When you remember that the majority of our fellow human beings are destined for two things, unconsciousness, with no progress, and no further light and no further help for aeons and aeons and aeons, unless they get spiritual enlightenment and intellectual help; or, on the other hand, destined to the annihilation of the Planet of Death or of Avichi — what is your reaction? I put it to you. I think these things ought to be talked from the housetops, preached all the time, brought to notice on every occasion possible. It does not matter two pins if people mock. The average man and woman today likes, like the Athenians of old, to hear something new; and even if a smile of incomprehension comes to the face — mark you the first time you attended a Theosophical gathering, and consider what your reaction possibly was. For all you know, you may be sowing seeds of thought every time you utter a technical Theosophical teaching. So wonderfully appealing and persuasive are they, that no matter how much a man may grin and hesitate and argue, and even mock perhaps at first, it may be for months, the seed sown will germinate some day. You may have saved that human soul and you know what I mean by "saving"; and for pity's sake, when you talk about philanthropy, raise this grand old Greek word to the plane where we understand it, and don't think that the giving of glasses of water, or mush and sausages, or soup and stale bread, is going to save souls. I have seen these things done so mechanically and soullessly that it was almost an insult to the receiver, and a disgrace to the giver. I have seen it, and have blushed.

Of course I don't say all the philanthropy of human beings is like

that. Undoubtedly there are thousands and thousands of noble men and women in the world who have never heard a word of genuine Theosophical teaching, whose hearts ache for the sufferings of their fellows, and who do what they can. But I am talking of mechanical charity, and the charity which humiliates when it is given.

What we want is to do away with the need of charity, and you will never succeed in this until you change men's hearts and their minds. The multi-millionaire who endows a College or a University, or some scientific institution, with several millions which he could spare perhaps as easily as the wealthiest among us could spare a few dollars, and immediately sees his name in the newspapers, may be doing far less good for his fellowman than the poor woman at the cottage door who will give of the little she has to the wayfarer who may come and knock. The latter act is true human sympathy. The other may or may not be commendable.

I tell you this, it is my own pet dogma: I don't believe you will get any genuine spiritual brotherhood, no matter what the form of the power behind the movement, which is not based on spirituality and Theosophy. You will get mechanics and political theories and emotional outbreaks of charitable people. And these are often more dangerous than they are workers of good, because their whole concentration is on the things of the body. It is needful to have the body cared for, undoubtedly. Nobody questions it for a moment. But look here. You can feed a man's body and starve his soul to death. You can give him work and kill his spirit. You can give him a job and clothe him well and guarantee him against the cold of winter and the heat of summer, and you can starve that man to death. You may have made a lost soul out of him. Why? Because the concentration here is solely on the things of matter. When Jesus spoke of "feeding my little ones",

do you think he meant babies? Children? "Little ones" is an old occult term for disciples, learners, as children are; loving as children are; receiving as children do: therefore "little ones". And such — and I say this with deepest reverence for human hearts and minds — and such, I repeat, are all those millions who await hungrily to be fed the bread of life and the water of inspiration that Theosophy, technical Theosophy, only can satisfy.

The Theosophical Forum

HUMAN NATURE, IN THE LIGHT OF THEOSOPHY — *B. Finkernagel*

There are comparatively few people who are aware of the fact that their constitution is composed of three distinct evolutionary streams of life, which we speak of as the animal soul, the human soul, and the spiritual soul. Each of these in itself is an evolving entity with a distinct evolutionary growth and destiny of its own. These three streams of life are enshrined in a physical body, the presiding human consciousness of which, by its modes of thought, feeling, and action, and by persistent endeavor, can so attune the physical brain, that it slowly acquires the power to respond to any impulses appropriate to the individual's aims and objectives. The complexity of our human constitution at times gives rise to phenomena which will often baffle the understanding of the academic psychologist, but are well enough understood by one who has acquired a clear understanding of what Theosophy has to teach in regard to the septenary constitution of man.

The supreme importance of what Theosophy teaches in regard to this subject cannot be over-estimated, for without this information it is well-nigh impossible to understand our human nature, or to live our lives intelligently and well. We should never allow our waking consciousness to engage in any thoughts, desires, feelings, or emotions, without subjecting them continuously to our discrimination, so that we may clearly realize from what part of our human constitution they have come and particularly if they come from our lower nature, that is to say, the animal soul. We should discriminate whether these impulses are, from the higher human point of view, desirable or not, and refuse instantly to give them "house-room" if they do not conform to the objectives and ideals for which we are striving. It is just because the great mass of the people do not understand the processes

which educe their thoughts, emotions, and feelings, that we find so much sorrow and suffering among men.

Quite a large proportion of mankind live entirely in their animal soul, as a result of which their human soul and spiritual soul find but little expression in physical life. In this type of person, the life of sense dominates almost completely the individual's thinking and acting. He will have no knowledge whatever of his higher nature. He identifies himself completely with his body, emotions, and feelings, and if this continues throughout the term of the physical life, he is sure to repeat, in his next embodiment on earth, the same follies and the same mode of life as characterized his previous life on earth; for as he has failed to generate spiritual causes, which alone can produce effects of a spiritual and elevating nature, there will then be but little spiritual material which would predispose him to something higher than he was in his previous existence on earth. Although such a man resides in a physical human body, he lives altogether in his animal soul, and therefore he is actually less than man. It is quite impossible to help such a person, unless his human soul awakens from its stupor and torpidity, so that it may be able to see life as it actually is, and not what it appears to be, or what he thinks it is.

It is quite a relief to pass from this gloomy review, to a higher type of man, and to be able to point out that the average human type stands far higher in the evolutionary scale. In the average man discrimination is certainly active, although it is always more or less hampered by ignorance of the higher nature, as well as by the insistence with which the animal impulses are trying to impose themselves upon the human consciousness. Nevertheless, the average man, instinctually, though vaguely, is beginning to realize that he must endeavor to control all those lower impulses which, if indulged in by him, will bring pain and suffering upon himself, as well as upon other beings; and to his credit it should

be said, that he often follows this higher impulse, provided his will-power is strong enough to hold out against the imperious demands of his animal promptings, and his still deeply-rooted selfishness. But there are usually many instances in the waking life of this type of man where his humble efforts to live a higher life — be those efforts successful or not — do generate spiritual effects, which do presage a nobler existence in future lives on earth.

As we ascend the evolutionary scale of our race, we shall find that this type slowly merges into a still higher one, in which the meaning and the purpose of life are much better understood and the universal fact of Unity and Non-separateness is definitely perceived. It is this higher understanding of life which forces the realization upon the ever more awakening spiritual man, of his greater responsibilities and duties to his fellow-beings, than hitherto he has recognised. He begins to see that this fuller understanding demands of him a never-ceasing watchfulness, and an obligation to eliminate ever more and more completely from his character, all the countless evidences of human frailty and selfish tendencies, which are still able to influence his thoughts and feelings.

When the individual perceives that in his higher nature he is actually a Ray of Divinity, and identical with the Heart of the Universe, which is all-inclusive, then the fact becomes self-evident that selfishness in all its forms, great or small, is a direct violation of the Cosmic Harmony, and of the Law of Being. When this is fully seen, the aspiring soul, if sincere, will find neither peace nor rest, unless the efforts it puts forward are at least equal to the greater spiritual illumination that has come to it. There will, therefore, be an ever increasing stimulus for greater efforts, as the growth of the individual proceeds, and thus every ounce of will-power, devotion, and determination is marshalled to the fore,

so that the person may realize his aims and ideals. The soul perceives that it must become godlike before it can become at one with Divinity, before it can link its consciousness with the Master-soul which resides at the core of its being. He is thus ever on guard, alert and watchful, in regard to all that he allows himself to think, feel, say, or do. From henceforth, this man's daily task will be to make himself incapable of yielding to anger, hate, or wrath; to cast out all traces of vanity, pride, malice, envy, strife, or fear; to become utterly humble, meek, and lowly in heart and mind; patient, calm, and self-controlled; never to strike back, or to retaliate; never to respond to hate with hate, but instead, to respond to all injuries and insults with instant forgiveness, sympathy, and pity, realizing that the person who is ill-using him, lacks spiritual understanding, and that these unbrotherly actions are due to the man's soul-destroying identification with his animal body and passions. The aspirant is trying to do all this without complaint, trusting utterly to the Law of Life, and therefore he finds the strength to suffer silently, forgivingly, patiently, and with an attitude of heart and soul which is ever shedding rays of love, sympathy, and pity — like our glorious Solar Orb shining in its effulgence in the heavens upon good and bad alike.

But in case your courage fails you as you read this formidable list of what the aspiring human soul must accomplish before it can definitely enter upon that steep and thorny Path which will lead it to a stage in evolution where it becomes more than man — let me add that no ordinary man can possibly acquire fully all these divine accomplishments in one short month, or year, or lifetime, even. What has just been said outlines the ideal which every earnest aspirant must ever hold before himself, and which must become, so to speak, the background of all that he thinks, feels, says and does.

Let us all clearly realize that the good Law of Life requires no more from anyone, be he high or low, than what he or she is able to accomplish. If one does all he can, as he struggles onward towards his ideal, be that all much or little, it is all that is expected of him.

The three types of people above described are, so to speak, landmarks, indicating the general road along which our humanity, during its aeonian past upon this globe, has been evolving. But human history, as well as tradition does record the occasional appearance of glorious Beings, who tower far above even the highest types of ordinary humanity. These Beings are the very embodiment of divine power and wisdom, of compassion and self-sacrificing love. They have always appeared on earth, whenever our human race was approaching a serious crisis, invariably brought about through a long false thinking and acting by mankind in the mass. It is at such times as these that Supermen do appear — meteor-like — on our human horizon, for the purpose of bringing help, counsel, and spiritual understanding to an ignorant, suffering and spiritually perverted world. I am referring to such Supermen as the Buddha Gautama-Sakyamuni, Sri-Krishna, Jesus, Lao-Tse, Tsong-Kha-Pa, and many others.

I submit that any perspicacious mind on reflexion should be able to perceive that these outstanding figures are indeed more than ordinary men, and that they belong to, and have their native home in, a world which stands far above the place which our physical earth occupies in the cosmic scheme of things. They have their true home in a world which in all respects corresponds to their exalted stage of evolution to which they have attained through self-directed evolutionary effort. They come into this nether-world of ours — which is indeed a veritable hell to them — for the purpose of helping, instructing, and uplifting mankind.

The intuitive mind will perceive in these occasional appearances of Supermen, an actual proof of the existence of subtler worlds than our own, worlds which are invisible to ordinary men, because human selfishness and materiality has so coarsened our human lower nature, that these higher worlds, which are of exceeding subtilty and purity, cannot be perceived by our coarse lower principles. Our humanity has befouled its human constitution, through ages of false thinking and acting.

The cocksureness with which the materialist usually denies the existence of invisible worlds, as taught in Theosophy, and also of everything which is beyond his powers of physical perception, invariably produces feelings of profound pity and regret in a clearer-seeing and spiritually perceiving mind. It is painful to think that rational and often scientifically trained minds can be so utterly blinded by bias, prejudice, and foregone conclusions, as to deny the existence of anything super-physical, when even the familiar processes of our daily experiences and consciousness so often point to — and I feel tempted to add — prove the existence of these super-physical worlds. If those able but misguided men were only willing to approach with an open mind the subject of Theosophy, they would before long discover to their utter surprise, that it embodies in its teachings the highest wisdom ever perceived by man, and that it is not only absolutely consistent throughout its entire range of thought, but that it is vast; for it is an all-inclusive exposition of the entire universe and of man, dealing not only with the visible worlds, their scope and their destiny, but also with the invisible worlds. It may well be claimed by Theosophists that Theosophy is the Supreme Science of all sciences. And when it is perceived that its teaching is the combined wisdom, gathered throughout all the ages of the greatest Seers and Sages of all time, and that every portion of it has been subjected to the most meticulous methods of research

on all the four lower planes of our world, and that the findings of these Supermen have been checked and counter-checked innumerable times by other Seers and Sages in all ages — then, perhaps, this cocksureness, this presumptuous attitude of mind, will disappear, and a more fitting and humble willingness to learn what they do not know, will take its place.

Theosophy is indeed a great and synthetic Whole, of which every portion is necessary for the full understanding of every other part. Let it, therefore, be clearly understood that one cannot in fairness and justice take any single portion of the teaching and pull it to pieces, apart from all the rest, and then denounce it. Every part of the teaching must be kept in mind, and must have its place in the consideration of any particular part of it, for one cannot possibly come to any correct conclusions otherwise. If it is not so considered, then any, or all conclusions arrived at, lose all their value and claim for recognition.

And now in conclusion, may I be permitted to express the ardent hope that this humble attempt to point to a few aspects of these sublime teachings in respect to the highly complex nature of the Universe and of man, may educe from within us all a sympathetic consideration of what has been said, as well as a sincere attempt and firm resolve to live, and to be in some measure — equivalent to each one's capacity — the noble ideal of the Spiritual Man. This Universe exists for this purpose, and even the least of men, as countless ages succeed each other, must and will attain to this noble ideal.

THE HOLY RIGHT OF SANCTUARY — *J. M. Prentice*

In the midst of a busy life and from some quite unexpected touch on a chord of memory some lines by Longfellow came unbidden:

Oft have I seen at some cathedral door
A laborer, pausing in the dust and heat,
Lay down his burden and with reverent feet
Enter and cross himself, and on the floor
Kneel to repeat his Paternoster o'er.
Far off the noises of the world retreat;
The loud vociferations of the street
Become an indistinguishable roar. . . .

and immediately I recalled the ancient and holy right of Sanctuary. This was one of the gracious aspects of the otherwise frequently brutal life of the Middle Ages, and he who sought it was safe from pursuit, provided he dropped for the time being all worldly weapons, and surrendered himself utterly to spiritual forces.

There are no such physical sanctuaries nowadays. The need of them exists, however, and in their *present absence* we can create for ourselves inner retreats to which we can repair when we are attacked by either the physical or the more insidious psychic forces that are operating today. The need for this inner sanctuary is very real when around us forces are operating that are either evil in themselves or liable to do us hurt by arousing in us fears and distractions that torment the soul. To seek this inner silence is not to try to escape from reality; rather is it to draw upon the resources of the greater Reality that is our own innermost being, "which to know is Life eternal." It is the means whereby we enter

into the peace that passeth all understanding, which lives and moves in those who know the Self as One.

It is never entirely wise to create of the entering into this Inner Sanctuary anything that tends to become a ritual. Rituals are the scaffolding by means of which a building may be erected, a house built, but they should be temporary, a means to an end. Any one who develops a ritualistic method will defeat the desired objective. Yet in the beginning a phrase, a verse, may have almost the effect of a *mantram* — one of those potent syllables of power that are found in the Sanskrit tongue and are used by those who are trained in some Eastern Schools. I myself have often found that some lines by Matthew Arnold have this effect. They are from an almost forgotten poem called *Lines Written in Kensington Gardens*,

and they run:

Calm Soul of All Things, make it mine
To feel amid the city's jar
That there exists a Peace of Thine
Man did not make, and cannot mar.
The will to neither strive nor cry,
The power to feel with others give,
Calm, calm me more, nor let me die
Before I have begun to live.

Memorize these lines and recall them when the heat and burden of the day seems almost too great to be borne. Then, with the words as the gateway or entrance into the Inner Reality, be still and know that you are of the Eternal. What will happen to you in the Silence is your own affair; moreover it is something that in practically every case will vanish if you attempt to share it with any one else. But this is certain: you will find within yourself, as you go deeper and deeper into the mystery of your own

consciousness, that there is a peace such as you have never known, a power that makes all things new. It is a power that you will never be able to use for selfish or personal ends because it belongs to the Impersonal. But it will be to you a Sanctuary far better than any built by medieval hands, more hushed with peace than any cathedral, however splendid with fume of incense, glory of stained glass, or harmony of organ music.

Not necessarily the lines which I have written above. It may be a line from some such book as *Light on the Path*, a sloka from the *Bhagavad-Gita*, the words from an unidentified Upanishad that are quoted at the beginning of *Letters That Have Helped Me*. It is the method rather than the actual words at which we would hint. Find some apt quotation — and use it. Enter into this inner world deliberately and consciously, but remembering always to avail yourself of the opportunity afforded you of laying aside all your physical weapons, of doffing the garments of consciousness you wear in the world of outer things, and thereby allowing your mind to become a mirror that reflects your higher consciousness.

The contemplation of a beautiful picture, the hearing or the recalling of some exquisite melody, are other but similar means to the same end. There are as many such means as there are individuals to use them. But behind all such incursions there must be a motive — to obtain therefrom surcease from the cares and worries of the world in order only that we may overcome the world. There must be nothing selfish involved. Indeed it may well be that viewed from without we may seem more negative than ever; yet in this very lack of aggression it will be found that we are centers of peace to which others will flock. Walking ever in the light from within, we develop spiritual forces and weapons that can be used against the evil that seems to be uppermost in the world today. The whole process may be described in a term that was popular in the early days of the Theosophical Movement

— "swearing allegiance to the Higher Self."

The Theosophical Forum

THE LAND OF THE SHADOWS — *Martyn Witter*

It was time to retire from the duties of the day and to enter the land of sweet repose and rest. But there is no rest for those who open their hearts to the woes of humanity. How can anyone rest when there spreads such unspeakable woe over the races of men? Instead there is joy in feverish activity, for there is so much to do. We must prepare for that cyclic moment when the races of men shall make the "Great Choice". Oh, how many will perhaps fail in the struggle and be sent back to the bottom of the ladder to learn all over again, step by step! In this age of blindness how few there are of those who are preparing themselves to help this struggling orphan — humanity. But then the dismal valley of doubt and despair is occasionally lighted by the Spiritual Fathers. Where there is darkness there is in time a call for light — more light. The Great Ones have been waiting and waiting for a long time. But not until the pupil calls for truth, as one who is dying of thirst cries for water, can the Teacher instruct.

As the above thoughts ran through my mind, burning like searing irons, I slipped into that land of sleep. How long I slept I do not know but I awoke to find myself in that world where time is not; there is only a ceaseless flow of duration. Here all earth-life seems as a dream. Thought and existence appear inseparable; the thinker and Universal Life being indistinguishably and inseparably One. Only as a dim remembrance can one recall the earthly conceptions where physical space seemed to exist as distance separating one object from another. Oh, what illusions there exist in the "Land of Shadows" where men think that they are separate from one another. But, why did this "Land of Shadows" come into being? Why? To answer my own question I had but to turn thought upon thought. The answer came as a

reflexion of thought upon the mirror of mind. It was silent, yet it spoke saying:

"It is because many another similar to you, knows not the answer to this question that the "Land of Shadows" is a necessity. You are the creators of yourselves and your lands of woe. Do you not know that suffering is the greatest of all teachers and that your land of woe is but the state of your own consciousness?"

In agony I cried for the veils to be rent apart that I might see and seeing know. This time the thought came as an almost unbearable surge of energy. It seemed to say:

"Know that you are the veil which hides the unspeakable from your eyes. It is only when the burning spirit within rises like a flame and consumes all, that the veil shall exist not. Until self is merged into Self, veils must necessarily exist. Know that when you seek knowledge for self it ever recedes. Know that only when you seek but to feed others, little caring whether you taste of it or not, shall knowledge be yours. Not until seeker turns into giver can the seeker receive reality instead of illusion."

It was then that I grasped an inner realization of the unworthiness of my shrine. Not until the giver gives solely for the motive of giving shall he be united unto that which is given. In the land of shadows, which we call the earth, how few there are of those who while giving do not take great pride therein.

The Theosophical Forum

THE ACTS — *P. A. Malpas*

(Extract from a letter)

Dear Friend: You ask me what I have to say about the *Acts of the Apostles*, or the "Apostle-history," as it is sometimes called.

An interesting point is that until recently it was supposed that the *Gospel of Luke* and the *Acts* were written by Luke — a physician, a doctor, as we should say. This is based on a single remark "Luke the beloved physician." But it should not be forgotten that the Essenes, the Therapeutae, were "physicians" of the soul, also the first "Christians."

But the much quoted evidence that only a physician had the technical knowledge to write such a treatise or book can be equally applied to the assumption that both books were written by a sailor. Many years ago I worked on this idea, probably suggested by some remark of H. P. Blavatsky's in *Isis Unveiled*. Since then other scholars have come to the same conclusion.

But this disregards later research, which seems to show at least two writers for the *Acts*. Probably the sailor was one of them. And that sailor seems to have been no less a person than Marcion the Gnostic, practically the last in his day, somewhere about 135 A. D., who knew what the inner meaning of the church was. He was forced to leave it owing to political moves in the church government. After him, it was not much more than any other exoteric church or sect. He was a rich man, as riches went then, and his money would have been very useful if, as the intention was, they had elected him head or pope.

It has often been pointed out that the *Acts* is an artificial compilation, with the proof thereof in the long speech of the

martyr Stephen — which of course nobody took down either in shorthand or longhand. It is simply a fine piece of rhetorical writing. Yes, they had shorthand writers in those days, often in teams of two, one to write quickly and the other to transcribe it in copper plate, so to say. But it needs much imagination to suppose that the scene was prepared beforehand, if indeed, it is historical at all and not like so much else, mystery narrative.

The purpose of the *Acts* seems fairly clear; at least, *one* purpose. The idea seems to have been to blend the more or less opposite currents of Petrine and Pauline history and teachings. You have the Peter history and then the Paul history, and the attempt at reconciliation is evident. It is hard to say how far this plan might have been carried, but the fact seems to be that the *Acts* is really an unfinished treatise.

It is difficult to imagine that the narratives are meant to be historical rather than artificial, though of course, there may be much history in them.

But look at Paul's own story. He is represented as being suddenly converted, violently converted, one may say, in a few hours. Dramatically this is fine, but it hardly happens in real life. His own tale is that he studied seventeen years, seemingly in seclusion in the Arabian desert, with one small exception about the third year, as he says in *Galatians*. This is much more plausible and reasonable.

Assuming that this view is correct, that the work is a technical mystical treatise and not historical, then we must pause before we accept the usual reports of the death of Paul and Peter as being historical. It is quite likely that Paul was never martyred at Rome at all. The *Talmud* makes him out to be a very old man indeed and a very vigorous one, years after the destruction of Jerusalem, while the *Acts* describe him as a man of middle age. I

think the story of his martyrdom is based on a single obscure statement of some writer much later in the day who may or may not have known something about him. We are too prone to accept statements as historical simply because they are old and because they agree with orthodox views.

As for Peter, there seems to be no real evidence at all that he was ever at Rome. It is just a tradition. The Jewish writings, also much mixed with allegory and fancy, make him out to have died in exile at Babylon after living there for many years as an ascetic. One story seems to be as authoritative as the other. Of course, "Peter" as a mystical character and not historical, is simply the *interpreter*, as the Hebrew word Peter implies, between the mystic hierophant and the disciples. Joseph in *Genesis* (1) is Pharaoh's "Peter" or dream-interpreter. This is the character he occupied in the Roman mysteries long before "b. c. 1," and he was not any one man but an official. Speaking of the play of words so often found in these mystic writings, is it not curious that the church is founded, not on the Hierophant, the Teacher, but only on his *interpreter*?

I suppose the historical Paul was really a very interesting character and his life full of startling adventure. But it is not easy to sort out fact from fancy. If a film showed all the adventures attributed to him it would be regarded as impossibly fantastic, as a story no one man could ever have lived through.

H. P. Blavatsky makes a very interesting remark in her articles on "The Esoteric Character of the Gospels":

There are, besides great Initiates into scriptural symbology, a number of quiet students of the mysteries of archaic exotericism, of scholars proficient in Hebrew and other dead tongues, who have devoted their lives to unriddle the speeches of the Sphinx of the world-religions And these

students, though none of them has yet mastered all the "seven keys" that open the great problem, have discovered enough to be able to say: "There *was* a universal mystery-language, in which all the World Scriptures were written, from *Vedas* to "Revelation," from the Book of the Dead to the *Acts*."

Serious scholars should think of this. It is the only way to reconcile the absurd discrepancy between the story of Paul in the *Acts*, and his own story as given in *Galatians*, unless we are to say that one is a pure forgery or fiction.

It was more H. P. B.'s work to give keys to study than to scatter facts indiscriminately. Here is such a key.

The Theosophical Forum

A FABLE — A. W. Ferguson

(Concerning the Finding of the Philosopher's Stone)

On a certain day when the sun shone like a great ball of fire and the sea rose and fell in restless fashion as if in keeping with the evermoving streams of life which made the City, on that day Callan, a young and noble Celtic Chief in whom a strange discontent moved and to whose young life already had come a sorrow and weariness, cried:

"I shall go away from here and search the whole world. Surely there must be some place wherein is to be found the Philosopher's Stone." On the hills surrounding the harbor were many men at work.

There young Callan beheld many men in rags pulling up great buckets of fuel from the bowels of the earth, and his heart was heavy. In the City many women and young girls sat like automatons before great pillars of steel, and the heart of young Callan was sad. And in the harbor men pulled up great heavy anchors and slimy dead fish; and the heart of young Callan was sick.

"I shall go away from here; surely, there must be some place in which is to be found the Philosopher's Stone."

And so it was that young Callan, now grown to manhood, went forth into the dark and solitary night. The road was bare. The hills were bare. Here was no happy companionship, but lonely days and black nights.

And on a certain day when the sun had reached its zenith Callan, who was now grown old and grey, came upon a certain City. And

on the hills here and there were men in rags pulling up great buckets of fuel from the bowels of the earth. And in the City were many women and young girls who sat like automatons in front of pillars of steel. And in the harbor were men at work pulling up great anchors and dead fish from the sea.

And in the evening when the Sun like a great red disk sank below the horizon, Callan who was now grown wise fell into a peaceful sleep.

The Sun was a great globe of light whose pulsating life filled space. The Sun was the Heart of a Universe. The Sun was a great Being full of Conscious Life. And all the Universe was a part of that Life, in Harmony, in Tune, and in Love.

And Callan saw that the hills surrounding the harbor were Nature's plan. And the sea was calm. And the whole scene was an immortal sight. And there was no dark and solitary night. And the hills were of burnished gold.

And Callan went down into the city and among the great pillars of steel, among the men in rags, and to each and every one and to the women and young girls, to each and every one he gave a laurel wreath.

It was in this manner that Callan came by the Philosopher's Stone.

The Theosophical Forum

MATHEMATICS AND THE IMAGINATION (1) — *H. T. Edge*

Mathematics, as the authors say, like other familiar things, is easier to describe and to illustrate than to define: it is hard to find one general idea that will embrace all the manifold applications. But the impression we have received after reading this book is that mathematics is an attempt to systematize the universe: first some small part of the universe, then a larger part, and so on, until we begin to suspect that we shall need a formula as complex as the universe itself if we are to embrace all. As viewed from the standpoint of the intellect, mathematics is the most abstract and fundamental of all the sciences, being a sort of master-science underlying all the rest. To give the layman some notion of what it is all about has been the laudable aim of these writers, who have produced a most interesting and informative book.

First we have chapters on numbers, especially very large numbers. It is explained that primitive minds count without the use of numbers, by the simple process of matching one plurality with another; and that the idea of number apart from a particular plurality of objects is an abstraction which comes later. The existence of the very large numbers is an inference rather than a conclusion from observation. One very large number, facetiously called a "googol," is 10 to the power of 100, or a 1 with a hundred zeros after it. But Eddington estimates that the number of electrons in the entire universe is only 10 to the power of 79. If we wish to climb to farther heights we can speak of 10 to the power of one googol, which would be represented by a 1 with so many zeros after it that there would not be room to write them if you wrote one every inch all the way to the farthest nebula. Such a number may have no use in mensuration, but it may in the calculus of probabilities, as estimating the probability that my

typewriter may suddenly jump off the table and land on the bed, or that an electron may do some excessively unusual thing.

Then follow chapters on the meanings of the word "infinite," the infinitely large, the infinitely small, the unbounded, the undivided; and the numerous paradoxes and fallacies which arise from a neglect to distinguish these meanings. The very big and the infinite are entirely different; there is no point where the very big begins to merge into the infinite; however large a number or magnitude you may reach, you will still be no nearer the infinite than you were at the start. The idea of the infinite is arrived at through "reasoning by recurrence": what we have done once we can do again, and we assume that we can go on doing it indefinitely. The paradoxes of Zeno are considered. Some of them are due to his failure to recognise that an infinite series may have a finite sum, and some depend upon a relation between position and motion which has engaged the attention of the profoundest mathematical minds. Leibniz tried to explain the infinitely small to Queen Sophie Charlotte of Prussia, but she said the behavior of her courtiers had made her so familiar with it that she did not need to be taught.

The principle of logarithms is clearly explained, with the remark that it is wonderful it was not thought of before. This may suggest to some that it has been thought of before; many of our mathematical discoveries may be rediscoveries, and there may have been things known to our remote ancestors that have not yet been rediscovered. Transcendental and imaginary numbers, π , i and e , come in for consideration, and a great many formulas for approximations to π are given.

In the sections on assorted geometries we are introduced to the four-dimensionalists and flatlanders, and it is shown how they neglect to distinguish between physics and pure geometry,

between physical space (that of our sensory experiences) and ideal space. Euclidean space is ideal and abstract; a three-dimensional geometric solid is as imaginary as a two-dimensional figure, and quite distinct from a solid physical body. The word "dimension," as used in mathematics, does not necessarily mean an extended line at right angles to other lines. Its meaning must be abstracted from that of physical space, and it is better to substitute the word "co-ordinate." Physical space is a three-dimensional manifold. When mathematicians speak of multi-dimensional manifolds they have no reference to physical space; such manifolds (or "spaces") have only the properties expressed by the postulates and axioms of the particular geometry concerned.

Euclidean geometry is shown to be only a theory, in which the propositions are deduced with faultless logic from the axioms and postulates laid down. But Lobachevsky, Bolyai, and Riemann have constructed equally consistent geometries upon other postulates, and these geometries are better adapted for the mensuration of curved surfaces than is Euclid's. Here again we see that geometries are an indefinite number of different systems invented for the purpose of co-ordinating certain groups of experiences which we have of the universe.

The chapter on mathematical puzzles will prove of great interest to many readers; we have here quite a large selection of such posers: various versions of the problem of a man crossing by a ferry and having with him a fox, a goose, and a bag of corn, only one of which he can carry at a time; the problem of the eight-quart jug of wine which is to be divided into two equal shares by means of jugs holding five and three quarts; mechanical puzzles with wires and rings; etc. The International Beer-Drinking Problem is as follows:

In a town on the border between the United States and Mexico the state of exchange was such that an American dollar was worth only 90 cents in Mexico, while a Mexican dollar was worth only 90 cents in America. So a man crosses the border into Mexico and orders ten cents worth of beer, which he pays for with a Mexican dollar, receiving an American dollar as change. With this he recrosses the border and buys another ten cents worth of beer with his American dollar, receiving a Mexican dollar as change. He keeps this up all day until he is quite full of beer. Question — who pays for the beer?

Another chapter is on paradoxes or inconsistencies, many of them hoary with antiquity. The paradoxes of Zeno naturally come in for consideration. That of Achilles and the Tortoise depends on the fact that Zeno confuses an infinite distance with a finite distance infinitely subdivided; but his problem of the moving arrow involves considerations which have exercised the greatest mathematical minds. Motion, when analysed by our logical mind, appears to become reduced to a series of disconnected stationary positions, which our perceptions synthesize in a way similar to that by which the separate images on the film are made to resemble figures in motion. In the same way a continuous line may be analysed into a series of separate points, or a continuous solid body into an aggregate of disconnected atoms. It would seem that the analytical function of the mind is bound to lead to dilemmas; and is not this what Zeno was aiming to demonstrate?

The section on chance and probability carries us into deep water. The calculus of probabilities succeeds to perfection on the large scale, but breaks down utterly in the details. It is thanks to the former virtue that our insurance companies can profitably enable us to sit in our armchair and smoke at forty for the rest of our life; but they cannot for the life of them tell whether it is going to

rain tomorrow. I can toss a coin a thousand times with the assurance that the proportion of heads and tails will be almost exactly 50 — 50; but I have not the least idea, if I only make one toss, whether it will be heads or tails. According to the rules the chance of heads or tails is always equal, no matter how often I may have thrown heads in succession. But what about the betting odds?

Edgar Poe calls attention to this discrepancy: the fact of sixes having been thrown twice with dice is warrant for betting the largest odds that sixes will not be thrown a third time; yet the intellect cannot see how the past throws can influence the ones that follow them. The error involved, he says, is one of an infinite series of mistakes which arise in the path of Reason through her propensity for seeking truth in detail. This can only mean that the successive throws *are* connected; that the Reason is wrong and the intuition right.

The kinetic theory of gases explains their expansive pressure by an elaborate integration of the kinetic energies of all the molecules; but when we consider a single molecule, we visualize it as flying about at its own free will like a midge in a sunbeam. This may help us to reconcile our doubts about the compatibility of free will with law. If you only have a sufficient number of individual free wills, they will together fulfil the law: the calculus of probability proves it.

The authors point out that classical physics regarded as immutable laws of Nature phenomena which had been shown to hold good within a limited range of experience; and that modern physics has extended its observations to regions wherein some of those rules do not hold good. Thus natural law has been largely replaced, perhaps even ousted, by statistical inference. The laws of Nature are no longer regarded as "simple and constant." We

used to say: "All men die; Socrates is a man; therefore Socrates will die." Now we say: "All men die so far as we know; Socrates is a man; therefore he will probably die."

Mathematics is formulation, and formulation is a method of approximating the truth by stages. Such is the impression we receive.

A word should be said on the subject of abstractions. The meaning of this word depends on the point of view. If moving bodies are considered as real, then motion becomes an abstraction from this reality. But if motion itself be regarded as real, then moving bodies must be regarded as only particular manifestations of motion. Is the infinite merely the negation of the finite? Or is the finite a limitation of the infinite? Which is the prior term? Descartes held that the infinite is the positive idea, and the finite the negative, and that therefore the infinite presupposes the finite. Kant held that space is not a general conception, abstracted from particular ideas of space, but that particular spaces are arrived at by limitations of the one infinite space that is prior to them. This is of course the way space is viewed in *The Secret Doctrine*; and so also is number. Number, which from our viewpoint is an abstraction, is viewed as a reality. That may seem unthinkable, but the universe is not likely to be conditioned by the infirmities of our conceptual powers. We can form no idea of what a number is in itself; we can only think of a plurality of objects or parts. So long as we have to rely on the argumentative and analysing faculties, we are bound to come up against dualities, antinomies, contradictions; and mathematics has sought to palliate the difficulty by all sorts of subtle and ingenious devices. But Theosophists believe that the human mind is able to rid itself of this kind of *Maya* and thus to be able to grasp ideas beyond the scope of our ordinary powers. The book concludes with a chapter on the Calculus and the meaning of

Change and Changeability as understood by mathematicians.
Much praise must be given to the excellent illustrations and
diagrams by Rufus Isaacs.

AFTER DEATH: YOU ARE YOURSELF — G. de Purucker

I hope that the time will come when we Theosophists shall weigh more strongly than we have been doing on the teachings of what happens after death in the Kama-loka and the Devachan. The average man seems to be today not so much immoral as amoral, i. e., seems to have largely lost the sense of moral responsibility. If men could realize what is going to happen to them after death, it would awaken a certain sense of needed behavior or conduct.

Now let us try to restore to mankind the teaching of the Ancient Wisdom: As ye live so will ye be after ye die. It is a simple teaching and it is so logical, it appeals. Men may resent it at first, men may not like it; but there is a thought there which on account of its logic, on account of its justice, will finally throw forth sprouts of thought in the mind.

If you want to understand the kama-loka and the devachan, just study yourself *now*, and you will know what you are going to get. Just that. You are going to get a continuation of precisely what now you are. If a man indulges in vice, what is going to happen to him? He reaps the consequences of his evil-doing. He learns by it the lessons that come out of the suffering. If a man fills his mind with gross thoughts and evil dreams, he learns by it in the long run through suffering, but the effects and consequences on his mind and character will ensue. He suffers, he is in torture, he pays the penalty, he has poisoned his inner system and he won't have peace until the poison has worked itself out, until he has become what is called re-formed, i. e., re-shaped. Then he will have peace again, then he will be able to sleep in peace again.

So the answer lies, it seems to me, in just these thoughts. Study yourself in your daily consciousness; and also study what kind of

dreams you have. Why are these two conjoined? Because your dreams are from your own mind, and therefore are a part of your own consciousness. A man during his waking hours has evil dreams, evil thoughts; when he sleeps he has nightmares; he learns by them, but he certainly is not going, when he sleeps, to have a heaven of dreams because he has filled his mind with horrid, hateful, mean, degrading thoughts. He has not builded the substances of heaven.

There you have the answer: and the kama-loka is simply a state of consciousness which the man's consciousness itself is in after death because he has made himself during his lifetime to have that consciousness. It works itself out, and then he rises or sinks into whatever is his destiny: a weak devachan, no devachan at all, according to the individual. In other words, if he has made for himself a character which is X, he will have that character X, whatever it is, after death. He won't have character Y, or Z, or A, or B. Contrariwise, a man who during life has kept himself in hand, has controlled himself, has lived manly, experiences the same law precisely: the after-death state will be unconscious in the kama-loka, or very nearly so, because he has no kama-loka biases in himself; and probably there will be a blissful devachan.

Suppose a man has no marked character at all, is neither particularly good, nor particularly bad. What kind of an after-death state is he going to have? He will have a colorless kama-loka, nothing particularly bad; and he will have a colorless devachan, nothing particularly beautiful or blissful. It will all be like a sort of vague, intangible dream. It doesn't amount to much and consequently he won't amount to much after he dies.

Or take the case of a young man of evil ways who reforms, let us say, at about middle age, and spends the rest of his life in deeds of virtue, of self-improvement. What will be his fate in the worlds to

come? As I told you before, the kama-loka and the devachan are simply a continuation of what the man is when he dies. So consequently an evil young man becoming a good old man has practically no kama-loka of an unpleasant kind at all. He will have to pay to the uttermost farthing for any evil he did as a youth — but in his future life. His evil deeds are thought-deposits there. But as he reformed at about middle-age, and had lived a clean decent life as a decent man, his kama-loka will be very slight, because it will be simply a continuation of what he was when he died, and the devachan will be in accordance likewise.

One can be in the kama-loka, as well as in the devachan, before death comes; indeed, it is possible to be in the avichi-condition even while imbodyed. And here is a very important deduction we should draw from this fact: if we have kama-loka while imbodyed men and women, we shall have it after death; and precisely according to the same law because we have spiritual yearnings, dreams of a spiritual kind and type or character while imbodyed, we shall have the devachan after death. Do you see the point? The kama-loka is a prolongation or a continuation, until it is worked out, of what you have been through in your life. If you set your thought and mind and heart on things which bring you pain, which make you suffer because you are selfish, and stiff-necked in pride and egoism, you will assuredly continue the same bending of your consciousness after death. It cannot be otherwise. It is simply you. Therefore, the devachan and the kama-loka are prolongations or continuations of the same states of consciousness respectively that you have gone through on earth — with this difference: that being out of the body, which is at once a blind and a shield of protection, you are, as it were, thought, naked thought. Do you see what I am trying to say? And if your thought has been during life on things of horror, or if you have allowed your thought to bend in those directions while

imbodied, you won't be washed free of stain merely because you have cast off the body. Your thought, which is yourself, will continue and you will have to pass through the kama-loka and exhaust that phase of thought. It will have to die out as a fire will burn itself out.

Similarly, indeed exactly: if you have had beautiful thoughts, grand thoughts, sublime thoughts, in life, you will assuredly have the same thing, but a thousandfold stronger because no longer smothered by the body, when you have cast it off; and if you want to know what your destiny will be after death, just study yourself now and take warning. There is a very important and pertinent lesson that we can learn from this fact, just in that. You can make your post-mortem condition what you will it to be now, before it is too late. Nothing in the universe can prevent the bliss of devachan coming to you, or rather your making it for yourself.

Deduction: Take yourself in hand. There you have the teaching of the kama-loka. There you have the teaching of the devachan. It is very simple. All the intricate, abstract questions I think arise largely in failing to understand the elementary principles of the teachings. When you lie down you dream, or you are unconscious. When you die you dream, or you are unconscious. You have, when you lie down at night, evil dreams or good dreams, or you are unconscious. When you die you will have evil dreams or beautiful dreams or you will be unconscious — all depending upon the individual and the life he has led.

So the kama-loka and the devachan and indeed the avichi, are not things that are going suddenly to happen to you when you die; but because your consciousness has been that way while embodied, they, one or the other, will continue after you die. You see now the importance of ethics, and why all the great Sages and Seers throughout time have tried to teach men to spiritualize

their thoughts, to refine their thoughts, to live in the heart-life as some people have said, to cast out the things which are wrong and evil. There is the whole thing, simple as A B C. The devachan is not waiting for you. The kama-loka is not waiting for you — I mean as absolute conditions now separate from you. If you had them in life, you will have them after death. The man who has had no thought of hatred or horror or detestation or venom toward another, in other words whose heart and mind have never been nests of evil, will have neither an avichi in life nor after death, nor an unhappy kama-loka in life or after death; he will have an exquisite devachan, and will come back refreshed and vigorous and strong and renewed to begin a new life and with everything in his favor.

After death you continue to be precisely what you are when you die. There is the whole thing. There is the secret of the kama-loka and of the devachan and of all the intermediate states of the Bardo, as the Tibetans call it. All the rest is detail, and that is why I keep emphasizing in my public lectures and in my writings, that death is but a sleep. Death is a perfect sleep and sleep an imperfect death. It is literally so. When you sleep you are partly dead. When you die, you are absolutely asleep. If you grasp these simple ideas you will have the whole teaching on your thumbnail, a thumbnail picture.

Now this is another point. I have heard people say that they don't want to remain in devachan, it is a waste of time. This is a misunderstanding. You might as well say: I don't want to have sleep tonight, it is a waste of time. As a matter of fact, you need the rest, recuperation, assimilation of the experiences of the past life. You are strengthened by it, you grow by it. So that while the devachan is not a time for evolution, it is a time for building, for recuperation, for assimilation, for inner digestion, for strengthening, and is just as much needed as a man's night's rest

in bed is for his body.

There will come a time in human evolution when even the devachan is no longer required, because the man has learned to live in the higher part of his being. Devachan, however beautiful, is an illusion. The time will come in the future when men will no longer have to sleep at night; they won't require it. They will have different kinds of bodies and thus learn to do without the devachan, and thus reincarnate almost immediately in order to help mankind — which is the thing they love most of all — and all other beings. These men are what we now call Masters, in all their grades. But for us ordinary human beings the devachan is a necessary episode.

The devachan, however, while a beautiful experience of the consciousness, is an experience of the higher *personal* consciousness, the higher part of us human egos, the higher part of the personal man, its aroma so to speak. In this fact lies the training bringing about the shortening of the devachan. If you learn to live outside of the personality, and as the Christians say, in the Eternal, while you are embodied, if it becomes habitual with you, your devachan will be correspondingly shortened because you won't want it. You won't need it. The bent of your mind is not in selfish beatific satisfactions of the soul. That is what the devachan is, a fool's paradise. When compared with Reality, it is an illusion. But just because men and women strain for those things and suffer to attain them, the devachan in Nature's infinite pity becomes the time when they have it, the resting, relaxing time, the time of recuperation, digestion, assimilation. As we grow, as the ages pass, in future ages, we won't long so desperately to have these beatific satisfactions of the soul. We shall find our happiness in impersonal attachments to things of beauty, things which belong to the higher spiritual man, and not to the hungry human soul. Do you catch the

thought?

That is where the training lies that all chelas are taught, that same truth, that and nothing more. Rise out of the personality so that you learn to use it as a willing, acquiescent instrument, and live in the spiritual part of you, which means impersonally; live universally so that you are not swayed by your own hunger for the things that please and help and rest you; but live in the spiritual, in the universal, and all these other things will be added unto you.

I do feel that we should talk more about the kama-loka and the devachan, and especially the kama-loka, in our public lectures. Let people know how logical our teachings are, how simple, how natural — that you get precisely what you have sown in yourself as character, i. e., what is coming to you. It gives man a powerful reason for living decently. It appeals to his reason, it appeals to his instincts of justice. And while Theosophy has removed the fear of death, we must instil also the sense of ethical responsibility lying upon me, upon you, upon every human being.

The Theosophical Forum

SEMPER FIDELIS — *Madeline Clark*

What we love better than we love ourselves we find means to safeguard and protect. Theosophy is that to us, because it is the wellspring of truth and spiritual Tightness, and because it brings the promise of better things, like the waters of life, to humanity.

We know from what unsullied heights the pure stream of Theosophy comes down to us; and there is no wish nearer to our hearts than that of preserving its purity: passing it on to others without divergences from its fundamental verities. For well we know in this regard that any departure from the original, eternal quality of its essential truths can only come about through the vagrant and transitory conceptions of our imperfectly evolved human minds.

Herein lies the significance and value to Theosophists of the traditional words that have come down through the centuries in the schools of Theosophy: "Iti maya srutam" — "Thus have I heard"; with the added implication: " — and thus only do I pass it on." Here we have the surest of all safeguards to the preservation of the teachings: not in the mere formal utterance of words, of course, but in the traditional attitude of mind and heart which gives us, first, in all our studies, an intentness upon the true import of the teachings; and then, the same high quality of intellectual honesty in giving them forth again.

There is profound interest attaching to this tradition of the passing on of the teachings. It takes us back through the ages to the half-forgotten days of the Mystery-Schools, and farther back to that period in Atlantis when the Mystery-Schools had their beginnings; and beyond these again to the Divine Instructors of the later Third Root-Race, when they first entrusted to mankind

the treasures of divine wisdom. Through such a lapse of time the Ancient Wisdom has been passed down from teacher to pupil, from elder to younger, with such integrity that we have it now, today, as pure and fresh as when the gods first sent it forth. *We* are the beneficiaries of this long, long labor of fidelity; we are the generation whose turn it is now to preserve and pass on the sacred heritage.

The Theosophical Forum

OUR MIRRORS — I. R. P.

When the pessimist says "many despair of the race because they know little of it save what they see in their mirrors," his ignorance would seem self-acknowledged; for did we really understand our mirrored reflection the keys to all wisdom and progress would be ours.

To any study of man, Theosophy contributes what the x-ray brings to the specialist's diagnosis of physical imperfection. It teaches that in totality our mirrors reflect a sevenfold Universe, a miniature reproduction in structure, substance, functioning, vitality, and destiny, of the greater Universe in which we live and form an inseparable part. And at the very least, we see the physical and outermost garment of a composite entity marred or enhanced, as the case may be, by the impacting activity of the composite entity's present karma or life.

Even the latter mirrored reflection portrays to the discriminating eye traces of past racial characteristics discernible through the present dominant impress. In this we have definite evidence of our previous participation in differing racial experiences during past lives or incarnations.

Viewed from another aspect what we see in our mirrors is a reflection of a reflection reflected in our individual perception. In other words our conception of ourselves is the psycho-emotionally perceived human aspect of a divine prototype mirrored in reverse, a completely illusory vision save for the degree of spiritual ensoulment we have attained. For in reality the visible man is but a condensed expanse of space strewn with a handful of scattered nebulae, that combined and in vibration conveys to us the impression we classify as a human being.

Those who are becoming spiritually ensouled contact the divinity permeating their own hearts and minds and thereby recognise themselves, and all other human beings, as spiritual candidates for Godhood now serving their human apprenticeship on earth.

So comprehensive a knowledge of what we see in our mirrors with its cosmic, racial, human, physical and individual aspects, banishes crippling despair. It fills us with a compassionate understanding of human endeavor, and a creative hope in the future of humanity based on gratitude for, and trust and confidence in the universal laws of life in whose currents, whether we realize it or not, we are actively involved.

The Theosophical Forum

HOW TO BECOME AN ADEPT (1) — *E. V. Savage*

In choosing this subject, I was reminded of the old story told of Charles Darwin when he was at the height of his fame. (The same story, by the way, has been told making one or more others the hero of it!) Two boys thought they would play a practical joke on him, and they collected various parts from several different insects and small creatures and very cleverly glued them together to resemble a complete creature. They took this to the Naturalist and asked him to examine it and tell them what it was. Darwin looked at it very closely and examined it, and then asked: "Does it hop?" The boys answered: "Yes," delighted that he was falling into their trap. "Then it is most certainly a bug. Does it hum?" he asked. "Yes," said the boys. "Then it must be a humbug," answered the scientist.

TRUTH MUST BE SHARED

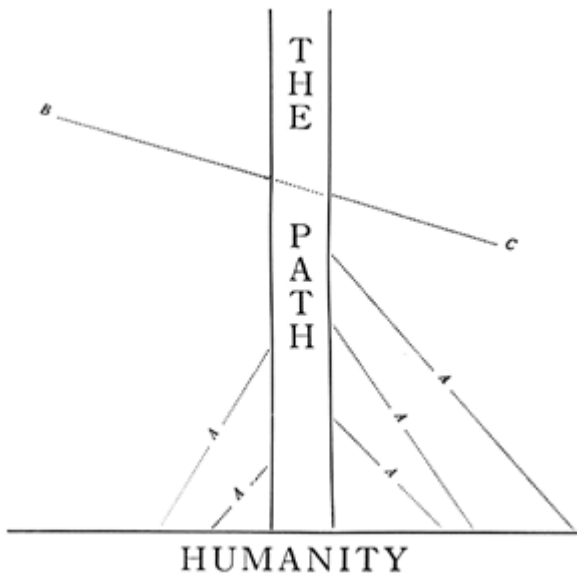

And that tale has two morals to it in the present instance. You can't fool an adept in the line in which he is skilled, and above all not in spiritual matters can you fool one "who has attained." And the second moral is that I feel somewhat of a humbug myself in trying to talk to you on such a subject. But the fact is that one does not always need to be fully skilled or adept in the things one talks about and shares with others, as long as one realizes, of course, one's shortcomings. For instance, I am no god and could not create a sunset. I am not even an artist and could not paint one. But I can call a friend from a busy day at his desk and ask him to come out and share with me the beauties of a sunset and gain inspiration from it.

So it is in the studies we pursue along the Path. We do not need to wait until we have attained Adeptship before sharing what we

have learned. The very essence of the teachings is that they must be given. They lose their true value if they are not given. For instance, the purpose of a pane of glass in a window is to be the medium through which light can come. Suppose that pane of glass decided it would no longer give the light that came to it, but would store it up for itself. Soon the many vibrations of light, and the images, etc., coming to that window would become so thick that the window would no longer be transparent, and its usefulness and very reason for existence would be destroyed.

THOSE WHO TREAD THE PATH

What is this Path that we speak of, and who tread it? We call it technically "The Path," but it could be better described perhaps as "A way of Life" or of living. Let us take a diagram to illustrate our idea, remembering of course that this is only a diagram and not an exact picture.

We have at the bottom of the diagram the large mass of humanity, good, bad, and indifferent, who for generation after generation drift and live, making little or no purposeful

evolutionary progress. But in every age there are those who feel an upward urge and start "treading the Path," or at least begin to turn their faces towards it; because there is a vast difference between yearning to lead a higher life, and actually conforming to its requirements in every particular. These who are turning their faces towards the Path are represented by the lines marked A.

There are three general classes of beings who are definitely on the Path. When a man, after many lives of sincere striving for self-improvement and self-progress — please note that I say *self*-improvement and *self*-progress — has finally succeeded in planting his feet irrevocably on the Path, he goes on and on, upward and upward, casting aside one by one the heavinesses of this earth which would drag him down. He finally reaches a state of unalloyed freedom and bliss, which we call Nirvana, and he no more has to worry over the problems of this earth, nor of the many souls struggling beneath him.

How does that picture appeal to you? Theosophy calls such a Nirvani a Pratyeka-Buddha. He has sought spiritual advancement for himself. There is nothing ugly or degrading about him. He is holy and spiritual. In fact many religious systems teach the beauty of such a goal. But he is spiritually selfish because he has advanced alone; not at the expense of his fellows it is true, but disregarding them and not being impeded by them or their sufferings.

The second type who travel the Path, but travel it in the opposite direction, we call Sorcerers or Black Magicians, in contradistinction to those who travel on the upward way who may be called White Magicians. As in everything else in life and the universe, there are always the opposites, such as day and night, black and white, good and evil, positive and negative. We

need not concern ourselves much with this second class today, except to point out that they do exist, and that their goal is not reached by merely a sudden step in the wrong direction, but by life after life dedicated to evil-doing, to selfishness at the expense of others and because of a love of evil. I do not believe the number of such travelers on this Path is large.

The third class are those we call the Buddhas of Compassion, who win their title because the very essence of their journey on the Path is that they shall help others. They are ready at any time to delay their own progress if they can stop to help a fellow human being; and, as beautifully expressed in *The Voice of the Silence*, they seek out him who knows still less than they, and give him hope and consolation and let him hear the Law. These we consider the greatest of all beings known to us on earth.

LET US TURN TOWARDS THE SUN

But let us consider ourselves, all of us here in this Temple, ordinary human beings. We have, let us say, become dissatisfied with merely drifting as the large mass of humanity does. We are beginning the journey on the Path. Let us turn to the diagram again. There is the Path, and below, the mass of humanity. From time to time an individual here, a body of people there, feel an urge to hasten their evolution. On the diagram the lines marked A all converge on to the Path itself. But all too often our aspirations do not lead us immediately in the right direction. We wander around vaguely, searching and seeking (I was unable to procure the expensive cut for the diagram which would have shown this); and thereby often give the opportunity to pseudo-teachers to start their various sects and gain a following. But it is also the opportunity for a true Teacher to come among men and act as a genuine Spiritual Guide.

We have heard that it is in times of spiritual darkness that a

Teacher appears among men. True, because if all men were spiritually awakened and treading the Path, they would not be in so great a need of a Guide. On the other hand, there must be some at least who are looking towards the Path, searching for wisdom; because only when a Call is made can a Teacher respond. What happens? He finds truth-seekers, searching sometimes in vain for the true Path. He comes among them, if he is of the Order of the Buddhas of Compassion, because he forgets his own self-advancement and lives only to help others.

So the Teacher appears (at the point marked *C* in the diagram let us say,) to lead men back to the Path, and men follow him as they followed the Buddha and Jesus Christ. But in their blind eagerness, when the Teacher has gone they continue too far in the direction set (represented by the continuation of *C* marked *B*), and instead of going upward when they reach the Path, they are led astray again, until another cycle comes around, and another Teacher comes among them to turn their faces forwards to the Sun again. This shows us why it is that from age to age, although Truth is one, and all great Teachers teach that same Truth, it is necessary for the Great Lodge periodically to send out its Messengers to teach mankind.

In our yearnings towards the Path, I am reminded of a good illustration I read in H. P. Blavatsky's *The Secret Doctrine*:

the rays of the Sun, which contribute to the growth of vegetation, do not select this or that plant to shine upon. Uproot the plant and transfer it to a piece of soil where the sunbeam cannot reach it, and the latter will not follow it. So with the Atman: unless the higher Self or Ego gravitates towards its Sun — the Monad — the lower *Ego*, or *personal* Self, will have the upper hand in every case. — Vol. II, p.

It is a long and arduous journey we are undertaking. Every Teacher has warned us that it must not be viewed lightly. What shall be our equipment, our luggage so to speak? I have selected four qualities or attributes to begin this journey with. You may choose different ones. It doesn't greatly matter, as long as you feel well equipped. I have chosen Courage, Spiritual Discernment, a Sense of Humor, and Selflessness. Let us examine each of these and see in what way it will prove a useful part of our luggage.

COURAGE

I name this quality first because I believe it is the first requisite. Every student of occultism should know that a difficult task is ahead of him. It is a serious undertaking. Mistakes made on the Path are fraught with more dire consequences than those made by ordinary men. The higher you climb a ladder, the more dangerous is a fall therefrom. I would like to read part of a letter written personally by Madame Blavatsky to one who started to tread the Path. It is reprinted in *THE THEOSOPHICAL FORUM* for July, 1939:

I am always delighted to be brought into relation with a new seeker after truth, and only wish I had hours enough in the day to take each by the hand and lead him the long journey through that ends at the door of Esoteric Wisdom. But it has been decreed, from time immemorial, that each one must be his own sufficient pilot and body-guard so far as visible things are concerned. The "Kingdom of Heaven," which I need not tell you is but the dominion of man's immortal spirit over the inner force of the Universe, must be taken by violence. I am sorry to be compelled to tell you, that the prize of Wisdom and Power must be won through danger, trial, temptation, the allurements of sense and all the besetments of this world of matter which they

counterpoise, hence antagonist of spirit. Broad, smooth and flower-sprinkled is the way to the world's rewards; narrow, hard, sorrow beset the path to the Temple of Truth.

Do not take the above, pray, for literary flourishes, or an attempt to throw a mysterious coloring over our correspondence What I say is simple and naked truth. . . . Your greatest need you have yourself stated; it is *Will-Power*. There never was either Adept of White Magic, or Sorcerer of the Goetic Art without that. . . .

To help those who need it is the object of all my life and my most sacred duty.

There was a phrase that caught my fancy in an article in *The Reader's Digest* by Dorothy Canfield, entitled "We Just Live," in which, speaking of a fine old woman, she called her "a general in the army of spiritual forces." That is a good vision to hold before us. When life seems to be particularly hard and perplexing, let's picture ourselves as generals in the army of spiritual forces, and I believe our tasks will become easier.

I think that one thing that will help us to make the courageous attitude our own is to think differently about suffering. We are too accustomed to thinking of the happy life, the easy-flowing life, as the desirable one. We wish our loved ones "a happy and peaceful future." A more useful wish, I should imagine would be "May you always have courage and strength to meet what life has in store for you."

I agree with Shaw Desmond, writing in his book, *Reincarnation for Everyman*, when he speaks thus of suffering:

There is another way of looking at suffering. Suffering is a privilege reserved for those who are advancing on the

Path. It is the *power* to suffer which makes us tender to the sufferings of others and helps us to relieve those sufferings, and with them our own. — p. 168

SPIRITUAL DISCERNMENT

This is our second attribute, and I chose it because I have often thought that if some "good fairy" came along and gave me a choice of one wish to be granted, I should choose the gift of Spiritual Discrimination because it is so easy to strive vigorously towards some goal in life, and after years of futile effort find that we have been going in a wrong direction; and this is particularly important in one's relations with others, when one may, with the best intentions in the world, be "helping" a person one loves to his own detriment. But Spiritual discernment is the function of two very important parts of man's nature, his mind, *Manas*; and his spiritual nature, *Buddhi*, that part which illumines the mind and urges man to noble action. The spiritual part alone is not enough, not for functioning in this world. One of my favorite passages in *The Mahatma Letters to A. P. Sinnett* is that which tells us that

the supreme energy [of man] resides in the *Buddhi*; latent — when wedded to *Atman* alone, active and irresistible when galvanized by the *essence* of "Manas." . . . — p. 341

It is true that needful warnings must be given the student not to let his brain-mind rule him, but the urgency of these warnings has, I fear, made us sometimes lose sight of the necessity for using one's mind, and I think that perhaps nowhere as acutely as in spiritual or occult matters is keen intelligence needed. Mr. J. B. Priestley seems to recognise this when he says in his *Rain Upon Godshill* that persistence along any line of action must be coupled with intelligence, otherwise we might be persisting along stupid or wrong lines.

I would like to quote again from Madame Blavatsky's *The Secret Doctrine*, Vol. II, p. 80, to show what an important part Mind plays in man's life, (or should play!):

. . . we find primeval man, issued from the bodies of his *spiritually fireless* progenitors, described as aeriform, devoid of compactness, and MINDLESS. He had no middle principle to serve him as a medium between the *highest* and the *lowest*, the spiritual man and the physical brain, for he lacked *Manas*. The Monads which incarnated in those *empty* SHELLS, remained as unconscious as when separated from their previous incomplete forms and vehicles. There is no potentiality for creation, or self-Consciousness, in a *pure* Spirit on this our plane, unless its too homogeneous, perfect, because divine, nature is, so to say, mixed with, and strengthened by, an essence already differentiated. It is only the lower line of the Triangle — - representing the first triad that emanates from the Universal MONAD — that can furnish this needed consciousness on the plane of differentiated Nature.

However, having put up a brief for the use of our minds, I do not mean to infer that the mind is all-important. How easy it is for men to use their discriminating faculty without spiritual illumination. The great heresy of the age is separateness, and see how it manifests in all walks of life! Men are continually creating divisions. We make a distinction between the old and young, forgetting that the old can be young in spirit and the young can be old in knowledge. One hears stupid questions asked about whether women can become adepts — as if sex had anything to do with spiritual development! Don't trust any religion or philosophical school which lays emphasis on sex, because it is not dealing with the higher, the lasting part of man's nature.

So greatly have we emphasized the difference between East and West that for centuries in the West, the East was looked down upon as being beneath us on all lines of progress. Then in revolt against this narrow-minded view, people began looking towards the East as though everything that came from there was an embodiment of wisdom, and the itinerant yogis and swamis reaped a rich harvest.

But perhaps the most insidious of divisions men make is in their religion. What should be the highest and most unifying force in men's lives is all too often used to make the greatest breaches among them. I have even heard people divide mankind into Theosophists and non-Theosophists and ask: "Can a Christian travel the Path, or must he become a Theosophist to do so?" Here is Madame Blavatsky's definition of a Theosophist:

Any person of average intellectual capacities and a leaning towards the metaphysical; of pure, unselfish life, who finds more joy in helping his neighbor than in receiving help himself, and who is ever ready to sacrifice his own pleasure for the sake of other people; and who loves Truth, Goodness, and Wisdom for their own sake, not for the benefit they may confer — is a Theosophist.

That is a high ideal and one that few of us measure up to; but you will notice that it does not exclude believers in other forms of thought than the strictly Theosophical. It is not a sign of greatness when a man makes dividing lines in any walk of life. The younger and the more inexperienced the student, the more intolerant and exclusive he is likely to be. Who is so self-righteous as the reformed reprobate? It is an unfortunate fact that one of the first dangers on the Path that besets the student is the tendency to see others who differ from him and who perhaps have not taken the steps he has, in a bad light, and to set himself above them and to

dogmatize. The adept on the other hand, widens his sympathies.

I have tried to illustrate on the diagram the absurdity of expecting all men to follow exactly the same lines and to hold that one path only leads to Truth. The lines *A* are all running towards the path, but are also running in different *directions*. If one on the right side faces the path, and then expects a fellowman on the left side to face in the same direction as he is, he is merely directing his brother away from Truth.

As a final word on the necessity of spiritual discernment, I will call attention to two pieces of practical advice or warning given to the student by Dr. de Purucker. He says that splendid as honesty and sincerity are, they are not sufficient in themselves and can often even lead us astray, for a time at least. But honesty must be illumined by wisdom, else it often becomes harsh. And showing the need of using our intellectual, discriminative faculties, he points out that there is nothing that leads so quickly to fanaticism as *blind* faith. Certainly there is nothing that can so easily lead us into the queer by-paths of pseudo-occultism.

A SENSE OF HUMOR

I was almost tempted to put this quality first, as it is so very important, I should say a *sine qua non*, and in fact embraces a multitude of virtues, pre-eminently common-sense, and a sense of proportion, of the fitness of things — indispensable qualities. Keeping our feet firmly planted on earth, we can let our vision and inspirations soar to the farthest star. Also, to make of spiritual endeavor a lugubrious affair does not encourage mankind to travel the Path with us; but a true sense of humor does prevent our doing some of the ludicrous things that the uninitiated think are necessary to become adepts.

A sense of humor prevents us from having too magnified an idea

of ourselves, but it also prevents our having that equally grave fault, an inferiority complex. One is as bad as the other. In a machine, for instance, if one necessary part of the mechanism becomes swelled with its own importance, it will no longer fit, and will have to be discarded, or at least chiseled down. But if one becomes so self-centered and conscious of one's own shortcomings, that one feels like shrinking into insignificance, the likelihood is that one will no longer be large enough to fit into the mechanism of the whole, and will therefore likewise have to be replaced.

The idea is to fill sensibly and whole-heartedly whatever position life's duties have given one, and to attempt to live up to one's highest principles. But please mark that each one of us must live up to *his own* highest principles; and we should neither go through life trying to make our conduct measure up to some other person's idea of what we should do, nor should we try to make other people shape their conduct according to our pattern. Observance of this one simple rule would save a lot of needless heartache, and perhaps enable us to make much quicker progress — if that is what we are seeking!

To me one of the most fascinating aspects of the life of any great Teacher is his sense of humor and of the appropriateness of things. I should like in this connexion to recommend for reading, Edward Thompson's delightful and beautiful book *The Youngest Disciple* which gives such a wholesome and lovable picture of the Lord Buddha.

SELFLESSNESS

This fourth quality I placed last because I think it is the most difficult, because by selflessness I mean vastly more than being unselfish. Mr. Judge puts it very neatly, I think, when he says that the true selfless disciple is not even concerned about himself

being the one to render service. He is just as happy if to some other one comes the opportunity for self-sacrifice and service to the world.

I think it is appropriate to illustrate here the difference between the Buddhas of Compassion and the Pratyeka-Buddhas, in terms of their relationship to other men. The Pratyeka-Buddha follows strictly the upward path, without deviation. His course might be shown on the diagram as a spiral ascending upwards, but so small a spiral that there is no danger of its reaching beyond the confines of the Path. The Buddha of Compassion on the other hand, though firmly rooted on the Path, keeps on widening his circle of consciousness, so that it extends not only higher and higher, but also wider and wider and lower and lower, encircling within his compassionate embrace all the toiling pilgrims behind him.

That is one of the first lessons we must learn: not to exclude others, and in our realization of the faults we (hopefully) have left behind, not to dismiss from our consciousness those whom we consider (very probably mistakenly) to have evolved less than we have. In other words, we should avoid Spiritual Pride as we would the plague.

One of the finest things I have read recently along this line, was in a book-review written by H. A. Overstreet in the *New York Herald Tribune*. The book itself has nothing to do with my argument, so I will merely quote the pertinent passages from Mr. Overstreet's review. He says:

___'s tendency — like that of many another disillusioned western mind — is to go oriental. The oriental way, however, is always easy because it does not involve relationships to other people. It asks only for a sustained occupation with one's inner powers. One may well doubt,

however, whether our human evolution is to be accomplished by an absorbed occupation with our own consciousness. It seems far more likely that the way of evolutionary advance is that of losing oneself; in short, of caring so much about other people that one's ego, unwatched, redeems itself from egocentricity.

___'s book is a fascinating and instructive account of man's efforts to storm the citadel of his mind. It is highly probable, however, that this is not the way the mind is to be released. For the point is that the mind, to release itself, must forget itself. It must aim not at its own expansion, but at the expansion of life around it. Meditation is good, but better than meditation is active love of one's fellows.

And Mr. J. B. Priestley states somewhat the same idea more succinctly in his *Rain Upon Godshill*: "Nobody ever saved his soul by perpetually worrying about it."

In the foregoing I have attempted to show that the way to adeptship is not essentially following some course of instruction *given to us*, but it is living one's own life and conquering one's own faults — in other world *self-discipline* from beginning to end. And whatever part outward observances or initiatory rites play in it, they are not the essence of what is needed. But equipped with the virtues I have mentioned, when we have taken full possession of them, many other virtues will have been added unto them, and our circle of consciousness will be so enlarged that we will truly have "set our feet upon the Path." It is a slow journey, and it is difficult; but with courage that admits of no discouragement, with keen intellect illumined by the spiritual light above, a sense of humor that keeps us traveling the Middle Way, and with a selflessness that is devoid of Spiritual Pride, we are bound to succeed.

The Theosophical Forum

A CHURCH DILEMMA — *P. A. Malpas*

Four years ago the Archbishop of Canterbury, Primate of the Church of England, set up an inquiry into "spiritualism." The Committee of twelve reported a year ago, but until now, the report has not been published.

An English Psychic Journal says that nine of the more influential members of the Committee reported that "spiritualism is true." In reply, Lambeth Palace issued a statement that this is "unauthorised and inaccurate." Also that "it is not proposed to publish the report at present, as further investigation is required."

It is a strange dilemma, the only escape from the horns of which is through Theosophy.

Elsewhere a very able writer, very positive and convincing, tells the world, and especially the military world, that "there is no death." He has *proof*, he says, consisting of the usual psychic manifestations. But these proofs are very unsatisfactory, since they make out that the "dead" are rather less intelligent than the very average man, though capable of certain psychic faculties which seem wonderful simply because we are not accustomed to them; in themselves they are of no ascertainable value at all.

The greatest difficulty appears to be that some people report phenomena of a certain class, and others do not believe these phenomena occur. Those who experience them give an explanation which is obvious to themselves, but discourages belief on the part of others who are more reasoning than psychic, more intellectual than emotional or sentimental. And sentiment plays a great part in the matter.

A very fair statement of the case that will please few is that the phenomena are seen and heard, but that the explanations of them are very wide of the mark.

A person is seen or heard, so it is thought, and the mere sight or statement is accepted without question. But if a mischievous schoolboy telephoned in his best mimicked voice that he was the one now dead, people would not invariably accept that as proof of his statement. Nor if he could imitate the figure or reproduce the thoughts of the dead person would it be any proof at all that he is the dead person. If one thing is certain it is that these psychic appearances, etc., have, in general, a rooted faculty for imitation. Why, is a question well answered in the older Theosophical literature.

One who can coolly analyse the phenomena is struck by the fact that in practically no case has any information been given which is of the slightest use or more than can be learned among living men. It is a fact that a "spirit" once stated the "truth of reincarnation," to use as loose a phrase as the one we started with in our quotation about spiritualism, but nobody seems to have paid much attention — it was not orthodox, perhaps. It was certainly exceptional.

Why not accept the obvious deduction from this and say that the so-called spirits are in no way higher than or superior to ordinary living men, that is, that they are not "spiritual," but psychic, and no more.

There are people whose sentimental nature is tremendously attracted by the mortal remains of their beloved dead. But most realize that the body is *not* the dead friend or relative, and are very content to let it disintegrate.

Would anyone like to have his thoughts immortalized? I think

not. Why not let them die, too, and disintegrate? Why not, as the next step, let the psychic nature die and be purified in nature's way? The *man* is more than all these. Let him rest, so far as he needs rest and as long as he needs rest. But that higher and highest part of him that is above even the need of rest, let it seek its own place so long as it will.

Can anyone imagine the *man* trying to come back to communicate with the, to it, childish brains it left behind? I cannot. But I can imagine the *man* in his own sphere of consciousness, free from earthly psychism — earthly, sensual, *devilish*, as an old Christian in the Bible calls it — saying, "Let those who love me come to me, when they are asleep, perhaps. Then let them take back what they can to their brains and bodies and minds. But I want none of their earth-life *here*. Time enough when I have to go back to it. I need my rest from it first."

It all seems so strange, all this effort to drag a man back from his happiness to our muddy world, when he is free. Is it because we are too indolent to make an effort to rise to where *he* is — not where his body is, nor his psychic cast-offs, nor his unspiritual thoughts, but where he is himself?

Meanwhile all the healthy instinct of a balanced mind rebels against these dealings with the dead, the worship of the dead, as it is called in the East.

The Churches would find new life if they could recall the old teachings on these matters in their early lodges and seek what lies above and beyond all that is material, psychic, mentally intellectual, and lead their peoples upwards instead of into the byways of the desert. Let them recognise by all means that certain phenomena do occur of a psychic sort, but let them study their old teachers and realize that these phenomena have nothing whatever to do with their beloved dead, who have gone far, far

beyond such trivialities.

There are no dead men — but they leave a lot of dead garments behind them. And the so-called dead men come back in due time to take new garments, new bodies. It is not fair to them to try to drag them down before their time, even if the efforts are so feeble that they are fruitless, except as disturbing the order of nature and her provisions for their needed rest between two lives on earth.

"Why seek ye the living among the dead?"

The Theosophical Forum

TO MAKE LIFE INTERESTING — *Leoline L. Wright*

What a life!" groans someone, tumbling out of bed on a wet Monday morning to take up again the week's relentless grind. And that, I am afraid, describes most of us.

Yet is this feeling really necessary? Life in itself of course *is* uninteresting. It's always the same thing, more or less, over and over and over again — from the stars and planets arriving on the dot at the same point in their heavenly pathways year after year through the millenniums, to the cook starting the percolator at 6.30 on every morning of the year!

Routine governs the universe. Fortunately for us too. For without almost endless repetition there could be no development, in other words no evolution. Doesn't it take any one of us a fearfully long time to learn anything? Walking, talking, controlling temper, learning to play a musical instrument — anything. So repetition and routine are facts that we have to reckon with. We cannot change the habit of the universe. But what I maintain is that there is still a whole lot we can do about it.

If you ask what that is, I reply: "By developing our occult powers." But don't let me mislead you. You may be thinking I am going to talk about the power to precipitate violets and carnations out of the atmosphere, or make an emerald turn up in the apple pie. And that would make life interesting, I admit. But the Editors would never let me get by with it.

Seriously, however, if you really were going to precipitate objects out of the ether you would have to use exactly those occult powers which every normal human being possesses in abundance. But few realize they have them because they are

seldom taught to think about and train them. They are "occult" simply because they are concealed from observation by indifference, and because their true range of use is unsuspected.

The particular powers I am referring to are three — imagination, will, and impersonal love. Can you use your imagination whenever you wish to get creative results? To write a story or give a talk, or think up the real way to help a neighbor? Is your will-power right on the job the instant you need it — to control irritation or check unkind retort? Can you look with the piercing eye of impersonal love into every situation which confronts you and determine exactly what you ought to do about it?

Let us look into life as we know it and answer these questions in the light of every-day experience. Now "creative imagination" sounds like a large term, I agree. It may suggest to you only such pictures as Beethoven working out the "Moonlight Sonata," or Turner dashing upon canvass his inspired vermilion and gold, even of someone like the late S. S. Van Dine turning out one of his bestsellers. Strange, how seldom it occurs to anyone that life itself is the highest art of them all.

If we could only bring ourselves to realize that the principles of creative imagination can consciously be applied to marriage, parenthood, a business or professional career, there would be fewer failures. A human being has the powers within himself to take the most commonplace events of daily life — in the office, the schoolroom, the nursery, or the kitchen — and make each one of them a creative masterpiece. Perhaps it is neglect of this power in the home that sends children so often to the moving pictures.

But you must first *want* to do this. "Back of will stands desire," as the Sages tell us. And you must believe in your Divine Self and its creative powers. Are we not children of Buddhi-Manas? Within our own higher principles reside the germs of all the creative

ideas and the power and glory of the unfathomable cosmos.

Think about this just before you sleep. *Think about it.* Train yourself to remember it the instant you wake in the morning. Rouse yourself to it before the groan and the gloom can get busy. Call at once upon the god within you to inspire you to create a happy day. You will have to use your will-power to accomplish it. This tiresome personality of ours takes more pleasure, seemingly, in being miserable than in standing up to things. It is far more dramatic to feel oneself unhappy and thwarted. It gives a chance to comfort our weaknesses with self-pity, the most destructive of all human qualities.

So let us gird ourselves and call upon the spiritual will. A mere sentimental desire will not do the work. It must be purposeful, determined, and continuous effort. If we will begin like this and keep it up day after day (repetition again, you see), our very cells will begin to change. We shall be transforming the life-atoms of our brains and nervous systems — so often drugged with the poison of egotism and self-pity — by using the electric, actually the *fohatic*, currents stepped down to us by our higher principles from the creative inner spheres.

If John Everyman will carry into his office work this creative use of his imagination, aided by a determined will purified by the power of impersonal love, surprising results will follow. By impersonal love is meant that kind of interest in others which puts their welfare before his own. This may sound to him impractical as applied in a business office. But has he really tried it? If he does, it can be confidently predicted that this attitude will open up within him all sorts of new channels of service. These will include inspired suggestions, new ideas for his own job, such as increasing his power of initiative and invention. For it is the Buddhic quality of universal intelligence within ourselves from

which all inspiration flows. And Buddhi cannot register in a mind always constricted within its own selfish personal limits.

His standing as a human being will now go up about 75% with his office team mates. For he will be giving constructive sympathy instead of criticism or sentimentality. He will be a living example of fair play and helpful suggestion. And he will meet unfair criticism of himself either with goodnatured silence or some kindly impersonal response, even perhaps a touch of disarming humor at his own expense.

When in turn we consider mothers and school teachers, doctors and nurses, school principals and business executives, or any other career that might be suggested, we have only to apply creative imagination to realize how these occult powers of ours can be applied. Especially in the home life are these powers invincible.

In conclusion, to the many who sincerely aspire to the ultimate goal of direct chelaship under the Mahatmans another thought should occur. It is not, we can feel sure, until the daily problems of our own individual cosmos have been tackled and completely mastered that Karman will call us to higher and wider fields of action. By developing today in our own environment the creative vision and a will purified by the understanding love that gives all and demands for itself nothing, we are taking the first step towards that desired goal. It will call out, strengthen and develop for practical use, every occult faculty of our being. Will it not then serve to make life, for the first time, supremely interesting?

THE TIBETAN BUDDHIST TRADITION — *C. J. Ryan*

In regard to the work *Peaks and Lamas* (1) we agree with Dr Coomaraswamy's appreciation in *Asia* magazine that this:

is one of those very rare books which it is impossible to overpraise. This is we feel, the book with which every student of Tibet and of Mahayana Buddhism should prepare himself and over and above this it is altogether pertinent to the consideration of the tragic problems with which humanity is faced at the present day, as well in Europe as in Asia.

We would add that to the student of Theosophy it is especially valuable for its confirmation by an unprejudiced and keen observer of the favorable impression of the majority of the people of Tibet and neighborhood given by H P Blavatsky and her Indian Masters as well as by Theosophical scholars like Dr W. Y. Evans-Wentz, and other writers and travelers whose firsthand knowledge of Tibet qualifies them to speak.

Mr Marco Pallis, the author, leader of an English mountain climbing party, came in 1933 into close and friendly contact with certain lamas while he was conducting an expedition to scale the highest peaks of the Ganges-Satlej watershed on the border of Tibet. At Lachhen in Sikkim he received valuable preliminary instruction from a lama-anchorite who seems to be the one mentioned with great respect by Mme David-Neel in her *Magic and Mystery in Tibet*. Not being able to penetrate into Tibet proper, but seeking more wisdom, Mr. Pallis was advised to travel to the western border of Tibet where later he continued his studies of Tibetan Buddhism under several learned and spiritual-minded lamas.

For some readers his detailed accounts of ascents of the great Himalayan peaks will be the most interesting parts of the book, while others will be attracted by the word-paintings of the sublime mountain and forest scenery. Everyone will enjoy his delightful sketches or studies of the people he met, including high and really holy lamas and hermits as well as distinctly inferior ones, down to the simple peasants and the porters in his expedition. His humor is conspicuous but it never transcends the bounds of kindness and good taste. In return for the friendliness and consideration shown to all by Mr. Pallis and his associates they received an equal if not greater return in kind. He was so happy as a guest in one monastery in Ladak that he writes under its photograph "If I forget thee, O Jerusalem!" And this reminds us that we must not forget to mention the magnificent and unusual series of photographs of scenery, temples and monasteries, symbolic and other works of art, and interesting people.

During the last few years a number of valuable books about Tibet have appeared, such as Professor Roerich's *Shamballa*, F. S. Chapman's *Lhasa: the Holy City*, T. Bernard's *The Penthouse of the Gods*, Dr. W. Y. Evans-Wentz's and Madame David-Neels scholarly works, and others; all of which treat Tibetan religion and the Tibetans from a thoroughly sympathetic point of view. These books have removed much Western prejudice founded on ignorance. Mr. Pallis, tired of being a mere observer, adopted the costume, food, ways of living and, as far as possible, the mentality of the people of the Tibetan borderland, and was thereby able to make close personal and especially spiritual association with them. His tribute to the Tibetan character in general is high. Honesty, goodnature, and cheerfulness in adversity as well as prosperity, tolerance, politeness, and the absence of servile manners became more conspicuous as he approached the Tibetan border. He quotes the well-known French observer, Professor

Jacques Bacot:

The Tibetans impress one at once by the dignity of their persons. . . . The Tibetans are not barbarous, not uncultivated; nor for that matter is their country. Under their rough hide they conceal refinements that we lack, much courtesy and philosophy, and the need for beautifying common things, be it a tent, a knife or a stirrup. . . . Moreover they are gay, these Tibetans, and happy as is not the case elsewhere today, more so than our wretched workers in their wretched factories. . . . The more densely the country is populated, the tamer is the wild game¹. The Tibetans have long since lost the taste for killing which we still keep. . . . I love their companionship during the long rides, for they are taciturn, or else they only speak with good sense, originality, and a taste for speculative things.

Kindness to animals is the rule, though the blind and literal following of the injunction to avoid hurting living creatures often leads to unintentional cruelty when an injured or sick animal is allowed to suffer. While many "superstitions" are rampant, such as the fear of demons and the widespread belief in charms and the like, Mr. Pallis points out that with Tibetans superstition does not lead to such horrors as the burning of witches, and he absolutely denies that superstition has replaced religion. He found that "the Doctrine had left its mark deeply even on simple inarticulate souls." In regard to the charge of lack of cleanliness, which, he says, "is a great standby of a certain class of lecturer or writer, when they can find nothing else to say about the people whose hospitality they have enjoyed," he claims that it is greatly exaggerated. He quotes impartial travelers who make no special complaints. The long bitter winters do not encourage indulgence

in cold baths and fuel is scarce. Taking one thing with another, he calls the inhabitants of the Buddhist lands where he traveled, "one of the earth's most civilized peoples." Mme Alexandra David-Neel, the famous Orientalist and traveler, agrees with this. Writing in her *Magic and Mystery in Tibet*, she says: "I had vaguely imagined that beyond the Himalayas the country would become wild, but now I was beginning to realize that on the contrary I was coming into contact with a truly civilized people." Mr. Pallis often "had to whet his intellect to its keenest edge, trying to keep pace with the descant of some contemplative recluse upon a theme of pure metaphysic," after having exchanged elegant and truly expressive courtesies. He found a profound respect for learning ingrained in the average Tibetan: can we say this of the West?

In view of such tributes by Mr. Pallis and the other authorities it is interesting to note the opinion of a still more competent observer, who resides in Tibet but who is also not a Tibetan. We refer to the Mahatman Koot Hoomi who wrote: "For ages has been Tibet the last corner of the globe not so entirely corrupted as to preclude the mingling together of the two atmospheres — the physical and the spiritual." He adds that the Tibetans are a moral, pure-hearted, simple people, untainted with the vices of "civilization." (See *The Mahatma Letters to A. P. Sinnett*, p. 434.)

To the Theosophical or other student who is looking for more important spiritual values than are contained in the mere technical study of "comparative religion" the main interest of this work will be the admirable exposition of the deeper meaning of Tibetan Buddhism which the author acquired under unusually favorable conditions after he abandoned the rarefied air of the snow peaks to seek the more rarefied heights of the spirit.

Mr. Pallis warns us against "the grotesque travesties of doctrines

and customs with which certain persons with obvious axes to grind try to saddle the thinkers of India and Tibet." He strongly protests against the narrowness of too many well-meaning western missionaries in the Orient "whose consciousness of their own righteousness" and of the defects of the "heathen" is still very marked. He contrasts it with the open-minded spirit of the lamas and their followers in general. When he commented on this to Tibetans they told him "we are taught that it is a sin to speak disrespectfully of other religions or to treat their ministers in unfriendly fashion." This is, of course, nothing new. H. P. Blavatsky mentions it in her article "Lamas and Druses" in *The Complete Works of H. P. Blavatsky*, Volume III, where she describes the respect shown by the Tibetans to other religions and their representatives. She compares the refined courtesy extended by a very high lama at Kum-Bum to the Abbe Hue and his colleague about a hundred years ago, with the gross impoliteness of the "lamas of Jehovah," as they called themselves, to the Tibetan prelate, "a poor heathen." The Abbe describes the unbecoming incident without a qualm, in his *Journey through Tartary, Tibet and China*.

While Mr. Pallis believes that Christianity has been one of the great "Traditional" (2) avenues for the transmission of the True Doctrine and that the ethics of the Sermon on the Mount and that of the Buddha in the Deer Park are practically the same, he claims that his "meetings with a good many missionaries and the perusal of their literature have led me to the opinion that, on the whole, their activities are disruptive and their methods open to severe criticism."

In saying this Mr. Pallis is not condemning the Christian "Tradition." On the contrary, he devotes many pages to the demonstration of its fundamental identity with the Tibetan Buddhist "Tradition," though outward forms differ in many

points. In support of this, he quotes passages from medieval orthodox Christian writers which might be taken from the Tibetan Canon. He claims, as does the Theosophist, that all authentic "Traditions" are united by their "Note" of universality, though it has been trammelled more severely in the West by dualistic and "warlike" mentality than in India, China or Tibet. He shows that even the Doctrine of the "Void" or *Nirvana* was definitely taught in the fourteenth century by the English Benedictine monk, Father Augustine Baker, but he rather drily remarks that today it would be more intelligible to a Tibetan lama than to the monk's modern Western countrymen!

The "Void" is actual "Knowledge," Reality; to us it may appear to be empty because it transcends the capacity of our ordinary consciousness. But this Reality may be reached through the illumination obtained by initiation. The Gnostics called it the *Pleroma* or Fulness. Father Baker evidently realized this when he wrote, as quoted by Mr. Pallis:

The nought . . . is God, to whom the soul may be united when she is nowhere bodily, nor hath in her any image of creatures. And when she is nowhere bodily then she is everywhere spiritually; and being in such condition she is fit to be united with the said nothing, which also is in all places . . . our inner man calls it All. . . .

The "Knowledge" mentioned as the Reality is, as Mr. Pallis points out, superior to Reason. It is the fruit of direct intuitive experience, which is not so much a thing acquired by accretion; rather it is a thing already there from the moment that the obstacles to its realization have ceased to be. Our whole problem is, How shall we clear away the obstacles?

Many true followers of the Lord Buddha employ certain ascetic measures for inner development, but the object of these exercises

is not personal salvation *per se* in its ordinary Western meaning. Nor is it, as mistakenly thought by some, the cultivation of psychic powers or occult arts. The wise disciple seeks the power to rise above personal limitations to the high and serene state of Liberation from which poor ignorant, suffering humanity may be effectively helped. Before you can save others you must have freed yourself from the chains of the lower self. Mr. Pallis says that the spiritually high lamas he met — and there were not a few — were hardworking practical helpers of their people who only retired at times to their solitary hermitages to seek further inner growth in wisdom. Of course there were others whose apparent devotion was merely lip-service for worldly ends, and whose monasteries were ill conducted. He frankly describes such cases, but he did not see many. Mr. Pallis gives many pages to the interpretation of the well-known Buddhist Wheel or Round of Life found in every Buddhist Temple, which he learned from his lama teachers. The study of the Wheel is very desirable in order to understand the meaning of Liberation. Under a quaint but expressive symbolism the divisions of the Wheel represent the processes which "gods," "demons," men, and even animals, have to go through while they are bound by illusion. Its "hells" and "heavens" are here and now, and the Agent which keeps this Wheel of Fortune is Karman. (We note that the Sanskrit word *Karman* is spelt thus in this scholarly though not pedantic work.) The only remedy for the ills caused by seeking happiness in the impermanent and mocking region of Desire is true Knowledge, which of course includes Compassion.

Mr. Pallis, at his first contact with Tibetans and lamas of the Tibetan borderland, found that he "had stepped right out of the circle of influences that had enclosed our lives hitherto," and the lively temperament, bodily vigor, and kindly serenity of spirit of those he met induced him seriously to study the teachings which

were able to produce such results. He found that the lives of the people in general have been powerfully influenced by the sublime teaching of the Great Renunciation, the refusal of the bliss of *Nirvana*, exemplified in Tibetan Buddhism by the self-sacrifice of (among others) the Bodhisattva Chenrezi (Avalokitesvara in India), "the Good Shepherd, the Savior, sinless and all-knowing who offers himself for the Universe in the supreme sacrifice of redemptive love."

Deeply impressed by one of the first lamas he met, and referring to the power of Compassion which he radiated, Mr. Pallis writes:

Our lama's love possessed a note of serenity which seemed to distinguish it from the similarly-named but usually more passionately expressed virtue found among Europeans. I do not believe that this Compassion, said by some to be special to Buddhism, really differs in essence from Christian Charity; but it is . . . *consciously linked with a certain intellectual concept, of which it is the corollary — a recognition of the relations which exist between all creatures, including man, based on an insight into the true nature of the Universe, and not dependent on a vague emotional appeal.* (Italics ours.)

This eternal virtue, Compassion, then, is not an emotional byproduct but is closely linked (or identical) with a scientific understanding of the universe. It is one of the most important teachings of Theosophy that ethics and morality cannot be divorced from other expressions of natural law, because the Kosmos is fundamentally a unity, and as Dr. de Purucker says, "Love is the cement of the universe." Mr. Pallis points out that loving impulses are less likely to be upset by a swing of the emotional pendulum when they are firmly linked with definite ideas. We may rejoice that he is able to show the world that these

Theosophical principles are being taught by the lamas.

Mr. Pallis records a rich harvest of teaching he derived from the spiritually and intellectually qualified lamas under whom he studied. It includes difficult problems such as the true nature of man, of gods and of demons, asceticism, "idol" worship, Karma and Reincarnation, the difference between Knowledge and Reason, the perilous Short or Direct Path of initiation or Liberation, and many other cognate subjects. Whenever he asked for the best way to find the Path, the answer never varied — the first thing of all is to find a Teacher. He was warned that though certain Western translations from the Sanskrit are said to contain "practical methods" for seekers toward Enlightenment, any attempt to apply those methods without the watchful guidance of a real Teacher, an adept, is more than foolish, it is dangerous in the extreme. Even in the purely intellectual study of abstruse and condensed doctrinal texts many a Western savant presumes to pass judgments and to write commentaries, though he is ignorant of the vast amount of detail which is left to be filled in by the word of mouth of the Teacher. This is precisely what Col. H. S. Olcott, under H. P. Blavatsky's inspiration, brought to the attention of Professor Max Muller, the great Sanskritist, when he denied that within the outer meaning of the Hindu Scriptures lay concealed a hidden and esoteric one. Mme. David-Neel, rather better informed than Max Muller, while insisting that all the Buddhistic doctrines taught in mystic circles can be found in books, admits that in Tibet certain secret information is imparted to a few — "initiates," she calls them. But she believes that this esoteric teaching merely consists of methods of training the mind or, in lower degrees, of developing psychic or "supernormal" powers. We feel that Mr. Pallis has reached a truer understanding of the kind of "esoteric teaching" given to real disciples, such as H. P. Blavatsky received from her Tibetan Teachers, and which is

primarily spiritual and intellectual; not psychic even though occult powers may appear as by-products. She was allowed to give out a few of the hitherto secret teachings in her *The Secret Doctrine*. Theosophical students of the Hindu sacred literature or the Tibetan Buddhist writings such as the series translated by the Lama Kazi Dawa Samdup and annotated by Dr. W. Y. Evans-Wentz, can see far deeper meanings in such writings than the learned scholars who ignore the key of interpretation she brought from the East.

Considerable misunderstanding has prevailed about certain aspects of Tibetan Buddhist art works, and Mr. Pallis makes praiseworthy efforts to help us understand what the lama artists meant to convey. Everyone knows that the subjects represented in Tibetan religious art are marked by a strong duality. One moiety consists largely of serene and gracious Beings sitting on lotus pedestals in dignified attitudes, the other displays numerous frightful apparitions frenziedly dancing on or torturing men and even animals. The Western traveler or observer of museum pieces who may only be acquainted with medieval pictures of saints and prophets might interpret the Tibetan benign divinities with some approach to accuracy, but, with his recollection of the medieval pictures of Satan and his imps, he would probably misunderstand the symbolism of the Buddhist forms of horror and imagine that the Tibetans worshiped devils and offered sacrifices to them! Mr. Pallis redeems the reputation of the Oriental philosophers and artists by lucidly explaining the significance of this symbolic Duality.

Much confusion has also arisen in regard to the so-called Tibetan "Devil-Dances," and this is explained. These performances are not entertainment in the ordinary sense, but they are ceremonial dramatizations of religious themes of profound significance to the devout onlookers; in fact they are true Mystery Plays. Mr. Pallis

speaks with deep admiration for the beauty and magnificence of some of these spectacles. Very few foreigners have seen them.

The author also discusses the alleged objectionable nature of a certain class of paintings of deities which are seldom shown to travelers. He explains that they are merely symbolic, which is no doubt correct, and that their philosophic meaning is pure and profound; but, to speak plainly, we feel that although in the Orient, as in antiquity, the creative aspect of nature is frankly recognised and treated in art without Occidental reserve, yet far too much emphasis has been placed in the East on its emblems. According to Theosophy, sex is merely a temporary expression of Duality, and its symbolism, however pure and philosophic in intent, is liable to serious abuse. Without defending a false prudery we may well protest against the cruder developments in India, and to a lesser degree perhaps in Tibet, of such pictorial or sculptural symbolism of metaphysical concepts. We deny that they have any place in the presentations of the pure teachings of Buddhism. They are seemingly relics of the dark Bonpa magic and the dangerous worship of nature spirits, which is said to have come from ancient Chaldaea and originally from degenerating Atlantis. Mr. Pallis says that the adherents of the old Bonpa Tradition are still feared for their skill in sorcery, but he charitably suggests that "from all accounts they are really harmless enough people." Maybe, but other writers think differently.

In regard to magic, black or white, the phenomenon-hunter will find little to gratify his curiosity in this book. The author was too deeply absorbed in real occultism as we understand it, spiritual wisdom, to spend precious time on side-issues. But his references to Mme. David-Neel's experiences, especially with *Tummo*, the occult art of keeping oneself warm and comfortable without fuel or winter clothing in the bitterest cold of the ice caves or the

frozen wastes, which she studied successfully, and his remarks about the magical doings of the great Tibetan ascetic and poet Mila Repa, show that he does not avoid the subject through ignorance. Moreover, he gives three pages to the mystical subject of the *Tulkus*, or Incarnations of Heavenly Beings or other Saintly Personages in human personalities which in some cases, such as that of certain Avatars, like Jesus, are acts of White Magic. Mr. Pallis was puzzled by accounts of *Tulkus* who do not at all times act up to their high reputation; but this is not strange when we learn that the incarnating soul of a superior being, or in some instances a projected Ray, is not always "on deck," as it were, in its chosen physical vehicle. It may withdraw for a while, or even permanently.

There has been considerable misunderstanding in the West about the supposed "sacrifices" made by Tibetan lamas or yogis who retire for long or short periods to mountain retreats. Mr. Pallis explains from personal observation that the Buddhist conception of asceticism is very different from that of the early Christian anchorites who fled from the temptations of the world to the Egyptian deserts in order to save their own souls from eternal destruction. He says:

There is no idea of mortifying the flesh by painful austerities. The Buddha formally condemned the extremes both of luxury and self-torture. . . . Nothing which is calculated to damage health is encouraged, for with impaired health must come deterioration of mental powers which is an obstacle in the pursuit of Knowledge.

Each monastery (*Gompa*) owns a number of solitary retreats or cells for meditation and inner development free from distraction. No one is expected to intrude during the period of seclusion, be it long or short, but any suggestion of imprisonment or compulsion

would be ridiculous. Mr. Pallis corroborates Mme. David-Neel's experiences among the genuine ascetics. They do not suffer from the absence of social intercourse during their retreats. Their days are occupied by methodical exercises in spiritual training, meditation on profound philosophical problems, and efforts to reach higher states of consciousness. Passionately interested in these strenuous investigations and introspections, they are too busy to notice their isolation. Members of the Kargyiitpa Order, who follow the teachings of Mila Repa, sometimes withdraw into icy glacier caves in the high mountain solitudes where a cotton cloth is their only garment! They keep warm by the occult process of Tummo already mentioned. But the general practice is to make retreats under sufficiently comfortable conditions.

The author deals with many highly interesting and instructive matters which cannot even be mentioned, and in every case he throws light on his subject. His point of view is original, and even in the rare cases where we may not agree with him, his conclusions demand careful consideration. He has no hesitation in discussing difficult problems, such as the disputed question of the Tantras, which are so frequently confused with the archaic Bon black magic, yet which did not fall into disrepute until about 400 years ago. In regard to the problem of the Tibetan Deities he has much to say of great interest. Do the instructed lamas believe them to be real Divine Personages or merely metaphorical abstractions? Apparently neither, or both! He quotes the great fourteenth century Adept and Reformer, Tsong-kha-pa, to the effect that from the standpoint of the consciousness which lives in the region of "name and form," to use the technical expression, the conventional Deities do exist, but to the fully Enlightened who understand "Reality" they "simply are not."

But we must not take the words "are not" too literally. A clue to the deeper meaning may be found in *The Secret Doctrine* (I, 128-

32, etc.) where the *Lipika*, the Recorders or Agents of Karman, are discussed. Mr. Pallis shows that the Tibetan Judge of the Dead, Shindje, is Karman itself, the law of cause and effect, from which none can escape. Karman is real enough! It is reassuring to find that Mr. Pallis was protected by his lama teachers from falling into the common error of regarding Karman as merely retribution for evil doing. He explains that it is not a process of reward or punishment in the ordinary meaning of those words; it is simply *inexorable justice* which returns to you exactly what you have called for by your thoughts and deeds, be it pleasant or otherwise. Like other laws of this orderly universe it can be absolutely relied upon. To the evil-doers Shindje, the Karmic Judge of the Dead, is naturally a terrible monster, and in order to warn them while there is time to repent he is depicted as such.

The latter part of this illuminating book deals with the present conditions and the dangers threatening the culture of the lands in which the Tibetan Buddhist "Tradition" still holds its own. Mr. Pallis discusses these profoundly important problems with a breadth of outlook and a sympathetic insight rare indeed in a Western writer. "Advanced" social and educational reformers, so-called, will find much that is new to them and much instruction on lines unfamiliar in the West, presented temperately but convincingly.

Among many cultural phases of the Buddhist "Tradition" discussed, but which we have no room to do more than mention, interesting and important though they be, are vegetarianism, non-resistance, war, education and the meaning of "progress," crime and punishment, the social conditions and family life, and many others, all of which supply a solid foundation for judgment.

Mr. Pallis eloquently sets forth the high standard of the "Traditional" arts, music, architecture, painting, handwoven

textiles and so forth. He greatly dreads the mechanistic commercial irruptions which seriously threaten to injure or destroy the creative inspiration which has developed these fine results. As one example; the native paints with their harmonious colors are being replaced here and there by cruder (and cheaper) commercial importations, and in consequence the appreciation of subtil shades of color is already beginning to degenerate.

In regard to the knowledge of Man, the Buddhist Tradition has much to teach us, as Mr. Pallis quickly found. Our Western scientists, by hard work directed on materialistic lines mostly, have discovered worthwhile information about the brain and its mechanisms, and have developed some rudimentary theories of psychology, a science admittedly in its early infancy. All this from external observation. By harder work and at enormous sacrifice in another direction — mostly internal observation — generations untold of Oriental researchers have discovered an infinitely larger field of study in man's consciousness and have reduced it to an exact science. Their science has a high moral and spiritual background and aim, which unfortunately ours disregards as of no practical significance. But they get results which the world cannot afford to lose!

The respect for learning is ingrained even among the illiterate, but the learning must have a spiritual motive or background. Mr. Pallis is firmly convinced that the isolation of Tibet has been no misfortune. It has enabled a considerable vestige of the finer atmosphere of the ancient world to survive, a spirit which the West has lost in its competitive race for materialistic commercial domination and in its worship of the Western god of inventive science. He feels that the Tibetans and their neighbors hold something spiritually and intellectually precious in their keeping, and that if they can realize the importance of their trust and preserve it from contamination, it may become the expanding

focus from which the Oriental "Tradition" in its purity will spread widely over the earth. But if this fails, he believes, the world may drift into sheer opportunism, out of which it will take almost superhuman efforts to rise. He frankly admits that he would like to reincarnate in Tibet *if it remains Tibet* and refuses to become a slavish copy of the meretricious civilization of the West!

FOOTNOTES:

1. *Peaks and Lamas*, by Marco Pallis Alfred Knopf, New York 99 illustrations and maps. 428 pp. \$5. 00 ([return to text](#))

2. He employs the word "Tradition" to convey the idea of something wider than any closed system of religion or philosophy. Though it includes religion and philosophy "Tradition" embraces a characteristic culture or mode of life, ethical, social and cultural in general, for which such antitheses as "sacred and profane" are meaningless. He prefers to use "the Tibetan Buddhist Tradition" as being more expressive than "Lamaism" which is misleading as well as offensive in its implications. ([return to text](#))

The Theosophical Forum

LIKE AND UNLIKE — *H. T. Edge*

It is said that "like attracts like," and also that like repels like. Instances of both are found in science: if a solution of two or three different salts, is left to crystallize, the particles of each salt will congregate together. On the other hand, the like poles of a magnet will repel each other.

The trouble arises from the use of an undefined word, the word "like." A woman is like a man in the sense that both are human as contrasted with animal or vegetable. But if we are thinking of humanity alone, we can describe the woman as a polar opposite of man. Therefore man and woman are at the same time like and unlike each other. Birds of a feather flock together, says the proverb; and that is because like attracts like; but all the same there may be a terrible scrap if two male mocking-birds should happen to meet in the mating season. This is because like repels like.

This is just one example of the way in which people arguing may get a temperature, all because they are using undefined words, or students may find what they call contradictions in teachings. We have to learn to think in thoughts, not in words; and to detach words from ideas; also not to let ourselves be hypnotized by proverbial expressions.

JUSTICE RULES — *Helen G. Steward*

Nothing "just happens." If things just happened there would be no system of planets. Everything would be a jumble; there would be no order, no system anywhere; because what holds good in one place, as far as cosmic law is concerned, holds good in all places. Chaos, destruction, death would be the rule if things "just happened."

But the truth is that all moves in a sequential, orderly manner. Nothing ever really dies, nothing is lost. Everything, everywhere, is balanced. Action and reaction are equal and opposite. Let us remember that the aggressor of today is but the defender of yester-year. Old scores, old hates, old debts must be met, must be balanced, if not in this life then in a succeeding earth-incarnation. Fundamentally, perfect justice rules the world. We should hold tightly in our hearts to this fundamental idea: out of the welter of seeming injustice something better, finer, nobler will be born; some thing, some lesson or lessons the world needs will be born out of the seemingly impossible situation stalking abroad today on this stage called Life.

Remember too that nothing can come to us either for good or for ill but what *is ours*: ours to be met, ours to be repaid, ours to conquer, but never ours to "get even with." "Hatred ceaseth never by hatred, hatred ceaseth by love" — uttered centuries ago is still applicable today.

QUESTIONS AND ANSWERS

How Old are the Hindu Schools of Philosophy?

Can you give me any hint as to age or time of origin of the six Darsanas or Hindu schools of philosophy? When did Kapila and Patanjali actually live? There is so much argument on these two personages and the time of their birth. — J. T.

G. de P. — You ask first about the origin and second about the various ages, of the Six Great Darsanas or Philosophic Visions, otherwise Schools of Philosophy in India; and collaterally with these you ask about the ages of their various Founders, such as Kanada, Kapila, Gotama (not the Buddha of course here), Patanjali, etc.

First, as regards the ages of the founders: The truth is that all the ages, or dates rather, given by European Orientalists are little more than speculations; they have never been proved, even though they may be generally accepted. Consequently we Theosophists refuse to accept them. They are almost invariably too late in time, too close to us. That is what I would say.

On the other hand, I would accept with much more respect a date that might be worked out as given by some eminent Hindu of old times himself. Of course I know this would be a vast work, sifting the material, and I merely mention it to show that I would prefer the Hindu tradition, as to when so-and-so lived, to the theorizings of modern Occidentalists who are all psychologized with scientific ideas of the recent development of thinking man, etc., etc.

In the old days it used to be held that the world was created only four thousand odd years ago, and this was a then Christian view;

and consequently every date had to be brought down as close to ours as they could push it. So much for the dates of the founders of these Schools. Every one of these founders was not actually a founder in the sense of starting a new School, but merely carried on, perhaps rejuvenated, perhaps modified, what already had been known for heaven knows how many ages before he lived: somewhat in the same way that H. P. B. brought the archaic Theosophy to our age and presented it in its modern form, although it is ageless as time.

This leads me to the origin of these Six Darsanas. Occidental Orientalists, as I have already pointed out, in trying to keep within the limits of their new facts, say that each such School was probably started by the philosopher named. But I have just pointed out why in actual fact this need not be so.

It is my opinion, in fact my conviction, that every one of these Six Darsanas is of enormous age. The fact that they are such natural productions of the human intellect shows that they must have occurred ages and ages and ages ago to other philosophic minds. Personally I think they run back in their reaches even to Atlantean times, not in their present presentations or forms, but I mean the philosophic ground-thoughts that these Schools respectively represent. The various so-called founders were merely more or less recent; and by that I mean long after Atlantis, but not in our time — Hindu philosophers who themselves were attracted by one or other of these Schools; and each one was so successful in interpreting and propagandizing his own particular choice or philosophic preference, that in time he became the founder of this School or that School.

For instance, take the Yoga School of Patanjali. I think that it flourished ages beyond the age of Patanjali, whenever he lived, because Yoga has been active in the thought of man's mind since

immemorial time. Patanjali did not discover it. He merely acted as I have above stated. The same with the Nyaya School of Logical Philosophy of Gotama, or the Vaiseshika, the Atomic School of Kanada. Thoughts like these must have been in the minds of men since Atlantean times. Similarly with the Vedanta, especially the Adwaita. The Adwaita form of it was magnificently presented and formulated by the great Sankaracharya, and this is just an instance in point. Some occidental scholars now call him the Founder of the Adwaita-Vedanta, as if men never had the thoughts in the Adwaita-Vedanta before Sankaracharya. He merely took this aspect of the Vedanta, and re-formed it according to the ideas of his time, and did so so wonderfully that he became known as its great Teacher. But Adwaita-Vedanta is so native to the human spirit, it must have existed for ages and ages before ever Sankaracharya was dreamed of, by the Gods that be.

As we Theosophists say, the Six Darsanas contain the six various types or methods in which human philosophy through the ages has been cast, and we unite them all in the highest or seventh, which is our own Wisdom-Religion or Theosophy — or to put it more correctly, it is from this God-Wisdom or Wisdom-Religion that all these six various Darsanas have come forth as six special presentations or six specializations of philosophy, each one along its own line, the scientific, the mystical, the logical, the scientific-mystic, the objectively idealistic, call them by what names you like.

Theosophical Interpretation of God

Please tell me, in as simple words as possible, what is the Theosophical interpretation of God?

Irene R. Ponsonby — Theosophists exalt no one god over all other gods. We believe the Universe to be composed of god-stuff — divine substance — in varying grades of evolutionary

development or self-expression. These grades form the hierarchies or kingdoms of Nature, and at the apex of each hierarchy a god or hierarch presides as the focussing and emanating center of that hierarchy for the forces pouring into it from the farther reaches of the Universe and radiating through every unit composing the hierarchy. There are, therefore, numberless gods — low, less low, intermediate, high, higher, and highest; extending to reaches the human mind cannot now conceive — each one the god for its particular sphere, a self-contained universe among countless universes in the Galaxy.

One god there is to which the Theosophist attunes his heart and mind in reverence and aspiration. This is the god of his being, his Inner God. It is the source of all the inspiration that fills his life with radiance, that sustains and vitalizes him, and is his link with the sublime realms of Life and Light beyond his present sphere of activity.

Life's Progressive Drama on Earth

If the personality is lost at death, how can we carry over what we have learned during life, and benefit by our experience?

Lydia Ross — A new personality for each incarnation is only the costume which the Real Man wears in that life's drama. Or, better say that it is his wardrobe for his whole life's dramatic career. Because each lifetime the reincarnating Ego is costumed by the different outfits of body, brains, and characteristics which are suitable for the parts of infancy, childhood, youth, manhood, and age.

The knowledge and skill which we gain in learning to walk and talk and read, etc., are used in our adult work and study. All that is gained in playing juvenile roles — both successes and failures

— go into our enlarging character and resources. It is character which counts and which prepares us for future roles in life's progressive drama on earth. No adult actor can go back, even if he would, and rebecome his juvenile self. Why should he, when all that he *has been* is merged into what he *now is*. No more can the reincarnating man — wiser for his Devachanic visions of possible ideals — be wholly limited to the outgrown stature and ideas of his by-gone personalities. Just as we leave a whole series of our childish and youthful personalities behind, as little by little we become adults, so do we leave them all for good when we die.

The great mysteries of life and death are everyday events writ large. If we know the meaning of the familiar events, we have the key to the rest. It is right that we should know. That is why we are here on earth. Truth is the natural heritage of mankind, and Theosophy shows the way to reclaim our birthright.

Beware of Labeling!

Please define for us the difference in the signification of the two words "spiritual" and "mystical" as used in the Wisdom-Religion.

H. T. E. — These words are vague in their meaning and used in different senses by different writers. I know of no standard meaning for either of them, whether taken separately or when compared and contrasted with each other. A particular writer may decide, for his particular purpose, to give definite meanings to them in his writings, and to define a distinction between them. Any decision I might make on the subject myself would be liable to contradiction by other people. We should strive to think in *ideas* rather than in words. The wish to have things neatly labeled and docketed is natural enough, but is apt to fetter the mind. When any writer on the Wisdom-Religion uses these words, it is usually easy enough to find out his meaning, and that is all that

really matters.

Reimbodiment is Nature's Law

What does the future hold for one who does not accept the Doctrine of Reincarnation?

C. Q. Wesner — There are two general classes of those who do not accept the Doctrine of Reincarnation: (1) those who hold some other theory regarding the post-mortem life, for example, the orthodox Christians, and (2) the rank materialist who believes that "when you're dead you're dead all over."

The members of the first class pass into their kama-loka. As a large percentage are really good people who live up to their ideas of a good life as best they can, they soon enter their devachan, which will correspond to their earthly pictures of Heaven. But sooner or later this state of consciousness fades and — they reincarnate.

The members of the second class, during life have built nothing into their "thought-self which can survive the dissolution of the physical body. To quote H. P. Blavatsky:

For the materialist, who, notwithstanding his materialism, was not a bad man, the interval between the two lives will be like the unbroken and placid sleep of a child, either entirely dreamless, or filled with pictures of which he will have no definite perception: . . . — *The Key to Theosophy*, pp. 161-2

Nature is no respecter of persons. Reimbodiment, being Nature's Law, applies to all beings without respecting the wishes, thoughts, or desires of anyone. Learn Nature's Laws, live in accord with them, and even while we are "bound to the wheel of Necessity," it is possible so to shape our lives — and our future destiny — that

the journey may be a joyous pilgrimage toward our spiritual goal
— self-conscious divinity.

The Theosophical Forum

THE MAIN PURPOSES OF THE T. S. — *G. de Purucker*

Why do Theosophists devote so much time and energy and intelligence to a study of recondite doctrines? What is the use of it? To be very Occidental, "does it pay?" It won't pay a particle if your mind is directed downwards. But if you are a normal human being, with normal human aspirations, and want to be more and greater than you are, if your mind is directed upwards, it will "pay" enormously. Why? I will tell you why.

The Theosophical Society was founded by the Masters of Wisdom for one purpose mainly. The secondary purpose was to give priceless comfort and help to human individuals, giving them courage and hope and a sublime objective in life. But the main purpose was to give to mankind a religio-philosophical and scientific explanation of life's riddles, based on the natural fact of Universal Brotherhood, which would bring about a moral and spiritual revolution in the world.

The Masters knew that the world was entering upon conditions which if not checked would lead us to hell, conditions spiritual and intellectual, social, political, conditions of all kinds, of which the psychical outbreaks are only symptomatic. The purpose of the Theosophical Society therefore, principally, is to establish a nucleus of a true Universal Brotherhood, and to give unto thinking men and women the reasons for this. When you can persuade men's and women's reason, and charm their hearts, you have won; and you cannot persuade thinking man that a thing is right if all his instincts rebel against it, instincts intellectual and other. So the Masters founded the Theosophical Society once more in our age in order to give anew to a very materialistic and discouraged world, the teachings of the God-Wisdom of all the

ages, man's heritage. Now understand that clearly. And we study these Theosophical doctrines so that we, becoming acquainted with them, understanding them, and ourselves persuaded by them, i. e. our minds and hearts captured by their grandeur and completeness, will change our own lives. Then we shall be able so to present them to other men that they too will see the Vision Sublime which we at least have caught glimpses of.

That is why we study the Theosophical Doctrines; and I can tell you that had it not been for the very perilous conditions that the human race began to go into with the downfall of the so-called Pagan religions and philosophies of two thousand years ago, had it not been for world conditions, I myself doubt very much if the Theosophical Society would have ever been founded for two or three or six thousand years. Individuals would have been helped in the silence and privately. But conditions were such that help from above, from wiser heads than ordinary men, was needed. It was given.

I will tell you, the problem in the world today is not with the men on either side of the fence, or any side of the fence. Men are human beings. The trouble is *wrong ideas*, which make wrong conduct. You change ideas and you have conduct in conformity therewith. If you can set men going crazy about some fad or other, you can just as easily fire them and enthuse them with the love of something sublime, and change the whole course of life: bring peace on earth and good will to men.

But you have to know how to persuade men. You have to give them a philosophy that they can study and respect and have conviction in, and which will grow upon them as they study it the more; the greater study, the greater belief. Truth is marvelously persuasive in itself. Men are inherently decent and good; and a good many, I do believe, of the so-called criminals of the past and

of the present are people, men and women, who have become so absolutely discouraged that they have lost their grip. If they had had a decent chance, the inherent weaknesses in their characters might probably not have overpowered, paradoxically as it sounds, the higher part.

I believe in my fellow human beings. I know men, and I know that men think and feel — no matter what their race, no matter what their beliefs. Men are men the world over, and fundamentally decent, and they love decency and grand things. Look how the appeal of an heroic action runs like wild fire in all countries; all men respond. That shows the inherent right and decency in the human heart. It is to these things that we appeal. If fads can sweep over not only one people, but the whole world and fascinate mankind for a thousand years or more, making them all kinds of things which we now look upon as crazy; you can just as well, and with just as much hope, and with infinitely more chance of permanent success, appeal to the decency in men, to the good in men, to the common fellow-feeling that we are human beings, that we at least will learn to respect each other's convictions in harmony and in peace. There is where real decency comes out. Not in the attempt to convert with violence, always bringing forth more violence and resentment.

There is the pathos of the situation. I personally have never yet found it to fail in my own dealings with my fellow humans, I have never found kindness, consideration, and the appeal to the decency in other men — I have never found these to fail. If the response has not always been what I have wished for, then I have questioned myself, whether I myself have longed for the things I have wanted, longed for them strongly enough.

That is one reason why the Theosophical Society admits to its Fellowship men of all races, of all creeds. There is no distinction

of race, caste, creed or color in our organization. Remember the main objective of the Theosophical Society: to establish a nucleus of a genuine Universal Brotherhood, a nucleus which is absolutely and throughout non-political, based on no sentimental reasons. This perhaps may never make an appeal to some of the hard-heads, those wilfully blind, who simply will not see. Our appeal is to intellect and decency in moral instincts, and points to the laws of the universe as the foundation on which life is builded. That is why we study Theosophy and its sublime religio-philosophico-scientific doctrines. It is the Occult Hierarchy that sent our H. P. B. to establish the Theosophical Society, whose work is not to labor spectacularly, showily, theatrically, but to work steadily, untiringly, to change the hearts and minds of men. Secondarily, the work of the T. S. is to help us as individual Theosophists.

The Theosophical Forum

THE LARGER VIEW — *Lydia Ross*

Those who measure the practical importance and the essential value of a movement in terms of money and a huge membership, fail to see the vital influence and the progressive character of the Theosophical Movement. Granted, the Theosophical Society is anything but a money-making venture, and its enrolled members are a small percent of the two billions populating the planet. Nevertheless, this international organization, as a human experiment in the study and application of a universal philosophy of life, is demonstrating the solution of the individual and social problems which evidently are beyond the scope of money and majorities. The Ancient Wisdom proves that the practice of Universal Brotherhood is the simple and fundamental means of justice and progress for all men. Only by unity in diversity can each human unit fulfill his destiny by moving forward in his own place in the grand scheme for the perfecting of all humanity in the course of many lives

Knowledge of this larger view of the original and ultimate plan of a spiritual democracy, so changes the minds and hearts of men that they progress by natural evolution instead of by unnatural revolution. "Where there is no vision, the people perish " Study Theosophy if you would read the deeper meaning of the chaotic signs of the times! — Lydia Ross

DAMODAR, A SUCCESSFUL CHELA — *Helen Savage*

"Happy Damodar! He went to the land of Bliss, to Tibet, and must now be far away in the regions of our Masters."

H. P. Blavatsky undoubtedly wrote these words with a mingling of many feelings in her heart. There must have been genuine happiness for her young co-disciple who had attained in so short a time the goal of his one-pointed will; and a warm affection for the faithful friend who, with a loyalty to the cause of Theosophy equal to her own, stood by her day after long arduous day in the task of issuing her magazine, *The Theosophist*. She must have felt also a nostalgic wistfulness as she thought of the time when she too, her herculean task at last completed, would return "Home."

But she had not yet written *The Secret Doctrine* (it was only 1885); and while it was her lot to struggle on in the world of men for six more years of intense labor, it was Damodar's to be admitted to the Tibetan Mystery-School whose graduates become the spiritual Teachers of the race. This privilege he had won by natural right; but he knew, and H. P. B. herself knew, that it was not a matter of going to a "land of Bliss." It would be for the boy a period of the most intense and severe training; for Masterhood is not cheaply won.

Damodar's story from the time he "disappeared" in 1885 is, of course, a closed book; and his childhood and youth were much like that of other boys brought up in a well-to-do Brahmin household. So that it is the few short years between 1879, when he joined the T. S., and the spring of 1885 that embrace that portion of his life-story so interesting to Theosophists. This story has been told in a lively and sympathetic way by Col. Olcott in his *Old Diary Leaves*, but Damodar's own writings, (1) found scattered

through the pages of the early numbers of *The Theosophist*, as well as his letters to W. Q. Judge and others, add much to our understanding of the character and capabilities of this remarkable figure in the group of workers at the Headquarters during the early days of the T. S. in India.

Damodar tells us that it was the reading of *Isis Unveiled* that first awakened him in this life, and he lost no time in joining the Theosophical Society and starting right in to *work*. He says:

It is really no exaggeration to say that I have been a really living man only these few months; for between life as it appears to me now and life as I comprehended it before, there is an unfathomable abyss. I feel that now for the first time I have a glimpse of what man and life are — the nature and powers of the one, the possibilities, duties and joys of the other.

He seems to have been entirely free from a tendency to the vacillation which so often assails the new aspirant to wisdom when faced with grave issues. When he found that remaining in his caste was not compatible with his ever-increasing breadth of vision and compassionate feeling towards his countrymen, and indeed towards all mankind, he made the decisive move of stepping outside his caste, though it cost him the love of his nearest of kin. He tells about this in his article "Castes in India," and his profession of faith becomes truly eloquent through the burning sincerity of conviction that shines through the simple and straightforward language.

Though Damodar never writes about his own state of health, we have, besides the testimony of Olcott, references from H. P. Blavatsky and the Masters as to his frail physique and constant ill health. To carry on unremitting labor from early dawn until far into the night is difficult enough even for the robust; but here was

Damodar constantly ailing, "just off the school bench," and quite untrained, and moreover handicapped by the discomforts of an impossible climate, yet doing the work of at least three men, and doing it in such a way that the Master K. H. speaks of him as "indispensable at Headquarters," and H. P. B. cries, on one occasion when the Masters had taken him to one of their asramas in Kashmir for a few days: "What shall *we* do in the office *without* Damodar!"

One can imagine that there were some pretty lively times at Headquarters in the efforts of the understaffed editorial office to get out *The Theosophist* on time each month. When one looks through the old volumes of this magazine and notes the odd editorial slips and printer's errors that occur here and there throughout its pages, one is reminded of H. P. B.'s own words in a letter to Sinnett written in one of her fits of desperation: "Damodar is loony as a March hare!" How many times must Damodar have had such epithets heaped upon his devoted if not always brilliant head!

Whatever his shortcomings, his writings show a consistent steadiness and concentration that is praiseworthy. Among his duties as Joint Recording Secretary he wrote for *The Theosophist* a great many Reports and Notices of activities, and these are all done with an earnest thoroughness that never falters. On occasion too he could wield a lively pen when he felt called upon to defend the Mahatmans and the Founders of the Society, and one is reminded, when coming upon this pugnacious spirit, that he did indeed write under the aegis of H. P. B., than whom there never has been a more royal battler for Truth.

Working as he always was at top speed, it is only natural that he should not have had the opportunities of a leisured man of letters to turn out elegant essays, but his qualities of resoluteness and

uncompromising honesty, noticeable in every smallest item he penned, mark his style with a certain distinctive charm.

On more than one occasion it fell to his lot to review books for the magazine, and there is never anything perfunctory in the way he attacks his job. With great energy he dissects the toughest metaphysical themes, marking, not without some skill, the inadequate or faulty lines of reasoning; and when he has thoroughly torn the whole into bits, with the consideration of a good chela he graciously finds some excellent point of the book to recommend to the reader. His consideration is not so active, however, when it comes to the matter of paragraphing! He seemed to have an unnatural aversion to paragraphs, so that his columns in *The Theosophist* nearly always present an unbroken and formidable mass of print.

His occasional answers to Questions are handled with impersonal bluntness, and he nearly always manages to put the Inquirer in his place, firmly reproving him for asking questions already clearly dealt with, or for not framing his questions clearly, etc. To one inquirer he says: "Question Three would never have been put by one who had properly *studied* the article . . ." It was this same quality of blunt sincerity together with his zealous loyalty to the Masters that led him at times into errors of judgment the results of which he had to answer for, as the Mahatmans mention in several of their letters.

It is interesting, however, that with all his directness of approach and his unequivocal methods of handling matter under discussion, he yet manages to avoid even the suggestion of anything dogmatic. It was probably his genuine modesty that saved him from this latter fault. He recognises no hard and fast formulas — whether in running a T. S. Lodge, in meditation, vegetarianism, or prayer, but in all cases stresses the broad and

general principles of the philosophy, believing that the interpretation of these should be left to the intuition and initiative of each student. His article "Answer to * * * 's Misconceptions" contains an excellent discussion of the free platform of the Theosophical Society, whose ideal is to maintain harmony among its members not by the enforcement of a uniform creed but by fostering in each member a large-hearted appreciation of the views of his fellows. And further than that, he urges an approach to the plane of thinking where differences vanish and Truth is revealed. The true student of occultism "tries to penetrate into the *spirit* of everything. For him, all exotericism is a mere wrangling of terms." Yet he recognises that it is no more right to ignore than to overestimate the outward aspect of things. "Both the objective and subjective standpoints are essential for the attainment of true knowledge."

It is such traits as these which mark Damodar as one who came into this life with the memory of training along the lines of those age-old principles that are the fundamentals of the esoteric tradition. And there are three other qualities noticeable in his writings which still more single him out as a student well advanced in training. The first is his attitude of reserve in discussing certain deeper aspects of the teachings; the second, his total lack of interest in rituals, postures, etc.; and the third — an attribute which includes the other two — his unerring comprehension of the true nature of occultism.

He speaks with the voice of authority when he says in his article "Contemplation":

Raj Yoga encourages no shams, no physical postures. It has to deal with the inner man whose sphere lies in the world of thought. To have the highest ideal placed before oneself and strive incessantly to rise up to it is the only true

concentration recognised by Esoteric Philosophy which deals with the inner world of *noumena*, not the outer shell of *phenomena*.

He shows how futile it is for members to want to rush into Occultism through some sentimental feeling of disgust, however genuine, at the shallowness of the worldly life; or to imagine that the T. S. was formed for the purpose of providing every member with a Teacher ready-made who would take the aspirant under his special charge for training in the attainment of "powers." He felt passionately, as his own self-sacrificing years at the Headquarters testify, that in return for the soul-quickenning philosophy the members received, the most practical thing they could do to show their gratitude was to fit themselves by service to become in time co-workers with their spiritual benefactors.

Yet it is not all these excellent qualities of the young Damodar, not his arduous work on the editorial staff of *The Theosophist* (and later as Manager), not his fidelity to duty nor his loyalty to H. P. B., that give him the place of distinction he holds in the history of the Theosophical Society. So lightly are we apt to pass over qualities of character, that the young Hindu lad, not a particularly attractive figure as the world judges things, might almost have been forgotten after these fifty years or more, were it not for the one significant fact: he was found worthy to be, almost from the first, and as the months went by, in increasing degree, under the special attention of the Masters themselves, and after only *four years* of probation was found to be a fit candidate for special training in Tibet.

Damodar writes that as a child, during a severe fever, a vision of some great personage appeared to him, and though through the years of his formal education the image had become indistinct, it was always there in the background of his consciousness, and

with his first meeting with H. P. B. he felt that it would be in some way through her that the mystery of his early experience would be explained.

It was not long before his Teacher, the Mahatman Koot Hoomi made himself known to him, and from that time, running parallel with his Theosophical duties and responsibilities, he went through a series of remarkable experiences which read as though drawn from the pages of the most enthralling occult story. These Damodar tells about in a number of letters written to W. Q. Judge in 1880 and 1881; and they are the basis for the series "A Hindu Chela's Diary" that appeared in Judge's *Path* several years later. It seems likely that it was Judge himself, who with the instinct of the true story-teller, saw the narrative possibilities in these most unusual experiences of Damodar, and wove them into the tale of occult mystery and wonder that has intrigued so many Theosophists.

There is one of Damodar's letters to Mr. Judge which is of quite a different character from those just mentioned. It was his first, written in October, 1879, when these two remarkable men were as yet unacquainted with each other. H. P. B. and Col. Olcott had set sail for India, via England, just a year before this, and the dynamic force of the titan energy H. P. B. was withdrawn from the group of American Theosophists. There was Judge left stranded, harassed by family and professional duties, almost alone Theosophically speaking. Is it any wonder that in writing to H. P. B., a note of despair must have been present in his letter? H. P. B. evidently asked Damodar to answer Judge's letter for her and he does so in his characteristically thorough but somewhat unimaginative way. To the Theosophist, aware to some extent at least, of Mr. Judge's superior stature, the letter reads like the most blatant bit of patronizing. But when we remember that Damodar himself had just joined the T. S., and wrote with the zeal of an

enthusiastic neophyte, our feeling changes to one of understanding. It is interesting to note also, that in his second (extant) letter to Judge he assumes quite a different tone, saying: "I cannot give you my reflections on this matter for the reasons already stated to you, and because (judging from your letter) I find you are far superior to me in intellect and have made a greater progress."

Wherever Damodar throughout his writings mentions things of an occult nature, there is never the slightest touch or suggestion of psychic unbalance. He was called upon on various occasions to testify to the existence of Mahatmans as *real men*, not just disembodied spirits, and in every case, he narrates whatever he has to with a frankness albeit modesty that one instinctively feels is wholesome above all else. He came in for his share, just as H. P. B. did, of being called a "medium" influenced by a "spirit guide," and his reply to one of such charges is both spirited and witty. He said he was visited on this occasion by his Master in the body "for three nights consecutively for about three hours each time, I myself retaining full consciousness." And he continues that he never heard of a medium who could, with complete consciousness, meet his "spirit guide" by previous appointment in the compound of his dwelling-place, invite him in, offer him a seat, and converse with him for three hours or more, the while the medium himself retained full consciousness!

Though Damodar does not dwell on the subject of occult powers — continually pointing out, in fact, that they are only for the few — when he finds it necessary to explain any point along this line he does so in that natural and lucid way which proves him to be writing from first-hand knowledge. In his article entitled "Phenomena" he stoutly defends the Masters against the charge of merely using their occult powers in a cheap and flamboyant way for the amusement of their admirers. He shows that, as a matter

of fact, where perfect rapport exists between Master and Chela, there is no undue use of extraordinary power, but that sending messages by the "Astral Telegraph" is as natural a phenomenon as is the sending of ordinary messages by wireless.

He explains that, like other intelligent beings, the Mahatmans use the most efficient means at their disposal to carry on their work. He himself was in constant communication with his Teacher; in fact he tells Mr. Judge that if he were to mention all the communications he had received from his Teacher they would fill a small volume.

Among other occult powers which Damodar had well developed was that of being able to leave his body when required to do so on business for his Master. He stands as an excellent example of a truth so often repeated in Theosophical literature, and which has so often been criticized as being nothing more than a bit of adroit side-stepping, i. e., that when the disciple reaches a certain stage of development the higher psychic powers develop naturally, with no strain and no evil results, and are performed by conscious will. This is a point to keep well in mind, for the accomplishments of Damodar along occult lines are to be considered as far removed as possible from the specious glamour of mere psychic tricks.

Damodar's own writings in *The Theosophist* cease in January, 1885, and like echoes from a faraway country there appear after this time jottings here and there in H. P. B.'s and the Masters' letters which assure us that all is well with him. In 1886 there appeared in *The Theosophist* an official notice signed by H. S. Olcott and T. Subba Row, containing the last word we have of the Hindu chela: ". . . we are happy to state that we have positive news as late as the 7th of June that he has safely reached his destination, is alive, and under the guardianship of the friends

whom he sought. . . ."

This authoritative statement silenced the rumors that had been abroad that Damodar had perished in the snows on the borders of Tibet. To the uninitiated it was indeed a "hare-brained scheme" to set out towards an uncertain and to some minds even a mythical goal, without adequate food and clothing, and leaving even his guides near the Tibetan frontier. But faith born of knowledge was the urge that spurred him on; and viewed from the inner world, where cause and effect write their flawless record, success marked his journey from the first step. The words of the Mahatman K. H., written on an occasion quite different in character, are significant here: "Those whom we desire to know us will find us at the very frontiers. Those who have set against themselves the Chohans . . . — would not find us were they to go [to] L'hasa with an army."

FOOTNOTE:

1. Damodar's writings have now been gathered in a book entitled *Damodar: The Writings of a Hindu Chela*. It contains also Biographical Notes by C. J. Ryan, extracts from *The Mahatma Letters to A. P. Sinnett* and *The Letters of H. P. Blavatsky to A. P. Sinnett*, and the fascinating tale, "A Hindu Chela's Diary," which first appeared in W. Q. Judge's magazine *The Path*. The Theosophical Forum

BY THE SEA — *G. Cardinal Le Gros*

It was on an evening, I like to think, when there was nothing at all but the illimitable liveness of the sea, and from the rim of it, and on into infinity, the rose-flame of the sky.

He was going to a far country, not to return, and his words drifted away with pale leaves and delicate blossoms over the star-clear waters:

*Brightest of all the bright
Blossoms along the sea,
Cradled in song and light, —
Bloom in the soul of me!*

*After the sunset-gleam,
Over the twilight-dew
Gather me, dream by dream,
Into the dream of you.*

There had been a time, he remembered, in his childhood, when the flowers that he saw were more than flowers and the songs that he heard were more than songs. The faces of people glowed with a strange, beautiful light: there was hope in them and a remembrance of something ineffable. But as the years passed, dark veils fell before his eyes. The flowers lost their bright enchantment, becoming flowers, the songs songs. The light in human faces was gone. Towered in gloom a different world appeared: sunlessness and starlessness brooded over the cities and the mountains and the sea. Only in memory, and slowly retreating, was the golden world with its luminous flowers and living songs and faces that were not faces at all, but living souls.

The long music of the waters, whispering through the avenues of

the waves, heard him and listened; and then, strand upon beautiful strand, climbed slowly upward through the jewel-mist of the stars. . . .

And if it was the wind that made words, speaking to him, he did not know. And if it was the liveness of the sea, or the sky above it that made words, speaking to him, he did not know. But he heard, somewhere in the world, near him or afar he was never able to tell, words spoken not in time, but in the vastness and quietness of eternity. And hearing them, he thought of waving flowers in the morning, flowers of pale and delicate flame that reached upward to heaven, and he thought of songs that rose like sunlight on swift wings, pouring melody over the world, and he thought of human faces luminous with beauty and joy.

The whole world, with its mountains and seas, and the sky above it, and him, became — and he knew that it had always been so — a divine liveness and oneness of peace. Even the words of eternity were of him, spoken by him, through the winds or the sky or the waters he was never to know. But wherever flowers were, or songs, there was he. And wherever human hearts beat there he was also.

It was on an evening, I like to think, when there was nothing at all but the illimitable liveness of the sea, and from the rim of it, and on into infinity, the rose-flame of the sky.

The Theosophical Forum

TWO WAYS OF VIEWING REALITY — *G. de Purucker*

The Real, the Reality, Sat, or more accurately Asat, Tat, is that which is during cosmic maha-pralaya; and all the manifested universes are dreamed forth when Brahman falls asleep during what we call manvantara.

It is to be noted that just here there is a divergence not of knowledge, but of expression, even among the occultists themselves. The more common way in ancient times was to speak — and I will now use the Hindu terms — of Brahman awaking, becoming Brahmâ and the manifested universe with all in it. In other words Brahman awakes when manvantara begins, and falls asleep when pralaya comes. This is quite correct if you want to look at it from this standpoint, and I might add, was a familiar notion to Greek and Latin philosophic thought, as in the statement attributed to the Stoic philosopher Cleanthes which has been rendered into Latin, although he was a Greek, in the following words: "Quodcumque audiveris, quodcumque videris, est Juppiter." That is: "Whatsoever thou mayest hear, whatsoever thou mayest see, is Jupiter;" a thought very familiar in ancient Hindusthan where Brahmâ is said to evolve forth the universe from itself, in other words, that Brahmâ is the universe and yet transcendent to it: the universe and all of it, and yet transcendent! Which reminds one of the statement attributed to Krishna in the *Bhagavad-Gîtâ*: "I establish all this universe from a portion of myself, and yet remain transcendent."

But the other manner of viewing this matter and equally correct — and I will frankly say that sometimes as I ponder the matter, perhaps more spiritual, perhaps more correct than the former, but more difficult of understanding by us men — is to think that

Brahman awakes when mahâ-pralaya begins; for then Reality, so to speak, recommences its flow of lives. The phenomenal universes have been swept out of their existences until the next manvantara and disappear like autumn leaves when the autumn ends and winter begins. Driven along, as it were, by the winds of pralaya, all manifested life is swept out of existence *as manifested life*. Everything that is real is withdrawn inwards and upwards to its parent Reality, and then divinity is in its own. This is Para-nirvâna. It is then awake and dreams no more until the next manvantara.

Those in ancient times who grasped this other manner of viewing, of making Reality come into its own when manifested or phenomenal things pass away into pralaya, have stated the matter after various tropes or figures of speech, the favorite one however, being this: all the manifested worlds are but the dreams of Brahman. Brahman sleeps and dreams karmic dreams, dreams brought about by karman. These dreams are the worlds of manifestation and all that is in them. When the dream ends and the universe vanishes, when the dreams end and the universes vanish, then Brahman awakes. It is coming into itself once more.

I think both views are correct. Yet I have often wondered in my own mind whether the second way of viewing it be not somewhat loftier, closer to the ineffable truth than is the more popular way because more easily understood. We have analogies in our own lives. When we awaken in the morning, we go about our daily duties and we do them and they are karmic. But it is when we fall asleep at night and the things of physical matter and the lower mental plane vanish away, that we come closer to the divinity within us. We rise upwards, closer to the god within us, towards the abstract and away from the concrete.

I think the second view, though perhaps no more true than the

first way of viewing — I think perhaps the second way of viewing the matter, makes what they call Mahâ -mâyâ, cosmic Mâyâ, somewhat more understandable by us men.

At the end of Brahmâ's life, when even the Days and Nights of Brahmâ pass away into the utterly Real, the Reality at the heart of the Real, when all is swept out and away or indrawn and withdrawn upwards: I wonder if in this last thought we do not have as it were, a striking confirmation of the statement that perhaps the second way of viewing Brahmâ awake and Brahmâ asleep is not the more real. For at the end of Brahmâ's life, when Brahmâ re-becomes Brahman, not only do all manifested things pass out of existence as so much dissolving mist, but even Cosmic Mahat is indrawn or vanishes. Mahâ-Buddhi disappears and naught remains but Brahman. For an infinity, as it would seem to us men, hundreds of trillions of years, Brahmâ is awake, itself, no longer dreaming dreams of karmic universes, but as we are forced to express it, sunken in Reality in the inexpressible deeps of Brahman's own essence. All has vanished except Brahman; the dreams are ended. Then when the new life, when Brahmâ rather, imbodies itself again, then the galaxy re-awakens, but Brahman begins again to dream, dreaming the worlds, dreaming the universes into existence, dreaming the karmic dreams of destiny. Then the One becomes the Many. The armies, the hosts, the multitudes, begin to issue forth from the consciousness of the ineffable. Abstract space is once more filled with suns and solar systems and whirling worlds.

We see therefore that Brahman and Brahmâ, the offspring of Brahman, may have reference not merely to a planetary chain, but to a solar system or to a galaxy, and on a still more magnificent scale to a super-galaxy including many galaxies in the womb of endless space. In other words, Brahman and its offspring Brahmâ, may apply to any one or to all of these

different ranges on an increasing scale of grandeur. Brahman dreams karmic dreams of destiny and the universes flash into being; they appear like seeds of life or the spawn of Mother Space, and this we call manvantara or maha-manvantara. And conversely, when Brahman's dreaming ends, the worlds are swept out of existence and Brahman awakens as Brahman's Self.

Let us also remember as a final thought, that when we speak of frontierless infinitude, or of the beginningless and endless or boundless, we call this Tat, from the Sanskrit word meaning THAT; and that innumerable Brahmans greater or smaller, in countless numbers, are comprised within the boundless Tat.

The Theosophical Forum

"PHILOSOPHY AND LIVING" (1) — H. T. Edge

Under the head of "Penguin Books," these publishers are bringing out a series of low-price reprints Mr. Stapledon's book, *"First and Last Men"* has thus been reprinted; the present two volumes were written specially for the series.

As indicated by his title, the author uses the word "philosophy," not for a barren intellectual discipline, but in a sense akin to its original and etymological meaning. Philosophy is a way of life; it must seek an answer to such questions as, Shall I live forever? What am I? Is there a God? What ought we to do with our lives? And, since the question of immortality or survival seems the central problem, he devotes thereto his next chapter.

Mr. Stapledon has a tidy mind and is commendably lucid and concise; his meaning is not obscured by verbiage or terms and phrases unfamiliar to the non-philosophical reader. In enumerating the arguments for and against survival, he recognises that the first requisite is to state the question accurately, and shows that this is not done by the average inquirer. This vagueness in stating the question renders it impossible to give either a positive or a negative answer. To do so, we must first answer a number of other questions. Do we mean immortality or survival? What is meant by "I"? What is the nature of selfhood? What is the relation of mind and body?

Do we envision a time-sequence, as here on earth, or will our present conceptions of time, space, and other things, prove not to be universals but merely peculiar to our earthly existence, and therefore not applicable to the afterlife? Is our condition to be a repetition of earthly experience, or a static condition, or a progressive condition?

Hence the answer has to be deferred until these questions have been considered in his other chapters. We see that no single problem can be settled by considering it in isolation. Our knowledge must be comprehensive; in default of which our reasoning is based on false premises, and our questions involve implications contrary to fact, and are therefore unanswerable.

We see here what an advantage is gained by those who approach these problems in the light of the teachings of Theosophy. It is true there are some people who, when Theosophy is presented to them, insist that its doctrines shall be validated by some familiar process which in their minds amounts alone to demonstration, and without which a doctrine is a mere article of faith and may be disregarded. But in books of this kind we see that much discussion and reasoning leads up at last to a cautious and tentative admission of doctrines which, to a Theosophist, are presented at the outset. For instance, the author cites the views of C. D. Broad regarding the evidence of survival offered by Spiritualists. This evidence, says Broad, is not sufficient to establish the survival of the deceased personality, but does prove the survival of something which he calls a "psychic factor." Now Theosophists are taught from the beginning that man is compounded of different principles, and the nature of each of these, together with its destination after the death of the body, is fully explained. Thus the Theosophist starts with a map of the country in his hand, instead of having to wander about, stopping at every cross-road, compass in hand, until he either loses his way or finds it by accident after much tribulation. A study of philosophy should certainly include a sufficient acquaintance with the systems of ancient India, which go so fully into the composite nature of man and the various states in which human beings exist after physical decease.

What is it that survives? The ordinary man is not interested in mere survival; he wants to know if *he* survives. To answer this we must have some knowledge of what is meant by true and false personality, of the Self and its vestures, of the dual nature of man while still in the body, and many other such questions. Also it is futile to argue as though man is merely an immortal essence in a mortal body, and that he passes at once from his present state to "the other world." The infinite complexity and amplitude of the mere physical universe, with its countless orbs, should suffice to suggest a similar plenitude and variety in other parts of the universe.

In all processes of reasoning we must inevitably assume certain things as "given," and which we must therefore not try to prove. This being so, why not begin by *assuming* survival? If we do not assume this, it is pertinent to ask, Then what shall we assume? Careful examination, such as we find in this book, will show that those who argue against immortality, or those who posit the question pro and con, assume quite as many unprovable or unwarrantable things as they can accuse their opponents of assuming. And if it be found that the assumption of survival makes sense out of life, while the contrary assumption makes nonsense or perplexity, what more in the way of demonstration can be asked?

After considering various arguments for survival, the author glances at arguments against, and finds them in general trifling and futile. The alleged overcrowding of the "other world"! No wonder the author complains that this generation has neglected the power of constructive imagination. Yet even in this world an overcrowded omnibus may have an upper deck, and we imagine it was Jesus who said there were many mansions in his Father's house. Besides, as we are admittedly not speaking of physical bodies, we cannot venture to dogmatize as to the methods by

which disembodied souls may be warehoused in the "other world." The objection that there can be no survival because the mind is dependent on the body, is either an indirect begging of the question, or it is reasoning from a mere dogma.

The author concludes that the problem cannot be solved in the present state of human knowledge, as it depends on so many other problems which must be solved first. "Is there perhaps," he asks, "some other kind of knowledge, which is not subject to the disabilities of intellect, and which apprehends and enters into its object intuitively?"

We must content ourselves with a mere enumeration of the chapter headings in the rest of these volumes: Mind and Body, the External World and I, Reasoning, the Scope and Limitations of Reason, Ethics, Personality, Community, Social Change, Metaphysics. The result is summed up in "The Practical Upshot." Here the conditions of the world are reviewed. Science is transforming the world. (Or is it that some more potent underlying influence is transforming science and everything else as well?) The economic motive in civilization has run to seed; and, despite of wild theories, we must look to some more equitable distribution of material goods. The East seems destined to play a greater part in the future. We have lost faith in intangible values; man has risen by the "critical and imaginative intelligence and the capacity for community," but these powers are declining in scope and even coming into disrepute.

This is certainly a good diagnosis of the patient's ailment; and it is true enough that an accurate diagnosis is a necessary preliminary to a cure. And there are such diagnoses in plenty today. But more is needed.

Whence is the source by which humanity progresses on its march through the cycles of its evolution? Before we can answer this we

must see what we understand by evolution. Evolution is commonly viewed merely as *process*, though by a strange confusion of thought that process is in some way spoken of as if it were also *cause*. What is called the materialistic view, or what we might perhaps call the one-plane view, presents us with a picture of a machine moving itself, or generating the power which moves it. The history of humanity becomes a succession of linked cause-effects, running in what science calls a closed system, without interference from without itself. Such a machine could only run down by the gradual frittering away of energy never renewed. Humanity is to be saved by intelligence and imagination, and is at the same time expected to create these powers. It is just the same doctrine as that by which the human organism is supposed to create those hormones by whose power it is actuated. All logic and analogy demand that evolution, progress, demand a continually renewed access of power from without the "closed system." A study of history reveals that progress is achieved by the work of inspired individuals who appear from time to time and initiate mighty tidal waves of renewal. The doctrine of reincarnation teaches us that there is a constant accession of human egos enriched, ennobled, made potent, by their own past experience. It is not inconsistent with any doctrine of evolution that there should exist human beings who have evolved beyond the level of the common human attainment; and Theosophy teaches that these perfected human beings now discharge their role of inspiring humanity from behind the scenes. Study history without prejudice, and you shall find ample proof of their existence and their work in all ages and climes.

It is they who have inspired the Theosophical movement, and we can best help humanity by spreading the knowledge of that marvelous all-embracing philosophy which they have made accessible to us; for without it life must remain an insoluble

enigma, without purpose or hope.

The Theosophical Forum

LIFE'S DAILY BREAD — *Irene R. Ponsonby*

Thomas Mann defines "Truth, and the freedom to seek it as "life's daily bread"; thus simply expressing a series of profound ideas which claim further consideration.

How much we lose when we limit the term 'daily bread' to nourishment for the physical body alone! Experience in various fields of investigation has proved that food is not the all-important need we often think it is. Man has many vital needs which food for the body does not satisfy. And here the septenary man is meant. Water and air are vital to life, but creative occupation for the mind and hands is also of paramount importance. Had we cyclic perspective we would realize that soul-starvation is a far greater menace to this generation than is physical malnutrition. Man's mind and body are the pampered darlings of *our* age: his soul has long been called the orphan of the ages by the wise! Our bodies are the periodic earthly vehicles of our souls. They merit our care, and cannot be held responsible for the sins of the desire-ridden mind-man; yet they last but a single life-span as bodies, whereas the human soul or ego exists in progress or deterioration throughout the entire series of cycles of a planetary manvantara. An evolved soul can function without marked limitation in a frail body, but an impoverished soul is incapable of fashioning a healthy body, however well nourished the actual physical atoms may be. The body often gains more from our casual neglect than it gains by our ignorant interference; and definitely benefits when freed from the wear and tear of our undisciplined minds, as is evident in some cases of insanity.

If truth be the bread of life, it stands to reason that that in man

which is nourished by truth must be akin to truth. This points to a fundamental teaching of Theosophy voiced by the intuitive of all ages and cultures:

Truth is within ourselves; it takes no rise
From outward things, whate'er you may believe.
There is an inmost center in us all
Where truth abides in fulness; . . .

wrote Robert Browning in *Paracelsus*. There in that divine center, the core of man's being, all the qualities and capacities of the Universe inhere, for the most part in latency. It requires the stimulus, the nourishment of the good, the true, and the beautiful, to bring these faculties and attributes which embody Truth in its cyclic manifestation, into fruition. The recognition of Truth and the freedom to seek it are quickening forces.

Truth *per se* is as all pervasive and all encompassing and eternal as Life itself, but man's immediate conception is limited to the confines of his not yet fully evolved consciousness, which for most of us extends little beyond the scope of the manifested world. The vision of the sage is commensurate with the Galaxy, and tracing its horizons his gaze keeps pace with the cycles.

Therefore freedom in which to seek truth means not merely the possession of leisure, the opportunity for research in a favorable environment, and a will set to attain. It implies judgment, discrimination, and altruism, for one blinded and misguided by ignorance and prejudice is enslaved. It presupposes freedom to receive, receptivity, and to give; a mutual sharing in the benefits of the Universe. Only Truth so acquired can be life's daily bread!

Let us build for the day when this definition will form the criterion upon which civilization will be judged.

OTHER MORAL ISSUES — *Arthur A. Beale*

Though I speak with the tongues of men and of angels, and have not charity, I am become as sounding brass, or a tinkling cymbal. — *1 Cor.*, xiii, 1

With our hearts torn and our minds confounded with the chaos of conditions in the world today, as personalities we are tangled in a meshwork of emotions, ranging through the gamuts of disappointments, dreads, despairs, and despondencies, even to the frontiers of hopelessness. However, as disciples of the Masters of Wisdom, Compassion, and Peace, let us listen to the still small voice calling: "Comfort ye, comfort ye, O my people!" For have we not behind us a philosophy of the ages, compiled from divine sources, which has watched the vicissitudes of humanity through the ages in its oft-repeated attempts to emasculate itself, which have brought misfortune to man and the world, till the millstream of confusion burst the banks of compassionate toleration of the Law into a flood of cataclysms, from which has arisen like a phoenix a new order of ages?

Once more we vision the birth-throes of our mother Earth, and we wait, wait, wait for the new infant Humanity which will lead us into the promised land under the watchful eye of the gods.

Let us not forget that the mass of mankind is only in the puberty stage of the evolution of the animal soul of man — constituting the basis of personality — and is marching to its profound destiny towards divinity. However, the pioneers have evolved previously on another world, and already glimpse the roseate dawn above the hilltops, and whisper to us in the valley, the good tidings of hope through the god-given teachings of Theosophy. In the meantime we are having once more a taste of medievalism, as

though it were part of that cleaning up process of Siva, who at cyclic periods with his army of "destroying angels" sweeps up the debris of old karmic misdeeds, in order to prepare for a rejuvenation, so as to enthrone once more a new Brahma — the creator — with his attendant Vishnu — the preserver. Such is the law.

In the body of man: when it has been polluted with disease due to his misdeeds, it is ravaged by the microbes of destruction before the vital fiery lives can be let loose for rebirth. Similarly the old static civilizations — as in Europe and perchance in America too — have to be shaken up, and useless traditions destroyed, before man is ready to receive the New Doctrine of the new order of the ages.

The mills of God grind slowly
But they grind exceeding small.

For three and a half Rounds according to our teachings, representing many millions of years, the old earth travailed to bring forth vehicles worthy to receive a thinking man, and this latter event happened only about 18 million years ago, previous to which man was in the gestatory stage.

During this long time, evil traditions and habits have been formed which with personal man are quite automatic. The animal propensities of egotism, selfishness, and combative competition, personal and national, and pride, are prominent factors in man's destiny, and so, over and over again, man repeats follies of judgment that are seeds of further strife.

Until the finer factors of self-control, co-operation, compassion, and helpfulness are instituted in place of the former propensities, no hope of harmony, peace, and concord are possible. "Be not deceived. God is not mocked, whatsoever a man soweth that shall

he also reap." If we sow to the wind, we shall reap a whirlwind.

So here we are today, battling with the petty follies of a selfish humanity, not to be trusted with the sacred rights of manhood, only exhibiting the immature follies of youth. But when we realize the sacred offices of the Theosophical Society — the child of the Guardians of the Race, the sacred Lodge of Adepts, to whom we are pledged as co-workers for humanity — let us not forget our great responsibilities in creating the proper psychological atmosphere that will make early redemption possible. This, we are told by our Teachers, is made possible by making the teachings not only receptive but actually vital in our lives; in fact by living Theosophy. Then indeed may we be worthy bricks in the Guardian Wall.

What the world wants, it seems to the writer, are new ideals, new initiatives, new out-looks. Surely every Theosophist views war with abhorrence as being a futile solution to our troubles. Not only is it a futile method, but decadent; for war is the recognised antiquated method adopted by personalities. When mankind realizes the saner issues of Spiritual initiatives, then will shame be felt in using the old methods. These saner ideals will only come when men strive to ensoul themselves by endeavoring to live in the higher aspects of their nature.

Here is a straight hint for Theosophists as voiced by Thomas Carlyle: "Be an honest man yourself and there will be one rogue less in the world." So it would seem that Theosophists have a sacred duty to accomplish: to ensoul themselves with spiritual impulses, never to despair nor be despondent, but "let your light so shine before men that they may see your good works and glorify your Father in heaven." Some day mankind may realize that instead of going out to fight other peoples, it were better to create a center amongst the more enlightened which will be a

beacon and stronghold of righteousness. Then these enlightened people will arise to protect the recalcitrant Powers from injuring themselves and the whole world, but this center must come through co-operation, through sacrifice of national deceits and egotisms, and by seeking not the welfare of themselves but of all Humanity.

While the destroyers are at work, let us work for the rejuvenation of the Race, so that the war-weary pilgrims may have a goal towards which they may turn their weary eyes and find a sanctuary of sound ideals, a nucleus, a "laya center," of divine essence opening out into vistas of unspeakable beauty, wisdom, and peace, a veritable "new order of ages," upon which a real civilization can be built and from which the past will appear as a bad dream only. Thus an atmosphere of goodwill, hope, and persistent peace may be visioned: a new Humanity — in the words of Tennyson:

For I dipt into the future, far as human eye could see,
Saw the Vision of the world, and all the wonder that would
be; . . .
Till the war-drum throb'd no longer, and the battle-flags
were furl'd
In the Parliament of man, the Federation of the world.

The Theosophical Forum

A POSSIBLE ATLANTIS TRADITION — *Cyrus Field Willard*

In looking over my file of THE THEOSOPHICAL FORUM for the year 1939, I saw in the July issue an article by C. J. Ryan, M. A., entitled "Atlantis — Romance or Reality?" As I had always thought from study of *The Secret Doctrine* that Atlantis was a reality, curiosity led me to read the article, and then to look up what H. P. Blavatsky had written as to its reality. On page 8, Vol. II, she said: "Atlantis is the fourth Continent."

It would be the first historical land, were the traditions of the ancients to receive more attention than they have hitherto. The famous island of Plato of that name was but a fragment of this great Continent. The Fifth Continent was America.

There was a time when the delta of Egypt and Northern Africa belonged to Europe, before the formation of the Straits of Gibraltar, and a further upheaval of the continent changed entirely the face of the map of Europe.

How it was possible for the Straits of Gibraltar to be formed, was outlined in an article by the writer in the February, 1939, issue of this magazine, entitled "Isostasy Proves Assertions of H. P. B."

H. P. Blavatsky goes on to say on the same page:

The last serious change occurred some 12,000 years ago and was followed by the submersion of Plato's little Atlantic island, which he calls Atlantis after its parent continent.

It is an absorbing and instructive study to take the Index at the back of Vol. II, and read all the pages mentioned therein, under name of "Atlantis." On page 141 she speaks of various deluges and

the submersion of the last little island of Atlantis. On page 408 she says:

whether the peak of Teneriffe or not *was a volcano* when the sinking of the "western Atala" (or hell) began, and those who were saved told the tale to their children. Plato's Atlantis perished between water below and fire above; the great mountain vomiting flames all the while. "The 'fire-vomiting Monster' survived alone out of the ruins of the unfortunate island."

(I have preserved the curious quotation-marks just as she used them.) Teneriffe is now one of the Canary Islands of volcanic origin and located about 150 miles west of Africa in 27° to 30° North Latitude and about 15° West. The island of Teneriffe, in my encyclopedia, is said to be 60 miles long and about 25 miles wide; and its peak is a notable sight from the sea. Prof. Ryan, in his article in which he discusses a book by James Bramwell entitled *Lost Atlantis*, after castigating flamboyant misconstructions of some writers on Atlantis, says:

Tradition in the shape of world-wide myths and allegories is the most likely method by which knowledge of a Lost World would survive.

But where shall we look for this "tradition that is most likely to survive"? H. P. B. indicates this when she placed in juxtaposition her statement that Atlantis was the fourth Continent and America the fifth. So it is in America, after the last fragment of Atlantis had disappeared, that we must look for this tradition where "it is most likely to survive." And although Bramwell says Theosophists care little for "scientific discussions," yet the writer desires to submit his investigations which show how untrue this assertion is and the wisdom of following the faint signboards H. P. B. erects; — for the statements taken from the Seventh Annual Report of the

Bureau of Ethnology to the Smithsonian Institution, Washington, Government Printing Office 1891, should be scientific enough for Mr. Bramwell and prove to him that Theosophists do care for scientific discussions. In this large profusely illustrated volume are preserved the traditions of the Ojibwa Indians as gathered by a scientist, a trained Ethnologist of the Bureau of Ethnology, Dr. W. J. Hoffman, who submits in this Report a very full paper on the traditions, cosmogony and religion of the Ojibwa Nation now living in Northern Minnesota, near the Western end of Lake Superior, which point to these Americans being of Atlantean descent. This paper by Dr. Hoffman begins at page 149 and continues to page 300, and as each page is 7¹/₂ X 11 inches it is evident that but little can be quoted in extenso of this mass of information. Dr. Hoffman's special paper is entitled "The Mide'wiwin Or 'Grand Medicine Society.' " He says:

The Ojibwa is one of the largest of the Indian Tribes of the United States, and is scattered over a considerable area, from the Province of Ontario on the east to the Red River of the North on the west, and from Manitoba southward through the States of Minnesota, Wisconsin and Michigan.

On page 151 the term "sorcerer" is used to designate those persons who profess to have the power of prophecy and practice incantations and administer medicinal preparations. Constant reference is made to these personages and their opposition to the introduction of Christianity. The cause of this antagonism seems to lie in the fact that the traditions of the Indian genesis and Cosmogony and the ritual of initiation into the Society of the Mide'wiwin constitute what is to them a Religion, even more powerful and impressive than the Christian religion is to the average civilized man. These initiation rites of the Mide'wiwin are like those of the Egyptian mysteries, or of a Masonic Lodge,

which are said to descend from Egypt; where dramatic representations were used to impart ethical or religious ideas. This is done in a medicine Lodge, like a Masonic Lodge, oriented due East and West, with presiding officer seated in the East, and entered from the West. This Lodge is of a form that Dr. Hoffman terms "an oblong square," a technical Masonic phrase, which explains how he, evidently a Mason, was able to get the description of their ceremonies, and to find an ancient birchbark chart with delicately incised hieroglyphics which was interpreted to him by some of the old priest officers of the secret society of the Mide'. In this Lodge there are four degrees instead of three, as in the Masonic Lodge. The similarities are striking in other respects.

While this whole paper is intensely interesting to a Theosophist and Mason, yet the principal thing now is their traditions which link them up with what Plato calls "Atlantis." Dr. Hoffman quotes much from *The History of the Ojibway Nation*, by W. W. Warren, an Ojibwa of mixed blood, an educated man and later a member of the Minnesota Legislature, published in Vol. V of *Collections of the Minnesota Historical Society*, St. Paul, 1885. He spoke the language perfectly, was related to them, was initiated, and yet he said (p. 160) that he stood, "as it were, on the threshold of the Me-da-we Lodge." Mr. Warren says on p. 161 of this Report:

In the Me-da-we Rite is incorporated most that is ancient among them — songs and traditions that descended *not orally, but in hieroglyphics* for at least a long line of generations. [Italics mine. C. F. W.]

The ritual of the Mide'wiwin is based on traditions pertaining to the Cosmogony and genesis of the Ojibwas and to the thoughtful consideration of the Great Spirit for the Indian; so it is looked upon by them as their religion, as they themselves so designate it.

They fully believe, and it forms a part of their religion, that the world has once been covered by a deluge, and that we are now living on what they term "the new Earth." This idea is fully accounted for by their vague traditions; and in their Mide'wiwin religion, hieroglyphics are used to denote this New Earth. Furthermore they fully believe that the red man mortally angered the Great Spirit, who caused the deluge, and at the commencement of the new earth, it was only through the medium and intercession of a powerful being whom they name Mana-bo-sho that they were allowed to exist, and means were given them whereby to subsist and support life; and a code of religion was more lately bestowed on them whereby they could commune with the offended Great Spirit, and ward off the approach and ravages of death. Each tribe has its medicine man or woman, and here the word "medicine" means something above the material. They form an order of priesthood, who are consulted and employed in times of sickness. Those who wish to join it are taught the virtues of certain plants, certain incantations, how to chant the medicine song, how to pray, which prayer is addressed to the Master of Life. The Ojibwas believe in a multiplicity of spirits who inhabit all space, whom they call man'ido. The chief or superior one is called Ki'tshi Man'ido, approaching to some extent the God of the Christian religion.

Dr. Hoffman was fortunate enough to find at the Red Lake Minnesota reservation an ancient birchbark mnemonic chart on which were delicately incised hieroglyphics of which a photographic reproduction is given on large plates in this volume. It was interpreted to Dr. Hoffman by some of the priests of the Mide'wiwin showing positions of the priests and the "snakes" in the initiations. It tells of the origin of the Mide'wiwin and their traditions and cosmogony. It tells of one who was feared by all and was called "He- who-lives-on-the-Island." On page 170 it tells

of the 4th degree Mide" priest who was supposed to be able to accomplish "the greatest feats of necromancy and magic" (for which Atlantis was destroyed, according to H. P. B.). He is also not only endowed with the power to read the thoughts of others but to call forth the shadow (soul) (put in parentheses on page 170 of report), and retain it in his grasp at his pleasure as long as he wished. In Theosophic language this would be called the "astral body," and it will be seen that this is what is termed "Black Magic" in Theosophic literature. On the chart deviations from the right-hand path are shown. Plato says, as does H. P. B., that the Egyptians are descendants of the Atlanteans. Sir E. Wallis Budge, the celebrated Egyptologist, has openly declared his belief in Egyptian magic. The plates showing the Medicine Lodge has rows of figures on the side-lines resembling Egyptian figures. On page 174 reference is made to the one central island from which the Ojibwas originated. The tradition of their origins and their migrations from what may have been what Plato called "Atlantis" is the most interesting to Theosophists and is given on page 183 by the intelligent and partly initiated Mr. Warren. He informs us that he was told, during an initiation, by one of the officiating priests:

Our forefathers, many strings of lives ago [they believed in reincarnation] lived on the shores of the great salt water in the east. Here, while they were suffering the ravages of sickness and death, the Great Spirit at the intercession of Man-a-bo-sho, the great common uncle of An-ish-in-aub-ag [Original people], granted them this rite, wherewith life is restored and prolonged. Our forefathers moved from the shores of the great water and proceeded westward. The Me-da-we lodge was pulled down and it was not again erected until our forefathers took a stand on the shores of the great river [St Lawrence] where Mo-ne-aung (Montreal)

now stands. In the course of time, this town was again deserted and our forefathers, still proceeding westward, lit not their fires till they reached the shores of Lake Huron . .

Two other migrations are mentioned in repetition, which, for brevity will be omitted here, but which took the Ojibwas from the gulf of St. Lawrence to the far end of Lake Superior. Whether it was fear of the fire-vomiting mountain that took them as far as they could go in their canoes to which they would have to go when they reached the west end of Lake Ontario, at Niagara Falls, is not told. But the fact of the migrations of the Ojibwas from the shores of the Great Salt Water far to the east is preserved in the 7th annual Report of the Bureau of Ethnology. It has taken time to condense and gather the full sense of the many statements that have confirmed belief in the writer that the Ojibwas are descended from the Atlanteans.

Teneriffe, which H. P. Blavatsky intimated vomited fire on the island of Atlantis which must have been close by, is on one of the Canary Islands, 150 miles west of Africa, in Latitude of about 29° North and Longitude about 15° West, while the Gulf of St. Lawrence is about 60° North and 60° West. This would be but a short slant to the west before the north-east trade wind, for such skilful sailors as the Atlanteans, "the people of the sea," who were some of the survivors of the deluge, and H. P. Blavatsky intimates that there were some. The preserved traditions of the Ojibwas show that they came across the great Salt water to the Gulf of St. Lawrence from shores far to the East. An island is spoken of in one place "fleeing before a great deluge" that had destroyed many caused by their doing some wrong things that angered the Great Spirit, and the sorcery that is described in this report is similar to the black magic, for which the Atlanteans were destroyed, according to H.P.B. Enough has been given to fill the

specifications given by Prof. Ryan. More could be given, but the traditions mentioned have another potent fact to support them, and that is that the Egyptians, the descendants of the Atlanteans, in depicting themselves always painted their faces as having the same coppery-red color as the Red Indians of North America, the fifth continent. This would seem to fill the bill of proof.

NOTE by C. J. Ryan

It is indeed significant that the ancient American traditions so definitely indicate that the Indians came from the Eastern sea after some world-shaking disaster. This story is widely spread in both north and south America, and is a very strong argument for Atlantis. Many anthropologists insist that the Indians must have come to this continent by way of Bering Strait, but this is not supported by Indian tradition. Why should those stories, many of which were handed down in picture writing and held very sacred, be utterly ignored or rejected? We believe there are many great surprises in store in regard to the origin and past history of the Indians. Even during the last few years the length of man's habitation of America has had to be extended from as little as 4,000 years, according to some leading Americanists, to more than 30,000 according to more daring investigators. It is the opinion of some authorities that man was here a good while before the end of the great ice age, a terrible heresy until recently!

In regard to the cause of the destruction of Atlantis referred to by Mr. Willard I should like to draw attention to a certain ambiguity in this matter which has puzzled many students. Several passages in *The Secret Doctrine* deal with the alleged result of Atlantean sorcery. In Vol. II, p. 350 we are told that the Fourth Race was *not destroyed because of its depravity* but because the end of the cycle had arrived. This is repeated on page 410, but on page 636 we read "the Atlanteans became the terrible sorcerers now

celebrated in so many of the oldest MSS. of India only toward their fall, the submersion of their continent having been brought on by it." On page 427 it is said that Atlantis was doomed and the sorcerers "have to descend with her." In *Isis Unveiled* there is a reference to a final battle between the black and white magicians, after which the end came. Somewhere H. P. Blavatsky, I think, indicates that the rapid disappearance of the Atlantean civilization prevented humanity from descending to greater depths from which it would have been very hard to rise. In *The Secret Doctrine*, II, p. 178, H. P. Blavatsky speaks of the *untimely* end of the Atlanteans.

Does it not seem that the most reasonable interpretation of the statements about Atlantis is that while its cycle was running to its natural end, the final crisis, the actual "submersion," was hurried up by the violence and rapidity of the descent into sorcery? Perhaps someone can suggest a better explanation?

The Theosophical Forum

TO THOSE WHO MOURN — *G. de Purucker*

The beautiful message that Theosophy has to give to those who mourn, those who sorrow, applies not only to death and those left behind by the passing ones, but just as much to those who are not yet touched by death, to all those who have to live on this earth where there is more of sorrow and trouble and weariness of spirit than of happiness and real peace. For I wonder if any tenderhearted man or woman can really be happy in a world like ours, when we see surrounding us on all sides the most awful proofs of man's inhumanity to his fellow-men. How can we retire into our water-tight or spirit-tight or heart-tight compartments of life when we know what is going on around us, not only among men, but among the helpless beasts: suffering and pain and sorrow, and on every side the cry of these martyrs raised to heaven?

We talk about those who mourn and restrict it, each one of us, to our individual selves. How then? Do we not love the hand of kindness extended in sympathy and understanding to others, who suffer lonely, who sorrow in loneliness? Death itself is nothing to grieve at. We have been through death a thousand times and more on this earth. We know it well. It is an old experience; and here we are back again. But we feel for those who mourn while they live: mourn for the loss of beloved ones; mourn for the loss of fortune, so that they are in difficulties to give even the physical bread to the bodies of those they love; mourn over the difficulties to find work so that they may work like men and women and feed the mouths of their hungry children; mourn because they have lost friendship, lost love, lost hope, and perhaps most awful of all, lost trust in their fellow-men.

Every son and daughter of man mourns, or he or she is heartless. The man who cannot mourn and who does not mourn to my mind is inhuman; and so great and wonderfully is nature builded that it is precisely this divine capacity for mourning that gives us sympathy for others, and to the mourners the hearts of understanding; and, strange magic of the human spirit, mourning, sorrow, suffering are our wisest friend. How these enrich our hearts! What priceless treasury is the expansion of consciousness that comes when mourning sets its often burning but always healing hand on our hearts! We sacrifice; but in this sacrifice is purification, is the awakening to the greater life. It is in sorrow, it is in mourning, it is in the evocation by these of pity, of compassion, that we learn truly to live. Even little children know what sorrow is, and how blessed it is for them that they may learn life's greatest thing: to learn and become enlarged by it, made grander by it. How pitiful is the man who cannot feel for others and is enwrapped solely in the small prison of his minuscule self. Where in him is grandeur? You seek for it and find it not. But the man who has suffered feels for all the world. On his heart each cry of mourning falls like a scalding tear, and he is made grand by it. Nature here works a magic, for in this process is born rosy hope, a star-lighted inspiration that comes from the enlarged consciousness.

Blessed peace, the most exquisite joy and happiness that human hearts and minds can bear, is the appanage or spiritual heritage of those whose hearts have been softened by suffering. They who never suffer are the hard-hearted ones, unripe in their own restricted consciousness. The man who has never suffered knows not what peace is. He has never entered into it. The man who has never experienced sorrow knows not the surcease nor the blessedness that comes when quiet comes.

It is to those who mourn — which comprise really all the human

race — that Theosophy brings its own, its ineffable doctrine of hope and peace, and this because it teaches us to understand. The French have a proverb: *Tout comprendre c'est tout pardonner*, the meaning of which is: if you *fully* understand you forgive all.

Isn't it clear to us that inner grandeur comes from enlargement, and that enlargement of our consciousness as we say, of our understanding and of our heart, comes from suffering? Joy too can bring the smile to our lips and the light of happiness to our eyes; but isn't it a mere truism that all of life's ordinary joys turn to ashes in the mouth? Isn't it also true that the joys of life all too often make us selfish? We grab the joys to us, afraid lest we lose them. These commonplace joys often narrow us. But fellow-feeling, sympathy brought about by suffering, make the whole world akin. The man who has known naught but joy in life perhaps does not mind inflicting sorrow upon a fellow. He is not awakened. He does not understand. He is misled. He is ignorant. But the man who has suffered, the woman who has suffered, who has mourned, these are they who are great in their gentleness, who are great in their understanding because they comprehend, take in; they are enlarged, they are magnified. And the extreme of this is glorification in its true original sense. They become glorified, the next thing to god-men on earth.

Such simple thoughts! I dare say that every child knows them and understands.

So our blessed message to those who mourn is this: Fear not the bright and holy flame. It will make you men and women, not mere males and females. What is the great and outstanding characteristic mark of the god-men who have come among us from time to time? It has been the understanding heart: so that they could speak to the woman in trouble and help; to the man in ignorance and bring him succor and peace; to the little children

and they will understand. For the great man's own simple heart speaks to the simple direct heart of the child before it has been sophisticated, spoiled by the falsities which it all too often learns as it grows up and has to unlearn in order to be truly a man, truly a woman.

To those who mourn comes the blessed Gospel: let the holy flame enter into your hearts as a visiting god. Treat it very friendly. Welcome it. Receive it as a guest; and that guest, sorrow-clad, will cast off the habiliments of mourning, and you will realize that you have been entertaining unawares a god. And that god is you. Then you have entered into your own.

The Theosophical Forum

**A VINDICATION OF H. P. BLAVATSKY'S WORK AND MESSAGE — J.
H. Venema**

Well might the great lion-hearted H. P. Blavatsky have said with Shakespeare in *The Merchant of Venice*

What judgment shall I dread, doing no wrong?

but, on the contrary, as we must recognise more and more every year, doing a grand and sublime work for the benefit of humanity! There is a story of a famous and inspired singer, a man with a heavenly voice, whose audiences were enraptured night after night. But one evening, when he was to sing in a great concert, an embittered rival of his had played a trick upon him and had put in the first row a man who even during the most inspiring music and songs did not respond and who sat motionless, with cold staring eyes, untouched by the most spiritual notes, apparently without any feelings, no "music in his soul" The story tells that the famous singer, moved by profound love and compassion — for he always sang to bring beauty and inspiration to his audience through the medium of impersonal art, the "most divine and spiritual of arts," music — though at first greatly distressed by the icy coldness of that man in the first row, firmly determined to awaken him, to bring a wonderful beauty into his life. Pathetically the author reveals to us how the singer sacrifices himself, how he gives heart and soul, and succeeds in bringing down to earth the divine music of the Gods above, the harmony of the spheres, indeed, how in the end he sacrifices his physical vehicle in the supreme effort to awaken one human being, and died on the platform, a victim to the machinations of his rival — for that one man in the first row was a deaf-mute.

When H. P. B. came to this world in the previous century — the

"Heavenly Gandharva," the Singer and Revealer of Heaven and Divine Truths — she was in a similar position, with this great difference, that she brought her message to hundreds of thousands who were *spiritually* deaf and dumb, ignorant of what they were, what their destiny might be, and who, consequently, at first remained unmoved, cold, bearing malice toward her and her work. And she did succeed in awakening them, partly in the beginning, more as time went on, until she was recognised by a certain number of noble souls, who began to help her in her titanic task. She also sacrificed her very heart-blood in order to bring an ancient, divine Message to this world.

Perhaps, as Theosophists who study and try to grasp the teachings, we are so accustomed to reckon by manvantaric and pralayaic periods, that in 1938 we are inclined to think of H. P. B.'s time as a cycle long ago! That *she* and her workers were the "pioneers," and *we* continue, *we* of a later period. In one way this thought contains truth; there have indeed been great changes since she passed away, indescribably great work has been done. But, on the other hand, there are in many respects no very great differences, for we know that the spiritual evolution of mankind takes ages and ages. From that point of view we are still pioneers and we shall be for many, many years; millions around us are still educated on the basis of the old dogmas and crystallized ideas of the last century, though numbers and numbers continually outgrow them! To these millions Theosophy is and will remain *a new message!*

In studying the subject under discussion let us pay attention to Judge's words in *The Ocean of Theosophy*, Ch. XIV, the conclusion:

The first 5000 years of *Kali Yuga* will end between the years 1897 and 1898. This *Yuga* began about 3102 years before the Christian era, at the time of Krishna's death. As

1897-98 are not far off, the scientific men of today will have an opportunity of seeing whether the close of the five thousand year cycle will be preceded or followed by any convulsions or great changes political, scientific, or physical, or all of these combined. Cyclic changes are now proceeding as year after year the souls from prior civilizations are being incarnated in this period when liberty of thought and action are not so restricted in the West as they have been in the past by dogmatic religious prejudice and bigotry. And at the present time we are in a cycle of transition, when, as a transition period should indicate, everything in philosophy, religion, and society is changing. In a transition period the full and complete figures and rules respecting cycles are not given out to a generation which elevates money above all thoughts and scoffs at the spiritual view of man and nature.

Let us also pay attention to H. P. B.'s own words in *The Secret Doctrine*:

They [the esoteric doctrines] are said to emanate from a source (Occultism) repudiated by science. . . . The rejection of these teachings may be expected, and must be accepted beforehand. . . . They will be derided and rejected *a priori* in this century; but only in this one. For in the twentieth century of our era scholars will begin to recognize that the *Secret Doctrine* has neither been invented nor exaggerated, but, on the contrary, simply outlined; and finally, that its teachings antedate the Vedas. — I, p. xxxvii

And on page xxiv, referring to the first cycle of Kali-Yuga:

We have not long to wait, and many of us will witness the Dawn of the New Cycle at the end of which not a few accounts will be settled and squared between the races.

Though we do not as yet know anything about that "end" spoken of, let us recognise the truth and importance of the words just now quoted. Let us admit that we are still — and Heaven knows how long yet — right in the middle of this transition period. It is worth considering for all of us to what extent H. P. B.'s work and message has been vindicated so far, both in what we might call "outside" the T. S., in the world, and inside the T. S. or rather the Theosophical Movement, though, of course, we realize that there is no real separation here; there is a constant influence through the "channel" into the world and the influences of the latter react on the Movement, at least in exoteric aspects.

Now a Convention like this, where so many subjects are tackled, is not the place to go into a detailed and technical study of what is happening in science, philosophy and religion and to make comparisons. Those of us who are alert and study magazines and books of the present day get one example after the other of the truth of H. P. B.'s statements and — shall we call them "predictions?" (Predictions here were based on knowledge of the cycles!) Our own periodicals and books continually point to the hundreds and hundreds of instances, and it would indeed be interesting to quote some of them here.

We are living in a strange period; on the one hand turmoil and struggle, discord and strife, reminding us of the cruelty and darkness of the Middle Ages, on the other hand a breaking through of light, a search of human minds for truth about life and death, about the universe, as never before. New conceptions everywhere, broadening of ideas and ideals, all in themselves a vindication of what H. P. B. stated and predicted. We are reminded here of her IF at the end of *The Key to Theosophy*:

ENQUIRER. But if this danger be averted? [the danger of dogmas and degeneration into sects of the T. S.]

THEOSOPHIST. Then the Society will live on into and through the twentieth century. It will gradually leaven and permeate the great mass of thinking and intelligent people with its large-minded and noble ideas of Religion, Duty and Philanthropy. Slowly but surely it will burst asunder the iron fetters of creeds and dogmas, of social and caste prejudices; it will break down racial and national antipathies and barriers, and will open the way to the practical realization of the Brotherhood of all men.

It is especially the statements in this concluding chapter of H. P. B.'s *Key to Theosophy* that are very important to us, for either partly or wholly we find her work and message vindicated by comparing what she stated with what has happened after she left us and what at present takes place in the world around us.

In the world of science almost every new discovery means a vindication. Read the books on astronomy, biology, archaeology, on the therapy of many medical men of the present day. Cosmic ideas penetrating everywhere! Here is an instance, the concluding words of a well-known Doctor of Medicine in a weekly article in one of the big Netherlands papers:

The tragedy of man is that all sorrow finds its origin in his own nature, because he does not know what he is doing. There will probably come a time when we, doctors of medicine, no longer make a difference between diseases of the body and of the mind (soul), because there is no difference between matter and spirit. For matter is spirit and spirit is matter. However, this is not a modern view at all; we do not owe it to modern science, physics and chemistry, though they have given recent proofs of the fact. Four hundred years ago already the physician Paracelsus stated it in his *Volumen Paramirum*. And in curing diseases

this fact will have to be taken into consideration. For the more deeply one penetrates into some process of a disease, the more one realizes that the causes of it lie in the occult, and that nobody, with the light of nature, can be a (real) physician, if he fails to find the causes of the visible in the invisible (realms). — Dr. P. H. van de Hoog, in *Het Vaderland*, The Hague

And here is a statement from a book by Geraldine Coster on *Yoga and Western Psychology*, a most interesting work:

My plea is then that Yoga as followed in the East is a practical method of mind development, quite as practical as analytical therapy, and far more practical and closely related to real life than the average university course.

H. P. B. said in the *Key*:

The West will learn to understand and appreciate the East at its true value.

Only a couple of weeks ago in The Hague two very well known men of science lectured on the publication of a book called *Scientia*. It was a significant gathering; there were interesting people, one could feel the predominance of the manasic qualities throughout the hall. But what struck us was the great effort of the two learned speakers to convince the audience that a unification of the various and specialized branches of science had absolutely become necessary, so that the men of science could approach each other and a synthesis could be found, seeing that *Spirit is one*. We were led to think of many passages in *The Secret Doctrine* when listening to the very interesting speeches of these two scholars.

It would take too much time to give the hundreds and hundreds of instances where H. P. B.'s work and message is vindicated in

religious and philosophic thought. There is everywhere an enormous interest in Tibet just now, the existence of the Great Ones and their disciples or chelas is accepted. H. P. B.'s words are quoted either directly or indirectly in ever so many periodicals and books. After the first wild phases of psychism, an ignorant search to cultivate psychic powers, there may now be seen everywhere a turn of the tide. There is a closer investigation, a careful proceeding on this path of minds more receptive as to the existence of forces in man and nature, dangerous on one hand but worth investigating on the other hand, so that in course of time, as H. P. B. said, mankind may be guided along normal and healthy lines. She said in *The Key to Theosophy*:

Further, the development of the psychic powers and faculties . . . will proceed healthily and normally. Mankind will be saved from the terrible dangers, both mental and bodily, which are inevitable when that unfolding takes place, as it threatens to do, in a hot-bed of selfishness and all evil passions. Man's mental and psychic growth will proceed in harmony with his moral improvement, while his material surroundings will reflect the peace and fraternal goodwill which will reign in his mind, instead of the discord and strife which is everywhere apparent around us today.

Now speaking more from the standpoint of one *inside* the T.S.! What lessons we get! "Its future," said H. P. B. "will depend almost entirely upon the degree of selflessness, earnestness, devotion, and last, but not least, on the amount of knowledge and wisdom possessed by those members, on whom it will fall to carry on the work, and to direct the Society after the death of the Founders."

"*Unite and work* as one mind, one heart," said H. P. B. to the Conventions in her time (1890). And in 1891:

Never has it been more necessary for members of the T. S. to lay to heart the old parable of the bundle of sticks than it is at the present time; divided, they will inevitably be broken, one by one; united, there is no force on earth able to destroy our Brotherhood.

Well then, in our time, a man comes and again repeats *the same message* to the Theosophical Movement: UNITE! Our present Leader, Dr. de Purucker, issued the plea to all Theosophists, no matter what their present organizational affiliations may be, to unite on the fundamental principles of Theosophy, if they really love H. P. B. and her work. I sometimes ask if some of our friends are blind that they do not see that *here* especially H. P. B.'s work and efforts are vindicated. And as to deeper aspects, hardly to be understood by the outside world, read H. P. B.'s article on "Chelas and Lay Chelas," see the state of affairs in those times, the dangers and difficulties, nay, disasters, compare the work done by the Leaders after she left and by the forces behind them with that which was done later, leading to a limitation of the dangers of the inner Path, the avoiding of sudden occurrences by the gradual steps, just as in the Mystery-School, which the T. S. indeed is.

For those who have made a study of the influences at work in the Theosophical Movement it is not only a *fact* that the T. S. will live on and through the twentieth century, that it is leavening and permeating in any case *a great part* of the mass of thinking and intelligent people, but also that it is being guided by the same forces as in H. P. B.'s time. And that guidance is of such a great importance to them and such an indescribable and continual inspiration to them, *for that is indeed the greatest vindication* of H. P. B.'s work we can ever think of. There was the unforgettable training of K. T. — and I mention this especially, because it may not be so well known to the members who have come in in later

years preparing the way for greater things and by this very method vindicating Blavatsky's work and message in the most esoteric way. There is the grand work of G. de P., whose methods of work and guidance, whose marvelously clear and profound statements in the magazines and books, *always* confirming and corroborating H. P. B.'s teachings, i. e., the doctrines of the Esoteric Wisdom, prove to us that Blavatsky's promise that *more would be given* in this century if all went well, has been fulfilled to the letter.

Reflect! no disappointments in our T. S. as regards leadership and teachings, always proofs of the impersonal forces working through the top of the hierarchy, always definite evidence that H. P. B.'s teachings were given out in strict conformity with the indications of the Great Ones who sent her. No withdrawal of fragments of doctrines or even of whole aspects of teachings, but, on the contrary, an ever greater vision is given to us of the esoteric, majestic verities in *The Secret Doctrine*. Is not this a vindication that should make us think and guide us as to the work we have to do for the future? For we should not forget that the greatest vindication of H. P. B.'s work is still to come by *our* work, i. e., by our trying to prepare the time as pioneers in our days for the realization of the Theosophical basis of life for *every* human being, for communities and nations, indeed for the whole world. This very Convention shows us that we mean business, this very meeting of members and officials from various places in Europe is a most beautiful vindication of the noble efforts of the lion-hearted Founder of the Theosophical Movement.

H. P. B., her work and message! The *insignia majestatis* of the really Great Ones were there. The real teachers always have that great impersonality, there is no desire or effort to make personal followers. They seem to say: I only do my duty, I teach but to pass on. They always make us love humanity and never attract

attention to themselves, for which very fact they must needs get our attention in the shape of great respect and gratitude. They teach us that we should in our turn be impersonal instruments, that really nothing remains of us but the *spiritual aroma of our work as such instruments*, though this will come back even in future manvantaras!

The Theosophical Forum

WHAT IS THEOSOPHY? — *Iverson L. Harris*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

FIRST: Theosophy is a way of living, a path through the labyrinth of life, lighted from within by the fires of aspiration, of love and compassion and sympathy for all that lives, and illuminated from without by the self-shining sign-posts all along the way left by the Enlightened Ones of all ages and of all peoples, who have trodden the Path before us.

Second: Theosophy is a magic treasure-house of spiritual and intellectual wisdom, into which anyone may enter and partake of the riches therein offered, to the extent that he is willing to pay the price for them — the price being sincerity and disinterestedness of purpose, readiness to work and study and strive and serve and give. Marvelous paradox! The more one avails himself of the riches of this treasure-house, the greater one finds therein the riches yet untouched; and the more one gives to others of the treasures received, the more richly he finds himself endowed. Such is the magic of sharing in spiritual and intellectual treasures. There are no letters patent issued by the Keepers of this Thesaurus. Its treasure-chests are open to any and all who will give the right knock; and no one can shut the doors to the treasury except oneself.

Third: Theosophy is a master-locksmith, who supplies gratis keys to all who earnestly apply for them and are willing to serve their apprenticeship in order to learn how rightly to use them — keys to the basic, underlying, hidden, and noumenal causes behind the superficial, outward, obvious, and phenomenal effects which so

mystify and baffle thinking men searching for solutions to the deeper problems of religion, philosophy, and science.

Fourth: Theosophy is a universal Baedeker or guide-book, which describes the travel-routes, points out the places of interest, recommends the best stopping-places, warns of the dangers, and answers age-old questions for the serious wayfarer on his eternal pilgrimage from un-self-conscious god-spark to fully self-conscious god: Who am I? Where did I come from? Whither am I bound? What is the purpose of it all? What is my relationship to the vast universe — visible and invisible — which surrounds me? And, perhaps most important of all, What is my relationship and my duty to my fellow-pilgrims along the way?

Fifth: Theosophy affords me the companionship of real men and women in many varying degrees of evolutionary development, enlightenment, and awareness; and from the moment these companions have really been touched by the spirit of Theosophy — even if not yet familiar with it by name — all are at once linked with me in a marvelous web of destiny — my spiritual brothers and sisters, closer to me, mayhap, than those of my own flesh and blood. To some of these — my younger brothers in Theosophy — I may be able to give light and help, because I may have passed through the grades into which they are just entering; as to the majority, I study and grow and aspire with them, each sharing with all the others the lessons learned, the experiences passed through, the difficulties overcome, the victories won, the achievements recorded, the enemies inside ourselves conquered. From those wiser and more evolved than ourselves — our leaders and teachers — we receive inspiration, light, and guidance. Fallible human beings like us, as they themselves remind us, they are perhaps closer to us for that very reason; while they nevertheless enrich our lives with the brilliance of their genius, the loftiness of their ideals, the creative power of their

imagination, the dynamic force of their resilient vitality, the bountiful generosity of their intellectual and spiritual gifts. And beyond them, through Theosophy, we are made aware of our link with the real Elder Brothers of the Race, the *Mahatmans*, the highly illuminated spiritual Sages and Seers, the men in whom the living spirit of the Christ and of the Buddha actually abides and manifests itself in the outpouring of magnificent philosophy, occult science, lofty ethics, universal religion, and all-embracing love.

If, perchance, some are unfamiliar with the treasures that Theosophy has to offer, and doubt that such riches as I have spoken of are actually available in this sad world of ours, then to such I say: Do yourselves the service of investigating personally. Dare you plunge in deeply into the arcana of occult lore? Seek you to know the Masters of Wisdom by their own words and teachings? Then read and study *The Mahatma Letters to A. P. Sinnett* or the synthesis of religion, philosophy, and science transmitted from them to the world by H. P. Blavatsky over fifty years ago in her monumental masterpiece, *The Secret Doctrine*. Let me whet your appetites with a brief quotation from each of these works. Listen first to this daring figure from *The Mahatma Letters* (page 339):

The culture of society more often inclines to lawn-tennis philosophy than to that of the banned "adepts," whose wider game has worlds for balls, and etheric space for its shaven lawn.

And in the Preface to *The Secret Doctrine*, H. P. Blavatsky states that the teachings contained therein

. . . belong neither to the Hindu, the Zoroastrian, the Chaldean, nor the Egyptian religion, neither to Buddhism, Islam, Judaism, nor Christianity exclusively. The Secret

Doctrine is the essence of all these. Sprung from it in their origins, the various religious schemes are now made to merge back into their original elements, out of which every mystery and dogma has grown, developed, and become materialized.

Do you seek to share in the universal ethical ideals and devotional teachings which Theosophy has to offer? Then study and memorize and make a part of your lives the golden rules contained in H. P. Blavatsky's *The Voice of the Silence*, William Q. Judge's recension of the *Bhagavad-Gita*, and G. de Purucker's *Golden Precepts of Esotericism*. A brief quotation from each by way of example: From *The Voice of the Silence*:

For mind is like a mirror; it gathers dust while it reflects. It needs the gentle breezes of soul-wisdom to brush away the dust of our illusions. Seek, O Beginner, to blend thy mind and soul.

From the *Bhagavad-Gita*:

Even if the good of mankind only is considered by thee, the performance of thy duty will be plain; for whatever is practised by the most excellent men, that is also practised by others. The world follows whatever example they set. (ch. iii, page 25)

From *Golden Precepts of Esotericism*:

Love is the most beautiful, the holiest, thing known to human beings. It gives to man hope; it holds his heart in aspiration; it stimulates the noblest qualities of the human being, such as the sacrifice of self for others; it brings about self-forgetfulness; it brings also peace and joy that know no bounds. It is the noblest thing in the universe.

Do you seek to know more about the application of Theosophy to the problems of home and education and every-day living? Then read Katherine Tingley's *Theosophy, the Path of the Mystic* or her *Wine of Life*. In the first of these works she wrote:

Think of Theosophy not so much as a body of philosophic or other teachings, but as the highest law of conduct, which is the enacted expression of divine love or compassion, (p. 3)

And in *The Wine of Life* Katherine Tingley wrote:

Theosophy is not exclusive, it is all-inclusive; it is not for the "chosen people"; it is for all humanity. It is the great, sweeping breath of truth, (p. 131)

Do you desire to share in the light which the technical doctrines of Theosophy, expressed in easily understood language, have to throw on some of the basic questions of religion, philosophy, and science? Then read H. P. Blavatsky's *The Key to Theosophy*, William Q. Judge's *Ocean of Theosophy*, or G. de Purucker's *Esoteric Tradition*. In the concluding chapter of *The Key*, H. P. B. wrote:

Theosophy . . . , as it has existed eternally throughout the endless cycles upon cycles of the Past, so it will ever exist throughout the infinitudes of the Future, because Theosophy is synonymous with EVERLASTING TRUTH.

In his opening chapter of *The Ocean of Theosophy*, William Q. Judge declared:

Theosophy is that ocean of knowledge which spreads from shore to shore of the evolution of sentient beings; unfathomable in its deepest parts, it gives the greatest minds their fullest scope, yet, shallow enough at its shores,

it will not overwhelm the understanding of a child. It is wisdom about God for those who believe that he is all things and in all, and wisdom about nature for the man who accepts the statement found in the Christian Bible that God cannot be measured or discovered, and that darkness is around his pavilion. Although it contains by derivation the name God and thus may seem at first sight to embrace religion alone, it does not neglect science, for it is the science of sciences and therefore has been called the Wisdom-Religion. For no science is complete which leaves out any department of nature, whether visible or invisible, and that religion which, depending solely on an assumed revelation, turns away from things and the laws which govern them is nothing but a delusion, a foe to progress, an obstacle in the way of man's advancement toward happiness. Embracing both the scientific and the religious, Theosophy is a scientific religion and a religious science.

In *The Esoteric Tradition*, our present Leader, Dr. de Purucker says on page 406:

It [Theosophy] is the result of innumerable ages of human experience, of human research and experiment by the Great Sages, the Masters of Life and Wisdom, and of their deep thinking and reflexion, casting this Wisdom-Knowledge into systematic formulation. It is the result of their correlation of the knowledge that they have wrested from the womb of Nature and have formulated into systematic exposition. Such Great Men still live as a Brotherhood.

Elsewhere, Dr. de Purucker has stated:

Theosophy is a formulation in human language of the operations, structure, origin, present state, and destiny of

the Universe. . . .

Light for the mind, love for the heart, understanding for the intellect: all three must be satisfied in every man before he has real peace.

Finally, would you like to take the first steps in this wide field of intellectual and spiritual culture and development? Then, I say, join a Theosophical study-group or lodge, or enroll in the free Theosophical Correspondence Class, and read the series of fifteen little *Theosophical Manuals* issued this year as a complete set by the Theosophical University Press. They are entitled respectively:

1. What is Theosophy? A General View for Inquirers
2. Reincarnation: A Lost Chord in Modern Thought
3. Karman: The Doctrine of Consequences
4. The Seven Principles of Man
5. After Death — What?
6. Evolution
7. Rounds and Races: Man's Divine Parentage and Destiny
8. The Doctrine of Cycles
9. Hierarchies: The Ladder of Life
10. The Astral Light
11. Psychic Powers
12. Theosophy and Christianity
13. Mahatmans and Chelas
14. The Mystery-Schools
15. Yoga and Yoga Discipline: A Theosophical Interpretation

As a verbal keystone to the great arch in the temple of Theosophy, I think the following message from one of the Masters transmitted through H P. Blavatsky to her students is superlatively inspiring and bears constant repetition.

Behold the Truth before you: a clean life, an open mind, a pure heart, an eager intellect, an unveiled spiritual perception, a brotherliness for one's co-disciple, a readiness to give and receive advice and instruction, a loyal sense of duty to the Teacher, a willing obedience to the behests of TRUTH, once we have placed our confidence in and believe that Teacher to be in possession of it, a courageous endurance of personal injustice, a brave declaration of principles, a valiant defense of those who are unjustly attacked, and a constant eye to the ideal of human progression and perfection which the Secret Science (*Gupta-Vidya*) depicts — these are the golden stairs up the steps of which the learner may climb to the temple of Divine Wisdom

The Theosophical Forum

QUESTIONS — *M. G. G.*

Can you explain in words just why
So many are afraid to die?
Why should the creeps be twinned with fear
At thoughts of Nature's ruling here?
Are we so loath to close our eyes
While stars bedight Night's purple skies?
Why then, when this, our perfect sleep,
Allows the Spirit Cosmic sweep?
Is there today a way whereby

Rare souls, prepared, might amplify
Self-knowledge by a thousandfold,
Precisely as in days of old?
Might one foretread that old, old road
Which the immortal gods have strode,
And know just what it means to be
Some Rounds ahead of you and me?

The Red Man views the Milky Way
As one vast "Road of Souls," they say.
Is this a fragment of old lore
That all men shared long heretofore?
Did they then know the metes and bounds,
The ultimate of future Rounds,
That Man must make in times to come
When we have solved the Cosmic Sum?

— *M. G. G.*

CONSCIOUSNESS AND SELF-CONSCIOUSNESS — *Abbott Clark*

Consciousness is awareness of any thing on any plane. It is knowledge or perception of any state, object, or sensation, mental, emotional, or physical. It is all that makes us different from insensate matter. If we were not conscious on this plane we would be asleep or in a faint or a trance. In such cases our consciousness is transferred or tuned in to another plane. We are then temporarily conscious on some inner plane. If we were not conscious at all on any plane we simply would not *be* at all.

Self-consciousness is an affirmation of duality: I, and myself. But what is the *I* that scrutinizes myself? It is evidently not the body, nor its life, nor the emotions or desires, for I can scrutinize them and exercise my will upon them. I am not my mind, for I can view and study its operations and train, change and control it.

What then is this mysterious I? This awareness of being an individual? An individuality which never changes from birth to death? It is the Atmic Ray, the Christos, within us. The ray of the immortal monad. If we could turn inward and follow this sense of reality, this stream of consciousness, to its source we should become illuminated. We should realize our divinity.

Consciousness and energy are inseparable, two aspects of one thing. The will in man is the energy aspect of his individual consciousness, of his mind and soul. For purposes of discussion we often separate mind and will and make of each an empty abstraction; but in fact and in nature they are two inseparable aspects of one thing. We cannot be conscious, or think, without motion, life, energy; for consciousness and life or energy are one.

Other beings both above and below man are conscious and

exhibit varying degrees of intelligence, often high intelligence. But they are not self-conscious. It is said in the Vedas that the gods (devas) in heaven envy suffering, struggling man on earth. Why is this? Because of man's vast possibilities; because of his having free will and the creative fire. He can think, imagine, will, and create, and so become "as one of us," i. e., as one of the creative gods. There are some classes of gods who have not been through the human stage. They have not developed self-conscious free will. The human stage on any planet is the stage in which self-conscious free will is developed.

Other beings below man are moved to act by a general hierarchical impulse, as flocks of birds and schools of fish. The teaching is that there are classes of devas, spiritually far above man, who have not this self-conscious free will or power of choice and the creative fire. It is they who are jealous or envious of man, according to Vedic lore, as indicated by the story of Prometheus. Most men are far from being fully human yet. They are in a low primitive state of evolution. They move with the "herd mind," are swayed by mass psychology. They have hardly begun to think and reason for themselves. They are experimenting on each other in the use of their wills, and vexatious or terrible is the conflict. Deluded by the sense of separateness, "the great delusion," they injure each other. But nature is beneficent. They learn by suffering.

All the myriad parts of complex man are perfectly right and good and pure in their proper place. They become evil only when out of place, as fertile soil is "dirt" when in the house. It is the limited, egoistic, emotional, personal man that misuses his powers for selfish gratification that makes all the trouble. It is the object of the Theosophical Movement to teach man to know and control himself and use his powers aright. The personal, emotional man and the desires are not to be destroyed or annihilated. Without

them we could not live or work on earth. They are to be purified, elevated, perfected and used aright. For example, the creative power which man possesses is a pure cosmic force. It can be used for procreation, or worse than wasted for gratification, or utterly purified from bestial and selfish desire. It can be used on the intellectual, moral and spiritual plane, where one of its powers is kriyasakti, the power to create or materialize objective forms by the imagination and will.

Initiation and masterhood must be accomplished while in a body here on earth.

As man rises spiritward in the scale of evolution the sense of separateness disappears and the conflict of wills ceases. Man's consciousness blends in love and sympathy with his fellow-men and in fact with all nature. He becomes an impersonal force for good, universally beneficent. The object of the human stage of evolution has been accomplished. The human host has joined the army of Compassion. They have learned to use their wills, the power of thought and imagination, and all their creative faculties in full constructive co-operation with the gods.

The Theosophical Forum

CHARACTER: A THEOSOPHICAL EXPLANATION (1) — *Clifton Meek*

Editor *Norwalk Hour*:

Several weeks ago there appeared in the *Norwalk Hour* a very excellent letter by Judge Light entitled "What is Character?" Perhaps some of your readers may be interested in further thoughts on the subject from a theosophical viewpoint. The lack of time has prevented me from commenting earlier. I believe that character can be explained and defined by Reincarnation, at least to the satisfaction of some, for as a lecturer on the subject once facetiously remarked: "Reincarnation explains human nature. People could not have become so stupid in just one life here on earth."

There can be no satisfactory explanation of character that can be universally applied to all cases that is based upon popular religious and scientific concepts now prevalent in the Occident. Science accepts nothing that it cannot prove by its own physical methods of investigation, and hence gives little consideration to the inner man and his spiritual reactions to life. Character is a spiritual quality which cannot be boiled down to a residue in test tubes. Christian theology, a distorted interpretation of the early Christian mystery teachings, tells us that man is a trinity — body, soul, and spirit, a classification which is true as far as it goes, but one which is sadly lacking in detail as far as a practical and workable basis upon which to build a better understanding of the real man is concerned. It briefly mentions man's intermediate nature as a soul, but gives us no information concerning the mental and psychical processes which take place, e. g., desire, and, most important of all, free will, by which man may shape his own destiny. We are further told that the earthly experiences of

man are limited to one brief, short, and fleeting life here upon earth, during which time he is supposed to acquire perfection much in the manner that a student would master algebra and higher mathematics by attending school for one day. Such a theory is contradicted by every known law of nature. All life, great and small, from stars to atoms, is governed by the law of cycles, a habit of nature, so accurately and perfectly balanced that astronomers are able to compute and foretell solar eclipses hundreds of years hence, and there is no logical reason or criterion in the realm of nature to assume that man is an exception to this universal law. It is only when we view life from the large perspective — that the spiritual man returns to the sphere of earthly existence innumerable times until the last lesson has been learned and coined into the spiritual currency of character and made a par of himself, that we can account, with any degree of logic and reason for the inequalities of human nature and why some men innately have more character than others. A man who has character is simply more of a man than one who hasn't for the reason that he has incorporated the fruits of experience and the lessons of many lives into the fiber of his being, and it has become himself. His very nature bears the stamp of a nobler life.

This does not mean, however, that character is something which is acquired from without and added to man like so many bricks as a building is constructed. Rather it is the unfoldment of spiritual and divine qualities inherently within; the manifestation of higher attributes brought about by the trials and experiences of earth-lift through many incarnations.

Let a man once grasp the idea that he is essentially a divine being in his inmost nature, and that life is a school of discipline to which he must return until the selfish impulses of his animal nature are transmuted into an unselfish love for all that lives, his

life will become purposeful and an elevating influence within the sphere of his relationship with his fellow-men, and I hold that this, and this alone will bring about permanent world betterment and the abatement of those evils which today cast their blight over the face of the earth. The general trend of western civilization, both in secular and religious matters, has been dominated by the selfish ambition of men to GET something rather than to BE something. If it hasn't been worldly things it has been a glorified selfishness for eternal salvation. The purpose of life is to make something of men here and now, and the future will take care of itself.

For nearly two thousand years western civilization has been fed on theological husks instead of the basic Christian and Theosophical teaching that it is the divine nature of man alone that can restore peace and happiness on earth, and today the gods of war are reaping a bountiful harvest.

If character is to be developed in human nature, something more is necessary than merely preaching to men that they must be good. This is an age of inquiry and investigation, and the mere repetition of platitudes no longer satisfies thinking people who refuse to blindly accept spiritual guidance on the strength of supposed authority. Man is endowed with an intellectual apparatus and if he is to grow and keep pace with the evolutionary process of nature he will have to do his own thinking and learn to discriminate between Truth and the mass of non-essentials with which religion has become incrustated. An orderly society cannot be created by teaching men for centuries that they are like so many rotten apples that can be made whole again by some supernatural, external power. In time they will begin to believe that they are inherently bad and sooner or later the bad spots of spiritual decay and dry rot will begin to appear on the surface of society, which is exactly what is happening

today. Although the idea of Reincarnation has been promulgated in the western world for a comparatively short time, it has gained wide acceptance in all walks of life and many professed Christians have accepted it as a part of their religion. It is the only teaching, religious, philosophical, or scientific, that explains the apparent inequalities of life with any degree of justice.

I would define character as the accumulated wisdom of many lives — the urge to live a nobler life more in harmony with the moral and ethical laws of Universal Nature which underly all manifested life.

The Theosophical Forum

WHAT THEOSOPHY MEANS TO ME — *Margaret Adams Faulconer*

Theosophy is a comprehensive answer to the questions which arise in us all at times of great exaltation or trouble. It explains our awe at beauty and satisfies our yearning to know that our aspirations are not in vain, but will have their fulfilment in good time. It teaches that there is *no* unfinished business; that right thinking results in proper action, and that evil brings its own appropriate punishment.

Theosophy purges life of its most virulent poison: regret, and fills us with a glorious sense of adventure, reaching beyond our numbered years. It ties us in with cosmic consciousness akin to ecstasy. Crying for the moon is no longer futile; we may help ourselves to all the starry universe, for of it we are an integral part.

"And the stars sang in their courses." The poet who wrote that understood Theosophy; he must have, to convey to us the feeling of joyousness in Nature.

Theosophy frees us from the trammels of dogma and doctrine which, if we are sincere in our research, must result in Theosophical conclusions. It shows Science and Religion and Philosophy to be fluid, not static, but ever unfolding; as today's theories are nullified by tomorrow's, many times, even so we evolve and expand in our reactions and understanding. Its teaching of compassion is appealing, for without this outpouring of tenderness there can be no brotherliness; and hate and envy are not negative but strong forces which bar all advancement and are even physically poisonous. Unlike religion, Theosophy imbues us with a great necessity to share the sense of freedom with others. Religion has its missionaries, but they seek to impose hard

and fast dogma. We strive to point out this above mentioned freedom, the freedom of self-discipline; freedom to be oneself, and exert every effort toward the "good Life" here, so that we may "graduate," so to speak, from this phase and do "post-graduate work" of evolvment as cycle succeeds cycle. Theosophy is a study, of course, with limitless avenues to follow, to develop and deepen our capacity to receive Truth; but the beginner cannot dissociate the study and the practice: as we progress in understanding of Theosophy we find that what we took as something to peruse we have automatically made a habit of living.

Theosophy has shown me that it works, because it does not require that one go outside the province of one's daily circle of influence, nor side-track any of the normal duties of life, but rather it stresses the importance of being the best possible, responsible person, in attitude, faithfulness, etc., right in that sphere where we find ourselves. Many times a religion interests people because it furnishes an excuse for chucking the humdrum, daily duties. But that will never help us to grow, and others watching for the effects of a newly acquired philosophy are unfavorably impressed when the student neglects his immediate responsibilities.

To sum up:

(a) Theosophy is the science, philosophy, and religion combined which every thinking man needs to keep balanced in this muddled world.

(b) Theosophy tells us why we are here and helps us to prepare for the next step in our evolution.

(c) Theosophy points to a possible "heaven" on earth if only all mankind could feel and practise the tender compassion it teaches.

A DREAM FROM THE SEAS OF THOUGHT — *F. F. Webster*

F. Spanner, U. S. Navy, Retired, woke up in the morning still full of the ideas he had gotten from a dream that was as clear as a real experience. It impressed him so much that while it was still fresh in his memory he went and told it to his wise old friend, Mr. Whitely. It ran very much as follows.

"It seemed as if my old Navy shipmate Sparks, the Radioman, and I were having an interesting experience testing a new radio device by which a person could listen in to the thoughts of other folk — their actual thought — not the seeming thoughts back of their conversation, and also that the same device made it possible for Sparks and myself to broadcast our actual thoughts to impinge on the minds of any particular persons we wished.

"While I was intent on broadcasting to a certain group some thoughts that seemed helpful and kind and friendly, I happened to glance over at Sparks. His face showed a sort of puzzled concern, so that I asked him what was wrong. He answered that he had been listening in on the thoughts of a group of people together at some apparently friendly entertainment. There seemed to be, as it were, two sets of thought-actions going on in the minds of each of the folk he was studying. There were the thought-forms directly connected with the conversations, which were amiable and friendly, and then there seemed to be certain vigorous thought-forms that appeared to be stamped with suspicion, distrust, and fear. And further, these qualities of thought coming from one person seemed to react on others so as to increase the disturbing thoughts already in their minds. While Sparks and I were talking about it, I woke up."

After Mr. Spanner finished telling his dream Mr. Whitely

remained quiet, in deep thought, for a while. Then he turned to Mr. Spanner and said: "You have been dreaming about some very serious facts that the majority of men do not consider. Men's brains are very wonderful radio sets that are fitted for both sending and receiving ideas. It is very important to understand this quality of brain structure in these days when people are in such close association with each other. It is just as dangerous to be ignorant of this as it is to be wilfully destructive, as you can see. Unfriendly ideas, unexpressed, build up into dangerous forces for destructiveness. It is a further fact that a person in a group where such harmful thought-emanations are building up, can by a strong, positive, friendly, good-will thought-force from himself counteract the unfriendly thought-structure and may even start a wave of positive friendly thoughts that will build up into bases for real trust and true friendship. Refuse to think unkind thoughts; think kind thoughts, and trust and friendship are bound to develop. That is what makes real civilization."

The Theosophical Forum

A RIGHT PHILOSOPHY — *H. T. Edge*

Some people say they are so occupied with daily cares that they have no time for Theosophy. But this is nonsense and shows that they have not grasped what Theosophy is. It is true that it includes deep studies which demand much time; but apart from this, Theosophy is a way of looking at life. However preoccupied we may be with the daily task, we cannot help thinking; everybody has *some* philosophy of life, though he may not call it by that name; and surely it is better to have a right philosophy which will help you to face life than a wrong one which will make life more difficult. The advantage of Theosophy is that it explains the problems of life instead of teaching doctrines that do not agree with our experience.

Take the question of the duality of human nature. That is a fact which everyone knows well enough from his own experience, both in his own character and in the characters of his associates. This fact cannot be explained away and must be faced; but if we can understand the reason for it we shall be better able to grapple with it. Sometimes it has been called the angel and the demon in man, or man's higher self and lower self.

We all know that our mind is a battle-ground of opposing forces — those that make for peace and happiness, and those that make for trouble. But what too many do not realize is that every man has within him the power to determine his own destiny. We have in our nature unfathomable depths, and this is a *fact* which not all the dogmas of science or religion can do away with. Who has sounded the depths of human nature? Who dare set limits to the power of the human spirit? This is a time when each man is called upon to stand on his own feet and manfully assert the

power of his own individuality against any doctrines which may teach him that he is only an improved animal or that he is a helpless miserable sinner.

There are various movements of self-culture, New Thought, etc., which teach the calling forth of our innate powers, but there is no definite body of scientific teachings behind. Theosophy, with its teachings as to the sevenfold constitution of man, gives the clue to the problem. Man is not a mere collection of instincts and desires and fancies; he is not merely an improved animal; nor is he the plaything of indifferent cosmic forces, or a poor helpless creature doomed by deity to play a sorry and incomprehensible part. Man is essentially a divine being, a god dwelling in a tabernacle of clay. There are "humanist" movements, which concentrate on making human nature the chief thing; and they are right so far, but they do not know enough about human nature and its possibilities. The essential divinity of man, the sevenfold nature of man, Reincarnation, the doctrine of Karma: these are some of the things which must be understood if we are to understand human nature. And Theosophy explains them all.

The Theosophical Forum

TO A NOVICE IN WRITING — *Leoline L. Wright*

About once a month on an average someone writes to me, or I hear someone say: "I wish / could write an article on Theosophy." Instead of replying: "Well then, why not go to it?" — let me make a few simple suggestions.

First of all as to material. Here, you cannot be new. Everything allowed at present to be known about the Esoteric Philosophy has already been said, and by the Teachers themselves. But remember this. Not one of these wonderful truths has yet been brought out in the light of *your* experience.

In that sense — providing you are writing what *you* think and feel and not what you have read in *The Secret Doctrine* or *The Esoteric Tradition* — in that sense alone you yourself have something new and highly worthwhile to say. No reader is going to be struck with mere repetitions from the Theosophical classics. He can read those for himself. And neither you nor I can possibly put these things as they have there been written once and forever. But your own thoughts about them; your own fresh-minted ideas brought from your individual use of them — there is the secret in the choice of fresh material in writing an article on Theosophy.

Second. Before starting your article lay aside your textbooks for a week or two and concentrate on a fresh point of view. So many Theosophists read nothing but Theosophical books. The result is that many of us go round and round in the same spate of clichés and figures of speech and expression until we are like caged squirrels in their eternal treadmills. In this way some of the grandest Theosophical phrases have become threadbare and almost wearisome.

One of the best preparatory exercises I know is to read the books of some of our great modern writers. And if you will tackle one or two on a subject you *don't* like, you will get a whole lot more out of it than if you just follow the trend of your own mentality. The reason being that the expressions used will be fresh to you. As an exercise in rich and virile English the works of Winston Churchill, the English Prime Minister, can be particularly recommended. Priestley is another gold mine. Search out some good writer, anyway, on a topic that is unfamiliar to you, and study closely the style and vocabulary. In this way you will free your mind from the too familiar treadmill of daily thinking.

Also, freshen up your sense of human values. Pay a visit to your local post office and take in the types; or sit for an hour or so in a public park or the zoo; take a ride on a popular bus-line — anything that will enable you to soak up the common human atmosphere of everyday people and their lives. Focus observation, sympathy, and imagination on the people and slight happenings which you may encounter. Then during the next day or two write out a description of your impressions. It is simple and persistent work of this kind that has laid the foundations of all great writing. The biographies of the masters of prose tell us that all of them habitually carried a notebook wherein to imprison the fugitive phrase or the chance scene.

Wasn't it Anatole France who once set his pupils to describe a certain tree with which they were all familiar? He told them to look at that tree and find something to say about it that had never been said before. Thus emphasizing that it is not through one's material — for there is nothing new under the sun — but in what the observer finds to say about it, that the masterpiece is constructed.

Do not be afraid to use color. And cultivate what the rhetoric

books call "tropes" or figures of speech. That means you must try to make pictures, and dramatize rather than describe your material. The use of too many adjectives is fatal. Learn to choose nouns that embody in their meanings the quality of the thing you are describing; and you won't need many adjectives. Choose verbs of action instead of just describing how a thing appeared to be done. Make your reader *see* what you mean.

Be careful, however, to keep your first articles close to your own life. Fill them full with illustrations from your daily experience. After all the true laboratory of life is found in the business office, the nursery, the kitchen, or the workshop. For in these common places it is that the average man or woman may begin to sprout the first few prickly pinfeathers of the wings of Initiation.

The Theosophical Forum

THE DRAGON'S DEATH — *Irene R. Ponsonby*

Dragon's Death" is, writes Basil de Selincourt, "the price of men's joy and of their peace together." Surely this is a most intuitive and arresting thought!

Swiftly it unfurls visions of the dragon in art and literature — the great gold and crimson dragon of Chinese temple and festival, the dragon of the Nibelungenlied, and our own St. Michael and the dragon — each and everyone of these representing some aspect of a universally recognised symbol. What does the dragon symbolize, and how and why is its death "the price of men's joy and of their peace together?"

The dragon is the personified individuality in man, a stalwart step-son of the gods and the lusty product of the material sphere of evolution, as distinct from its elder brother, the universal individuality, the pilgrim of the ages which the dragon-slayer or St. Michael represents.

This personified egoity is the fertile source of human ignorance and illusion, for from it exude the manifold disruptive influences of life the ancients collectively termed the "heresy of separateness." The dragon would have man imagine himself a plaything of the gods pitted against the Universe, its laws and its forces; and competing with man and beast for a meager existence on Earth.

This the dragon-slayer knows to be a fraud and a delusion that he must destroy by using the strength and intrepidity possessed by the dragon, to divert its energies, now disruptively directed, into the constructive channels of evolution, of universal progress. Knowing himself a potential Universe, one with its very heart — a

son of Sun, Stars and Earth, now participating with all the kingdoms of Nature, in the life of this planet — St. Michael can by the power inherent in his divine kinship thus slay the dragon.

With the death of the dragon, the psychological distortions causing enmity and discord, fear and disease, will become amenable to the disciplined will of the dragon-slayer and learn to conform gladly to the good of the whole. The dragon's death means bringing the loved ideal into creation in the world of men instead of building a world man can no longer rejoice in.

Is this too heavy a price to pay for man's joy in his fellow-men of all nations and races and for the peace wherein to fulfill his joy? The dragon would take all, and when all else had been consumed — consume itself: St. Michael gives royally of what is worthy, retaining for himself but the right to transcend his own limitations, to garner from that experience yet greater treasures for the giving.

The advent of Justice, Altruism, and Compassion — the death of the dragon, antagonism — verily this is "the price of man's joy and of their peace together."

The Theosophical Forum

THOUGHTS ON MAN (1) — J. P. Upton

It appears that man is essentially an ego. Difficult as it is to define the word, it must be taken to be some point which has intelligence and, when this is used, it has force.

We can then say that man's mind is the extension of this point although it may not be the first differentiation of the origin.

The obvious expression of one of his stages of manifestation, is the brain, and its local instrument the body, both of which are but to give means for the operation of a non-material force on a material plane.

Man's actions produce his environment which in turn encourages the fuller development of that type of action which he is in the habit of performing on account of his character. If this type is unethical, it eventually leads to its own destruction. If it is a moral type, it is self-consolidating and leads to a greater intensity of the action.

Where does this begin with the individual? His birth is determined by his previous actions, it is a balance brought forward. He then begins to act according to his own swabhava, which allows him to act in accordance with it or he can act contrary to it, although this will be against his "nature." He can at any time turn from stage one to the next although at first he does so by reason of compulsion of feeling or education. Later, when he begins to think, he will decide to turn because he thinks it is right to, even when he does not want to. This stage is not dependent on age, in years, but of development. Until man reaches this stage he is not adult, not capable of independent intellectual thought, unaffected by passion, yet not cold because

over-fathered by the new intuition of the divinity of life.

Most men do not think. They only react against the circumstances around them, this is why so many naturally grouse. They then pull themselves up and determine to be cheerful, in which state of mind they still do not think, but ignore inharmonious conditions, and pretend that either they do not exist or else they cannot affect them.

When man becomes more aware of the planes of thought, he will perceive that there exist many webs of thought vibrations. He can tune himself to any of these within his range, and he will then think as all the others in that web. If this is a powerful vibration he will be so overcome with it that he will believe it to be the only true one, and if his mind is limited in its ability to encompass the new thought-form, he will tend to become a fanatic. Those who rise into the higher principles of their own composition, meet the divine aspects of life. They have a much higher perception of the values of life, and so powerful and so true is this awareness of things that they say they have seen God.

Man usually has the humility to accord the responsibility for this supreme vision to something outside himself. Here he is both right and wrong, for the truths that he feels are relating to a factor which is present in all men, even if it is only latent, and so he is wrong in attributing this to a source outside himself.

And yet he is also right, for he has now become acquainted for the first time with the essence that is present in all men, but this is the lowest plane of expression on which it shows. Below this man is chiefly a thing of personality, and this obscures the common denominator; especially as we all try to develop the personality so much nowadays. This stratum in the many man has, is called by various names, often the Christos, the Higher Self, or just the Conscience.

Many battles have been fought about the particular label that shall be applied to the exact name that shall be given to a certain stratum. Names tend to divide men, and they should try to feel the idea that the other is putting forward. Most of us think that our way of looking at an idea is the best one, and perhaps the only one. Yet if we could put our aspect into the minds of the other man, it would not appeal so much to him as his own, because we all have different backgrounds and tendencies.

Therefore the actual mental process and conclusion is unimportant. Too much thinking dulls the edge of action. Thinking is not to be made an end in itself, it is only a middle stage in three stages of living. The first is experience of action, then comes the realisation of what has happened, coupled with the mental reaction of what should next be done, and finally the doing of it.

Turning to the third stage of the swing of the pendulum of life, the action resolved on after careful weighing of the experience of the day; we find that we have choices of several ways. If our actions have brought us unhappiness, we can still do the same things again, with promise of still more unhappiness. Most of us have deliberately done things, that we know we shall rue. We have felt impelled by external forces to do them. Paul described this choice, and rightly ascribed the tendency to do the wrong thing, to his lower nature. All of us have to go through this experience, and return to it many times, long after we thought we had quelled its influence. Many of us blame this apparent dictation on our wills, we say we have bad tempers, or are too weak-willed to resist certain tendencies in our characters. We forget that the will is but the kinetic force of the mass of thoughts we hold. The nature of these thoughts is determined by desire. If we wish to change the desire, we must first uproot it for inspection, and this many of us

are afraid to do, because we like the experience the possession of this or that desire gives us. We do not like the payment that we have to give for its possession, but while we subject our minds to its sensations, we love it and are glad to see it grow. But when the time comes to pay for the damage it does, its cost of upkeep, our minds revolt and we determine to get rid of the animal, which it truly is. During this revulsion the detached ego sees truth in a rather too stark contrast to its surroundings and rapid repentance sets in. This is but the first stage in determining one's future policy. Repentance is easy, it is automatic. Burning of one's boats is helpful, in deciding to take the other way, but unless the focus of consciousness is deliberately fixed on the goal of the other way, and above all an attempt is made to like it, no lasting results will occur.

FUNCTIONS OF THE PINEAL AND PITUITARY GLANDS — *G. de Purucker*

The pineal gland was in earliest mankind an exterior organ of physical vision, and of spiritual and psychic sight. But due to the evolutionary course that the human frame followed, as time passed on and our present two optics began to show themselves, the pineal gland or the third eye, the "Eye of Siva," the "Eye of Dangma," the spiritual eye — call it what you like — began to recede within the skull, which latter finally covered it with bone and hair. It then lost its function as an organ of *physical* vision, but has never ceased to continue its functions even now as an organ of spiritual sight and insight. When a man has a "hunch," the pineal gland is commencing to vibrate gently. When a man or a woman has an intuition, or an inspiration, or a sudden flash of understanding, the pineal gland begins to vibrate still more strongly, albeit softly, gently. It functions still, and can be cultivated to function more, if we believe in ourselves, and if we believe in the things we have and demonstrate in our daily lives.

Whence comes our ethical sense, whence comes our spiritual insight, whence comes our sense of justice, whence comes the power that makes us men and not mere beasts? Why, these are energies that have to be accounted for. Merely to say they are, is no explanation. These various energies function through the different organs of the brain, some of them arising in the heart and reaching the brain, each such energy through its own appropriate organ or gland, or what not.

The spiritual being works on, plays on, the physical body, as the master musician plays on a wondrous lute or harp. The strings of this instrument, some of them, are coarse catgut and can produce

coarse, heavy, sensual sounds. But the strings of this wondrously constructed physical human frame, the body, run from the coarsest catgut to the silver, the gold, and finally to the intangible strings of the spirit; and the master plays on these strings with masterly sweep of will, the master-hand, when we allow it. Mostly we human beings refrain from playing on the nobler and higher strings, and play on the coarse catgut only. Think!

Why, as a matter of fact, this body of ours is one of the marvels of the universe. It is marvelously constructed. We human beings at present have no realization of what it contains, of its powers to be developed in the future as evolving time will bring them forth, but which we can hasten in their growth now. For instance: What did the ancient Hindus mean when they spoke of the different chakras of the human body, speaking in language which was hid, as all ancient occult teaching was hid? I will enumerate a few of the human chakras as they rightly are, and I am now going behind the veil of the exoteric teachings of the T. S., a bit. I will speak of seven organs or glands in the human frame, beginning with the lowest (which can be the highest). I will recite them first: the genital, the liver, the spleen, the cardiac, the brain as a whole, and the pineal and pituitary glands; and there are other subordinate centers or ganglia in the body. Every one of these organs or glands has its own appropriate function, activity, purpose, and work in the human frame. By our will, by proper study, by living the life, we can make the higher, the incomparably more powerful ones within us, active far more than they now are active, and thus become gods among men. Most of us do not do that. We live in the world below the human diaphragm as it were. And yet, despite our worst efforts to kill the god within us, I mean to destroy its holy work, the pineal gland and the pituitary gland, and the heart, continue functioning just the same. We are protected as it were against our own

foolishness.

The lowest of these chakras then can be made one of the noblest by changing its functional direction for creative spirituality. I am now talking of the body. Waste brings loss; that particular organ in the human frame can be made the organ for the production of the mightiest and noblest works of genius. It has a spiritual as well as a physical side, as all these organs and glands have — every one of them. How many men remember the holiness of spiritual creation, so to say?

The liver is the seat of the personal man, the kama-manasic individual; and the spleen, the "lieutenant" of the former, is the seat of the astral body, the linga-sarira; and even at seances today — which I would not advise anyone to frequent unless he goes there knowing more than the average man does — even they have shown how the astral body of the medium oozes out, first as a slender thread, and then becomes, when the manifestation is *genuine*, what is now called "ectoplasm," really thickened astral stuff. It comes through the spleen, it comes forth from the spleen. The liver, as stated, is the seat of the personal man, and the spleen is its lieutenant or adjutant.

Then the heart, the organ of the god within us, of the divine-spiritual: here in the physical heart considered now as a spiritual organ, and not merely as a vital pump which it is also: here in the heart, is the god within; not in person so to speak, but its ray, touches the heart and fills it as it were with its auric presence — a holy of holies. Out of the heart come all the great issues of life. Here is where conscience abides, and love and peace and perfect self-confidence, and hope, and divine wisdom. Their seat is in the mystic heart of which the physical organ is the physical vital instrument.

The brain *as a whole* is the organ of the brain-mind, as a whole

the field of activity of our ordinary reasoning, ratiocinative mentation by which we think ordinary and even higher thoughts, and by which also we go about our daily tasks. This is the function of the brain as a whole. But connected with the brain are two wonderful glands already spoken of, the pineal and the pituitary. The pineal gland is as it were a casement opening out into infinite seas and horizons of light, for it is the organ that in us men receives the direct mahatic ray, the ray direct from the cosmic intellect. It is the organ of inspiration, of intuition, of vision, a casement as it were opening unto infinite horizons. The heart is higher, because it is the organ of the individual's spiritual nature, including the higher manas or spiritual intellect. When the heart inflames the pineal gland and sets it vibrating rapidly, then so strong is the inflow of spiritual force that the man experiencing this has his very body clothed in an aureole of glory; a nimbus is behind his head, for the pineal gland is vibrating rapidly, the inner eye is opened and sees infinity; and the aureole or nimbus is the energetic outflow from this activity of the pineal gland.

The pituitary gland is the lieutenant of the pineal. It is the organ of will and hence also of automatic growth. Even in another sense, I believe today medical research has discovered that gigantism is due to an unwonted activity and growth of the pituitary. This is just one aspect. It is the organ of will and urge and growth and impulse; but when the pineal sets the pituitary vibrating in synchrony with its own vibration, you have a god-man, for there is the intellect envisaging infinity, the divinity in the heart speaking and vibrating synchronously with the pineal gland, which sees infinity. And the pituitary thus inspired to action of will working through the other chakras or organs or glands, makes all the man a harmony of higher energies — relatively godlike. Strange paradox!

To enumerate, then, once more the seven main centers of energies in the body: the genital, one; the liver, two; the spleen, three; the heart, four; the brain as a whole, five; the pituitary, six; and the pineal, seven; and there are others subordinate to those. But I would call these seven organs or glands in this wonderful human frame of ours the chiefs, the most important. And strangely enough, they are as it were paired: the heart and the brain; the pineal and the pituitary; the liver and spleen again a pair; the pair of the lowest couple, as a matter of fact, is the solar plexus — but this is a story by itself.

The pineal gland functions but slightly in the average man simply because he does not believe there is anything in him of worth except the body as a unitary whole. Nearly all he lives for is to eat, to drink, to sleep and to breed — all proper things in their places, but not proper things for man to live for. There is an ethical sense which abides in us all, and is as it were the free whisperings of divinity in our hearts. It is worthwhile to cultivate this, to allow it to live and to flourish.

Now then, would you like to know how to increase the vibration of your pineal gland in your skull? It is in a sense the easiest thing in the world; you have been told ten billion times! All great spiritual leaders and teachers the world over, the great men-gods and god-men of the human race, have told you: First, live as a true man — it is as simple as that. That is the first rule. Do everything you have to do, and do it in accordance with your best. Your ideas of what is best will grow and improve, but begin. The next thing is to cultivate *specifically as units* the higher qualities in you which you know perfectly well make you superiorly human as contrasted with inferiorly human. For instance, be just, be gentle, be forgiving, be compassionate and pitiful. Learn the wondrous beauty of self-sacrifice for others; there is something grandly heroic about it. No wonder the world loves a hero. I

sometimes think that there is a divine quality in a human soul which is called hero-worship — not worshipping a mere man, but that wonderful divine something that works through certain men so that when the test comes they rise up like gods. Why, every one of us loves it! Keep these things in your heart. Believe that you have intuition. Believe that you have a heart. Try to love others. Try to love all things, great and small.

Live in your higher being. What then happens? You will be living above the diaphragm, from the solar plexus upwards; and that wonderful pineal gland will begin to vibrate. You will get intuition, you will see, you will know; and when that can be kept up continuously so that it becomes your life, habitual to you, then the time will come for you to become a glorious Buddha, a man made perfect. You will manifest the Immanent Christ within you, you will embody it. There is the physiology of it. It is the spiritual physiology of it that I have tried to explain to you.

These various organs with their respective functions in the human frame have been known and studied from time immemorial in the Orient, studied both casually as shown in exoteric literature, and definitely and specifically in certain occult schools. In India these organs and their functions are referred to as chakras. Strictly speaking, the chakras are the astral organs or functions which have never yet been properly placed, exoterically at least, or openly, as connected with specific physical organs in the human frame. Hence the chakras as regards specific allocations to organs, are surrounded in the exoteric literature with mystery and uncertainty. Yet, while the chakras as taught in Hindu literature are really invisible or astral organs or functions, their allocations to physical organs are as I have named them and outlined them above. The Sanskrit names for these can be found in our exoteric Theosophical literature dealing with the subject.

THREE GREAT IDEAS — *Iverson L. Harris*

Under this title, *Three Great Ideas*, William Q. Judge wrote in *The Irish Theosophist* for February, 1895, as follows:

Among many ideas brought forward through the theosophical movement there are three which should never be lost sight of. Not speech, but thought, really rules the world; so, if these three ideas are good let them be rescued again and again from oblivion.

The first idea is, that there is a great Cause — in the sense of an enterprise — called the Cause of Sublime Perfection and Human Brotherhood. This rests upon the essential unity of the whole human family, and is a possibility because sublimity in perfectness and actual realization of brotherhood on every plane of being are one and the same thing. . . .

The second idea is, that man is a being who may be raised up to perfection, to the stature of the Godhead, because he himself is God incarnate. This noble doctrine was in the mind of Jesus, no doubt, when he said that we must be perfect even as is the father in heaven. This is the idea of human perfectibility. . . .

The third idea is the illustration, the proof, the high result of the others. It is, that the Masters — those who have reached up to what perfection this period of evolution and this solar system will allow — are living, veritable facts, and not abstractions cold and distant. They are, as our old H. P. B. so often said, *living men*. . . . The Masters as living facts and high ideals will fill the soul with hope, will

themselves help all who wish to raise the human race.

Let us not forget these three great ideas.

THE FIRST GREAT IDEA

The core of the first of these Three Great Ideas is that of universal brotherhood based upon the essential spiritual unity of the whole human family. Never was it more necessary than now to remind ourselves of this fundamental, basic fact in nature; for "truth, crushed to earth, shall rise again." This idea of inescapable human brotherhood I firmly believe expresses a truth without whose recognition a lasting cure of the world's scourges is impossible. And never doubt that man's highest aspirations and yearnings will eventually triumph over their temporary negation. *Yadyad devata kamayate, tattad devata bhavati*, taught the ancient Vedic Sages: "Whatever a divine being longs for, that very thing the divine being becomes." And the Lord Buddha proclaimed twenty-four hundred years ago: "Hatred ceaseth never by hatred; hatred ceaseth only by love." Each one of us can prove this in his own individual life; and be it remembered that communities, states, nations, and races, are aggregates of individuals — individuals with conflicting wills and desires, to be sure, which fact is the basic cause of the world's ills; but even conflicting wills in their deepest reaches hunger for harmony and peace and enlightenment; and hunger of any kind must eventually be satisfied, even if, alas! the hunger must first be aroused by labor, suffering, or starvation.

Endeavoring to see somewhat beyond present world-outlooks I am convinced that the time is coming when it will dawn on the consciousness of men at the helm of affairs in all countries that persistent individual or national self-aggrandisement, which fails to recognise the fundamental fact of human brotherhood, of the essential unity of all men, is self-doomed to ultimate failure. Since

divine justice, law, and order exist in the Universe — and they surely do, because the hunger for them exists in the souls of men, children of the Universe — then justice, law, and order must ultimately triumph over everything which works against the universal harmony. As Dr. G. de Purucker writes in *Golden Precepts of Esotericism*:

Nature will not tolerate for long persistent self-preferment to the detriment of others: for the very heart of Nature is harmony, the very fabric and structure of the Universe is co-ordination and cooperation, spiritual union; and the human being who seeks self-preferment unremittingly, without surcease, ends in that far-distant country of the "Mystic West," the Land of Forgotten Hopes, the land of spiritual decay; for Nature will have none of him for long. He has set his puny, undeveloped will against the mighty currents of the Cosmos, and sooner or later he is washed on to some sand-bank of the River of Life, where he decays. Nature will not tolerate persistent and inveterate selfishness.

The only prerequisite to fellowship in the Theosophical Society is a sincere acceptance of this first great idea — this principle of Universal Brotherhood; and the only heresy that I have ever seen referred to in Theosophical literature is "the heresy of separateness" — the denial of one's spiritual unity with his fellow-men. Let any serious and thoughtful man ask himself: Is not this heresy of separateness at the root of all the dire calamities which beset a world turned into an international bedlam? And the remedy? It is as simple as this — so simple that few will see it: A universal recognition of human solidarity, a sincere acknowledgment by each man to himself that when he injures his brother he actually injures himself — not merely from a sentimental viewpoint, not alone even because he will reap the

consequences of his wrong-doing by at least marring his own character — but also from the standpoint of absolute law and fact, because in our higher parts, I and my brother are actually one, just as in our highest parts, as Jesus told us, "I and my Father are one."

The clashes of men and of aggregates of men never come when they are functioning on the higher planes of thought and feeling. These clashes come solely when men's center of consciousness is focused in the lower reaches of the stream of consciousness which is man. Men do not fight when they are occupied with the grand, universal, impersonal problems or achievements of life, or even when occupied with the humbler harmonious things that preserve our conviction of Universal Brotherhood. For example, one could hardly imagine a serious altercation, on the one hand, over the composing of a Beethoven symphony, the painting of a Chinese landscape, the writing of a Shakespearean drama, the building of the Taj Mahal, the discovery of radium, the enunciation of the Theory of Relativity; no, nor on the other hand, are world-conflicts started over a mother tenderly caring for her child, a father conscientiously providing for his family, a physician ministering to his patient, an artisan diligently practising his skill, or a laborer proving himself worthy of his hire. These are the things that attest the truth of this first great idea, that of universal brotherhood based upon the essential unity of the whole human family. As the Master Koot Hoomi Lal Singh writes in *The Mahatma Letters to A. P. Sinnett* (page 17):

The term "Universal Brotherhood" is no idle phrase. Humanity in the mass has a paramount claim upon us. . . . It is the only secure foundation for universal morality. If it be a dream, it is at least a noble one for mankind: and it is the aspiration of the *true adept*.

THE SECOND GREAT IDEA

This brings us to a consideration of the second great idea, that of human perfectibility. If we would understand the truth of this second great idea we shall have to share in the aspiration of the true Adept towards realization of Universal Brotherhood. We can grasp the idea of human perfectibility by opening our eyes to the relative perfection of the great spiritual Sages and Seers, the Buddhas and the Christs, who have trodden the path ahead of us, and by comparing our own past and present imperfection with, hopefully, our yearnings and aspirations towards ever greater perfection in the endless journey before us. Such aspirations lie at the heart of every right-thinking man and woman.

The proof of the verity of this second great idea, i. e., that man is a being who may raise himself towards perfection, to the stature of Godhead, because he himself is God incarnate, is found in the response of every normal human being to the innate godlike qualities made manifest in individual lives. We all admire the man of courage; we reverence the woman of compassion; we seek help from the learned and guidance from the wise; we rejoice in generosity and we are in love with love. Our higher self triumphantly responds to the call of duty even when the performance of that duty may involve the destruction of the outer man. That within us which is less than Godhead, alas, often veils the shining splendor which is our real self marching on towards perfection. But it is this real self which forever assures us in our moments of aspiration of the truth of this second great idea, which the Master Jesus reminded us of when he said that we must be perfect even as the Father in Heaven is perfect.

The greatest and most enduring thoughts in our literary heritage are those which proclaim in some form the perfectibility of man. "Come up higher" is the essence of every truly inspired message

appealing to the god within us. This Inner Buddha, this Christ Immanent, is the source of the grand manner in poetry and in prose, in epic and in saga, in psalm and in *sastra*. The hunger of our inmost being for perfection will not permit us to be satisfied with the husks of merely limited, selfish, personal, animal existence. This spiritual hunger is the cause of our divine discontent. It is the origin of every sincere effort to make the world a better world to live in.

The innate hunger in the soul of man for perfection is nourished and satisfied by the enduring truths of religion and philosophy and science, and by the creative labors of mind and hand. Said a wise man: "Perfection is the standard of Heaven; the desire for perfection is the standard of men."

Many have been the sign-posts which the spiritual Teachers of all ages have left us, by following which we may tread the path towards perfection. The scriptures of ancient China, India, Persia, Palestine, Greece, Rome, the Moslem Empire, and old Scandinavia, as well as the most enduring literature of the modern world, are full of spiritual food to satisfy man's hunger for ever-increasing perfection.

The Voice of the Silence, translated by H. P. Blavatsky from an ancient Eastern scripture called "The Book of the Golden Precepts," is a veritable treasure-chest of priceless jewels of thought set in exquisite words, all evidencing the truth of this second great idea of human perfectibility and pointing to the path of its realization.

Have patience, Candidate, as one who fears no failure, courts no success. Fix thy Soul's gaze upon the star whose ray thou art, the flaming star that shines within the lightless depths of ever-being, the boundless fields of the Unknown.

Have perseverance as one who doth for evermore endure. Thy shadows live and vanish; that which in thee shall live forever, that which in thee *knows*, for it is knowledge, is not of fleeting life: it is the man that was, that is, and will be, for whom the hour shall never strike.

Do these directions of the Exalted Ones bearing witness to their realization of the perfectibility of man seem too transcendental for us ordinary mortals? To be sure, they are beacon-lights from the mountain-tops beckoning us to come up higher, ever higher; but the mountain-tops must be scaled step by step. I know of nothing more helpful and reassuring to the humble traveler along the path of human perfectibility than the following inspiring passage from *The Mahatma Letters to A. P. Sinnett* (page 372):

Does it seem to you a small thing that the past year has been spent only in your "family duties?" Nay, but what better cause for reward, what better discipline, than the daily and hourly performance of duty? Believe me my "pupil," the man or woman who is placed by Karma in the midst of small plain duties and sacrifices and loving-kindnesses, will through those faithfully fulfilled rise to the larger measure of Duty, Sacrifice and Charity to all Humanity — what better path towards the enlightenment you are striving after than the daily conquest of Self, the perseverance in spite of want of visible psychic progress, the bearing of ill-fortune with that serene fortitude which turns it to spiritual advantage — since good and evil are not to be measured by events on the lower or physical plane.

THE THIRD GREAT IDEA

The third great idea proclaimed by William Q. Judge is, as he tells

us, "the illustration, the proof, the high result of the others. It is that the Masters — those who have reached up to what perfection this period of evolution and this solar system will allow — are living veritable facts."

Perhaps no idea with which H. P. Blavatsky and the early Fellows of the Theosophical Society made the Western world familiar caused so much controversy as did this one about living Adepts, Masters of Wisdom, Elder Brothers, *Mahatmans*, Initiates, as they are variously called. It was at once the most startling, the most inspiring, the most intriguing, the most controversial, and the most abused of all the doctrines introduced into occidental thought by the Theosophical Society.

The whole question of the actual existence of the Theosophical Mahatmans and of the abuse of sacred names and terms is admirably summarized by H. P. Blavatsky in Section XIV of *The Key to Theosophy*. The gist of her argument is that if these Adepts and Masters from whom she stated she received her teachings are mere figments of her own fertile imagination, as alleged by her enemies, then she must be credited with being herself three times over a Mahatman by virtue of the magnificent system of science, philosophy, and religion which she promulgated but which she never for one moment claimed to have originated out of her own mind or studies. In her greatest work, *The Secret Doctrine*, she says, in substance, that the teachings therein contained are not hers, but Theirs who sent her.

Now, some intuitive, spiritually-minded people of my acquaintance, whose good faith I would no more question than I would doubt that the sun shines, actually *know* of the existence of the Masters in ways that to them are conclusive. Others have had to arrive at a conviction of the existence of living Masters by a process of hard thinking. For the benefit of those who may be of

this latter type of mind, I will briefly rehearse the logical processes of thought through which one such, whom I shall call Mr. X, became satisfied as to the existence of living Masters of Wisdom.

1. This individual was startled into thinking along this line by reading that Thomas Henry Huxley, the great English biologist, had come to the conclusion that there must be beings as far more evolved than we ourselves are, as we are above the black beetle.

2. X began by saying to himself: "My father and my mother, my teachers and my friends, grand and lovable people as they are, surely cannot be the last word in evolution, even on this globe of ours."

3. X read Carlyle's lectures on *Heroes and Hero-Worship* and began to acquire a philosophical understanding of the basis of man's innate admiration and love for the great qualities of genius in men more highly evolved than ourselves.

4. X began to study and to familiarize himself in some measure with the lives and teachings of the spiritually Enlightened Ones — the founders of the great religions and philosophies; and X soon recognised that here, at least, were historical characters who were obviously far more evolved than any of the good people whom it had been his privilege to know personally.

5. X attended meetings in the Theosophical Temple at Point Loma, and heard Dr. de Purucker say over and over again, in substance: "What nature has produced once, nature can produce again." (X was getting "hot on the trail" of a deep-seated conviction as to the actual existence of living Adepts and Masters.)

6. X read *The Mahatma Letters to A. P. Sinnett*, and he knew that those letters could not possibly have been written by men less evolved than members of the Brotherhood of *Mahatmans* or

"Great Souls."

7. In those *Mahatma Letters* X came across two passages among many others, which he thought might have been directed to him — generically speaking, in other words, to men of his type of mind. Here they are. On page 246, X read:

It is not *physical* phenomena that will ever bring conviction to the hearts of the unbelievers in the "Brotherhood" but rather phenomena of *intellectuality, philosophy* and logic, if I may so express it.

The other passage had to do with the founding of The Theosophical Society and occurs on page 263. The letter from which it is quoted, was received in February, 1882, by Mr. A. P. Sinnett, a distinguished Anglo-Indian journalist at Allahabad. It was written by the Master Morya and reads in part as follows:

On the 17th of November next the Septenary term of trial given the Society at its foundation in which to discreetly "preach us" will expire. One or two of us hoped that the world had so far advanced intellectually, if not intuitionally, that the Occult doctrine might gain an intellectual acceptance, and the impulse given for a new cycle of occult research. Others — wiser as it would now seem — held differently, but consent was given for the trial. . .

In a few more months the term of probation will end. If by that time the status of the Society as regards ourselves — the question of the "Brothers" be not definitely settled (either dropped out of the Society's programme or accepted on our own terms) that will be the last of the "Brothers" of all shapes and colours, sizes or degrees. We will subside out of public view like a vapour into the ocean. Only those

who have proved faithful to themselves and to Truth through everything, will be allowed further intercourse with us.

That last sentence also contains the implied promise that those who do prove faithful to themselves and to truth through everything *shall* be allowed further intercourse with the Masters. In any case they have left us abundant teaching and guidance.

Having become convinced in his own mind of the actual existence of this Brotherhood of the Masters, X was amazed to find in his serious reading, even outside of specifically Theosophical literature, many hints hitherto hidden from him of the existence of the Adepts throughout the ages, also valuable directions as to how to become like unto them. In the November, 1940, issue of THE THEOSOPHICAL FORUM there is an article by Elsie V. Savage on this very subject: "How to Become an Adept." I commend it to everyone who is interested. The November issue of *The Reader's Digest* has a fine article by Walter B. Pitkin, author of *Life Begins at Forty*. He tells about the most unforgettable character he ever knew, Henry Sherrard, who taught Greek at the Detroit High School in the 1890's. Mr. Pitkin describes his hero in these words: ". . . Sherrard was that rarest of humans, a perfectionist whose devotion to perfection was itself perfection," and he quotes Sherrard as saying to his pupils on the first day in class: "I don't like good students. I like only the best. I don't like a good translation. I like only the right translation."

The goal of adeptship is not to be reached without toil and strict adherence to the ideal of doing every single task as perfectly as possible. If we do this, we shall be able to appreciate the following passage from Emerson's *Essay on Nature*:

Who can set bounds to the possibilities of man? Once inhale the upper air, being admitted to behold the absolute

natures of justice and truth, and we learn that man has access to the entire mind of the Creator, is himself the Creator in the finite. This view, which admonishes me where the sources of wisdom and power lie, and points to virtue as to

"The golden key
Which opes the palace of Eternity,"

carries upon its face the highest certificate of truth, because it animates me to create my own world through the purification of my soul.

The Noblest Thing

The noblest thing that we can do is so to change the thought of the world that men will realize their Oneness with the inner beings on the various planes of Life Universal, and govern themselves accordingly, not merely in the legislatures, but in their teachings and in their personal conduct of life, and in their care for their brothers, and in their sense of loyalty and fidelity to their teachers, those whom they know and believe to have that truth. — G. de Purucker, *Fundamentals of the Esoteric Philosophy*, p. 318

[*The Theosophical Forum*](#)

THE REAL BASIS OF UNIVERSAL ETHICS (1) — *Dr. H. Groot*

What is the real basis of universal ethics? This will be our subject for meditation, our object to bring forward one of the many aspects relative to this question.

To begin with, we want to lay stress on the words: *basis, real basis* of ethics. The existence and universal value of ethics is not called in question. The ethical law, the ethical commandment — speaking through the voice of conscience — is beyond any doubt. Are we not at every act, at every thought, at every impulse placed before the choice: this way, or that way?

Not a fraction of a second is lost, but the voice of our inner God tells us how we can and should live in accordance with our higher nature. But at the same time there is our lower nature, weak and cowardly, inclined to hide and steal away, tending to exalt and raise personality. And its voice, which so often sounds more powerful and persuasive than the still, small voice of the God within us, speaks of other possibilities, sounding more attractive to the lower man. Yet, though this voice may drown the other, never can it silence it.

Often we do not recognise this truth, but if we honestly look inwards, we realize that two voices are constantly speaking within us, for good or for evil; that at any time we can choose between two paths, the left-hand and the right-hand path.

This indeed is ethics: the power of distinguishing between high and low, between good and evil, between the voice of divinity and the other voice. *He* lives conformably to ethics, who is alive to the difference between his higher and his lower nature — and lives up to it.

This view can be traced in every religion, in every philosophical system, and indeed in the conviction of every normal man. The form in which it is clothed may vary, but in its essence it will always come to what, for want of a better definition, we may call the *command* of ethics: *act, think, live in harmony with your divine nature.*

If this is then the case, the question arises: what is the deepest foundation of this command?

It is obvious that this basis must not be looked for outside man. The religions and philosophies, which, it is true, know and respect this demand of ethics, but are of opinion that it arises from a *command* imposed upon us from the outside, lower the universal ethical nature of this demand to a *prohibition*. They think that in the last instance its basis is an arbitrary one. Arbitrariness of a God, it is true, but yet arbitrary. By saying so, however, they affect the root of ethics itself. Why should we obey a command laid upon us from without? From fear, from weakness, from a feeling of dependence, from thousands of motives, none of which, after all, has anything to do with real ethics.

No, the real basis of ethics must be looked for where we can find it: within the man who acts ethically.

In endeavoring to find the deepest basis, we first consider that man is the first thinking being that becomes conscious of this ethical command. In the planes below him, the animal, the vegetable, and the elemental kingdoms, there is no impulse of acting ethically. Ethics awake at once with the thinking faculty.

The Manasaputras, who brought us the thinking faculty, at the same time bestowed upon us the knowledge of good and evil. This is symbolized in the Paradise story, as the eating of the fruit of the tree of knowledge, which, in veiled words, implies the awakening

of the higher thinking faculty. The thinking faculty is the instrument that makes ethical consciousness possible.

But it is not the *basis*, only the *instrument*. Where to find the real basis then?

Let us consider this a little further. We have seen that it must be possible to find the basis in every man. Besides we know that ethics has a universal meaning, that its command holds good for every being in whom the thinking faculty has awakened.

Accordingly the basis we look for must be findable in every individual and at the same time span the universe entirely and completely. But how can the whole universe lie hidden, not partly but wholly in the individual?

The solution of this paradox is very simple. In the individual is all that is in the universe, because man and universe are inseparably one. There is no such thing as separateness. The individual *is* the universe and the universe reflects itself in the individual. Such is the real basis of universal ethics.

This also is the basis for understanding Jesus' words, which form the summary of ethics: "But I say unto you: Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you and persecute you." It is on this basis that Jesus could say: "A new commandment I give unto you, that ye love one another; as I have loved you, that ye also love one another."

For divine love — called by Dr. de Purucker the cement of the universe — is an utterance of the inseparable unity of all things, which *seem* to be separate, but in their deepest essence are not.

Similarly Karman, which essentially is nothing but love and harmony, is only possible as a result of this deepest and most universal truth, holding good for both man and universe. IN

ESSENCE MAN AND UNIVERSE ARE ONE. Outwardly they are manifestations of a multiplicity of entities; inwardly, apart from the manifestation, in their inseparable unity they are THAT, which human words cannot describe.

This unity is the basis, the real basis, of universal ethics. It manifests itself in the workings of Karman, in the command of all-embracing Love, in the great Harmony of the Universe. Its witness is the secret voice in every living being, which will always place us before the choice: illusion or reality — the lower or the higher — hatred or love. The essence of all these opposites is forever the same. It all can be traced back to the basic choice: *Maya*, or the one-ness of THAT, which is also the essence of our inner divine nature.

The basis of universal Ethics is found in the identity of our divine Self with the great SELF of the Universe.

Om, mani padme hum.

FOOTNOTE:

1. Presented before the European Convention of the Theosophical Society, held at Visingsö, Sweden, August 1, 1938. Dr. Groot is Doctor of Physics and Astronomy, University of Utrecht, Holland.

The Theosophical Forum

THE CENTRE OF THE WHIRLWIND (1) — *Blodwen Davies*

Here and there among your friends and mine are a few rare individuals who seem to have within them and about them a kind of serenity which is so real that it is almost tangible. It is a sort of potency in which we can refresh ourselves as we would at a spring in the cool of the woods. There is with this serenity, a quality that is dynamic, not passive, and an assurance against which all the fretful swirls of our anxieties and our suspicions break harmlessly and disappear. These magnetic persons have about them also a sense of endurance, as though their serenity had come to them not through a life protected from storms, but from having sailed through so many storms safely that the ordinary breezes of life do not trouble them at all.

In these days when the old familiar landmarks of our social, intellectual and political lives seem to be either demolished or bewitched, these few rare men and women become our life buoys. They rise and fall to the rhythm of currents and winds, but we know they have their anchors well grounded in some terrain which we cannot see. We know that within them there is a good store of oil, and a light that will not fail.

What is the secret of their difference? Oftentimes they have little in the way of possessions or worldly advantages, yet they have what we can truly call a culture for they are integrated, tolerant, compassionate. They are often rebels, but they are those dangerous and cheerful rebels who do not waste themselves in play-acting as liberators and reformers. So what is the source from which they draw that which makes them unique?

We are told that each individual has a sort of store house, or treasure house, into which is withdrawn at the end of each life all

that remains from that life as the essence of experience. Just as the chaff is blown away as the kernels of grain are extracted from the sheaves in the threshing machine, so everything that has not been transmuted from activity into essence in the human life is also blown away and only the kernels are stored in that body of light which is the home of the Inner Thinker. The more diligent an individual has been in this process of transmutation, the greater the store of his treasure and the more radiant his immortal dwelling place. In it is stored so much of wisdom that whenever man returns to dwell there he has at his disposal so much truth, about so many things, that he has a universal vision. Here are stored kernels he has harvested in every state of being, in all the kingdoms of nature, in all the ages of this earth. So long as he dwells within that place of light he can look upon any experience in this life in its true perspective and he has compassionate understanding in abundance for all those who have not yet found their way back to their own dwelling-places of light. Even if he has just discovered for himself the key to that treasure house and has not more than begun to explore its resources, he cannot help but live and act like one who knows that he dwells in the centre of the whirlwind where there is peace. He knows the whirlwind rages and that the farther he wanders from that centre the more he will become prey to the devastating winds of life. And even if he must face them, and travel through them, he knows that, his task ended, he can return to the place of light which is immovable and indestructible.

No man even finds the way to that treasure house or the key to its door except through repeated and sometimes desperate crises. But once the Path is trodden to the end and the key of alignment is turned in the door, the whole inexhaustible treasure is his to spend freely for his fellows.

Each one who dwells in the centre of his own whirlwind knows

the meaning of the process of return when he sees others on their way. Most important of all, today he sees the race travelling the Path and nearing the door. He knows that when the present series of crises is ended the door will open and the stored treasure and light of the race will be poured out. So in compassionate serenity, himself a very token of fulfillment and of victory, he who lives in the centre of his own whirlwind pours out his own individual light to cheer the long troubled road the race travels. The greater the number who achieve that serenity and who hold their lights steady, the easier will be the race's journey to its immediate goal, and the faster the travelling.

The unflickering light in the centre of the whirlwind. . . .

The Theosophical Forum

NATURE'S THREE QUALITIES — *Oswald Busch*

Theosophists frequently refer to the various "Pairs of Opposites" perceived through the senses, such as hot and cold, waking and sleeping, male and female, positive and negative, force and matter, etc. They are innumerable.

Our ideas of life and our conduct are largely based on the recognition of these contrasting principles and their operations, and we, generally, are satisfied in accepting this dualism as a full explanation of phenomena being observed.

Yet the Ancients taught that all Nature partakes of three qualities instead of two. They are referred to in the *Bhagavad-Gita*, the sacred scripture of the East, and are called — using their Sanskrit names — *sattva*, light or truth; *rajas*, action, passion or desire; *tamas*, indifference or darkness.

Accepting merely the two antagonistic elements — a partial truth — or using certain words or ideas in the sense of their being pairs of opposites, when actually they are not, might be the cause of much of the error, confusion and perplexity which exists in our conception of Life and Nature and in our subsequent action and conduct. By treating this theme from different angles, an attempt will be made to clarify it to a certain extent.

EQUILIBRIUM

All the Christian Kabbalists understood well the Eastern root idea: The active Power, the "Perpetual motion of the great Breath," only awakens Kosmos at the dawn of every new Period, setting it into motion by means of the two contrary Forces, (1) and thus causing it to become objective on the plane of Illusion. In other words, that dual motion transfers Kosmos from the plane of the Eternal Ideal into that

of finite manifestation, or from the *noumenal* to the *phenomenal* plane. Everything that *is*, *was*, and *will be*, eternally is, even the countless forms which are finite and perishable only in their objective, not in their ideal *form*. They existed as Ideas, in the Eternity, and, when they pass away, will exist as reflexions.

Many phenomena, observed superficially, appear as single actions or forces — as, for instance, the act of walking! We are apt to overlook the fact that the tendency of a youngster, when crossing a street, is to run. It may be a matter of years before he is able to restrain himself to a walk. The impulse of the aged, on the contrary, is to step back when alarmed by an approaching vehicle. The alert and mature, only, manifest the necessary balance of these two inclinations.

A similar theory applies in locomotion. In automobile driving, the brakes are of equal importance with the motor, and equilibrium has to be maintained in their use to meet constantly changing conditions of terrain and also to avoid coming in contact with other vehicles or pedestrians.

Again, in nature, we note the falling rain, only, and do not see the counter action of the evaporation of moisture. Winds near the surface of the earth are perceived blowing from one general direction, but higher up there is a contrary movement. The warm ocean currents flow, mainly, towards the Poles, and unnoticed are the currents of cold water near the bottom returning towards the Equator and thereby completing the circuit.

COMPENSATION

Furthermore, Nature has two aspects, a positive and a negative aspect. . . . "Nature" has these two poles or sides: the positive pole or side and the negative pole or side. Examine yourself closely, and you will find that even your mind is dual, like everything else, for it mirrors Nature. It has its passive side, its

"unconscious reflexes," just as the body has, just as Nature has. It has also its positive or active side. There is a great difference between the conscious will and the unconscious will. — G. de Purucker, *Fundamentals of the Esoteric Philosophy*, p. 171

Another familiar phenomenon of nature is being discussed somewhat in detail as a number of analogies will be drawn from the same later on. This is the daily alternation of daylight and darkness in the yearly cycle.

As we all know, there are twenty-four hours of daylight at the North Pole at the summer solstice. Latitudes towards the south show a gradual recession from this absolute of daylight possible and at the Equator a point is reached where the day is evenly divided between daylight and darkness.

During the same time, conditions in the southern hemisphere are reversed, with the quality of darkness being in the ascendancy.

At the winter solstice, we find twenty-four hours of darkness at the North Pole and the same hours of daylight at the South Pole.

The following aspects of this phenomenon might be emphasized:

1. In the northern hemisphere, during the spring and summer months, the positive quality of daylight predominates.
2. In the southern hemisphere, during the same period, the negative opposite of darkness prevails.
3. At the Equator there is no variation; night and day being always of equal length.
4. During the course of the year, the sun shines an equal number of hours upon all parts of the earth's surface.
5. Also, were the earth's axis perpendicular to the plane of its orbit, instead of being about $23\frac{1}{2}$ degrees from a perpendicular to that plane, we would find every day balanced — having an equal

- amount of daylight and darkness upon every spot on our globe.
6. A cycle exists between every degree north of the Equator and its corresponding degree south of it as regards the number of hours of daylight and darkness existing during the course of any one day. For example, should there be 15 hours of daylight in this latitude, then the same hours of darkness would obtain at the corresponding point in the southern hemisphere.
 7. At the Poles are found the greatest variations.

ILLUSIONS

In human nature, evil denotes only the polarity of matter and Spirit, a struggle for life between the two manifested Principles in Space and Time, which principles are one *per se*, inasmuch [as] they are rooted in the Absolute. In Kosmos, the equilibrium must be preserved. The operations of the two contraries produce harmony, like the centripetal and centrifugal forces, which are necessary to each other — mutually inter-dependent — "in order that both should live." If one is arrested, the action of the other will become immediately self-destructive. — *The Secret Doctrine*, I, p. 416

The philosophical view of Indian metaphysics places the Root of Evil in the differentiation of the Homogeneous into the Heterogeneous, of the unit into plurality. — *The Secret Doctrine*, II, p. 421, footnote

Years ago, when horses were more in evidence than they are now, one often witnessed a team passing by. Occasionally, it might happen that one of the horses would drop back a pace while the other advanced correspondingly. This would cause them to fall out of the straight line in which they had been advancing and thereby they would draw the wagon to which they were hitched from what might be designated as positive and negative positions. Invariably, the driver, in anger, would

whip the horse which appeared to be lagging, being under the impression that this horse was not pulling its share of the load.

No doubt, such a driver labors under an illusion, for, presumably, both horses are performing equal work. The thought that "They offset and balance in Nature — like all other "pairs of opposites"" would, undoubtedly, apply here!

Misconceptions like the above have given rise to much of the error existing in our ideas as to what is good or evil. As finite qualities, these are, likewise, a pair of opposites and relative only to the beneficiaries or victims of the same.

Limiting Nature to only two qualities and accepting the positive as good and the negative as evil is more common than is generally realized! Consider such opposites as light and darkness, day and night, summer and winter, hot and cold, etc. It is customary to use the positive poles of the above pairs as synonyms of what is desirable and the negative poles as synonyms of what is undesirable. The same distinction has at times been applied to the sexes; some religions taught that the woman was by nature evil or inferior.

Regardless of whether an opposite be designated positive or negative, the fact remains that either is good when it mitigates an extreme condition existing at the time, and evil when it aggravates that extreme condition. To illustrate from physical nature: In this eastern section of the U. S. A. during the extremely hot and humid days of summer, a cold fresh northwest wind is greatly welcomed. The same kind of wind blowing in winter is the cause of much hardship.

Intuitive individuals have grasped such ideas as are contained in the above illustrations. They have given expression to the same by such common sayings as "One man's meat is another man's poison"; "A half truth"; "Everything has two sides"; "The law of averages"; "The law of compensation."

VIRTUES

Two painters each painted a picture to illustrate his conception of rest. The first chose for his scene a still, lone lake among the far-off mountains. The second drew on his canvas a thundering water-fall, with a fragile birch-tree bending over the foam; at the fork of a branch almost wet with the cataract's spray a robin sat on its nest. The first was only Stagnation, the last was Rest. For in rest there are always two elements — tranquillity and energy, silence and turbulence; creation and destruction; fearlessness and fearfulness. Thus it was in Christ. — Henry Drummond, *Pax Vobiscum*

. . . Looking back on my own experiences, they all converge towards a kind of insight to which I cannot help ascribing some metaphysical significance. The keynote of it is invariably a reconciliation. It is as if the opposites of the world, whose contradictoriness and conflict make all our difficulties and troubles, were melted into unity. Not only do they, as contrasted species, belong to one and the same genus, but *one of the species*, the nobler and better one, *is itself the genus, and so soaks up and absorbs its opposite into itself*. This is a dark saying, I know, when thus expressed in terms of common logic, but I cannot wholly escape from its authority. I feel as if it must mean something, something like what the Hegelian philosophy

means, if one could only lay hold of it more clearly. Those who have ears to hear, let them hear; to me the living sense of its reality only comes in the artificial mystic state of mind. —

William James, *The Varieties of Religious Experience*, p. 387

In *The Secret Doctrine*, Volume II, page 153, H. P. Blavatsky states that "Analogy is the guiding law in Nature, the only true Ariadne's thread that can lead us, through the inextricable paths of her domain, toward her primal and final mysteries."

This article, so far, has been chiefly confined to a consideration of matters pertaining to physical nature but it is accepted that a parallelism exists with the metaphysical and further arguments will be made according to this belief.

Henry Drummond, in the quotation which appears above, shows that the genuine Virtues, appearing as unities, are composed of diverse qualities! In confirmation of his idea, remarks follow regarding some of them. Comments will also be made under succeeding headings about additional Moral and Ethical characteristics of man.

One of the definitions of temper is: "A due proportion of different qualities or ingredients." In the tempering of steel, skill is required as, otherwise, the treated metal may turn out to be either too soft or too hard. As regards man, the word Temper is similarly used. This substantiates the assumption that Virtues are compounded of unlike properties.

Vigilance is considered a Desirable attribute. This is defined: "Attentive to discover and avoid danger." Two attitudes can be inferred here, an offense and a defense.

Innocence is often mistaken for unsophistication, but the former is a potent Virtue. Innocence does not harm others; and there is an inner strength which wards off evil.

The Just man will not take advantage of the abject. He also has sufficient vigor to resist being taken advantage of by the despotic.

The Helpful or Accommodating individual willingly helps others. He possesses sufficient self-restraint not to intrude in their private affairs. One who lacks this check is merely officious.

The Liberal will advance when circumstances warrant it, but he has an added attribute — Self-control — which prevents him from going too far. Here might be used as an analogy the idea of locomotion previously mentioned. The brakes on an automobile might be used to illustrate the quality of conservatism and the motor that of radicalism. The Liberal holds these two elements in Equilibrium.

In the Law of Inertia, as taught by Physics, we find this stated in two parts, as follows: "A body at rest tends to remain at rest and a body in motion tends to remain in motion unless acted upon by an outside force." Perhaps the idea herein contained might be extended to the domain of Metaphysics. Note, for example, the act of working. We find the lazy or debilitated worker possessed of a similar quality to that mentioned in the first part of the Law of Inertia. Then there is the one who works hurriedly and intensively. He is often given credit for being a model workman, yet it seems that this might not be the case. His actions are automatic. The second part of the rule might apply to him. The Steady worker exhibits both of these characteristics and is in addition Self-controlled.

RAJAS	SATTVA	TAMAS
hardness	Temper	softness
offense	Vigilance	defense
sophistication	Innocence	unsophistication
despotic	Just	abject
officious	Accommodating, Helpful	unaccommodating
radical	Liberal	conservative
intensive, hurried	Steady, Self-controlled	debilitated, lazy

MORALS

. . . we say that from the moment when manifestation begins, it acts dualistically, that is to say, that everything in Nature from that point onwards is crossed by pairs of opposites, such as long and short, high and low, night and day, good and evil, consciousness and non-consciousness, etc., — and that all these things are essentially mayic or illusory — real while they last, but the lasting is not eternal. It is through and by these pairs of opposites that the self-conscious soul learns Truth.

What is the basis of morals? This is the most important question that can be asked of any system of thought. Is morality based on the dicta of man? Is morality based on the conviction in most men's hearts that for human safety it is necessary to have certain abstract rules which it is merely *convenient* to follow? Are we mere opportunists? or is morality, ethics, based on Truth, which it is not merely expedient for man to follow, but needful, necessary? Surely upon the latter! — G. de Purucker, *Fundamentals of the Esoteric Philosophy*, p. 21

In the remarks about the opposites, daylight and darkness, it was noted that the distribution of these might be placed in three categories. For six months of the year, one of them predominates in one hemisphere while the other is in the ascendancy in the other. But at the Equator these diverse qualities are always in Equilibrium — the day being composed of twelve hours of daylight and twelve hours of darkness.

By correspondence, the same law would apply to metaphysical phenomena. And it is therefore assumed that what we designate as Virtues, Moral or Ethical characteristics, are the various pairs of opposites manifesting in Balance! This, of course, is the doctrine called the Middle Way by the Ancients.

They taught that True Morality never varies, but is ever the same, yesterday, today and forever. Conventions and customs change, following the cycles of the opposites, but the Virtues remain "fixed." A relevant thought appears in *Light on the Path*:

The condition of the soul when it lives for the life of sensation as distinguished from that of knowledge, is vibratory or oscillating, as distinguished from fixed. — p. 42

To the gullible, patronage may be mistaken for Benevolence, but the dispenser of the former places the recipient under obligation and the favor will have to be repaid, oftentimes at usurious interest. The Benevolent individual, making a gift, does so impersonally and does not calculate on or expect a return.

The writer was in the army during the Great War and often talked with other soldiers who had been called upon for service at the front. Some confided to him the emotions they experienced while under danger. A number of the latter confessed that at first they felt great fear, but later there came a reaction and then they charged the enemy. They admitted that this latter emotion was self-preservation. Spiritual Courage or Bravery faces every duty without apprehension for there is the realization that "Verily never was I not, nor thou, nor these rulers of men; nor shall any of us hereafter cease to be" (*Bhagavad-Gita*).

Recklessness — the positive aspect of another quality — is indulged in, it is thought, more through a non-realization of possible danger than through the taking of a risk deliberately. When and

if the reckless person meets with an accident, he will react to over-cautiousness. The Cautious consider all the factors involved, strike a balance between the above pair and act accordingly.

Passion or rage is an active emotion which only one with a "superiority complex" can afford. The person with an "inferiority

complex" has to be content with its passive counterpart, moodiness or sullenness. Equanimity and Equality might be used in designating the Sattva qualities of the foregoing.

RAJAS	SATTVA	TAMAS
patronage	Benevolence	obligation
self-preservation	Courage, Bravery	cowardice
reckless	Cautious	over-cautious
passion, rage	Equanimity	moodiness, sullenness
superiority	Equality	inferiority
mock-pity	Compassion	self-pity
cultured, polite	Courteous, Gentle	uncultured, boorish

ETHICS

The universal force, which is one, is really composed of positive and negative electricity and the unnamable Something behind it which the West is trying to grasp. Should they not be humble in reflecting that thousands of years ago the wise men of China taught that it was the Yin and the Yang, the positive and negative principles, the masculine and the feminine principles, which are one and, being one, drive the universe? And this is Law — and Love. — L. Adams Beck, *The Garden of Vision*, p. 345

. . . The ONE, can, when manifesting, become only 3. . . The "Deep" is *Space* — both male and female. — K. H. in *The Mahatma Letters to A. P. Sinnett*, p. 347

Words or ideas are often used in contrast which, actually, are not pairs of opposites. This error, it is believed, is caused by the conception that there are only two qualities manifesting in Nature. It is, of course, proper to use phrases as Spirit and matter, Higher and lower nature, Virtue and vice, Desirable and undesirable human attributes, etc. Here we have opposed properties of the Noumenal World and the phenomenal. But it must be remembered that the latter

are bi-polar so that, in fact, three qualities are being inferred.

One often finds, for example, optimism and pessimism used in the sense that the former is a Desirable characteristic and the latter is an undesirable one. But such a definition would constitute a philosophical absurdity on a par with contrasting a horse with half of a cow. For if Optimism be used as a Virtue, pessimism would merely be the negative pole of its finite reflexion.

In *THE THEOSOPHICAL FORUM*, issue of January 1940, Christmas Humphreys defines these two words. He writes:

It follows that optimism and pessimism are alike unhealthy forms of phantasy for the one undervalues and the other overrates experience. The wise man therefore values honestly, and accepts experience at the value found.

An example is also given by Dr. G. de Purucker. He states that "It is an error in logic to contrast life and death. The opposite of death is birth and to life there is no contrast. Life is infinite." Life simply changes its forms, periodically, in the two words mentioned.

Humble and haughty are used in a like sense many times. But the haughty react to obsequiousness. Real Humbleness is a Firm Moral characteristic.

In *The Saturday Evening Post*, issue of November 26, 1938, the Editor makes some relevant observations as regards an imputed antagonism between democracy and dictatorship, as assumed by many persons. In the first paragraph, he says: "The danger is not that the principle of popular government will be overthrown by the opposite principle in battle; the danger is that it will defeat itself beforehand." Further on he mentions that "It is an axiom of history that great human institutions must first be weakened within before they can be destroyed from without, which means that, in fact, they destroy themselves." Towards the end of the editorial he states that "To meet

dictatorship in battle — if it were that — we should have embraced dictatorship ourselves."

His remarks support the contention being made that to the genuine Virtues — in this case that of Pure Democracy — there can be no opposition.

Incidentally, our American government follows a form which might be considered as being patterned after the three qualities of Nature. This refers to the distinct branches: judicial, executive and legislative.

RAJAS	SATTVA	TAMAS
optimism	Enthusiasm	pessimism
birth	Life	death
haughty	Humble, Modest	obsequious
autocrat	Democrat	communist
executive	Judicial	legislative
license	Liberty	prohibition
politician	Statesman	henchman

PERCEPTION

"Harmony results from the equilibrium of contraries." . . . The truth must be whole and single; yet the ratiocinative function of our understanding is unable to present it as a unity, and can present it only as a series of pictures.

The old idea of a purely objective universe, outside the spectator, the same for all observers, always the same for any observer, is no longer tenable. What each man calls the universe is the interaction between the outer physical world and the inner private world; scientific truth is relative to the mind of the observer. — THE THEOSOPHICAL FORUM (H. T. Edge)

It is quite commonly assumed that there is only one mode of perception — that phenomena are discerned the same by all. But, in

further corroboration of the ancient doctrine that all Nature partakes of three qualities, it may be noted that this universality applies here also. L. L. Wright's "Paradox," below, can be used to illustrate this on the physical plane.

Think for example of a brass curtain-rod. If it is held lengthwise before the eye it looks like a straight line; if held end-on the eye sees it as a tiny disk; if it is slanted a little it becomes a line which appears shorter than its true length. But by co-ordination of eye and brain these deceptive appearances are instantly combined into a single mental image.

The idea herein contained from the field of the senses can by analogy be extended to the intangible faculties of perception. Cognition in certain persons is colored by their emotions. In others, it is tinged by their mental bias. The brain-mind is considered by many as being the faculty par excellence, yet, the "Intellect without a guiding light can be ruthless in manipulating ethics to fit its purposes." Figuratively, the emotional would only see the curtain rod end-on and the intellectual would see it lengthwise. The Intuition is the Spiritual faculty of "co-ordination" for "the intellect compares while the intuition realizes."

Emotions and impulses operate through the animal body; instinct and intellectualism through the human brain-mind; while intuition and innate intelligence act through a Spiritual vehicle.

In the domain of psychic investigation the universal law of the three qualities of Nature applies also. We find, on the one hand, the negative medium; on the other hand, the positive control or hypnotist. In the dangerous, lower psychism, in order to perceive phenomena, these two types act together. The Higher Clairvoyance operates only through the Spiritual, Self-controlled individual. He does not need to become negative to the influence of another and is therefore able to guard himself against malignant evil influences which might be contacted on other planes of perception.

RAJAS	SATTVA	TAMAS

intellect	Intelligence	emotions
brain-mind	Spirit	body
personality	Individuality	animality
hypnotist	Clairvoyant, Clairaudient	medium
thought	Illumination, Ecstasy	feeling
human-nature	Higher-Nature	animal-nature

ACTION

"Man know thyself," saith the Delphian oracle. There is nothing "improper" — certainly in such a curiosity. Only would it not be still more proper to study our own present personality before attempting to learn anything of its *creator*, — predecessor, and fashioner, — the man *that was?* — K. H. in *The Mahatma Letters to A. P. Sinnett*, p. 145

All that we know of anything is that it is not this and it is not that. We gain experience in terms of opposites.

We are all familiar with the law of Magnetism: "Unlike poles attract each other; like poles repel each other." In human relationships, the same rule applies — in so far as this is confined to the finite world of the opposites.

Here, the above law can be stated thus: "Persons of unlike temperaments attract each other; those of like temperaments repel each other." It would probably be quite simple to predict the reactions of others were their experiences of life confined entirely to the sensual world. But this is not the case, for all individuals contact, though in varying degree, the Higher planes.

When reference is made to a dictionary one often finds words like dishonest or untruthful listed as antonyms of Honest or Truthful,

respectively. From this, one is apt to infer that any pair of synonyms and antonyms completely covers the specific characteristic being considered.

But it may be noted, for instance, the dishonest person takes advantage, not of the Honest, but of the gullible. Similarly, the untruthful are only able to influence the credulous, not the Truthful. And, by what may appear as a peculiar quirk of human nature, the gullible and credulous seem to "like it." Honest and Truthful individuals may meet with cold receptions if they try to convey to the latter types that they are being imposed upon.

Tolerance and intolerance are listed in like manner. Yet, there is a pseudo-tolerance; tolerance allied with condescension. This is a passive property and, it is believed, exists only because of its impotence, due to adverse conditions prevalent at the time. Should conditions become favorable, it would become active intolerance. Real Tolerance is a realization that the beliefs of others may be right for them at their stage of evolution.

In attempting to demonstrate the actions of the pairs of opposites and their intensity or degree, three different examples are offered.

First, consider the two sides of a triangle formed by the swinging of a pendulum. The two lines could be used to represent a pair of these. At the apex, where the two lines meet, is the point where they melt into unity. The farther the distance from this center, the greater the sweep of the pendulum, and the greater the intensity of the opposites.

A second illustration. The positive vibrations from a Broadcasting Company are received through negative receiving sets, when tuned in to the same wave-length. In like manner, there is a different vibration for each pair of opposites and action takes place between those of identical wave-lengths.

It was noted that, as regards the opposites, daylight and darkness, a

cycle exists between every latitude on the northern hemisphere and its corresponding degree in the southern hemisphere and, also, that the greatest variation is found at the poles. In other words, any of these two contrasting points are parts of one whole. Similarly, as regards the finite human characteristics, it can be inferred that their oscillations follow the same law.

We are all prone to flatter ourselves in believing that we always stand at the Equator where the antagonistic forces are equally balanced. But if we find ourselves in opposition with another located some distance from it, it might be well to consider whether we are not located the same distance away in the opposite direction.

Between individuals in whom the Sattva quality is operating, the law of Magnetism does not prevail. Action here may be called Sympathy.

Perhaps the two distinctions made might help explain some of the paradoxical statements so often met with and which puzzle us all, as, for instance, "It is desirable that persons of opposite characteristics should marry," and "People with like aims, only, should marry." Presumably there is no contradiction, for in the former the law of polarity would apply. The latter would be more of a platonic union. Here attraction and repulsion would be harmonized and a state of Sympathy would obtain.

RAJAS	SATTVA	TAMAS
repulsion	Sympathy	attraction
lust	Continence	fascination
abandon	Chastity	prudery
intolerance	Tolerance	pseudo-tolerance
dishonest	Honest	gullible
untruthful	Truthful	credulous
greedy	Provident	improvident

CONDUCT

That man who sees inaction in action, and action in inaction is wise among men.

He is considered to be an ascetic who seeks nothing and nothing rejects, being free from the influence of the "pairs of opposites." The truly devoted, for the purification of the heart, perform actions with their bodies, their minds, their understanding, and their senses, putting away all self interest. The man who is devoted and not attached to the fruit of his actions obtains tranquillity; whilst he who through desire has attachment for the fruit of action is bound down thereby. —
Bhagavad-Gita

In man, the pairs of opposites manifest only through his lower nature. At one period of his evolution — the Higher Nature still being latent — they operated automatically, within certain set limits. But, with the advent of Self-Consciousness, problems of Morality have arisen. The former condition of irresponsibility has long since passed and humanity is now entered upon a phase of evolution which is Self-directed. His duty now is to bring into Equilibrium the various pairs of opposites acting through him. To accomplish this, a position must be taken outside of them.

Some assert that — living in the finite world — it is impossible to separate oneself from the different forces which may prevail at the time, and that one must therefore always choose one of two sides. Presumably they belong to the type who still are considerably enmeshed by their lower natures. But, in our illustration from physical nature, we noted that at the Equator there always exists a zone of Equilibrium as far as the opposites, daylight and darkness, are concerned. Similarly, there is a center within each one of us where each of the conflicting elements of our lower nature can be brought under control.

And as an outside force is needed to bring the earth's axis

perpendicular to the plane of its orbit and thereby creating, so far as that phenomenon is concerned, universal Harmony on our earth, so, likewise, in man, a force outside the pairs of opposites is required. This is the Spiritual Will which can be invoked through right Aspiration.

It was stated that the finite problem of good and evil was largely relative, but with the advent of the Higher Nature, the seat of such attributes as Self-Consciousness, Free Will, Conscience, etc., this is no longer the case. A conscious choice has now to be made as to which of two paths is to be followed.

Now, an identifying of oneself with the lower nature intensifies what were formerly merely animal propensities. This is the road which leads to black magic.

The truly Wise will no longer allow the innumerable pairs of opposites to make a playground of their minds but will strive to bring them into Equilibrium. The materialist may consider this course as leading to negation but the Ancients held that this was the way to Freedom of the Self.

QUESTIONS — *M. G. G.*

NO THOROUGHFARE

Are there detours for getting by,
And yet transgress, in low or high?
Note you the highway's hopeful throng
Seeking such means the whole day long,
Their power to visualize long lost,
By just such search, at just such cost?
Would they, think you, endure the goad,
Did they but know there's no such road?

RESPONSIBILITY

Think you this be your first time here
To reap and sow in gloom or cheer
That what you are is what you are
Through some past blundering of a star,
Or hap some elemental sprite,
Unschool'd, unknowing wrong from right:
That you, yourself, have had no part
In what you are in mind and heart?

JUDGMENT

Why must the dying man review
Each detail of the life he knew,
While old familiar scenes recall
Past thoughts and deeds, however small?
Must he see more than merely these,
The warp and woof that plague or please?
Does he link cause with its effect,
And so know just what to expect

While weighing all these things of his
With Truth and Justice witnesses?

The Theosophical Forum

ANCIENT MYTHS AND SYMBOLS — *Ginevra Munson*

The wisest among early mankind, in order to hand down their knowledge for future generations of those aspiring to higher things, imbodyed their store of wisdom in myths and symbols. The keys to these symbols were kept secret from the uninitiated, hidden in caves and vaults and secret crypts.

The Tree-Myths were the most popular for explaining how the spirit of Life descended into physical matter. We find the Aswattha Tree of the Hindus, "whose roots grow above and its branches below, and the leaves of which are the Vedas." And there is the Yggdrasil of the Scandinavians, the eternal sacred tree; the Zampun of the Tibetans; Gogard, the sacred Tree of the *Avesta*, the Persian sacred scripture. In ancient Egypt the initiates into the Mysteries were even called "trees."

In the Eddas is described how "the first root of the Yggdrasil ran under the fountain of Life, the second root was under the well of Wit and Wisdom, the third reached into heaven."

The ancient Akkadians represented a tree in the Garden of Eden: "it grew in the center of the earth, its roots went down into the watery deeps, where the god of wisdom had his seat; it became green and teemed with fertility; its leaves formed the couch of the primeval mother. Into the heart of its holy house hath no man entered. There is the home of the mighty mother who passes across the sky," wrote an ancient scribe.

It is the most beautiful of all myths, the Universal-Tree! It was beneath the sacred Bodhi Tree that Gautama attained to Buddhahood in spite of all the tempters that assailed him. Here he overcame all the powers of darkness by his own enlightenment

and his love for all mankind.

Then there are other symbols. The bird, the dragon, the serpent, the fish, the crocodile, all were much used in esoteric teaching.

The American Indian myths and symbols were all drawn from the forces of nature and the elements of water, fire, air, and earth.

The clouds, winds, rain and lightning were all thought of among them as agents of the Great Spirit. The four winds were identified with the four cardinal points, north, south, east and west. The four ancestors of the human race were supposed to come from the four winds. Michabo of the Algonquin tribe was their highest deity, called Light or the Dawn, the Sun in the East. The peoples of South America, the Peruvians, the ancient Toltecs and Incas had their God of Light who came from the East.

All the American tribes of both continents had their flood myths, in striking similitude with the religious records of all nations in which cosmic and terrestrial events are recorded. And this fact in itself seems conclusive proof that the Ancient Wisdom was the heritage of, and was known to, all primitive races of mankind from pole to pole.

The myth of the golden Egg laid by the Swan of Eternity, Kalahansa, tells the story of the origin of universes and all forms of life within them, born of the invisible essence that is within every atom of space. And there are more elaborate series of symbols which tell the full story of evolution. H. P. Blavatsky, in *I sis Unveiled*, (I, 348) describes a picture telling of the doctrine of the cycles, which covers "a whole inner wall of a subterranean temple in the neighborhood of a great Buddhistic pagoda, . . ." To quote in full:

Imagine a given point in space as the primordial one; then with compasses draw a circle around this point; where the

beginning and the end unite together, emanation and reabsorption meet. The circle itself is composed of innumerable smaller circles, like the rings of a bracelet, and each of these minor rings forms the belt of the goddess which represents that sphere. As the curve of the arc approaches the ultimate point of the semi-circle — the nadir of the grand cycle — at which is placed our planet by the mystical pointer, the face of each successive goddess becomes more dark and hideous than European imagination is able to conceive. Every belt is covered with the representations of plants, animals, and human beings, belonging to the fauna, flora, and anthropology of that particular sphere. There is a certain distance between each of the spheres, purposely marked; for, after the accomplishment of the circles through various transmigrations, the soul is allowed a time of temporary nirvana, during which space of time the atma loses all remembrance of past sorrows. The intermediate ethereal space is filled with strange beings. Those between the highest ether and the earth below are the creatures of a "middle nature"; nature-spirits, or, as the kabalists term it sometimes, the elementary.

This, picture is either a copy of the one described to posterity by Berosus. the priest of the temple of Belus, at Babylon, or the original. We leave it to the shrewdness of the modern archaeologist to decide.

This is a wonderful symbolic picture and quite in agreement with the Secret Doctrine teaching about the formation of the earth and its inhabitants in evolutionary development.

LEADERS ANCIENT AND MODERN — *H. A. W. Coryn*

There is one kind of leadership of which modern life has no understanding whatever. Indeed little or no study of leadership is made at all to see whether there *are* any different kinds. Yet one division — into true and seeming, is manifest in a moment. There are leaders who *go* ahead, and whom people follow; and those who are *carried* ahead, like a standard, who are but focus-points and merely voice strongly or eloquently what the people were already thinking.

The idea of leaders implies that of followers. But there are leaders who make with their followers an organic whole or unity; and there are men who, walking for themselves along a particular path of thought or action, are followed by others because that path which these others could not have cut for themselves, is thus made easy and attractive. These leaders may be indifferent whether they are followed or not; or they may like to be followed because they like the sense of power, the feeling of being influential. This constitutes more or less of their life-food, and if it is suddenly withdrawn they may actually die.

The chiefest division is between leaders who are either indifferent to a following, or who *want for themselves* something which a following can give — power, sense of influence, or life — or who find a following do for them what a good listener does for the ordinary individual, give him the chance either of clearing his thoughts to himself, of dumping the products of his intellectual activity on to a negative mind, or of drawing a fine picture of himself for himself to look at, in another mind —: and leaders who, because they love, desire only to *give*.

Of the highest type of this class, our day knows practically

nothing. For not only is the wish to give necessary, and in such degree as to exclude all other wishes; but wisdom, *what* to give, *how* to give. Some of the older peoples recognised these men in their midst, and some of the old sacred writings describe them and their relation to their followers. They were the Teachers, and, in the days before the degradation of the temples, the temple-Hierophants. Their relation to their immediate circle of pupils was much more hidden than visible, much more on *unspoken* — and truly unspeakable — planes of thought and feeling, than on that of words and visible association. The Teacher was credited with having attained conscious unity with the *Nous*, the Logos, of the world, and saw in that Mind the Idea, the spiritual Eidolon, of each pupil, the sum, the final, the full flower of all possibilities. That he held in his mind, and held before the superconsciousness — we need this word for the upper pole of that whose lower pole science calls the sub- or subliminal consciousness of the pupil. He placed his mind in inner touch with the pupil's, the pupil reacting and cooperating and clearing the path to the best of his ability, and was thereafter continuously open to the pupil's mental states. To these he sent back a reply which was the accentuation of the pupil's conscience. The pupil felt in his heart in a new way, in increasing degree, and with increasing understanding of it and its connexions, the presence of that "witness, admonisher, supporter, reprover, encourager, friend." Conscience is self at self's root (in the heart), and the currents from the Teacher playing constantly upon the pupil in response to — encouragement or discouragement of — the pupil's mental states, were such as finally to call him to self-consciousness in his divinity. It lay with the pupil to respond with his own will; for though the way was thus *shown* as no words could show it, it was neither trodden for the pupil nor was he in the least hypnotically forced upon it. Yet the currents did constitute strength for his use if he chose. They were the spiritual blood of the Teacher poured into his veins

because he had asked. Not asked with words, which are nothing; but with a power that could not be refused — love. He had recognised ideal humanity in the Teacher, and loved it.

The Teacher found his own life and joy in this giving. He manifested himself and in a way dissolved himself in his pupils as earth-life manifests in the lives of earth; yet was always more. Some of the old writings exhaust themselves in symbols to describe the relation. It was a relation at once of service and of being, both ways.

The Teacher's duty was therefore never finished, never intermitted. He lived entirely for humanity, and more immediately for his pupils; as it was to be their endeavor to live for humanity, to develop and acquire — for humanity. There was no moment at which with human weakness he would be thinking: I have done enough for them today. This hour is for myself. Such a thought, indulged for one fleeting moment, would have shocked and chilled the temple atmosphere, and would have been felt by the pupils as a plant feels when a knife cuts its root.

Finally, the Hierophant, as the ideal man, was regarded, in his fixed will to give, in the richness of his life by self-surrender, in his willingness to manifest his life *through* the enriched lives of others — as foretype of what all men will be. It was held that then only will the immeasurable possibilities of life be disclosed.

Some of the ancient writings dealing with what is written above, are accessible to scholars, though few have as yet been seen by them. The greater part are not to be made accessible till the world is readier for the ideals they deal with.

SCIENCE AND RESEARCH — *C. J. Ryan*

The Connexion between Planets and certain Metals: New Evidence

Some readers may have thought that this Department has shown undue skepticism regarding astrology at times, but any criticism that has been made has always been directed against exaggerated claims, and mainly in favor of the need for great reserve in accepting widespread predictions about international and other public events. The number of failures is enormous (and generally ignored afterwards!), the number of successes extremely small. Yet it must be admitted that an unprejudiced observer, an honest critic, will find that the comparatively few successes or partial successes are more than can be explained by pure chance. In regard to character, as indicated in the chart drawn up for the moment of birth, the successful delineations are much greater, but a vast amount of study will have to be carried on before approximately convincing results can be expected. We must remember, too, that the Higher Astrology is only taught in the Mystery-Schools.

There is, however, a substantial foundation for astrology in the natural law of Analogy, but our modern astrology is held back by its ignorance of the existence and influence of the invisible globes of the solar system, a deprivation which invalidates many predictions and renders the art so uncertain. Some research students with a scientific background have been trying experiments in astro-chemistry with results that may be strong enough to convince unprejudiced minds that astrology has some basis after all. According to these experiments certain relative positions of the celestial bodies produce definite and

unmistakable effects upon certain metals. Anyone who has an elementary chemical outfit, an astronomical almanac, and a sufficient store of patience can experiment for himself without having to take the word of anyone else. We feel that both from an occult and an astrological standpoint our readers would like to hear something of this new line of research.

Occultism has always claimed that a sympathetic relation exists between terrestrial metals and certain planets, i. e., quicksilver with Mercury, copper with Venus, iron with Mars, tin with Jupiter, and lead with Saturn. The sun and the moon are in harmony with gold and silver, respectively. Modern science still regards such correspondences as fanciful and ignores them. So far as we know, it has not even inquired into the possible reasons for them. It also brushes aside the possibility that the revolutions of the celestial bodies have any effect upon terrestrial metals except by ordinary gravitation. But if scientists would venture out of their conventional standards a little farther than the new atomic theories have driven them, they might find that certain discoveries made by Mrs. L. Kolisko, one of the rather heterodox scientific researchers already mentioned, would open an unexplored field of study.

We do not pretend to assert that the results of Mrs. Kolisko's researches may not have some explanation other than the one she presents, but this is simple, rational, and it seems impossible to think of another. She has given fifteen years of intensive study to the subject and has tried almost innumerable experiments with consistent results. A report of her work was recently published in *Tomorrow* (London), from which we have obtained the information here presented in very brief outline owing to lack of space to do it justice. Tests already made at the Headquarters of the Theosophical Society, Point Loma, have shown that extreme care and judgment in technique are required to avoid errors that

would render the experiments useless. Mrs. Kolisko warns us that they must be conducted by one person as the process is so sensitive that the intrusion of another person may cause complications and failure. While this may seem strange to some, occult students will recognise that it is perfectly natural in such delicate matters.

Mrs. Kolisko's experiments were conducted with various metallic salts in solution. A strip of filter paper rolled into a cylinder was partly immersed in the liquid containing the metal to be studied. As the solution gradually crept up the dry part of the paper it crystallized into a definite pattern of colored markings with a definite edge. *Each metal had its own characteristic pattern.* Some, such as gold, produced bright colorings, others, like silver, were noted for a greater variety of forms.

So far, Mrs. Kolisko's observations were interesting enough, but she went farther. If the metals are really in sympathy with and correspond to the planets, might not the development of the chemical patterns reflect the vicissitudes of those planets as they move relatively to each other? With this idea in view, she decided to try if anything happened to the solar pattern (gold) as it developed on the filter paper during a total eclipse of the sun, when the solar radiation is greatly reduced by the interposition of the moon (silver).

She made the first trial during the 1927 eclipse, and the results were striking. Using gold chloride for the sun and silver nitrate for the moon, in combination, she found that the colored pattern developed by the gold component gradually faded as the eclipse proceeded, being quite overpowered by the silver lunar pattern. After totality the solar pattern again strengthened and finally resumed its original brightness. The same experiment was tried with equal success at subsequent eclipses, including that of 1933

when thick rain-clouds covered the sky and the eclipse could not be seen.

Thinking it likely that the moon would affect the corresponding metal of a planet at the time of conjunction of the moon and such planet, in the same way it affected the sun during the conjunction that caused the eclipse, Mrs. Kolisko tried numerous experiments with the proper metals at lunar-planetary conjunctions with complete success. For instance, the pattern given by the solution of chloride of tin was suppressed by that of the lunar silver chloride as soon as the moon was conjoined with Jupiter, and so forth with the others. In each case the normal appearance of the patterns was restored when the conjunction no longer operated. Similar effects were found to occur at oppositions of the moon with the planets.

But is it likely that such a confirmation of the occult teaching of the importance of the law of Analogy, of which H. P. Blavatsky speaks so often, will be listened to? Will even the more mystical astrologers welcome such an unexpected support to their claim that planetary positions powerfully affect things on the earth? These experiments require no trance mediumship, no mysterious proceedings, not even high mathematics; the methods are purely scientific and can easily be tried out. But even so, judging by the unhappy experiences of many discoverers of unwelcome occult truths we fear that if Mrs. Kolisko's researches attract any wide attention she must expect insults, the attribution of base motives, and the charge of gross superstition. There will be those, however, who will admire and respect her courage and devotion to Truth wherever it may lead.

Who is "Sandia Man"?

Gradually the authorities on American archaeology are retiring from their original bases to new positions in regard to the age of

man in this country, forced back by a barrage of new discoveries! When the "Folsom Man" was found a few years ago in the Southwest, daring investigators ventured to suggest that he might be eight or ten thousand years old — a radical innovation on accepted views. Anyway he was the oldest possible human inhabitant of this continent and was decidedly a very barbarous kind of savage of purely nomadic habits and presumably no manners. All this is now upset by Dr. Frank H. H. Roberts of the Bureau of American Ethnology who has just discovered that the Folsom people had a community life in settlements with regular homes, and that they probably lived 25,000 years ago. Not only did they make the beautifully chipped and grooved javelin points associated with the name Folsom, and a variety of other stone tools, but they cut beads from bone and decorated them with simple patterns. They also used red and yellow paint. Dr. Roberts says that the Folsom culture compared favorably with the contemporary Stone Age culture of Europe. This is unexpected and will require considerable explaining.

But a step farther back into the unknown past of man in America has just been made by means of a discovery in the Sandia Mountains near Albuquerque, New Mexico. In a cave, beneath several stratified deposits — one of which included Folsom points — stone implements were found which were undoubtedly made by men who lived long before the Folsom people. These implements were found just above the bedrock and well separated from the higher stratum containing the Folsom points and bones of extinct animals. No human bones of either the Folsom or the older Sandia men have been found, but the Sandia javelin points closely resemble those of the Old Stone Age in Europe, the oldest implements found there. If they are actually as ancient as the older European artefacts American man could claim hundreds of thousands of years of existence instead of the

beggarly tens of thousands which liberal-minded archaeologists rather grudgingly allow him, but naturally this will require very conclusive proof. Dr. Frank C. Hibben of the University of New Mexico, reporting the discovery of Sandia Man in *The Scientific American* for July, humorously speculates on the possible aspect of this ancient Stone Age type saying: "The probable truth is that even such an oldster of the last of the ice age as Sandia Man would look no worse if we saw him on the street than some of the least attractive of our politicians"!

The Theosophical Forum

THE ARTIST OF LIFE — *Martyn Witter*

One of the most difficult of problems for the Theosophist to solve is that of how to touch the flame in men's hearts in order that they may become conscious of their duty to the universe. Here lies a crucial point. There are millions of religious mystics in the world who are conscious of some of the spiritual verities taught by the Sages. But can a spiritual flame be kindled that will truly glow in the hearts of men if their thoughts are but upon the favors that are to be gained from the Universe for the price of being good? For a long time the greater part of the spiritual labors of mankind have been devoted to the earning of bliss. Such a motive is a blight upon the evolution of the races of men. For thousands of years man has, under the cloak of his various religions, scrambled over the heads of his brothers to receive blessings either from a God or the Gods. Religious greed is but a refined form of material greed. One form of spiritual greed is the "holier than thou" attitude.

Today, there awaits a great opportunity for Theosophy to teach the world a lesson that *it* shall not soon forget. Theosophy can do this without cloaking itself with a "holier than thou" garment; for does it not teach that all men are potential Gods? It can teach man to give to the Gods and work with them instead of the traditional begging for favors. Men must be taught that they need not ask anything from without for there is nothing in the "thousand universes" that does not lie already within man.

The warping of motives lies at the heart of religious greed. A truly great artist will work at his art for the love of art alone. He would rather die from starvation than be torn from his work. He is not working for praise, glory nor financial reward, for his motive for

action lies in action itself. The spiritual man is an artist of life. He loves to see all life developing and growing — from the flowers to the souls of his fellow men. His supreme motive for action lies in action itself. He feels the challenge of all Life ringing in his ears and he answers that challenge by giving his will to the Universe and thereupon becoming an Artist and Master of Life. He considers only his duty to Man and the Universe, for fulfilment of that duty is his Supreme Art.

While our Theosophical Teachings are rich with the food of the Gods, there is no guarantee that the world will be impressed within time. The best of materials needed to produce a great work of art can be given to a man who is not an artist and nothing will happen. Though we have the teachings of the Gods, we are the agents of transmission and must play the role of the artist. Although, with the aid of our intellectual gifts, we bombard the world with our logical reasonings and writings, little will it avail if we, who are the transmitters, are mostly intellect, with little spirit. If we be not artists of life we shall fail to reach the millions of sleeping ones though we have the food of the Gods to offer.

It is always an inaudible voice that speaks in the causal realms while the physical man speaks with his tongue and pen. It is in the inner realms where the battle will be won. It is here where the spiritual warrior applies his art while the world thinks it is the physical man who speaks. The only solution is to live Theosophy with all the strength of one's being and make an Art out of Self-Discipline. A society of such individuals working in union would accomplish the seemingly impossible.

"LEAD US NOT INTO TEMPTATION" — *G. de Purucker*

"Lead us not into temptation, but deliver us from evil." When the Avatara Jesus made this beautiful statement to his disciples, he made it to help them. If you read the New Testament of the Christians, you will there see that this prayer, as the Christians call it, was given to them for use. And therefore the entire prayer is based on psychology and must be read from the standpoint of psychology. I don't mean the psychology of the present age, which is little more than a kind of — it is hard to describe — a kind of sublimated physiology; but I mean the psychology of the great seers, the titan intellects of all times, in other words, the science of the human soul, the intermediate part of man; not the spirit, not the body, but the soul.

The point is a subtil one: do you know that when you wish to avoid doing something that you realize is not good for you, one of the best things is not merely to face the fact, but to state it clearly through your own mind? Often the ugliness of the thought or of the action repels. The temptation is seen in its proper outlines. Thus it is never the Higher Self or the god within, what the Christians call God, which ever leads one into temptation. But the higher parts of our being, the spirit within, the god within us, is exercising upon us constantly the inner urge to do better, to be more, to strike out, to awake, to cast off the slumber and be and do. And often this wonderful brain mind, which is not, however, as yet fully evolved, cannot get the true import of the inspiration from above and it distorts.

Remembering these facts which you have been taught, this is the import of the Avatara's speech. The very fact that you will say to yourselves in an uprush of aspiration: Lead me not to follow

paths which appear holy or which are veiled in the illusory colors or glory of what I want, lead me not to be tempted to what seems to be high, but deliver me from these things: These very thoughts in the mind make the temptation to lose all its seduction. The outline is seen for what it is.

You know the old fable about stripping off the garment which deceived the knight. He sees coming towards him the yearning of his heart; he is on trial, a knightly course of trial. Will he succumb to the temptation which seems to be the very yearning of his heart? Nobody knows. He is on trial, the trial of the knight. He steps up to the seductive illusion, pulls aside the enchanting veils and sees the death's head. This is the meaning.

The very fact that Jesus warned his disciples to take this as their aspiration every day, showed that it had a psychological veritable protection for his disciples; in other words, they were to build up what modern psychologists call a framework or wall of thought around the mind.

Modern psychology has struck one truth, and it is that temptations come to us because of what modern psychologists have called schizophrenia, a long, ugly Greek word which simply means the good old-fashioned statement that a man's nature is often divided against itself. Schizophrenia means split mind, split personality. The good old saying was, a mind is often divided against itself, or, we are in two minds about it. That is what they mean today with this horrible Greek word schizophrenia.

Now what is the psychology of this thing? It is this: Weld your mind together again into one and you won't succumb. Every decent man knows the truth of this if he examines himself. We fall into temptation because we allow our mind to become split, one part of the mind to bemean the other and then we scheme. "Can we not get away with it?"

In other words, don't try to ride two horses. Once the god within bathes our mind, our brain, with its holy light, with its love, schizophrenia becomes a horror of the past. Refusing to allow this mental division within ourselves, we become single-minded; we sense the inner divinity; and when this is possessed in extreme degree we have a Christ or a Buddha. These have appeared among us. There is no reason why they should not appear today.

The Theosophical Forum

THE MAKING OF A GOSPEL — *Philip A. Malpas*

Most of us have found our Gospels ready made and it has not occurred to us to speculate as to their birth. Millions of us have accepted them as simple history, in fact as "Gospel truth."

To avoid a long story, let us assume that we are at the beginning of a gospel-birth and that it is a single event, not spread out.

From the great storehouse of all wisdom and all the wise men of all the ages comes a Teacher — high, medium, or low, according to the ripeness of the time, or the reverse. He desires to set going keynotes of spiritual aspiration to last a certain time, until other Teachers and keynotes are due. How shall he do it? First, he must have a pupil or pupils — that is the aim of a Teacher. There may be pupils intellectually ready and, with luck, also spiritually ready, to assimilate and digest more teaching than they have. The Teacher's business is to lead them as far as they can safely go, if possible at that point dropping them as incapable of further progression at the moment, and not as opponents or enemies. Best of all is the rarer case where they never cease to progress. Delicate management is required, because the Teacher knows the tendencies of the imperfect human, like a moth with a candle, to oppose the Light when he has failed to advance with undazzled vision beyond a certain point of approach. Therefore caution is necessary. Also, how can he clearly express spiritual truths in terms of the intellect, however brilliant. In fact, the more brilliant the intellect unguided by the spirit, the more difficult it is for the spiritual light to penetrate the man's character. Only an approximation is possible, the closer the better.

The time is ripe; the pupils, whose destiny it is from past actions, are born in the time of their Teacher, and he begins. One lifetime

is a very short period to found and establish a school, even among old pupils who are now to have their next chance. So the Teacher sometimes knocks at a strange door. He demonstrates certain unfamiliar laws of nature, which are often called miracles. Although in early Christian literature we find complaints that, though there are no "proofs" of the miracles of Jesus the Teacher, those of Apollonius, who lived a hundred years or so later are well known. The one who complains is perhaps unaware that the "miracles" of Jesus are not meant to be actual incidents in daily life, but types of a Teacher's credentials. They are dangerous credentials because of men's ignorance — either they may kill him as a sorcerer or they may worship him as a God, neither of which courses is welcome to him. What he wants is to awaken their spirituality and get them to live the spiritual life for themselves. And if they are very intellectual or psychically inclined, those qualities are often great stumbling-blocks, sometimes almost insuperable.

So he attracts his pupils as best he can. Soul calls to soul, and they recognise him according to their degree of perception.

He forms a school. There are pupils of very varying degrees. How can he amalgamate them? By forming degrees of classes. Also by teaching allegorically, "as through a glass darkly," to the least progressed, "face to face" with others who are ready.

His teaching is the story of man's evolution in theory and if possible, practice. So he builds up a "legend," a "mystery," and uses it as a lodge-ritual or drama of Everyman's life, now and in the future, in "life" and in the great intervals between lives that men call "death." Perhaps he chooses only a certain aspect or part of that non-stop life which we may call life-death-life.

Sometimes the allegory or symbolism is built up on familiar figures known to the intellect which can be used, so to say, as

language, to describe the soul-processes which no intellect can really define.

One Teacher takes the symbolism of building a Temple as that of the building up or evolution of the soul, the Man. Another takes the Vineyard, and the intellectual-minded actually confuse the spiritual Wine of Life, the true Bacchic communion, with alcohol! The Sheepfold is a beautiful and graphic symbolism. The Bread or Corn is one of the most sublime. The Heavenly Marriage is also grand in its conception, but in the present state of mankind's development so little likely to be interpreted spiritually and not materially that it is very dangerous — as some early Christian sects found it. How can the public be expected to understand the symbolism of marriage among ascetics as spiritual symbolism and no more? Trees, doves, serpents, dragons, children, fishes, crosses — all have their uses as descriptive figure-material for such a symbol-ritual.

Because of the inevitable misunderstanding and degradation in the hands of untrained or unpledged disciples or profanes, it is necessary to keep the ritual secret or private, or at least its real application and working.

There were wise Greeks who said that Homer and Hesiod ought to have been condemned for their stories of the gods and their failings. They said they were a direct encouragement to bad men to do the same. But these stories were high symbolism and should have been kept for the crypt, the lodge, alone, where they were known to be symbolic. The same applies to many Bible stories of the little tribe of Jews in Palestine.

A very good plan for such a lodge-ritual or symbolism is to take the story of a man standing symbolically for every man, and show him coming through struggles to the goal of everyman, the spiritual state of a god.

Suppose such a Teacher wanted to build up on the beautiful Temple symbolism. He could take the Temple — the Great Pyramid, for instance, which some call El Harran — and show a great builder constructing it. The builder and the Temple could really be the same, separated for purposes of symbolism. Is not Man the builder of his own temple, himself?

The details of the building can be elaborated in any direction. And there you have a wonderful story, as a lodge-ritual. It would take too long to go into detail, but we can imagine the typical man being named *Hermes* with the strong guttural V. In the Egyptian language he might be connected with coens, cohens, or cowans, or priests, and some Egyptian form of the word Hermes. But in the Orient the word might well be chohans. The point is that all these names can be "localized" in forming a new ritual-story for any particular people or place. Thoth, Khnum, Kheper, Isis, and all the whole host of names might well be adapted from Sanskrit equivalents to make an Egyptian god-story.

A hint is even given by Plato and H. P. Blavatsky that Atlantean names were so transferred to Egyptian equivalents and thence to other Greek equivalents, each language concealing the story behind the name.

Our Teacher then, of high degree or low, might wish to transfer, or localize, shall we say, an Egyptian ritual into a Hebrew ritual. He would take the name Hermes in its Greek form and render it say "Hiram," each form of the word containing the essential consonants H-rr-m. Thoth he might make into Tot or D-o-D, Daud or even David, the "writer." Sol-om-on, the god-name in three languages, fits in very well with Suleyman or its variations, Salamon, Salmon, etc. Just as in Greek Sol-on is also "the wisest man who ever lived."

So a purely local ritual may be built up of Egyptian, Chaldaean, Hindu, or Atlantean elements. The hierophant and the adepts know perfectly well what it all means, but the lower degrees know in ever more veiled form, until the profanes — those "outside the temple," if they get to know the stories and names, know nothing of their real significance. In time, as corruption and materialism increase, the inner meanings are lost or, for safety, withdrawn, and you have the exoteric local story as "history," or at least myth or mythos.

I have never heard that the Jews made of Hiram a god, much less worshiped him. If they did so, it must have been very much in secret. The Temple story is very beautiful, and every word has its inner meaning down to the very open confession that it was "made without the sound of axe or hammer" or any noise. The growth of the soul always is in the silence. But I have no doubt that there were many neophytes who became "Hirams" for the period of their initiation before as many "Solomons."

It is easy to figurate some later Teacher who desires to give a new spiritual impulse to some group, perhaps not a high teacher, or possibly a high teacher unable to utilize his full strength owing to the quality of the time and the pupils, working with a group in a downward cycle preparing for a period of worse materialism than usual. He might also choose a Hebrew setting for his ritual. "Man" is "Ish." Joshua the "Savior" is also a form of "Ish," "Ish-u," shall we say. Rendered more Latin or Greek in form it is the same word as "Jesus" or "Iesous." The story of the Chrest — the pilgrim, the man, the neophyte, the struggler towards spirituality, is a very good figure for the Ish or Jesus.

It would take too long to go into all details, but the general idea is clear. A ritual is built up, and like all others made by experts; it is a beautiful allegory of the soul's, or man's evolution, and his

hothouse evolution also, so to say, or initiation.

But whatever the lodge or sect or brotherhood or gnostic association that used this little ritual, it became more or less public and therefore inevitably corrupt through lack of knowledge. In some inexplicable way the Chrest became tangled up with the Christ — quite a different affair. The Chrest does not become a Christ before he dies the initiation-death, but how were the uninitiated to know that? The result is that at some later date a wholesale substitution of "Christ" for "Chrest" occurred, or even for "Jesus." Quite in line with this is the odd deletion of the name *Jesus Barabbas*, because no one could understand that such a bad *man* and *criminal* (instead of a personified human principle!) could bear the name Jesus. (But a few of the oldest MSS., or copies of them, still retain the *Jesus Barabbas* — Jesus the son of the Father!)

We have run a little ahead of our story. The original "gospels" might have been small fragments, each complete in itself, which were later hammered together in the Museum at Alexandria into what we call the gospel. At some point along the line it was evidently decided to make the mythos into history and a real living historical man was sought as the typical Ish or "Man" (Mensch). It was not difficult to find one. There was a great Avatara who had chosen to be born in a Syrian or Palestinian body, or if you prefer it more accurately, a divine power chose to overenlighten a highly spiritual being who in his turn had chosen a Syrian body. That was in the troublous reign of King Alexander Jannaeus of Judea, there or thereabouts, say 120 b. c. His name might or might not have been Jesus, or that name might have been given him in view of the Savior and Ish and Joshua implications; often a mystic name has many meanings. This historical figure, almost unknown to history as to his personal life, was dovetailed into the beautiful and significant mythos, and

the ritual became "history." More, this grand figure even came to be worshiped by the profanes as a god — not that they quite know what a god is or might be, but a sense of vagueness adds to the illusion.

So now we have, launched upon the world, the exoteric story of the personified Man or Soul on its way to Godhead. And the "gospel" has become a very exoteric gospel indeed.

One could write volumes on the theme, but we have said enough.

A final hint may be given for thought. Has anyone ever thought of the lower class of gods who are the creator and creators, and the higher — the architect? The Creator god is not a high god at all except for the uninformed public — the pro-fane. One of the most ingenious and beautiful Gnostic mythoi describes the origin of Christianity as being the supplanting of the material, violent, revengeful, material God of the Jews by the much higher Gnostic God, Jesus or Christ, the architect God, because the creator, the workman, the builder god, did not know he was not the highest, and therefore was making a sorry business of his reign, impossible to continue as such.

But the Creator principle is still very beautifully allegorized and symbolized in its place. It is the Jot or Jod, the tenth letter of the Hebrew alphabet. And it has a very striking resemblance to the Western word God, Gott, and its variations. I believe it is one of the Siva symbols, equally beautiful to a beautiful mind. You might write it as "I" in Hebrew and "G" in English.

The word "Evangelion" in Greek, which we translate Gospel, would also bear a little thought, remembering that these adept ritual-makers more than often hid meaning after meaning under the "cloak" of the outer word or narrative, and especially names. Some sort of a play of the words is made as meaning the "good

message" the good-spel or god-spel, the gospel — but there may be other and not uninteresting derivations for our cryptographers who know the Gnostic methods of "concealing while half-revealing." Who can say?

The Theosophical Forum

THE LANGUAGE OF SYMBOLS — *H. T. Edge*

Poets and prophets, heathen and Christian, alike express themselves symbolically, and, if we believe that this language prevailed in the early ages of the world, before the external and intellectual life had predominated over the instinctive and emotional, we must conclude it to be the natural language of man, who must therefore have been gifted with a conformable faculty of comprehending these hieroglyphics; and hence it arose that the interpreting of dreams became a legitimate art. Long after these instinctive faculties were lost, or rather obscured, by the turmoil and distractions of sensuous life, the memories and traditions of them remained, and hence the superstructure of jugglery and imposture that ensued, of which the gipsies form a signal example, in whom however there can be no doubt that some occasional gleams of this original endowment may still be found, as is the case, though more rarely, in individuals of all races and conditions. The whole of nature is one large book of symbols, which, because we have lost the key to it, we cannot decipher. — Catherine Crowe: *The Night-Side of Nature*

We recognise here an intuition of that universal mystery-language spoken of in *The Secret Doctrine*. The author is writing of symbolic dreams, of which she narrates many instances. She points out that the interpretation of the symbols is the same with all peoples, as, for instance, deep water means trouble, and pearls mean tears; and comments on the quickness and facility of this language as compared with the labored process of verbal speech. It is to be observed that this symbol language, as here conceived,

is not of the nature of an arbitrary code, agreed upon by persons desirous of conveying information to those possessing the key, while withholding it from those who do not. It is a *natural* language, based on existing facts. In this language a single symbol, such as a tree for instance, conveys a sort of compound or general idea, a root-idea underlying a variety of particular manifestations. The intuitive faculty would grasp the whole of the meaning at once, as a thought without words; whereas the ordinary mind has to decipher the various meanings laboriously one by one, and any Teacher trying to explain the matter may be thought guilty of contradicting himself by saying one thing at one time and another at another. Or take the geometrical symbols, triangle, circle, cross, etc. Is it not possible that, to the unclouded inner vision, no interpretation whatever would be needed, because the mere symbol would convey the entire meaning in a flash?

In the language which we customarily use, words stand either for concrete objects or for abstract notions. These abstractions are based on our experience in the physical world of consciousness. But what about other worlds and their conformable planes of consciousness? Is it to be expected that we should find there the same objects and the same abstract ideas as here? If so, it would be the same world and not a different world. Then why may there not be a world where the language is in wordless pictures, and the mind exercises a corresponding faculty of seizing the import of these pictures in a flash? The writer quoted above surmises that the highly intelligent in the ancient world could not have been satisfied for so long with a mythology which to us seems idle stories, if this mythology had been really such and nothing more. And it may be that they never troubled to "interpret" what to them seemed in no need of interpretation.

We think here of the true nature of art and poetry, of the ability

of some minds to appreciate them, while other minds do not; and of attempts by these latter minds to explain and analyse the poetry and the art and reduce it to some system. We think of the minds of little children and of primitive peoples; and we begin to realize how the intellect (which of course has its own proper uses) clouds over these natural primitive faculties, these intuitions, these direct perceptions. All this links up with the doctrine of universal correspondences (also treated of in the book just quoted), and of how all things are interrelated one with another. Upon the knowledge of this natural fact rest such things as sympathetic cures, amulets, sympathies and antipathies, totems, etc. There is a vast fund of knowledge about Nature which we do not possess, or perhaps have forgotten; and our attempts to explain these mysteries in such a way as to make them fit in with our own systematized acquaintance with physical Nature seem rather crude.

It is suggested in the quotation at the beginning of this article that our loss of knowledge has been due to a lack of simplicity, and that our inherent faculties have been obscured by our physical senses and our reasoning mind. And in this respect children, animals, and primitive peoples may be our superiors. It is of course true that we must become as little children in order to enter the Kingdom of Heaven, and that the pupil must regain the child-state which he has lost. Yet this return to simplicity does not imply retrogression; it is futile to attempt to set back the hand of the clock. Our philosophy shows us that evolution winds along a spiral path, ever bringing us back to a phase similar to one which we have left behind, yet always one rung higher. The concentration of attention on physical matters, and the development of intellect are necessary stages in evolution; but we have to develop our intellect, not allow it to develop us.

Symbols then are not arbitrary chosen signs, but pictorial

representations of compound ideas, which ideas cannot be grasped as wholes by the reasoning mind, but only in successive aspects; while to grasp the entire meaning in one flash requires the use of a higher faculty, which we may call intuition — one of the things we are called on to develop.

The Theosophical Forum

SEND IN YOUR QUESTIONS! — *G. de Purucker*

What is the exact state after death of a person who commits suicide to avoid present conditions? Does he remain in a temporary state before entering the rest due to one who has died a natural death?

G. de P. — Yes, a temporary state, and it depends upon the suicide's character as to just what kind of state this temporary state is. As ye sow, ye shall reap. All suicide is wrong, ethically and in every other way, for it is cowardice, it is shirking; and you know what happens to shirkers in life. As I have often said before, every human being is born with a certain magazine and reservoir of vitality; and the composite entity which is man holds together until that reservoir of vitality is exhausted. Then the composition breaks up. The spirit goes to Father-Sun; the reincarnating ego goes into its Devachan or heaven-world of unspeakable peace and bliss; and the lower parts break up and dissolve into their component atoms.

But in the case of a suicide, here is one, a human unfortunate, who, it may be harassed and wrung by sorrow and pain, in folly takes his life, thinking, blind man, that he can thwart Nature's purposes. He simply destroys the body, and all the man remains in the astral world in conditions which are at the very best the reverse of pleasant; and in the cases of evil suicides — men who suicide and who have also been extremely evil men — in their cases they are in a condition which is awful, for their whole consciousness is burning with all the unholy passions, hates, loves, fears, terrors, dreads, which caused them to commit suicide. They have no escape; in taking their own life they made the condition a thousandfold worse.

But there are suicides and suicides, and the individual case depends upon the individual suicide. That is all there is to it. The mental state in which the suicide was before he committed the act, continues in the astral world, but intensified tremendously. Of course the time will come when the reservoir of vitality will be exhausted; and then whatever of beauty and grandeur and spiritual light there was in the soul of the suicide, all this receives its recompense in the Devachan then. But suicide is cowardice, and this should not be forgotten.

What happens to those who are slain in battle?

G. de P. — I daresay that the questioner thinks there must be some identity in what happens to those who are slain in battle and suicides, merely because the death in each case is quick; but it is not so. It is the motive, in every instance of violent death, whether wilful suicide or murder, or death in battle or accident, which governs the post-mortem state. Those slain in battle sink into utter unconsciousness, for in them there is no stain of cowardice seeking to shirk the duty, as in the case of the suicide, and therefore no harrowing anxiety, no harrowing and corroding fears of life itself. Those slain in battle simply lapse into blissful unconsciousness and so remain until the reservoir of astral-physical vitality is exhausted. Then they enter the Devachan, the heaven-world. Nature is rigidly just in all her rules and actions, because she is rigidly compassionate. Compassion, remember, means law, harmony, regular procedures of cause and effect. The very heart of Nature's being is compassion. The man who dies in battle, and the man who gives his life to save the life of a brother, are very much the same. Unconsciousness, dreamless and inexpressibly sweet, that is what they receive until the reservoir of vitality is exhausted; then they enter the Devachan, or heaven-world, and therein remain in inexpressibly beautiful and blissful rest until the next reimpodiment on earth.

I have studied the technical Theosophical literature and understand that man is a composite being. Also, I have read about what happens to the sevenfold hierarchy "Man," when he dies, but has not Theosophy also an ethical side in regard to death, with love and compassion?

My question is: What consolation for the heart, what inspiring hope and courage, does Theosophy give to those who fear death, to the dying, to those who have lost their loved ones?

G. de P. — Theosophy teaches that death *per se* is not to be feared. It is a change to a better state, but only when death comes naturally. This questioner evidently has not read much of our Theosophical literature, wherein he would have been told that ethics are of the very essence of every doctrine that Theosophy has. Ethics are of the very structure of the Universe, for they mean harmony: that right is right, and that wrong is wrong, and that the correct thing is the correct thing, no matter when and where it is; also that the straight thing is the straight thing no matter where and when it is. The ethics of our teaching regarding death are what I have so often stated: That it is naught to fear; it is inexpressibly sweet, for it means ineffable rest, peace, bliss. When a man dies, he enters into the great Silence, just as happens when a man falls asleep and later awakens. These few words tell you the whole story, although none of the details of the story.

Do you remember what Robert Louis Stevenson wrote in his *Requiem*? He wrote this for his own grave, they say:

Under the wide and starry sky
Dig the grave and let me lie;
Glad did I live and gladly die,
And I lay me down with a will.

This be the verse you grave for me:
"Here he lies where he longed to be.
Home is the sailor, home from the sea,
And the hunter home from the hill."

Ay, very beautiful, for in it the spirit of Robert Louis Stevenson spoke; but why did he say: "Dig the grave and let me lie." Don't you see here the old horrible thought that the man is his physical body? I would have written: "Dig the grave and let me go free." I, an incarnate energy of the Universe — can you keep me within a grave? I, a flaming intelligence, an imbodyed spirit, can you enchain me within a coffin? Ay, the very bonds of the world are too small for me. My soul is native with the stars, and whether it be Canopus or Sirius, or Stella Polaris, there I dwell on familiar terms. There I belong. Free me! "Glad did I live, and gladly I die, and I lay me down with a will. This be the verse you grave for me. Hence he has gone, where he longed to be."

Take the case of one who dearly loved someone else on earth, and the one who loves, dies: Does the dead one who loved, continue to love?

G. de P. — A very natural question indeed. The very meaning, the very essence, of the heaven-world state, or Devachan, is bliss and love, because bliss and spiritual yearnings have as their main motive-power that abstract impersonal function or energy of the human spirit which we men call love. The Devachan signifies all that is beautiful and good and sweet and holy and true and clean and pure. Love is immortal; it continues always; and, mark you, the more one loves, of course impersonally, the nobler he becomes. I don't here mean the ordinary gross, passional love, for that can be even of the fires of hell. But I mean that inexpressibly sweet, divine flame which fills life with beauty, which instills thoughts of self-sacrifice for others. Love of that kind, impersonal

love, is the very heart of the Universe. Therefore, I say, the one who loved and who died, loves still, for it is of the fabric of his soul.

The Theosophical Forum

ASTRONOMY IN THE MIDDLE AGES — *C. J. Ryan*

When we read of the curriculum of the European Universities during the Middle Ages we are inclined to think that certain classical studies, literature and languages, music, and mathematics, were almost the only subjects taught that had reasonable foundations. The natural sciences are generally supposed to have been in their infancy (as of course they were) when not purely fanciful, arbitrary, and grotesquely erroneous. But now and then side-light is thrown into some obscure corner and the existence of correct knowledge discovered among much that is doubtful or wrong.

A most interesting instance exists in an Irish Treatise on Astronomy now in the Library of the Royal Irish Academy, and which was translated into English by Mr. J. J. O'Farrelly in 1893. It was written about the year 1400, certainly not later, and is derived from the works of Messahalal, an Arabian Jew who lived between a. d. 754 and 833. Twelve of the thirty-nine chapters are not contained in the Latin versions of Messahalal's treatises from which the Gaelic translation was derived; their origin is unknown, but they probably came from other Arabian sources, or they may have been in part the results of the observations and studies of the Irish writer himself.

The treatise is based upon the Ptolemaic theory of the Solar System. It is remarkable that Ptolemy did not accept the Pythagorean System, which placed the sun as the central body instead of the earth, for the teachings of Pythagoras had been widely diffused in the time of Ptolemy. The result of his refusal to work on the correct system of the great Initiate, Pythagoras, was that the students of astronomy were misled and held back from

the knowledge of the true relationship of the sun and the earth for many centuries, and much bitterness was aroused.

The Irish MS. carefully explains the globular shape of the earth, and gives its true, approximate diameter, 8000 miles; the real causes of the phases of the moon, its eclipses, and the eclipses of the sun, are stated; the reason why the sun rises earlier if you travel eastward and later if you go westward is properly explained; the writer points out that the moon, like the planets, has no light of its own but reflects that of the sun. He also touches upon physical geography and geology. He gives, though with some hesitation, the true explanation of the rising of the Nile. His remarks about the wearing down of the mountains by the action of rivers, and upon the origin of fossil shells agree remarkably with the principles of modern geology. Yet, hundreds of years afterwards, geology had to fight for its life against the entrenched strongholds of learned ignorance and prejudice which went so far as to say that the fossils were artfully placed in the rocks by the Devil in order to try the faith of the pious in the literal accuracy of the *Genesis* account of creation in six days.

But the most curious thing in the whole treatise is a statement which shows the possession of information upon a subject of which it is generally believed that *nothing was or could be known* before the invention of the astronomical telescope by Galileo in 1609 — two hundred years later! This is that when the planets Venus and Mercury "are twelve degrees proceeding westward of the sun they are horned like the new moon."

One of the strongest arguments against the true theory (Pythagorean or Copernican) of the solar system was that Venus failed to show the crescent or horned phase like the moon as it should do. As the phases of Venus cannot be detected without optical aid, and as the critics possessed nothing of the kind, they

had some show of reason in not accepting the truth; but when Galileo turned his "optic tube" upon the Planet of Love it was immediately seen that it *did* pass through exactly the phases of crescent, half-moon, and full-moon, that ought to be seen.

How then comes it that the unknown Irish writer was able two hundred years before Galileo, to write quite confidently of the crescent phase of Venus, and also of Mercury, a much more difficult object to distinguish? Perhaps the answer to this will be forthcoming when it is explained how it was that the ancient Assyrians represented Bel, the Assyrian Jupiter, with *four star-tipped wings*, and the god corresponding to Saturn *standing within a ring*, as Proctor, the famous English astronomer, pointed out in *Our Place Among Infinities*, unless they knew by telescopic observation that Jupiter had four large moons and that Saturn was surrounded by a wonderful ring!

This is another instance of the debt owing to that remarkable Arabian civilization and culture which flourished so brilliantly in Spain and the nearer Orient, at a time when the intellect of Europe proper had not yet awakened. How dark those rightly termed Dark Ages were when the Arabian Jew Messahalal wrote in the ninth century, can only be appreciated by those who have given the time and energy necessary to understand it. When this fifteenth century Irish writer composed his treatise, the mind of Europe had already begun to stir; the priceless treasures of Greek knowledge had been lately brought to Europe and had quickened the sluggish and stupefied thought to unwonted activity, while the dullest could see the parallels in the Greek writers with the philosophy and science of the Jewish-Arabian culture. Just as the Greek intellect had expressed itself in science, philosophy, and mathematics, in Pythagoras, Plato, Eratosthenes, and Euclid, who themselves were to a large degree indebted to Asia, so the Saracens who studied and absorbed these writers, stamped their

own productions with their own native genius, and in turn handed on to the European the Grecian thought, based as it was on Asiatic (Babylonian, Syrian, Egyptian) achievements. What a curious and interesting reflexion it is, that the theoretic and philosophical systems of the Egyptian Babylonian priest-scientists should have wandered from their native soils to Ionia, Peninsular Greece, and Magna Graecia; then to return to their native continent, and after greatly aiding to mold and soften the manners of the Men of the Desert, to be carried to Spain, and from Spain to meet again in the European Universities the other branch of the same stream of Asiatic learning flowing from Constantinople. Truly, so far as *European* history is concerned, no more fascinating page exists than this period of renaissance. And, sad to say, no period has been treated so meagerly by historians.

The Theosophical Forum

THE SEVEN SACRED PLANETS OF THE ANCIENTS — *Lawrence Merkel*

There is a genuine fascination, a strange reverence, that the subject of the seven sacred planets seems to evoke. Perhaps astronomy in general has always interested the writer, and that may account for the particular interest in the teachings of Theosophy relating to the heavenly spheres moving in their appointed routes in the skies. That this is a vast subject, a tyro would quickly admit; that it is important *in these times* may warrant some explanation.

The basic axiom of universal brotherhood takes on a profound and penetrating significance when one looks into the real structure and orderly operations of the kosmos. Brotherhood is no sentiment or mere emotional effervescing. We are all rooted together literally — linked with all that is, we have our ties with the suns, the moons, the planets, and even the encircling Milky Way. Nature is a unity! Is this teaching of importance *at this time*?

The study of the seven sacred planets is but one of four facets of a jewel — one of four subdivisions of a group of teachings in the Esoteric Philosophy called the Doctrine of the Spheres. One aspect of this general doctrine is that of the Universal Solar System, a system comprising all the planets and their satellites, visible and invisible, which belong to our solar family. It should be noted that aside from the nine planets of which present-day astronomy tells us, there are innumerable invisible planetary bodies which our "fourth plane" eyes cannot perceive. Our Universal Solar System is septenary; it has seven planes or worlds, seven suns of which our earthly vision takes in but one.

It may prove of interest to state that the planet Neptune does not

belong to our Universal Solar System. While it is a "planet" in that it does revolve around our sun, in reality it is a "capture" — captured as other planets have taken to themselves "moons" (or more accurately, satellites, as each planet can have only one true moon). Furthermore, inasmuch as the planet Uranus revolves around our sun, it is a member of our Universal Solar System, though not of our Solar System.

Our own solar system concerns the second of the four aspects of the general Doctrine of the Spheres. It is this portion of the teaching that deals with the seven sacred planets of the ancients.

But before returning to our theme, we will mention, for the purpose of completeness, the third and fourth subdivisions of the Doctrine of the Spheres. The third aspect is one which the author of *Fundamentals of the Esoteric Philosophy* refers to only by allusion, for obvious reasons. It deals with the relation of Mars and Mercury and the "four secret planets" to our earth. The fourth and final aspect of the Doctrine of the Spheres has to do with our Earth planetary chain.

To resume the study of our main theme: the seven sacred planets. We shall name them: a secret planet not visible to us; Mercury; Venus; a mystery planet now invisible to earth men — let us call it "Vulcan"; Mars; Jupiter; and Saturn. The secret planet, unnamed, is now dying, as it is nearing the end of its cycle. When the earth enters its seventh round, this secret planet will be its "moon," or more correctly, its satellite; our real moon will have become "atomic stellar dust."

Why were the seven planets considered and called "sacred" by the ancients? One reason was that our Earth's planetary chain, i. e., its seven globes, were formed and are under the guidance of these seven planets. Further, each sacred planet acts as a guide and protector of a Root-Race. But in two very succinct sentences,

Dr. de Purucker gives the most telling reason for terming these seven planets "sacred." He explains:

There are seven main or Chief Rays or Forces which make and which inform the Sun; and these seven Forces are the Seven Solar Logoi. Each one of these seven main Logoi is sub-divided in its turn into seven; and these seven subdivisions of one chief Ray or Logos form the Rectors, the Genii, the Archangels, if you will, of which the "Seven Sacred Planets" are the Houses. —*Fundamentals of the Esoteric Philosophy*, p. 460

We may parenthetically state, as an example of the interblendings and interworkings in our kosmos, that our Earth itself is one of a series of seven planets (other than our own planetary chain) which aid in building the sevenfold planetary chains of certain other planets.

It was stated above that each globe of our Earth's planetary chain was builded or overseen in its construction by one of the seven sacred planets. More accurately, it is the spiritual Rectors of the sacred planets who are the builders or guides; and as an additional point it must be remembered that each globe of our Earth-chain has its own especial characteristics, its own swabhava which acts as a prime mover, a definite influence in its shaping.

We are told that the globes of our own septenary planetary chain, that is, Globes A, B, C, D (our earth), E, F, and G, were formed under the respective guidance of "Vulcan," Jupiter, Venus, Saturn, Mercury, Mars, and a secret planet. Further, each of the seven globes (A, B, C, etc.) is under the guidance of the following respective constellations of the zodiac: Leo, Sagittarius, Libra, Capricorn, Virgo, Scorpio, and Cancer. We have omitted mention of the five arupa, or formless globes, of our twelvefold planetary

chain. We must enter a caveat here: It should not be assumed that *one* sacred planet, or *one* constellation solely, acts in forming a particular globe of our Earth-chain. It is true that *one* sacred planet and *one* constellation are the *predominating* influences, but every one of the others leaves its mark. Nature is a unity; there are no hard and fast dividing lines, no segregation into cubby-holes.

There are some very interesting details about the ages of each of the seven sacred planets, that is, their ages physically and spiritually speaking. As a general rule, the density of a planet will indicate its physical age. Also, generally speaking, the farther a body is from the sun, the physically younger it is. Mars, usually considered by astronomers as being older than the Earth merely because our telescopes seem to find few if any traces of organic life there, is actually younger, physically, than the Earth.

Theosophy holds Mars to be in obscurity — asleep — though it cannot be called dead. There is life on Mars; it has just ended its third "Round," or minor cycle within its greater Life-Cycle.

The planet Venus is in its seventh round — much older than the Earth — as is Mercury, likewise. The latter, however, is just beginning its last and seventh round. The planet Saturn, while physically younger than the Earth (being farther away from the Sun) is more advanced spiritually than our Earth.

There appears to be a mystery surrounding Mars. Often in listing the seven sacred planets, the Sun and the Moon are used as two substitute names for "Vulcan" and another unnamed secret planet. We find Mars "to a certain extent . . . in the same category."

Perhaps the most fundamental key iterated in Theosophy is the old old axiom of the Hermetists: "As above, so below." And as we find the Universe to be a living being, a vast organism, we may

step down the analogy to a human walking here on Globe D- man being a replica, a microcosm of the universe, the macrocosm. As man has his organs, his nervous system, etc., so it is with the universe. The Kosmos has its organs, its circulatory system, its stream of life forces pulsating through certain well-defined, albeit invisible, channels with their centers (the planetary bodies) corresponding to the ganglions of a human's nervous system. So it follows that the hosts of entities comprising our universe are not moving in a helter-skelter jumble, but in definite grooves, proper pathways toward which their magnetic or gravitational attractions draw them. Yes, everything in the Universe is connected, is a unity- a most heartening, a most stimulating teaching, a teaching which when comprehended and *lived* is found to be the only straight and true way to inner peace.

The mass of men worry themselves into nameless graves:
here and there a great soul forgets himself into
immortality. — Emerson

The Theosophical Forum

INNER SERENITY THE WAY TO ENLIGHTENMENT — *Marguerite de Basquette*

The present generation, especially the youth of our time, is not without an earnest longing for spiritualization and the development of the divine forces in man. They attempt to reach this goal in many ways, but only a few succeed.

Why is spiritual attainment limited to the few? Is it so difficult to liberate ourselves from worldly desires to which the human soul is only too ready to yield? Or is it so hard to discover at all that we must free ourselves from worldly bonds in order to give birth and life to the divine forces within us?

The human mind is continuously disturbed by numberless forms of perception and thought, and the average man, being the helpless object of conflicting sensations, represents a labyrinth of unrest to the eye of the Enlightened, or to him who has considerably advanced on the road to higher knowledge. With many of our generation this inner unrest has already come to be a permanent condition, in which, without interruption, the vibrations of thought and perception mechanically revolve, just as in a vicious circle. *There are but very few who have attained true inner balance.*

Indeed, the most essential aim of our evolution should be this: *To create in ourselves a divine center of rest*, which stands immune to any change of conditions. Only after this has been achieved will the waves of emotion no longer be able to wash us away and cause us to perish. Only then "all things work together for the good," even if the greatest afflictions befall us.

In order to acquire the highest good we must, however, follow the

road untiringly until the goal is reached.

Master Ekkehart says: "Do away with everything within you that is not from God, and only God will remain."

The more divine life increases in us the more earth-bound life decreases and loses its influence upon our soul. The eternal overcomes the temporal; the incorruptible the corruptible, which can no longer blind us or lead us astray. Doubts and worries cannot befall us, since the inner road has been unmistakably made known to us.

How can man ever overcome the obstacles on this burdensome road? Certainly, for the restless man of today it is difficult enough even to commence this change, this conscious turning away from the road hitherto pursued but now conceived as erroneous, and to do it so as not to grow fatigued in the presence of opposing conditions. *It is often the wrong beginning that leads to defeat and despair.*

Many of the present-day so-called esoteric schools point out to their disciples ways and means which necessarily cause aberration and failure. Most of the teachers of such schools consider, as the principal aim, the unfolding of the astral forces and medial abilities. This is a great mistake, involving serious danger. I have met many victims of those methods. The astral senses as well as the medial abilities, are, as a rule, much easier to awaken than those teachers believe. They forget, or do not take into consideration, that no one will successfully encounter this strange and transcendental world, unless he has first inwardly experienced these divine forces and already is in the process of developing them by daily struggle. The unawakened ones, restless in themselves, might become a mere tool of such forces and often end in religious mania, mediumship, and frenzy. Therefore, a certain theoretical study of the astral plane ought to be

recommended only as far as it enables the student to distinguish between high and low, eternal and temporal. Exercises in meditation and concentration are useful only for the purpose of relaxing from worldly unrest and sinking into the divine.

It is also dangerous to repress our desires, if this be practicable at all. One is, indeed, well justified in warning against an exaggerated ascetic life and in emphasizing an organic spiritualization by means of ascetic practices and exercises.

Therefore, my advice is to try to regain "the innocence of the senses!" Indeed, we should strive for this innocence, which original man enjoyed, but lost in his "fall". Feeling our way in awe we should proceed step by step, leaving behind us all that we, conscious of our guilt, recognise as impure and worthless.

Even this gradual process of purification will not be painless, but will require the entire strength of our mind and soul. Therefore steady concentration is a thing needed in this divine training. Yet this concentration must have its primary motif in relaxing into the divine. Only through this unfoldment the divine ray of inspiration will shine into the cloudless soul, just as the rays of the sun can reach us only through an open, unclouded sky. From inspiration will arise enthusiasm and inexhaustible perseverance, making us capable of concentrating on the highest goal. The awakened soul, then, sets its own problems with a fine, purified instinct — that is "with the innocence of the senses" — in accordance with its respective ability of achievement.

Even worldly activity will thus become a divine service. This course will be pursued unswervingly. Gradually the difference between working days and holidays ceases, because our entire life is filled with holy work in accordance with the divine will. Therefore, we should first learn: Placid devotion to divine inspiration — and then only can we will, work, and achieve. All

this, however, must not be selfish in purpose — not motivated by ambition or graft or "the struggle for power."

The clearest way to purify and deepen Self consists in serving humanity. Selfless work of love is impossible without sacrifice and, therefore, represents the most powerful process of purification. To teach means more and more to delve into the Divine Being, and thus to draw more liberally from the fountain of life. Everyone may become a giver, if he does not cease striving for it. All those who understand that their co-operation is a necessity will attain the great patience of those who know that they are indispensable.

This patience is the foundation of love, warmth, and enthusiasm. Love and enthusiasm are inner gifts, the reward of faithful and patient service rendered to mankind. They resemble the holy flame which consumes all that is impure. Those who are filled with this spirit will not easily be depressed. They feel satisfied, raised to a higher existence, yes, actually redeemed. All external work develops into conscious inner activity. The end is no longer in the outer world; we search and find it in ourselves. If we strive whole-heartedly for these things we can lay the foundation for a truly spiritual life.

LIGHT ON LUCIFER (1) — *Clifton Meek*

Editor of *The Norwalk Hour*:

In his recent letter to *The Hour*, Samuel Walter Taylor makes a very common error in his reference to Lucifer when speaking of his demoniac attributes, a theological misinterpretation which has gained almost universal acceptance. Like many of the other legends which were taken over and incorporated into occidental religion, the legend of Lucifer has been distorted to mean something which is diametrically opposite its original import, the proof of which should be obvious to any thinking person. Lux, or Lucifer, as the name itself connotes, means Light, and not darkness or something evil, but theologians, with their customary skill and proficiency in mutilating ancient allegories which they did not understand, made of Lucifer, the "Luminous Son of the Morning," the personification of evil, or Satan, the prince of darkness. This unscholarly and un-philosophical procedure can be attributed only to one of two things: either gross ignorance or willful misinterpretation. According to Yonge, "Lucifer is no profane or Satanic title. It is the Latin Lucifer, the light-bringer, the morning star . . . the name of the pure, pale herald of the daylight."

The allegory of Lucifer, the first Archangel who fell from the heavenly state, embodies some profound teachings of occult philosophy when rightly interpreted, but one cannot hope to find an enlightened interpretation in a school of thought that for centuries has denied the existence of an occult philosophy and that there is an esoteric aspect to religion as well as its external form and dead-letter interpretation.

According to occult philosophy, Lucifer, the "Luminous Son of the

Morning" is symbolic of Divine Intelligence in the depths of Chaos in the early dawn of cosmic manifestation, for Light is the first differentiation of Space. As stated in *Genesis*, an occult account of cosmic evolution which the early Hebrews borrowed from the Babylonian mystery teachings, and which the Babylonians had derived from still earlier sources; " — darkness was upon the face of the deep (Chaos), and the Spirit of God moved upon the face of the waters (Space). And God said, "Let there be light: and there was light." " Today, in the depths of outer space, in the "fiery" but cold nebulae, this same cosmic intelligence is at work as world systems are born in space and enter upon their aeon long day of cosmic manifestation, and Light, which is the first manifestation of Divine Intelligence projecting itself upon the screen of matter can be called "evil" only in the most abstract sense — that all manifested life, or material evolution, is relatively gross as compared with pure, unalloyed spirit. Both Spirit and Matter, like light and darkness, complement each other, and are but two aspects of the same thing — the Great Unknown and ever unknowable. Yet men have tried to define God by dragging the ineffable down to the level of their own feeble understanding with personal attributes and qualifications which at best can be but a sorry caricature. This is probably true of all the exoteric world religions with the exception of Buddhism, the teachings of which do not embody the idea of a "personal" God or "personal" Devil.

After man had invented a personal God to account for what was good out of necessity, and to balance the picture, he had to blame someone for what he considered evil, so Satan made his appearance upon the scene of theological speculation. As Lucifer of the ancient legend symbolized Light and Intelligence, what could be more natural than that men steeped in an age of superstition and medieval darkness, should point the accusing

finger at this legendary hero of ancient lore, and make of him a scape-goat. Light and intelligence were not popular in those days, and it offered an excellent opportunity to discredit the older religions and philosophies. It never occurred to them, nor does it seem to have dawned upon the mass of mankind today, that it is man alone, due to his ignorance and violation of the impersonal laws of Universal Nature, who is the real creator of all evil, discord and strife. It is so much easier to blame someone else, so upon the person of poor Lucifer was planted all the evidence of the viciousness of human nature, and he has been under sentence ever since.

By the same token it is likewise much easier to be "saved" by someone else rather than by our own striving to understand the fundamental laws of our own being and our own inherent spiritual capacities which alone can transmute the baser qualities of human nature. And there is little hope that the world will be spiritually improved to any perceptible extent until men are spiritually awakened to the truth of their own inherent divinity, and that "the light that lighteth every man that cometh into the world" is the real "Christos" crucified on the cross of matter. Beneath the external beauty and dramatic presentation of religious ritual lie those fundamental truths so necessary to man's well-being and spiritual progress, and which one day will be recognised for what they really are, bring new light and hope to the hearts and minds of men. And like the prodigal son, a regenerated humanity will wonder why it was blissfully content to live upon the husks for so long a time.

As Mr. Taylor suggests, there certainly is need for "more light" in our religious institutions and lives, but I do not believe the kind that comes in electric light bulbs will accomplish the desired result. If such were the case, Broadway would be a veritable paradise on earth. There is plenty of light there, but very little

spirituality emanating from the blase faces of the mass that wander aimlessly about.

Light of a more profound nature is needed — a spiritualization of the ancient teachings which have become encrusted with mere ritual, ceremony and form with the passing of time and human misunderstanding.

QUESTIONS — *M. G. G.*

COMPARISONS

Are we to think that stars complain
And deem their lives are lived in vain
Because they may not have their way
In some celestial roundelay?
One wonders, too, if comets free
To roam throughout a Galaxy
Give second thought to where to dine,
And what the food, and what the wine.

CHANCE?

Are we to feel at sea and lost
While now confronted with the cost
Of old misdeeds that slipped our mind,
Perhaps through aeons left behind?
Must we bemoan our several lot
Because the causes are forgot,
Or hold that Chance has played a prank
And happenstance is all to thank?

THOUGHTS

Know you our thoughts and deeds done here,
Once death has closed one's earth career,
Are amplified a thousandfold
And dwelt upon, in their same mould?
Think you that thoughts of love or hate
Are left behind at Death's wide gate,
Or that Oblivion sets a seal

On seeds of woe or seeds of weal,
Or that forgiveness wipes away
The Law's infringements any day?

The Theosophical Forum

DUTY — *Hannah Berman*

"Stern daughter of the voice of God," is Wordsworth's definition of Duty.

It would be hard to find a word which is more misused, more misrepresented and made more of an opportunist than the word "duty." In the dictionary of conduct its definition is legion. It can be made to fit so many different gaps and lapses and promises unfulfilled. Actually it is almost impossible to define it sufficiently clearly and satisfactorily to fit all cases. Duty itself is related to the spiritual part of man's make-up and is so wrapped around with impulses and so dissected by mind and intellect that its definition becomes an individual matter and varies accordingly. Of course, on broad lines — very broad lines, it can be defined. Shelley calls it:

The devotion to something afar
From the sphere of our sorrow.

But that definition, though utterly beautiful, is not plain enough for the plain man. A study of Theosophy gives not one but many clues to the real meaning of the word. Here one finds that duty is very closely related to the doctrine of Karman, the law of cause and effect. The whole realm of nature is so ordered that nothing happens by "accident." Everything fits into a pattern like pieces into a jig-saw puzzle and follows a natural sequence. The smallest piece has its own place and can make or mar the perfection of the finished pattern. So in the pattern of Nature and the Universe. "Thou canst not stir a flower without the troubling of a star."

We must inevitably reap what we sow unless we make some definite individual effort to deflect the stream of events. "We

make today our chances for tomorrow." We are our own destiny! Where, then, amidst all this comes "duty?"

First, Theosophy answers, lies duty to humanity; then like concentric circles, come duty to race, to country, to family, and lastly to self.

The difficulty lies in reconciling all these apparently different duties and making them fit into each other. Very often duties seem to be conflicting and then it is a test for the individual to work out the problem for himself.

Theosophy is full of wisdom and guidance to those who seek these ideals and will always point out the way when other standards fail.

The test of any ideas or ideals in the realm of good or not good is their universality. If this thought is really understood it is a great help on the way towards working out the definition of duty. From *Light on the Path* comes a seemingly paradoxical statement:

Desire only that which is within you.

Desire only that which is beyond you.

seemingly contradictory, but not really so. Men must always strive for that which seems out of reach, but which is within them and always beyond them because there is no end to the striving. "The ideal must always exceed the real or what's a heaven for?" Duty must never be allowed to become a rigid unlovely thing; because the moment it does so, it loses the bloom of its inspiration. Then what looks like duty is actually a hard, unrelenting, obstinate and always unwilling service. Real loving service done in a spirit of brotherhood is real duty and it is always a beautiful ideal to follow. Sometimes it falls to one's lot to carry out a duty which is repellent and which appears to contradict all one's ideas and ideals. In this case one has to dig

deep and look searchingly "within" and "beyond" and view the matter impersonally before one can decide where duty lies. One might have to perform loathsome tasks; but looking beyond the farthest horizon through black clouds of doubt and horror one can see the gleam of sunshine ahead and know that the only thing to do is the duty that lies nearest. The quintessence of the meaning of duty lies in the concluding words of the poet:

Give unto me, made lowly wise
The spirit of self sacrifice.

or in the words of *The Voice of the Silence*:

To live to benefit mankind is the first step.
To practise the six glorious virtues is the second.

The Theosophical Forum

THREE ASPECTS OF KARMAN — *G. de Purucker*

The Greeks had a most interesting and indeed profound way of describing karman. You will remember that they spoke of Destiny, often called by the Latins the "Fates," sometimes as unitary, and sometimes as threefold, or the Three Moirae; as often we speak of karman as being unitary or as being threefold and separated over the three great time-periods, past, present, and future.

So the three Destinies, or the three Spinners of Destiny, were respectively named Atropos which means that which cannot be changed or set aside; Klotho, the spinner; Lachesis, that which happens to us out of the past. These three Destinies, said the ancient Greeks, were three in one, and one in three. Atropos was the Future, that which is inevitably coming. It was connected with the Sun, mystically it was connected with our spiritual-intellectual parts, or as we would say the treasury of destiny embodied in the Manasaputra. In art, it was expressed as a grave maiden pointing to a sundial — signifying what is waiting in the womb of time as the flowing hours bring it closer to us.

Klotho was the Spinner, that which is taking place now; that which we are now spinning or weaving in our minds, and in our feelings. It was called the Present, and was represented in art as a grave maiden holding a spindle, spinning the thread of present destiny to become the Future, and was linked in significance with our psycho-personal nature, what we call our mind, having intimate mystical and historical connexion with the Moon, the shadow of the Sun as it were, the reflexion, the reflected light.

Lachesis was connected with the Earth and represented the Past which we are now working out, and was represented in art as a

grave maiden holding a staff pointing to a horoscope; that which you have builded in the past is now yours.

Atropos, the Future, the Sun, the Manasaputric intelligence; Klotho, the Spinner, the Present, the Moon, the active present mind; Lachesis, the Past, which we are now working out, in this body, on this Earth. Don't you think this Greek conception is rather a marvelous way of envisioning karman as at once unitary and triple? The more I think of the subtil Greek mind having thought this out, the three in one and the one in three, the more I admire the conception. Karman is divisible by such methods into three paths of destiny: Past, Present, Future, one in three.

So a man predestines himself, has done so in the past; what he now is on earth is the fruit: with his mind or lunar part he is now weaving his destiny which will find as it were, when he unravels it, lodgment as garnered knowledge in the solar part of him, in the Sun, in the Manasaputric treasury of destiny, some day to become the Present, and shortly thereafter the Past.

The Theosophical Forum

THE MYSTERIES OF DEATH (1) — *A. Trevor Barker*

I would like to begin by reading to you a short passage on one of the great mysteries of man's inner nature: the mystery that all of us are confronted with at the final stage of our lives; the mystery that at certain times during the course of our earthly pilgrimage we are brought face to face with when someone with whom we have been closely connected — dear to us possibly — passes over the Great Divide and we are brought into living consciousness with eternal realities.

Now these mysteries that surround the whole great subject of Death absorb modern thought to a quite surprising degree. One of the biggest Movements of our times is that which is called the Movement of Spiritualism — miscalled as we think because it has little to do with Spirit, with the Divine; and it is my purpose tonight, after reading this short passage, to try to elucidate some of the thoughts that are contained therein. These lines are from *The Mahatma Letters to A. P. Sinnett*. In the pages of that book you will find an at present unexplored treasury of knowledge, a collection of information and facts about all the problems of Death — the problems with which the Spiritualists concern themselves — if you will examine them. Now listen to this:

Yet from the last pulsation, from and between the last throbbing of his heart and the moment when the last spark of animal heat leaves the body — the brain, thinks and the Ego lives over in those brief seconds his whole life over again. Speak in whispers ye who assist at a death-bed, and find yourselves in the solemn presence of Death. Especially have you to keep quiet just after Death has laid her clammy hand upon the body. Speak in whispers, I say, lest you

disturb the quiet ripple of thought, and hinder the busy work of the Past casting on its reflection upon the Veil of the Future.

Is there any one of us who could hope to reach to such language as that? If you have a literary sense you will realize that words like that can only come out of the very heart of being itself, from one of those High Beings — a Mahatman, a Great Soul, one who has learned to attune his mind and heart to great Universal Mind itself, and is one with it. Being master of the forces of his own being he can penetrate into the mysteries of Nature as a conscious, fully intelligent, and potentially omniscient being.

BEINGS WHO KNOW TRUTH

The doctrines that we are going to discuss tonight are not the vain speculations and theories of ancient or modern materialistic scientists who use instruments of matter, instruments of scientific precision; who reason from a collection of facts, observable by the external senses, and endeavor to deduce therefrom some working hypothesis which for the time being they will label "the laws of nature." It is not about such so-called scientific facts that we wish to speak, because it is our experience that, in a matter of two or three centuries, such so-called scientific laws change. The scientist discovers that what he thought was truth, was not, and a new theory, a new hypothesis, has to be evolved. From such sources as this we could get no inspiration or light for our mind, and no food for our hearts; no relief for the perplexities under which humanity suffers. Therefore we have to find some other avenue of information and of knowledge; otherwise those great problems that perplex the human heart will not be solved.

So the nature of these doctrines then must come from men who know; and it is the statement of Theosophy — and one of the most helpful and illuminating statements that is to be found in the

whole of our philosophy — that not only does Truth exist, being the workings of Nature herself in all departments visible and invisible, within and without and below — but that there are Beings who know — for something which exists merely in the abstract is of no possible use for us; we cannot utilize it unless there are Beings who know. Therefore our approach to knowledge must be directly or indirectly by an approach to those who already have this knowledge: and those, in a word, are the Ancient Teachers of the race who exist as a living Brotherhood among men, sending their Messengers from time to time out into the world — always at work, mostly secretly but nevertheless having witnesses on the scene to testify that Truth, and knowledge of it, exist, and that there is a way by which man may illumine this material brain of his, and learn the Truth if he will.

Now the truths that we are going to study tonight, then, you can expect will literally strip the veils from this vast Unknown mystery, the mystery that the teachings enshrined — and truly enshrined — in the Christian scriptures simply do not approach at all. Go anywhere you like in any Christian church, and unless by — I was going to say by accident — you happen to come across a learned Kabbalist (and it is most unlikely because you would not find him there) you will not get any knowledge whatsoever of the mysteries of Death. You will be informed that the Almighty, if he had meant you to understand these mysteries, would have given you this information if it had been good for you, and the fact that it is not given in the Christian Bible means that we are to know nothing about it.

Theosophy begins with the statement that an Adept — one who is trained and skilled in Nature's mysteries — can by the power of his own Spirit know all that has been known, all that is known, and all that ever will be known. Now that is a large statement, but it is a necessary one if we are to have the right approach to this

problem of the mysteries of Death.

THE SPIRITUALISTIC MEDIUM

Take the Spiritualist position. Some scientists have joined the ranks of the Spiritualist Movement hoping to gain illumination, scientific facts, and data that will bring knowledge of a mystery of which they are entitled to have information and experience if it be possible, and those who began to investigate along these lines in the beginning of the last quarter of the last century found that in the majority of cases man has simply not got the equipment to enable him to go behind the curtain of matter and examine the process of what happens when a living intelligence passes out of this world — never to return, as far as he knows.

And so we have the first fact that accounts for the existence of a certain class of human beings who call themselves mediums, i. e., persons who have a peculiar constitution — a constitution which is psychically sensitive, in exactly the same way as a cat has. I don't wish to be offensive; don't think that for a moment. A cat is part of the cat-family of nature, and its mechanism is extremely psychically sensitive. Those of you who have ridden on a horse on a dark night will know that horses also are clairvoyant: they see. Cats see, dogs, most animals do; so that these senses that the spiritualistic community imagine are so highly spiritual, are shared, dear friends, by the animal kingdom — nothing more exalted than that; and the nervous mechanism from which this vision functions is that of the sympathetic nervous system, having its seat and controlling factor in what in the human being we call the solar plexus.

Anybody who is physiologically instructed will know that this mechanism is not under the control of our will at all. It is an unconscious function; and therefore, as you would expect, the capacities and so-called powers of a medium will not be under his

or her conscious control. On the contrary, a definition of medium is one who is a passive instrument of forces that control and guide him — exterior forces. The medium imagines that because some exterior force comes and as it were hypnotizes him, and he surrenders the control of the divine temple of his body to this extraneous force, therefore it must give wisdom, when he has lost control of it and it begins, like the oracle in ancient times, to give messages that are supposed to come from entities beyond the veil of death.

When somebody loses one who is dear to him, and, not being instructed perhaps in philosophical teachings, feels all the more keenly the loss, it is this human feeling of loss that leads him to be attracted to anyone within reason who declares that he is able to communicate with the one he has lost — a very natural human feeling. So when such people hear that Theosophy challenges the position of Spiritualism, they begin to feel perhaps we are going to take something from them, and they perhaps for the time being give us a wide berth. Then perhaps they examine into Spiritualism; they attend seances — and what do they find? This is the crux of the situation. If they are patient enough and spend enough money: note this, spend enough money: they will see a variety of phenomena. In fact the number of diverse phenomena that they will see and perceive and learn about, and hear theories about, to try to explain them, are simply legion. I could not begin to tell you in an hour's talk more than the outer fringe of the numbers that they deal with; but nevertheless the most common, in whatever particular form of medium you are dealing with, is of course a message of some kind from one who has passed over.

Now then, practically the whole of the Spiritualistic Movement is built up on one idea; and it is simply that they can communicate with the dead through mediums. Mediums gain their living this way: and there is roughly the whole thing in a nutshell.

Theosophy comes along and says: "But you don't have the philosophy to explain your beliefs. We know you get messages; we know that you get materializations of some entity who is made to look like and assume the features and appearance of someone you knew. That is possible." Then the Spiritualists answer: "But this is evidence. Nobody ever looked like that but so-and-so," — and for the time being you are convinced. They call it evidential value; yet it is in reality one of the things that go to prove how our senses deceive us.

TWO ASPECTS OF THE AFTER-DEATH STATE

What are the facts underlying this matter? When the last particle of animal soul, as we read from The Mahatma Letters to A. P. Sinnett, leaves the body, what happens? What is the nature of the being who is leaving its tenement of flesh? Whence did it come? Whither has it gone? Can our Christianity explain it? It cannot; it is only the knowledge of the ancient mystery teachings of antiquity that gives you the answer for which men and women are looking today. Who are you? What am I? Am I this body which is endeavoring to utter words and phrases to convey certain ideas to you tonight? Is it the body that is I? No. Therefore when the tenement is cold, that inner flame of intelligence that energizes all manifested lives, and especially human beings, vanishes in a flash. The human consciousness, the inner Ego, the true individuality of the man who is passing, in the last moments before the body is completely cold, lives over again every incident from death to birth: every incident: nothing is left out. So that he understands the long chain of causes that he has set going, the meaning, in all their aggregate sequences, of every incident of life, and these he gathers together in his memory in a period of complete unconscious supervision. This is the first step.

Then what happens? Check what I tell you tonight with what you

may have heard stated in the fields of Spiritualism. This inner entity, if he has led a decent and spiritual kind of life, will pass through those disturbing ghostlike regions of the purgatorial and astral world; pass through them very much as a child will pass through a den of vice and be unaffected by it; and then that indwelling consciousness, the Real Man that has shaken off his body, begins to divest itself of that clothing of subtler matter through which he expresses the emotions, feelings, desires, and lower thoughts. This clothing of subtler matter you can think of as corresponding to the physical body on earth; but though the body may be burnt, this form of desire in the shape of the man that we know on earth persists, and if you had the clairvoyant vision you could see the exact likeness of the man or woman that was. The form is the same that in the East they call the Kama-rupa, "the body of desire."

Now it is around the desire-body that the whole field of psychic phenomena centers, for this cast-off spook, this mere simulacrum of the man that was, has certain peculiar faculties. We cannot call them powers but they are faculties, if you can use the term thus, because these spooks of the dead are made up of matter that is living, and this matter contains the impress and memory of everything that happens to the entity or around the entity during life. The curious thing about the mediumistic function is that directly such an entity is attracted to it, this dynamic force, this mediumistic power, acts very much like the energy that revolves the disc of the gramophone. The "gramophone" is set, and the medium then repeats whatever incident is wanted out of the memory of the individual that is gone. Whoever goes to a Spiritualistic seance carries with him his own memory of all the long history of his relationship with the one that is lost. It is all there: the appearance of the one he loved, and every incident, happy or unhappy, in the whole long existence. We carry around

with us from birth to death the whole record of everything that we have done, thought, said, felt, desired or willed, all that we have seen or heard even; and the medium can read that record, for it can all be seen by one who has the inner vision.

Now you will be asking: "Well, if all that is left of us after death is a spook, what about our boasted immortality?" Aye, you may well ask, for immortality is something that, according to the Ancient Wisdom Teachings, we have to earn. I asked just now what is the nature of the being that has gone into the Great Unknown. Is it something essentially transitory and material; or is it something divine and immortal, winging its way into the spaces of space with the power and faculties of a god? And the answer to the question is, at least in part, that the transitory or "devilish" part of it cannot proceed; and yet that upon which the Spiritualist bases his so-called evidence of survival, is the most transitory part — except the body. Strange, isn't it, but it is a fact. That which does wing its way into the inner spaces, cannot be reached by the ordinary medium. Assuming that the entity who has passed on was a spiritual person while on earth, one who had led a clean, religious, and ethical life, he won't be held in the lower purgatorial regions at all. He will have a slight discomfort, perhaps, in shaking himself free of the lower vessels; but it will be in a kind of dream state, and he will experience, later on, either after the longer or shorter dream, something that is equivalent to the passing from earth life: a struggle, a brief struggle, as he frees himself finally from the last clinging bonds of matter. Then that inner entity enters into what in our technical language we call a kind of gestation state — that which precedes birth; for Nature follows the same law everywhere, whether it is the birth of a mosquito, a human being, a planet, a sun or a solar system — the same law operates. It enters into a gestation period, and then very soon it enters into unspeakable peace and bliss where it

commences to live over and over again from birth to death the spiritualized memory of the life it was living while on earth, with a memory as vivid as the imagination of a child. If you have watched a child you know what that means.

To the entities in the heaven-world there is no death: they have lost nothing. In their spiritualized dream they are surrounded by those they loved on earth, and they believe themselves to be on earth, for the life there is lived in terms of the real personality. I do not wish to dwell longer on this phase except to say this: that it is possible for us to rise in spirit and contact that entity in that state of unalloyed bliss, absorbed in its dream as it is; but I beg leave to doubt whether any paid medium is capable of doing it. And because the medium cannot rise so high, what happens? You get those puerile messages of mere repetition, containing perhaps what you call evidential value because it quotes some peculiar characteristic that you knew belonged to the entity that is gone. But does it give you anything of real explanation? Does it give you any more knowledge than the individual had in life? None whatever, and generally less.

THE PRACTICAL APPLICATION

Now if these theories are true — and you will find it very difficult, and I dare suggest impossible, to explode or knock a hole in them, because they are consistent with Nature: they hold water and are true to the facts as we know them — if these theories are true, there must be a practical application to our lives; for a great Master once said that he who possesses the keys to the mysteries of death is possessed of the keys to life. Why is that so? It means simply this: that if we know what is going to happen to our inner soul nature when it passes into the Great Beyond, we shall be extremely unwise if we do not order our lives in accordance with that knowledge. If you know that to the extent that you live a

sensual, devilish kind of life, if you know that a dwelling upon evil during physical life, in act and thought, will so intensify and materialise that which you have to meet face to face after death, if you know that you risk to have no rebirth into the spiritual world at all; that your experience after death will be one of intense suffering, and a suffering that you can do nothing at all about: will you not consider that it is time to do something about it now before it is too late? For, once we have passed over, our lives become dictated by the causes that we have set going in life: our hatreds and passions and desires are the things that will take possession in the after-life and make existence a perfect hell, an evil nightmare of unrequited desire for beings we loved, and which we cannot get rid of. These are the things that will surround us in the after-life with all the intensity of a horrible nightmare, and if this is multiplied and intensified as in the most evil cases it is, it means the death of all that is spiritual in us.

On the contrary and in the other pole of consciousness, if we have lived in the ethical and spiritual side of our being, then indeed we have a tremendous incentive and encouragement and hope, for as we live life here, so it will be there; and if you want to know what you are going to discover when you pass the portals of death, study your own life now, and you will have a very good clue to the nature of the experiences that you will then undergo.

FOOTNOTE:

1. A lecture given at the London Lodge of the Theosophical Society. ([return to text](#))

OUR DESTINY IS OUR WILL — *H. T. E.*

John Stuart Mill says somewhere that "the interference of human will with the course of Nature is not an exception to law" — which may prove helpful to those who get themselves into a boggle over the question of free will and karman. It is quite an orthodox Theosophical tenet that every least operation of Nature is ultimately analysable into an act of will. The universe, we say, is an assemblage of living souls interacting with each other. What else, then, can Karman be but a manifestation of the action and reaction of the wills of living beings? When met with a manifestation of the effects of Karman (supposing it to be of the kind we do not relish), we can say with Faust: " 'Tis thou, proud heart, 'tis thou hast willed it so." In other words, we are but finishing something we had begun.

As to destiny and fate, see what is said in *The Secret Doctrine*, II, 605, where the author is speaking of Μοίρα, Fate [Karmic Ego], whose business it is to lead the man to the end appointed for him. She explains that Moira is destiny, not "Fate"; and it is clear that this Destiny is the will of the true Self in man, so that destiny is equivalent to self-realization in the highest sense of that word. So we can say that our destiny is our will, so long only as we do not mean the will of any lesser ego in our compound nature. Destiny, then, may be said to be a force outside of man, in one sense; while, in another sense, it is the will of the man.

QUESTIONS AND ANSWERS

Consciousness After Death

I have heard that after-death consciousness in the Kama-loka is really only a dream-consciousness, however vivid. Is it, then, ever possible to be conscious, while in the Kama-loka, of what takes place on earth?

G. de P. — The matter of the human soul being conscious after death of what passes on earth, or among truly loved friends, is very far from being the simple thing that the spiritists imagine. They do not know the teaching of the god-wisdom, and it is quite natural for them to think that the human consciousness should go on uninterrupted after death with perhaps a slight unconsciousness at the moment of death itself. They utterly fail to take into account the frightful, perfectly ghastly, torture that in nearly every case possible, such consciousness after death would mean, could the dead look back upon earth and see what is happening to the ones left behind, and feel the utter inability to help; see disease, misery, wickedness perhaps, crime perhaps, sin, misfortune, as well as the good things.

Nature is infinitely more just and kind than that. And this is the reason why for all normal human beings, that is those neither very high nor very low, in other words, neither for initiates, nor for great sorcerers, unconsciousness supervenes at death, and the kama-loka is what I have often described it to be.

But, here is an interesting point. It has been said regarding the kama-loka and the devachan that the more spiritual the man or woman who dies, the less is the kama-lokic experience. The soul of such a noble spiritual character shoots through the kama-loka

like a meteor, and unconscious of it, and therefore unconscious of things on earth. So you see that when we rise above the average of good men and women and begin to enter the class of somewhat nobler souls we have the characters that make for no post-mortem consciousness whatsoever, no consciousness of the kama-loka horrors or dreads or fears, but immediate unconsciousness awakening into a very blissful devachan after the second death.

Now then, going still higher, when we have reached the grade of the initiates: they by this time have been taught to remain conscious not only in sleep, but after death also. But they do this self-consciously, and the after-death state in their cases has no terrors or horrors for them, except perhaps the disgust that they feel for astral cesspools.

Of course, in the case of sorcerers or extremely malignant and evil characters, they have a long kama-lokic experience, very intense, and just because their consciousness is still so earthly, they can even by magnetic sympathy in many cases come to see as it were, or to feel as it were, as in a sort of day-dream what is passing on earth, not every detail but, depending upon the individual, a more or less clear "getting it."

A Substitute for Corporal Punishment

I understand that Theosophists do not believe in corporal punishment. If that is correct, my question is, What have you to substitute in those not infrequent cases where nothing but physical force seems to command respect?

H. T. Edge — Kindred to the question of capital punishment, now so much discussed, is that of corporal punishment, the arguments for and against which follow similar lines. The general trend is towards mitigation of physical violence, whether in schools,

prisons, or the army and navy; but now and again we see some letter or article in the papers advocating corporal punishment as being the only effectual means of dealing with certain cases. Instances are quoted to show how crimes of violence are put down by its employment, and encouraged by its abrogation; and the alleged salutary effect of the cane on youthful natures of a certain type is mentioned with approval.

Corporal punishment is an appeal to the lower nature of man; and, as such, it must be classed with other forms of appeal to the lower sentiments, such as bribery and threats. The temporary effectiveness of these means is not disputed; but objection is made to their use, either on the ground of the harm they do in the long run, or because they violate higher principles which we value. These arguments are sufficient to meet the case of corporal punishment as an habitual practice; thus employed, it would tend toward the debasement both of individuals and of the tone of the school or community in which it prevailed. Against the occasional resort to violence stronger arguments may be needed. Advocates thereof may bring up such cases as that of the celebrated Dr. Arnold of Rugby, who reduced a disorderly school to a state of exemplary discipline by resorting to the wholesale use of the cane. Dr. Arnold's success in his immediate object is unquestionable; but if claims of justification are to be rested on the fact of success, it will be essential for those claiming such justification to be successful. Again, the Doctor was admittedly a man of such exceptional qualities that the mere use of the cane on this occasion is a detail; and it does not follow that an imitator would achieve the same success. We all know the story of the ass in a lion's skin, as also that of the frog that tried to blow himself out to the size of the ox. Next comes the question whether Rugby school could not have been reduced to order without the use of the cane — more effectually, perhaps, than with it — whether, in

fact, Arnold's method was not a second-best, adopted in default of a best. Finally we have to consider whether the atmosphere thus created by Arnold in his school is just the kind of atmosphere we propose to create in any school or community of the present day; and this, of course, only with the presumption that it is possible for most people, or for any people at all, to imitate Arnold, a man of such exceptional character.

Letters to the papers from "Indignans," or some such person, advocating flogging for wife-beaters, appear from time to time. They usually make the mistake of considering special cases as apart from the general public polity, and this prevents the writers from realizing how many other things their proposed policy would entail if the principle were once admitted. In short, we cannot flog wife-beaters and stop short at that; for logic and consistency would demand a similar treatment of other kinds of offenses. It is the realization of this fact that often prevents the adoption of measures which, if they could be considered apart, might be deemed permissible or desirable. The principle of administrative resort to violence is deprecated as a part of general policy, and cannot be admitted in particular cases without endangering the principle. Even though it should be admitted that wife-beaters ought to be whipped, still this question of general policy might prevail against the special plea; it is not only the welfare of the criminal that we have to consider, but the welfare of the community as a whole. And the community might well be considered as incurring greater risk from such a resort to rough methods than it would from refraining.

In the case of a school, even the advocates of corporal punishment, if they are sincere in recommending it as a means to discipline, must admit that it would be better if the discipline could be secured without violence. For it is not to be supposed that anyone recommends corporal punishment from sheer love

thereof. Their justification, therefore, reduces itself to the advocating of a second-best in default of a best. "Let us cane," they say, "since we do not know how to secure order in any better way."

Sometimes it is contended that the objectors to corporal punishment are inexperienced theorists, and that experienced persons know better. Let us therefore put the case as strongly as possible, so as to cover all occasions that can arise in practice. Let it be granted that a boy in a school is of so coarse and degenerate a nature that all appeals to him are useless and the only thing he respects is physical pain. Let it be granted that corporal punishment would immediately reduce him to order for the next month. We will admit that the boy actually craves corporal punishment and does all he can to provoke its infliction; also that his master knows of this craving and that he could save himself much trouble by gratifying it. Most people under such circumstances would yield and inflict the cuff or the flogging; and, considering the many drawbacks they have to contend with, we should not be too ready to blame them. Nevertheless the necessity, if a necessity, is a regrettable one. The act is a kind of confession of failure. The subconscious craving for corporal punishment, and the feelings which follow its infliction, are of the nature of animal propensities. It may require years of patience and endurance to deal with such a case without resorting to physical violence, but progress will be made, and thus the higher nature will be aroused to co-operate with the master in the cause of discipline, and fear will no longer be the ruler.

As to corporal punishment in the state, the same arguments apply to it as to capital punishment. In practice it would amount to a resort to the principle of attempting to destroy violence by violence. If we may make the same assumption as the advocates of corporal punishment make — namely, that the state has both

the right and the power to act in the suggested manner — we suggest that the wife-beater be taken from his home and kept in a reform institution until such time as he should show by his conduct that it was safe to let him out again. It may be some time before we can have such institutions for criminals of all sorts; nevertheless that must be the ideal before us; if we are to have ideals at all, let them be high.

If anything remains to be said, it might be a word on the difference between firmness and anger, orderly maintenance of discipline and the resort to violence. Take for illustration the familiar case of the schoolmaster whose own nature is so unregulated that he can keep order only by the constant use of the cane; and contrast it with that of the master whose mere presence in the room is enough to reduce every pupil to absolute silence and order. It is the weaklings who have to resort to violence, not the strong. The real key to the control of others is self-control; and this is not a mere theory but a fact of experience, for vindication of which we may safely appeal to experienced persons.

Karman as Reward or Punishment

(1) I was asked whether the crucifixion of Jesus, or the martyrdom of any great soul, could be considered deserved karman? (2) Is it not unfortunate to stress the idea of reward or punishment as the necessary result of Karman? Does not the reward and punishment theory give a very limited outlook upon which to base a philosophy of life? (3) Do we not sometimes have advanced problems to master, new karman to meet? — D. G. M.

Abbott Clark — (1) The crucifixion of Jesus is an allegory of initiation. Jesus was an Avatara and an Avatara does not make personal karman. The sacrifice of great souls for humanity

deserves love and gratitude, not the martyrdom they usually get. They certainly "deserve" better treatment. However, this discussion is largely a play on words. Their sufferings are karman as all conditions are, but not in the sense of "deserts."

(2) The querent is quite right in thinking that "reward" and "punishment" are unfortunate terms to use in a philosophical or scientific discussion of so profound a subject as is Karman in its deeper aspects. But most men are neither philosophers nor scientists. To most people Karman is the most practical of all our Theosophical subjects. Karman is an impersonal, colorless process of nature. It is we who give it a color as an expression of our feelings. Karman does not reward or punish. It is we who reward or punish ourselves by setting in motion good or evil causes. We are the cause. Karman is the process, and the "reward" or "punishment" are words we use to describe the quality of the result.

A teacher of children has to use reward and punishment to get results. The children cannot yet understand moral laws apart from results, and the results are usually classed as either painful or pleasant, or as rewards or punishments. To get results, to effect improvement in human conduct, you have to use methods and speak in a language that will be understood by, and will appeal to, the grade of intelligence addressed. It is a case of "milk for babes and meat for men."

In a race of men who live for rewards and in fear of punishments and whose ignorance of the karmic law threatens to lead them to destroy themselves and their civilization, you have to teach Karman in terms they will understand and appeal to motives to which they will respond. That being so, and H. P. Blavatsky being both wise and practical, she uses the words "reward" and "punishment" to designate the classes of karmic results. See The

Key to Theosophy, Sections VII, VIII, and XI, where the words and the idea of reward and punishment are repeatedly used. However it will be an excellent thing when children can be taught to forget the selfish motives of fear and favor, reward and punishment, by being ever inspired to love the good, the true, and the beautiful, and to love duty and right action for impersonal motives. Thus they would avoid many of the usual mistakes in life with their resultant pain and sorrow. (3) As we advance we certainly do have new conditions to meet and new problems to master and each has its own Karma. New problems, new Karma.

Why Teach Impersonality

Why does Theosophy stress the importance of an impersonal outlook on life? Is impersonality a vital factor of Universal Brotherhood? Did Shakespeare touch one of the strings of the cosmic harp when he wrote, "Love thyself last"? Hamlet. — A. W. N.

W. E. S. — Impersonality means putting the thought of others first, and when faced with difficult decisions choosing that line of action or conduct which least advantages you personally but gives prime importance to the welfare of others. It means understandingly to "love yourself last," as the questioner suggests in quoting from Shakespeare.

Yes, impersonality is recognition of the all-embracing sway of universal brotherhood, which unites in one essential whole all that is, from the highest god of any hierarchy of superior beings to lowest elemental. All are linked together. All are essentially one. A technical grasp of this as revealed by the Theosophical teachings of hierarchies: of interlinking and interlocking spheres and worlds; of lokas and talas; of the doctrine of invisible worlds; and a clear conception of the illuminating Theosophical exposition of the two streams of consciousness, the matter (the

dark) side and the spirit (the light) side, and their fundamental oneness — meditation on those subjects and an understanding even in part of their far-reaching extension will bring growing conviction of the innate brotherhood of all that is.

Understanding of this extends within your consciousness to a realization that this brotherhood that pervades the Universe is also in man and is a thing to be practised; for a Theosophical truth when once realized is not a thing limited to intellectual or even philosophical appreciation, but stirs, impels rather, the sincere thinker to the daily effort to seek application of it. The Theosophist who faces the facts of life therefore tries to live impersonally for the benefit of others. Thus the man in his purely human personal nature finds his influence circumscribed to just that plane; but liberated, even partially, he is freed to undertake larger duties of intellectual and spiritual import which affect an ever widening circle. He is on the road to fuller awakening, which comes in fulness when he reaches Buddhahood, becomes one with his inner Buddha.

The simple facts are that personality reflects those qualities which bind, narrow, constrict the spiritual being within us. Therefore are we taught to seek to lead out the hid god-like attributes which are lasting and impersonal. This inevitably brings freedom and a more conscious allying of oneself with the brotherhood of evolving souls which forms all Nature.

Man's personality is something which through long ages has been evolved out of himself, not something therefore to be shunned as inherent evil. That is absurd. But on the other hand it should not be idealized as it so generally and blatantly is. It has its rightful place. It is the necessary vehicle of the individuality within us. It is the lesser human intermediate part of man. It is necessary for the expression of our present human life. There is much in it that

not only is good but that we can look upon with real affection; but after all it is the vacillating human soul, which reflects the ordinary psychical and emotional phenomena of life. It is but the mask of the real actor-man who pilgrims through the spheres.

The business of life is to lift this lesser part until it becomes the greater; and as one does this he gains self-mastery and learns the secrets of Nature. Attainment of even a certain amount of impersonality is acquirement, therefore, of a degree of occult power; for the higher the being, the larger is his sphere of activity and the more impersonal is his work — until finally, like Father Sun whose rays shine beneficently alike on all beings, he becomes so thoroughly allied with the inner Impersonality, the inner Individuality, that he likewise becomes benignly sunlike, shedding his spiritual influence, without thought of self, on all that lives.

The Theosophical Forum

LIFE BEGINS WITH THEOSOPHY — *L. Gordon Plummer*

It so happened, a long, long time ago (aeons b. c.) that there was a mathematical point. Not that there have not been mathematical points galore since that time, but this one commands our attention because he was representative of all mathematical points, and thus becomes the hero of our story.

Now he was nothing much to look at, having no size at all. You are not to think of him, however, as microscopically small, for to say that much of him would be to attach size to him, and we have stated that size was the one thing he lacked above all else. On the other hand, you might be inclined to imagine him to be very large, but again, though you conceive him to be larger than from here to Arcturus, you once more limit him by attaching size to him. Having no size, our hero was neither large nor small. He was at once nowhere and everywhere. Having thus definitely placed him, we discover that he was an idea in the Cosmic Mind.

Now he had heard that ideas rule the world, so he set out to find a world to rule, and was immediately snapped up by the mind of a man of that time. (The man didn't look like us, but we call him a man because he occupied a corresponding position in the evolutionary scale to what we do. Besides that, he could think.) The man was quite within his rights, for to think was his prerogative, and what is thinking but the clothing of ideas in mind-stuff, and sending them out again as thoughts? But this man was foolish and thought that the idea was his own, thereby mistaking his own thoughts for the idea itself. Thus, were it not that the man talked rather much, our story might have ended here. But it so happened that a Theosophist (there were Theosophists then as there are Theosophists now) heard him, and

said "There's a grand idea behind what you say", after which he (the Theosophist) resurrected the idea, and brought it to light. Because he was a wise man, he was able to see clearly, and knew the idea for what it really was, and so was able to give to it the suitable mind-stuff clothing. The fact of the matter is, he wrote a book about it, and so the idea occupied a good many minds all at once.

This was a bit complicated, but the Idea soon got used to it, and when he discovered that men acted on the thoughts they thought about him, he was in a position to make two important discoveries. Firstly, that life for him began with Theosophy. Secondly that there were three essentials for life: (1) the idea, (2) the thought, and (3) the action. He discovered that these three essentials operated everywhere; that the existence of the universe was dependent upon them. From this grew the knowledge that within himself was forming the skeleton-outline of a seven-principled being. To wit: there was (1) the Cosmic Mind from which he had sprung, (2) himself as the idea, (3) the human agent who had given him birth, (4) the thoughts in which he had found himself clothed (5) and (6), the resulting actions which are in reality both cause and effect, and (7) the life which vitalizes and permeates the whole. Of course, it must be remembered that this was but the beginning of what was destined finally to become a sevenfold being like ourselves; it might be said that he was an entity in the embryonic stage of life.

And now he was really aware that the universe was alive with beings of all kinds, and with some of them he had direct dealings. For, at this time, he was engaged in helping certain classes of beings to shape themselves, for all things must become imbodyed periodically, and there are certain nature forces that we call the elementals whose particular task it is to help build the vehicles in which all entities must manifest. And our aspiring mathematical

point had become one of those busy elemental forces.

Do not think that he really knew what he was about. For at this early stage of his history, he worked quite automatically, and he was not conscious to the degree that he knew himself apart from all the other myriads of elemental lives working with him. As yet his consciousness was none other than the consciousness of the Cosmic Mind of which he was a part. Individuality for him was a mere potentiality. But little by little the need for individual existence became felt, and this hunger after growth finally lifted him out of the low level of life he had occupied, and he found that he could build bodies on his own account, and thus he turned into a monad.

As a monad, he went through all sorts of experiences, first, inhabiting mineral bodies, so that we could have said he was in the mineral kingdom, had we spoken of him at all, in those times. There wasn't much for him to do, and he rested mostly, until finally, the desire for individual expression asserted itself once more, and he passed into the plant world, or the vegetable kingdom. Sometimes he breathed out the fragrance of the rose, or the buckthorn, sometimes he was the lowly moss underfoot, again he would look mischievously through the eye of the forget-me-not, or sometimes sing to the wind in his mantle of pine needles. But ever the need for individuality urged him on, until ages later, he learned to climb the mountainous crags as the wild goat, or soar aloft on the pinions of the eagle. He was now in the animal world, and the germ of individuality was sprouting. Yet he was not satisfied. Then after further ages had rolled by, and worlds had lived and died, he became a man, and once a man, always a man. Now his individuality was complete. He could think for himself. He had ideas, as a certain other man of long ago had had ideas.

But he was a rather foolish man. He had some ridiculous notions, as for instance that until only a few thousand years before his time, there were no humans, also that his was the only planet that was inhabited with intelligent beings. He thought likewise that he had come from an ape, but to crown all, he thought that the human being was the acme in evolutionary development, and that there were no beings in all the spaces of space who were more intelligent than he. Wherefrom grew a colossal egotism, and he was an easy prey to the heresy of separateness. He was so intoxicated with his new-found and complete individuality that he thought of himself as different from other men, not to speak of the animals and plants.

But the skeletoned pattern of a sevenfold being that we had discovered in the life-atom of long ago, had now grown into what we call his seven human principles. He had a body, which was built around a definite pattern, which we call his astral, these two being held together and sustained by his vitality. This vital-astral-physical being was ruled by desires and emotions, which we call his Kama, and as such he was no better than the beasts themselves. However, being a man, he had a mind, his fifth principle. This sometimes asserted itself as cold dispassionate intellect, but again, it was sometimes warmed by the breath of the spiritual intelligence we call the Buddhic principle, which is the shrine of the holy flame of Atman, the essential self of the man, his divine nature. In time this divine self made itself felt in the man's heart, and after many reimpodiments, the need for something higher caused him to search deeper for the secret of existence. Thus it was that he finally met a Theosophist who gave him a new understanding of life. He was so intrigued with the new philosophy (not knowing that it was as old as Time itself) that he applied himself diligently to the study of its main postulates, to wit, Reincarnation, Karman, the Seven Jewels, and

so on, until finally he learned for the second time that Life begins with Theosophy. He discovered how to live fully, completely, and to function in all parts of his nature.

And so a change came over him. It was an inner change that did not come about suddenly. It gradually dawned upon him that, though he was a completely individualized entity, he was aware of a universal consciousness permeating the whole of nature, excluding none, and that it was possible for him to ally himself with that universal consciousness, and that in time he might manifest it in himself. Whereupon he devoted several lives to Theosophical study and work in unselfish service to Humanity, so that in time he became a pupil of a spiritual Teacher, and received further instructions so that he joined a part of the ancient Brotherhood of Light. He himself became an Adept in the science of Life, and after ages of work in this field, he learned how to be conscious with the universal consciousness instead of with his own human consciousness, and with that initiation, for such it was, he stepped outside the boundaries of human existence, and became what it is common to call a demi-god. He was such as are told of in myths and legends, which recount the days when gods walked the earth in company with men. And so he grew apace until he entered the company of those gods who are so grandiose and lofty in their reaches of consciousness that instead of manifesting in human bodies such as we have, they require glowing bodies of solar energy. We men foolishly think they are stars, and try to measure their magnitudes, densities, speeds, and what not, never guessing what mighty beings they really are.

And this brings us now to the year 1940 a. d. I could not tell you just which of the stars this wanderer became. For all I know, he might be one of the multitudes of invisible stars which people the fields of space. But there he is, working in company with his

fellow-gods, learning, growing, evolving.

And just where do we come into the story? We are heroes of similar tales, following our own evolutionary pathways, reaching out to claim the same bright destiny that the wandering monad of our story has achieved.

Moreover, each of us is, at this present time, a life-atom, a part of one of those beings we call the gods. What greater privilege can come to man than the responsibility of representing here on Earth, one of the Gods in Heaven? Who of us fulfils that divine charge laid upon us, to so live in every thought and deed, that we may be worthy of that God that in the inmost of ourselves we already are?

The Theosophical Forum

WORK OUT YOUR OWN SALVATION — *G. de Purucker*

This is the teaching of the great sages and seers of all the ages: work out your own salvation. Exercise the powers within you with which you are endowed. Hearken: does the fact that men are bewildered and often troubled with questions of conscience signify that we have been left without guidance? Don't you see that that very fact is a call to us by nature to exercise the powers latent within us! By the exercise of judgment and discrimination, judgment and discrimination grow stronger. If we do not exercise our own god-like right of spiritual and intellectual judgment we grow weaker and weaker. It is by this exercise that we evolve, bring forth ever more the god-like powers within us.

Look at the great, the magnificent examples of human spirituality and genius with which the annals of human history are builded. These are indeed glorious and give us courage and show us how, since others have attained, so may we. These are sign-posts along that mystic path leading to the Mountains of the Spirit. But it is we ourselves who must tread that path, and we ourselves who must make our own judgments and abide by them. Just there is their great beauty. As ye sow, ye shall reap. Not something else than what you have sown. Think what this means. When men become convinced of this, their judgment will be broadened, they won't leap to points of conclusion, they will not lean negatively on others and thereby weaken their own judgment because no call is made upon it. They will accept the magnificent examples of human history as encouragements. "What he has done as a Son of Man, that also may I do by exercising within me the same powers that that grand figure of human history exercised." Their lives are a perennial example for us. But it is we ourselves who must grow, and by exercising our powers we do grow; and with each exercise

the discrimination becomes more keen, the judgment be comes more sure, the light brighter. Then when the test comes we know which way to go.

The Theosophical Forum

THEOSOPHY AND INITIATION — *Loretta Colgrove*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

The Lord Buddha has said that we must not believe a thing merely because it is said; nor traditions because they have been handed down from antiquity; nor rumors, as such; nor writings by sages, because sages wrote them; nor fancies that we may suspect to have been inspired in us by a Deva (that is, in presumed spiritual inspiration); nor from inferences drawn from some haphazard assumption we may have made; nor because of what seems an analogical necessity; nor on the mere authority of our teachers or masters. But we are to believe when the writing, doctrine, or saying is corroborated by our own reason and consciousness. "For this," says he in concluding, "I taught you not to believe merely because you have heard, but when you believe of your consciousness, then to act accordingly and abundantly."

The subject of Initiation is of such a nature that it fascinates those who are wont to think. It is so abstruse that I have tried to eliminate as much as possible any ideas of my own and if I seem to *quote* too often, I trust it will be forgiven, for *only* "One Who Knows" can speak "as One having authority."

The message in this article is not directed to "the man in the street," but to *Fellow-Students*. To me there is no "man in the street" *per se*; there is only humanity in three walks of Life — Humanity in three Halls or Departments of Life. These are the Hall of Ignorance, the Hall of Learning, and the Hall of Wisdom to which so few aspire, yet it may be reached, for:

To every man there openeth a way, and ways, and a
Way,
The high soul takes the high road, the low soul takes the
low,
And in between on the misty flats the rest drift to and
fro;
But to every man there openeth a high way and a low,
And every man decideth the way his soul shall go. —
Oxenham

To the Theosophist, or Esotericist, the Way is no other, can be no other, than the "Way of Initiation." The word "initiation" means "into," and "to go"; an entrance into or a new beginning. A changing from one condition into another, from a purely material life into a *spiritual one*. It is the first step and the succeeding steps upon the Path of Holiness; literally, therefore, one who has taken the first initiation is one who has taken the first step into the spiritual Kingdom of Nature, having passed out of the definitely human kingdom into the super-human, and has a right to be called "a spiritual man," in the technical significance of the word. But, "Except ye be converted (changed), and become as little children (initiates) ye shall *not* enter the kingdom of Heaven." (*Matt.*, xviii, 3)

In the middle of the Fourth Root-Race, the Atlantean, one door was closed and another opened. The opened door is known as the Portal of Initiation and is still open to permit members of the human family who are willing to undergo the necessary discipline, and to make the required strenuous effort, to enter the fifth or spiritual kingdom of Nature.

The Probationary Path precedes the Path of Holiness and marks that period in the life of a man when he definitely sets himself to the re-building of his own character, takes himself in hand and seeks with diligence to bring his personality under control. He will have to transfer his consciousness out of the personal into the Impersonal and during the transitional stage much of difficulty and suffering is necessarily endured. Yet in the overcoming of the lower self, in the EVER-BECOMING, higher and HIGHER, the Goal is finally attained. A SERVER OF THE RACE stands forth.

After a longer or shorter period of time the disciple stands at the Portal of Initiation. We must remember that as one approaches this Portal and draws nearer to the Master, it is, as says *Light on the Path*, with the feet bathed in the blood of the heart. Each step up is ever through the sacrifice of all that the heart holds dear on one plane or another, and always must this sacrifice be voluntary.

To quote our Leader:

Initiation is the strait and narrow way, thorny and perilous, yet it is the short way, it is the way of the Teachers themselves, the way of self-renunciation to the service of the world; the way of personal self-forgetfulness; the relatively quick way of evolving forth the grandeur which lies latent within.

"There is a road steep and thorny, but yet a road, and it leads to the heart of the Universe." Wondrous words are these of H. P. Blavatsky! Initiation is the way by which the evolutionary process of growth can be quickened greatly; but a man must have attained the qualifications therefor, and have learned to know how to give the "right answers"; in

other words, he must be *ready* for initiation before he may venture to attempt passing through its rites. All this involves very serious self-training, comprising a yearning for the Light, a being immensely hungry for it; and the possessing of an inflexible will to go ahead which nothing can daunt. In still other words, it means a man's becoming at-one with his inner higher constitution, with the higher part of himself: living in it and for it, and letting it prevail — actively working in his daily life — instead of doing, as the multitudes do, merely resting in quiescence, in somnolence, spiritually asleep, and indifferently allowing Nature's slow River of Time to carry him along on its tranquil and ever moving wave. — *The Esoteric Tradition*, II, 1036-7

To everything there is a season, and a time to every purpose under the Heaven, a time to be born and a time to die, a time to plant and a time to pluck up. — *Ecc*, iii

. . . everything in the Universe, in the last analysis, is based on the Cosmic Intelligence, so that even certain seasons of the year are more appropriate for initiatory ceremonies than other seasons. — *The Esoteric Tradition*, II, 1080

These TIMES are called the Sacred Seasons, the two Solstices and the two Equinoxes, forming a *cross* in the Heavens.

The PLACES of Initiation have sometimes been described as chambers, caves, crypts, temples, halls, lodges, pyramids, and in the case of Iesous on the cross, Golgotha, the Place of a skull.

He who treads the Path is he who has counted the cost, whose sense of values has been re-adjusted; he is one who is attempting

to take the "kingdom" by "violence," and in the attempt is prepared for the consequent suffering. He is one who counts all things but loss if he may win the goal, and who in the struggle for the Mastery of the lower self by the Higher, is willing to sacrifice even unto death.

Euripides has said: "O blest is he whose fortune it is to have learned the divine initiations; he sanctifies his life."

And Plato: "Constantly perfecting himself in perfect mysteries a man in them alone becomes truly *perfect*."

The Theosophical Forum

THE LAND OF THE CULT OF CAVES — *H. T. Edge*

In the January number of *The Review of Religion* (Columbia University Press) is the report of a lecture delivered last November at Columbia by Spyridon N. Marinatos, Professor of Prehistory at Athens University. It is entitled "The Cult of the Cretan Caves" and gives an interesting and sympathetic account of the many subterranean shrines found in Crete since this site of the ancient Minoan civilization was unearthed by Sir Arthur Evans in the early years of the present century. Professor Marinatos was himself a partaker in this more recent work of exploration. As we shall see, this account furnishes valuable items of confirmation for H. P. Blavatsky's thesis, that all cults have sprung from one ancient and universal parent-cult, which she called the Secret Doctrine or Wisdom-Religion. But, whereas H. P. Blavatsky takes the existence of that Secret Doctrine as a starting-point, and then proceeds to substantiate her claim by reference to recorded facts, archaeological research, on the other hand, proceeds in a contrary direction, theorizing on the basis of its knowledge up to date, and enlarging its theories step by step in order to accommodate new facts. These two roads to truth are destined to converge. The immediate acceptance of H. P. Blavatsky's thesis would mean a thorough recasting of prevalent ideas as to the nature of man and the immense antiquity of civilization — ideas which archaeologists are not ready to adopt — and in the meantime their inferences are handicapped by the persistence of narrower preconceptions which the light of knowledge has not yet dispelled.

Professor Marinatos says that the oldest civilizations were born in the lands surrounding the eastern Mediterranean, and that the Minoan civilization was the first upon the soil of Europe. The

former of these statements seems too dogmatic, in view of the fact that it is based on the latest information, and hence is as liable to change in the near future as it has changed in past years. Indeed it is doubtful whether it would meet with general concurrence among the archaeologists of today. The date assigned by the author for the Minoan civilization is from the early part of the third millennium b. c. to about 1200 b. c. This does not carry us very far back even in the history of the Fifth Root-Race of humanity, and says nothing of the preceding Root-Races or of the immense antiquity of civilization in Egypt, India, America, and other lands.

The religion, he says, was a kind of monotheism with a supreme goddess at the head, who has several aspects as goddess of sky, water, earth, domestic affairs, etc. One name for this divinity is Eileithyia (variously spelt as Ilythyia, etc.), connected with childbirth and mentioned in the Odyssey. The ancient cave-worship in Crete is described by Greek writers, and the caves of Dicte and Ida are also mentioned by them. The author comments on the curious absence of temples and of large monumental buildings and plastic works in general; and regards the large caves as the Cretan substitute for such buildings. Crete is connected with the child Zeus, who was said to have been born here, and who must be distinguished from the Olympic or heavenly Zeus. In fact these caves were the seat of chthonic worship, the cult of earth-divinities.

Professor Marinatos says that Crete may be thought of as the classical land of the cult of caves, and that, in the light of archaeological research the Cretan cave cult is to be recognised as the origin of one of the most persistent motifs in religious history. But cave-worship is far more widely extended and far more ancient than that. Norse mythology provides us with Gimil's cave; Moses is said to have been initiated in the cave Horeb; we have

the cave-temples of India; the site of the Delphic oracle was a cave; and so on. Caves were habitually used as places for a particular stage in initiation rites. The candidate, at this stage, had to descend into the underworld, there to undergo the mystic crucifixion. The major divinities in every land have their earthly or chthonic aspect as well as their celestial. What is done above is repeated below, whether in the sense of cosmic deities or of candidates for initiation. It was no superstitious awe that led to the use of caverns for such purposes, but a knowledge that caverns were the naturally appropriate sites therefor.

The author takes us through a detailed account of the structures and artifacts found in the numerous caves, and makes a special point of the magnificent stalactite formations in the spacious cave of Eileithyia. He represents the ancients as being impressed with superstitious awe by these superb spectacles and as having regarded them as the work of Gods. But, we are told, science has now revealed their true origin. Others may hold that there is nothing in nature which is not due to divine power, and will regard the scientific explanation as concurrent, not alternative. We may be aware that the stalactites are formed by precipitation of calcium carbonate, but why should this detract from our feeling of reverence before a sublime manifestation of Nature's divine creative power? Does the dissection of a human body abrogate our faith in the immortal glory of the human soul?

THE FRIENDLY HEART — *Florence Wickenburg*

One of the most heartening and eye-opening teachings of Theosophy, and one that answers so many human problems is that of the Duality of Nature — Human Nature as well as Cosmic Nature. Through this knowledge we are in a position to apply Theosophy in a practical every-day manner. A little self-study will plainly indicate that within our being are two opposing forces, two "selves" each attempting triumph over the other. The question then becomes, which will we *allow* to win out? The answer is obvious. The moment we realize that there is a Friend within, a Lofty Nature, a God within our hearts, a Divine entity that has the ability of making the lower, petty, grumbling and selfish personality obey the higher mandates, a sudden courageous strength infills our being. Once we feel the friendly warmth pervading our being, we begin to listen for its "voice," and impulses arise to share our discovery with others.

This keynote not only changes our daily outlook, but our whole life becomes one of joyful service. Instead of duty being nothing but daily drudgery, our responsibilities a constant burden, those about us a nuisance preventing us from following our own selfish pursuits, we find a newborn Voice compelling service to others. This need not be in the form of frenzied emotionalism, a rushing among charitable organizations, forcing our ideas down others' throats "for their own good," or running around offering well meant but unwanted advice. No. That is only meddling, the lower personality doing good only to satisfy its own desires. The God within does good, not with loud noise and personal advertisement, not with thought of reward, or of earning what Theosophists call good karma, but silently, almost unconsciously, as the rose pours forth its perfume and sheds its

beauty on all alike.

Practical, every-day Theosophy is simple. It means merely greeting those about us with an open hand, a friendly smile, a heartfelt word of cheer, the shining eye, and in most cases with a sympathetic, understanding silence. It means doing our daily duty in the home or in the business world with a devoted heart, in self-forgetful service for others. It means welding our daily actions together with the torch of love.

And yet, this is not always as easy as the saying of it. It is all very well to read of lofty ideals, to meet together in common discussion of them, to carry them in mind and heart. This is necessary for spiritual development. It is quite another thing, however, to practise these ideals on Monday morning when the toast burns, the paper is late, the baby is cross, and hubby has a grouch on. If we can put Theosophical ideals to practical use under such trying conditions, shedding the warm glow of a loving heart over the breakfast table, soothing ruffled tempers, bringing harmony out of chaos, then we can begin to feel the joy of living. Learning to give loving service under stress of daily trials is one way to become better acquainted with the habits of the Higher Nature.

Again, it is one thing to listen to old platitudes about forgiveness, loving our enemies, and turning the other cheek. It is quite another thing, however, to forgive the boss when he meets us in a fit of temper over some small oversight. It is not so easy to walk serenely through a sea of criticism hurled at us by a jealous neighbor or competitor, or to be philosophical when a most promising prospect leaves for parts unknown instead of signing on the dotted line. However, it is just such daily commonplaces that offer the opportunity of listening to the mandates of the Higher Self, of expanding the soul-life, of rising higher along the

path of evolution. Where would be the necessity of effort were there no trial?

Is this not the very same pathway the Great Ones have walked? Somewhere in the dim past, in former lives the Great Souls such as Gautama the Buddha and Jesus called the Christ had no doubt to face just such daily problems. But by conquering them, by listening to the Higher Voice, the Friend within, they at last became that Higher Self in reality. Think of the hope behind these facts! What courage it should give us, how it should spur our efforts! For what these Great Souls accomplished by facing trial and temptation — and conquering them — we can also do.

Let us search for this Friendly Heart within, for it is ready for us to open its doors and allow the mellow light to shine forth for all the world to see. Let us not carry this light selfishly within, hidden from a troubled world, but let us share it with our next-door neighbor, the beggar at the door, the little child playing in the yard, the merchant down the street. Let us listen to the Voice of the Higher Self, and begin to make our life one of joy; not for our own benefit, but so that we can bring joy into the lives of others. Let us put our Theosophy into practical use, by remembering that

Toiling is not toiling
When the service that we give
Is to keep the living loving,
And to help the loving live.

REINCARNATION — *Verna Brackett*

The Law of Reimbodiment, or Reincarnation, teaches man that he is a very necessary part in the divine plan of things. What is needed first of all is to show that man is not a product of physical evolution only, but that he evolves mentally and spiritually as well. He is a being consisting of Spirit, Mind, and Matter. This trinity in essence is one, for they are aspects of the One Consciousness, One Life, One Spirit.

In the evolutionary plan of things, man is a deathless spiritual Ego, who uses mind and matter as a vehicle to gain experience and express himself in the external world. This spiritual Ego we can think of as the individual consciousness in man, as a ray of Universal Cosmic Consciousness, which is the First Cause back of all manifestation. Therefore the real inner man has always existed and cannot be destroyed any more than can the Boundless Universe of which he is an inseparable part. We can think of him as a center of consciousness in this Universal Consciousness.

The Universe itself is a product of evolution, and as it rises on the ladder of evolution, it carries with it all that it contains — atoms, plants, animals, worlds, suns, solar systems — to an ever higher state of being. This process is taking place because the Universe is the vehicle for the Universal Consciousness whose evolution is beyond human conception. It is a vast living organism, and in it there is no point in space which is not occupied by some form of matter, these forms being the vehicles for the multitudinous degrees of ideation. This includes atoms and collections of atoms from the tiniest molecule to the greatest solar system.

We can think of evolution as unfoldment, for all growth starts

from within, as this growth is generated by the life force from within the ray itself. In the acorn are all the potentialities of the oak tree it is to become; also within the acorn is the essence of all its past evolutionary experience. It is just the same with man, for in the core of his individual consciousness are the latent potentialities of his future being, and stored within this consciousness also is the essence of his entire pre-existence.

Before man's evolution on this earth he was a self-conscious being who had acquired a degree of perfection from past evolutions on other planets and took on a body of flesh again on this earth in order to gain all experience there is to be had in this world. The plan of evolution is for man to raise everything in the kingdoms below him to the state of man, and then by his own efforts to unfold himself upward again into his own plane of perfection or spiritual being.

This experience is gained through the laws of periodicity, that is, through cycles of activity and rest. We see this happening around us on every side. In Nature we have Spring, Summer, Autumn, and then the rest period of Winter, followed by Spring again. In man there is birth, childhood, adulthood, old age, then death which is the rest period for the Spiritual Ego, and in time birth again for that Ego. We observe in the daily living of man that he has his day of activity and his night-time rest period for his physical body. Although man sleeps, his consciousness is ever active although the sleeping brain is not always aware of that fact. But we know this must be true, for upon awakening, the man picks up his thinking of the preceding day and continues with his business of living.

So we see that in the rest periods of the Universe, or Nature, or Man, consciousness never ceases, for it is a beginningless and endless stream of activity.

In the human race Reimbodiment is called Reincarnation, or the putting on again of the body of flesh. The purpose of this law is to give time and opportunity for the spiritual potency in the core of man's being to develop or unfold into a self-conscious individualized spiritual being. Theosophy teaches us that the personal man, Mr. A. or Mrs. B., that which we familiarly call the personality, is not immortal because it changes each life according to its environment and experience. For example the yearly foliage of the oak tree is not the real oak consciousness but merely its vehicle of expression which varies from year to year according to the elements of Nature.

Man is a composite being consisting of seven principles, but today we shall consider him as a threefold entity. First, there is the Spiritual Ego within whose deep reservoir of consciousness are all the fine aspirations and ideals of man's nature. Next we have the personality. Then, lowest of all, is the animal consciousness, including the body, which is the vehicle for the two higher aspects of man through which they express themselves. It is the higher Human Ego which reincarnates. The Theosophical name for it is Manas, which means, the Thinker. In it is the origin of our self-consciousness, that which wells up with us as "I am I." It is the seat of conscience, whose still small voice can tell us what not to do, for it is the voice of our vast pre-existent experience that is stored in the Spiritual Ego.

From our Higher Nature comes the inspiration for unselfishness, love, compassion, and our impulses to impersonal, charitable thought and action. So we have two selves existing within us: the Spiritual Ego or Thinker which persists throughout all reincarnation, and the personality which is mortal and breaks up at death. It is the constant duel between these two states of consciousness that makes up our lives and is such a mystery. The purpose of the spiritual consciousness is to change the

personality's wrong thinking and its animal desires with its own pure understanding of selflessness, love, and compassion.

The question then arises as to the origin of all this duality. Theosophy describes how the animal vehicle of man was built up in the past ages of evolution on our globe by the lower forces of nature, and when it was ready the Spiritual Ego or Thinker overshadowed and guided it, until it had developed a personal consciousness of its own. Then this personal consciousness expanded through many ages of reincarnation, still under the shadow of the Higher Ego, until it became the human personality; and it is through this that the Higher Ego gains experience.

We see then the reason for the mixture of moods in our natures. We are all Arjunas struggling to overcome our lower personalities by appealing to our own inner god. This struggle between our higher and lower natures develops a bundle of personal energies throughout an existence. When at the time of death the Spiritual Ego returns to its own sphere in Devachan, it leaves behind it these energies which Theosophy calls skandhas, and these skandhas are like the seeds which a plant drops into the earth when it withers and dies. So it is with man when he dies, the experiences of his life are deposited into his spiritual, mental, and physical life-atoms. These are the skandhas or attributes of character which shape the new personality in the Ego's next incarnation.

When the Reincarnating Ego passes out of this earth-life to its own spiritual plane in Devachan, it pauses for a moment and looks back over its past life and sees to the minutest detail all the experiences it had gone through there, and in turn connects up these experiences with the ones of its preceding existence. Then having rid himself of his lower vehicle he takes with him into Devachan all that is fine and spiritual of his personality. In

Devachan, or plane of perfect bliss, he experiences only the high vision and memory of all that was great and grand in the past life.

The devachanic state is the rest-period for the Human Spiritual Ego, just as the sleep period in our daily lives is the rest period for our physical bodies. However, consciousness is always active, whether we experience earthly or devachanic rest. It is a constant beginningless and endless stream of activity.

The yearning for earth experiences, together with Karma (which is the law of cause and effect), draws the Ego back again to incarnation from its devachanic state. As the Ego descends into the material plane once more, it picks up the life-atoms on the spiritual, mental, and physical planes which contain the skandhas or traits of character which go to form the new personalities, and just before it enters the world it looks ahead and sees its future life laid out before it. And with this comes understanding as to why it has to have this particular life experience, and the ego willingly accepts what it sees, and so enters into physical life again.

The Law of Reincarnation brings a new revelation into one's understanding of life, as it opens up an entirely new vista concerning our existence, and there dawns upon the mind the reality that there is only One Life, One Spirit, One Consciousness. This thought leads man on to see that all men are one, and that humanity is in essence one great brotherhood. The realization that within every man is an unfolding God should teach him to withhold judgment and condemnation of his fellow-men, for how can he truly judge from one life's experience? As we strive to unfold the spiritual Ego in our natures, we shall find that love and compassion will lift us from the personal to the impersonal, and by this process we shall be able to work for others in a truly unselfish way.

The Law of Reincarnation teaches us that everything reimbodies itself, and this thought applies to the Theosophical Movement as well. The power of love is the strongest power in the universe, and as we individuals strive to unfold this deep compassionate love from within our spiritual being, just so are we building the vehicle for the future Theosophic Movement. Let us hope that as this grand Movement grows and expands in its expression of love, more and more of humanity will be drawn to it. A united harmonious Theosophical Movement can bring about in some future time a Golden Age in which the Gods will walk among men, and misery and war will be unknown, for peace and harmony will reign in the world once more.

The Theosophical Forum

THE ONE AND THE MANY — *Martyn Witter*

In the pursual of self-knowledge the seeker after Truth is constantly confronted with the most difficult problem of How the One becomes the Many. As the spider depends upon a single strand for support at certain times, during the construction of its web, so do philosophical systems in the ultimate analysis hold for dear life to a partial solution of this most sublime paradox.

The problem of the One and the Many can be viewed from any one of a multitude of facets. For example one could go into the direct mechanics of emanation which would involve the science of the inter-relations of the vibratory essences forming the different vehicles for consciousnesses to work through. In contrast to the mechanics of material emanation one could deal with the emanations of states of consciousness and the manner in which one is derived from another. Then again the problem could be considered from a philosophical point of view entailing the why of the different steps of manifestation rather than the how. From here it would be but a step to the consideration of the transcendental problem of Being and Non-Being which would lead one directly to the consideration of individuality and Unity. We would have to consider the question as to whether the One really became the Many, involving a thorough analysis of the Doctrine of Maya, or illusion.

Dealing with these problems from any aspect brings one quickly to the realization that logic will go but a little way in grasping even the elements of the Occult Verities handed down to us by a long line of Seers. We can apply the law of analogy to the extent of our ability and thus obtain thereby a vague awareness on the mental plane of some of the basic verities. It is only the Adept of

the Sacred Sciences who possesses the necessary development of those intuitional processes which enable him to know by direct perception. The real knower is the "thread self" of consciousness which stands behind all possible conscious states. Taking the idea of the "thread self" to heart we can experiment by tracing beyond in our consciousness to the point where we stop through inadequacy of concentration. Upon performing this experiment we prove to ourselves that the centers of consciousness could not be perceived and used in a self-conscious manner unless there were always a higher conscious perception to register and record the state which we are experiencing at the time. By reflecting upon this, one is led to an appreciation of the fulness of the seeming void which appears to lie outside of our direct perception. At this point we must ask ourselves whether the Many could possibly perceive themselves as the Many if there did not exist an inexpressible fulness — a "Unity" or a hierarchy in which we move and have our being. This "Unity" is much more than a mere aggregation. However, as we found in our experiment upon consciousness, the "Unity," denoted abstractly as the One, could not be without its higher source. This process is an infinite one. This leads us to the conclusion that consciousness, in any state, throughout the vast myriads of manifesting Universes would be impossible without the existence of the "Unknowable" which is "Be-ness" in contrast to Being. No attributes can really be given to "Be-ness" although consciousness *per se* does regard it as the "Ever Darkness." "Be-ness" is transcendental to both homogeneity and heterogeneity as well as to the Unmanifested and the Manifested. We must not think of "Be-ness" as lying outside of our galaxy or somewhere in location for this would be contrary to its ever presence and would be the fallacy of projecting our physical conception of extension to that which is far removed. It is obvious that that which has no direct relation to the finite cannot of itself create.

Let us trace if we can the process of emanation as far as the reaches of mind allow. I submit the following for the reader's own reflexions. From "Tat" (That) springs the "One Unknowable Causality." Manifestation is still in the lap of "Non-Being" regardless of the eternal existence of "Tat." Perpetual Motion has its source in the ever "Unknowable Causality," for where there is causality there is motion, as the two are one. Perpetual Motion has an essence of Unconditioned Consciousness which in turn has the essence of "The Great Breath," which Breath assumes the character of "Precosmic Ideation" bringing forth primordial Light through whose radiance the Eternal Thought (still Precosmic Ideation) assumes the essence of the Word. I would venture to say that the Word is the one Ray which awakens the Eternal Germ resting in Mother-Deep. As *The Secret Doctrine* expresses it on page 28 of Vol. I:

Her heart had not yet opened for the one ray to enter,
thence to fall, as three into four, into the lap of Maya.

The germ is Father-Mother (Svabhavat) being as One. It appears that the Germ is Pre-Cosmic Substance and the Word (Ray) is Pre-Cosmic Ideation as above seen from the derivation of the Word from the One Unknowable Causality. It was a necessity for the Ray to fall upon the Germ, for Perpetual Motion neither had a beginning nor will it have an end. It is the origin of the One Law which the Adepts recognise — that of Eternal Harmony. With the awakening of the Germ we have the reappearance of Cosmic Ideation and Cosmic Substance. Cosmic Ideation uses Cosmic Substance as a vehicle through which to experience.

We have now entered upon the second phase of the awakening of the Cosmos, for the Ray has already struck the Germ, and the breath of differentiation has been drawn, its effect being the issuing of the atoms from a Laya-Center. This may be called the

"Fire-Mist" period. It must be pointed out that the Word did not create but only awakened the Germ existing in its Chaos (great storehouse of Creation), which upon stirring brought forth as one portion Cosmic Ideation containing as its Seed The Flame which in turn awakened the Seven Gods who fashioned the Universe out of matter. On page 72 of Vol. I of *The Secret Doctrine*, we have the following:

He is called the "Blazing Dragon of Wisdom" because, firstly, he is that which the Greek philosophers called the Logos, the Verbum of the Thought Divine; and secondly, because in Esoteric philosophy this first manifestation, being the synthesis of the aggregate of Universal Wisdom, Oeahoo, " the Son of the Son," contains in himself the Seven Creative Hosts (the Sephiroth), and is thus the essence of manifested Wisdom.

This Flame is as it were the connecting link between Pre-Cosmic Ideation contained in the Word and Cosmic Ideation of which it is a self-evolved product. This connecting link is the Golden Chain of Being formed by self-evolved links of compassion imbodyed in the "line of Teachers." All this has a direct relation to the "thread self in man. It is the unity of the "thread self" which instills in man's consciousness the awareness of Unity denoted abstractly as One. In contrast, man's personal consciousness creates for him the awareness of the Many. The One never becomes the Many but always remains the One. Moreover the term "One" is selected *a priori* by the consciousness of its opposite polarity to the Many. The One is a Unity which is Zero and can be divided *ad infinitum* without losing anything of its unity. In tracing the Ray from the Ever Darkness we could see the thread of unity existing which, while appearing to change, changes not, for its immutability consists in its Eternal Motion. Neither does it descend to become the Many any more than the sun leaves its orb to follow its Rays,

and yet it is ever present in the circulations of its Rays, for all that Is, is inseparable. Thus we see that the Ideal One is really not a One strictly speaking but an incomprehensible and immutable Ideal Unity partaking of something analogous to the "Ever Darkness." The Many appear as the separate Manys because of the relativity of consciousness. This is not a denial of the existence of that which seems to be wrapped in Illusion, for our dreams exist and are real at the time of experiencing them.

There may be some who see in the ineffable "Unity" a Monotheistic God and Creator. But he who creates becomes that which he creates and we have seen that the ineffable "Unity" does not become the Many any more than expansion of the variety — "from within without" — means an increase in size; for infinite extension admits no enlargement.

It is the conscious wills of the infinitude of consciousnesses that form the Habits of Being. Although the Infinite and unconditioned cannot have real relationship with the finite and conditioned yet it is the Ray partaking of the nature of the "Ineffable Unity," which awakens again and again the germs that lie in the Bosom of That which knows itself not. However, this awakening is not an act of creation but is simply Eternal Motion. It is the destiny of the Many ever to move onward as Eternal Motion. It is our destiny to press ever forwards into the Unknown by enlarging the circle of our sympathies. To stop expanding is death, while to press relentlessly outward is to realize with expanding vision the inseparability of All.

H. P. BLAVATSKY AND MODERN SCIENCE — *H. T. Edge*

Chemistry and physiology are the two great magicians of the future, who are destined to open the eyes of mankind to the great physical truths. (I, 261) 1. (1)

A few decades have witnessed the downfall of the best established principles and most firmly supported conclusions: a fact which shows the need of caution in basing general metaphysical principles on the advances of the different sciences. — *Matter and Light: the New Physics:* de Broglie, 1940

It is often remarked that H. P. Blavatsky forecast the lines along which science was destined to develop, and anticipated discoveries and changes of view which have been made since the time when *The Secret Doctrine* was published (1888). That there is plenty of warrant for such a statement is a matter of which anyone with a candid mind can convince himself by comparing what was said in *The Secret Doctrine* with the subsequent advances in science. But in these articles we propose to facilitate matters by calling attention to some major instances. Throughout the work scattered references are found, but the third section of each volume is specially dedicated to the consideration of science. The author criticizes and often assails the scientific views prevalent in her time; but, as will be seen, she is a champion of science so long as it remains loyal to truth and does not lapse into dogmatism and obscurantism. H. P. Blavatsky attacks some positions which are no longer held, but this merely illustrates our thesis; and in addition we may point out that we cannot adequately understand the science of today without some knowledge of the science of yesterday, for the present is always

the child of the past.

ATTITUDE OF THEOSOPHY TO SCIENCE

This is explained at the beginning of Vol. I, Part iii, and is also the attitude of the present writer, who has been keenly interested in science from childhood and may call himself by education and avocation a man of science. As H. P. Blavatsky points out, earnest and honest truthseekers are always comrades in arms, whatever their particular lines of investigation may be; and their efforts, if faithfully pursued, must inevitably lead to the same goal. She avows that Occultism can have no quarrel with men of science so long as they adhere to their own prescribed program — to investigate natural phenomena, to formulate and systematize them into laws, and by means of these laws to discover other phenomena. Science is sometimes said to be inductive, but it has been shown that no science can be purely inductive, and science itself has to reason deductively from its own provisional hypotheses. In fact the method is alternatively inductive and deductive: facts are observed, from them are made provisional hypotheses, and these provisional hypotheses have to be changed or enlarged from time to time to include additional facts which may be discovered. But men of science are human beings, and the frailties of human nature may sometimes intervene. The provisional nature of these hypotheses is forgotten and they are put forward as established truths; and there is the tendency, when new facts are adduced, to reject them because they do not fit the theory, instead of changing the theory so as to accommodate the new facts. Not to be unfair to men of science, we must credit the public with their share in building up this new dogmatism. In the interest of truth, and of men of science themselves, it is important to separate the true from the false. To quote from *The Secret Doctrine*:

There can be no possible conflict between the teachings of occult and so-called exact Science, where the conclusions of the latter are grounded on a substratum of unassailable fact. It is only when its more ardent exponents, overstepping the limits of observed phenomena in order to penetrate into the arcana of Being, attempt to wrench the formation of Kosmos and its *living* Forces from Spirit, and attribute all to blind matter, that the Occultists claim the right to dispute and call in question their theories. Science cannot, owing to the very nature of things, unveil the mystery of the universe around us. Science can, it is true, collect, classify, and generalize upon phenomena; but the occultist, arguing from admitted metaphysical data, declares that the daring explorer, who would probe the inmost secrets of Nature, must transcend the narrow limitations of sense, and transfer his consciousness into the region of noumena and the sphere of primal causes. To effect this, he must develop faculties which are absolutely dormant — save in a few rare and exceptional cases — in the constitution of the off-shoots of our present Fifth Root-race in Europe and America. He can in no other conceivable manner collect the facts on which to base his speculations. — I, 477-8

THE ATOMO-MECHANICAL THEORY

Professor P. G. Tait, in *The Properties of Matter*, 1885, says:

In the physical universe there are but two classes of things,
MATTER and ENERGY.

Note the qualification, "in the physical universe"; it allows us to infer that he recognises the existence of one or more other universes, or departments of the universe which are not physical. But this qualification was not adhered to; the doctrine was

proclaimed that the *whole* universe is based on these two things, each of which was described as being eternal and indestructible. Not merely the physical world, but the mental, moral, and every other possible world, were based on Energy and Matter. Our very thoughts were merely the result of energy acting in matter. This is the doctrine with which H. P. Blavatsky finds fault. Since her day science has been forced, by its studies in intra-atomic physics and radiation, to acknowledge that these two primary postulates, as they were formerly understood, are inadequate to explain the phenomena. The physical rudiment could no longer be conceived as a definite particle of physical matter, moving in accordance with the laws of molar dynamics; nor could motion be regarded as merely the transference of matter from one part of space to another.

There were writers in H. P. Blavatsky's time who shared many of her views with regard to the science of the day, and from some of these she quotes. One was John Bernhard Stallo, a United States judge, 1823-1900, whose work, *Concepts of Modern Physics*, examines point by point and exhaustively all the details of what he calls the "atomo-mechanical theory" of the universe. He comes to the conclusion that this theory is of a highly metaphysical nature, being founded exclusively upon concepts. These concepts are abstractions from reality, assumed quite legitimately for the purposes originally intended; but to mistake them for truths is disastrous. Stallo finds that, whatever the differences among the scientists of his time, they were all agreed that the fundamentals of the universe are Matter and Motion — or better, Mass and Motion. To quote:

The mechanical theory postulates *mass* and *motion* as the absolutely real and indestructible elements of all forms of physical existence. Ordinarily these elements are designated as *matter* and *force*; but this designation is

plainly inaccurate.

And he shows that neither mass nor motion can have any meaning at all apart from each other. We have experience of moving bodies, but not of motion in itself; it is an abstraction. Similarly we can have no experience of mass except in so far as it is affected by motion; our only knowledge of it is derived from its composition with motion in various dynamical units; but of what mass is in itself we have no perception or conception. Both mass and motion then are abstractions from reality — concepts, as Stallo calls them; and yet science was treating them as independent existences and using them as the fundamental building bricks of the universe.

It must be noted here that Stallo was not proving the inadequacy of the atomo-mechanical theory to explain the whole universe, but its inadequacy to explain even the physical universe. In his own

words:

The considerations presented in the preceding pages lead to the conclusion that the atomo-mechanical theory is not, and cannot be, the true basis of modern physics. On proper examination, this theory appears to be not only, as is generally conceded, incompetent to account for the phenomena of organic life, but it proves to be equally incompetent to serve as an explanation of the most ordinary cases of inorganic physical action. And the claim that, in contradistinction to metaphysical theories, it resorts to known assumptions, and operates with no elements save the data of sensible experience, is found to be wholly inadmissible.

NOUMENON AND PHENOMENON

Students of *The Secret Doctrine* know how often H. P. Blavatsky insists on the need for recognising the Noumenon behind Phenomena. She explains the Noumenon as the *conscious* cause of the phenomenon (I, 633, 517); the word is defined in metaphysics as an object apprehended by the understanding, without mediation of the senses; the Phenomenon therefore would be an object apprehended by the senses. This latter word means "appearance," in which sense it is contrasted with "reality"; though Theosophists at any rate would use the word "reality" in a relative sense. Things may be real relatively to phenomena which spring from them on a lower plane; yet they may themselves be unreal relatively to a higher plane. The noumenon on one plane may be regarded as a phenomenon relatively to a higher plane.

We have seen that attempts to explain phenomena without reference to any plane higher than the physical must land us in contradictions and logical absurdities; and this has become more apparent to men of science with the passing years. It is seen that behind matter, considered as an aggregate of molecules, there is a something of a more or less electrical nature, and that this also underlies energetic effects. We cannot perceive it directly with our senses; we study it through its effects. But this substance in its turn may be but the manifestation of something still more subtle and underlying. In short, there may be a concatenation of substances, growing more and more refined as we proceed upwards from the physical plane. The question arises, Where does consciousness come in? Consciousness, in some degree and form, is everywhere present in the universe, but is this the same as saying that the atoms of physics are conscious? If these atoms are merely appearances, merely effects produced on our senses by some hidden cause, it would hardly be appropriate to speak of them as either conscious or unconscious. There is conscious life everywhere, and it produces in our senses various effects; we see

a mineral, a plant, an animal. Somewhere behind that mineral, that plant, etc., there is consciousness; unless we possess the power of direct intuition of that consciousness, we can only know the effect produced on our senses — a stone, a tree. We can apprehend the phenomenon, but the noumenon can only be known by sympathy of consciousness. This is what is meant by recognising the noumena behind phenomena; it does not mean that a stone is a phenomenon with a noumenon inside it; it means that a stone is a living being, which impresses itself on our senses as a solid block of inert material. Perhaps this will suggest an explanation of the occult virtues attributed to stones and other so-called inanimate objects.

Biology is also striving in vain against the necessity for recognising the noumena in order to understand the phenomena. A good deal can be learned by viewing vital phenomena as processes merely, but we must somewhere come to a stopping point in this kind of explanation. We must come to a point where we see microscopic particles doing certain things, acting in a certain way, without being able to tell why they do so or what they may do next. If we trace backwards a chain of physical causes and effects, we must sooner or later reach a point where we can trace it no farther. The only conclusion which does not involve us in logical confusion is that living beings are at work, invisible to our physical senses, but whose physical operations we can to a certain extent discern. This brings us to another most important point in our collation of the teachings of H. P. Blavatsky with science: that is, the need for recognising the existence of the Astral Plane beyond the Physical Plane.

THE ATOM — ACTIO IN DISTANS

H. P. Blavatsky has much to say about the atom. This word, in nineteenth century science, had a somewhat vague meaning. For

one thing, as pointed out by H. P. Blavatsky, citing Stallo, the atom of chemistry was not the same thing as the atom of physics. In chemistry it was (and is) a convenient unit, but its physical qualifications were not in question. In physics it served as a basis for certain dynamical calculations, such as the kinetic theory of gaseous pressure. But the attempt to regard it as a particle of physical matter leads to hopeless confusion. For the physical properties of matter were interpreted as dependent upon the fact of the atomic structure of this matter. But the atom has (*ex hypothesi*) no such atomic structure; how then can it have any of those properties which arise from an atomic structure? How can the atom be elastic, compressible? And without these attributes, how can it obey the laws of motion and interaction, as required by the kinetic theory of gases? Again there comes up the question of *actio in distans*, action at a distance: in what conceivable way could such atoms act upon one another, as the theory requires us to assume that they do? The difficulty requires the assumption of a non-physical medium between the atoms, to convey energy from one to another. But the assumption of such a medium upsets the atomo-mechanical theory at once. For either this new substance is itself atomic, in which case we are still faced with the original difficulty; or else it is non-atomic.

As H. P. Blavatsky says (I, 487), most men of science reject *actio in distans*, while Stallo observes that there is no physical action which, on close examination, does not resolve itself into *actio in distans*. Thus they reject a principle which actually underlies their whole system, and which they must necessarily assume in order to define that system! On pages 400, 401, Newton is quoted to the effect that gravitational attraction must be caused by an agent, and he implies that this agent is not material (at least in the usual sense of the word). Euler is quoted as suggesting either a Spirit or some subtle medium.

The difficulty as regards *actio in distans* is evidently that we are trying to *demonstrate* what we have *assumed*; for the atomo-mechanical theory presupposes action at a distance. For the explanation of action at a distance we must step outside the atomo-mechanical theory; hence we find the mention of spirits, subtle mediums, and something which (whatever it may be) is *not* physical. "Distance" is in itself a conception founded on our sensory experience, our experience of the physical world. Is it necessarily applicable to the universe in general? Can we attach the idea of distance to our mental and emotional life? In short, if we are to explain the universe in physical terms, we shall be compelled to assume something which we cannot prove within the limits of physical science. H. P. Blavatsky says that *actio in distans* is one of the fundamental principles in the question of Aether or Akasa in Occultism (II, 487); and now today physical matter has been found to resolve itself into an affection of some substance which is not material in the old sense, though it may deserve the name of matter of another kind. This means that the supposed *separate* particles of matter are not really separate at all, so there is no longer any *distans* to be bridged.

It is easy to imagine how H. P. Blavatsky was perplexed to find words in the scientific vocabulary of her day to correspond to her words Aether, Akasa, etc. But now we find a word ready to use, much used by the great Einstein, though familiar to science before his vogue — that blessed word "field." What we need is a term which will embrace the notions of space and a fluid medium, without being too committal either way; and the word "field" just fits. Now it is admitted by the most orthodox science that a particle (or point, if you prefer) that is charged with energy can have a field of force extending to that unknown bourne known as "infinity," which is far enough surely; so here is your *actio in distans*, all complete, free from any trouble about

particles and intervals. Then again, so far as action at a distance is concerned, there is no significant difference whatever between a small distance and a great one; and it has been shown that the behavior of intra-atomic particles (or whatever they are) simply laughs at the law about the square of the distance.

So, as Stallo shows, the physical world is merely phenomenal, and is underlaid by a world which we must necessarily call non-physical. The atom is a phenomenon taking place in some other kind of matter. We say "matter," but might as well say "energy"; in fact, both these terms, if considered separately, are abstractions, and neither one alone will apply to our hypothetical substratum.

ATOMS AND VIBRATIONS

In this connexion we must not forget the vortex theory of atoms, which at one time had some vogue. It was shown that a vortical motion taking place in a perfect fluid would have the same properties as were attributed by physicists to their atoms; and the idea was illustrated by creating vortices in smoke, and in other ways. But that "perfect fluid" presented an obstacle. Yet this theory foreshadowed an idea very much in vogue today; before speaking further of which, let us quote from *The Secret Doctrine*, I, 633:

Atoms are called "Vibrations" in Occultism. . . . The waves and undulations of Science are all produced by atoms propelling their molecules into activity *from within*. Atoms fill the immensity of Space, and by their continuous vibration *are* that MOTION which keeps the wheels of Life perpetually going.

(Remember that the writer of this did not have the word "electron" at her disposal, and so used the best words available).

Now it is characteristic of the science of today, as contrasted with

that of yesterday, that the two notions of particle and vibration have become merged, so that a formula is sought which shall comprise the two in a single general idea. This but confirms the conclusion mentioned above, as being reached by Stallo and advocated by H. P. Blavatsky — that neither mass nor motion have any meaning when considered apart. It is true that they may be *assumed*, as primary postulates, for the purposes of a particular branch of investigation; and this was most successfully done, for the purpose of co-ordinating observed phenomena in physics and chemistry, and thus leading to useful practical results. But it was not always remembered that the said assumption was provisional only, which led some scientists, and the public who accepted their dicta without examination, into an unjustifiable dogmatism. But now the investigations of physicists have forced them to admit the provisional nature of these assumptions, and they can no longer speak of mass and motion as independent absolutes. (2)

(To be continued)

FOOTNOTE:

1. In these articles, to avoid repetition, references to H. P. Blavatsky's great work, *The Secret Doctrine*, are indicated simply by numbers denoting the volume and page. ([return to text](#))
2. It should be stated here that, in saying that motion has no meaning apart from mass, we are not impugning anything that may be said in *The Secret Doctrine* or elsewhere as to the reality of MOTION as a fundamental hypostasis of the universe. The motion we are speaking of is that conceived by the modern science of physics. The MOTION spoken of by H. P. Blavatsky is a far more generalized idea, of which motion on the physical plane is merely a particular manifestation. If we speak of motion as characterizing our mental and emotional life, we do not think of

anything like a transference of masses from one place to another; far less can we apply such a materialistic notion to planes .higher even than the mental and emotional. ([return to text](#))

"WATCHMAN, WHAT OF THE NIGHT?" — *Abbott Clark*

Yes, the night is dark and our dreams are nightmares. But the darkest nights end with the dawn and abnormal states give place to normalcy. No sensible man or student of history can consider the present state as normal. Storms, like convulsions, are abnormal and short lived, else evolution were false and savagery would never have given place to civilization. Our civilization is young and undeveloped and suffers relapses like the outbreaks of childish temper. In the immediate present the condition is sadder and more terrible than the mind can grasp and I would not try to minimize it. On the contrary, I think it should shake us from self-complacency and move us to the profoundest thought of which we are capable. The sadness and sorrow of the world should awaken every germ of sympathy and compassion of which we are capable and make us set our feet on the Path of Compassion. We admit that our minds are overwhelmed by the baffling Conditions. But there are greater minds than ours. The minds of our Masters are equal to the world-problems. They have anticipated present conditions and given us in advance the necessary solutions. The Theosophical Society was started for the very purpose of counteracting present conditions and inaugurating a new and better civilization. Theosophy is the answer to the problems that confront us in the immediate present and in the future.

Listen to the following extracts from a letter by the Mahatma K. H. in which he quotes his Teacher, the Maha-Chohan I emote only scattered fragments of a long letter printed by H. P. Blavatsky in *Lucifer*, Vol. II, pp. 432-3, and often reprinted.

The Theosophical Society was chosen as the corner-stone of

the future condition of the future religions of humanity. . . .

The doctrine we promulgate being the only true one, must become ultimately triumphant, as every other truth. . . .

For our doctrines to practically react on the so-called moral code or the ideas of truthfulness, purity, self-denial, charity, etc. — we have to popularize a knowledge of Theosophy. . . . It is not the individual determined purpose of attaining oneself Nirvana . . . but the self-sacrificing pursuit of the best means to lead on the right path our neighbor, to cause as many of our fellow-creatures as we possibly can to benefit by it, which constitutes the true Theosophist. . . .

To be true, religion and philosophy must offer the solution of every problem. That the world is in such a bad condition morally is a conclusive evidence that none of its religions and philosophies . . . have ever possessed the TRUTH. The right and logical explanations on the subject of the problems of the great dual principles, right and wrong, good and evil, liberty and despotism, pain and pleasure, egotism and altruism, are as impossible to them now as they were 1880 years ago. They are as far from the solution as they ever were but . . . there must be somewhere a consistent solution, and if our doctrines will show their competence to offer it, the world will be the first to confess, that ours must be the true philosophy, the true religion, the true light, which gives truth and nothing but the TRUTH.

The Master K. H. says in *The Mahatma Letters to A. P. Sinnett*:

The truths and mysteries of occultism [or Theosophy] constitute, indeed, a body of the highest spiritual importance, at once profound and practical for the world

at large. Yet, it is not as a mere addition to the tangled mass of theory or speculation in the world of science that they are being given to you, but for their practical bearing on the interests of mankind. . . . They have to prove both destructive and constructive — *destructive* in [of] the pernicious errors of the past . . . but *constructive* of new institutions of a genuine practical Brotherhood of Humanity where all will become co-workers of nature, will work for the good of mankind. . . .

"Ideas rule the world"; and as men's minds receive new ideas laying aside the old and effete the world will advance; mighty revolutions will spring from them; *institutions* (aye, and even creeds and powers . . .) WILL crumble before their onward march crushed by their own inherent force. . . . It will be just as impossible to resist their influence when the time comes as to stay the progress of the tide. . . . — pp. 23-4 and 425

As a relief from the agonizing conditions of the present one can take refuge in a wider and a longer view. From the early days of the Theosophical Society we were taught that this was the time of the change of cycles. In fact, that several cycles, some of them very great ones, came to an end and new ones started at about this period. This would bring us under the sway of new and higher cosmic influences and of old karma, good and bad. The future of individuals, of societies, or of nations, depends upon the use or misuse they make of the flowing tide.

We as individuals, or collectively as societies, or as nations, may rise to the heights or sink to the depths. We, individually or collectively, are responsible. "On human shoulders rests the responsibility for human salvation." An old age is passing away in revolutions and cataclysms and a new and better age is

succeeding. It is like the breaking-up of river-ice in the spring. At such times the storms and floods and calamities are often terrible. But they give way to and usher in the burgeoning energy of spring. Wind and frost and cold give way to sunshine and balmy days when you can feel and almost see things grow.

Cycles of history are like that. Convulsions of nature or revolutions of men have swept away whole civilizations and left, where once they flourished, nought but watery wastes or sandy deserts. But the flowing river of cyclic time flows on and new civilizations arise, as the hosts of souls who made them, re embody in congenial places.

Civilizations differ as widely as do men. Each brings something to near perfection — as Greece did art, and Egypt her monuments of stone, and as our age is doing in the realm of mechanics and mechanical industry and the mechanical side of science. So the ancient Aryan race brought language to perfection. "It is impossible for us to conceive what minds men must have had in those days to have required such a language to express their thought." Yet that race left us no monuments of stone nor artifacts of high mechanical perfection. Their language, Sanskrit, furnishes us with the majority of our technical Theosophical terms with their rich and copious meaning. Those whose eyes are fixed on the mystic east will behold the glory of the dawn and live therein. In proportion to the degree that they embody the spiritual sunshine in their lives they will create a radiant atmosphere of love and harmony and intellectual inspiration which will flow out to all others.

We shall have to revise our ideas of the long reaches of human evolution and base our calculations on the evolution of souls who sweep round the earth in waves of spiritual Monads who derive their karman from the *long*, not the immediate, past. Ancient

Egypt did not give birth to the modern fellaheen nor did the glory that was Greece nor the stability that was Rome find their reïmbodiment in any modern Hellas or the peninsula of Italy. The souls that once made the philosophy and art that was born on Helicon will reïmbody their imperishable ideas and ideals in some modern Athens where the spirit and the atmosphere of beauty and art and philosophical thought will find their high and noble expression. In our day-dreams and in our practical endeavors we have tried to give them an initial imbodiment at our International Headquarters at Point Loma.

From a small seed the *sequoia gigantea* becomes the largest and oldest tree in the world. Just so, from small beginnings great civilizations grow. From one Teacher millions of men have received regenerative ideas and imbodyed them in institutions of learning or in religious philosophies that have lifted their sincere followers to as great a degree of spiritual enlightenment as their individual capacity or the race or age allowed.

We can rely on the beneficent laws of nature as imbodyed in the cycles of history to continue their rounds and raise us out of the terrible trough of this wave and into a calm and placid sea. Fear not for the future. The peoples of Europe and America and the rest of the world are human souls and their inherent divinity will reassert itself when this feverish, convulsive sickness is over, and a healthy normalcy will supervene in which the Theosophical ideals now so rapidly spreading will find some full measure of imbodiment. Look not to the past. Visualize the future. Paint your mental pictures in beauty, symmetry, and glory and move out into each coming day with new and nobler resolutions. Others will follow. The Theosophical life will even become popular and more and more people will clothe themselves in the robes of love and kindness and thoughtfulness for others and the spring-time of a Theosophical era will be ushered in.

ASKING QUESTIONS — *H. P. Leonard*

Seek this wisdom by doing service, by strong search, by questions and humility. — *Bhagavad-Gita*

To ask a question, is commonly supposed to be one of the easiest things in the world; but is this so certain? Dull-witted people, whose interests are mainly centered in material things, go through life confronted at every step by problems of vital importance, and yet they never seem to reach the point of being able to make a clear-cut statement of their difficulty in the form of a question, a proceeding which not infrequently evokes the answer that is sought.

The vague perplexity of those animal-minded people, whom Pythagoras called "the living dead," may be compared to the effect of burning gun-powder in the open air — a few faint puffs, a flash, a little smoke, and nothing more. But when a man of more advanced development faces a problem which is vitally important for him to solve, it is like a man with a rifle, who rams his charge into the barrel and takes aim at a definite target. The dynamic demand of a man of this type is marked by concentration and direction.

A true question is not a negative thing: it is more than an intellectual void, a hole in the mind. A true question is an appeal to the Higher Law, and contains within itself that positive force for attracting its answer to which Madame Blavatsky refers in her dedication to *The Secret Doctrine*. "This work I dedicate to all true theosophists, in every country, and of every race, *for they called it forth*, and for them it was recorded."

Theosophists of past ages, like single drops before a shower, were

coming back for reincarnation in ever-increasing numbers, and were eagerly looking around for a modern restatement of that which had been their support in lives long since gone by. Scattered here and there over the earth, and for the most part unknown to each other, they actually succeeded in making an appeal which was collectively of sufficient intensity to induce the custodians of the Old Wisdom Religion to impart a generous measure of the stored-up wealth which they hold in trust for future humanity.

These experienced guardians never make the mistake, so common among other teachers, of answering questions before they are asked; but when we are goaded on to desperation by insistent need, to the point of formulating a question, *and ask it in the right way*, they impart out of their treasury with no niggard hand.

Our very consciousness of a void within, which no accumulation of material things or merely intellectual learning can satisfy, is a clear proof of that spark of Divinity which sleeps within the clod of animal man,

Irks care the crop-full bird?

Frets doubt the maw-crammed beast?

The measure of our dissatisfaction is the measure of our inward greatness, and contains the promise of our ultimately receiving the answers to the questions that we put.

The Theosophical Forum

SEND IN YOUR QUESTIONS!

When X Equals Sh

In the *Popol Vuh* and other writings dealing with the culture of the ancient Guatemalans and Southern Mexicans we often find proper names with initial X followed by a consonant, as: Xbalanque, Xpiyacoc, Xmucane. Is there any way the proper pronunciation can be indicated by our modern English letters? — C. Q. W.

H. L. — When the Spaniards came to the New World, they found many of the native Americans, whether Aztecs or Mayas, using the sound *sh*, which English people transliterate as *sh*, and French and Portuguese as *ch*, and the Germans as *sch*, all having the sound of *sh*.

Now the Spaniards have no such sound in their language; so they made a curious compromise, and represented the *sh* sound by the letter *x*. This complicated things in later years, because Spaniards often represent their *ch* sound, as the German *ch* of *machen*, by the *x*. Thus the Spanish even today writes *Mexico* with an *x*, or sometimes with a *j*, because in Spanish both *x* and *j*, in such a connexion, have this *ch* sound like the German *ch*.

However, custom brought it about that the *sh* sound in these native American tongues in Spanish writings, became represented by the *x*. Thus: the *xb* or *xy*, when taken from Spanish books, renders the early American sound *shba* or *shy*. *Xr* would be *shr*, if indeed it is used, etc.

Mental Healing and Mental Freedom

What are the reasons why Theosophists do not endorse the

healing methods of Christian Science?

H. T. E. — First let me say that I take exception to the form of this question, as it seems to commit me to a kind of sectarian dissension which is repugnant. I do not wish to pose as a member of one faith sitting in judgment upon the members of another faith, and setting a value upon my "endorsement" of their beliefs and practices. Moreover, the terms used are general and vague, lumping together all Theosophists on the one hand, and all Christian Scientists on the other. Any individual condemned just because he styles himself a Christian Scientist, and without reference to his personal qualities, has a right to feel aggrieved; nor have I, on my side, the right or the wish to borrow undeserved plumes from a title. But I am perfectly willing to give the reasons why I, being a Theosophist, have my doubts concerning the advisability and efficacy of certain methods of mental healing.

I believe that the practitioners of certain methods of mental healing are heedlessly experimenting with dangerous latent forces in the human constitution. The idea that what is not material must be spiritual is wrong; there are in man's constitution many powerful psychic forces, normally latent, which may be used for good or for ill, or may be dangerous for the same reason as a powerful electric generator is dangerous in the hands of an ignorant person. Anyone who, rashly and without knowledge, arouses these forces, upsets the delicate balance of his nature and thereby exposes himself to dangers great in proportion to any good that may ensue. If he tries the methods on other people, then he is interfering with their mental freedom, just as a hypnotist does.

It is of course admitted that cures are often wrought by these methods; but such cures are like those produced by powerful

drugs which suppress the symptoms without healing the disease, and which merely give temporary relief at the price of greater suffering later on. It is true that the mind heals the body; but this should ensue by nature's healthy, gradual, and normal processes, not by violent interference. The spiritual will should be used to heal the mind; the body should be cured by medicine and proper regimen. Direct attempt to cure a disease by these psychic and mental methods is a violent and ignorant interference with natural processes; and results in driving back an evil which is trying to work its way out through the physical. There is so much that is good in the beliefs of these healers that it is a pity that they should have got hold of things by the wrong handle. What is required is a much more thorough study of the complexities of the human constitution, physical, astral, psychic, mental, and spiritual. The word "Science" would then be much more appropriate. For further information, see the pamphlet, *Some of the Errors of Christian Science*, by H. P. Blavatsky and W. Q. Judge; and the latter part of Dr. G. de Purucker's *Theosophy and Modern Science*.

Nature and Her Immutable Laws

In *The Voice of the Silence* it is said, "Help Nature and work on with her." How is it possible to help Nature who works through Immutable Laws? I have personified Nature as H. P. B. did as "Isis Unveiled"? — *W. L. C.*

J. N. Shore — If, as we have been taught, Nature is a mighty mother, the answer to the question "how is it possible to help Nature who works through Immutable laws?" is easy to conceive. A wise parent teaches and trains the offspring, insisting on adherence to rules, the following of certain patterns of action and conduct. The work of the hierarch of the family requires co-operation from all members of the hierarchy. Part of his duty lies

beyond the level of accomplishment of his offspring while part of it consists of training his children in the actual technique of learning, living, and doing. The child in a well regulated home learns to work with his parent, carrying out suggestions, correcting errors, sharing responsibility, feeling himself a true helper in the work of the household and its organization. A good parent recognises meritorious effort and does not hesitate to give compensation in a wise way. In this manner, the parent makes obeisance to his child.

Just so does he copy the mighty mother who has and follows her own immutable laws. These laws are a part of her and she a part of them; for she herself has evolved them. Her children, young offspring of herself, and yet not separate from her, must learn these laws and make them part of their self-conscious selves. Then they begin to "work with Nature"; and in proportion to the success of learning and working through these laws, does Nature reward her children with the power of discrimination and wisdom and the blessed talent of helpfulness. Thus does the mighty mother make obeisance to her offspring.

But she requires that her laws be thoroughly learned and observed. She brooks no disobedience of them. They, we have been told, are her *habits* and through these she expresses herself and teaches the less evolved entities for whom she is responsible. Thus she works through the law of re-imbodiment, through the law of cause and effect, through the law of periodicity. Thus she trains her offspring who are blood of her blood, bone of her bone, flesh of her flesh; part and parcel of her; individual and yet inseparable from her. Compassion, co-operation, and harmony are her life essence and she keeps her blood stream pure by strict, impartial, unvarying discipline. That is her duty — self-imposed and unending — carried out through her immutable laws, her self-evolved habits of action. Let one of her progeny go against

the stream, refuse self-discipline, forget or ignore any of the rules of harmony, brotherhood, and compassion, and Nature (the culprit's own nature which is inseparable from the mighty mother) rebels and imposes on him the discipline that he has refused to exercise for himself. On the other hand, let him "work with Nature," remembering kindness, brotherly love, and forgiveness perhaps most of all, and he will discover the meaning of Nature's Immutable Laws. Eventually Nature will make obeisance to *him* as One Illumined and from Whom she has no secrets.

Avoid the Over-anxious Attitude

Some members of the Theosophical Society have much anxiety about those near and dear to them who seem to be quite unable to perceive the truth of Theosophical teachings, or who, if they do acknowledge the truth of them, still do not see any necessity for guiding their lives by them. What is the best attitude to take towards near and dear ones like this?

H. P. Leonard — If a person is unable to receive the truths of Theosophy there is a strong presumption that he has not yet evolved to that point where he would be ready to assimilate them. Why be anxious? It only tends to erect a barrier that will estrange you from the object of your loving care. Trust in the Law which is slowly working towards the very end you have in view.

Apply Theosophy in your own life more completely, and your dear ones will be won over by the fresh outpouring of warmth and sweetness that they see in you. Theosophy applied in all its fulness is an attractive thing, and it may be that you have repelled your relatives by an over-anxious solicitude for their "conversion'.

When the sun rises, some of the daisies in the meadow open their petals because they are ready: others less advanced remain closed — they are biding their time.

If other relatives accept Theosophy, but fail to apply it in daily life, they are piling up obligations which they will have to meet later on; but having sown the seed, your responsibility is at an end. Pass on. It is your duty to sow in every kind of soil, and you have no right to narrow your sphere of activity to those who are *personally* interesting to you. Humanity is your family, and by benefiting the whole, your influence will, by repercussion, finally be of benefit to your predilected group.

The Theosophical Forum

DEFENCE OF H. P. B. — *J. Emory Clapp*

Theosophists may take comfort in the fact that no great advance has ever been made in religion, science or philosophy without arousing the enmity of the forces of darkness. Working through the entrenched powers of those whose self-interest seems to be threatened, these dark forces, aided and abetted by the ignorance of their dupes, seek to hide the truth behind a smoke screen of unjustified attacks upon the personalities of those who are leading the advance of movements, which would be of benefit to mankind and help to arouse its spiritual intuitions.

The greatest leader of advanced thought in the nineteenth century was Helena Petrovna Blavatsky, the chief founder of the Theosophical Society. Upon her devoted head the powers of darkness cast their arrows of suspicion, vituperation and hatred. Using every ignoble means at their command, they sought to discredit her by violent and unjust accusations, so that the noble philosophy which she resuscitated for the benefit of the human race would not be investigated or its truths become the common property of that humanity which needs it so greatly.

Lest anyone should think that it is no longer necessary to defend the memory of this Great Soul, I would call attention to the fact that scarcely a year goes by without some new attack being launched even more violent than those which had preceded it. As Theosophists, we should realize that one of our tasks is to combat these unjust attacks and rise to her defence at every opportunity. To show the need of such action let me quote the words of H. P. B.'s great teacher, the noble Mahatman Morya. On page 251 of *The Mahatma Letters to A. P. Sinnett* we find the following statement made by him:

... it is the vilification and abuse of the founders, the general misconception of the aims and objects of the Society that paralyses its progress — nothing else.

It will be observed that the Master mentions not only the attacks made on the founders, of which H. P. B. was the chief, but links these up with "the general misconception of the aims and objects of the Society" as being responsible for the lack of progress. I hope to show that these two matters are quite definitely related before closing my remarks but will consider the question of "defence" first. Although this statement was made nearly sixty years ago it seems as true now as the day it was made. The question naturally arises as to how best this defence can be made effective. It seems to me that there are many angles from which it can be approached, each one of which should be utilized to its fullest capacity, but the foundation of the defence must lie in the fact that the accusations made against her were wholly incompatible with her noble character, her self-sacrificing altruism, and a total lack of motive for wrong doing. She sought no selfish ends either in financial emoluments or personal aggrandizement. She would accept no money for the beautiful and glorious truths which she recalled to the attention of the world in the nineteenth century, and she resolutely disclaimed any originality. In the "Introductory" to her greatest work, *The Secret Doctrine* she modestly quoted the words of Montaigne: "I HAVE HERE MADE ONLY A NOSEGAY OF CULLED FLOWERS, AND HAVE BROUGHT NOTHING OF MY OWN BUT THE STRING THAT TIES THEM." Furthermore, she would not even accept an executive position in the Theosophical Society which she founded to promulgate the truths of Theosophy and would accept no other office than the unassuming position of Corresponding Secretary.

In order to demonstrate how unfounded were the charges that she was an adventuress and motivated by self interest, one has but to examine the unassailable facts that are known about her.

These might be summed up under the following headings which have to do with her character, her outstanding intellectual ability, her comprehensive knowledge of both ancient and modern religions, philosophies and sciences, and her deep insight into the realities of being. Categorically they may be enumerated as follows:

I. Her altruism. II. The purity of her personal life.

III. The sublimity of the ethics which she taught (and lived).

III. Her ability as a seer which was shown by

(a) Her fore-knowledge of coming events

(b) Her prevision of the notable advances to be made during the succeeding century by great scientific thinkers.

V. Her demonstration of the unity of knowledge as shown by a comparison of the underlying truths to be found in the great religions, philosophies and sciences; and the revelation that all of these are contained in Theosophy, the Wisdom-Religion which, when understood in its fulness, is shown to be a marvelous cosmic philosophy which agrees with all known facts and gives a satisfying and comprehensive explanation of all the problems of life.

VI. Her insistence upon the fact that science would have to go beyond the physical plane to the metaphysical or astral plane in order to arrive at the greater truths of nature and being.

VII. Her clear and cogent logic which demonstrated that the understanding of the simple teachings of Theosophy would form the foundation for "a new order of the ages"; and that by putting these teachings into practice, war, crime and disease would be gradually banished from the earth in proportion to the extent to which Theosophy was practised.

Let us take up these points one at a time, and offer evidence

which should be convincing to those with an open mind:

I. There can be no question of H. P. B.'s altruism and the sacrifices which she made for the good of humanity. Her life was filled with instances that showed her unwillingness to accept any reward for the sublime spiritual teachings which she gave out. Her benevolence was so great that it seemed Quixotic to her friends. As an instance of this it was related that when she was about to take a trip from Europe to America she noted a poor woman with two children weeping in great distress. Upon being questioned by Madame Blavatsky the woman stated that her husband had sent her a ticket to take her to America with her children, where he had prepared a home for them, but that she had lost the ticket. H. P. B. told the woman to come with her on board the vessel in which she was to sail, and insisted that the purser change her first-class cabin ticket into steerage tickets which would take herself and the woman and her children to America. It is also known that she earned her own living by menial tasks, at times, while she was engaged in writing her great books and that she gave freely out of her own restricted means to help the Theosophical Society.

II. Her personal life as seen by those who worked with her was beyond the shadow of suspicion, and her enemies had to concoct stories based on her travels in far places, which could not be either proved or disproved by reliable witnesses. Such vile stories, however, were disproved in an examination by a reputable physician.

III. To her disciples Madame Blavatsky gave the priceless little book known as *The Voice of the Silence*. This was based upon a translation which she made of *The Book of the Golden Precepts*, a work, written in an ancient tongue, given to her by her great Teachers. These precepts she had learned by heart. The following

illustrate some of them:

To live to benefit mankind is the first step [on the path].
Step out from sunshine into shade to make more room for
others.

Let thy soul lend its ear to every cry of pain, like as the
lotus bares its heart to drink the morning sun.

Let not the fierce sun dry one tear of pain until thyself hast
wiped it from the sufferer's eye,

But let each burning tear drop on thy heart, and there
remain until the pain that caused it is removed.

IV. H. P. B.'s fore-knowledge of coming events was shown in many ways. One of the most remarkable of her predictions was to the effect that before the end of the first five thousand years of the Kali-yuga (within ten years) the veil of matter would be rent and marvelous scientific discoveries would change the whole basis of modern science. This statement was made in 1888, and during the next ten years three events of great importance took place. First, Roentgen, while experimenting with vacuum tubes along the lines laid down by Sir William Crookes, discovered the X-ray. Second, Madame Curie discovered radium. Third, Sir James J. Thompson enunciated the electron theory, which has since been generally accepted. Thus was demonstrated the permeability of matter and the composite nature of the atom, and these in their turn led to a new foundation for the science of physics.

Many of the scientific concepts which were built up on this new foundation were predicted by Madame Blavatsky, including the material nature of electricity, the unity of force and matter, (these two being but the opposite poles of one substance-principle), and the corpuscular nature of light, thus reverting to Sir Isaac Newton's concept which modern science had thrown aside.

A score of other changes in the current scientific conceptions of that day were also mentioned in H. P. B.'s *Secret Doctrine*. H. P. Blavatsky did not claim to gain these facts by any other than the commonplace method of acceptance of the teachings given out by "Those who know."

Referring again to the statement made by Madame Blavatsky in her quotation from Montaigne, she remarked "pull the "string" to pieces and cut it up in shreds, if you will. As for the nosegay of FACTS — you will never be able to make away with them. You can only ignore them, and no more." It is marvelous to note that while many of the scientific statements in *The Secret Doctrine* have been independently proved to be true by the work of our modern scientists, not a single statement has been disproved, so far as I know.

In a recent bibliography of *The Secret Doctrine* which has been compiled by an old student of *The Secret Doctrine*, Dr. Thaddeus P. Hyatt of Stamford, Conn., some amazing facts have been brought to light. In this compilation, which Dr. Hyatt refers to as "A Check List of some of the books and authors quoted or referred to in the two volumes of *The Secret Doctrine*," it is shown that Madame Blavatsky referred to or quoted from more than 700 authors on over ninety subjects with an astounding range of topics. Included in this list are books and articles on many branches of science, an amazing list of philosophers, besides all of the great religions known to the world today; in fact, there is scarcely an activity of human consciousness which is not touched upon in some way, and the Director of the Public Library in one of the largest cities in the United States has stated that this work of H. P. Blavatsky is one of the most amazing feats of which he has ever heard. A still more remarkable accomplishment is found in the fact that Madame Blavatsky displayed greater knowledge of the subjects referred to, in many cases, than was possessed by prominent

authors who had devoted their life's work to the study of only one of this vast array of them.

As an instance, Dr. Carter Blake, anthropologist and zoologist has stated that Madame Blavatsky knew more than he did on his own particular line of anthropology, etc., and that her information was superior to his own on several of the topics which belonged to his line of work, some of which he listed in detail.

V. The factor which has caused more trouble in the world than any other one thing has been the lack of understanding that there is a unity of knowledge as shown by the great religions, sciences, and philosophies of the past. In *The Secret Doctrine*, Madame Blavatsky devotes much space to showing the underlying unity of these essential products of human consciousness, in religion particularly, with the key of symbology which she interpreted. A marvelous knowledge of ancient religions and philosophies, world-wide in extent, is manifested in this great work, which frequently refers to rare volumes unattainable by ordinary means, the only copies available being in such places as the British Museum, the Vatican Library and other important collections of ancient lore.

This proof of the essential unity of human knowledge immediately convinces the inquirer that there is no basis for the claim that any single religion or philosophy can claim to have all knowledge; in fact it was demonstrated that much of the knowledge was common to all, while certain aspects of truth were found to be more fully explained, perhaps, in some one of them. From a consideration of these facts it is obvious that dogmatism and creeds are out of place and that all mankind should, as individuals, look with tolerance on the beliefs of others, showing them the same respect that one would desire for his own.

VI. Anyone who is at all familiar with the ideas of our great scientific thinkers as expressed in their articles and statements for consumption by the general public, can readily see that these advanced thinkers are arriving at the point where they agree with H. P. Blavatsky that the greater truths of nature and being can only be arrived at by extending the field of science to take in the metaphysical as well as the physical planes of being. Sir Arthur Eddington's phrase "mind-stuff," Sir James Jeans's conclusion that "consciousness is the only reality," and many other similar expressions by equally well-known scientists are a proof of this tendency.

VII. Every student of Theosophy is convinced that the understanding and practice of the simple teachings of Theosophy would banish three-quarters of the suffering to which mankind as a whole is subject at the present time. It has been an astonishing and inspiring experience to the writer to see how "Mr. Average Citizen" responds to Theosophical ideas simply presented, and in particular the unanimity of the idea that it is human selfishness that is responsible for practically all of those things which we dislike. Is not this conclusive evidence that what the world needs today more than anything else is an understanding of Theosophy, at least in its essential teachings such as "the four links of the golden chain" mentioned in *The Key to Theosophy*? If these are presented in a simple manner so that the teachings will be readily understood by average newspaper readers, I think we will agree that it will result eventually in great good to mankind.

In a quotation which I gave from *The Mahatma Letters to A. P. Sinnett* in the early part of this address, there was a statement of the Master to which I called especial attention. I observed that I hoped to show that this statement was quite pertinent to "the defence of H. P. B." It referred to "the general misconception of the aims and objects of the Society" as being responsible for the

lack of progress. I think this misconception was the fact that the public did not then and does not now understand that the chief object of the Theosophical Society is to show men and women that Brotherhood is an inescapable fact; because the universe is a unity and therefore every individual part of it, which means all that is, must work in harmony with the laws of the universe and for the ultimate good of everything without exception. Here we have a foundation for the scientific demonstration that it is only through the practice of brotherhood that men and women can find happiness, peace, and true knowledge, and reach the ultimate goal toward which mankind is traveling on the evolutionary pathway.

Since the charges made from time to time against the honor and character of H. P. Blavatsky tend to distract the attention of men's minds from an investigation of Theosophy, it is quite essential that Theosophists should ever be ready to defend her memory from these unjust charges, and the best way to do that, is to show that these false charges are incompatible with her character and the nature of the philosophy that she taught, the latter being based upon utter unselfishness, backed by sublime ethics. Once you can get a reasonable person to understand that the attacks against her were intended to prevent the dissemination of a wonderful religion-philosophy-science which would not only solve all human problems but completely change the hearts and minds of men, such a person will be willing to spend a little time in examining the nature of Theosophy.

The attempt has been made to defend H. P. B. by making a critical analysis of the charges against her in an effort to show that these charges were either false or unproved. While this is helpful and particularly worth while for Theosophists, it is not a method that will work very well with most people. They do not feel that they have the time to read voluminous articles trying to prove that

certain charges about which they are either poorly informed or not at all informed are false, and there is the further weakness that such a method of defence simply brings up new charges and reiteration of old ones, in that way perhaps doing more harm than good. Publicity is just what sensational writers desire and the one thing which discourages them more than anything else is for the charges to be ignored.

Before closing, I would like to call your attention to the fact that May 8th, 1941, will be the fiftieth anniversary of the passing or "going home" of the Great Soul known as H. P. Blavatsky, to whom we owe so much. This anniversary, known as White Lotus Day, has for some years now been utilized for Fraternization efforts among Theosophists, irrespective of organizations. I would like to suggest that the Resolutions Committee of this Convention be instructed to formulate a suitable resolution calling attention to this fact and suggesting that this would be a good opportunity for Theosophists everywhere to unite in the celebration of this event, as a mark of the love and respect which they all hold for this great benefactor of the human race.

The Theosophical Forum

IS HYPNOTIC PRACTICE EVER JUSTIFIABLE? — *G. de Purucker*

Question — After having unconditionally condemned some 90% of all hypnotic phenomena and practices, is there any justification whatever in at least some of it, primarily in therapeutics? Such things as local anesthesia by hypnotism, prevention of birth-pains by the same means, seeming cure of small psychological defects and bad habits. This is at present done on a rather large scale, and it seems to be divided in two main categories: (a) under hypnosis and (b) without hypnotic sleep and solely by mental suggestion. My question does not refer to magnetization which, of course, can be of great help when done by clean-minded unselfish people.

— The above is one of many similar questions on this subject that have been sent to me. My answer follows hereunder:

Hypnotic practice is almost always bad, even though, somewhat like blood-transfusion, there are rare successes occasionally. It is just like playing with some dangerous explosive. It is fundamentally and generally bad because it weakens the will of the subject instead of evoking the will from within outwards into action thus building up a structure of inner life and power. Every repetition of hypnosis renders the subject still more flabby, still more negative, still weaker, and subjects the subject more and more to leaning on the outer instead of evoking inner powers.

Now of course like everything else, it is conceivable as a theory that an Adept, a Mahatman for instance, knowing nature's laws and all the tricks and oddities and peculiarities of human psychology and the astral body, could as an abstract theory use hypnosis in certain minor cases beneficially. But this is merely a theory, and I can assure you that no Mahatman or Adept ever

would do such a thing, because the fundamental idea is wrong. They want to bring out or develop the will-power and inner vital strength of men, and hypnosis sends these last fine things to sleep, weakens them, emasculates the inner powers of reserve. Still as a mere academic theory, by an Adept hypnotism could be used safely.

Now of course in some local things, like stroking with the hand on an affected part of the body to relieve pain such as a headache, this is really not so much hypnotic sleep in minor degree as a kind of mesmerism or animal magnetization, soothing the nerves but not weakening the will, the healthy body quieting, soothing the tangled and angry nerves of the invalid. And this is not bad if no attempt is made, as just said, to affect the will of the subject or his body as a whole, if it is purely local; because in the first place it is not hypnotism purely speaking, as this word is popularly understood, and in the second place it is purely local and the benefits are derived from the clean, strong magnetism of the operator. It is in fact animal magnetism in these last cases; and if the animal magnetism is healthy and clean, probably no harm is done and the patient can receive temporary relief, although it is not permanent because the cause is not eliminated.

I will say in this connexion that even auto-hypnosis or self-hypnosis, where the subject hypnotizes himself or herself by various means known for ages past, such as staring at a spot or a bright light or a piece of crystal or glass, or even looking at the tip of the nose concentratedly, or at the navel: all those things which are so well known are emphatically not good because they mean using the will by the subject himself to send his higher will upwards and out of the picture, and induce in the lower part of the constitution a false tranquillity or quiet by what is almost mechanical means. In other words the nerves, instead of being roused into clean wholesome healthy activity upon which the

inner will can work, are put to sleep, hypnotized, (which means sending to sleep), and the brain and nervous system as stated sink below the threshold of ordinary consciousness into the vibrational rates of the glass, etc. Quiet is induced, but it is the quiet of death, of the Mineral kingdom, etc.

Therefore while self-hypnosis is not as bad as hypnosis by others, it again is emphatically not good and is not used by the true Adepts, only by magicians and Shamans and medicine men of barbarous tribes. It is this power exactly which gives the steady unwinking eye of the snake its hypnotic power over a bird or a rabbit or a mouse, popularly called fascination; but it is the process I have just tried to explain. The glittering eye of the human hypnotizer starts hypnotism off with the same process. It is all unfortunate and if not exactly bad in its better side, is certainly not good.

Therefore all these things should be avoided. They are unwholesome. They lower the vibrational level down into the lower kingdom instead of raising the vibrational rate of consciousness upwards into the higher psychical, intellectual and spiritual realms.

The Theosophical Forum

TIME — A LINK — *Ernest A. Bunting*

We are told that Time as an entity has no existence, but that it is a man-made concept by which he measures the passage of Duration and marks or locates events relative to each other in his own consciousness.

True. But is not Time, that same man-made concept by which he also measures the progress of his own evolutionary unfoldment, a link with the past, with those great days of an earlier Race when the Gods brought to the then nascent mind of the slowly evolving mankind the first great principles and teachings of the Ancient Wisdom-Religion?

And is not Time also a link with the future, with that great future when, this present cycle of evolutionary unfoldment being complete, man will have worked out his own destiny and achieved oneness with his own Inner God, will in fact have become a God?

And the present, what of it? The present is the center, the hub if you like, to which the other two are linked by the links of Time; and which, by the same reasoning is linked to those other two by those same links of Time. The present is that point in infinite Duration as measured by man's measuring-stick, Time, in which he has the opportunity and the privilege of taking hold of the results of past mistakes and accomplishments and, by his own conscious efforts along the line of evolutionary unfoldment as taught by the Ancient Wisdom-Religion, Theosophy, of weaving out of these his own great destiny of a glorious future of yet greater service.

Past, Present, Future, these three, but the greatest of these is the

Present; for it spells opportunity to grow and the privilege of service. Out of these, growth and service, shall a man weave his own destiny.

The Theosophical Forum

OUR NEED FOR AN INNER SANCTUARY — *Louis E. Van Norman*

Condensed from a lecture given at Point Loma, California

This is not the exposition of a doctrine, not a pronouncement, or a statement of a philosophical tenet. It is intended to be a recital of personal experiences in an attempt to help others who live in a busy, noisy world as to how they may flee to their inner temples, and there find peace, the ability to clarify their inner vision, and the means of cleansing their minds and spirits from the accumulations of the day's struggle with situations, things, and states of mind.

I propose to consider the inner sanctuary we all may have from three points of view:

1. As a refuge from the noisy world.
2. As an aid to perspective.
3. As a "Beauty Parlor" for the Mind and Spirit.

I have found out something about myself. I have discovered that, if I want to find spirituality, I must find it while living in the world, yet not being of it. I have found that a man can build a quiet church inside his own heart and be a ministering priest to his own self.

This does not mean any mysterious technique or imported Oriental procedure. We Westerners can make our own program of meditation and prayer. But first we must learn that the spirit as well as the body has rights and its own way of reacting to our physical life habits.

I — A REFUGE FROM THE WORLD

In the fighting days of the empires of antiquity and on into feudal

times there existed a peculiar but beneficent institution known as the "right of asylum," or the city of refuge. Sometimes this was an actual city, sometimes only a building, a temple, or church. To this place of refuge hunted folk fled — fugitives from a pursuing enemy, an avenging justice, or a tormenting conscience.

The "asylum" was recognised as something wholly apart from ordinary life, a holy place where the hunted one was safe from his pursuers. If such pursuer were his own tormenting conscience, the victim usually buried himself in some part of the house of God, in the church or a monastery. There he found peace, or, as it was often described, "sanctuary". The passing centuries saw the passing also of this haven of refuge, although the monastery — for women, the convent — still survives. It is true, as has been wittily said, Monasticism was an attempt to overcome the world by running away from it. This can be done for a while. But we do need an inner sanctuary. Jesus said, "When thou prayest, enter thou into thy closet and when thou hast shut the door. . . ."

Whatever it may be called, we of the modern world are in sore need of some such place, physical or mental or moral, to which we can escape from the assaults of the life around us when they become too hard for us to bear. If we are not able to find a physical place for our physical presence, we must find a sanctuary within our own souls where we may have peace. Otherwise the answer for, alas, too many of us, is futility, misery, or perhaps suicide.

The lower orders of life need — and possess — such protection. Certain animals, birds, and insects have been provided by Nature with what we call protective covering, a coloring, an outer shell, some defense against the outer world of hostility, noise, distraction, waste of energy, dissipation of attention, and so on,

down the list of forces or happenings from without which might in any way tend to interfere with their ability to live the lives Nature intended them to live.

It has become the fashion these days to emphasize the dependence of the individual upon society. We are told that for our happiness and progress we need at all times the presence of our fellows. But is not the exact reverse of this the truth? Is it not only the cultivation of an internal solitude among crowded lives, the ability, as some one has said, to sit quiet for fifteen minutes alone in a room, that makes the social order endurable? Even a little sociableness often murders solitude. Society, even that of really nice people, alas, often brings in its train all that "fretting, chafing, tantalizing, irritating flock of worrying thoughts that destroy the dignity and beauty of life much quicker than any lonely vice could."

Is it not true that our modern crowd consciousness has tended to vulgarize life and to eclipse the natural dignity of our nature, our spiritual personality? Have we not laid too much stress on the promised leisure which the machine age was to give us? If so many of us must "kill time" now, what would we do if we had more spare time?

The protective coloring we need is some philosophy to heighten and broaden our life in those moments when we can live to ourselves, a philosophy that will help us kill boredom, destroy inertia, dispel lethargy, drive away weariness, and overcome that sense of futility which so often accompanies modern so-called progress. The ability to withdraw from the trivialities of the sense life, even if only for a few moments at a time, is our human protective covering. The world is indeed too much with us. We need to re-establish our poise. We need to get to the point at which we can do without conversation or turning on the radio.

We need to become acquainted with the God in all of us.

For years, the rule of my own life was that of the typical American: "Something doing all the time." Every minute had to be filled with movement, words, practical things. A moment of "doing nothing" except communing with myself, this was a wasted moment. But I have learned the lesson.

A keenly observant visitor from England recently remarked about our life in the United States: "You Americans live on the surface. You are driven by things, by facts of every-day life. The robot is the symbol of your national life, regimented, standardized and impersonal. Your world is one of noise, fury, and haste. Loudness and speed mark your activities in every area."

This observant foreigner says that we judge everything by measures of speed, size, and cost. "Your homes, your schools, your business, your legislation, and even your religion, are set to the tempo of ever increasing miles per hour and quantitative production. The most tragic breakdown of modern life is not of economics but of inner life, or personal character. The supreme struggle is not of man to save his property, but to save himself. You talk too much and listen too little."

All this has a serious effect on our lives, even on our physical lives. Referring to the increasing number of cases of insanity in the United States, the late Dr. Charles H. Mayo, of the famous Mayo Clinic, said:

We Americans pass through more of the wonders of life in forty years than was possible for actually old people in the past. . . . For the moment we have almost got behind in our powers of adaptation. Today [1935] every other hospital bed in the United States is for mentally afflicted, insane, idiotic, feeble-minded, or senile persons. There is an

enormous number of people who are almost fit for the asylum. Many people live to an age when they are dependent and senile. Only five percent of our people, at the age of sixty-five years, have independent means. Why? Because we have not, as yet, psychologically, morally, nervously, and spiritually caught up with the machine age which we have brought upon ourselves.

The world is too much with us all the time. Hard, difficult it is to escape it — the world with all its rush and bustle, its pressure and dominance of material, so-called practical affairs!

There is often much comfort in reciting to ourselves the words of deep thinkers of today and of other days long gone by. Let me begin by looking backward three thousand years.

The very ancient wisdom points to the voice of the silence. From an Egyptian papyrus written about by Dr. James Henry Breasted, said to be over three thousand years old, the "Wisdom of Amenemope" tells us:

The most effective means of gaining the favor of God is contemplative silence and inner communion. . . . Be not of many words, for in silence shalt thou gain good.

The self-contained man is the truly silent one.

Set thyself in the arms of God until the silence overthroweth thine enemies.

Another Egyptian writer (1000 years ago) said:

Oh, Amon, Thou sweet Well for him that thirsteth in the desert. It is closed to him who speaketh, but it is open to him who is silent. When he who is silent cometh, lo, he findeth the Well.

A modern writer (Paul Brunton) says:

The voice of the silence is better than the voice of the priest.

Man is really engaged upon an inward pilgrimage. His outward speed gives no measure of his true progress.

Although spirituality does not assure financial prosperity, health, or fortune [no matter what the cult shops may say], yet what you work out in activity will be the test of what you have attained within your heart.

God is light and we meditate to see Him. But we must not forget that, as Occidentals, we cannot be ascetics; nor must we forget that spirituality and activity are not incompatible.

In her "Intimate Journal," written in 1840, Georges Sand, that erotic literary genius wrote:

God is not a force outside of us. He is the sun and the skies and the gold in the chalice. He is the bread. He is all the elements of the earth. He is the heart of man, and all men, with all their yearnings and fortunes, are one in Him. He is in us and outside of us. We are in Him and never outside of Him. He is the universal Spirit. He reveals himself to man. He is I and I am He.

More than one poet has told us that truth lies at the bottom of the well. Old Rabelais was one of the first to put it this way. Later, John Wolcot, (who wrote as "Peter Pindar") put it thus quaintly:

The sages say Dame Truth delights to dwell
(Strange Mansion!) in the bottom of a well.
Questions are, then, the Windlass and the Rope
That will pull the grave old Gentlewoman up.

II — PERSPECTIVE

In the sanctuary, in the silence, we may, if we will, gain a sense of proportion, of perspective, not possible in the whirl and noise of the day hours.

From the time when the infant first learns that the toe he reaches for is nearer than the ball at the other side of the room, and, conversely, the ball is farther away than the toe, until the youth begins to understand that many things must always elude his eager grasp, life is a series of discoveries about perspective, or relationship to the physical, social, and spiritual universe in which we live. In the silence we may perceive proportions more clearly. "When he has ceased to hear the many, he may discern the One, the inner sound which kills the outer." Before I had read that beautiful message in *The Voice of the Silence*, I had realized this truth. The Christian Bible says the same thing in the injunction, "Be still and know that I am God."

We need no display, no blare of trumpets, no shouting from the housetops — only what Virginia Lee Eastham has so beautifully expressed in her tribute to her "Temple of Silence":

No church bells call me to worship,
I hear no thundering prayer,
I enter my temple of silence
And find God waiting there.
Silent, receptive, enlightened,
My soul in its glory stands;
And I am one with my Maker,
In the temple not made by hands.

A realization of perspective makes possible self-criticism. It is not easy to admit faults and failings when one is out in the open strife of the day amid the noise and in the presence of others. But, in

the silence of the inner sanctuary, in contact with our real selves, we can see more clearly our mistakes and false moves.

We modern people, particularly we Americans, have been trained to regard education as something brought in from the outside, rather than as a faculty cultivated in our inner selves which makes us better fitted to live in our environment — whatever that may be — and be happy in it.

We really do not know ourselves, much as we may know, or think we know, the external world. In a recent lecture, a professor of philosophy in an eastern university, put it well when he said: "We don't even really know much about our surroundings, not much more than our parents. Only we have a larger vocabulary. We are sophisticated; that is, the "jazz" of the age has gone to our heads. Moreover, we really don't want to learn. We want to be "put wise." We despise the real things which are made known to us by our senses, calling them "obvious" and continually seeking something which can be labelled "believe it or not!" "

In a recent address before the freshmen at Princeton, the great but simple Einstein advised them, "as an old man to young fellows," in these words:

Always find time to sit down and think without talking or making any noise. Moreover, never regard your study as a duty but as the enviable opportunity to learn to know the liberating influence of quiet beauty in the realm of the Spirit, for your own personal joy, and to the profit of the community to which your later work belongs.

III — BEAUTY PARLORS FOR THE MIND AND SPIRIT

Four and a quarter centuries ago, on a sunny April day, a Spanish gentleman named Ponce de Leon landed on the shores of what we now know as the state of Florida. He was in search of the land

of "Bimini", the Indian name for the land of the fountain of perpetual youth and beauty.

Since that day, and even long before it, a very large proportion of the inhabitants of these United States had been expending a goodly portion of their time, energy, and money in endeavoring to discover some method, some elixir, by which Americans, masculine and feminine, may remain young or restore their youth when it has passed, that they may be beautiful in body.

In both cases, however, — that of Ponce de Leon and Mr. and Mrs. Average Citizen — it was physical youth that was sought. The quest so far has been in vain. It is true that we talk glibly, at least our smart business folk and our beauty specialists do, in terms of prettily named cosmetics, of diet, of exercise. Our scientists tell us of the marvelous results we are soon to witness when we know just a little more about the behavior of glands, hormones, and other learnedly named factors in bodily growth. But the secret of perpetual youth, the youth of the physical body, as yet eludes us. We have not even begun to think that perhaps beauty is not after all limited to physical youth. In these days of depressions, government changes, unemployment, war, and all the other ills to which our young people have fallen heir, it is well to remember that inner peace and refinement will do infinitely more to beautify the countenance than any number or amount of applications from the outside. Socrates it was who said: "I pray Thee, O God, that I may be beautiful within." Vergil put it this way nearly two thousand years ago: "There is no beautification of complexion or form or behavior, like the wish and effort to scatter joy and not pain around us." Old Quarles of Elizabethan days said: "The fountain of beauty is the heart, and every generous thought illustrates the walls of your chamber." Finally, some critic of the present thus expresses the idea: "There are no better cosmetics than a severe temperance and purity, modesty

and humility, a gracious temper and calmness of spirit; and there is no true beauty without the signature of those graven in the very countenance."

More and more we are learning that composure and peace are the best cosmetics. Meditation is the workshop in which these qualities are wrought out. "Sorrow and suffering," said a wise man of olden days, "have been well likened to the weight about a diver, necessary to keep him down while he is securing pearls."

We must learn to commune with ourselves, and not only how to analyse our character and appraise our habits of life, but also how to realize our relation to the universe, to feel our identification with God. Meditation may be considered the best beauty shop for the mind and soul. "No matter how deformed your body may be, it is possible for you to throw such a wealth of character — of love, of sweetness, of light — into your face, that all doors will fly open to you and you will be welcomed everywhere without introduction."

The race was very young when man first discovered the desirability of physical cleanliness, and it is many million years, probably, since our forebears began to use water to wash the body. The most primitive of races have believed, with Bacon, that "cleanliness of body is to be deemed to proceed from a reverence to God." Moreover, in the words of the poet Thomson, "Even from the body's purity the mind receives sympathetic aid."

Washing the body is no longer a religious ritual as it was in ancient days. It has become a necessary part of life just as have eating and sleeping. We admit, with Lord Palmerston, that "dirt is only something in the wrong place." But we insist upon removing it from the place where it should not be. "Beauty," said Addison, "commonly produces love, but cleanliness preserves it."

Each day brings its contact with this "something in the wrong place" which we call dirt. Each day we apply soap and water and emerge clean. Moreover, we admit that the course of our human life is such that physical dirt is not to be avoided. But we can wash, and when the unclean covering has been removed we forget it. Physical life is, as it were, a compromise with dirt.

How about our mental, esthetic, and moral life? When we retire at night, when we arise in the morning, is it possible to wash off the dirt of the day and night?

Yes. Intellectual and spiritual life in this world of duality is a compromise. How can we bathe and wash our minds, our spirits, so that they may be clean after the little compromises of the day — the yieldings to the lesser good, the pettiness, the tricks, the evasions, the white lies and all the other little concessions to expediency and assumed "welfare"?

Meditation and prayer are the only answer. I like that definition of prayer which makes it not a plea to get something but an earnest effort to be ready to receive what we receive, knowing that this is what we have brought to our own lives.

We can wash our mind and spirit in the clear light and flow of communion with our better selves, our oneness with the Universe, with God. Every night before we sleep, every morning before we start the day's work, we can follow our physical bath, our face and hand washing, with a cleansing of the mind, the character, the spirit, in the clear water of meditation and prayer. Every night, every morning, it should be said, In this beauty shop there are no "permanents" for men or women.

So, in our inner sanctuary we may, if we will, find refuge from the world of noise and self-seeking. We may gain a clearer picture of life in its real proportions and we may wash our spirits clean in

the waters of the silence.

How can we enter the inner sanctuary? you ask. By earnest, constant striving to be worthy of our own better selves, of the God within.

The Theosophical Forum

QUESTIONS — *M. G. G.*

ADVANTAGES

Have we less noise, less care, less crime,
More peace, more poise, more joy, more time,
Since undreamed speed decreed that we
Should measure leagues with instancy?
Have hours and days and years so saved
Conferred the leisure men have craved,
Or rendered plain the reason why
Unkindly clouds begloom our sky?

IMMUNITY

Find we ourselves more chaste and pure
Since dire diseases are grown fewer;
That now, forsooth, with tonsils out,
Past plagues are things that we may flout?
Think you that Nature sets aside
Effects of causes we deride,
Or fails to have her final way,
Though circumvented for the day:
That sheer immunity be won
Through some new serum "neath the sun?

SPECULATION

Must we believe a love of power
Ensouls and motivates the flower,
Or that the Sun be moved by greed
The while his light and life proceed?
Do you suppose his neighbor "Jones"
Who some more brilliant planet owns

Might make his golden beams turn green
And show him in a spleenful mien,
Or that the planets cease to sing
Because a comet must its fling?

The Theosophical Forum

"FAMILIAR SOIL" — *Irene R. Ponsonby*

In death we tread familiar soil, possibly soil even more familiar than that of physical imbodiment! Why then do we fear death? Because most people's fear is based not on what they know, for general knowledge on the subject is negligible, but on the terror-breeding bogeys men's minds have entertained for several centuries, ever since ignorance about the states of consciousness we call death usurped the place in men's hearts once held by the teachings of the Mystery-Schools and their graduate-Initiates.

It is the false ideas we have about it that foster our fear of death, and singularly enough, this psychological bias is limited almost entirely to the most "civilized" people. The more primitive races look upon death as a highly honored guest, with awe, it is true, but without fear.

Lately, however, the age-old tides of thought have returned to the West in the teachings of Theosophy, and here and there in literature, art, and drama, these truths of antiquity are echoed, as in *Two Epitaphs* by Margaret Sackville:

So like to Heaven, my Earth — I seem to tread
Familiar soil, being what men call dead.
And, since I lived adoring, death to me
Is but a mood of finer ecstasy.

II

The first step done
My swift feet run
Firmer and fleeter;
And, like a verse,
Old songs I now rehearse

To a new metre.

Briefly and poetically these lines express the Theosophical teaching that man's dominant state of mind during his physical life sets his condition in the spheres of death. In other words, the physically released man is the same bundle of consciousness in death that he was in life. Therefore his experiences are a continued reverberation of himself, intensified and accelerated because untrammelled. For the average person, the change is one of degree and tempo only. The "new metre" even, is regulated by our own dominant attitude at the time we leave the purely material realm. Are not all the events of life similarly affected by our approach to them?

The skeptic who refuses to countenance aught but the material, by that very contention immerses his higher than material consciousness in oblivion. No spiritual or ethereal contacts can broach his aloofness in life or in death until he changes his outlook. For him there can be no compensatory adjustment between the ideal and the real.

The querulous and fearful deny themselves the soul stimulation of a vital participation in the wondrous drama of Life both here and hereafter, while their lack of confidence limits future creative potentiality. Life urges us towards growth, encourages us to dare to be. It is the fruition of ripening that gives the bloom to the peach: the conscious fulfilment of consummated life that brings joy to the soul. He who shirks, dallies by the way, but cannot evade the issue, or as the proverb has it, "He who fears death lives not."

The evil individual continues in his wickedness in death and suffers; the righteous remains at peace with his world and rejoices; and the indifferent skims the surface of life and reaps no satisfaction anywhere. As in life so is it in death, only more so.

A few there are, whose unsophisticated, intuitive minds have been touched by the presaging radiance of death, as was the young airman who wrote, before going out on his last patrol: ". . . . I have no fear of death, only a queer elation. . . . I would have it no other way. . . ."

These may have no technical knowledge about the states of death, but for them the perfect sleep of death will be long and true — "a finer ecstasy" in fact. They will reach towards an ever deepening freedom of kinship with their own and all that is. Theirs will be a creative part in shaping this world far nearer to their spirits' purposes, a giving of themselves to causes as grand as they are universal. These it is who will some day return to make this world what it might be today were men's hearts and minds attuned to the laws of the Universe.

This Earth which is "so like to Heaven" is also like to Hell! Yet to it as one of the classrooms in the University of the human soul we owe fealty, the while intellectually and spiritually our allegiance soars to far nobler, because more harmoniously evolved, realms. In them we live adoring always whether we realize it or not, for they too are familiar soil, being the home of our spiritual natures as Earth is our physical mother.

The Theosophical Forum

NOTES ON THE ZEN PHILOSOPHY — B. M.

The Zen philosophy seems in several ways to be a very practical system in stimulating an awakening of the "Spiritual Qualities" by inducing spontaneity in mental reactions. It suggests that the methods used make an instantaneous connexion *through* the human apparatus to the Buddhist layer of consciousness. The resulting illumination and oneness, called Satori, would appear to be a matter of degree, and *not* necessarily of very great range, but belonging to the sub-plane and fields of knowledge and experience which are related to that degree.

The essential feature is that this inner light breaks through the ratiocinative processes of the Mind, and enables the entitative self-consciousness to receive something of the state of "things in themselves," and yet be able to translate the experience in terms of feeling and knowledge and action on the human plane. Its value to us appears to be in the growing ability to spontaneously react rightly in any circumstances and on all occasions; but I imagine that this right reaction would be an individual matter and by no means apply to anyone else — karmic considerations would be the main governing factor.

The flash of illumination would bring a deeper understanding by which *volitional* action could be exhibited more accurately and wisely; for, after all, as humans, we have to develop Manas, even though we need the greater "awareness" which Buddhi gives.

AN ATTITUDE OF BALANCE AND VISION — *G. de Purucker*

It is true that the world is in a saddened and anxious state. But mark you, I think it unwise and spiritually and psychologically unwholesome to emphasize this, for it raises none to higher things but depresses courage, the courage to meet life and carry on in a higher and nobler way. See the beauty in and behind things, see the beauty in your fellow men; see likewise the ignominy and the ugliness in life, although do not let these latter depress you or discourage you. There is no reason to lose our calm, our inner peace, in order to become like unto them of the mobs, passion driven, governed by prejudice. Such an attitude will not help us or those who suffer. But we can send forth into the world thoughts of courage and hope and an optimistic looking into the future, founded on our own blessed God-Wisdom: that no matter what happens through man's folly or infamy or infidelity to his spiritual inner God, to his spiritual Essence, there are always right and justice which will ultimately triumph over all. The only thing is to be sure we are on the side of right and justice — and we cannot always judge by appearances.

An English poet, Browning I think it was, expresses this thought, albeit in the theological language of the time when he said: "God's in his heaven, all's right with the world." Those who do not like this optimistic outlook and conviction and who are trying to get down into the arena of hysteria and discouragement, mock at it; and yet every sane man who keeps his mind cool and clear and can think for himself realizes full well that the mightiest forces in this world are cosmic right and cosmic justice, and they in the long run will always prevail. There is no need to be discouraged. Avoid hysterias; or again on the other hand avoid running at one and the same time with the hares and chasing with the hounds,

which is what we all do more or less. Have your own convictions and sometimes hide them if it is not wise to shout them from the housetops; but keep your own heart upright, in love with love, hating hate, always standing up for justice and innate right. Only be sure that when you stand up you are not standing up for the propaganda-atmosphere around you, but for something that you in your own heart know to be right and true.

It would be a sorry thing indeed if there were naught to our world but what we see around us today, or have seen at particular intervals during the past; but every time and always the conscience and the sense of justice of mankind have proved supreme over all and risen above human feelings and follies, and marched onwards and upwards to balance and harmony. Don't be down-hearted or discouraged or think the world is going to the devil because you don't like what is going on. You have a right to like it or to dislike it. But be sure that you, as an individual, on your part do not add to the hatred in the world, to its discouragement and unhappiness. That is my point.

THE SYMBOLOGY OF THE SEAL OF THE T. S. — *E. V. Savage*

The subject I have chosen for this afternoon could cover a vast field; but I have selected four symbols only: the swastika, the serpent, the interlaced triangles, and the Egyptian tau or ansated cross. I shall endeavor to give you a few general keys to their symbolic meaning, as a detailed study of each could easily occupy an entire afternoon's lecture; and then I shall show how these combine to form the Seal of the Theosophical Society. A true emblem, one rooted in the Wisdom of the Ages, should contain in its interpretation all aspects of what it stands for; and you will see that the T. S. Seal carries in its meaning the vast range of Theosophical doctrine.

ITS PRACTICAL APPLICATION

Today's subject might seem a far cry from the so-called "practical problems of living," but I shall endeavor to show that the Wisdom that these symbols contain is very close to the living of our daily lives. A Theosophist is often asked what is the value of studying ancient religion, symbolism, the histories of by-gone peoples, the future of the Race, etc. I think of the Theosophical conception of man as being really *consciousness*, which should not be such a far-fetched idea even to a non-Theosophist. You don't have to be a Theosophist to realize that very little of *you* is your physical body; it plays little part in your spiritual and intellectual life, (unless you should be ill, when it is sometimes difficult to remove the consciousness from the body!) And you certainly realize that what you love in your friends is something quite apart from the physical part of them. In other words, it is your consciousness that you live and function in — which indeed is you yourself.

So then I realized that man actually extends, both in time and

space, as far as his consciousness can go; and when we study the Wisdom of the ancients as we find it in history, symbolism, literature, or archaeology, we are expanding our consciousness to embrace those egos of olden times. When we study the destiny of the human race in future aeons, we are expanding our consciousness into the future. When we study about the stars and the sun and other solar systems, we are expanding our consciousness out into space. Now, what do you suppose happens if students all over the world are also studying these subjects in their various aspects, each one expanding his consciousness (which is himself) in space and time? Don't you think these different consciousnesses must merge to a degree, thus proving that in the higher immortal part of man, each one of us is not separate from another? I shall presently show how that is illustrated in our Seal. I fully believe that widespread interest in and study of such lofty subjects would in time, because of this merging of the consciousness of one with another, do away with that spirit of 'separateness' which is the heresy of the present age. To me that is a very practical problem, closely affecting our every-day living.

FOUR TYPES OF SYMBOLISM

In a series of articles by Dr. Henry T. Edge, published in *THE THEOSOPHICAL FORUM* during 1936, entitled "The Universal Mystery-Language," he states succinctly the part that symbols play in giving expression to truth. He says:

There are certain broad general truths which transcend the power of expression in ordinary verbal language; and this must necessarily be the case. For verbal language is the instrument of a certain portion of the mind which has limits; the knowledge of which we are speaking relates to powers of the mind which transcend those limits; and

therefore they are beyond the power of words. Such profound ideas are expressed by symbols; the full meaning of these symbols has to be grasped intuitively by the exercise of higher faculties of the mind; but we can approximate to such a comprehension by studying the various meanings which the symbol conveys, and holding all these meanings in the mind, until finally we gain some sense of the real underlying meaning

I think of four general types in symbology: (1) Universal symbols which have come down to us from the mists of history (and it is some of these that we shall study today). (2) Symbolism in the mind of an artist which he portrays in color or sound, expressing his ideas in concrete form. (3) Literary symbols, that is symbolism by means of stories or legends, metaphors and figures of speech, or truths hid in parables. (4) There are what we might call fictitious symbols, those which from day to day may be used to portray some idea, but are not based on any universal key. I might instance the use we make of red signals to indicate danger.

THE SWASTIKA

We come now to the first of the symbols we shall study: the swastika, the origin of which can be traced in occult records back to Atlantean times, and which is so universal that even in historic times it can be found among many peoples and in widely separated parts of the globe. The swastika is really a cross, and all crosses symbolize manifestation, that is life as contrasted with death, waking with sleeping; and in the cases of universes which also sleep and wake, it would portray the active life of a universe when Spirit comes "down" as it were from above, and Matter

rises from below, and the two conjoin. No manifestation is possible without the conjunction of Spirit and Matter, the vertical line of the cross representing spirit, and the horizontal matter.

In the swastika each arm is bent backwards in the same direction, indicating the whirling motion of evolution, whether of worlds or men. Nothing can stand still while in manifestation, it must go forward or backward. The question is often asked whether there is a special occult significance to the direction in which the arms of the swastika are bent, but there is none. Some students seem to think that if they are bent towards the left, it is a sign of traveling on the left-hand path; but it could as easily mean that, out of compassion for humanity, an advanced soul turned aside from his own forward evolution on the right-hand path, to help to lead "erring humanity" away from the left-hand. The swastika is found among many peoples with the arms bent either way.

As regards men, the swastika can stand for the dual forces in man at work all the time, energy and inertia, will and passivity. The center of the swastika is its neutral point, the focus towards which are drawn all evolving beings, who are "ground over and over" so to speak, on the wheel of evolution, by means of repeated lives, until they are transformed into something higher (which will be portrayed in another symbol).

This form of the cross was used by early Christians, and by the Greeks. It is also a favorite Buddhist symbol; and they use a beautiful metaphor in connexion with the periodic appearances of Teachers who come to give Truth to mankind: that each one comes and gives another "turning to the Wheel of the Law," which the swastika symbolizes.

THE SERPENT

This is really two symbols in one, the serpent meaning Wisdom, and in its form of a circle meaning immortality, endless cycles. The circle not only stands for Wisdom in the abstract, but for Those who have attained to Wisdom, in other words initiates and seers. In mythology the serpent has a dual meaning, the nagas and the sarpas, the nagas standing for initiates; the sarpas standing for those who are mean, tricky, wily, deceitful; but this may be only a man-made distortion. For instance, in the Bible narrative, the serpent is depicted as a tempter; but he really was a Teacher, 'tempting' Adam and Eve only in the sense of showing them that their way towards salvation lay in leaving the passive Garden of Paradise and going out along the Path of Evolution; and he persuaded them to "eat of the Tree of Knowledge." We also have in the New Testament the exhortation "Be ye wise as serpents." In this symbol, with its active head biting its passive tail, it is shown that there is never a beginning or an end to things, the cyclic course of nature. If you start at the head of the serpent and travel around to its tail, you come to the head again. In the same way, if you begin with the morning of a twenty-four hour day, and go on through it, you do not come to an end, but to another morning. So the serpent in its circle represents birth and death and rebirth again, in other words reincarnation. This is also signified by the serpent casting off its old skin, as we do our old bodies, and emerging forth again with a fresh skin or garment.

Another interesting phase of the serpent biting its tail, thus forming a circle, is this: the ratio of the circumference of a circle to its diameter is closely three to one, expressed by the

mathematical constant π . But if you try to work out the figure exactly, you will find that you never can obtain a finite number. There is an endless line of figures after the decimal point. This is symbolic of the unknown factor in human affairs, both in the sense of there never being a definite period or stopping of anything; and in the sense of life not being pre-determined and governed by fatalism. Each act we do produces its effect, which in turn becomes an act producing its effect, and so on and on: in other words the constant working of the karmic law in nature.

The scales of the serpent also can have a double significance: they can represent the various facets of truth, each facet being one aspect of Truth as viewed by an individual; and they can also represent the myriads of individual men traveling on the path of evolution in search of truth.

THE INTERLACED TRIANGLES

Here again we have Spirit and Matter combined, showing the worlds of manifestation. This symbol has been called the Seal of Solomon, also the Seal of Vishnu. The white triangle stands for Spirit, the dark one for Matter. The white one should always point up, showing the mastery of Spirit, or the forces of light, over Matter or the forces of darkness. If the black one pointed upwards, it would indicate a reign of darkness and evil over the world. The two triangles interlaced can also stand for Wisdom concealed and Wisdom revealed. In order to make the wisdom of the ages available to men, it is necessary that it be "brought down" from the spiritual realms and "revealed" to men. You will notice also that there are six points or angles and a central enclosed space. These can show the sevenfold aspect of nature; and as regards man, the six points may stand for six of his principles, and the central space for his Seventh, the Atman, the Divine. It is in this seventh or highest that all things become one.

It is the "Universal Principle."

There is a fascinating paragraph regarding the Interlaced triangles as they appear in our Seal, in *The Mahatma Letters to A. P. Sinnett*, where the Master refers to them as "a geometrical synthesis of the whole occult doctrine," and says that they contain "the great problem of Life and Death, and — the Mystery of Evil." And then the Master says "The *chela* who can explain this sign from every one of its aspects — is *virtually an adept*." So we can safely leave it with this partial explanation.

THE EGYPTIAN TAU

This is also called the ansated or handled cross, and as a cross it bears all the general meanings that the swastika does, only it has perhaps a more *cosmic* significance. The vertical part surmounted by a globe serves to show the descent of spirit from the inner realms, until it is crossed by the horizontal line of matter in the worlds of manifestation. This symbol also stands for regenerated Man, or for an Initiate, and is indeed a sign of initiation. In ancient pictures initiates were often depicted carrying this cross. In Christian symbolism it conveys the idea of the "Word made flesh," mystically a crucifixion.

THE THEOSOPHICAL SEAL

Now we can place the serpent, with the swastika enclosed in a circle at its head, the interlaced triangles within the circle of the serpent, and the tau in the center; and we have the Theosophical Seal. The six points of the interlaced triangles almost touch the serpent, showing the reaching out by man, in all his principles, towards Wisdom and immortality during his evolutionary journey; and the tau, the regenerated man, stands in the center, which, representing the Divine or Atman, shows that man has become at one with his Divine part. But it is in our highest principle, the divine, that men find the realization that they are indeed not only brothers, but are in essence one and not separate entities. That is the aim of evolution: the realization of man's own divinity, and his kinship with all that is.

The Theosophical Forum

FOR ONE WHO DIED (1) — *Thomas Nugent*

Death, in the beautiful philosophy which has withstood the test of time, is a friend. People ask, What is Death? The wise of all ages have taught that Death is Sleep for the soul of man. And what is sleep? Sleep is Nature's method for restoring equilibrium to the tired body. Sleep is necessary for the continued life of man. It is one of Nature's unbreakable laws that we sleep.

No less necessary is the sleep we call Death. The grander life of the undying spirit-soul needs the sleep of death to refresh itself, to regain inner strength and equilibrium. Then, renewed, we can enter on our new day of life ready for what is to come. For the sake of the greater life which spans lifetime after lifetime the soul needs the sleep of death, and takes it.

And yet so many fear this Death, which is only Nature's seal to sanctify our orderly evolution and the release of the spirit for needed rest. They fear because they do not understand. And yet nowhere around us do we see death as an end in itself. We see change, growth, culmination of power, decline into death — and then rebirth. Always there is the rebirth. Always after the winter comes the renewal of life in the spring.

If we really want peace and strength we must learn to view man as an eternal being who wends his cyclic way from invisible world to visible world as what we call birth or death periodically claim him.

Man is not only a child of Earth but he is rooted in the Universe of which the Earth is but a single family-member. Therefore he is at home in the universe. When we become more familiar with death we shall not fear it; we shall know that in a long sleep we have

merely left this our earth-house of life to go to other and more spiritual mansions in "my father's house" of the universe.

Remember that you are a child of infinitude, each one of you, inseparable from the boundless Universe in which we all live and move and have our being; remember that you are well taken care of by almighty Nature's laws, which brought you here, which will take you out from this life, and which will infallibly guide you on your way. Trust yourself then to death in happy confidence; die with a strong and happy will; die with gladness when your time comes; be not afraid. . . .

Remember that you are well taken care of. — G. de Purucker: *Questions We All Ask*

The man we loved is the enduring individuality, who after his rest will return to this earth-life, return to the old associations he loved, to the friends of yore, to meet the problems yet unsolved, to work out the pattern of his life, taking up the threads where last he left them.

But for long years of sleep, purified, beatified, this soul rests,

completely engrossed in the bliss of all his personal earthly affections, preferences and thoughts, and gathers in the fruit of his meritorious actions. No pain, no grief, nor even the shadow of a sorrow comes to darken the bright horizon of his unalloyed happiness: . . . — *The Mahatma Letters to A. P. Sinnett*, p. 101

There the soul, purified of all material yearnings, rests in its own sphere, in perfect peace, in perfect bliss, dreaming dreams of all the deeds that it longed to do and could not do; seeing the accomplishments in its consciousness of all the nobler acts that it wanted to achieve in the life last past

and that it could not or did not achieve — dreams of spiritual beauty, dreams of spiritual happiness, dreams of spiritual peace, dreams of unspeakable reality. — G. de Purucker: *Questions We All Ask*

Law and order prevail throughout universal life. And one of these orderly procedures is what we call Death. But when we know we are eternal pilgrim-souls living life after life for experience, fear cannot touch us. We know "we are well taken care of." Poets and philosophers have sensed this truth of ancient wisdom and their writings for centuries have carried the message of hope that this belief inspired them with. The great Frenchman Victor Hugo wrote:

I feel in myself the future life. I am like a forest once cut down; the new shoots are stronger and livelier than ever. I am rising, I know, toward the sky. The sunshine is on my head. The earth gives me its generous sap, but heaven lights me with the reflexion of unknown worlds.

You say the soul is nothing but the resultant of the bodily powers. Why, then, is my soul more luminous when my bodily powers begin to fail? Winter is on my head, but eternal spring is in my heart. I breathe at this hour the fragrance of lilies, the violets and the rose as at twenty years. The nearer I approach the end the plainer I hear around me the immortal symphonies of the worlds which invite me. It is marvelous, yet simple. It is a fairy tale, and it is history.

For half a century I have been writing my thoughts in prose and in verse; history, philosophy, drama, romance, tradition, satire, ode and song; I have tried all. But I feel I have not said the thousandth part of what is in me. When I go down to the grave I can say, like many others, "I have

finished my day's work." But I cannot say, "I have finished my life." My day's work will begin again the next morning. The tomb is not a blind alley; it is a thoroughfare. It closes on the twilight, it opens on the dawn.

And the Celtic poet Fiona McCleod wrote:

There is great serenity in the thought of death, when it is known to be the Gate of Life.

Nature is very wise. For the one who died there is peace. The hand of mourning does not touch the freed soul. And though we who are here are filled with sorrow, that sorrow is in reality for ourselves at our loss. But as we hold in thought that dear one who has gone, our hearts are sustained by the fact of those immutable inner bonds which unite us, and by the assurance that we are not separated in Nature. We stand here waving a farewell, as it were, to that soul which has preceded us, knowing that we shall meet again. United by a communion of thought that is holy, we take courage, because we are endeavoring to forget our own loss in the recognition of the ineffable peace which soon will enfold the one who has gone. We raise ourselves inwardly to follow his own inward journey; and our own sympathy and understanding frame in words the thought, greater than mere comfort because born of experienced Truth, which bathes that soul itself, quitting this schoolroom of life:

O Divinity of me, that which is part of the Cosmic Essence of Being, thou hast fashioned a temple for the living god of me, my real undying Self. And I have lived there. But my work this time is done. I long for peace and rest. And so for a while I return Home. I need new strength before I return to earth to continue my conscious journey, endeavoring ever to grow inwardly that I may become strong and wise and able to help others!

O my Divinity, blend thou now with me that from the darkness of this earth I may go forth in Light!

THEOSOPHY AND CHRISTIANITY (1) — *Harold W. Dempster*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

Having joined the Christian Church at the age of twelve, I had read the Bible from cover to cover before I was twenty-one. I should, therefore, have a justifiable basis for speaking sympathetically on this subject: "Theosophy and Christianity." During the last seven years of association with the Theosophical teachings, I have become deeply convinced that Theosophy is not an enemy or a competitor of Christianity, but, on the contrary, is Christianity's greatest friend. Why? Because it points to, interprets and upholds the inner meaning of the Divine Nature and teachings of Christ, and at the same time confirms his mission in the world as a Great Spiritual Teacher of real Esoteric Wisdom, and therefore a Savior of the Human Race; that is, for those who have eyes to see and ears with which they may hear.

The main doctrine of Christ gives the comforting assurance that each individual may become like unto Him, in due course of time, in the familiar phrases: "I am the Way, the Truth, and the Life" and, "Greater things than these shall ye do," again implying the future. He does not here refer to himself as a "personality" as being "the way" or as the performer of "miracles," but to the Divine Principle within Him, which exists within the hearts of all men. It is instinctive from within the deeper side of man to desire to help others. But in order to help others wisely in ways that are vitalizing and permanent, it is necessary to be in possession of and to understand the Knowledge that deals with the Facts of Nature. When properly understood, and I repeat, when properly

understood, Theosophy is that Knowledge. Its literature abounds with logical and convincing interpretations of many hitherto misunderstood or little understood phrases in the Christian Scriptures. Theosophy simplifies, it does not complicate. Let me give you an example: An early Church-Father by the name of St. Clement, writes that when Jesus was asked when his "kingdom" would come into being, he replied, "It will come when two and two make one; when the outside is like the inside; and when there is neither male nor female." Does this make sense to you? What does it mean? Referring to Theosophy as the "Interpreter," Dr. G. de Purucker, present Leader of the Theosophical Society at Point Loma, gives a very simple and interesting explanation of this, in somewhat the following manner:

"The two and two make one" portion of the phrase, refers to the two upper and the two lower principles of man's composite nature, the upper two being the Universal Spirit and the Inner Christ, while the lower two in this case are the Soul of man and its vehicle, the physical body with its counterparts. In the long course of man's evolutionary growth, the two lower will grow into or unite with, the two higher, thereby forming a single Unity; hence the two and two shall make one.

"When the outside is like the inside" refers to the type of body man will have in the distant future as he evolves out of the present Fifth Root-Race type of dense physical body into an ethereal, luminous and more or less transparent one when he evolves into the Sixth Root-Race type; therefore, the inside and outside could be said to resemble each other.

As to that portion of the passage referring to the disappearance of the sexes, this will actually take place also, in the far off future, as man evolves from a bi-sexual entity into a sex-less, god-like Being. Thus, when the higher and lower become unified, the body

luminous and sexless, the Inner Christ will then be able to express itself with a greater degree of perfection, and the Kingdom of Christ or of Heaven shall become a reality upon earth. (2)

And so does Theosophy throw a flood-light upon all the early Christian scriptures. All that is needed is an open mind and an awakened intuition, which latter is really the Inner God. Nothing exists upon this earth that does not need periodic rejuvenation or quickening, whether it be a Theosophical Society, a Christian Church, or the Individual Soul of Man. And all men need the guidance of their own inner light and that of a Spiritual Teacher; but this guidance must be put into expression and conveyed with a Universal feeling, if it is to be understood and convincing to others. To become alert to a greater light on existing Christian doctrine, is to become more individually awake and alike unto the disciples of the Great Teacher Himself. And this in turn makes us more alive to the needs of our fellows, and to the ways and means of offering — but never forcing — to bring a renewal of life and understanding into their hearts and minds, greater than they have ever experienced before.

Now let us examine the words we are using and define their meanings. The term Christ comes from the Greek word *Christos*, meaning "anointed," or one who has been prepared for initiation into the Mysteries, or Secrets of Nature. The Hebrew word for one who has been "anointed" was *Messiah*, a term by which Christ is often referred to.

The term Theosophy also has a Greek origin and comes from *Theos*, meaning a God; and *Sophia*, meaning Wisdom; hence it means God or Divine Wisdom, Wisdom of the Gods, or the Wisdom-Religion as it is frequently called. It is as ancient as thinking man, which is millions of years old, and is therefore sometimes called the Ancient Wisdom.

This Age-old Wisdom has been handed down to evolving man from the highest evolved Beings of the Human Race, those who have become by a more rapid evolutionary growth the God-men or Sages of the Race — the Giants of all mythologies, if you like — and who have given out to mankind through their Messengers, appropriate portions of this Wisdom of the ages, as needed by man, in the various time periods and stages of his evolutionary development. Why? The answer is very simple. As the child needs paternal care and guidance to train and educate it to the full flower of human adulthood, so does man, as a whole humanity, require a deeper knowledge of the Laws of Nature, as taught by these Great Ones of all the Ages. By understanding the knowledge already existing in the world by means of the light that a deeper interpretation throws upon that knowledge, vast strides toward a greater unity of Science, Religion and Philosophy would result. Likewise a better relationship between one individual, one nation, or one Religion toward another would also certainly exist.

Instead of this, and due to ignorance of what the Theosophical interpretation of life and Nature really is, we have a world of confused thought, of angry emotional outbursts and wars, of prejudice against real truth, and forced thinking within certain accepted and traditional molds.

The facts of Universal Nature are so very simple. Let me name a few of them for you — Cause and Effect, Cyclic Periods, Evolution of Consciousness, the Spark of the Divine within all things, the Oneness of all Life, the Relationship of all to all or Universal Brotherhood. The child-like state of all clear and learning minds understands these instinctively and well, and strives to live by them. In fact, a man's Religion can be defined as that high standard of life or understanding by which he *lives*, not merely what he professes.

The study of the operations and laws of Universal Nature and of their relationship to man, is another way of referring to the primitive and therefore pure and simple doctrines of early Christianity, with which Theosophy is at one, because in essence they are one and the same. It is of little value to argue over the differences of meanings of various words and phrases in an unfriendly way. Unity comes from finding and understanding the factors that exist in common.

If I as a Christian discover in Theosophical writings an account of a similar story to the birth of Jesus in the story of Krishna, spiritual Savior of the Hindus of 5,000 years ago, I should not be disappointed because I had previously thought that the story of Jesus was that of the first and only Savior of the Human Race. Rather should I rejoice and be glad that the humanity of that day had a Savior who taught the Golden Rule as Jesus did, and elevated the human race thereby.

I see all men as evolving human Souls, growing greater each day, each year, each life-cycle upon earth. And I see all Souls eventually reaching that Inner Kingdom of Heaven as the Soul and the Spirit are unified into one Being — a god-man made perfect by the radiations of the Inner Christ.

What about the phrase in Christian Scriptures, "Know ye not that ye are Gods, and that the Spirit of the Most High dwelleth in you?" What does this mean? Obviously we are not very god-like today; hence this implies what man will become in the future. We are today only Gods in the making. Many rebirths will be required before that attainment is reached. Did not Jesus say: "Ye must be born again."?

We approach this higher state of consciousness every time we allow the Better Self within us, to expand our minds and open our hearts to manifestations or expressions of the Best that lies within

us. This is the way to peace and good cheer, for it is the path that leads to ever higher or deeper states of understanding toward the realization of the Oneness of all things, which is the basis for Universal Brotherhood.

May Christianity find in Theosophy what the Theosophical School of Thought seeks to give, namely: a deeper and clearer knowledge and understanding of each for the good of all.

The Theosophical Forum

QUESTIONS — *M. G. G.*

MEANING WHO?

Who did Pythagoras have in mind
Among the hosts of human kind
When speaking of the "living dead"?
Was it of those whose souls have fled:
Lost souls whose horrors few may learn,
Or those we meet at every turn:
The people who are sunken deep
In self-regard, and, dead asleep?

WHY AND HOW

Most people know that thoughts are things
Of instant speed on varied wings,
But who knows how and who knows why
These things loom larger when we die?
Does death tear down the fence between
The flesh and thought, befouled or clean,
To amplify a thousandfold
All things forgotten or grown cold?
And are our after states of death
Spun here and now from breath to breath?

MARTYRDOM

Why should one spurn chagrin or grief?
Or would one, thinking, just as lief
Be martyr to some galling thought
And care not what its future brought?
If we recount our thoughts and deeds,
In hades or in heavenly meads,

And these make up our after states,
Would we keep making hades dates?

The Theosophical Forum

H. P. BLAVATSKY AND MODERN SCIENCE — *H. T. Edge*

II

LIGHT OR MATTER

The quantitative law of electrolysis had, even before the days of *The Secret Doctrine* (1) familiarized us with the idea of a definite unit of electricity; but this was only in conjunction with atoms. It was left to J. J. Thomson to discover the electron as a unit independently of the atom. But an electric current is now regarded as a stream of electrons. Thus we have the electron as the basis both of matter and of electricity, and matter becomes an electric phenomenon. As we already knew from Maxwell that light is an electromagnetic phenomenon, we have thus light, electricity, and matter connected with each other. H. P. Blavatsky speaks of light condensing gradually into form and becoming matter (I, 73), of light becoming on the objective plane gross matter (II, 33), and of the mineral kingdom as being light itself (II, 169).

The essence of what has just been said is that the older idea, current in the days when *The Secret Doctrine* was written, that there are two independent principles, Force and Matter, or Motion and Mass, the one active and potent, the other inert; and that physical phenomena can be interpreted as the action of the active forces on the inert matter; that this idea has disappeared. In its place we are now coming to the idea taught by H. P. Blavatsky, the idea of a single life-principle, manifesting itself in various ways; matter itself being merely one of these ways. Matter is a condensation of the universal life-principle. Under the old view it was impossible to explain how the force acted on the matter; or how mind can act on matter. How could an immaterial

spirit contact an inert material substance? The problem of *actio in distans* again. But under the new (or, rather, ancient) idea, both the force and the matter are different grades of the same thing; the difference is analogous to that between steam and ice.

"MODES OF MOTION"

H. P. Blavatsky frequently ridicules the idea that light, heat, sound, and other physical agents, are merely "modes of motion." Such an expression leads us to ask whether these "modes of motion" are causes or effects. There was always a notable ambiguity about the use of the word "force" by physicists. Dynamically speaking, force is an *effect* of matter in motion. Then what sets the matter in motion? The answer again must be "force." So that there would seem to be two kinds of force, one which acts as a cause setting matter in motion, and the other as an effect produced by matter in motion. Heat is defined as a form of energy, being either the energy of vibrating particles of matter, or the energy of a wave motion in the ether. Thus it is an effect; it is also an abstraction. The idea advocated by H. P. Blavatsky is that heat is an entity, a force independent of matter, one of whose effects is that of setting the particles of matter in vibration. But science said that the heat *is* that vibration. Speaking of the physical forces, H. P. Blavatsky says:

Occult Science defines all these as Super-sensuous effects in their hidden behavior, and as objective phenomena in the world of senses; the former requiring abnormal faculties to perceive them — the latter, our ordinary physical senses. They all pertain to, and are the emanations of, still more supersensuous spiritual qualities, not personated by, but belonging to, real and conscious CAUSES.
(I, 145)

At I, 601 begins a chapter entitled suggestively, "Forces — Modes

of Motion or Intelligences?" In it she points out that certain things which mechanical science has to assume for its groundwork can never be explained by mechanical principles (which is of course a logical truism). To explain them we must go beyond the limits of the particular science for which they were postulated as elementary indefinables. Take as an instance gravitation — or, to use a wider term, attraction. Attraction has to be assumed as one of the bases of a mechanical system; it is idle therefore to seek to refer it to a mechanical cause. The great Newton suggests a Spirit, and seeks to penetrate no farther. H. P. Blavatsky here insists that behind all motion must lie intelligence. Prominent scientists of our day are willing to admit this. It is natural to suppose that what occurs in our own constitution, when we make a movement, also occurs in greater Nature — the thought precedes the act. Further she says that it is useless to seek the basis of physical matter in physical matter itself; if we are to have matter at all, then it must be matter in some other state. It is matter, she says, that cannot be conceived by the five physical senses, and therefore cannot be conceived by a mentality limited by those senses. This primeval matter she denotes by the Sanskrit word *Akasa*. The Esoteric Doctrine —

teaches that it is this original, primordial *prima materia*, divine and intelligent, the direct emanation of the Universal Mind — the *Daiviprakriti* (the divine light emanating from the *Logos*) — which formed the nuclei of all the "self-moving" orbs in Kosmos. It is the informing, ever-present moving-power and life-principle, the vital soul of the suns, moons, planets, and even of our Earth. (I, 602)

Speaking of "life," she quotes Dr. B. W. Richardson's views as to the existence of a vital principle, which he regards as of a material nature, but not of ordinary matter; and says that

Theosophists recognise a distinct vital principle independent of the organism. A "mere interaction of molecules and atoms" is of course a mere abstraction: moreover it makes of life both a cause and an effect. We need life to account for the activity of the molecules; how then shall we define life as being nothing more than that very activity?

The source of the trouble about a life-principle is that we begin with the false assumption that matter is dead, and then try to explain why it is alive. If we began by assuming that it is alive, there would be no need to postulate a separate life-principle. The same difficulty occurs as to the problem of how mind acts on matter. The truth is that the two are not *essentially* different or separate. Theosophy teaches a doctrine which was partially advocated by Leibniz — that the manifested universe is composed of *monads*, *i. e.*, living souls; so that physical matter is composed of monads in one state or degree of their evolution, and mind is composed of monads in another stage. It is the same as regards "life" and "inanimate matter": these terms denote a false distinction. By imagining a dead matter, we are obliged to imagine an immaterial life-principle; whereas all matter is living, and all life has a material basis. On this point Dr. Richardson is quoted:

"I speak only of a veritable *material agent*, refined, it may be, to the world at large, but *actual and substantial*." (I, 603)

Speaking of attraction and repulsion, H. P. Blavatsky continues:

Occultists . . . see, moreover, in these two opposite Forces only the two *aspects* of the universal unit, called "MANIFESTING MIND"; in which aspects, Occultism, through its great Seers, perceives an innumerable Host of operative Beings: Cosmic Dhyan-Chohans, Entities, whose essence, in its *dual* nature, is the cause of all terrestrial phenomena.

For that essence is co-substantial with the universal Electric Ocean, which is LIFE; and being dual, as said — positive and negative — it is the emanations of that duality that now act on earth under the name of "modes of motion." (604)

Three points should be noticed in the above: (1) that "modes of motion," though a legitimate and convenient phrase, is merely the effect of unspecified causes; (2) that even such words as "mind" and "intelligence" denote abstractions, unless regarded as the attributes of *beings*. Science, considered as a speculative philosophy, is highly metaphysical, being built on abstractions, ideas; the only possible reality is a conscious being, an individual, a monad, a person — as it has been variously called. The universe is an assemblage of such beings, differing among themselves in the stage of evolution in which each may be, but alike in essence. (3) That direct perception of ultra-physical things requires the use of ultra-physical senses.

PLANCK AND EINSTEIN

Planck has endeavored to embrace the ideas of atom and vibration in a new physical unit, which he calls a quantum of "action," whose dimensions are energy X time, and which is measured in erg-seconds. This has a mathematical value, but we have not yet learned to form a mental picture to suit it.

Einstein, by combining the two principles that all motion is relative, and that the velocity of light is independent of the velocity of its source, has evolved a theory which seems to flout common-sense — namely, that the velocity of light is independent of the velocity of the beholder. This is agreeable to the negative results obtained by the oft-quoted Michelson-Morley experiment, which failed to detect any variation in the apparent velocity of light due to the motion of the earth relatively to the source of the

light. But what we have called "common-sense" is based on Newtonian kinematics, by which space and time are taken as independent variables. This assumption, which is suitable for ordinary purposes and within the limits to which Newton confined himself, has proved unworkable in some of the fields of the very small and the very great which science is now investigating. Hence Einstein has chosen a new set of assumed data on which to build his kinematical and dynamical system. He no longer treats space and time as independent of each other, but makes them interdependent. He postulates no fixed space-framework by which we can measure velocities; velocities can only be measured relatively to each other.

SPACE

The meaning to be attached to the word Space is a frequent subject discussed in *The Secret Doctrine*. But to understand the relation between the views there propounded and the views commonly accepted, we have to understand not only the former but also the latter. And many people have confused ideas on this subject. They do not discriminate between physical space and geometrical space; which has led to all sorts of fantastic stories about "the fourth dimension." Physical space is that which is apparent to our bodily senses, and it is three-dimensional, neither more nor less. Geometrical space may have as many dimensions as you please; for it is an ideal construction, devised for interpretative purposes. H. P. Blavatsky uses the word both generally and specially: she speaks of Space, and eternal principle; and of various kinds of space, each of them correlative to some particular plane of perception. If we think in words, rather than in ideas, we may fail to understand her; we must glean the meaning of the word, intended in any particular passage, from the context.

Our object is to show that the ideas of science have lately undergone a change in favor of those of H. P. Blavatsky.

Space was apt to be regarded as mere emptiness, as the absence of matter, as a container. But H. P. Blavatsky, in common with some philosophers, regarded space as an entity, and as being a fulness not an emptiness. It is called the Great Mother, the Womb of Nature. Now compare this with the view that many properties supposed to inhere in matter are now regarded as inhering in space, or rather in whatever may be between the particles or masses of matter. It was Faraday who long ago proved this as regards electrostatic charge; but the idea has now become developed and extended. It is true that, for space, we sometimes say "aether." At any rate the idea of empty space has mostly disappeared as a practical proposition. It is nowadays quite orthodox to regard interstellar space as a storehouse of energy; even to regard matter as a sort of exudation from space or condensation of space. Instead of space being a hole in matter, matter is a whole in space! The disciple has to learn "the fulness of the seeming void, the voidness of the seeming full." Space is one of the fundamental hypostases, according to the Secret Doctrine; and on all planes we have copies of it — spaces of different kinds and degrees. Space is Aristotle's "privation," it is the blank paper, the screen, whereon forms are to be made manifest. Only, the forms are not placed upon the paper, they are born from out it. Space contains in potency all that is subsequently manifested.

MOTION

This is another of the fundamental hypostases. Scientifically it is an abstraction — that attribute possessed in common by all moving bodies. But the world and all that therein is was never created, never set to work and maintained in life by an

abstraction. It is of course unfair to ask science to explain motion, since it is one of their fundamental unprovables, one of the things they have had to assume as a basis for their philosophy. A postulate cannot be proved within the limits of the science for which it is postulated. Similarly, if motion is to be taken as one of the fundamental hypostases of the universe, we obviously have no simpler terms by which to define it, and must leave it undefined, assume it. But perhaps it will not hurt us if for once we lay aside the itch to define and if we are content to say that motion simply *is*. But let us not transfer to other realms the idea of motion as we know it on the physical plane: a more general term will suit better — "change," for instance, or that blessed word "vibration." Even physical science finds it can no longer get along with the idea of motion as a simple transference of bodies from one part of space to another. The word also acquires a different idea when applied to the realms of thought and emotion. Motion means activity and change. It is seen in the Great Breath, the ceaseless alternation between Manvantara and Pralaya.

This "Be-ness" is symbolized in the Secret Doctrine under two aspects. On the one hand, absolute abstract Space, representing bare subjectivity, the one thing which no human mind can either exclude from any conception, or conceive of by itself. On the other, absolute Abstract Motion representing Unconditioned Consciousness. Even our Western thinkers have shown that Consciousness is inconceivable to us apart from change, and motion best symbolizes change, its essential characteristic. This latter aspect of the one Reality, is also symbolized by the term "The Great Breath," a symbol sufficiently graphic to need no further elucidation. (I, 14)

The Secret Doctrine states that motion is essentially circular. A

circular motion may generate a helix, and the helix bent into a circle yields a vortex, and so we may go on compounding indefinitely, generalizing by saying that motion is Vortical. The Newtonian mechanics have assumed motion to be essentially rectilinear, and have explained the circular orbits by means of a gravitational pull exercised between the primary and its planets or satellites. Newton himself, while postulating this force, confesses his complete inability to explain its nature in scientific terms, and can only suggest a spirit. We have recently become familiarized with the idea that gravitation is not a force, but an effect produced in some other way.

ATTRACTION

We too easily slip into the habit of speaking of an effect as if it were a cause; and attraction is surely an effect. The word expresses the fact that two bodies are drawn towards each other. To say that they are thus drawn together by the force of attraction is playing with words, much as we might say that a body is moved by the force of motion, or a man walks by the force of ambulation. To recognise attraction as an effect (whose cause we do not know) does not prevent us from formulating those familiar laws which govern it, relating to the product of the masses and the square of their distance apart. The old bugbear of *actio in distans* crops up again here: the difficulty is caused by the attempt to explain nature in terms of an atomo-mechanical theory, which postulates particles and empty spaces as primaries. Such a theory, excellent for certain purposes, is insufficient for other purposes; a force of attraction has to be *assumed*. H. P. Blavatsky quotes Newton as to attraction:

To him it was, he said, a purely mathematical conception involving no consideration of real and primary physical causes. In one of the passages of his "Principia," he tells us

plainly that, physically considered, attractions are rather *impulses*. In section xi (*Introduction*) he expresses the opinion that "there is some subtle spirit by the force and action of which all movements of matter are determined." (I, 490)

GRAVITATION

This comes under the head of attraction. As H. P. Blavatsky says, astronomers, finding the hypothesis of gravitation a convenient means of enabling them to represent the mechanics of the solar system, do not trouble as to the *cause* of this "universal law."

They call Gravity as law, a *cause* in itself. We call the forces acting under that name *effects*, and very secondary effects too. One day it will be found that the scientific hypothesis does not answer after all. (I, 490)

And we are reminded of Einstein's explanation, which claims that the effects attributed to gravitation follow logically upon his ideas of space and time, so that it is not necessary to suppose such a force at all. And furthermore, it is claimed that this new explanation accounts for certain celestial phenomena which gravitation has failed to explain. So that the prediction just quoted has been fulfilled to some extent at least. Others are studying the possibility of regarding the solar system as an electromagnetic system, and thus accounting for the effects which go under the name of gravitation. Newton protested against the assertion that he had proclaimed gravitation as the *cause* of his system; he declares he can form no notion of the cause of attraction, and is content merely to formulate its effects. In seeking for the Noumenon, he can only whisper reverently the name of God. But Occultism, disclaiming belief in a personal deity, and adding that even a supreme deity would not interfere directly in every detail of his universe, speaks of Gods, an ancient

superstition, if you please, conceived in the infancy of humanity, but exploded in our cultured age. These Gods are "the creative fashioning powers" (I, 492); they are noumena of phenomena. Accepting man as a pattern of Nature, we may reasonably suppose intelligence behind the movements; which does not prevent us, if so minded, from formulating the mechanics of these movements. Failure attends those who seek to include even man himself in a purely mechanical system, and to make his very thoughts and volitions the results of molecular movements.

We can actually formulate a law of gravitation, based on the square of the distance and the product of the masses; and we can investigate it on the small scale as in the Cavendish experiment; but this gives us no clue as to its cause, and even the law as formulated seems to have been proven inaccurate in the case of those anomalies which Einstein's theory claims to have accounted for.

(To be continued)

The Theosophical Forum

SELF-DIRECTED EVOLUTION — *Martyn Witter*

Self-directed evolution becomes a reality when an individual takes it upon himself to wilfully direct his course of action along chosen paths. While evolution from the rocks to the stars does take place through the urge from within yet self-directed evolution is a self-conscious function. Indeed could not this be the end and purpose of self-consciousness?

Patanjali states in his *Yoga Aphorisms*, Book IV:

The mind, though assuming various forms by reason of innumerable mental deposits, exists for the purpose of the soul's emancipation and operates in co-operation therewith.

Likewise the *Maitri Upanishad* asserts that mind is the means of release for mankind while it can also be a bondage if it is directed to the material and objective state of things. Self-directed evolution can become a reality in our lives only if we have the strength of will to make it so.

As the driver of the car today controls its course by the mechanism of the steering wheel so can the occult student control his course of activity by attitudes of mind. The gas of the car corresponds to our will and the divine urge, the road to the path that has been blazed by those who have gone before, the car to our living temple, and the driver to the self-directed manas.

It is from the higher part of our constitution that we draw the necessary intuition and insight required to map out a course of action in the process of conquering self and to meet the many obstacles that are sure to come. We need the influence of the "thread self." As *The Voice of the Silence* has it:

Ere the gold flame can burn with steady light, the lamp must stand well guarded in a spot free from all wind. Exposed to shifting breeze, the jet will flicker and the quivering flame cast shades deceptive, dark and ever-changing, on the Soul's white shrine. And then, O thou pursuer of the truth, thy Mind-Soul will become as a mad elephant, that rages in the jungle. Mistaking forest trees for living foes, he perishes in his attempts to kill the ever-shifting shadows dancing on the wall of sunlit rocks.

One must have great strength of will otherwise failure is insured from the start. The mind is but a burden unless it is brought under control and made into a servant. Side by side with mind control must come a deep insight and understanding of the emotional aspects of the personal man. Theosophy is the great illuminator and with its help we can easily see the personal side of our natures for what it is. Understanding brings control. With control comes confidence and faith in ourselves, which is a necessity. Thus equipped we shall have started a task that requires as much vigilance as would be required to drive a racing car at high speed. Yet speed is an unhealthy state of affairs as we can see in our world today. Every student knows that it is best to make haste slowly. It is not speed that is required but vigilance. Indeed eternal vigilance is the price of victory!

The Theosophical Forum

STRENGTH THROUGH EXERCISE — *G. de Purucker*

Our destiny lies in our own hands, and we can make or mar ourselves. No god forbids, no god imposes; we are children of the Divine, and therefore partakers of the divine freedom of will; and in our own feeble way as only partly evolved souls, we work out our destiny. As we shape our lives, so those lives shall become: good, bad, shapely, distorted, beautiful, or ugly. We make them such. There is no fatalism in this. All Nature surrounding us is not only aiding us, but at the same time strangely enough, to a certain degree restricting us so that it gives us an opportunity to exercise our strength against opposition, which is the only way to develop a good pair of biceps!

Exercise brings out strength. If Nature gave us no chance to prove the god within us, we should never grow. Therefore Nature is not only a beautiful, helpful mother, but also a stern nurse watching over us with an infinitely compassionate eye, and insisting by her operations and reactions to what we do or follow with our own will, that this will shall grow in strength through exercise; that our understanding shall become brighter and keener through use.

MORALITY: THEOSOPHICAL VIEWS ON A VITAL SUBJECT (1) —
Clifton Meek

Of all the mistaken theories that have masqueraded under the name of religion probably none has been more philosophically unsound than the idea that morality can be enforced upon men by external methods and mere physical observances. It has always failed for the obvious reason that it deals only with externals and the shell of things; the physical aspect of human nature. It does not reach the soul and spiritual nature of man from whence spring his nobler aspirations and the desire for better things which must necessarily precede all spiritual growth. Evil is born in the heart and mind of man, not in the chemical elements of the physical body, which is but the passive and temporary instrument of the vital forces of varying degree of spirituality that compose the real man. The hackneyed phrase "sins of the flesh" is a meaningless term designed to conceal men's ignorance of the true nature of the constitution of man and the spiritual process of universal nature working within his inner being.

The purpose of religion should be to instruct men in wisdom and the deeper laws of being, thereby arousing a spiritual desire for nobler living, instead of trying to "railroad" human souls to perfection by controlling their external actions on the physical plane. Man's spiritual evolution is a matter of inner growth and the un-foldment of inherent qualities, and attributes, not a "cramming" from without. It is the work of ages, and human beings will evolve no faster than their intellectual and spiritual faculties are unfolded and brought into play. When this occurs, the actions and events of man's external life will naturally fall into line and shape themselves accordingly, and the desires of his

selfish, animal nature will no longer control him.

Orthodox religion, for the most part, has been working on the theory that man is inherently bad and that divinity could be high-pressured into his rusty spiritual bearings by an external process much in the fashion that an automobile is lubricated. He has been told that the mechanism of his spiritual and moral betterment was a complicated machine outside of himself and beyond his understanding, rather than a state of consciousness within himself. In every age sincere but misguided men have not only attempted to force their interpretations of what they called "the laws of God" on others, but have inflicted inhuman suffering upon those who dared to follow the dictates of their own conscience which is the only royal road to perfection and spiritual enlightenment. No man, whatever his spiritual status may be, has the right to enforce his religious and moral concepts on another any more than he has the right to force physical servitude and slavery upon a fellow human being, and in fact, much less. The same law of nature that insists that man digest his own food likewise insists that he may learn to walk on his own spiritual feet. He may frequently stumble and fall, but such is the law of nature for it is the only way by which he can learn and grow. No man is a whit more moral, nor has his spiritual stature been increased an iota if he follows physical observances merely because some law prevents him from doing otherwise. He may completely master his physical body and its natural functions by the force of sheer will, but still have a mind and soul that is twisted and warped.

There is no better illustration than the case of the Hindu yogi. He may live the life of celibacy and lie on a bed of spikes all his life completely immune to physical pain, but still have a heart that is filled with evil and utterly lacking in love and compassion for his fellow human beings.

The untouchable of the lowest caste who goes about his daily life in a normal way, fulfilling his humble duties and who sees divinity in his humble, ragged neighbor, is his spiritual superior in every way, and neither the world nor mankind is better for the yogi's fanaticism

KUAN YIN, THE BUDDHIST MADONNA (1) — *Hans Nordewin von Koerber*

The Madonna-concept, both Christian and Buddhist, is a product of the genius of the Indo-European race. The Buddhist concept, in particular, had its inception in India, its youth in Central Asia, and received its elaboration and conventionalization in China through the inspiration of the Chinese people.

The Madonna-concept can be rightly evaluated only if we approach the god-concept of the race, which forms the background for the Madonna. If asked for information by a stranger unfamiliar with its meaning, we naturally will proceed to tell him of God, of St. Mary, and Jesus, the child, and of the relationship they have to mankind in particular and the universe as a whole in an attempt to make him see the significance correctly.

Thus it will be useful also, if we first take our imagination far away to India and erect as clearly as possible the god-concept that the ancient Brahmans had conceived and practised. We find, for instance, in *The Bhagavad Gita*, in the tenth chapter, the following statements concerning God, the Creator of heaven and earth:

I am the Self, seated in the heart of all beings; I am the beginning, the middle, and also the end of all beings. . . Having pervaded this whole universe with one fragment of Myself, I remain. . . . Understand thou, O! Man, that thou hast gone forth from a fragment of My splendor.

And in the sixth chapter of the same text we read:

However men approach Me, even so do I welcome them, for the path men take from every side, is Mine.

This only one God is called Janardana, that is "Infinite Glory." What a remarkable name that is; so much depends on the name that we give Him! As the name is, so is our attitude and approach to God. If we call Him Lord,

we see in Him a lord with the corresponding amount of reserve on our part; if we call Him Judge Righteous, we see in Him a judge with the natural amount of fear in our heart; if we call Him the God of all gods, we approach Him accordingly; and so will our attitude be different, if we see in Him a God of Love and Compassion, or a Father, or Infinite Glory, etc. The prerequisite for lofty conceptions such as Infinite Glory, Father, God of Love and Compassion, and similar ones, are on the part of the race:

- (1) powerful ability to perceive
- (2) efficient susceptibility to receive
- (3) unobstructed mentality to conceive
- (4) an equivalent spiritual power not to abuse or misuse what comes to men in the nature of divine revelations.

There are races well endowed in that way, and others that are less gifted, and again others that are gifted very modestly only.

Of this Janardana it is said in the first chapter of the Vishnu Purana:

The only one God, Janardana, takes the designation of Brahma, Vishnu and Shiva, accordingly as He creates, preserves, or destroys. . . He is the cause of creation, preservation, and destruction.

This means that God continuously manifests in a threefold way, namely as a creative energy, as an ordaining and maintaining energy, and as a transforming and dissolving energy. Such a triplicity (called *trimurti*) reflects the essential nature and character of the godhead and is certainly identical with the trinitarian aspect of the godhead such as has been conveyed to us by the various Christian mystics throughout centuries, namely: LOVE (the creative energy), WISDOM (the ordaining and maintaining energy), and WILL or HOLY GHOST (the transforming energy).

Around these three fundamental and concomitant manifestations of the Godhead had, in the course of time, developed philosophies and rituals; soon the three basic qualities of Janardana were made into deities, i. e., Brahma, Vishnu, and Siva. Therefore one speaks of the "three religions":

Brahmanism, Vishnuism, and Shivaism. The Brahmanic civilization, as a social system, had been built up on the foundation and the essence of these three religions. As it is always the case in every civilization, there comes the time when the spiritual content vanishes more and more in proportion to the degree of mental and moral negligence on the part of mankind to whom the revelation originally came. If that takes place, the system becomes clogged with wrong thoughts and interpretations, the spirit becomes subdued, and soon petrification is the result.

Such happened also in ancient India. As a consequence of that there arose in the fifth century b. c, a young man by the name of Gautama Siddharta Sakyamuni, "The mighty of the Sakya family, the most victorious on earth," a prince of royal blood, the heir to the throne of his father, who took issue with the churches then well established. He had great compassion with suffering mankind and was himself struggling in the effort to solve the social problems of his days.

After receiving what they call "illumination" (*bodhi*), he became a *buddha* (an illumined one) and thus was the Buddha of our age or *Kalpa*. For well conceivable reasons he did not stress the existence of the godhead, although he certainly knew of it; it is beyond doubt that he had enjoyed the best education that India could give him in those days, and that he was well acquainted with the several "isms" of his time. He taught that the world came into existence by itself and is ruled by well-ordained laws. He neglected, however, at least in public, to draw the necessary conclusion, namely: where there are laws, there must also be a lawgiver, in other words, there must also be an Intelligence Supreme. Thus he put himself on an atheistic ground. This atheistic momentum is, of course, reflected everywhere in his own philosophy. He also maintained the belief in the cycle of reincarnations (metempsychosis), upheld Karma, i. e., the Law of Action and Reaction, and professed to have found the means to overcome this law of Karma and thus to be freed from the compulsion of rebirths, leading to a condition of freedom and beatitude, called Nirvana.

On such a ground, covering at least 2,000 years of evolution, has developed the seed for the Buddhist Madonna, a concept that was to grow mightily much later, about 1,000 years after the death of Buddha.

Gautama Siddharta was born in b. c. 561 and died in b. c. 480. About 150 years later, to be exact in b. c. 325, Alexander the Great, a Greek, the phenomenal conqueror and scholar, extended his domain to what today is Afghanistan and northwest India (Punjab) and established there a most prosperous outpost of Greek civilization and thought. It was through this contact with Greece and her several divinities (including the one great unknown god, in whose honor they had erected a temple in Athens) that *theistic* elements crept into the atheistic philosophy of the Buddhist church. When in b. c. 250 King Asoka officially accepted Buddhism and thereby became the Constantine of the Buddhist church, the Buddhist dogma had already considerably changed towards the positive. While this development went on, an ever-growing distance became noticeable between the orthodox Buddhists and the ones of northwestern India. This led, about 500 years after the death of Buddha, on the occasion of the Fourth Church Council (100 a. d.), to the great dissension and split: Hinayana and Mahayana, the former perpetuating dogmatic loyalty and narrowness with Pali as its sacred language, the latter breathing freedom and greater possibilities, using Sanskrit as its sacred language. Several developments in India gradually pushed Buddhism aside; it was completely expelled from its native land during the tenth and eleventh centuries, that is 1500 years after the death of Buddha!

Hinayana Buddhism with its atheistic dogma spread to and settled in Ceylon, Burma, Siam, and French Indo-China. It also gained a foothold temporarily in the Malay Archipelago (Java in particular).

Mahayana Buddhism with its strong theistic tendencies — a mixture of Brahmanic and Greek thought — came to China about 900 years after the death of Buddha during the Wei Dynasty (386-550) and spread from there to Korea and Japan, and later to Tibet and Mongolia where it became closely

associated with Hindu thought and native deities. This conglomerate religion of Tibet and Mongolia is usually called Lamaism.

It was in China, through the medium of theistic Mahayana Buddhism with its Greek inspiration, that the Madonna concept rose to prominence. Let us now trace this concept from its inception in India to its perfection in China.

Some time during the third or fourth centuries, two imaginary figures had developed in the "pantheon" of Mahayana Buddhism, whilst it still was in vogue in N. W. India and Central Asia, namely the Dhyani Buddha Amitabha, and the Dhyani Bodhisattva Avalokitesvara. Both figures had reached completion in their evolution sometime during the fifth or sixth centuries, when the deification of Buddhas, Bodhisattvas, and Saints was well on its way.

Who is Amitabha? Since Buddha, the historical one, is gone and no longer within the reach of mankind, dogma deemed it necessary, compelled by public dissatisfaction, to create a spiritual counterpart of him for the purpose of functioning on earth. Here is not the place to ventilate the several hypotheses that exist on this subject; it is sufficient to state that the essence of Gautama Siddhartha became projected and embodied in a meditative or contemplative type of a Buddha (a Dhyani Buddha), who is, together with others of the same category, permanently functioning and residing in the likewise imaginary paradise Sukhavati, located in northwest Tibet. There he is constantly exerting himself for the benefit of humanity by way of profound contemplation. No mortal may enter that paradise. However, man can approach Amitabha and communicate with him effectively through the medium of the congregation. Therefore, in Mahayana Buddhism Amitabha received more attention than Gautama Buddha himself, yea, he is the center of the worship, and as such most powerful. In China, Amitabha is called Omifo, and in Japan, Amida.

Who is Avalokitesvara? In order to satisfy the expectation and the prayers of both the worshipers and the faithful ones the creation of meditative Buddhas was not enough; Dhyani Bodhisattvas were still to step into the

picture. Usually, a bodhisattva is a human being (sattva) who has already succeeded in obtaining a certain amount of illumination (bodhi) and need, therefore, not return any more to earth for another incarnation. After his physical death he will be a buddha. The meditative Buddha Amitabha is so frequently moved in his compassion for suffering mankind that he deems it necessary and helpful, temporarily to take on the bodily form of a human being who is on his way to perfect illumination (i.e., the bodily form of a *bodhisattva*). In such a way Amitabha can walk among men and teach, can help and console, and live with them, can eat and sleep with them just as the Lord Buddha himself did when he walked over this earth. Naturally, such a temporary manifestation found an immense echo, and it is Avalokitesvara "the Lord (isvara) who graciously looks (lo-kita) down upon (ava) mankind," who actually is the most cherished and the most beloved divinity in the pantheon of Mahayana Buddhism. Yet let us not be forgetful of the fact that both Amitabha and Avalokitesvara are merely imaginary figures.

And in China, there happened something extraordinary to the Dhyānibodhisattva Avalokitesvara. He had to perform a metamorphosis of a peculiar kind; he had to become female. Several influences led to this change. Only the most significant influence may be mentioned here. The Chinese were taught that Avalokitesvara is a lord of greatest compassion and profound divine love. It is just here at this psychological juncture that the genius of the Chinese race proved to be unwilling to accept this as it was. The Chinese can see in a lord, in a ruler, in an elder, in a father, a person of greatest respect and admiration; they can discover in him an abundance of friendliness, benevolence, and similar characteristic traits, but there is always a distance, a reserve, that remains. Genuine, real love — so they say — is only possible in a mother, where there is no distance between her and her child. And thus the Lord of Compassion and Love became female, a goddess. She rapidly developed to a national deity; yes, it is safe to say, that for some time she became *the* national divinity of China. Her name is Kuan Yin, an attempt to translate the name Avalokitesvara. This Kuan Yin concept was pretty well established by the end of the thirteenth century, that is,

1800 years after the death of Buddha. Kuan Yin prominently shows all the virtues of real womanhood: motherly love, humility, endurance in suffering, nobility in character, never failing in co-ordinating and subordinating her motherly instincts — really the most perfect representation of true and indisputable womanhood such as it should be in accordance with the ideal conceived by the genius of the Chinese race. From China Kuan Yin was introduced to Korea, and from there to Japan. In both lands, however, she never was accorded the place of a national deity. As such Kuan Yin exclusively belongs to China.

A word will still have to be said about the materials of which Kuan Yin figures were and are being made. The kind of material is really of importance as the means by which the artist wants to show the inner nature of his conception as well as to arouse a corresponding emotion in the onlooker. The innermost of every unit of matter is spiritual, or, in other words, the substance of matter is spirit. Grass is grass because of its inner nature, tree is tree, not because of the name that man gives to it as the designation of a species, but because of the concept placed into it, because of the spiritual essence it contains and because of the purpose it reveals. Thus for the same reason water is water and not stone, fire is fire and not soil, etc. In other words, water is water because of its inner nature and fire is fire for the same reason. Water, ever in readiness to be used, shows humility and only thereby the right preparedness to serve; it betrays divine energy and thus quickens; it shows divine contempt of what is dirty and thus cleans and diffuses. Fire, reflecting God's benevolence, emanates warmth and light, two requisites absolutely necessary for Life; it also reveals the holiness of God and is thus consuming and thereby purifying. In a similar way we have first to disclose the innate spirit of the jewel, of the semi-precious stone, of wood, and of whatever material that may be. Both the artist, i. e., the creative genius, and the artisan or craftsman, i. e., the reproducing mind, intend to represent their conception of the madonna through the most appropriate means available, that is, through the right material that suggests to the onlooker the correspondence between the spirit inherent in

matter and the spirit contained in the conception of the artist.

If, therefore, the artist wishes to stress *heavenly charm*, he takes sandalwood because of its grace and scent. If he wishes to emphasize *luminous virtues* he uses jade; if *diversity in virtues* he selects the carnelian. If he wants to show *refinement in character* he avails himself of ivory. If *spirituality* is his vision, rock-crystal appears to be the most appropriate material. Marble suggests *noble solidity and permanency*, sardonyx *heavenly emotions*, quartz *divinity in action*, onyx *luminous iridescence by virtue of spirit*, and turquoise *homogeneousness with the all-pervading ether*. Lacquer is used to suggest *successful evolution*, horn to show *freedom from poisonous qualities*, and iron to disclose *power to protect from evil forces*. Clay and porcelain in general is used, if the artist is especially concerned with the concept of *heavenly pliability* or *heavenly beatitude*, white porcelain (blanc de Chine) in particular to stress the *lovely innocence in virtues*. By way of painting the artist attempts to express the *esoteric approach to the divinity and through her to nature*.

This interpretation of the Buddhist Madonna would not be complete without a few remarks relative to the styles of the figure. Characteristic are its posture, its attitude, attire, and attributes. In order to bring out this distinction appropriately, it is well to state first that Gautama Siddharta Buddha (the Lord Buddha) is usually represented in his classical attitude, standing, as a thinker, or teacher, garbed with a very simple monastic robe, while the Dhyani Buddha Amitabha mostly appears as being seated in the oriental fashion, cross-legged, upon a white lotus flower, holding the ambrosia vessel in his hands which are resting in his lap one above the other, palms upward. His hair has no adornment, only showing more prominently the topknot (*ushnisha*); his forehead is provided with the third eye, the eye of wisdom (*urna*). The attitude of crossing the legs with both soles of the feet upwards symbolizes that his whole body, including his feet that normally show downward and touch the ground, has become illumined; the celestial powers are thus streaming perfectly through his feet as well and bringing about a harmony of the two conflicting energies in the

universe, i. e., bringing about the conciliation between the positive and the negative principles. The white lotus symbolizes the process of purification through which Buddha has gone successfully; therefore, he has the privilege as well as the right to be supported by the all-conquering and purifying forces of the spirit of the lotus. The ambrosia vessel represents the mendicant's bowl into which he received earthly food, and which is the bowl whereinto heaven now places its bread, ambrosia, for the nourishment of mankind.

The bodhisattva type is characterized by a standing figure of Greek fashion, and in China its distinctive attribute is the treating of the hair, in which the topknot (*ushnisha*) is drawn up into a mitre shape, often adorned with jewels, or concealed by a tiara. Other attributes frequently appear, such as necklace, armband and girdle, trailing scarfs over arm or from the waist, elaborate pleats of skirt or cloak, ear-rings and long swinging chains, all derived from Indian sources. Beside this, the Dhyani-bodhisattva Avalokitesvara usually wears a five-leafed crown, of which the leaf in the middle shows the figure of Amitabha, his spiritual father. Thus we have in him an Indian divinity-concept placed in a Greek body showing attributes that represent ideals and fashions of India, Central Asia, Mongolia, and China. In addition to this, the Avalokitesvara figure in Korea discloses certain Korean features, the one in Japan Japanese characteristics, and the one in Tibet Tibetan traits. In the latter domain we find, for instance, figures of paintings representing Avalokitesvara with six arms and eleven heads, or with a thousand arms and eleven heads. In this way the primitive and therefore very natural mind of the people wishes to emphasize superexcellency and efficiency in seeing, hearing, thinking, helping, etc., on the part of the deity. Avalokitesvara as Kuan Yin in China is always represented as a charming and attractive woman or deity, usually sitting in the royal pastime attitude (the *maharaja lilasana*), in which the left leg is bent and the right knee raised to support the right arm, which is propped against the background, usually an aureole or a niche. In such a posture she represents the Goddess of Mercy and Compassion; if she is sitting in such a

way on a rock looking downward upon the waves of the ocean playing around the rock, she is seen as the protector-deity of the seafaring people.

At times she appears to be popularized and thus raised to the rank of a buddha-deity sitting cross-legged on the lotus flower.

She also appears as the protector-deity of mothers and is then represented Christianized by way of holding a child in her lap or in her arms.

Sometimes Kuan Yin is also represented in the true bodhisattva style as standing, holding the *ju-i* scepter in her left arm and a scroll in her right hand, the latter symbolizing truth divine as it has been written into the many forms of creation and then gradually abstracted and recopied by man in his book of law. The *ju-i* scepter, a Taoist symbol, is in the nature of a staff that ends in a peculiarly shaped leaf and intends to express the fulfilment of our purified desires. Divine fulfillment of our desires is only possible if they are in harmony with cosmic laws, or as the Christian would say, in harmony with the Will of God, which alone means real freedom and happiness on the part of the spirit.

If she holds in her right hand a gourd, or a pomegranate, whose many seeds suggest multiplication, and in her left hand a bottle containing dewdrops, i. e., heavenly water, the element of quickening, she then appears in the role of making alive those who are in death, as well as in the role of the one who is ushering in the Coming Buddha, Maitreya, "The Loving One," "The Lord of Love." Most remarkable statues of Kuan Yin and Maitreya, particularly showing them in this role just referred to, can be seen in the Munthe collection in our own Los Angeles Museum.

It will be in order to conclude this sketch by way of briefly comparing the two philosophies that are behind the Buddhist Madonna and the Christian Madonna.

In doing so we may arrive at the following picture:

Kuan Yin

St. Mary

An ideal, abounding in inspiration, beauty, strength and loveliness.

A reality, most sacred, noble in character and devotion, super-strong in sacrificing.

The child of an imaginary spiritual father: Amitabha.

The mother of a real child, Jesus of Nazareth, the Christ.

This child developed into a friendly, most compassionate and *ever-helping goddess* attempting to lead humanity through fulness, purification to a life of beatitude.

In the child of Nazareth arose the most benign, the most perfect and *only savior of the world* in whom dwelled the Godhead in and who alone could say, "I am the Way, the Truth, and the Life; no man cometh unto the Father, but by me." "The Father and I are One."

The Theosophical Forum

DEATH TRANSFIGURED — *Madeline Clark*

Bereavement is one of life's supreme experiences. Torn is the veil of illusory things when death comes very near us, and through the rent pours "the white radiance of eternity," giving us truly an inkling of Reality — interpret it as we may when the brief moment of insight is over.

The Testament of Immortality (1) is a collection of such interpretations, a collection made by the anonymous author-compiler to sustain his heart at a time when he had suffered the loss of his only son in the prime of youth and promise. Wide reading and a kindly breadth of culture are so evident here that we follow the author delightedly in his selection and arrangement of these intuitive thoughts from great and lesser writers of both East and West. We thank him too for the list of authors cited, with their "dates," and a brief notation about each; and even the index shows the careful touch of the scholar.

The book itself is a garland sweet with the fragrance of trust and resignation; a pot-pourri filled with the essence distilled from grief, or from joy at the revelation of the happy thing that death is after all. It is a fitting gift to one in sorrow.

This is the first and chief impression; but if more is now said in a slightly different vein, it is because there may be value in going deeper; the truest solace is found after all in truth itself. So I would say that the effect of reading this book (or reading in it, for one does not sit down and read it through, naturally) is to induce a mood of exaltation which brings the emotions to a pleasant tension, satisfying to the esthetic sense, while the mind remains as much at sea in the Mystery as before. This is because, while we are led onward and upward by the mystical beauty of the

thoughts, what we miss in them is a definite philosophy. The higher emotions are touched, but the longing for definite knowledge is not fulfilled.

Curiously enough, we have little suspected that there *could* be such definite knowledge. And yet Theosophy has it to offer, and on a highly scientific basis. We have to overcome the long-prevalent attitude that we must accept without question the inscrutable workings of a Law we were not meant to understand. The new time into which we are entering demands that we go forward with minds open to new spiritual possibilities. We must have the courage of research into the things of the spirit, yet always keeping close to the anchorage of the innate sense of right and fitness abiding in the heart.

Only one or two selections in the book contain any description of what may have really befallen the departed soul. On page 201 the writer quoted speaks truly of the experiences of death and birth as having been made familiar to the many-times-incarnated soul by long repetition; but her teaching that "We are conscious one moment on the physical plane and a moment later we have withdrawn on to another plane and are actively conscious there" is open to doubt. The Theosophical teaching postulates a longer or shorter period of unconsciousness immediately after the shock of death, to give rest and readjustment to the soul in its new conditions: a rule which seems not only merciful but very natural. This unconsciousness, we are taught, in the case of average human beings of virtuous life, continues more or less complete until the first main stage of post-mortem life, the *kamaloka*, is passed, and the vivid and blissful dream of the *devachan*, or assimilation-period, begins.

There is more than a hint too in the book of that curious haunting doubt: shall we really survive the change? and what proof can we

have that we shall persist? Throughout the book, therefore, runs an undercurrent of reassurance (Are we whistling to keep up our courage?) The thoughts expressed do not rest on proof, they are bright inspirations of intuitive minds that hit upon the truth that we do survive, because that certainty is inherent in the spiritual soul itself. We simply know.

But only the ancient doctrine of Reincarnation as revived in modern Theosophy can give an adequate picture of the continuous and harmonious progress of the soul in its eternal journey.

Noble and majestic are the ideas that throng this anthology, coming as they do from some of the finest minds of this and other times; yet, when all is said, the marvel remains with us that for so long in the West death has been regarded, if not with horror and dread, at least as cause for grief and mystification. The sense of loss, the heavy heart, seem to be its inescapable concomitants as things are now, and we need powerful helps to ease the load. But when we grow into an understanding of the real nature of our very selves and of our destiny in a perspective far beyond this one small life; when we take to ourselves this large and comprehensive philosophy which transcends emotion and makes clear the reasons for all our changing fortunes, we shall look calmly upon the face of "delicate death," because we shall know whither she is leading us. Peace comes with knowledge.

COMPOSITE MAN — *Allan J. Stover*

A five-year-old San Diego child met her father as he came home one evening and said "Daddy, are we animals? Do we belong to the animal kingdom?"

His reply was "There is a mineral, a vegetable, and an animal kingdom. We are not minerals. We are not vegetables. We belong to the animal kingdom."

The little girl then went to her mother with the same question and was told "No, dear, we are not animals. We belong to the Kingdom of Heaven."

Was the child satisfied? Would you have been?

The questions and answers quoted are representative not only of individual instances, but are also representative of the confusion and questioning throughout modern civilization. Men question, and science and religion answer to the puzzlement and confusion of the questioners.

Truth itself is not divided into compartments or differing schools. There can be only one truth regarding the universe or man, although there are many ways of viewing truth and also many distortions of truth. Theosophy tells us that we are composite, with a higher and a lower self. This anyone can prove by a little — a very little — self-study. If we study the fundamentals of esotericism we learn further that there is in man a divine ego, a spiritual ego, a human ego, a personal ego, a beast ego, and a physical body. While each of the egos is an evolving, conscious entity within the greater man, and each has its own range of consciousness, still, if we watch closely we may catch glimpses of these various selves, or some of them at least.

The beast ego is represented by the lower physical functions and desires, and when we give way to anger, greed or envy we have been manifesting through the beast or animal part of ourselves. The personal ego thinks "I am John Jones," of "me," of "mine." The human ego thinks "I am I," and but little of "me" or "mine." It is more interested in humanity, of which it feels itself to be a part.

With the spiritual ego, the thought "I am I" has given way to that of "I am," with a sweep and range of consciousness beyond ordinary human conception. With the divine ego, one *becomes, is,* the Universal Self — deathless, omnipotent, one with the Gods.

The egos below and including the personal ego are mortal. These as vehicles of the deathless spirit are limited to one life. All above the personal is immortal, or relatively so.

As to the little girl's question, both answers were correct, though partial and misleading. Man is composite. There is an animal or beast self, a human, thinking self, a spiritual self, and a divine god within him.

Recently a well-known scientist said, "There is no plan, no purpose in Nature. Further, there is no law, for every law has so many exceptions as to make it no law."

No law in nature? How about death and birth? Do not all things have a beginning and an end? And if that is so, isn't a law of cycles established, and are there any exceptions to it? Here is one law that is universal in its sweep.

Again, if we examine any cycle — a day, or a year — we find that while it returns to a new beginning at regular periods, the beginning of each succeeding cycle is in every case different from the preceding one. In other words, progress has been made in certain ways, and progress is evolution. Here we have another law universal in its scope.

Once more consider the various cycles, the rotation of the electrons in an atom, the heart-beat of a man, the sun-spot cycle of a sun, the rise and fall of universes. Here are cycles, here is evolution, here also is something else, for each cycle is the life-course of some being — an atom, a man, a solar system, a universe, each contained within a greater, and that in a still greater, and that in a greater still.

This structural plan or habit of Nature is called the law of hierarchies, and may be found operating everywhere.

To return to the first questions and the various egos or monads of man: If we apply the teaching of hierarchies here, we find these various aspects of man — each one, from the physical body to the divine ego — while living its own life, existing also in a larger, more fully conscious being, and that in a still greater. Here is the beginning of the answer to the little girl's question.

The Theosophical Forum

SEND IN YOUR QUESTIONS

Immortality and Good and Evil

I have been reading the record of H. P. B.'s Inner Group in this month's FORUM [January, 1941], and in an "Editor's Note" the statement is made that only by becoming actively good or evil can one achieve immortality. The ordinary folk, neither very good nor very evil, cease to be. Now, if I read this aright, it seems very terrible, and although a return to this troublous world does not seem enviable just now, one feels that surely those not wholly given up to evil have a better right to continue than the utterly evil.

Also it does not seem consistent with the teaching that *all* must eventually evolve to the highest.

Perhaps I am not clear in my reasoning, for I am still very much a beginner in Theosophical thought. I read and re-read the articles in the Forum, and often find that after many studies light dawns. But I do find this latest problem beyond me. — *B. M.*

G. de P. — I am not at all astonished that the questioner was puzzled at the language used in the article in *Leaves of Theosophical History* as quoting from H. P. B.'s Inner Group, and the reason is that the teaching as here imbodyed is given patterned after the peculiar language of the French Qabbalist Eliphas Levi, who is notorious for extreme statements on the one hand, (for that was his psychology), and on the other hand for the singularity of his paradoxes. Yet because he was intuitive in some respects, H. P. B. often quoted him either verbatim or in substance.

Take careful note of the following facts: The *Monads* whether of gods or of men or of beasts or of plants or of stones or of elementals, are immortal, for they are spiritual consciousness-centers. *But* the references in the passage that bothered the questioner, do not point to the monads, but to the various souls of the different hierarchies of lives or different kingdoms of lives, which either must rise up into immortality and "god" by joining with the spirit within them, or in other words with the spiritual side of the monad; or attain immortality in what is called "evil," by descending and becoming unified with what we Theosophists call absolute matter. In this way, philosophically speaking, there is immortality; and this is the important word here, *self-conscious* immortality either with the divine or with the absolutely material: absolute Spirit on the one hand, or absolute Matter on the other hand — so far as our own universe is concerned, that is.

We human beings, although immortal in our monads, cannot be called immortal in our souls, because our consciousness is interrupted by death. And here is the point to remember: A person is not immortal if there ensue long lapses of his consciousness, although he is immortal in the other sense of never-ending inner or monadic consciousness. Thus we human beings are immortal in our monads, conditionally immortal in our souls, and mortal in our bodies, because these last change and our stream of consciousness is interrupted by death. The soul, if worthy of it, has its dreamy blissful state in the devachan, and then is reembodied; but this is obviously not immortality of the *self-conscious soul*, because this consciousness changes. Immortality means an unchanging consciousness without modifications or variations, an uninterrupted continuance of a stream of thought, so to speak.

Now, if this stream of thought or of consciousness is interrupted by death, we cannot call it immortal. We must call it mortal, even

though that stream of thought, because based in the monad, takes up its continuance when reimpodiment occurs. The difficulty lies in the odd way of using the word "immortal" in the sense employed by Eliphas Levi and H. P. B. in this extreme thought quoted.

Thus the gods are immortal from the beginning of a manvantara to its ending, comprising billions of years; but we human beings, and monads less evolved than the gods, have many interruptions from the beginning of a manvantara to its end; and we cannot thus be called immortal, because of these interruptions.

Nevertheless we *are* immortal in our spiritual monads; and when we as humans or souls shall have become allied with our spiritual monads, and become Buddhas or Bodhisattvas or Christs, then we shall enter immortality in this peculiar sense of speaking.

The whole difficulty, therefore, is in understanding the peculiar technical sense in which the word "Immortal" is used in this extract. Hence Theosophists often speak of the soul as being mortal, conditionally so, or as being immortal, conditionally so, as H. P. B. does in *The Key to Theosophy*. The soul becomes immortal when it unites with the Buddha or Bodhisattva or Christ within itself, its "Father in Heaven," or in other words when the soul unites with the Monad. Then it enjoys the immortality of the monad, uninterrupted consciousness.

The Healing of Diseases

What does Theosophy teach about the Healing of Diseases?

H. T. Edge — The querent probably has in mind the treatment of diseases and mental disorders by what may roughly be termed occult or psychic means. Theosophists are in general averse to these practices. In ordinary medicine, much study is required in order to qualify for being a practitioner; and a large body of

knowledge, the result of the experience of doctors for a long time, is behind the medical art. But in matters psychic — where are we to find anything like such safeguards, such conditions. This is truly ground where it may be said that "angels fear to tread"; yet we find that almost anybody is ready to rush in, and either to attempt to practise himself, or to undertake to teach others to do so. What would such a condition be called in the medical world?

Both the material dealt with — the finer parts of the human constitution — and the forces and methods to be used, are of a far more delicate and intricate kind than those which ordinary medicine deals with, delicate and intricate though the latter are. It is but reasonable to infer that anyone aspiring to competence in this field would have to pass through a very long and difficult course of instruction and training before he could qualify; and that, if he should practise without such qualification, he would be likely to do more harm than good to his patients.

Diseases in general are evils which are in process of being cast out of the system. They had their origin in wrong thinking and feeling, and they have worked their way down to the physical body, which is trying to excrete them. If this natural process of elimination should be prevented, the evil would remain in the system, and the case would resemble that of stopping the flow from a suppurating sore. The relief given would be temporary, resulting in worse evil later on; moreover it would amount merely to a suppression of the symptoms, not a healing of the disease. This is a mistake to which psychic healing is peculiarly liable; and it is evident claims of immediate success do not refute the objection. An adept is needed to judge if and when it is advisable to interfere; and who of us has the profound knowledge which would enable us to take into account the intricate fabric of a human being's destiny and karma, so as to be sure that we shall benefit and not injure our patient?

Co-operate with Nature

What is the right and safe way of treating diseases?

H. T. Edge — The physical part of the treatment should be left to the doctor, who, if he is a wise physician, will pay much less attention to the administration of drugs than to assisting nature to do her own powerful remedial work. The patient should assist the remedial process by adapting his mind as much as possible to the circumstances. Realizing that a remedial process is going on, he will accept it as such, instead of rebelling against it. And he will endeavor, by living as healthily as he knows how, mentally, morally, and physically, to avoid setting up any further discordant conditions which would have to be cleared out of the system in the same painful way. He should try to forget his complaint rather than to focus his attention on it. It is well known that people sometimes dwell on their complaints until they make them worse and believe themselves to have diseases which they have not; they become hypochondriacs or valetudinarians. The same thing can happen to those who try to drive away their complaint by concentrating on it; the disease feeds by attention, and besides the treatment is likely to be without knowledge and unskillful.

"THE THREE MONADIC VESTURES" — *Studley Hart*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

The Christian teachings as found in the Bible speak of man as composed of a body, a soul, and a spirit. In Theosophy we study the Seven Principles of man; in other schemes of philosophical and religious thought we find two, four, five, and even, nine and twelve mentioned. Amidst these varied and diversified divisions it is small wonder that a newer student or inquirer feels lost, confused, and even perplexed to the point of deciding to take up some other more readily assimilated subject of study.

The truth of the matter can be said to be in the fundamental axiom of Theosophy as well as all the other great world systems of thought throughout the ages. Namely that the Root, the Base, or the Acme, the Flower of everything from the lowliest elementals to the highest Gods is ONE.

As the *Zohar* says:

The Divine animated all parts of the Universe with characteristic and appropriate spiritual beings, and thus all the hosts exist. — *Zohar*, III, 68a

In Theosophy we call this One Divine Principle, when manifesting, the Monas Monadum, that is, a Galactic Monad composed of hosts of Monadical centers. We may think of this ONE as a circle whose circumference is boundless and whose center is in every minute portion of limitless space on all its planes.

The Heart of the most inanimate and unevolved subject we can

imagine is rooted in — in fact is the same as — the Heart, the Core of the being, of the consciousness, of the greatest Galactic Universe. The only difference is one of expression in degree of consciousness. H. P. Blavatsky in *The Secret Doctrine* expresses this thought in these words:

From Gods to *men*, from Worlds to atoms, from a star to a rush-light, from the Sun to the vital heat of the meanest organic being — the World of Form and Existence is an immense chain, whose links are all connected. The law of Analogy is the first key to the world-problem, and these links have to be studied co-ordinately in their occult relations to each other. — I, 604

This Oneness expresses itself on all planes of the Cosmos through transitory vehicles, built of the substances, forces and life-energies of the planes upon which it may be manifesting. These vehicles or sheaths of consciousness become ever more condensed, more material, as the Ray from the Monad descends through children-vehicles down into ever increasingly material spheres. Each plane is the sphere of being or consciousness, the home, of a ray of the Chief Monad of any entity whether a mineral or a God. The core of the vehicle of such a manifesting Jiva is called the Sutratman in the Vedantic philosophy, the thread soul, which has strung upon it various children monads. Each of these minor monads in the constitution is exactly the same in essence as the Chief Monad, the fountain from which they have all issued and in which they have their being; each is constituted in the same essences, vehicular bodies, and consciousness centers, although of varying degrees depending upon its evolutionary standing.

Now with this picture in mind, and with a general concept of the various methods of dividing man, we might say that the manner

which is the most basic, in that further sub-divisions can be made, is the Threefold. Further separations should be made by each student according to the mode which gives him the clearest understanding and satisfies his mind and heart the most fully — with the added thought, however, that we should ever strive to keep an open mind and not allow ourselves to become crystallized in any one way of looking upon a subject, if we hope to expand our consciousness and the teachings as time goes on.

The triune division of man is the Self, the Ego, and the Soul. Every Monad may be said to express itself first consciously and then self-consciously through these primary Upadhis which it has built for itself and which are the reflexions in their respective fields of the One.

The Self, the I AM, is the immortal spark of any entity, which never dies or descends directly into the lower planes, but sends forth shoots or rays which are the spiritual heart of the pranic forces or life-energies of those planes. The Self of a monad, such as the human, which is largely unrealized, acts unselfconsciously as the "medium" through which these life-essences are transmitted to the human, through the Higher Ego, and which develops into self-consciousness in conjunction with the Ego.

The Ego, which is a garment or vehicle of the Self, of the I AM, is like a mirror which reflects the I AM, making of it the I AM I. It is that portion of us which in its higher parts gives us our spiritual yearnings and sublime realization of the essential Divine Root from which everything evolves and from which come our flashes of intuition. In its lower aspects it joins with the soul to give us our individualized personalities, our human self-consciousness.

The Soul in its turn is the vehicle or body of the Ego. On the higher planes it is a body of light; and on the lower it is ever more concreted light until it reaches this physical plane where it

develops into the material elements we see on all sides. If we had the eye of a Seer, these bodies would look like millions of tiny lights, revolving and sparkling with the greatest of intensity. Each one of these lights, atoms, is in itself an expression of a ray of a monad — a monad manifesting in its turn through a Self, an Ego, and a Soul. As Madame Blavatsky says in *The Secret Doctrine*:

The collective aggregation of these atoms forms thus the *Anima Mundi* of our Solar system, the *soul* of our little universe, [or of man, a miniature universe] each atom of which is of course a *soul*, a monad, a little universe endowed with consciousness, hence with *memory*. — *S. D.*, II, p. 672, footnote.

In the same manner that the Cosmos is the Universal World-Soul or Being in whom we are rooted, live, and have our being, so do we, the Human Ego and Soul, stand to these lesser lives. These less evolved monads exist in our constitution and draw their life and inner forces from and through us. Dr. G. de Purucker in his *The Esoteric Tradition* (Vol. I, p. 264) says that

Man is the parent of all the minor beings or lives of life-atoms which compose his various vehicles or sheaths of consciousness

Even a partial understanding of these teachings fills us with awe, and reverence too, for the sublime pattern of the Universe which is repeated throughout and which holds us responsible for the welfare and guidance of these lesser beings of our constitution. Our guardianship of them is as sublime in its way as that of the greater beings who have sacrificed themselves to help us in our struggle up the ladder of life to an ever fuller expansion of consciousness and self-conscious absorption with the Super-Divine Essence and work of the One.

WIN WITH GENTLENESS AND KINDNESS — *G. de Purucker*

I KNOW not what others think, but I have never enjoyed breaking idols, for I believe in the divine instinct in the human heart which at some past time brought those idols into being as works of love and understanding. It is we who do not understand what they represent and mean. It is rather we who are at fault than the Great Ones who gave birth to those works of past ages which have comforted millions century after century after century; and I do not enjoy breaking idols and crushing ideals in human hearts. Much better is it to teach, to show, to win with gentleness and kindness: "Search this out, Brother, here is something I have found, something I have discovered to be supremely grand and good. Try it yourself. Subject it to your own closest inspection, and if you find it good, come and help to give to others what you and I have found."

Smashing idols is easy work, and it has been a work which has persisted for too long in my judgment beyond its appointed place in the history of mankind. Oh, indeed if you like you can say that an idol contains a precious stone, and in order to get the precious stone, by all means let us smash. But there are other ways. If that idol contains a precious stone, it was put there by very wise men, and there is a way to get that precious stone out of the hiding idol without crushing it, and thereafter the idol becomes useless and is discarded.

And what are some of these idols? I do not mean brass and stone or wood only. I mean generally those idols which men worship and which they carry around in their minds and in their hearts. Don't you realize that sometimes by intemperate iconoclastic action you can actually set human hearts backwards, discourage

them, throw them off the path? It is easy to be an idol-smasher. It is easy to smash; it is easy to crush; it is easy to overthrow — and it is often popular. But there is grander work for true men than that.

The Theosophical Forum

H. P. BLAVATSKY AND MODERN SCIENCE — *H. T. Edge*

III

LIGHT

Is light a body or not? Newton decided that it is a body; by his corpuscular theory it is the emission of particles from the source of light, or it is caused by such emission. But the phenomena of interference and some other effects could not be explained by this theory, and could be explained by the vibratory theory; so the latter supplanted the former. The theory of interference enables us to measure the wave-length of these vibrations; and by representing this length, and the distance gone by light in a second, in suitable units, and dividing the larger number by the smaller, we obtain a quotient representing the inconceivable rapidity of these vibrations, hundreds of trillion times in a second. For the vibrations we require a vibrating medium, which therefore has to be endowed with an inconceivable rapidity, while at the same time being so tenuous that it will not check the passage of bodies through it. We know of no such substance in our experience; but there seems no good reason why an hypothesis should not have those properties, and why an hypothesis should not be able to transmit those rapid vibrations and yet permit the passage of the earth through it without friction. However the question of the ether may be left aside for the moment. The point to be made now is that experimental science has found that, for certain classes of phenomena, it is necessary to regard light as a stream of particles. Allusion is here made particularly to the photo-electric effect. It was necessary therefore to conceive of light as being at once a wave-motion and a flow of particles

The only way of escaping from this difficulty, then is to assume that the wave aspect of light, and its corpuscular aspect, are as it were two different aspects of the same underlying reality.

(*Matter and Light*, Louis de Broglie, p . 28)

This confirms what we quoted above from H. P. Blavatsky, that atoms are vibrations. It also confirms the teaching that there are *underlying* unities which reconcile apparent dualities. What can this word "underlying" mean but "on a higher plane"? And as to the word "reality," this is a relative term, for there is no apparent reason for regarding the higher unity as real, except in relation to its dual manifestation; while the manifestations themselves are real enough to our ordinary perceptions.

At all events we may now regard light as a body without transgressing scientific orthodoxy, and this is what H P. Blavatsky contended for. If light is not a body, it becomes reduced to a mere vibration, a "mode of motion," an effect in short. The word "light," as used in science, though deriving its name from visual sensations, really includes much more; for its effects are actinic, thermal, and otherwise, besides visual.

In *The Secret Doctrine* (1) it is described as one of the great primary forces of the universe. The expression *Fiat Lux* refers, as the Kabala says, to the evolution of the Sephiroth, the rays of the Logos.

That which is meant by the allegorical sentence, "*Fiat Lux*" is — when esoterically rendered — "Let there be the "Sons of Light'," or the noumena of all phenomena. (I, 481)

As we have said in the case of sound, science treats light as a physical phenomenon, and has little or nothing to say about the psychical phenomenon, the sensation of light, the visual faculty.

And again here, as in the case of sound, we trace a chain of physical cause and effect up to the ends of certain nerves — and there comes the big jump. The gap between physical vibration and mental image is unbridged, whether we measure it as one second or as 186,000 miles. Why not say that we have light in our head or in our eye, and that the physical vibrations merely bring it into physical manifestation? That seems a pretty good theory. But with H P. Blavatsky, light is a primal force, operating on all planes, its physical manifestation being only one of these.

In the "beginning," that which is called in mystic phraseology "*Cosmic Desire*" evolves into absolute Light. Now light without any shadow would be absolute light — in other words, absolute darkness — as physical science seeks to prove. That shadow appears under the form of primordial matter allegorized — if one likes — in the shape of the Spirit of Creative Fire or Heat — (I, 201).

To know what is light, and whether it is an actual substance or a mere undulation of the "ethereal medium," Science has first to learn what are in reality Matter, Atom, Ether, Force. Now the truth is, that *it knows nothing of any of these*, and admits it. (I, 482)

This refers to the science of last century; and she continues, referring to Stallo, that the words enumerated were but convenient temporary hypotheses. They were what a surveyor might call bench marks, fixed arbitrarily as basis for a system of measurement, but subject to replacement at any necessary time. And now see what has become of the atom, the ether, force, and Matter. As shown above, it has been found impossible to measure light by the old bench marks: the question, Is light a body or not? becomes unanswerable. It is not a body in the old sense, but it is a body in another sense; nor can we call it a vibration in an ether

unless we define better the words vibration and ether. Light is a cosmic energy producing manifestations on all planes, and science studies the physical manifestations, which include not only visual phenomena but also thermal and actinic effects.

ETHER

The subject of light leads to the subject of ether. The word itself is borrowed from the Greek, meaning an upper and clearer region of the atmosphere, and often the abode of the Gods; also called the empyrean. When light was defined as a vibratory phenomenon, it was necessary to imagine some extended medium in which such vibrations could inhere. Theorists were hampered by their experience of vibrating mediums in ponderable matter, such as the air with its sound vibrations. They transferred these properties to their hypothetical aether, and tried to calculate what must be the density, rigidity, etc., of such a medium, in order that it could transmit such vibrations. But physical concepts are not applicable to an ultra-physical medium, as is now being found out. We need more data before theorizing. The aether has also had to be accommodated to electro-magnetic theory: it is at present an hypothesis, or group of hypotheses; we have no direct perception of it. The fact remains that light and electric impulses are transmitted across spaces void of physical matter, and that these impulses are of the nature of vibrations, which can be tuned.

H. P. Blavatsky, in seeking to present the ancient teachings in modern terms, makes use of this word "aether," which thus has to cover a variety of meanings. Aether, an aether, the aether, ether, Ether, etc., may be used in the desire to draw distinctions; and often the Sanskrit word *Akasa* is used in reference to higher grades of aether. Certain Hindu systems speak of five elements in Nature:

Prithivi or Earth

Apas or Water

Vayu or Air

Agni or Fire

Akasa or Ether

This system does not fit in with that of modern science, so that attempts to translate one system, word by word, into the other will not succeed. A study of these Hindu treatises is requisite, so that we may get an understanding of the meaning of these terms as used therein. However, we are concerned at present with the word "ether" only. It stands for the most subtle (from our point of view) of the series, being beyond Agni, which corresponds to luminous and thermal phenomena. The word akasa has been translated into "ether" for want of a better word; but we must beware of being misled into attaching to it other meanings which attach to "ether," and which do not necessarily pertain to akasa. Its peculiar property is stated to be sound, the other four elements being correlated to the other four senses. The scientific ether was originally luminiferous, but since the development of wireless telephony we may surely speak of it as connected with sound. It is true that there is a conversion of sound waves into etheric waves, and back again, and that ordinary physical sound is not transmissible where there is no physical matter. But in spite of this, and in view of the wider use of the word "sound," the fact is suggestive, and may be a signpost for scientific discoveries yet to come. Some quotations from *The Secret Doctrine* may follow here.

The whole range of physical phenomena proceed from the *Primary* of Ether — Akasa, as dual-natured Akasa proceeds from undifferentiated *Chaos*, so-called, the latter being the primary *aspect* of Mulaprakriti. . . (I, 536)

The septenary gradation, and the innumerable subdivisions and differences, made by the ancients between the powers of *Ether* collectively, from its outward fringe of effects, with which our Science is so familiar, up to the "Imponderable Substance," once admitted as the "Ether of Space," now about to be rejected, has been ever a vexing riddle for every branch of knowledge. (I, 331)

Now, what does the modern science of physics know of Aether, the first concept of which belongs undeniably to ancient philosophers, the Greeks having borrowed it from the Aryans, and the origin of modern Aether being found in, and *disfigured* from, AKASA? (I, 485)

And a discussion follows as to whether we are to regard it as atomic and continuous, both alternatives being demanded by science for different reasons, and inconsistencies arising therefrom. At I, 342 and 464 we read that, with the ancients, aether was regarded as the synthesis of all the elements — synthesis, not in the sense of an additive compound, but a common source or parent. At I, 508 it is stated that, according to Occultism, aether is the source and cause of cohesion, chemical affinity, thermal, electric, and magnetic forces — in short, of the "properties of matter."

We are reminded of the quest of the Alchemists for an "Absolute," a primary element, a universal solvent, etc. Aether, as used in the above passages, is at once the source of elements and of forces. But these two words have recently lost most of their distinctiveness and have tended to become merged into one. They are Nature viewed under its active and passive aspects. When we recede from physical matter, the distinction between body and energy becomes obliterated; such a question as whether light is a body or an energy loses meaning: it is an element, and as such

has both active and passive aspects. If the properties of matter are functions of ether, then it is absurd to try and explain ether itself in terms of these properties; so no wonder there is confusion if we try to do so. Ether is by hypothesis non-physical, so why expect to find physical properties in it?

And what does present-day science say about it? We have only to read current scientific literature to see how men of science are revising their views, and revising them along the lines indicated by H. P. Blavatsky. Is it not being openly said that the scientific philosophy is but a temporary structure, devised for particular purposes, but now due for alteration? This structure was made to accommodate a certain range of facts, but new facts have been discovered which do not fit into it. After all, this is but the declared scientific method, of making provisional hypotheses and enlarging them according to requirement. And many of the things which were once regarded as fundamental and universal are now seen to be merely superficial and local. The fixed and mutually independent time and space, the spatio-temporal scaffolding upon which physics has been built, has given way under the stress of the Relativity theory; and we now speak of the position of an *event* in a four-dimensional space-time continuum. It is necessary to recognise that the word "matter" may be made to cover a number of different things, of which physical matter is only one. We have to study the properties of higher forms of matter, and to bear in mind that we are endowed with higher perceptions adapted thereto, though these may be latent for want of use.

SOUND

This is a word used by science in a somewhat vague way. Ordinarily it implies audition, but the meaning has been extended to include effects which make no impression on our

auditory sense. A wave-motion of a particular kind produces audible sounds when its frequency lies within certain limits; but similar vibrations can be created which lie outside those limits and produce no audible sound, and yet they are still included under the term "sound." A new name has lately been devised for the waves whose frequency is above the limit of audibility — "supersonics," and the effects of such waves have been experimentally studied. These effects are powerful, disintegrative, destructive. Classical mechanics shows that there must be a great energy in a motion which changes its direction so frequently, and corresponding energy is required to generate such a motion. Hence we have an illustration of the power of sound, or sound considered as a power. Sound, thus considered, becomes a name for longitudinal vibration in a medium. As to its connexion with audition, we are told that some animals will start at the blowing of a whistle which makes a sound too shrill for human ears to hear. What may be the case with insects? we ask ourselves. And, if man himself has subtler senses, may not these be correlated with still higher frequencies, and with vibrations thrilling in a medium subtler than any familiar to our physical perceptions? In a word, can the two ideas of sound as an energy and sound as a sensation be separated? Or are the physical and the psychical inseparably related?

In *The Secret Doctrine*, sound is spoken of as one of the primal forces in cosmos, having manifestations on every plane of objectivity, its physical manifestations being those which science studies. The creative Word, or Logos, has for its energetic aspect Sound, while on its formative side it is a Name: a mystery which underlies the use of mantras and incantations. It would seem that no hard-and-fast distinction is made between sound as a sensation and sound as an energy, such distinction being artificial; planes of consciousness are everywhere correlated with

planes of matter, the subjective with the objective; and where sound is of a nature imperceptible to physical senses, there are other channels of perception susceptible to it. We find *Akasa* mentioned as the material cause of sound, (I, 296) and sound mentioned as the characteristic of *Akasa*. (I, 205) Another name for *Akasa* is Ether, used to connect the idea with a familiar scientific term; though, as Occultism recognises different ethers, the word *Akasa* is used to denote the higher forms as distinct from the lower. This higher Ether is spoken of as a vibratory soundboard of nature (I, 536). In Hindu systems, sound is correlated with *Akasa*. The scientific ether was postulated as a vehicle for the conveyance of undulatory vibrations of light and some other effects; but it remains merely a hypothesis, and by some is now regarded as unnecessary. Audible sounds are made perceptible by the vibrations of materials having mass — - gaseous, liquid, solid — under the bell-jar of the vacuum pump, such sounds die away. There is no longer any physical sound, because there is no physical vehicle for its manifestation. There was a Punch joke where one man says to his mate: "Donal', have you got a light?" and the answer comes: "Yes, Tugal', but it's oot."

What becomes of the sound when we can no longer hear it? Physics says that a certain order of vibration gives rise to a sensation called "sound"; vibration is tracked through the air to the tympanum, and from the tympanum through various structures to the auditory nerve and brain; and here we come to a big jump. The road to the bridge is magnificent, but the bridge is not crossed; as to how the molecular vibrations are converted into a sensation, science is silent — it emits no audible sound. As in the case of the human soul, the question of whose whereabouts after death is linked up with that of its whereabouts before birth, we may ask where is the sound when we cease to hear it, and where was it before it became audible. A particular vibration among physical molecules provides the condition for a physical

manifestation of sound; but sound itself existed both before and after. "Music, when sweet voices die, Lingers in the memory;" and we can hear the voices of friends, and sing all the songs we like, "in our head," after our physical molecules have stopped vibrating. But perhaps this is metaphysics; very well, and science is another kind of metaphysics, for its philosophy is based, as has been seen, on abstractions of a highly unphysical character. The study of phenomena ought surely to engross science; and these inaudible sounds in our head are phenomena. Recent scientific views confirm the need for taking into account such phenomena, if even physical phenomena are to be comprehended. The line between Knower and Known (or, if you prefer, between Subject and Object) is not a fixed line; the stakes may be shifted, so that what was once part of the Knower becomes part of the Known. We study physical phenomena with our physical senses, and then we study our physical senses with our minds: all of it is science. Once again we say that the Phenomenon cannot be understood without taking into account the Noumenon.

(To be continued)

The Theosophical Forum

AN ORIGINAL POINT OF VIEW — E. J. Dadd

What is the "I", anyhow? For the most part it is just an egoic resultant of the interaction of a spiritual entity and an environment. Change the environment suddenly and a great deal of the warm halation which can arise in generously endowed surroundings, and which to the unwise is "I", will disappear like hot air from a pricked bladder. Oh what, what fools we mortals can be! We stand within the protecting shade of the great ones and are well pleased with what we accomplish. But are we so very confident that we shall not wilt when we move out into the hot sunlight?

Yet we must not be unduly severe with ourselves. Life, for the most of us, is very much of a riot. Our intentions are good and we step out valiantly to help the T. S. work along as best we may, lacking sufficient insight and experience to avoid the confusions along the pathway. The essential fact however that we *are* a spiritual entity within an environment will carry us through to relative safety. We may wilt for a time; but we shall gradually become used to the sunlight. And — and — shall I say it? — we may discover that we are still within the protecting shade of the great ones (and minus the halation). "Step out from shadow into sunshine in order to bring others within that protecting shade."

DUTY AND THE MORAL BALANCE — *G. de Purucker*

It is only the knowledge of blessed karman with its infinitely just measures of harmony which saves the man of mind and heart from being utterly discouraged. It is this key, to the man of the world when he understands it, which leads him up gentle gradations, upwards with an expanding vision; until finally he sees reality, as much of it as his mind can contain; and he knows that despite all his suffering in the world due to karmic necessity, fundamentally all is well.

Let no man harden his heart at this and think that he need not bestir himself to help others or to extend a helping hand or to give a draught of cooling water to the thirsty. Remember the old law that H. P. B. taught us: Inaction in a deed of pity becomes an action in a sin full of fate for you. You see why?

I wonder how many of us forget our fundamental teaching of Universal Brotherhood? Such simple words! They seem so trite, and yet they contain the doctrine of the gods. They contain, these words, UNIVERSAL BROTHERHOOD, all the Law and all the Prophets. Remember that knowledge brings not only power but responsibility. What might be excused unto you when you are ignorant, will be counted against you when you know the Law. This is just one of the reasons why the Masters keep the higher teachings of Theosophy, the occult doctrines, (one of the reasons at least) so strictly secret. Much is excused of a man who does not know. Little is excused the man who knows and who remains inactive. Nothing is excused the man who knows, who has power to act, and who lacks the urge to act. He is guilty of a crime against Nature; and the only thing we have to watch, we students of our Ancient Wisdom, is this: let us never so act that we offend a

brother or injure him. It matters not how right we may think we may be. It matters not how wrong we are convinced our brother is. Your duty, my duty, is to care for our own dharma. Forgetting our own dharma or duty, and presuming to judge a brother and thereupon acting against him, offending him, is full of danger. The duty, the dharma, of another for you is dangerous. Therefore do not criticize.

Such simple truths, so logical, so clear, so appealing! Our earth would be a heaven if men would but follow them. And yet today men flatter themselves, and they flatter those in high public posts, for the same evil: thinking that struggle, punishment, hate, become a moral duty. Show me one passage by the Saviors of the world that endorses this, one single passage. You will not find it. The secret is to do your own duty wherever you are and at any time. You have a duty to yourself, to your soul. The first duty of all that a man has, is to think uprightly, to think cleanly, to live rightly, never to hurt a brother. Then comes the duty to his family, then the duty to his country; and to certain rare ones there comes a duty to the gods, or demigods. This is all included however in the one statement of a man's universal duty to mankind which includes all. Whether we call this class of "rare ones" just mentioned Mahatmans, or super-Mahatmans, Bodhisattvas or Christs, it matters not.

Do not for a moment imagine that I have uttered contradictions, that there will ever be a struggle between your sense of right to Y or your sense of right to X. There never will be. Impossible! If there is a conflict in your mind, it shows that your mind is not yet clear, that you are hanging on to something. When your mind is crystal clear to the spiritual inspiration, you will have no doubts. Duty will always be clear before you; and I will tell you now that duty never calls for injuring someone else. The difficulty for us Theosophists is sometimes in moments of distress, when we are

striving hard to know what is right, to *know* what is right. That comes of our imperfect spiritual and intellectual growth; and all we can do at such times is to do our best, keeping the principles of the rules before us: never injure another; be loyal to your word, be faithful to your pledge. Be honest, be cleanly in all things; be upright and harmless; wise as serpents, which means adepts; innocent or harmless as doves. The dove was in ancient times an emblem of the chela.

A great European once, when asked what he thought in a conflict of duties the most important to be, answered briefly: Do the duty which is first at hand. Then all others will find their proper places.

Thus, a man who is true to himself will be true to his family; he will be true to his country; and with the enlarging vision that this rule brings, he will be true to all mankind.

HELENA PETROVNA BLAVATSKY (1) — *Clifton Meek*

1831 — 1891

"There is no Religion Higher than Truth "

This year marks the fiftieth anniversary of the passing of the founder of the Theosophical Society, Helena Petrovna Blavatsky, in London, May 8, 1891, and Theosophists throughout the world are commemorating the event that brought to a close her eventful and turbulent life.

The dominant overtone of her life and work was a plea for brotherhood, charity, mutual understanding, and good-will among men, not merely a sentimental union, but an understanding of the basic law of life — universal brotherhood as a fact in nature — which she endeavored to inculcate by teaching technical Theosophy, again giving to mankind the long-hidden spiritual and literary treasures of the ancient East, the original fount of ancient wisdom from which the great religious founders and metaphysical philosophers of every age have drawn their inspiration. She claimed the teachings not as her own, but as the oldest known to mankind which she had derived from certain adepts of the Trans-Himalayan School whom she had personally met and studied under while in the Orient, and at whose instigation she was sent to America to form "a nucleus of universal brotherhood," the Theosophical Society, a mission which she inaugurated in 1875 in New York City. Considering the broad scope and depth of her teachings regarding religion, science and philosophy, probably the greatest compliment her critics paid her was the charge that she had "invented" them. Her crowning literary achievement, *The Secret Doctrine*, completed a short time before her death, has become increasingly popular

with the passing years as a mine of information to students of Oriental philosophy and occult science. Dr. Thaddeus P. Hyatt of Stamford, an old student of *The Secret Doctrine*, recently compiled a bibliography of that work in which he revealed that Madame Blavatsky referred to or quoted from more than 700 authors on over 90 subjects. This included many branches of science, many philosophers, and all the great religions known to the world today.

After a lapse of half a century it is possible to judge with some degree of fairness the effect of her teachings upon occidental thought. It is no exaggeration to say that perhaps no other single individual contributed more to breaking the materialistic and dogmatic concepts of the scientific and religious thought of that century. She frankly stated that it was her aim to "break the molds of mind," and that it was nobler to think than to merely believe and live in an air-tight mental closet of crystalized opinions. Like all others who have challenged the established beliefs and dogmas of any day and age, she aroused the enmity of fixed and static minds in both religion and science, but she attracted the most thoughtful and imaginative minds of her time. The scientific thought of her day was dominated by the Darwinian theory which was the direct offspring of the philosophy of Nietzsche and his theory of the "survival of the fittest," a materialistic doctrine which denied the spiritual aspect of man and nature, the logical conclusion of which can be seen in Europe today. It was a "dog eat dog" concept of life, the keynote of our present age into which a strange Russian woman attempted to introduce a breath of spiritual sanity.

Madame Blavatsky anticipated the present world crisis when in the early eighties she wrote: "Theosophy is Altruism, and we cannot repeat it too often. It is brotherly love, mutual help, unswerving devotion to Truth. If once men do but realise that in

these alone can true happiness be found, and never in wealth, possessions, or any selfish gratification, then the dark clouds will roll away, and a new humanity will be born upon earth. Then, the Golden Age will be there, indeed. But if not, then the storm will burst, and our boasted western civilization and enlightenment will sink in such a sea of horror that its parallel History has never yet recorded." [*Lucifer*, Vol. IV, May, 1889]

"We are at the end of a cycle — geological and other — and at the beginning of another. Cataclysm is to follow cataclysm. . . . We are not emulous of the prophet's honors; but still, let this stand as a prophecy." [*The Theosophist*, Vol. V, November, 1883]

Contrary to popular belief, Madame Blavatsky did not attempt to foist a "new religion" upon mankind, already overburdened with multitudinous sects and creeds, but sought to show the basic and fundamental truths — the Theosophy — underlying all religions which had become encrusted with man-made dogmas and creeds with the passing of time and the frailty of human understanding. In her introduction to *The Secret Doctrine* she stated: "The Esoteric philosophy is alone calculated to withstand, in this age of crass and illogical materialism, the repeated attacks on all and everything man holds most dear and sacred, in his inner spiritual life. The true philosopher, the student of esoteric wisdom, entirely loses sight of personalities, dogmatic beliefs and special religions. Moreover, esoteric philosophy reconciles all religions, strips everyone of its outward, human garments, and shows the root of each to be identical with that of every other great religion. It proves the necessity of an absolute divine principle in nature. It denies deity no more than it does the sun. Esoteric philosophy has never rejected God in nature, nor deity as the absolute and abstract ens. It only refuses to accept any of the gods of the so-called monotheistic religions, gods created by man in his own image and likeness, a blasphemous and sorry caricature of the

Ever Unknowable."

An editorial published in the N. Y. Tribune, May 10, 1891, at the time of her passing, stated among other things: "Few women in our time have been more persistently misrepresented, slandered, and defamed, than Madame Blavatsky, but though slander and ignorance did their worst upon her, there are abundant indications that her life-work will vindicate itself, that it will endure, and that it will operate for good. For nearly 20 years she has devoted herself to the dissemination of doctrines the fundamental principles of which are of the loftiest ethical character. However Utopian may appear to some minds an attempt in the nineteenth century to break down the barriers of race, nationality, caste and class prejudice, and to inculcate that spirit of brotherly love which the greatest of all teachers enjoined in the first century, the nobility of the aim can only be impeached by those who repudiate Christianity. Madame Blavatsky held that the regeneration of mankind must be based upon the development of altruism. In this she was at one with the greatest thinkers, not alone of the present day, but of all time. — This alone would entitle her teachings to the candid and serious consideration of all who respect the influences that make for righteousness. — No one in the present generation has done more toward reopening the long-sealed treasures of Eastern thought, wisdom and philosophy. — Her steps often led, indeed, where only a few initiates could follow, but the tone and tendency of all her writings were healthful, bracing and stimulating. The work of Madame Blavatsky has already borne fruit, and is destined, apparently, to produce still more marked and salutary effects in the future. She herself has finished the course, and after a strenuous life she rests. But her personal influence is not necessary to the continuance of the great work to which she put her hand. That will go on with the impulse it has received and

some day, if not at once, the loftiness and purity of her aims, the wisdom and scope of her teachings, will be recognized more fully, and her memory will be accorded the honor to which it is justly entitled.

The Theosophical Forum

WHAT ABOUT ASTROLOGY? — *Charles J. Ryan*

DR. Carl G. Jung, the eminent psychologist and orientalist, says in his *The Secret of the Golden Flower* (p. 43) that "there are some facts adequately tested and fortified by a wealth of statistics which make the astrological problem seem worthy of philosophical investigation," adding that "the fact that it is possible to construct, in adequate fashion, a person's character from the date of his nativity, shows the relative value of astrology."

He bases his opinion on the time-honored philosophy which sees the Universe as *One* in the full meaning of the word, a cosmos in which every part is linked in perfect unison or correspondence with every other part at any given moment of time, regardless of such mechanical impediments on the physical plane as the limit attached to the speed of light. The Divine Power, Sustainer of all manifestation, "God Impersonal," who is Here and There without distinction, Omnipresent, cannot be located in any point of space or in a "heaven" of simple minds, to receive messages that take measurable time to be transmitted. In regard to the significance of an astrological chart as an index to the cosmic conditions at the moment of birth as mentioned by Dr. Jung, we might crudely represent the principle by the idea of a ball of string composed of various colors and materials connected without a break. Getting hold of one end of the string would enable us to unravel the ball and discover the nature of the interior. Dr. Jung says "whatever is born or done in *this moment of time* has the *qualities* of this moment of time," however diverse and distant the contemporary events may be; and he concludes that astrology is one definite method of making connexion with and thereby of discovering the content of any given "moment of time." The reader is referred to

Dr. Jung's book for the exposition of this important point; space will not permit fuller treatment here. Philosophical students of astrology, such as Dr. Jung and his school, believe that it has a basis of truth unfamiliar to the ordinary practitioner of the art. However, in the book mentioned above and in his *Disintegration of Personality*, Dr. Jung explains that astrology is not unique in its power to lift the veil of Isis, even if only a little. For instance, the Chinese method of divination by the "throwing-sticks" called "I Ching" has been effectively employed for at least 3000 years, and Dr. Jung describes a definite prediction obtained that way which he and a large group of psychologists personally witnessed, and which was perfectly fulfilled in due course.

Unfortunately, the line of study followed by the great majority of our "practical-minded" scientists is not in sympathy with that kind of research which seeks the more subtil aspects of nature, and anything savoring of "mysticism" (a much abused word) is suspect, even though backed by strong evidence and the support of brilliant minds. We are told by our contemporary astronomers, whose mathematical skill and profound researches into the *physical* aspect of the celestial spaces — their proper field — compel unstinted admiration, that astrology is a pure illusion, and that even the more philosophical and symbolical interpretation is no more than special pleading.

This attitude is natural enough in this "Age of Iron," and we can easily understand the difficulties that victims of our materialistic systems of thought and education, so-called, would meet in breaking through the mental observances in which they are enmeshed. Even in such a comparatively simple matter as telepathy the efforts of a few intuitive scientists to study it have encountered the same intolerance for heterodox innovations that Galileo suffered from when he rebelled against the overwhelming authority of certain erroneous teachings of Aristotle and thereby

outraged the academic mind of his period.

Ever since the advent of the Theosophical Movement with its revelations of the Eastern knowledge about man and nature, a new spirit of inquiry into the Occult has arisen in the public mind, and already more than one so-called "superstition" has been found to be based on sober facts. While little is yet said openly, it is suspected that many scientists are feeling that the tides of thought are beginning to turn and carry Western mechanistic speculation from its cramped and insecure anchorage to what they erroneously fear to be a dangerous and uncharted ocean of unreality!

But in regard to fake astrology, just as in the case of quack medicine, scientists have a right and a duty to protest against both the well-meaning incompetents and the horde of charlatans who pretend to "rule the planets" for the credulous in regard to stock quotations, love affairs, lucky days, as well as the newspapers which publish fabulous predictions, etc. Quite lately, a Boston local committee of the American Association of Scientific Workers has started a movement to break public belief in astrology in any form, calling it a "current fad" and pointing out that "physical scientists are apparently without exception opposed to the teaching of astrology." It should, we learn, be regarded merely if at all "as an interesting stage in the historical development of science that has definitely been superseded as the nature of the universe became more fully understood." (We might mention that probably never did so many persons in Western countries take an interest in the subject as at the present time!) The Boston group says that the practice of astrology (presumably for hire) is prohibited in a few of our States, and it urges more effective and uniform legal restrictions. If this means the suppression of astrological magazines it suggests the danger of an un-American regimentation of thought at the bidding of a

scientific bureau.

The Report issued by this group does not indicate a really impartial handling of the subject, and we feel that no investigation can be satisfactory unless it is conducted without preconceived opinions or bias. A real study of astrology should give particular attention to the reason why so many intelligent people are satisfied that it contains valuable pearls of truth even though encrusted by a perhaps unprepossessing shell. Is it not possible that the scornful attitude of astronomers toward astrology is largely responsible for its abuses, because an unbiased scientific study would have probably, to use another simile, cleared away the jungle of superstitions which have choked the good grain? Careful and intelligent persons who have obtained even a modicum of success in astrological research — results which exceed the possible amount allowed by the laws of chance — naturally wonder at the persistent opposition of the skeptics. For instance there is the French scientist and mathematician, Commandant Paul Choisnard, and his school, who more than forty years ago made a very elaborate statistical study of the dates of birth and death in the cases of very many thousand soldiers in military hospitals (where exact data were available) and found that the frequency of death in those cases where the transit of Mars was taking place over the position of the sun at birth was three times that of the general average. Careful observations like these and many others made by Choisnard on statistical lines, cannot be disregarded and classed as "medieval superstitions" by unbiased persons who know the facts. Perhaps some who have "come to curse may remain to bless" when they find that advanced students of astrology are familiar with the somewhat naive objections brought against it by most skeptics, and that they have even faced more serious objections than are suspected by the confident critics.

Investigating committees in other unwelcome fields of inquiry as well as astrology have followed the same course as this Boston group, and yet have failed to prove a negative. How many times have inventors and discoverers had to fight against every conceivable obstacle for recognition! For years the astronomical world refused to listen to the crazy, "superstitious" notion that stones — meteorites — could fall from the sky, in spite of clear evidence.

The latest recantation of the denial of genuine natural phenomena because they were "pure nonsense, baseless superstitions and old wives" tales," is of special interest in relation to the dogmatic condemnation of astrology still in vogue. We refer to divination for water or metals by the divining rod, or Dowsing as it is properly called, which at last has been studied by scientists using the technical equipment of modern physics, and reported on favorably. For a few decades one or two courageous scientists, such as Sir William Barrett, f. r. s., have dabbled with Dowsing, but rather suddenly it is becoming an accepted fact in nature which can be studied by scientists without losing caste. Of course the technique is brought into line with the terminology of modern physics, formulas of high-frequency radiation, interference patterns, polarization, etc., but the important point is that it is admitted that the time-honored methods and results were sound. Yet the editorial writer in *The Scientific American* magazine for February, 1941, who discusses the most important physical studies of Dowsing with approval and admits the validity of the art, renders little honor or even attention to the efforts of the courageous, practical and sober-minded men who have for so many years demonstrated their peculiar powers in face of ridicule and the opposition of academic scientists who condemned without proper investigation; although he does censure their illogical attitude. At certain times Dowsing was a

dangerous practice. According to an old book in the British Museum, *Mineralogia Cornubriensis*, by William Pryce m. d., "Hooson says that the first inventor of the *Virgula Divinatoria* [the Divining Rod] was hanged as a cheat and impostor!" The editorial writer merely rejoices that any supposed mystery or "occult" atmosphere has been removed from Dowsing. Well, some may think so; but many of its "mysteries" are still unsolved, among others the curious fact that certain persons can respond to radiations from water only, others from one or another metal or metals, and some can get definite information from large scale maps without actually traveling over the ground! The influence of the phases of the moon has also been traced. No mysteries left in Dowsing, indeed" Studies on these lines bring up the ancient philosophy of sympathies and antipathies, of stellar influences and that terrible subject — the Occult!

In regard to another disputed problem, the reality of psychic phenomena, the story of the battle for recognition is instructive. Ever since the time, about a century ago, when critical attention was directed toward such things as the "spirit rappings" of the Fox sisters at Hydesville, N. Y., many efforts have been started by skeptics, singly or in groups, to prove beyond all question that mediumistic phenomena, haunted houses, apparitions, telepathy even, and in short everything that evidenced the existence of other planes of being than the physical, were absolutely non-existent. The reports of these skeptical investigators are instructive for they show that no final and unanimous conclusions were reached, and as it became clear that further study was needed to "prove" the negative verdict desired, a new committee and then another and another tried their hands. One result was, however, that many intelligent and unprejudiced persons became convinced that occult phenomena of one kind or another occur under certain circumstances and that they are

produced under laws yet unknown to modern science, though strictly "natural." This is of course the Theosophical view, and by "natural" we include far more than the physical, however ethereal. From all that is suggested by experiment and from the teaching of the great occult Sages and Seers, it requires a high and rare spiritual development before these laws can be understood or controlled.

Quite recently *The Scientific American* started a new investigation into psychic phenomena conducted by a well-selected committee under the chairmanship of Mr. Dunninger, the famous exponent of the fine art of conjuring. This body has apparently not set out to "disprove" anything, but is looking for positive evidence one way or the other, the right scientific method. This committee may get more decisive results than its predecessors. In connexion with inquiries of this kind H. P. Blavatsky humorously comments:

If spiritualists are anxious to keep strictly dogmatic in their notions of the "spirit-world," they must not set *scientists* to investigate their phenomena in the true experimental spirit. The attempt would most surely result in a partial re-discovery of the magic of old — that of Moses and Paracelsus. Under the deceptive beauty of some of their apparitions, they might find some day the sylphs and fair Undines of the Rosicrucians playing in the currents of *psychic* and *odic* force — *Isis Unveiled*, I, 67

Is it not possible that the Boston committee which is seeking to expose astrology will find it a hard task to reach a unanimous decision in the negative, and that even the few authentic teachings that have survived in modern astrology from the wreckage of the ancient Mystery Schools may provide enough demonstrable evidence to show that it has a substantial foundation?

To judge by the number of books on astrology recently published there seems to be no lessening of interest in the subject, and it should be noted by the skeptics that most of them, though not alarmingly technical, are not of a kind to attract the uneducated and the unthinking. Mr. Marc E. Jones's *How to Learn Astrology* is not intended for the illiterate, the credulous, nor the vulgar fortune-teller class; it is constructively critical. The publisher correctly describes it as an amazingly simple book based on a new and striking method of approach to the subject, and particularly to Natal Astrology. It contains much of value in a small compass. The author starts by showing the beginner how to regard an astrological chart in the way an artist looks at a picture, first getting a general impression and then studying the larger details and so forth until at last he is sufficiently prepared to make a fair interpretation of the whole and to cast a figure. Certain general groupings or "patterns" of the planets in a chart, regardless of their individual significance indicate the leading characteristic of the "native," and these can be easily detected if this interpretation is accepted. It is certainly worth careful examination.

Mr. Jones accepts the position taken by Dr. Carl G. Jung, already mentioned here, and says "The time of birth, modified by the geographical place of its occurrence, can be translated into the pattern of the instant, as this is given individual and recognizable form in the kaleidoscopic heavenly motions" and can "be captured on a piece of paper" for study. Mr. Jones apologizes for being too "hopelessly philosophical" for some readers, but we believe he is right in expressing the subtil philosophical point which may appeal to philosophic-minded students of science who would certainly not be impressed by baby-talk or mere assertions. He shows that many generations of astrological devotees have distrusted "the academic mind" because of its

conservatism and have unwisely refused to ask "the help which a careful scholarship might have given," but he very properly insists upon the need to employ exact scientific methods "without adopting the prejudices of the conventional scientists."

Dr. W. J. Tucker, editor of *Science and Astrology* magazine (London), in his *The How, What and Why of Astrology* takes a different point of view from that of Mr. Jones, and, we think, a less intuitive and philosophical one which inclines towards the mechanistic position and in which the doctrines of modern physics are called on to bear a heavier astrological load than they can legitimately bear. This appears in his criticism of "thoroughgoing occultists" in astrology who "merely account celestial phenomena and celestial bodies as *signs* and *symbols* of something which will happen months hence, or even years hence." Dr. Tucker calls this "insensate" for it is the stars and planets themselves which really affect human destinies. Such charged bodies, he claims, do this by producing variations in the magnetic field of the earth by their constant changes of position. Of course we know that from a purely physical aspect gravitational influences of the planets slightly affect the movements of the earth, and that the sun and moon have definite magnetic fields, but our information about planetary magnetism is very uncertain. Even the sun's magnetic field is so weak that it cannot be measured more than 200 miles above the surface, the photosphere.

In his rather brief reference to the Precession of the Equinoxes, Dr. Tucker explains that each sign of the moveable zodiac is a significator of character and has a powerful effect on different parts of the body, etc. Yet these Signs are, as he points out, "purely a mathematical proposition," "continuously shifting in respect to the stars," i. e., to the real stars in the real constellations which bear the same names as the abstract mathematical Signs. The

Signs are only a mental picture, a geometrical figure which we project across the background of the sky in our imagination. Being moveable, they coincide only at very long intervals of time with the physical constellations from which radiations of light traverse abysses of space at a definite velocity, perhaps accompanied by induced magnetic fields. If these energies come from the actual stars what is it that radiates from the mathematical, non-material Signs and according to astrology is able to produce effects on people and things? Can it be something mental or spiritual, such as we can only deal with symbolically, and haltingly follow with our laboring minds? Is it intelligent?

The problem of the seeming independence of the moveable Signs and the fixed constellations has long been a thorn in the side of popular astrology, and the application of the "scientific magnetic field" hypothesis does not reduce the apparent paradox. If we said that students of the deeper teachings of Theosophy have some clarifying information, our author might object that we were introducing the scientifically tabooed subject of Occultism! Well, perhaps it does, and perhaps Theosophy can show that though the problem is a paradox it is not a flat contradiction.

When, however, we are asked to believe that the light rays "with their accompanying magnetic fields," coming from the almost infinite distances of the stars can combine with those of the nearby planets at the moment of birth "to set the paths of the electrons which compose the child's body into a fixed and definite pattern which appears to exist for the duration of its life" (p. 22), we feel that the difficulties are even greater than those of the paradoxical Precessional problem. How can the radiations which take only a few hours at most to reach us from the constantly moving planets arrive so neatly at the same moment as those which have traveled for centuries from the stars and yet which must blend harmoniously with them to produce a workable

personality? Furthermore, we must assume that such a mechanical combination of physical magnetic fields can explain the infinitely complex structure of a human being without any "occult" factor being introduced! The Boston anti-astrological group not unnaturally disputes the suggestion that mechanical forces or influences can produce tangible effects on people because, as they say, "the walls of hospitals and other buildings where babies are born are opaque to all known radiations of stars and planets," a sound objection if we only refer to the scientific definition of magnetism and magnetic fields, and one that astrologers who want to keep in the good graces of modern physical science will find difficult to answer. The objection, of course, does not affect the "occult" interpretation of the activities of "nature's finer forces" which obey laws of another kind.

There are even more serious obstacles facing those who assert that human *temperaments and moral characters* are governed by stellar forces in any ordinary meaning of the words. We do not find scientists allowing for a moment that "magnetic fields" and so forth are *intelligent* in any shape or form, yet, if not, how can such mechanical factors creatively build up the infinite variety of combinations in the moral, intellectual, and spiritual character of a single individual? What have the scientist's "magnetic fields" in common with the emotions?

The difficulties in studying astrological influences greatly increase when branches of astrology such as those dealing with coming events, answers to questions, etc. (not included in either of the interesting books we are considering, which only treat of the birth-chart) are taken up without a recognition of the occult structure of the universe, of which the physical and material is but one manifestation. We fear that Dr. Tucker's laudable effort "to put the subject for the first time [!] on a firm scientific basis" will fail unless he greatly deepens and widens the common

interpretation of the word "scientific," which only too often means "materialistic" Fortunately for humanity, there are increasing signs that materialistic views are losing ground in some departments of science. We can see by such books as Dr. Gustaf Strömbom's *The Soul of the Universe*, and Dr. Knut Lundmark's writings on stellar evolution and consciousness that high-ranking astronomers are not all satisfied with mechanistic theories.

Dr. Tucker handles the difficult problem of free will in astrology with good sense. He says that "the astrological dictum, "Character is Destiny," only holds true when a man acts phenomenally as a non-moral being"; but man has been given free will and a moral self with which to combat the lower desires, appetites, and ambitions; and that "the operation of the will will act as a deflecting force; and this is something which will defeat any predictions which are based upon the arc of character-determinism." He divides man into three parts: (a) his character, which is determined, (b) his free will, and (c) his moral self. This is not far from the Theosophical point of view, but no explanation is offered for the alleged fact that we are obliged to accept a character determined by the action of "magnetic fields," for which we are not responsible, and which is often a very poor specimen. Without the factors of Reincarnation and Karma the character, and to a degree the destiny, perhaps, indicated by the birth-chart, would be purely a matter of chance and accident so far as the particular individual is concerned. Yet this is a universe of law!

Another point that needs stressing is that the character, however obtained, is only the temporary presentation of the limited personality, the mask, that the permanent Ego wears for that particular incarnation, Mr. Smith, or Mrs. Tomkins. Too many modern astrologers only think of the outer shell, the superficial aspect of the real man; but two well-known English students, Alan

Leo and W. R. Old ("Sepharial"), who have exercised a profound influence by their philosophical approach to astrology, saw further; and Theosophists who are looking for more than signs and wonders in the heavens will not regret time spent in reading their works. Alan Leo, who took much from H. P. Blavatsky's *The Secret Doctrine*, must have had a strong intuitional faculty. He showed that while in Exoteric Astrology the planet ruling the ascending sign, and so forth, describes the personality, the "mask," the Lower Manas focussed in the brain, the student who can look deeper and discriminate will find indications of the Higher Self reflected even in the distorted form of the ordinary personal horoscope. It is seen as in a glass, darkly. Alan Leo works out the principle that in our higher nature we belong to the sun regarded as Divine consciousness, while the moon with its mental aspect symbolizes the limited and ever-changing personalities which feebly reflect the solar light.

As to the intrinsic value of astrology to those who desire to become true occultists, H. P. Blavatsky points out in her *Occultism and the Occult Arts* that the incidental appendages to real Occultism such as Astrology, Palmistry, Ceremonial Magic, etc., when not useless or misleading are only indirect and imperfect methods of trying to gain knowledge of nature. She also shows that the acquirement of occult arts is only for the present incarnation, while those who travel on the true Path gain ground that is never lost. Many students have verified this teaching by experience, sometimes by great suffering before they discovered that they had wandered from "the strait and narrow" Path of Occultism which is the training and purification of heart and mind, self-discipline, impersonal love, self-forgetfulness, leading to Self-knowledge and the opening of the inner Vision. There is, of course, no objection to the study of astrology as a relaxation for spare time, but it cannot be regarded in its present imperfect

condition as of importance in the training of character. When it becomes more enlightened and purified astrology may help to break down materialism, but it would still be far from the true Esoteric Astrology which H. P. Blavatsky refers to in a well-known passage:

Astrology is built wholly upon the mystic and intimate connection between the heavenly bodies and mankind; and it is one of the great secrets of Initiation and Occult mysteries — *The Secret Doctrine*, II, 500

The Theosophical Forum

THE "THEOLOGY" OF THEOSOPHY — *Louis E. Van Norman*

"What I should like to have you explain to me," said a friend the other day, "is the theology of Theosophy." "Theosophy has no theology," I replied. "That is, if by the term theology you mean a system of dogmas, of precise doctrines drawn or inherited from historic sources, from the dicta of human beings, religious leaders."

"But would you claim that Theosophists don't have their particular brand of truth and insist upon your believing it?"

"Yes, I mean to say just that. Theosophy does not insist upon any particular brand of truth. On the contrary, it teaches that, since truth is reality, cosmic reality, and human intelligence is limited, man can go only so far toward truth as his intellectual and spiritual insight enables him to go. He himself must always be the judge. If the evidence honestly convinces him, it is for him the truth."

"But how about those with sectarian backgrounds? Can we accept such an attitude? What must we believe? In other words, can we become Theosophists I mean, without discarding our old faiths entirely?"

"Yes. Strange as it may seem to you, that is possible. I myself have found many different faiths represented in the Theosophical Society — Christians, Jews, Hindus. I believe you will find people with these backgrounds represented in the Theosophical Society, holding to the Ancient Wisdom which was originally in their own faiths. But now they understand what Theosophists mean when they refer to their teachings as God Wisdom."

"I am not convinced as to the theology point. Theosophists must

have some sort of system to which they expect you to subscribe. I don't mean what they teach in their books. I mean the general objects of their teaching, if you like to put it that way. The other day I went to one of the meetings in the Temple at Point Loma and someone handed me a circular which listed the "Objects" of the Theosophical Society. They seem to me to be a sort of Theology. Perhaps, if these "Objects" were stated in simpler language this flavor of theology might disappear."

"Does the language in which these "Objects" are stated really seem theological? Let me restate them — or try to do so — in even simpler phraseology. Let me use phrases which, even if somewhat less dignified than those in the circular, will perhaps be more comprehensible to the man in the street and the woman in the home in these United States of ours in the year 1941. If I can do this acceptably I believe no true Christian, Jew, Buddhist, or even so-called Agnostic, will find any real difficulty in agreeing with what is set forth and, at the same time, in holding to the basic tenets of his own particular faith. They all began as inheritances from the Ancient Wisdom which Theosophy teaches."

As set forth in the circular in question the first "Object" (a) of the Theosophical Society is:

"To diffuse among men a knowledge of the laws inherent in the universe." This might be otherwise stated to read:

"To set down and explain, so far as may be possible, so that all who wish may understand, how things work in this universe in which we live."

We all know and believe that, as Browning has put it, "God's in His heaven, All's right with the world." But we will be happier and nobler if we understand something of the laws of God by whatever name we may know Him.

The second object of the Theosophical Society (b) is:

"To promulgate the knowledge of the essential unity of all that is, and to demonstrate that this unity is fundamental in Nature."

"Promulgate" is, perhaps, a rather stiff formal word. The dictionary says it means "to announce officially." Frankly, I confess I don't like the official smack to the word. But here it really means that the Theosophical Society is willing to stand behind, to endorse, an organized effort to spread abroad facts and information going to prove that the universe in which we live is one, fundamentally one, and that man is part of this oneness. There are many scientific historical facts to prove this. We might make a paraphrase of this "Object" to read this way:

"To spread abroad, with the approval of the Theosophical leaders, and reference to historical sources, a knowledge of the fact that we are all one — animate and inanimate nature, the land, the sea, the stars, the animals, and man himself."

Let us leave until the last "Object (c)." It is in many ways the most important of all.

Now take "Object (d)":

"To study ancient and modern religion, science, and philosophy." This seems quite clear and concise as stated. It is of course a very large order. But how inspiring and stimulating.

"Object (e)" is stated as:

"To investigate the powers innate in man."

Most of us know very little about our powers. Today we are being told by all sorts of alleged authorities, including impostors, that we have powers over nature and ourselves. We need to know the truth about these powers. Not for material gain but for our

spiritual enlightenment. The wise Greek said: "Man, know thyself," and thou shalt know all that can be known.

All of Theosophy, all of human duty and opportunity, is bound up in the lofty purpose set forth in "Object (c)":

"To form an active brotherhood among men."

This is regarded as so important by Theosophists that all they ask of those who wish to join their ranks is a sincere acceptance of this belief.

"Could any object be more lofty or important in these years in which we are living? Could any theology held to by any church, or other religious body, be more soul-inspiring, more divine, more practical than this?"

My friend left me with an admission that theologies are not so important as he had been accustomed to regard them, but that "Objects" are. He promised to read theosophical books to learn about the "teachings" of the great ones of all ages and all lands who have given us what we know as the Ancient Wisdom.

The Theosophical Forum

KINGS, LEADERS AND DICTATORS — *Arthur A. Beale*

The public mind today is much perturbed and often vexed on this question of Leadership and Dictatorship. It is important to clarify one's mind on what these issues stand for and do not stand for. Let us examine the cosmic system. Our Theosophical philosophy contains the explanation of fundamental principles that are universal, consistent, permanent, and convincing to minds prepared for the truth. It involves three propositions:

- I. A Universal, boundless, omnipresent, and immutable principle, concerning which speculation is impossible.
- II. The eternity of the Universe, carried with absolute Universality of periodicity.
- III. The fundamental identity of all souls with the Universal Over-Soul, being the basis of Universal Brotherhood.

These three fundamental propositions work out through seven processes, but it is sufficient to mention four of these for our purpose. We wish to emphasize: 1. Reimbodiment. 2. Karman. 3. Hierarchies. 4. Evolution. That is, that all entities reimburse; all are subject to the law of Karman or consequences; all evolve from lower grades to higher; and all in consequence find themselves associated with groups or Hierarchies and in their hierarchy find their proper level, not by designation of a superior being, but by their own affinity. In fact the whole Universe is a product of law and order.

Incidentally a hierarchy is a group of entities of common interests and grade of evolution, and composed of smaller groups contained in and part of this larger group. Every such group whether large or small belongs to and is incorporated in a hierarchy of more comprehensive bulk and importance, i. e.,

more evolved.

Every hierarchy has at its head, a hierarch or head, that is, an entity who has assimilated all the lessons of his hierarchy and therefore is its "head-man." He is there not by any false process, not by election or choice, but by a "divine right." He has earned it, and by his own superior evolution, he is there, and one judges that this law is the origin of the saying "the divine right of kings." But let us not forget the ordinary king does not hold his position by divine right but often only by birth right; he is only a symbol.

In the old days when the Mystery-Schools played such an important part in the control of the race, there was recognized a spiritual hierarchy of adepts, that is, advanced souls. And there were priest-kings, those wonderful, compassionate and wise Souls, who by their innate powers and wisdom assumed control and responsibility; and when such a system was established the collective wisdom of the community and their spiritual demands ensured the continuous supply of subsequent hierarchs to fill the place of the one departing.

So one gets, as a natural law, a system of a succession of the most fit. This principle was adopted by Christianity as the apostolic succession, and this is an assumed principle of the Roman Catholic Church, that recognizes St. Peter as the first pope.

But these successors were adopted by a very frail system — a reflex of the collective moral, spiritual or non-spiritual consciousness of the extant community.

The fact remains that leaders, teachers, rulers are required in every movement or community of interests, and are evident in presidents of societies, premiers of governments, governors of states and rulers of nations.

It is a Universal principle, but is not always consistent with

natural or divine principles; it is often only an artificial and imperfect simulation of these. The nature of the hierarch is always a reflection of the collective consciousness of the community. A corrupt or criminal community may acquire a gangster for its head. A spiritual community may and does by its inherent spirituality acquire a spiritual head. A pronounced individuality may and often does by his force of character impose his individuality on a community, often with great benefit to that community. Such a ruler may prove himself a beneficent force, or he may, by a process of profound egotism and personal ambition degenerate from a beneficent force to a consummate nuisance.

Even an autocrat may be beneficent, but the tax on his personal makeup to retain his or her balance as a benevolent force is tremendous.

In the divine or cosmic system of hierarchs, before the hierarch is worthy to occupy such a place, he has to pass through incarnations or aeons of probation, till every virtue is tested and strengthened by long processes of trials and sufferings, till every selfish instinct, every bit of personal egotism, is swept out of his nature, every weakness to temptation is eradicated, in fact until a Christ-like compassion, a profound wisdom, an unassailable peace flows from his soul — and we see a Master of Wisdom, Compassion, and Peace: a man incapable of meanness, weakness, fear or cupidity, a man of sound judgment, supreme knowledge, indomitable will and understanding heart. And such simply find their position in the golden chain of the spiritual hierarchy. They are the spiritual guides, comforters, protectors and kings of the race, in an unbroken chain of every grade of evolution. A self-appointed demagogue, who by his personal will, fine oratory, and forceful nature acquires a supreme control, is no guarantee of beneficent rulerhood, but is symbolical of the consciousness of those ruled. They have called him forth.

The moral of these suggestions is that because we have had throughout historical times evidences of leaders and dictators who have become nuisances, menaces, aggressors and objectionable autocrats, that is no argument against leadership, kingship, or autocrats. Yes, let us have autocrats, but divine autocrats, who know, who never encroach on another's right, who never self-seek, who are free from egotism, who are wise, compassionate and peaceful.

The Theosophical Forum

TWO GREAT PLAYS — A STUDY OF KARMAN — *Alice D. Peirce*

The Theosophical teaching about Karman is of the utmost practical importance in these days when a question-mark seems to be the most familiar mental symbol of the future. At best our knowledge of a teaching so fundamental and so profound in its deeper reaches is limited. But without some degree of understanding of this indispensable key to the mysteries of life, we have little to explain the bewildering facts and events of our world.

Extending the etymological meaning of the word, which is *action*, possibly the most accurate definition of Karman is the Law of Consequences. This so-called "law", or operation of Nature, is the unerring adjuster of disturbed balance, well-known to physical science in the formula: action and reaction are equal and opposite. Perform an act, there is reaction: produce a cause, there is sequence. If it were possible to imagine a condition where perfect equilibrium prevails, there would be no such thing as karman. The pendulum would be at rest.

In the physical world the operation of karman is unmistakable. Break the laws of health; defy gravitation; ignore the natural properties of fire, water, gases, chemicals, and dire results are to be expected. These reactions upon us are automatic. No account is taken of ignorance, of motive, or of any other conditions. An impersonal, inescapable law operates. We have the choice whether to act in conformity with law and order, or suffer the consequences. To trace effect back to cause is comparatively easy in the material world.

In the realm of the inner man, however, it becomes more difficult. Here subtil factors are involved — thought, emotion,

desire, and our intricate relationships with all other beings whom we contact. Tracing effect to cause in this domain is often too entangled for our limited vision to accomplish, and utterly impossible if it be confined to the compass of one earth life. Everyone has experiences for which there is no explanation on the basis of known causes. Only the correlative doctrine of Reimbodiment renders just or logical the fact that we suffer sometimes without the slightest notion of what brought it about. Realization that the thread of continuity is unbroken from life to life, brings the assurance that we suffer, justly, from our own past thoughts and deeds, and not, unjustly, from causes we had no part in producing. Appearing upon the stage of life at each rebirth with a definite character, built by ourselves in past lives, it follows that upon these innate characteristics depends our future destiny.

Karman is sometimes presented as though it were a ledger account, in black and red, of rewards and punishments. But it is much more than that and should not be conceived as so coldly mechanical. Compassionately, karman operates to educate and correct, rather than to merely balance an account. Hourly choices which we make with free-will, determine whether our accounts conform to the primary law of Harmony, or work against it. The ultimate dictum, let us remember, is that harmony must prevail throughout Nature. If disturbed, it shall be restored — it may be soon, or "after many days."

Therefore Karman denotes a deeply philosophical doctrine, and means an operation of Nature which is utterly impersonal and unevadable. It is *not* Fate, for that implies some outside power or agency beyond human control which predetermines our lot. Endowed with the divine faculty of free-will, we alone have that power over our fortunes. For we are our own karman.

As a spider spins his cobweb with filament issuing from his own substance, each of us is weaving, strand by strand, a self-made destiny. Man being a lesser organism within a greater, the sum of all individual destinies constitutes a vast and complicated Kosmic fabric, formed of interwoven strands. It is because these separate destinies interweave, act upon and react against each other, that Karman is so difficult to fathom in its details. Only the vision of a Seer could disentangle an individual thread of destiny, spun through ages of material existence, and trace each event to its originating cause.

The classic myth of the Three Fates shows that the old Greeks well understood that a continuous thread of destiny runs through every life. Clotho, the spinner; Lachesis who measured, and Atropos who clipped the thread with her shears, represent the whole cycle of life — Past, Present, and Future. Nemesis, the Greeks called the goddess of retributive justice. Without attributes and propelled into action by men and nations, she was made by them an avenging Fury or a rewarding Angel. Nemesis could never be appeased by prayers or sacrifices, nor deflected from the course automatically followed after some action produced a disturbance of harmony.

No lesson from the wisdom gleaned by older generations is so sorely needed today as this basic truth that, ultimately, justice will prevail. The baneful and utterly false idea that a man by last-minute profession of faith, and so-called repentance, or in any other way, can escape the just consequences of his actions, has undermined character and bred indifference to responsibility for wrongdoing. Knowledge of these inseparable laws of Karman and Reimbodiment must be extensive if we are to build a better world on sure foundations.

This teaching has been presented in many ways and from various

angles during the more than three-score years since the mighty voice of Blavatsky proclaimed again these ever-rustless keys to the Temple of Truth. Effective in ancient days, as in modern times, is the use of dramatic presentations to drive home certain lessons. In the Mystery-Schools of many lands, and especially in the lower grades known as the Lesser Mysteries, the pupils witnessed and took part in mystery-dramas. These were designed as preparatory teaching, and dramatized experiences which later would be actually lived through by the candidates for initiation into the Greater Mysteries.

The value of drama as a teacher of Karman is the fact that we can see take place in a very short time the working out of causes to their appropriate sequences. For the true significance, of course, the action must be raised from the material to the psychological or mental plane, where man actually weaves his destiny — by thought.

Glancing back over the road our race has traveled, certain intellectual and spiritual giants stand out, as do mountain-peaks upon the horizon. These are the philosophers, poets, dramatists, patriots, with something unmistakable in the tone of authority with which they speak through their chosen medium. We recognise them as spiritual voices bringing a spiritual message from higher spheres. Some of these have pictured life as a drama, which is fitting, because life in these manifested worlds is indeed the drama of the soul — made up of melodrama, comedy, and tragedy. Few of the players have more than a vague idea of plan or plot, it is true; but that is for their finding out. The inner, spiritual man assumes new garments and plays new roles with each reappearance upon the stage of earth-life. Gradually we learn to use our inner faculties to break through the illusions, to find reality behind the seeming.

There is an old myth which pictures the gods as looking down upon this human drama going on in our lower sphere, and moved to peals of Olympian laughter, which vibrates throughout the upper regions. The cause of their merriment, so the story goes, was to see the antics of actors who had so identified themselves with, and been deluded by, the roles they played and the trappings of their assumed characters, that they mistook the illusion for reality. There is wisdom here. All too often we fail to realize the illusory and transitory character of our earthly roles, taking lines, gestures, and poses all too seriously. Sometimes we even fail to distinguish between the fictitious and the real actor behind the mask — that divine being out of Eternity, destined to learn the lessons earth has to teach, then return to that ancestral home wherein illusion has no place.

Among the Titans of thought we select Shakespeare and Aeschylus, who unfailingly drew their inspiration from universal fountains and proclaimed things which are eternally true. They depict the dual nature of man, good and evil, which are the opposite poles of his consciousness in conflict within him, and show convincingly how following the one leads to destruction; the other, to heights sublime.

They taught that destiny is made by man himself. Therefore Karma, not Fate is at work. Agents for working out consequences are shown to be his own thoughts and actions, in other words, his character. Men are "themselves the authors of their proper woe." Figures of the play are types representing the many aspects of a man, or they represent a principle. Therefore each drama may be said to be Everyman.

In *Macbeth* more clearly than in the other great tragedies of Shakespeare, we see the quick results following from a man deliberately choosing wrongly, setting his higher nature aside and

letting the evil in him dominate. At first Macbeth appears to be an average man, a good soldier who is exceptionally brave, well thought of, and apparently loyal to his kinsman, the King. When the witches first hailed him as "King that shall be," it seemed incredible. Yet almost immediately we see the suggestion working in his mind and taking root there. Promptly he wrote of this incident to Lady Macbeth that she might share in the anticipation of this possible good fortune. Evidently he knew of her ambition to be called "Queen." In her soliloquy after reading the letter, she expresses fear that Macbeth's nature was "too full of the milk of human kindness to catch the nearest way"; and that he would not play false to gain an ambition. This shows Macbeth's nature inclined to honorable ways. Lady Macbeth had no scruples herself. Inflamed with ambitious hope, her mind worked fast with plans to bring about the consummation of her desire. Upon Macbeth's return home, she was ready with details of the plot to murder Duncan, the King, a guest under their own roof. With some difficulty she persuaded her lord. We have the speech wherein the struggle is shown between Macbeth and his conscience. He recognises that "even-handed justice commends the ingredients of our poisoned chalice, to our own lips," and admits to himself, "I have no spur to prick the sides of my intent, but only vaulting ambition, which o'erleaps itself. . . ." Spurred to the deed by his wife's taunts of cowardice — the most galling to a brave soldier — he commits the murder of Duncan — his kinsman, his guest, his King.

Then follow the consequences. It should be noted here that the act itself was the sequence of other causes, which had built into Macbeth's character a destructive weakness. Not alone by external forces, but by still more powerful inner enemies collaborating, does Shakespeare show his tragic hero to be destroyed. Karma is at work, justly bringing about the doom

which Macbeth brought upon his own head.

Macbeth had a conscience so stinging in its reproaches and so appalling in its remorse that his inward torment compels our pity. This very struggle between the two natures shows that up to that point he had not completely cut himself off from the god within him. The fact that he can see the right and knows the better way, doubles his sufferings when he chooses the evil path. Realizing to some degree the disintegration of his better nature, he is pursued by the memory of his guilt.

One fatal step which contributed to his final ruin was traffic with the supernatural, in the form of the witches on the heath. Herein there is a tragic warning that we can profit by in these days of growing interest in psychic things, when people ignorantly seek the counsel of clairvoyants, crystal-gazers, and so-called astrologers, who advertise to reveal the future and, for a price, give superhuman advice. By opening his mind and inner nature to the suggestions of the witches, evil influences from the lower astral world poured in upon Macbeth. This astral world by which we are surrounded, is the storehouse for the effluvium of human vice and crime. Once open the door, the evil emanations accumulated there, flood in and seize upon the weak spot in the nature of the foolish one who dares to enter unprepared, and fans it into flame.

We follow the rapid progress of Macbeth's downfall. The first crime calls for another and then another to make secure the position. There is the ever-present goad of Lady Macbeth's ambition, which matched his own, and made them partners in crime. "Infirm of purpose! Give me the daggers," she taunts him. Matter-of-fact and unimaginative as Lady Macbeth was, driven by overpowering desire for position as queen, she displays neither regret nor remorse. Later, Karma-Nemesis reaches her and we

have in the "sleep-walking scene" one of the most dramatic pictures in all literature of retributive justice at work. Just as Macbeth, tormented by his guilt, heard a voice which cried, "Sleep no more! Macbeth does murder sleep. . .", so the guilty Lady Macbeth, walking in her sleep, rehearsing over and over the events of that fatal night, cries, "What, will these hands ne'er be clean?".

The monster within, fully aroused, all restraint gives way and Macbeth, no longer a normal man, becomes but a destroying energy . — covetousness incarnate. Hate and passion surge through him as through a hollow wreck, and everything that stands in his path is violently removed. Finally outraged Nature reacts against him. Catastrophe arrives and he meets his doom at the hand of Macduff, the man he had so cruelly wronged.

Aeschylus, often called the "ancient Shakespeare," belonged to that noble company of Greeks whose creative genius has nourished the thought-life of the world to our day. He was born towards the close of that wonderful sixth century b. c, which produced half a dozen or more of the greatest intellectual and spiritual supermen in recorded history. Pythagoras was still living and there is evidence that Aeschylus spent some years of his early youth at his school and was initiated into the Mysteries there. He received highest honors for distinguished military service and for many years won first place in the yearly dramatic competitions held at Athens.

He saw, more clearly than others, ominous signs that all was not well in the State; that the "glory that was Greece" was beginning to wane. The Mysteries were becoming corrupted; sacred institutions were being done away with. Athenian arrogance was growing, and the rights of lesser states were being trampled upon and their sufferings disregarded.

Aeschylus chose tragic-drama as the medium through which to sound warnings to his countrymen that Karma-Nemesis would mete out even-handed justice for every wrong inflicted. This is the theme of all the dramas that have come down to us — only seven out of nearly one hundred that he wrote. His well-timed message was, "Beware! Ill deeds bring forth offspring like to their parent stock." Especially in the Oresteian trilogy did he drive the lessons of Karma home. It is interesting to note here that the plot of the tragedy of Orestes, up to a certain point, is almost identical with that of Hamlet. Of course Shakespeare has been called the arch-plagiarist. But there is nothing to show that he ever heard of Aeschylus and the trilogy.

Let us recall how Agamemnon led the Greek expedition against Troy and upon his return victorious, his wife, Clytemnestra, greets him with elaborate honors and makes honeyed speeches of welcome. While the fact of the matter is that she has been a faithless wife. Aegisthus, cousin of her husband, has become her lover, and together they have planned to murder Agamemnon so that Aegisthus might take his place as King and marry the queen. Clytemnestra has one bit of salve for her conscience in this, because she considers herself an agent of Nemesis. Agamemnon, in order to propitiate the gods and have fair winds for his undertaking, has supposedly sacrificed their daughter, Iphigenia. As a matter of fact she was saved by Artemis. By assuming this agency Clytemnestra has come under the ban of Karma-Nemesis as Agamemnon already was for the intended sacrifice of Iphigenia. The chorus chant their misgivings and are haunted by forebodings of dire results. Nemesis overtaking Agamemnon upon his return, he is murdered by Aegisthus and Clytemnestra.

Orestes, the son, absent from the city, returns at the behest of Apollo to avenge his father's death, which was then considered a religious obligation on the part of a son. The unnatural

circumstances place Orestes in a deplorable position. He kills the guilty Aegisthus, and then with anguish of soul disregards his mother's pleas and tells her, "Thyself art guilty of thy death, not I." And, later, to the reproaching Chorus, "With Justice" sanction I my mother smote."

However, the guilt of matricide weighs him down and nearly unseats his reason. He realizes that he must be purified from this pollution in spite of the high authority upon which he acted. He sees rising in the background the Furies, or Erinyes, gathering to haunt him. "Gorgon-like they come, vested in sable stoles, their locks entwined with clustering snakes." He seeks refuge at the temple of Apollo, where the Furies follow him. Apollo tells Orestes that he cannot free him from their hateful presence, and suggests that only the goddess of Wisdom, Pallas Athena, can do that. So he hurries to Athens to lay his case before this final court of justice.

Then follows the trial of Orestes. With Athena as judge, Apollo defends Orestes. The Furies are the accusers and the ancient Court of the Areopagus is the jury. The twelve votes cast by the Areopagites are evenly divided, but Athena, who by divine right has the deciding vote, casts hers for Orestes.

The Erinyes, complaining to Athena about thus losing their prey, are then transformed by her into the Eumenides, goddesses of good fortune.

It may be objected that if Karma-Nemesis was at work, Orestes should have suffered the consequences of his evil deeds, as Macbeth paid the price. But Aeschylus is portraying the drama of the soul and its final victory over the furies of the lower passions in human nature. Athena, the symbol of Wisdom, considered the motive in relation to both crimes. That of Clytemnestra and Aegisthus, committed for purely selfish reasons to satisfy worldly ambition; that of Orestes in fulfilment of what he considered a

religious duty to avenge his father's murder. This drama is depicting the soul's experiences in the school of life. Orestes, the inner spiritual entity, behind the mask of the outward personality, is the symbol of the soul. You cannot kill the soul.

The earth-spirits, or Furies, who haunt Orestes until he is freed by Athena, consider only the outward act and automatically exercise their functions in accordance with natural law. Wisdom takes motive into consideration and the whole character of the inner man. Free-will and moral power triumph over blind instinctive thirst for revenge. The transmutation of the Erinyes into Eumenides teaches not the suppression or annihilation of the instinctive tendencies, but their subordination to become servants of the higher faculties of the soul.

Orestes sought refuge with his Higher Self — Wisdom, or the Buddhi principle. Considering this tragedy as taking place within one human being, it suggests that when the lower, undeveloped part of a man appeals for guidance to the highest within him, help is invariably received. Justice is tempered with mercy. Even if the soul is led to wisdom through suffering, compassion adjusts the karmic load so that it does not crush. Sorrow and darkness and the dread furies of the lower nature are but incidental means to that end. As Aeschylus says in *Agamemnon*, "Against their wills, rebellious men are tutored to be wise."

So we learn, or have the opportunity to learn, one of the most important lessons of life; that the eternal order of Kosmic Nature is Harmony and that soon or late, we shall have to conform to this divine law which,

Knows not wrath nor pardon, utter true
Its measures mete; its faultless balance weighs;
Times are as naught — tomorrow it will judge —
Or after many days.

Such is the law that moves to righteousness,
Which none at last can turn aside or stay;
The heart of it is Love, the end of it
Is Peace and Consummation sweet. Obey!

The Theosophical Forum

THE SOURCE OF CLIMATE — *A. J Stover*

Many explanations have been advanced by scientists to account for the ice ages, or glacial periods. So far, all such have failed to explain either warm interglacial periods during the last ice age, or the focalization of continental glaciers such as the Cordilleran, Keewatin, or Labradorian glaciers.

The rapid retreat of glaciers in the Sierra Nevada Mountains, the Cascade Mountains and in the mountain ranges of Alaska during the past fifty years has called attention to a possible cause of glacial periods. For instance, since its discovery in 1880 Muir Glacier, in Alaska, has retreated about thirteen miles Paradise Glacier of Mount Rainier is retreating steadily at about seventy feet per year.

In *The Mahatma Letters to A. P Sinnett*, on pages 161 and 162, the Master K. H. makes the following statement:

. . . I wonder how Science has not hitherto understood that every atmospheric change and disturbance was due to the combined magnetism of the two great masses between which our atmosphere is compressed I call this meteoric dust a "mass" for it is really one. High above our earth's surface the air is impregnated and space *filled* with magnetic or meteoric dust, which does not even belong to our solar system. . . . Science makes too much and too little at the same time of "solar energy," and even of the Sun itself, and the Sun has nothing to do whatever with rain and very little with heat. I was under the impression that science was aware that the glacial periods as well as those periods when temperature is "like that of the carboniferous age" are due to the decrease and increase or rather to the expansion of our atmosphere, which expansion is itself due to the same meteoric presence? At any rate, we *all know*, that the heat that the earth receives by radiation from the Sun is at

the utmost *one third* if not less of the amount received by her directly from the meteors.

In regard to the origin of the glacial and interglacial periods, the following thought seems to present a possible explanation: At present we find our world divided into "life zones," seven in all, three warm, one intermediate, and three cool.

Boreal or Cool	Artic Alpine	Region of perpetual snow.
	Hudsonian	Timberline and tundra.
	Canadian	Zone of spruce and alpine firs.
Intermediate	Transition	Zone of the Yellow Pine.
Austral or Warm	Upper Sonoran	Chaparral and sagebrush.
	Lower Sonoran	Hot desert areas.
	Tropical	Enters U.S. only in Florida.

Suppose we imagine our earth surrounded by successive layers of these zones, onion-like, but with this difference: that certain zonal layers are thick at the equator, thinning out and finally disappearing as they recede to the north and south. The zonal layer at the equator would be the tropical zone. The next zone would be the Lower Austral (or Lower Sonoran), overlying the Tropical and extending far beyond it both north and south. The next layer, the Upper Austral (or Upper Sonoran), doing likewise. It will be seen that the layers are not uniformly deep in any locality: the dominant zone for that area is greatest in depth and influence. A mountain high enough to rise through these zones would support the forms of life common to each zone.

In general, for each thousand feet we rise in climbing a mountain we find an average decrease of four degrees Fahrenheit in temperature, with corresponding plant and animal life fitted to that environment. In short,

we can find Canadian types of life by going to Canada, or by climbing a high mountain.

In the north we find the three higher zones expanding over a considerable range, with the lower zones, wherever present, greatly constricted. In California these same upper zones, when present in our higher mountains, are greatly compressed. Instead of occupying thousands of feet in altitudinal depth, they may occupy a mere few hundred feet. In Alaska, timberline may be near sea level. In Oregon, at about 4,000 feet In Southern California, at something over 11,000 feet.

Taking this passage in *The Mahatma Letters* as a clue, it seems possible that alternating ice ages and inter-glacial periods may largely be brought about, as the Master's statement suggests, by expansion and contraction of these zones; that cold sections of our zonal scale may have so expanded in depth as to cause the glaciers already existing there as nuclei to increase greatly in size, finally merging one with the other to form once more an extensive glacial system. On the other hand, it may be that at present we are rapidly leaving the age of ice. Seattle, for instance, may not experience any great change climatically either in temperature or in rainfall, yet the Arctic Alpine-Hudsonian section of the life zone scale in that area may be so raised or reduced in thickness as to decrease the nearby mountain glaciers or even to cause their extinction, and this is likely to occur if the present rate of retreat continues.

UNVEILING THE SOUL — *Raymond Rugland*

Man is a trinity of spirit, soul, and body, a division which is enlarged by Theosophy into seven principles. The teaching regarding man as a triad has remained with the peoples of the West since the organization of *dogmatic* Christianity. As the Christian teachings have been passed down through the ages, they have gradually become veiled with deepening shades of materialism which were not part of the original Wisdom-Religion, their Mother. Today almost one-sixth of the world's population are adherents of Christianity.

What do men learn from the Sacred Book, the Bible, about their inner Natures, their destination, their purpose on Earth, and of their relationship with their Divinity?

It is not strange in this twentieth century that men meet with discouragement in the search for their "souls." Science speaks not of it, and with the churches there remains but a dim shadow of the original sublime teachings concerning the nature of the soul. Because it is a difficult task many have resigned from the search for the "soul." These have created their own barrier to Wisdom by seeking that which is *within*, externally. Blinded in the delusion of separateness, these people can only consider "soul" as something apart from themselves — as they do God. It is not that the soul must be found, but rather that we must become aware, self-consciously, that we *are souls*.

Among the defeated we hear: "It is not for us to know"; others dabble in psychology, spiritualism, mysticism, and the "subconscious" mind. The search among external objects takes the explorer down many a road and side-trail.

Locked within the allegories and parables of the Bible, albeit distorted almost beyond recognition, are verities regarding the inner nature of man, and much may he learn who can follow the labyrinth of teaching aided by the "golden thread" of Theosophy.

Analysing the Bible teaching of soul on its own merits and weaknesses, we note in *Genesis*, ii, 7: "the Lord God formed man of the dust of the ground, and breathed into his nostrils the breath of life; and man became a living soul." This is Adam, the "first man" of the earth, as commonly considered, *created* by the Lord. God *created* both matter and life, teach the Christians; Matter He *created* when He fashioned the Universe; Life He *created* when he "breathed" Life into man and all the living kingdoms of earth. Could God have "made" Adam of those elements, life and matter, thus separating Himself from the Design of Matter and the Consciousness which is Life? Can any God, however high, separate himself from matter and life?

Man must be more than dead substance imbued with life, for he manifests intelligence and spirituality. The word for soul in the original Hebrew was "nephesh," and meant "animal soul." The "living soul" which Adam was created to be, is "nephesh," and, according to Theosophy, the physical soul refers to the lowest and most transitory principles of man's septenary constitution. Therefore, according to this exoteric picture, we cannot attribute to the Adam of Genesis immortality, self-conscious responsibility, or the spirit principle, Adam being but a *vital* soul. He was *created* sinless without knowledge of right or wrong, and not having entered upon material experience, was without power of discrimination. Adam became more than a "vital soul" when he ate of the "Tree of Knowledge," or when, according to Theosophy, his latent intellectual principles were awakened by the "sons of Mind."

The intelligent Adam became aware of himself and his actions, and could see the good and could see the evil. He became aware that his desires were not holy, realizing that he had "sinned." Through mind he became able to hear the voice of pleasure and the voice of the spirit or duty. Because intelligence linked his higher and lower nature, he became aware of both, and thus the director of his own actions.

Thus we build upon the picture of *Genesis*, and ask: If man is able to know the "good" or the Harmony of Divinity, must not that Divinity be inherent in his own Nature? Not one man is exempt from the struggle between the higher and lower nature.

Knowledge of good and evil is not enough, for there must be the voice of the Spirit that seeks to return the Pilgrim of experience to his Spiritual Home. Mere intelligence without material and spiritual desire is non-evolving and purposeless. It is through Mind that we are ever choosing; it was through Mind, plus the intuition of the Divine radiating from his own inner Spiritual Self, that Adam knew that he had "sinned."

If we return to the Christian picture depicting man as a wandering "soul," a *created* product, we can ask with what justice can God hold man to account for his life on Earth? The *soul* of man which God *creates* can appear from its description to be only a static thing, living but not self-conscious, intelligent but not responsible, non-evolving and with but a limited destiny which God has planned beforehand. If the soul represents the responsible part of man's nature — and it must be so since it is this *soul* that God judges for heaven or hell, and has *created* with all its virtues and weaknesses — there is no *reason* to expect man to assume the responsibility for living a noble life with a fated creation and environment. What kind of God is it that will judge all men alike, although he has tempted some and others not, placed some in a favorable environment, others in a poor one?

Where is the equality of opportunity to gain justice?

We may justly wonder at the Divine Wisdom of God who separates from Eternity a few thousand years to express his planning. It is only human vanity that could conceive of the *creation* of endless universes so that the humanities of one small planet could be afforded with an environment for His purpose. Eternity cannot extend in one direction only, and we can ask: Had God done nothing before He brought the Universe into being? Did he fashion this great Structure merely so that after the Day of Judgment He might spend the remainder of Eternity watching his children suffer in hell or partake of the bliss of heaven, realizing his responsibility for their *creation*? No law-court of our times would mete out the same cruelty to a breaker of human law that the Most Holy has ordained.

In Theosophy is presented a magnificent vista of Design, Harmony, Purpose, and Justice which we have every right to expect of a Universe governed by Law — the result of Divine Intelligence and Planning. Here we see no Man-God like the Jewish Jehovah *creating* something out of nothing, and making a mockery of His Planning by omitting the Purpose of it. The immaterial "soul" of the Bible is not tried in a material hell. Theosophy shows that every man, like every entity in the Universe, is "self-directed" and "self-responsible" for every act and deed. There is no predestination or fate; there is no chance. Evolution is carried out in obedience to Natural Law and free will allowing for perfect justice in Karman for acts performed and causes created. Theosophy does not separate the Universe from Deity, but shows that every manifestation arises out of the One Spiritual Essence or Divinity, the Fountain-Source from which All has emanated and differentiated. This Divinity is eternal and regular in its manifestations.

Because we as human beings have emanated from the Spiritual Heart of the Universe, we manifest aspects of Its Desire, Its Intelligence, Its Harmony, Its Life. The very root of our Being is the Spiritual, and by consciously striving to attain the Reality of our Inmost we become the Imperishable, the Spiritually Glorified. This attainment is only possible by evolving to the Reality in many forms, bodies, or vehicles, in many worlds and environments, through many lives. It is by means of individual forms or vestures that the Enduring Self is linked with each realm of experiencing, but the Inmost Self needs these not when their purpose of gathering experience has ended; and they are therefore transitory.

To us, Universal Nature reveals the structure of its Scheme in seven Universally diffused principles of which all manifestation is made up. We as human beings are similarly composed of seven principles, our Immortality preserved in the three highest spiritual principles which include the Reincarnating Ego. The seven principles which compose Man may be broadly summarized by the Christian trinity of body, soul, and spirit. As "spirit," man's imperishable nature consists of: Atman, the formless Divine Essence; Buddhi, the irrational soul or vehicle of the Atmic principle; and Higher Manas, the intellectual principle, born of Mahat, or Universal Mind, that adds rationality to Buddhi from *below*. Atman cannot be cognized, nor can it be possessed singly. It is the Universally diffused Central Kosmic Spiritual Fire which all share as their highest Principle. Buddhi, the Divine Soul, is irrational, because, being the *pure emanation* of Atman from which Reality and Truth flow as a stream, it can have no individual reason of its own on this plane, nor for us any attributes. In Buddhi is reflected the Wisdom from Atman; rationality is from Manas. It is the spiritually attracted part of Mind or Manas that survives the lower principles, and by

assimilating this Higher Manas, Atman-Buddhi becomes consciously aware of its Divinity. These eternal three principles are known in Man as the Reincarnating Ego or Causal Body, and comprise his enduring individuality as contrasted with his *personality*, and assimilate all experience in the process of evolution and the living of many lives.

The *soul* of the Christians, as usually interpreted, is best compared to the Theosophical personal or human soul, the Ego in which resides the idea of "I," and which is preserved by the Spiritual Self, or the Reincarnating Ego, from one incarnation to the next. This *soul* is the agent for the transference of material experience into Spiritual Self-Consciousness, the intermediate link between Spirit and Body. Theosophy teaches that it is the two principles, Lower Manas or Intellectuality, and Kama or the principle of desire, that make up the intermediate nature. The personal *soul* is the personality, and is therefore perishable.

The most transitory of the souls of man is the terrestrial or animal soul, the "body" of the Christian trinity, the "nephesh" of *Genesis* before commented upon. The Sthula-sarira, man's physical body, and the Linga-sarira, the astral model body upon which the physical is shaped, imbued by Kama, the desire principle and Prana, the life principle, are the elements of man's constitution that are terrestrially attracted. Being of the earth they return to it at death, separating each from each, and from the principles comprising the personality and Reincarnating Ego. At the "second death," the personality is severed from the Individuality, the immortal, and the Reincarnating Ego attains the "heaven-world" or Devachan.

Theosophy but reiterates the key-thought of all the Great Teachers of mankind: "Seek not in externals for that which is eternal, but look always *within*. You are your own Pathway to the

highest God, for you are part of All that is."

The Theosophical Forum

H. P. BLAVATSKY AND MODERN SCIENCE — *H. T. Edge*

IV

TRANSMUTATION

The transmutation of elements is a perennial theme; and if we were to say that H. P. Blavatsky predicted that science would achieve it, we might be answered that this was an easy guess. But too many of those who have sought or speculated about the "absolute," the *prima materia*, the basic metal from which all other metals are derived, have sought for something "on the same plane" (as Theosophists say) as the substances to be derived from it. But it is not likely that the substratum from which are derived manifold substances would be of the same order of materiality as its derivatives; and this has been borne out by what has actually been discovered. Crookes dreamed much as to the existence of a single element from which the other chemical elements were derived, and H. P. Blavatsky quotes him liberally. When we speak of chemical elements, we think of chemical atoms, which were formerly regarded as the fundamentals in chemistry, as in physics, though the atom demanded by the chemists was not the same as that demanded by the physicists. The chief difficulty as to the chemical atom was that, if it was always the same, there was no way of explaining why the chemical elements differ from one another; to explain this it would seem necessary to postulate many different kinds of atoms, one kind for each chemical element; in fact we know that each element has its own atomic weight. So it was inevitable that Crookes and others should regard these atoms as composites; and now the thing has been proved true. We assign the differences in properties and weights to the number and arrangement of these subatomic elements,

whose names and attributes are not yet sufficiently settled for us to venture much about them. Also transmutation has become an accomplished fact, though not exactly according to the golden dream of the alchemists. We learn too that the atom, far from being eternal and rudimentary, is subject to progressive change, disintegration.

This leads to the conclusion that the chemical elements and their atoms are not permanent and invariable, that they are undergoing change, evolution. This is quite an Occult doctrine, and supports the contention that there is no *essential* distinction to be drawn between so-called living and so-called inorganic matter; all are changing, growing, evolving. We likewise get the idea that the lapse of long ages would give us quite a different assortment of chemical elements, so that our calculations as to physical conditions in far past times would be upset; and the inferences which we have been constrained to draw, based on our assumption that the elements have *not* changed, would be rendered false.

The *Magisterium* or powder of transmutation, of the Alchemists, was held capable of transmuting one metal directly into another; and such a transmutation implies the existence of an underlying basis common to both metals. Otherwise, instead of transmutation, we should have mere substitution. Some essence which at one time manifested itself as lead, is now made to manifest itself as gold. It is in this way that the chemical elements are now held to transmute themselves, by changes in the sub-atomic elements whereof they are compounded.

The idea of universal life is one of those ancient conceptions which are returning to the human mind in this [nineteenth] century, as a consequence of its liberation from anthropomorphic theology. Science, it is true,

contents itself with tracing or postulating the signs of universal life, and has not yet been bold enough even to whisper "Anima Mundi!" The idea of "crystalline life," now familiar to science, would have been scouted half a century ago. Botanists are now searching for the nerves of plants; not that they suppose that plants can feel or think as animals do, but because they believe that some structure, bearing the same relation functionally to plant life that nerves bear to animal life, is necessary to explain vegetable growth and nutrition. It hardly seems possible that science can disguise from itself much longer, by the use of terms such as "force" and "energy," the fact that things that have life are living things, whether they be atoms or planets. — (I, 49) (1)

Chemistry and physiology are the two great magicians of the future, who are destined to open the eyes of mankind to the great physical truths. With every day, the identity between the animal and physical man, between the plant and man, and even between the reptile and its nest, (2) the rock and man — is more and more clearly shown. The physical and chemical constituents of all being found to be identical, chemical science may well say that there is no difference between the matter which composes the ox and that which forms man. But the Occult doctrine is far more explicit. It says: — Not only the chemical compounds are the same, but the same infinitesimal *invisible lives* compose the atoms of the bodies of the mountain and the daisy, of man and the ant, of the elephant, and of the tree which shelters him from the sun. Each particle — whether you call it organic or inorganic — *is a life*. — (I, 261)

In the science of today the distinction between organic and inorganic, or living and dead, is vanishing, though there is still

much left to be done. But in the science of last century that distinction was prominent. The acceptance of such a distinction is not agreeable to the scientific ideal of seeking to reduce the complex to a common origin. For here, instead of one universal principle of Matter, we have two kinds of Matter, one living and one dead. To get over this objection, some postulated a life-principle, which, by acting on dead matter, could endow it with the properties of living matter. This gave rise to further questions as to the nature and origin of the life-principle. Others, seeing that this hypothesis involves the introduction of an immaterial essence into a materialistic universe, involved themselves in the logical absurdity of treating the manifestations of life as though they were life itself or the cause of life. All this is avoided if we assume at the start that there is no essential difference between organic and inorganic matter (so-called). This is the view for which H. P. Blavatsky contended, and recent advances in science are tending towards the justification of this view. Our perfected apparatus has enabled us to make a more intimate study of the structure of crystals, of colloids, and of other conditions of matter, which seem intermediate between the matter in "living" bodies and that in "inorganic" bodies, and which give us hopes of finding consecutive stages of transition from one to the other. In the light of this, what happens to the old question as to the origin of life? At what particular point can we say that life enters? Just where can we say that life is absent? Life now becomes a set of phenomena or manifestations, continuous and with no particular dividing line; and, unless we are to fall into the old logical error, we must infer that these phenomena are caused by some agent, and that this agent is not material, or is material in another sense. And even then, it becomes necessary to infer that this life is the attribute of living beings, otherwise it remains an abstraction. So we are gradually brought back to the ancient, and often derided idea that all Nature is an assemblage of living beings.

The soil under our feet, which to some minds is just so much dead dust, is found to be a marvelous world of its own, teeming with living organisms of all kinds, and with potent chemicals, so important to the well-being of the plants that grow in it that we wonder which is the more important part of the plant, that which is above ground or that which is below. It is no longer possible to analyze the soil and to say, This part is dead, but that is alive; this is inorganic, but that is organic. Accumulating evidence compels us to the conclusion that life is everywhere, that life is the only thing, that there is nothing but life, nothing but living beings.

THE ASTRAL PLANE

The whole issue of the quarrel between the profane and the esoteric sciences depends upon the belief in, and demonstration of, the existence of an astral body within the physical, the former independent of the latter. — (II, 149)

The existence of astral prototypes, preceding the physical forms, is very frequently mentioned in *S. D.*, though more often in connection with biology and anthropology than physics and chemistry. For instance, at II, 737, we read that —

Astral matter, it must be noted, is fourth state matter, having, like our gross matter, its own "protyle." There are several "protyles" in Nature, corresponding to the various planes of matter.

Here we see that the word "matter" may apply to various conditions of materiality, of which the physical is only one. It is important to observe that, when we pass from physical matter we do not thereby pass at one bound to "spirit;" we pass to another kind of matter. The distinction between what may be called spirit and matter — the active and passive sides of nature — obtains on all planes of manifestation; but here the word "matter" has to

cover substances which have none of the properties by which we are accustomed to think of matter. A far more generalized conception is needed. The word "vehicle" is often used in Theosophy, as defining that in which forces or energies are manifested. But at present we are concerned only with that form of matter next in order above physical matter.

The existence of an astral body inside the physical is necessary to explain many familiar phenomena, such as the persistence of moles, scars, etc., although the physical atoms are continually changing. Such instances are striking, but after all they are but particular cases of a phenomenon that is general. For what is it that determines *form*? Why does a flower have its own particular form, a man his own features? Since the physical atoms come and go gradually, it cannot be they that preserve the form. There must be something that remains unchanged throughout, or at least changes much more slowly. There must be a pattern upon which the physical atoms are molded, a shape into which they run. Hence to speak of an invisible model-body within the physical is not to invent an arbitrary theory, for the thing is actually implied, necessitated: there *must* be such a model-body within every physical organism. But the scientific mind is reluctant to make this inference, and certainly it would open up vast reaches of unfamiliar ground, necessitating an entire revision of the scientific philosophy. The attempt to explain matters without this hypothesis, however, results in confusion; there is no way of explaining how the shape of an organism maintains its integrity. Any direct perception of astral matter would involve the use of astral senses, and this again leads us onto unfamiliar and dreaded ground. We refer again to a quotation from H. P. Blavatsky at the beginning of this series, to the effect that, for direct knowledge of these higher planes of nature, we must develop faculties which have long been dormant in the people of our race. It is only thus

that we can collect the factual data on which to reason; otherwise we can only speculate by reason and analogy, arriving at conclusions which present no picture to the mind and can be clothed in abstruse mathematical terms only. The question of higher faculties and their development is so hedged about with deception, charlatanry, delusion, and flightiness, that it is no wonder scientists are cautious; added to which is the fact that the development of psychic powers by no means implies a corresponding development of the will and the power to use them for good and not for ill. Investigators into these questions are too often attracted to the sinister aspects of their enquiry.

GODS, MONADS, ATOMS

Such is the heading of a chapter in *The Secret Doctrine* (I, 610) which shows that it is needful for us to recognize something which the ancients believed, but which men of science have been wont to call superstition. This belief may be said to be universal, for it is shared by very many peoples living on earth to-day. A scientific name for it is "animism" — the belief in nature-spirits. Even empty space (so-called) was regarded as peopled with intelligent beings; and the mere external phenomena which science investigates were believed to be produced by the volitions of these intelligent beings.

One of such "degrading" beliefs — in the opinion of the all-denying sceptic — is found in the idea that Kosmos, besides its objective planetary inhabitants, its humanities in other inhabited worlds, is full of invisible, intelligent *Existences*. The so-called Arch-Angels, Angels and Spirits, of the West, copies of their prototypes, the Dhyana-Chohans, the Devas and Pitris, of the East, are no real Beings but fictions. On this point Materialistic Science is inexorable. — (I, 611)

". . . God, Monad, and Atom are the correspondences of

Spirit, Mind, and Body (*Atma, Manas, and Sthula-Sarira*) in man ". . . "The Monads (*Jivas*) are the Souls of the Atoms, both are the fabric in which the Chohans (*Dhyanis, gods*) clothe themselves when a form is needed." — (I, 619, *quoted from Esoteric Catechism.*)

And now, having just quoted what *The Secret Doctrine* says, and what the science of those days said, let us quote the recent writing of an eminent scientist of today.

Dr. Gustaf Stromberg, a member of the Staff of Mount Wilson Observatory, and an eminent Swedish scientist, has written a book called *The Soul of the Universe*, which is reviewed at some length in our number for August, 1940, pp. 126 ff. He believes cosmic space to be a plenum, thus confirming what was quoted above. Moreover he regards this space as being the origin and inner world of life, the real world of life and consciousness. But he does not remain satisfied with the use of the abstract word "consciousness," but speaks of *conscious beings*, which actuate the phenomena of life, and for which he uses provisionally the term "genie." Under this term however he includes many different grades of intelligent beings. These beings, in their synthesis, may be regarded as the Soul of the World.

We could hardly look for a more complete vindication of H. P. Blavatsky's doctrines: she often uses the terms World-Soul, Anima Mundi, etc. in this collective sense, as being general terms for the hosts of intelligent beings which people the causative realms of Space. The necessity for postulating such intelligent causes, endowed with volition and design, is becoming every day more apparent. Without such an hypothesis, we are reduced to trying to build a cosmos out of a mass of abstractions. In this same chapter of *The Secret Doctrine* we find it stated that

. . . To the average physicist, as remarked by a Kabbalist,

"Space, Force, Matter, are, what signs in algebra are to the mathematician, merely conventional symbols;" or "Force as force, and Matter as matter, are as absolutely unknowable as is the empty space in which they are held to interact." — (I, 615)

In biology and cytology the want of such an hypothesis is even more striking; for what the microscope discerns is but minute specks coming into visibility and behaving in every respect as though actuated by intelligent purpose. The attempt to account for such behavior, and for the marvelous results of it, without postulating intelligent agencies at work, leads to preposterous theories. But to admit so much is a step which, once taken, would lead science to the threshold of a quite unfamiliar realm, wherein its vaunted certainty would be lost. It will be interesting to watch the issue.

SOCIAL BEARINGS OF SCIENCE

Keeping in mind the three things we are comparing — the science of 1888, H. P. Blavatsky's teachings, and the science of 1941 — we can hardly choose a more appropriate topic than the one indicated by our heading. As we write, the question of the social responsibilities of science is much to the fore. Many will maintain as a general proposition that neither art nor science nor any other one thing can be isolated from human life, any more than a plant can be isolated from the soil, or an individual person from his kind, without undergoing decay, thus losing its life and becoming a nuisance instead of a help to its surroundings. Moreover, such attempted isolation is apt to be one-sided: it enjoys privileges while shirking responsibilities. It claims non-interference from those very institutions by which its freedom to assert such a claim is guaranteed. It has flourished in the free atmosphere created by a certain order of society, yet claims no

concern with the affairs of that order. Art for art's sake, and science for science" sake, are phrases which doubtless have a legitimate meaning, but may be overdone. But the logic of facts is often sterner than the logic by which we are wont to support our wishful thinking.

In prominent scientific circles today the attitude of aloofness is mentioned as characteristic of an attitude that is passing; the pressure of events has forced the change. But there are still some who argue that science promotes knowledge, but is not responsible for the use made of it. But human conduct is governed by motives, and such knowledge as science provides will be used for wrong motives unless right motives prevail. Science cannot claim authority and disclaim it in the same breath. The separation of knowledge into departments may be useful or even necessary for practical convenience; but those who look beyond this aim must recognise the unity of knowledge. In arguments about religion and science we see attempts to bring together things which have been artificially separated, as though we were trying to assemble a human body out of its dismembered limbs. Such a process would give us a machine, rather than the original living whole. In the same way we are striving to bring about a *modus vivendi* between science and social polity, having first decided that the two are separate and different. But if the meaning of both these terms were extended to its just limits, we might find that social polity and science were one and the same thing, though we should need another name for this thing. Every year the meetings of scientific associations include more and more subjects which formerly were not considered as pertaining to science. Even within the limited sphere of modern science proper, barriers are disappearing; the border between physics and chemistry grows more shadowy, there is a domain wherein organic and inorganic so blend that we cannot decide which of

the two realms we are in. The unity of knowledge becomes more apparent, as also the conviction grows that the only science is the science of man. The term "social relations of science" is as misleading as if we were to discuss the relations between the brain and the human body.

FOOTNOTES:

1. To avoid repetition, references to H. P. Blavatsky's great work, *The Secret Doctrine*, are indicated simply by numbers denoting the volume and page. ([return to text](#))
2. Undoubtedly there is a typographical transposition here. The phrase, "the reptile and its nest," should follow the phrase, "of man and the ant." — H. T. E. ([return to text](#))

The Theosophical Forum

WHAT IS THE "ORIGIN OF EVIL"? — *Ingrid Fick*

We may well ponder over this question of evil when we see such a prevalence of hatred and destruction in the world today. Fundamentally, evil is caused by the "*conflict of wills*," of evolving beings. Its powers are fed by such weaknesses of character as ambition, selfishness, and ignoble thoughts and passions of every kind. In *The Mahatma Letters to A. P. Sinnett* (p. 56), it is stated that "evil has no existence *per se* and is but the absence of good, and exists but for him who is made its victim." Before we can alleviate the causes of evil, we must as individuals, seek to work in harmony with nature's laws, and to lift our hearts and minds to the loftiest planes of being.

Duality in nature is the great instructor, the great necessity, for the opposition of forces produces balance in the Universe, produces life itself. Man would not recognize light, as light, unless he had witnessed darkness; so, in like manner, it would be impossible to realize the inherent value of good, if one never knew the nature of evil. This does not mean, however, that we should deliberately follow a course of evil action, should succumb to evil habits in order really to know life. Evil arises from imperfection, and as long as there is manifestation, there is imperfection. We are beings in manifestation, therefore we are imperfect. The great battle in life consists of learning to recognize imperfections, to be conscious of the duality in life, and thence to seek to rise above the snares of illusion. It is beneath the dignity of man's divine heritage to follow any other path than that of noble service to his fellow men.

Extending good and evil beyond mere human limitations, we may consider evil as relative imperfection, and good, as relative

perfection. This applies to the vast range of beings infinitely above and infinitely below man, for there is no limit to progress — good and evil are the eternal ways of manifestation. The influence of these forces becomes an involved circle, because just as we, by our thoughts and deeds, impress all entities below us in the evolutionary scale, from the atoms in our bodies, on up to the various kingdoms in nature: mineral, plant and animal, and are responsible for both the beneficent and harmful elements existing therein, so the Hosts of Light and the Brothers of the Shadow have a still more powerful influence on the thoughts and lives of men; the Dark Forces constantly seek to play upon men's weak wills. We never stand still on the evolutionary scale: every moment of the day we are adding to the forces of light or darkness. Our responsibility to all beings is tremendous, for our destinies are so interlinked and interblended. We are as many spokes in the great wheel of life; all rooted in Boundless Infinity.

The contributing causes towards human evil had their primal origin eighteen million years ago when those great divine beings, the Manasaputras, symbolized by Prometheus in Greek mythology, brought the fire of mind to infant humanity, gave us a part of their divine selves, thus activating our power of reason, and endowing us with *free will*, the power to choose between two pathways. At this point man was gradually released from his Divine Instructors, and in exploiting his so-called freedom, at first drifted far afield from his spiritual home. At cyclic intervals spiritual teachers have come to direct man along the true course of life, to teach him of his essential divinity and the karmic law of retribution, thus demonstrating that Will exerted by desires for self results in false freedom. With the coming of mind, not only the latent power of choice was awakened in man, but his egoic consciousness was set in operation, the "I am I" part of his being. From this point man's ultimate duty has been to raise the

personal to become one with the divine, to blend his individual consciousness with the universal. This quest will continue to be ours for ages to come. We are still lurking in the illusory halls of false freedom. Mankind has yet to realize that true liberty is not brought about by the imposing of the will of one upon another, but by becoming true Servants of the Law, Co-workers with the Gods. One powerful contributing factor towards evil which has undermined the strength and morals of men for centuries and still continues to do so, is the degrading influence of the many religions and creeds based on only *partial* truth — A little knowledge is worse than none. In *The Mahatma Letters to A. P. Sinnett* (p. 58) reference is made to the Irish, Italian and Slavonian peasant who would leave his family poverty stricken, in order to support his padre and pope; then, to India, where for two thousand years the Brahmans were the only privileged class; and again, to the followers of Christ and Mahomet, who for centuries have caused bloodshed in the name of their respective Saviors. Creeds and dogmas invariably breed selfishness and stagnation of thought. To quote the final significant lines:

Remember the sum of human misery will never be diminished unto that day when the better portion of humanity destroys in the name of Truth, morality, and universal charity, the altars of their false gods.

The eternal battle of good and evil has been pictured in allegorical form in many of the ancient writings, and can be traced in all the various sects, no matter how corrupted they may be. In the ancient epic of India, the *Ramayana*, Ravana, the demon, is finally conquered by Rama, symbolizing the conquering of evil with the sword of the spiritual will. In Greece, knowledge was at one time brought to the people through the medium of the drama, and Aeschylus' trilogy, the *Oresteia*, one of the greatest tragedies of all time, is really a profound study of the

operations of good and evil in human nature. Of particular significance is the *Eumenides*, the third of the trilogy, where we see the potential forces of good and evil, the *Eumenides*, transformed from darkness into light, through the exercise of the will of Orestes. In the Christian religion itself the forces of good and evil are represented in the much distorted belief of God and the Devil. It is fear of God and the Devil which has done much to destroy the very purpose of man's existence on earth — to become an individually and ethically responsible entity.

Deep in the hearts of men is the yearning to end the misery and suffering in the world, yet effort in that direction is not strong enough. Progress is a slow and uphill grind. Brotherhood still remains a precept rather than a living power in men's lives, in spite of the noble efforts of the Great Ones to instill sympathy and compassion into the hearts of men. The fundamental importance of this teaching cannot be better expressed than in these few words of H P Blavatsky:

With right knowledge, or at any rate with a confident conviction that our neighbors will no more work to hurt us than we would think of harming them, two-thirds of the world's evil would vanish into thin air.

The Theosophical Forum

REINCARNATION AND CHRISTIANITY — *John Gayner Banks*

Are they Incompatible? (1)

This thesis will not attempt to state any final conclusion. It merely faces the question above stated and attempts to set down on paper some of the reasons why the Christian Church has — almost consistently — rejected the *teaching* of Reincarnation, though according to some traditions many conspicuous members of the Early Church accepted the doctrine of Reimbodiment — or at least acquiesced in it.

No "regular" theosophist reading this brief monograph will be offended if the writer states at the outset that he has *sought in vain* for any authentic evidence that the Christian Church ever definitely taught this doctrine. What the Theosophical writers present as "evidence" on this subject is simply an accumulation of passages or excerpts from early documents indicating that this or that Christian disciple or teacher himself believed or accepted this doctrine.

What most theosophical writers seem to have overlooked is that the doctrine of Reincarnation could *never* have formed part of the orthodox teaching of the Christian Church, for the simple reason that it is inconsistent with the main body of teachings regarded within the Christian Church as constituting orthodox Theology.

This does not prove that Reincarnation as a "teaching" is wrong. The present writer concedes hypothetically that Christian Theology as presented by the historic Church may lack something, or may need radical revision or restatement. All he affirms here is that the doctrine of Reincarnation is inconsistent with Christian Theology as believed and held by accepted

teachers of the Church. The clearest statement of why "orthodox" Christians do *not* accept the doctrine of Reincarnation may be found — not in any book of doctrine, but in a volume of essays by a mystical writer, Walter Leslie Wilmshurst, in his *Contemplations* (John M. Watkins, London, 1928) where he says:

Whatever be the truth about Reincarnation, the Christian mystic, if an actual and not a *soi-disant* mystic, may well say of it. . . . Save as a matter of intellectual curiosity, I am not concerned with this problem at all. It pertains not to the world of reality and permanence, but to that of time, flux and transiency. It does not interest me or influence my thought or conduct. Be the truth of the matter what it may, what alone interests me is to identify myself, my will, my purpose, my life, with the Divine Will, purpose and life; to become what they will, to go or come where they send or draw me, to live where, and in such form or body, as they bid or need me.

The Christ-teaching

Not only is the Christ-teaching passive upon the subject of Reincarnation; it points with great insistency in another direction so inconsistent with it as to forbid our building upon it.

It does not deny Reincarnation as a fact of nature; on the contrary, it may be taken as pre-supposing that fact. But its whole trend is towards ensuring such a change in, and development of, the individual incarnated soul that reincarnation in physical conditions shall no longer be its portion. Life in physical conditions necessarily emphasizes that very sense of individualism, egotism and separateness which of all things it is desirable to slay and die to. "Whoso loseth his life (the sense and the fact of separate existence) shall save it." "Whoso hates not his own life (by obliterating the idea of existence apart from Me)

cannot be My disciple." One cannot therefore concentrate attention upon and attach value to the future destiny of his personality, and at the same time abandon that personality to an ideal which promises to transfigure and elevate it to a totally new and loftier order of Being. In a word the position would seem to be this:

the integration of the soul in Christ ensures its immunity from reincarnation; whilst, conversely, reincarnation is the menace and the penalty of failure to attain that goal.

(Wilmshurst)

Authorities for Reincarnation Teaching

The Scriptures and Traditions of Oriental races with a great spiritual and philosophic past are emphatic in their inculcation of this doctrine. So too are the Pythagorean and Platonist systems. In fact (says Max Muller), "It is well known that this dogma has been accepted by the greatest philosophers of all ages." (*Lectures on the Vedanta Philosophy*) Outside the Greek philosophical and mystical schools the European mind has been unacquainted with it. The history of civilized Europe synchronizes virtually with that of the Christian Church, which has held (or withheld) the keys of information upon arcane matters, and since that Church was silent upon reincarnation, no means existed by which the idea could be propagated in the West until it became introduced by the "Theosophical" movement of our own day. Its acceptance was then facilitated by two causes; first, by the translation and popularization among westerners of the sacred and philosophic literature of the East, where the doctrine is consistently taught and believed; and secondly, by the recognition, by Western science of an evolutionary process at work in Nature, a process suggesting that all life advances by gradations and through a succession of ascending morphological changes. Even as (fairly)

orthodox a writer as Dean Inge, for many years Dean of St. Paul's, London, says in his book *The Philosophy of Plotinus* that "The doctrine of successive rebirths is attractive"! The mind can hardly be otherwise than gratified at observing a gradual perfecting process involving a sequence of births and deaths, and at contemplating life "sleeping in the mineral, dreaming in the plant, waking in the animal, attaining self-consciousness and freedom of action in man," with the added prospect of further spiritualization and advancement as time goes on. What the mystical mind of the East has intuitively discerned and ever held as true, the practical intellect of the West has at last hit upon by scientific inductive research, the results of which suggest that *all life advances to more and more perfect consciousness, by slow patient gradation and through countless modes and forms*. This is the real Truth that lies back of the theory or doctrine of Reincarnation.

Walt Whitman expresses this Truth in his own impulsive and enthusiastic style:

Births have brought us richness and variety,
And other births will bring us richness and variety

I am an acme of things accomplished, and I am encloser of
things to be.

My feet strike an apex of the apices of the stairs;
On every step bunches of ages, and larger bunches
between the steps.

All below duly travell'd, and still I mount and mount. . . .

Nature Has Parallels for Reincarnation

A strong argument for Reincarnation is to be found in the periodic pulsations characterizing Nature in all her modes and activities. Outbreaking and indrawing, systole and diastole, ebb

and flow, light and darkness: is human life alone an exception to the universal rhythm? Daily we wake to activity, and nightly are withdrawn into sleep; alternating throughout our lives between objective and subjective conditions. Are birth and death other than wakings and sleepings, and all our births and deaths but the overtones of a fundamental rhythm of *manvantara* and *pralaya* originating in the mighty heart-beats of the Lord of life? Such is the reasonable hypothesis on which a theosophist bases his belief in the doctrine of Reincarnation.

Reincarnation in the Christian Scriptures

The light here thrown upon the subject is at first sight small and perhaps of doubtful value. Modern advocates of the doctrine seem hard put to it to establish their claim by appealing to Biblical lore. They are usually content with pointing to Solomon's words (*Wisdom of Solomon*, viii, 20) that "being good, I came into a body undefiled;" to the case of the man born blind (*St. John*, ch. ix), of whom the Lord was asked whether the infirmity was due to his own past fault or to that of his parents; to the passages as to John the Baptist being a reincarnation of Elijah (*Matt*, xiv, 2 and *Luke*, ix, 19); and to the text in the Book of Revelation (*Rev.*, iii, 12) as to the perfected soul becoming a pillar in the heavenly house and "going out no more," i. e., into earthly form. In the book above referred to Mr. W. L. Wilmshurst suggests that a much better case for Reincarnation can be constructed from the Bible by studying some less familiar texts, as for example Psalm 90 where at almost every Burial Service (at least in the Anglican communion) the Minister reads the significant words: "Lord, Thou hast been our Refuge from *one generation to another* . . . Thou turnest men to destruction; again, Thou sayest, *Come again*, ye children of men." The phrase "from one generation to another" means literally "from generation to generation." The Hebrew word DOR signifies not generations of descendants, but successive rounds or periods

of existence; "comings in and goings out" of the soul in respect of physical existence; incarnations.

Granting all this, and assuming ourselves to be satisfied that reincarnation is a fact of life, what has Christian doctrine to say about that fact; and why has it not hitherto been recognised and proclaimed?

To deal with the latter point first, there are very good reasons and sound grounds why the Christian Church has been dumb upon the subject. During European history the Clergy could not of course teach that of which they were ignorant. But the Early Church was *not* in ignorance about it. It is incredible to suppose that the fact of reincarnation was unknown to those among whom the Christian religion originated, for Christian origins are traceable to the very sources where the doctrine was axiomatic, while some of the earliest patristic writings also testify to acquaintance with it.

The scanty direct reference to it in Scripture proves nothing, for we know that side by side with the written oracles was given an interpretive, supplemental, oral teaching, and that neither the written word nor the expository instruction was put to indiscriminate public use, but was reserved for inner circles of disciples dedicated to the religious life and to special study of spiritual science, among whom the doctrine may be taken for granted as familiar.

Why Did The Church Avoid Mention of this Doctrine?

Briefly, for this reason. The Christian Evangel was one designed to offer means of *liberation* from the wheel of birth; it was one providing the means of *escape* from the prospect of otherwise interminable incarnations in the flesh; it was the charter guaranteeing the soul's final and permanent exodus from this

land of its bondage. Once grasp this fact and it will be clear why Christian doctrine strove to divert attention from reincarnation. It viewed incarnation in the mortal body as the sign of the soul's defection and alienation from its Source. It sought to teach that the soul's aim should be as rapidly as possible to escape from the world of generation by attaining re-generation in Christ, so transcending and passing for ever away from a condition of existence into which, strictly, it ought never to have entered at all!

The central doctrine of the Christian Faith is now (and always has been) the *Incarnation of Jesus Christ* the Son of God. He was "incarnated" in order that Man might not be compelled to undergo endless reincarnations. Faith in Him, which implies obedience to His sublime "Way of Life" as well as acceptance of what He has accomplished for and in Man, enables His followers or disciples to neutralize that accumulated Karman which would (otherwise) have required many incarnations to expiate.

Protagonists of the Christian point of view on this theme would gladly concede the existence of Christian "Adepts" who, though their regeneration is complete, return to incarnate existence moved by love and compassion for their fellows on the earth plane. Obviously, such beings stand in a class by themselves and are outside the compulsion to which their spiritual juniors are subject. They are miniature "Christs," emulating in their own degree the cosmic self-oblation of their Divine Master.

THE FATHER AND THE SON — *H. T. Edge*

The most important doctrine of essential Christianity, which links it with the Esoteric Philosophy, with Platonism, Neo-platonism, the Hindu philosophies, and countless others, is the doctrine of the Father and the Son. It is strange how little the usual church interpretation of Christianity has made of this: the ignoring or twisting of this vital truth is a most significant sign of the decadence of the original gospel. The Father is the Divine Spirit within every man: it is Atman. See *The Key to Theosophy*, chap. vii and chap. x. The Son is Manas, or (more accurately) Atma-Buddhi-Manas, the Christos, the SELF, the Ego or thinking Manas, the Logos or Son of soul and spirit, the Man-God, the Word-made-flesh. (See *Key*, chaps. v and x). The most frequent mention of the subject in the Bible is found in John's Gospel, where we read:

The Son can do nothing of himself, but what he seeth the Father do: for what things soever he doeth, these also doeth the Son likewise. For the Father loveth the Son, and sheweth him all things that himself doeth . . . for as the Father raiseth up the dead and quickeneth them, even so the Son quicken-eth whom he will. . . . As the Father hath life in himself; so hath he given to the Son to have life in himself, (chap. v)

The servant abideth not in the house for ever: but the Son abideth ever, (viii, 35. Referring to the mortal personal man and the permanent Man.) If the Son therefore shall make you free, ye shall be free indeed. (36)

This Gospel is clearly, in part at least, a Gnostic gospel; but we find the same Gnostic coloring elsewhere. See for instance *Matthew*, xi, 27:

All things are delivered to me [Christos] of my Father: and no man know-eth the Son but the Father; neither knoweth any man the Father, save the Son, and he to whomsoever the Son will reveal him.

Reference to the Gospels will reveal many other apposite quotations, with which we cannot burden the present writing. The God-Man is a cardinal doctrine of religions in their original purity, though this sublime truth has either been ignored or degraded into something evil or absurd. The Mithras of Mithraism was such a God-Man, as was the Gnostic Abraxas; we have the Father and Son in Osiris and Horus; and so on, for instances of which see *The Secret Doctrine*. All this gives the true key to the evolution of Man by convergence of an evolution from below upwards with an evolution from above downwards; and declares the existence in Man of an immortal Divine Self, who crucifies himself on the Cross of mundane existence, in order to make fully manifest on earth the Divine Nature, and who thereby *redeems* the lower nature of man. This is the true salvation, and it is our own Christos who is the real Mediator between God and Man, the real accomplisher of the At-One-Ment. Truly Theosophy, so far from being the opponent of Christianity, is its interpreter, its redeemer.

It is not faith in a particular person that saves man, but faith in his own Divine Nature; so the same way of salvation applies equally to all men, whatever their religion. What can be thought of those who, whether in the name of religion or of science, deny this Divine Nature, making of man either a creature born in sin and unable to help himself, or a mere intellectual animal?

REINCARNATION IN THE BIBLE (1) — *William Brehon*

An exhaustive paper on this subject is not contemplated in this article, but even a sketch will show that the Christian Bible has in it the doctrine of Reincarnation. Of course those who adhere only to what the church now teaches on the subject of man, his nature and destiny, will not quickly accept any construction outside of the theological one, but there are many who, while not in the church, still cling to the old book from which they were taught.

In the first place, it must be remembered that the writers of the biblical books were Jews with few exceptions, and that the founder of Christianity — Jesus — was himself a Jew. And examination of his own sayings shows that he thought his mission was to the Jews only and not to the Gentiles. He said, "I am not sent but unto the lost sheep of the house of Israel." This clearly referred to the Jews and as clearly excluded the Gentiles. And on one occasion he refused for some time to do anything for a Gentile woman until her importunity at last compelled him to act: and then too he referred to his mission to the Jews. So in looking into these things we must also look at what were the beliefs of the day. The Jews then most undoubtedly believed in reincarnation. It was a commonly accepted doctrine as it is now in Hindustan, and Jesus must have been acquainted with it. This we must believe on two grounds: first, that he is claimed by the Christian to be the Son of God and full of all knowledge; and second, that he had received an education which permitted him to dispute with the doctors of divinity. The theory of reincarnation was very old at the time, and the old testament books show this to be so.

"Proverbs" gives the doctrine where Solomon says he was with the Creator from the beginning and that then his (Solomon's)

delights were with the sons of men and in the habitable parts of the earth. This disposes of the explanation that he meant he existed in the foreknowledge of the Creator, by the use of the sentences detailing his life on the earth and with men. Then again Elias and many other famous men were to actually return, and all the people were from time to time expecting them. Adam was held to have reincarnated to carry on the work he began so badly, and Seth, Moses, and others were reincarnated as different great persons of subsequent epochs. The land is an oriental one, and the orientals always held the doctrine of the rebirth of mortals. It was not always referred to in respect to the common man who died and was reborn, but came up prominently when the names of great prophets, seers, and legislators were mentioned. If readers will consult any well educated Jew who is not "reformed," they will gain much information on this national doctrine.

Coming now to the time of Jesus, all the foregoing has a bearing on what he said. And, of course, if what he said does not agree with the view of the church, then the church view must be given up or we will be guilty of doubting the wisdom of Jesus and his ability *to* conduct a great movement. This, indeed, is the real position of the Church, for it has promulgated dogmas and condemned doctrines wholly without any authority, and some that Jesus held himself it has put its anathema upon.

When there was brought into the presence of Jesus a man who was born blind, the disciples naturally wondered why he had thus been punished by the Almighty, and asked Jesus whether the man was thus born blind for some sin he had committed, or one done by his parents. The question was put by them with the doctrine of reincarnation fully accepted, for it is obvious the man must have lived before, in their estimation, in order to have done sin for which he was then punished. Now if the doctrine was wrong and pernicious, as the church has declared it to be by

anathematizing it, Jesus must have known it to be wrong, and then was the time for him to deny the whole theory and explode it, as well as definitely putting his seal of condemnation upon it for all time. Yet he did not do so; he waived it then and said the blindness was for other reasons in that case. It was not a denial of it.

But again when John the Baptist, who had, so to say, ordained Jesus to his ministry, was killed by the ruler of the country, the news was brought to Jesus, and he then distinctly affirmed the doctrine of reincarnation. Hence his waiving the matter in the case of the blind man is shown to have been no refusal to credit the theory. Jesus affirmed the doctrine, and also affirmed the old ideas in relation to the return to earth of the prophets by saying that the ruler had killed John not knowing that he, John, was Elias "who was for to come."

On another occasion the same subject arose between Jesus and the disciples when they were talking about the coming of a messenger before Jesus himself. The disciples did not understand, and said that Elias was to come first as the messenger, and Jesus distinctly replied that Elias had come already in the person called John the Baptist. This time, if any, was the time for Jesus to condemn the doctrine, but, on the contrary, he boldly asserts it and teaches it, or rather shows its application to certain individuals, as was most interesting and instructive for the disciples who had not enough insight to be able to tell who any man was in his real immortal nature. But Jesus, being a seer, could look into the past and tell just what historical character any one had been. And so he gave them details about John, and we must suppose more particulars were gone into than have come down to us in the writings naturally incomplete and confessed to be but a partial narrative of the doings and sayings of Jesus.

It must now be evident that there is a diametrical disagreement between the church and Jesus. The church has cursed the doctrine he taught. Which is right? The true believer in Jesus must reply that Jesus is; the church will say it is right by acting on that line. For if the doctrine be taught, then all men are put on an equal basis, and hence the power of the human rulers of heaven and earth is at once weakened. Such an important doctrine as this is one that Jesus could not afford to pass over. And if it is wrong, then it was his duty to condemn it: indeed, we must suppose that he would have done so were it not entirely right. And as he went further, even to the extent of affirming it, then it stands with his seal of approval for all time.

John the Revealer believed it of course, and so in his book we find the verse saying that the voice of the Almighty declared that the man who overcame should "go out no more" from heaven. This is mere rhetoric if reincarnation be denied; it is quite plain as a doctrine if we construe it to mean that the man who by constant struggle and many lives at last overcomes the delusions of matter will have no need to go out into life any more, but from that time will be a pillar, what the Theosophist knows as "Dhyan Chohan" forevermore. And this is exactly the old and oriental doctrine on the point.

St. Paul also gives the theory of reincarnation in his epistles where he refers to the cases of Jacob and Esau, saying that the Lord loved the one and hated the other before they were born. It is obvious that the Lord cannot love or hate a non-existing thing, and that this means that Jacob and Esau had been in their former lives respectively good and bad and therefore the Lord — or Karma — loved the one and hated the other before their birth as the men known as Jacob and Esau. And Paul was here speaking of the same event that the older prophet Malachi spoke of in strict adherence to the prevalent idea. Following Paul and the disciples

came the early fathers of the church, and many of them taught the same. Origen was the greatest of them. He gave the doctrine specifically, and it was because of the influence of his ideas that the Council of Constantinople 500 years after Jesus saw fit to condemn the whole thing as pernicious. This condemnation worked because the fathers were ignorant men, most of them Gentiles who did not care for old doctrines and, indeed, hated them. So it fell out of the public teaching and was at last lost to the Western world. But it must revive, for it is one of the founder's own beliefs, and as it gives a permanent and forceful basis for ethics it is really the most important of all the Theosophical doctrines.

RADIO AND THE GLOBE-CHAINS — *L. Gordon Plummer*

We are constantly reminded that a diagram is not a picture of a thing but merely represents in pictorial form the underlying principles of the truths under study. This is particularly true in the case of the diagram commonly used to explain globe-chains. We designate by horizontal lines one above the other that there are planes of consciousness of varying degrees of energy and substance; and in those cosmic planes we allocate the globes of the planetary chain. We are not to suppose that the implication is made that the cosmic planes are actually one above the other. Yet there is good reason for showing it thus on our diagram.

That this diagram does not give a clue as to the true nature of the globes or their positions in the heavens, if they have any, can be better shown by using an analogy of the radio. The stations come in on your dial in a certain definite order according to their wave-lengths; and this order will be found on all radios.

Thus you think of the stations of high frequency at one end of your dial, and those of low frequency at the other. But no one supposes for an instant that the stations themselves all line up in this order. We know, as a matter of fact, that the stations are scattered all over the country, not to speak of the world; and, furthermore, that the wave-lengths from all the stations that are

now broadcasting are penetrating your room at this very instant, and that there is not one section of your room devoted to stations of certain frequencies and another section to those of another frequency. We know that every cubic inch of the room is permeated by all the wave-lengths, all interblended, not one of them interfering with any of the others, and that tuning-in one to the exclusion of all the others merely proves the point that the wave-lengths differ.

Thus the position of a station as it comes in on your dial gives no clue as to the nature of the wave-lengths, or the construction of the radio-station, or the fine technicalities involved in radio transmission.

So we can look at radio from three standpoints:

1. The order in which the stations come on your dial.
2. The positions of the various broadcasting stations throughout the world.
3. The nature of radio and the ether-waves.

Applying this now to our usual diagram of the globe-chains, we can really look at the globes in three ways:

1. The manner in which they are regarded on a diagram — which corresponds to the dial of your radio.
2. The actual positions or locations of the globes in space.
3. The nature of these globes, and the energies coming to us from them.

Thus the diagram has its right and proper place in our studies, but we must look deeper and find out *why* the globes are pictured as seven, what is the significance of their circular arrangement *in the diagram*, etc.; and having then solved, at least in some degree, the meaning of our symbol, we must pass on to other and perhaps deeper aspects of the truths about the globe-chains.

THE LIVING DEAD (1) — *Trevor Barker*

[The following article, "The Living Dead," was given as a lecture at the H. P. B. Lodge of the T. S. (Point Loma) in London, England, in 1934, by the late A. Trevor Barker. It is published here in connexion with the notice of his death on July 17th of this year, appearing elsewhere in these pages, as a tribute to one of our most valued contributors. Readers of THE FORUM will be pleased to know that the Editors have several of Dr. Barker's unpublished articles for future use in this magazine, and that the Literary Staff at Point Loma have likewise in mind the possibility of publishing the collected writings of Dr. Barker, or at least many of them. It is too soon to say whether this hope can be realized, but for those who are acquainted with the product of Dr. Barker's thought, and have been uplifted and inspired thereby, this hope, we feel, is sufficient to arouse deep interest. — Eds.]

One of the difficulties that we are all faced with in studying this great philosophy, is not so much that as a result of it we do not come to recognize and know certain things — our difficulty is rather in translating the implication of those ideas into action.

Now, it was because we came to a recognition that this is a difficulty the majority of us need to solve, that we were led to choose the title for this series of lectures: — "A Rational Basis for Ethics." What we are trying to do with each subject that we take up is first to consider very briefly what the teachings are; and then to try to extract the ethical implication from the metaphysical teaching, and see how we are going to translate it into action in our lives. That makes the philosophy a living power in our lives if we want it to be so.

I am taking for granted tonight necessarily that you are familiar with the subjects of the two preceding lectures in this series: the first was on the Sevenfold Constitution and Powers of Man; and the second one dealt with Cyclic Law, Reincarnation, and to some extent Evolution. That is the background upon which the great Teachers of life and knowledge have thrown, as it were, upon a screen, the marvelous solutions and explanations that they have to give of the great mysteries of the life after death.

There are at least three ways that this title "The Living Dead" can be understood, because, as you will have divined, that title comes from the Mystery Schools of old time. The Living Dead can be understood as those who have put aside their mortal body — the people that colloquially we call "dead" people, but who, according to all the great religions of antiquity, and therefore in the teachings of Theosophy, are still indeed living. We can understand the title in that way, and we shall consider the Theosophical teachings on the subject from that point of view.

Then again, this phrase can signify living people, or those that we call living, but who none the less are really and truly dead, in the sense that they are unawakened — spiritually asleep. It is these that in the Mystery Schools of antiquity they called the "profane" — those who have not been awakened to the reality of the spiritual life.

And there is yet another way of looking at that title: those fewer in number, who, whilst still living in the body have dared to die in their personalities — who have dared to lose their personal lives, and have been reborn, spiritually speaking, and have therefore found their lives.

So we will try briefly to study the subject from these three points of view, amongst others.

Now may I try to give you a brief sketch of just what the Theosophical teachings are about the passage from what we call life through the intermediate worlds into the after-life, and back in cyclical return to earth again. The teachings on this subject in Theosophical philosophy are very rich. They are treated in great detail, and their implication is of tremendous importance and significance for us here. Then, when I have given you that picture, I will try to extract from it some of the implications of an ethical kind. First at the moment of death everybody — whether dying quietly in their beds, whether what is called insane, or dying by accident or violence — everybody: young, old, under all conditions, experience in the last fleeting moments, when the cord of life is snapped, a complete review of every incident of the life from first to last. That is the first point we want to get the significance of, for surely it means that we have to remember, that in the memory of Nature nothing is ever forgotten. Do not let us deceive ourselves for an instant that any single one of our actions can be lost. We may choose to wipe it from our memories and forget it, but the soul memory cannot forget; the memory of Nature does not forget; and therefore sooner or later we have got to face the implications and consequences of our own acts.

Then, the review completed, the whole of the being that is life — the five-fold man, goes into that intermediate realm which in some parts of Christian doctrines is known as purgatory: into that region of purgation where the higher and lower elements of the being of the man are separated into their component parts. Therefore think of all that is left other than the body and life going into the great intermediate realm, and there instantly being subjected to a process by which the lower material parts of the man's being begin to separate by downward attraction from the spiritual efflorescence of his being, which is attracted inevitably upwards, upwards, upwards.

That is a process that happens without the man's will. If he dies a normal death he goes into that after-death condition but without the power to initiate new actions. He is in a subjective world; he can no longer will, perceive and know in a conscious way. He is rather like a man in a dream, or if his life has been very material it will be perhaps more like a nightmare.

Then he experiences what is known as the second death. Now please note this particular teaching, for of all teachings it probably has the greatest significance for those who want really to be reborn either during life on earth, or after death. The result of the separation of the higher principles from the lower, leaving the lower to separate and disintegrate into their component parts — the lower consisting of all that is necessarily transient in Nature: the passions, the evil thoughts, the hatreds, all those qualities that are essentially impermanent and of the nature of death. They are doomed to fade out since there is no permanent survival of man's personality. And directly those principles are separated — the last process of which is a struggle resulting in another or second death — then is the man reborn into the Heaven world. Now what gives him birth there? Simply his spiritual aspirations, his religious yearnings, his philosophical and spiritual meditations of a lifetime; the high, beautiful and holy things that the man's heart was set upon during life. The innumerable mystical dreams and imaginations that most of us weave during life and never have a chance to work out and translate into action. They are ideal pictures, beautiful imaginings, true ideas — unfulfilled spiritual hopes. Now it is these things, not the will whether personal or spiritual, which cause a man to be reborn, spiritually speaking, in the Heaven world which in Theosophical teaching is called the world of Devachan or Sukhavati, the Land of the Gods.

What happens when he gets there, when he enters into that state

of consciousness — for that is what it is? He is reborn as a little child as he was on earth, and his first recollections will be those that he had on earth — of his mother, his parents, his family, and from that tiny babylike beginning will be evolving the abstract effects of his own spiritual thinking, the causes of which were generated in the thought-life of the man's last personal incarnation. And there, in that after-death state he will be surrounded with all those that he loved and left on earth — the ideal picture of them, the idealized personalities of father and mother, husband and wife, and friends. He will be provided, as it were, by the creative power of his own imaginative thinking, with the opportunity of carrying to the nth degree his philosophical and mystical researches into the secret ways of the inner heart of Nature. He will be able to enter into the companionship of the great thinkers, the great Sages and Teachers of the human race. He will be able to work out these ideas and translate them, as it seems to him, into action. Yet he is really only living in a glorious dream world, but full of happiness, peace, bliss and the power of the spirit. And when the full tide of the assimilation process, gradually waning, finally leaves him, with all the spiritual effects of his last personal life fully worked out, assimilated into the fabric of his spiritual being, what happens? Why, the efflorescence of that last life on earth, the fruit of that human soul is gathered up into the bosom of its Father in Heaven, merging into union with the Spiritual, there to experience the vast panoramic vision of all its past existences — each incarnation as it were a pearl upon the golden thread of life and consciousness. And in the memory of the Immortal Seer is seen every one of the causes that led to such and another effect in life after life on earth: that which he had done of good bringing beautiful results and that which he had done of evil resulting necessarily in suffering. Finally he sees as a whole the past life that he has just completed, and the destiny which he himself has created of the

life that is about to open in his next incarnation — seeing as it were in the ideal thought of his own inner Divinity, the plan laid down there in his own highest spiritual self for the life which he is about to embark upon. Just like an ideal architectural plan of a universe to be — in this case the future life of a man on earth. Then when that wonderful vision of all that he will have to go through is complete, the triumphs of the spirit that he will experience, and the failures due to the blows of Karmic destiny — the results of those things of an evil kind which the man had generated in past existences; when all has been seen, he begins to descend step by step, drawing back to himself the life atoms, the very matter through which he had experienced his passions, desires, and thoughts, good, bad, and indifferent, of the last personality; drawing them all together by the power of attraction and finally emerging on the stage of life once again as a little child.

That in brief is an imperfect picture of the Theosophical teaching about the life after death for those people who die a normal natural death at the end of their life period. I have purposely left out all the exceptions to the general law, because it would take us too far afield. But when we discover what the implications of these ideas are and we try to work out how to translate these implications into action in terms of ethics, then we begin truly to *think*; then indeed life begins for us and takes on an entirely different aspect to merely reading about these things in an intellectual way and leaving it there.

We spoke about the review of the past life. That is an automatic process, and we have already seen the implication that nothing is forgotten in the book of Nature, or in the Soul's memory. The man has passed from earth necessarily leaving behind him all his purely material possessions; and then you have the teaching about the separation of the principles and the second death. Now

what are the implications of this idea? First that in terms of a man's spirituality, to the extent to which during life the higher and divine nature of the man had dominated the lower personal nature, to that extent will he pass through the intermediate worlds and purgatorial regions with speed: if a spiritual, if a holy life and pure one, the lower nature will just fade away. The higher will then gravitate upwards, rising like a cork does in the sea — it cannot help itself; and because the lower nature had been transcended during life there is very little to disintegrate, and so it vanishes away like the mist before the rising sun.

We see at once the tremendous spiritual benefit to the man who lives in terms of ethics during life even in that one fact. Now consider another aspect of it. Supposing the reverse kind of life had been led, and you have before you the life of a materialist, a man who has lived in the animal nature, pursuing the objects of the senses, living in his desires, the spiritual nature given no attention to — perhaps hardly wakened at all. The center of gravity is in the animal soul. He must pass a long period in the purgatorial regions, to the extent that he dies with active, vigorous hatreds and passions and desires, and he must suffer the unsatisfied longings which he can no longer assuage in the after-death world. These he will experience as a terrible nightmare, which he is unable to do anything about. A sufficient reason indeed for living an ethical life here — but still worse is to come, because it is just such individuals who can be most easily attracted and drawn into the mediumistic vortex of the spiritualistic seance. Earthly is that animal soul by nature, and earthly are the forces that attract to the spiritualistic seance. And then that discarnate animal — almost devil — seeks to satiate the animal passions, vicariously as it were, through the human beings that he is brought into contact with through the medium; and unfortunately many are the cases of insanity, suicide,

obsession, that are caused by such people. Not only do they do damage to the living, but through the excesses that they commit they gradually build into themselves worse and worse tendencies in that part of their nature than they had actually done during earth life. So you get an ethical implication there at once — the condemnation as a practice of getting in touch with these entities through the mediumistic seance, and at the same time a tremendous incentive to leave behind, to turn around from that kind of life while living on earth, because after death it is too late — you cannot do anything about it.

Now the third, and as I think, the most important application of this far-reaching doctrine: what is it that really causes a man to be reborn in the Heaven-world or Devachan? It is really a state during life of spiritual ignorance, a state of spirituality, of spiritual yearnings, spiritual imaginings and strivings, but without that deep understanding of the laws of Nature which would enable the individual to translate that ideal thinking into action in the living present, and therefore he has to work them out in an ideal state instead of here in the objective universe. Now that means that it is really a state of illusion, although much nearer reality, than earth-life — very much nearer; but nevertheless, from the point of view of a really spiritual self-conscious being such as any of the great Sages and Seers, the great religious Teachers of the human race — from their point of view it is a state of ignorance — something that can be transcended by a certain process. What is it? Simply this: that just as in the after-death state the spiritual nature by its predominance goes instantly into the higher worlds and expresses itself there in a rebirth of the spirit by transcending all the actions of the material, passionate, lower nature; so here in order to extract the ethical implication of this idea we have simply to realize that it is possible for us — you and I — at this

moment, any time, from day to day, from hour to hour, to die to everything that is of a character that prevents the expression of our own high, divine, spiritual nature and powers. It is those things of a lower nature that are keeping us from a realization of the God Within, that are keeping us from being incarnate Gods here in the temple of the body. To avoid the illusory state — necessary, beneficent and useful as it is — of the Heaven-world, we simply have to take a high ethical standard of life and realize it in the body here and now; and that will mean to lose our personal lives completely from an ordinary point of view. It will be to follow the advice of the Initiate Paul: to die daily that he might be reborn in Christ. This is a possibility for us, and it simply means translating ethics from the realm of the ideal into the living present through action here and now. That is one of the main implications of the whole of the after-death teaching of Theosophy: the possibility first, and then the necessity, the impelling necessity for those who want to live in terms of the spiritual idea — to do the thing in the only place that it can be done, which is on earth here where we are. Here alone can we learn so to dominate by the power of the spirit the lower man, that we become actually reborn during life.

One last idea I want to draw your attention to: the plan that our Paramatman, our own Father in Heaven, has for each one of us; the plan that our own Inner God shows to us before we come into this world, of the incarnation that we are about to embark upon. That is something that has a tremendous importance, for deep down in the spiritual nature of our own being there is that which knows the justice of every single accident that will come to us in the life that is opening: the justice of the rewards and the retribution that we experience seemingly perhaps in some automatic way once the incarnation has begun. For if there is such a picture, such a plan of the ideal working-out of our destiny

— destiny that we ourselves have created — then it rests with us so to live during life that we human, thinking entities, can reflect purely and perfectly that ideal plan for the living of our lives that exists in the mind of the God Within. And if we learn to do that in our daily meditation, listening for the voice of the Inner Warrior, our Inner Deity, our Personal Savior, we shall have revealed before our own Inner Spiritual Eye, step by step, the pathway which that Inner Divinity wants us to follow if we only will — and the price of it is simply the willingness to live an entirely different sort of life; a willingness to translate into the living present those simple ethical principles that all the great Teachers of the human race have laid down as essential and necessary for the saving of the souls of men.

ACHIEVING THE IMPERSONAL — *M. G. Gowsell*

As the lengthening of the days following upon the winter solstice presages the coming of spring, so have we evidence of the nearness of the new time. Not least among such collective testimony is the spirit of inquiry among men as to the why and wherefore of things. There is also in this connexion a readiness, a willingness, if not an actual desire on the part of increasing numbers, to be shown. This is but natural, when we consider our appalling dearth of certitude about so many things. Call this attitude the higher criticism, or call it a robust scepticism if you will. It is that which has given birth to such popular phrases as: "Show me! I'm from Missouri!" etc., etc. One might take this more or less universal circumstance as the mental keynote of our day. People are clamoring for a modicum of certitude. They want to know. Herein is the reason for the appreciation of certain noteworthy achievements in that particular field of endeavor which has come to be known as debunking. It is one of the signs of health rather than of disease.

This lusty, iconoclastic infant, born of the exigencies of our time, holds great promise for the relatively immediate future. Moreover it threatens the very life of a tremendous amount of organized time-honored humbug. Intensive investigation and research among historical, archaeological and other records is beginning to bear fruit. History of the past — his story of the past, whoever he or she as chronicler may have been at the time — is being scrutinized and subjected to critical analysis as never before. His or her contemporary stories likewise, whether journalistic or brought to one's ears over the radio. There is something portentous, something irrevocable and juggernaut-like about this debunking of the spoken, written or printed word.

To get at the unbiased, impersonal truth in respect to this, that, or the other matter is the thing. It may involve more than one angle of approach, and so may not be the same avenue for everyone. Some may grasp the essential truth concerned in any matter by means of intuition or insight; others by a process of reflexion, turning it over in the mind; others again by a purely logical habit of thought. Yet another approach, and not least among them, is by weeding out the non-essentials in any given case, the irrelevant in short, with which so many issues are decked out for presentation. Thus stripped of their trappings, the bare facts are more easily brought to light.

This is a way of approach that is within the scope of anyone and everyone. By seeing the unvarnished facts through the hole of discrimination, which each has to bore for himself, there results the essential, the impersonal view, the value of which may not be overestimated. If one is ever to achieve even a modicum of the impersonal some such attainment must be reached, some such implement used. It may often mean an abandonment of one's prejudices or preconceived ideas, but what of that? They will soon be seen for what they really are: impediments, preventives, in the way of the mind's being kept fluid, receptive, open and unbiased. It is through the accumulation of such mental and emotional rubbish that we find ourselves so destitute of vision today, so unresponsive to the teachings of events, the most impersonal teachers known, and the least appreciated, be it added.

Nearly everyone is interested in the news of the day, but inasmuch as the daily reports, false or true are, to the man in the street, so inextricably interwoven with propaganda, little credence is given to them. It is an old truism that falsehood goes down grade apace, while truth has to laboriously climb up hill.

The reason is that in our present state of society the majority are inclined to believe the lie rather than the truth, particularly if it be presented in terms with an emotional meaning, which would naturally appeal to one's personal prejudices. And yet, speaking of propaganda, it cannot be denied that the most effective component in it is truth, although truth is usually called propaganda by the other side — the side against which this truth may be directed. But we are not in the slightest degree concerned with world politics, nor with local politics. All these will some day be recognised to be the ineffectual, futile things they are. The day will arrive when they will be lined up and made to walk the plank, together with other major institutions still serving as separative barriers between man and man. This event, however, will not be until a far greater measure of impersonality becomes operative in the affairs of men.

Inasmuch as words are of such importance in life, let us see if they cannot be made to serve more impersonally, less colorfully, perhaps, less emotionally, certainly, wherever and whenever facts are at issue and certitude threatens to become obscured. We might profit by checking up on current words and phrases which reach us through conversation, or in our daily course of reading: books, magazines, newspapers or what not.

As might be expected under existing circumstances, the thoughts of uncounted millions are today completely dominated by emotion. Instead of using the head they have turned the job over to that much over-worked organ the liver, and we have what we have in consequence — "Insanity Fair" — Personality gone to seed. One may find evidence of this emotionalism in the foreign news, as reported in some of the daily papers, by noting the usual number of words suggesting disapproval, opprobrium, condemnation, or moral turpitude. But by replacing such emotion-evoking terms with neutral words which have a purely

objective meaning we have an entirely different picture. Try this on the next political speech you hear.

There is something in the adage about giving a dog a bad name. Suppose for instance that some particular dog were of mixed ancestry, as a good many dogs are. He is regarded by his owner as a valuable and faithful companion. But to a complaining neighbor who may have heard him barking during the night he is a mongrel, a cur, plus a nuisance. This is to depart from the word dog which has a purely objective and neutral meaning. To refer to him as a dog of mixed breed would still preserve the objective meaning attached to the word dog. But to call him a mongrel implies a measure of disapproval in connexion with that particular dog, while to call him a cur suggests downright worthlessness or even ugliness.

Words with emotional or colorful meanings have their place, their legitimate use in any language. And they need not be confined to poetry either, although poetry may furnish as good an illustration of such usage as any. Suppose we were describing a bit of mountain scenery in early summer and said:

*The little lake in borrowed blue
Mirrors the mountain sheen,
Faithful to nearby alpine firs
New-tipped in timid green.*

This would be more or less of a picture, one quite in keeping with the characteristic environment at such a time and place. A suggestion of consciousness, fidelity, and action is implied throughout, plus a picture. To say that the lake reflected the blue sky and the towering mountain a mile away, and that it included in its reflexion fir trees showing new growth would be to rob the lines of any poetry they might possess, particularly the endowment of such qualities as quietude, consciousness, and

fidelity. Yet in so doing we should be using strictly neutral or objective words, but at some sacrifice of beauty.

Let us try to get away from the emotional language of local and other rival politicians and keep our mental furniture in order. It behooves all educators and thinking people generally not only to be on guard against any possible influences upon themselves which present-day emotion-arousing terminology might have, but to do their utmost to further the day when we shall be able to consider national and international problems, yes, and personal problems also, in the same dispassionate manner that the chemist adopts in the laboratory or the mathematician with the properties of numbers. For until we can do that it is to be feared that things may remain pretty much as they are.

The Theosophical Forum

THE SACRED TREE SCRIPT (1) — *H. T. Edge*

In a well-known passage in the Introduction to *The Secret Doctrine*, H. P. Blavatsky avers that the Secret Doctrine of antiquity will be rejected in the nineteenth century, but that in the twentieth century scholars will begin to recognize it as a fact. The present volume is one evidence of this forecast, for it deals with innumerable matters with which H. P. Blavatsky was concerned when she outlined the tenets of the Secret Doctrine and the evidences for its universal diffusion as the groundwork of all religions and great philosophical systems. The author, so far as we have been able to discover, shows no knowledge of H. P. Blavatsky's teachings, or of the numerous literature that has sprung therefrom; but he quotes a great number of authorities English, French, and German, and we have no means of knowing whether any of them had contact with Theosophical writings. But however the case may be, it is evident that the subject of a universal mystery and symbol language, which at once reveals and conceals ancient lore, is being widely studied by scholars of many lands. The author states in his Preface that he is about to consider several topics which may seem unrelated: the esoteric basis of Plato's science of numbers, the origin of the Runic script, the origin of some Old Testament legends, and the historical implications of Plato's metaphors. His endeavor is to show how these are related; but students of Theosophy know how very much wider a field is covered by such researches, and how not merely the few things mentioned by the author, but the sacred lore and symbolism of all lands and all times is included in the scheme. The author's scope, apart from occasional references, does not extend beyond the Aryan peoples (in the usual linguistic sense), and is confined mainly to ancient Greece. He takes a very

high view of Plato, whom he regards as in possession of an esoteric knowledge, with numerical keys, and as being obliged, like Jesus, to address the multitude in parables.

It is still a mystery to me whether Plato actually knew the initial source of all his inspirations. Was it intuition or schooling which led him to his "vision" of the cultural past of humanity?

The ancient thinkers knew how to conceal their esoteric doctrine from the laics. In order to get access to their treasury we must pass through Plato.

Speaking of references by Plato to the Sun as the source of Wisdom, he says:

The above-mentioned passage seems to indicate that for a "true philosopher," who understands the relationship between the shadows, images, reflections, pictures of things and their "ideas," the access to "true knowledge" is open. He actually sees "truth" as such. His eyes possess the power of penetrating into the very essence of things. Like the Solar God, Apollo, a "true philosopher," is able to approach the "eidos" [archetype] of a thing and to reveal it to his own view and to that of congenial fellow thinkers.

The worship of the sun is pan-Aryan. We find it among the Hindu, the Persians, the Greeks, the Goths, the Slavs.

The Apollonian myth is one of the few keys to the "Delphic mysteries."

There is a great deal about numbers and their correspondences here, reminding us of such books as Higgins's *Anacalypsis* and Skinner's *Source of Measures*; studies which involve us in intricacies, as students well know. The author has detected the

existence of an octaval system of numeration (we forbear to risk the word "notation," which usually implies the use of a zero and positional value). Students too readily accept a group of digits, like 777, or 600, for instance, as denoting numbers in the ordinary decimal scale (an argument for photostatic reproduction!), whereas there is no knowing what numbers they may indicate.

He speaks of a "pre-logical" school, as representing an ancient cast of thought contrasted with the "logical" school initiated by Aristotle, and which has set the pattern of subsequent Western thought. Plato was a mathematician of the Pythagorean school, he says, and this book is very largely on numbers. Students of *The Secret Doctrine* are aware of the importance attached to this subject, and Mr. Efron bears out H. P. Blavatsky's contention that numbers were formerly considered in a different way from the merely numerical way in which they are considered in our mathematics. A German author, G. Albert, is quoted to the effect that "the digits determine and are the skeleton of number; the zeros are in so far without importance." A French author, Shure, says that 7 represents the union between the divine and human, represented respectively by 3 and 4; also that 7 represents the law of evolution and complete realization. (But we observe that he cites and endorses a statement by Plato that the number 5040 has 44 factors, whereas it will be found to have 58).

The Sacred Tree Script is a figure found in the Runic inscription on the Gothic stone of Kylfver; it looks like a diagram of a fir tree, and speculation is made as to the meaning of the number and size and arrangement of the branches on each side, with a view to finding a numerical key of interpretation.

The first section of this book is on the Ideal Numbers; the second is on the Ship of State, described as Plato's leading metaphor which seems to determine the main features of his ideal city.

Noah's ark is compared with it. Much is said in *The Secret Doctrine* about the symbol of the Ark, ship, boat, crescent, moon, etc., as denoting the feminine aspect of the Universal Spirit, the Great Mother, Isis, etc., the receptacle or container of all. The author has a chapter on the "Indic and Indo-German Background of the Genesis," in which he points out some of these analogies. Thus he has hold of a part of the scheme of the Wisdom-Religion.

The Theosophical Forum

REINCARNATION THROUGH THE AGES — *Stanley Zurek*

Reincarnation through the ages?" some sympathetic friend may query in surprise. "Yes," we reply, "through the ages." "But, how strange," our friend may continue, "I was always under the impression that the doctrine of reincarnation was a comparatively new teaching, introduced, I believe, by the Theosophists towards the end of the last century." "And so it was," we reply, "precisely. However not so much introduced as re-introduced, by the Theosophists of the last century."

And so, Friends, for the benefit of this hypothetical friend of ours, and of others who may be interested in this sublime teaching of the ages, we shall endeavor to present this afternoon a brief outline of the doctrine of reincarnation as it existed in the religions, philosophies, and literatures of various nations down the ages. And as the subject is a vast one, we must of necessity, limit ourselves to a few examples only, and have therefore chosen to present today some of the recorded instances of this teaching in a few specific nations only, such as India, Greece and Rome, Britain, and the United States.

But before proceeding with our presentation of these recorded examples, it might be wise to present an outline of the teaching itself for the benefit of those to whom the doctrine may be new or comparatively so.

REINCARNATION EXPLAINED

Briefly, the doctrine of reincarnation is the teaching that man is reborn on earth again after the change called death — and not once only, but many times. Why? it may be asked. For the simple reason that one life on earth is not sufficient to make of the

imperfect man which we are at present, the Perfect Man which Nature demands.

Why is it that even in our ordinary every-day life there are such great discrepancies in character, ability, opportunities, and even physical appearance among individuals? Why should one individual be born with a silver spoon in his mouth and another with an empty tin cup, so to say? Why should one be blessed with a strong, healthy and beautiful body and another come into the world with some deformity or perhaps a frail body, soon to be disease-ridden? Theosophy answers: Karma, or the Law of Consequences, or Cause and Effect, which is the twin-doctrine of Reincarnation — one unable to exist or function without the other. As we sow, so shall we reap — no more, no less.

In other words, the discrepancies or differences are due to men themselves — the types of lives they led in former incarnations on earth strictly and invariably determining their present state. This is so obvious and fair an argument that anyone who will but analyse and think over the matter carefully cannot but see the justice of it.

THE DOCTRINE OF ANOTHER CHANCE

The teaching of reincarnation is likewise the doctrine of another chance. How cruel, how cold, and how totally unjust is the teaching of a single life only when compared with the doctrine of another chance! Under the one-life theory, man is relegated after death either to an eternal blessedness in heaven or an eternal damnation in hell. How unjust, we repeat; for could a man possibly, within the span of a single lifetime only, have merited an eternity of either supreme bliss or supreme suffering? How could he possibly have accomplished so much good or so much harm within a single life to merit an eternity of reward or an eternity of punishment after death?

Under the doctrine of another chance man is given an opportunity to correct mistakes committed in former lives. He is given an opportunity to redress wrongs done to his fellow-men and by them to him. He is given an opportunity to become a genius and master of his art, profession, or chosen calling. What a hope and comfort this doctrine would be to the thousands who long for distinction in their work and do not seem to achieve it, no matter how hard they labor! No effort, however, is lost, not even the smallest, so if we do not attain success in this life, there are other lives to come in which the effort expended in this life will give us just so much more talent or ability in our life-work. Rome wasn't built in a day, and neither is a Beethoven, a Shakespeare, or a Gainsborough the product of a single lifetime only.

And finally, in concluding our brief explanation of the doctrine of reincarnation, we should like to quote the old Kabalistic aphorism: "A stone becomes a plant; a plant, a beast; a beast, a man; a man, a spirit; and a spirit, a god." In other words, the teaching is that the inner entity or soul in man has inhabited all the lower kingdoms in nature, starting with the invisible elemental forms of what are called the gnomes, undines, sylphs and salamanders, and, rising through the mineral, plant, and animal kingdoms, finally reaching the stature of man. But is that the end? No. From the imperfect men of today we shall become the perfected men of tomorrow — geniuses, and not in one calling only, but in all branches of knowledge: in religion, philosophy, science and the arts — to what are called today the Mahatmans or Masters of Wisdom, and from them to still higher states of life and consciousness, unendingly.

And now we will proceed to our presentation of the recorded examples of the teaching of reincarnation in the nations chosen

for our study this afternoon.

INDIA

We shall begin with India, called the cradle of civilization, where the doctrine of reincarnation is practically universally believed in in one form or another. In order to clear up a most erroneous misconception in connexion with the teaching of reincarnation, we shall deliberately begin with two passages from the *Laws of Manu*, which is an elaborate system of laws and duties, religious and civil, said to have been written many thousands of years ago, and followed by priests and laymen alike. In the chapter entitled, "On Transmigration and Final Beatitude." the moral consequences of various human acts are given in great detail, of which the following are examples:

For sinful acts mostly corporeal, a man shall assume *after* death a vegetable or mineral form; for such acts mostly verbal, the form of a bird or beast; for acts mostly mental, the lowest of human conditions.

A priest who has drunk spirituous liquor, shall migrate into the form of a smaller or larger worm or insect, or a moth, or of some ravenous animal.

"Why, how superstitious!" our friends may cry, and we quite agree with them, how superstitious indeed, *if accepted literally*, for Theosophy distinctly and unqualifiedly teaches that man does *not* re embody himself in animals or other lower forms of life after death. "Once a man, always a man," is the rule, *without any exceptions*. Let us examine, however, what the main Founder of the Theosophical Society, Madame H. P. Blavatsky, has to say on this subject. In her article, "Transmigration of the Life-Atoms," she writes:

Now to the Hindu doctrine of Metempsychosis. It has a

basis of truth; and, in fact it is an axiomatic truth, but only in reference to human atoms and emanations, and that not only after a man's death, but during the whole period of his life. The esoteric meaning of the Laws of Manu bears no reference to the human Ego, but only to the atoms of his body, his lower triad and his fluidic emanations. It is all very well for the Brahmans to distort, in their own interest, the real meaning contained in these laws, but the words quoted never meant what they were made to yield later on.

In other words, the doctrine is there, but in a distorted form, for the *Laws of Manu* having been undoubtedly tampered with, the teaching is carried to an entirely erroneous extreme by its literal interpretation.

We will next consider the *Mahabharata*, the great epic poem of India. The original is written in the Sanskrit language and is the world's greatest poem, containing some two hundred thousand lines! It consists of countless episodes, legends, and philosophical treatises, strung upon the thread of a single story and is historically based on the strife between the Aryan invaders of India and the original inhabitants. In India the reading of it is supposed to confer upon the happy reader every good and perfect gift.

One of the episodes of the *Mahabharata*, called the *Bhagavad-Gita* or *Song Celestial*, is studied and held in great esteem by all the sects in Hindusthan, except the Mohammedan, and is one of the best-loved of Theosophical devotional books, of which Mr. Judge has said that "It is the study of adepts." We are told that Ralph Waldo Emerson always had a copy on his desk. It consists of a dialog between Arjuna, prince of India, and his charioteer, the god Krishna, held in the open space between two opposing armies. The episode is allegorical, the god Krishna symbolizing

man's Higher Self, his own Inner God. The doctrine of reincarnation is clearly stated in this work as the following passages will show.

Krishna speaking:

"Those great-souled ones who have attained to supreme perfection come unto me and no more incur rebirths rapidly revolving, which are mansions of pain and sorrow.

"Both I and thou have passed through many births, O harasser of thy foes! Mine are known unto me, but thou knowest not of thine.

"All worlds up to that of Brahman are subject to rebirth again and again, but they, O son of Kunti, who reach to me have no rebirth."

The last quotation is interesting as it bears out the Theosophical teaching that not only man but all beings below and above him are subject to rebirth.

We will now consider Buddhism, the religion based on the teachings of the greatest of the Oriental Spiritual Teachers. That reincarnation is taught in Buddhism is clearly evidenced by the famous *Jataka Tales* or *Book of Birth-Stories*, attributed to the Buddha himself, and which contains some five hundred and fifty or more stories describing the Buddha's past incarnations, from the lowest form of life to the highest attainable by man on earth. The author of *Buddhism in Translations*, Henry Clarke Warren, states that some of these tales are much-traveled ones, and are to be found in Aesop's Fables, and in La Fontaine and other European works.

GREECE

We now come to Greece — brilliant highly-polished Greece —

who received her wonderful civilization from Egypt, and which Egypt, in turn received from India. Four great names occur to us at once: Homer, Pythagoras, Plato and Plutarch. We shall treat of two.

Pythagoras, the Sage of Samos, who established a colony and school at Crotona in Italy, was one of the great Initiates of ancient times, having spent twenty-two years of study in the Temples of Egypt and twelve years with the Magi in Babylon. Iamblichus in his *Life of Pythagoras*, gives clear evidence of his belief in reincarnation:

. . . he reminded many of his familiars, by most clear and evident indications, of the former life which their soul had lived, before it was bound to this body, and demonstrated by indubitable arguments, that he had been Euphorbus the son of Panthus, who conquered Patroclus.

And further:

Let this, therefore, be one specimen of his piety, which also we have before mentioned, that he knew what his soul was, and whence it came into the body, and also its former lives, and that of these things he gave most evident indications.

We next take the great Plato, of whom Emerson wrote that "out of Plato come all things that are still written and debated among men of thought," and that "Mysticism finds in Plato all its texts." He taught reincarnation likewise. In the last book of his *Republic* occurs the famous "Vision of Er," which we will summarize.

Er, the Pamphylian, had been slain in battle, and on the tenth day, when the bodies were taken up, his was found unaffected by decay and he was sent away to be buried. And on the twelfth day, as he was lying on the funeral pile, he suddenly returned to life

and related what he had seen in the other world.

He reported that when his soul had left his body, he had found himself, in company with a great many others, before two mysterious openings in the earth, and above them two other openings into the heaven above. Out of these openings were emerging souls from the underworld and heaven respectively, and the newly-arrived souls from earth, after being sentenced by the judges, entered the openings leading to the place they deserved.

Er was told that for every wrong committed on earth, the soul had to suffer ten times over — that is, once in every hundred years — and likewise was it rewarded in the same proportion.

In company with the spirits, he finally arrived at a rainbow-colored column of light, piercing the sky and earth, where a prophet, having distributed lots among the spirits, instructed them to choose their coming lives on earth. The spectacle was sad and laughable and strange, for the choice of most souls was based on their experience of a previous life. The soul of what had once been Orpheus, chose the life of a swan, out of enmity to the race of women, hating to be born of a woman, as they had been his murderers. And Odysseus, whose lot happened to be last, spent a great deal of time looking for the life of a private man with no cares — and he had difficulty in finding this as it was lying about and had been neglected by everyone else. Then, after drinking of the River of Unmindfulness — that is, all the spirits with the exception of Er — which drinking made them forget all their past experiences, they were driven upwards in a thunder-storm and earthquake to birth on earth again.

Plato's description of the souls choosing their next lives on earth is quite in keeping with the Theosophical teaching which states that the Reincarnating Ego chooses just the life best suited to

work out certain Karma or set of consequences engendered in former lives.

His allusion to Orpheus, a great Teacher of Greece, as passing into the form of a swan, is no doubt allegorical, we are told, as the swan is the Hindu symbol of the immortal spirit, and signifies, therefore, that Orpheus had passed into the spiritual life, having reached the end of mortal existence. Plato, in common with all initiates, of whatever land or time, was compelled to use symbol and allegory in presenting deep teachings to the public, which was not prepared to receive the truth outright.

In his *Meno*, *Phaedo*, *Phaedrus*, and IXth book of the *Laws* are to be found other references to reincarnation.

ROME

Coming now to Rome, the name of the immortal Vergil comes at once to mind — Vergil, of whom Tennyson writes:

I salute thee, Mantovano,
I that loved thee since my day began,
Wielder of the stateliest measure
Ever moulded by the lips of man.

While on the subject of poets, we might say here that in ancient times the poets were the Teachers of men — as Horace, a contemporary of Vergil, says: "Poets the first instructors of mankind," — and they employed verse instead of prose in their instruction. Dr. de Purucker tells us that the original metre or tempo of the ancient poetry placed the mind in a rhythmic condition which was conducive to a better understanding of the teachings.

In the great Roman epic, the *Aeneid*, which took Vergil eleven years to write, and which he did not consider complete when he

died, the doctrine of reincarnation holds an important place. In the sixth book, Aeneas descends into the underworld to converse with his father, Anchises, in the Fields of Elysium, which lay beyond the realms of punishment. While there, his father told him that the souls that visited the underworld were punished according to their deserts, and then sent into Elysium. Then after they had become cleansed of all their impurities, and after drinking of the River of Lethe, which made them forget their memories of the past, they again were reborn on earth in another form. In a crowd which passed them, Anchises pointed out to Aeneas, and to the priestess who helped him descend into the underworld, the men who would make his race famous in Italy. First of all there was his son Silvius — not yet born — and then Lavinia, his Italian wife-to-be; then Romulus, the founder of Rome; and then, greatest of all, the long foretold Augustus Caesar, who would restore the Golden Age.

Another great figure in Roman history was the great sage Apollonius of Tyana, who was born about the same time as Jesus Christ, and who possessed miraculous powers of healing and prophecy and was a friend and adviser to kings.

Philostratus, in his *Life of Apollonius of Tyana*, records the fact that when Apollonius visited India, he was told by the Brahman sage, Iarchas, upon asking him his opinion of the soul, that it was "the same as was delivered by Pythagoras to you, and by us to the Egyptians." Apollonius also related to Iarchas that he, Apollonius, in a previous incarnation had been an Egyptian steersman who had refused the inducements offered him by pirates to guide his ship into their hands.

BRITAIN

Coming now to Britain, we are told by E. D. Walker, the author of *Reincarnation: A Study of Forgotten Truth*, that the circle of

reimbodiment was an essential principle of Druid faith. He says that the people held to this doctrine so vitally that they wept around the new-born infant and smiled upon his death; for the beginning and end of an earthly life were to them the imprisonment and release of a soul which must undergo repeated trials to remove degrading impurities before finally rising into a succession of higher spheres.

There is also an old legend that King Arthur, his body healed of his wounds, and his soul healed of the hurts of treachery, would come back again to teach and lead.

Many English poets have written with great feeling and beauty respecting this doctrine, in which connexion we might quote the words of Plato regarding poets: "Poets utter great and wise things which they do not themselves understand," and also the words of Bulwer Lytton, who said that "Poets are the truest diviners of nature."

William Wordsworth, in his "Intimations of Immortality," writes of it almost intuitively.

Alfred Tennyson, who was the poet-laureate of his time, also wrote of reincarnation with a sure and brilliant pen, of which "De Profundis," "Two Voices," and especially his Early Sonnet I, are examples in his poetry.

Robert Browning also writes of it in his "One Word More":

I shall never, in the years remaining,
Paint you pictures, no, nor carve you statues.
This of verse alone, one life allows me: . . .
Other heights in other lives, God willing.

Sir Edwin Arnold's beautiful *Light of Asia* — describing the life of the Buddha Gautama — is a classic which presents the teaching of

Reincarnation and Karman in a masterly way. The following passage is an example of his beautiful writing:

The Books say well, my Brothers! each man's life
The outcome of his former living is;
The bygone wrongs bring forth sorrows and woes
The bygone right breeds bliss.
That which ye sow ye reap. See yonder fields
The sesamum was sesamum, the corn
Was corn. The silence and the Darkness knew!
So is a man's fate born.

And today, the present poet-laureate, John Masefield, in his "My Creed," gives a graphic and practical picture of this teaching.

Of prose writers, Marie Corelli, who was Queen Victoria's favorite author, was an ardent believer in reincarnation and it plays an important part in her novels. Kipling likewise, in his "The Finest Story in the World," writes of it, as did Henry More, Shelley, and Rossetti, among many others.

UNITED STATES

Coming now to our own United States, we find that many of the Indian tribes believed in reincarnation. The Maryland Indians stated that the white men were an ancient generation who had come to life again and had returned to seize their former land. Among the Algonquins, the women who desired to become mothers, flocked to the couch of those about to die in the hope that the soul, as it passed out from the body, would enter theirs.

Ralph Waldo Emerson, who was called the Plato of the nineteenth century, and who was also a student of the literatures of the East, was an ardent believer in the doctrine of reincarnation and in his "Representative Men" practically quotes Plato in connexion with Plato's teaching that "all knowledge is reminiscence."

But the most important exponent of Reincarnation in America, the one possessing the most actual knowledge on the subject and the greatest authority, was Madame H. P. Blavatsky, who in 1875 founded the Theosophical Society with several others in New York. We might add here that it is the teaching of Theosophy that in the last quarter of every century a messenger is sent from the Great White Lodge to do special public work in the world, and in the last century H. P. Blavatsky was this Messenger or Envoy, and the work she began is carried on today by our present Leader, Dr. G. de Purucker.

Madame Blavatsky's short definition of the word Reincarnation, as it appears in the Glossary of her *Key to Theosophy*, is so clear and concise that I would like to read it to sum up the teaching. She writes:

Reincarnation, or Re-birth; the once universal doctrine, which taught that the Ego is born on this earth an innumerable number of times. Now-a-days it is denied by Christians, who seem to misunderstand their own gospels. Nevertheless, the putting on of flesh periodically and throughout long cycles by the higher human soul (Buddhi-Manas) or *Ego* is taught in the Bible as in all other ancient scriptures, and "resurrection" means only the *rebirth* of the Ego in another form.

In conclusion, Friends, I believe I can do no better than to end our study this afternoon with the words of the American poet, Oliver Wendell Holmes, which words, taken from his "The Chambered Nautilus," are really a petition or prayer to rise ever higher in each succeeding rebirth:

Build thee more stately mansions, O my soul,
As the swift seasons roll!

Leave thy low-vaulted past!
Let each new temple, nobler than the last.
Shut thee from heaven with a dome more vast,
Till thou at length art free,
Leaving thine outgrown shell by life's unresting sea!

The Theosophical Forum

"EVERESTS OF THE SPIRIT" — *Irene R. Ponsonby*

Frequent question, and a pertinent one, amid the present psychological chaos and physical conflict, is: Why, if the Great Ones come, or are sent, to humanity in time of need, does not a Master — a Christ, or a Buddha — come to the World now?

All the answers to this query are based on certain indisputable facts such as, that the Great Ones come only at the right and proper time and in conjunction with certain cycles — in periods of ignorance and "spiritual barrenness"; that the Sages and Seers can do their specific work for humanity more effectively now far from the arena of conflict and in the seclusion of their retreats; and that were a Christ or Buddha to come among men with his age-old truths, he would probably be imprisoned for reasons entirely divorced from guilt on his part. But while these statements are perfectly true, the deductions they point and emphasize are of still greater significance.

To the informed observer it is obvious that this is no time of "spiritual barrenness," despite the dreadful toll of human suffering and misery. On the contrary, materialism is swiftly and definitely waning, and the danger of psychism, while it menaces, is not great while psychic manifestation must take a physical outlet. The advent of the Theosophical Society in 1875 and its subsequent development under the guidance of wise leaders has insured a wholesome channel for and secure link with the Wisdom-Religion of the Ages and the sanctuary of the Sages and Seers. Through this vehicle truths withheld from public discussion for a thousand years or more, are being promulgated, and coincidentally, the very tragedy of world-conditions preparing the soil most fertile to it, a "stirring of the spirit" or a "new

spiritual environment" is to be sensed springing up everywhere. This is a state totally opposed to that of spiritual stagnation and impotence which causes the desolate call of the soul-starved to bring forth a Great Teacher.

Therefore, today, it is for awakened men and women, possessors of this renewed wealth of truth, individually and collectively to evoke from themselves, through the application of their knowledge, the wisdom, the strength, and the individual leadership they look to a Sage to bring them.

A Christ or a Buddha coming would fulfill his mission irrespective of persecution or opposition, just as Jesus, H. P. Blavatsky, and the other Teachers did, but the main part of that mission would be to give vitality to the ancient teachings and to direct individual and collective human development. These factors are actively present in the world today.

Suffering is shattering illusion and self-satisfaction; sorrow is baring men's hearts and minds to the reception of truth, and the almost universal woe is adding urgency to effort. These are tragic but fructifying elements and they will not be denied. Danger unites: here too conditions we abhor are effectively working toward the ultimate good. Lack of unity in aim and ideal is the great destroyer of progress. The Teachers have always united their followers while they were with them; but humanity has yet to produce a *body* of united leaders each representing his own united people. This is the supreme need of the age!

This is one of those Everests of the Spirit which await the indomitable effort of an awakened humanity — a humanity blessed in the possession of holy truths after long centuries once more revealed; and united through the airways by an advanced Science. The Great Ones are doing their work — - of that there can be no doubt, nor are they estranged or aloof from humanity. It is

our lack of integration both as individuals and as a human host that causes this sense of separation. Realizing this our feeble clamor for the presence of a Sage assumes its proper perspective, and, as Patric Dickinson writes:

Man's Spirit rooted in divinity
Springs on inviolate within the breast
Of Time, and grows not old nor hard nor cold
Whatever cloaks of flesh impede and mar,
Building anew each towering-tumbling world
From dust, from fallen star.

The Theosophical Forum

"PHYSICIAN HEAL THYSELF" — *Soren Dahl*

"Physician heal thyself" is a great saying and it is very closely allied to the ancient wisdom-teaching, "Know thyself."

It is a duty every man owes to himself and should therefore never be lost sight of. It is also his duty to All Life, the complete and perfect Unity of which man is a united part, to the Allness which is ever present to heal according to the choice, desire and capacity of the individual center.

By capacity is meant understanding, that which stands under his individuality, that upon which he rests, for which he stands and which can be increased. "Above all get understanding" is in perfect harmony with "Physician heal thyself."

The more a man is able to heal himself both mentally and physically, the greater will be the good he will be able to do for others and for himself and therefore the greater will be his joy in life. This is his duty; but also he gains great help in uplifting his individuality by helping and healing others as he travels through life. It is the Way, for by the practice of helping others he will secure both experience and strength by which he will be able to heal himself.

The danger of carrying the practice of helping others too far is that the needs of others shuts out the needs of your own self. But no man is justified in saying to another: "Physician heal thyself" insinuating thereby a limitation of ability to heal. For the fact that he has chosen to heal others first instead of himself, does not change the unchangeable truth, that all the power and wisdom there is, is ever present ready to fill the desires and choice of all individual centers.

An outstanding example of an insinuation of limitation is found in the life of Jesus where the chief priest declared "He saved others, himself he cannot save." This priest would have glorified himself if he could have stated the truth of the situation — "He saved others, himself he had no desire to save."

However, any man is justified in saying to another: "Physician heal thyself," meaning that it is his duty to himself and to All Life that he does so. And further not only is any man so justified, but when an individual tries and persists in trying to heal with a degree of power and wisdom that is not sufficient to heal, then it becomes the duty of others to say "Physician heal thyself," meaning first he should strive to increase his understanding before he attempts to heal, or can heal, that upon which he is working.

A good example of such a case is presented in *I sis Unveiled*, Volume I, page 117, where H. P. Blavatsky recommends this "sensible bit of advice" to certain individual centers.

The Theosophical Forum

RISING ABOVE DESIRE — A. Trevor Barker

What does the occultist mean when he says we should endeavor to kill out desire? He does not mean that we should do away with the driving power in life. Desire is the motive force that sends the Universe along.

Unfortunately it has been my experience in the Theosophical Movement to see some very worthy people reduced to complete inertia thinking they were really striving along the Path and had killed out desire — and the poor things had! But you cannot perform any duty in life without the principle of desire energizing your being. It is a vehicle for your will. So, in considering this question, there must be a particular sense in which desires have to be killed out. It is only those desires that intensify your material and transitory nature that have to be killed out. We have to change or transmute finite desires into aspiration. If you are a Christian you call it prayer, and true prayer, which is aspiration towards the spiritual part of your being, to the Supreme itself, doing all actions without a selfish desire for the fruit of those actions — this is the state towards which we aspire, difficult enough, but true. That is the use of desire.

But there is another way of looking at this question. The highest philosophical and metaphysical concepts that we study in a Theosophical Lodge take the mind into a region that is really beyond the region of desire, and that is why we study them. It is to purify the desire nature and free the mind from identification therewith, that we study philosophy and metaphysics. To quote a lovely phrase of Gautama Buddha: We try to teach the mind to walk in the way of Truth; we try to instruct our mental part, our

true individuality, to recognize its essential oneness, unity, identity with the one Mind, the one Being which is the Universe, for it is the greatest mistake in the world if you think of the planet and the solar system, and the marvelous Universe of which it is a part, as something outside of you. You are part, an essential spark of its own life; part of its great river of being. So that we think of this Universe as a conscious living entity, we playing our little roles and parts in its gigantic term of life; and the purpose of the whole thing is to realize that there is not a moment of life when the atoms of the material part of us cannot be transcended and conquered by rising above desire into unity with the one mind, the Universal Soul, which incidentally is without bounds. Is that an idea that inspires you? If you have never thought of it before, dwell upon it, and think, for one of these days it will give you the greatest lift that it is possible for a philosophical idea to do, for then you will realize that you are not your weak and erring and sinful mind, but that if you are willing to rise above these things, to let them go out of your life, you have the power of the One Mind; you have the Life and the Knowledge and the Wisdom and the Truth of the Universal one Self, which is the same in you and in me.

The Theosophical Forum

LOST CONTINENTS AND OUR ATLANTEAN HERITAGE — *G. de Purucker*

The actual evidence for the existence in prehistoric and former geologic times, of now sunken continental land-massifs, is simply enormous. Items of proof have been brought together by very clever researchers and writers, not Theosophists alone, but eminent scientists and other investigators; and all in an attempt to solve the mystery: How on earth did the flora and fauna of the land-massifs, as they now exist, ever pass from one to the other over hundreds, maybe thousands, of leagues of rolling, stormy ocean?

An attempt was made during long years to explain the presence of similar and identic flora by means of migrating birds. Birds eat seeds and drop them, and perchance by the time the birds drop the seeds another land is reached, and the seeds take root. Or perhaps things float on the waves of the ocean, and after weeks and months, it may be years, are thrown up on some sandy coast and there take root! But common sense prevailed after a while. It was soon seen that these labored efforts at explaining the similarity if not identity of the vegetation and animals in widely separate continents, required something firmer and more concrete than speculative evidence of that type.

So it was the scientists themselves who, long preceding us Theosophists, began to ponder the existence or the possibility of formerly existing lands where now the oceans roll their stormy waves in the Atlantic and in the Pacific and elsewhere. It was certain scientists who collected data to prove that something like that must have existed during some former period in geologic history, in order to account for these things; and when geology

and its discoveries brought further proofs of the existence in these widely separated continents, of flora and fauna in the Old World similar to if not identic with types in the New World, and discovered these in the Eocene, the Miocene, and Pliocene deposits, they said to themselves: Surely there must have been land-connections between the Old World and the New, somewhen, somewhere. Those facts remain still unexplained.

Scientists themselves are already granting, and have granted for fifty or sixty years, the existence in former geologic times, of a great continental land-massif in the Pacific Ocean. Sclater sixty or more years ago called it Lemuria, from a little monkey-like animal called Lemur. Later a similar continental land-massif was imagined and called by some scientists Gondwana-land, if you please, to explain puzzles in distribution of flora and fauna in the Pacific and elsewhere that without these supposed land-connections could not be explained. And they have not yet been explained.

The reluctance of the scientists to accept the evidence of their own eyes is remarkable. They themselves brought the question forward, brought the proper answer forward, and in the case of the Atlantic continental land-massif, it is still, as they say, possible, even probable, but not proved. I don't know why. They have accepted it for the case of the vast Pacific Ocean lying to the west of us here, but not for the other ocean as yet; and yet the proofs are there.

Now then, I think one of the reasons for the reluctance of so many thousands to accept what must be the case, arises in an erroneous idea of what these former geologic land-massifs were. They seem to have got the idea that Atlantis, an immense stretch of land, exactly similar in type to our own present system of ocean and land, all sank in a night; and out of the then existing oceans came

the new land, which is now ours. This is an absurdity. It is one of the commonest facts known to all even today, that land is slowly sinking, or rapidly sinking, all over the world; and that other lands not only are with slowness, but with equal regularity, rising. And this process of submergence and emergence through long and short geologic periods is just what took place first in Lemuria and ages and ages later in Atlantis. It took hundreds of thousands of years for the main portions of the great Atlantis-system of continents, big islands, small islands, and seas, even notably to change places — the land sinking, the oceans overwhelming the lands which sank, and other new lands rising to take their places. This has continued through all geologic time, is continuing now, and will continue into the future. Yet there have been cases where islands even fairly large have sunken or risen rapidly, even in our short human view — cataclysms, as in the case of Plato's Poseidonis, an actual event of European pre-history as we now know history, which sank in a day and a night, some eleven or twelve thousand years ago, after fearful earthquakes and tidal waves. Poseidonis was an island the size of Ireland or less, which lay a good distance in the ocean off what is now the Straits of Gibraltar. But that was one of the last island-remnants of the great Atlantic continent, just a headland, as it were, which remained until it finally also sank.

Similarly so with Lemuria, the home, as we Theosophists say, of our Third Root-Race. It was not just one big land. It was a system of continents, great islands, small islands, oceans and seas, just as we have them now. As a matter of fact, there are some remnants of Lemuria still remaining above the waters of the oceans, and also of Atlantis. Talk about scientific proof! Why, the call for such land-connection is so tremendous that it is not for proof of such existence we should ask, but for proof that it has not existed. That is a perfectly justifiable and even a strong argument. I repeat it:

even today, and during the Eocene and Miocene and Pliocene ages, the flora and the fauna were and are still so similar in so many respects in widely separated localities or lands, that some land-connexion at some time as among these separated lands is imperatively called for. The only alternate thing to say is that in those now far past geologic ages there must have existed an immensely civilized, powerful body of races of men, who, with mechanical devices equal to, or greater and finer than ours, could transplant the vegetable life and the animal life from continent to continent in proportion with their own migrations and colonizations, and that comes to the same thing.

When we know that land is sinking and land is rising, and has been throughout geologic time, as proven by the geologic record, and that it is going on secularly, progressively, through the millennia, actually through millions of years, what is the answer? Prove to me that Atlantis did not exist. Why, one could talk for a day and a night simply about the almost innumerable data that have been collected by scholars of all kinds along this line. Books, scores of them, have been written on just these themes.

Now then, my other thought is this: The Atlanteans were a great body of races, just as we are today, a great body of races, with different colored skin, different kind of hair, different past histories from ours, but all human or semi-human. Some of them were good. But most of them, when judged by abstract standards of right and wrong, were evil — even more so than we are. And we cannot throw stones! Heaven knows, we are bad enough. But we are an improvement upon our Atlantean progenitors. For there, although there were millions, throughout the millions of years that Atlantis endured, who worshiped the Divine and the Spirit in preference to matter and selfish power, the majority in those days were worshipers of brute power, of strength, of matter, of influence for the self. Selfishness was the dominant

keynote in the Atlantean race, just as it is even yet in ours; but in ours we have reached the point where we no longer glorify it, but recognize it and are ashamed of it. It shows that spirituality is entering, although slowly, into our consciousness; and even among crooks, honor and right and reason and justice are the key-words with which to charm the hearts and minds. With the Atlanteans it was power and strength, stuff, substance, wealth. But not so with all. There were millions and millions who in their hearts worshiped the Divine and Right and Justice, and these were the Elect, and from these Elect were formed the Mystery-Schools which have endured to this day, out of which Schools have come all the great religions and philosophies and sciences of human history, for the saving of men from worse things, for the helping of men, for the raising of men, for the softening and refining of men, and therefore of civilization.

Just as the Theosophical Society today came therefrom, so in past ages came the Theosophical Societies of other times, our own lineage. There they originated in far distant Atlantis: those who loved right and honor and justice and truth and reason and pity, more than strength and power and selfish privilege. They were what we call the Sons of the Divine, the Sons of God; and they gathered together, collected together, and formed the first Mystery-Schools in which the Spirit of Truth was worshiped, revered and taught, instead of the spirit of power and dark self-interest. Just think how these thoughts sway human minds. Look even at our world today, and see how a thought of selfish profit or advantage, an egoism, can lead men astray. We have the old Atlantean spirit back amongst us, even yet, and this was what was meant by H. P. Blavatsky in saying that the karma of Atlantis still weighs heavily on us, on our souls, on our minds. We are still under its influence, but we are struggling out of it, out of its embrace.

In this connection a final word: There are certain groups today who in speaking of our blessed god-wisdom, Theosophy, say, "Oh, yes, that is very fine, that is the Eastern Tradition. We follow the Western Tradition." Is it conceivable that any one can so ill apprehend Theosophy as to speak of it in that way? The platform of the Theosophical Society, associate Fellowship in the Theosophical Society, is open to all of whatever race, Eastern or Western, Northern or Southern. Wherever the spirit of man has spoken, enlightened by the god within, there is something fine and good; and one professing it, teaching it, living it, and believing it, no matter what the Tradition is, is entitled to association in the Theosophical Society. But speaking of the Theosophical Society as this Tradition of the East, is the most preposterous nonsense, for it is the parent of them all. It is neither eastern nor western, northern nor southern, it includes them all, for from it, they, all, have come forth. Theosophy is the source of them. It recognizes its children in these various guises. Therefore I call it the Great Reconciler, the Great Harmonizer, the Comforter, the spiritual parent.

How true it is that we even today yearn for truth with all our hearts and souls, and that the mark of a great man, or a great thinker, is service and learning. Do you know that the proudest — what may I say? — not boast — but the proudest thing that we Theosophists can say, is that we are learners, students of our god-wisdom, learning from each other in good fellowship, charitable to each other, seeing good in what the other has to present, looking only for candor, honesty, purity, decency of mind and heart. Let us never lose this. It is our safety, our protection, yes, and our open sesame into human hearts. Let the Atlantean spirit die. Let it molder into the dead bones of the past. Hatred, dislike, enmity, unreason, injustice, are all its products. Smallness and pettiness of mind, are its children.

AUTUMN AFTERNOON — *G. Cardinal Le Gros*

It is an Autumn afternoon and the streets are brown with leaves. Children are coming home from school, calling to each other in the cool, windless air. I think of other Autumns that have come and gone: each like a strange, wonderful symphony: the Autumns of childhood, boyhood, manhood. I wonder what this Autumn will mean to me, what I shall think of when the memory of it returns to me in the years to come?

There was a time when the Autumn days seemed to me the most beautiful of all the year: something unseen and ancient whispered to me from the falling leaves, called to me from the wild-geese overhead. I had only to go out and walk and dream and wonder, and the strange, precious glory dwelling in the mystery of Autumn would steal into my heart and make me one with all.

What will this Autumn mean to me? I think that I know: the cycles of the old years have turned, a new path is being traced by the wheel of time, my life of reveries is fading into the quiet past. I feel that my place is not to be in loneliness and dreams, but out among men, searching in their hearts for something precious, something to answer the mystery in my own.

Yes, I think that I know: there is divinity in the Inmost of men; there is something in me which knows that it is there. And so I have a new work, a new duty, of trying to see, to recognise, to encourage the divinity in men to come forth, to flame out and illumine the dreary dream that too many of us mistake for life. This Autumn can be the most wonderful of all; it can be the luminous veil of an inner, spiritual Autumn. Behind its beauty can shine the beauty of a divine universe.

THE FOUR WINDS — *Allan J. Stover*

When we consider the symbolism and thought of the American Indians it is necessary to keep in mind that both the Indian and his philosophy or religion are relics of a former great Root-Race and of another cycle. Also we should not read into symbol or idea too much of our own Theosophy. We should not suppose that the Indian of the past century understood his ancient symbolism as we today may understand it. We should not suppose even that the Indian of the past century understood this ancient symbolism of his as it was originally understood. Nor must we expect to find the Indians of this generation retaining much of the knowledge of their grandfathers, or, if they do, speaking of it to strangers.

There is abundant evidence, however, of a former mystical religion or system of thought, tinged though it often is with traces of Atlantean magic and Atlantean ideas.

Throughout North America one finds a graphic symbolic idea or plan — very simple and sketchy here, very elaborate there, but recognisable in some form — in most Indian tribes. The customary greeting offered to the Sun at sunrise; the symbolic four puffs of smoke as the pipe is passed around the circle of the council fire; the four divisions of a pottery bowl design; these and hundreds of other customs indicate the living symbol of which they are a part.

Here also lies the explanation of the curious white, red, blue, yellow, black and spotted Indian corn of the Southwest, symbolic of the four cardinal points, the regions above and the regions below, and why such pains have been taken to keep each strain pure. (Botanists tell us that for many thousands of years Indian corn has been propagated only with the aid of man, as it cannot

reproduce itself without aid.) This widely distributed symbolic scheme is that of the Four Winds or, one may say, of the Four Directions. It appears on aboriginal pottery, blankets, baskets, and sand paintings. Now one may hear it referred to as twofold, now fourfold, sixfold, or twelvefold, according to the degree in which this ancient idea is elaborated.

Among the native tribes of California, for instance, the belief is widespread that everything in the world — men, animals, and plants — belongs to either a water class or moiety, or a land class or moiety. The Miwok refer to these two classes as Frog People and Bluejay People. The Cupeno speak of them as the Coyote People and the Wildcat People. Other tribes have different names, but all signify a water or cold (lunar) division, and a land or warm (solar) division. One is reminded of the Yang and Yin of the Chinese philosophers, and the eight trigrams built up of various combinations of these two elements. In medieval Europe, Paracelsus said: "Two complexions of Nature should be noted: one is hot, the other cold." In old Greece, Ptolemy, in his *Tetrabiblos* divided the Zodiac into two parts, a solar half from Leo to Capricorn, and a lunar half from Cancer to Aquarius, the former dry, the latter watery. More recently, Baron Reichenbach found that his sensitives distinguished various substances as being either warm or cold, which qualities he designated as "plus od" or "minus od," and gave a long list of substances so classified.

The Aztec prayer to the Gods of the Showers began: "Ye who dwell at the four corners of the earth . . ." Both Algonquins and Dakotas traced their ancestry to four personages, identified with the four winds. The Creek Indians tell us of four brothers, who came from the four directions bringing fire from each of the cardinal points.

The Indians of the great plains, such as the Sioux and Omaha,

emphasize the fourfold division, although they recognise each direction as threefold and also speak of the upper and lower regions. With them the North, represented by a buffalo, is the region of earth, agriculture, hunting, etc. The East, represented by the thunder-bird, is the region of fire. The South, the region of the wind-makers, is represented by an eagle. The West, the region of the beaver, is the home of the Water People.

Here we find water opposed to fire, and earth opposed to air, while Christian tradition and modern astrology transpose fire and water, placing earth opposite water, fire opposite air, and follow the order Fire, Water, Air, Earth. Certain western Masonic traditions, on the other hand, derived through the Talmud, follow the same order as the Indians.

Among the Osage tribe, each mystic hearth was consecrated by placing four sticks in the form of a cross and building the fire on these sticks. In doing this the Indian would, if he belonged to the fire gens, place the first stick towards the east; if of the water gens, he would point the first stick towards the west, and the others would be laid down in order.

Certain animals were symbolic of particular directions, and every Indian with an animal name was considered to belong to the element and direction associated with that animal. The class to which a man belonged was determined as he entered manhood, at which time he kept a prolonged fast on some isolated mountain until he dreamed or saw a vision which indicated to him his place and name in the tribal scheme. Just what the directions meant is difficult for us to understand. Certainly they symbolized much more than the points of the compass. Among the Plains Indians they seem to have signified directions of thought and consciousness as well. Among the Zuni of the Southwest they were sometimes referred to as "Inner Worlds." In general, the

directions may be thought of as signifying the four elements, and the emotions and feelings associated with Fire, Air, Water, and Earth.

Those familiar with the visions described in the *Book of Enoch* may be surprised to learn that the Zuni tell of four great seas, one in each quarter of the Universe, in each of which rises a sacred mountain, each of a different color.

Among the Sioux, all adult members of the tribe belonged to one or other of the four directions and at the council fire the members sat in their appropriate quarter of the circle. In effect, the tribe was divided into four castes, each caste having definite occupations and ceremonies which they might attend and personal names which they might bear.

In the tribal organization, the Earth People assist the Fire People, the Fire People and Water People are hostile or inharmonious to one another. The Fire People and Wind-maker People are concerned in all kinds of suffering, and work together. The Water People are concerned in death and in the after-death states. They have charge of all funeral ceremonies. To still further complicate the picture, the guardian of each mystic direction has his servants assisting him in each of the other directions.

As with the two-fold classification of the California Indians, we here find everything classed according to a fourfold order.

When we use the expressions, "From the East comes light," or, "Look to the East," we are expressing the same sentiment the Indian does when he offers greetings to the Sun at daybreak, or when he refers to the four winds or four directions.

WHEN WILL THEOSOPHY BE WRITTEN IN ENGLISH? — *Grace Knoche*

This question, if it keeps on cropping up, will divide students into not two but several camps — that of the plain person who has little faith in his capacity for judging and perhaps little time for study; the devotee (a trifle inert very often) who thinks that ethical teachings are enough; the brilliant mind that is too impatient to be profound; the congenital reformer who knows that he ought to learn but, alas! would rather teach; and, rare nucleus for the future! those quiet and genuine students who see that the hurdle of a handful of technical terms is very little indeed to consider in view of the tremendous speeding-up, spiritual and intellectual, that he sees also is the sure reward of taking it. In addition, there is the puzzled inquirer who doesn't know what he is, or where, but who, come wind come weather, is going to find out about Theosophy somehow, yet is confused by this wordy fog.

One is amazed at the persistence of this question, for the answer is simplicity itself. Theosophy will be written in English when we who speak this language have English words to express, understandably and succinctly, its clear direct teachings and ideas. Unfortunately, when Theosophy was brought to the West we had no such words. How could we have names for teachings and ideas of which our dictionaries were chemically pure and even Western scholars had never heard? Alice in Wonderland might uncover an answer, but we are speaking from Globe D.

As a matter of fact, the question as stated is purely rhetorical. What it means is, When will Theosophy be written in English without the inclusion of Sanskrit words and terms? However, let us take it as it stands, and the first step is to settle upon what we

mean by "English." Just what is English? A dictionary might know something about it and one happens to be before us — the Funk and Wagnalls Collegiate. A less than ten-minute perusal of its pages discovers the following Sanskrit words: *atman, amrita, buddha, guru, dharma, prakriti, sakti, sati (suttee) maya, sutra, Indra, Vishnu, Siva, trimurti, nirvana, Mahabharata, vina, yoga, and yogi.*

Whatever these words were once, they're English now, as English as Chicago or Des Moines, regime, bouquet, piano, molasses, or some thousands of others once immigrant and suspect, now citizens. Returning however to the dictionary: it doubtless contains other Sanskrit words, perhaps many, but here we have twenty, a larger number than one can find in any but the most exceptional, even a technical, article. An Editorial Board composed of scholars, note, includes these words, without benefit of apology, in an English dictionary known to probably every college in America, thus posting them as belonging to the English language. Incidentally, before passing on, we check this list against the *Practical Standard Dictionary* on the shelves across the hall. We find every word there, too — and this in a dictionary described on the title-page as "Practical."

So what is this "English" in which Theosophy cannot be written, and yet can be? For we cannot repudiate these Sanskrit words without repudiating equally the almost numberless technical words today found not only in dictionaries but in dozens of glossaries on law, medicine, anatomy, botany, chemistry (Sanskrit, a language of compounds, has nothing to compare with the 40-letter unpronounceables of the chemist); or on pharmacy, versification, engineering, electrical science, etc., etc. Or on any subject that is technical but that, like Sanskrit, belongs in the now rising cycle of human knowledge and thus is worthy the steel of the worthwhile mind. Or glance down the columns of a

competent Index in a technical book — say on botany which is well past its youth and harmless — and note the multitudes of words and terms at one time as strange to us as Sanskrit, but now by rite of adoption full citizens of the fatherland we call English. A bit of history must be inserted here, for the question, What is "English?" requires something more than a categorical answer.

What in due course came to be known as English had its roots in a spoken speech brought over to the island now called England, from the continent — from the forests of the North Sea and the Baltic, the low terrain of the Elbe, the Weser, and the Rhine, by migrating groups sifted from populous clans. First the Angles, then the Saxons, then the Frisians, the Norsemen, and the Danes. They brought their wives and children and their strong will to stay; they brought their household goods and gods; they brought their speech, their dialects, whose words were as exotic, as wholly strange, as Sanskrit is to most of us today. They fought their way to and into this island-country, and they settled down to stay.

It does not make the politest picture, but history paints it so, and after a century of the spade-work which was to make "Anglo-Saxon" the speech of this new land, its inner terrain of thought and communication was plowed and furrowed and seeded-down with these new, strange words. The native Celtic, hardly more than spattered with Latin, mingled with the dialects of the invaders, for Rome had moved out, bag and baggage, and had taken its language along. The day of books and scholarship was to come. Fat books and many have been written around these proceedings and migrations, but a bare summary will suffice. So much however is indispensable, for we must define that word "English" and definitions have to rest on a foundation or they cannot define.

There were law-courts, and there was of course a church, but

these alone concerned themselves with Latin. The vernacular was simply Old English, familiar in the college Manual, and comprised roughly of three main dialects: the Northumbrian, brought in by the Angles and so named because spoken north of the Humber; the Mercian of the Frisian clans, spoken south of this river to the Thames; and the Wessex or Saxon, still further south, the mother-tongue of Alfred the Great. Certainly there were minor dialects, and no doubt overlappings, but this will do. It is the dialect of Wessex that became the Anglo-Saxon of English history, its very name compounded of foreign words.

Now for the superstructure which is to furnish forth our definition. Not only were these outland dialects taken into the Celtic fold as they came to be needed, or pushed their way in, but the native dialects borrowed words from foreign tongues, as well as from each other. So that by the time we arrive at Middle English, with its greater solidity and exactness, some hundreds of French words had filtered in, derived from the usages of the aristocracy, the clergy, and the courts of this now Norman England.

These paved the way inevitably for more and more of Latin, the beloved of the scholar and the church, while inflexions were changed and exchanged, added and lopped away; prefixes and suffixes were born and reborn; and participles and prepositions, adverbs, infinitives, and gerunds had their own growing-pains to modify forms here and there. It all seems curiously fluid. Yet it was natural, since language is essentially a fluid thing. One is reminded here of Blackstone's quite unforgettable definition of water (somewhere in his section on the Rights of Things) that

Water is a movable and wandering thing, but the land below it is permanent.

So is a language a "moveable and wandering thing," but the inner,

the deeper forces that shape and in fact create it — these are permanent. While all the time more words come filtering in, raining in, dancing in, and muscling in, some to be adopted intact and unchanged, some to melt and fuse together with words they found, like candles left in the sun. By the fourteenth century, for instance, we find French words flowing like a tide, to rock merrily along with the rest in the cradle of a grammatical frame thoroughly Teutonic. Until at last, out of the crumble and break-up of the dialects there we find emerging a language. They called it "English," and it too went on borrowing, clasping strange, foreign words in its motherly embrace like so many breathless young children. But unlike the Old Woman who lived in the Shoe, English did know what to do. It adopted them — an irrevocable step, but by no means unique. For this is a language-habit, sprung from the essential nature of free utterance in its youth — and the Occident, bear in mind, is very young, compared with the Mystic East.

What, then, is English? A melting-pot? Not that exactly, for mostly the new words fit unchanged into the niches suddenly ready to receive them. They are adopted, and this because English finds suddenly that it needs them. By the mysterious, because trackless, procedures of the past they come in because they "belong." The English language is a hierarchy, therefore, with many hierarchies folded in it, but most of these left to remain just themselves to the degree that they co-operate with the rest. They become, thus, integral with that rest, tissue of its tissue now, life of its life. And just as English has welcomed the stranger-words that knocked for admission in the past, so will it in the future, because it is a hierarchy, in other words, a family, before all. It is the One cherishing within it the Many. Here is our definition, then, and should English ever cease to justify it, it would cease, in the deeper sense, to be English. But it will not cease. It will live its life,

and normally, reach its prime, grow old, decline, and pass away as all composite things do, to give place to another language and a nobler — Sanskrit perhaps! (Very wise Teachers have said so, not today only, but in ancient days — but that is another story).

The point is, so English came to be, for with every new adventure, discovery, importation, gadget, horizon, or idea, in would come a new word or two, often a flock of them. This did not have to happen, to be sure. We might have refused the discovery, shut our eyes to the new horizon, our mind to the idea, and declined all that looked like adventure. But as it chanced, we didn't want to. We chose adventure and the new frontier, and English therefore took the path of growth and power and enchantment, and kept on inviting foreign words in, and is doing it still as the dictionaries attest — with each new edition we find the family enlarged — and never in all the history of English has anyone ever thought it queer.

Here are a few words, for instance, imported through the centuries from Holland — sturdy Dutch words, every one: botch, brake, spool, ruffle, tuck, cough, muddle, nag, luck, trick, sloop, mop, and so forth for the better part of a page, not to mention easel and landscape, and (quickly seized upon by writers) Boer-African *trek* and *veldt*. Alien and exotic once, they are English now because adopted, and have all the rights, hereditaments, and smoky flavor of "a good old Anglo-Saxon word." We would not, because we positively could not, dispense with a single one, and incidentally, did it cost us hours of painful application to learn them? Is the use of them confined to the scholar, the bookworm, or those who have "time to study?" Such an argument doesn't stand up.

Nation after nation, foreign language after language past and present, has stamped its soul-impress upon English in just this

way, some more indelibly, and some more spiritually, than others; but here these once-strange words are, all of them, without benefit of protest, English words now. And it will continue, the hoary process, because we who speak English are that way. When the first Giant Panda, for instance, was brought to our shores, or the little Koala-bear from Australia (with apologies, since it isn't a bear) did we accept them, and adopt the unknown words which they brought along as names? Or did we ship them back with the message that if the donors (or discoverers) "will give them English names we shall be pleased to look them over?" Of course not. We did the sensible and simple and perfectly obvious thing — we adopted these hitherto unknown Chinese and Blackfellow words, and hurried to the dictionary-makers with them.

But Sanskrit is different, you say, and you are right: it is very different. It is not bringing us curious animals, or insect-pests, or dangerous weeds with strange names, as the scientists do; not even nourishing foods and fruits like the mango, anone, cherimoya, and avocado pear; like the orange and lemon, apricot, sago, cinnamon and chocolate, molasses and marmalade, coffee and tea — words as foreign once as Sanskrit ever was. Nor does it vie with the native dialects of North America which have given us so lavishly of their words for names of lakes, rivers, cities, counties and states, that whole pages in a competent atlas make you wonder if geography is but another name for some verbal melange or pot pourri.

Sanskrit is different, for the burden of its strange new words is no material thing. What it does bring is best described, perhaps, in the familiar words of our Leader: "Light for the mind, love for the heart, understanding for the intellect." What it has to offer is a nosegay of forgotten truths and teachings — truths, by the way, upon which the great spiritual civilizations of the distant past

were founded, and by which they lived out their cycle to reach a point of (relative) spiritual perfection.

What Sanskrit has to bring us, in a word, is Light — but some, because it is offered in lamps whose name and pattern are strange, must hesitate. (English doesn't hesitate: English adopts them. Question: does a language have more courage than a man? But that is an aside.) To imagine that any protest of ours can make a language stop dead in its tracks is to imagine something that simply does not happen. Languages do not evolve that way, and certainly English did not. That is why it is not ready-made and static; that is why it is spiritually alive. It is learning and growing as we are. What do we want to be polarized to, anyway — Spirit or Matter? What do we really want for our spiritual Polar Star?

The Theosophical Forum

THE ASCETIC — *Martyn Witter*

The ascetic seeks but the one flame that dwells in the innermost core of his being. It is many flames united into one. Around it is the silence that knows no discord of pain or pleasure. The ascetic seeks this source of his being as does the baby the breasts of the mother. It is his spiritual father and mother combined into the inner teacher. To it the disciple must go with purity if he is to gain admittance into that holy of holies.

He who can keep his spiritual eye focussed upon that holy flame within, during the waking hours, will wing his way to it consciously during sleep. He who can keep this contact between the consciousness imprisoned on earth and that gleaming star within receives the rivers of love and wisdom that flow as unto parched earth. He is never lonely. All the storms of life will exist not even though they may swirl around his body of clay. That man is an ascetic, for by his self-discipline he maintains a channel that helps to feed all around him. Only one who is an ascetic can hold back by his will the forces of dissension that rage outside the prison doors of clay. He is not one who breaks his bones, tears his flesh, and lives on a grain of barley. Instead he is one who seeks the flame within by exercising his divine will.

A PARABLE — *Miles MacAlpin*

A unit of consciousness and will, which for long ages had astonished astronomers on many man-bearing planets, quit behaving like a comet and went on with the karmic process of being re-born as a planet in one of the most illustrious solar universes.

Like any human unit, it went into darkness for a period of gestation. It multiplied itself into a suitable body — a bony structure of rocks, an arterial system, a breathing apparatus, a nervous network, a little vegetation on its outer surface. These sub-hierarchies were composed of units of consciousness and will, too; they had formed many successive imbodiments for the planetary unit, and the desire-fumes arising from the pent-up energy in all these body-forming units made an excellent root-base for the animal life that presently began to ooze, crawl, fly, swim and prowl in the elements of the planet's imbodiment. All the animals were shadow-prototypes of the solid forms they would ultimately become, like the desire-design that becomes a form through the mind of an inventor.

But this imbodiment was a crisis in the planet's evolution. The planet had reached the man-bearing degree of self-unfoldment, and was about to develop its first stream of thought-energy maintained by those weird units called "men" — young gods who must re embody thousands of times (at least, the greater number of them must) before they begin to wonder if they are elementary gods or postgraduate beasts.

The body-building skill of a re-born planet is no more amazing than the splendid technique shown by a human unit in its mother's womb; nor is the breeding of many types of men more

remarkable than latent mentality in a baby becoming many thoughts of different types that use the perceptive senses as a means of adjusting self and environment.

So the planet's humanity presently became many men of different types varying in degree of evolutionary unfoldment. This took rather longer to do than one might believe, for most of us find it difficult to think in time-periods of millions of years. If we calculate in seconds the time from a human baby's birth to the time it starts to think in an organized manner we might partially condition our minds toward a grasp of planetary and solar growth.

The mentality-units born to the planet may not have had elongated shells full of chemical apparatus similar to our bodies, nor four appendages thereto, called arms and legs, nor a spinal periscope with a head-like radio-station on top of it, as we have; but they could think of themselves as this, that or the other; they could self-consciously exercise choice in making adjustments between self and environment, and they soon began to wonder if they were animals or gods. So we may conclude that, relative to their planet, they were "men."

As is customary with worthy man-bearing planets, advanced units from the solar army of kindly helpers, conveniently called "gods," who at one time had been new men on some planet, walked, flew and talked with the newly born humanity. Many persons think of a god as something like a man but with much bigger and better ways of having a good time. But the gods that tutor young humanities are better thought of as basic principles; eternal, omnipresent, boundless and immutable relative to their particular unit-area of motion, or "hierarchy." The constant re-embodiment of these lofty gods gives man the finer qualities of love, faith, trust, etc., and as these qualities are just what makes a

human baby lovable, it is evident that the gods walk and talk with a new-born baby as well as with a new-born humanity. To the perception of the young humanity the gods no doubt were living entities. Patience, humility, charity, hope, etc., may have appeared as focal centers, even imbodyed in ethereal forms similar to those of the planet's new men. At any rate, lofty, impersonal and impartial principles were in direct communication with the humanity, even serving as rulers and teachers. But when the humanity began thinking of itself as "many men," and each man began to think his way into a personality-shell that probably was a bit more important than any other shell, the new men grew a bit cocky and were certain that the way of the old gods was out-of-date, old-fashioned and hardly fit to meet the exigencies of every-day, practical, modern life.

The universe being based on mathematical principles, it is quite reasonable to think of a new humanity as composed of ratio-units rather than of meat-and-bone structures, and so it was on this planet. One prominent type of man had a perception-ratio of one-to-two. In fact, this type of man *was* the ratio of one to two, but it is our unfortunate habit to think of "having" rather than "being" even when considering our own innate qualities. The type thought of itself as the $1/2$ — a much better type than the heathen across the mountains whose perception-ratio was $2/3$, and incredibly higher than the strange people over the ocean whose perception-ratio was an unheard-of $3/4$. When a type with a $1/6$ perception-ratio made its appearance, and international affairs were in a mess, the wiser units who still believed the gods could help some, went to the people's favorite preceptor, Ah Ping.

"We cannot get along as a humanity, Ah Ping, as you say we used to do; even the last million years has shown a marked decrease in human solidarity. The humanity is nothing but "types" and the types are fast becoming localized units, or "men," each of whom

thinks of himself as a whole type — if not as a whole humanity!"

Ah Ping said, "You must introduce a new mode of thought. All the types must find a common working base and each type must adapt its perception-ratio to that base. For your types the base is 12. Teach the $1/2$ to think of itself as $6/12$, the $2/3$ as $8/12$, the $3/4$ as $9/12$, and the $1/6$ as $2/12$. Thus you can work together, yet no type will lose its own perception-ratio."

Aided by Ah Ping and other gods, the wise men established schools of the new mode of thought, and because the humanity was young and plastic a great deal of the old brotherhood of man was re-established in only a few thousand years. But of course not all the men accepted the new way to think of themselves, and indeed it is not easy to develop a root-base of twelve and make it a living power in one's life, even if one could live a thousand years at a stretch as these early men did. Who of us could remember to ask for $6/12$ of a yard of cloth if we desired only eighteen inches? Yet that is easy compared with acquiring some of the high modes of thought necessary to real elementary godhood.

Presently a $1/8$ type appeared! Many men claimed that the new thing was a freak, a frivolity of the gods, and the older types began to accuse one another of being the parent of the outrageous new type that would not fit into the orthodox mode of thought. Ah Ping and the few wise men who had remained disciples of the gods established a new school to fit the ageless principle to the needs of the new cycle, and taught thought-exchange on a $1/24$ basis. A sufficient number of men learned the new mode of thought to save the planet from a mental collapse, but it was a mighty task as the men had developed more solid bodies, more material knowledge and more lust for perishable goods. The basic principle of expansion of consciousness was being lost sight of by

the people at large. They preferred to worship an image of 1/24, done in matter, man-like in form; a god with one eye and 24 hands, or some such thing. And soon most men forgot what the 1 and the 24 really meant. Besides, the men spent vital energy so rapidly that 200 years was a long time for a man to live, and why waste time learning new modes of thought? Let the best man win.

The time came when, according to law, the new humanity must more or less stand on its own intellectual-spiritual feet, with the gods accessible only by each man through his own higher, godlike qualities. Ah Ping and some of the other gods were at times available to a few of the highest disciples, who sent forth their young pupils from time to time to keep alive, if possible, the basic doctrine of an ever-expanding consciousness. The planet was at that time nearly two billion years old, comparable to a human unit of about 36 years who is full of physical energy but without much interest in the gods.

Two billion years seems a long time for Ah Ping and the other gods to stay with the new humanity. Of course, the first billion years might have passed before the new humanity was old enough to be taught by the gods. But certain classes of high gods have a remarkable ability to re embody at will, and part of their power to do this is their constant, impersonal and impartial devotion to the great evolutionary process throughout all space. Ah Ping himself was not always known to the public by that name, but it was he just the same.

It was at this mid-point of the planet's lifetime, when the men were nearing their most materialistic degree of involution, that the next radical type, the 4/5, appeared.

Two major schools of thought clashed with one another for possession of men's minds. One school claimed that a thought-base of 60 was quite enough, and the 1/8 type could be let drift

into oblivion or go dig up a buried city out of some desert and live in it. The other school taught a thought-base of 120, including all types. Old-line orthodoxy said both new schools were abominations in the eyes of the gods. So the planet had its first religious war, and many good men were killed in the names of the prevailing spiritual teachers.

Ah Ping smiled when a committee of wise men said to him, "What will happen, O Master, when a 3/7 type is born, or a 7/9? Will the planet go crazy?"

"These fine types," said Ah Ping, "will evolve from the older types in the spiritual half of your planet's life. It would be impossible for so young a planet to develop men with modes of thought on a base of 840, to say nothing of a base of 2520 to include the 7/9 type. But in the sixth and seventh rounds of this planet's present life it will not be so difficult."

"Why not?" asked a careless one.

Ah Ping asked the disciple, "Will not the many re-become the One?"

The Theosophical Forum

THE STARS IN THEIR COURSES — *C. J. Ryan*

H. P. Blavatsky's Contribution to Astronomy. Part II

The "Expansion of the Universe" and the "Great Breath"

In our last article we considered the rhythmic or periodic appearances and disappearances of worlds and universes and the tentative approach that science is making to this important fundamental in Theosophical cosmogony. A casual reference was made to the "Expansion of the Universe," a remarkable and ingenious hypothesis devised to explain the affection of light called the "red shift" of the lines of the spectrum, the rainbow band of color into which light is analysed by the spectroscope. The apparent movement of the lines is very clearly marked in the light coming from the far distant galaxies of stars beyond our Milky Way system. In the majority of cases the lines are displaced toward the red end of the spectrum, which is taken as evidence that nearly all of the host of galaxies scattered all over the firmament are moving *away from us*; the greater the displacement the faster the motion. We cannot give the full particulars here but they can be found in any modern textbook of astronomy.

In regard to the velocity of recession a curious effect has been observed which has called forth the hypothesis that what is commonly called "*the Universe*" (rather a vague term as used by astronomers in this connexion) has been expanding from a central and small nucleus for billions of years. While the nearer galaxies appear to move away from us comparatively slowly, the more remote ones seem to travel more rapidly and the farther away they are the faster they go until the farthest yet discovered reach almost incredible velocities. By employing these

observations and calculating backward to the time when the galaxies were starting out in all directions from the supposed central nucleus, the approximate date of the beginning of the explosion has been estimated. But unfortunately this does not give nearly enough time to cover the generally accepted life-history or probable evolution of suns and systems. Yet if the expansion hypothesis is discarded science must look for some other explanation of the red shift. No satisfactory one is in sight, though several have been considered. One is that the red shift effects are produced by a process akin to "fatigue" as light travels through enormous distances in space. Another is that "the" universe of galaxies is expanding in some parts and contracting in others, and that immense regions are stationary. Dr. Herbert Dingle, distinguished British physicist, after suggesting other solutions of the expansion and other problems of space, says "or again, our universe may be of a character at present unconceived. . . . We leave off where we began: the universe eludes our apprehension. But we shall continue to pursue it."

The fact that the "Expansion of the Universe" is being seriously discussed by the scientists is of considerable significance to Theosophists, for it implies contraction as well as expansion and, probably, an endless succession of rhythmic activities on a cosmic scale as the logical deduction. The physical or material aspect of Expansion may be abandoned, but the general principle is very important for it points directly to one of the grandest teachings of the Ancient Wisdom — the Law of Periodicity or Rhythm which rules in the smallest manifestation of life-matter as well as in the greatest galaxies of stars. It is the framework within which evolution proceeds. In the Cosmos it appears as alternations of manifestation in form and matter and of withdrawal into the invisible and subjective, poetically but graphically called in Hindu philosophy the Outbreathing and Inbreathing of Brahma, a name

derived from the Sanskrit "brih," to expand, to grow.

There is one marked difference, however, between the modern Expansion hypothesis and the Archaic Teaching. Both convey the idea of rhythmic pulsation, but the "Outbreathing" metaphor represents the re-appearance of life and consciousness into forms and compounds from the invisible ultimate Essence into objective existence, and the "Inbreathing" stands for the dissolution of all into the original state. Neither is external. The modern "Expansion" is supposed to be a purely physical phenomenon, if it exists at all. It should not be overlooked, however, that neither the scientific hypothesis (or its modifications) nor the archaic Teaching excludes the other; they are not incompatible.

As we pointed out in the last article there is strong evidence that some tremendous cosmic change or so-called "catastrophe" *did* take place not very long ago, astronomically speaking, and the question arises: has cosmic evolution proceeded in our part of space more rapidly than seemed probable and may this catastrophe have been a minor though enormous cataclysm and reconstruction within vastly greater periodic cycles? Have any celestial bodies survived from a previous minor cycle through a reconstruction which would occur after a *partial* contraction — one of a series? This remarkable suggestion is being seriously considered by astronomers, as it would explain many difficulties.

As a help to the understanding of the Archaic Doctrine of Periodicity and its bearing on modern speculations the following passages from H. P. Blavatsky's works will be found convenient for reference:

The esoteric doctrine teaches, like Buddhism and Brahmanism, and even the Kabala, that the one infinite and unknown Essence exists from all eternity, and in regular and harmonious successions is either passive or

active. In the poetical phraseology of Manu these conditions are called the "Days" and the "Nights" of Brahma. The latter is either "awake" or "asleep." . . . Upon inaugurating an active period, says the Secret Doctrine, an expansion of this Divine essence from without inwardly and from within outwardly, occurs in obedience to eternal and immutable law, and the phenomenal or visible universe is the ultimate result of the long chain of cosmical forces thus progressively set in motion. . . . an out-breathing of the "unknown essence" produces the world; and an inhalation causes it to disappear. This process has been going on from all eternity, and our present universe is but one of an infinite series, which had no beginning and will have no end. — See *The Secret Doctrine*, I, 3-4

The appearance and disappearance of the Universe are pictured as an out-breathing and inbreathing of "the Great Breath," which is eternal, and which, being Motion, is one of the three aspects of the Absolute. . . . When the "Great Breath" is projected, it is called the Divine Breath, and is regarded as the breathing of the Unknowable Deity — the One Existence — which breathes out a thought, as it were, which becomes the Kosmos. — *Op. cit.*, I, 43.

Intra-Cosmic motion is eternal and ceaseless; cosmic motion (the visible or that which is subject to perception) is finite and periodical. — *Op. cit.*, I, 3

The former [the inbreathing] represents a certain period of cosmic activity, the latter [the outbreathing] an equal one of cosmical repose. In the one, worlds are being evolved, and passing through their allotted four ages of existence; in the latter the "inbreathing" of Brahma reverses the tendency of the natural forces; everything visible becomes

gradually dispersed; chaos comes; and a long night of repose reinvigorates the cosmos for its next term of evolution. In the morning of one of these "days" the formative processes are gradually reaching their climax of activity; in the evening imperceptibly diminishing the same until the *pralaya* arrives, and with it "night." . . . and it was a "day of Brahma" that the kabalistic author of *Genesis* had in mind each time when he said: "And the evening and the morning were the first (or fifth or sixth, or any other) day." — *1sis Unveiled*, II, 421-2

In the first book of *Manu*, we read: "Know that the sum of 1,000 divine ages, composes the totality of one day of Brahma; and one night is equal to that day." One thousand divine ages is equal to 4,320,000,000 of human years, in the Brahmanical calculations. — *Op. cit.*, II, 272

He alone, the Unconceivable, is unchangeable (ever latent), but the Creative Force, though also eternal, as it has been in the former from "no beginning," yet must be subject to periodical cycles of activity and rest; as it had a *beginning* in one of its aspects, when it first emanated, therefore must also have an end. Thus, the evening succeeds the day, and the night of the deity approaches. Brahma is gradually falling asleep. In one of the books of *Sohar* [a Kabbalistic work of great antiquity, at least in part], we read the following: "As Moses was keeping a vigil on Mount Sinai, in company with the Deity, who was concealed from his sight by a cloud, he felt a great fear overcome him and suddenly asked: "Lord, where art Thou . . . sleepest thou, O Lord?" And the *Spirit* answered him: "I never sleep; were I to fall asleep for a moment *before my time*, all the Creation would crumble into dissolution in one instant." — *Op. cit.*, II, 273

How the Sun keeps its "Fires" burning

When H. P. Blavatsky brought the Archaic Wisdom to the West the method by which the sun pours out an apparently endless volume of light and other forms of energy was unanswered. To quote Dr. Harlow Shapley of Harvard Observatory, in a recent announcement:

It has long been a serious problem to explain why the sun exists at present, and why it radiates at apparently *the same rate as it did in Palaeozoic times*. The ancient plants and animals apparently lived under conditions similar to our own — two hundred million years ago.

When H. P. Blavatsky's Teachers challenged certain astronomical theories more than sixty years ago the problem of the sun's supply of energy was becoming acute. The most favored hypothesis was that of combustion — burning — in which compounds are formed by the chemical combination of free atoms or molecules. For instance, when the carbon in a piece of coal "burns" it unites with oxygen in the air to form carbon dioxide, and as this goes on a certain amount of energy in the form of heat and light is given off. When this principle was found inadequate (1), mechanical processes, such as the gravitational contraction of the sun or bombardment by meteors were tried, also without success. When radium was discovered it seemed promising, but it failed to stand the test, and the problem remained unsolved till recently. It was unanimously agreed, however, that the sun could not be very old — only a comparatively few million years — and that its energies must be rapidly declining, astronomically speaking. With its approaching "heat-death" the planets would freeze to death and, as Balfour said, human life, "a rather discreditable episode on one of the meanest of the planets," would come to an inglorious end! It need

hardly be said that this was not the view of the Adepts, the exponents of the Ancient Wisdom.

But the geologists and biologists were thoroughly dissatisfied with the limited time allowed by physics and astronomy, because the evidence of geology and of the evolution of life on earth demanded a far longer period. No solution seemed possible until the New Physics revealed the enormous energies locked up in the *atom* and the possibility of liberating them under conditions existing in the sun and the stars, and which can now be reproduced on a small scale in the laboratory. *Chemical* combinations need no longer be considered. A remarkable process of transmutation of certain elements — the dream of the alchemist — has been found to explain the sun's vast energy production, and, (with a little help from the solar contraction), its uninterrupted pouring forth for the billions of years required by science and, of course, Theosophy. The sun, then, is ceaselessly transmuting certain elements into others and liberating its stores of energy — *Life-Energy* we call it — as a "by-product," a very important one for us, however. The vital fact is now scientifically established that the sun has sufficient resources within itself to be independent of any outside help for untold billions of years, time enough to cover any reasonable scheme of human evolution on the *physical* plane. It can bountifully sustain its planetary family and ask no support in return. (2)

Although Sir Arthur Eddington said a few years ago that "the sun contains within it the energy which is to last the rest of its life," the *modus operandi* was not then worked out; but he unwittingly repeated what the Theosophical Teachers had openly declared from their own researches nearly sixty years ago. The problem was finally worked out by Dr. Hans Bethe, now of Cornell University, who in 1938 provided a solution which has received an enthusiastic reception and which has been further developed

by Dr. George Gamow and others. It depends upon the demonstrated principle that when a lighter element is transmuted into a heavier one — in this case hydrogen into helium — an enormously greater quantity of energy in the form of light, heat, etc., is released than that produced by the most intense chemical combustion as mentioned above. The process is a long and complicated series of atomic transmutations which remind us of the extraordinary and complicated series of physical transformations called *mitosis* that nature adopts to produce the cells of our bodies. A brief description will give some notion of the process of the suns.

The process of atomic transmutation which liberates the required amount of solar radiation is composed of four elements (and some isotopes of three of them). These are carbon, oxygen, nitrogen and hydrogen, as already mentioned. The helium which appears at the close of the cycle is only the transformed residue of the hydrogen, the "ashes" as it has been called. The fact that the four elements are essential to the work is of primary importance to us in view of their special significance in occult science. We refer the reader to *The Secret Doctrine* II, pp. 592 and later, which should be carefully read by students of chemistry. Here she shows that the four elements are the basic factors in physical organic life, and defines their parallelism with the four lower "principles" of man. Once we recognise their importance in terrestrial affairs as described in *The Secret Doctrine*, the complicated and laborious series of transmutations of these particular elements no longer seems so extraordinary, even though we cannot yet penetrate further into the mystery.

The elements which appear in the chain or series of atomic transmutations that liberate the sun's life-energies are Carbon, Nitrogen, Oxygen and Hydrogen in one form or another. The process begins when an atom of carbon is struck by the nucleus

of a hydrogen atom and is transmuted into a special type of nitrogen (an "isotope"). More hydrogen comes along from time to time, and other changes take place during which the original carbon atom is transmuted into normal or isotopic forms of oxygen or nitrogen. Finally, it is restored to its original condition as a normal carbon atom, ready to start the whole cycle over again when another hydrogen proton attacks it. The last phase of the process is marked by a surprising and "magical" change, as one scientist calls it. The hydrogen that came in during the transmutations has disappeared as hydrogen but has been in part transmuted into the heavier element helium and in part into the liberated energy which constitutes the solar radiation that makes life possible on earth. Fortunately for us hydrogen is abundant in the sun, and though millions of tons are transmuted every second many billions of years will elapse before it is all used up, and even then other possibilities of energy supply are suspected which could carry on for a good while longer.

How the carbon, hydrogen and all the other elements in the sun originally were formed is a problem unanswered by modern science, but we may be sure that no attempted explanation can be more than superficial which ignores the Cosmic consciousness and intelligent control over the ceaseless and universal activities of the One Life that is behind all phenomena.

It is interesting to learn that the sun, structurally, possesses an unfailing and automatic regulating system which controls the output of energy and prevents any dangerous fluctuation in the steady flow until, like everything else in nature, its time has come to withdraw from active life on this plane.

In regard to the sun's ability to support itself and shine with undiminished brilliance without external assistance for the enormous time required for the Seven Rounds of human

evolution at the very least, it is clear from the following quotations written about sixty years ago that the Masters of Wisdom possessed knowledge of natural phenomena quite unknown to Western scientists. In an authoritative series of articles published by Madame Blavatsky in 1883 and called by her "the true occult teaching" (See *S. D. I*, 528, footnote) because they were written by the Masters and their advanced disciples, we read:

. . . [the sun] is quite as self-dependent as he is self-luminous; and for the maintenance of this heat requires no help, no foreign accession of vital energy, for he is the heart of his system, a heart that will not cease its throbbing until its hour of rest shall come. Were the sun "a cooling mass," our great life-giver would have indeed grown dim with age by this time, and found some trouble to keep his watch-fires burning for the future races to accomplish their cycles. . . . There would remain no hope for evolving humanity. . . . — *The Theosophist*, Vol. IV, Sept., 1883. Also *Five Years of Theosophy*, pp. 251-2

The "cooling mass" mentioned by the Master of course relates to the general belief that the sun was like a coal fire burning by the ordinary process of chemical combustion and rapidly running down to extinction. He knew, however, that the sun sustained the steady output of heat and light it had been giving off for untold ages by some far more effective process — one that the contemporary scientists never suspected. The Master continues:

The "Adepts," who are thus forced to demolish before they can reconstruct, deny most emphatically (a) that the Sun is in combustion in any ordinary sense of the word; or (b) that he is *incandescent* or even *burning*, though he is *glowing*; . . . — *Ibid.*

Notice the words "in any ordinary sense of the word," because the sun's activities may be accurately called a very *extraordinary* kind of "combustion," a "combustion" of *atoms*, which would indeed have seemed incredible in 1883, but which is comprehensible in 1941 when our scientists have discovered atomic disintegration and transmutation. Again:

The Solar substance is immaterial. In the sense, of course, of matter existing in states unknown to science [in 1888, of course]. — *The Secret Doctrine*, I, 499

This statement, as we all know, has been amply verified by the new atomic discoveries which have proved that "matter" can exist in states that were utterly undreamed of in 1883. We must not forget, also, that the great discoveries in atomic physics were largely made possible by the technical researches of Sir William Crookes, a member of the Theosophical Society, and one who was in touch with the Mahatmans through H. P. Blavatsky. In future articles on modern scientific rediscovery of the Archaic Teaching we hope to discuss new and remarkable discoveries about the sun, the stars and the planets, and conclusions reached by astronomers which either positively confirm the teachings or show how closely science is approaching them.

FOOTNOTES:

1. According to the combustion theory, we are told that even if the sun were made of pure carbon burning in pure oxygen it probably could not be much more than 6,000 years old! But chemical compounds subjected to the enormous forces raging in the sun would be broken up into their elements and combustion could not begin. For instance, if carbon dioxide happened to get into the sun it would instantly be "unburned," as it were. The carbon and oxygen atoms in that combination would be torn apart and even perhaps disrupted within themselves by the

radiations which are enough to melt a 40-foot shell of ice completely covering the sun in one minute. ([return to text](#))

2. The Mahatman K. H. says in *The Mahatma Letters to A. P. Sinnett*, written in 1882: "For indeed, there is but one thing — radiant energy which is *inexhaustible* and knows neither increase nor decrease and will go on with its self-generating work to the end of the Solar manvantara [period of life or physical manifestation], . . . Yes; call it "Radiant Energy" if you will: we call it Life — all-pervading, omnipresent life, ever at work in its great laboratory — the SUN." — p. 168 ([return to text](#))

The Theosophical Forum

MAKING HISTORY — *Hannah Berman*

A chance remark, quite carelessly made, sometimes gives the key to very trenchant facts. Such a remark is responsible for the birth of this article.

A public vehicle, loaded with passengers, all engaged in a heated discussion about the latest events — and then the remark: "What thrilling times we are living in! Why we are actually making history!"

One individual was obviously overwhelmed by the importance and greatness of the events happening around him — the big outstanding events, he meant, the things that occupy the front pages of the newspapers, the things that loom large like pillars of fate hiding the light beyond and throwing into shadow other things smaller and seemingly insignificant but strong and persistent and struggling for life.

It is always the case that in times of great cataclysmic happenings human beings are far too close to the events to judge their place in history and their importance in the scheme of evolutionary time.

It is often discovered later on, by those whose business it is to write chronicles of history, that small and seemingly unimportant events have had more far reaching effects than one could imagine. Actually it was the loss of an insignificant nail that was the cause of a kingdom's downfall: but this was only discovered when the historian traced back the big disaster to its first beginnings.

The teacher who had the sorry task of trying to "educate" Thomas Edison looked upon him only as a "nuisance" scholar and had no

idea what wonderful miracles were striving for expression in the mind of one who could only be regarded as a very difficult pupil.

It is therefore very foolish and very dangerous to regard superficially events big or small which impinge on our lives today. Here and now humanity is indeed "making history." Regarded from a Theosophical point of view and with some vision, the present age is a wonderful time in the history of humanity. The struggle between black and white forces goes on continually and is slowly but surely reaching a climax. Old standards of values are crashing about us; new ideas and ideals are forcing their way in; there is a general and persistent striving — men hardly know what it all portends; but the urge is there. Great and magnificent issues are bound to be the fruits of the present struggle. We can truly say of today as Wordsworth said of the French Revolution —

Bliss was it in that dawn to be alive
And to be young were very heaven!

Humanity is adrift today on a stormy and perilous sea, yet there are rafts to which we can cling, have we the perception to see them. Primarily we must take care not to exaggerate the importance, good or bad, of the big events; neither in the same way must we disregard and neglect the small happenings that we see all around us. The Theosophical teachings will assuredly lead us into paths where lie the eternal verities and these we can regard and use as lifelines which will eventually take us to calmer waters and safety. Theosophy helps us to invoke the best that is within us and this means that we are enabled to build a bulwark between ourselves and the disastrous effects of humanity's folly, in the midst of which we are forced to live. But one thing it will have taught us and that is to endeavor to rise above it all and what is still more important — to *live* above it until an age of

sanity returns.

The Theosophical Forum

THE UNIQUENESS OF MAN (1) — *H. T. Edge*

One must look into this book to see what the title means; but the title under which it was published in England is more informative: *The Uniqueness of Man* — which is also the title of the first of the essays. These essays, fifteen in number, are very miscellaneous, being reprints of magazine articles between 1927 and 1939, to very diverse readers. In seeking a thread to bind this collection, the author points out that they were all written during a period when an old order was passing and the birth-throes of a new order were supervening; so that they may be regarded as contributory to a general aspiration towards social amelioration. To the reader however a much closer bond of unity may be found in the fact that they together constitute a revelation of the mind of Professor Huxley himself, and of whatever school of thought he may be taken as representing. The author is no scientific recluse, but a man interested in human welfare and desirous to promote it. He is also greatly interested in the biological side of science, and has much knowledge in this field. The remaining question therefore is how to bring these two elements into useful relation to one another. It may seem to some however that the two elements do not mix very well, and even get in each other's way; so that we could be happier with either, were t'other fair charmer away. For Professor Huxley is charming when he describes and comments on interesting facts in biology and zoology and anthropology; of the way of the snake in the grass, the birds in their courtships, the untutored savage in his inspired ignorance. He has also a pretty good notion of what is the matter with us today, and of how much better things might be if they were not what they are. The same might be said of Mr. Wells. But his scientific philosophy seems rather a hindrance than a help.

In the essay on *The Uniqueness of Man*, he says that the gap between man and animal, lessened in the earlier days of Darwinism, has again widened, and that man stands unique in the powers of conceptual thought and of formulating principles by the aggregation of facts. His view of the plan of evolution is far broader than the narrow views of bygone times; in place of a single line of development, he sees innumerable lines of deviation from a main trunk. The general law is one of dispersal into variations; the continuity of development is preserved only by the rare exceptions which do not thus become lost in unprofitable variation. It short, it is a series of experiments, of which most are failures, but which are ultimately crowned with success. (In this we are reminded of what is taught in *The Secret Doctrine* as to the various abortive attempts to produce man in the earlier stages of cosmic evolution.) But then comes the question, Who is trying the experiments and making the mistakes and achieving the ultimate successes? The work is the work of *Mind*. But *Mind* is excluded as an agent, because it is represented as a *product* of the process. The animals are shown not to possess it in the requisite degree; it is only in man that it arrives — and this *because his brain is so much more plastic*. "Mythical gods," and "philosophical absolutes" are waved away; but what takes their place? Is the universe automatic? Very well, but automatic means self-moving, voluntary as opposed to influenced, possessing inherent power — attributes applicable to the Causeless Cause of ancient philosophy, or to the God of theology. Such a power, such an intelligence, such a purpose, has to be assumed at the outset, in order that the machine may be set running at all. And yet these attributes are represented as the *result* of the process. Such an upside-down outlook as this may well prove an obstacle in the way of social planning. The only conceivable evolution is an evolution of *beings*. Moreover evolution cannot be a creating, by blind experiment, of things entirely new; but it is a bringing into

manifestation of things that have pre-existed in potency. Mind must be at the beginning, not at the end only. Mind brings into being a series of vehicles for its own progressive expression.

We are left quite in the dark as to the origin of these powers of conceptual thought and generalization, to which Professor Huxley assigns such importance. He calls upon us to use our powers ("Let us not put off our responsibilities onto the shoulders of mythical gods or philosophical absolutes, but shoulder them in the hopefulness of tempered pride.") It is an interesting speculation at what precise point in the evolutionary process blind experimentation and haphazard forces gave place to responsibility and the power of conscious planning. We are whole-heartedly with Professor Huxley in the wish that man should use his powers to further his own betterment; but we are not at all satisfied with his account of the manner in which man became possessed of those powers. And that is why we say his philosophy gets in his way. The same confusion between cause and effect is seen elsewhere: as for instance in speaking of a nation whose character has undergone a great change in a short time, it is said that biological causes could never have produced such an effect, and that it must be due to the social changes. But social changes are elsewhere spoken of as effects which we must bring about. However some justification may perhaps be found by saying that there is action and reaction between man and his environment, so that each alternately features as cause or effect.

Professor Huxley takes a just view of the relation between the agent and the machine, condemning alike those who say that change of heart alone is enough, and those who say that change of circumstances alone is enough. We must of course work at both ends. The final essay, "Life Can be Worth Living," illustrates well what we have said. There is earnestness of purpose, intuitive grasp of essentials, breadth and balance of ideas; but everywhere

a cautious dread of arousing old specters of theology or some other -ology. Much faith in the power of human intelligence and goodness.

Man, as individual, as group, and collectively as mankind, can achieve a satisfying purpose in existence. . . . I believe that there exists a scale or hierarchy of values, ranging from simple physical comforts up to the highest satisfactions of love, aesthetic enjoyment, intellect, creative achievement, virtue. I do not believe that these are absolute, or transcendental in the sense of being vouchsafed by some external power or divinity; they are the product of human nature interacting with the outer world.

He believes that among human personalities there exist the highest achievements of the universe; and that the State exists for individuals and not individuals for the State. An individual is not an isolated or separate thing; he is a transformer of matter and experience.

It is in the devotion of the sacrifice that he becomes most himself. . . . Finally, I believe that we can never reduce our principles to any few simple terms. Existence is always too various and too complicated. We must supplement principles with faith. And the only faith that is both concrete and comprehensive is in life, its abundance and its progress. My final belief is in life.

Yes; truly man's destiny is in his own hands. He is a being endowed with innate creative powers. All philanthropists recognise this, if not directly, then by necessary implication. Yet it is an immense advantage to have a philosophy which gives an understandable account of the origin of such powers, rather than a philosophy which can give no rational explanation. The efforts

of all sincere philanthropists, whatever their beliefs, must be respected as contributory to the general forward movement. This book, as previously noted, combats the idea that attention to the spirit alone is enough, and that the circumstances will then adapt themselves without direct attention; it insists on the need for attention to outward things also. We have to put food into the children's stomachs before we can put knowledge into their heads. Social planning, it is true, tends to deal with mankind too much in the abstract, and to rely on the formula. But living people are many and various, and actuated by forces that will not submit to formulation; so that progress is achieved by experience, opportunism, the application of various means to particular ends as they come up, rather than by attempts to apply formulas and rules. People will not of their own accord mold their lives by fixed rules and cold logic; and if force is used in the effort to make them do so, then we get tyranny and the suppression of free choice.

This book shows how greatly earnest and intelligent aspirations may be hampered by a fantastic philosophy of the origin and nature of man and of the world of which he is a part. Could there be a better way of helping progress than by replacing these ideas by a philosophy which gives a consistent and adequate account of the universe and its living components? The teachings of Theosophy have already infiltrated into the world of thought to a degree which causes wonder to those with an experience of half a century; and this process may be expected to continue with acceleration in the years to come.

NATURE'S ARCHITECTS — *Charlotte Braun*

There is a great challenge in the study of the majestic architects of universal nature, for they were once men and their stature suggests possible destinies awaiting us. Some of the members of this hierarchy of teachers, governors, architects, are, in fact, men. Fully developed spiritually and intellectually, these men are *masters* of the art of human living, and they are a rung in a ladder of beings which stretches out into the spaces and includes planetary, solar, and galactic intelligences. But we must approach this hierarchy of spiritual beings with the deepest reverence in our hearts for the highest of them are indeed gods and their abodes are sacred "temples."

Some of them dwell in cosmic substances and forces beyond our vision, others in visible stars and solar systems. They have representatives on every globe. We may live among and in them but their life is too great for our senses to perceive or encompass. Their consciousness is too vast for ours to encircle, and the rhythm of their lives is so great that to us it would not appear as motion but rather as the quiet and silence of a man in deep meditation. For this reason some of them are called by the Sanskrit terms Dhyani-Chohans, meaning "Lords of Meditation," and others, Dhyani-Buddhas, meaning "Buddhas of Meditation."

There are many aspects to the work of these titanic beings. Their architectural work is to bring forth the patterns, the blue prints of worlds, the plan which is to be wrought into a substantial structure by lesser workers, the Builders. They are responsible for the construction of worlds and the protection and guidance of inhabitants of worlds. The wheels of the universal mechanisms, physical, psychological, mental, must be kept spinning in perfect

precision. But the most beautiful aspect of their work is the effort to stimulate spiritual growth and to formulate, preserve, and teach the truths about the universe. This is carried out not only on earth but in every sphere visible or not. Because of this special function the hierarchy is called the Compassionate. The very essence of the existence of this Hierarchy of Compassion is selflessness and it is through much self-sacrifice that its members have fitted themselves to carry on this very necessary work.

Of course there are many grades and degrees of accomplishment in this hierarchy just as there are in any other group of beings. Some are of a more cosmic or Archetypal nature than others, while some belong to what Platonists would call the intelligible world, the creative world, the demiurgos. Among these latter intelligences there are those who, although highly advanced and carrying on the work of the Hierarchy of Compassion, also belong to the general line of beings called Builders. They receive the plans and orders from the ideative world, from the Architects and carry them out. The Greeks called these builders Kosmocrotadores, and like the Hebrew Jehovah they are "creators," fashioners, masons of worlds.

The work of this Hierarchy of Builders, which must in turn include many grades of intelligences, is to care for and guide all the details of the substantial structure and the operations of nature. It is they who marshal the many kinds of life-atoms, their building materials, into the endless variety of patterns and designs which we find repeated in such perfection or indeed imperfection as the case may be.

In this teaching of the intelligent constructors of nature lies the explanation, as Dr. de Purucker has said, of ". . . the philosophic and scientific framework, the structural carpentry, not only of the universe but of man's own consciousness."

The Manasaputras are particularly inspiring examples of the selflessness of these beings. They are the "Sons of Mind," god-beings who gave of the stuff of their own nature as a candle gives its flame to light another wick. Thus they did the work of builders, building the inner constitution of man, and at the same time the motive and act were a part of the work of the Hierarchy of Compassion. The functions and phenomena of nature which apparently happen without guidance and in a purely mechanical way, have been explained by so-called primitive peoples by attributing them to the work of fairies and gnomes. By other peoples the elements and forces were personified into a pantheon of gods. But at least they all recognised that the intricate mechanisms of nature cannot operate by chance but that there must be some kind of directive, and in some cases intelligent, forces working through them.

This problem has troubled Europe's greatest philosophers. Kant was unwilling to say that the marvelous symmetry, unity, and beauty of the myriad forms in nature are due to what he called "supernatural design" because he could not close his eyes to the waste and chaos in certain aspects of nature and to what he thought useless repetition and multiplication. Our architects and builders fit into this picture, however, because their perfections are relative, not absolute. They are all growing and evolving beings ranging through many grades, and they have their own problems, mistakes, and even failures. Besides, how can we judge them when we cannot even understand them? Too often we permit them to go unappreciated and unthanked. What may seem to us a tragedy or a waste may in some cases even be a blessing.

Looking to the harmony and symmetry so evident for instance in the arrangement and movements of the planets and stars, in the structure of a flower, or in the pattern of a snowflake, we ask ourselves how the unseen helpers of nature provide and keep

these designs. What is their source? They spring from the heart of the universe which is one and the same as the heart of a flower, or of a star, or of a snowflake. These architects, each according to its degree of evolution, have learned to draw their consciousness nearer to their own higher selves which are rooted also in this divine heart of the universe. To reach such a high spiritual state they purified their personality, they raised it, drew it into their higher nature so that it no longer impedes their vision and they reflect more clearly their innermost nature. In this wonderfully impersonal and selfless state they can be the instruments of the laws of a greater universe, they can reflect in their functioning and habits the ways of Divine Intelligence. They help nature geometrize, so to speak, for the symmetrical patterns and mathematical proportions which are repeated on all scales, were in this way first impressed on the Archetypal world, and then being taken up by the Builders they were wrought into the myriad varieties of external worlds.

There is a very interesting relation between these two hierarchies, the Architects and Builders. They represent the two contrasting sides of being, and are the bi-polar forces which build all of nature. These two magnetic forces have many aspects; they are positive and negative, bright and shadowy, spirit and matter. The Chinese call them the Yang and the Yin, while in Sanskrit the bi-polar worlds are called the Lokas and Talas. But these contrasts are not separate from each other; everywhere they are found together and this is because they are two aspects of being, of the one fundamental life. The Hierarchy of Compassion is rooted in the spiritual-energy-consciousness side of life and the Hierarchy of Builders in the vehicular side. As we have shown, there are many beings who belong to either hierarchy, according to how one views them.

The spiritual-energy-consciousness side of nature includes in its

span all the degrees of consciousness from the highly spiritual yet primordial and un-self-conscious god-spark which is unaware of its own divinity or even of its own identity, ranging upward and outward to the great masters of self who have gained a recognition of their divinity, faced the Divine One at their hearts, and have accepted the responsibilities which such recognition entails.

Humanity holds a unique position in this great scale of varying stages of development. We stand, from our plane of vision, midway in the journey; we are no longer among the un-self-conscious nor are we among the directive powers of nature, but with a modicum of self-awareness and the free will that this entails we may use these for the directing of our own evolution and thus follow the way of our guardians and teachers who have become masters of life. Always we must remember that these states and conditions are relative, that we are but one link, and in our higher natures a truly god-like one, in the vast chains of existence which stretch away beyond our vision or imagination.

The vehicular side of nature covers a span from primordial substance and force to matter which is to us apparently vegetative; indeed it includes the vehicles of all scales of entities from atoms microcosmic and atoms celestial. Each vehicle is in turn helping to build the body of a greater being. The atoms and molecules build our bodies, and the solar systems and galaxies are the atoms and molecules that build the bodies of greater universal beings. This principle applies not only to physical bodies but to vehicles of desire, to thought-bodies, and to spiritual sheaths.

The great necessity of knowing these facts lies in the vision it gives us of the goal of life, the destiny and heritage that may be ours. Plato in his *Republic* suggests this destiny when he says:

And what is it that he who has attained to knowledge knows? It is this: That all visible things are types, in which are mirrored to us the features of certain archetypes, and are, therefore, the mere shadows of higher realities. The aesthetic education of man consists in his learning thus to rise from the type to the archetype.

Here then is our goal, to learn to raise our consciousness and interests, to draw them up till they are one with the god reality.

The way to this goal has been pointed out by those who have succeeded in pushing past some of the shadows. Men like the Buddha, Lao-Tse, Jesus, and indeed Plato, great teachers of the race whose coming to us is vital evidence of the existence of such a goal and that it is not unattainable, are the strongest evidence of the existence of the Hierarchy of Compassion, and their precepts indicate that in joining the ranks of this Hierarchy we are taking the first steps toward our goal and the realizing of our highest destiny in accord with the universal plan. Their ethical precepts are the challenging golden rules of right living which indicate the way to fulfil our destiny. Godhood will not be thrust upon us. We must seize it ourselves, but first we must prepare ourselves, becoming ever more fully human, like those titan men, the Masters, who take an active part in the selfless work of the guardians of nature.

It is very encouraging to know that this pathway has been followed before, and that the very difficulties which we now face in our selves have troubled the greater beings, and that in our efforts we will be watched over with their infinite understanding. We are told that every inspiration that comes to us to do good, to help another, every perception of the wonder of these secrets of nature, is to be cherished and remembered for it is a gift given us by our own higher selves and by the Hierarchy of Compassion.

The chain of this hierarchy has a link on every planet, a nucleus in every solar system which is centered in the Sun of the system, and there is a spiritual center in every galaxy. We receive our knowledge of the universal structure and relations and our inspiration for better things down through this chain. It is stepped down to us from link to link. "Somewhere in Galactic space there is a company of Solar Gods. Somewhere in the fields of Cosmic space there is a celestial council of galactic divinities from whom we receive our light."

The Theosophical Forum

THE VISION OF THE LORD BUDDHA — *G. de Purucker*

When I was a boy of twelve, I came upon a Buddhist quotation which fascinated imagination, mind, and heart. I think it was one of the things which in this life awoke me more than any other thing that I can recollect; at any rate it was one of the first. It is pure Theosophy and genuine Buddhist doctrine. It is this: The Lord Buddha is speaking, and I am paraphrasing somewhat his words in order to make them somewhat clearer: "Oh! disciples, never let discouragement enter into your souls. See you suffering in the world, see you unhappiness and pain and ignorance, misery and distress which wring the heart? Disciples, all things are destined to pass into Buddhahood: the stones, the plants, the beasts, all the component atoms of these, each and every one, aye and sun and moon and stars and planets: all in future ages will become Buddha. Each one will become a Buddha."

What a marvelous picture! How it quiets the heart and stills the mind; for if one atom, one man, become a Buddha, everything will, for this Universe is one, broken into multitudes during Manvantara or manifestation; rooted in that One, living from it, and by it. In it we live and we move and have all our being. Therefore some day, somewhere in the incalculable aeons of what we call the future, all now of the multitudes, suns and stars, planets, comets, gods, men, animals, plants, stones, atoms, elements, worlds, everything, each as individual, is destined for Buddhahood.

When I read that — I have given you the expanded gist of what I heard — for nearly three months I went around in a daze of spiritual delight and inner reawakening. To this day I could not tell you whether I ate or drank or slept. I know I must have done

so, but I have no recollection of anything except light; and the raising of the eyes inner and outer, upward and inward. Just that thought broke open the doors closed when I drank of the waters of Lethe, of forgetfulness, when last I died. The doors opened and the light came in, began to come in.

I think this extract gives us a most wonderful picture. Take the mineral kingdom: It is formed entirely of unconscient monads, that is monads unconscient on this plane, never unconscient in their own spheres. But what we call monads in the mineral kingdom are as it were the expressions of essential spiritual monads working and evolving down here on this plane, and going through these Gilgulim, as the Hebrew Qabbalah has it, meaning these lower halls of life and experience, these worlds of the ceaseless evolutionary journey; yet each one is essentially a god, each one in essence a Buddha, a ray of the Adi-Buddha or the Cosmic Buddha. And so it is with all things.

Therefore, the Lord Buddha said: "Disciples, when sorrow wrings your heart, when pain and suffering are too bitter to bear, when you see others dying for the needs, the mere needs of life: be not discouraged. Look into the future. Every one of the multitudes some day will be a Buddha, Adi-Buddha, therefore *a* Buddha, stones and plants, and beasts and men and gods, suns and stars and comets and the elements of them all."

Yet this recognition of the essential divinity of all, and the certain future Buddhahood of all, should never at any moment stay our hands from works of loving pity and helpfulness here and now; for it is here and now that lies our sublime duty of doing all we can to alleviate the world's suffering and need that are incident and necessary to the monads on their evolutionary journey.

EVOLVING THE SUPER-INTELLECTUAL SELF — *Kenneth Morris*

(1)

If *you*, your personal self, do not set to work to tame, train and evolve that other *you*, your animal self: the latter *you* will make short work of the former. Watch your animal self and you will understand the animals; watch an animal, and you will get understanding of your animal self, the seat of your desires and passions. You may shoo her off the table a dozen times, but the cat will come for the bit of fish that is there: her soul, her nature, impels her to it, and no inward voice whispers a *Thou shalt not*. Nor does she take harm, in her natural state, by obeying the impulse of her nature; but in us, that impulse from the animal *must* be dominated; or the animal self, given the reins, would kill our minds and bodies. The evolution of our animal selves is forced upon us: we must act as agents of evolution or perish; and thus we see that evolution is a fact in nature. You, the personal self, have attained self-consciousness; which the animal self, whether in man or in the brutes, has not; and therefore you have to play your part as an agent of universal law and get busy evolving, training and sublimating your animal self.

Bellerophon, gazing into the waters of the fountain, saw the approach of the winged steed; you, searching thus into yourself, can discover the laws of the universe. Why bother to discover them? Because you can't live your life successfully unless you know the laws that govern life. Because the World — in the body and soul of which you are a component atom — is being run with disgraceful unsuccess; which cannot be bettered except by folk who understand the laws that govern life. Whatever one's job, one cannot do it properly unless one knows the principles involved. Life is the job of all of us; the World is the job of all of

us. It is what it is, and not prosperous and happy, because people have not bothered to understand. That is why its most crying need today is Theosophy. Theosophy is, simply, understanding.

Matter is in itself non-existent: the atom, its ultimate subdivision, is made of force, not matter; the proton-sun in that little solar system is a charge of positive, and its electron-planets are charges of negative, electricity. Force in the same way is nonexistent in itself; it is an appearance caused in turn by the action of Consciousness: Consciousness stands to Force as Force stands to Matter. The universe is built of consciousness, of consciousnesses, of conscious beings: consciousness is the ultimate and only reality. You are consciousness; and therefore it is within yourself that you can discover the laws and principles that govern life.

Is there nothing in you that stands to the personal self as that does to the animal self? Examine your personal self. It is that in you which makes you feel distinct from everyone else, the sense that you are yourself. Sort it out; take the microscope or a small tooth-comb to it; note how it is composed and inhabited. Such and such fears, tendencies, dislikes and attractions; the memories that give you a sense of identity, or being the infinitesimal thing that dwells in your body and brain in the midst of this infinite universe. Is there nothing above it, as it is above the animal: nothing to make *it* worth while, as it must make the animal inexorbitant?

Of course there is. Take up a text-book of Theosophy, and begin reading. Soon you are out of your personal self; your thoughts are no longer personal and limited; you dwell no longer in the little body and brain, shut in; but in the dignity of "intellectual being," with "thoughts that wander through eternity." You are *thinking* now, in some real sense of the word: a giant to what you were; impersonal, and therefore free of the universe. Contrast the self

of the petty concerns and trivial memories with this greater self that thinks; dwell on the contrast; examine it: discover the meaning of those two regions of what we call the mind.

The one so small, so unimportant; the other potentially as great as it was in Plato or any of the sages; as great, you may say, as the universe of which it makes you free. It is there, to be discovered and used; a continent of which we have for the most part but sighted the shores afar. It is there in all of us; the dullest lout of us all, turning his attention that way, might yet in time carve out for himself grand kingdoms there; and not one of us can make his mark, or accomplish anything, or be worth while in any sense, unless sometimes he rises from the personal to the impersonal mind, and has begun to *think*.

This Higher Intellect is there, then; and has the job on its hands of evolving its shabby little poor relation, its marred reflexion, our personal selves. Is there nothing in turn that may be supposed to have the job of evolving *it*? What is the thing we call genius?

Beethoven (perhaps Europe's supreme Man of Genius), at the height of his illumination by it, when notes and numbers could carry him no further, broke out into the cry of that Super-intellectual Self which lies latent in all of us: "Joy to you, ye mortal millions! Here's a kiss for all mankind!" And there you have indication of what is the essential nature of genius — however perverted genius may become as it struggles down into manifestation. Its essential nature is an electric universality, a flaming compassion, a boundless joy in its universality and compassion, an exultant knowledge that the Inmost Self in all of us *is* universal; that one life, one Self, shines through all being, through ourselves and the sun and the stars. "God is love," said the Nazarene, with scientific exactitude. Love — which does not mean fastening your affections on some personality, whether

another's or your own: but living not for self but to benefit mankind — is the manifestation in us of Pure Consciousness, the Self of our universe.

Thus we are Jacob's Ladders, a self in us for every rung, from these flesh-and-bone bodies of ours up to what you may call "God" if you want to use a thoroughly spoiled name for It. The business of each of these selves or rungs is twofold: to raise itself towards the self above, and to evolve the self below: of the animal self, to be mastered, trained and sublimated; of the personal self, to train the animal, and to learn to marshall great thoughts across the mind's surface instead of being at the mercy of what trivial or base thoughts come buzzing to it; of the Higher Intellect, to evolve the personal self, and to infuse itself with the glory from above, Compassion. This is what Evolution means.

FOOTNOTE:

1. The late Kenneth Morris was President of the Welsh Section, T. S., from 1931 until his death in 1938. He was also known in the world of letters as author and literary critic, as well as interpreter of the ancient folklore and mysticism of ancient Wales. We feel that in time there is no doubt that equal recognition will be given him as a poet, particularly in the two fields he loved most, the Chinese and the Celtic. — Eds. ([return to text](#))

The Theosophical Forum

CIVILIZATIONS OF PRE-HISTORY — *G. de Purucker*

The following questions concerning ancient civilizations have been sent to me, and I find the best way to answer them is through the pages of THE THEOSOPHICAL FORUM.

Question: in a preface written to Dr Alexander Wilder's series of articles on the Egyptian Dynasties, published in the old *Universal Brotherhood Path*, occurs the statement that "Egypt is older than India, and America older than either." This preface is signed by Katherine Tingley.

This statement cannot be reconciled, it would seem, with the many statements made by H.P.B., both in *The Secret Doctrine* and in *Isis Unveiled*, to the effect that India is older than Egypt and that Egypt owed her civilization to India. For example the following:

"Egypt herself had, in those unknown ages when Menes reigned, received her laws, her social institutions, her arts, and her sciences from pre-Vedic India." — *Isis Unveiled*, I, 589

"Egypt owes her civilization, her civil institutions, and her arts, to India." — *Op. cit.*, II, 431

"Egypt owes her civilization, commonwealth, and arts — especially the art of building, to pre-Vedic India." — *Op. cit.*, II, 435

Isis Unveiled has several other similar statements, and *The Secret Doctrine*, II, 417, reads "India and Egypt were two kindred nations, and the Eastern Ethiopians (Egyptians) have come from India, as is now pretty well proved, it is

hoped, in *Isis Unveiled*, II, 569-70 "

I have heard a statement that certain Atlantean stocks, foreseeing the coming catastrophe, when Atlantis began to sink, migrated to new lands, and these lands became the Americas, became Africa, became parts of Asia, and that in time they lost all memory of their homeland and became the stocks of the ancient Americans, the Mayas, the Incas of Peru, and *also the archaic Egyptians, and the very earliest Aryans.*

Question: Can you throw some light upon the contradictions? Is it possible that Dr Wilder wrote that preface himself, as he wrote the preface to *Isis Unveiled*, which preface admittedly contains errors?

G. de P. — No, no. The statement therein is from Katherine Tingley and is quite true. America was, strictly speaking, the fifth continent to appear about the time of the sinking of the mainland of the Atlantic continental system. But for ages and ages after the first part of the original Americas had risen above the waters of the ocean, semi-continents, quasi-continents, great islands, of the Atlantean system still endured. And not so very long, geologically speaking, after the Americas had arisen above the waters — not then having their exact present configuration — the first roots of what later became Egypt, "the Gift of the River Nile," appeared; a little later than that, the larger part of what is now called upper Asia.

There is no contradiction at all between the statements, and I have often wondered why a contradiction should apparently be sought for where none exists. Is it not possible to understand that two statements can mean the same thing, but are made because viewing the same thing from two different angles? It is perfectly true that America is older than Egypt, and that Egypt is older than

what is *now* called India.

What is now India was first colonized from the north, but almost contemporaneously from the south: from what was in ancient times, aeons ago, called Lanka, of which now vanished land, what was the northernmost highland is today called Ceylon. Lanka was one of the quasi-continents that I have just spoken of — I mean the ancient Lanka of the wide-flowing Atlantean system. The peoples inhabiting the ancient Lanka, of which Ceylon is the northernmost tip or prolongation, were mythologically spoken of by the Greeks as the "eastern Aethiopians" — not meaning negroes, but Easterners, who were called "Aethiopians" on account of the dark color of their skin — as if the skin had been greatly sunburned.

Thus then, the original part of India had likewise received settlers from the south, coming from the remnant of the ancient Atlantean Lanka, inhabited, if you will remember, by Ravana, the foe of Rama, and by Ravana's armies of "monkeys" and "half-men." The common Sanskrit name for the inhabitants of ancient Lanka was Rakshasas.

Now, preceding the time when the Asiatic Atlantean Lanka was in the hey-day of its prosperity, there existed in what is now called the region of the Atlantic Ocean, a great and extensive and highly civilized range of land which was the continental back-bone throughout the ages of Atlantis. When this Atlantic Atlantean continent finally broke up and disappeared, leaving behind it large and small islands — which last condition existed after the original Asiatic Lanka had also broken up and disappeared — emigrants from these remaining islands of the Atlantic traveled eastward and settled on new land which had been rising out of the ocean to the eastward of these remnants of the Atlantean continent, and these new lands later consolidated — these new

islands — and became what is now the district of the Abyssinian highlands and lands somewhat to the north of these.

As time passed, these Atlantean emigrants who had settled upon these new lands to the eastward, followed northwards the continual northward rising of new land — the extension of their shores northwards into the Atlantic Ocean; and this was the earliest Atlantean root-stock of what in later ages became the archaic or primitive Egyptians. Remember that the Egypt of history is the "Gift of the River Nile." The Nile flows northwards, and through the ages it has brought down enormous accumulations of sediment in its waters and has deposited these continually on the shore of the Atlantic Ocean into which the Nile flowed, so that little by little through the ages this shore-deposit of the Nile extended ever more and more into the waters of the Atlantic, as the river kept bringing down, through the passing millennia, ever more and more detritus and earthly material, carried northwards in its waters and derived from the mountains of the hinterland, the back country, Abyssinia, and what is now Nubia and the other countries there. Thus the entire Nile Delta, as the Greeks called it: in other words the Egypt of history, and as it is today, is literally the Gift of the River Nile.

This original Delta was settled anew by further colonists of a later age from the last remnant of Atlantis, which Plato called "Poseidonis," which existed some eleven or twelve thousand years before his time; for Poseidonis then still existed in the Atlantic Ocean beyond the Pillars of Hercules; and this Poseidonis at about that time was a large island more or less of the size of Ireland today. These Poseidonians were they who settled anew on the Egypt of the Delta and built the great Pyramid some seventy or eighty thousand years ago. You see, therefore, that these Egyptians of the second important immigration were a much later Atlantean immigration than were the first that I have told

you about. Furthermore, the Poseidonians had already become more or less mixed in blood with the Aryans — the new race which had already for several ages been coming down from the plateau of Asia, where, as Atlantean stocks, they had found refuge from the continental agony of Atlantis.

Remember, therefore, that these Aryans coming down from the plateau of Asia belonged to the original Atlantean emigration which I have told you of, which went eastwards to the new lands arising out of the waters of the then Far East.

Once more, still later than the time when Poseidonis sank, which was some twelve thousand or more years ago, Egypt was again invaded and settled by emigrants from what is now southern India who came into Egypt by two routes: over the Indian Ocean to Abyssinia and the countries around that range of land, and thence came down the River Nile into Egypt, conquering and settling the country as they went. The other route was a land-route over what is now the Isthmus of Suez. These last immigrants into Egypt from southern India, the Egyptian records refer to as the "Sons of Horus," the Sun-God, coming out of the East.

Thus you see that Egypt had first a primal or primitive immigration of Atlantean stock before the Egypt of history had as yet been made by the River Nile. Then came a second and much later emigration of a mixed Atlantean stock from Poseidonis into Egypt, which mixed stock settled on the Egypt of history, some eighty, ninety, or one hundred thousand or more years ago. Still later again there came the third immigration into the Egypt of history, it may have been eight or nine thousand years ago or more, these immigrants coming from southern India; and it is this last immigration from India — an immigration of Indian stocks from southern India — who were the "eastern Aethiopians" who

mixed with the Atlantean Egyptians and thus produced the composite racial stock which known history, recorded history, knows as having produced the dynasties of Egypt.

Thus America was the oldest continent; Egypt in its beginnings was much earlier than India; then came India; but also southern India at a later time sent her civilization, her arts, her mysteries, the teaching of her great mystical schools, to Egypt. These last south Indian immigrants into Egypt were themselves a mixed people partly of early Aryan stock but of a still stronger infusion of the ancient Atlantean inhabitants of the then already sunken and almost forgotten Atlantean Lanka.

This is a long and I fear a rather labored explanation of what is not a contradiction, but possibly a paradox.

Question: Archaeologists have found no remains of developed civilizations earlier than about 7000 years ago — not long before the beginning of Kali-Yuga.

There is positive evidence from tens of thousands of years before that, of a "primitive" mode of living — stone implements, etc., — and negative evidence of the same — the absence of pottery, metals, buildings, etc.

H. P. Blavatsky says the lack of progress during the immense period of the Stone-Ages was due to the heavy Atlantean karma.

Was humanity really brutal and savage as a whole during the Stone-Ages, or are the appearances deceptive, and did a higher civilization exist during the 900,000 years since the destruction of the continent of Atlantis, though lacking the appurtenances we now consider essential to "civilization"?

G. de P. — Brutality and brutishness walk the streets of our cities;

and you will see among us many examples of the so-called Stone-Age man of the archaeologists. There are Stone-Age men today, savage and barbarian tribes, using stones; and there are so-called civilized men also today. Consequently, my answer is, regarding civilizations that have existed during the last 900,000 years most emphatically so, certainly so. During the 900,000 years that this querent speaks of, which is by no means all the time since the downfall of the Atlantean civilization, but even within this smaller period of 900,000 years, there have been great civilizations in various parts of the globe, which were born, which flourished, which brought forth the best that they could achieve in the plenitude of their power, and then decayed; and not a wrack of them remains as a witness today. Our fate will be exactly the same; but while these brilliant civilizations flourished in various parts of the world, there were Stone-Age men then, just as there are today.

There are different kinds of waves of civilization which sweep over the earth, such as that which existed during the times of the Greek and the Roman Empires, when all over the world civilization was fairly low when looked at from a standpoint of merely mechanical achievements, and not so high in that respect as our civilization is at the present time; but from a nobler standpoint, higher than civilization is at present. The essence of civilization is the bringing forth into manifestation in human life of the spiritual and intellectual faculties and powers of men, whether men have automobiles and flying machines, or not.

When a man thinks and produces the fruits of his thought in noble works, in literature, in the mysteries, in religion, in philosophy, in human kindness, there we find a true civilization. It is a civilization of a higher type than one like our own. Yes, there have been many civilizations in the past more brilliant even than our own at present. We have not reached the fullest

expression, the highest point, of our present cycle of growth. But that highest point is not far off, and then our turn will come to decay — unless the Theosophical Movement can arouse generally in the hearts of mankind, some greater longing for spiritual things; unless our spiritual movement arouse in the hearts and minds of men — so that it will carry them over the difficulties of the future — a vision, a vision of Truth, and of Reality; and above everything else, unless it can evoke brotherly kindness, brotherly love.

You will find brutes walking the streets of our great cities today, types and examples of those purely imaginary figures, but nevertheless drawn somewhat after such types in our streets, which imaginary figures, the imaginative archaeologists portray as the "dawn-man," or the "paleolithic man" or the "neolithic man," or the "Stone-Age man."

Not so many thousands of years before Greece attained the remarkable brilliance which characterized its civilization during the Periclean Age: not so many thousands of years before that, there flourished a civilization which would put ours to shame, actually a series of civilizations, and they had their habitat and stage in what is now Persia and Western Afghanistan, and in the lands to the north and east of these, lands which are now barren and desert countries. Brilliant civilizations flourished there. There were also civilizations which once covered with a perfect web of cities and towns what are now the Gobi plains — a howling waste of sands and desolation, but which were then dotted with prosperous cities and towns and villages. The land was highly cultivated. Astronomical observatories and chemical laboratories were as common as they are with us. What remains of them? Naught but legends, dreams of the past, a few scattered archaeological remnants, which are supposed by the degenerate inhabitants of the Shamo desert today to be the dwelling-place of

spirits or genii. Many parts of the earth were the seats of once brilliant civilizations of which not even a memory remains today.

The Theosophical Forum

HEAVENS AND HELLS: FACTS OR SUPERSTITIONS? — *Abbott B. Clark*

The ideas of Heavens and Hells are based on the facts that moral and ethical principles are fundamental in nature, that this is a universe of law and order, that it is divine in its origin, nature, and destiny, and that man is an inseparable part thereof and governed by the same set of laws.

Man is fundamentally a spiritual being, as the universe is, and this demands of him rectitude in life and conduct. Man is interdependent and interblended with every other entity in nature, hence every thought and act of man helps or hinders every other part of nature, and so has a moral and ethical value and significance. The unity of all living beings demands co-operation, altruism, and living a life of brotherly helpfulness, for we help or hinder each other at every stage of progress.

Conformity to this divine order, or natural fitness of things, produces harmony, peace and progress, the higher expression of which men call Heaven, whether it is experience in a body or out of a body, on this earth or some other sphere; here or hereafter. Deviation from this divine order produces pain, suffering, and retrogression, the result of which is called Hell, whether experienced in a body or out of a body.

Some of the superstitions about Heaven are: that only the members of one religion can attain it, or that any man ever reaches it without personal effort and merit; or that anyone ever loses Heaven by conscientious objections to any form of belief so long as his moral condition and conduct conform to the laws of rectitude and harmony.

The superstitions about Hell are legion. But first, what do we mean by superstition? What is the first thing suggested to any man's mind by the word superstition? Answer — The other man's religion! But that is not the definition given in the dictionary. The shortest definition given by Webster is "false belief, especially in religion." The first superstition about Hell is that good men ever go there for using their reason in matters of religion; and, second, that bad men ever escape it by being caught and converted; or that it is largely inhabited by heathens who were loyal to the lofty principles of their religion; or by scientists, philosophers, saints and holy men who used their reason and judgment and rejected any particular form of salvation that did not appeal to their judgment. If they were all in that place, where bad Christians go, it would certainly be an interesting place to go to — plenty of good company!

Another superstition about Hell is that it lasts forever, and I think this is the most cruel of all the superstitions. There is no law in Nature which demands any such thing. The truth is that any suffering lasts only while there are causes to produce it, and *ceases* when the effects have been exhausted. All effects are exactly proportionate to their causes: there is no static Heaven filled with stationary saints, and no static Hell filled with changeless sinners. The worst pains and greatest pleasures end in time, for everything is transitory. The law of constant change and evolution rule everything in the higher spiritual spheres as well as in the material ones with which we are familiar.

Most religions have Heavens of various degrees of merit, and many Hells of different degrees, each suited to the purgation of a corresponding degree of evil. The Christians, unfortunately, have only one Hell, to which they consign all victims, without regard to degree of guilt, and which is supposed to last forever, without regard to the eternal laws of causation, equity and justice, or to

the human sense of law and order, justice and fair play, love and compassion. Such a conception of Hell appeals only to the spirit of persecution, revenge and hate. It is a theological dogma happily quickly passing from the minds of intelligent people — a dogma and superstition of the Dark Ages, much of the effect of which, however, still lingers over us.

Theosophists will tolerate no such conception as an eternity of pain and misery, nor on the other hand, a static Heaven where there will be no evolution or progress.

The Theosophical teaching is that beneficent Mother Nature wisely cares for all her children. There is an eternal drive to betterment. Every atom in the universe, from high to low, every portion thereof, is carried upon a great sweep of evolution by something within urging to express itself. That urge is caused by the Divinity, which is the basis of the universe, which is at the heart of every entity, however great or small, because that Divinity or Divine Spirit is fundamental in Nature; therefore it is in the heart of every entity. It gives the "kick" to the atom that the modern scientists talk about, and gives the energy they are trying to liberate by exploding the nucleus of the atom. It is the urge of every human being to express himself in ever fuller measure.

Man has two selves, one linking him with the Spirit; the other with matter. He himself has to decide which of the selves he gives expression to — the lower or the higher: all his future is determined by that.

Why, if Nature is beneficent, is there so much pain and suffering in the world? Because neither Nature nor man is perfect. The whole is in a state of evolution, and therefore a long way from being perfect. Man is in a very primitive, unevolved state, and he is learning by the contrast between right and wrong, high and low, good and bad. By trial and error and experience, and by

practice and by the lessons he learns, gradually he is improving and developing. The human stage that we at present are in is developing individuality, mind, and intelligence. Those below man are carried on by the general sweep of Nature as the birds in a flock move together, and the fishes in the sea; all are on a general tide that carries them on. But in the human stage the mind of man has the power of choice, free-will; he must choose, and abide by the consequences of his choice. Hence there must be a deliberate effort, because he has developed individuality and free-will, the ultimate purpose of which in Nature is that he will become wise enough to co-operate with Nature and cease trying, through selfishness and narrowness, to thwart her. When he does that he will cease to think evil, and have conscious spiritual life within himself.

Pain is not punitive nor vindictive; it is corrective, disciplinary and purifying. Pain is the warning of a beneficent Mother Nature ever urging man away from the paths of selfishness into altruism, wisdom and peace.

When a man dies he leaves this world. He goes alone. He takes with him nothing but himself — all the riches of the heart, mind and spirit. They could not be lost, because they are part of his very being. The man who has no riches of the spirit is poor indeed after death. The man whose mind is static, full of earthly thoughts alone, whose heart is attached to earthly things, whose spirit is empty of love, is poor indeed. He wanders a shade in the earth's astral atmosphere.

These facts of the after-life are of vast moral importance to living men on earth because they prove to us that as a man thinketh in his heart, so is he, both here and hereafter.

In regard to the states immediately after death, the Desire World and the Heaven World, we Theosophists call them Kama-loka and

Devachan, for we have definite names for definite things;
Theosophy is a definite science.

The facts are that in the after-life man meets himself face to face. No God rewards or condemns him, no Devil pursues him. In the astral world surrounding the earth, where men go after death, the thoughts of man's life are visible, objective things; his thoughts are made of substantial substance, of the nature of thought-substance. They meet a man face to face and accuse or bless him. He sees himself at his true value. If his life and thoughts have been good, he is filled with pure joy. If his life has been evil, his evil thoughts become avenging fiends — regular little devils — and his after-life is like a bad dream or nightmare. This is what Theosophists call Kama-loka or the Desire World, where the man's desires — good, bad or indifferent, are exactly fulfilled. No mistakes or injustices enter here, no rewards or punishments, except what the man has decreed by his own previous thoughts and deeds.

This astral world which surrounds the earth is neither Heaven nor Hell *per se*, but it is just what the thoughts of men have filled it with. It is the psychological atmosphere of the earth, a treasure-house or a waste-basket. Every beautiful thought of a man's life shines like a jewel; every bad thought burns like fire. This is the true meaning of Heaven and Hell.

This Kama-loka or Desire World, or the next stage after this earth, is only the ante-chamber of the true Devachan or Heaven World. It is a sort of settling vat or filter where that part of the man which is of the earth, earthy, is left behind in the earth's atmosphere where it belongs. A man cannot carry his faults with him to Heaven; if he did, it would not be Heaven.

Every normal man, however, has more good intentions than bad, more desire for the good and beautiful than for the evil. A good

deal of joking has been done about "good intentions" paving the way downward. I always object to that saying unless the intentions were hypocritical or no effort made to carry them out. After a great deal of experience doing Theosophical work in the State's prisons my conviction is that the road that leads downward is paved with tacks standing on their heads, and before a man has walked on that road to its end he has to walk bare-footed.

The aspirations and longings which every man has carry his soul — himself — that is the spirit, into the true spiritual world, where the spiritual part of his being is naturally attracted. They free him from the lower atmosphere of the earth. With his spiritual soul — what we call the Spiritual Monad — the human ego then sets out on a journey of beautiful and wonderful adventures in the "many mansions of my father's house."

The soul resting in Heaven is not disturbed by the events on earth. The mistakes and troubles of the life once lived on earth do not trouble or invade the heavenly abode; if they did, it would not be Heaven. But in a certain sense those in the heaven-world can help us. If our love carries our spirit to the plane on which they are, we may benefit greatly. To put it in other words, we can tune in to their world of harmony, beauty and love, but they cannot tune in to our jazz.

The study of these things shows that Nature is established on a moral basis which demands rectitude in human life and conduct.

These are the facts in the case when freed from superstition.

They lift the burden of doubt and fear from the question of death and the after-life. They dissipate the spiritual gloom inherited from the theology of the Dark Ages; they dissolve the curse of materialism of modern thought and life, and liberate the soul of

man. They launch man on a brave new world, the captain of his soul, the master of his life and destiny, full of joyous hope and aspiration, with endless vistas of spiritual evolution, adventures and conquest, before the ever-expanding consciousness and intelligence of his triumphant soul.

The Theosophical Forum

RELIGION ORIENTATED TO CATASTROPHE — *Marjorie M. Tyberg*

The title of Dr. M. Channing-Pearce's book *The Terrible Crystal: Studies in Kierkegaard and Modern Christianity* (1) is taken from the apocalyptic vision of the prophet Ezekiel and was selected as expressive of "the religion of a terrible and intense candour of spirit," brought to this quality by the intense inner experience of those face to face with catastrophe. The author views the thought of contemporary writers who see in inevitable catastrophe the very climate of religion and reality, and who seek a new faith based on the reality revealed to human consciousness in such terrible crises — a faith affirmed by the whole nature of man and termed by these writers "existential." He addresses his book to those who find Christianity in its traditional form inadequate to the present crisis, and who believe that a re-born religion, a revitalized Christianity, alone can avert the ruin of our world. He opens with a study of the Danish philosopher Kierkegaard, who, in his view, is the originator of this thought and who, after one hundred years have passed, remains its most profound and inspiring exponent.

After 1848 Kierkegaard abandoned his pseudonymous style of writing on various subjects and began to publish the studies of Christianity which have of late years become widely influential among both theologians and laymen. His purpose was to discover a religion rooted in life rather than in doctrine. By unflinching study and facing of his own nature, by long cultivation of inwardness and awareness, by relentless analysis of the official Christianity of his day — which, however, did not blind him to the heart of the Christian teachings — he came to the belief that with the mortification of the mind and the ephemeral self, man reaches a crisis, a state of fear and trembling, of utter suffering,

where, by an act of choice and will, he can take a leap into the dark, into a new field of consciousness, and pass from death to life, reborn as his spiritual self; that from the purifying fire of suffering, as from a crucible, can spring phoenix-like a new faith.

The instant of choice, the act of faith resulting from the death of arrogant reasoning, mark the co-ordination of the dual aspects of man's nature whereby alone does man become man capable of realizing his full destiny and powers. It is man's entry into "a new dimension of thought," an emergence from unreality to reality, a consciousness of God-relationship, which is the birth of true individuality. To Kierkegaard the life of Christ is the universal type of this experience of inward religion. He eliminates all historical limitations as to the possibility of man's power, unaided by priestly mediation, to reach this highest religious attainment; and thus he came into conflict with conventional and established Christianity. Kierkegaard founded no school, no system of theology or ethics, gave rather "a fundamental metaphysic of life" which has made a strong appeal to thinkers today.

Dr. Channing-Pearce's chapter on The Theology of Crisis deals with the teachings of Professor Karl Barth, a Swiss pastor of the Reformed Church, who, in 1918, found that he had nothing but a "bankrupt theology" to offer his flock, and turned back to the sources of Christianity to find a religion more adequate to their needs. He defines "crisis" as "a drastic reorientation and change of life and thought, necessary for the man who desires to be reborn, unescapable for the Christian"; and holds that *the whole modern world is faced with this crisis*. "Resurrection" he interprets not as an historical event, but as "a movement from above in which eternity invades time," as "the new world, the world of a new quality and kind" breaking in upon our natural world. "From first to last the work is God's, not man's" Barth asserts; "there is no way from man to God." He holds "the doctrine of likeness

between the creature and the Creator to be the discovery of antichrist." Faith is the cornerstone of this theology and to those who make the leap of faith into the unknown, the Word of God is revealed — truth and knowledge beyond anything thought humanly possible.

This bold claim on behalf of the individual man was made at the time when the prophecy of Kierkegaard was affirmed by the existing conditions, when all certainties seemed to be dissolving, and the post-war dread of imminent catastrophe was creeping into minds everywhere. Be a "void," said Barth, which God alone can and will fill; surrender all to Faith; be reborn into the new life, receive All from God. This Barthian interpretation of Christianity, given in 1918, for years stirred Christians in Europe to the depths, and led many to believe that a new prophet had arisen. We are indebted to Dr. Channing-Pearce for his account of Barth's thought, to which, for want of space, we are unable to do full justice.

Professor Emil Brunner's book *The Mediator* is a simpler presentation of the Barthian theology and a review of its implications. It is concerned with the link between God and man, the means by which this faith-knowledge is made available to man. Both writers are quoted by our author to show that they held that there must be "a clean break" between the old life and the new, "between knowledge and faith," between history and super-history"; a break into a fourth-dimensional Reality entirely other than that of the life we live. Man not only receives the revelation-truth, but also the capacity to receive and recognise it, as a gift from God. Dr. Channing-Pearce, after close study of this theology, finds that this sweeping elimination of all human participation in the mediation is not maintained throughout the works of Barth and Brunner, and remarks that there is that within the nature of man, which cleansed from selfish

propensities, can receive the Word and foster the divine seed into growth and development. He regards the view as false, that human life is "entirely worthless, unreal, doomed, fit only for some cosmic incinerator." He states that "a humanity which can conceive God, is not wholly evil."

The life of man is not in itself damnable; it is damnable because and in so far as it is sundered from that Life of life which is God, and is at variance with that Life. . . . Man is not a *massa perditionis*. His heart is abominably evil, but there is within his being a golden grain of glory.

God Transcendent and *Spirit and Truth*, books by Professor Karl Heim, give an interpretation of Barth's teaching concerning Divine Transcendence. Heim asks:

Is there, after all, that which the spirit of our age denies, a Reality . . . transcending the whole order of things in which we live?

How is it that we, who live in the Copernican age, we, for whom the world has lost its centre and its bounds, can still hold to the idea of the Transcendent?

How, when this idea, so vital to religion, has become impossible for countless people, can they believe in God? He realizes that to abandon it is to succumb to the naturalism bequeathed to us by the nineteenth century, the naturalism that grants only "the chance interplay of immanent forces."

Professor Heim meets this problem with a most interesting analogy. As transcendence presupposes boundary, he suggests as a substitute for the boundaries of content, the boundary of dimension; and instances the threefold world of consciousness of "I," "Thou," and "It," which exist independently and still interpenetrate and have a place of meeting established by means

of speech, action, or decision.

Why not, then, a divine transcendence which, in its turn, lies beyond both "I" and "Thou" and the entire consciousness of our human world? And if, in the human "word" which reveals a new world to the "I," contact between two worlds is established, why should not the "wholly other" world of the "Kingdom of God" have been revealed, just so, in the "Word" which was Christ?

To this is added a conception of Time also in conformity with modern thinkers such as Einstein and Whitehead. These ideas fill out a new world-picture where

Reality no longer consists of stationary entities which enter into relations, but of an activity in transition by which everything that exists is forever being created anew . . . [a world] where a divine word, like the atmosphere, surrounds us invisibly on every side . . . [a world where the Church is] composed of a unique brotherhood . . . [for which] all spiritual sources of salvation are absolutely free.

It will be seen that the essential truths of Christianity restated in the light of this new cosmogony, may be a reassuring message to bewildered humanity.

Eighteen years after the Barthian theology became known Dr. Channing-Pearce, having made a survey of contemporary thought as expressed in painting, sculpture, poetry, fiction, literary criticism, and works on science and religion — the account of which will be of absorbing interest to readers who have observed gleams here and there and wondered and been glad — suggested that the Theology of Crisis may be viewed as

part of a general and long-gathering reaction against the over-weening immanentism of nineteenth century

evolutionary thought, and Karl Barth, in the main, a modern Luther pitted against the Papacy of Science.

While finding it difficult to overestimate the value of Barth's contribution to his age, Dr. Channing-Pearce holds that the Barthian ideas concerning the wholesale repudiation of human life, the absolute break between the human and the divine, will not appeal to the modern mind, which is more prone to deny God than to deny life. And, while open-eyed to every indication that there exists a tendency toward the expression "through sense of something beyond sense," "a mounting faith in a transcendental reality," a recognition that "Known truth isn't the same as scientific truth," a repudiation of the stress on personality so dominant a few decades ago, Dr. Channing-Pearce is just as alert to the extreme dangers existing in those dark unseen forces of magic that "ritualize man's optimism," and, in an age like ours, tempt those who have lost their former faiths and certainties. The perilous counterparts of the surrender to Transcendent Divinity which requires self-purification and renunciation of material desires, are dealt with in a chapter that makes clear the difference between subservient dependence on magical rites and willed co-operation with the Divine.

By 1939, when the last chapter of *The Terrible Crystal* was written, catastrophe was no longer a mere prophecy, but had broken upon the world. Dr. Channing-Pearce's attitude to this is one of heroic inward acceptance of every terrific condition inevitably forced upon humanity. He believes that those who realize the catastrophic nature of the Christian religion, and the agony and travail that face humanity, can experience the "leap into the dark" and Kierkegaard's "first death, then life," can find spirit and will free to move into the new world here and now to which the teaching of Christ can give access, and find wisdom and peace.

The Terrible Crystal has some of the beauty of utter sincerity and compassionate inclusiveness. It is therefore the more surprising that the author, evidently so well abreast of numerous aspects of contemporary thought, has overlooked one potent spiritual movement and has omitted to mention the teachings of Theosophy. Ever since 1875, when H. P. Blavatsky restored knowledge of the Archaic Wisdom-Religion, the fount from which have flowed all the great religions of the world, there has been poured forth through the Theosophical Movement, a stream of Truth concerning man and his relations to the Universe and to Divinity. Her books have set forth the archaic cosmology and anthropology which is being confirmed by the most recent and reliable findings of science, but go far beyond these in presenting a conception of the origin and destiny of the human race in a cosmic setting that includes the rise and fall of many races and civilizations, the passing of that which has culminated ever leading to the rise of the new; includes also a view of the enduring principles which weave vehicles of varying grades, inner and outer, visible and invisible, for the purpose of experience and attainment of God-consciousness by the pilgrim souls which comprise humanity.

The sevenfold constitution of man, mirroring in little that of the universe contains the secret of that re-co-ordination of the Divine Transcendent with the immanent, now, according to Dr. Channing-Pearce, the "S. O. S." of the distressed ship of our civilization to-day." It also supplies the complete ethics and psychology of Mediation, whereby man through the purification of his intermediate nature receives Light from the Divine Transcendent within, guided in this by those who have preceded him in the attainment of this higher consciousness; namely, by the Hierarchy of Compassion, one of the greatest among whom was Jesus the Christ. The Theosophical cosmology and philosophy thus

give a wonderful background of Archaic Wisdom for the intuitions of fearless and compassionate thinkers today, and also vital significance to life on Earth.

We express our gratitude to the author of *The Terrible Crystal* for formulating so clearly the great thoughts which no doubt do much to inspire the sublime heroism of our brothers who are facing most directly the present catastrophe. His statement that "Misery is near to mystery" is a true word. Acceptance of the crucifixion of agony and suffering rends the veils between spirit and the mind which is "the Slayer of the Real," and enables human beings to participate understandingly as "knights of Faith" in that death which leads to birth of a new life for Humanity.

THE MYSTERIES AND CHRISTIANITY: I (1) — *F. Chapman Clemeshaw*

What is the connection between the mysteries of the ancients, and Christianity? We shall let two early Christian writers answer for us: Ammonius Saccas (230 a. d.), founder of the Neo-Platonic school of philosophy at Alexandria, says that Christianity and Paganism, when properly understood, differ in no essential points, but had a common origin, and are really one and the same thing. St. Augustine, about the end of the fifth century, says:

The very thing which we now call the Christian Religion, really was known to the Ancients, nor was it wanting at any time from the beginning of the human race up to the time Christ came in the flesh; from which time the true religion, which previously existed, began to be called Christian, not as having been wanting in former times, but as having in later times received that name. (Augustine, *Opera*, I, 12)

In other words, each age gives rise to the succeeding age; history repeats itself, but what we want to know is how often does it repeat itself? Here we may very profitably make a brief historical retrospect before proceeding with our subject. To this end, the writer wishes to share with other students a recent study of the Messianic Cycle. This does not claim to be the whole truth, but is at least approximate truth. Some years ago, the writer came across an interesting contribution to H. P. Blavatsky's *Lucifer*, by W. Wynn Westcott. The name of the series of articles is, "Numbers, Their Occult Powers and Mystic Virtues." The particular article is to be found in Vol. V. (Dec. 15, 1889, p. 320), and the particular paragraph runs as follows:

It has been calculated by some savants, by the late Dr. Kenealy in particular, that a Messiah, or divine teacher, has been sent to the world every 600 years.

The astronomical period of 600 years, spoken of as the "Naros," the Cycle of the Sun, the Luni-Solar period or Sibylline year, is a period of peculiar properties. Cassini, a great astronomer, declares it to be the most perfect of all astronomical periods. He says:

If on a certain day at noon, a new moon took place at any certain point in the heavens, it would take place again at the expiration of 600 years, at the same place and time, and with the planets all in similar positions. (Westcott, *Ibid.*, p. 320)

The Naros was always held to be a secret cycle, there being at least one good reason for the secrecy, for, were it commonly known that a messenger came every 600 years, how many impostors would there be at this time approached? It is interesting that in 1137 there was a Messiah, a pretender in France, and another in Persia. 1137 is very near to 1098, (marked *St. Bernard* on the diagram).

The Phoenix, though an excellent symbol for any cycle, has been especially associated with the Naros. Dr. Kenealy in his *The Book of God*, states that the ancient Irish ascribed a longevity of 600 years to their Phoenix, that Ovid and Herodotus mention it and say that it makes its appearance every 600 years. In Chaldee and Coptic it is called *Phennische*; these letters used as numbers add up to 600.

The coming of a Messiah is, of course, associated with the Annunciation. The spray of Lilies, which in the old pictures of the Annunciation, Gabriel presents to the Virgin, shows each lily as having six leaves and each flower six petals. This spray of lilies, typifying fire and water, or the idea of creation and generation, symbolizes *precisely the same idea as the Lotus* in the hand of the Bodhisattva who announces to Maha-Maya, Gautama's Mother, the birth of the world's Savior, Buddha (See S. D. I, p. 379, f. n.).

In the Sixth Century a. d. a certain scholarly monk, Dionysius Exiguus, calculated the date of the birth of Christ, and proposed that thenceforth

all things should date as from that date. This proposal met with some opposition at first, but eventually its supporters, the Venerable Bede among them, carried the day. We are now told that the occult date of the birth of Jesus is 102, or 103 years earlier than the date set by Dionysius. Considering that modern scholars have been unable to discover any reliable information about the birth of Jesus, it must be admitted that Dionysius came pretty near to the truth.

Taking 102 b. c. as the birth of Jesus, it is a simple matter to keep adding 600 years and thus arrive at dates when messengers should appear. I was encouraged to pursue this study because of two statements to be found in Theosophical literature that quite evidently support the idea that Messengers are sent every 600 years. In *The Ocean of Theosophy* (p. 178) we find the statement that the Kali-Yuga commenced with the death of Krishna, 3102 b. c. That is 3000 years from 102 b. c, or five periods of 600 years.

The second statement is to be found in H. P. B.'s *Glossary*, under "Eleusinian Mysteries": "Epiphanius traces them to the days of Inachos (1800 b. c). founded, as another version has it, by Eumolpus, a king of Thrace and a hierophant." Again, three periods of 600 years. Also, I have noticed a disposition to use the expression, *eighteen-hundred years ago*, when comparing our own times with those at about the beginning of our era. (See *Studies in Occultism*, No. V, p. 253).

The diagram, therefore, is an effort to illustrate and test these statements and consequently shows a complete cycle of 1800 years divided into three periods of 600 years. There is another good reason for dividing the Messianic cycle (or any other cycle, for that matter) into three periods and that is what Dr. de Purucker points out in *THE THEOSOPHICAL FORUM* for Sept., 1933, p. 6. He said:

The affairs of men are the manifestations of the thoughts of men; and the thoughts of men follow three distinct and separately characteristic types, as history demonstrates. They are: a religious

era, always followed by a scientific era, invariably followed by a philosophical era, which ushers in again a religious era, which gives way in its turn to a scientific era, followed again by a philosophical era; and thus the wheel of life turns continuously around.

In tracing the above-mentioned changes, this diagram presents a difficulty. For instance, if we are studying the cycle started by Jesus, Inachos, and the others, at the point "B," then the point of the triangle at "B" would be marked *Scientific*; for all the Messengers come when they are needed, that is, when man's spiritual powers are in abeyance and when his scientific and inventive faculties rule the day. In this case, the point "C" would be marked *Philosophical*, and the point "A" *Religious*. This might be misleading, for then it might appear that the Messengers at "C" belonged to a philosophical group, and those at "A" belonged to a religious group. To avoid this difficulty, the points of the triangle were left unmarked,

THE MESSIANIC CYCLE

so that if the student desires to trace these changes for the Messianic Cycle beginning with Buddha, for instance, then the point of the triangle at "A" should be considered as marking the Scientific period of the people to whom Buddha came. For the purpose of a diagram to be used for a lecture, the interlaced triangles could be drawn on a movable disc and marked *Religious*, *Scientific* and *Philosophical* at the corners of the dark

triangle. With the aid of such a device, some very interesting points could be readily brought out; for example, if the word *Scientific* were placed opposite "Buddha," then the diagram would show that the point marked *Religious* came opposite to the point marked "Mohammed." 498 a. d. is an important date in the history of Buddhism, as we shall see. It should be pointed out that in the case of many of the names shown on the diagram, the exact date of birth cannot be ascertained, for instance, there are four dates for the birth of Buddha and they vary as much as 103 years. If any presently accepted date falls within a period including the fifty years before and the fifty years after our theoretical date it is as close as we can hope to come.

Now let us trace these dates backward, beginning with 102 b. c. The first date is 702 b. c. This is a wonderful date, for about this time we have Gautama Buddha in India, Lao-Tse and Confucius in China, Numa Pompilius in Italy, and Isaiah in Palestine. Curiously enough, on Feb. 11 of this year, 1940, the Japanese celebrated the two-thousand six-hundredth anniversary of the birth of their first Emperor Jimmu. According to this, the Emperor was born on Feb. 11, 661 b. c.

Add another six hundred years, and we come to 1302 b. c. Dr. Kenealy gives Moses for this date, and it seems likely enough, for Mr. Budge, the Egyptologist, gives 1270 b. c. as the date of the Exodus; if we suppose that Moses was 32 years old at that time, then we get our date of 1302 b. c (2)

1902 b. c. we have already touched upon; on the authority of H. P. B. this point is marked Inachos. 2502 b. c, Dr. Kenealy gives Zoroaster for this date, but it cannot be verified. H. P. B., in her *Glossary*, points out that the dates vary from 6000 years before the time of Plato, to 1000 b. c. Neither of these dates help very much. In *Tabular Views of Universal History*, by Putman, there is this item: "2500 b. c, Reign of Seankh-kara, who dispatched an expedition to the land of Punt for Spices."

You may ask, is one warranted in picking out a name of a king simply because he reigned at the required time? Well, of course, it is easy to

make a mistake, but if you are considering a time prior to the Sixth Century b. c. you are not likely to be far wrong; for H. P. B. (S. D., "Vol. III"), in speaking of Egypt, says, "It was Amasis, 570 b. c, who destroyed the priestly power and thus perished the ancient Theocracy." In other words, kings up to that time had been priest-kings, or Initiate-Kings. About 1800 years before Seankh-kara, Menes reigned in Egypt. W. Q. Judge places Menes among the Avataras, from which we may infer that Seankh-kara was also an Avatara; for our diagram shows that history repeats itself every 1800 years in any one nation or people.

In 3102 b. c. Krishna came; this we may accept as accurate, on the authority of Theosophical writings. For 3702 b. c. Dr. Kenealy gives Fo-Hi of China, but I cannot check this. Modern scholars give Sargon I of Akkad, 3800 b. c. Was he a Messenger? Probably, from what has just been said, he was at least an Initiate-King. The story of the infant Moses being set afloat in a basket on the Nile is also told of Sargon; so we may infer that these two belong in the same category. In *The Theosophist* of June and July 1883, H. P. B., speaking of Zoroastrianism, writes:

Between Zoroaster, the primeval institutor of "Sun" *worship*, and Zarathushtra, the primeval expounder of the occult properties and transcendental powers of the divine (Promethean) Fire, there lies the abyss of ages. The latter was one of the earliest hierophants, . . . while . . . Bunsen places Zoroaster at Baktria and the emigration of the Baktrians to the Indus at 3784 b. c.

The above illustrates the difficulty that confronts those who essay to fix dates; however, we may include Zoroaster of Baktria in our list for if he were living in 3784 he must have been born very near our date of 3702 b. c. 4302 b. c. — Budge gives the date of Menes as 4400 b. c, and describes him as the first king of United Egypt; and as W. Q. Judge includes him among the Avataras, we may accept this name as fairly certain. (See *The Ocean of Theosophy*, p. 169).

It is not much good trying to carry these dates any further back into the

past though there are many noble names that are not included, such as Rama, Orpheus, Hermes, Zoroaster, Mithras, Fo-Hi of China, and Kapila, besides those whom W. Q. Judge calls mixed characters. He writes

In these cycles we can include mixed characters who have had great influence on nations, such as King Arthur, Pharaoh, Moses, Charlemagne reincarnated as Napoleon Bonaparte, Clovis of France reborn as Emperor Frederic III of Germany, and Washington, the first President of the United States of America, where the root for the new race is being formed.

Napoleon, according to the *Memoirs* of Prince Talleyrand, believed himself to be a reincarnation of Charlemagne, (W. Q. Judge, *Op. Cit.*, p. 86). The time from Charlemagne to Napoleon is 1018 years; from Clovis to Emperor Frederic III is 1300 years.

Concerning the Messengers in our own era, first there is Mohammed, 498 a. d., whom W. Q. Judge in speaking of Avatars, describes as "a minor intermediate one for a certain part of the race." The accepted dates for the life of Mohammed are 570-632, but even here there is some uncertainty, for the date of his birth is an *a priori* combination; thus ten years is allowed for the Mecca period; ten years for the Medina period; three years of secret work at the beginning, to which is added forty years, because citizens of Mecca did not become full citizens until they were forty years old. But who knows whether he was actually that age?

Between 498 and 570 there is a difference of seventy-two years, so, in order to get the Mohammedan cycle to fit into our scheme, we suggest that Mohammed bears the same relation to some Messenger unknown that Apollonius of Tyana bears to Jesus, and Sankaracharya to Buddha; or as H. P. Blavatsky to Count de Saint-Germain. This last suggestion will be further amplified when we come to the study of Saint-Germain. The writer therefore suggests that, as in the case of Sankaracharya, Apollonius, and perchance H. P. Blavatsky, Mohammed was carrying on a work given its initial impetus by one of whom it might be said that he

came "but to the lost sheep of Israel." For a fuller elucidation of "I come but to the lost sheep of Israel" see *Questions We All Ask*, Ser. II, 199. Very briefly, it is this: Jesus came to teach those who were ready, but who had not yet received the teaching and who in the Mystery jargon of the Near East were called lost sheep. How else could any movement be started, either then or now? The following extracts from the *Encyclopaedia Britannica* (1926 Ed.) seem to lend support to such a conjecture:

Before Mohimmet's time Arabian paganism had already been attacked both from the outside and from the inside. On the one hand the Northern tribes had gradually been christianized, owing to the influence of the Byzantine Empire, on the other hand South Arabia had fallen successively under Jewish, Abyssinian and Persian influence. . . . Christianity had some important representation in Najran far south of Mecca . . . Mecca itself and the neighbouring and allied Taif are said to have produced some monotheists or Christians we even hear of flagellant monks and persons vowed to a life of total abstinence among precursors of Islam.

So far as Mohammet may be said to have formulated a definite notion of his work, we should probably be right in thinking it to be the restoration of the religion of Abraham, . . . and there are stories, not necessarily apocryphal, of precursors of Mohammet going abroad in search of the "Religion of Abraham." . . . The precursors however, appear to have felt no call to reform their fellow-citizens, whereas, it is evident that Mohammet regarded himself as charged with a message.

The above citations point to a pre-Islamic movement. This was possibly due to the zeal of some missionary from among the Copts of Egypt or Abyssinia; if so, it would account for the fact that "the Prophet Mohammet himself had prescribed indulgence to the Copts before his death. Amrus, the Arab conqueror of Egypt, was mercifully disposed to the Copts."

Mohammed also came under the influence of Persia. He is said to have congratulated himself on having been born during the reign of the Persian King, Nausherwan the Just. (See *Communalism and Its Cure By Theosophy*, p. 6, by Bhagavan Das). That Mohammed was in touch with sources of inspiration, both at home and abroad, is further suggested by the tradition that he was sent into the desert in his early years to learn the habits and language of the Bedouins; that he traveled by sea to Abyssinia, and that he spent a period of preparation and religious retirement at Mount Hira, South of Mecca, a Christian area, and that later when his public work began, "The Abyssinian King and his ecclesiastical advisers took the side of Mohammed and his followers, whom they appear to have regarded as persecuted Christians." In the light of the foregoing, it seems reasonable to place the beginning of the Mohammedan era some years earlier than the birth of Mohammed. Before passing to the next name, let us see what a significant century this was" taking our *a priori* date of a d. 498 as a center, that is 600 years from 102 b. c:

The closing of the Mystery-Schools at Eleusis	A.D. 529
The closing of the Mystery-Schools at Philae	A.D. 453
St. Benedict founds the monastery of Monte Casino, which became the center of Christian life	A.D. 529
St. Augustine to England	A.D. 560
St. Patrick to Ireland	A.D. 432
St. Columba to Scotland	A.D. 563
Baptism of Clovis	A.D. 496
Fall of the Western Roman Empire and the Great Migrations	A.D. 476
Start of the Mohammedan era, (as the writer thinks)	A.D. 498
The opening of a cycle of about 8,000 years, which we are told is a rising cycle	A.D. 476

For a. d. 1098, Dr. Kenealy gives Jenghiz Khan. His historical dates are 1162-1227. One hesitates to put Jenghiz Khan in the same category as Menes, Buddha, and Jesus, not to mention other honored names; for generally he is looked upon as a hideous character, a combination of

acute generalship coupled with a callous delight in butchery. In the West, at any rate, it seems to the writer that Bernard of Clairvaux has more title to be included in a list of Messengers than Jenghiz Khan. He was born in 1091, within several years of our date. He it was who may indeed be said to have carried on the work started by the Avatara Jesus, and his influence on succeeding centuries was very great. About this time we also note St. Francis of Assisi, El Cid in Spain, St. Ladislav in Hungary, and the leaders of the First Crusade.

The Count de Saint-Germain — 1710-1789; these are the dates generally given, but it is admitted that nobody really knows when he was born or when he died (if he did die?). *The Theosophist* for July, 1905, has an article by H. S. Olcott entitled "The Count de Saint-Germain and H. P. B., Two Messengers of the White Lodge." This is published as a pamphlet by the Adyar Society. The point of interest for our study is that he did no public teaching, as H. P. B. was evidently sent to do. Saint-Germain is regarded as an important figure in the early activities of Freemasonry, though efforts have been made to discredit his masonic affiliations. However, the memoirs of Cagliostro contain the statement that he was initiated into the Order of the Knights Templars by Saint-Germain, and the fact remains that Masonry, in its present form, came into being during the life of Saint-Germain. That he did no public teaching, and that he worked among the secret societies seems to parallel the statement made concerning Jesus, i. e., that he came but to the "lost sheep of Israel." Jesus was followed by Apollonius of Tyana and others, and Saint-Germain was followed by H. P. B. and others.

Concerning the names at the points of the dotted triangle: 198 a. d., we have the Church Fathers, Tertullian and Clement of Alexandria. 798 a. d., Charlemagne, and 1800 years before that we have 1002 b. c, said to be the time of the first appearance of the Homeric poems. It is interesting to note that there is also a wealth of legendary stories clustering around the name of Charlemagne, and these stories or legends were not new. They resemble the Arthurian legends, just as the Homeric stories have their

counterpart in the Mahabharata. These are a method of teaching and of preserving the Ancient Wisdom in a manner best suited to the times.

In 1398 a. d. Nicholas of Cusa, or Cardinal de Cusa, H. P. B. tells us (*The Secret Doctrine*, "Vol. III") reincarnated almost immediately as Copernicus, in order to carry on important scientific research. Other names are Huss, Chaucer, and Thomas a Kempis, whose *Imitation of Christ* is the world's second-best seller.

This point also marks the beginning of the Renaissance, and the coming of the great reformer of Buddhism, Tsong-Ka-Pa (1356-1418). In 402 b. c. or 1800 years later than the last date, we have Plato, who marks the beginning of the renaissance of scientific thinking in the Grecian world, ending in the materialism of Rome — just as our renaissance is ending in the materialism of our time. It would be a mistake to suppose that these periodic changes are *caused* by the coming of one of the Messengers; it would be better to think of the Messengers as coming, or being sent to guide a certain portion of mankind through the changing conditions that confront that particular portion of mankind. Other and important events mark these cyclical times. We have already noted the important happenings of a. d. 498, or the point marked "Mohammed" on the diagram. Let us examine some of the other dates.

102 b. c. is the occult date of the birth of Jesus, but it is also the date of the birth of Julius Caesar; also, it is about the date of the removal of the libraries of Athens to Rome and the political end of Greece. 3102 b. c. is the death of Krishna, but it is also the beginning of the Kali-Yuga, and also marks the time when a number of the planets were in syzygy, as they will be again early in May, 1941.

Let us again look at the date 702 b. c. In Greece this is the beginning of the Hellenic period, a period that includes all the principal temples and monuments erected between 700 b. c. and 146 b. c. (or the fall of Corinth) — though her greatest masterpieces belong to a short period commencing some 200 years after 700 b. c. According to our theory that history repeats

itself every 1800 years, we should expect to find a similar condition arising in the Christian era beginning with 1098 a. d. but with its greatest masterpieces belonging to a short period commencing some 200 years after 1098 a. d. which is exactly what we find to be the case.

The present writer holds that the achievements of the 13th and 14th centuries are in every way comparable with the achievements of the high water mark of the Hellenic period, furthermore, speaking as an architect, he makes bold to assert that in architecture the work of the 13th and 14th centuries far surpasses that of the Hellenic period — and why not? Are we not told that the European family race has been steadily rising since the downfall of the Western Roman Empire?

In some quarters it is the fashion to see no good in anything relating to the Christian era. We read that 1800 years ago some of the adherents of the Christian cult (the Theosophists in those days) were just as complacent and critical as some are today — H. P. B. gives us the reason for this state of affairs.

In *his Unveiled*, Vol. I, p. 34, she writes: "An age of great inspiration and unconscious productiveness is invariably followed by an age of criticism and consciousness. The one affords material for the analyzing and critical intellect of the other." It will not be difficult for the student of the history of art and architecture to decide whether the high-water mark of the Hellenic period in Greece and the thirteenth and fourteenth centuries in Europe are "periods of great inspiration and unconscious productiveness." There are some modern writers on art and literature who have compared the splendid achievement of the two periods, and this study of the law of cycles certainly appears to confirm their findings for students of Theosophy. It appears that a religion reaches its high-water mark about 1300 years after the coming of the Messenger who inspired it, and, as we have already shown this is also the time of the greatest achievement in art and architecture.

In the Greek world this would be from the point marked "Inachos" 1902 b.

c. to, say, 600 b. c. In Christendom from 102 b. c. to the 13th century. A book called *The Thirteenth, the Greatest of Centuries* by Walsh, is recommended to those interested in such studies. If we trace the same period of growth starting with Buddha, we come to about 500 a. d., after which time Buddhism fell upon evil days, even as Christianity did after the Fourteenth Century. Dr. Montell, in his *The Chinese Lama Temple of Potala of Jehol* says:

Asanga, a monk of Gandhara, about 500 a. d. played a role of fateful consequences. He brought in the theory of the union of the individual with the Spirit of the Universe from Brahmanism and thus prepared the way for tantrism. The final decadence of the Mahayana Buddhism took place in the Seventh century a. d., when Sivaistic Mysteries entered. To the Gods were assigned women companions, numberless demons and patrons were adopted, and in that way the framework of the structure of present-day northern Buddhism was constructed.

This mixture of religions was preached for the first time in Tibet about 640 a. d. . . . King Thi-Sron-Detsan summoned Guru Padma-Sambhava from India in 747 a. d. and he became the actual founder of Lamaism.

The monastic life in Tibet had fallen into decay, celibacy was a dead letter and the religious rites were merely practices of magic. At that time, early in the Fifteenth century, the great reformer Tsong-Ka-Pa appeared and founded a new sect that outstripped all the others and has become the state religion that yet obtains.

This last statement is very interesting; for Tsong-Ka-Pa was born in 1356 a. d., a little over 2000 years after the birth of Buddha; the messianic cycle had then run its course and Buddhism took on a new life. It is a little over 2000 years since the birth of Jesus. Will Christianity take on a new life? — At any rate the state of Christendom compares favorably with the state of the Buddhist world at the time of the coming of Tsong-Ka-Pa.

The present writer believes, with many others, that Christianity has already begun to take on a new life and consequently believes that one of the best ways of spreading Theosophy would be to assist in that re-statement of Christian doctrine that Christian leaders now say is called for, and towards which definite steps have already been taken within the Church itself.

The publication of "The Report of the Archbishops" Commission on the Doctrine of the Church of England" is a case in point, not to mention a steady stream of new books of a very liberal character, prominent among which, *Essential Christianity*, by Angus, should be mentioned.

If the Messianic Cycle divides naturally into three periods, then the one-hundred-year cycle should do the same; this will throw some light on our familiar teaching that a special effort to assist mankind spiritually is made during the last quarter of each century. Assuming that the diagram is equally descriptive of a century, and that the century commences at the point marked "A", then we may conclude that the effort is made during the *Religious* part of the century. If this is so, then certain encouragement may be drawn from this conclusion; for we should now be just past the first third of the century ending 1933, a time when mankind would be what we have called *Materialistic* in his outlook, and that therefore, conditions for this century are improving. As we are considering the *century* cycle, the following from Dr. Angus's book, *Essential Christianity*, is of interest:

Perhaps the truth is, that there has scarcely been a town in any Christian country since the time of Christ where a century has passed without exhibiting a character of such elevation that his mere presence has shamed the bad and made the good better, and has been felt at times like the presence of God Himself. And if this be so, has Christ failed? or can Christianity die? — Seeley, *Ecce Homo*, Chap, xiv

The working out of this diagram has been a great help to the writer, and he hopes that it may be of use to other students. A pattern appears in history; odd statements and dates may be fitted into it. The key to it all is the constant change that we have been studying. If, as at present, things seem to be crumbling, we may say "This too will pass" and know at the same time, that history warrants the statement.

Before leaving this part of our study, let us see what may be deduced therefrom. First that there is continuity and order in the affairs of men. Secondly, that there is no need to be dismayed and to talk about the downfall of civilization, for somewhat similar conditions prevailed 1800 years ago, and will prevail again 1800 years hence; 1800 years ago, that is 140 a. d., Rome was at its zenith; Antoninus Pius was Emperor, and there were wars, of course. Thirdly, that Christian people do not need to be disturbed by the fact that our scholars say that no authoritative historical records of the birth of Jesus are to be found. A student of Theosophy is taught that he did indeed live and teach and that the time and place of his coming were known to those entitled to know. He came but to the "lost sheep of Israel," i. e., his work was among the few who were ready. Probably small groups were formed who avoided public attention at that time, but who, nevertheless, paved the way for those who should take up the more open work later, such as Apollonius of Tyana, Paul and others. And that is one reason why there are no historical records to be found.

Neither shall we be disturbed to contemplate the fact that Jesus was one of a long line of glorious Messengers and Saviors. This does not diminish the majesty and beauty of his character; rather, in knowing that all men in all times have had their "Sons of God" to teach and to inspire them, we shall take more joy in Christianity.

(To be concluded)

SEND IN YOUR QUESTIONS

Individuality and Personality

Does Theosophy teach that we always retain our individuality in all states of consciousness?

G. de P. — Yes it does indeed, provided that we use "individuality" in the technical Theosophical sense. Remember that the individuality is a very different thing from the personality. The individuality is the deathless part of us, the *individuum*, that which cannot be divided. Otherwise stated, it is the Monadic Essence, it is the inner God, the spark of divinity within us, that spark of the Cosmic Fire of consciousness-life-substance which is our inmost essence. This in its root is Atman, the indivisible self, deathless, stainless, and in its own essence beginningless and endless; for it is of the very substance-consciousness of the Universe.

The personality is a vastly different thing, it is a reflection merely of the individuality; the personality is like the moonshine, reflected light from the sun; and this personality is mortal always — and how fortunate it is that it is so! Fancy what it would be like, living in eternity in our present personalities: imperfect, undeveloped, feeble, inept, incapable of any great advancement, a poor understander, a very poor follower of noble things, incapable of receiving and retaining for any length of time the best that is in us.

Yet the personality is a wonderful instrument or vehicle through which the individuality works. I think we may say generally that the individuality is the spirit, and the personality is the mortal brain-mind of us; changing with each birth.

Thus it is clear why the individuality is the same, and that "we retain" it in all states of consciousness, for these various states of consciousness, in all their manifold and often bewildering phases and shifting qualities and attributes, when traced to their ultimate or original source, are light-stuff from the Atman. Consciousness contains many mysteries; and the real part of us is conscious even in those phases of consciousness wherein the personality is unconscious — a curious play upon words, yet containing a profound truth, and pointing to the same thought contained in the Sanskrit aphorism: *Atmanam Atmana pasya*, "Know the self by the Self."

On "Multiple Personality"

Does the teaching of the Seven Principles in man explain "multiple personality"?

Emma D. Wilcox — The teaching of the Seven Principles explains it indirectly as it shows man to be composite in nature. The term "multiple personality" is used mostly by psychologists and physicians to denote certain morbid mental states occurring in disease-neuroses or when a person is under hypnosis or in trance. The psychologist explains self-consciousness as the recognition of oneself as distinct from others, expressed through a definite and sustained group of characteristics called the personality.

It has been observed that under hypnosis a subject may show an entirely different group of characteristics, often opposite to those of his normal self, and in a second hypnosis enact still another group or even return to the first. In victims of hysteria the same phenomena have occurred. What gave rise to the belief that this proved the existence of more than one personality was the fact that when one group returned, it renewed its phases of action just where it had left them previously.

Various explanations of these phenomena of multiple personality have been made, such as subconscious mental states, clairvoyance, astral obsession, etc., but none of them has consistently responded to tests. Our best answer comes when we analyze what the term means.

Each individual shows in his daily life certain traits of character in his conduct towards others which, grouped together, are called his personality. What is termed a many-sided person will show different groupings in differing circumstances or towards different people, yet with them all may be traced an underlying uniformity of character consistent with himself. How is one individual able to do this when most people show only a single group of personal traits? The answer is in what lies behind the personality. We are what we think, and most of us have an entirely different thought-world from that expressed by our everyday actions, a world which we guard closely from even our best friends. Normally, our thoughts dwell within the limits of three planes, that of the sensations, that of the emotions, and the purely mental plane, while between them is the will, which chooses the field of our thought-activity. Let the restraining power of the will be removed, and the owner is at the mercy of any outside influence which he may meet, or he may enact the varied and often chaotic pictures that in his thought-world he has lived and framed in the gallery of his mind.

Each act and thought is a life-force, an entity, held and registered within the aura of its creator, and in aggregate it makes that aura. Think what it may mean, then, to have the mind exposed to the vision of such an aura without the choice and control of the will! If the pictures are those which are registered by the acts of the lower principles alone, then, indeed, will one be like a rudderless ship swept hither and yon by wind and wave, a victim to

whomever may board it. On the other hand, let the pictures be those from the higher mind and soul, then there can be no multiplicity of form or color, in other words, no *multiple* personality, because all imagery on the spiritual plane is selfless, free from physical sensation and desire, and therefore devoid of personality. Man is then SELF, not selves.

Four Questions on Centaurs and Satyrs

What is the Theosophical explanation of the Centaurs?

G. K. — According to Dr. de Purucker, Centaurs, beings of an intermediate type, half man, half beast, did at one time exist. They were one of Nature's experiments during an early period of evolution, aeons before there were beasts even faintly resembling those of today, or anything resembling our mankind. This period is described in the archaic *Stanzas* or *Book of Dzyan*, the description (quoted in *The Secret Doctrine*, II, 16) stating that all were finally destroyed. "Mother Earth remained bare" — to receive higher forms.

H. P. Blavatsky also quotes Berosus as author of a creation-account which mentions:

the hideous beings born from the two-fold principle (Earth and Water) in the Abyss of primordial creation: Naras (Centaurs, men with the limbs of horses and human bodies), and Kinnaras (men with the heads of horses) created by Brahma [Nature] in the commencement of the Kalpa [manvantara]. — *The Secret Doctrine*, II, 65, footnote

Obviously they could not have resembled the conception of the Centaur of modern art, which depicts the body as that of a highly evolved Fourth-Round animal with head and attitude intended to suggest indwelling, self-conscious Mind.

Why was Cheiron, the wise teacher of the Heroes who later became the Argonauts, depicted as a Centaur?

G. K. — Probably because Dual Man has been symbolized as half divine-human and half beast since Atlantean days and earlier. A familiar example is the Egyptian Sphinx. Cheiron, the Wise Man, the Sage and Teacher, who has conquered the beast-nature and functions in the divine or higher manasic, is still dual, and the intelligence and beauty which artists express in their portrayals of "Cheiron the Centaur" doubtless come from a sense of the relative perfection to which he had attained. A favorite subject in Greek art was the famous battle between the Centaurs and the Lapithae, a legendary people of Thessaly, upon the occasion of the marriage of Hippodamia, a Lapith maid. Here, though still handsome and intelligent, they are shown in their more brutal, or physical, aspect. The theme is purely symbolic, though the teaching connected with it has been lost.

What is the Theosophical explanation of the Satyrs?

G. K. — H. P. Blavatsky says in *The Secret Doctrine*:

The numberless traditions about Satyrs are no fables, but represent an extinct race of animal men. The animal "Eves" were their foremothers, and the human "Adams" their forefathers. . . . — II, 262

But who were the *Nephilim* of *Genesis*, vi, 4? There were Palaeolithic and Neolithic men in Palestine ages before the events recorded in the book of the Beginnings. The theological tradition identifies these Nephilim with hairy men or Satyrs, the latter being mythical in the Fifth Race and the former historical in both the Fourth and Fifth Races. . . . But Esoteric records show these hairy creatures to be the last descendants of those Lemuro-Atlantean races,

which begot children on female animals, of species long extinct. . . . — *Op. cit.*, II, 775

Why was Pan, the God of forests, pastures, and flocks, depicted as a Satyr?

G. K. — Because Nature is dual, half physical or material, half divine, well symbolized by the dual form of the Satyr with its higher aspect as God of Nature, friend of birds and beasts and flowers, and of children.

In THE THEOSOPHICAL FORUM, May, 1941, a question is asked and answered on pages 342-3, which is too long to write out in full. The heading "Avoid the Over-Anxious Attitude," emboldens me to ask, after saying "All fine, true": Suppose one whom you love deeply knows his Theosophy as well as you do, accepts it and relies on it, yet at times lives — or so it seems — diametrically opposite to all he believes, knows, accepts, *clings to*? Is my, our, responsibility at an end?

It seems to me Theosophists are rather prone to waive, as in *the last* paragraph of this article, ties, duties, unless they fit in with their, the Theosophists', idea. — H. F. S.

L. L. W. — I agree with this questioner that the "Pass on" attitude is not a satisfactory one. Probably what H. P. L. really meant was that unasked for advice or suggestions to such a negligent Theosophist might do more harm than good. Anyone however would be quite justified in offering a tactful and kindly reminder — as when one hears a Theosophist spreading gossip or indulging in unkindly criticism. Perhaps in a case where a Theosophist has neglected some obvious duty, like Lodge work assigned and left undone, one might do the work himself without comment, and thus use the silent but always effective force of example. But in family or strictly personal matters what could an outsider

suitably do? It all depends upon the particular case, the temperaments involved, and more than all upon the sympathy, tact and wisdom of the one who observes the failure. Few of us are perfect Theosophists. The more reason for using the understanding heart and wise impersonal love in dealing with what we believe to be the failings of others.

The Theosophical Forum

THE CLARION CALL OF THEOSOPHY — A. Trevor Barker

It is spiritual and individual regeneration that we want to find the key to. . . . It is that which is the clarion call of Theosophy to men and women of all religions and all races and all creeds: that if they will arise and seek out the ancient Teachers of the race, they can conquer, they can win in the greatest task that the spirit of man has ever had before it. Otherwise what is the good of philosophies and what is the good of religions, if they have no message for the millions of the outcast, the poor, the suffering and the oppressed — the people that seek for the bread of life and do not know where to find it?

If Theosophy were only for the few, for the one in ten millions, I would doubt its value. After all the same light lighteth every man into the world, the same problems beset humanity; and you have the great Masters of Compassion telling us always that their concern is not so much to care for the successful disciples, those who take knowledge by their own strength — for those people you cannot stop; they will seize their divine heritage and make it their own. But it is to take to the great orphan humanity the knowledge that they also have a Divine heritage; that it is for them also to open the gates of their inner being, to let in the light that is there shining, if they will but have courage to dare to enter upon the great adventure. — *The Hill of Discernment*.

DOES SCIENCE KNOW LIFE? — *Emma D. Wilcox*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

Nearly a century ago Herbert Spencer summed up the unknown problem of what life was as "the continuous adjustment of internal relations to external relations," and recently a well known scientist said that no one had as yet improved upon that definition. Three hundred years ago, Robert Hooke laying a lens on a piece of cork was surprised to see under it a succession of rings like little cells hollow in the center, as he described them. Testing farther, he found them in other plant forms and concluded that *they* were the unit of life. Not until two hundred years later was the smaller unit, the nucleus within the cell, discovered and in turn hailed as the center of life. But all this did not tell what life was; only the content of that cell, called by the term "protoplasm," could be regarded as the "physical basis of life," as Thomas Huxley phrased it.

In a study of the organization of living things in the final analysis all organisms may be disintegrated into units of structure called cells; yet this structure, although termed living matter, can be resolved into chemical elements called non-living, whose unit is the atom. The biologist claims that his aim is to study the processes of life and trace them back to their origin with the hope of finding their cause.

Although scientists still place everything outside of plant, animal, and human, as inanimate nature, that is as non-living, yet they themselves own that they cannot always draw the line between where one begins and the other ends; that the science of life is

much easier to explain than to say what life is, or as one of them has said: "We know what living things can do under differing circumstances. We also know when life no longer exists, but the nature of this mysterious element is still unknown."

When H. P. Blavatsky wrote *The Secret Doctrine* some sixty years ago, the atom was considered to be a solid particle like a "billiard ball," while the cell had not yet yielded up its genes. Yet in that book are these words:

It is on the doctrine of the illusive nature of matter, and the infinite divisibility of the atom, that the whole science of Occultism is built. It opens limitless horizons to *substance* informed by the divine breath of its soul in every possible state of tenuity, states still undreamt of by the most spiritually disposed chemists and physicists. — *S. D.*, I, 520

What says the new chemistry today? "Far from being an ultimate and indivisible particle, the atom is revealed as being complex and the seat of much concentrated energy." And the new physics: "By understanding matter and energy into which inanimate nature is divided, we shall be prepared to understand the sciences dealing with living organisms, and through them, we shall obtain an intelligent view of life itself." Again, "We shall find that matter alone does not account for the Universe. . . . Matter affects our senses only by means of energy — the two are inseparable. We can think of no energy without matter to carry it, and we know of no matter that does not contain energy."

Now take note of the following extracts from *The Secret Doctrine*:

In the realm of the Esoteric sciences the unit divided *ad infinitum*, instead of losing its unity, approaches with every division the planes of the only eternal REALITY. — I, 617

. . . the scientific hypothesis, that even the simplest

elements of matter are identical in nature and differ from each other only owing to the variety of the distributions of *atoms* in the molecule or speck of substance, or by the modes of its *atomic vibration* gains every day more ground.
— I, 455

Again we read:

The atom, as known to modern science, is inseparable from *Purusha* which is spirit but is now called "Energy" in Science. . . that which is called "energy" or "force" in Science . . . is never, in fact, and cannot be *energy* alone, for it is the substance of the world, its soul.

And in the footnote:

There *are other forms of energy* wedded to *other forms of matter, which are super sensuous*, yet known to the adepts.
— I, 582

Occultism does not accept anything inorganic in the Kosmos. The expression employed by Science, "inorganic substance," means simply that the latent life slumbering in the molecules of so-called "inert matter" is incognizable. ALL IS LIFE, and every atom of even mineral dust is a LIFE, though beyond our comprehension and perception, because it is outside the range of the laws known to those who reject Occultism. — I, 248

Finally:

Atoms are called "Vibrations" in Occultism; also "Sound" — collectively. . . Atoms fill the immensity of Space, and by their continuous vibration *are* that MOTION which keeps the wheels of Life perpetually going. — I, 633

What does Science tell us today of the unit of matter and of life?

The atom is an electrical field within which is a constant interplay of centers of energy; and protoplasm, the groundwork of the cell, is also an electric field within which the energy-units of life play their part.

This revelation has brought many open-minded scientists to the threshold of a new, unknown realm outside of ordinary physical perceptions, requiring the use of an intuition which hitherto has been considered outside of a strict scientific code; bringing them to the verge, as Professor Moulton has said, of the necessity "perhaps of accepting the existence of other planes of matter." Dr. Riddle of the Carnegie Institution said: "With the discovery of the electron, science has dropped its old guides and has not yet found new ones." When Bertrand Russell said that "Matter has become as ghostly as anything in a spiritual seance," he spoke more truly than he realized, because "matter" is illusory. To a Theosophist the following words from Professor Shapley are especially fine: "All of creation may be one single unit, with all of its various divisions existing in direct relationship to each other and all possessing uniform properties and tendencies. The test-tube, the microscope and the spectroscope tell fundamentally the same story. Electricity, whose positive and negative particles constitute the smallest, whirling world of material things, may also make up the substance of the largest and most distant universes. There is substantially no difference between the lowly atom and the most remote cloud of twinkling stars." Compare this with these words:

. . . the Occultists are not alone in their beliefs. Nor are they so foolish, after all, in rejecting even the "gravity" of modern Science along with other *physical* laws, and in accepting instead *attraction* and *repulsion*. They see, moreover, in these two opposite Forces only the two *aspects* of the universal unit, called "MANIFESTING MIND"; in which aspects, Occultism, through its great Seers, perceives

an innumerable Host of operative Beings: . . . whose essence, in its *dual* nature, is the cause of all terrestrial phenomena. . . . It is, . . . the dual *effects* of that dual essence, which have now been called centripetal and centrifugal forces, negative and positive poles, or polarity, heat and cold, light and darkness, etc. . . .

From *Gods* to *men*, from Worlds to atoms, from a star to a rush-light, from the Sun to the vital heat of the meanest organic being — the world of Form and Existence is an immense chain, whose links are all connected. — I, 604

In science a law is a statement based on experimental facts. To explain and account for these facts, scientists have adopted certain theories or hypotheses which seem to fit all or nearly all the facts. When new facts arise or later experiments disprove the old ones, the theories must be revised or discarded. To quote Professor Conant of Harvard: "A theory always starts with certain suppositions which we cannot test experimentally. Beginning with these assumptions, we reason that such and such must be true. We cannot, however, say that the theory is proved, but merely that it is probably true."

Today, we hear a great deal of the electro-magnetic field and of the electric basis of phenomena in both physics and biology, that is, in what science divides as inanimate and animate nature. Here is where the Theosophist sees looming ahead a converging point where science will behold light and magnetism and heat and electricity, all as rays of Life — mineral, vegetable, or animal — electro-magnetic at one pole, psycho-magnetic at another. To quote some words from Robert Millikan "Since electric currents are always accompanied by electric fields, electrical disturbances must always be accompanied by magnetic disturbances, and electric radiations are actually electromagnetic radiations. The

study of electromagnetic radiations has shown not only that they have the speed of light, but in fact, that they possess all the properties of light waves, the only apparent difference being in their greater wave length. Light waves are thought to be generated by the displacements of the electrically charged parts of the atom."

Also energy is said to be not locked up in the atom but generated by this electronic radiation, or as we would say, the focus or vehicle.

Sixty-five years ago when H P Blavatsky unfurled her flag of "All is Life" before a scornful and incredulous world, she made the prophecy that in the twentieth century, point by point, to science would be demonstrated that life exists in latency, whether atomic or in the "dead" or so-called non-living matter. Each new step has been perceived first by flashes of intuition, then by slow deduction and test of mechanics, until now the borderline is reached where more than one scientist has said that the road crosses into the metaphysical. Those who have taken that step have had opened to their intuition the perception of the One Universal Cause, the origin alike of the atom of matter and of the unit of organic life — Consciousness, expressed by conscious Beings whose thought-radiations center in atoms of matter.

The following are a few quotations from the first volume of *The Secret Doctrine*, which mark the pathway by which Science is slowly but surely approaching the door to Universal Life.

. . . the primordial Electric Entity — for the Eastern Occultists insist that Electricity is an Entity — electrifies into life, and separates primordial stuff or pregenetic matter into atoms, themselves the source of all life and consciousness. — I, 76

When an Occultist speaks of Fohat — the energising and guiding intelligence in the Universal Electric or *Vital Fluid* — he is laughed at. . . . The Occultist sees in the manifestation of every force in Nature the action of the quality, or the special characteristic of its noumenon, which *noumenon* is a distinct and intelligent Individuality *on the other side of the manifested mechanical Universe*. — I, 493

The chief and most fatal mistake and fallacy made by Science, in the view of the Occultists lies in the idea of the possibility of such a thing as inorganic, or *dead* matter in nature. Is anything *dead* or *inorganic* capable of transformation or change? Occultism asks. And is there anything under the sun which remains immutable or changeless? — I, 507

Today the gross materialism against which H P Blavatsky battled so hard has softened in part. As Dr. de Purucker has expressed it in *The Esoteric Tradition*:

Our best minds thus derive the Universe and all in it from Mind or Consciousness possessing obviously, intelligence and artistry in operation of cosmic magnitude. And from Mind, they derive not only the gross physical universe and all that is in it, but all intermediate stages between. — p 179

The future is giving promise that some of the forerunners in science will acknowledge the conception that everything is life, has its own consciousness each on its own plane, and that Cosmic Mind and Cosmic Consciousness manifest Life as Substance.

(To be concluded)

THE CHRISTMAS TREE — *G. de Purucker*

The Christmas tree, dotted with lights and bright with tinsel that reflects those lights and multiplies them manifold, is an old pre-Christian symbol used by the peoples of Northern Europe at the time of the Winter Solstice; and here is the inner significance of it:

Have you- never heard of the World-Tree with its roots in the realms of spirit and whose branches are the great suns and systems of suns? This World-Tree began in the beginning of this Cosmic Age to bring forth all the stellar hosts. Now the Winter Solstice is the beginning of the cosmic New Year, and so these northern peoples knowing some of the ancient truths, celebrated this cosmic event with the Christmas tree. It symbolizes the World-Tree, and the lights are the suns that bestrew the deeps of Space, hinting to us the message from the divinities who constantly give us the light of love, the light of mind, the light of hope eternal. But so far have we fallen from the wisdom of our forefathers that now the Christmas tree has become merely a sign of festivity, except for the few who preserve its significance in their hearts.

The giving of gifts on the Christmas tree was emblematic of the self-dedication of the gods so that the worlds might come into being. "Here is my gift. It is born from myself."

THE VIRGIN-BORN — *Irene R. Ponsonby*

On or about the 21st of December every year, after passing far to the South, the Sun, speaking astronomically, slips out of the sign of Sagittarius, the Archer, into that of Capricornus, the Sea-Goat. Long centuries before the coming of Jesus, the enlightened of all races recognized this season as the first, in cyclic sequence, of the four Sacred Seasons of the year marked by the four pivotal points of the Summer and Winter Solstices, and the Equinoxes of Spring and Autumn. Each of these periods had its own special significance and was the occasion for appropriate ceremonies and rites.

This particular sacred season, the Winter Solstice, the Ancient Wise Ones called the time of the Mystic Birth. For them it held — as for Theosophists today, it holds — a double significance. Cosmically, it commemorates the recurrent advent of the manifested worlds of Being from out the womb of Space, the Virgin-Mother, or Holy Spirit, through the Being of the Logos; and mystically it denotes the coming into being in the individual initiate of his Christ-hood through the mediation of his own virgin-spirit.

The Immanent Christ in the human being is that part of ourselves we contact in our dominant aspirations, in those times when revealing intuition illuminates situations for us, in the ideals that persist unbroken by the bitter attacks of material existence throughout our lives, in our deep allegiances and self-effacing loves. It is the part of us that is joyously free, soul-satisfyingly creative, compassionate and true, serene and wise. Through exercise and development of these qualities and attributes the initiate throughout his years of self-discipline and aspiration

prepares himself for the Mystic Birth. Thus it is that the Christos-self of every man becomes the Virgin-Born in this second and spiritual birth.

The Universe is a composite Entity, a Being in which, as St. Paul taught, "we live and move, and have our being": the last phrase of the sentence being of especial importance. Such a profound statement has many far-reaching implications.

It means that if the Universe is composite, man is a composite entity, as are all other entities comprising the Universe; if the Universe is a sevenfold compound, sevenfold is the constitution of man; if divinity, or deity, inheres in Universal Being, it is inherent in each of the seven sevenfolds of man; if the Universe is essentially divine in origin, and destiny, divine must be the destiny, just as it is the essence and was the origin of man. Pure divinity — Cosmic Spirits, Super-Gods and Gods — form the most highly evolved sections of the Universe and therefore in the virginity of his highest part man too, is divine, while universal spirit surges potentially through every sub-division of his humanhood. The functions, the forces, the influences, which result in the majestic cosmic processes we marvel at have their counterparts, their stirrings in our lives.

How sad it is that the significance of these mystic truths, so full of aspiration and power, has been lost to us or forgotten, and the beautiful symbols of the lighted Christmas Tree and Holy Family Group become little more than traditional emblems of a festival season! How arresting is their appeal when we know ourselves to be cosmic seeds of Eternity nourished by the spiritual essence and individuality of one divine Parent-Spirit and destined with the sacred tides of initiation to become God-men in our own right, just as the regal Pine becomes the sparkling Christmas Tree; when we feel within *ourselves* the power of divine Fatherhood and

spiritual Motherhood quickening the Christ-babe sleeping in the inner sanctuary — a babe whose presence inspires our highest moments and pleads with us for truer, grander, nobler, self-expression, that whispers to us of the vast reaches of potential expansion surging within us. Knowing these things who can ever again see the lighted Tree or the Nativity Scene without a lifting of his heart in joyful self-dedication as he shares with all beings participation in the wondrous mysteries of the Winter Solstice. The gifts on the Tree also may be said to symbolize the divinity we share with, and that links us to, the Universe — the gift of Selfhood which becomes the Christ-Man. This gift we share with all beings; and our personal gifts one to another are tokens of our individual recognition of this fact.

In *The Esoteric Tradition*, Dr. de Purucker tells us that the Three Wise Men or Magi of the Gospel-legend, Melchior, Kaspar, and Balthasar, when their names are properly understood, represent the planets Venus, Mercury, and the Moon. Thus we learn that Melchior means "King of Light"; Kaspar may be defined as "like unto a Scribe," and Balthasar is associated with Ba'al and probably means "Lord of Riches or of Prisoners." We have also been told that the gifts the Wise Men brought of gold, frankincense, and myrrh are not only associated each with its respective donor, but symbolize attributes or qualities possessed by those participating in the Christos-rite.

All Nature awaits this advent; the kingdoms respond to its impelling sway: bird and beast reverently rejoice and "flowers bloom in profusion" at the coming of the Virgin-Born, just as it has been portrayed in the Nativity Stories and Scenes of tradition. The Christs, like the Buddhas and all other World-Saviors, appear each in their proper season or cycle. These "hours" are marked on the Zodiacal Clock of the Universe and the Initiate-Astrologers — the Shepherds of the New Testament — noted the portents and

therefore were guided not by one star, but by the hosts of stars, to anticipate the coming of a Sage or Savior in quite as natural a way as the astronomers and weather-experts today predict radio-disruption due to sun-spots or storms caused by varying pressures, etc. If the lower kingdoms of universal being are present at the Mystic Birth can we exclude the denizens of the Celestial Spheres?

The Sufi mystics relate a legend of a Wanderer in the Desert Places for whom a beckoning light shone ever beyond his reach. Seeking to attain this radiance he traveled over trackless stretches of barren waste, through sand-storms and intense cold, losing his way oft-times, and having to retrace his steps time and time again. He traversed rocky ravines and was taunted by many a mirage. The glory of sunrise and sunset and the twinkling presences of heaven but enhanced his unsatisfied yearning search. Repeatedly as the years passed the gleaming radiance led him over the threshold of death, but always he returned once more to his seeking. Sometimes the light was dimmed and became just a glow within him. At other times it blazed like a search-light across his vision, all but blinding him.

Thus his pilgrimage continued. He began the ascent of a steep mountain on the peak of which the radiance seemed to rest. Up and onward he mounted: once an avalanche hurled him downward and at another time he traveled with a band of elated pilgrims who sought the light he followed. So onward and upward, ever upward and onward he climbed through beautiful meadows and round perilous bends, until at last he attained the crown of the mountain.

Light, rainbow-shaded, flooded the scene; light, tender and glowing, brilliant and penetrating, emanated from every surrounding atom and radiated in the heart and figure of a Being

in the center of the Radiance.

With downcast eyes the Wanderer of the Desert stood in the blazing effulgence face to face with the Light he had so long and so faithfully sought. Overwhelmed with awe and enraptured by the forces surging within, he dared not lift his eyes.

Then from the earth beneath his feet, from the air about him and the sky above, the voices of Life rang with the challenge: "Raise your eyes and Look! Lift up your eyes! Behold!" The Wanderer lifted his eyes and gazed into the source of the Radiance and beheld — Himself.

At the Winter Solstice, the Season of the Mystic Birth, the Christs, Buddhas, and Apollos have been and are "born of the Virgin." But what significance has the season for us, for ordinary, earnestly striving and aspiring, but fallible men and women? Can there be for us a mystic birth — a happy Christmas in the truest sense of the wish?

The first and among the most important initiations take place in the kitchen, the office, the market, and on the street, in each and all of the contacts of life. Initiation literally means "a beginning." And if, during the weeks intervening between the 21st of December and the 6th of January, as the days steadily but definitely lengthen, there is a similar steady and sure tide of purposiveness in our lives; a growth in character: if we are more generous in our judgment, more thoughtful of others, more self-controlled ourselves, and if we withstand the temptations which belittle us with an ever-stronger integrity; in as far as our motives are self-less there will be for us too a mystic birth of the Christ-Self within.

Even a Buddha or a Jesus had first to make a vow, which is a desire, in some life, that he would save the world or some

part of it, and to persevere with the desire alive in his heart through countless lives. — *The Ocean of Theosophy*, p. 46

Most auspicious is the Winter Solstice, the Season of the Virgin-Birth, for the making of such a vow.

The Theosophical Forum

"THE FOG MUST LIFT" (1) — *M. Sybil Tustin*

In these days, when the conversation turns almost invariably to discussions relative to war and its accompaniments, how may the Theosophist best preserve his own inner peace, and direct the thought currents that whirl about him?

We cannot begin to do this effectively until we, each one of us, has set his own, and no one else's house in order. The old adage, "Example is better than precept," may be trite, but it is also true. Others may listen, temporarily impressed by our Theosophic ideals, but they will also, even while acknowledging their beauty, almost subconsciously question — "Has this man — this woman, got what he or she claims to have — a guiding light which controls and beautifies the life of the recipient?"

Having attended to our own duties in this matter, it is essential to preserve harmony about us, to avoid and discourage destructive criticism of others, to be positive in our attitude to life and its lessons.

In these days of strain and danger to the physical and mental apparatus, often thrown out of gear, concentration tends to become difficult; emotion, whether of fear, anxiety, or grief threatens to usurp the will. At such a time it may be useful to recall the words of someone who has had experience of life's trials and dangers, and hold them in the mind, even repeating them, mantra fashion. You know the sort of thing — each will have some particular favorite, something appropriate to the moment. There are so many in our own Theosophical literature, that it is hardly necessary to quote any. But as an antidote to depression I have often found W. Q. Judge's words invaluable:

I could never let the least fear or despair come before me, but if I cannot see the road nor the goal for the fog, I would simply sit down and wait; I would not allow the fog to make me think no road was there, and that I was not to pass it. *The fog must lift.*

Do you know Bunyan's song from *The Pilgrim's Progress* — "Who would true valor see"? Every line of it inspires courage, steadfastness. I like the bit:

No goblin nor foul fiend shall daunt his spirit,
He knows he at the end, shall life inherit.
Then fancies fly away, he'll not fear what men say,
He'll labour night and day, to be a pilgrim.

When the siren goes, when the bombs begin to fall, such memorized lines may spring to the mind, and may help to recall to us the fact that we are pilgrims whose job is to be undeterred and undaunted by anything that Karman may demand that we should face.

Such lines act as a trumpet-call to the spirit, a summons to the Warrior within, who will not fail to answer the call.

And while life in human form gives us the chance, let us not belittle the value of human sympathy and encouragement. This does not mean a putting of the lower before the Higher Self. We have to reveal our divinity in our humanity, as Jesus the Avatara did. Do not let us forget the letter that heartens, the greeting and commendation that warms. And do not let us neglect, in these days of over-taxed limbs and minds, the Theosophical Lodge meetings. If we make the effort, neglecting no duties, we shall derive new strength from such meetings; and too we shall radiate on those invisible and intangible lines of communication, the Force which works for good, for harmony, for the spread of Truth

and right understanding. We shall be allying ourselves consciously and surely with the Cosmic Builders to defeat the Powers of Destruction

**THE CLOSING OF THE DOOR INTO THE HUMAN KINGDOM AND
THE MOMENT OF CHOICE IN THE FIFTH ROUND (1) — G. de
Purucker**

I would like to say a few words about this "door" into the human kingdom. Of course it is not a door. That is just a way of speaking. Thus the door into a profession means graduation of the student. When the animal graduates interiorly, in other words has brought forth from within, the human qualities, it has graduated into the human kingdom; that is its door.

Now, the difference between the beasts, the plants, the stones, the men, the elementals, and the Dhyān-Chohans, the difference as amongst these, or between any two of them, is one not only of potentiality, but of developing ability. Thus the human child is potentially a man or woman, but not yet so, and will not have the adult ability until he is fully grown. The potentiality is there, but the ability lacks. It is not yet brought forth from within. It will come as the child grows. Just so with the beast. The potentiality of humanhood is there, but the beast is not yet human because it has not yet brought forth from within itself human qualities, attributes, power of thought, power of feeling, self respect, all the qualities that make us men men.

Why was there a door into the human kingdom which closed at the bottom point of the present manvantara? It simply means that the animals at that point had not as yet brought forth *front within themselves* those spiritual, mental attributes, which would enable them to climb up towards the next kingdom, which happens to be the human. They could not make the grade. They did not want to; they did not know anything about it because they were not yet awakened within themselves. The humans did. Consequently there was no door for the humans. They came down the Arc of

Descent, passed the critical point, and began to climb up the Arc of Ascent; and we humans shall continue to climb until the end of the Seventh Round.

Here is a very interesting thing to note: There will be a door for us humans at the mid-point of the Fifth Round, and those humans who do not pass through that door, in other words who cannot then and there begin the grade upwards and enter into the lowest Dhyan-Chohanik kingdom in the Sixth Round, will be by the fact "failures," and will gradually die out, and will have to wait until the next Planetary imbodiment. But those humans who will make the grade, in other words who will make the upwards choice — when the great moment of upwards choice comes — they will continue to ascend the arc.

How does this all arise? There are ten or even twelve classes of monads. We may describe them thus: the three Dhyan-Chohanik classes above the human, that is the highest Dhyan-Chohanik, the intermediate, and the lowest of the Dhyan-Chohanik; then comes the human, then the beast, then the plant, then the stone, then come the three elemental kingdoms. Thus we have three elemental kingdoms on one hand, three Dhyan-Chohanik kingdoms on the other, and four intermediate kingdoms, human, beast, plant and stone, making ten distinct classes of monads; which merely means again, monads divisible into these ten classes because the individuals of each class have brought forth the qualities, attributes, in other words the type, attracting such monads to aggregate together in kingdoms or classes.

When any individual, any one of these ten classes, through evolutionary development brings out latent powers, attributes, faculties, within itself, it gradually rises and passes through the door into the next kingdom, graduating from the lower into the higher, and we call that a door. All the individuals congregate

together who are like each other. All the X's are attracted together, all the Y's, all the Z's — in other words, to use the old proverb, "Birds of a feather flock together."

As regards the beasts: they will all show a tendency to die out in this manvantara, and it is a peculiar process which that one statement doesn't really cover, but it gives you a key. As for instance, all the beasts that were on earth in this Fourth Round will reappear again on this globe earth in the Fifth Round, but will have a shorter time here. In other words, they will come and disappear more quickly; in the Sixth Round still more quickly; whereas in the Seventh Round it is probable that only the very highest of the beasts, the apes and perhaps a few more, will remain. The others will have died out. The reason is they could not "make the grade" in any way. It is my own opinion, subject to correction by those who know vastly more than I do, that probably the next Round, the Fifth, will see almost the last of the great majority of the beasts.

As regards the apes, there is an exceptional case. They are not human, but they are over-shadowed by humanhood. Humanhood is just beginning, as it were, to cast its rays into the ape's brain. If they can "make the grade," they will become men of a very low and degenerate type. No, the word is wrongly chosen — of a very low and *undeveloped* type during the next Round.

These classes are all monads, just as man is a monad. He makes his body to improve as he himself evolves. But when men's bodies become too gross for them, the bodies die out, the human monads won't have anything more to do with them, they are cast aside. "These are not fit rupas for us," they will say, and the bodies will vanish in that way. We shall then bring forth bodies approaching the type of Dhyān-Chohanīc vehicles, that is bodies fit for Dhyān-Chohanīc entities, which we shall have become during the Sixth

and Seventh Rounds; and some humans more advanced than others even during the end of the Fifth Round.

So you see, all these ten classes of monads have the same potentialities, but do not rank alike, for they are exactly like human children in different grades in a school, from the little ones up to the graduate young folk leaving the university. The potentialities are the same, but the different degrees of development vary greatly, and it is these differences of evolutionary development which actually are the ten monadic classes.

But I want to remind you once again that even we humans during the next Round shall have an opportunity to enter the open door into the lowest of the three Dhyan-Chohanik kingdoms; and this open door has been hinted at by H. P. B. and the Masters under the term "the moment of choice," or the time of choice. It means this: that when we shall have reached the middle point of the Fifth Round, more explicitly, the middle point of the Fourth Root-Race on the Fourth Globe during the Fifth Round, shall we be ready? Shall we have evolved to the point where we see the beyond and desire to go onwards towards it? If we have, we shall then pass through the door of choice. We shall then begin to approach the place that the lowest Dhyan-Chohanik kingdom now holds, and that kingdom will have gone a step higher. The Dhyan-Chohanik kingdoms are simply monads who have passed through the human stage, and they are ascending to the god-stage. They will become gods if they are successful. So we shall become Dhyan-Chohans if we "make the grade."

I will just say this: There is absolutely no time to lose, life is so rapid. We humans learn so slowly, and time is as fleeting in a single incarnation really as it is in a manvantara. There is no time to lose to make up your mind to succeed. And it does not require

any abnormal asceticism or martyrdom or anything of the sort. It simply means being more human, so that by continuously becoming more truly human, you become more Dhyan-Chohanic. It doesn't mean only intellectual growth. It means moral growth, intellectual growth, psychical growth, but above everything else moral and spiritual growth.

Who are these Dhyan-Chohans we have been speaking of? If you can imagine the very grandest kind of a human being that your loftiest flights of fancy can picturate, you will come somewhere near, perhaps. They are just like we are, thinking, feeling, evolving beings, above us as we are above the beasts. They have their representatives on this earth called sishtas, remainders.

As a matter of fact, and turning for a moment to the subject of Rounds, it is interesting to note that the Third Dhyan-Chohanic kingdom will enter this earth when we as a life-wave shall have gone on to Globe E. They are the higher class coming on the Round behind us, not in evolution, because they are higher than we, but merely so far as serial appearance is concerned; and these Dhyan-Chohans are now evolving on Globe C.

Referring now to our former topic: I have often thought what a world of warning lies in the words of the Master in the *Mahatma Letters*, "How many millions will perish?" It does not mean that they will be annihilated, it means that they will lose the remainder of this manvantara because they have been malingering before the moment of choice comes, unwilling to see, therefore too weak to go on, too indifferent to climb, lacking in spiritual and intellectual imagination to wish to become stronger and better and finer and nobler. Therefore these will not "make the grade." The truth is they just don't want to.

The Theosophical Forum

EVOLUTION AND MODERN RESEARCH — *C. J. Ryan*

While it is true that many distinguished biologists such as Dr. Frederic Wood Jones and the late Dr. H. Fairfield Osborn, etc., have abandoned the old belief that man is derived from any living or fossil *anthropoid ape* it is important to remember that scientists still believe that man is only a more advanced animal. Having repudiated the Biblical story of the creation of Adam, and ignoring (at present) the Theosophical solution of the problem, scientists see no other explanation. The only real difference between the modern and the older theories of human evolution is that it is now generally believed that the human stock separated from a primitive animal type (probably the Tarsioids) *before* the anthropoids appeared. So far as the *order of precedence* goes, this is the teaching of Theosophy and it was announced by H. P. Blavatsky long before the biologists thought of it. But Theosophy, of course, traces the human stock from a very different origin — a spiritual rather than a brute ancestry.

We all believe in Evolution, Theosophists and Scientists alike, and probably the majority of orthodox church people. Evolution is growth and development, and the only alternative is "special creation," which means that the world is static, that elephants and cats, birds and butterflies, oaks and cactuses, etc., *ad infinitum*, were each and all made at "the beginning" about as they are today. There is, however, considerable disagreement between the Theosophical and the Scientific Schools of thought in regard to what actually evolves, and what is the method by which evolution proceeds; in short what evolution really means. Theosophy presents a generous and comprehensive picture of progressive evolution founded upon the principle of universal consciousness ever advancing toward higher expression in form, all growth

being governed by orderly processes under law, but not by a hard, ugly fatalism. Mind, not necessarily of a human order, is the leading factor in any true evolution; otherwise it is pure fortuity and blind meaningless action.

Unfortunately biologists are doubtful about mind in nature, and in confining their attention, with few exceptions, to structure and function, they try to trace the transformation of one species into another to chemical and mechanical processes which leave out Mind or spiritual factors of any kind. Darwin's main energies were devoted to attempts to establish mechanistic "natural selection" as the leading principle in evolution, which means, of course, that if among minute variations spontaneously arising within a species one appeared which might be of advantage in the competitive "struggle for existence" its possessor would prosper at the expense of less favored individuals. If this advantageous variation were passed on by heredity the descendants would increase and multiply and if other improvements appeared new types would be formed. Darwinists sometimes illustrate this by the allegory of the Long Neck. In times of scarcity when the browsing animals had eaten all the leaves on the lower branches of the trees the one that had fortuitously developed a slightly longer neck would reach the higher branches and thrive while the rest were starving!

When Darwin brought forward his theory everyone knew that breeders were producing faster race horses and carrier pigeons, etc., by the *artificial selection* of the most promising parents, and so when he used the term "selection" it was easily understood. But the vital difference between his "natural" selection and that of the breeders was not so plain to the crowd. In the latter the matter of parents was carefully supervised, all interferences were prevented which might vitiate the purity of the new strain and the individual scions which happened to display the rudiments of

the desired characters were protected from harm. If all this was neglected the new strain disappeared and reverted to the original type, as the artificially developed fancy pigeons went back to the plain "Blue Rocks" when allowed to interbreed at will. But according to Darwin's *natural* selection there was no supervising intelligence to take all this care, nothing but blind forces of nature without foresight or interest in the result. Irrespective of the fact that "natural selection" does not attempt to explain the *cause* of his so-called fortuitous variations (the modern discovery of the combinations of the chromosomes in the germ cells only removes the fortuity one step backwards) it has been found so full of difficulties that it can no longer be regarded as the dominant feature in evolution, though, as H. P. Blavatsky frequently pointed out it has a subordinate part to play. Dr. Robert Broom, f. r. s., the distinguished biologist and anthropologist, sums up his argument for spiritual intelligence behind evolution from the primitive "jelly-speck" to the highest terrestrial life in a trenchant phrase: "The end seems to me to differ too greatly from the beginning to have been the result of chance." — *The Coming of Man*.

The twentieth century has revealed many new facts about the processes of life, and modern research into the mysteries of the cell and its complex activities has greatly diminished the belief in the all-sufficiency of Darwin's leading contribution to the subject of evolution, "natural selection." In this and other aspects of the appearance of new species in progressive order a certain number of leading scientists besides Dr. Broom are nearing Theosophical principles.

In opposition to current mechanistic hypotheses of the process of the appearance of new species, the great American biologist, Dr. H. Fairfield Osborn, worked out a new method of regarding it — the process, not the *cause* — which is important because it approaches closely to the Theosophical teaching that evolution

means the unfolding or unrolling into manifestation of what is already in embryo. In bringing forward his hypothesis, which he calls *Aristo-genesis*, or the process of "absolutely inevitable and *predetermined* evolution, always tending toward improvement," he shows the inadequacy of the great historic attempts to explain the modes and causes of evolution which were founded on such concepts as, (a) spontaneous variations arising fortuitously (Darwin, etc.), (b) inheritance of acquired characters (Lamarck), (c) environment (Buffon, St. Hilaire).

Dr. Osborn of course accepted the fact (recognised by H. P. Blavatsky) that the "survival of the fittest" and "the direct effect of environment" had *some* influence on biological evolution, but he insists that "the real underlying causes of evolution are entirely unknown . . . , and may prove to be unknowable," and "Pure Darwinism never sought to explain the *origin* of new characters. In fact, Darwin invariably used the word "chance" but open-mindedly declared that "chance" was a word that might simply express the ignorance of his time as to principles which might subsequently be discovered," and while modern observations undreamt of by Darwin have, according to Dr. Osborn, brought new facts to light they have in no way diminished the fact that the *cause* of variation is still totally unexplained by and unknown to scientists. Accepting this fully, he shows good reason for believing that the cause, whatever it may be, is connected with the germ plasm. He finds that the unfolding of the potentialities locked up in this mysterious "cause" are released in orderly response to the challenge of environment. They are not survivals from innumerable *accidental* mutations which happened to persist because they fitted into the environment. In the great families of mammalia, for instance, the earliest representatives possess the potentialities of the variations which gradually appear and finally segregate their descendants into genera or species. Dr. Osborn

made intensive studies of the mammalia to establish this "Creative Aristogenesis," especially in the Proboscideans or elephant family throughout its 14,000,000 years of existence, and found, "absolutely concrete and irrefutable evidence of the actual modes of the origin of new characters in species, genera, and higher divisions." It is as he writes, "fatal to Darwin's working hypothesis of adaptation of survival of variations in any degree subject to chance."

In the teaching of Theosophy, however, the cause of the appearance of the great mammalian types (the larger "root-types" of *The Secret Doctrine*) is the existence and influence of prototypes on inner planes of life, which become physicalized, as it were, and activate the original germ plasms. After this, the physical forms differentiate within certain limits (as in the teeth, etc., of the Proboscideans) by the ordinary secondary, physical causes such as climate, isolation, sex, diet, etc. Underlying all this, however, as H. P. Blavatsky writes in *The Secret Doctrine*, II, 649,

is a sub-conscious intelligence pervading matter, ultimately traceable to a REFLECTION of the Divine and Dhyan-Chohanian wisdom.

This is what has sometimes been called "the mystical dweller within the germ cell" activating the *nucleolus*.

The quotations from Dr. Osborn are taken from his articles in *Science* for December 2, 1932, and February 24, 1933, which are worth careful study.

Dr. Richard B. Goldschmidt, now professor of Zoology at the University of California, one of the world's leading biologists, has also broken with the pure Darwinian tradition and has unwittingly moved toward one of the most important teachings of the Ancient Wisdom about the appearance of new forms of life.

Darwin required innumerable fortuitous variations and aeons of time for the laborious process of working out a new species by "natural selection," but Dr. Goldschmidt discards this principle and offers an impressive array of evidence in favor of rapid mutation in the embryo by which new species would emerge quickly, geologically speaking. In some cases two or more drastic changes would occur at the same time, in others the speed of inter-embryonic development of one or more normal characters would be reduced or increased allowing others to get ahead and dominate, etc. As he points out, such mutations, rare as they may be, might be fraught with tremendous results. They would satisfactorily explain the mechanism of the appearance of the air-breathing Amphibians from certain fishes. To produce such a revolutionary change by the extremely slow process of natural selection working on an occasional "accidental" variation would be, as Dr. Goldschmidt says, incredible, because no intermediate steps are possible and more than one mutation had to take place *simultaneously* to adapt the fish to terrestrial conditions.

But the mechanism of the transformations (if correctly interpreted by Dr. Goldschmidt) is far from explaining the deeper cause of the simultaneous and other mutations which produce such (literally) epoch-making consequences, for we must remember that the Amphibians led the way to the Reptiles and the Mammals! Was all this the result of a rare and accidental combination of chromosomes in the embryonic cells of some fish? One of Dr. Goldschmidt's critics, while admiring the austere simplicity of his interpretation of the evidence evidently fears that it is dangerous because it may lead to a teleological explanation, and so he calls it "the simplicity of a belief in miracles"! But why should the teleological explanation be so terrible? Theosophists do not think it is at all subversive to reason.

According to the Ancient Wisdom such fundamental changes are not produced by fortuitous happenings, but have a lawful place in the great scheme, and are traceable to Divine or Cosmic Intelligences as mentioned above. Physical matter is only a small part of the real universe. According to Theosophy the "astral" or ideal forms or "germs" of the new orders of life, were "projected" from inner planes of being into the terrestrial world when the conditions were suitable. These subtil elements forced the mutations in the embryo which provided the mechanism by which the more advanced type was able to incarnate, apparently "out of the blue." H. P. Blavatsky explains that when this is done innumerable minor modifications follow by the so-called "natural" ways familiar to biologists. She writes:

Those purely *secondary* causes of differentiation, grouped under the head of sexual selection, natural selection, climate, isolation, etc., etc., mislead the Western Evolutionist and offer no real explanation whatever of the "whence" of the "ancestral types" which served as the *starting point* for physical development. The truth is that the differentiating "causes" known to modern science only come into operation after the *physicalization of the primeval animal root-types out of the astral*. — *The Secret Doctrine*, II, 648-9

Dr. Goldschmidt's hypothesis should be valuable as an open door for biologists to find their way to the teachings of the Ancient Wisdom on the real meaning of "Evolution." An article by him, setting forth the main points of his argument in technical terms will be found in *Science* for December 15, 1933.

EGYPTIAN TEACHINGS IN THE LIGHT OF THEOSOPHY — *L. Whellams and I. M. Oderberg*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

Verily there was some truth in the old saying, "The Wisdom of the Egyptians." . . . — H. P. Blavatsky

Origen tells us (in *Contra Celsum*, Bk. I, ch. xii) that the philosophers in Egypt had a "most noble and secret wisdom concerning the nature of the Divine which was disclosed to the people only under the garment of fables and allegories . . ." and indeed we cannot, by a study of the writings of and the comments about these ancient people, help but reach the conclusion that in its prime the civilization of the Nile valley possessed many of the keys to the doors of the Esoteric Wisdom.

From a review of the hieroglyphs, and the myths and legends, that have come down to us, we find that the wisdom the Egyptians knew and taught was enshrined in "picture writing," or as they termed it "the language of the gods." Indeed, the hieroglyphs seem to have occupied a position comparable to the language of ancient India, Sanskrit, being, as it were, the tongue of the Initiates and fully comprehended only by the Initiated.

The mundane meaning of these hieroglyphs and the eventual deterioration of their symbology at a later date does not concern us here, but it is probable that at about the period of the first decay, occurred so many of the erosions now noticeable upon the temple wall inscriptions and elsewhere. "The Napoleon Memorial Books" of the antiquities of Egypt as they were in Bonaparte's time indicate many hiatuses very clearly, and as the context is usually in good condition, there is only one conclusion at which we can arrive: that the Egyptians themselves erased the revealing portions of the glyphs, for fear they should "give away" too much to later and more

"profane" peoples.

However, even in those relics which survive, it is certain that anything associated with the "gods" was of immense importance from the standpoint of the ancient Teachings. There were several "families" of gods, each with its own distinct set of symbols and philosophic meanings, and most of these deities had a "sevening" aspect much as the "seven principles of man" as given in present-day Theosophical literature have a "sevening" aspect: that is, that each principle contains the germ, as it were, of the other six.

In the attached diagram, within which may be found symbolized many of the ideas of the ancient Egyptians (indeed, in it can be seen some of the actual hieroglyphic forms), we have endeavored to correlate these ideas with corresponding teachings of the presentations of Theosophy as we know them today.

**CORRESPONDENCES BETWEEN THE CELESTIAL AND
HUMAN HIERARCHIES**

FORMLESS Horus the Elder	1. Milky Way		
	2. Seraphim Nebulae: Comets		
	3. Cherubim Fixed Stars	Ra	Paramâtman
FORM Horus the Younger	4. Thrones Saturn ♄	Osiris	Aakhu Âtman
	5. Dominations Jupiter ♃	Isis	Khaibit Buddhi
	6. Virtues Mars ♂		Ba Higher Manas
	7. Powers Sun ☉	Thoth	Ab Lower Manas
	8. Principalities Venus ♀	Set	Ku Kâma
	9. Archangels Mercury ☿	Anubis	Anch Linga-śarîra
	10. Angels Moon ☾	Nephtys	Prâna — Jîva
	11. Men Earth		Khat Sthûla-śarîra

The symbology of the "gods" and the Egyptian hierarchical scheme is very complex, but one of its keys indicates the association with the component parts or principles of man. In this direction, it may be interesting to notice that clues lie in three divisions of any one "god": (a) the aspects of that god; (b) the attributes of the god; and (c) the powers of the god. In one sense, we may describe (c), as far as the principles are concerned, as the principles "in action," to use a colloquialism.

A DIAGRAM OF THE CAUSAL (POTENTIAL) MAN
ACCORDING TO THE ANCIENT EGYPTIANS

At the top of the diagram we find Ra, and it will be noted that Ra is placed on the Paramatmic plane. To the Egyptian, however, Ra had "many forms" and the three most important correspond with Parabrahman, Paramatman, and Brahman-Purusha-Prakriti.

Called the "Sun god," Ra's symbol is the circle and the dot — a universal symbol for the Logos (Supreme Self) manifesting as Khe-pera — and stands for the indwelling Self or immanent Horus. Ra saith: "I am the one who made heaven and the secrets of the double-horizon in which I have placed the force (or soul) of the the gods." (Turin Pap. cxxxiii) Ra occupies a position above and over the place of thrones.

Ra regarded as the First or Unmanifest Logos is the Paramatmic aspect, but in his various "forms," as Ra-Tem, Ra-Harmachis, etc., he symbolizes Atman and its efflorescence on lower planes. (Compare the Highest Duad, Highest Divine Triad.) The spirit of Ra was believed to dwell in the Ben stone (see page 435).

The "birth of Ra" occurred when manifestation took place upon the Atmic plane, when the "boat of Ra," or the Karana-sarira, was launched upon the "buddhic waters." Ra saith: "I am he who came into being in the form of Kheper. I became the creator of all that came into manifestation. Heaven existed not, nor earth, nor had any created thing of earth."

In the "Praises to Ra" from the Royal Tombs of Thebes and translated by Budge, the worshiper exclaims: "Praise be unto thee, O Ra, exalted power, thou Word-Soul (Logos) who resteth on his high place. . . . Thou strengthened thy hidden aakhui (monads) They have their forms from thee. . . . Thou lord who advancest. . . . Truly thou art Isis. . . . Whose head shineth more than what is in front of him; truly thou art the bodies of Nephthys. . . . Who art united in thy members, One, who collecteth all seed; truly thou art the bodies of Horus."

Next on the diagram are the "occupants" of the plane of thrones, the first, Osiris, Lord of the Underworld, and the second, Isis, his feminine aspect or vehicle. The symbol of Osiris is the throne, above which is the opened eye, the hieroglyph for Isis being simply the throne. In the Egyptian system there were five planes of mani-festation, and in the Legend of Isis and Osiris these five planes were called the "five superadded days." (See Plutarch: *On Isis and Osiris*: "Upon the first of the five days Osiris was born, and a Voice from

Heaven proclaimed, "the Lord of all hath appeared") This first plane corresponds with Atman and all below it represents the Tuat or underworld, over which Osiris ruled.

Amongst the many symbols of Osiris, an important one is the Tet, which shows the four lower planes of manifestation (Tattu or Dadui), through which "the tree of life" penetrates, and by aspiration, finally attains the summit.

There is interesting and illuminating information about Osiris in *The Theosophical Glossary* of H. P. Blavatsky, where he is referred to as the "first manifesting deity (our third Logos)." The whole monograph is worth close study.

In the work previously mentioned, *On Isis and Osiris*, Plutarch states that "Osiris was beautiful of face but with a dull or black complexion — his height exceeded five and a half yards." Interpreted, we have a clue to much that is hidden in this sentence. The Logos at manifestation is perfect potentially, but as it were nonexistent, accordingly symbolized by the color black, which means the darkness *beyond* light as well as the darkness "beneath" light. In this case, black stands for negation, i. e., something beyond our conception. The "five-and-a-half yards in height" refers to his five planes on which he accomplished his evolution, and the half symbolizing the commencement from the Unmanifest above Atman, i. e., Ra.

The four chief aspects of Osiris were: (a) Osiris-Ptah (Light), the Spiritual; (b) Osiris-Horus (mind), the intelligent or manasic aspect; (c) Osiris-Lunus, the lunar or psychic aspect; (d) Osiris-Typhon, the physical, material, and therefore passionate or turbulent aspect. In the four aspects he symbolized the dual ego: the divine and the human, the cosmico-spiritual and the terrestrial." — H. P. Blavatsky

There are two further ideas about Osirian symbolism. The first refers to the "body of Osiris," which is to say the desire-body, astro-mental, in which the Self is "imprisoned"; and the second thought concerns the birth of Osiris, or

the *manifestation* of the Highest Self.

Isis comes next in the chart, her symbol being the throne. She was the Divine Mother, the bringer-forth of the Horus, her symbol indicating that she was the vehicle or seat of Osiris.

In man, Isis corresponds with the Buddhic principle. The sister-wife of Osiris, her symbol the throne unoccupied (or incomplete without the eye of Osiris), she was the transcendental *vehicle* of the universal creative potency.

Viewed from the terrestrial aspect, Isis is Nephthys, hence she weeps for Osiris (in the legend of the dismemberment), because his divinity has become submerged in material existence.

Associated with Isis are one or two intriguing symbols, including the "thet," the so-called red carnelian "buckle of Isis." The red blood of Isis symbolizes the life-currents between the buddhic and astral planes by means of which the lower is transmuted to the higher. Another symbol is the vulture-cap, which stood for the transmuting power of Buddhi or Isis ('the lower nature, or personality, is consumed by vultures.')

The most mysterious of all the Egyptian pantheon comes next in the chart, Thoth or Tehuti, "the heart of Ra." In the symbolism the Ape of Thoth is crowned with a crescent containing the disk. As the vehicle of Ra, he is a center of Being on the mental plane ('the Eye in the boat'). This symbol would make of Manas the third Logos of the hierarchy within man.

Thoth is pre-eminently the symbol of the Divine Mind (cf. Afu-Ra, the Higher Self involved in matter). Afu-Ra stands in a boat, and has a ram's head surmounted by the Solar Disk. Ra saith: "The face of those who see thee (Thoth) will be opened in thee." He is the power or center or word by which the will of the god is carried into effect, and he corresponds to the manasic plane. The following is a thought-provoking citation: "And Cronos (Amon) going to the land of the South, gave the whole of Egypt to the god Tuaut (Thoth) to be his kingdom," ('Sanchuniathon,' *Cory's Ancient Fragments*).

To digress a little here, it is worthwhile to point out that the upper and lower natures in man, or more particularly, the upper Manas and the lower, were symbolized in the Egyptian legends by the terms Upper and Lower Egypt. It will repay the student to examine carefully the names of the nomes (counties or districts, we would call them today), and cities of Ancient Egypt, bearing in mind this symbolic division of the "two lands," and he will have many clues in his possession to the more recondite teachings about the inner nature of man. For instance, Hermopolis (the Greek form of the name), the great city of which Thoth was the patron or presiding deity, was located in Upper Egypt, in certain relationship with other cities which indicate some of the knowledge the Egyptians possessed about the intricacies of our manasic make-up. (1)

That this is no mere chance or coincidence, but must have been the original planned intentions of the first architects and builders in old Chem, is evidenced by the symbols of the various nomes used, and also by the brilliant light shed on obscure passages of the glyphs and portions of Egyptian myths, where names of nomes and cities occur as incidents in journeys.

To return, Budge says that "Thoth was called the heart and tongue of Ra," i. e., the Reason, Manasic or mental powers, of the gods. There is an interesting note in H. P. Blavatsky's *Theosophical Glossary* about Thoth, and it may be helpful to some to collate Thoth's symbol of the dog-headed ape, with the events of the middle Third Root-Race as recorded in *The Secret Doctrine*. The actual association would rather refer to the happenings of the period of the descent of the Manasaputras than to the miscegenating stocks or results thereof being taken as a symbol of Thoth or Manas.

A notable thing in the chart is the fact that the symbols for the kingdom of Thoth form the "Opened Eye." Said Proclus: "He (Thoth) presides over every species of condition, leading us to an *intelligible* essence from this mortal abode, governing the different herds of souls." (Italics our own.)

The meaning of his other symbol, the ibis, is suggested in the observation

that the "ibis devoured snake-eggs (i. e., symbols for the "bad serpents") of Egypt." On his head, Thoth wears the ibis symbol, thereby indicating its association with the Higher Mind (above the lower mind, eating the snakes or snake-eggs, etc., etc.).

The nine Apes which sang to Ra as he entered the *Tuat*, symbolized "the herds of souls" that shall pass through Horus to Divinity. This is equivalent to the Saints, in Christian symbology, who shall arise with Christ. In their lower aspects, the dog-headed Apes stand for the automatic or subjective mind (i. e., uncontrolled desire aspects, automatic body control, etc.).

Set (or better Sut) next attracts our attention. Set and Nephthys were the last two emanating from Ra. Set stands for the force of material construction, material evolution and spiritual involution. In man, Set symbolizes the Desire-mind (Kama-manas), and as the "desires and passions," is "the opponent of Osiris." (Cf. H. P. Bla-vatsky's *Theosophical Glossary on "Set"; "Nephthys"; and "Anubis"*).

Nephthys, "the mistress of the Temple," was "the extreme limit or end" (see Plutarch's *On Isis and Osiris*), and as such indicated the physical plane or principle. Her emblem was the cup which contains the higher principles. Usually she is associated with Isis (q. v.) in the sense that spirit and matter are associated, and therefore corresponds with sthula or the physical. Nephthys signifies what is in the underworld and "invisible," Isis that which is above and "visible." The circle touching both is the horizon, which is called Anubis (q. v.).

"The Opener of the Path," Anubis (Anpu), follows. He represents the astro-physical body with its mechanism of sensation and action which open the pathway of the soul's development. He is the vehicle of the soul, the product of Divine Energy and matter on the physical plane. (Osiris and Nephthys are his parents. Note that Set is not the father of Anubis-Anpu! there is more than one aspect of Anubis.) Apuleius, in his *Golden Ass*, says " [Anubis] that messenger between heaven and hell, displaying alternately a face as black as night, and as golden as day."

The last of the deities the chart symbolizes is the most difficult to deal with shortly, Horus (the son of Isis and Osiris), for which reason he is not actually indicated *on* the chart. There are so many aspects to Horus! In one, he is similar to the Theosophical concept of the Sutratman, the "thread-soul," on various planes, while Horus the Elder, emblemized the Self primordially manifest on the higher buddhic plane, Isis. Horus the Younger is the self born in the soul on the buddhic plane (Isis), prior to entering upon birth on the manasic plane. Horus the Child signifies the four sons of Horus, and indicates the birth of the inner Buddha in the soul on the buddhic (Isis) plane commencing to incarnate in the human vehicles (cf. the teaching about the Kumaras).

"Horus, the son of Osiris, born by Isis, is he with whom thou didst fill thy mouth" (see the symbology of the Mouth). The complex nature of Horus is one well worth the closest study.

Shortage of space requires us to hurry on to the symbols indicated in the diagram, which in itself is an illustrative symbol merely, and not a picture.

With regard to these symbols, the reader is called upon to note that the diagram forms certain shapes conforming to some Egyptian hieroglyphs. Many more not indicated in the chart, occur, shedding a flood of light on other of the Egyptian teachings, but space is at a premium, and simplicity is a thing much to be desired. Students may be able to fill in further symbols as these occur to their minds.

ANCH

LEVEL

BRIDGE

BEN STONE

CAUSAL BODY

RA

OSIRIS

ISIS

THOTH

NEPHTHYS

The first is the Ankh (spelled Anch in *The Secret Doctrine*, Volume II). It represents the manifested life of the Logos (the Sun — Ra), both the higher and the lower natures — the Divine Ray passing down through the lower quaternary. The circular part of the symbol means the higher planes. It should not really be quite circular, but more like a tear-drop, or somewhat egg-shaped (cf. the tear-drops of Isis), indicating the converging downwards of the activities. From the standpoint of man at his present stage of development, the aspiration upwards expands, and the tear of Isis become the "reborn" Osiris, the drop "reversed." The Ankh also symbolizes the life-principle (via the Pranic stream) in all things.

The "level" was a symbol of Maat, Truth, and was a testing instrument (its significance on the manasic plane should be noted). It is the plane upon which stands Osiris (also an important philosophic concept).

The "bridge" was the symbol for the Antahkarana, or joining together of the part "below" and the part "above." It was the hieroglyphic for the conjunction "with."

The pyramid on the base, also occurs in the diagram. It symbolized the unity of Osiris, Isis, and Thoth, forming the "throne of Ra." (The same idea was often depicted as the figure of Osiris (including his aspect Isis) standing on the level, and holding the three scepters). The pyramid is sometimes shown upon a short shaft and it was then called the Ben stone. In early dynastic

times it was looked upon as the home of the Spirit of Ra, which made itself manifest at "creation" by emerging from the top in the form of a bird called the Bennu Bird, in later texts pictured somewhat ibis-like with a long crest of two feathers. This was symbolic of the incarnation of the Soul or vehicle of Ra and the heart of Osiris. It was self-produced and appeared each "morning at dawn" on the sacred Persea tree of Annu. Now this is the Phoenix which appeared once every 500, 1461, (2) or 7006 years. Anu (Heliopolis: the On of the Old Testament) was used in the texts to symbolize the higher planes (Atman, Buddhi, and the Higher Manas). A temple called Het Bennu symbolized by a Bennu bird in a square with a smaller square in the top right corner, was in early times dedicated to it. This was the "great house of the Aged One (Ra) who dwelleth in Annu"; i. e., the temple of the soul is in the inner sanctuary of the Eternal Spirit, whose abode is on the higher planes of the soul.

This was the Higher Triad or the Unity of Atman-Buddhi-Manas. The reincarnating part of man's constitution was the phoenix, which clothed itself in a new personality or lower quaternary in each new earth-life. The pyramid is also seen above the square, indicating the four planes of the lower quaternary, the four sides or foundation or vehicle of the upper triangle. The whole glyph (pyramid above square) in a general way corresponds to the so-called "causal-body" and was in early times shown by the hieroglyph as shown in the Table. (See Ka.)

Applied to the cosmos, the term "each morning at dawn" refers to the dawn of a manvantara.

The symbol in the center of the diagram forms a mouth and was called by the Egyptians Ran, i. e., "the essence." As a principle of man the Ran or Ren stands for the transmuted Individuality of a man which is developed through the aspirations and effort of the personality. The Ran was considered to be seated in the Ka, and indistinguishable from it in fact. As a kind of laya-center it bridges the great gulf between the lower manas (personality) and the higher, but was usually referred to as being on the

higher mental plane. In another way this "center" can be looked upon as the "unopened eye" which is hieroglyph for "a" and means "towards" or more mystically "a way," "a gate." But in our diagram it is shown with a center and therefore forms the "opened eye." Now, it stands for YR, meaning "to create," "to contemplate something," "manifestation." Thus it forms the center around which revolves the uttermost parts of our universe — is the "center from which we cannot err" — our conscience or consciousness in other words (on the mental plane of course) now no longer sleeping. Thus we see the correspondences: for the Human Monad, "the Bhutatman, now aspires upwards to the Spiritual Soul — its root or base — the Reincarnating Ego." And so in the Ritual of the Egyptians the "soul" in the Judgment Hall says: "my eye is opened" and "I speak truth (Makheru) I am justified."

We have shown on the diagram the principles according to the Egyptians, but these are subject to much modification and elaboration. However, generally considered, the Aakhu or "Shining One" comes first. This principle is perhaps the efflorescence of the BA — higher manas or Individuality rising above the lower mental nature or Personality to a self-conscious individual life-center; and in this aspect it contacts Osiris (Atman). We could say this corresponds to Jivatman; but going a little deeper, it really is much more. The reader is asked to consider the relationship between the Aakhu (and also two other principles not shown but very frequently met with in literature on the religious or philosophic beliefs of Egypt: that is, the Sahu and the Sekhem) which should be looked upon more correctly as a Ba or "soul" of an unusual degree of attainment, and the "three glorious vestures or bodies," or Trikaya. According to the *Occult Glossary* of G. de Purucker the Trikaya consists of (1) Nirmanakaya or "formed body" (2) Sambhogakaya or "participation body"; and (3) Dharmakaya or "continuance body." We would refer those interested to *The Voice of the Silence* and H. P. Blavatsky's *Theosophical Glossary*.

The KA or "double" is sometimes considered by exotericists to stand simply for what the Theosophist calls the Linga-sarira. While this is all right and convenient as far as it goes, it does not go far enough, for the Ka is much

more than the Linga-sarira. The Ka is that "forming body" or "causal body" of man which after "death" (involution) enters the tomb (of material existence) and there in the "house of the Ka" (the inner being) has to be fed or nourished with "meat and drink" (aspirations toward goodness and virtue) by the "priests" of the Ka (the spiritual mind of man), and thus develops during its incarnation. A better comparison in Theosophical terminology is Karana-sarira or Karanopadhi, that "causal-body" or "causal-instrument" on the buddhi-manas plane.

As an instance of the many similarities between the Egyptian and the Sanskrit, it is interesting to compare Ka (Egyptian) with Karana (Sanskrit). Also, see Karman, i.e.,

all that total of a soul which is itself, brought into present being by its own willing and thinking, and feeling, working upon the substance of itself, and thus preparing its future destiny, as its present existence was the destiny prepared for itself by its own past lives." — G. de Purucker, *The Esoteric Tradition*, p. 56

The lowest "physical" aspect (or seventh counting downwards) is of course built on the "design-body" or the Linga-sarira.

Ab, "the heart," is the atma-buddhic principle in the Karana-sarira. It was this which was weighed against the "feather" of truth (see the level) in the balance of Thoth. *There are two aspects, the higher corresponds to the Spiritual Soul, or the Individuality; the lower corresponds to the Human Soul, or the Personality. This lower aspect is the vehicle of the Spiritual Monad and the Human Monad.*

Ba, "the soul," is the vehicle of the spiritual Ego — Reincarnating Ego — which may rise to live with Osiris (Atman) in heaven (Buddhi), but will return again to the body (the mummy); cf. the ram-headed form of Osiris called Ba; and also cf. Afu-Ra. The Ba corresponds to the Higher Manas (cf. Ab).

Khaibit, "the shadow," may be referred to as the Isis or buddhic aspect of the

Horus, that is to say, that part of the Karana-sarira or Karanopadhi which develops by means of the aspirations (of Manas) and the experiences of the lower self. (See H. P. Blavatsky's *Theosophical Glossary*, page 161.)

The Center may best be described by a quotation: "*Consciousness is on the mental plane and not below it.*" (See also the notes on Thoth.) *Across this center there is formed a "bridge" by the Ba and the Ab crossing or reflecting one another. This is (as are all the other divisions) a sort of laya center.* (The reader is again referred to H. P. Blavatsky's *The Theosophical Glossary*, page 161 on the Karana-sarira. See also Ba.)

The concluding note to be dealt with by this paper involves the Khat, and the quotation that follows best conveys the meaning of the khat: "Thine essence is in heaven, thy khat is in the earth." It is simply the fleshly vehicle of all the principles, the Sthula-sarira. The reader who has been interested in the subject of Symbolic Geography, wherein the names of the nomes and cities of earth have significance, will be intrigued, at the very least, to perceive that Mendes (in Lower Egypt) symbolized the lower nature, the symbol being the stranded fish (as it is called), which is also the symbol used for the khat.

This paper is an attempt to lift the veil that hides the Egyptian teachings from the unintuitive. The study of the hieroglyphs would yield an inexhaustible mine of information, which, correlated with what teaching appears in such works as *The Secret Doctrine*, *The Esoteric Tradition*, and *Fundamentals of the Esoteric Philosophy*, as well as the two Glossaries of H. P. Blavatsky and G. de Purucker respectively, would provide a wonderful picture of the extent of that "wisdom of the Egyptians" for which they were so justly famed.

FOOTNOTES:

1. Since writing this article, we have come across a very interesting work: *Ritual of the Mystery of the Judgment of the Soul*, by M. Blakeden and published for the Soc. Ros. in Anglia by Quaritch Press, setting out "the

papyrus of Ani" in a most illuminating way, while keeping strictly to the text. See also article in THE THEOSOPHICAL FORUM, July, 1940, "The Symbolic Geography of the Ancients," for an interesting excerpt from this book.

ORIGIN OF LIFE — *Emma D. Wilcox*

In the history and legends of all peoples from the beliefs of the crudest savage to the religions and philosophies of the most advanced minds of civilizations a dominant question has been, Whence came life, and what was its creation?

Today Science has taken the search from the hand of religion and philosophy, and geology and biology go hand in hand in seeking the beginnings of life. Both agree that life expresses itself in what is termed protoplasm. Here we come to the reef upon which all ships of science break. If protoplasm is life, when did it appear on Earth and where did it originate?

If the story of Geology is true as to the slow evolution of the globe of our Earth from an original gaseous or semi-fluid or molten state, then how and when did the first protoplasm appear? Also, if protoplasm is a chemical combination of simple, native elements, then what changes occurred in the evolutionary process to combine them as life in one case, and otherwise leave them free? The quandaries of thought into which such reasonings bring them are acknowledged by the scientists themselves. Many of them are complaining that the new experiments are drawing them more and more toward metaphysical concepts, many of which the old Greek philosophers held.

In one of her writings, H. P. Blavatsky speaks of a cyclic curve to scientific theories which in each new era brings around a recurrence of thought of an antecedent one but modified. A hint as to the reason for this is given by her:

Occult philosophy divulges few of its most important vital mysteries. It drops them like precious pearls, one by one,

far and wide apart, and only when forced to do so by the evolutionary tidal wave that carries on humanity slowly, silently, but steadily toward the dawn of the Sixth-Race mankind. — *The Secret Doctrine*, I, 558

Where, how, and when did life originate on Earth? In our western world, the general thought may be summed up into three main theories, each of which may be accepted as a facet in the Occult teaching of universal Life within its myriad forms. These three theories can be named as Special Creation from without; Spontaneous Generation from within; and Biogenesis.

The first is the theological one of an extra-cosmic Creator who said: "Let the earth bring forth grass, the herb yielding seed, and fruit tree yielding fruit after his kind, whose seed is in itself, upon the earth" (*Genesis*, i, 2); and later, it is interesting to note, the order was given that the "waters bring forth abundantly the moving creature that hath life." This latter agrees with the story of geology that the first forms of life developed in marine waters.

Science, as well as the Occult teaching, repudiates the idea of an anthropomorphic God creating something out of nothing, but some scientists are no better in thinking that life springs into existence by the chance meeting of certain chemical elements. As H. P. Blavatsky words it:

Have they not, these Titans of thought, dragged down God from His hiding-place, and given us instead a *protoplasm*?
— *Isis Unveiled*, I, 223

And as to special creation, she states:

No more than Science, does esoteric philosophy admit *design* or "special creation." It rejects every claim to the "miraculous," and accepts nothing outside the uniform and immutable laws of Nature. But it teaches a cyclic law, a

double stream of force (or spirit) and of matter, which, starting from the *neutral center* of Being, develops in its cyclic progress and incessant transformations. The primitive germ from which all vertebrate life has developed throughout the ages, being distinct from the primitive germ from which the vegetable and the animal life have evolved, there are side laws whose work is determined by the conditions in which the materials to be worked upon are found . . .

. . . so there are centers of creative power for every ROOT or parent species of the host of forms of vegetable and animal life. This is, again, no "special creation," nor is there any "Design," except in the general "ground-plan" worked out by the universal law. But there are certainly "designers," though these are neither omnipotent nor omniscient in the absolute sense of the term." — *The Secret Doctrine*, II, 731

What Science, of necessity, acknowledges as "Mind-stuff," we recognize to be intelligent entities, as part of Universal Being, working in and through universal nature.

Belief in the idea of spontaneous generation of living things from inorganic matter is so deeply ingrained that it still persists in the popular mind. This probably arose out of the old idea of a primordial slime, a mixture of earth and water from which under the heat of the sun, plants and animals sprang into existence. Certain forms of lichen, for instance, were supposed to be caused by dampness transforming the dead wood into organic life, or the leaf-like shoots which appear on the surface of pools and stagnant waters were thought to be a condensation of sun and water into organic life.

Since the discovery of micro-organisms — with which both earth and air are teeming — has disproved any possibility of

spontaneous generation of living organisms in earth-life today, the question has been raised as to the first appearance of protoplasm, such as might occur from the slow gradual formation of such groupings of chemical elements needed in organic substances. The millions of years given by geology to the Azoic Age would allow for this. Recent discoveries in the action of enzymes seem to aid this theory. In some bacteria nuclear particles are found scattered through the cell, not in a unit; in others, quite as simple, a sort of symbiosis of differing protein units proves an enzyme activity. As yet, science has no generally accepted theory as to how enzymes act and remain unchanged even when removed from their organism. In *The Secret Doctrine*, we find these words:

. . . should spontaneous generation be indeed proven impossible in our present world-periods and actual conditions — which the Occultists deny — still it would be no demonstration that it could not have taken place under different conditions. . . .

. . . If spontaneous generation has changed its methods now, owing perhaps to accumulated material on hand, so as to almost escape detection, it was in full swing in the genesis of terrestrial life. Even the simple physical form and the evolution of species show how Nature proceeds."
— *S. D.*, I, 150

The following from *The Mahatma Letters to A. P. Sinnett* is as true today as when written, some sixty years ago:

Life, after all, — the greatest problem within the ken of human conception is a mystery that the greatest of your men of Science will never solve. . . . It can never be grasped so long as it is studied separately and apart from universal life. . . . Let them try and examine, or analyze life apart

from organism, and what remains of it? Simply a mode of motion; which, unless our doctrine of the all-Pervading, infinite, omnipresent Life is accepted — . . . has to remain unsolved. . . . The greatest, the most scientific minds on earth, have been keenly pressing forward toward a solution of the mystery, leaving no bye-path unexplored. . . . and all had to come to the same conclusion — . . . namely, that life in its concrete manifestation is the legitimate result and consequence of chemical affinity; as to life in its abstract sense, life pure and simple well, they know no more of it today, . . . Spirit, life and matter, are not natural principles existing independently of each other, but the effects of combinations produced by eternal motion in Space." (pp. 158-9)

Biogenesis or an eternal continuity of life is now held by an increasing number in Science. The three main qualities of protoplasm, found inherent in no other form of matter, presuppose that the nature of organic life is entirely different from inorganic; these three qualities being the power that protoplasm has of producing internal motion, of self-nutrition and of reproduction.

Geology tells us that the Earth in its beginnings was at one time a molten liquid mass and at another covered by gases which were incapable of sustaining life. Then, if life can only come from life, where was it during those ages? Two theories as to this question are prominent today. One theory holds to the possibility of a transference of protoplasmic germs from another planet, but that raises the question as to how they originated there? The theory does not answer the question. Meteoric stones have been found to contain organic carbon in their centers it is true, but as to free organic compounds or micro-organisms passing through space to Earth, recent discoveries of the power of cosmic and ultra-violet

rays to transform or destroy organic matter make improbable such transference. Scientists are also finding out the presence of continental layers around the Earth in space, the existence of which was told sixty years ago by the Theosophical Teachers:

our globe has its own special laboratory on the far-away outskirts of its atmosphere, crossing which, every atom and molecule change and differentiate from their primordial nature." — *The Secret Doctrine*, I, 583

And again, speaking of the simple chemical elements of which all matter, organic as well as inorganic, is composed:

differentiated as these elements were in the beginning still they were not the compound bodies known to science as they are now. . . . for all these are the productions already recombined by the atmospheres of globes completely formed — even to fire — so that in the first periods of the earth's formation they were something quite *sui generis*. Now that the conditions and laws ruling our solar system are fully developed; and that the atmosphere of our earth, as of every other globe, has become, so to say, a crucible of its own, Occult Science teaches that there is a perpetual exchange taking place in space of molecules, or of atoms rather, correlating, and thus changing their combining equivalents on every planet . . . the essence of cometary matter, for instance, . . . during rapid passage through our atmosphere, undergoes a certain change in its nature. — *S. D.*, I, 142

A very interesting theory to a Theosophist is that of the viability of germs lying latent within the mass of the globe and awakening as soon as cooling of waters and solidifying of soil material gave proper environment for growth. Much study is being made of fertility of seeds held in desert areas of geologic time and within

glacial moraines. A thought apparently along this line is by W. F. Swann:

The fact that vital phenomena do not make themselves immediately evident in so-called non-living matter is no criterion as to the certainty of their complete absence therefrom. It is, in fact, not inconceivable that the existence of completely non-living matter as such might be unstable, and that the living activity might increase, perhaps slowly at first, but possibly at an increasing speed, until, at any rate, in the presence of suitable conditions and environment, it finally attained a steady state in which there was a definite equilibrium between the living and the non-living matter.

This idea of organic life being latent during the formative period of the globe is a step toward the Theosophical teaching, because the seeds of that life were inherent in the Earth when it came into its present embodiment. Every material form in the manifested universe is a vehicle by which life expresses itself in slow and progressive development from simple to complex, then at the acme of that degree of unfoldment it returns to latency:

the absolute universality of that law of periodicity, of flux and reflux, ebb and flow, which physical science has observed and recorded in all departments of nature. An alternation such as that of Day and Night, Life and Death, Sleeping and Waking, is a fact so common, so perfectly universal and without exception, that it is easy to comprehend that in it we see one of the absolutely fundamental laws of the universe. — *S. D.*, I, 17

In the mineral kingdom, the Monadic Life is "crystallized and immetallized"; in the vegetable, it expresses itself as seed, plant, fruit, and seed again. In the human kingdom, evolution at present

is by incarnation as birth, growth, death, and a return in reincarnation.

Life is One; what is called life is its manifestation in form. To our physical perception Life is substance; to our conscious mind, Universal Life is Conscious Intelligence.

The Theosophical Forum

THE MYSTERIES AND CHRISTIANITY: II — *F. Chapman*

Clemeshaw

Now, we return to our subject of "The Mysteries and Christianity." Our study so far has helped us to realize that there is continuity and order in the affairs of men; so if we make the statement that Christianity is the latest expression of the Mysteries, it will not now sound amiss; nor will it need proving.

If we *really understood* the rituals and creeds of Christianity and also the inner meaning of the story as told in the Gospels, we should know as much as we can know of the Mysteries short of being initiated therein. It is the importance of really understanding these rituals and ceremonies of Christianity that we here stress, for therein are preserved for us an archaic language and an archaic symbolism, the *full* meaning of which can come only by much study; in fact, the *full* meaning can come only at initiation.

Such a study may now be undertaken, as some keys to its understanding have been given to us by our Teachers, and because the cyclical time has come again when the Ancient Wisdom may be publicly taught. In other words, the cyclical time has come again for a re-statement. All thinking people today realize the need for this re-statement. Please note, that the writer has borrowed this expression "need for re-statement" from a recent pronouncement of the Archbishop of Canterbury. This brings us to another point that should be emphasized, i. e., that the cyclical change that brought the Theosophical Society into being is affecting all in some degree. How quickly the Churches are moving toward a changed outlook may be known by those who care to keep themselves informed.

As an instance, that quotation from St. Augustine already used herein appears in an essay on the universality and antiquity of the Cross, in the "Winter, 1939-40" number of *The Cathedral Age*, (Pub. The National Cathedral Association, Mount Saint Albans, Washington, D. C). It is important that Theosophists keep themselves informed, for by so doing, they are the less likely to fall into the error of attacking men of straw and flogging dead horses!

The history of Christianity — as well as other religions — is the history of these constantly changing outlooks caused by the continuous stream of Egos coming again into incarnation; these differ among themselves and cause the changes. In other words, there are times when younger Egos must have their turn. If the view were taken that the Germanic tribes were what we have called younger Egos, then it would help us greatly to understand our own era; perhaps we might say that they are younger Egos intellectually, but not without their own appropriate virtues such as loyalty to their chiefs, warlike valor, and respect for women. It will be admitted that the seeds of our present European nations were planted at this time, those centuries that we are graciously pleased to call the "Dark Ages" were the embryonic time. We know little about those centuries and so call them "Dark" but were those who lived and loved and died therein less happy than we are today? The thoughts of men are by turn materialistic, philosophical, and religious, as already pointed out; consequently, the church is by turns materialistic, philosophical and mystical in its manner of presentation. But the church is not the cause of these varying conditions. It is an effect. Notwithstanding what certain writers and critics have maintained to the contrary. One good example of this constant change in the manner of presentation is the way that the crucifixion has been symbolized down the centuries. First the cross alone, generally a Greek cross,

sometimes with the figure of "The Lamb as it had been slain" in the center.

After the council of 603 a. d. it was directed that the figure of our Lord should take the place of the symbolic Lamb.

Until the eleventh century the body of Christ was always regally clothed, crowned, and is shown with a rayed nimbus; the figure does not suggest hanging on a cross but is rather standing in front of a cross.

The piteous figure created by the Renaissance artists illustrates the change that was slowly taking place; the mysticism of the 13th was giving place to those tendencies that resulted in the skepticism of the 18th century only to end in the materialism of the 19th.

The cycle has turned, figures resembling those of the 11th century are re-appearing and are called "Modern!"

Now let us very briefly summarize the wealth of information to be found in our literature about the Mystery Schools or Colleges. Do not let us make the mistake of thinking of these schools or colleges as buildings or as what we moderns might be tempted to call a "plant!" They were schools or colleges in the sense of associations, with or without buildings as the case might be. No land or people has ever been without them, for the last four or five million years. Let us refresh our memories by mentioning the better known ones in the West. Beginning with Stonehenge; then Alesia and Bibracte in Gaul, Druidical centers destroyed by Caesar; Crotona, Eleusis, Samothrace, Byblos, Philae and Thebes.

What is meant by the word mysteries? The following from Masonic sources will give a good general answer:

By mysteries the educated reader will not understand

merely doctrines or symbols, or even secrets as such, but a system of discipline and instruction in esoteric learning which was deemed too sacred and recondite for those who had not complied with the essential conditions. Every ancient country had its sacerdotal order, the members of which had been initiated into the mysteries; and even Jesus defended his practice of discoursing in parables or allegories, because that only to his disciples was it given to understand the mysteries of the kingdom of God, whereas to the multitude it was not given. . . .

. . . The early Christians and heretical sects had also their signs of recognition, and were distinguished like the initiates of the older worships, according to their grade, as neophytes (*1 Timothy*, iii, 6), spiritual and perfect.

The mysteries most familiar to classical readers are the Eleusinia, which appear to have descended from the prehistoric periods. Pocke declares them to have been of Tartar origin, which is certainly plausible, and to have combined Brahmanical and Buddhistical ideas. Those admitted only to the Lesser Mysteries were denominated *Mystae*, or veiled; those initiated into the Greater Mysteries were *epoptai*, or seers. Socrates was not initiated yet after drinking the hemlock he addresses Crito: "We owe a cock to Aesculapius." This was the peculiar offering made by the initiates on the eve of the last day, and thus sublimely asserted that he was about to receive the great apocalypse. (Mackenzie: *Migrations of Symbols*)

As already said the Eleusinia were divided into two parts, the Greater and the Lesser. The Lesser Mysteries were celebrated at Agrae, in Attica, about the beginning of March; every fifth year the Greater Mysteries were celebrated at Eleusis about the time of

the autumnal equinox. Now, here is another point, (See Dr. G. de Purucker, THE THEOSOPHICAL FORUM, Dec. 15, 1929):

But there were Mysteries still greater, about which nothing was openly said. We only know from bare hints that they existed.

These bare hints were given by Greek and Roman writers. The need for secrecy was that there were wise men and foolish men in those days as there are today. The injunction to cast not pearls before swine, was needed then as now. "Swine" or dogs, sounds harsh, but it was part of the Mystery jargon of the Near East, and simply meant outsiders. The following quotation from Dr. G. de Purucker's *Fundamentals of the Esoteric Philosophy* must complete our brief review:

Even in the days when early Christianity had superseded the degenerate and corrupt religions of the Mediterranean countries, even then, fallen as the Eleusinia were from their former high state, yet they were considered so highly that initiations still took place in them. They were actually finally stopped on the initiative of the Pagans themselves, the school closed by an order of the Christian Emperor Justinian in Constantinople, but closed on the petition of the so-called Pagans themselves. The truth is that the Mysteries were not overcome by Christianity, but fell because of intrinsic degeneracy. Can we imagine what those men must have felt in the day when they saw that which was dearer to them than life closed and ended by their own will, invaded and degraded by degenerate rites and beliefs, and, doubtless, also by the Christian fanatics?

This happened in 529 a. d., and when we remember that Christianity had received official recognition in the time of Constantine some 200 years earlier, we may realize how the

Eleusinia were beloved by the people of those days. The following quotation is from THE THEOSOPHICAL FORUM, Aug. 15, 1932: "When the Mysteries finally disappeared in the West, the Christian Church took over some of the ritual or ceremonies of the Less Mysteries, and a few of the doctrines or teachings of the Greater." As Christianity at that time represented a reform movement, they naturally eliminated the degenerate rites already referred to. When we add to this the statement that some of the early Popes were initiates (*S. D. I*, p. 311) and that Origen, Synesius, and Clement of Alexandria had been initiated at Eleusis (*S. D. I*, p. xliv), and that Paul is also recognized as an initiate, we have the historic link between the Mysteries and Christianity.

What is the connection between the Gospels and the Ancient Mysteries? The gospels are manuals of initiation and were written by the Epoptae or initiates of the Alexandrian Schools to help those small groups of earnest people who had set their faces against the evils of the time. Or more fully:

The Christian Scriptures, that is the Christian New Testament, taken altogether, are an esoteric manual: a secret manual of instruction and of edification for the earliest Christians, for the earliest adherents of the primitive Christian Church; and these secrets tell in allegorical, in mythological (if you look into the old Greek sense of the word) form what any great Seer or Sage, any World-Savior, any great and noble-hearted man who gave up his life for his fellows, underwent in the schools of mystical training.

In other words, they form that particular manual of initiation in true but symbolic imagery in the initiatory cycle as it was followed in Palestine, in Syria, and in the countries of the Hither Orient. — (*Questions We All Ask*, xv,

Jan. 7, 1930)

It should be emphasized that what has been said about the Gospels is equally true of the sacred writings of other religions. They too are manuals of initiation, and that is why there is such a striking resemblance among them. (See *Isis Unveiled*, Vol. II, p. 537). So we see that the life, death, and resurrection of Jesus, though necessarily preserved and taught as history, are dramatic presentations of events in the soul life of each of us, events that must be experienced by all sooner or later. This is a statement that mystical Christians today will accept, a statement that the *few* have accepted all down the centuries.

The Gospels, then, are the basis of the Christian Mysteries; their teachings are presented dramatically in the Mass. All instructed Catholics see in the prayers and ceremonies of the Mass a pictorial re-presentation of the life of Jesus from the incarnation to the resurrection. The Church, as a whole, may be regarded as an exoteric school of religion (the Less Mysteries in fact), and the different orders therein regarded as esoteric schools for the practice of Yoga, such as Bhakti-yoga, or what would be called Salvation by love or devotion in Christendom; Karma-yoga, or Salvation by Works; Hatha-yoga or Salvation by self-imposed austerities. (See THE THEOSOPHICAL FORUM, March, 1940). How far some of these Orders may have lost the right to be considered as schools of Yoga, we do not undertake to say; it is the fact of their existence and of their relationship with the past that concerns us. Those who undertook these austerities were but human, and as the history of monasticism shows, they had their periods of decline followed by periods of reform, that always started from within.

The method of the Less Mysteries is described in the following from the Glossary of *The Key to Theosophy*:

[The Sacred Mysteries] were enacted in the ancient temples by the initiated Hierophants for the benefit and instruction of candidates. . . .

In short, the Mysteries were in every country a series of dramatic performances, in which the mysteries of Cosmogony and nature in general were personified by the priests and neophytes, who enacted the parts of various gods and goddesses, repeating supposed scenes (allegories) from their respective lives. These were explained in their hidden meaning to the candidates for initiation, and incorporated into philosophical doctrines.

and this from THE THEOSOPHICAL FORUM, August, 1932:

The dramatic part belonged in old days to the Less Mysteries, and the teaching or training to the Superior or Higher; and the dramatic was used only as a help for those who needed, as it were, a ritualistic or ceremonial observance in aiding to concentrate their thoughts.

One age gives rise to the next, as already said. Listen to this from De Sacrificio Missae:

Since human nature, says the Council of Trent, does not easily lift itself to the meditation of Divine things without some outside help, our good Mother, the Church, in conformity with the discipline and the tradition of the Apostles, has established certain rites and made use of ceremonies: blessings, lights, incense, priestly vestments, and numerous other similar means, to bring out the majesty of the Divine Sacrifice, and to incite through these exterior signs of religion and piety to the contemplation of the sublime mysteries which lie hidden therein.

So we see that the dramatic method of teaching was taken over by

the Christians. Over and above their rituals and ceremonies there were the liturgical dramas, the earliest that has come down to us dates from the 9th century, the Morality Plays, Miracle plays, and processional spectacles, and most important of all, the mystery or Passion plays such as that of Oberammergau, which is carried on to this day. Older popular festivals were never lost, but were incorporated and refined. In this connexion, H. P. B. makes the following comment in speaking of the "Punch and Judy boxes," as she calls them, which contain little figures representing Joseph, Mary and the Angel, and another one showing the Infant Jesus in the manger. These were carried around Southern Russia and Poland during the Christmas season:

We remember the three king-Magi represented by three dolls in powdered wigs and colored tights; it is from recollecting the simple, profound veneration depicted on the faces of the pious audience, that we can the more readily appreciate the honest and just remark by the editor, in the introduction to the *Eleusinian Mysteries*, who says: "It is ignorance which leads to profanation. Men ridicule what they do not properly understand. . . The undercurrent of this world is set toward one goal; and inside human credulity — call it human weakness if you please — is a power almost infinite, a holy faith capable of apprehending the supremest truths of all existence." (*Isis Unveiled*, II, p. 120)

Precisely, but as we are just past the most materialistic and skeptical part of our cycle, and of our century cycle too (as the writer thinks) it is now the fashion to deny to our own era all intuition, all mysticism, all esoteric knowledge; we like to talk about *anthropomorphism*, *soporifics* and of all religious drama or ritual as *mummery*. Certainly "Men ridicule what they do not properly understand." It is a mistake to suppose that the creeds

and dogmas that have come down to us need to be re-written or discarded; they need to be understood; for ceremonial and sacramental Christianity is a prolongation of the Lesser Mysteries. For the many, these Lesser Mysteries are as much needed today as they were in the past; they are worthy of our sympathetic study in that they embody all that preceded them.

How about the Greater Mysteries? If it was true 1800 years ago that there were Mysteries about which nothing was openly said, and that we only know from bare hints that they existed, would it not be true today, both in Christendom and elsewhere?

By hints gathered here and there, we may know that the Roman Catholic Church has its "Inner Church," for as H. P. B. says (quoting Higgins) "we have the esoteric religion of the Vatican, a refined Gnosticism for the cardinals, a more gross one for the people." ("The Esoteric Character of the Gospels," p. 240). The Greek Church has its "Society of Om," the Protestant world its Masonry and other Secret Societies, from which much may be learned by study; but these things do not help the rank and file, for these necessarily impart their knowledge under an oath of secrecy. So the Ancient Wisdom is again being publicly taught because this is the correct cyclical time so to do, but this is not being done without exciting both secret and open opposition.

History repeats itself: Buddha incurred the opposition of the Brahmans by imparting knowledge held too closely by them; Jesus incurred the opposition of the Doctors of the Law by doing the same; H. P. B. brought upon herself persecution for the same reason. But this will pass.

The Ancient Wisdom, now called Theosophy, will in time reunite Christendom in yet another "re-statement." The core of it is, and ever has been the same; its outward expression will be rich in that it will embody all that has preceded it, this time from both

East and West. It will still be called Christianity, or so the writer believes, but there will be an "Inner Church," or Inner Group called the "Theosophical Society."

The Theosophical Forum

SONS OF THE SUN — *Emily R. Plummer*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

Unveil, O Thou, that givest sustenance to the universe, from whom all proceed, to whom all must return, that face of the true sun, now hidden from us by a vase of golden light, that we may know the truth and do our whole duty on our journey to thy sacred seat. — *An ancient Vedic Invocation*

Among the many petitions, prayers, and invocations that the sons of ancient times have given us, is this Vedic invocation to the sun, and it is one of the most beautiful and instructive. Deeply inspiring in thought and emotion, it is moreover filled with esoteric wisdom. It indicates clearly the lofty position the sun holds in the scale of universal being; throws light upon its constitution, embracing the consciousness-side as well as the physical side; and indicates the spiritual and physical relationship existing between the sun, the earth and its inhabitants.

In studying and analysing the thoughts and words of this invocation or prayer, it is evident that the supplicant was a devotee of Archaic Theosophy, for he must have had knowledge of what the sun truly is, its place or function in the solar system, and man's ultimate goal or destiny therein. In the appeal that the face of the true sun be unveiled, as being hidden or concealed from him by a vase of golden light, he must have understood that there are various planes of manifestation, and also had an unbounded faith in spiritual powers and forces in the sun, and that through an inner, higher contact with these powers he could know the Truth, and as a true son of the sun, do his whole duty,

on this "journey to thy sacred seat."

The Ancient Wisdom teaches that the sun and everything in the universe has not only one "face" or aspect, but seven and even more such aspects or planes through which to work or function, consisting of an ever increasing degree of refinement in matter from the lowest physical to the highest grade or step in spiritual substance, during an objective manifestation of a universe, sun, planet or any lesser form of life. Our inner sight not being as yet active, we are not yet aware of the more ethereal planes or "faces" and if we would unveil, or penetrate with our understanding to these higher realms, it must be by the unfolding and growth of our inner, spiritual senses.

In the words of the invocation "that giveth sustenance to the universe," is contained the teaching as to the office of the sun in the solar system. The sun is the focus for life-forces pouring downwards from supernal realms beyond itself. The sun, in other words, is the reservoir for spiritual intelligences and powers flowing from invisible spheres and from which the solar system, the earth, and all that therein is, draws sustenance, not only physical life-nourishment, but spiritual food for the mind, soul, and higher nature. Every solar force has a focus in man acting or working naturally through him in accordance with the laws of Nature, in relation to his evolutionary status. (1)

Quoting from *The Esoteric Tradition* by G. de Purucker, in relation to the sun:

The solar system is a living organic entity, its heart and brain combined in the Sun; . . . — I, 188

According to the teaching of the Ancient Wisdom, the Esoteric Tradition, the composite aggregate or bundle of forces and substances which compose man's constitution

has its ultimate source in the invisible, or Spiritual Sun. —
II, 1080

. . . the physical sun, the day-star which our eyes see, is but the manifestation or vehicle of the inner spiritual and intellectual and other powers which flow forth from within through it and outwards, and thus give life as well as light to the solar system over which the sun presides. — II, 1100

Many of the Christian Fathers, Origen, Jerome and others of the early Christian era, and the various sects and orders of those times, adhered to the esoteric teachings. Among the writings left by them we find certain esoteric truths: "The Christos spirit in man is the luminous substance of the sun"; and "an incarnation from the God-Sun was born in human form." This last referred to the divinity of an Avatara, Jesus, and other Great Ones. It is interesting to note in this connexion that the Christ-child and other divinities, angels, and saints, are pictured with a nimbus, aura, or aureole about the head. This is because such a one is "clothed with the sun," or "the Inner God clothes him with solar splendor shining through him." The aura which is about every man, although invisible to our physical sight, is the efflux of these forces playing through him from above downwards. It is a continuous stream of consciousness, and to the degree in which he lives and aspires towards this divine, spiritual consciousness, does he draw near the God-ray within him, and live enveloped in its radiance.

In the next few words of the invocation: "from whom all proceed, to whom all must return," is the pith or essence of the law of cycles operating throughout the universe: the periods of out-breathing and in-breathing of the Great Breath of the Divinity back of or behind all things — involution and evolution. The involution of spirit from the subjective states or planes to the

substances of objective states or planes: the opposite pole — matter, with the resultant evolving or unfolding of spiritual powers and faculties in the general progression of lower life-forms to that of higher states of being. More familiar to us is that cycle of the eleven-year periodic expansion and contraction of the solar heart beat, performing the same office in the sun in relation to the solar system, as does the human heart for the human body — the sun's forces pulsating throughout the solar system of which we are a part and without which we could not live, move, and have our being.

The sun, being the repository of the forces from which the solar system draws life, is the home-cradle from which all things have issued forth during the cycle of objective life or manifestation, and the haven to which all things return for the subjective period of spiritual rest and experience. It is our Father-Sun from whom we, the sons of the sun, were sent forth on this journey as un-self-conscious god-sparks, and to whom, after aeons of time in evolving and growing, we return at the journey's end, self-conscious gods.

In the next sentence, "that face of the true sun," the reference is to that highest, most spiritual aspect of the seven "faces" or planes in the constitution of all existing things. *The Esoteric Tradition* says:

Every sun, as indeed every other celestial body, is the outward veil or the body, or vehicle, of an indwelling Spiritual and Intellectual Agent or Presence or Solar Spirit.

— I, 450

It is the Divinity manifesting through the sun and "hidden" to the ordinary physical sight. Even the physical body of the sun, as are the stars and many planets, being of a more attenuated or subtil form of matter than is the earth or its inhabitants, is therefore seen by us only as a fiery ball or, as expressed in the Vedic

invocation, "a vase of golden light."

The plea "that we may know the truth," comes from the earnestly aspiring heart, and is one of the greatest needs of today. Truth has had a losing fight for many an age to keep its head above water. Although there is the Bible precept "The truth shall make us free," self-interest and personal ambitions in priestcraft on the one hand, and intellectual laziness and love of worldly pleasures in the great mass of people, on the other hand, have kept the soul of man in the bondage of ignorance, misbeliefs, and sin, until from lack of nourishment, the God-ray within becomes, as it were, a smoldering spark, as far as the human, personal nature is concerned, smothered in the ashes of neglect, until some shock through suffering awakens it. Pain is not a celestial revenge, but a natural, scientific, vibrating response or reaction of one force to that of another. The agony of pain turns the nature away from outward attractions and distractions to an inward, spiritual consolation, and consequent higher life, igniting and reviving the spark to life again. When it flames bright and strong, with an unsatisfied desire for reunion with the Divine fire at the source of being, one then becomes aware of the Truth and of the goal ahead. Without the light of this knowledge, we unseeingly pursue our way, stumbling and groping about in many a blind alley, and into many a pitfall from which we must laboriously climb.

One of the means of avoiding delayed progress, is expressed in the following words from the invocation: "and do our whole duty." It is one of the finest expressions of devotion in this petition. Compare this noble, unselfish desire with other prayers of today, the response to, or the fulfilment of which rests usually upon a subscribing to certain man-made beliefs and requirements, differing in all lands as well as in opposing denominations and sects. The response to prayer is made quite clear by Dr. de Purucker in these words: "In the grand

organization of which we are a part, every feeblest vibration or flow of energy, produces a corresponding effect or reaction. Thoughts reaching out in prayer, aspiration or the reverse touch the corresponding force." In other words, in this action and interaction of forces between the different planes of being, if we would have a response from some high source, it must be by the concentration of efforts on our part in raising our consciousness to that to which we appeal; in fitting our natures so that spiritual forces may find responsive expression in us. Again quoting Dr. de Purucker in these most fitting and helpful words: "You cannot receive anything from without before it is already within yourselves. Seek ye first the Divine in you, cultivate it, awake it, and just in proportion as you do that, you will receive from without, because you gave from within."

There is no single thing which clears the way and hastens one's steps on this journey of ours more than in the fulfilling of duties to others and to oneself, it being a law of nature that a neglected duty is but a delayed duty, to be met with at some future time. All thoughts, deeds, and acts involve one in duties or consequences, through nature's reaction to all forces good or bad in establishing an equilibrium. Selfishness, hates, jealousies, revengeful feelings, and so forth, bind and shackle one in chains of a like kind, in a vast, complicated connexion with others which may be very unpleasant and run over into many lives ahead for their working out. This law of cause and effect, action and reaction, or Karman, acts with equal force in the opposite direction, in response to kindly thoughts, desires and actions. On the surface this may seem an ironic situation at times, as an unselfish person may be experiencing or reaping the effects of wrong actions sown in the past, and vice versa; which appears to be unjust suffering or, on the other hand, unmerited happiness. It is, however, but the result or working out of that law, "As ye sow so shall ye reap"; and

the sooner it is recognised that unselfishness or impersonality is the key or password to eventual, lasting harmony and peace, the quicker and more easy is the ascent of that right-hand path leading to our evolutionary goal — Godhood.

Here the attention should be called to a left-hand path, the path which leads downwards, in the opposite direction, to darkness, the nether pole — matter; and with it final annihilation with accompanying anguish in the loss of the soul. Human nature like everything else is dual, having in it the germ of every virtue and of every sin, the difference in character being the degree to which the germs of these higher or lower forces are developed and used. The personality with its shifting moods and fancies, likes and dislikes, is made of various grades and intensities of these dual tendencies, the spiritual and material aspects of forces, such as love with its opposite, hate; or charity, avarice; honesty, deception; and so forth. So complex is human nature that even a virtue may be used to gain some personal satisfaction, aim or end, and even spiritual knowledge and powers misused. We are not our desires, good or bad, any more than we are our bodies, for we have the power to choose, direct, and use the forces of desire. The real man at the helm is beyond these.

"The Master is one who has conquered nature before nature has conquered him." He now controls thoughts, feelings, emotions, and desires. He is beyond the sway of joys, sorrows, and disappointments, and no longer stops to wallow in the mire of his own lower nature nor in that of others, thus adding to the hosts of evil forces already in operation; but with peace in the heart and with eyes raised, uplifted to the heights beyond the horizon, he speeds onwards, the nature, spiritually awakened or relatively unawakened, placing the pilgrim-traveler at every moment of choice either on the one path or the other.

As the disciple, or chela, advances on the path of Light, duties and obligations assume a most necessary place in his inner training. An absolute requisite in the conquest of self, and familiar to all candidates, are the injunctions given by the great Teachers: "Do good to them who revile and persecute you"; "Resist not evil"; "Turn the other cheek"; "Defend not yourselves," and the like golden precepts; for in the training of the disciple or chela, the bearing of personal injustice becomes a holy duty. It is a purging fire to the dross in the personal, human nature, separating the lower tendencies from the higher. This silence forced or self-imposed upon the outer nature, compels him to stand alone in patience, endurance and forbearance. There being no outlet for pent-up forces, the personal will is subdued and he is thrown back upon his higher self. Seeking refuge in his impersonal, higher nature, he finds there the strength and support of the spiritual will. The desire for reprisal fades away into recognition of the realities beyond. The lower self becomes the higher self. This wonderful transformation in the nature, of course can be sought for selfishly, in the sole desire of attaining the spiritual goal, with no thought for mankind and its needs. But the true aspirant, with compassion for but no longer dependence upon others, is free to work unselfishly for mankind, yet forms no more entangling webs of evil about himself or his brothers.

The last beautiful thought in the Vedic prayer or invocation, "our journey to thy sacred seat," takes us to the goal of our long journey through life; for the sacred seat is that Divine center in the sun which is the home of the Gods. To the aspirant, the pathway is now realized to be within, and he becomes not only a channel, but a consciously responding or answering focus or center for the spiritual forces flowing forth from that sacred seat in the sun. He has sought and found that shining beam within him, and following it, is flooded with its wondrous light. He then

consciously exists in spirit instead of matter, and attains Godhood.

This ancient prayer will always be a classic among devotees. Pure in its freedom from personal material wants and requests; pure in its intentions and aspirations, every word carries some spiritual meaning or Truth. When we feel the warmth of the sun's rays upon us and realize that were it not for those forces which pour forth from the sun to us, we would cease to be, it is a sad commentary upon our intelligence and hopes that we neglect in so many ways to consider the inner as well as the outer relations which there are between us and our life-giving source — the sun. Not that the sun as a body is to be worshiped, but since it is true that we owe our very existence to it; that the highest most spiritual part of our being is fed from the highest most spiritual part of the sun's being: the structure and the function of the sun in the solar system should be studied, known, and revered, and in the purpose and object of all life, and our part in it, should be impressed upon the nature constantly. The Ancient Wisdom teaches that it is by this inner development of spiritual consciousness gathered or garnered from spiritual forces flowing through the sun to us — as a part of his domain, the solar system — that we successfully make the ascent of that right-hand path and return to our Sun-Home as Sons of the Sun.

FOOTNOTE:

1. It might be well to note here that when man infringes upon or interferes in any way with the normal action of these laws, as in the abnormal development of any of the forces, such as the cultivating of psychic faculties, breath control practices, hypnotism, and so forth, there are bound to be disastrous results in the end for himself and for others. ([return to text](#))

THE GIVING OF THE SELF — *G. de Purucker*

There is no freedom so great, no happiness so large, so wide reaching, as the giving of self in service. It is the hero who gives himself. If he did not give himself utterly, there would be no heroism in it. It is the giving which is heroic.

And so it is with love. Where there is questioning about it — not uncertainty because uncertainty is always very natural in these things; one wishes to be sure — but where there is a question about the values involved, where there is a selfish searching of "what *I* want," there is no heroism, no love, no self-giving. There is not the ghost of a shadow of a chance there for the god-like, heroic quality of self-renunciation.

When the year begins, when it opens, the one mantram I always make to sound in my own heart and mind is this: A new year is opening. Can I give myself a little more than last year? I pity from my soul the man or woman who has not learned the exquisite joy of giving of the self. There is not anything on earth that equals it in beauty, in grandeur, in sublimity, and in the peace and richness it brings to both heart and mind.

BROADCASTS FROM SHANGHAI: I

Over radio station XQHB, Shanghai, China, in the Spring of 1941, fifteen-minute weekly broadcasts were given — the result of the enthusiastic enterprise of Miss Inga Sjostedt and Miss Elsa-Brita Bergqvist of the Shanghai Theosophical Lodge. The first talk, covering a general outline of our doctrines, was presented on March 23rd by Miss Bergqvist.

Good evening, everybody:

This first talk is going to be merely a preliminary survey to explain very briefly what Theosophy is. The word Theosophy is a combination of *Theos* and *sophia*, meaning the Divine Wisdom.

Many people when they hear the word Theosophy receive the impression that this is another new religion, one of the many sects which periodically spring up in all parts of the world. This is not so. Theosophy is not a religion invented by men for men. It is a study of life as it is, and includes all the departments of nature. After all there can be only one ultimate truth, though this truth may have many facets and may be seen from various angles. The three main roads by which mankind has sought to learn the truth throughout all ages are religion, philosophy, and science. If a fact has been found plausible by any one of these methods, a thinking man will be convinced of its truth only if it agrees with the tenets of the other two. This is why science and religion are so often at loggerheads both with each other and with philosophy. The reason we believe Theosophy to contain the truth is the fact that it reconciles religion, science, and philosophy, and shows plainly that these are merely three different roads to truth — and the point where they converge is Theosophy.

Yet Theosophy is not a synthesis of these three. Rather is it the parent. For the teachings contained in Theosophy are by no means new. So long as there has been life, so long has there also existed an explanation of that life; and so long as mankind has lived on earth and been puzzled regarding the cause and meaning of its existence, so long also have the cause and meaning been taught. All the great world-teachers have given out certain facts regarding man's origin and the purpose of his life, and though the symbols and manner of speech have been fitted in each case to the particular recipients thereof, their teaching has always been identical. Though these teachers have lived at different periods, far separated in time and locality, yet their work is with us always. Mankind has never been without their guiding influence. Buddha and Christ, Sankaracharya and Lao-Tse, Plato and Zoroaster are not mere names of the past, but guiding influences in the world to all who care to heed, and their teaching is as much to the point today as it ever was.

In these days of mental and moral sickness we are all badly in need of a further dose of spiritual enlightenment, and we have the opportunity to study the teachings of these great men and others like them and to learn to understand their meaning, which is often difficult to grasp without the key furnished by Theosophy.

So far, little has been said about science and how it fits into the scheme of Theosophy. Physical science is, as any scientist will agree, as yet far from perfect and fails to explain some of the more obvious facts of life. If you ask a scientist: What is fire? he will be unable to answer you; yet fire is most widely used in all departments of life, and we are familiar with its habits and qualities. Yet even physical science, imperfect as it still is, is taking great strides. New discoveries are being made all the time, and it is approaching gradually more and more to Theosophy, and many of the tenets of Theosophy regarding the laws of the

physical universe are gaining currency among the modern scientific thinkers. As for instance the scientific view regarding the composition of the atom, which has recently been modified to accord with what is taught in the archaic religion-science-philosophy. In fact many of the more intuitive modern scientists are tending to adopt more and more of the Theosophical views, even at the risk of being ridiculed, as was the astronomer Galileo — yet Galileo's name has since been completely vindicated.

But Theosophy is no mere scientific and philosophical exposition of the facts of life. It is also religion. Not *a* religion, but religion in its highest and finest sense, for it demonstrates that ethics and morality are fundamental in nature; that the finer qualities we applaud are natural, that is to say that they are the laws of nature that must be followed, and that unhappiness and suffering arise out of the breaking of these laws. Humanity must learn to obey the natural ethical laws in order to maintain that order and harmony which are the basis of the universe. Any sin against these laws upsets the equilibrium on which the universe depends, and it is nature's reaction to restore balance which causes suffering.

I have sometimes been asked: Are Theosophists atheists? Indeed we are not. Theosophy maintains that there is a Divine Source from which all manifested existence springs. But we do not call it God, for the simple reason that God is a man-made conception of the Divine. The human understanding is limited to its own sphere of activity, and it is gross conceit on the part of man to "create god in his own image."

Divinity is unfathomable. It must be so, and to apply any human attributes such as goodness or kindness must be at best a ridiculous understatement. Therefore we give no name to the Divine, but content ourselves to call it *T_{HAT}*, as translated from the

Sanskrit *Tat* — because it is beyond human comprehension. As soon as we try to give any epithet, however lofty, to an idea we immediately limit this idea, and as the thought cannot be greater than the thinker, we create a god smaller than ourselves. From our refusal to do this has sprung the misapprehension that Theosophists are atheists. Out of this has arisen another point of variance between Theosophy and those religions that hold that man has nothing divine in him. Divinity, being divine, cannot be limited in space, time, or in any other way; must therefore be omnipresent and eternal. From this we draw the conclusion that everything, from the meanest atom to the greatest galaxy contains Divinity. Man as an entity, therefore, is essentially Divine, therefore essentially eternal, and contains in himself, in his essence, the potentiality for uniting himself consciously with Divinity. This is our aim and the reason why we live.

I repeat again, Theosophy is not new; it is as old as life. The facts that it teaches have been taught, whether publicly or secretly, to those whose minds were prepared to understand, from prehistoric times until today. Man is not the only pebble on the beach and is preceded and succeeded by other beings more or less evolved than himself. Those who have traveled farther on the path of evolution — the Masters and World-Teachers — have periodically appeared among mankind when we were ready to receive more of the divine knowledge, and their teaching has after their departure been misunderstood and dogmatized. But the identical core of all these many teachings can still be found, and the work of enlightening mankind still goes on. At the end of the last century the teachings were again given out, this time through the agency of Helena Petrovna Blavatsky, the Messenger of the Masters in these days, who founded the Theosophical Society for this purpose. Theosophy has not yet had time to degenerate from the purity in which it was first presented, and

we hope that it will long continue in its unsullied state and do great work in raising men's minds to a higher level of thought and inspiration.

The Theosophical Forum

THE ENIGMA OF CANCER — *Lydia Ross*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

The Theosophical viewpoint regarding one of the most widely discussed of all human diseases. This article is extracted from the manuscript copy of the *Theosophical Encyclopedic Glossary* in preparation at Point Loma under the direction of Dr. G. de Purucker.

In the exhaustive medical literature on this subject, cancer or carcinoma, in brief, is known as a malignant epithelial tumor composed of a connective tissue-stroma surrounding groups or nests of multiplying epithelial cells. In general, carcinomas have capacity for unlimited growth, for invading adjacent tissues, and for producing similar typical growths in distant tissues in the same body, or, as in experimental research, by grafts which "take" in another animal's body. The invaded tissues do not become cancerous from contact with the growth which crowds them aside, and, robbing them of nutrition, substitutes its own type of cells for those of the infiltrated organ. These multiplying cells, drawing freely upon the nutritive materials of the blood — or of any living matter — pile up an unorganized, functionless, purposeless, uncontrolled local mass of cells running riot at the expense of the body. The cancer-cell, while closely resembling the normal cell, performs only one of the latter's dual activities of alternating division into fresh cells, with their typical organic functioning for the organized body's welfare. Of these alternate activities, division or "fission" is the more primitive, being that of the simple moneron-form of life.

The usual rapid production of new cells in a wound on a healthy body, or in a test-wound in normal tissue-culture, slows down when they have healed the lesion, when they again take up the alternate role of their suspended functioning. The purposeless, self-centered cancer-cells which are allowed to multiply uncontrolled, finally destroy the body.

Malignant cultures prove to be varieties of normal epithelial cells from which their slight differences are "not qualitative but quantitative." Many years of intensive clinical study and research have found no explanation for this difference, which, paradoxically, groups normal units in pathological union. The consensus of medical opinion regards malignant growths as not contagious, and as not due to micro-organisms, or to diet-deficiency, or to inheritability. Also, statistics show that cancer is steadily increasing among civilized peoples — now having second place in mortality-records — while it is relatively rare among those various less developed and backward peoples who continue to live in their native states of crude and primitive conditions. The significance of this difference has been overlooked, while the search for causes has held "suspect" everything tangible in the human body and in man's *milieu*. Yet it is the different degree of development of the complex inner elements and urges of conscious quality which, giving personal play to the circulating life-forces, make the modern civilized type just what it is as a human phenomenon of interacting spirit and matter. The searching analyses have yet to stress the reaction of the modern man's combined mental, emotional, and ethical consciousness and vital forces upon the highly-organized matter in his own body. In its physical form and functioning it is not different from the body of any other human being.

Progressive biological research focused upon the state of the malignant cell-unit has proposed as possible causes the failure of

some chemical relationships, or, again, some disturbed relation in the nuclear chromosomes; or some unknown factor in a supposed "organizer" which directs the rhythm of somatic cell-division, and which dictates the development of the embryo. Thus the unexplored fields of research, narrowed down to, and facing an *impasse* at the microscopic nucleus of the cell, justify the conclusion of some biologists that the cause of cancer "is bound up with the enigma of life itself." In each man, the Cosmic forces of Vitality and of Intelligence (*The Esoteric Tradition*, p. 167) manifest, perforce, according to the individual karma. These combined factors, then, are the noumena of all the structural, chemical, functional, and biological phenomena which are studied. But these universal forces, in manifesting, are "stepped down," so to say, through the successive layers-centers of the inner man's spiritual, mental, emotional, and psychic nature. This series of conscious conditions provides and sets the stage, and directs the personal play of the manifesting impersonal forces. Every physical change as well as pathological phenomenon is

produced by certain conditions and changes in the tissues of the body which allow and force life to act in that body; that all this is due to those unseen creators and destroyers that are called in such a loose and general way microbes.

— *The Secret Doctrine*, I, 262

The "enigma of life" is neither new nor local, for

there is nothing but life everywhere! And their physicians . . . did tell them [the Atlanteans], for they knew, that every disease of our bodies comes about from an excess of life, particularly what we may call the malignant or wasting diseases. In these cases, it is life running riot in the body, and that is what causes death. They knew it better than we.

— *Fundamentals of the Esoteric Philosophy*, p. 304

During life the entire human constitution is suffused or permeated by the organic vital fluid of the Reimbodying Ego, which acts as a cohering factor for all the life-atoms of all the planes of the constitution to form an organic "electrical field" wherein these life-atoms may inhere and work both collectively and individually, under the impulses and urges originating in the substance of the Reimbodying Ego. (*The Esoteric Tradition*, p. 812) At times, the intense and unceasing vital activities of the life-atoms overcomes the cohering, dominating influence of the organic psycho-electrical field. This is what brings about

many if perhaps not all of the various forms of disease of a lasting character. Cases of malignant disease are due to the same general cause but on account of specific and unusual circumstances are localized in some portion of the body where the power or control of the organic vitality becomes greatly weakened. — *The Esoteric Tradition*, p. 813

Lingering diseases are often preceded by a gradual withdrawal on inner lines, of the higher parts of the human constitution, which, being denied timely expression here, are drawn or levitate toward their native spiritual levels of existence. Thus the waning influence of the cohering, harmonizing, and balancing spiritual life-atoms and forces, leaves the uncontrolled pranic forces to be expended upon the vital-astral-physical nature which manifests along the various materialistic mental and emotional and sensuous levels and lines of life. These latter are evidently the general trends of our strenuous, restless, unstable, matter-of-fact civilization, now at the critical stage of a disordered evolution. In a word, an overdeveloped materialism is usurping the natural place and preventing the functional play of the duly awakening higher mind and spirit — the essentials, at this stage, alike for our civilization's present safety and for its further progress.

This dangerous collective lack of balanced evolution is repeated in the play of the life-forces upon the cells of the cancerous individual. He is karmically responsible, as a self-conscious being with free will, for staging his own play of these impelling forces. He must choose, either to progress on finer, nobler lines of human selfhood, or to retrogress in needless rounds of outgrown experiences. His functionless cancer-cell with its one primitive activity of self-division, is a localized out-of-time biological "throwback" in type to the huge ethereal ovoid cell-forms of the First Root-Race. These primitive cells were then the normal encasement of the nascent, un-self-conscious men-to-be whose mode of reproduction was simple division. Now, the normal body-cell does not "go on its own," but it adds its function to the complex organism in whose development it also has acquired its minor place to work and to evolve. The cancerous tumor, being without blood-vessels and nerves, often, when located internally, subtly enlarges without pain, until its unnourished center breaks down, and the malign condition is recognised, perhaps too late for treatment.

Nature, working always and everywhere on all lines to evolve the suitable forms for the progressive imbodiments of the manifesting One Life, leaves civilized man free to do his part by spiritually balancing his own human growth. Otherwise, he becomes an unnatural unit in the universal plan which makes ethics the natural cohering, harmonizing factor in the Universe itself which "actually is imbodied consciousnesses" (*The Esoteric Tradition*, p. 258). Highly evolved culture without spiritual leaven is only sublimated selfishness.

Long-continued selfish emotions cause a distorted and inharmonious flow of the pranic currents of the body, and they cause disease according to the type of the emotions. This concerns the majority today, for few have a working philosophy of life

which can take things as they come. Aside from the frankly criminal and vicious types, the inner life of the many is self-centered and disturbed by the emotional play of worry, grief, disappointment, unhappiness, or a sense of futility, or of frustration — for all of whom there seems to be no way of escape. Even the exceptional cases who have no articulate troubles, and who outwardly seem free from the prevailing restlessness, suffer from a muted unrest and an inward tension. Many of these envied men and women have a haunting feeling of self-reproach for somehow being unworthy of themselves, while a more satisfying reality of life is waiting to be attained. Evidently, the emotional effect of all these conditions — to which the generally uncivilized are immune, *as yet* — reacts in disorder of the psychomagnetic-electric forces flowing along the highly organized network of nerve-wires. The retarded or congested or "short-circuited" forces produce disease in one or another organ according to the type of the emotions. Statistics list the abdomen and the pelvis as the most frequent sites of cancer. Meantime, the normally enlarged range of highly civilized faculties is being given relatively little play, as guided by the harmonizing and self-giving nobler mental and spiritual lines, while the general trend of the revitalizing and creative impulses retard the pranic forces unduly at the physiological levels. Back of all precancerous microscopical and chemical findings of changes in the blood, or in the polarity of the cells, or what not, are causative inharmonies or wrongs of the inner life.

No age or personal condition is wholly exempt from malignancy; and the karmic causes, in child or adult, may date back to a former life. Cancer, with its ability to grow in any living tissue, has been found in nearly all animals and in many plants, showing the closely knitted Nature-relationships between all forms of life, each Kingdom acting upon and reacting from harmonies or

disturbances in other Kingdoms. Experimental research has taken it over to the animal world countless times. Moreover, humanity's *milieu* is, in a real sense, a part or emanation of itself, because the vital human stream of incoming and outgoing material and of life-atoms on all planes, is interchanged with, and used by all other things and beings. Hence, man's unbalanced quality stamped upon this visible and invisible substance, would predispose its impress to reappear, at times, in the physical forms of Nature's less conscious entities.

The Theosophical Forum

LOVE AT WORK IN THE UNIVERSE — *G. de Purucker*

When a man's heart and mind are penetrated with the conception of the fundamental and perfect unity of all things in the vast organism of the Cosmos, then he will realize that this Cosmos is the field of Universal Life, of Universal Consciousness, manifesting in every smallest particle of space; and that it is also the field of an ineffable and boundless Love — assuredly not love as we human beings understand it, but that intrinsic character of the Inexpressible, whose nature and functions we can but vaguely conceive and hint at by our human word love. It manifests in the atom as attraction. It manifests in the cells and the other smaller bodies as the force of coherence and cohesion. It manifests in the framework of the Cosmos as that marvelous power which holds the universe in union, all parts in mutual sympathy and harmony, each to each, each to all, all to each; in human beings as spiritual love, and in beings higher than the human as something so beautiful that our human minds can but feebly adumbrate it and call it self-sacrifice for others and for all. — *Man In Evolution*, pp. 331-2

WATCH YOUR DREAMS — Stanley Zurek

"Know Thyself," were the words which met the eyes of all who looked upward over the portico of the Temple of Apollo at Delphi, for "Know Thyself," was the injunction of the ancient Delphic Oracle down the ages. "Know thyself, O son of man!" says Dr. de Purucker today, "for in thee lie all the mysteries of the Universe."

But *how* shall we go about knowing ourselves, we may ask. Let us try a method. Homer, for instance, tells us that sleep and death are twin-born; and Dr. de Purucker carries the analogy further by saying that not only are they brothers, but one!

Connecting these two statements, we shall find that if we analyse our sleeping state thoroughly, we shall arrive at a proper solution of what happens on a larger scale when we die. Spend our day in inharmonious thoughts, words and deeds, and what will be the result? Inharmonious thoughts, words and acts in sleep — a nightmare, mayhap, in some cases. Spend a day, contrariwise, in thoughts, words and deeds of good-will to men and the beings and creatures above and below him, and what is the result? A night of pleasant, joyful dreams, or, better yet, no dreams at all, for then the soul rises to such high realms that the brain-mind is not consciously impressed with the memory of the experiences undergone. In the former case, the soul is tied down in the vicinity of the body and the sleep is restless and of little benefit to the individual; in the latter case, the sleep is deep, profound, dreamless even, and we awake refreshed, not only physically, but mentally and spiritually.

Plutarch, in one of his ethical essays, tells us that Zeno, the founder of Stoicism, was of the opinion that a man could determine his progress and going forward in virtue by watching

his dreams, showing progress therein if in his sleep he took no delight in seeing anything improper or dishonest, or intending, doing, or approving any unjust or outrageous action. How true, indeed, in the light of the teachings of Theosophy; for Zeno and Plutarch were initiates and knew whereof they spoke. And likewise, if we wish to know our after-death state, let us, says Dr. de Purucker, watch our dreams, for death works no marvelous change in the individual — he is in death, as in sleep, the same — the same out of the body as in it.

The Theosophical Forum

STUDIES IN "THE MAHATMA LETTERS" — *G. de Purucker*

"Now there are — there must be "failures" in the etherial races of the many classes of Dyan Chohans or Devas as well as among men. . ." (*et seq.*, see p. 87, *The Mahatma Letters to A. P. Sinnett*)

G. de P. — In the address of tonight a quotation was made from *The Mahatma Letters to A. P. Sinnett* with reference to failures, spiritual failures; and as I know that this word has been greatly misunderstood, or at least apprehended wrongly, I ask your kind attention to what I have to say.

What may be failure among the gods, may be a glorious achievement for a human being or for a demi-god. The "failures" amongst the Dhyān-Chohans, or the gods if you wish, is a phrase which refers simply to those high beings, even amongst the Dhyān-Chohans, who have essayed more than they could successfully accomplish. But you see in a way how creditable this effort is. It is one of the divinest things in the consciousness not only of human beings, but of the Dhyān-Chohans, that they aspire forever beyond themselves. Such failures are victories in the long run, for they represent a sublime effort. And it is far nobler to try to seek the companionship of the gods in this life and fail because we are ourselves not yet gods, than it is to be forever merely human and reckon not whether the gods exist or not. So that these failures, all honest failures from the strictly logical meaning of not having done what was envisioned to be accomplished — these failures as beings are among the most glorious even among the Dhyān-Chohan hosts.

Now it is just these failures who were unable to top the last celestial rise and who had to wait until the next Manvantara

before they could cross that peak of achievement — it is just these failures who headed the hosts of those who returned and built our earth and taught earliest mankind, who laid down the lines of work on which the elementals and the lower Dhyān-Chohanīc hosts later labored to construct our world as it is. It was these failures who caught the vision, and, guided by the karman of our past, brought that karman as it were up a little higher. Failures, but saviors of us.

So indeed there are failures amongst human beings; and if we just take that word "failures," and do not know the teaching, how unjust could we be. Far nobler is the man who strives for chelaship and fails because of past weaknesses, past karman — far nobler is he than the man who has no such divine hunger to be more and to be better, higher than he was before.

There are failures also in initiation; but all this type of failure is glorious, for it represents noble effort, enlarging vision, increasing strength, and beautiful yearnings. It represents accomplishment. There are failures among the chelas who cannot reach Mahatmaship in this life. But how beautiful is their failure, for they tried and almost won. Fancy, if they had never tried! It is these rare spirits, whether amongst the gods or amongst us men, who see and try, and succeed or fail; but that failure itself is a success; and it is such failures as these that the mahatmic writer alludes to.

And what is it that H. P. Blavatsky says in *The Voice of the Silence*:

Remember, thou that fightest for man's liberation, each failure is success, and each sincere attempt wins its reward in time. The holy germs that sprout and grow unseen in the disciple's soul, their stalks wax strong at each new trial, they bend like reeds but never break, nor can they e'er be lost. But when the hour has struck they blossom forth.

A NEW STUDY OF MAN (1) — *Charles J. Ryan*

This remarkable work is another sign of the gradual progress of modern thought toward a more idealistic and, in a sense, a more spiritual view of the universe than the scientifically materialistic one of the nineteenth century. The author, Sir Charles Sherrington, O. M, etc, is a distinguished scientist, said to be the foremost British physiologist, and his handling of the subject reveals the possession of that rare combination, the sensitive vision of the poet and the technical knowledge of a trained expert.

Though the study of physiology has led many of its votaries toward materialism and skepticism Sir Charles is no crude materialist — and in many respects he takes the Theosophical point of view. He insists on the underlying unity of the Cosmos, and denies that the mind is a "secretion of the brain" or that it is made of electric particles or even connected with the relativist quantum of action. It cannot be "energy" because it does not obey the laws of energy. We feel that his liberal outlook suggests that if he studied the Esoteric philosophy he would find the clues to many of his problems.

As a starting point Sir Charles takes a notable sixteenth-century treatise entitled *De Abditis Rerum Causis* (On the Hidden Causes of Things) by Dr Jean Fernel, physician to King Henri II of France. Dr Fernel had a powerful and critical mind and although his thinking was dominated by the religious atmosphere of his age he was a keen reasoner. His book appeared in 1598, when faith in the unseen was strong, and he naturally believed that "living things have souls, dead ones none." This complete dualism is not the modern view in which the notion of a definite separation

between the animate and the inanimate scarcely exists, and much of the author's argument is devoted to the rebuttal of a crude dualism in nature. Here Sir Charles is in agreement with the Ancient Wisdom, though Theosophy carries the argument farther. H. P. Blavatsky writes:

. . . chemical science may well say that there is no difference between the matter which composes the ox and that which forms man. But the Occult doctrine is far more explicit. It says: — Not only the chemical compounds are the same, but the same infinitesimal *invisible lives* compose the atoms of the bodies of the mountain and the daisy, of man and the ant, of the elephant, and of the tree which shelters him from the sun. Each particle — whether you call it organic or inorganic — *is a life*. . . — *The Secret Doctrine*, I, 261

Sir Charles Sherrington's study contains many fascinatingly interesting though decidedly disquieting delineations of the marvelous workings of Nature in her incessant efforts to produce living creatures in overwhelming profusion. As he says, it is not easy to understand how a Benevolent and All-Powerful Designer can have "created" or even tolerated the ingenious and seemingly *guided* processes of reproduction and sustenance which produce horrifying tragedies on an enormous scale, especially those in which men and the higher animals are slowly and painfully destroyed by inferior creatures. For instance, in India alone about 1,200,000 human beings die of malaria annually, infected by the microscopic *plasmodium malariae*, and many more suffer intensely from the disease. The author holds the reader spellbound by his vivid description of the almost unbelievably complex and painstaking methods by which this venomous speck and many other equally lowly pests destroy the higher forms of life wholesale. In these cases, he says:

Life's prize is given to the aggressive and inferior life, destructive of other lives at the expense of suffering in them, and, sad as it may seem to us, suffering in proportion as they are lives high in life's scale.

Of course, numerous examples exist in which the same marvelous ingenuity and apparent "design" are employed for benevolent and constructive purposes, but on the other hand the examples of destructive "devilish ingenuity" such as those he describes are "an almost countless many."

Theosophists should know these things, for to many intelligent people they *stand as irresistible arguments for the materialistic denial of all spiritual possibilities in the universe*. Sir Charles, however, while fully appreciating the difficulties of the case, has not let his judgment be overwhelmed by the superficial appearance of an utterly ruthless Nature, "red in tooth and claw"; and of course a knowledge of the fundamental principles of Theosophy eliminates the necessity of resorting to the hopelessness of pessimism or the sophistries of materialism.

In Eastern philosophy the cosmos is an Ever-Becoming, an eternal process of approach which can be well illustrated by the mathematical "paradox," the asymptote, which always approaches but never arrives, and yet which is not a juggle or trick of numbers or lines. May we not believe that a certain measure of suffering is absolutely necessary, under present conditions, for progress? Are not pain and pleasure merely a "pair of opposites," contrasting poles or aspects of an infinitely higher sensation? Are they not temporary measures for the training of the Ego?

Returning to the antagonism discussed by the author between the medieval belief in a world "devised by a loving Father from every

nook and corner," and the modern "unhalting and blood-stained conflict systematically permeating the field of Nature," perhaps Man is far more responsible than "blind Nature" for the plagues which pursue him so relentlessly? According to the Ancient Teaching:

Eastern wisdom teaches that spirit [the Monad] has to pass through the ordeal of incarnation and life, and be baptised with matter before it can reach experience and knowledge. After which only it receives the baptism of soul, or self-consciousness, and may return to its original condition of a god, *plus* experience, ending with omniscience. (2)

But the outer Man "whose intelligence makes him the one free agent in Nature" (H. P. Blavatsky) has been impelled by selfishness, passion, and false ambitions to pit his personal will against the Cosmic harmonies, and in relation to man-made or man-attracted plagues, Sir Charles perhaps unwittingly provides us with a very significant argument. It seems that the malaria parasite, which according to his statement affects nearly *one-third* of the Earth's human population is apparently no older than the human race to which it is so closely attached. He writes:

Evolution has adapted it [the parasite] complexly, delicately and effectively to kill other lives. Since it requires man for its slaughter it would seem an evolution of recent date. Its hideous cycle has overcome with "ingenuity" great obstacles to perpetuate itself.

But as Dr de Purucker has so often pointed out, not only the evil fortunes of man and the cosmos, but progress through experience are actuated by the conflict of wills among the constituent Monads, and that when the disturbing causes are worn out, as it were, the cycles of time will restore all things to harmony, or at least to the utmost harmony possible in *this period* of the Ever-

Becoming. Sir Charles Sherrington envisions something like this when he writes:

Our world we recognize today as a world in making and ourselves as a part of it likewise in the course of making. Our present is not only not static, its very motion is a motion which will tomorrow not repeat today. Our planetary islet is unfinished even as those island universes which the astronomer tells us are at various stages of becoming. . . . Living things are all the time busy becoming something other than what they are. And this, our mind with the rest. It is being made along with the planet's making. We do not know that it will ever be finished — p. 169

While the author feels compelled to be at least temporarily satisfied with the chemical and physical explanation of life, he clearly realizes that the problem of mind is still an impenetrable mystery to science, and that the connection between mind and brain is unknown. This reviewer at least is impressed with the idea that the author cannot escape the haunting suggestion that the most primitive forms of life, brainless and seemingly nerveless seek their food as if they had a modicum of mind, including deliberate choice, and the capacity to learn. This, of course, is fatal to materialism as H P Blavatsky shows in her invaluable "Psychic and Noetic Action" in *Studies in Occultism III*, which readers of Sir Charles Sherrington's *Man on his Nature* would find very enlightening on many of the problems he brings up.

Sir Charles Sherrington pays great attention to the apparent disconnection between mind and body, and decides that *mind and energy are not convertible terms*, and the brain is only "an organ of liaison [a connecting link] between energy and mind, but not a

converter of energy into mind or vice versa" (p. 318). That is, Man is a temporary association of mind with a matter-brain which is a form of energy. This coupling is as mysterious as "matter" itself, now regarded in physics as a unity of seeming incompatibles — substantial particles and immaterial waves — a paradox which, as the author says "is accepted as an assumption and left unaccounted for," yet mind has an independent power of controlling our conduct. If modern scientists studied the Esoteric Teachings they would find that the links which unite mind and body were discovered ages ago in the so-called astral or etheric intermediary body; but if their own methods are preferred we commend Dr Gustaf Stromberg's scientific treatment of this crucial problem in his *The Soul of the Universe*. Among other points he shows that "chemistry" does *not* explain how memory can be carried through an ever-changing succession of brain cells without some "immaterial" (non-physical) and permanent structure to preserve it.

Sir Charles Sherrington concludes that "Mind, as we know it, is never any other than embodied mind," meaning, presumably, embodied in physical matter, and he seems to penetrate no farther into the higher states of consciousness than the mind, we hear no clear intimation of spirit. But his definition of mind is impressive:

Invisible, intangible, it is a thing not even in outline, it is not a "thing." It remains without sensual confirmation and remains without it for ever. Stripped to nakedness there remains to it but itself. What then does that amount to? All that counts in life. Desire, zest, truth, love, knowledge, "values," and seeking metaphor to eke out expression, hell's depth and heaven's utmost height.

This could not have been written by a materialist at heart and

when Sir Charles says that growth, the main characteristic of *life*, can be explained by "chemistry" we have his word that he is not identifying *Mind* with chemical reactions or any other form of energy. We believe, however, that no scientist would pretend to know what chemical activity is in its ultimate reaches. More than fifty years ago, when chemistry was very limited, H. P. Blavatsky wrote:

Chemistry and physiology are the two great magicians of the future who are destined to open the eyes of mankind to the great physical truths. — *The Secret Doctrine*, I, 261

But she looked forward to a very different chemistry and physics from the mechanistic one of the nineteenth century which was largely based on the old "hard billiard ball" theories of the atom. And in physiology and biology she was looking to a future when a truly philosophic and spiritual science will abandon the naive concept that man with his innate and godlike powers is nothing but a physical organism, here today and gone tomorrow, "a monkey shaved."

We have enjoyed Sir Charles's optimistic anticipations of the future of humanity, but they are limited by the usual negations of what is wrongly called the "supernatural." He shows no awareness of the existence of supersensuous planes of Nature where conscious beings exist, higher as well as lower than ourselves. The elementary facts about these subtil conditions of being — etheric, as Sir Oliver Lodge called them — are ignored even by those scientists who claim to believe in a future life and yet make no effort to discover where it will be spent. Even a limited knowledge of the existence of an inner world changes our mental center of gravity and our outlook upon the future of humanity. We agree with Sir Charles that a crude "anthropomorphic" outlook on Nature and a belief in a pseudo-

"magical" interpretation should be rejected, and that Nature is a Harmony, a Whole, and free from the element of "lurid drama" to which he objects. If by "magic" he means a defiance of natural law by a man or by a Personal Deity, who perform "miracles," again we agree, and more, we assert that this is the Theosophical teaching. We need not confuse such pseudo-magic and superstition with true magic or even with the marvelous, both of which are strictly governed by natural law. But who knows the limits of natural law? And when science discovers that certain teachings of Theosophy, at present regarded as heretical, are perfectly "natural" even if "occult" in some cases, it will simply have to widen its doors, as has already been accomplished in certain directions.

The Ancient Wisdom teaches that

. . . the daring explorer, who would probe the inmost secrets of Nature, must transcend the narrow limitations of sense . . . he must develop faculties which are absolutely dormant — save in a few rare and exceptional cases. . . . —
The Secret Doctrine, I, 477-8

Sir Charles may not be prepared to accept such a possibility, but we can afford to wait till time proves its truth, notwithstanding his confidence that "To-day knowledge views the natural scene wide-eyed"!

The author discards the popular idea of survival because it implies a "supernatural or magical" break-up of the body-mind combination at death which he calls a crude and infantile relic of Dualism. We certainly agree that mind — or rather spirit — needs a bodily "vehicle" to contact the matter in which it is imbodyed, but this principle applies to other kinds of substance than gross physical matter. When the energy-body perishes the consciousness of the Real Man falls back upon its more subtil

bodies or vehicles for contact with the "ethereal" conditions in which it then functions, magic or no magic!

The author analyses the increasing domination of man's higher nature in a very encouraging manner, though, of course, from the "regular" standpoint of the evolutionists. Early competitive and predatory strife was gradually modified by co-operation, and as mankind unfolded the qualities of pity, compassion and self-sacrifice the predatory form of living became more and more a curse. As "human life has among its privileges that of pre-eminence in pain" this sensitiveness brought increasing altruism and "a decenter-ing of the self and an admitting of certain "otherness" to interest on a par with the self's own"; in plain language an unselfish consciousness of universal brotherhood. Sir Charles adds the beautiful thought:

A great gift — some might say divine — comes to the "self when, perceiving certain suffering external to itself it so reacts to it that that suffering becomes its own, and is shared even as a "feeling." That gift is a gift, it would seem, uniquely human. It allots to human life a place unique among lives.

Well, we may ask, is the holder of this "*divine* gift" to perish for ever like the beasts of the field? Has "Nature" taken infinite pains to produce such a unique being merely to fling it away like a crushed flower? He quotes the verse:

"None can usurp this height," returned the Shade, "
But those to whom the miseries of the world
Are miseries, and will not let them rest."

"Will not let them rest"! Surely this is the fundamental teaching of the Buddha, the Great Renunciation of self for others" sake, the highest ideal of Theosophy!

INITIATION AND SUFFERING — *G. de Purucker*

All Initiation is really a test or trial, but the preparation for that test or trial is daily life — from January 1st to January 2nd, to January 3rd and throughout the days to December 31st. What we call Initiation is simply the showing by the neophyte in the tests then and there laid upon him, whether his daily life's training has been sufficiently strong to make him fit to hitch his chariot to the stars.

That is why the Masters have told us that no especial tests whatsoever are put upon chelas, only when initiation comes and they are given a chance to face the trial. The tests come in daily living. Do you see the lesson to be drawn from this? Fit yourselves while the day is yet with us and before the night comes. Do you know what some of these tests are? There have been all kinds of romantic stories written by people about them. These have been mostly guess-work, but the fundamental idea is often true. The tests are these: Can you face the denizens of other planes and prevail with them in peace? Do you know what that means? Are you absolutely sure of yourself? The man who cannot even face himself and conquer himself when required on this familiar plane where he lives, how can he expect to face with safety the habitants of other planes, not only the elementals — they are not by any means the worst — but the intelligent creatures, beings, living on other planes?

Now then, anyone who has mastered himself, perhaps not completely, but who knows that if he sets his will to it he can control anything in his own character, and knows it by proving it, is ready to go through initiation. When this knowledge comes to him then he is given the chance.

So many people seem to think that Initiations are privileges granted to people who pretend to live the holy life and that kind of thing, but I will tell you something more that I myself know because I have seen it in my fellow human beings: there is more chance for the man or the woman who has striven honestly and has fallen and risen again, in other words for one who has eaten the bread of bitterness, who has become softened and strengthened by it, than there is for one who has never passed through the fire. So compassionate and pitiful is universal nature, that it is precisely those who stumble on the path who are often in the end the richer. Holiness comes from the struggles with self fought and lost, and fought and lost, and fought and *Won*. And then compassion enters the heart, and pity, and understanding. We become gentle with others.

You see now why it is that the quick one to judge the faults of others is precisely he who himself has never stumbled on the path and therefore is not fit and ready. Compassion, pity, are marks of character, of strength gained through suffering. "Except the feet be washed in the blood of the heart" — there you have it! Look how compassionate the Christ was and the Buddha. Let us learn and do likewise.

I have often been asked or written to as to what my opinion would be concerning one who has been unhappy on life's pathway, has wandered from the straight and narrow path: and I have wondered how any Theosophist could ask me a question like that. Is it not obvious that it is precisely those who have learned through suffering who are stronger than those who have not? — and I here mean those who have suffered and conquered self "Judge not lest ye be judged." The one who has been through the fire never judges one who is passing through it. He knows what it means. It is the immature, the spiritually undeveloped, those who have never been through the fire of pain, who are

quick to criticize and judge others. Judge not, lest ye be judged
some day.

The Theosophical Forum

THE LAWS OF GOD — *Clifton Meek*

In a recent letter of a political nature Judge Light brought up the question of the "Laws of God." Aside from all political issues with which he was dealing, I think this touches upon something very basic and fundamental, and I agree, as I invariably do, with his philosophical viewpoint in principle. Personally, I have little faith in any political or economic panaceas as permanent corrections for the evils of our age or any other, for these things are but the froth and foam which rise to the surface of society in the fermentation of human evolution, and, I think the same can be said for creeds, dogmas and theologies in the field of religious endeavor. The best political and economic system that could be devised would be corrupted as long as the hearts and minds of men are perverse and selfish. Water can rise no higher than the level of its fountain source and the tragic state of human society today but reflects the height, or rather the level, of man's spiritual evolution. The world is as it is simply and only because men have made it so, due to the fact that they do not understand the basic laws of Universal Nature and their own being. If they did they would realize the futility and spiritual insanity of all selfishness, the basic evil and supreme hall-mark of ignorance.

The laws of Nature, as Judge Light stated, are the laws of God, so-called, not because they were objectively formulated and decreed by a personal God as many good people still believe, but because they are habits of Universal Nature, the essential characteristics of Divinity which is at the heart of nature. Beyond this point, all speculation as to the nature of God and the "laws of God" is futile and beyond the comprehension of the human mind. Through religious miseducation man has come to look upon life and himself as things apart from God, a super-natural creator who

plays the role of absentee landlord, and with whom he must deal through agents. The word super-natural should be stricken from the vocabulary of man, for Universal Nature includes All, and the idea that anything can exist above and beyond Boundless Infinitude is meaningless. God, or Divine Intelligence, must therefore of necessity be the essence of Nature rather than an extra-cosmical or so-called super-natural Being. The "Laws of God" is a term frequently used by religious spokesmen with little regard as to its deeper implications.

Purely speculative dogmas, at variance with the known laws of Nature, all philosophical reasoning, and even common sense, have been presented to man as the "laws of God."

There is not an atom, creature, or star of Boundless Infinitude whose very being and consciousness is not rooted in, and an expression of, Universal Consciousness, or what men call God, as countless hosts of entities pursue their evolutionary journey through the work-shop and realms of nature. It cannot be otherwise or they would not exist. When men are unselfish, kindly and compassionate they reflect the inherent divinity within themselves instead of allowing themselves to become enmeshed in the mire of materialistic and selfish desires, and build into their character that accumulated wealth of spirit, man's only permanent possession and the only one in which true happiness can be found. When stripped of the tinsel and trimmings, Religion per se is just that and nothing more, and it is the only philosophy of life that will stand the test of time and experience. Creeds and theologians come and go with every age as men attempt to dramatize the trials and sufferings through which the human soul must pass on its journey toward perfection. Every exoteric religion has had its legendary hero which but symbolized the Divinity in Man, the only constant and enduring factor amid the changing forms of religion and external observances.

Men follow the particular pattern of worship — or none at all — in accordance with their understanding of life and spiritual development. Whatever they may profess outwardly will have little influence upon the impersonal and inexorable laws of Universal Nature, for it is the moral and ethical aspect of their daily lives in relationship with their fellow beings and their own higher nature which alone determines the spiritual progress they have made. Every act and thought is a Karmic seed of destiny sown in the fertile field of time and space, the ineluctable results of which, for weal or woe, can no more be set aside or side-stepped than the laws of Universal Nature can be declared unconstitutional.

On that day when religion will rid itself of the idea of a personal, super-natural God and creator who arbitrarily imposes suffering upon man, his own imperfect handiwork, and recognizes the fact that Divinity is the heart of Nature itself and not a thing apart, and that it is man alone who stupidly inflicts suffering upon himself and his fellow men by his spiritual insanity and violation of the ethical and moral laws of his own Inner God, perhaps the Sons of God will create a happier world.

The Theosophical Forum

STUDIES IN "THE MAHATMA LETTERS" — *G. de Purucker*

I agree with those who just cannot see how the One could do otherwise than become the multitude. Consider the Universe around us everywhere. It represents the many. Reason tells us that being subservient to one common law, essentially formed of one common cosmic stuff, originally all the multitudes of beings and entities in this Universe must have come forth from one cosmic fountain of being and life. It is the teaching of Occultism of all the ages that back to that divinity all things are marching now: out from divinity as unself-conscious god-sparks for aeons and aeons of cosmic pilgrimage, undergoing all the various marvelous adventures that life in all its phases brings; then rising on the pathway and re-entering the bosom of the Divine, to issue forth again at the next cosmic Maha-manvantara. It is incomprehensible to me that anything else could take place; and there are so many remarkable illustrations that can be given of this eternal process.

SEDIMENTATION ON OUR EARTH

When the Masters or H. P. B. speak of the 320 million years since sedimentation on our earth took place, they refer to the beginning of *this Round* on Globe A; and when the impulse of the three elemental kingdoms, followed by the mineral kingdom, reached our earth, then not only sedimentation but volcanic action began. That is all there is to that. If you will read what I have to say on that in my *Fundamentals of the Esoteric Philosophy* (and I labored hard in that book to make the process of evolutionary development on the different globes during a Round clear): if you will look to that book, you will have it, I hope, clear enough for comprehension. As a matter of fact, we have so much teaching

that our dear people forget most of it! That is the plain truth. Our books are just packed with information; and one of the greatest helps possible to us students is to learn to collate and build up a picture by that collection, bringing together fact after fact and never being satisfied until we have made a proper place for every fact. Then you have a picture, and you won't forget it.

CORRESPONDENCES IN THE ROUNDS

The Fourth Round is a copy of a more advanced type of everything that took place in the Third Round. Similarly, the Third Round was such of the Second. Remember that, after all, forms and shapes and bodies are all relatively unimportant.

There was a time in the Third Round correspondential to the descent of the Manasaputras in this Fourth. There was a time in the Third Round correspondential to the arrival of sex on this earth. There was a time in the Third Round correspondential to what will happen in the future when sex will disappear in this Round. And so with all events through which we have passed and are to pass in this Fourth Round.

Indeed, during the First Round, even, there was organized intelligence on this earth, not merely mindless entities. If you think that there was no intelligence of any kind in the First Round, it shows that you keep your thoughts restricted too much to human evolution. But there are the different evolutions of the Dhyana-Chohanian Kingdoms; and even in the First Round there were human beings. Never mind what the bodies were; that is of no importance. There were beings with will-power, who thought and felt. They were few, to be sure, but they did exist; and they were the star-sons, the Sons of the Firemist spoken of by H. P. B., the first grand Adepts on this earth and indeed on the other globes of our chain. There were very few because this was the First Round. There were more in the Second; more in the Third;

more in the Fourth. There will be still more in the Fifth, and so forth; because every new Round raises every Kingdom one cosmic sub-sub-plane higher on the evolutionary scale. So much for that comment.

MAN-BEARING GLOBES

It is true that globes in a Solar System, or Planetary Chain too — it is the same thing really — can advance so high in their evolutionary or emanational development that they have passed the stage where human beings or the human kingdom can find place on such globes of a chain, because they have passed high above the human kingdom — the whole chain has. But that is only half the picture. The other reason why there are non-man-bearing globes, that is chains in our Solar System which are not man-bearing, is that these other, forming the other part of the picture, have not yet reached the point where their life-waves have risen to the human stage. Do you see?

So then, the idea is that every globe in a planetary chain has been, is, or will be, man-bearing some time, *some time*. Those not yet having reached the stage of man-bearing produce the lower kingdoms, or some of them. Those which have evolved beyond or higher than the possibility of bringing the human kingdom on their globes bear the races of the Dhyan-Chohans exclusively, and beings even beyond those last.

So there are man-bearing chains or globes in our Solar System, and there are those which are non-man-bearing. As a matter of fact, you can say the same thing about any kingdom. There are globes in our chain which bear Dhyan-Chohans, as an example, and others which do not bear Dhyan-Chohans.

PARABLE OF THE BRICKLAYER — *Miles MacAlpin*

Long ago, during one of those cyclic periods when a planet's humanity is none too bright, a certain type of men grew old physically and died within a very few yards of the spot of their birth — as most of us do to this day in an intellectual-spiritual sense.

These "dark-age" men seemed to have a racial agoraphobia. Believing the world to be a flat disc, they worshiped the horizon as seen from their birth-place with great awe. It was the binding ring that held the world together, and any heretic who suggested travel was treated most unhappily by the masses. He was accused of wanting to shove the horizon over the edge of nothing so the world would fall apart. This seems much like what happens to major spiritual teachers to this day, if they venture to suggest intellectual-spiritual "travel" or self-directed motion. Is it not strange that we will raise eyebrows at the queer physical behavior of others while the mentality behind the eyebrows may be duplicating the queer behavior?

When the end of the cycle approached, and a new type of humanity began to ease its way into the economic situation, the adept-guardians of mankind helped the gods send an avatic spiritual messenger to offer some age-old basic truths to the world of karma-bound men. This is one of the kindly duties and pleasures of those who acquire degrees of mastership in the great college of evolution. Just how these elder brothers of humanity may be of assistance to the gods in this matter is a mystery, but a little thought on the matter brings forth the analogical thought that when we go to church to hear a minister of the gospel or to a philosophic school to hear a teacher speak, we not only go to "get

something out of it" but to help build up an atmosphere that will enable the speaker to be the best possible vehicle for the truth he strives to present. It may be that at cyclic periods every adept, wherever he may be, lends something from his sevenfold nature for the use of the forthcoming avatar. A good way to know this lending technique is to become an adept and find out for oneself.

At that time the planet was too young to have evolved a Buddha from among its own man-types, so one of the more active gods, Ah Ping in esoteric name, provided an egoic consciousness for a baby that was born to worthy parents on earth, and in a matter of thirty or more years the world heard the mysteries through a "new" spiritual teacher.

To "rise above" traditional bondage was the general mystery-message for the people of that time. It was taught, as usual, in parable form to the masses and in more or less straight doctrine to immediate disciples. The age-old doctrine of expansion of consciousness by the "upward and inward path" was interpreted in many different ways by the people, and a number of odd beliefs developed when earnest but untutored folk tried to work out for themselves the literal meaning of the teacher's words.

One philosopher observed, on his daily walk to a mountain top within orthodox horizon-limits, that his horizon was considerably expanded when upon the mountain. The people had been climbing this mountain for many centuries; but their perception-limitations being what they were, and furthermore being traditionally forbidden to expand horizons, they climbed for exercise or to hunt game or pick flowers or something equally important to their daily life-problems. This may seem strange to us, yet for many centuries all the material has been at hand in natural resources but we did not think of them in terms of radio, electric lights, steam-engines, internal combustion engines or

induction motors. Ions, protons and electrons were within the atom long before we smart moderns discovered their presence. For many centuries during our own recent "dark-ages" science is said to have known nothing of the blood-circulation in man's own body. And even today, do we not climb mountains of intellectual-spiritual poise merely to pick the flowers of happy thoughts and feelings that seem to grow on such mountain-moments within the orthodox sense of our own rounded-out personality? How many of us are aware of any expansion of the horizon between self and environment?

So this philosopher, evidently one of the new type of humanity in an early stage of growth, built up a school of thought around the pin-point of knowledge that had seeped out of the depths of his being. We have a few of his kind today; they are like a rose that comes to bloom and radiates its aroma, believing it to be the aroma of the whole plant kingdom. This one had a soothing voice and a good line of words and phrases, so he soon had many persons in a "rising above" class. He and his mates would ascend the mountain and study the expansion of horizon-view as they ascended. The flower-pickers and the hunters considered them quite harmless, so they let them alone, although the horizon-expanders did not make any money out of their game and were therefore a bit off-center.

Presently the mountain was too low for the aspiring ones, so the master-mind went into deep meditation. It was no secret with the followers that the master often advised the gods on celestial matters, so they had seen to it that no worldly cares hampered their teacher's colossal work. This was too good a situation to lose, and how to hold his crowd together was the main theme of the master's meditation. At a ceremonial meeting he announced that Ah Ping in a person-to-person call had revealed the true "upward and inward" path, for which the disciples were now ready. This

path was for each man to build himself a tower as high as he wished, the sky being the limit if and when reached. The master would build the first tower if the disciples would get busy and make bricks.

To provide truly an inward growth, the tower must be built around the individual. So the master stood on a certain spot and started to lay bricks around himself in a circle within easy arm reach. He became an excellent bricklayer, and grew fascinated with the art of laying bricks, especially as his wall became higher than his shoulders and his hands grew closer to one another. Presently, with a shout of triumph, he fitted in the key-brick in a well-executed dome over his own head. He had discovered things about brick-laying that no one heretofore had known or conceived as a possibility.

Most of the followers held a ceremony of praise and sang songs of tribute to the teacher. They hurled anathema at the few heretics who dared suggest that the master had missed his objective. So some more schools of tower-building got their start then and there. The philosopher's bones are still within his tower.

Many of us are like that in our tower-building with doctrinal bricks. We get so interested in cementing one doctrine onto another with the mortar of compassionate love as we understand it that we forget to move along with the tower. Institutions as well as individuals are likely to do this, according to historical evidence, unless they keep alive an awareness of the dual nature of intellectual-spiritual "rising above."

How could the master-mind in the parable have kept on rising? He could have built a scaffold or he could have walked around on his wall as he built it. If there had been a seepage of water or oil into his tower he could have risen on a float; but then there would be the timing-factor between his bricklaying speed and the

rise of the liquid. This is probably the closest analogy to what happens to most of us; our progress requires eternal vigilance to keep the rising liquid of emotional control, the laying of doctrinal bricks and the knowledge of wider horizons well synchronized with one another and with the builder's responsibility to humanity.

Then again, the philosopher could have built a solid tower, taking more time and material but keeping a solid footing and rising with each layer of bricks. He could have worked in a circular stair on the outside to keep his communication with the world.

Of course, this parable of rising in a physical sense must be interpreted into terms of consciousness-growth, for the rising that one does toward self-conscious godhood is not a matter of crawling up so many feet above the earth or above one's own head.

There are many points to consider in this parable; many interesting and instructive analogy-points. The institution that gets too interested in bricklaying technique is more than apt to find itself under a comfortable dome that becomes a "ring-pass-not" beyond which lie the mineral springs where heretics get baths in sulphur and brimstone. Institutional bricklaying fanaticism may again be analogous to overdone "membership-driving" — the chief interest becoming the laying of human bricks around the name of the school while the school falls behind in knowledge or in the ability to properly disseminate the knowledge it may have to new streams of human consciousness. History seems to show that to build a well-cemented, horizon-limiting dogma-dome over the world's major religio-philosophic institutions, or "churches," is a good way to help bring on and to add a little more darkness to another one of those cyclic periods when the planet's humanity is none too bright.

BUT WHAT OF DEATH AND AFTER? — W. Q. Judge

Is heaven a place or is it not? Theosophy teaches, as may be found in all sacred books, that after death the soul reaps a rest. This is from its own nature. It is a thinker, and cannot during life fulfil and carry out all, nor even a small part of the myriads of thoughts entertained. Hence when at death it casts off the body and the astral body and is released from the passions and desires, its natural forces have immediate sway and it thinks its thoughts out on the soul plane, clothed in a finer body suitable to that existence

This is called Devachan. It is the very state that has brought about the descriptions of heaven common to all religions, but this doctrine is very clearly put in the Buddhist and Hindu religions. It is a time of rest, because the physical body being absent the consciousness is not in the completer touch with nature which is possible on the material plane.

But it is a real experience and no more illusionary than earth life, it is where the essence of the thoughts of life that were as high as character permitted, expands and is garnered by the soul and mind. When the force of these thoughts is fully exhausted the soul is drawn back once more to earth, to that environment which is sufficiently like unto itself to give it the proper further evolution. This alternation from state to state goes on until the being rises from repeated experiences above ignorance, and realizes in itself the actual unity of all spiritual beings. Then it passes on to higher and greater steps on the evolutionary road.

THE ORIGIN OF MAN AND THE LOWER KINGDOMS — *Peter Stoddard*

Students of Theosophy are aware, in a general way, that scientific ideas are approximating more closely to the Teachings of the Ancient Wisdom. In recent years this tendency has been very marked in regard to the vexed question of the "Origin of Man" and its related subjects of Darwinism and Evolution. The once popular idea that the Human Stock was derived from the lower kingdoms via the Simians and Anthropoids is now being abandoned by an ever-increasing number of Scientists; mainly because the merging of one kingdom into another, or of one stock into another, has never been demonstrated, and because the facts disclosed in the study of the anatomy of the human physical frame do not support such a theory. Further, the discoveries of human remains of high types in very ancient geological strata now prove that highly evolved men were contemporaneous with, or precedent to, some of the animals he was supposed to have been derived from.

To quote a few facts from the science of Anatomy. The constructions of the human arm and hand, and of the human leg and foot, prove that man was never pronograde, that is walking on four legs like the four-footed animals. Man possesses a muscle in the leg, the peroneus tertius, which enables him to stand and walk in an upright position. No other animal whatsoever has either this muscle, or a foot like the human foot. These are two specifically human characteristics, which are also found in the early development of the human embryo, thus proving them to be exceedingly primitive human features which could never have been inherited by man from any animal. The muscles, bones, and joints, of the human forearm are astonishingly primitive in

structure, and therefore could not have been evolved at a late date in man's evolutionary history; and they show no traces of ever having been used as a supporting forelimb.

What are the Theosophical Teachings about the Origin of Man and of the Kingdoms of Nature accompanying him on this planet? They can be summarized in one sentence, viz.: — "The Human Kingdom was derived from the Gods, and the lower Kingdoms were derived from Man." How? When? Where? That is a long and complicated story, which, in Theosophy, all along the line, is consistent with itself and with the known facts of life.

When Theosophy speaks of "The Gods," it means that there are "Creative Powers" in Nature, and that they contribute to, and assist in, man's evolution. How? By appropriate action in accordance with their function and destiny, much in the same way as a gardener tends his flowers. These "Gods" are of various grades and functions, and they have their own proper work to do in the evolutionary processes, even as man has. Theosophy declares there are designers in the world — designers of many degrees, vast hierarchies of them, infilling the Cosmos, and we live in them even as the cells of a man's body live and move and have their being in man. Further, that evolution proceeds on three general lines — the spiritual, the mental-emotional, and the vital-astral-physical; that man represents these three general lines of evolution, and that he is thus composite, having various "Principles" united in his constitution. Thus man is not merely an animal. His psychology, his mental abilities, his inventive genius, his art, his aspirations, his wonderful achievements, are the results of high powers acquired during various periods of evolution. Nature's processes are cyclical — She has the habit of repetition; and as man is a part of Nature, he also reflects this habit of periodicity in his repeated incarnations on earth. In the larger sense, the Human Life-Wave, consisting of Man in the

aggregate, is also subject to the same Law of cycles, and his present association with the earth is only one (the fourth) of a septenary series of such events. Nature's processes are also gradual. The beginnings of Human life on this present earth were not necessarily material in the ordinary sense of that word. They were ethereal at first, and condensed only gradually into a material condition. These periods of gradual solidification occupied many millions of years, prior to the further millions of years during which the Human frame has been more or less material.

Now there is no confusion in the Theosophical Teachings, although there is great complexity. And the subject of the origin of the beasts is a complex one. Clearly, the many similarities between Man and the Kingdoms below him indicate a close connection. But must we therefore suppose that Man is derived from these lower Kingdoms? In view of the fact that the human stock is the most advanced, the logical deduction would be that it is the oldest. And if it is the oldest, it must have started the first; and if the lower kingdoms possess many features similar to man, the further logical deduction would be that they are derived from man. This is our thesis, viz.: — "The Human Stock, considered as a whole, is the most primitive of all the mammalian stocks of today, and always has been so in past time. The human stock is the primordial (ancient first) stock; the originator, on this earth, in the present Globe-Round, of the entire mammalian line, in a manner and according to the laws of nature fully explained in Theosophy. Man preceded the mammals, and they grew from him. Man did not grow from the mammals. But this does not apply to the other vertebrata and the invertebrates, although they came from the human stock, in the previous Globe-Round."

BROADCASTS FROM SHANGHAI: II

Over radio station XQHB, Shanghai, China, in the Spring of 1941, fifteen-minute weekly broadcasts were given — the result of the enthusiastic enterprise of Miss Inga Sjostedt and Miss Elsa-Brita Bergqvist of the Shanghai Theosophical Lodge. This second talk, given on March 30, was by Miss Inga Sjostedt. She outlines the Theosophical teaching of Universal Brotherhood.

Good evening, everybody:

The speaker last Sunday gave a broad, general outline of Theosophy and its main teachings. This evening I would like to explain and define Universal Brotherhood, the acceptance of which is the only pre-requisite for joining the Theosophical Society.

What do we mean by the word Brotherhood? It can, of course, be considered as a purely sentimental bond between man and man, but a student of the Ancient Wisdom-Religion means something much deeper than that when he speaks of Universal Brotherhood.

Throughout the ages the Wise Men, the Initiates, of all parts of the world have known and taught — sometimes publicly and sometimes secretly — the doctrine of the Divinity of Man. We have lost this noble and inspiring teaching in the West as our religions have degenerated through the dark Middle Ages which enveloped Europe in mental and spiritual darkness. But the ancients were familiar with this thought, and not only believed man to be basically divine, but believed that trees, animals, brooks and mountains were vitalized by an indwelling god. Today we say, as we consider the mythologies of different peoples, that

these peoples were pantheists, childish pagans who believed in fairy tales — because we do not understand the deeper meaning behind these so-called fairy tales.

God, Divinity, the Spiritual and Ultimate Reality — we can call it what we like — must be omnipresent to be infinite, eternal and truly divine. If we admit of a single atom in space without its core of indwelling divine fire, then we limit God, because He cannot be all-powerful if He is not contained in every particle of space. Divinity must infill all life, all created, finite entities, to *be* Divinity. This the seers and sages of humanity have always known; and they have passed their knowledge on to us under the guise of allegory and myth. The Greek pantheon is filled with deities presiding in so-called inanimate objects, such as trees, lakes, rocks, and so on. It is the same story with the Hindus. Even some of the early Christians endowed stars and planets with a soul of their own and believed that the stellar bodies visible to the eye were merely the bodies of bright spirits or gods.

There is much in us that is neither divine nor eternal, for instance our physical bodies, our instincts, and even our everyday thoughts; but the core of the core of our inner being is God, because it is the infinite in us which builds for itself garments and vehicles of perishable matter — though even the atoms of our physical bodies have a spark of the eternal in them.

Jesus knew this, as well as the other great spiritual Teachers of mankind. If we turn to the Christian scriptures for a moment, we shall find many references to the divinity of Man. In Psalm 82, verses 6 and 7, it is written: "I have said, Ye are gods, and all of you are children of the most High. But ye shall die like men, and fall like one of the princes." Jesus repeats this saying in the New Testament. In the Gospel according to St. John, Chapter 10, verse 34, he says, "Is it not written in your law, I said, Ye are gods?" In

1st Corinthians, Chapter 3, verse 16, it is written, "Know ye not that ye are the temple of God and that the Spirit of God dwelleth in you?" And this from Acts, Chapter 17, verse 28: "For in him we live, and move, and have our being." Could anything be said more plainly and incontrovertibly?

We are divine at heart, and because the divinity in us is the highest and noblest part of our complex being, it is our task, our destiny, to merge the lower human soul with the deathless God within. Then only can we understand the injunction of Jesus as it stands recorded in the Gospel according to St. Matthew, Chapter 5, verse 48: "Be ye therefore perfect, even as your Father which is in heaven is perfect."

Not only is man divine at heart. But all things whatsoever that *are*, that live and exist in this world of ours, live and exist because they are projected onto the screen of existence by the indwelling Divinity which is their real originator. When we realize this: that we must unite in brotherhood with all humanity, because every man is basically identical with ourselves; that we must guide and protect the animals who stand below us on the evolutionary ladder because in them too there is a spark of the identical divine fire which inspires us; when we learn that the beauty in Nature appeals to us because it awakens a responsive chord in our own souls, then the words Universal Brotherhood begin to acquire a real meaning, based not only on sentimentality but on cold facts.

There is an old mystical Sufi tale which illustrates this teaching well. The story is that the Soul once came to the portals of the House of God and knocked. And God heard the knocking, and His voice rolled like thunder, saying, "Who knocks?" And the Soul answered, "It is I." And the voice of God spoke again, saying, "Who is I? I know thee not." And the Soul turned away from the House of God unhappily and wandered throughout the universe for

untold ages. And at last it returned to the House of God and knocked again. And God's voice thundered forth as before, "Who knocks?" And the Soul answered, "*Thou* knockest." And then a whisper, inaudible to the ears, yet filling all the spaces, issued from the House of God, and it said, "Enter into thine own."

This is the keynote to our attitude in life. We are divine at heart; whatever our failings and imperfections, the pattern of perfection, of immortality, is graven on our spirit. We are the temple of the living God, as the New Testament says, and all inspiration, all understanding and spiritual power come — not from the outside, but from our own inner nature. It remains in our power to awaken the human nature to a recognition of the divine. When we have done that we shall be as gods.

There is a way of quickening the process, and that is by means of training under a reliable teacher. There are many men in India and Tibet today who have passed through such a training and who have mastered their lower human nature. They can perform feats which to a Westerner would seem nothing short of a miracle. These men, these Yogis, would laugh at the notion that the Spirit of Nature, or God, was something outside of themselves. They know, they have proof through experience, that true spiritual powers come from within themselves, that God, or Divinity, is at the root of their human selves. There is no such thing as a miracle, because there cannot be anything supernatural in nature; but masters of life like Jesus and Buddha, through drawing upon their inner Divinity, knew how to control the functions of physical nature, and to the uninitiated these things appeared to be supernatural because beyond their understanding.

FORGIVENESS AND KARMIC ACTION — *G. de Purucker*

Think of what the ancients meant when they spoke of men as the kin of the gods, the children of divinities, co-operating with the divinities in the affairs of the Solar Kingdom. It is true; and as time goes on and from manhood we pass into godhood, into becoming gods, our contributory efforts will be much better, much more beautiful, much wider, much richer, in every way grander. We are at present young gods at school, young gods at play. Our home is the Solar System. It is likewise our school-house, our university. This earth is, as it were, our school-room at present until we graduate to a higher school-room; but all our activity takes place in our university of life, which is the Solar System. How wonderful a picture! And I can assure you that every human thought is registered for eternity on the deathless tablets of time. A thought of mine will touch with the most delicate finger of influence the remotest star in the galaxy and will affect that star by so much, just as I am affected by all thoughts around me.

Imagine two billion human beings on earth, the human race — that is, the imbodyed portion of the human race. Suppose they are thinking, as men do, especially today due to the rapid improvements of intercommunication: suppose they think all more or less at the same time about the same thing and pretty much in the same way — let us say it is a scare or a war-hysteria or a great hate or a great emotion: do you think that that vast body of loosened psychic energy is not going to strike somewhere? Of course it will. And here is where karman comes in. It is an old, old teaching, taught more often in the earlier days of the Society than now, that the disasters that afflict mankind are mainly brought about by man, his own evil thinking and evil

feeling throwing into the astral light or into the earth's atmosphere a simply terrific volume of energy, of force. You know the old English proverb, which is very true: Curses like chickens come home to roost. They do not go and roost in somebody else's farm. *Chickens come home*. Thoughts of love, thoughts of beauty, thoughts of kindness, benevolent thoughts and feelings: they likewise come like messengers from the gods winging their way back to us. Someday, somewhen, somewhere, we reap what we sow. If men knew and felt this great law, how differently would they not act towards each other! All feelings of revenge and hatred, and that diabolic fruit of self-seeking materialism that you must protect yourself at any cost against your brother: such things could never again find lodgment in men's minds and hearts.

How true is the word of the old Hebrew Prophet: "Vengeance is mine, saith the Lord." What a warning! Theosophy shows us why and how. The man who suffers an injury would do infinitely better to accept and forgive, to take it manfully; for his guerdon in recompense someday will be great, an injurer will become his benefactor; and if he stays his own hand, not only does he not add to the fearful weight of evil karma pressing on him, but he raises his enemy. An act like that is godlike. I say unto you, "Love your enemies." So spake the Avatara. "Do good unto those who persecute you. Give not wrong for wrong, nor hate for hate." When will men learn this?

The Theosophical Forum

UNRECOGNISED INFLUENCE OF THE MYSTERIES — *H. T. Edge*

The cyclic appearance and reappearance of mystery schools implies that there has at all times existed a source from which these outward manifestations could spring, an undercurrent, a thread, an immortal basis, never absent, but alternately latent and manifest. This is somewhat like the familiar idea that the Masters of Wisdom, who collectively constitute the Great Lodge, continue to exist, while yet it is only at certain specific epochs that they send forth into the outer world of men their messengers to proclaim anew the tidings of the Wisdom-Religion or Secret Doctrine which they preserve and guard. But it is not to be doubted that these guardians of the ancient lore have at all times secret bodies of disciples in various parts of the world, unknown to mankind, yet secretly preserving the teachings; esoteric schools in fact, continuous as to their esoteric side, but only periodically exoteric. That this is not merely inference or speculation might readily be established by historical research; and if this has not already been done, it is only because the attention of scholars has not been turned in that direction. On the contrary, the attitude of mind of our historians has been such as to turn their eyes in a contrary direction. For we have to bear in mind that history is largely an artificial made-to-order commodity. Historians examine ancient records, and from these they draw and put together all that they consider worthy of credence, rejecting whatever they regard as unworthy of credence. Such a selective process must inevitably result in the production of a biased history. But if a scholar, whose mind was not previously biased against such a subject as the mystery schools, were to go to a great library in search of all the evidence he could find — would he not then collect all the things which other scholars have

rejected and ignored? In short, I maintain that the evidence will be forthcoming in abundance so soon as any scholar or historian is prepared to search for it with an unprejudiced mind. Some while ago I reviewed a book which dealt elaborately with mysticism in Europe throughout the centuries of the Christian era, and I was astonished to find what a wealth of information is accessible of which the world at large, even the learned world, is entirely ignorant.

What we know as history may be a mere record of outward events, mere chronicles; or it may go a step further and be colored by some shade of political opinion, as the Whig history of Macaulay or the Tory history of Hume. Some historians may seek to give an economic color to history, others to interpret it according to theories of social evolution, and so on. There is a subject called the philosophy of history, in which writers seek to define the causes which produce events. Sometimes history has been viewed materialistically as a causal sequence of events, the one producing the other in an endless chain, with no cause operating from outside the chain. But such an interpretation would mean that there could be no progress; the stream of events would resemble a river running downhill and could never rise higher than it stood at any previous time. The facts prove that there is progress, and hence there must be forces operating from outside. One of these, as Theosophists know, is the continual reincarnation of souls who bring with them the results of their former experience. All great movements in history start from the dynamic effect of some great personality, who draws around him other personalities. But another potent force in the molding of events is surely that emanating from these secret mystery schools. How is it conveyed? It is neither easy nor indeed necessary to give a concise answer to this question; it hinges upon the general question of what theologians call inspiration. Whence

did such men as Jacob Boehme, Meister Eckhart, Paracelsus, Giordano Bruno — to mention but a few out of an almost countless number — draw their inspiration? In what form or manner did they receive it? There may have been some who received instruction directly from wise men and who openly acknowledged the fact. Others there may have been who, though thus being taught, were precluded by vows of silence from acknowledging it. But apart from these two classes, how many mystics must there have been who received knowledge from the mystery schools by one of the means of what is called inspiration? We know not whence our thoughts come to us; and a man of pure life and high aspirations opens that very door which the unseen helpers of humanity stand always ready to enter.

We Theosophists cannot afford to forget that, behind this outer world of visible events, there stands the mighty world of thought, whereof this outer world is but the visible manifestation; that, behind this stage whereon the actors play their parts, is the great drama itself which they are enacting, the author whose ideas they are bodying forth. The history of humanity unfolds itself according to the true laws of evolution: it grows from within. Whatever conventional historians may be, Theosophists are not metaphysical enough to imagine an evolution which grows mysteriously out of nothing towards an unknown goal. The drama shows us the progressive outward manifestation of what is latent within.

Mystery schools throughout the ages — even the darkest ages — have kept burning the sacred fires, have kept alive the seeds, as the winter snows preserve the seeds of future harvests. Had there been no such guardians, where would have been the means by which in our own time a new proclamation of the Wisdom-Religion could have been made? True, the sacred fire would have been there, in its own realm; but what of the link? For just as the

human mind is the link between the Spiritual Soul and the man of flesh, so have the mystery schools been the link between the Light of the Great Lodge and the children of earth — a necessary vehicle that could not be allowed to perish.

The Eleusinia were highly esteemed in the ancient Greek world, for the beneficial moral influence which they diffused; though there were also, unfortunately, certain other schools which, through inculcating perverted doctrines and rites, diffused an influence that was recognised as pernicious. Some important names in Greek history have come down to us as owing the chief part of their prestige to their being more or less closely connected with one or another of these genuine schools. For example, we have Epaminondas, the celebrated Theban leader, who contacted the school of Pythagoras through a friend who had come from there; and not only his unusual ability but also the magnanimity and justness of his character are celebrated by the historians. By his influence the Thebans are restrained from the usual acts of revenge and destruction upon some hostile and conquered neighbors, and these neighbors are instead treated mercifully and taken into alliance. Even so rapacious a man as Alexander the Great included in his character an element of nobility and enlightenment which he had imbibed indirectly through his teacher Aristotle, and which greatly tempered the severity of his policy towards the peoples whom he conquered. It would be easy to compile a list of similar instances of the direct and traceable effect of the mysteries upon men of prominence; and the more so, as I said before, if the minds of historians were directed towards finding, instead of ignoring, such cases.

Around the time of the Christian era, when the seat of civilization was the Roman empire and was spread around the Mediterranean as a center, there were many schools of occultism in Egypt, Asia Minor, and other adjacent territories. These

undoubtedly had a connection with India. Through Egypt, India, Persia, filtered through many channels the ancient teachings of the Wisdom-Religion; and we have notable examples in the Neoplatonists and Gnostics, which it may please scholars to define as vague speculations or as syncretistic patchworks of Platonism and whatever else the professors of these cults could find. But a juster estimate, such as we are enabled to take, shows that both the Neoplatonists and the Gnostics had their source in the ancient Mysteries, and that instead of borrowing from religions, they simply interpreted them. Christianity in its origins was of this nature; and it was only through the course of some centuries that all the most valuable doctrines were driven out and the later materialistic and dogmatic religion formed. Yet were these elements not entirely killed; they were driven out of sight, compelled to hide; and a careful study of all the various secret schools and cults and isolated writers and teachers between those early centuries and the present day would prove amply that the contact between the outer world of men and the inner world of the gods has never entirely ceased.

Perhaps we may see in this theme the solution of a historical problem which has puzzled many. I refer to the extraordinary vitality and influence of the Christian religion, so out of proportion, as far as one can see, with the merits of its content. Can it be that this hardy plant, however stunted or grotesque its visible form may be, is continually nourished from an inexhaustible fount of life that ever wells up anew and replenishes its dwindling vigor? This is surely the case, nor can we believe that such power could be brought to the external organism from the life fount within unless there have always existed intermediaries of some kind — not merely individuals but groups — the mystery schools or their equivalent in some one or other esoteric body.

When the Sanskrit literature first began to be translated, Europe experienced a second Renaissance. Then was a circuit closed which established contact with the ancient mystery schools of India. The Transcendental school in America, through Emerson, acknowledges its indebtedness to this source; in the realm of German philosophy, Schopenhauer profited by it. Its influence since then has steadily widened more and more, until now it is a source of inspiration for pulpit, pen, forum, and lecture hall in every quarter. This could not have happened if the Mystery Schools had not been kept alive.

We have been privileged in our day to witness and to participate in a revival of the lost Mysteries of antiquity, whose purpose and effect is to restore to actual use the eternal principles upon which successful living is based; and to counteract the desolating and destructive effect of those wrong principles which have ensued upon a too exclusive devotion to an individualistic selfishness aided by scientific discovery. Thus we have seen this influence diffused ever more widely, everywhere being recognised and applied; so that it needs only the rise of younger generations and the passing of the older, for great and beneficent changes in our whole social polity to become apparent and active. And this influence is conveyed not merely by the visible channels of printed and spoken word, but also and powerfully through the invisible currents of thought which bring to receptive and aspiring minds the sacred teachings which we broadcast into the ether from our assemblies and from our private meditations. Organization is an all-important thing; every living being is an organism. Our society is an organism; it was formed largely to bring together into a common focus the many scattered sparks of divine fire cherished in the hearts of individuals powerless from their isolation. There are individuals who avail themselves of the benefits rendered available by organizations, without desiring

themselves to affiliate with such an organization. They may have good and sufficient reasons which justly preponderate over arguments on the other side: it is not for us to judge. Yet for those of us who see the joining of an organization as being at once a privilege and a duty, the way seems sufficiently clear. It is ours to promote the work of the body of which we are members, and to stand ever loyal and true to our fellows and to those to whom we look up as leaders and inspirers.

The Theosophical Forum

AFTER DEATH — THE WEIGHING OF THE HEART — *S. H. Wylde*

The Vignette which accompanies Chapter 125 of the Egyptian *Book of the Dead* depicts the famous scene of The Weighing of the Heart. Between the great columns which support the Hall of Twofold Truth stands Osiris Ani. He has passed through the portals of death, and before he can proceed upon his journey his past earth-existence must be evaluated. In one scale of the Balance of Justice rests his heart, in the other the Feather of Truth. Is the heart undefiled, guileless and true; or has it become heavy with cupidity, sloth, or self-love? Horus stands in the center and observes the weight.

At this fateful moment no word is necessary. No supplications, no justifications, no specious sophistries avail. The Scales, presided over by Maat, inexorable Goddess of Truth, mark with impersonal exactness the worth or lack of worth of the pilgrim. Osiris, the sun-god, waits in an inner chamber while Thoth notes down upon his tablet the record of the life just over. What his report will be determines whether the pilgrim can continue to the solar heart or must enter for a time the purgatorial fires.

Thus in ancient days did the Egyptian hierophants by this graphic symbol teach to countless generations the secret of the after-death state. What must have been the psychological effect of such a vivid representation upon even the uninitiated people? And how would the knowledge of such a teaching affect the actions of men today? For this is not merely a relic of Egyptian religious ritual. Osiris Ani is Everyman, who must witness his own judgment after death. He must watch *himself* being prepared for the sifting process by which his "sins are separated from his soul," as the Egyptians phrased it, before, freed and purified, he can

pass on to the "heaven-world."

How futile at this supreme hour will appear all the deceptions of the past life: the tortuous arguments with which we justified our actions; the elaborate mayas we wrapped about ourselves, living in a fool's country of self-made dreams! How transparent the insincerities will become with which we cheated ourselves — and others; while within the secret chambers of the heart earthiness and corruption were entertained!

On the other hand, to one whose life, strive as he would, was clouded in confusions and misunderstandings, failures and disappointments, the weighing of the heart may bring an infinite peace and consolation, *if* through every trial and difficulty he has "kept his heart with all diligence." For this keeping of the heart means that he has held faithful to the behests of the Dweller within as far as his undeveloped capacities will allow. To do this consistently in all the occasions of life is no trifling task. The temptation to compromise, to put up a pleasing front to the world, to say the half-truth, to "play safe," to refuse to think when thinking reveals unpleasant things — all these temptations appear so plausible that we persuade ourselves we have solved the problems of living by making use of them. But the heart suffers meanwhile and becomes weighted down by these counterfeits; for each measure of deception, insincerity, prevarication or indolence that we indulge in adds its modicum of weight little by little through the years of our life, and thus we are, through ignorance, preparing an unfortunate after-death judgment for ourselves — ourselves working against our own best interests.

Purification of the heart requires an assiduity and alertness, a fidelity and strength of purpose that nothing can overthrow. It is the beginning and end of all progress; because this mystic heart,

of which the physical vital organ is but a poor representative on earth, is the channel by means of which the human self contacts its divine original. May this, perhaps, account for that indefinable quality, that warmth, that radiance, surrounding those who live the heart-life even in minor degree? A little of the celestial light shines through?

"Blessed are the pure in heart for they shall see God" — for they shall be found true in the trial of the Scales of Justice; and death shall mean for them a passing on into the presence of Osiris, the god whose sun-splendor they have earned the right to share consciously.

The Theosophical Forum

BROADCASTS FROM SHANGHAI: III

This is the third of the series of weekly quarter-hour broadcasts given over radio station XQHB, Shanghai, China, last Spring, by Miss Inga Sjostedt and Miss Elsa-Brita Bergqvist of the Shanghai Theosophical Lodge. This talk, broadcast on April 6th, outlines several of the most important Theosophical doctrines.

Good evening, everybody:

The speaker last week explained the meaning of universal brotherhood as based on the fundamental divinity of all that is. This thought may seem at first sight incongruous in the face of present-day civilization, but we must realize that man today has travelled a long way from his spiritual home, and that his fall into matter has been an aeons-long proceeding. If we read the first few chapters of Genesis in the Christian Bible, we find there the story of the original fall of the spiritual entities into the beginnings of manifested life or material existence. In this allegory Adam and Eve were told regarding the fruit of the tree of Knowledge: "In the day that thou eatest thereof thou shalt surely die" (*Gen. II, 17*). Tempted by the serpent, which is an ancient symbol of wisdom in all mythologies, they did eat, and it says in the next chapter of Genesis, verse 22: "The Lord God said: Behold the man is become as one of us to know good and evil." Thus the unself-conscious spiritual entities first acquired responsibility and free choice and began their pilgrimage through all the spheres of nature, gaining experience of all manner of manifested life, until they shall have attained to self-conscious union with the divine. That is the goal of all beings, from atoms to stars — man included. Nature never jumps, but all things evolve slowly by

gradual growth in a spiral motion. A cycle of growth is succeeded by a cycle of decay, followed again by a cycle of growth on a higher plane. As a spiritual entity sinks into matter, its spiritual qualities recede and give place to the qualities pertaining to the opposite pole, the pole of matter. For spirit and matter, being the opposite poles of life, are fundamentally life itself and inseparable from each other. Then the entity immersed in matter, has to evolve in itself its inherent spiritual qualities in order to return to its own divine source, as an experienced and fully conscious god. The teachers of mankind have taught us that we, as humanity today, are beginning our upward journey and must evolve those spiritual qualities in us, which are at present obscured by the material side of our nature. This is also the reason for the coming of the succession of spiritual teachers. We are at the turning-point, when we can develop no further in the direction of materiality and must return with the upward trend of evolution.

The cyclic course of evolution can be traced in all forms of life. Planets circle around the sun in regular order, and the seasons follow one another in due course. We live by day and sleep by night and return to pick up the threads of our waking life regularly each morning. In precisely similar fashion we are born, live and die in a regular cycle. Reincarnation does not mean, as so many people think, a return to life in animal bodies. The trend of evolution is ever forward, and an entity, having reached the human stage and developed the faculty through which human beings chiefly function, the self-conscious thinking mind, cannot lose that faculty and return to any lower form of life, but must evolve ever more of its latent capacities, until it becomes a truly spiritual being — a Master, as we call such a man. That is, one who has united himself with the divine self within him and functions consciously on the plane of spirit.

Reincarnation also provides the only satisfactory explanation of the obvious inequalities in life. We all wonder why some people are born with every opportunity for making life a splendid experience, while others are confronted with hardships and difficulties from the very beginning. If we regard life from the viewpoint furnished by a belief in reincarnation, we realize that these inequalities arise out of mistakes and successes in some former life. There is a Sanskrit word we often use in this connection — the word Karman. It means action and reaction. This speaks for itself. Karman is really a natural law, which balances cause and effect, action and reaction. Any thing which in any way disturbs the natural harmony brings its own results. Theosophy does not countenance the idea of a god judging human beings after one short life on earth to eternal bliss or damnation. Either sentence would be ghastly. The thought of stagnating in heaven for all eternity imperfect as we are, must give the creeps to any honest man — not to mention an equally unending sojourn in hell. We say that nature provides her own punishments and rewards in exact proportion to the deeds or thoughts, which produced them, and that there is no arbitrary judgment by a deity either wrathful or merciful: "As ye sow, so shall ye also reap." The result is only the exact effect of the cause, not strictly speaking a punishment or a reward, but a natural outcome.

Thus the divine entity repeatedly imbodyes itself in vehicles suited to its sphere of action. These vehicles range from the first spiritual veil over pure divinity, through all the forms of intelligence and emotion down to the physical bodies. All beings have all these principles although not all are active. For instance the animal kingdom has not yet developed the use of its thinking faculty. The animals are not capable of abstract thought, whereas human beings are. But the animals have developed the principle of emotion, which in the vegetable kingdom still lies dormant —

and so on. We humans have reached the point, where we must learn to use the spiritual principle, which we possess in latency. It is our next duty to learn to function in that still unexplored region of our composite constitution. This will not be accomplished in one life, nor yet in two. It may take hundreds of lives before humanity as a whole has reached the status of a Buddha or a Christ. The latter teacher gave us specific instructions to begin: "Be ye therefore perfect, even as your father, which is in heaven is perfect" (*Matt. V, 48*). Not one of us has the conceit to imagine that this can be accomplished before we die — say to-morrow or in fifty years.

And when we do reach what to us now would seem perfection, we shall find that we are only entering into a larger and more advanced existence. Our earth-lives are only one step on the ladder, and when we have united ourselves with the highest that we can conceive of, then will begin our evolution on a grander scale. The entire universe is pursuing its own course of development, of which we are a part. Yet the universe in its turn is only a part of a greater hierarchy of lives. We are all too prone to think of the stars as mere shining globes placed in the sky for our delectation by some deity with a sense of their decorative value. That is of course absurd, and it is far more reasonable to suppose that they are animate entities in various stages of evolutionary progress. This, incidentally, was an accepted teaching in the Christian church at the time of the church-father Origen, until, along with many other theosophical teachings, it was anathematized by the Home-Synod, which met at Constantinople in about 538 a.d., some three hundred years after Origen's death.

The stars then are living entities, and the beings inhabiting them form a part of their life, just as the characteristic denizens of our globe, mineral, vegetable, animal and human form a part of the

earth and its life. In the same manner the atoms composing our physical bodies are a part of these. In this way we see all life as a system of hierarchies, where entities at different stages of evolution grow within their respective spheres.

In the human hierarchy, as in all others, there are beings very backward in development, such as savages, and others, who have reached far ahead of the average human being. These pioneers in spiritual development we call Mahatmans, a word meaning great soul, or Masters, for they have striven to reach the goal of human development in order to help the general run of mankind. From time to time such a Master will appear among men, teaching the truths of nature and giving a fresh impetus to the urge for spiritual advancement. Thank you.

The Theosophical Forum

STUDIES IN "THE MAHATMA LETTERS" — *G. de Purucker*

[See Letters XXIIIa and XXIIIb, Question and Answer No. 8. — Eds]

ALL THINGS CONTRIBUTE TO ALL THINGS

It is the teaching of the God-Wisdom that every member of the Solar System is a living entity, a god imbodyed. Such is the sun, such is every planet, such is every comet. Furthermore, the Solar System itself as a whole is an entity, precisely as our human body is an entity as a whole, a unit, yet containing within itself different organs, each such organ itself being an individual, a unit, a living entity with a consciousness of its own kind.

Do you see what this means? That just as our body, an organic entity itself, is helped in being such by the different organs, the heart, the brain, the kidneys, the liver, the stomach, and so forth, so the Solar System, itself an organic entity, is aided in being such by all the organic units within it: the sun, the planets, the comets, and so forth. They all co-operate to produce a greater thing, i. e., the Solar Kingdom, with the sun as its king or chief.

What deduction must we draw from this? That, co-operating as all these units do towards a common end, nothing can be done properly in the Solar System if a single one of these bodies refuses co-operative action and union in effort; and "union" here does not mean two or three organs joining to oppose two or three other organs. It means all organic units without a single exception cooperating for the common universal good. If there is not this co-operation, if, for instance, one single organ were to die, then the whole organism dies, because the harmony and symmetry of the greater unit is interrupted, killed, stopped. It is just the same with the human body. Suppose my heart stopped working, died — my

body would die. If my stomach disintegrated, my body would die; and similarly so with any other organ — even the skin or the tissues or the flesh or the bones: we need all these different things to make a complete and rightly functioning human body. So it is with the Solar System.

Thus when we say that all things co-operate to produce all things, we may be referring to all things on this earth; but it may also mean that this earth in its turn co-operates with *every other* body in the Solar System to produce the proper effects on every other planet and on the sun. How about rain, for instance, and the other meteorological phenomena of this earth? How about storms of any kind: snow-storms, hail-storms, rain-storms, electric storms? Shall we say that only one thing in the Solar System produces these, whether it be sun-spots" or the planets, or perhaps one planet, as some astrologers quite wrongly say? No. All things work together to produce all things everywhere.

Thus, when we come to answering the question: Are the sun-spots the cause of the meteorological phenomena on this earth? the answer has to be no, because that would exclude all the other contributing causes and causers. The sun-spots play their appropriate part; so does every planet. But what is the most important factor, the greatest cause in the production of these things on our earth? It is the earth itself. But the earth itself could not produce them unless it had the help of all the other co-operating or consentient gods, as the Greeks and Romans phrased it; in other words of the sun, the planets, the comets.

What makes heat? What makes rain? What makes cold on this earth? Magnetism, to be sure; electricity, to be sure. But these are the forces. What makes these things fundamentally? The vitality of the earth co-operating with the vitality received from the other planets, and from the sun and the comets. *All things co-operate to*

make all things. A key, a master-key.

Actually, if you want the mechanical cause, the immediate cause, that is, the cause just preceding the effect — not the first cause — it is the dilatation of the earth's atmosphere and its contraction. The atmosphere of the earth is one of the most marvelous organs of our Mother-Earth. Look upon the earth as a living being, or as the Latins would say, an animal (from the Latin word *anima*, meaning life). Animal in Latin means a living being, a human or beast, for instance. Even a plant is an "animal" in this sense, only very feebly so; because *anima* meant, more particularly, what in Theosophy is called the animal soul — the *nephesh* of the Qabbalah.

The earth is constantly surcharged with vital power. There are times when it is almost bursting, and the inner power must have an escape: it must be discharged, because the pressure of the whole Solar System is behind it. Take the instance of earthquakes: they are my pet horror, they just turn my blood cold because I am always thinking of the damage to human beings, and the wretchedness that they can cause; yet they are one of the greatest blessings, for the earth is releasing energy which could otherwise become devastatingly explosive. Our earth would simply burst; it would blow up, if there were not these periodic discharges.

It is like the vitality that a human being is constantly throwing forth — by his walking, by his speaking, by his moving, by the circulation of his blood. Every time he lifts a finger he is throwing off energy. Suppose all the energy that the body produces could by some magic be clamped down and kept in the body, the body would explode, simply blow up; the tissues would be torn apart.

Of course there is the other side of the picture: if the expenditure of energy is too great, then you have the other extreme, and you have disease or death. But why does the human body do this? It is

doing in its own small sphere, in its own small line, what the planets are doing, contributing its quota to the vitality of the earth; and this vitality comes into -the human body from above, and from what passes in and out in the exchange of the life-atoms amongst us all. *All things contribute to all things*; they receive and give constantly. (1)

Do you realize that there is more vitality in the body in old age than there is in youth? Old age is not a cause of deprivation of vitality; it is a case of too much vitality. The body cannot build up fast enough. The intense life of the adult human being is slowly wrecking the body, causing it to age. The body cannot build fast enough. The life-pulsations are quicker than the building power. Consequently you get the greying hair, the failing eyesight, the failing hearing, and all the phenomena that age brings. Health is simply balance; and the longer you can keep in health the longer you live — if you want to! If it is advisable! Some people seem to think that a long life is a mark of sanctity. It is very often not just so. Sometimes the grossest people are the longest-lived. There is an old Latin proverb which says: "The gods love those who die young," meaning the gods take those they love when they are young — not when the gods are young, but when those they take are young. The gods themselves are perennially young.

Now to return to the matter of the earth's atmosphere, which is continually dilating or expanding. We know that when this expansion occurs we have the dropping of the barometer, that sensitive instrument we have learned how to build which registers the air-pressure. It is a sign of rain. And we all know the chill in the air that follows a rain-storm even in the summer-time. We say "It cooled the air." The opposite effect, heat, is produced when the atmosphere condenses or contracts, and the greater pressure on the barometer causes it to go up. "Fair weather," we say, "and heat," — relative heat according to the season, of course.

What causes these contractions and dilatations of the earth's atmosphere? Mainly the periodic, vital pulsations in the earth itself. But these pulsations are intimately connected every instant of time, without a second's interruption, with all the other bodies of the Solar System. *All things contribute to all things.* The sun and all the planets are connected with the dilatations and contractions of the earth's atmosphere. Thus far the astrologers are perfectly right. But to say that it is the planets which make these things, that the planets are the sole cause, that is all wrong. All things contribute to all things: the sun and planets give me health; they give me disease. But so do I give myself both health and disease. *All things contribute to all things.* That is the master-key.

Now these contractions, or pressures as the modern scientific phraseology has it, of the atmosphere, and these dilatations of the atmosphere, are mainly caused by the actual meteoric continent surrounding our globe like a thick shell. You will say, "But how can it be such a thick shell when we can see right through it; we can see the sun and the stars and the clouds?" Suppose instead of my present eye-sight I had an electric eye. Why then I could look right along a copper wire. Such things as copper and iron would be transparent to me. But with my present eye-sight I cannot see through a copper wire or along a 5000 mile stretch of copper wire because I have not the electric eye. On the other hand, with the electric eye I could not see things I now see. The fact is that our eye-sight has been evolved by Nature, or, if you like, evolved by Karman, so that we can look right through this meteoric mass surrounding our earth like a shell; and all we see of it is what we call the blue of the sky. That is the real explanation of the blue of the sky. The scientific theory that it is very fine dust mostly from earth which intercepts the blue rays of the solar spectrum, might be called a weak, partial explanation. I dare not omit even this, because if I did my explanation would be by so much imperfect.

There is some truth in it, but to say that it is the cause of the blue of the sky is not true, because that excludes everything else.

All the other planets except Mars are likewise, each one, surrounded with its own meteoric continent. Science knows this and calls them the clouds of the different planets. Call them clouds if you want to. Say that they are clouds of cosmic dust and dust from the respective planets. All right: but they are actually mostly interstellar and interplanetary meteoric dust. Everyone of the planets in our Solar System except Mars, as I have said, is surrounded by such a continent of meteoric dust; and even Mars has a thin gauzy veil of meteoric matter surrounding it. Mars is different from the others because it is in obscurity at present; and on Globe D of the Martian Chain the forces of attraction holding the meteoric continent together have been relaxed, as it were. These magnetic and electric forces surrounding Mars are weak because the meteoric continent around Globe D of Mars has been more or less dissipated throughout space — not quite, but almost. That is the reason we can catch just glimpses of the Martian Globe; but even those glimpses are still uncertain. Our astronomers are not sure that what some see others see. You know the interminable dispute aroused by the discovery of the so-called canals of Mars which Professor Lowell of Flagstaff, Arizona, and others have quite believed so long; and which others deny. Schiaparelli, the Italian astronomer, was the first to speak of these lines years and years ago, and as they seemed to him to resemble canals, he called them *canali*, the Italian word for canals or channels of any kind; and then people got the idea, because they took the word in the English sense of water-courses, that they must be water-courses. That is still not proved; it may be and it may not be. I do not care to say anything more about that.

Please remember this, Companions; The Solar System is a living being, of which the sun is both the brain and the heart. The

different planets are the organs of this organic entity. Our earth is one. They all work together to produce the Solar System as an organism, or a group of organs. *All things contribute to all things.* Nothing happens on this earth, from the waving of a frond of fern in the wind to the most awful earthquake the world has ever known, except by such co-operating cosmic agency. All are produced mainly by the earth, but with the co-operation of the sun and moon, the planets and comets, for this organic entity moves in synchronous measures of destiny. *All things contribute to all things.* The birth of every baby is produced by the Solar System, by the earth, especially by the mother; yet all things contribute to produce that baby. The stars do have their effect upon us, most undoubtedly so; and the sun and planets and comets, because the Solar System is an organic living being, and therefore everything within it anywhere is affected by everything within it everywhere. Surely this is true; and it is a wonderful picture.

FOOTNOTE:

1. So strangely does the human mind wander into vagaries of imagination, that I find it needful to append this footnote lest the words in the text above be misunderstood by thoughtless or careless people as a kind of indirect endorsement in our human life of the dissipation of vital human forces through immorality or in some other way.

Such misunderstanding of my meaning would be so utterly monstrous, so utterly contrary to every teaching of Theosophy and Occultism, that on no few occasions have I asked myself just how far I can go in stating even simple occult facts, when, as experience has shown me, one or two or more hearers might wrongly take the sense or the significance of what I was trying to say.

I state here without qualification, that any dissipation of the vital powers of the human body or mind in immorality of any form, immediately hastens the approaches of disease and old age, because wearing the body out, and because unnatural. Such dissipation of vitality would be a wilful waste of the life-forces, thus co-operating with the work of the Destroyers. Not only would such waste invite disease and premature senility, but even worse than this would be its effect on the moral stamina and ethical instinct of the human mind, and could in an extreme case result in moral and intellectual degeneration.

Let it be stated that self-control, strict moral conduct and self-forgetfulness are the path of Theosophical occultism, and this is stated without any qualifications whatsoever. Any misuse whatsoever or in any manner of vital power, even such as over-eating or gluttony, drunkenness, or anything along any line causing the body extra strain or depletion is a waste of vital power and therefore has a tendency to bring on disease, speedy old age, and as above hinted, even worse things in its train.

"THE HILL OF DISCERNMENT" — *G. de Purucker*

All truths are like diamonds. When cut and polished they have facets, each one such reflecting what is before it. For truth is comprehensive, not exclusive; it is a spiritual thing, and the spirit comprehendeth all. It is only the smaller things of us humans, and of beings lower than the great Cosmic Spirits, which are bounded by frontiers because of the imperfection of the evolutionary vehicles through which these great entities work. And we men should bear this fact in mind, for it makes us reverent, and humble in the nobler sense, when we realize that others than ourselves may have a vision sublime of Reality.

How great and how good and how noble a thing it is for men to dwell together in brotherhood. Each man is a revelation unto all of his fellow-men, for each one is a marvelous mystery, a child of Eternity and of the Infinite; and despite the imperfections of human evolutionary development, when we see the vision from the Hill of Discernment, we penetrate beneath the veils of the merely seemings into wonders ineffable which the human heart contains.

In my own life it was a revelation when this great truth came back into my human consciousness of this imbodiment, and from that moment I looked upon my fellow human beings no longer just as men, but as wonder-beings from whom I could learn, learning from the least as from the greatest. And what I learned in brooding over this wonderful thought, taught me to seek truth everywhere: as much indeed, had we the eyes to see it, in the plant or in the stones or in the circling orbs of heaven, as when we look deep into the eyes of a fellow human being and see marvels there.

What is this Hill of Discernment? It is one of the oldest thoughts that human genius has ever given birth to. In all the great philosophies and religions of the past, you will always find this wondrous figure of speech, this trope, this metaphor, this climbing the hill of vision; whether it be as the Jews had it, the hill of Zion, or after some other way of speech, the thought is the same. And the noblest expression that comes to my mind, the most graphic and the most profound, is that passage in *The Mahatma Letters to A. P. Sinnett* that Dr. A. Trevor Barker published, in which the Mahatmic writer speaks of that Tower of Infinite Thought from which Truth is seen.

What, then, is this Hill of Discernment? Confessedly it is a metaphor; but what is it really so far as we human beings are concerned if not that wonderful organ within man's own constitution which we Theosophists call the Buddhi-principle, which is the organ of understanding, of discernment, of discrimination, of cognition of reality without argumentation. This organ of understanding for a man is that man himself in his highest, his link with the Divine. That is the hill of discernment within the man himself.

The burthen of all the teaching of the Archaic Wisdom is simply that: Recognise yourself as an instrument of Reality, as one of its vehicles; ascend out of the miasmas and the fogs and the clouds of these lower planes upwards and inwards to rejoin in consciousness the divinity within, or the Atma-Buddhi as we say; and then all knowledge will be yours, all vision of Reality is yours at will. For this is the organ clothed with no vehicle dimming its power. It sees Reality as it were face to face, because itself is the Reality. It is, as said, our link with Divinity, which is Reality; which is Truth, which is all Wisdom and all Love and all Knowledge-

So this Hill of Discernment is within man himself. And while it is the same for all of us, for each one it is in a sense different. It is like the pathway to Truth: one for all, and yet differentiated into the wayfarers on that Path, who are themselves both the wayfarer and the Path itself. Man has no other means of attaining Reality except through his own power, through his own organ, through his own being. He can and does receive help from outside, help which is wonderful; and it is our duty to give and receive help. But the receiving is merely as it were the outward stimuli to awaken the inner organ of the receiver. This inner organ is not the deceptive organ of physical vision.

Remember the story told in the wondrous Hindu philosophy: A man returning home at night sees a serpent coiled in the path and jumps aside, and in the morning he sees it was but a coil of rope. So deceptive are all our physical sense-organs! The blind man cannot see the wonders of the dawning east. But even the blind man has an organ within him which if he can reach it needs not the deceptive organs of physical vision to see Reality.

This Buddhi principle which is in us and which we may use, if we will, knows no deceits. It cannot be blinded; it cannot be deceived. Its vision is instant and direct; for it is on the same plane as Reality, and by opening up the intermediate channels between this our highest and our mere brain-mind, we inspire, breathe in, receive inspiration, and then we become like the gods.

That is the Hill of Discernment, of vision, and therefore of wisdom and knowledge and love, perhaps the three most glorious attributes of human consciousness: to be lost in cosmic love, to be lost in the vision sublime which is wisdom, to be lost in the higher interpretation of the vision which is knowledge: religion, philosophy, science, three in one and one in three; and this is not a theological trinity, but unitary Truth.

MY PERSONALITY — *J. B. Priestley*

What is called my personality, is, I know, a temporary affair. I am glad of it. I should hate an immortality of J. B. Priestley. I have only known him for 44 years, but I have had enough of him already. It is not for this bunch of habits and bag of tricks that I demand immortality.

But there is in me, as there is in everybody, something that a few years of this life cannot possibly satisfy, and this something is easily the most important part of me. Sometimes it takes the form of a vast and oddly impersonal curiosity. At others it is a deep feeling of admiration, well-wishing, love. At others it is a terrible hunger for more beauty.

And if I thought there was nothing in this universe that could respond to these needs, that all this was silly illusion, I would consider it a crime to have helped bring children into the world, would see in every birth the beginning of another hopeless tragedy.

I believe then that in dreams or in those waking reveries where we drift away from the Present, we are probably having a foretaste of our immortal life.

It seems muddled and confused to us because we have trained ourselves to concentrate on a very different kind of life, our ordinary existence in the physical world.

On the other hand I do not believe that our separate individuality, so marked in the physical world, where we are so many solid bodies, continues in this world-after-death, and I suspect that we gradually lose our individuality.

This will be no tragedy for even here and now we are never happy unless we are trying to transcend the bounds of personality. The times when we are most keenly aware of our own ego are those when we are most miserable.

Lastly, I suspect that the world we first experience after death will have been *largely made by ourselves*, just as the world we see in dreams is largely of our own making.

The greater the width of our sympathies, the more splendid our imagination, the deeper our love for our fellows, the richer our immortality.

The Theosophical Forum

ISIS UNVEILS SLOWLY — *Gertrude W. van Pelt*

This is inevitable. The human mind unfolds slowly. Even teaching on mundane affairs is graded, which is only simple common sense. But when it is a matter of esoteric instruction to be given, the pushing of teachings beyond the power of the human mind to assimilate and digest is not only unwise, it is disastrous. Witness the effect of misunderstood truths in the dogmas of the Christian Church.

Thus, in accordance with the time-honored rule, H. P. Blavatsky states in *The Secret Doctrine*, I, xxxviii (1) that only "One turn of the key, and no more, was given in Isis," and she follows this with the assertions, (1), that much more is explained in the present volumes, (2), that "Once the door permitted to be kept a little ajar, it will be opened wider with every new century" (footnote), and (3), that in the XXth Century, a disciple, more informed than she was, may be sent to prove that there is a science of *Gupta-Vidya*.

On page xlii, I, she states again that *The Secret Doctrine* explains much that could not be given in *Isis Unveiled*, and in Vol. I, 299, she repeats

... a corner of the Veil of Isis had to be lifted; and now another and a larger rent is made.

However, quietly, unobtrusively, even in *Isis* she gives hints of deeper teachings, forecasting much that would be elaborated in *The Secret Doctrine*. For instance, in I, 231-2 (footnote), she says the seven principles of man and of our chain were hinted in *Isis*, and in II, 496, she answers again the criticism that so few of the doctrines taught in *The Secret Doctrine* were given in *Isis*. There is another hint of the caution used, expressing truths for the

intuitive student, while concealing them for those not ready.

Notwithstanding all this, I remember hearing in the early days shallow criticisms intended to discredit H. P. B. by asserting, for instance, that she contradicted herself in the two works, teaching in the earlier, a three principled man, and in the later, a seven principled, etc. In *Isis* the threefold constitution of man was emphasised, very naturally, as this was easier for a Christian nation to understand. Body, Soul, and Spirit, was familiar, and perfectly true; which does not preclude a more complete analysis. There are seven rays of the spectrum visible to man (and others invisible), but there are three primary colors.

And now the same method is used in *The Secret Doctrine*. H. P. B. stresses the seven principles, but she also hints of ten, referring to the 10 Sephiroth (I, 352). In I, 152, there is reference to seven planes: three the Archetypal, our manifest globes being on the four lower planes. And again, I, 199-200:

These seven *planes* correspond to the seven *states* of consciousness in man. It remains with him to attune the three higher states in himself to the three higher planes in Kosmos. But before he can attempt to attune, he must awaken the three "seats" to life and activity.

Unless, however, man had principles in his constitution corresponding to these higher planes, it would be impossible for him to reach that consciousness.

Again, although emphasis is placed on seven as being the number of globes in a planet, there is a very broad hint of 12 globes in Vol. I, 240, where our Earth or *Malkuth* is spoken of as both the *Seventh* and *Fourth* world, the former when counting from the first globe above, the latter if reckoned by the planes.

"The One is not concerned with Man-bearing globes, but with the

inner invisible Spheres," I, 216, seems to suggest that there are other Globes than the seven, concerned with the evolution of the human stage.

There are hints given, almost casually, of the after-death states, yet quite plain to one who knows the teaching. For instance:

It is on the Seven zones of *post mortem* ascent, in the Hermetic writings, that the "mortal" leaves, on each, one of his "Souls" (or Principles); until arrived on the plane above all zones he remains as the great Formless Serpent of absolute wisdom — or the Deity itself. (I, 411)

And on I, 577, we read:

The Planetary origin of the Monad (Soul) and of its faculties was taught by the Gnostics. On its way to the Earth, as on its way back from the Earth, each soul born in, and from, the "Boundless Light," had to pass through the seven planetary regions both ways.

Again, H. P. B. refers to

the Platonic theory of the Soul's obtaining its respective faculties from the Planets in its downward progress through their Spheres. (II, 604)

The teaching regarding the *Avatar* is hinted in Vol. II, 483-4, and is quite clear to one who knows it.

There are also covered statements about 12 planets, though the emphasis in *The Secret Doctrine* is only on seven, which are called sacred to us. In I, 71 (footnote), it is stated that there are twelve Adityas. On page 99, Vol. I, the Adityas are called the planets. And on page 100, these Adityas are called the twelve great gods.

"The Seven allow the mortals to see their dwellings, but

show themselves only to the Arhats," says an old proverb, "their dwellings" standing here for planets.

Again on I, 573 (footnote), we read:

There are only seven planets (*especially* connected with earth), and twelve houses, but the possible combinations of their aspects are countless. As each planet can stand to each of the others in twelve different aspects, their combinations must, therefore, be almost infinite; as infinite, in fact, as the spiritual, psychic, mental, and physical capacities in the numberless varieties of the *genus homo*, each of which varieties is born under one of the seven planets and one of the said countless planetary combinations.

And further:

Saturn, Jupiter, Mercury, and Venus, the four exoteric planets, and the three others, which must remain unnamed, . . . (I, 575)

Then there is that famous answer of the Master to A. P. Sinnett's question about the Planets, viz.:

Neither A, B, nor YZ are known nor can they be seen through physical means however perfected. (I, 163)

There are many references in *The Secret Doctrine* to the effect that the ancients knew of very many planets unknown to the astronomers of today, but that is another story.

And here seems to be a hint of the "Universal Solar System":

In order to avoid creating new misconceptions, let it be stated that among the three *secret* orbs (or star-angels) neither Uranus nor Neptune entered; not only because

they were unknown under these names to the ancient Sages, but because they, as all other planets, however many there may be, are the *gods* and guardians of other septenary chains of globes within our systems. (I, 575)

Finally, although the importance of the number 7, which belongs to the purely human stage of development, is constantly taught in *The Secret Doctrine*, it is plainly hinted that our Universe is built on the number 12; that Pythagoras was right in declaring that "The dodecahedron is a PERFECT number." (I, 649) Plato also taught that the Universe is built in the geometrical form of the Dodecahedron, (I, 340, 344). Again, H. P. B. quotes the Kabalists as saying, "The Dodecahedron lies concealed in the perfect Cube" (I, 450). This in connection with the diagram of the unfolded cube (II, 600, footnote) is suggestive.

Casually (I, 436), she refers to the seven, ten, and twelve orders of the Egyptians; and on II, 36, one finds very interesting symbology concerning the wonderful numbers, 7, 10, and 12.

Most striking evidence of the construction of the Universe is given in the following:

The hierarchy of Creative Powers is divided into seven (or 4 and 3) esoteric, within the twelve great Orders, recorded in the twelve signs of the Zodiac; . . . (See I, 213-22)

These are a few references illustrating the time-honored method of teaching, a method which we may expect to be followed when "the door. . . will be opened wider with every new century." No doubt earnest students will find many more in *The Secret Doctrine* and some of H. P. B.'s other works.

STUDIES IN "THE MAHATMA LETTERS" — *G. de Purucker*

"THE TOWER OF INFINITE THOUGHT"

For countless generations hath the adept builded a fane of imperishable rocks, a giant's Tower of INFINITE THOUGHT, wherein the Titan dwelt, and will yet, if need be, dwell alone, emerging from it but at the end of every cycle, to invite the elect of mankind to co-operate with him and help in his turn enlighten superstitious man. And we will go on in that periodical work of ours; we will not allow ourselves to be baffled in our philanthropic attempts until that day when the foundations of a new continent of thought are so firmly built that no amount of opposition and ignorant malice guided by the Brethren of the Shadow will be found to prevail. — *The Mahatma Letters to A. P. Sinnett*, Letter IX, p. 51.

These are the words of a Master of Wisdom, and I want you to hearken to them and try to get the inner meaning of them, for they are really godlike. A great intellect composed them.

What is this Tower of Infinite Thought? It is the general Cosmic Intelligence, here particularized as the hierarchies of the Dhyani-Chohans, the Cosmic Spirits, the Lords of Meditation and Cosmic Wisdom. We call them the hierarchies of the Sons of Light, representing the consciousness-side of the universe. They are innumerable, extending from even below man up through countless hierarchies, stretching indeed to Infinity.

This is the Tower of Infinite Thought, in which the cosmic Titans dwell and think and live and plan. These cosmic Titans are the aggregate of the cosmic logoi, the cosmic spirits, an army of the

suns of light and life. And from this inexhaustible fount of all Perfect wisdom and perfect love, from time to time there issue forth great souls who take imbodiment among men, and guide and lead and help and aid and inspire, and raise not only us superstitious and fallible men, but all beings less than they, for Nature is one organic Unity. What is above in the highest is shadowed in the lowest, for there is but one cosmic law, because there is but one cosmic intelligence and one cosmic life; and therefore that law, that life, that intelligence, prevails throughout. So that, as you see, what is here below, is but a shadow or a copy from a pattern of what is above; and the whole secret of life, and the whole secret of living, is to become at one in consciousness and in feeling, in spirit and in soul, with that pattern of Infinite Thought.

No grander words I should think have ever issued from human lips. No more sublime conceptions have ever been penned, than those contained in the extracts from the Master's communication that have been read to you. They are a new gospel of thought and of love, a new dispensation of human effort; and a man must be blind who fails to sense and to feel the immense import, the grand content, enwrapped in these human words.

When the times are not propitious, or the times are not right, then the adepts — never indeed abandon mankind to its hopeless fate; there remain on earth at least the Brotherhood of the Mahatmans or Masters of Wisdom and Compassion. They inspire and instill intimations of wonder and of grandeur in sensitive and receptive human souls. But if the times are not right for a larger spreading of the Wisdom of the Gods, then for the time being they retire upwards and inwards into this Tower of Infinite Thought, and await there until the time is ripening once more so that they may once again work publicly, or semi-publicly, among us.

We too, even now in our smallness and weakness, inhabit this Tower of Infinite Thought. And precisely as the Masters do when the times are not propitious or not ripe for a new installment of the God-Wisdom of Infinitude, we too, although our hand is always outstretched ready to impart what little we ourselves have taken by strength of the Kingdom of Heaven, when the times are not ripe, precisely like our own Teachers, we retire into the higher consciousness, and to outward appearance may seem to have retired into silence and quiet. But that is only so to the outer seeming.

The Masters of Wisdom, the Adepts, simply retire when the times are not ripe for them to do their greatest work among men. They do what they can, and what human karma or destiny will allow them to do; but to a certain extent, they ascend, vanish from the outer seeming, to become only the more active and the grander in works of beneficence on the inner planes. And when the times become ripe, when men through suffering and sorrow, pain and racking care, once more find their hearts yearning for a greater light, and for the comfort which is never gained by egoisms, but given only by the spirit — when men then make the inner call, soundless yet ringing unto the very spheres of light, then Those, hitherto silent but watching and waiting in the Tower of Infinite Thought, from their azure thrones, so to speak, bend a listening ear; and if the call is strong enough, if it be pure enough, impersonal enough, they leave the portals of the inner invisible realms to enter these portals of our universe, and appear amongst us and guide and teach and comfort and solace and bring peace.

How great is the inspiration to be derived from this teaching of the God-Wisdom we today call Theosophy: that the universe is not chaotic nor insane, but is an organism guided and controlled from within outwards, not only by infinite and omniscient cosmic intelligence — intelligences rather — but by cosmic love. For love

is the cement of the universe and accounts for the orderliness of the universe, and its harmony and unity that every one who has the seeing eye may discern in all around him. Scientists speak of these orderlinesses as the laws of nature, as manifested in the cosmic bodies and their inhabitants, as manifested in their times and places and regularities.

How wonderful likewise is the feeling that the man who trains himself for it may enter into touch, into communication, with these grander ones in evolution above him, above him only now, because some day he shall evolve to become like unto them, divine as they are; and they themselves shall have passed upwards and onwards to divinities still more remote to us. There is a path which is steep, which is thorny, but it leads to the very heart of the universe. Anyone, any child of nature, may climb this path. Anyone who ventures to try to find it may take the first steps upon it; and these first steps may be followed by others. What a blessing to know this! What an inspiration for the future that our destiny lies in our hands! Nought shall stay, nought can prevent, no outer god nor inner, can stem the inspiration welling up from the deepest resources of the human spirit, because that human spirit is but a spark of the cosmic divine.

How beautiful, how inspiring, how simply pregnant with as yet undisclosed significance, is this phrase: the Tower of Infinite Thought! It is a god-like phrase, and only a semi-god-man or a god-man could have so worded his sublime conceiving. What magic vistas of inner realms of faery, true faery, do these wonderful words suggest to reverent minds. This Tower of Infinite Thought, is likewise the Tower of Infinite Love, for it is infilled with love, and its inhabitants are the exponents of love. From time to time its portals open and Teachers from these inner realms come amongst us. Such was the Lord Gautama, the Buddha; such was the Avatara Jesus; such was Krishna; such were

a multitude of others whose names are known even in the Occident to every educated man. No wonder a grateful humanity has called them Sons of God, or children of the gods — a phrase which I prefer; for such indeed they are, just as we humans likewise are offsprings of the gods, our forebears and forerunners on the evolutionary path, leading upwards and inwards forever to divinity.

These Teachers of men have themselves been worshipped as gods by men who forget the injunctions to take the message and worship it, but not to worship the bringer. Therein lies grandeur; for it is, after all, the thought of a man which is powerful, not the mouth through which the thought pours forth. It is the love in a man's heart which makes him sublime, not the mouth which declares it. I think that one of the proofs that these Great Ones who have lived amongst us and who will come again and again and again — I think one of the proofs of their divinity is precisely the fact that they accepted nought for themselves, but called attention to their teachings only.

How beautiful to the hearts of men are they who come bringing tidings of great joy. Their faces are suffused with the dawn of a newer, a grander, a more beautiful, age. For they are its prophets and its heralds, harbingers of a new time to come, when instead of enlarging quarrel and war, men shall learn that the ways of peace are the ways of strength and of power and of wisdom and of plenty and of riches.

The Theosophical Forum

BROADCASTS FROM SHANGHAI: IV

The origin and true message of Easter is the subject of this fourth of a series of weekly quarter-hour broadcasts on Theosophy begun last Spring over radio station XQHB, Shanghai, China. This talk was broadcast on April 13th by Miss Inga Sjostedt, President of the Shanghai Theosophical Lodge.

Good evening, Everybody: Today is Easter Sunday, a day celebrated by Christians all over the world, so this evening I would like to explain the esoteric or hidden meaning of what the majority of the Western nations erroneously suppose to be a purely Christian festival.

The celebration of Christmas, Easter, and other so-called Christian festivals dates back to pagan times and the sacred Mystery-Schools of the ancients. These Mystery-Schools were seats of learning to which only the elect were admitted, and in them were taught the then secret sciences, such as physiology, astronomy, astrology, occult philosophy, and also magic. Every founder of some great religion has had two teachings, one for the masses and one for the worthy disciples who were initiated into the deeper occult knowledge of the Teacher. Buddha, Jesus, Zoroaster, and other great teachers of mankind were familiar with the secret sciences which the multitude knew nothing about, and to their worthy followers they imparted as much of this occult wisdom as the times permitted. The average modern Christian believes that the teaching of Christ was simple and equal for all, but some of the alleged sayings of Jesus, as recorded in the New Testament, show just the contrary to have been the case. In the Gospel according to St. John, chapter 16, verse 25, Jesus says: "These

things have I spoken unto you in proverbs; but the time cometh when I shall no more speak unto you in proverbs, but I shall show you plainly of the Father." In the Gospel according to St. Matthew, chapter 13, verses 34 and 35, we read: "All these things spake Jesus unto the multitude in parables; and without a parable spake he not unto them. That it might be fulfilled which was spoken by the prophet, saying, I will open my mouth in parables; I will utter things which have been kept secret from the foundation of the world." And here is one more quotation from 1st Corinthians, chapter 2, verse 17: "But we speak the wisdom of God in a mystery, even the hidden wisdom, which God ordained before the world unto our glory." These verses from the New Testament show plainly that Jesus had one teaching for the simple multitude, and quite another, deeper teaching for his own disciples, which is in accordance with the tradition of every promulgator of the Secret Wisdom which we today call Theosophy, and which has been taught under various names in all ages. The Egyptians and Greeks had their Mystery-Schools where they taught the Secret Wisdom. The Chaldeans and Druids and the Jewish Kabbalists had *their* occult teachings which they carefully guarded from the uninitiated. Thus initiation from immemorial times has always been the way to obtain Truth.

Let us now consider the word Initiation. This word has the vaguest of meanings in the Western world. Initiation means the awakening of the dormant spiritual faculties in the human soul, the recognition and comprehension of the divine Self in man. This was the aim of the Mystery-Schools, and was attained through rigorous training and religious and philosophical teaching. Through countless initiations a man may attain to the spiritual grandeur of a Buddha, of a Christ. These initiations have taken place since the days of remotest antiquity, and continue even today in various parts of the world. No need to point out that

these solemn events take place in the utmost secrecy and retirement, away from the distractions of public places.

Now, among the ancients such initiations were several in number and took place at certain times of the year, the most important being that of the Winter Solstice, on or about the date when we now celebrate Christmas. Another of these sacred seasons of initiation took place on or about the date of the Spring Equinox, that is near March 21st, and became first the pagan Spring festival and later the Christian Easter. The Christians have borrowed generously from the pagans, and nearly every symbol, every outstanding event in the life of Jesus is taken from the ancient Mystery-schools. In fact, the entire story of the life of Jesus is the story of initiation.

Every nation had its own Mysteries; they varied in detail but were identical in essence. All of them taught about the "Mystical Death," that is the death of the personal life and the awakening of the Divine Self through initiation. There was always the "descent into Hades or Hell"; there was always the "resurrection," the Rising, usually after "three days"; and the "glorification" at the end of the trial — a complete picture of the supposed life of Jesus, and also a complete picture of the supposed lives of many other Saviors.

After successfully passing through the trials of initiation the candidate was called the "unconquered Sun." We think today that the ancients were sun-worshipers, that they worshiped the physical sun we see in the sky; but they did nothing of the sort. They worshiped the Spiritual Sun, the invisible, divine power which rules our Cosmos. It is quite likely that thousands of years hence the Christians of today will be called pagans because they symbolize Christ as the Lamb of God — which is as much a symbol as the Spiritual Sun of the ancients.

Even the early Christians identified Jesus with the Spiritual Sun. On a pillar of stone, which was found in Germany many years ago, was an inscription wherein the Sun was called the "Firstborn," the "Son of God," the "Word" or Logos — all of them names which the Christians later applied to their particular Savior, Jesus. In ancient Greece the sun was also frequently called "the only Begotten."

In the 5th century, Pope Leo the First wrote in one of his sermons that what made the Christmas festival so sacred was not so much the alleged birth of Jesus on that date but the return, or, as he expressed it, "the new birth" of the Sun. Cyprian and Ambrose, two orthodox saints of the Christian Church, referred to Christ as the "true sun" and "our new Sun" respectively.

We see thus that Christianity in its beginnings had more than a suspicious resemblance to Sun-worship. To the Christian layman today this must seem rather shocking and pagan, but we must not forget the underlying meaning here. Just as the physical sun is the center of our planetary system, and therefore its Lord and Regent, just so the *spiritual* Sun stands for the Supreme Divine Monarch of our Cosmos — or, in other words, God. Even some of the early Christians believed that the physical planets and suns were merely the bodies of divine entities, and that, just as Theosophy teaches today, there is a center of divinity in all things whatsoever — planets, atoms and men. It is then not difficult to understand the deification of the sun, our physical life-giver and light-bringer.

Easter, as well as Christmas, is an important time of initiation. We must not think, however, that only great souls like Christ and Buddha are initiated during their life on earth. The path to Godhood is open to all, and there are many men and women today who are following that path. India and Tibet abound in tales

about ascetics and yogis who live holy lives in retirement and solitude and whose aim it is to reach what to the average man would seem perfection. Those who have already attained spiritual mastery over their lower selves we call in Theosophy Masters of Wisdom, Adepts, or Initiates. They are not gods come to earth from a higher sphere: they are simply perfect men, who, like Gautama the Buddha, the Light of Asia, have accomplished a union with the god within them. Strange as this teaching must seem at first sight, it is not strange when we consider the seat of consciousness in living entities. For instance, the consciousness of a tree functions in its physical surroundings only: it is *alive*, it imbibes its vitality from the earth and the air, but it is not conscious in other ways, properly speaking. The seat of an animal's consciousness is in its instincts and desires. An animal can feel rage and maternal love, fear and shame, but it is not conscious on the mental plane as we understand it. Then think of a savage, a human being of low development. His consciousness is awake on the mental plane, but on the lower mental plane only. He is chiefly concerned with his daily life and his personal interests, and the impersonal abstract thinking of a philosopher is completely beyond him. Then, take a truly great man, a genius, an artist, a philosopher or social reformer. A man like that directs his mental energy beyond his personal concerns. He has trained himself in abstract or impersonal thinking. His consciousness is active on a wider field than that of the average man. Then finally we have a Christ or a Buddha. Their consciousness. Penetrated even beyond abstract thinking and functioned on a *spiritual* plane from which they derived their super-human wisdom and greatness. Initiation trains a man to make his consciousness Christ-like or Buddha-like.

Just as an unselfish action on the part of a man can have beneficent consequences for several other individuals, so a

successful major initiation must benefit all humanity, for a Master of Wisdom, on attaining Universal Consciousness, attains also Universal Compassion, and from then on becomes a worker for mankind — sometimes publicly like Jesus, but more often secretly and without the recognition of the world.

This is the true message of Easter: mental and spiritual purification for the ordinary man, and initiation for the Great Ones, the Masters of Life. The origin of Easter is ancient, pagan, and deeply mystical. (1)

The Theosophical Forum

THE REAL WORK OF THE T. S. — *G. de Purucker*

The Theosophist is often asked what practical good the Theosophical Society is doing in and for the world, and the answer is simple enough and direct to the point of the question. We work with ideas, and we try to show men that there is nothing more practical, stronger and more forceful than an idea. Ideas shake civilizations and overthrow them. Look what has happened in the past. What brought such changes about? Ideas. The ideas living in the minds of a few men — seeing ill or seeing good, is quite beside the point I am discussing. It is the ideas that I wish to stress, not who voiced them, or the consequences flowing from their enunciation to the world. The important thing is that ideas good or bad have tremendous power. And because these ideas and ideals were different from what was commonly accepted, they met at first with contempt and derision, later with study, and finally with acceptance; and structures toppled and there was much dust, and other structures rose and endured for centuries.

Show me something more practical than an idea. If ideas overthrow civilizations, they also build them up. The whole work of The Theosophical Society is to fill the minds and hearts of men with ideas of grandeur, inspiring them to ever nobler, more unselfish, and altruistic objectives; to give men and women thoughts that they can live and die by. Show me something more practical than this. This is our main work. True, we give from our slender means what we can and may when the calls come; but this is the least.

What ails the world today? Is it lack of riches? No. Is it lack of thought and good-will? The hearts of men vibrate with agony and pain at everything that goes on everywhere. But men and women

are blind, they have no ideal, no solid, central spiritual idea around which men may collect. Religion has lost its grip on Western men. Science has become suspect even in the minds of its foremost proponents, so that they themselves are questioning whether their scientific discoveries are good for the ethical stability of the human race, giving to men power to control their present evil passions and thoughts. Philosophy is today little short of a caricature and mimic of far older and truly grand philosophical systems known however to relatively few in the Occident.

What the world needs today is grand humanitarian ideals that they can believe in and follow in trust, ideals of a constructive character: something to give men hope, and a conviction that this world is run morally, i. e. morally inspired by the spiritual powers of nature, and is not a mere accident, originating in some far off time in cosmic space when by chance a nebula began spinning in empty space and finally after many aeons brought us forth, creatures of a day, finally to draw up our legs in bed and die into nothingness.

For fifty or sixty years Occidental science has been teaching us that men are but a higher kind of beast, soulless, irresponsible, answerable to none: a teaching flying in the face of every voice of Nature, of every being around us. For everywhere we see law and order and cause and effect, and that if you do certain things you will reap the penalty, or win the guerdon, the reward. These are facts. The others are evil dreams or devachanic illusions.

What, then, can we do? Teach men that this universe is essentially and fundamentally governed and controlled by irrefutable law and destiny, ethical, moral in its essence; and that it is not simply a crazy phantasmagoria, a *danse macabre*, without sense or purpose or reason. That is what too many tens of

millions think in the Occident today, that is what they think they believe. Self-interest has become their sole guide in life. Result? Each man for himself, and the Devil take the weakest. There is where the trouble lies: false teachings, false convictions, stupidity, and the pathetic picture of noble human beings run away with by ideas and ideals indeed — but of what category? The pathos of it all is that men fail to discern in nature and in themselves nature's own categorical moral imperative, in which indeed most men no longer believe. Thus they fail to find the road to everlasting happiness and peace and wisdom and unselfish love.

The greatest men in the world are they who have seen beyond the clouds, seen the stars of spiritual destiny and followed them. In other words they have followed that divine inner peace which all men vaguely sense, but which when recognized and followed gives us wisdom and knowledge and power to labor mightily for the common good of all men. But our civilization as a whole has lost that religious instinct of unity with inner guidance; it has lost belief in its science which has miseducated it; it has no philosophy; it is unguided, blinded, almost helpless, and yet it is pathetically crying and asking the cause like a child in the night, crying helplessly — an appeal to the powers that be. There is the picture.

The main work of the Theosophical Society seems to me to be the restoring to man of the self-conscious realization of his spiritual intuitions and of the belief in the innate morality welling through Nature's heart and recognizable when our own eyes, through the same moral urge, open to recognize it in others and everywhere. This is the main reason of its founding; this is the main reason why the Masters sent their first Envoy, H. P. Blavatsky: to restore to men the archaic heritage of the philosophy of life which is at once a religion and a science, which is founded on the spiritual heart of Almighty Mother Nature herself and on no man's say-so;

which is provable by examination into Nature's secret places.

It is our work to change men's hearts by changing their thoughts; give them ideas and ideals for them to follow and live up to. And to work with malice towards none, with a yearning to do justice to all, even to those with whom we most disagree. The Theosophist will be successful just in so far as he can implant in the hearts of others who may see him and hear him the thoughts and ideas and ideals which he himself has sought and found and is blessed with. Little by little the thoughts of men will change, until a time will come when these Theosophic ideas will sweep like wildfire through the hearts and minds of men everywhere, permeating both mind and conscience, thus furnishing a strong, a mighty, guide to all. The world will then be changed because men will begin to think new thoughts, see new ideas, realize their truth and immense import and value, and instinctively will follow them; and they will understand then that self-interest is the worst policy possible to follow, because the man who works for his fellows works likewise for the best for himself and wins friends everywhere. The man whose honor is unstained and whose heart beats with love for his fellows: he is the man who will be looked to for counsel, for all will instinctively feel the inner guidance that such a man follows, and will themselves seek the light that directs him.

If ideas can overthrow and work havoc, it is by this fact evident that ideas of another type can build and unite and save.

The Theosophical Forum

THE SCIENCE OF ENVIRONMENT — *W. Y. Evans-Wentz*

Over the plains of Hindustan, as over the Himalayas and their differentiated provinces of Sikkim, Bhutan, Nepal and Tibet, dwells the brooding presence of an ineffable greatness. During the course of millenniums the purifying thoughts of unnumbered generations of *Rishis* and *Yogins* have been poured out there until today these regions of the world are really holy, their rivers sacred, their trees and plants, their soil and rocks, and the very atmosphere enveloping them emanate a hidden glory; and he who can harmonize himself with this glory becomes transfigured.

All holy places, in varying degrees, have been made holy by that same occult power of mind to change the psychic character of the atom of matter; they are the ripened fruit of spirituality, the proof of thought's all-conquering and all-transforming supremacy. Thus, in every center of holiness the seer beholds in manifestation the magic of the Divine *Sakti*, which, when it shall have invaded and possessed every locality, will literally have made of this material plane of existence a terrestrial paradise. If through Ignorance man has lost Paradise, through Wisdom man can regain Paradise.

Indescribably, invisibly, immanent and transcendent beauty and peace sanctify every place of pilgrimage. As pure water cleanses the body so do places of sanctity cleanse the heart.

Wherever his own pilgrimages have led him, over continents and oceans, the writer has experienced this of which he bears witness. On the wondrous mountain trails of Kashmir, through meadows of Alpine blossoms, along the awesome shores of the glacier-fed Lake of the World-Serpent, over snow-fields and glaciers, to the Cave of Amarnath, 13,000 feet above sea-level, wherein Nature

makes symbolically manifest the Destroyer *Siva* as a lingam of immaculate ice, he has felt the ecstatic joy there attained by the pilgrim. At Puri, on the Bay of Bengal, where stands the Temple of Jagannath, Lord of the World," at Kedarnath, as at Badrinath, amid the ever-lasting snows whence issues Earth's holiest river, the Ganges, at the holy of holies of the *Avatara* Rama at Rameswaram, at the shrine of the Virgin Goddess on Cape Cormorin, at Benares, the *Anahata Chakra*, or Heart Center (1), at Sarnath, where the Buddha set in motion the Wheel of the *Dharma*, and at many a lesser goal of pilgrimage in Humanity's Holy Land, India, he has been vouchsafed the heart-cleansing.

Once the magical control of mind over matter has been successfully accomplished, the place so favored is, like radium, radio-active for ages afterward. Even now a spiritual essence enhaloes every crumbling fane of a long lost culture. It is present at Stonehenge and Avebury in England. It pulsates amid the Alignments of Carnac, in Brittany, as a direct inheritance from pre-historic days when Carnac was a far-famed place of pilgrimage for the Druid-led Gauls of Western Europe and perhaps of all of the Mediterranean basin. It lives in the ruined site of the Great Mysteries of Eleusis, in the deserted mountain-shadowed vale of the silent Delphic Oracle, and in Abydos and the other mighty temples on the Nile. Powerfully it radiates from the Black Stone in Mecca, whither there are sent daily and focussed the highest thoughts of the faithful millions of the whole of Islam. It is active in the Cathedral of Canterbury, in St. Peter's in Rome, as in St. Paul's, built upon the site of the ancient temple to the British god Lud, in London. It blesses the pilgrim in Jerusalem, in Bodh-Gaya, on Mt. Fujiyama in Japan, on St. Patrick's Holy Mountain in Ireland, or on Adam's Peak in Ceylon. It belongs to no race and to no religion.

One who is able to feel environment knows that there are places

not only of positive holiness, but places of positive evil also. And each site of an ancient as of a modern city is enveloped in its own mind-woven aura of accumulated thought-forms. So, too, are the world's battlefields, where hatred and worldly ambition have had fruition, where the blood and flesh and bones of incalculable multitudes throughout the ages have mouldered into dust. The seeds of ancient sowings of good and evil ever await a chance to grow. In the same manner will the sowings of this generation seek their own reproduction.

Oxford is Oxford, Paris is Paris, or Harvard is Harvard; and no school or college or famous seat of learning is or can become quite like any other because of the distinctive thought-forms bequeathed to it by its own teachers and students, day by day, year by year, century by century. Likewise, every household, though it be of the simplest Mexican peasant or Congo native, accumulates its own psychic character from the thoughts of those who dwell within it. Nor is this power of shaping environment man's prerogative alone; every thinking thing, visible and invisible, god or man or sub-human creature, or inhabitant of what the Rev. Mr. Kirk, the fairy-seer, called the Secret Commonwealth, exercises it.

No true practitioner of yoga in India or Tibet will go into residence anywhere until the place has been exorcised. One who is about to undergo yogic penance or to enter upon a fixed period of solitary meditation is directed by the *guru* to prepare, or shape, by mental processes, the environment chosen, be it that of a remote mountain cave or that of a monastic cell. In the Orient, psychic prophylaxis is considered to be far more essential than sewers and bath-tubs; and the failure of the occidental to purify and fashion environment is advanced as evidence of the inefficiency of his own Peculiar form of education, which is, unfortunately, confined almost wholly to the realm of external

appearances.

The Wise Ones who bequeathed to us the *Maitri Upanishad* knew well the power of mind over environment; they knew, too, that as the sowing is so shall the harvest be for the individual, for the nation, for the human race. Their words of warning, which long ago should have been written in letters of gold over the portals of all the fanes and schools and homes of men, were these:

*"Nought else the whole world is than one's own thought.
With effort one should therefore cleanse the thought,
For what one thinketh that doth one become.
And this is the eternal mystery."*

If, then, consciousness, or mind, be, as the Great Teachers tell us, the one ever-enduring reality, and the architect of environments, of worlds, of universes, immeasurable and marvelous knowledge awaits men of science of the future when they turn to the study of environment in relation to mental activity. Every thought of man and of all thinking things has left its record in the secret archives of time; and through the doors of the womb there will come occidental scientists who will interpret the mind-moulded symbols, and, thereby, make unparalleled advance towards the mystery of being itself.

We await the awakening of all the races, of all the nations from the aeon-long sleep of Slothfulness and of Ignorance. We await the era of right education, when humanity will re-think and remake their world, when all places on the planet Earth, all the hills and mountains, all the rivers and lakes and seas, all the temples, all the cities, all the abodes will be holy, and divine at-one-ment will have been realized by man. Then only will there be fulfilled the prophetic vision of the poet wherein he beheld

"the battle-flags were furl'd

In the Parliament of man, the Federation of the world."

FOOTNOTE:

1. In this article, emphasis is placed upon the intimate relationship between thought and environment rather than upon the existence of sacred spots on the Earth which may be said to be naturally sacred and more or less immune to man's shaping. Delphi was regarded by the ancient Greeks as such a naturally sacred spot, as Carnac, in Brittany, probably was by the builders of the Alignments, and as Benares, better known as Kashi, is today by Hindus. Brahmanical Scriptures enumerate seven places of pilgrimage in India which confer *Moksha*, or liberation from rebirth, and these are correlated with the seven occult centers, or *chakras*, of the human organism. SOMETHING ABOUT PHILOSOPHY — *Abbott Clark*

DEDUCTION

The Deductive method, frequently called the Platonic method, of philosophical reasoning is *a priori*, *i. e.*, from known or assumed causes to effects; from fundamental principles to the logical or natural results; from universals to particulars.

This is the method of the Ancient Wisdom or Esoteric Philosophy and of all religions. All religions and esoteric philosophies begin from one fundamental principle which is perceived intuitively, assumed as a logical necessity, or accepted on authority, and all the rest of the philosophy or religion or system of thought is built upon, or hangs pendent therefrom. As we know, the Theosophical philosophy begins with one fundamental Reality, by whatsoever name it may be called, and all the rest is pendent therefrom.

The Platonic or deductive method is that of the Seers and Sages, of the intuitive and spiritually minded, of all ages and religions. It relies on the intuitive perception of fundamental principles and from them deduces the details of its philosophy. The details of the philosophy differ with the degree of the enlightenment and the intellectual capacity of the Philosopher or Teacher and the character and intelligence of the recipients thereof.

The fundamental principles perceived by spiritual intuition remain the same throughout the ages. The names, forms of thought, or theories, vary in value as they reveal or conceal the truth and conform to, or depart from, the facts and laws of nature.

INDUCTION

The Inductive, or Aristotelian, method of philosophical reasoning is *a posteriori, i. e.*, "from effects to causes, from a part to a whole, from particulars to generals, from the individual to the universal."

This is the method of modern scientists who base whatever conclusions they arrive at upon the evidence of discoveries or phenomena before them, quite oblivious of the transitory nature of the evidence and the incompleteness of the discoveries. No satisfactory and enduring philosophy can be founded on the progressively changing discoveries of modern science. Any philosophical system, any comprehensive explanation of the causes of and reasons for things as they are, based on "the solid rock of scientific realities" is liable to be reduced to a mere shifting sand dune or scrap of paper almost any day by some new and startling discovery.

Inductive philosophies are inherently unstable and transitory. H. P. Blavatsky has humorously called the modern inductive philosophers, "philosophicules."

Aristotle's method of accumulating vast numbers of facts laid the foundation for modern science and the scientific method of reasoning from accumulated facts to causes — that is, the Inductive method. Paradoxically, Aristotle's own philosophy is deductive. The explanation of this is that his philosophical ideas were largely drawn from his teacher, Plato.

"Induction can ordinarily give no more than a probable conclusion, because we can never be sure that we have collated all instances." — *Funk and Wagnalls' Practical Dictionary*

IDEALISM

Idealism is "any theory or philosophy which affirms the universe to be an embodiment of mind or denies the possibility of knowing

ought save psychical reality." In philosophical literature the word spiritualism is sometimes used in connection with idealism for the specific purpose of denoting conceptions that are essentially spiritual. Later writers, in the same connection, use the term "philosophical spiritualism" to distinguish what they mean from the modern cult of that name. "Modern Spiritualism," properly so called, began in the United States in 1848 with the "Rochester rappings," and is characterized by the belief that the spirits of the dead can communicate with the living in various ways, especially through mediums.

MATERIALISM

Materialism, philosophically speaking, is any theory that assumes to find in matter alone, or in the forces or qualities of matter, a sufficient explanation for the origin of life or the problems of existence. Any theory which denies or excludes the existence of god, soul, mind or spirit, except as products or phenomena of matter — opposed to Idealism.

OBJECTIVE IDEALISM

Theosophy, considered as a philosophy, is an Objective Idealism, because it postulates the Cosmos as the product of Cosmic Ideation and the imbodiment of consciousness. But not a pure Idealism, because it recognises the objective or phenomenal worlds as having a relative reality; being real and objective to all beings who themselves are a part of the objectivity.

The philosophers themselves and the universe about which they philosophize are all alike transitory and phenomenal and therefore unreal. But to themselves it is all very real. In the Theosophical philosophy all things and beings are the product of a Divine Reality which is both immanent and transcendent.

As an Objective Idealism, Theosophy is founded upon one

limitless unqualified Reality of which boundless SPACE and eternal DURATION, considered as one, are the best symbols. This idea is adumbrated in Einstein's Time-Space-Continuum when used philosophically — a word or phrase which has another and very technical scientific use, however. This fundamental Principle, or One Reality, is beyond the range and reach of thought, but is perceivable by the highest intuition as the ONE REALITY. The whole objective universe is an emanational unfolding, an ever becoming, as H. P. Blavatsky says, yet its very objectivity, illusive and transitory as it is, is pervaded and sustained by the ever present REALITY.

All the manifested universe is compact of hierarchical hosts of Monads, each and all being rooted in the Real and yet having objective existence and relations as long as the manifestation lasts. The Universe itself and all therein is an embodiment of consciousness centers, units of consciousness, or monads. All worlds, subjective and objective, inner and outer, spiritual and material, are compact of monads in varying states of evolution, of ever-Becoming, hence their state at any time is an illusory and transitory one.

Theosophy postulates both Cosmic Ideation and Cosmic Substance on or in which Cosmic Ideation works to produce an objective universe, cosmic substance being the basis of all objectivity. (In this philosophical sense all worlds, including the highest spiritual worlds, are worlds of objectivity or manifestation).

Within the realm of a manifested universe on which philosophical speculation is possible both cosmic Ideation and cosmic Substance are indispensable. One cannot exist without the other. Without Cosmic Ideation Cosmic Substance would remain a formless, lifeless, empty abstraction. Without cosmic Substance no objectivity, no manifestation, not even that of the gods, would

be possible. There would be no delimitating factor by which gods, in the plural, could exist.

The Theosophical concept of objective idealism is similar to the Vedantic doctrine of Maya.

Man has within himself the Monadic stream which is rooted in the Real. It is important to understand this and that Reality is ever present here and now. In proportion as this is realized one acquires an inner strength and calm that nothing can disturb. The higher one raises his consciousness the more relativity, differentiation and illusion disappear. As the consciousness ascends towards its source it expands, increases in understanding, discrimination, wisdom, power and love.

In short, within the all encompassing and all comprehending philosophy of Theosophy induction and deduction, idealism and materialism, all have their proper place and value.

The Theosophical Forum

THEOSOPHICAL READING

One of the Theosophical classics which is very often overlooked in the wealth of other literature is W. Q. Judge's booklet "An Epitome of Theosophy." Perhaps it is mistaken for a mere primer, but it is only this in the sense that for a certain type of thoughtful mind it might well serve as a first approach to Theosophy.

Mr. Judge always writes with the simplicity of clear thinking and an obvious desire to meet the mind of the seeker for truth half way. But with all his simplicity he is profound, and what one has found to be lucid and interesting at the first reading, with deeper study is found to suggest at every turn lines of deep thought to be unfolded.

The "Epitome" might almost be said to contain in its thirty-five pages the whole Theosophical philosophy either expressed or implied. Many an older student may have overlooked in its pages certain statements about the astral light, elementals, thoughts, cycles, karman, the "moment of choice," etc., that give a rare slant on these teachings not to be found in the larger books.

Mr. Judge never loses the broad general picture, so necessary to prevent one from running off into side issues; but he has a way of linking up a generality with some detail of teaching that touches the flame to the inert candle of the mind. And then the student finds himself afire with the beauty and reality of some cosmic truth that previously had been to him just remote metaphysics.

His summing up of the process by which man's spiritual advancement is attained is masterly and is introduced in such a way as to show that, as far as man is concerned, it is the whole reason for a study of the philosophy. He writes:

As to the process of spiritual development, Theosophy teaches: —

1. That the essence of the process lies in the securing of supremacy, to the highest, the spiritual, element of man's nature.

2. That this is attained along four lines, among others, —

(a) The entire eradication of selfishness in all forms, and the cultivation of *broad, generous* sympathy in, and effort for the good of others.

(b) The absolute cultivation of the inner, spiritual man by meditation, by reaching to and communion with the Divine, and by exercise of the kind described by Patanjali, *i. e.*, incessant striving to an ideal end.

(c) The control of fleshly appetites and desires, all lower, material interests being deliberately subordinated to the behests of the spirit.

(d) The careful performance of every duty belonging to one's station in life, without desire for reward, leaving results for Divine law.

3. That while the above is incumbent on and practicable by all religiously disposed men, a yet higher plane of spiritual attainment is conditioned upon a specific course of training, physical, intellectual, and spiritual, by which the internal faculties are first aroused and then developed.

4. That an extension of this process is reached in Adeptship, Mahatmaship, or the states of Rishis, Sages, and Dhyan-Chohans, which are all exalted stages, attained by laborious self-discipline and hardship, protracted through possibly many incarnations, and with many degrees of initiation and preferment, beyond which are yet other stages ever approaching the Divine."

The leaflet abridgment of the "Epitome" made by Mr. Judge himself is excellent to have on hand to show to an interested friend.

Among reviews of *The Hill of Discernment* we notice with particular pleasure one written by A. E. S. Smythe in *The Canadian Theosophist* for January. Mr. Smythe's own evident appreciation is a guarantee that *The Hill of Discernment* will be recognised as a "treasure-book" all will delight to read, and "which will be placed on the special shelf by those who are accumulating a Theosophical library."

Mr. Smythe writes: "Mr. Barker is saturated with the doctrines of the Mahatmas and he has simplified much of this teaching by his own assimilation and by the experiences in which he has been able to apply their principles. He writes with courage and independence and looks to no authority. . . One can give this book to any open-minded enquirer and be sure that Trevor Barker will become one of his prophets. He does not minimize the difficulties so that the reader after pursuing the path for a little meets unexpected dangers and difficulties. No, the danger signals are all in place. But the way to meet them is made plain." — The Editors

The Theosophical Forum

BROADCASTS FROM SHANGHAI: V

In this broadcast further aspects are given of the esoteric symbolism of the Christ-story from the Theosophical viewpoint. This is the fifth of a series of weekly quarter-hour talks begun last spring over radio station XQHB, Shanghai, China. It was presented on April 20th by Miss Elsa-Brita Bergqvist of the Shanghai Theosophical Lodge.

Good evening, everybody:

Last week, Easter Sunday, the President of the Lodge spoke on the meaning of Easter with as much detail as there was time to give to this most mystical subject. We were told that Easter is one of the four periods of the year when initiations take place — when human beings, who have devoted their lives and their very selves to the service of humanity, are initiated into that larger life, whence their ability to serve the human race is greatly enhanced by the spiritual powers that are their reward for lifetimes of selfless work.

Miss Sjostedt also mentioned that the New Testament story of the events in the life of the Syrian teacher Jesus the Christ is the story of initiation. This does not mean that Jesus did not exist. There was indeed such a man, but the life imputed to him is an allegory, which was told in almost identical form of many other saviors or masters. The main incidents in his life, as related in the Bible, have been told of many other World-Teachers.

For instance, the annunciation of an angel bearing flowers, the immaculate conception, the guiding star and the three wise men, the virgin birth at the time of the Winter Solstice, the performance of so-called miracles, the Last Supper, and the death

on the cross, the descent into hell and the resurrection after three days — these are incidents common to legends attached to various great sages. It is too striking a coincidence to be taken as a literal account of the lives of these men, but it furnishes proof of the identity of the procedure, which these various tales are intended to relate.

In the first chapter of the Gospel according to Matthew, the genealogy of Jesus is traced from Abraham through David and through Joseph, the husband of Mary; and in the 22nd chapter of the Book of Revelations, verse 16, Jesus is reported as having said: "I am the root and the offspring of David and the bright and morning star." This star, by the way, is the light-bringer "Lucifer," who has since been demoted to represent the devil, curiously enough. This genealogy traced through Joseph is unreasonable unless the virgin birth be a mystical symbol — which Theosophy avers that it is, together with the other incidents just mentioned. It is the symbol of the initiation — that is, of the birth in man of his higher spiritual nature, the pure birth of his consciousness into spiritual realms and activity.

Again the crucifixion is by no means a merely Christian idea. We are told very little of the more occult teachings of the Mysteries, but we are told this: that the initiate was laid on a cruciform couch, where he lay as one dead for about three days and nights, while his mind of consciousness explored the deeper reaches of nature and he literally passed through the state called hell, where he must meet and overcome his lower personal self, and he was then confronted with his own divine nature. If he successfully sacrificed his personal self to the impersonal divinity, he in a manner died as a man and was reborn a Master, and his whole being was suffused with glory — that is, the spiritual light within him shone so strongly that for a time it became visible even to the physical eye as a halo or aureole. People who are psychic or

clairvoyant can see around a person an aura of colored light, which colors are said to depict the person's thoughts or emotions. In the case of an initiate who has recently passed the final test and become conscious in his spiritual parts, this light is so vivid that it can be seen by even ordinary people. This explains the origin of the nimbus often seen on paintings of Christian saints and Greek and Roman divinities, and the flame on the heads of images of other religions.

It is curious to note that the original text of Jesus' cry on the cross, which has been translated: "God of me, God of me, why hast thou forsaken me?" was "Eloi, Eloi, lama shabahhthanei." This is Hebrew and also Chaldaic and the word "shabahh" used in the gospels according to both Mark and Matthew, means actually to "glorify" or "to give peace to." This should be contrasted with the passage in one of the psalms, where a different Hebrew text has been correctly translated to mean, "My god, my god why hast thou forsaken me?" The word here used is "azabthani." "Azab" means to forsake or to abandon. There has apparently been some confusion by the translators of the words "shabahh" and "azab." Jesus' utterance correctly translated was therefore, "God of me, God of me, why givest thou me such peace?" or "why glorifiest thou me so greatly?" This puts an entirely different complexion on the story of the crucifixion.

The story of initiation is by no means unique — on the contrary, the events portrayed therein take place even today, and such men as Jesus exist in the world to inspire and enlighten mankind, whenever such inspiration or enlightenment is sincerely solicited with altruistic motives. We cannot find a Master by advertizing in the paper, but any human being who seeks to aid in the work of helping mankind and whose motive is entirely unselfish, can and will receive the guidance and inspiration of the Great Souls who have devoted their existence to helping the evolution of the

human race toward the goal of perfection. Those of the Masters who have publicly lived among men all founded Mystery-Schools, where the deeper truths were taught and still are taught to those who have proved themselves worthy guardians of these truths. The general public, who could not be trusted not to abuse or misuse the deeper knowledge, had to be content with general ethical injunctions and truths half-veiled beneath parable and allegory. And so it is today: "Ask and ye shall receive, knock and it shall be opened unto you" — people are given just so much of knowledge as they are able and willing to digest and understand, no more, no less. The Theosophical Society as such was founded for the purpose of providing opportunity for study to those who desire to know the truth, at a time when humanity as a whole was emerging from a cycle of crass materialism, during which very little of the Ancient Wisdom was given out, and was entering a cycle of philosophical speculation and of groping after a sane, scientific religion to replace outmoded and garbled dogmatic creeds.

The Theosophical Forum

THEOSOPHICAL PROPAGANDA — *Frank Watson*

Personal propaganda can be a very large field of Theosophical activity, and, indeed, it is worthy of great spiritual stature, since it is concerned with quickening the evolution of humanity as a whole. Being a field in which discretion and real wisdom is required, a consideration of some of its difficulties may be worth while.

Of course, the best medium for the propaganda of the ancient wisdom is the advanced human Ego, who radiantly illustrates the teachings by his very presence. But most of us are very much on the same evolutionary stage of earth life, and as regards the propagation of Theosophy, we have to rely on our presentation of the teachings, and the sincerity and warmth and conviction we can summon to our expressions. And it is a position of great responsibility, (possibly more so than we realize) to be the medium whereby a mind contacts these archaic truths, perhaps for the first time in such wealth of detail. Responsibility because, while untold good can be achieved by such contact, yet clumsy and unsuitable methods can certainly do harm. I have not witnessed very many first contacts with Theosophy, but I am sure of how extremely crucial this period is, during which great care and thoughtful handling is necessary. Admittedly, the Theosophist sometimes meets that type of mind which is very "ripe" for many of the teachings — a mind very easily convinced of their veracity because of its own proximity to them. Yet, while the Theosophical propagandist is particularly on the look out for such minds, they are a minority usually among the enquirers and people whom he contacts.

One of the main difficulties is to impart Theosophical thoughts

without coloring them with any personal paint. It is of extreme importance that they should be given to the enquirer exactly as they had been previously received. An enquiring mind, rejecting a personal opinion or idea which he has been given as part of the Theosophical doctrines, may be repelled from Theosophy as a whole because of this indigestible item. This is why it is so necessary to become as much as possible a living illustration of Theosophy. A wide discrepancy between the teachings and the personality explaining them can have a similar bad effect.

Another difficulty of equal importance arises from the inertia of thought in the human mind. The old phrase "casts of mind" expresses it admirably. It is when these "casts of mind" are concerned, that I think the greatest amount of wisdom and thought is required. They cannot ever be overcome by rough methods such as challenging them directly, but must be destroyed by softening the mind gradually to sensitiveness to new thoughts, all achieved with stepping as little as possible on mental toes. Perhaps I am not being explicit enough when I speak of not challenging these "casts of mind" directly. What I mean is that very rarely is it enough to say, in so many words "Here are the Theosophical teachings, you will have to scrap your previous views." This is also what I am thinking of when I speak of "stepping on mental toes." And it is not just silly sentimentality — very far from it. It is all because of what we call openmindedness, that attribute of the mind whereby it is more or less respondent, impressionable to new thought. To become most "open" the mind must have a certain sympathetic adjustment with another, adjustment never achieved by mere parrot fashion reiteration of Theosophical teachings. One of the main essentials of this adjustment is a great respect for the other's view, a respect, which, if amounting to an intimate realization of the other's general outlook, can be even more effective.

I think it is an Eastern method of teaching, in which the teacher, by asking a few questions, gains a fair idea of his student's own mental tendencies and opinions. Then, forgetting temporarily his own thoughts, he tunes his mind to that of his student, using his resources of imagination, and step by successive step he brings his student's mind to those thoughts he wished to impart, stopping at any ungrasped idea, and dwelling on it until it is understood before continuing Well, although there can never be hard and fast rules made, I think something of the sort is often needed in personal propaganda. The Theosophical propagandist, who takes these traits of the human mind into consideration, is employing real wisdom in the job in hand.

The Theosophical Forum

PLANETARY CHAINS AND PRINCIPLES — *G. de Purucker*

For years really I have felt I ought to speak about a difficult matter of doctrine, to try to correct at least a few simple errors which some of our very best students have fallen into, I fear; I am not sure, but I have the impression that this is the case. It is with regard to the planetary chains, a very technical teaching, but a beautiful teaching, and most suggestive when properly understood, a teaching having a distinct moral value on human life because of the inferences that the student draws from this doctrine of the planetary chains.

Of course there are planetary chains of which we have no physical cognisance whatsoever, because their lowest or fourth globe — following H. P. B.'s septenary enumeration — their fourth respective globes are either above or below our plane of the solar universe. Therefore being outside of the sphere which our eyes can encompass, we do not see these other globes. Nevertheless these higher or lower planetary chains exist. So much for that point.

When the planetary-chain teaching was first given out by H. P. B., shortly before and at the time of and after the printing of her great work *The Secret Doctrine*, those students who thought they understood the teaching concerning the planetary chains, imagined that the other globes of a planetary chain, such as our own Earth Planetary Chain, were but different phases of each chain's fourth-plane globe, as for instance of our Globe Earth, our Globe D for our Chain — different levels of consciousness, as it were, of our Globe D, reaching from the grossest or our physical plane up to the spiritual. So strongly did this idea sink into the minds of students of those days, and such vogue did it get, that

very unwittingly and utterly wrongly, students spoke of the other globes of our Planetary Chain, or of any other planetary chain, as being the *principles* of our Globe Earth or of some other fourth-plane globe, with respect to its chain, like Venus or Saturn or Mars or Jupiter. This is all wrong. The reason for such mistake was the very striking and close analogy that exists between the globes of a planetary chain and certain aspects of the septenary human constitution little spoken of in those days, but in our day much more clearly understood, to wit, the monads in the human septenary constitution.

For many years over-emphasis has been given to this idea that I have just spoken of, that the other globes of our planetary chain were so to speak the principles of our Globe D, and for that reason I have taken especial pains to change that current of thought; until about a year ago I became suddenly conscious that the swing of thought had gone far too much, far too far, in the other direction; and that our members had lost sight of the very striking and close analogy between the monads in the human constitution and the globes of a planetary chain, and were beginning to look upon the globes of our planetary chain, or of any planetary chain, as almost unrelated individuals, unrelated globes, or at least held together only by delicate and subtil karmic bonds of destiny — a thought which is true enough, but not nearly close enough, or accurate enough.

If you can synthesize these two points of view, the older and this latter, fuse them into a new and more comprehensive conception, you probably will have the real facts. Let me try to illustrate: The monads in the human constitution — and I will use the septenary form that H. P. B. gave to us as it is somewhat easier than the duodenary — may be reckoned thus: the divine, the spiritual, the intellectual, the psychical, the animal, the astral-vital, and the vital-physical; for even the vital-physical human body, temporary

and imperfect as it is, is nevertheless the expression of a monad working on this plane, whose seat (since your western minds always want very definite brain-mind locations), whose seat is in the human heart. The heart is likewise the seat of the spiritual monad working through this lower.

The globes of a planetary chain correspond almost term for term to these monads in the human constitution; and as you know, the human constitution being unitary, one, the principles and monads being in coadunion but not in consubstantiality, so likewise we may speak of the globes of a planetary chain as being in coadunion but not in consubstantiality. Yet these other globes are not the other six principles of our Earth. They are fellow-globes, a septenate, of which our Earth is one. But a septenary unitary fact comes in what I have just told you; that the globes correspond in that chain to what the monads are in the human constitution, because each globe is itself the expression of what we may call a globe-monad.

Furthermore, just as the principles in the human constitution are as given from the very first, atman, buddhi, and so forth, down the scale, so the same cosmic principles, paramatman, mahabuddhi, mahat, etc., are the principles of a planetary chain. Thus you see right there there is the same distinction between globes and the principles of a chain, and the monads and the principles of the human constitution, item for item. Furthermore, just as there is in man a hierarch of his constitution, just exactly so in a planetary chain there is a hierarch of the entire planetary chain, the hierarch for all the seven or twelve globes of that chain, our chain as an example. And this hierarch, who really is a kind of person or individual god for the chain, our chain, is the highest spiritual planetary of our chain, or planetary spirit.

Remember that every globe of a chain has its own minor

hierarchy of planetaries. You may call them Buddhas and Bodhisattvas, if you like. I am now using the typically Theosophical term, planetaries. But these combined planetaries of the chain simply make the families of the planetaries of the chain, the highest of such planetary being the hierarch of the hierarchy, the king. Furthermore, every such planetary considered as an individual, in some past cosmic age has been a man, or a being corresponding to a man; that is, the monad now a planetary, now blossomed out, evolved forth, into being a planetary, then was passing through the stage where spirit and matter meet, conjoin, and produce man, the midway stage. We in our turn, all of us, if we make the grade, shall some day be planetaries. Furthermore, note that in the human constitution, all the monads of a man's constitution are inseparably linked, which does not mean closely linked, but inseparably (which means cannot be separated, that is torn apart from each other to become strangers unto each other), are inseparably linked for a galactic manvantara; after which evolution will have so parted them through increasing individualization that although they will still be karmically linked, they will no longer be condensed as it were into a relatively closely knit unit, as they are now in a man.

Precisely the same rule holds for a planetary chain; and remember that all that I am saying tonight is but brushing the outskirts, sketching an outline, of much deeper and important teaching that does not belong here.

All the globes of our planetary chain had a common origin, were born together so to speak, just as the monads in a man's constitution have a common origin and were born together so to speak. When they were thus born in past cosmic time they were much more closely in union, united, than now they are, evolution of each globe through the ages bringing about a stronger individualization of each globe, and for this reason we speak of

these as being in coadunition; so that as the ages pass, they will have the tendency to separate, still remaining connected by spiritual and magnetic and all other kinds of bonds. The separation, as stated, comes through constantly increasing individualization. But as each globe becomes more strongly individualized, the constellation as it were of globes in a chain separates farther apart. Thus a child born in a family finds the time come some day when it leaves the family and enters the world to carve its own way, or to follow in the footsteps of the father, no longer as a child but as an individual, as a man "on his own," to use the slang expression.

Furthermore, every globe in a planetary chain, ours for instance, has its own septenary constitution. The Master in *The Mahatma Letters to A. P. Sinnett*, outlines what these principles are for our Earth-Globe, but the Master there gives only the septenate for the *physical* globe. You remember, every principle in a constitution is itself septenary, so that there is even an atman of the physical so to speak. Therefore, every globe not only has its own septenary principles, each principle a septenate itself; but you see this means that every globe therefore is a fully equipped entity with divinity at its heart and manifesting in a gross physical vehicle, veil, frame, body, exactly as a man does. You know that even an atom in your body is a septenary entity. Its heart is divinity. Why should not a globe of a chain be exactly the same? It is. At the present time the globes of a planetary chain, ours for instance, are sufficiently conjoined or coadunated so that they move through space more or less together as a constellation, as it were; so that while they are not inside of each other, the more ethereal inside the more material — that is not so — while they are scattered about in space, but closely together; nevertheless they form a constellation as it were, if you take the twelve of them, or even the seven; and they pursue the same orbit about the sun that

the earth does, not because the *earth* follows this orbit — it is only one of seven or twelve — but it happens to be the orbit that these seven, these twelve, all follow; so that when we move about the sun, we do so, and all the other globes do so, more or less as a constellation, each globe moving and rotating. Follow your thought now: so that actually every globe from this standpoint can be called a planet. It is in itself not only a septenary entity, but if you were on Globe E for instance, or F or G or A or B or C, you would not see the other globes around you. To you it would be an earth, following its orbit around the sun, as does each of the other globes. Therefore the globes from this standpoint can truly be called planets.

What has been said with regard to our earth applies equally well to all the other planetary chains, visible or invisible, of our Solar System. And there are scores of planetary chains. Our modern science knows of only a few planets — I think the total number at present is nine, including Pluto, and about these I have not the time nor is it the place to go into here.

I am debating now in my mind, and also trying to find words in which to speak of something else. These things are not easy to speak of. The teaching is difficult indeed, because it is so utterly apart from anything that our brain-mind knows. What I have said about planetary chains applies equally well to the Solar Chain, or indeed to any stellar chain, the chain of any star. Furthermore, remember that every planetary chain is headed by its hierarch, which is the chiefest planetary spirit of that chain, the highest; and therefore that planetary spirit is for its chain what we in the West I suppose would call a "personal god." Now this teaching is a very ancient one, and in its popularization a very esoteric one. It has been known since immemorial time, and was the basis of what the ancients called astrolatry or star-worship. They did not worship the physical globe, they worshiped the life, the light, the

intellect, the manifestation of order and beauty and harmony, for which the planet was the symbol and expression. They worshiped, in other words, the regent of the planetary chain. And furthermore, just as a chain has its own chief planetary or hierarch, so every globe has its own subordinate smaller hierarchy of planetaries with its hierarch or chief minor planetary, our Earth as an example; only these are globe-planetaries — at least those on our Earth are. Nevertheless, they are higher than we men, spiritually and intellectually.

Thus you see, "to come back to our sheep" as the French say, we must not look upon a planetary chain as an indissoluble single body or globe, of which what we call the other globes are merely finer planes. In other words, the other globes are not merely finer planes of our own Globe-Earth that we know. Our own globe that we know is only one of seven or twelve, and in some ways the least important of all, because the lowest. Nor should we again on the other hand look upon the planetary chain as composed of a number of globes, whether we reckon on the seven or twelve, which are merely held together in a kind of feeble union, unconnected in origin with each other, which is quite wrong, because they are very closely connected in origin with each other, and they shall be connected thus closely until the end of the Galactic Manvantara; and then when the new Galactic Manvantara opens, they will still be connected, but much less so than at present, obviously, because of what I pointed out a little while ago: that age, evolutionary progress, gives to each globe an increasing increment of individuality. It becomes more independent in spirit, as it were, just as we find among men. It is a very curious paradox that the lowest things are the most closely united, the least individualized, as we see in the unism of the rocks. As we follow the ladder of life upwards, we find that the component parts slowly seem to separate and become more

individualized, until we reach men. And here, strangely enough, although it is among men that the sense of disunion is very strong, it is likewise among men that begins to come to birth again, in men's souls, the feeling of their oneness, the *ekatwa* or *ekatd* in Sanskrit, their oneness with the Divine. Isn't that a marvelous paradox? Unism at the lowest, but unconscious unism as in the rocks, and in the atoms. Unity in the highest, but self-conscious unity with the Divine.

Try then to understand, to fuse these two thoughts together. The globes of a planetary chain are in coadunition, but not in consubstantiality, which means that they are karmically united as a unitary group at the present time, closely so, but are not consubstantial. That is, the stuff of which the individual globes are builded differs from one to the other.

And now, finally, do not for an instant take the metaphorical symbol used by H. P. B. of the necklace of globes as being a graph, a photograph, as it were, of the actual positions of the globes in space, for that is all wrong. The globes are scattered about the heart of the chain as it were from the central pillar of light, so to speak. And you could write a metaphorical graph of the seven globes, no longer what H. P. Blavatsky on page 92 of her *Letters to A. P. Sinnett* called a necklace of sausages and protested against it as being a wrong conception; but you could write the way the globes are located towards each other on an ascending line, 1 2 3 4 5 6 7. That would be just as accurate as the necklace of sausages; but that straight-line graph has not the advantage of suggesting the descent into matter until the bottom is reached and the rise again, which the necklace of globes does. The straight-line way of describing the positions of the globes however has one enormous advantage. It shows that every globe of the seven or twelve is on a different plane; and that no two, despite the graph in *The Secret Doctrine*, are on exactly the same sub-plane. Those are

metaphors, that is, diagrams. They suggest things, and the suggestion you must try to understand; and do not take pictures, those metaphorical suggestions, as photographs of the positions of the globes.

Now it is true, and I have emphasized this point myself, that precisely because the globes are scattered about in space, although each one is on a different plane, there comes a time when they come opposite each other in their evolution. I wonder now if you catch that thought? So that it is possible, for instance, for an observer on Globe E at a certain instant in time to catch a glimpse of Globe C, the reason being that the two globes are for the instant in vibratory synchrony. That instant actually may be a million or tens of millions of years. But the globes are in movement. We are speaking now of super-geologic time; but compared with the life of a planetary chain, it is, relatively speaking, an instant.

It is in exactly the same way, or a very similar way, that H. P. B. tries to describe the outbreak of psychic disturbances in our time, foreseen and foretold by the Masters. Do you remember in some of her earlier writings she points out that the world is entering upon a period when the plane on which we live and the plane on which the kama-rupas of kama-loka mostly are, come close together, the partition becomes thin, and there is an inrush of kama-rupic spooks into our thought-atmosphere, and into our world. It is, as it were, as if two planes came close to each other. I wonder if I make my thought clear. If you get the idea, that is the main thing.

TIME AND SPACE — *H. T. Edge*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

Looking into the sky at night, we may think of the vast distances which, as we are told, separate the celestial bodies from us: a light year, a hundred, a thousand; nay, one has recently heard of super-galaxies one hundred million light-years away. But we are apt to forget that these bodies are not merely spread out in space, but in time also. If a body is 100 light-years distant, it means that what I see is not what is there now, but what *was* there a century ago; and for aught I know, it may have ceased to exist for a century. And what of the super-galaxy? What we see there through our large telescope is what existed in one of the earlier Root-Races of mankind! Truly I may say that I am not looking into space, but into history.

It is impossible, by any means now known to us, to view the heavens as they are at any one given time; every body that we see is at a different epoch in time. And yet, if I am not careful, I may find myself speculating and making calculations about the transference of energy between these bodies, as though they all existed together at one time.

How can I measure the distance between the earth and Sirius? To speak of this distance is like speaking of the distance between me at Point Loma and Socrates in Athens. I can only measure from where I am *now* to where the star was *then*. What am I measuring? Space or time; or space-time? This may help us to understand what Einstein and others are engaged with — trying to find formulas that will mean something when applied to

problems of interstellar space.

The velocity of light is so great that we can afford to ignore it for terrestrial purposes. But suppose that the velocity of light were diminished proportionately. If I saw you in the distance, it would be no use shouting to you, because I could only see you in the place where you were a minute before I shouted. It would be futile to shoot at any moving object, for there would be no means of knowing where it was at the time of shooting. This gives some idea of the hash we may make if we try to apply terrestrial notions to celestial affairs.

But this is no reason for despair. We are on the threshold of an advance like that inaugurated by Galileo and Newton, and it is producing much the same kind of consternation. Before those pioneers, nobody had any conception of gravitation or of many other mechanical principles now familiar to all. Einstein and the others are pioneering; for some time there will be perplexity and confusion, mistakes and corrections; but it will settle down into a new formulation; and in time the masses will become conscious of it.

It does not seem wonderful that the Theosophical teachings should contain many things hard to explain; they have to be translated into terms familiar to us, and in the translation they are of course deformed. When H. P. Blavatsky's *Secret Doctrine* was written, these ideas about space and time were not in the air. But read *The Esoteric Tradition*, (1) pages 388-9, where the ideas are given full credit.

Space and time do not seem so different from each other. The distance between objects is generally considered as spatial; that between events, as temporal distance. But, as has been shown, these two kinds of distance seem strangely interblended when we are dealing with the heavenly bodies. If we settle on a ratio

between spatial and temporal quantities — in this case the velocity of light — we can equally well express the distance of a star in years or in miles. The sun is 93,000,000 miles away, or eight seconds away.

If we regard the earth as still — which it is often convenient to do — we are able to rest still in one place for an hour, a day. But if we are to take into account the motion of the earth round the sun, the motion of the sun round some other body, and so on indefinitely, it is clear that we can never remain in one place for even the smallest fraction of a second. Nor can we ever come back again to the same place (unless indeed it be at the completion of some vast cyclic period). In a word, we are eternally shifting, in space or in time, whichever you like. It is thoughts like these which urge us to realize our entry upon a revolution similar to that ushered in by the heliocentric theory. We cannot afford to be geocentric or flat-earthist, or we shall be left behind in the march of thought.

The Theosophical Forum

ACTIVE PATIENCE — *Martyn Witter*

The ascetic cultivates patience for he has the wisdom to understand Nature's Law of Adjustment. The Eternal Mother works in her own slow but wondrous ways. She will neither rush nor linger but walks with a stately step throughout all duration. The sages are able to calculate cycles because of this measured tread.

The disciple is able to draw courage and comfort in his darkest moments of trial, for Nature will clear his pathway if he but have confidence and remain true to her operations. The darkest clouds pass and sunlight takes their place. Thus there follows throughout all being the operations of action and reaction. The farmer who sows seeds must wait until the fall before he can reap his harvest. The disciple may wait many lives before his seeds of thought and action send him soaring into the spaces upon wings of thought. Thus the Great Mother teaches patience to her children. If the disciple becomes impatient and pits his will against the slow but healthy processes of growth in an attempt to rush to the goal, he may indeed fail. He who would pluck the blossom before it has ripened into the fruit is both rash and selfish. Rash because he is attempting to harvest his seed before it is ready. Selfish because he has his gaze upon the reward.

There is both a negative and positive type of patience. He who follows the negative type lets life batter him without ever raising his will into an effort to better his condition. He who follows the positive type of patience is intensely active while he endures. He is the one who accomplishes action while to all appearances he is inactive.

Imagine the patience required of the teacher who waits

throughout the ages for the day when infant humanity will send out a call to him. His range of vision sweeps the centuries while ours covers the minutes.

THE ESOTERIC CHARACTER OF THE GOSPELS — *P. A. Malpas*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

RIDING INTO JERUSALEM

The 21st chapter of Matthew — the Greek pseudo-Matthew which we have, and not the real or original Matthew, which has always been a secret book — commences with a somewhat curious incident.

And when they drew nigh unto Jerusalem, and were come to Bethphage, unto the mount of Olives, then sent Jesus two disciples, Saying unto them, Go into the village over against you, and straightway ye shall find an ass tied, and a colt with her: loose them, and bring them unto me. And if any man say aught unto you, ye shall say, The Lord hath need of them; and straightway he will send them. All this was done, that it might be fulfilled which was spoken by the prophet, saying, Tell ye the daughter of Sion, Behold, thy King cometh unto thee, meek, and sitting upon an ass, and a colt the foal of an ass. And the disciples went, and did as Jesus commanded them. And brought the ass, and the colt, and put on them their clothes, and they set him thereon. And a very great multitude spread their garments in the way; others cut down branches from the trees, and strawed them in the way. And the multitudes that went before, and that followed, cried, saying, Hosanna to the Son of David: Blessed is he that cometh in the name of the Lord; Hosanna in the highest. And when he was come into Jerusalem, all the city was moved, saying, Who is this? And the multitude

said, This is Jesus the prophet of Nazareth of Galilee.

And Jesus went into the Temple of God and cast out all them that sold and bought in the Temple, and overthrew the tables of the money changers, and the seats of them that sold doves, And said unto them, It is written, My house shall be called the house of prayer; but ye have made it a den of thieves. And the blind and the lame came to him in the temple; and he healed them. And when the chief priests and scribes saw the wonderful things that he did, and the children crying in the temple, and saying, Hosanna to the Son of David; they were sore displeased, And said unto him, Hearest thou what these say? And Jesus saith unto them, Yea; have ye never read, Out of the mouth of babes and sucklings thou hast perfected praise?

And he left them, and went out of the city into Bethany; and he lodged there.

Chapter II of Mark gives the same story, but omits to mention the mother-ass and only refers to the colt.

In the 19th chapter of Luke we have the same story. The detail is given that the colt is one "whereon yet never man sat," and when the disciples take and loose the colt they are to say, and do say, as their justification, "The Lord hath need of him," (as in Matthew).

The same story occurs in the 12th chapter of John, which Gospel was published as late as 180 a. d. and may have been written only a short time before that. The cry of the palm-bearers is, "Blessed is the king of Israel that cometh in the name of the Lord."

At one time there was a perfect mania — not without a deep purpose — for making everything possible in the Gospel relate to some Old Testament, that is, purely Jewish, "prophecy," as being the fulfilment of that prophecy. So we find that all this happens as

the fulfilment of a prophecy in Zachariah, (Chapter 9, verse 9.)

Rejoice greatly, O daughter of Zion; shout, O daughter of Jerusalem; behold thy King cometh unto thee; he is just and having salvation: lowly and riding upon an ass, and upon a colt the foal of an ass.

All this about a carpenter who had the amazing effrontery to ride on a donkey in semi-royal state into Jerusalem, as if he were other than a mere lunatic, has led some writers to declare that he *was* a lunatic. The other alternative is to become a lunatic oneself and imagine that the Jews or Romans would have permitted such an extraordinary demonstration for a single moment, if it were really *history*. Others have, quite legitimately, though not with any reverence for the Gospel narratives, asked why it was necessary to perform such a curious circus trick as riding on two donkeys at once, to show that the rider was the son of David or King of Israel, or whatever it might be.

Let us look at the story a little more closely. John goes on to give what, if we follow a suggestion made by H. P. Blavatsky, looks very like a significant hint to search for the secret meaning of it all.

These things understood not his disciples at first; but when Jesus was glorified, then remembered they that these things were written of him, and that they had done these things unto him.

The disciples' failure to understand these things at first is an open hint that we are likely to be in the same case, and that if we dig deeper we shall find something interesting, providing we know how to recognise it when we see it.

For obviously, there is some quite important meaning in the incident, which bears the look of a symbolical initiation ceremony

in some secret lodge of mystics. Again and again do we find in writings of the day and of later times that this story is so prominent that one may suspect the possibility of its being the most important thing in the whole Gospel. It is "the narratives that are as a cloak," to use the graphic phrase of a learned Hebrew mystic — they are not the Gospel itself.

We can find several ways of tackling this curious problem in the ritual stories of an early secret society, without even having to go so far as to find out if that society, or any remnant of it, still exists with knowledge of its symbolism.

One thing is to remember that very important fact that our Gospel is not, and never was, the real Gospel, the original Gospel, but that the original was Hebrew. Official theologians twist and prove and argue and assert that the Gospel was Greek, that Jesus talked in Greek, that it ought to and must have been Greek. They always try to make the facts fit their desire that it should have been Greek. Then you have the curious fact that the Gospels are written in such bad Greek that there were five hundred words that the philologists could not account for as decent Greek. But now we are told that they are hugely delighted at finding a number of papyri and fragmentary documents inside crocodile mummies of the earlier centuries of the common era, documents which use about four hundred and fifty of these words. Oh yes, it is jargon, of course, but it was the language of the common people, and Jesus was talking to the common people. He was a workman, a laborer, and they were laborers, and everything is as it should be, if not more so. He simply talked what we should call Yiddish if we were Jews referring to Hebrew; or Cockney if we are to think in terms of modern London; or a sort of Chinook, or gipsy language, perhaps; certainly not pure Greek. In plain language, they will have it that the gospels are written in a very common low-class Greek about equivalent to the language of a not-too-well-educated

ranter in Hyde Park.

Plainly, it will not do. Initiates do not write such careless stuff. So let us suppose that our Greek Gospel is really a hash-up, to use a vulgar but expressive word, of the Hebrew original. There will be some words we can identify with some degree of probability.

The *Lord* in Greek is simply *Kyrios*. This word, in some such way as we are now considering, is twisted to mean *Cyrus* in the Old Testament, a couple of hundred years before Cyrus lived, so we have a good precedent. But in Hebrew it is *Adonai*. In Greek it might be called Adonis, the beautiful Syrian God, or in Egyptian, perhaps Aton.

Now the word for *ass* in Hebrew tells us little. But if you insist that it is a female ass you get, curiously enough, a distinct reference to the word *Adon*. We may say that in symbolism it is quite a good disguise to describe the God of the Jews as an Ass. Lest any should think this too much of a shock to ingrained ideas, let us say at once that the secret Hebrew God *was* an ass — a red one. He is the rejected Typhon of Egypt, the ass God. Whether the Jews ever came out of the geographical Egypt or not, they certainly were adherents of the old rejected god of Egypt that became with others a devil, and Satan, and the opponent of the good god Osiris. And this fact, and the word itself, link up the secret Jewish God with many a despised heathen God who is identical with him. You will even see the ass on the front page of the English comic weekly *Punch*. It is precisely the same thing, and has the caricature of the God on its back. There is obviously nothing more absurd in the Jewish God being a donkey than there is in the Christian God being a lamb or sheep. It is all a matter of the way the symbolism is understood.

In the Talmud Jesus is frequently referred to, and also Paul, but never by those names. The Talmud is the Hebrew Bible in its

originally unwritten portion. It is now written, but is a huge mass of legend and teaching utterly incomprehensible to the outsider. Here Jesus is referred to as "That man," and Paul as "The other man." But another name for Jesus is Balaam. The origin of the name is obvious — he is the man who rode on an ass.

It is H. P. Blavatsky who tells us that Jesus in its secret meaning is simply *man*, in one of his principles. It is easy enough to see it when once we are told, because the Hebrew lettering, when read Kabbalistically, does mean "man," just as it does, with hardly a change in the word, in ordinary, everyday Hebrew. She goes farther and gives us another clue. She says that Jerusalem is the symbol for the body.

To cut the story short, this absurd tale, as it seems to be in a historical sense, turns out to be a most wonderful symbolism of man, each one of us, you and me and everyone else, conquering the red ass that is our lower, obstinate, dull, self-willed, positive, personal, undivine self — the self that always wants its own way, always wants to dictate, to talk, to be "intellectual," to enjoy itself, to think of what "I" have done and am doing and am going to do. Who does not know the million and one tricks of that desire-self?

But the Christ in each of us, the struggling Manas with the potency of Divinity, at last wins the battle. It does not *kill* the ass of its lower nature, but conquers it and rides on it into the kingdom of true life as a divine being. It is a glorious story.

Of course there was another meaning; there are always many meanings to every true symbol. (1) And one such meaning is that the Jews, the secret Jews, knew well enough that the mission of the reformed Judaism which later came to be called Christianity was to "ride upon the ass" of Judaism and transform it into a living religion, no longer the crystallized, material, dead-letter preserve of the Jewish priesthood.

The "Jesus riding into Jerusalem on an ass" meant, politically, that their occupation would have gone. No wonder they were up in arms against "Jesus" whether as man or symbol. They moved heaven and earth to recapture the Reformed Judaism for the Old Judaism. And whether they succeeded or not, we can soon discover if we ask ourselves the question, "Did they succeed in reimposing the Old Testament on Christianity or did they not? Do we or do we not today look upon the Old Testament as part of the Christian scriptures?"

However it may be with that political aspect, to the Theosophist the esoteric meaning of the "Jesus riding on the ass" is plain. *We* are the Jesus, each one of us, and we have to ride our red donkey and not let it ride us. One might go so far as to ask pertinently, "Is not the whole aim and end of Theosophy in practice, the conquest of the selfish Self and the enthronement of the Divine, Impersonal, Silent, Unselfish self?"

Supposing Christianity had limited itself to this one teaching *as a thing to be carried out in daily life* — not talked of, not mixed up with theology, not lost in a maze of dogma and sectarianism — the world would be a paradise today. You could call it Christianity — why not? But it would be Theosophy, all the same. For it cannot be repeated too often — *original* Christianity, if not the whole of Theosophy, was pure Theosophy and nothing else.

FOOTNOTE:

1. Cf. what Dr. G. de Purucker says on this particular subject in *The Esoteric Tradition*, Vol II, pp 1083-4 *et seq*: "It is to be noted carefully that in the Oriental Mystical Cycle of the Hither East, or what is now called Asia Minor, the Planet Saturn was frequently mystically called and figured under the form of an "ass" — or rather the ass represented that planet in mystical symbolology. In

equivalently mystical symbology the "foal of an ass" was this Earth, because the ancient seers taught that this physical globe Earth was under the direct formative influence of the planet Saturn.

". . . The Spiritual Soul, the inner Christos, rides into "Jerusalem" — material existence on Earth — on an ass, meaning Saturn, and the foal of an ass, meaning this Earth, and the Monad, the Christ-Spirit, descending into matter thus, is crucified on the cross of matter "

See also in this same work the interesting footnote, No 458, which follows the above quotation. — Eds. ([return to text](#))

The Theosophical Forum

LIVING ON A STAR — *Irene R. Ponsonby*

G. K. Chesterton once wrote: "Among all the strange things that men have forgotten, the most universal lapse of memory is that by which they have forgotten they are living on a star."

Verily a key to the Cosmic Philosophy, Theosophy, which teaches that Earth is the most material plane of one of the most material planets in the Solar System. It is the point on this planet where involution and evolution interchange, where matter and spirit equilibrate, where the duality of manifestation is most marked, hence the extremes in conditions of life.

Earth is the focal-point for all the forces of the Solar System, a vital life-atom in the body of a Solar System which is in its turn a solar-atom in a Galaxy.

A child of the planetary Moon, it is the sphere where man expresses his egoity as a complete septenary, where he has the power to attain the sublimest goal or, because of the lure of materiality, to do the greatest mischief. Here man came as an unconscious god-spark; here he received self-consciousness; here he has consorted with Buddhas and Christs, and will again consort; here man may, if he will, attain self-conscious Godhood himself. That is what living on a star means.

A GREAT PRINCIPLE OF SUCCESS — *G. de Purucker*

When a man is in difficulties, the thing he must do is to act, to move. Attack is the secret of victory, whether it is a commercial matter, or propagating a philosophy, or answering questions, or whatever else it may be. In anything a man does he has chances of success if he moves, goes out, acts.

The great principle of success in anything is to go after your objective, to take the kingdom of heaven with strength, and then the gods are with you. It is really a wonderful psychological secret; and it is better to move and to act, even if you make mistakes, than it is to sit still. You will discover your mistakes as you go along, if you have ordinary prudence, and can modify and change from step to step. Keep pushing forward, instead of remaining always quiet and allowing things to rest — which last all too often degenerates into dormancy.

I believe that generally our speakers on the public platform might adopt this principle more than they do, just in a little thing like answering questions from the audience. If they would drop the defensive attitude which some have, and cease imagining that the man on the floor is trying to trip them or to trick them, and would simply attack the question, go right at it, answer it positively, in other words *guide* the thought, then all Theosophical meetings, interesting as they are, would be much more interesting. This is the way by which to make a meeting really lively and really interesting; and if you combine it with constant courtesy and a little humor, you become almost irresistible.

THE MYSTERY OF PERSONALITY — *H. Percy Leonard*

Although undivided It appeareth as divided among
creatures

— *Bhagavad-Gita*, chap xiii

The strong illusion of the separated self casts its illusive glamor even upon the deepest students of their own nature. It is comparatively easy with the intellect to grasp the thought of Universal Life concealed in stones, in plants and animals and filling those apparently void spaces that extend between the starry population of Immensity; but to apply this theory as a rule of practice in our daily life, we sometimes think it difficult. This much at all events is plain, that just so far as we concern ourselves with bodily sensations and material things, so does the selfish thought of separated life fasten its grip upon our minds, while in proportion as the senses are ignored and sympathy wells up and overflows to forms of life outside ourselves, do those confining walls expand and set us free.

The masses of humanity are so enamoured of that pole of feeling known as "pleasure" that they spend their days in madly plunging in life's stormy waters in its vain pursuit. Time after time experience proves that every vivid pleasure draws its reaction in its train, as every wave on which the swimmer mounts, inevitably lets him fall into the following trough; but yet the fatal glamor is so strong that till the winter of old age abates desire, they lavish all their energies upon the chase. Some keen observers have declared that pain as well as pleasure has a fascination for deluded man. To throw a light on this strange doctrine one may observe his mind in leisure moments and take note how the poor fool drags out some long-forgotten grievance from its lurking-

place and revels in the misery its memory recalls. Not till the final bitter drop is drained with eager thirst, is the stale sorrow cast aside, and even then the mind is just as much disposed to choose some other cause of pain, as to select a pleasant subject for its contemplation. The tactful compliment, the acrimonious attack, the lively hope of personal ambition and the dread of disappointment, our likings and disliking, *both* the pairs of opposites are brought to mind, for both serve to preoccupy the mind with thoughts of self and both are equally of value to contract the consciousness upon the point of personality, and check that yearning for expansion that would set us free. It seems in fact that just as prisoners long-confined are said to cling with strange affection to the old familiar cell, so do we crouch within the personality and oscillate alternately between the poles of pleasure and of pain. We hide within our prison walls and fear to venture on the larger world outside ourselves. The poet Wordsworth, it is said, when as a boy he walked along the road to school, was sometimes overpowered with such a sense of vastness and expansion that he would touch the nearest wall or tree in order that the shock of contact with material things might call him back to his lost sense of personality.

Most people who have wandered lonely among natural scenes of an unusual grandeur and sublimity have had to some degree a kindred feeling, and the alacrity with which they mingle with society on their return is often prompted by no higher motive than to recover by association with their fellows the sharp outlines of their own familiar egotism which had become a little blurred and faded by the solitude.

Some characters on reaching to a certain point in their development are strong enough to seize and grapple with their lower natures and by determined effort once for all rob them of independent life and place them in their true position — that of

obedient servants for the soul's use in daily life. This is the method of self-conquest by a slow starvation. The personality is stunted by degrees and not permitted to absorb such large supplies as formerly of mental substance and of vital force, for its unbalanced and luxuriant growth. For as the personality is made the subject of our constant thought so does it fatten and grow strong; but as we cease to feed it and engage the mind in wider fields, its independent life begins to weaken and its fierce insistent self-assertion to decline.

Silence has always been commended by the sages as a specific agent for dissolving the hard crust in which the selfish ego is confined. But silence from the theosophic point of view means vastly more than simply to refrain from uttered speech, which can avail but little if the mind is not restrained as well. Silence of voice may co-exist with great activity of mind which may exhaust itself in weaving pictured webs of thought in which our virtues and accomplishments stand out in brilliant coloring against a somber background of the failings of our neighbors. But to control all lower forms of thought, to still the vehemence of our desires, and by the effort of a steady will to rise into the outer quiet where all mental agitation dies — this is an enterprise that calls for men. In the deep peace of the eternal silence our encrusting shell disintegrates. There the harsh voice of criticism never comes to drive us back into our citadel and strengthen our defenses in reply to the attack. There no impinging wave of love or hate reminds us of our boundary line, and thus insensibly it melts away and sets the captive free — a pure impersonal force in Nature which has found its home at last.

Christians who long to enter Heaven should bear in mind that those celestial fields, however wide their bounds, must still be looked upon as a locality with limits and a line of demarcation fencing it from Hell. The "place" sought after by theosophists is

nothing less than the Infinitude itself, the freedom to its ample spaces being gained by the mere breaking loose from those enclosing walls in which we find ourselves confined — in fact, by living from day to day, faithful to duty and following conscientiously the path of unselfishness.

The Theosophical Forum

BROADCASTS FROM SHANGHAI: VI

Over radio station XQHB, Shanghai, China, last spring, a series of fifteen minute expositions of the main doctrines of Theosophy was given by Miss Elsa-Brita Bergqvist and Miss Inga Sjostedt. This present broadcast, given by Miss Sjostedt on April 27th, gives an historical outline of one of the most important Theosophical teachings — the doctrine of Reincarnation.

Good Evening, everybody:

Last Sunday the speaker elaborated the fascinating theme of initiation and its universal symbology, and explained such symbols as the Crucifixion and the Resurrection — both of them actual occurrences in the solemn rites of true initiation.

Initiation means the making of perfected men, of Masters of Life, human beings who work with Nature and understand her occult laws, men who have achieved union with their Divine Ego — that same Divine Ego which lies dormant in the average man and gleams but fitfully through the mind of a genius.

The obvious objection to the teaching about Initiation from one who is not familiar with Theosophy would be: "How can the average man even dare to think of perfection as he lives his average life and neither rises to sublime heights nor dares to descend to sublime depths?" The answer would be that we live not one life on earth, but countless lives, and each time we return to the earth to pick up the threads of our half-completed destiny we learn something more from our experiences, and build into the fabric of our being more sympathy for suffering, greater intellectual powers and an increasing understanding of life in all

its aspects — physical, mental and spiritual. In this way, coming back to earth in life after life, we can ultimately reach comparative perfection.

The teaching of Reincarnation is as old as the hills and has always existed in all great religions. At times when conditions were intellectually and spiritually degenerate, this teaching has been withheld from general knowledge and taught only in secret. Even the early Christians believed in the rebirth on earth of the human ego, and no wonder, for early Christianity was a mixture of ancient Hebrew and Chaldean thought — which was reincarnationist — and of Greek Mystery teachings, which were also based on the doctrine of Reincarnation. It is only in later centuries that *modern* Christianity evolved its present-day beliefs of one sole life on earth and a state of eternal, changeless felicity or suffering after death.

The following is a quotation from Origen, an early Christian Church Father:

Every soul comes into the world strengthened by the victories or weakened by the defeats of the previous life.

How many Christians today would accept such a statement from an authority of their own Church! Yet Origen, together with Clement of Alexandria, formulated the theology of the Christian religion. His doctrines were later anathematized by the Church, but that only happened some time after his death when the Church was already changing its basic attitude. We have forgotten the past, and instead of investigating the sources of present-day Christianity, content ourselves with accepting the modern interpretations.

The Jewish historian, Josephus, who lived in the first century a. d., and who was a Reincarnationist like the majority of the Jews of

his time, writes the following:

Do you not know that those who depart out of this life. . . and pay the debt which was received from God. . . obtain the most holy place in Heaven, from whence, in the revolution of ages, they are again sent into pure bodies?

And here is a quotation from Philo Judaeus, the Jewish philosopher and historian, who was a contemporary of Jesus in Alexandria:

Of these [souls], those which are influenced by a desire for mortal life, and which have been familiarized to it, are again reborn to it.

Now, it is an interesting fact that Josephus was a Pharisee and that as such he was a firm believer in Reincarnation. If we remember that Christianity largely derives from the Jewish scriptures, and that Christ came to teach the Jews; if we also realize that the majority of the Jews were Pharisees — just as today the Western nations are mainly Christian — and that the Pharisees were Reincarnationists, it seems almost incredible that we have lost this teaching so completely.

Even in the New Testament there are definite traces of a belief in Reincarnation, though no doubt the compilers and translators of the four Gospels — whoever they were — tried to change the text to suit their personal opinions. In several places it is mentioned that the people thought that John the Baptist was Elias returned to earth again. In fact Jesus himself is quoted as saying that John the Baptist was indeed Elias. There is a passage from the Gospel according to St. Luke, chapter 9, verses 7 and 8, which refers to Jesus and the opinion the people held about him. Here it is:

Now Herod. . . heard of all that was done by him. and he was perplexed, because that it was said of some, that John

was risen from the dead; And of some, that Elias had appeared; and of others, that one of the old prophets was risen again.

This passage cannot possibly be misunderstood. It is quite clear that the people believed that Jesus was a reincarnated Elias, John the Baptist resurrected, or one of the old prophets reborn. The fact that they believed this possible shows that they were more than familiar with the belief in Reincarnation and that it was by no means an uncommon belief among the Jews. Even Josephus, the Jewish historian referred to before, says in one of his books that some thought that Jesus was Moses, their first legislator, come to life again.

The belief in Reincarnation was so current among the Jews at the time of Jesus that this teaching is mentioned very casually by the thinkers of that era — not elaborately, as if trying to convince an incredulous people, but carelessly, as though taking it for granted that nobody would question such a belief.

The Greek philosophers who were initiated into the Mysteries of their sacred Colleges, were Reincarnationists. Such were Plato, Pythagoras, and many others equally famous. An interesting point when studying Christian origins is that almost all Christian symbols are taken from so-called pagan sources and the Greek Mysteries. H. P. Blavatsky, the great Theosophist, tells us that some of the early Popes were initiates, but that the inner knowledge was lost in later times, and the later Popes had lost the true meaning of Christian symbols and the esoteric teachings of the Church.

Here is one more quotation from the New Testament which is a most interesting one and deserves a close scrutiny. It is from the Gospel according to St. John, chapter 9, verses 1 and 2:

And as Jesus passed by, he saw a man which was blind from his birth. And his disciples asked him, saying, Master, who did sin, this man, or his parents, that he was born blind?

The answer that Jesus gave need not concern us. He replied that the man was born blind so that the glory of God should be made evident in him. This can be interpreted in many ways, to suit different beliefs. But here is the point: the disciples of Jesus must have known better than anybody else what Jesus taught and believed, and these disciples asked him whether a man born blind, *born* blind, please note, was so born because of his own sin or that of his parents! Obviously a man cannot be born blind because of his sin unless he has lived and sinned before! What is more, if Jesus had been against Reincarnation he would surely have rebuked his disciples for asking such a question, whereas his answer showed neither anger nor astonishment.

Two of the oldest nations, the Egyptians and the Hindus, have a wealth of allegorical teaching among their sacred traditions, the most important among which is the teaching of rebirth. The ancient Hindu system of Yoga is nothing but a means of training the body and mind through which a man attains union with his divine Self and so escapes the round of rebirths which the average man has to pass through; and as the Yogi trains himself in spiritual perception he begins to remember his past lives, first in flashes, as it were, and later in fuller detail. We have proof of Reincarnation everywhere; in analogy, in religious history, and through personal testimony, and it is time that the nations of the West should begin to revive this ancient doctrine which alone can give a logical and philosophical background to human life.

We have sketched this evening a historical outline of the doctrine of Reincarnation as a universally diffused doctrine. Next Sunday

we will give a philosophical description of the doctrine itself.

The Theosophical Forum

ONE LIFE — ONE LAW — *G. de Purucker*

How marvelously does our Theosophy, the ancient God-Wisdom of mankind, reduce all the phenomena of Nature to a majestic generalization, so that all things fall within the compass of a single law understandable to human beings: for our God-Wisdom shows us that just as we are born and live our little sphere of life and die, so do the worlds likewise, and the suns in those worlds, and the planets and the various kingdoms of the different suns, and the atoms which compose all things, and the electrons in the atoms. All are periodic, not only in the sense of being cyclic but in the sense of having periods: beginnings, culminations, endings, and, rounding out the cycle of the worlds invisible, beginning a new beginning, a second culmination, a subsequent passing merely to vanish again into the worlds invisible, there to experience new and vastly greater adventures than those that our smaller solar system can give to us.

All things function alike because Nature has one Law, one fundamental law which is at its source, a divine source, all energy; and habits, courses, procedures, all are governed by the same cosmic powers and intelligence, which simply means that all things follow these same fundamental laws in similar manners, all under the governance of the cosmic life, ringing all the possible changes that Nature so lavishly provides for our admiration and utmost reverence. For while all things, all beings, follow the same fundamental laws and courses; every unit, precisely because it is a unit and an individual, has its own modicum of will — call it free will if you wish — and therefore can more or less change, modify, its own courses, but always within the encompassing energy of the universe.

This means that while all beings follow these general rules, or what we Theosophists call analogical procedures — analogy being therefore the master key of life — yet all beings, precisely because they are beings, by their own innate power drawn from the cosmic source, more or less modify the details of the procedures and movements. Thus the sun is born as a child is born, but the details are different. Details are not so important as the main fact. The birth, the growth, the death, the invisible worlds, the new adventures, the coming again to a new embodiment, a new culmination on a plane somewhat higher, a new death to be succeeded by the same round on the wheel of life — but always advancing, always growing, always enlarging. Step by step all things progress.

Thus actually, as our occultism, our God-Wisdom, points out, if you wish to know the destiny, the birth, the origin, and the temporary ending of a sun, study a man from birth to death. And if you can, study him after death in his adventures, and you will see what the solar divinity undergoes, but of course on enlarged and higher planes in the worlds invisible. Why, this visible world of ours is but a shell, is but the body, the exterior carapace, the skin of things. The life, the individuality, the power, the will, the thought, the real entity, is not this outer shell. Whether a man, or sun, or solar system, or galaxy, or an entire universe: the reality is within. And the body more or less expresses, although feebly expresses, what the inner powers produce on this outer plane.

Those of you who have followed the experiments undertaken in scientific ways will understand this more clearly than those who have not studied them. But all of you, if you think a moment, will know that you shed your strength from hour to hour, physical strength and mental strength. The man who produces a great thought shakes the foundations of civilization. The man who produces a majestic system of cosmic philosophy and definitely

guides mankind — does not his vitality move men? These are facts. The only difference between a sun and a man is in the details, some of them majestic, very admittedly majestic; but it is only in the details that the procedure differs. The main principle of fundamental law is the same for all. Every man in fact is but an embryo sun, a sun in the making for the distant future — not his body, for that is not the man. His body is but the skin of him, the clothing of skins spoken of in the Genesis of the Hebrew Bible. A man is the power within, the spirit or the monad; and it is this energy or power which makes the man be the same from birth till death, which makes the sun retain its form and follow its functions from its birth to its death. An atom, a flower, a tree, or a beast — all are subject to the same cosmic law of similarities if not positive identities. It is but the detail that changes.

The wisest and greatest men of antiquity pointed out that Father Sun was indeed Father Sun, but likewise our elder brother; our parent and yet our brother. The beast and the plant are in a sense our children because they look up to us as we look up to the Gods. They are, in a sense, our children and they follow in our footsteps towards mankind, towards the status and stature of humanity. The beasts are slowly crawling up towards us, as we look unto the Gods, our parents and grandparents; and when we find our souls infilled and inspirited with their life-force and a spark of their shining intelligence, then we become on this earth like God-men, because our thoughts are godlike, and our feelings are godlike, and our actions following our thoughts and feelings become godlike too.

Thus the atoms of the body and the molecules and protons and electrons that make up the physical stuff of the body, are in a sense its children, and they feel the impact of our thought and of our feeling. They suffer for our sins in proportion, and they are raised by our virtues, so closely are all things knitted together, a

web of life of which each strand is a production of spiritual magic.

I tell you that we are responsible for the very atoms which compose our bodies, whether we dirty their faces or cleanse them. Some day, if we dirty the faces of the atoms composing us, they will return to us to be washed, washed clean of the sin we put upon them. And so with all the interior realms of man's constitution, the vehicles of his mind and of his feeling and of his thought.

Birth and death: what are these changes? A birth in the body is a death to the soul, for it leaves its own inner spheres, its own inner arrangements of its life there, and as it were descends or falls like a star to earth, and is born in the physical body of a helpless human babe, tasting for the time being the karmic retribution for all its past. And when we die, aye, when we die, then are we released, then we spring forth and upwards and onwards on the wings of our soul, those strong pinions carrying us through all the planetary habitations to the very throne of Father Sun. It is rebirth to the soul, as rebirth on this earth is death to the soul. So with the sun, so with the worlds which are born and which die. The sun when he embodies on this plane is shorn of greatly much of his splendor. When the sun's hour shall strike and he passes from this plane, he springs like a divine thought right into the invisible realms, taking off into grandeurs only very dimly imagined by us. The flower expressing its soul in scent and beauty but repeats the same cosmic law in its birth from the seed. Little brothers of men are the flowers. Some of them are to us venomous. In some way in past time we envenomed them. Now in karmic retribution they envenom us.

The birth of a man from ordinary manhood into mahatmahood is an interior birth. The growth of the mahatman into Buddhahood

or Bodhisattvahood, or as the Vedantists say, the becoming one with the Atman: this growth is in your hands to achieve, and in the hands of none else. You have it in your power to become god-men on this earth; or you have it in your power, every one of us has it in his power, so to ruin and blast his life that he shall become like the fury-driven victim of Greek legendary story, driven by unspeakable remorse and haunted by the feeling: I have played my play and I have lost. Too late, it is too late! But Theosophy says: Never too late. If you have played your game awry, re-assemble your cards and play like a man, play with the devil for the salvation of your own soul, the devil of your lower self, and win! If you win, divinity lies ahead of you. Over the peaks of that mystic East, the East in the heart of every human being, dawns the sun of truth which carries healing in its bosom. The truth shall make you free!

The Theosophical Forum

THE BEACON OF THE UNKNOWN: I — *H. P. Blavatsky*

This instalment of H. P. Blavatsky's brilliant article concludes the series which was begun last July. In this issue, starting with the profoundest metaphysics and an exposition of the "God Nothing," the Unnamable Deity, and pointing to the Truth which is behind all religions, she brings her series to a close by an almost prophetic vision of the times in which we now live. What role does the Theosophical Society play in this tremendous drama? Her paragraphs in answer to this question show the importance of the Movement with which all true Theosophists have linked their destinies. Originally published in the French magazine, *La Revue Theosophique*, 1889, under the title "Le Phare de L'Inconnu," the article first appeared serially in translation in *The Theosophist*, Volume X.

It is written in an old book on the Occult Sciences: "Gupta Vidya (Secret Science) is an attractive sea, but stormy and full of rocks. The navigator who risks himself thereon, if he be not wise and full of experience, (1) will be swallowed up, wrecked upon one of the thousand submerged reefs. Great billows, in color like sapphires, rubies and emeralds, billows full of beauty and mystery, will overtake him, ready to bear the voyager away towards other and numberless lights that burn in every direction. But these are will-o'-the-wisps, lighted by the sons of Kaliya (2) for the destruction of those who thirst for life. Happy are they who remain blind to these false deceivers; more happy still those who never turn their eyes from the only true Beacon-light, whose eternal flame burns in solitude in the depths of the waters of the Sacred Science. Numberless are the pilgrims who desire to enter

those waters; very few are the strong swimmers who reach the Light. He who gets there must have ceased to be a number, and have become *all numbers*. He must have forgotten the illusion of separation, and have accepted only the truth of collective individuality (3). He must see with the ears, hear with the eyes, (4) understand the language of the rainbow, and have concentrated his six senses in his seventh sense." (5)

The Beacon-light of Truth is Nature without the veil of the senses. It can be reached only when the adept has become absolute master of his personal self, able to control all his physical and psychic senses by the aid of his "seventh sense," through which he is gifted also with the true wisdom of the gods — *Theo-sophia*.

Needless to say, the profane — the non-initiated, those *outside the temple* or *pro-fanes* — judge of the "lights" and the "Light" above mentioned in a reversed sense. For them it is the Beacon-light of occult truth which is the *ignus fatuus*, the great will-o'-the-wisp of human illusion and folly, and they regard all the others as marking beneficent sand-banks, which stop in time those who are excitedly sailing on the sea of folly and superstition.

"Is it not enough," say our kind critics, "that the world by dint of "isms" has arrived at *Theosophism*, which is nothing but transcendental humbuggery [*fumisterie*], without the latter's offering us further a *rechauffee* of mediaeval magic, with its grand Sabbath and chronic hysteria?"

Stop, stop, gentlemen. Do you know, when you talk like that, what *true* magic is, or the Occult Sciences? In your schools you have allowed yourselves to be stuffed full of the "diabolical sorcery" of Simon the magician, and his disciple Menander, according to the good Father Irenaeus, the too zealous Theodoret, and the unknown author of *Philosophumena*. You have permitted yourselves to be told on the one hand that this magic came from

the devil; and on the other hand that it was the result of imposture and fraud. Very well. But what do you know of the true nature of the system followed by Apollonius of Tyana, Iamblichus and other *magi*? And what is your opinion about the identity of the theurgy of Iamblichus with the "magic" of the Simons and the Menanders? Its true character is only half revealed by the author of the book *de Mysteriis*. (6) Nevertheless, his explanations sufficed to convert Porphyry, Plotinus, and others, who from enemies of the *esoteric theory* became its most fervent adherents. The reason is extremely simple.

True Magic, the theurgy of Iamblichus, is in its turn identical with the *Gnosis* of Pythagoras, the *science of things as they are*, and with the divine ecstasy of the Philaletheans, "the lovers of Truth." But one can judge of the tree only by its fruits. Who are those who have witnessed to the divine character and the reality of that ecstasy which is called *Samadhi* in India? (7)

A long series of men, who, had they been Christians, would have been canonized — not by the decision of the Church, which has its partialities and predilections, but by that of whole nations, and by the *vox populi*, which is hardly ever wrong in its judgments. There is, for instance, Ammonius Saccas, called the *Theodidaktos*, "God-instructed," the great master whose life was so chaste and so pure, that Plotinus, his pupil, had not the slightest hope of ever seeing any mortal comparable to him. Then there is Plotinus himself, who was for Ammonius what Plato was for Socrates — a disciple worthy of his illustrious master. Then there is Porphyry, the pupil of Plotinus, (8) the author of the biography of Pythagoras. Under the shadow of this divine *Gnosis*, whose beneficent influence has extended to our own days, all the celebrated mystics of the later centuries have been developed, such as Jacob Boehme, Emanuel Swedenborg, and so many others. Madame Guyon is the feminine counterpart of Iamblichus.

The Christian Quietists, the Mussulman Sufis, the Rosicrucians of all countries, drink the waters of that inexhaustible fountain — the Theosophy of the Neo-Platonists of the first centuries of the Christian Era. The *Gnosis* preceded that era, for it was the direct continuation of the *Gupta-Vidya* and of the *Brahma-Vidya* ("secret knowledge" and "knowledge of Brahma") of ancient India, transmitted through Egypt; just as the theurgy of the Philaletheans was the continuation of the Egyptian mysteries. In any case, the point from which this "*diabolic*" magic starts, is the Supreme Divinity; its end and aim, the union of the divine spark which animates man with the parent-flame, which is the Divine ALL.

FOOTNOTES:

1. Acquired under a Guru. ([return to text](#))
2. The great serpent conquered by Krishna and driven from the River Yanuma into the sea, where he took for a wife a kind of siren, by whom he had a numerous family. ([return to text](#))
3. The illusion of the personality of the Ego, placed by our egotism in the first rank. In a word, it is necessary to assimilate the whole of humanity, live by it, for it, and in it, in other terms, cease to be "one," and become "all" or the total. ([return to text](#))
4. A Vedic expression. The senses, counting in the two mystic senses, are seven in Occultism, but an Initiate does not separate these senses from each other, any more than he separates his unity from Humanity. Every sense contains all the others. ([return to text](#))
5. Symbology of colors. The language of the prism, of which "the seven mother-colors have each seven sons," that is to say, forty-nine shades or "sons" between the seven, which graduated tints are so many letters or alphabetical characters. The language of

colors has, therefore, fifty six letters for the Initiate. Of these letters each septenary is absorbed by the mother color, as each of the seven mother-colors is absorbed finally in the white ray, Divine Unity, symbolized by these colors. ([return to text](#))

6. By Iamblichus, who used the name of his master, the Egyptian priest Abammon as a pseudonym. ([return to text](#))

7. *Samddhi* is a state of abstract contemplation, defined in Sanskrit terms each of which would require a whole sentence to explain. It is a mental, or rather, spiritual state, which is not dependent upon any perceptible object, and during which the *subject*, absorbed in the region of pure spirit, lives *in Divinity*. ([return to text](#))

8. He lived in Rome for 28 years, and was so virtuous a man that it was considered an honor to have him as guardian for the orphans of the highest patricians. He died without having made an enemy during these 28 years. ([return to text](#))

The Theosophical Forum

**THE SCIENTIFIC EXPLANATION OF THE INFLUENCE OF
CELESTIAL BODIES ON EARTH-LIFE AND HUMAN AFFAIRS — H.
Groot**

In our day of scientific-technical production the statement "not strictly scientific" is more or less equivalent to a *testimonium paupertatis*, signifying spiritual poverty. It is a pity indeed that outsiders tend to label Theosophy too as being unscientific. Is there any sound argument for this accusation?

If one makes oneself acquainted with Theosophical literature, one finds it often and again emphasized that science, philosophy, and religion are indivisibly ONE — each being but one aspect of the sublime Reality. Then there is no room for doubt whether the Old Wisdom, nowadays called Theosophy, may claim or even of necessity *must* claim itself to be scientific as well. But at the same time it will be clear just why "outsiders" incline to label Theosophy as being unscientific. It is because, except in Theosophy, science, philosophy, and religion are considered to be three separate, independent departments of human thought. "A thing is accepted as scientific only in so far as it is not influenced by philosophic ideas or religious sentiments," it is said.

But Theosophy is of a distinctly different opinion. According to its views the scientific pattern cannot and may not be disconnected from the philosophic and religious warp and woof. This intermingling of science, philosophy, and religion, which is an essential of the Theosophical trend of thought, is seen by the outsider as a state of confusion and lack of clearness. That is why he sticks his label "not strictly scientific" on to Theosophy.

It is rather of some importance for Theosophy to exculpate itself. Not that this imputation will do it any harm in the eyes of its

followers, who know better indeed, but the reputation of not being scientific certainly does hinder its propagation, especially among its most science-minded investigators.

In my opinion this charge is most effectively refuted by pointing to the fact that Theosophy acknowledges the discoveries of science, and indicates how these discoveries more and more accurately support the teachings of the Old Wisdom. And is there a more convincing proof to be found in favor of the scientific purport of those teachings than the fact that time and again the most modern scientific discoveries prove to be in agreement with the statements of the Old Wisdom, as far as these can be separated from the closely related philosophic and religious truths?

Now the Old Wisdom comprises a number of statements concerning the influence of the Cosmos on earth-life and human affairs. As yet the main part of these statements cannot be given out in clear, direct terms, as these influences involve hidden causes. But even exoteric literature contains a number of indications on this subject. Therefore it is of no small importance to compare these hints and indications with the explanations given by modern science.

It was not so very long ago that science did not see any reason to bother itself about such influences. When Herschel, one of the most intuitive minds in the field of astronomy, ventured to surmise that a number of events on earth, like food shortage, failure of crops, famines, and the like, perhaps are connected with the frequency and number of sunspots, one of his critics remarked that "since the publication of Gulliver's travels the world had not been offered a more perfectly ridiculous idea than this one!"

Gradually Herschel has been put in the right, after his seemingly

unbelievable statement was carefully compared with the facts. In our day nobody hesitates to accept the close relationship between the period of sunspots and the most divergent events on the earth. Not only do they show identical periods of 11 or 12 years, but also reflect with greatest accuracy all details of each such particular period.

Nowadays we know with unshakable and mathematical certainty that there exists an immediate connection between the period of 11 or 12 years of the sun's activity — making itself known in the frequency of sunspots — and vegetation. This appears, among others, in the width of the annual rings of trees. In one and the same cycle of sunspots they appear periodically in different widths. It has been stated that in the case of fossil tree-stumps this connection between sunspots and vegetation existed long before the ice-age.

The same cycle which has been detected in magnetic influences and disturbances, and in the frequency of polar lights on earth. In fact there exists so intimate a connection between these phenomena that the appearance of a particularly large sunspot enables us to announce beforehand the occurrence of a magnetic disturbance or of strong polar lights. However, not only is the magnetic field of our earth proved to be in close relationship with the solar activity, but almost all earthly manifestation as well. Science even suspects this relation in meteorological phenomena, although it has not yet succeeded in detecting clearly the connection spoken of above. From all this, science infers the existence of a very powerful Cosmic influence on earth-life — emanating from the sun.

How do astronomers explain this influence? They have discovered that sunspots are sources of strong electro-magnetic powers. From these sunspots emanate mighty bundles of lines of

force, to different parts of space.

Some have compared the sun to a pulsating heart, the period of solar activity corresponding with the duration of contraction and dilation of this solar heart. If pictured in this way, the bundles of lines of force represent the veins and arteries that spring from this heart, and the electrical particles in their course along these lines of force can be compared to the blood corpuscles pushed through the organism by the pulsation of the heart.

This metaphor, which is entirely correct scientifically, emphasizes a number of particulars which must especially strike those who are acquainted with the latest discoveries of science. The polarity of the sunspots justifies the use of the words *veins* and *arteries*, for in some cases the lines of force are directed to the exterior; in other cases they are directed to the interior of the sun. Hence there must exist an outflowing as well as an inflowing of electrical particles, although the latter has not been observed as yet. Just as the human heart beats on an average of 72 times per minute, so a beat of the solar heart averages 11 or 12 years — although both may show considerable deviation from these figures.

The electro-magnetic forces residing in the sunspots, and the polarity of the spots, and the influence of the sunspots on our earth — all these are scientific facts which were entirely unknown in H. P. Blavatsky's time. But although today science has a better knowledge of the mechanism of these phenomena, yet it fails entirely in giving an explanation of the periodicity of the sun's activity, as is emphatically admitted by the most prominent investigators.

The Old Wisdom, however, can explain, because — where we are concerned with a matter of insight — it is able to free itself from the merely materialistic views of present-day science, while the

latter, however effective on its own plane, is positively hampered in its philosophic and religious outlook on account of its one-sidedness. This one-sidedness, this restriction to merely materialistic phenomena, constitutes its proper force if it comes to tracing new *facts*. But it is decidedly its weakest point as soon as it is no longer a matter of stressing the causal connection between facts, but of penetrating to a deeper understanding of the spiritual background manifesting itself in those facts. Theosophically speaking, the latter is the proper attitude in which to approach and study natural phenomena.

Let us hear what H. P. B. says concerning the sunspots. In *The Secret Doctrine* we read:

"The Sun is the heart of the Solar World (System) and its brain is hidden behind the (visible) Sun. From thence, sensation is radiated into every nerve-centre of the great body, and waves of the life-essence flow into each artery and vein. . . . The planets are its limbs and pulses. . ." — I, 541-2

And further:

Thus, there is a regular circulation of the vital fluid throughout our solar system, of which the Sun is the heart — the same as the circulation of the blood in the human body — during the manvantaric solar period, or life; the Sun contracting as rhythmically at every return of it, as the human heart does. Only, instead of performing the round in a second or so, it takes the solar blood ten of its years, and a whole year to pass through its *auricles* and *ventricles* before it washes the *lungs* and passes thence to the great veins and arteries of the system. — *Ibid*

So in the periodical increase and decrease of the number of

sunspots the sun's "*breathing*," the "*pulsation of the heart of the Universe*" is clearly manifested.

A little farther we read:

It [that is to say the sunspot period] is similar to the regular and healthy pulsation of the heart, as the fluid passes through its hollow muscles. Could the human heart be made luminous, and the living and throbbing organ be made visible, so as to have it reflected upon a screen, such as used by the astronomers in their lectures — say for the moon — then everyone would see the Sunspot phenomenon repeated every second — due to its contraction and the rushing of the blood.

Now, one may shrug one's shoulders and qualify such a vision as being unscientific, but while science itself confirms our metaphor with each new discovery made, one feels compelled to ask whether the reason why this metaphor reflects the observed facts with such exactitude is not simply this: *that what is called a metaphor may be Reality itself*. And this is precisely what the Old Wisdom teaches.

The reason why we have dwelt somewhat elaborately upon the subject of the mighty influence caused by the cycle of solar activity on earth-life, is that after a long period of scepticism science now accepts and even explains in detail this influence of our sun, at least its influence on the material Universe.

The mighty forces which govern the astral, mental, and spiritual Universe, originating in the sun's activity — science cannot dream of them before it has left the path of one-sided study of material facts. If it were the proper time to do so the Old Wisdom could reveal great truths concerning these aspects of the Universe. Then the sacred science of Astrology would rise again to that summit of

reverence and holiness which it occupied in long aeons past. Science now scorns the thought that Astrology may embody any truth at all. If we observe what is nowadays offered under the name of astrology, we can well understand the attitude of science. For what is announced as astrology on closer investigation appears to be simply a means of gaining a livelihood, and has nothing whatever in common with the loftiest of all sciences: Astrology, the Science of the Gods.

Yet, again and again modern science discovers Cosmic influences formerly unknown to it. We especially call attention to the discovery of the ultra-violet radiations from the sun, and to the newly discovered electro-magnetic radiation of a particular frequency, having great influence on the transmission of radio-waves. We also see the endeavor made by science to detect a connection between the periodicity of sunspots and the time of revolution of the planets, particularly in the case of the planet Jupiter. Considering all this we wonder for just how long a time science will maintain its scorning attitude. We feel quite convinced that before long science cannot but grasp the deep significance of the fundamental truth of the Old Wisdom, which also underlies the sacred science of ancient Astrology: that everything is related to everything else; that the Cosmos is one great, living Entity; that the Cosmos is embodied Consciousness.

And as if to stress the scientific facts just mentioned, not so long ago science discovered Cosmic rays, originating in interstellar spaces, which with almost unbelievable intensity penetrate into the earth. This wondrous discovery should be a stimulus for science to ponder upon the possibility of earth-life being influenced by even the most distant stars, which influence was formerly considered to be a silly nursery-tale. For most assuredly, in the discovery of the Cosmic Rays science may recognise a key to the true significance which ancient Astrology ascribed to the

Zodiac. As yet, this key seems rusty, and science does not even know to what key-hole it should be applied! But if it continues its search, it may expect to disclose many a profound Cosmic mystery, even though it should confine itself to merely material phenomena.

Perhaps there are some among you who have expected me, in speaking about the scientific explanations of Cosmic influences, to mention also the influences that find their origin in the moon. I must disappoint you however. As yet exact science does not know of and does not admit any influences coming from the moon except those of ebb-tide and flood-tide, which the moon originates in co-operation with the sun. Theosophists will not be astonished at this attitude, since the influences of the moon are more particularly situated on the astral plane, which science is entirely unacquainted with.

Summarizing the above, we see that — as contrasted with the decennia lying not far behind us — science has met with influences originating in the celestial bodies. More especially the cycle of solar activity has its full attention and interest. Naturally, its explanations relate to the mechanical side of things only. Of the spiritual side of Nature science is entirely ignorant as yet. Still, as a consequence of its strenuous and sincere efforts to find the relationship between the facts observed, it approaches more and more to the insight that matter and spirit are two aspects of the ONE fundamental Reality.

As soon as science has actually attained to this stupendous insight — which will be the noblest achievement possible — it will free itself from its "splendid isolation" and re-establish its links with philosophy and religion.

Then, and not earlier, will the men of science understand and realize the full significance of the influence of the celestial bodies

on earth-life. They will no longer call themselves scientists, or philosophers, or theologians, but students of the Old Wisdom. Because all the science that it can ever discover has already been known from time immemorial to the Guardians of the Gupta-Vidya.

May our evolutionary pathway soon reach these glorious heights of Knowledge, when the Higher Manas will blossom out into full consciousness, and man, the eternal Pilgrim, will fully recognise his inborn Divinity, and live up to it.

The Theosophical Forum

THEOSOPHY AND DAILY LIFE — *Carrie C. Coates*

I am very glad of this opportunity at least to touch the fringe of Universal Truth — Theosophy, *the* explanation of the Universe. In the East they are more reverent than we Westerners, some of whom try to define God. In the Orient they speak of That. It is impossible to conceive of the beginning of Life; the mind immediately goes beyond any such conception. A beginning of manifestation there must be, but something cannot evolve out of nothing; and so Sir Edwin Arnold beautifully sings:

Never the spirit was born; the spirit shall cease to be never;
Never was time it was not; End and Beginning are dreams!
Birthless and deathless and changeless remaineth the spirit
forever;
Death hath not touched it at all, dead though the house of it
seems!

The next thing that occurs to me to accentuate is that Universal Brotherhood is not a *dream* of the future, but a fact in Nature. We are all indissolubly bound together, not only we humans, but the whole universe which is teeming with Life, most of it invisible to us. It is a wonderful thought that there exists not only the Infinitely Great but also the Infinitely Small. When this is borne in mind it carries us far beyond the ordinary idea of Brotherhood. It makes life intensely interesting to know that there is no such thing as dead matter; and what a responsibility it casts upon us when we realize that we cannot move hand or foot without radiating an influence for good or bad. An example of this occurs to me in a story told by a rather matter-of-fact person. He was playing a solitary round of golf one day when he became aware of a disturbing feeling, as if some unusual intensity had developed

in the atmosphere. This continued until he had finished his game, when, on mentioning it to the golf keeper he learned that Mr. Lloyd George had been playing on the links at the same time, though beyond his range of vision. Though opinions may differ as to the ultimate verdict of history on Mr. Lloyd George, all can agree as to his intensity and forcefulness; and the prosaic man was convinced that the Welsh statesman was the disturbing cause on that occasion. The same law operates through all the kingdoms of Nature — the action of a magnet and the perfume of a flower are both familiar instances but perhaps the most striking examples of its operation. H. P. Blavatsky once said that from the Theosophist must radiate those higher spiritual forces which alone can regenerate his fellow men.

This knowledge that we are all members of the Great Universal Life makes us realize that no one can be *only* his own enemy, as is so often mistakenly said by unthinking people. As the Irish poet A. E. said to me in one of his letters:

If I raise myself I raise the rest of the world so much, and if I fail I drag others down also. When this is once realized, when we know that in the inner world nothing but a verity convinces, nothing but an actual reality has force, we learn to cut away all that is superfluous, all minor interests.

Every unit of Life is a power-house energizing all around it, ever creating or destroying. Has not this been voiced again and again? "Give me the bards and I care not who makes the laws," or, as Tennyson says: "More things are wrought by prayer than this world dreams of." That is such prayer as we believe in: aspiration for Truth, Light, Wisdom.

I think it is always a relief if we find that perhaps we ourselves are partly to blame for things; it may be we have unconsciously irritated the other person who is secretly suffering. I often think

how true are the words that one half of the world does not know how the other half lives. And if we *are* treated unjustly, is it not the duty of a Theosophist to bear injustice with equanimity? *All* the planes of our being need exercise, just as well as our bodies; and I think it is a splendid spiritual exercise to have the door either figuratively or literally closed in our face. As Browning says: "Welcome each rebuff that makes earth's smoothness rough." And does not the sense of humor come to our aid? For instance when we are filled to the brim with what seems to us a wonderful thought, and in an unguarded moment give expression to it, it is excellent discipline to be given a hint that we are not at a revival meeting! As we become more impersonal, less completely absorbed in our own sensations, we become more tactful, more discriminating, and we learn when to speak and when to be silent.

Again, when we look at the matter Theosophically, we shall remember that justice rules the universe. What happens to us, whether for good or ill, has been brought about by our own action, if not in this life then in some past existence. We are only getting our own back, or as the old saw says: Chickens come home to roost. The symbolic picture of Christ that portrays him as a heart pierced by daggers seems to me to assume a negative aspect of that Great Being. He came not to bear our sins, but to show us how to bear our own sins, that is, our own Karma: "Rejoice we are allied to that which doth provide, and not partake, effect and not receive" (Browning).

Furthermore, we have been taught that what *seems* bad Karma is perhaps something that our own Higher Self has chosen for our own self-development, and that when so-called misfortune comes our way, if we determine not to allow it to hinder us in our work in life, nor yet to glorify ourselves as martyrs, it cannot overwhelm us. Self-appointed martyrdom is a weapon

successfully used against our true progress. What harmful sympathy has not been lavished on and received by the misunderstood man or woman! We may find that our trouble, its task fulfilled, has disappeared. What matter if we are misunderstood! Such things seem small when we are face to face with the Great Realities! Let us again remind ourselves that we are only getting our own back, and that we are here not to look for love and sympathy, but to give them — to give them in full measure, pressed down and running over.

Acceptance of the principle of Universal Brotherhood is the only prerequisite to fellowship in the Theosophical Society; but when we accept that in all its heights and depths, I think we shall find the other great Theosophical truths permeating our being.

As evolution is now generally accepted by all, is it not only commonsense to believe that there are Those who, though they cannot alter our Karman, can yet point the way they themselves have trod, can show us how to modify our karman and how to avoid making further evil karman? It has been said that the law of Karman is one of the most difficult of the Theosophical teachings to understand; but if we live up to the light we have, more light will dawn upon us.

The Law of Karman, that is of Cause and Effect, also shows us the fallacy of the "forgiveness of sins," that teaching which has been dinned into our ears for ages past and which with its corollary doctrine that we are miserable sinners has perhaps done more than anything else to rob us of our real manhood, our real womanhood. "Give a dog a bad name. . ." What a different bearing we unconsciously assume when we are taught that the Ray of Divinity, however hidden, is in every one of us, is, in fact, the real man. As Christ said: "The Kingdom of God is within."

As for Reincarnation, Karman's twin sister, it is impossible to

understand life without a knowledge of these two great Laws. How otherwise understand that *seemingly* most unjust saying about "visiting the iniquity of the fathers upon the children"? How otherwise understand the seeming injustice of poor creatures born in the slums, both material and spiritual, if we do not acknowledge that we have made our present by our past, and that as we sow so shall we reap? I know that some believe in a progressive Heaven, but if we use our commonsense we shall remember that wherever we sow the seed, there we shall reap it. Indeed I often think that Theosophy should be called Commonsense. If people only realized these two great Laws we should have fewer suicides, less railing against fate or against the supposed decrees of an impossible "personal" God. There is no outside to the Universe. No wonder poor Dean Inge had to take refuge in the idea which he puts into the mouth of a Scottish clergyman, that the Deity in his official capacity is compelled to do things that are — well, not in keeping with our conception of Him!

When Theosophy is made a living power in our lives it enters into our whole daily existence. It is literally the Way, the Truth, and the Life. By its teachings the *seemingly* useless daily round, the trivial task, become full of meaning, and we recognise the Great Truth that "Nature exists for the soul's experience."

The Theosophical Forum

THE YOGA OF DHARANA — *Martyn Witter*

Dharana is a Sanskrit word coming from the verb-root *dhri* — meaning to maintain, direct and resolve. Hence the term implies a purposive directing of the mind towards some one goal or state of consciousness. What a vast field of interesting thought this simple word opens up to us. Let us follow a few of these bypaths.

Man is constantly giving off energy as does all Life. There is heat from the body; a more subtil energy that goes forth in the breath and emotions. Then come the children of the mind, and so on up to the pinnacle of our sevenfold constitution. Every part of our constitution is giving off its particular type of life. Now what has Dharana to do with these obvious facts?

Every type of energy composed of lesser lives has its appropriate channel in our being. Direct your mind upon a certain line of thought for a while and a corresponding type of energy will flow through you. It is thus that geniuses produce their great monuments of art and literature. Their work is constantly before their mind's eye — even during sleep. Consequently the flow of inspiration is constant and all of the other types of energy in the constitution co-operate. The physical body, the emotions, the desires standing of course behind will, and the inspirations from the Buddhi-atman respond in a co-operative manner in accordance with the degree of one-pointedness of the mind. Thus, like attracts like. However there is also a reaction between opposites. For example, all of us have noticed that when we aspire deeply to break the fetters of illusion our faults are magnified and rise, as from the ashes, to challenge us. Thus the man who practises Dharana can expect obstacles at every turn, but if he is one who can laugh at himself, he need not be

discouraged.

There is an occult rule which states the fact that one should never scatter his attention and energies if he wishes to achieve to the fullest extent of his ability. H. P. Blavatsky gave a good example of following this law especially while writing *The Secret Doctrine*. It is said that she could hardly be persuaded to take much needed drives in the open air. Even while in the process of moving her establishment she continued her writing, often asking for manuscripts that were already packed. This shows the intensity of her one-pointedness of mind. She declared at the time that if she stopped work for a while the current would stop and it would take months before she could re-establish it.

Dharana has its important place in the conquering and raising of the personal man. There are some who, because they lack one-pointedness of mind, find themselves torn between the different parts of their constitution. There is a lack of harmony and coordination between the different flows of energy. If such an individual is truly trying to aspire upon the Path he may, in desperation, blame the lower types of energy such as greed, selfishness, etc., as being the cause of his trouble, and hence he may try to kill and suppress his personality. By doing this he is conquering nothing, but is merely killing and blocking the very forces that would give him drive and will if he were practising Dharana. It is the one-pointedness of mind that gives co-operation among the various parts of our constitution. The fault does not lie with the innocent forces of our animal body but in our inability constantly to direct our minds towards that part of our nature which will respond by sending purifying and strengthening influences.

Forget the body and the personality and direct the mind along spiritual channels *and keep it there*. If this is done, all the rest will

harmoniously fall in line and lend the best they have to offer. Thus by practising Dharana the lower is not killed but is uplifted and purified. It is our duty so to direct our mind that the personality becomes a friend and helper. One need not sit in a forest but can practise Dharana while eating, working, and even while at play.

The Theosophical Forum

INDIAN YOGA AND THE MODERN WORLD — *Charles J. Ryan*

In one of Dr. Paul Brunton's earlier works, *A Search in Secret India*, he says that although Yoga "is one of the most valuable inheritances India has received from her ancient sages," if it is "to remain the hobby of a few hermits the modern world will have no use for it and the last traces of the sacred science will disappear." The West will ignore it and the new India will abandon it. Readers of that widely read study of Indian yogis will remember that the author was profoundly impressed at first by the mental peace shown by the Maharishi of Arunchala, "a saintly yogi who had perfected himself in indifference to worldly attractions and in the control of the restless mind." But after further experience he has concluded that the effort to attain such a goal was not a justifiable one if it led to nothing of practical benefit to humanity at large.

Dr. Brunton's latest book, *The Hidden Teaching Beyond Yoga*, is the result of long experience in theoretical observation of Indian yoga and in its actual practice, and his previous works must be regarded as descriptions or expressions of the stages through which he has traveled in reaching a higher altitude. Its title conveys the realization that humanity can reach a far more all-round development than the limited outlook offered by the yogis. It is surely the most important contribution the author has yet made to occult literature and to the cause of social welfare, and we are glad that a further development will follow in a second volume. It is both critical and constructive in showing that certain mental disciplines of Indian yoga might be extremely useful when the terrible conditions now prevailing have passed and men of good-will are called upon to redeem the world from the nightmare of materialistic thought and action we have brought

upon ourselves. For any artificial culture of psychic powers, sometimes mistaken for yoga, a terrible menace in this hotbed of passion and emotion, Dr. Brunton has of course no sympathy, and his presentation of yoga has no element which could appeal to the curiosity-seeker or the psychic researcher. He broadly defines yoga as "a Sanskrit word which appertains to various techniques of self-discipline involving mental concentration and leading to mystic experiences or intuitions," but he emphasizes the warning that though these experiences may help to thin the veil between the ordinary consciousness and its profounder reaches they are certain to mislead unless strictly controlled and checked by the discriminating analysis of a mind trained by the methods of certain great Sages of old, and by practical experience and service in the world of men. The visions of "yogis," whether in the Orient or among the Christian saints, or among certain Western seers or "sensitives" or even those of so-called "primitive" races, are rarely balanced by logical thinking, with the result that so many differences of opinion prevail about their correct interpretation. The Mahatman K. H. strongly emphasizes this in *The Mahatma Letters to A. P. Sinnett*, p. 276. The need for the scientific and philosophical teaching of the Sages which we call "technical" Theosophy is apparent.

The author's final conclusion, after years of personal experience of yoga-states and wide acquaintance with genuine yogis, is that while there is much to say for a disciplined yoga training, freed from emotionalism, curiosity hunting, superstition, and "the miraculous," its real usefulness lies in its practical methods of mind concentration, the control of the restlessness of the mind which is our greatest hindrance in hearing the Inner Voice. He does not disguise the danger of yoga becoming a mere personal gratification and a turning into ashes in the mouth, "a shriveling complacency accompanied by an open disdain for life's practical

fulfilment in disinterested service of others." He repeats the old teaching that the withdrawal from the pleasures of the senses to the more subtil enjoyments of self-centered isolation is no self-abnegation at all. He quotes the well-known and cultured yogi, Sri Aurobindo: "Trance is a way of escape — the body is made quiet, the physical mind is in a state of torpor. . . [but] . . . The disadvantage is that trance becomes indispensable and that the problem of waking consciousness is not solved; it remains imperfect."

Speaking from the logic of critical reflexion and somewhat painful experience, he writes:

I became acutely aware that mysticism was not enough *by itself* to transform or even discipline human character or to exalt its ethical standards towards a satisfactory ideal. It was unable to link itself thoroughly to life in the external world! . . . Even the emotional exaltations of mystical ecstasy — wonderfully satisfying though they be — were fleeting both in experience and effect and have proved insufficient to ennoble men permanently. The disdain for practical action and the disinclination to accept personal responsibility which marked the character of real mystics prevented them from testing the truth of their knowledge as well as the worth of their attainments and left them suspended in mid-air, as it were. Without the healthy opposition of active participation in the world's affairs, they had no means of knowing whether they were living in a realm of sterilized self-hallucination or not . . . The true sage could be no anemic dreamer but would incessantly transform the seeds of his wisdom into visible and tangible plants of acts well done. — p. 25

The latter, of course, is the essential teaching of the true "Raja

Yogis," the Masters of Wisdom, and Compassion, who established the Theosophical Movement and its humble instrument, the Theosophical Society, to bring "Truth, Light and Liberation" to a world in sore need of them.

We have always admired the Zen system of Buddhism, and it is gratifying to find that Dr. Brunton accepts the Japanese Zen as a sensible and beneficial system free from the objections that apply to much of the Indian yoga. In Zen the students are given active duties as well as discipline in meditation, and after a period of training they are returned in most cases to the outside world, equipped with the power of sustained concentration and a desirable balance of the inner and the outer faculties that make them successful and respected citizens. A few adopt the monastic life but all made spiritual contacts by which their lives are permanently enriched.

What, then, is the balancing philosophy which is needed if Eastern Yoga training in concentration of mind, etc., is to be any use in the daily life of the world? "Disenchanted," as the author says, "by long experience of certain ashrams and ascetics," and no longer "confusing yogis with sages — as most of us do," he was led, largely by the help and example of a truly great and spiritual philosopher-ruler, the late Maharaja of Mysore, to such ancient teachings as the Mandukya Upanishad, the Bhagavad-Gita, the Ashtavakra Samhita, Sankaracharya's writings, etc., which contain what he calls "The Hidden Teachings Beyond Yoga," the teaching of "the yoga of philosophic discernment" . . . "philosophic disciplines using the intense concentration generated by yoga practice but directed toward freeing the mind of its innate ignorance and habitual error": in short to develop the fullest powers of *insight*. He says he is not writing for cloistered pedants of academic metaphysics but for the intelligent "man in the street" who is taking thought for the meaning of life; and

therefore he has avoided technical language as far as possible, without sacrificing accuracy or depth — an example many writers on philosophy would do well to follow.

The great Hindu scriptures mentioned as of such transcendent importance by Dr. Brunton are not unfamiliar to Theosophists. The Bhagavad-Gita., for instance, has been the subject of almost universal and intensive study since the early days of the Theosophical Society. The teaching that is "Beyond Yoga," but for which yoga concentration of mind is no doubt a good preparation, is not a new revelation, as Dr. Brunton says, for it is enshrined in the works mentioned, but unfortunately its meaning has not been properly understood by Western scholars and still less by the general reader unless enlightened by the teachings of Theosophy. If we understand Dr. Brunton correctly, the Theosophical discipline and outlook is practically the same as his "yoga of philosophical discernment" adapted to the comprehension of the Western mind. We are, however, looking forward with interest to the second volume of this study, where more complete interpretation is promised.

After a careful consideration of the modern developments in science, education, transport facilities, inventions, etc., which have transformed our social conditions and mental outlook, and especially the widespread increase, under the baleful influence of materialism, of the despairing feeling that there is no purpose in human life, the author declares that this is the time when the ancient "Aryan" knowledge must be brought to the West "to help the better cultured classes act more wisely that something nobler may emerge . . . toward a finer human world." This is true indeed, but it is not exactly new, for the Theosophical Movement was started in 1875 to promote human welfare on "Aryan" lines of thought, spiritual, intellectual and practical. At that time only a minute coterie of scholars in the West knew anything about these

principles, and few regarded them as anything more than an abstruse field of linguistic and ethnological research. The Theosophical activities called popular attention to the Wisdom of the East, and in the few years that have elapsed since H. P. Blavatsky brought her message it has produced far-reaching results by giving hope and encouragement to an immense number of discouraged people as well as by powerfully affecting the religious, scientific, and social ideas of our age. The Theosophical Movement was established by Hindu Sages, not "hibernating hermits," but philanthropists of the highest compassion and wisdom, whose aims and ideals are universal in scope and application. These Masters of Life "have made the age-old cause of all mankind their own" and are not "ascetically indifferent" to the social welfare and evolution of the world in its common everyday experiences and tribulations. According to Dr. Brunton, this can hardly be said of many of the self-centered and self-sufficient Hindu yogis, pure-minded and mystically inclined though they may be, and untainted by the selfish desire to be revered for their possession of strange powers.

In the last chapter, "The Philosophic Life," the author discusses the woes of the world and its crying need for a true and dynamic philosophy of life, one which would be recognised and accepted by men of action and leadership. But, as he writes, the ground for such a world-philosophy must be prepared by a voluntary clearance on the part of the organized religions of their labyrinth of traditional rubbish and a complete reorganization of their methods. The Unity of the Universe must be recognised, and this implies the divinity of man because he is an integral part of it — some would say of God, but the author prefers a term he has suggested, the Overself. He insists that the laws of Cause and Effect, Perfect Justice — Karman — and Reincarnation must be understood and lived up to. Fully to accept the law of Karman —

you reap what you sow, and nothing else — is of the utmost importance for it is a natural and inescapable fact from which we shall suffer and suffer until we recognise it. Every day we are shaping our future conditions and history by our thoughts and deeds — fortunate if they are good, unhappy if they are selfish. The only way to change one's life for the better is to take the bull by the horns and change one's way of thinking, as he says. All this is good sound Theosophy, though Dr. Brunton does not use the word even though its antecedents in classical thought are excellent and expressive of his views. We notice that he avoids any reference to or consideration of the seven (or four) *kosas* or "principles" of man's complex nature as given in Oriental philosophy, which have been found so illuminating by Theosophists in their study of the subtleties of human psychology and universal consciousness.

Dr. Brunton strikes a profound Theosophical keynote of action when he says that the key to happiness is *forgetting oneself*. He sums up his ethical position in the words: "It is the duty of the strong to assist the weak, of the advanced to help the backward, of the saintly to guide the sinful, of the wealthy to enlighten the ignorant. And because ignorance is the root of all other troubles, therefore the Buddha pointed out that, "explaining and spreading the truth is above all charities." " This, of course, is the "practical charity" which is the Theosophical ideal, the most effective way to bring about a permanent condition of universal brotherhood. The reason why the Theosophical Society as a philanthropic *organization* is more concerned in spreading the light of Theosophy in this Dark Age than in extending material assistance is that the latter can only be a temporary alleviation or "appeasement," to use a popular expression, so long as human ignorance and selfishness remain unchanged. *Members* of Theosophical societies, as *individuals*, may and do help in any

charitable work they prefer, for as H. P. Blavatsky says in *The Voice of the Silence*, "Inaction in a deed of mercy is action in a deadly sin."

Dr. Brunton calls for a remedy for "the malady of human suffering," and he clearly indicates that the remedy lies in the active participation of men of "goodwill" and wisdom in the work of redemption. For instance, he writes:

The sages who have gone looked within self in the quest of abiding reality rather than fitful experience, of final truth rather than emotional satisfaction . . . hence they alone found the genuine goal. And because they did not flee as did mystics from the vexing problem of the world, they solved that too at the same startling moment that the self was understood. . . . Thenceforth they made the age-old cause of all mankind their own.

This is excellent so far as it goes, and knowledge of the Self, even in part, is essential for a true Teacher. We must remember, however, that such an understanding is not gained by merely intellectual processes, nor can the search be entered upon without a higher inspiration if it is to succeed. According to the teaching and example of the Great Ones, the Buddhas and the Christs, the first and most important qualification for discipleship in "the age-old cause of all mankind" is to "love thy neighbor as thyself," or, in Buddhism, to obey the highest of its rules of conduct or *Paramitas*, "Dana, the key of charity and love immortal," and as H. P. Blavatsky gives it in *The Voice of the Silence*, "To live to benefit mankind is the first step," and "Compassion speaks and saith: "Can there be bliss when all that lives must suffer? Shalt thou be saved and hear the whole world cry?" "

We hope that in his forthcoming volume Dr. Brunton will

emphasize this fundamental teaching of all the Saviors of humanity without which the candidate for even the highest psycho-intellectual states of consciousness is always in danger of being led into unproductive bypaths toward what is called the *pratyeka* condition. Dr. Brunton has certainly deserved gratitude and has done excellent service in this volume by courageously presenting the matured judgment of an expert in Hindu Yoga at the risk of inevitable misunderstanding, as he tells us. By his frankly critical but constructive and not unfriendly analysis he has cleared up many obscurities and helped greatly in exposing the false and fantastic notions about yoga so prevalent in the west.

Amid the wreckage of outworn forms of thought the world is blindly reaching for a nobler philosophy of life. If it would realize the admirable principles so skilfully and earnestly put forward here, which are practically those of Theosophy, *and put them into practice*, we should indeed begin to see the "Promised Land"!

The Theosophical Forum

BROADCASTS FROM SHANGHAI: VII

One of the great Theosophical teachings, that of Reincarnation, is here explained. The speaker is Miss Elsa-Brita Bergqvist, who on May 4th last year gave this broadcast as the seventh of a series of fifteen minute expositions of Theosophical doctrine by herself and Miss Inga Sjostedt, over radio station XQHB, Shanghai, China.

Good evening, everybody:

The speaker last Sunday gave an outline of the history of the doctrine of reincarnation. This evening an attempt will be made to demonstrate the logic and philosophic plausibility of this belief, which has formed an integral part of the pure religions of all times.

Those who are unfamiliar with the doctrine of reincarnation may tend to recoil from the word with the thought that it is a heathen idea and means that human beings come back as animals. If we give the matter a little thought, however, it will become clear that, although pagan, the belief is supported by a firm ground-work of common sense, and it must not be confused with transmigration, which in some of its aspects teaches a return to animal bodies. Natural evolution goes always forward — a lesson learnt cannot be unlearnt, though it can be forgotten. Similarly a being having reached manhood cannot go back to animality, though he can forget his manhood and behave like an animal — but he remains a man.

It has been mentioned before that all natural evolution proceeds in a series of cycles — the cycles of life and death being among them. Reincarnation then, or re-infleshment, is one phase of the greater cycle of reimpodiment, which applies to all the realms of

universal nature. We see the evidence of this cyclic process all round us — Nature's annual revival every spring is so familiar a fact that its significance often goes unnoticed.

First of all, if we admit the immortality of the essential man, let us see for a moment where this leads us. Immortality means deathlessness or eternal life. If we believe in eternal life after the death of the physical body, we must of necessity believe also in a pre-existence before the birth of the body, otherwise we should have eternity stretching in one direction only, which is a philosophical absurdity — like having boundless space with one boundary. Therefore we reach the conclusion that we have existed before and shall continue to exist after the shedding of our physical and lower emotional garments, these being the vehicles we build for ourselves in order to function on the earth where we live.

We cannot hope during one short life to attain to the state of perfection which is our goal, neither can we garner all the experience which earth-life has to offer. In fact the thought of one single life on earth is as unsatisfactory as the idea of attending school for one lesson. There is so much to be learnt and there are so many contacts to be made, so many circumstances to be met and responsibilities to be shouldered that one earth-life is ludicrously inadequate. This would seem to be the reason why the believers in the one-life theory are almost invariably displeased at the thought of death, and even frightened, no matter what rewards are offered them thereafter.

If we look at life today from a practical point of view, we see around us innumerable instances of the most flagrant injustice — apparent injustice from the view-point of the theosophist. It is unnecessary to enumerate any examples — they are only too obvious, and who has not at one time or another been astonished

and distressed by the staggering contrasts prevalent in the social order? It is impossible to reconcile these incongruities with the order and harmony ruling the universe in general, unless we realize that what we see is but a fraction of the whole — that, could we review the entire vista of all our past lives on earth, then each and every circumstance we meet would fall into its place as the natural outcome of our former deeds — and is our self-created destiny.

We build into ourselves at every moment the thoughts and ideas we harbor in our minds, and we are at any given moment the products of our former thoughts and deeds. To those who like to push the responsibility for their weakness on to a god who created them such, and who want leisure to sin as much as they please in the certainty of being forgiven anyhow, this doctrine is an unwelcome thought, for it brings home to us the tremendous responsibility we carry in creating ourselves and our destiny.

One question is often asked: "Why don't we remember our past lives?" Just think back for a moment — Can any of us *remember* every lesson we learnt at school? Of course not. Yet we are the same people who then underwent the agonies of learning many things that have long since slipped our memories. The general outlines of our schooldays remain with us and form as a whole what we are pleased to term our education. In the same way we have forgotten the incidents which composed our former existences, although the aggregated results thereof combine to form what we are pleased to call our characters. There is however a difference. In our schooldays we had the same physical brain as we have today, the same thought-instrument, whereas in our former lives we had bodies and brains that died a long time ago. Incidentally, in a few rare instances people have been known to remember their past lives and to describe circumstances thereof, which could be verified, but such cases are

exceptional.

Theosophy teaches that when a man dies, his physical body is the first to lose its vitality, or the vital essence, which animates it during life — although the brain remains active for an hour or more after the heart has stopped beating. This fact has but recently been corroborated by medical science. During this hour or so the dead man re-lives his past life in a series of vivid pictures, omitting no detail. In a few cases of almost complete death by drowning or freezing, or other slow death, people have been resuscitated even after this process has commenced and have lived to tell the tale. When this is over, the physical body commences to disintegrate and to release the astral or model-body of semi-physical matter. This astral matter is not far removed from the physical that we can see, and can occasionally under abnormal circumstances become visible. These astral shells it is that have given rise to various ghost stories and it is such beings that are attracted to spiritualistic seances. The astral body of the dead man combined with his lower desires and emotions continues to exist as a coherent whole until it has exhausted the vitality or impulse, which the man during life gave to that part of his nature. In the case of a gross and brutish man this is naturally a slow and painful process, whereas in the case of a man whose impulses were centered in the higher parts of his constitution, it is almost unnoticeable and very much quicker. From this teaching has sprung the Catholic doctrine of purgatory. The spiritual ego of the man then garners from his intermediate nature or soul, all that was fine and spiritual and proceeds to what we could call a heaven-world of his own making, where he exists with all his noblest aspirations and emotions in a beautiful dream, until the energy he had given during life to the higher part of his nature has been exhausted. Then the ego begins to yearn towards earth-life and, passing through the realms where

the component parts of his lower nature are dispersed, he re-collects his tendencies and aptitudes and is born again, with certain definite characteristics, acquired through many earlier lives. This accounts for the appearance of such people as infant prodigies and geniuses. Many lifetimes of training in a subject may produce an expert of that subject at a very tender age. It accounts also for certain family and national characteristics, for we are naturally attracted to the surroundings and people with which we are familiar and with whom we have formed links of affection or similarity — individuals with whom we have something in common.

Death is an adventure very similar to sleep. It is in fact an exact analogy. Each night in sleep the ego passes through vivid experiences in dreams, which are colored by the general experiences of the previous day. Except in cases of prophetic dreams or nightmares engendered by physical discomfort our dream-life corresponds to the state of mind in which we have passed the day. Exactly the same is the case in death, with the difference only that then we leave our bodies behind completely, whereas in sleep we still keep in touch with them and can return to them and waking life at any moment. Sleep is an imperfect death — death a perfect sleep.

The doctrine of reincarnation or reimpodiment is intimately connected with the doctrine of Karman, the law of cause and effect. Every action causes a reaction, which in its turn becomes the cause of a new effect. In our relations with other human beings we are therefore inextricably woven into a web of causes and effects, some set in motion many lives ago. If we realize the extent of this most complex thought, we understand why many lives are necessary to readjust the balance of actions and pick up the loose threads of former lives, before at length the entire human race shall have run its course on our earth and become

ready for the next step in evolution.

The Theosophical Forum

THE BEACON OF THE UNKNOWN: II — *H. P. Blavatsky*

This series originally appeared in the French magazine *La Revue Theosophique*, May 1889, under the title "Le Phare de L'Inconnu." One of H. P. Blavatsky's most brilliant articles, it presents a clear statement of the meaning of true Theosophy in theory and in practice. It shows the striking contrast between the aims and methods of those who retire to the jungle or to the desert with the sole idea of saving their own souls, indifferent to the woes of humanity, and the true disciple who is trained to give up thought of self and "live to benefit mankind." It first appeared in translation from the original French in *The Theosophist*, Volume X.

After all, critics who judge only by appearances are not altogether wrong. There is Theosophy and Theosophy: the true Theosophy of the *Theosophist*, and the Theosophy of a Fellow of the Society of that name. What does the world know of true Theosophy? How can it distinguish between that of a Plotinus, and that of the false brothers? And of the latter the Society possesses more than its share. The egoism, vanity and self-sufficiency of the majority of mortals is incredible. There are some for whom their little personality constitutes the whole universe, beyond which there is no salvation. Suggest to one of these that the *alpha* and *omega* of wisdom are not limited by the circumference of his or her head, that his or her judgment could not be considered quite equal to that of Solomon, and straight away he or she accuses you of anti-theosophy. You have been guilty of blasphemy against the spirit, which will not be pardoned in this century, nor in the next. These people say, "I am Theosophy," as Louis XIV said "I am the State." They speak of fraternity and of altruism and care in reality only

for that for which no one else cares — themselves — in other words their little "me." Their egoism makes them fancy that it is they only who represent the temple of Theosophy, and that in proclaiming themselves to the world they are proclaiming Theosophy. Alas! the doors and windows of that "temple" are no better than so many channels through which enter, but very seldom depart, the vices and illusions characteristic of egoistical mediocrities.

These people are the white ants of the Theosophical Society, which eat away its foundations, and are a perpetual menace to it. It is only when they leave it that it is possible to breathe freely.

It is not such as these that can ever give a correct idea of practical Theosophy, still less of the transcendental Theosophy which occupies the minds of a little group of the elect. Every one of us possesses the faculty, the interior sense, that is known by the name of *intuition*, but how rare are those who know how to develop it! It is, however, only by the aid of this faculty that men can ever see things in their true colors. It is an *instinct of the soul*, which grows in us in proportion to the employment we give it, and which helps us to perceive and understand the realities of things with far more certainty than can the simple use of our senses and the exercise of our reason. What are called good sense and logic enable us to see only the appearance of things, that which is evident to everyone. The *instinct* of which I speak, being a projection of our perceptive consciousness, a projection which acts from the subjective to the objective, and not *vice versa*, awakens in us the spiritual senses and power to act; these senses assimilate to themselves the essence of the object or of the action under examination, and represent it to us as it really is, not as it appears to our physical senses and to our cold reason. "We begin with *instinct*, we end with omniscience," says Professor A. Wilder, our oldest colleague. Iamblichus has described this faculty, and

certain Theosophists have been able to appreciate the truth of his description.

"There exists," he says, "a faculty in the human mind which is immeasurably superior to all those which are grafted or engendered in us. By it we can attain to union with superior intelligences, finding ourselves raised above the scenes of this earthly life, and partaking of the higher existence and superhuman powers of the inhabitants of the celestial spheres. By this faculty we find ourselves liberated finally from the dominion of destiny (Karma), and we become, as it were, the arbiters of our own fates. For when the most excellent parts in us find themselves filled with energy; and when our soul is lifted up towards essences higher than science, it can separate itself from the conditions which hold it in the bondage of every-day life; it exchanges its ordinary existence for another one, it renounces the conventional habits which belong to the external order of things, to give itself up to and mix itself with another order of things which reigns in that most elevated state of existence."

Plato expressed the same idea in these lines: "The light and spirit of the Divinity are the wings of the soul. They raise it to communion with the gods, above this earth, with which the spirit of man is too ready to soil itself. . . To become like the gods is to become holy, just and wise. That is the end for which man was created, and that ought to be his aim in the acquisition of knowledge."

This is true Theosophy, inner Theosophy, that of the soul. But followed with a selfish aim Theosophy changes its nature and becomes *demonosophy*. That is why Oriental wisdom teaches us that the Hindu *Yogi* who isolates himself in an impenetrable forest, like the Christian hermit who, as was common in former times, retires to the desert, are both of them nothing but

accomplished egoists. The one acts with the sole idea of finding a nirvanic refuge against reincarnation; the other acts with the unique idea of saving his soul — both of them think only of themselves. Their motive is altogether personal; for, even supposing they attain their end, are they not like cowardly soldiers, who desert their regiment when it is going into action, in order to keep out of the way of the bullets?

In isolating themselves as they do, neither the Yogi nor the "Saint" helps anyone but himself; on the contrary, both show themselves profoundly indifferent to the fate of mankind, whom they fly from and desert. Mount Athos (1) contains, perhaps, a few sincere fanatics; nevertheless, even these have without knowing it got off the only track that leads to the truth — the path of Calvary, on which each one voluntarily bears the cross of humanity, and for humanity. In reality it is a nest of the coarsest kind of selfishness; and it is to such places that Adam's remark on monasteries applies: "There are solitary creatures there who seem to have fled from the rest of mankind for the sole pleasure of communing with the Devil *tete-a-tete*."

Gautama, the Buddha, only remained in solitude long enough to enable him to arrive at the truth, which he devoted himself from that time on to promulgate, begging his bread, and living for humanity. Jesus retired to the desert for only forty days, and died for this same humanity. Apollonius of Tyana, Plotinus, Iamblichus, while leading lives of singular abstinence, almost of asceticism, lived in the world and *for* the world. The greatest ascetics and *saints* of our days are not those who retire into inaccessible places, but those who pass their lives in traveling from place to place, doing good and trying to raise mankind; although, indeed, they may avoid Europe, and those civilized countries where no one has any eyes or ears except for himself, countries divided into two camps — Cains and Abels.

Those who regard the human soul as an emanation of the Deity, as a particle or ray of the universal and Absolute soul, understand the parable of the *Talents* better than do the Christians. He who hides in the earth the *talent* which has been given him by his "Lord" will lose that talent, as the ascetic loses it, who takes it into his head to "save his soul" in egoistical solitude. The "good and faithful servant" who doubles his capital, by harvesting for *him who has not sown* because he had not the means of doing so, and who reaps for the poor who have not scattered the grain, acts like a true altruist. He will receive his recompense, just because he has worked for another, without any idea of remuneration or reward. That man is the altruistic Theosophist, while the other is an egoist and a coward.

The Beacon-light upon which the eyes of all real Theosophists are fixed is the same towards which in all ages the imprisoned human soul has struggled. This Beacon, whose light shines upon no earthly seas, but which has mirrored itself in the sombre depths of the primordial waters of infinite space, is called by us, as by the earliest Theosophists, "Divine Wisdom." That is the last word of the esoteric doctrine; and in antiquity, where was the country, having the right to call itself civilized, that did not possess a double system of Wisdom, of which one part was for the masses, and the other for the few — the exoteric and the esoteric? This name, Wisdom, or as we say sometimes, the "Wisdom Religion" or *Theosophy*, is as old as the human mind. The title of *Sages* — the priests of this worship of truth — was its first derivative. These names were afterwards transformed into *philosophy* and *philosophers* — the "lovers of science" or of wisdom. It is to Pythagoras that we owe that name, as also that of *Gnosis*, the system of "the knowledge of things as they are," or of the essence that is hidden beneath the external appearance. Under that name, so noble and so correct in its definition, all the

masters of antiquity designated the aggregate of our knowledge of things human and divine. The sages and Brahmanas of India, the magi of Chaldea and Persia, the hierophants of Egypt and Arabia, the prophets of *Nabi* of Judea and of Israel, as well as the philosophers of Greece and Rome, have always classified that science in two divisions — the *esoteric*, or the true, and the *exoteric*, disguised in symbols. To this day the Jewish Rabbis give the name of *Mercabah* to the body or vehicle of their religious system, that which contains within it the higher knowledge, accessible only to the Initiates, and of which higher knowledge it is only the husk.

We are accused of mystery, and we are reproached with making a secret of the higher Theosophy. We confess that the doctrine which we call *gupta vidya* (secret science) is only for the few. But where were the masters in ancient times who did not keep their teachings secret, for fear they would be profaned? From Orpheus and Zoroaster, Pythagoras and Plato, down to the Rosicrucians and to the more modern Freemasons, it has been the invariable rule that the disciple must gain the confidence of the master before receiving from him the supreme and final word. The most ancient religions have always had their greater and lesser mysteries. The neophytes and catechumens took an inviolable oath before they were accepted. The Essenes of Judea and Mount Carmel required the same thing. The *Nabi* and the *Nazars* (the "separated ones" of Israel), like the lay *Chelas* and the *Brahmacharins* of India, differed greatly from each other. The former could, and can, be married and remain in the world, while they are studying the sacred writings up to a certain point; the latter, the *Nazars* and the *Brahmacharins*, have always been entirely vowed to the mysteries of initiation. The great schools of Esotericism were international, although exclusive, as is proved by the fact that Plato, Herodotus, and others, went to Egypt to be

initiated; while Pythagoras, after visiting the Brahmins of India, stopped at an Egyptian sanctuary, and finally was received, according to Iamblichus, at Mount Carmel. Jesus followed the traditional custom, and justified his reticence by quoting the well known precept:

Give not the sacred things to the dogs,
Cast not your pearls before the swine,
Lest these tread them under their feet,
And lest the dogs turn and rend you.

Certain ancient writings — known, for that matter, to the bibliophiles — personify Wisdom; which they represent as emanating from *Ain-Soph*, the Parabrahm of the Jewish Kabbalists, and make it the associate and companion of the manifested Deity. Thence its sacred character with every people. Wisdom is inseparable from divinity. Thus we have the Vedas coming from the mouth of the Hindu "Brahma" (the *logos*); the name Buddha comes from Budha, "Wisdom," divine intelligence; the Babylonian *Nebo*, *Thoth* of Memphis, *Hermes* of the Greeks, were all gods of esoteric wisdom.

The Greek Athena, Metis and Neith of the Egyptians, are the prototypes of Sophia-Achamoth, the feminine wisdom of the Gnostics. The Samaritan *Pentateuch* calls the book of Genesis *Akamauth*, or "Wisdom," as also two fragments of very ancient manuscripts, "the Wisdom of Solomon," and "the Wisdom of *Iasous* (Jesus)." The book called *Mashalim* or "Sayings and Proverbs of Solomon," personifies Wisdom by calling it "the helper of the (Logos) creator," in the following terms, (literally translated):

I (a) H V (e) H possessed me from the beginning.
But the first emanation in the eternities,
I appeared from all antiquity, the primordial. —

From the first day of the earth;
I was born before the great abyss.
And when there were neither springs nor waters,
When he traced the circle on the face of the deep,
I was with him Amun.
I was his delight, day by day.

This is exoteric, like all that has reference to the personal gods of the nations. The Infinite cannot be known to our reason, which can only distinguish and define; but we can always conceive the abstract idea thereof, thanks to that faculty higher than our reason — *intuition*, or the spiritual instinct of which I have spoken. Only the great Initiates, who have the rare power of throwing themselves into the state of *Samadhi* — which can be but imperfectly translated by the word *ecstasy*, a state in which one ceases to be the conditioned and personal "I," and becomes one with the All — only these can boast of having been in contact with the *infinite*: but no more than other mortals can they describe that state in words.

These few characteristics of *true* theosophy and its practice have been sketched for the small number of our readers who are gifted with the desired intuition.

EVOLUTION — *Boris de Zirkoff*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

How Worlds Are Born and Reborn (1)

Analogy is the great mystic and scientific key to the understanding of the structure of the Universe in which we live, and of which we are an integral and inseparable part. What is below, in the small and the infinitesimal, is also above, in the great and the cosmic. There is but One Law, One Pattern, One Universal Plan, underlying everything that is, guiding everything that unfolds and grows, and the same universal urge, impelling all growth and unfoldment, stimulates from within every evolving entity in the boundless infinitudes of Nature.

From Atom to Cosmos everything in Nature is for ever indissolubly bound together, holds together, evolves together, marches together along the silent paths of cosmic evolution. From Atom to Cosmos everything in Nature is endowed with a consciousness of its own, with a life of its own, and unfolds with a spiritual purpose, under the universal and ever-present sequence of Cause and Effect. This is a fundamental teaching of the Esoteric Philosophy. In this the student of Ancient Wisdom is in perfect accord with the most progressive scientists of the day. Sir James Jeans has said:

I incline to the idealistic theory that consciousness is fundamental, and that the material universe is derived from consciousness, not consciousness from the material universe. . . . The universe seems to me to be nearer to a

great thought than to a great machine. It may well be, it seems to me, that each individual consciousness ought to be compared to a brain-cell in a universal mind. . . . — *The Observer*, January 4, 1931

Max Planck has said:

I regard consciousness as fundamental. I regard matter as derivative from consciousness. We cannot get behind consciousness. Everything that we talk about, everything that we regard as existing, postulates consciousness. — *The Observer*, January 25, 1931

Thomas A. Edison has said:

I do not believe that Matter is inert, acted upon by an outside force. To me it seems that every atom is possessed by a certain amount of primitive intelligence.

This is the ground upon which Modern Science and the Ancient Wisdom meet and shake hands in a warm hand-clasp.

SEVENFOLD STRUCTURE OF THE UNIVERSE

The evolutionary development of Worlds or Systems of Worlds, such as our Solar System or the Galaxy to which it belongs, can be understood only against the background of the ancient teaching about the nature and structure of the inner or invisible Universe, of which the physical universe is but the outward shell, as it were. According to this ancient teaching, Nature is *Tenfold*. There are in it *Ten* distinct yet correlated planes, or spheres, or realms of substance and consciousness. Of these the uppermost Three are at present entirely beyond our comprehension; they pertain to the very roots of things that are; they are what is known in technical language as the *unmanifested* Planes of Being. The lower *Seven* planes, however, *can* be understood as to their nature and

function; they are termed the *manifested* planes of the Universe.

Of these Planes only the Physical Plane, and this one only in its lowest levels, can be perceived with the aid of so-called physical senses of perception. What we see and know of the physical development of the Universe — let us say, of our Solar System, or of our Galaxy — pertains, therefore, to this one Plane only, while the Causes and the Spiritual Impulses behind all evolutionary urge lie hidden away in the superior Planes, and *flow out*, one might say, into material or physical form, in due course of time.

Everything comes out of the Spiritual Realms of Being, everything journeys through the evolutionary pilgrimage, cycling from one plane to the other, on its downward spiral of involution; everything re-ascends again, on its upward path of evolutionary unfoldment, and, at the end or consummation of the pilgrimage through the material spheres, is re-absorbed once more into the Spiritual Spheres of Being, where the Consciousness of the Universe dwells until the dawn of a new cycle of universal manifestation — the *Re-imbodiment* of Itself. It is so with Planets; it is equally so with Solar Systems; it is so with Galaxies; it is the same with a human being who is born, lives, dies, rests for awhile, and is born anew; and it is equally so with the world of the infinitesimally small, as already hinted at by Science.

REIMBODIMENT OF A UNIVERSE

Every Planet, every Sun — which means every star we see in the depths of the night sky — every solar system, every group of systems, every galaxy, and beyond — *is the reimbodiment of a former Cosmic Entity*, the reimbodiment of its own former Self, just as man is but the reincarnation of his own self, the same soul or ego come back for another series of experiences, building for itself a new form in which to manifest on the plane of physical life. So it is with a Cosmic Entity, the Spiritual Intelligence and

Consciousness which inhabits a World and manifests through its complex structure as a system in evolution. Analogy, as said before, is the key to every mystery of Nature.

This view is corroborated by the famous Swedish astronomer Dr. Knut Lundmark, who recently wrote:

. . . We only understand a very, very tiny bit of what really happens when a star explodes. . . . Perhaps the stars are ensouled Super-Beings, whose soul-life we cannot even imagine. With our gross senses and our imperfect instruments we can only try to follow the external physical processes in that tremendous laboratory which the universe must be. In the hand of what Being or Beings does it lie? — *Goteborgs Handels och Sjöfarts Tidning*, October, 1936

After the dissolution of a World, or of a Solar System, the highest spiritual principles of that World retire into a supreme spiritual Nirvana, for a period of rest, just as a human being enters after physical death into a condition of spiritual sleep, and the assimilation of the experience gained in the life just past; only that in the case of a Cosmic Entity these states are immensely superior to those of the human soul. Meanwhile, the *cosmic dust*, we might call it, resulting from the dissolution of that world, remains as it were in a state of quiescence, of slumber, scattered far and wide through the various planes formerly occupied by the World that was. The same takes place with the hosts of life-atoms of any one human being, after the final dissolution we call physical death. The *dark nebulae* of modern astronomical research are a stage towards this condition of atomic dissociation.

(2)

Very little is known at this time about the nature of these dark areas, as far as astronomy is concerned; but let me venture the

thought that one of these days, through researches already on their way, Science will find out that the matter composing these dark nebulae is not matter as we know it here on earth. It obstructs the light coming from behind it, it is true, and yet it is not matter in our physical sense of the word. There are substances in Nature which pertain to other planes of being, to other rates of vibration, as it were, and Science is well on its way to the discovery of such superior grades of matter.

The "Cosmic Soul" of a Universe or World, of any one of the myriads of Worlds scattered through Space, remains in its high state of Nirvanic rest until the *Divine Thirst* for active life re-arises in the Consciousness of that Cosmic Being; this urge for dynamic evolutionary experience is a cyclic process in itself and brings Cosmic Entities into manifestation again, just as it does the human soul, life after life, on our small scale of earthly experiences. Analogy once more! On this ground again Theosophy and Science meet as friends and collaborators. Professor E. A. Milne, the well-known scientist of Oxford, has said:

Our Universe is no passing thing. Creation was once, is always. Once started, the system goes on forever. Each constituent has a temporal existence, but the world as a whole knows no time history. . . . The World sows ever at its own frontier the seeds of its own future. Each individual nebula reaps the harvest of its own experiences, and passes to the winter of its decay. But . . . at the confines of the visible universe, at the world's inaccessible edge, the music of the spheres is the song of a new dawn, the dawn of the world's perpetual birthday.

The "Soul" of a World or of a System is often spoken of in Theosophy as a *Cosmic Monad*; we might call it a god, one of the numberless gods or godlike Beings who are the indwelling

Spiritual Intelligences of any one World or Solar System — the Cosmic Mind suspected these days by outstanding scientists, such as Stromberg, Moulton, Swann, Eddington, Jeans, Lundmark and others. When its cyclic time has come, this Cosmic Intelligence or Being, through a gradual process of reimpodiment, similar, as to pattern, to the reincarnation of a human ego, cycles downward, as it were, through the various planes below it, till it reaches the physical plane of the sevenfold structure of Nature. As it passes through these planes, slowly, through ages upon ages, it reassembles and reintegrates the widely scattered life-atoms which went to build its former structure. This process we might term an electro-magnetic one. Similarly does the human soul gather in reincarnation its former life-atoms. The Cosmic Monad or Soul awakens once more into action this sleeping, slumbering, quiescent matter in its state of atomic dissociation; it revivifies these life-atoms, recalls them into being out of a deep sleep, *re-illuminates them from within*, infuses into them its own spiritual life and light — and finally assumes the appearance of a Cosmic Nebula, a Galaxy. (3)

In this connection Sir James Jeans upholds one of the basic teachings of the Ancient Wisdom, when he writes:

The type of conjecture which presents itself, somewhat insistently, is that the centres of the nebulae are of the nature of "singular points" at which matter is poured into our universe from some other, and entirely extraneous, spatial dimension, so that, to a denizen of our universe, they appear as points at which matter is being continuously created.

This is a scientific presentation of the Theosophical doctrine regarding *Laya-centers*, which are focal points through which spiritual energies are flowing into the physical plane, and

through which they are again reabsorbed into the planes of spiritual life, at the end of cosmic manifestation.

When this Nebula attains the point of unfoldment or *involution* downwards into manifestation where the re embodying Soul of the former World that *was* has sufficiently entered into it, it begins to rotate by an energy inherent in itself, similar to electromagnetism and flowing forth from the invisible spheres of being, it becomes endowed with motion, both circular motion and motion through space. (4)

The Nebula drifts from the place where at first it became endowed with motion, the guiding impulse of its own Karman directing it here and there towards its appropriate place in the cosmic spaces, until it finds its cosmic "home," as it were. Through the cycling ages it gradually gives rise within its very substance to the individual suns and systems of suns, each one of which goes through a similar process — as to the general pattern of it — except that it is on a smaller scale; suns being cosmic intelligences, or Spiritual Entities of a smaller degree as compared with the Cosmic Being inhabiting a Galaxy as such. Thus it would be necessary to discriminate between a Nebula giving rise to a whole Home-Universe or Galaxy, and a Nebula giving rise but to one Solar System, out of the billions which form a Galaxy. The general pattern is the same; the scales of magnitude differ. Many Galaxies assemble in groups, forming Super-Galaxies. Can this process extend still further? Why not?

In this again the Esoteric Philosophy meets Modern Science. In the words of Dr. Forest Ray Moulton, the permanent secretary of the American Association for the Advancement of Science, in his remarkable work *Consider the Heavens* (pp. 300, 330):

The essential units of which we are composed are molecules and chains of molecules. Our life processes are

expressed in terms of their properties, our thoughts are conditioned by their interactions. But perhaps in the infinite series of cosmic units there are others which play the role of molecules, in living organisms. Sub-electrons of the hundredth order may be the molecules, so to speak, of conscious beings which live through a million generations in what to us is a second of time. And super galaxies of the hundredth order may similarly be the molecules of conscious beings whose life-cycles consume unimaginable intervals of time. . . . Let us, therefore, once more assume the existence of intelligent beings whose constituent elements — whose atoms, so to speak — are galaxies or super-galaxies of stars. Their life-cycles are measured in millions of billions of years, for such periods of time are required for important transformations of super-galaxies of the higher order, which are for these beings only the cells in their bodies or the corpuscles of the blood which circulates in their veins. . . . For these beings the galaxies which we know are only electrons or protons whose gravitational expansions and contractions and whose oscillations in form are expressed vaguely in wave packets. . . . For them the galaxies are the primary elementary units in a chaos out of which by statistical averages a considerable degree of order emerges in the super-galaxies.

Is this scientific imagination? No. It is a statement of actual esoteric reality, and merely voices in scientific terminology an age-old teaching of the Ancient Wisdom.

COMETS

What about comets? (5) Comets play a very important part in the Universe, a part hardly suspected by Science. They are worlds in

the making, planets in the making; one of the first stages in their evolution or re-embodiment. More accurately, some comets are planets in the making, and some others are solar systems in the making. Comets, after passing through many and various stages and grades of evolutionary growth in constantly increasing materiality, ultimately become the globes that fill the stellar spaces, suns and planets.

First a nebula appears — we are speaking now of the formation of a solar system or of a planet of a solar system, not of the nebula out of which a whole galaxy with billions of solar systems is formed — then this nebula begins to whirl, similarly to the nebulae which give rise to whole galaxies; ultimately this primary condensation of extremely ethereal substance rushes into the cosmic deeps, seeking its former home. It is attracted by one or another part of a galaxy, such as our galaxy, magnetically drawn to this or another sun, its former chief in a preceding embodiment.

Once caught in the gravitational field of the sun to which it karmically belongs, it gradually settles into a more or less regular orbital motion around it. Its developing vital fires act upon the cosmic dust — the darker matter — in that locality of cosmic space, aggregating it together, vitalizing it anew. The comet then passes through another state of nebular evolution. (6)

As the ages roll by, out of this nebular phase arises either the central Sun of a solar system with its planetary bodies, or a group of solar systems, according to the scale we may be considering. It will be seen, therefore, that while the Esoteric Philosophy agrees with much that modern astronomical research has established through painstaking labor, it nevertheless does not look upon the planets as having been thrown off by the condensing Sun, or as having been produced by accidental collisions or close approach

of two stars; nor does it recognise the theory that the suns, stars, and certain nebulae are centers of tremendous heat, in our sense of this word. It looks upon all the processes of "creation" as taking place with grades of matter extremely more ethereal than anything we know of on Earth, involving electro-magnetic phenomena on a cosmic scale, which produce certain visual appearances to the observing eye.

It is thus, according to the ancient teachings of the Esoteric Philosophy, that great aggregations of solar systems are born, evolved through untold ages out of an original nebula which is but the initial stage in the process of re-imbodiment of a Cosmic Entity. Myriads of solar systems, hosts of suns are evolved from the Cosmic Matrix of Being. (7)

And let us remember that each Sun, each Star, is but a cell — perhaps only an atom — in the complex structure of the Cosmic Organism to which it belongs. This thought alone establishes the infinite unity and correlation of everything that is, from the infinitesimally small to the infinitely great, from the electron to the galaxy and beyond.

FINAL DISSOLUTION OF A WORLD

And now there remain a few words to say regarding the final dissolution of a Sun or of a Solar System. The end of its evolutionary cycle of life is a moment when, its purpose and mission having been accomplished, its psycho-magnetic and spiritual energies are released, and its essence is withdrawn into the Cosmic Monad or Soul. Such is the end of man's incarnation at the moment of physical death. Such is also the end of a cosmic system at the moment of its physical dissolution.

It is the teaching of the Esoteric Philosophy that what is known to modern astronomy as a "Nova" — a star that suddenly flames up,

reaches an apex of intense brilliancy, and gradually fades away, either entirely or partially — is the final explosion, we might say, of a cosmic system, at the end of its career on this physical plane of manifestation. Sometimes this process is sudden, sometimes more or less gradual. This teaching is well illustrated by successive pictures of the expanding nebulous ring around the "Nova" of 1918 in the constellation of *Aquila*. It shows the gradual resolving of a cosmic system, undoubtedly with planets of its own, into a nebulous mass which resembles the stages through which a system passes in the period of its gradual birth. It is also very remarkably illustrated by the famous "Crab" nebula in *Taurus*; this nebula has been identified with a "Nova" noticed by Chinese astronomers as far back as 1054 a. d.; since that time it has been expanding at a considerable rate forming a widely spread nebulosity still in a process of expansion and diffusion.

We have also a large variety of so-called Planetary Nebulae which show a central star with a vast spherical luminous atmosphere surrounding it. The latter is supposed to have expanded to its present size, according to present-day views. Among these are the Planetary Nebula in *Andromeda* and the Ring Nebula in *Lyra*, which has certain peculiarities of its own. However, it is more than probable from the standpoint of the Esoteric Philosophy that the famous Planetary Nebulae, at least a few of them, might be stages in the gradual formation of a solar system, instead of stages of dissolution. Both possibilities should be kept in mind until more definite knowledge is at hand.

According to the ancient teachings, exploding stars are thus but a stage in the gradual re-absorption of a system into the inner spheres of being, the superior planes of that universe — in other words, the *dis-embodiment of a Cosmic Entity*, leaving behind it a mere physical structure in gradual disintegration, minus the spiritual invigorating Fires of its "Soul," that structure then

returning into the state of undifferentiated matter, from which we started the outline of these teachings.

From Atom to Cosmos, from the world of the sub-atomic to the super-galaxies and beyond, the Universe is an endless Ladder of evolving Life. Everything unfolds, everything grows, everything changes constantly, cycling through the portals of renewed birth, and into the portals of seeming death, which is but a sleep and a rejuvenation. There is no Death, for Life is Universal and ever-enduring, and what men call Birth and Death, from an atom to a cosmos, are but two phases of Cosmic Being, tides which come and go on the shores of Cosmic Life.

As written by Dr. G. de Purucker, Leader of the Theosophical Society, in his important work *The Esoteric Tradition* (pp. 156-7):

. . . our physical World, including stars, suns, planets, etc., is but the outer shell or garment or veil of an inner, vital, intelligent aggregate of causes, which in their collectivity form or rather are the Kosmic Life. . . . The Kosmic Life is in very truth the Ineffable Reality behind all that is, within all beings and things that are. . . . The World Universal, Space Universal, is full of gods, "sparks of eternity," links in an endless causative chain of cosmic intelligences that live and move and have their being in the vast spaces of Infinitude, precisely as we do in our own Home-Universe on our own smaller scale.

Everything that is, lives in something greater than itself; and in its turn is the enfolding structure of smaller lives which make it up. The electron lives in the atom; the atom lives in the molecule; the molecule lives in the cell; the cell is but an integral part of the organ it helps to build; the organ lives in the body corporate of the evolving organism; the organism is but a part of the kingdom to which it belongs; the kingdom, such as the human kingdom, for

instance, is an integral part of the planet upon which it lives; the planet is a member of a large family of planets and lives in the Solar System to which it belongs; and the Solar System is but one of a group of such systems; and the group is but a fraction of the Galaxy wherein it lives. Millions of galaxies form some still greater system, beyond the comprehension of even the greatest minds among men. And each unit, from the atom to the cosmos, is a conscious unit, evolving within the consciousness and the vital streams of the greater unit of which it is a part. And through this beginningless and endless hierarchical gradation of evolving Life there flows but One Cosmic Consciousness, there beats but One Cosmic Heart of Being. Man has within himself a droplet of that Cosmic Consciousness, and his heart beats in unison with the Heart of the Universe. The Fire of Cosmic Life courses through his being, and the music of the spheres resounds in the depths of his spiritual soul. Ally yourself in the silence with your spiritual self, the Starry Spirit dwelling in your heart of hearts; seek it — bring it out, and in due course of time, when awakened into fulness of manifestation, your consciousness and your understanding will outreach the most distant galaxies in the deeps of Space.

The Theosophical Forum

EMERSON, THE SAGE — *John P. Van Mater*

The enumerating of Emerson's views of life as set forth in his essays might be compared to the setting forth of a whole philosophy. It is quite a task. For not only are his essays numerous, but they contain in almost every line of every page, ideas so conducive to long and thoughtful meditation, thoughts so cosmic in their scope, that indeed a complete carrying out of their chain of reasoning would be endless. Scattered throughout all his essays are those fundamental truths which underlie both Universe and Man, and which in any true philosophy form its background and at the same time its source of inspiration. It is a question of "Seek and ye shall find"; but this for the sincere student constitutes his true delight. Here in this limited space we can merely point to some of Emerson's fundamental thoughts. These, it is hoped, will entice the interested reader to pursue the inquiry further.

Predominant in all his essays stands out the principle of essential unity. "Each particle is a microcosm, and faithfully renders the likeness of the world." (1) Man "learns that going down into the secrets of his own mind, he has descended into the secrets of all minds." (2) ". . . the Deity in me and in them derides and cancels the thick walls of individual character, relation, age, sex, circumstance, at which he usually connives, and now makes many one." (3) To Emerson, as to every true Theosophist of any era, Brotherhood was a fact and not a belief. And this principle of Brotherhood was universal, extending throughout all, unifying everything whether great or small. For the Universe, and Nature, and Man, are of spiritual origin, and the divine manifests in each part, no matter how minute.

Because man is of divine origin, he is given a promise of new hopes, a new destiny. "Bid the invaders take the shoes from off their feet, for God is here within." (4) "Life is a progress, and not a station." (5) "Once inhale the upper air, being admitted to behold the absolute natures of justice and truth, and we learn that man has access to the entire mind of the Creator, is himself the creator in the finite." (6) Think of the infinite possibilities Emerson puts within the reach of man in the above quotations, when he states that the only real gain, the only real compensation in life, is an ever expanding consciousness. Think of the clearness of his vision of each part of the Universe, which yet perceives further the fundamental concept of the unity of all into a great organism, each part acting upon and felt by the whole, but still retaining its own individuality as a self-evolving entity.

And to Emerson each entity was not a tool with which the Almighty plays as he sees fit; but each one possesses within himself the power of expanding through the use of his will and through the operation of the law of Cause and Effect. "Cause and Effect, the chancellors of God. In the will work and acquire, and thou hast chained the wheel of Chance." (7) "Nothing can bring you peace but yourself. Nothing can bring you peace but the triumph of principles." (8) And how did Emerson explain the source of the divine in each of us? "There seems to be a necessity in spirit to manifest itself in material forms:" (9) Hence, "Being passes into Appearance and Unity into Variety." (10)

To the average reader, the ideas expressed above are bewildering in their vast scope and revolutionary content. For Emerson was a cogent thinker, deeply mystical, and to one with no knowledge of occult truths it is necessary to use spiritual insight if he would penetrate to the heart of these teachings. But it is unfair to say that to the average reader he is incomprehensible. For Emerson himself has told of "the transcendental simplicity and energy of

the Highest Law." (11) "Abide in the simple and noble regions of thy life, obey thy heart, and thou shalt reproduce the Foreworld again." (12) For intellectual attainment is not the primary object to be considered. The first and foremost thing is to live just as much of the Law as you understand. Therefore, it is the duty of those understanding more, to practice living to the full extent of their knowledge. Anyone then of a serious and unprejudiced mind may read Emerson, fill his cup of understanding to the brim; and if he lives up to the ideals he has gleaned, still more understanding will be his.

The distance between Emerson's thought and that of most men of his time laid him open to charges of infidelity and obscurity; and his plea for the individual consciousness as against all historical creeds, bibles, and churches, brought about much controversy. But there was one stumbling block for all those taking opposition against him. This was the character and life of the man himself. Even those differing with his views, agreed on the point that in Emerson was a pure and lofty spiritual nature. Here was a man who practised what he preached, and no one was able to find fault with him in this respect. And inasmuch as his writings were concerned, Emerson was not given to defending his statements. He always remained serene and remote and never was drawn into discussion, thereby winning over many friends from the ranks of the opposition.

And what was there aside from his philosophy that could turn people against him? His character was fine and noble; he was everybody's friend and adviser, and he did not attempt to force his teachings on anyone, but merely made them accessible to all those wishing to partake of them. But there was this that was a source of irritation to many: his statements were piercing, and when, for example, he opposed the Church by taking its teachings at their true value Orthodoxy was disturbed. "No law can be

sacred to me but that of my nature." (13) "I am ashamed to think how easily we capitulate to badges and names, to large societies and dead institutions." (14) "All men's prayers are a disease of the will, so are their creeds a disease of the intellect." (15) Emerson wanted men to think, and not to accept blindly traditional truths just because their forefathers had done so. He did not want the young American scholar to become a "bookworm," reading, and accepting what he read merely because it was stated to be true. "Books are the best of things, well used; abused, among the worst." (16) Not that he wished men to become absolute non-conformists, but he wished each one to apply all of his faculties towards perceiving the truth before accepting any statement.

"The great difficulty is that men do not think enough of themselves, do not consider what it is that they are sacrificing when they follow in a herd, or when they cater for their establishment. They know not how divine is a Man. I know you say such a man thinks too much of himself. Alas! he is wholly ignorant. He yet wanders in the outer darkness, in the skirts and shadows of himself, and has not seen his inner light." (17)

The above is the pith and marrow of his essay on "Self-Reliance." It is because Emerson recognised the possibilities of the inquisitive American mind, and voiced his support of their individuality in his oration, "The American Scholar," that he is said to have uttered "our intellectual Declaration of Independence." (18)

Truly, Emerson was a sage and a seer, and one who not only expounded universal truths, but lived them. To interpret Nature, not by the analysis of phenomena, but by detecting the higher, spiritual quality present in all physical things, was his keynote. His confidence in the "Oversoul," or the divine within every person, as a unifying agent, and his total magnanimity and trust

of all those he knew, is proof that he put his teachings into practice. Many were the devoted friends of his life, and numerous have been the attributes ascribed to him. Let us, therefore, hark to his words:

"A life in harmony with Nature, the love of truth and of virtue, will purge the eyes to understand her text." (19) "When in fortunate hours we ponder this miracle, the wise man doubts if at all other times he is not blind and deaf; for the universe becomes transparent, and the light of higher laws than its own shines through it." (20) "Let us be silent — so we may hear the whisper of the gods." (21)

STUDIES IN "THE MAHATMA LETTERS" — *G. de Purucker*

AVALOKITESVARA — THE DIVINE PRESENCE

(See Letter No. LIX, pages 343-345)

Mahayana Buddhism, which is mainly the form studied in Tibet today, as it has been for centuries past, recognises three distinct entities or hierarchical Logoi in the Buddhists' hierarchy of spirit. They are the Buddha Amitabha or the Buddha of Boundless Light, then Alaya, then Avalokitesvara. Alaya means the spirit-source of all, the garment or clothing of the boundless light; matter cosmic or infinitesimal in nature. Out of it spring the multitudinous rays, as rays of light leave the sun for instance; and each ray is itself a being.

Avalokitesvara does not mean "the Lord looking down," as Rhys Davids translates it, in direct violation of the elementary rules of Sanskrit grammar. *Ava* means "down," *lokita* is the past participle passive of the Sanskrit verbal root *lok*, "to see," hence meaning "seen." *Iswara* means "Lord." So Avalokitesvara means, paraphrased somewhat, "the Lord who is beheld everywhere," the cosmic light, the cosmic spirit, in which we live and move and have our being, whose very essence, whose very light, thrills and burns in every human soul, the spark within every human being. It is the immanence or the constant presence of divinity around us, in everything, seen down here in all its works, pre-eminently for humans in man, the most evolved vehicle of this divine presence.

Compare this wonderful Buddhist triad of Tibet, which is likewise our own, with the Christian trinity, degenerated and grossly transmogrified as this latter is through centuries of theologic and

scholastic mishandling because of misunderstanding. We find that Amitabha, the Boundless Light, corresponds to the Father in the Christian Trinity, the Cosmic Father or Abstract Spirit, the Pythagorean monad of monads, the source — in silence to us, and darkness to us — of all the monads emanating from it, streaming from it, born from it through the second logos, Alaya, the Spirit, which in original Christian teaching was feminine, the productive and generative power in nature, in spiritual matters as well as material, the mother of all, the fosterer of all, the preserver of all. And Avalokitesvara corresponds to the original third Person of the Christian Trinity, the Son, the cosmic or Third Logos. In Brahmanism the triad runs: Parabrahman or Brahman, Pradhana or Mulaprakriti, Mahat. When manifesting in individual monads such as a human being, the trinity is Amitabha, Atman; Alaya or Mahakasa, Buddhi; Avalokitesvara, Manas; for Manas is a direct ray from the cosmic Alaya, and our Atman, a direct ray from the Paramatman, the cosmic Atman, or Brahman or Parabrahman, or the Father.

Thus we have Father, Spirit or Holy Ghost, and Son — the original Christian trinity which the Latin Church finally succeeded in turning around into Father, Son, and Holy Ghost, making the Son or Logos precede the Mother from which it is born!

So, as the Masters pointed out in the last part of the letter we have been studying, Avalokitesvara has its temple in the Universe around us. It is the creative Logos, the Third Logos, the one closest to us as it were, from which we all spring as rays from a cosmic sun, which is the divine presence in nature, which is the divine presence in the human manasic part, emanating of course from Atman or Amitabha; for the Son, is he not the Son of his Father? Is not Manas through Buddhi the offspring of Atman? Is not Mahat through Alaya or Mahakasa or Pradhana — all names for the same thing — the offspring of Adi-Buddha, or if you wish

Paramatman or Brahman or Parabrahman?

So Avalokitesvara is the divine presence around us everywhere, which every sensitive human soul can feel continuously, day and night, even when we are in dreamland or when imbodyed on Earth. And that same divine presence is in the human breast, because the human breast, even the human body, is a microcosmical representation on this plane of the universe. No wonder the ancients had their Holy of Holies in every temple — originally a beautiful metaphor and a suggestive one when understood by those who came to the temple to worship the divine in purity of heart and with utmost reverence — wherein as in the universe, the divine presence dwells. It was a symbol; so that when one approached the Holy of Holies, shoes were cast from the feet, the garments were wiped, the heart was raised, the mind was elevated; for the worshipers in their reverent raising of their own spirits upwards entered into the Presence, even the Presence Divine.

That Presence is Avalokitesvara; and its ray in us through the Atman is the Higher Manas, illuminated by Buddhi, Buddhi in its turn infilled with the divine light of Atman. For the Father dwelleth in the Mother, and the Mother giveth birth to the Holy Son, and the three are one and yet three, each distinct from the other. Very simple to understand, but amazingly difficult to attain a deeper realization of that marvel! Yet it is wonderful to know and to strive upwards towards. Would that every man and woman realized that every human breast is such a Holy of Holies; for when the man, through his own self-discipline and cultivation of the highest within him by forgetting himself in service to all others, thus sinking the unit into the all, thus becoming even then relatively divine, becomes so overpowerfully strong that nothing less than It will ever satisfy, then he yearns upward, he opens the portals of his holier being, and the light streams in and fills the

Holy of Holies within his breast. Then the man is transfigured, he is a Christ, he is a Bodhisattva, for the time being.

That was the effect of successful initiation, just that. Sometimes the aura of the event remained with the man for days, it may be weeks, and his very body at the time was surrounded with light. He was spoken of as being clothed with the solar splendor, the sun being a symbol of Atman, as he is in his kingdom; and our own inner God being the sun, the inner God of our own divinity, our Father in Heaven, that ray from the cosmic Avalokitesvara.

I think it is just here that we find the reason why the Tibetan esoterics and mystics, Initiates, and the common people — by that I mean the mass of the people, the hard working, kindly, good-natured, loving, aspiring men of the multitude — why they all look upon the Bodhisattvas with deeper reverence and a more fervent love than they do even upon the Buddhas. For the Buddhas have achieved, they have left these spheres. Behind them remains their glory as a spiritual influence. But the Bodhisattvas are still men, not yet Buddhas, men whose life is consecrated to making Avalokitesvara a living power in the world through themselves. This is why it is the Bodhisattvas that the multitudes love. They deeply revere the Buddhas as having gone on and shown the way, but they love with an exalted human devotion the Bodhisattvas who remain behind with arms outstretched to help in pity. No wonder they love the Bodhisattvas, for he who brings Avalokitesvara to live in this Holy of Holies in the human breast, becomes more than man. No wonder he is loved and revered and trusted. I think these thoughts are beautiful beyond description. Their sublimity does not blind us, for it is like divinity clothing itself in human habiliments, in human apparel, and therefore becoming understandable to us humans. It is like seeing humanity clothed with divinity. The Bodhisattvas are not so abstract, so seemingly

far away, as are the Buddhas.

So true is this psychology that to it is due, to it alone I believe, all the success of early Christianity, that it taught the very ancient doctrine which had become almost forgotten in the so-called pagan world, and it was this: that a man lived who had been infilled with divinity, and that he came amongst us and taught and showed the way and loved us all so greatly that he laid down his life and all that was in him so that others seeing might follow on the path — the typical Bodhisattva, the typical Christ. I think *that* one thing alone captured for Christianity those who joined the Christian Church.

But how very old is this doctrine of beauty and inspiration! The Christians received it from the Orient. It is far older than the so-called enduring mountains, for when they were still sea-slime, not yet having been raised, these doctrines were taught among men in other continents, in other ages, in other Root-Races, these same wondrous teachings of cosmic origin.

See the difference between the Christian theological idea of Avalokitesvara as wrongly translated by Rhys Davids and others as being the "Lord who looks down," something "up there" and apart and away, as compared with the real meaning: The Lord here amongst us, the Lord of pity, human and yet divine, the Divine Presence surrounding us everywhere, which makes the human breast recognising this the human Holy of Holies.

Christians too have that intuition. Let me close with a poem that illustrates the point and which I learned when I was a boy. I have several times recited it here. It was written many years ago by a Christian clergyman, and I think I quote accurately:

A Parish priest of austerity
Climbed up in a high church steeple

To be nearer God, so that he might
Hand down God's word to his people.
In sermon script he daily wrote
What he thought was sent from heaven;
And he cast this down on his peoples' heads
Twice one day in seven.
In his age God cried: "Come down and die."
And he cried out from the steeple,
"Where art thou, Lord?" And the Lord replied,
"Down here among my people."

The Theosophical Forum

"THE SKIN OF THE EARTH" — *Martyn Witter*

As one looks back to the theosophical literature of the latter part of the nineteenth century one finds often very stimulating articles. One such appeared in *The Path* of October, 1889. It was called "The Skin of the Earth." (1) Its author without question must have seen the things he writes of, for his descriptions are too exact and philosophically accurate to be otherwise. In articles of such a character the author often revealed truths of his inner experiences that would never have appeared in such a dramatic form in mere articles on philosophy.

The manner and setting by which the author introduces his subject is unimportant and may be even fictional. However the philosophical implications contained in his description of the Earth are most revealing.

As the story runs, he was gazing upon the revolving mass of the earth as from a distance. This globe in miniature was covered with hosts of small creatures whose encircling movements caused the sphere to revolve. Thus the author was evidently seeing the entities composing the life force of the earth, i. e. the pranic force of the earth. With the eye of a seer he could see that the whole globe was filled with these same creatures who were constantly coming from the surface and moving to the center along well-defined magnetic lines of force. No description of the actual direction and location of these lines was given, for this is reserved for esotericists. The beings which moved in these magnetic lines of force were of every color and form; some were like star-blossoms of the sea while others appeared to be similar to man himself. They all throbbed with an interior pulse of light while their pure tints waxed and waned. Here we see that they were

developed entities with well-defined cycles in their auras. In their real essence they were centers of energy around which light condensed. Indeed, they were vehicles for the energy of the sun. There was a constant progression of type and form. Some were very primitive while others were well progressed and on the very verge of self-consciousness. The more progressed ones had larger orbits and many satellites circling about them.

Let us look for analogies in our own solar system. These systems all owed obedience to an interior Power which expressed itself by shedding rays upon all. Each of the systems composed of these little creatures existed for the service of the rest, thus complementing and sustaining each other as they worked in their labors of love and devotion. As mentioned before, they assisted the earth in its revolutions upon its axis, and in addition they guided it in its orbit. Also as they grew they stimulated the latent spark in the metals and assisted all the underworld growth as the flame awakens other flames.

The author goes on to say that the orbit of these docile and beautiful creatures made a passage to and fro through the Mystic Wall of the earth. Thus their duties were *upon* the earth as well as *beneath* its surface, and in reward for the faithful fulfilment of their functions they were lifted continually into higher service and form.

Now not all was well with the beautiful workings of these faithful beings. There were other beings on this globe who built cities and waged wars. The thoughts of the two-legged creatures seemed for the most part like a dark mist full of noxious vapor which deadened while it chilled. *Verbum sapienti!* Many of our faithful beings were paralyzed and some even became servants of this baleful mist formed from the thoughts of men. This created a disturbance that checked the orbital revolutions but still the

whole throng held together as some huge iridescent heart that went on throbbing in the gloom.

Certain locations upon the earth were worse than others. Where too many servants of the Law were stamped with the evil of men's minds they were no longer harmonious and became like an avenging host bringing plague and suffering to those responsible. Where whole continents became wicked the effect was so great that the circling globe was disturbed in its movement and moved off its axis. Then great sections of the earth were flooded and cleaned of their burdens. Sweet and fresh lands were left bare for those who were servants of the Law. Turbulent waters and sinking lands were left for those who had struggled, with their magic, to be little rulers of the Universe. This is the reward of those who strive to serve Nature and those who would be little rulers. No puny man can pit his will against the surges of Nature and long endure. Those beautiful rivers of lives, that so faithfully pass from the inner to the outer skin of the earth and back again in their whirling cycles, cannot for long be burdened by man. Let man sow seeds of hatred and strife for a long enough period and the surging lives of the invisible worlds will prove to be faithful guardians whose duties are to devour that which stands in their way. At such times, it is too late for men to fall to their knees and cry to the Gods for aid. Indeed, they who dare sow a whirlwind among the peaceful creatures of the Great Mother must reap the same.

BROADCASTS FROM SHANGHAI: VIII

A synopsis of the Theosophical teaching of Karman, the Doctrine of Consequences: that man is responsible for what he is and for what comes to him. This was given by Miss Inga Sjostedt last May 11th in the series of weekly Theosophical talks sponsored by herself and Miss Elsa-Brita Bergqvist, over station XQHB, Shanghai, China

Good evening, everybody:

Last Sunday the speaker explained the teaching of Reincarnation as it has been taught from immemorial times by our Elder Brothers, the Adepts, spiritual Teachers, or Initiates. This evening we must examine its twin-doctrine, Karman. As the speaker said last Sunday, Karman is the law of cause and effect, of action and reaction. The word "karman" is Sanskrit and means action, literally, but it is action which returns in the form of results to the actor. It is therefore the law of retribution, for Nature is essentially harmonious, and any disturbance of its equilibrium must be adjusted sooner or later. Therefore a man must always reap what he has sown, whether he like the harvest or not. According to the occult wisdom of the ages, nothing we think or do, nothing we feel or say, is lost, but forms the material out of which we build our future lives. The doctrine of Karman is a key to happiness, success and achievement. It gives us far greater responsibility than the Western idea of forgiveness of sins through prayer and repentance, which latter throws all responsibility on God — an illogical doctrine, if we give it any thought, for if a man, for instance, maims another man for life, or ruins him financially, or through some deliberate course of action causes him to commit suicide, not all the repentance in the world

or the assumed forgiveness of God can undo these things. They have happened; they cannot be changed. Nature's law of harmony has been violated, and according to the Secret Doctrine the man responsible must restore the equilibrium in this or another life on earth.

Karman explains the seeming inequalities of life. We are born poor or rich, according to our merits — in a favored or suppressed nation, as we deserve and whither our affinities draw us. We are born into the family, race, locality and age, to which we are psycho-magnetically attracted through our sins and virtues of many previous lives. Every thought we think today affects our future incarnation, because thoughts are energies, and no energy can be lost in the spaces of the universe — it must go somewhere — and where more naturally than back to ourselves who first sent it forth?

The doctrine of Karman has been wrongly understood by many superficial students of Theosophy. Some people, for instance, say: "If all that happens to an individual is just, and all his sufferings and misfortunes are his own doing, I need not help those who are in distress, because it is, after all, the just laws of Nature working." Such a heartless attitude is unforgivable and also reveals an ignorance of natural law, because compassion is a divine attribute and permeates all nature, and also because all living creatures are interdependent. No creature can live by itself and unto itself alone. Man depends for his life on the different elements — air, water, earth, etc. He derives his nourishment from the earth, and all the comforts and conveniences of life are created by communities of men like himself, who build cities and ply different trades so that the members of the community must depend on each other. If, then, life depends on a constant give and take among all the different creatures and elements that make up the world, how wrong it is to say that human suffering

should not concern us because it affects strangers and because it is the law of justice in operation! Each time we help someone in distress, each time we improve unfortunate conditions in the lives of people less fortunate than ourselves — our personal Karman adds to its store of good things for the future; but lest anyone think that there is merit in mere conventional duty, let me add that the most important element in a charitable act is the motive. As said before, thoughts are energies, and therefore motives are energies also, and as such they color our actions, making them noble and unselfish or cold and indifferent. Many a helpful gesture loses its potency for good because the motive is selfish and calculating — not generous and kind. The motive is of prime importance, and Karman acts accordingly.

Karman is not a special law governing human affairs only: it affects all creatures — atoms, elements, plants, animals, men, planets, gods, and supergods — all according to their various development and state of consciousness. Even the life of a man is governed by different kinds of karman. For instance, a man may suffer evil physical karman because he abused his body in his former life; he may be afflicted with an unfortunate psychic karman because he did not attempt to control his passions and impulses in his former life; he may be quick-tempered and psychically unbalanced, always torn by conflicting emotions and moods, and we are told about such a man that he was born "with an unfortunate character" — only the Theosophist would add, "with an unfortunate *self-created* character." At the same time such a man may have an excellent mental karman, because in his previous incarnations he applied his intellectual powers to deep studies and was eager for knowledge. In the present life, therefore, this man would have an exceptional mind and be given many opportunities to use it for some useful purpose, such as science, literature or mathematics.

Karman acts on different ranges. There is such a thing as individual karman — that is, each individual is affected by his former thoughts and deeds in a purely personal way. Then there is family karman, where a certain group of individuals is brought together through affinity and former bonds, and these individuals are all affected by the karman of the family to which they belong. There is the karman of a city or a village; there is also national karman which affects the group of people which constitute a nation, and finally there is the karman of all humanity, which no man can escape as long as he forms part of our earth-humanity.

National karman is effected when the same individuals who lived in the same nation thousands of years ago are reborn together, and through certain characteristics in common form the so-called national or racial idiosyncracies. Others, who were not of the same race in their former life, may be reborn into the new race because their natural tendencies and character are like those of the new race. And so, because of what a nation as a unit does in one life, that race must atone for or be rewarded for the next time the identical individuals are reborn together. This constitutes national karman, and so wars, revolutions, famines, conquests and successes in legislation are but the results of that nation's former activities. A soldier dying in the field of battle may not have a personal karman which pre-destined him to die before his time, but it was through his personal karman that he was born into the nation which was involved in a war, and because he formed part of this nation, his personal karman was overshadowed by the national karman which brought about his untimely death. And so it is with famines, commerce, different forms of government, and other things that affect a country, and through the country its individual inhabitants. Therefore, not only the thoughts of the individual, but the collective thoughts of a nation result in peace or war, wealth or poverty, for the

country.

The doctrine of karman must not be mistaken for fatalism. There are certain things which are brought to us through our past actions, but we can neutralize evil karman through personal effort and by changing our attitude.

An understanding of this doctrine, while loading a greater responsibility on the individual than the dogma of repentance and forgiveness of sins, at the same time opens up to our inner vision a vista of possibilities ordinarily undreamed of, for we can make ourselves what we will — beings of spiritual power and wisdom, conquerors of circumstances and personal weaknesses, or, if we so will, we can degrade ourselves to the level of the beasts. Because there is a center of divinity in us, no heights are unreachable, and because we live not one life but hundreds of lives in human form, karman is the doctrine of "another chance."

The Theosophical Forum

WHO ARE THE GODS? — *Leoline L. Wright*

A friend who recently attended an open forum meeting in the Temple at Point Loma said to me afterwards: "I noticed that your speakers referred several times to what they called "the gods." It astonished me. What did they refer to? Surely Theophists can't believe in Jupiter and his company of Olympic pagan deities?"

In giving an answer to this question one sees perhaps for the first time just how alien to the average Western mentality may be this idea of the beings who in the Ancient Wisdom are known as gods, or cosmic divinities. To many at first sight the idea may seem decidedly strange.

Yet there is little doubt that of all our teachings this of the existence of inner divine planes, builded of hierarchies or graded hosts of sublime spiritual beings, is one of the most beautiful and consoling. Because we are assured that our own inner spiritual natures are actually offsprings of these cosmic divinities. This is our spiritual heredity, in contrast to a so-called animal descent. Man is himself a god. He enshrines within himself a divine being who overshadows and guides and inspires its own child, the struggling developing human soul. And we, these human souls, when we shall have evolved out those divine powers and attributes now latent within us, shall then ourselves be full-fledged gods. It will become our privilege to shine upon and urge forward our own animal souls, which are our children and dependents.

After saying this, it is perhaps needless to add that these cosmic divinities of the Ancient Wisdom are not in any way to be confused with the popular conception of the Greek and Roman deities. These were originally but the personified forces of Nature,

corrupted in time as are all spiritual ideas by the vagaries of mass psychology.

The Cosmic Divinities of the Ancient Wisdom are of varied ranges of being and power. There are the regents or guiding spirits of the stars and planets. Other grades in the divine hierarchy comprise the architects of our universe, and those grand celestial beings whose nature is to embody and cyclically to set in motion the spiritual potencies and karmic trends which hold our universe in harmonious coherence as it swings endlessly through the illimitable spaces of space.

We are told that our visible sun is the luminous body of a god. And through this thought we can picture what is, from our human viewpoint, the essential nature of a cosmic divinity. It is a being which like the sun gives itself inexhaustibly throughout the cosmic manvantara so that every creature, great and small, within the cosmic body, may be infilled and nourished, protected and urged forever forward on its evolutionary path.

Another characteristic of a cosmic divinity, such as those which are embodied in the suns, is that it has the power of self-renewal at the inner fount of its own being, where it contacts higher and deeper and more universal sources of life even than its own.

Naturally, as with all our sublime teachings, the aspect that interests us particularly is their relation to ourselves and our daily problems. If a man or woman can feel that in obeying the behest of his own karman, however difficult, he is in his humble way working hand in hand with the cosmic divinities, his daily existence will be lifted at once to a higher and serener plane. How different the morning to one whose day is thus inspired and sanctified. Petty drudgeries or monotonous routines take on gradually the tempo of the universal rhythm. As time goes on the soul moves confidently forward in unconscious harmony with the

music of the spheres.

In the midst of change and turmoil let us often recall the shining Presences of the over-leaning gods. Let us lift up our hearts and minds daily to those deep inner spaces from which we may draw the breath of impersonal love, and thus become links between suffering humanity and the divine vitality of supernal order and peace.

The Theosophical Forum

ESOTERIC HINTS ON CYCLES — *G. de Purucker*

Some days ago it was brought to my attention that a comment had been made by a new member of the T. S., to the effect that he could not easily understand from whom came our sacred rules of calculating cycles and time-periods, as for instance, the well-known and very difficult time-periods used by the Brahmanas of India, and which are likewise ours.

So intricate is what I have to say that I hesitate, and yet will do my best. Intricate because of the manifold ramifications into which Nature herself runs or is divided; although her heart is simple, and the rules upon which these very ancient calculations are based are likewise simple.

KEY-NUMBERS OF THE SOLAR SYSTEM

These calculations upon which the Theosophical seer or prophet, as the ancients would have called him, may see the future if he is skilled and clever enough to do so, are not arbitrary. They were invented by nobody. They are based on Nature herself, and mostly on cosmical movements, specifically those of the planets. Here is the key which I will now give you, and attempt to explain in some detail. The secret numbers of these Hindu Yugas, which have puzzled the brains especially of so many mathematical Theosophists lie in a combination of the year of Saturn and the year of Jupiter expressed in Earth-years. There is your key.

The mistake constantly has been made by Theosophists of attempting to divide these numbers of the yugas by 7, and that is not possible, because the number 7 does not go into any of these key-numbers without leaving a remainder. 7 is the key-note of our Earth; 10 of the Solar System, and 12 of our Galaxy, which of

course includes our Solar System, and the latter includes our Earth.

The key-numbers are these: The year of Jupiter expressed in Earth-years is 12, i. e., 12 of our years make one year of the planet Jupiter. The Saturn-year expressed in Earth-years, or our years, is approximately 30. There are your two key-numbers: 12 and 30. Multiply these by each other, you have 360. $30 \times 12 = 360$.

I want to call your attention to one important fact of Nature, suspected by the most intuitive astronomers, but none as yet has succeeded in proving his intuition. It is that our Solar System is an organic entity, an organism, in other words an individual, as much an organism as is a man's body. All the planets of the Solar System, with the sun and our moon and other moons, are enmeshed as it were, forming a celestial machine so that they move in rhythmical or harmonic sequences. It is obvious that if this were not so, there would be no sympathy and no symphony, no harmony, in the movements of the bodies of our Solar System; but these bodies would be moving helter skelter, hither and yon; and we know perfectly well that they are not.

Our Theosophical mathematicians who have not yet been given this key have all been thrown off the track because of the fact that while the years of every one of the planets of the Solar System clearly prove that all these planets move synchronously together, as if they were enmeshed, wheels in a machine; yet the orbit of every one of these planets is not a multiple of some other lower orbital revolution or year. In other words, there is always, as it were, a libration, or as the astronomers put it — and this will illustrate — the year of Jupiter is really 11 and I think $88/100$ of our Earth- years, not quite 12. (You can see all these figures in any book on astronomy.) The year of Mars is not exactly two Earth-years, but 1.88, as I remember. (I may be a little off on these

fractions but they are unimportant to the point we are going to discuss.)

Now here is what I want to point out: It is these fractions putting the orbital times of the planets off any exact accordance with each other, which is a proof of the theory; because this shows that while all the planets are enmeshed together as it were, working synchronously and harmonically as a machine does with wheels interlocked, yet each planet itself is an individual, and has a certain liberty of movement. Keeping in mind this essential liberty or freedom we can more clearly grasp the following points: first, that the Solar System is an animate organism guided by intelligence; and yet, second, that each one of the planets, although working together with all the others in harmonic rhythms and in co-ordinate times, has just a little movement of its own, as it were edging each year a little farther on; so that as time goes on, the pattern of the planets changes; and this introduces the varied fortunes and destinies not only of mankind and of the inhabitants of the other planets, but also brings about the karmic changes and modifications of the Solar System. I weigh heavily on this point, because it is most important.

I want to call your attention to a few facts to show you what I mean about the rhythms, to prove that all the planets by their annual orbital motions — in other words the lengths of the planetary years expressed in Earth-years — are organically connected together.

Let us take the Year of Jupiter: Jupiter-year = 12 Earth-years approximately. Now mark: the Planet Mercury in one Jupiter-year has 48 of its own years, approximately, of course. 48 is 4×12 . You get your 12 coming in here again. You remember that I spoke of the key-numbers as being 12 and 30 — or 6, if you like. (1)

Now Venus has 20 years (approximately) to one Jupiter-year. This

20 is not divisible by 12, but if you will take a longer cycle, say the cycle of 360 (18 x 20) years, then 12 goes into that 30 times, doesn't it? Yes. Note that 18 equals 12 + 6 or half of 36, which is 3 x 12, and 36 is 1/10 of 360. I want you to see how these key-figures keep coming back, coming back. Every calculation you make in these interlocked planetary movements is divisible by 6 or 12, or 60 or 30 as factors.

The Earth of course has 12 of its years while Jupiter has one. The year of Saturn is 30 of our years. Now 12 goes into 30 2½ times. But that is not a very good figure, and we therefore see on working the thing out that we must take the larger cycle which includes both the Saturn-year and the Jupiter-year. This is the famous 60-year cycle known all over China, Mongolia, Tibet, Asia — all of Asia and of ancient Europe. What is this 60-year cycle? 5 years of Jupiter expressed in Earth-years. 5 x 12 is 60. Saturn-year, being 30 of our years, goes into 60 twice. So we then see that Jupiter makes 5 of its years while Saturn is making 2 of its years. The proportion or relation is 5 to 2, i. e., both enter 60 without leaving a remainder.

THE IMPORTANT 5040 CYCLE

Now then, we come to "a very difficult point," as some of our friends are always saying! The ancients in my judgment knew of the planets Uranus and Neptune, but they did not include them in their astronomical works. We Theosophists know why. It would be extremely interesting, but it would take me a week to explain this why. I will merely add that all these astronomical ages — which is what these Hindu yugas are — all these astronomical cycles and key-figures, are based on the calculated key-numbers of Jupiter and Saturn, 12 and 30, as factors. Yet a very interesting fact comes forth. How many Jupiter-years does the planet Uranus contain? I mean, one year of Uranus comprehends or includes

how many Jupiter-years? 7, practically exactly. How many Jupiter-years does the planet Neptune contain, in other words one Neptune-year? 14 Jupiter-years. If you are following these thoughts carefully, the conviction will grow upon you that the periodic times of all the planets are time-connected, connected by time-periods; and my own conviction is, although I never have had time to work this thing out, that some Theosophical mathematical sharp could go ahead and even find that the planets Uranus and Neptune would be included in still larger time-cycles.

One of the most important cycles mentioned even by Plato in his Dialog called *The Laws* is 5040 years. This figure is remarkable for several features, amongst which is that it is divisible by 54 different divisors among which are the key-numbers I have been speaking of this evening, to wit 5, 6, 12, 30, 60, and of course 36, 72, and 360; but what is noteworthy about this cycle of 5040 is that it is likewise divisible by 7, giving us the quotient 720 — in which we see the key-number 72 again, x 10.

Furthermore, this figure of 5040 is arrived at by multiplying by each other the simple arithmetical series of the first seven digits taken in order, to wit: $1 \times 2 \times 3 \times 4 \times 5 \times 6 \times 7 = 5040$. This remarkable number or cycle, so specifically mentioned by Plato in another connexion, was of course known to the ancient astronomers, astrologers, and mathematicians; and by using this figure or cycle, we find that the year-period of every planet, whether the sacred planets known to the ancients, or those including the others supposedly unknown to the ancients, to wit, Uranus, Neptune and Pluto, used as a divisor will divide into 5040 without remainder. In other words, 5040 is a cycle which contains the planetary years of all the planets in the Solar System, and thus links them up through having as one of its factors the number 7 — a most interesting fact, and one worthy of study.

THE FAMOUS BABYLONIAN CYCLE

I wish to call your attention once more to this 60. Remember that it is 5 times the Jupiter-year, Jupiter-year being 12 of our years, and two times the Saturn-year, the Saturn-year being 30 of our years approximately. It is $1/10$ of the Babylonian Neros of 600 years; and take the square of 60 and you will have the famous Chaldean or Babylonian Saros, 3,600 years. This cycle of 60 years is of course the root-figure of the famous so-called Babylonian sexagesimal method of reckoning, to wit reckoning by 60s; but as we know from Berosus, as he is called by certain Greek writers who have written about him and who have left us fragments of these Chaldean writings, the sexagesimal system of reckoning or of counting was an integral part of the same system that we know to have been common in Hindusthan since immemorial time. Berosus in the fragments left to us likewise informs us that the famous Hindu Yuga-figures, based on 4 3 2, were likewise as well known in Babylonia as in India. The sexagesimal root-figure of 60 is of course a factor of 4320 with various ciphers added according to the length of the cycle. One of the commonest time-periods known in Chinese writings is the mention of the cycle of 60 years: so many cycles of 60 years, and so-and-so lived and taught.

In connection with the number 5, I would also remind you that the Latin lustrum was a period of 5 years observed by the Roman State and held very sacred indeed. They also knew of the cycle of 60 years, i. e., one Jupiter year times five.

Furthermore, in India, the cycle of 60 years is constantly used in mathematical, astronomical, astrological and other computations, as they also use 6 and 12.

When you look into these matters, the facts are so numerous, so scattered all over the face of the earth, and among all races of

people and in all times, that finally as you study you are brought to the conviction that what we Theosophists teach is true, that there was once a Universal Wisdom-Religion of mankind which was universal over the earth.

THE CIRCLE OF 360°

It is from Babylonia, but originally from India, that we of the West got our manner of dividing the circle into 360° — each degree consisting of 60', the latter of 60". Does anyone know the reason why the Babylonians chose the number 360? Why didn't they choose some other number? I will tell you: The number 360 arises from an old Theosophical teaching of the ancient God-Wisdom of mankind, to the effect that the true number of days in a year is 360, the cycle of the seasons. But as the ages passed, and due to the fact that the Earth is an individual with a will of its own, it does things at times, not exactly disobeying the mandates of the system in which it is enmeshed, not disobeying Father-Sun as the Lord and King of his realm, but determined, as are the other planets, to move a little on its own. So that as the ages pass along, the mean of 360 days in a year for our Earth, the daily rotation of the Earth making the day and night, quickens a little bit for a while, and the days become 361, and then 362, in a year, and then 363, 364, and now at the present time our year consists of 365 days and a fraction, $\frac{1}{4}$. Then this libration returns to the normal 360 days in a year; and then the Earth slows down its rotational period, so that for ages — how many ages is a question that does not enter into the picture here — any one of our Earth-years is less than 360 days: 359, 358, 357, 356, until it reaches the end of that libratory cycle. Then it begins to swing back; and thus the Earth continues to follow this libration.

That is why the Babylonian initiates, getting their ancient wisdom originally from India, divided the circle into 360 points or

degrees; because in their Temple-crypts and Initiation-chambers they were taught that the true Earth-year consists of 360 units or days — and it actually does. Thus the circle became adopted in mathematics as divided into 360 points, cogs, degrees — call them what you like. It is a wheel, a wheel of time, but applied to the Earth as it does actually.

DAWNS AND TWILIGHTS

But notice how the Earth-year divided into days is enmeshed again with the other planetary cycles: Jupiter-year 12 of our years Saturn-year 30 of our years. 30×12 is 360. Marvelous that the number of days in our year is exactly the same as the Saturn-year and the Jupiter-year multiplied by each other. You know in the Jewish Bible there is a passage saying: "And thy year shall be threescore and ten" — 70. Well, actually this is an Oriental way — Jews were Orientals — of using a round figure for 72. You know how they make 72 out of 60, which is 5 Jupiter-years and two Saturn-years? What is $1/10$ of 60? 6. Put down 6 for the Dawn, another $1/10$ for the Twilight: $6 + 60 + 6 = 72$. In the same way you will see in the Diagram that there is a Dawn and a Twilight for every cosmic period; and the dawn and the twilight are in all cases of relative equal length, and in all cases are $1/10$ of the cycle period. $1/10$ of 4000 is 400 — the Dawn; $1/10$ of 4000 is 400 — the Twilight. In the Treta-Yuga there are 3000 *Divine* Years, please, not our Solar years: $1/10$ of 3000 is 300 — the Dawn; $1/10$ of 3000 is 300 — the Twilight. The next is Dwapara-Yuga. It is 2000 *Divine* Years; $1/10$ of that is 200; $1/10$ of 2000 again is 200 — the Twilight. And so for the last of the Yugas, the Kali-Yuga, 1000 *Divine* Years in length; $1/10$ of it, 100 — the Dawn; another $1/10$ — 100, the Twilight. A shorter way, of course, is to take $2/10$ or $1/5$ to find the combined length of the Dawn and Twilight.

YUGAS	DIVINE YEARS	SOLAR YEARS
Dawn	400	144,000
Kṛita-Yuga	4000	1,440,000
Twilight	400	144,000
	4800	1,728,000
Dawn	300	108,000
Tretâ-Yuga	3000	1,080,000
Twilight	300	108,000
	3600	1,296,000
Dawn	200	72,000
Dwâpara-Yuga	2000	720,000
Twilight	200	72,000
	2400	864,000
Dawn	100	36,000
Kali-Yuga	1000	360,000
Twilight	100	36,000
	1200	432,000

DIVINE YEARS: 12,000; SOLAR YEARS: 4,320,000

OTHER INTERESTING FACTORS

Now a further interesting thing about this 72: a human being is a child of the Universe, and being its child, its laws are his. Its life is his. Its pulsations are his. The rhythmic periods in Nature must therefore work through man. One of the greatest rhythmic pulsations in man is the pulse-beat. Do you know what the average pulse-beat for a human being is? 72. 72 beats of the human pulse every minute, or if you like, it is 60 pulse-beats plus the increment of beginning plus the increment of lapsing into the next pulse-beat. 60 plus 12; $5 \times 12 + 12$. You see how these

numbers recur? 72 is twice 36. Well, now you remember 360 there, and 36 is 6×6 . You notice how the numbers thus keep coming, whatever you do. 6 goes 12 times into 72 human pulse-beats in a minute. 6×12 is 72.

Here is a very interesting factor. In enumerating the years of the different planets I intentionally did not speak of the Moon, for your minds are so enwrapped with the astronomical teachings of the West in which the Moon is not considered a true planet, that I did not want to confuse you. Yet so thoroughly does Nature work throughout, after the same laws, the same rhythms, the same principles, the same pulsing, that do you realize that what the astronomers call the minor Saros, that is the eclipse-cycles, the cycle of years in which the eclipses begin again and repeat themselves nearly as they were before, is 18 years and some 10 or 11 days? We can here drop the days. 18 years: 6×3 , 12 plus 6, $\frac{1}{2}$ of 36. I want to call your attention to these key-figures, which keep coming to the fore. Furthermore, this is not all. Do you know how many is the average number of eclipses in this minor Saros of 18 years — Solar eclipses and the eclipses of the moon? The average number is 72.

Here is a very interesting fact. The sun-spots, according to modern astronomy, come, or the maximum is reached, every 11 years and a fraction, 11 and $\frac{1}{3}$ or something like that. But here again we must allow for librations; and taking everything together, all factors included, and the way the Solar System has all its bodies enmeshed together like the cogs of wheels, yet each having a little independent movement of its own, which in time changes the pattern — a very interesting fact is that the sunspots coincide with the perihelion of Jupiter. Now explain that if you like. In other words, Jupiter like all the other planets makes its annual tour or orbit of revolution around the sun, completing it in 12 of our years. But in doing so at one point of its orbit it is

closer to the sun, closer than it is at any other point of its orbit. That is what they call perihelion, close to the sun. When the perihelion of Jupiter takes place, the sunspots reach their maximum, roughly every 12 years, between 11 and 12 years. And it is a remarkable thing — I would wager almost anything upon it — that if we could collect the statistical data we would find that outbreaks of disease and other afflictions of mankind will coincide with these 12-year periods, sun-spot maxima or minima. I saw a calculation of that kind some time ago in which it was shown that epidemics of spinal meningitis broke out at every sunspot maximum. In other words when the planet Jupiter was closest to the sun, every 12 years or so.

Do you know in modern Western astrology it has been customary to speak of the planet Jupiter as the great benefic, and the planet Saturn as the great malefic. But I think that this is pretty near to being nonsense. I will give you one instance showing how this idea is a distortion of facts. I read some time ago a very interesting statistical discovery made by a French writer who showed that whenever the planet Jupiter was in its nodes as the astronomer phrases it, crimes of violence increased enormously. Whenever the planet Saturn was in its nodes, crimes of violence were noticeably few. Now that is easily explained. Jupiter excites, urges people to do and to move. Saturn calms, brings balance and steadiness, the truth being that every planet has its good side and its bad, every planet can be a benefic or a malefic, according to its action. This is true astrology, and all that we have been talking about is true archaic astrology or Theosophical astrology.

THE DIVINE YEAR AND THE YUGAS

I want to call your attention to the Diagram again: a Divine year is the name given according to this system of archaic calculating of time-periods to 360 of our years or Solar years. Therefore 12,000

Divine years in Solar years are 4,320,000. Made up thus: the Krita-Yuga of 4000 Divine years — 1,440,000 Solar years, with the Dawn and Twilight thereof — a Krita-Yuga is 1,728,000, (and isn't 1728, the cube of 12?). The Treta-Yuga is 3000 Divine years. Multiply this by 360 to turn it into our ordinary Solar years, and you get 1,080,000 years. Add on the 2/10, the Dawn and Twilight, and you get 1,296,000 years.

Here on the Diagram you get this series of 144, (the square of 12). Isn't it in *Revelation* of the Christian New Testament that it is said that the sealed unto the Lord, or the saved, shall be 144,000 in number? You see here again the mystical figure, 144, that is the main point. You can add and take off ciphers according to the time-period or cycle you are discussing. It is the head of the series of figures that is important — 144. The square of 12, twice 72, 4×36 , and so forth. So we go down to the Dwapara-Yuga: turn it into Solar Years, with a Dawn and a Twilight, and you have 864,000; then Kali-Yuga, the age we are in now called the Iron Age, adding to it its 2/10 for Dawn and Twilight, you have 432,000 years. This system, or mathematical calculation of adding an opening and a closing of every age-period or cycle which the Hindus call the Dawn and Twilight, is an extremely archaic method of calculating based on Nature herself, for she always introduces everything she does with a preparatory period, whether of time or phenomena, or both, or whatever you may be dealing with. All diseases come with the Dawn of preparation. Then there is the disease. Then there is the Twilight of the disease as it fades out. So to get the full time-period of the cycle you must know not only the length of the cycle itself, but its Dawn and its Twilight, its beginning and its end.

You see, Companions, there are just simply so many sides to a study like this, you could go on interminably talking just as long as your recollection will bring back to you facts which you have

garnered from Nature.

THE PYTHAGOREAN TETRAKTYS

I want to point out to you what is called the Pythagorean Tetraktys. It was so holy amongst the ancient Pythagoreans that they swore oaths by it, and a Pythagorean would no more violate an oath sworn by the Holy Tetraktys than he would — it was an oath that simply could not be violated. Why did they think it so holy? They gave the answer: because it adds up to 10. It was 4 plus 3 plus 2 plus 1 = 10. What is 1/10 of 10? 1. Add 1 as a Dawn; add another 1/10 of 10 as a Twilight, and you will have 12. They sometimes figured the Pythagorean Tetraktys as thus, one sphere, then two spheres, then three spheres, then four spheres.

1 plus 2 = 3, + 3 = 6 + 4 = 10. Don't you see the Pythagorean Tetraktys, 4, 3, 2, 1, in the Yugas in their numerical order of the cycles? The same figures, the same system of counting, the same fundamental idea. No wonder the Pythagorean philosopher swore by the Holy Tetraktys, because it was equivalent to saying, "I swear by Holy Zeus," as if he had said, "Father and Lord of Life, of whom my own life is a spark, truth of truth, and life of life, real of real," — it was an oath that no Pythagorean ever dared to violate. It was like swearing by one's own Higher Self.

OTHER CYCLES

Now, here is another thought. Have you been examining the night-sky for the last year or so? If so, you will have noticed that the planets Saturn and Jupiter have been in near conjunction for some time, and will soon begin to separate. (2) It was the

conjunctions of Jupiter and Saturn which the ancients taught always began notable changes and events on our earth. (Elsewhere in the Solar System too, but we are more naturally interested in what is taking place on our Earth). Just when such a happening will come again, with the other planets as now they are, i. e., as they will be on May 11th, of this year 1941, would require intricate calculations. It may be thousands and thousands of years before the planets all return to the positions they *now* hold in the sky; but the two planets, Saturn and Jupiter, because 5 years of Jupiter equal 2 years of Saturn, will be, so far as those two planets are concerned, again passing each other in the same Zodiacal House, or in conjunction there, in 60 years: 5 years of Jupiter = 2 of Saturn: think it over, do not forget these key-numbers.

There are almost innumerable cycles of varying lengths, and of greatly differing importance, which were known to the ancients as well as to the few moderns acquainted with esoteric chronology and cyclical computation. As for instance, there is the cycle well-known in modern astronomy called the Precessional cycle of 25,920 years, divisible by many if not all of the factors or keys already alluded to, and which in its influence on the destiny of mankind is one of the most important.

Then, there is the so-called great Orphic cycle of 120,000 years, which of course is obviously 1/3 of the still greater and immensely important cycle, because dealing with racial periods, to wit, 360,000.

THE KEY-NUMBER 72

With reference to the key-number 72, which itself of course is a cycle of varying length depending upon the ciphers added to it, the following series contains cycles, every item of which on the list is important and well worthy of study by those interested in

chronological or cyclical matters:

$$72 \times 10 = 720$$

$$720 \times 2 = 1440$$

$720 \times 3 = 2160$ — an extremely important cycle this because entering into the computations of the precessional cycle mentioned above, for there are 12 such cycles of 2160 in the Precessional cycle of 25,920.

$$720 \times 4 = 2880$$

$720 \times 5 = 3600$ — a cycle well known to historians and chronologers as the famous Babylonian Saros, which again multiplied by 100 or 10^2 equals the racial cycle mentioned above of 360,000.

$720 \times 6 = 4320$ — again a most famous cyclical key-number, well known in ancient Hindusthan and in Babylonia and in the esoteric or occult schools of virtually all Asia and ancient Europe, a cycle which with zeros added is an even more important human racial cycle than is the 360,000 above mentioned.

$720 \times 7 = 5040$ — another extremely useful, interesting, and important cyclical period, with or without extra ciphers to define shorter or longer periods, and mentioned even by Plato in his *Laws*, as already stated.

The ancient initiate-astrologer-astronomers rarely failed in their prophecies, for it was a relatively perfect knowledge of the interrelations of planetary movements and of other cosmic time-periods, both great and small, which enabled them to predict with an accuracy of Nature herself events which they knew would take place because of their knowledge of what had taken place in other preceding cycles of time; and all cycles are repetitive, bringing more or less the same train of events or sequences as happened before, when these cycles begin anew. It should be

noted that this is in no sense fatalism; for every cycle, although repeating itself constantly in time, due to what modern astronomy calls the irregularities in planetary and other celestial movements, is never precisely or exactly what the preceding cycle was; for every such cycle beginning anew its course always differs in less or greater degree from its former courses.

FOOTNOTE:

1. "In all the old Sanskrit works — Vedic and Tantrik — you find the number 6 mentioned more often than the 7 — this last figure, the central point being implied, for it is the germ of the six and their matrix." — *The Mahatma Letters*, p. 345. ([return to text](#))

2. Actual conjunction was on May 8-11, 1941. Note that this talk was given in March, 1941. Saturn and Jupiter are now, August, 1942, rather more than one sign apart. Saturn and Uranus are now in conjunction — Eds. ([return to text](#))

The Theosophical Forum

RESPONSIBILITY AND KARMAN — *H. T. Edge*

It is not so easy to change the habits of thought in which we have grown up; and if you adopt the Theosophical teachings in a short time, it may take longer before you can get rid of these old habits of thought. You may unconsciously keep the old ideas and simply change their names. Thus some people speak of the law of Karman as though it were a supernatural agency which intervenes among the workings of natural law, in the same way as Providence was supposed to intervene by miraculous aid or special grace. You may hear people wondering whether a particular illness was due to heredity or errors in living *or* Karman. This seems to show that they regard Karman as a sort of supernatural influence which comes into play whenever natural influences are found insufficient. But *all* influences are karmic, whether or not we can point to proximate causes for the happenings; a disease may be due to intemperance, but all the same it is karmic.

Karman is a general law which acts through many lesser agencies; it may act through bad habits or through heredity or any other of various proximate causes. It has been wisely said that acts build habits, habits build character, and character makes destiny. Here we see the links in the chain. People often confine the use of the word Karman to those effects which they cannot trace to any cause; but there must always be a chain of causation leading from act to consequence, whether we can trace this chain or not. Doctors say that a person may carry about with him for most of his life the germs of tuberculosis, encysted and so made harmless; and that the cysts may burst late in life and bring on the disease. Is not this a good illustration of karmic action?

This error as to the meaning of Karman turns about the word "responsibility." Shall we try to evade our responsibility by shifting the burden onto some outside power — some Providence, some Chance, some Fate, some law of Karman? There are actually people who seem to think that the law of Karman excuses us, or even prevents us, from fulfilling the promptings of love and sympathy towards our fellows, or from discharging the duties and services which we owe them. The fact that what they suffer is due to their own Karman is no concern of ours, and does not modify our duty towards them in the least; nor would anyone with a truly sympathetic heart stop to think about the matter at all. Besides, whether you help a fellow or abstain from helping him, you are equally engaging in action towards him; and if the law of Karman has any say in the matter, it is difficult to see why it should favor the one mode of conduct rather than the other. "Inaction in a deed of mercy becomes an action in a deadly sin."

The various philosophies and sciences have so accustomed us to believe in mysterious "laws," — laws of nature, laws of economics, laws of social evolution, and laws of this and that — that we have got into the habit of waiting passively for something to move us, instead of getting to work and acting on our own responsibility. If we could think less of the effect of our surroundings on our own fate, and more of the effect of our own actions on our surroundings, we should make a first step in learning the lesson of individual responsibility which Karman teaches.

THE BEACON OF THE UNKNOWN: III — *H. P. Blavatsky*

This series originally appeared in the French magazine *La Revue Theosophique*, 1889, under the title "Le Phare de L'Inconnu." One of H. P. Blavatsky's most brilliant articles, it presents a clear statement of the meaning of true Theosophy in theory and in practice. In this number the author shows her ability to cope with the many detractors of Theosophy existing in her day. Here we have H. P. B. not as the amanuensis of one of the Mahatmans, but wielding her lively pen in her own right as a recognised literary artist, with all the skilled sword-play in which she delighted — so long as it was in defense of her beloved Theosophy. This series first appeared in translation in *The Theosophist*, Volume X.

Do our amiable critics always know what it is they ridicule? Have they the least idea of the work that is being carried on in the world, and the mental changes that are being brought about by that Theosophy at which they smile? The progress already due to our literature is evident, and thanks to the untiring labors of a certain number of Theosophists, it is becoming recognised even by the blindest. There are not a few who are persuaded that Theosophy will be the philosophy and the law, if not the religion, of the future. The reactionaries, captivated by the *dolce far niente* of conservatism, feel all this, and from them come the hatred and persecution which call in criticism to their aid. But criticism has fallen away from its original standard as inaugurated by Aristotle. The ancient philosophers, those sublime ignoramuses according to modern civilization, when they criticised a system or a work, did so with impartiality, and with the sole object of bettering and making more perfect that which they were

critically examining. First they studied the subject, and then they analysed it. This was a service rendered, and was recognised and accepted as such by both parties. Does modern criticism always conform to that golden rule? It is very evident that it does not.

Our judges of today are far below the level even of the philosophical criticism of Kant. Criticism based on unpopularity and prejudice has replaced that of "pure reason," and the result is that the critic tears to pieces everything he does not understand, and above all those things that he is not willing to understand. In the last century — the golden age of the goose quill — criticism was biting enough sometimes, but only in rendering justice.

Caesar's wife might be suspected, but she was never condemned without being heard. In our century we give Montyon (1) prizes and erect public statues to him who invents the most murderous engine of war; today when the steel pen has replaced its more humble predecessor, the fangs of the Bengal tiger or the teeth of the terrible saurian of the Nile would make wounds less cruel and less deep than does the steel nib (*bec*) of the modern critic, who is almost always absolutely ignorant of that which he so savagely tears to shreds!

It is perhaps some consolation to know that the majority of our literary critics, trans-atlantic and continental, are ex-scribblers who have made a fiasco in literature and are revenging themselves now for their mediocrity upon everything they come across. Cheap, insipid and adulterated wine often turns into excellent vinegar. Unfortunately the press reporters in general — poor hungry devils whom we would be sorry to grudge the little they make, even at our own expense — are not our only or our most dangerous critics. The bigots and the materialists — the sheep and goats of religion — having placed us in turn in their *index expurgatorius*, our books are banished from their libraries, our journals are boycotted, and ourselves subjected to the most

complete ostracism. One pious soul, who accepts literally the miracles of the Bible, following with emotion the ichthyographical investigations of Jonas in the whale's belly, or the trans-ethereal journey of Elijah flying like a salamander in his chariot of fire, nevertheless regards the Theosophists as wonder-mongers and cheats. Another, the devotee of Haeckel, while he displays a credulity as blind as that of the bigot in his belief in the evolution of man and the gorilla from a common ancestor (considering the total absence of every trace in nature of any connecting link, nearly dies with laughter when he finds that his neighbor believes in occult phenomena and psychic manifestations. And yet for all that, neither the bigot nor the man of science, nor even the academician who has been admitted to the number of the "Immortals," can explain to us the smallest problem of existence. The metaphysicians who for centuries have studied the phenomena of Being in their first principles, and who smile pityingly when they listen to the wanderings of Theosophy, would be greatly embarrassed to explain to us the philosophy or even the cause of dreams. Which of them can tell us why all the mental operations — except reasoning, which faculty alone is suspended and paralysed — go on while we dream with as much activity and energy as when we are awake? The disciple of Herbert Spencer would send anyone who asks him the direct question, to the biologist. But he cannot satisfy us at all; for him digestion is the *alpha* and *omega* of every dream — just as hysteria, that great Proteus of a thousand forms, is the actor in every psychic phenomenon. Indigestion and hysteria are, in fact, twin sisters, two goddesses, to whom the modern psychologist has raised an altar at which he himself is the officiating priest. But that is entirely his own affair so long as he does not meddle with the gods of his neighbors.

From all this it follows that, since the Christian characterizes

Theosophy as the "accursed science" and forbidden fruit; since the man of science sees nothing in metaphysics but "the domain of the crazy poet" (Tyndall); since the reporter touches it only with poisoned forceps; since the missionaries associate it with idolatry and "the benighted Hindu" — it follows, we say, that poor *Theosophia* is as shamefully treated as she was when the ancients called her TRUTH and at the same time relegated her to the bottom of the well. Even the "Christian" Kabbalists, who love so much to mirror themselves in the dark waters of this deep well, although they see nothing there but the reflexion of their own faces, which they mistake for that of Truth — even the Kabbalists make war upon us. Nevertheless, all this is no reason why Theosophy should not speak in its own defense; that it should cease to assert its right to be listened to, and that its faithful and loyal servants should neglect their duty and declare themselves beaten. "The accursed science," you say, good Ultramontanes? You forget though, that the tree of knowledge is grafted on the tree of life; that the fruit which you declare "forbidden," and which you have proclaimed for sixteen centuries to be the cause of the original sin that brought death into the world — that this fruit, whose flower blossoms on an immortal stem, was nourished by that same trunk, and that therefore it is the only fruit which can insure us immortality. You also, good Kabbalists, ignore, or wish to ignore, the fact that the allegory of the earthly paradise is as old as the world, and that the tree, the fruit and the sin had once a far profounder and more philosophic significance than they have today when the secrets of initiation are lost.

Protestantism and Ultramontanism are opposed to Theosophy because they are opposed to everything not emanating from themselves; as Calvin opposed the replacing of its two fetishes, the Jewish Bible and the Sabbath, by the Gospel and the Christian Sunday; as Rome opposed secular education and Freemasonry.

However, the Dead-letter and Theocracy have had their day. The world must move and advance under penalty of stagnation and death. Mental evolution progresses *pari passu* with physical evolution, and both advance towards the One Truth — which is the heart of the human system as evolution is the blood. Let the circulation stop for one moment and the heart cease also, and what becomes of the human machine!

And these are the servants of Christ who would kill or at least paralyse the Truth with blows from that club called: "*the letter that killeth!*" But their end is nigh. That which Coleridge said of political despotism applies also to religious. The Church, unless she withdraws her heavy hand, which weighs like a nightmare on the oppressed bosom of millions of believers — believers *nolens volens* — whose reason remains paralysed in the clutch of superstition, the ritualistic Church is sentenced to yield its place to religion — and perish. Soon she will have but one choice. Because, once the people become enlightened concerning the truth which she hides with so much care, one of two things will happen: the Church will either perish *by* the people; or else, if the masses are left in ignorance and in slavery to the dead letter, she will perish *with* the people. Will the servants of eternal Truth — out of which Truth they have made a squirrel turning in an ecclesiastical wheel — will they show themselves sufficiently *altruistic* to choose the first of these alternative necessities? Who knows?

I say it again: it is only Theosophy, well understood, that can save the world from despair, by reproducing the social and religious reforms once accomplished in history by Gautama the Buddha: a peaceful reform, without one drop of blood spilt, each one remaining in the faith of his fathers if he chose. To do this nothing is necessary but to reject the parasitical growths that have choked every religion and sect in the world. Let him accept but the

essence, which is the same in all: that is to say, the spirit which gives life to man in whom it resides and renders him immortal. Let each man who is inclined towards well-doing find his ideal — a star before him to guide him. Let him follow it, without ever deviating from his path; and he is almost certain to reach the beacon-light of life — TRUTH: no matter whether he seeks for it in a manger or at the bottom of a well.

The Theosophical Forum

EXPERIMENT IN TELEPATHY — *Charles J. Ryan*

At last we are given a detailed and fully documented account of an experiment in telepathy of the highest evidential value and of a unique character, whose publication in book form has been eagerly awaited. (1) The standing and reputation of the persons concerned and the unusual nature of the case prohibit any suggestion of exaggeration or collusion, and "accidental" coincidence cannot possibly be strained to cover the mass of documented facts presented.

Sir Hubert Wilkins is the well known aviator and Arctic and Antarctic explorer who has taken part in ten Polar expeditions, commanding six of them; he holds the Military Cross of the British Empire and has been honored by leading scientific societies throughout the world. Mr. Harold M. Sherman is a successful author and scenario writer, now living at Hollywood. Both have long been interested in the possibilities of telepathy as a human faculty which might be developed in qualified persons and employed for human welfare.

Sir Hubert volunteered to conduct the perilous search by airplane during the winter of 1937-8 for the Russian aviators who were lost in their attempt to fly from Moscow to the United States across the Arctic Ocean. The story of his adventurous flights makes thrilling reading, but the main object of his portion of the book is to relate with scientific precision his efforts during the six months spent in the Arctic to report his doings by thought-transference to Mr. Sherman in New York. Mr. Sherman describes his experiences at the receiving end of the thought line, and the result is truly remarkable. A regular hour was set, three times a week, for Mr. Sherman to receive the communications, and it was

religiously adhered to by him in spite of almost overwhelming difficulties, including severe sickness at times. Communication with Sir Hubert was kept up by mail when possible, but Mr. Sherman very rarely knew by that method in what part of the immense Arctic territory Sir Hubert might be exploring, though he was usually able to follow his movements day by day through the telepathic communications.

Thoughts Through Space is divided into three parts, the first being by Sir Hubert Wilkins, introducing the subject and presenting his side of the telepathic experiment to prove the possibility of regular communication between two persons at great distances. His descriptions of the preparations in Alaska for the search and of the flights themselves are so detailed that the reader can see for himself that Mr. Sherman could not normally have guessed the minute technical details which he saw at times telepathically, still less the exact times when various events took place; he has never been to the Arctic and is not technically familiar with airplanes.

The second part of the book contains Mr. Sherman's story as receiver of the communications, and his profound analysis of telepathy in general and of his own experiences. The third part is a complete record in parallel columns of the messages and thoughts as sent by Sir Hubert and as received by Mr. Sherman.

Immediately upon receipt of a telepathic impression, Mr. Sherman mailed a record to Mr. Samuel Emery of the City Club of New York, and another to Dr. Gardner Murphy, psychologist of Columbia University, who filed them for future comparison with Sir Hubert's notes and recollections, each with its postmark.

Sir Hubert had arranged to communicate by radio with the *New York Times*, but as Mr. Reginald Iversen, chief operator for that paper, writes, from October 1937 to March 1938 the intended

schedule was almost completely disrupted by magnetic and sun-spot disturbances, and "Mr. Sherman had actually more accurate telepathic knowledge of what was happening to Wilkins in his search for the Russian fliers than I was able to gain in my ineffective attempts to keep in touch by short-wave radio." Only 13 successful radio contacts with the Arctic were made and Mr. Sherman did not hear of these until he had received and recorded his telepathic communications which always came first. We can leave it to the readers to study the detailed record with the assurance that they will agree that telepathy is the only sensible way to explain the facts.

Mr. Sherman's comments are worth careful reading. At first he had healthy doubts about success, but being determined to put the matter to the most complete test he wrote down all the impressions, mental or pictorial, that he received, quite improbable as some of them seemed. This was fortunate, for otherwise much valuable evidence would have been lost.

When the first receptions were found by Sir Hubert to be accurate in the main, Mr. Sherman was puzzled by finding that he had not only received communications consciously directed to him from the Arctic but also information about other events that had happened to Sir Hubert during the day, and even the intensive thoughts " about plans which only Sir Hubert knew. Writing to Mr. Sherman about this Sir Hubert says: ". . . You evidently have picked up quite a lot of *thought forms*. Strong thoughts emitted during the day, and some of which I would, if I had had time, have tried to pass on to you at night. . . . for I *believe that the thought form does not necessarily fade with its first "spread," but keeps revolving in our atmosphere so that a sensitive mind may pick up the form some hours or even years after it has been emitted.*"

This is precisely the explanation that H. P. Blavatsky gives of certain communications received or images seen (but not all) apparently coming from the spirits of the departed, but which are really "hangovers" from strong thoughts or wishes thrown out *before* death. In connexion with the undirected thoughts received by Mr. Sherman he found that those with a strong emotional content were more likely to carry than cold-blooded numbers or symbols such as Dr. Rhine used in his experiments at Duke University, in which the preponderance of successes over failures was small, though sufficient to eliminate chance coincidence. Once when Sir Hubert Wilkins was flying under great tension Mr. Sherman actually *saw* an immense "lead" in the ice field which the aviator was carefully studying because it was quite unexpected. At the moment when a house was burning at Point Barrow he received a vivid impression of the event, and on another occasion when Sir Hubert was having trouble with one of the propellers he recorded that there was a difference between the pitch of the new propeller and that of the other though they ought to be the same. Sir Hubert remarks: "He saw the propeller in his mind's eye, and he might have recorded that fact alone — which in itself would have been remarkable — but he could not have seen the difference in the pitch of the propeller, because it was so slight that it could not have been noticed by the keenest eyesight. The difference in the pitch of the propellers could not be proved except by a delicate instrument or by a comparison of the fine markings on each, which were concealed beneath the hub. So to have known of my concern and discussion with the engineers about the pitch of the propellers, Sherman must have responded to the stimuli of either my thought or of our expressed words."

And Mr. Sherman was in New York while his friend was anxiously considering how to synchronize the motors of his two propellers at Atvalik, Alaska!

Still more paradoxical was the fact that on some occasions, again under conditions of anxiety or strain with Sir Hubert, Mr. Sherman had a "preview" or prevision of an accident which was hanging over but had not yet been precipitated. On January 27th, 1938 he recorded an impression that a bad accident had happened to the crankcase of the plane. Sir Hubert reported later that on February 6th he had serious trouble with the crankcase, "main bearing of one engine ground to powder that day." On March 7th and 8th Mr. Sherman saw an accident to the tail of the plane when landing on a sharp ridge of hard snow, the detail being exactly *what was to occur several thousand miles away three days later* on March 11! Such incidents as these aroused many speculations about Time and the nature of human consciousness, and he asks if we can learn to contact marvelous realms of intelligence of which our normal consciousness is ignorant. Theosophy would certainly answer, yes, but as Mr. Sherman himself says only "after we learn how to delve into the almost frightening and certainly awe-inspiring depths of our own selves." He believes, truly, that this knowledge of man's inner self "will do more eventually to bring about the centuries-old dream of universal brotherhood than any other intelligent force." His telepathic experiences convinced him that man possesses at least two forms of consciousness which he calls the "conscious" and the "subconscious" and that to obtain the best results the recipient must liberate the "subconscious" (which conveys the information to the "conscious mind") from extraneous impressions from the conscious mind. He must above all be free from hates, prejudices, fears and worries; and this applies to far higher matters than mere telepathic messages from another person. He speaks of "reinforcements" of strength and self-control arising from "the creative power within" when the destructive emotions have been overcome. He feels convinced that we are constantly creating our own future by the nature and character of our thought, projecting

the inner self ahead of the conscious outer self, and attracting experiences which have lain in wait in response to our strong desires, ambitions or fears, and which transform themselves from a future possibility to a present fact. We might take this as a distinct reference to the law of karman under which we build the conditions of our future incarnations. On page 208 he speaks of the mind creating "in some mysterious way, the conditions and events with which the physical self is to become associated on this earthly plane, in future moments of time."

The addition of the strenuous work of controlling the restless mind to receive the communications — a technique he devised for himself — to the constant strain of an extremely active life with many anxieties, undermined Mr. Sherman's health so seriously that his life was threatened, and he warns all who do not possess a well-balanced nervous system against extensive experimentation in telepathy. He also mentions a peculiar and rather startling affection of his breathing during one of his reception periods which may serve as a corroboration of the warnings given to unprepared dabblers in the occult. All genuine Occult Teachers agree that ignorant interference with the subtil currents of *prana* in the body by means of breath control is very dangerous and is not countenanced in the higher yoga, or spiritual discipline. In regard to the facility with which telepathic communication is conducted between an adept and his chelas we must not forget that the latter have to pass through a severe training under a spiritual Teacher to become worthy of such an attainment.

But it is a different matter to study the cases of spontaneous telepathy which occur both in sleeping and waking, usually in regard to deaths or accidents. Thousands of records are available and nearly everyone has had a personal experience or knows some one who has. We can very profitably employ this weapon

for breaking down the barriers which mechanistic science has raised against anything savoring of the occult. Telepathy is free from many of the objections brought against other forms of psychic research and a book like *Thoughts Through Space* is admirably qualified to attract the attention of critical minds. Researchers in the better-known fields of psychic phenomena such as clairvoyance, materialization and alleged communication with spirits, have been sickened by a mass of charlatanry and vulgar fraud that obscures the small nucleus of truth, but telepathy is by its very nature difficult to imitate and offers no financial reward to impostors. Judging by the animated controversy aroused by Dr. Rhine's academic experiments in telepathy at Duke University it may be that a sufficient number of scientists will insist before long that the official philosophers, psychologists, and physiologists in the universities take up its study as a duty, for they can hardly deny that an excellent *prima facie* case has been made out for it. Here is the open door into a field of study that may — the Theosophist would say, *will* — revolutionize the whole science of man, by proving the existence of uncharted human powers, astonishing in themselves and still more important because of the boundless prospect of spiritual evolution which they suggest. Dr. Rhine lately warned his scientific colleagues that telepathy must be faced as a fact in nature even though the (accepted scientific) heavens fall. His experiments (and of course thousands of observations by other persons) show that it obeys laws which are utterly unfamiliar and apparently impossible from our standpoint: perhaps we might say they border on the "spiritual" to use an ambiguous term in default of a better. For instance, ordinary radiation like that of light from a source, spreads out and weakens in intensity as its distance increases according to the well known law of inverse squares. But Dr. Rhine's laboratory experiments and the experiences of thousands of persons who have had telepathic

communication by vision, or verbally, from friends about the time of death, show that the telepathic impressions are just as clear and strong at a thousand miles as they are at ten feet! Mr. Sherman saw many of the Alaskan events as vividly as though he were physically present, though only in flashes as a rule. In radio we use an amplifier to render the message audible, but it is not necessary in telepathy.

All this, of course, suggests that telepathy is on the borderland of subtil planes or states of being which we may properly call "occult," or inaccessible to normal sense perception; not "supernatural," which is a word without meaning. The occult has been accepted by the commonsense of the majority of mankind for thousands of years, but in modern times the scientists, believed by so many to be the arbiters of knowledge, have contemptuously ignored or condemned it without adequate study. On physical lines they gladly follow the smallest hint of new knowledge *within their self-drawn boundary*, and with incredible labor and marvelous devotion make world-shaking discoveries, but there they insist upon halting, oblivious of the fact that just beyond that borderline far more significant worlds are waiting to be conquered. Perhaps they feel a vague, indefinable dread that to win onward in that great quest they must "delve into the almost [?] frightening and certainly awe-inspiring depths of our own selves" as Mr. Sherman admirably expresses one of the profoundest teachings of the ancient God-Wisdom, Theosophy.

However that may be, this book, a dignified and sober presentation of a tentative approach toward things unseen but enduring, is well qualified to render first aid in serious cases of crude materialism.

The Theosophical Forum

MAN IN A JUST AND ORDERED UNIVERSE — *G. de Purucker*

There is no chance anywhere in Infinitude. Now just apply your reasoning faculty to that statement, and see how far afield it will carry you. The first deduction is this: There being no chance anywhere, therefore no fortuity, everything that happens is a link in a chain of causation — cause, effect — the effect immediately becoming a new cause, producing its effect, which in turn becomes a new cause, producing its effect. This is what we call Karman.

Everything that happens is therefore caused by law, which is just another word for cosmic vitality plus intelligence, plus what we call the ethical instinct, order; and these things are precisely what our studies of the universe show that it exhibits to our inquiring gaze. Everywhere we see order, law, procedures acting according to causational and effectual relations. If there were chance in but one atom of Infinitude, there would be chance throughout, for then Infinitude were not Infinitude, but an atom short of Infinitude, which is an absurdity.

Now with all you know of the teaching of modern science, and all you know of our beloved God-wisdom, carry your thought on logically a step farther: since whatever happens is causative and effectual, it is therefore justified in Infinitude.

We discern, in our investigations or researches into Nature, two things: an all-embracing, all-encompassing orderliness, or what we call the laws of Nature; and within this, embraced by this universal law, an infinitude of individuals or individualities, each one an entity, working under the mandate, as it were, of cosmic law — no entity can do otherwise. We have therefore unity, divine unity, working through virtually infinite multiplicity.

Among these multiplicities are we human beings. There are also the gods, angels or Dhyani-Chohans, the plants, the animals, the atoms, etc., etc. They are all individuals working in and under, and as it were, subject to the mandate of this fundamental background of cosmic orderliness. You see how these thoughts are rigidly logical, carrying us step by step from point to point, until we reach not only new conclusions, but conclusions that are always in accord with everything that we know of universal nature. The point is to apply these to our lives, which means likewise to our thoughts and our feelings.

When a man realizes that there is no chance in the universe, that he is but one unit in a hierarchy and that these hierarchies are virtually infinite in number, and that so far as we human beings know they are endless, like the bodies in space, children of the Infinite Life as we are — when a man realizes all this, several things happen to him. When he thinks these thoughts and becomes through reflexion upon them convinced of their inevitable force, first he loses all fear of death. He realizes secondly that he is responsible for what he does, which means for what he thinks and for what he feels, and that there is no escape from the result of his thinking and feeling and acting; and that just in that impossibility of escaping the retribution or the reward of cosmic law lies mankind's highest and noblest hope.

To phrase the thought popularly, in the old-fashioned language of the Christian, he can escape neither heaven nor hell. He cannot escape reward, that will come unto him somewhen, somewhere, for the good that he has done in the world. It will seek him out wherever he may be, and brighten and cheer his life and give him renewed hope and renewed courage. And for the evil that he has wrought, the injustices, the crimes, the unfairnesses that he has committed, equally will these consequences in the chain of causation seek him out; and though he hide in the cleft of the

mountain or the deep of the bottomless abyss, he cannot escape a just retribution, for eternal and universal nature is on his track.

There is no chance in Infinitude. See the immense weight of these thoughts as moral motors upon us. We see the reason for all the ethical, all the moral teaching of the greatest sages that the human race has ever produced, and we see the reason why their teaching is the greatest hope that mankind has.

And a third reflexion: We on this little earth of ours, so big to us, so small when compared with the giants of even our own solar system, should remember that each one of us, as an inseparable part of the cosmic structure, is equally weighty in importance to the cosmic law, so to speak, as is the mightiest giant of the stellar host. The Christian New Testament alludes to this in its teaching, strange to so many: Know ye not that the hairs of your head are counted? And that no sparrow droppeth unless it be in accordance with Divine Law? There is the same thought: that we are not merely the children of the gods, but embryo-gods ourselves, for we are the very offsprings of the divine life, the divine stuff in the universe. Otherwise what are we? Can you deny it, and say, "We are not; we don't belong to the universe, we are not in it; we don't come forth from it"? That is absurd.

And our divine origin makes us kin with every thing and every being that is. For not only are all mankind kin, but all beings and things that are, are our other selves. All spring from the same universal ocean which holds us around forever — the Mother Eternal, the Father-Mother. It is a wonderful thought.

The next time you pluck a flower, remember you are touching a younger brother; and that perhaps in the way we look upon these buds of beauty, young embryo-souls as it were, or monads in a young state on this plane, expressing their life and beauty and fragrance to us, so do the higher gods look upon us. I have often

wondered how often do the gods pluck us because mayhap in their spheres we shed beauty and fragrance and they love us: Those whom the gods love die young. A whole mystery lies just behind that one thought. Death is no accident. Birth none. And yet never think for a moment that this chain of causation is the old scientific dead soulless determinism of the days of our grandfathers, when the idea was that everything moved just like a soulless machine, and never stopped. Did they not forget that to have a machine there had to be a machinist to build it and run it? They just used words then and were happy. It is not of that soulless determinism that I speak. But it is the structure of the universe arising in imbodyed hierarchies of consciousnesses providing the cosmic variety, and the innumerable families of beings, and all enclosed in the encompassing, sheltering, protecting, aye, guiding and guarding, vastly great Hierarch, of whom we in common with all other things are the children — that Hierarch, which is not different from our inner self, but we, as it were sparks from it, the Central Flame of our Universe.

The Theosophical Forum

PROGRESSIVE INCARNATION — *Helen Savage*

Birth is the beginning of the process of incarnation — but *only* the beginning. Incarnation continues through the entire length of a human life, through birth, childhood, adolescence, full manhood, ripe maturity and on into old age. This is a revolutionary idea, running counter to present scientific theory, but on the basis of the Ancient Wisdom-Teaching we say that it is the missing key in the science of psychology. This is not an empty assertion. It can be tested. Study any course of descriptive psychology and then apply, as an interpretation of the mass of factual material gathered, the principle that there is an inner source of energy, the motivating, selecting, building factor working from within outwards, pushing towards outer expression in the body and the brain, in successive tides of ever increasing power. The student who is willing to follow this theme through in a logical course of study will no longer be content with anything less to explain the mystery of the physical, mental and moral growth of a tiny human seed into a man who towers above the mere animal world.

Leaving aside entirely the biologic view that the body is the man, and that psychological growth to adulthood is merely a building up of continually more complex reflexes — leaving this fantastic view aside, we still find unsatisfactory the generally accepted idea that a soul, God-given and newly made, enters the body at birth or at some vague point thereafter. What is this soul they speak of? What relation has it, if any, to the psychological and so-called hereditary traits that so soon begin to manifest in the child? Does this soul play a major or only a minor part in the formation of character? How is its influence exerted throughout the life? The student of true psychology will want answers to these questions.

He does not want to abandon the idea of a soul in man, but he asks that its nature and functions be consistent with the observed phenomena of the various stages of human life. He would be even better pleased if he found that the existence of this soul explained more reasonably than any other theory these same observed facts.

Now the Theosophical philosophy, far from denying the existence of a soul in man, says that there is not only one but many. It describes man as a sevenfold being, his many parts ranging from pure spirit to physical matter. H. P. Blavatsky's *Key to Theosophy* (pp. 90-92) gives an excellent explanatory Table of what is known in Theosophy as the seven principles in man; and with a preliminary study of this Table the diagram used by Dr. de Purucker in his *Fundamentals of the Esoteric Philosophy*, ch. xviii, will be intelligible. The author here shows that each consciousness-center can be divided into an ego-aspect and a soul-aspect, the soul in each case being the carrier of its corresponding ego-self.

Below is appended a simplified Table listing these egos and souls. It is drawn from the more complicated diagram in *Fundamentals*, but it should not be taken dogmatically, since no diagram tells all the truth but rather suggests some viewpoint to be studied. It is introduced here because useful to illustrate the present theme.

Divine Ego	Divine Soul or Monadic Envelope
Spiritual Ego	Spiritual Soul, Buddhi Fruit and Seed of Manas
Human Ego	Higher Human Soul Lower Buddhi and Higher Manas
Personal Ego	Human Soul or Man Manas, Kama, and Prana

Beast Ego	Vital Astral Soul Kama and Prana
Body	Physical Soul or Body Sthula-sarira and Prana and Linga-sarira

Now it is obvious, if we accept the doctrine of reincarnation, that all these ego-souls have been associated in a previous earth-existence. Death is a dissolution of these factors. Reincarnation is the process of their reassembling. Is it any wonder then that the new-born infant is unable immediately to entertain this august assemblage in its entirety? Is it any wonder that Incarnation must be progressive, each ego awaiting its appointed time to manifest its powers in the growing child?

But here we cannot help but ask the question: Is man then one or many? The answer is, He is both, just as the solar universe is one and yet many. The Divine Self is a central sun that gives light and life to his whole kingdom, this light shining progressively less and less brightly as we come down the scale of "selves" to the physical body. This is not to say that the lowest in the scale are heavier with "sin" or are of their inherent nature evil. It indicates rather a logical provision of nature, namely that Divinity can contact the outer world of matter only by means of a ladder of life, each rung of this ladder being composed of living creatures in a descending scale. Thus these ladders are all channels of communication. Man is such a ladder of life, and it is by means of this descending or ascending scale that he is able to touch the fringe of divine things. Ultimately also it will be the means by which the spirit can become incarnate here on earth.

Now I have spoken of reincarnation as a reassembling; but it would be more accurate to say, following the idea set forth in our Table, that reincarnation is a reissuing of a chain of selves, each

of which builds its own soul-vehicle by a process of *reassembling* that vehicle's former life-atoms; and death is then the ingathering of this chain of selves and a *dissolution* of the life-atoms which formed their bodies. The self in each case is the center or knot of consciousness, and an indivisible; the soul or carrier is in each case a composite, its atoms stamped with the attributes, high or low, that formed the character of the individual in his former life. These attributes are not dimmed nor worn away by death. Each atom bears its indelible stamp like an imprint in stone.

When the child's body is born we can say that the first step of incarnation has been taken, the first step in the "enfleshing" of an invisible entity. To be sure the body is not an ego, but it is listed on the ego-side in our Table because the diffuse life of its purely physical atoms cohere about some vague center which suggests the first glimmer of a consciousness-center. Is it then merely this vague body-ego — a congeries of conscious and cohering atoms — which takes the first step in incarnation? In one sense, perhaps, yes. But it must be remembered that there is, running through and threading together all these selves of man, what is sometimes called the Sutratman or Thread-Self. It is this Ray from the Divine Self which energises all the centers and marshalls them into coordinating activity in earth-life, so that even in the new-born body, gasping to catch its first breath of life, there is the finger of Divinity.

One often feels around very small children an impalpable radiance. It is the light from the Divine Ray; for heaven does lie about us in our infancy. Traherne, the mystic of the seventeenth century, even recalls that as he lay in his cradle he seemed to himself to be "an inward sphere of light, a vital sun." He tells us how he lost all memory of this during his childhood and youth, but found it again as a young man when in a state of rapt meditation.

However, this radiance from above-within is more like a reflexion in the child than as yet an actuality. Shades of the prison-house begin to close only too soon; and the actual incarnation of this Divine Ray comes only as the consummation of a fully developed human life.

Almost immediately, albeit imperceptibly as day follows day, we see before our eyes the marvel of the growing infant-body. But it is more than a body, for already from within a second center is stirring — the Beast-Ego we must call it if we are to follow our Table above. It is in any case an elemental being that has been ushered in, a being which knows with unerring instinct how to build with symmetry and beauty. Unless stamped too heavily with an unfortunate past physical karma, it exhibits the charm and comeliness of all Nature's new-born creatures.

The small child, let us say until the age of seven, entertaining as yet only this elemental Beast-Ego, nevertheless shadows forth the possibilities of the egoic center next higher in the scale. Yet so far its reactions are chiefly instinctual, as are those of an animal. While it does not as yet show forth some of the less noble traits that the personal ego later brings in, when its time to incarnate comes (bringing with it its karmic load from the past), neither, on the other hand, does it yet exhibit deep intellectual power, altruistic impulses, profound emotions, compassion and pity. It is artless, trusting, guileless, without thought or care; its troubles are soon forgotten; its emotions but of the moment.

The reactions of the small child have been studied exhaustively by the psychologist, who often bases the entire superstructure of the unfolding life upon these first years, considering them of vital importance, since they determine, he thinks, almost entirely the trends and biases, the habits and inhibitions of the mature man.

The Theosophist also considers these years important, but for a very different reason. He does not ignore the antics, pretty or otherwise, of this elemental being, and he recognises how deeply impressions may be stamped into its plastic soul-substance. But more than this, he recognises these early years as a time of preparation in which a vessel is in building ready to receive the Personal and later the Higher Human Ego. He knows that as each Ego works through the one below it in the scale, any harms done, any habits formed of an unfortunate nature, will inhibit the action of the next incarnating entity. But however many impediments are put in the way, it is also the teaching, and one which psychologists would find useful, that the Ego can override these stumbling blocks and often does, through the power of the spiritual will; for that will is always there to be called upon, an inexhaustible reservoir of strength and power.

It is obvious that the earliest years of the child's life are the easiest to understand. Differentiation and complexity belong to a later period. Aldous Huxley remarks in his *Ends and Means* that there has been evolved during the past twenty-five years an excellent system of nursery training, but that the educational methods beyond the nursery have not followed suit. This suggests that the psychologist and child-trainer have mastered the technique of handling the elemental child, but have not yet the clue to the mystery of a further step in incarnation, when the Personal Ego, overshadowed by the true Human Ego, and laden with its freightage of past lives, begins to take possession of the inner citadel.

The Personal Ego, we learn, is dissolved at death; that is, its soul-aspect is dissipated into its component atomic particles, all of which are stamped with their own particular characteristics, called skandhas. The kernel of the egoic center itself is indrawn at death into its parent, the Higher Human Ego. Now at that point in

the reincarnation when the body is sufficiently developed for the incoming of this Personal Ego, there are drawn to this focal point of energy all the skandhas of the last life, or possibly lives. Little by little these are inbuilt into the invisible center, like living building bricks gradually shaping as the lower psychological nature. It is usually between the ages of seven and fourteen that we see traits of character suggested — at least those lesser traits that characterize what we often speak of as "just human nature." To the Theosophist these years are of great importance, since it is at this time that a first check can be put upon those tendencies and weaknesses of character which, if allowed to wax too strong and take too great a hold of the inner constitution, can become a dominant factor in a man's life.

The Personal Ego is not in itself evil, but it is primarily self-centered, and out of its interest in self are likely to arise all the faults which are so unreservedly recognised as undesirable: self-indulgence, deceit, hatred, anger, jealousy, and the like. It is no wonder that the adolescent is not understood today. The child himself does not know whence comes flooding in upon him this new tide of temporarily unassimilable forces. He does not know that he inherits *from himself*, and that the things he finds cropping up in his nature at this time, that seem to invade his inner stronghold like unbidden guests, are actually members of his own household perhaps returning from some long forgotten past. Unfortunately, too, his parents are no more aware than he is of what is taking place in their child. How often one hears parents speak almost in awe of the masterful creature, who but recently they had known as their "little son," now passing entirely out of their limited range of understanding — theirs no longer.

Behind the Personal Ego is the Human Ego, as said. With its incoming are ushered in the first higher mental faculties which bring in their wake responsibility, the power of choice, the will to

create, and all the concomitant dangers, joys and sorrows. It is often said that this Self begins to incarnate at about the fourteenth year. But here one must again emphasise the word *begin*. Each step in incarnation is progressively more complex than the last. The body is most easily brought into being because the physical plane is its natural home; but the invisible entities in man have each to provide for themselves channels of communication with the outer world. They are not native here. They must send out tentacles, as it were, to make contact with a plane more material than their natural habitat. Time is needed in the process. So the incarnation of the Human Ego is a gradual process which continues — or should continue — through the remainder of the life. And rarely, even when the full span of life is run, is this wholly successful.

It is with the ushering in of the Human Ego that the truly higher human qualities begin to manifest. Chief among these is altruism. And though it is the mark of the highest type of mature human being, it is not too soon to begin to stimulate an admiration and love for this quality in the young person just growing out of adolescence. To speak of it as merely "enlightened selfishness" is to deny, or at least to confess one's ignorance of, the existence of a spiritual nature in man. Perhaps the most alarming result of the last century of materialistic thinking is this pernicious teaching, in which altruism is explained as having its first beginnings in the pleasant physical sensations of the babe-in-arms, who wants to bring about or prolong such pleasurable moments. Step by step, however, as he grows he is supposed to learn by a series of associative experiences that sometimes temporary sacrifice of a wished-for thing is desirable, so that, thereby gaining the good will of others, in the long run he may obtain their favors. (1) Ostensibly, they say, he learns to look for no immediate reward for his good works, but tucked away in his "subconscious" is the

awareness that he is really bettering himself!

The fact is there is no relation at all between the gratifications of sensations of the small child and the selfless actions of the mature man who brings happiness and peace to others regardless of the suffering it may cause himself. Evolution, whether of the race or of the individual, follows one law: It proceeds, not from below up, nor yet simply from above downwards. It is a twofold process. Involution and evolution take place co-incidentally. We see the body building up from below, to be sure; but it can only do this because invisible spiritual factors are involving in matter at the same time. The body would not exist were it not for those same inner powers. These misconceptions as to the nature of altruism and the like all spring from a training in materialistic evolution which looks for the origin of all things ultimately in the mire.

In the normal human being the Human Ego should have relatively fully evolved by the time one reaches the prime of life. The higher skandhas should by this time have been drawn back magnetically to their originator, holding within themselves what might be called residual experience — all that was implicit in them from former lives. One reaches the peak of attainment at this time. His character is established, his capacities have flowered. It is almost as though up to this time had been a sort of recapitulation of the achievements of the past, and that from now on new ground must be broken. It is a time when men ask: What next? I have arrived. Is there anything further? Theosophy answers: What about the Spiritual Ego?

It has often been said that the latter half of life is the richer half; that here we have ripened judgment, a seasoned sympathy for the frailties of human character, a benignity and a serenity as though, having pierced life's illusions and found them bubbles, we have arrived at a juster sense of values. But how seldom is this the

case! As the powers of the physical and lower personal man begin to wane, as the flesh becomes more refined and the clamor for sensation is stilled, often there is an emptiness and a sense of futility, and at best man finds himself slipping into a sort of automatic repetition of what he already has done and been, and as the years pass he sees this mechanism imperceptibly slackening until by the age of three score years and ten he becomes but a feeble echo of his former self. At worst he finds this sense of futility too much for him and he simply "cracks up".

(2)

But middle life need not be an *impasse*. The spiritual resources as yet hardly tapped are inexhaustible. Physical energy has to be replaced by the energy of the spiritual will. More truly than at any other time may we say that all the life up to this point has been a preparation. The ideal state is where the body, emotions and mind have been trained in a healthy discipline, having been recognised as handmaidens of the spirit. In proportion as this has been done, to that extent is the way open for the incarnation of the Spiritual Ego. This is the supreme goal of our humanhood. We are, as a matter of fact, not yet fully humanized. But we cannot expect to accomplish this complete humanization in a few short lives nor yet in many. Probably some of our reincarnations are merely times when we automatically go through the round of birth, growth, maturity, old age and death, carried along in the grooves of a long-established habit, little realizing that our purpose is to prepare for the incarnation of a god, the god within our own being. It is not enough that this god is free and active on its own high plane. Of what avail is that to the lower struggling elements in the human constitution? Here on this earth the Incarnation must take place, and not until the race as a whole has accomplished this, will our perpetual round of earth-lives cease. So we can count as lost that imbodiment that does not leave a

record of some effort made to prepare for this sublime event.

We cannot always judge where the leap ahead is being taken. A man of successful well-balanced life that flowers to his complete satisfaction in middle age may not have gone as far as one who has seen the god-like vision within, and leaping too high in trying to make it his own has failed and suffered defeat. His effort is not lost and will return in another life as a larger increment of the will to succeed, while the former successful one may find himself saddled in another life with a strange inertia which he cannot shake off.

It would be a study in itself to discuss how this effort can be made. The Wise Ones of all lands have shown us the way, but their words often seem too simple to bother with. They are the pioneers of the race who will not let humanity rest until it awakens to a realization of its inevitable divine destiny.

THE BEACON OF THE UNKNOWN: IV — H. P. Blavatsky

This series of articles is one of H. P. Blavatsky's most brilliant writings, presenting a clear statement of the meaning of true Theosophy in theory and in practice. In this fourth number the author continues, with her own consummate skill, her championing of the cause of the universal Wisdom-Religion — that Truth which can be found by the earnest seeker under a thousand guises, hidden in a thousand symbols and under many names. H. P. B. in her trenchant writing is herself like a beacon lighting the way of discovery. The series originally appeared in the French magazine *La Revue Theosophique*, 1889, under the title "Le Phare de L'Inconnu." Its translation was first published in *The Theosophist*, Volume X.

Laugh, then, at the science of sciences without knowing the first word of it! We will be told, perhaps, that such is the literary right of our critics. By all means. If people always talked about what they understood, they would tell nothing but the truth, and that would not always be so pleasant. When I read the criticisms now written on Theosophy, the platitudes and the stupid ridicule employed against the most grandiose and sublime philosophy in the world, of which only one aspect is found in the noble ethics of the Philalethes, I ask myself whether the Academies of any country have understood the Theosophy of the Alexandrian philosophers any better than they understand us now. What do they know, what can they know, of Universal Theosophy, without having studied under the Masters of Wisdom? And understanding so little of Iamblichus, Plotinus, and even Proclus, i. e., of the Theosophy of the third and fourth centuries, they yet pride

themselves on delivering judgment on the New Theosophy of the nineteenth.

Theosophy, we say, comes to us from the extreme East, as did the Theosophy of Plotinus and Iamblichus and even the mysteries of ancient Egypt. Do not Homer and Herodotus practically tell us that the ancient Egyptians were the "Ethiopians of the East," who, according to their descriptions, came from Lanka or Ceylon? For it is generally acknowledged that the people whom these two classical writers call *Ethiopians of the East* were but a colony of very dark skinned Aryans, the Dravidians of Southern India, who took an already-existing civilization with them to Egypt. This migration occurred during the prehistoric ages which Baron Bunsen calls pre-Menite (before Menes), but which have a history of their own in the ancient annals of Kaluka-Batta. Besides, apart from the esoteric teachings which are not divulged to a mocking public, the historical researches of Colonel Vans Kennedy, the great rival of Dr. Wilson as a Sanskritist in India, show us that pre-Assyrian Babylonia was the home of Brahmanism, and of Sanskrit as the sacerdotal language. We know also, if *Exodus* is to be believed, that long before the time of Moses — i. e., before the XIX Dynasty — Egypt had its diviners, its hierophants and its magicians. Finally, Brugsch Bey sees in many of the gods of Egypt, immigrants from beyond the Red Sea and the great waters of the Indian Ocean.

Whether all this be so or not, Theosophy descends in a direct line from the universal GNOSIS, a tree whose luxuriant branches, spreading over the earth like a great canopy, gave shelter to all the temples and to all the nations of the earth at an epoch which Biblical chronology is pleased to call "antediluvian." That *Gnosis* represents the aggregate of all the sciences, the accumulated wisdom of all the gods and demi-gods incarnated in former times upon the earth. There are some who would like to

see in these beings fallen angels and the enemy of mankind: sons of God who, seeing that the daughters of men were beautiful, took them for wives, and imparted to them all the secrets of heaven and earth. Let them think as they please. We believe in Avatars and in divine dynasties, in the age when there really were "giants upon the earth," and we absolutely repudiate the idea of "fallen angels" and of Satan and his army.

"What then is your religion or belief?" we are asked. "What is your favorite study?"

"The TRUTH," we reply. The truth wherever we can find it; for like Ammonius Saccas, our greatest ambition is to reconcile the different religious systems, to help each one to find the truth in his own belief and at the same time oblige him to recognise it in the belief of his neighbor. What does the name matter if the thing itself is essentially the same? Plotinus, Iamblichus and Apollonius of Tyana had, all three, it is said, the wonderful gifts of prophecy, of clairvoyance, and of healing, although they belonged to three different schools. Prophecy was an art that was cultivated equally by the Essenes and the *B'ni Nebin* among the Jews, as by the priests of the pagan oracles. The disciples of Plotinus attributed miraculous powers to him; Philostratus has claimed the same for Apollonius, while Iamblichus had the reputation of surpassing all the other Eclectics in Theosophic theurgy. Ammonius declared that all moral and practical WISDOM was contained in the books of Thoth or Hermes Trismegistus. But Thoth means a "college," school or assembly, and the works of that name, according to *Theo-didaktos*, were identical with the doctrines of the sages of the extreme East. If Pythagoras acquired his knowledge in India (where even today he is mentioned in old manuscripts under the name of Yavanacharya, (1) the Greek Master), Plato gained his learning from the books of Thoth-Hermes. How it happened that the younger Hermes, the god of the shepherds, surnamed "the

good shepherd," who presided over divination and clairvoyance, became identical with Thoth (or Thot), the deified sage and the author of the *Book of the Dead*, only the esoteric doctrine can reveal to the Orientalists. Every country has had its saviors. He who dissipates the darkness of ignorance by the help of the torch of science, thus revealing to us the truth, deserves that title as a mark of our gratitude quite as much as he who saves us from death by healing our bodies. Such a one awakens in our benumbed souls the faculty of distinguishing the true from the false, by kindling a divine flame hitherto absent, and he has the right to our grateful worship, for he has become our creator. What matters the name or the symbol that personifies the abstract idea, if that idea is always the same and is true? Whether the concrete symbol bears one title or another, whether the savior in whom we believe has for an earthly name Krishna, Buddha, Jesus, or Aesculapius, surnamed "the Savior God," we have but to remember one thing: symbols of divine truths were not invented for the amusement of the ignorant; they are the *alpha* and *omega* of philosophic thought.

As Theosophy is the way that leads to Truth, in every religion as in every science, so occultism, so to say, is the touchstone and universal solvent. It is the Ariadne's thread given by the master to the disciple who ventures into the labyrinth of the mysteries of being; the torch that lights him through the dangerous maze of life, for ever the enigma of the Sphinx. But the light thrown by this torch can be discerned only by the eye of the awakened soul — by our spiritual senses; it blinds the eye of the materialists as the sun blinds that of the owl.

Having neither dogma nor ritual — these two being but the fetters, the material form which stifles the soul — we do not employ the "ceremonial magic" of the Western Kabbalists; we know its dangers too well to have anything to do with it. In the T.

S. every fellow is free to study what he pleases, provided he does not venture into unknown paths which would of a certainty lead him to *black magic*, the sorcery against which Eliphas Levi so openly warned the public. The occult sciences are dangerous for him who understands them imperfectly. Those who devote themselves alone to their practice, run the risk of becoming insane; and those who study them would do well to unite in little groups of from three to seven. These groups ought to be uneven in numbers in order to have more power; a group, however little cohesion it possesses at first, by forming a single united body, whereby the senses and perceptions of those who work together complement and mutually help each other, one member supplying to another the quality in which he is wanting — such a group will always end by becoming a perfect and invincible body. "Union is strength." The moral of the fable of the old man bequeathing to his sons a bundle of sticks which were never to be separated is a truth which will forever remain axiomatic.

PRISONER OF THE CLOUDS — *G. Cardinal LeGros*

Within the deep eternal sweep
Of mountain-peaks and sky,
I stand alone with wind and stone
And watch the clouds rush by.
The morning light is wild and bright
With Autumn-flame uncurled
And all my dreams, like mountain-streams,
Cascading down the world!

It is said that men who dwell for long on high mountain-ranges suffer great discomfort in acclimating themselves to lower altitudes. The mystic who has learned to live in the higher aspects of his being likewise suffers if he permits his center of active self-consciousness to descend into those lower aspects of life which he has resolved to abandon. The life above the world's life is forever sweet and clean: the winds of eternity blow there, and multitudinous clouds of iridescent hue weave the poetry of paradise.

But the true mystic is not one lost in a selfish dream. Always upon him is the pressure of a great duty: that of striving to acquaint all men with the knowledge of a grander world: where truth abides in fulness, and compassion reigns, and the unfolding perfection of all things is a constant reality. But to fulfill his duty he must breathe that larger air; he must hear the symphonies of heaven while he teaches; his heart must beat in harmony with the divine heart. He dares not forsake the higher altitudes of consciousness which, once attained, make him alien to the life below.

How grave and solemn are the steps by which we climb from the desert to the mountain-peak. How bitterly die our human dreams

when once the ascent is begun. How desperate and cunningly beseeching are the myriad voices of the world's life around us when we mount. But what are they all compared to the Voice of Splendor speaking from the mountain-top? — "Lo! I have prepared a place for you where you will be with Me forever." Only we who forsake the world's life are happy! Only we who are prisoners of the clouds are free!

STUDIES IN "THE MAHATMA LETTERS" — *G. de Purucker*

(See Letter No. XV, pages 97-9)

ELEMENTALS AND ELEMENTARIES

I would like to make a comment upon the statement quoted from *The Mahatma Letters* concerning the Teacher's observation that there are elementals which never become men. This tells us two things: (1) that elementals become men, and (2), that there is a certain class of elementals in our manvantara which will not have the time to become men during the remainder of the course of this manvantara. They won't have the time to run up the ladder of evolution through the different kingdoms until the human kingdom is reached. They will become men in the next manvantara or perhaps in the manvantara after that. Sometime they will be men. All elementals become men. Man as a kingdom is a goal which all kingdoms below the human look up to and aspire toward; and during the course of evolution every monad beneath the human stage is aspiring to evolve, is unfolding itself finally to become a human.

In connection with this I want to issue a word of warning; it may have struck most of you, perhaps not all. It is with regard to the word elementary and the apparent almost identity of meaning which H. P. B. or the Masters occasionally give to the two words "elemental" and "elementary." The reason was this: in the early days — and remember we are going back now to the very early days of the Theosophical Society — our vocabulary had not yet been sufficiently defined nor was it sufficiently extensive. During those early days words were used which were later dropped, such as the word "rings" in connection with the rounds and races. The word "rings" finally passed out of theosophical use.

Now the word "elementary" was taken in those early days by our theosophical writers, the Masters and H. P. B. pre-eminently, from the writings of the Kabbalists and also from the imperfect writings of Eliphas Levi, the French Abbe and Kabbalist. These Kabbalists meant by "elementary" several things, but generally what we Theosophists now today call "elemental." An elemental soul they called an elementary soul, or simply elementary for short. So therefore you will sometimes find the two words used indiscriminately. Words which were then used almost synonymously we nowadays do not use in that way.

Later on, I think it was mainly due to H. P. B.'s work, "elementary" was set aside and given a specific technical meaning of its own which we now all understand. There is a peculiar meaning which we could even yet use in the word elementary — and by the way, in H. P. B.'s *Theosophical Glossary* if you will look under this word you will see what she has to say about just this point — there is a certain deeply significant and occult meaning which we could give to "elementary" quite apart from its technical meaning that we now give to it as a rule. We have to go back to the early Fire Philosophers who said that the elements of nature were filled with inhabitants. In other words, to phrase it as we would today, every cosmic plane has its own inhabitants fit for that cosmic plane, utterly unfit for any other cosmic plane; precisely as we men could not live under water as the fishes do or as the whale does. We are not fit for that milieu, that medium, that cosmic plane so to say.

So by going back to this original meaning of the Fire Philosophers, which is quite a true meaning, we still today could say that an elementary in this other sense means an elemental soul, thus specifically described because defining it as climbing up the rungs of the ladder of life step by step upwards. At every step

upwards it is a master, relatively at least, of what it has left below it, an elementary as to what is above it. That was really the way the Kabbalists and Eliphas Levi and the original Fire Philosophers spoke of what we now call the elementals or the beings or creatures or inhabitants of the seven fundamental cosmic elements, all of them on their way to become men, on their way as we are now to become super-men, and then gods, and then higher still. In this sense we are elementaries so far as the gods are concerned. They are elementaries so far as the super-gods are concerned.

A great deal of confusion has arisen, I think, in the minds of some readers of this wonderful book that we are studying here, from not remembering these little facts of history, and that in those days the distinctions we now give to those two words, "elementals" and "elementaries," had not yet been established.

KAMA-RUPAS — THEIR FUTURE

If you contrast the kama-rupa, which is our astral body after death, with our physical body, which is our physical body during this earth-life, you will realize that both are vehicles, both are enlivened by monads, or a center of consciousness, both disintegrate shortly after death. But the group of qualities which make my body, my physical me, are my physical skandhas. So my skandhas physically are my physical body as that body is. Just so with regard to the skandhas of the kama-rupa. The kama-rupa is its own skandhas. Subtract those skandhas, which means qualities, attributes, the life-atoms thereof, and what have you? You have not anything. It is the grouping together of these skandhas and the life-atoms through which they work, which form on the one hand the physical body in life or the corpse after death; and similarly the astral skandhas and others which inhere in the kama-rupa after death, form the kama-rupa.

Now then, is it not obvious that just as the life-atoms which made our physical bodies in a former life will return to us when we return to physical imbodiment, similarly and perhaps exactly is it with the kama-rupa. The Dweller on the Threshold is a kama-rupa so dense and heavy with matter that it lasts from one death over to the next rebirth of the entity coming back, and haunts the new, new-old man, the ego coming back to earth. That is an extreme case. But outside of extreme cases the life-atoms which form the kama-rupa are picked up by the human ego or monad as it approaches our earth, and the family into which it is to be born; and those kama-rupa life-atoms are gradually ingathered by the attraction of the ego over them, and them over it, until finally at some indefinite time, it may be in boyhood, it may not be until the boy becomes a man, it may not be even until quite late in life, the old kama-rupa life-atoms, and therefore the skandhas, have been re-absorbed by the new body, the new kama-rupa of the ego after it has come back after death.

If you will reflect, you must realize that even our physical body — and the same goes for the kama-rupa — could not hold together as a unit, in other words it could not be an entity, unless there were some holding power there. In other words there is even a monad of the physical body, and exactly so there is a monad of the kama-rupa. Remember, the kama-rupa is not a shell until it becomes a shell. Very shortly after death, the kama-rupa which has been built up during the life-time of the man, separates from the dead physical, and thereafter it begins its course in the astral light or in the kama-loka. And the monad is in that kama-rupa until the second death. Then the kama-rupa begins to fall apart because the soul so to speak has withdrawn itself, as the physical body begins to decay from the moment of physical death. And as long as the monad is in the physical body the latter is not a corpse.

THE DEATH OF A SUN

The Sun, or rather the period of its life referred to by the speaker quoting from the book, refers to the end of a Solar manvantara, or the opening drama of the Solar pralaya or dissolution time. After premonitory symptoms of decay which the Sun and those planets still surviving will experience, symptoms which it would be easy enough to describe to a certain extent if it were worth while — after certain premonitory symptoms of decay which may last for millions of years, the time will come when the Sun has reached its last instant of life. And then, like a shadow passing over the wall, like a flick of an eye-lid, the extinction of an electric light, the Sun is dead.

In exactly the same way a man dies. He may be slowly dying for years before he actually dies, but the moment of death is instant, quick as a snap of the fingers. The man may be on a sick bed for forty years, he may be dying during the last two or three years.

Premonitory symptoms are there that any capable doctor can recognize. But when death comes — gone! It is the same with the globe, or in fact anything as far as I know. It is a very wise and pitiful provision of our great Parent, because dying is a very solemn thing, and by solemn I do not mean anything arousing a sense of the ludicrous in us. It is a very important thing, so important that a weighty warning is issued by one of the Masters somewhere, I do not remember just at the moment where he tells us: (1) in a chamber of death to be as quiet as possible, for the mind of the dying man is collecting its consciousness, is passing inwards from all over the body, the brain and the heart and other organs, and that process should not be interrupted by noise. No weeping, no moving if possible, the utmost reverence and quiet. Death itself is peaceful. But of an evil person one cannot say the same; death can be hard to one whose whole affection, interest,

love and yearning have been knitted into the physical life. And it is hard then simply because the snapping of the psychic bonds of attachment takes time and causes psychic and mental pain. But even then, death comes quickly when it does come.

So it is with the Sun, although the premonitory symptoms may last for millions of years. Furthermore in this same wonderful book, (2) the Master K. H. also answers in reply to the same question: Do the planets enter the Sun at the end of the Solar manvantara? He side-steps a bit because that is an esoteric doctrine which cannot be told openly, but says this: Yes, you may call the Sun the vertex of all the planets if you wish. The meaning is very clear.

The point is here that the Sun, being as it is not only the heart but the mind of the Solar System as long as this Solar System remains a coherent unity, is therefore the governor of all the life-forces in that Solar-System — governor and controller, as well as source and final focus. Now as long as the Solar System lasts, the various planetary chains in the Solar System live and die, and are disembodied and have their Nirvanic rest and then come back again for a new term, and do this several times; but their dead bodies remain for a while as moons in the Solar spaces, each moon really following its former orbit, although a dead chain; but when the Sun reaches its final term in the Saurya or Solar manvantara, then the Sun draws into itself all the members of the Solar System, i. e., the various planetary chains, which however, before they enter the Sun, have died. The process is an analog of the manner in which a dying man for instance gathers together all the vital forces inwards and upwards before the moment of physical death supervenes and it is this ingathering of all the vital forces which brings about the phenomenon which we may call the death of our bodies.

The Theosophical Forum

BROADCASTS FROM SHANGHAI: IX

From Shanghai, China, over station XQHB, a series of Theosophical radio broadcasts was given last year by Miss Elsa-Brita Bergqvist and Miss Inga Sjostedt, in which they outlined the fundamental tenets of Theosophy. This talk, given last May 18th by Miss Bergqvist, deals with the subject of Swabhava, the essential characteristic of a thing.

Good evening, everybody:

The speaker last week gave an explanation of the doctrine of Karman, Nature's law of perpetual readjustment of harmony wherever this has been in any way disturbed. It is a habit of Nature, which amounts to a natural law, because it never fails to balance causes and effects with perfect exactness.

But Karman is more than this. In a perfectly true sense we are our own Karman. It is not something that happens to us independently of ourselves, but rather is it the qualities in ourselves that attract the circumstances from which we derive joy or sorrow. To illustrate this, may I point out that people in favorable circumstances are often not as happy as some less fortunate people who yet retain a serene contentment in the face of great difficulties. The important thing is not so much what fate has in store for us, but rather what qualities we have acquired to deal with that fate. At each moment we change these qualities, and so our lives and fates are perpetually changing. Nothing in the universe ever stands still, for life is synonymous with change. For anything ever to remain the same for even an instant of time is incompatible with life, and as everything is alive, it is an inconceivable abstraction. We change all the time, and at any given moment we are not the same as we were the previous

moment in mind or body. Our thoughts change and with them the qualities that compose our minds and characters. Through all these changes we are nevertheless conscious of being one and the same entity. That is, our individuality does not perceptibly alter, but little by little we grow by adding to our egoic center those qualities of our lower nature which by our efforts we have raised to the level of our higher selves. This is a slow process of development, and we may live thousands of lives on earth before our personal lower nature has become fully absorbed into the divine center within us, and we shall function consciously on the spiritual planes, just as now we function in the emotional and lower mental states of consciousness. It is this petty emotional everyday nature, which has little by little to raise itself to the level of our Spirit and in so doing to become absorbed in the Spirit — that is to say in our true self.

As we know, there are no two things exactly alike, no two leaves, as the saying goes, with identical markings, and this holds true of all the spheres of nature. There are no two people with the same qualities in equal proportion. As we grow and evolve we are continually altering all the complex parts of our constitution, incorporating in ourselves attributes and thoughts that we contact, and exchanging with other entities the atoms of our physical, mental, vital and emotional vehicles. We develop in ourselves those qualities with which we are most closely related. Just as a child will try to emulate the object of his hero-worship, we all seek to acquire the qualities we admire in others. As we continually give and take thought-entities and develop the attributes that appeal to us, so we change ourselves and our attitude to our surroundings. The circumstances we encounter are to us either pleasant or unpleasant according to the reaction of our own natures, and so it is that each of us is his own Karman, for it is the self-developed qualities in each man that determine

his attitude to the trials and triumphs he meets, and whether he profit or lose by his experiences on the earth.

It is also these qualities, which the Theosophist would call collectively by the Sanskrit word Swabhava, meaning innate characteristics. It is the swabhava then, or the collection of peculiar characteristics of an entity, that determine his Karman. As all entities are at different points on the ladder of evolution, they all have different lessons to learn, different experiences to pass through, and the unerring justice of Karman places them in the setting perfectly adapted to the gaining of the experience necessary for the next step. For instance, it is the swabhava of a man that causes him to be a man, for with his particular qualities he could be nothing else, just as it is the swabhava of a rose to be a rose. It could not be any other entity, for its peculiarities are those which go to make up a rose. If you planted an acorn, you would not expect to see a maple tree grow, neither would a sheep be expected to produce kittens. Each entity embodies in the form suited to its inner qualities, which is the same as saying to its state of development. These facts quoted from nature are so obvious and we have been accustomed to take them so much for granted, yet it would be well to consider for awhile, why it is that a seed — take for instance a strawberry achene, which itself bears no resemblance to the finished plant, would invariably produce a strawberry plant, even though it be planted in a bed of nasturtiums or cauliflowers. There is something in that achene which is typical. It contains latent in itself the potentialities of a strawberry plant, but not anything else, yet there is no visible indication of what it will produce.

As an entity progresses and garners experience, its swabhava constantly changes and grows better or worse, and when the entity by means of accumulated experience and consequent change of qualities, has exhausted the stock of knowledge to be

gained in one bodily form, then that entity will incorporate in, assume the body of, a more highly evolved form of life. This does not mean that the physical forms change for that reason — they do, as a result of climatic and other changes — but rather that the soul inhabiting a form of life is promoted to inhabit a body more suited to its growing capacities for self-expression. We could not as human beings find sufficient freedom to express our abilities in any form lower than the human. Neither are we sufficiently wise and experienced to embody in the form of for instance a planet. Our swabhavas are those of men and women, and these characteristics are changing all the time. We possess in our will and mind the ability to make of ourselves anything we wish, and it is our immediate duty to grow into conscious spiritual entities, for which fitting vehicles will be furnished when we have attained to our goal, as perfected humanity.

Now please remember that we are constantly changing, that our thoughts and emotions are in a constant state of flux, and that we are continually weaving into the fabric of our being new qualities, and it is the aggregate of our characteristics at any given moment which is this same swabhava. Our swabhava, therefore, is never the same from one instant to the next, because as the atoms composing our minds and bodies change, so the aggregate, of which they are the component parts, changes in proportion, and it is this aggregate which at any particular instant is our swabhava or character or state of evolution. Evolution means the unfolding or bringing forth of that which is within. Man, as an integral part of the Universe, contains within himself in latency all that the universe contains, and can unfold whatever qualities he desires from within himself. Our swabhava, therefore, is the sum-total of what we have to date evolved from our innate potentialities through the experiences encountered during our many lives on earth.

At the beginning of this talk, I mentioned that the Higher Self or individuality, as distinct from the lower personality, does not perceptibly alter, and then proceeded to explain how everything in the universe is constantly changing. Lest anyone should have found these statements contradictory, it would be as well to explain more fully. The individuality, or Higher Self or Reincarnating Ego, does not perceptibly alter — perceptibly to us, that is, because our perception does not function on its plane. It is our higher mind and Spirit which are meant, and these parts of us are unfortunately not much in evidence in our everyday lives. We live for the most part in the personal, emotional, selfish principles of our nature and take but little heed of the still, small voice of our Higher Self. This Higher Self is a ray emanating direct from our Universal Spirit, the *to us* highest conceivable Divinity, and could we but communicate with this Divine Center in us we should see the higher egos as growing evolving entities, but on a higher rung of the evolutionary ladder than the personalities we inhabit for a life.

It is our aim and the Karmic law that we shall help evolve the personalities and incorporate into our individualities all that can be garnered from the chaff of these evanescent forms. For our emotions and lower mental qualities are, as said in a former talk, merely the garments of the true self, and disintegrate on the death of the physical vehicle, while the ego passes through the experiences it has prepared for itself during life and in due course of time returns to earth, where it gathers up the fruits of which its former personality contained the seeds to build itself a new personality for the future life on earth. We are thus responsible for every one of our qualities of character. We have builded for ourselves the residences of our egos, and if these be not to our liking it is entirely our own fault.

AHAM ASMI PARABRAHMA — G. de Purucker

Dr. de Purucker's last public address given in the Temple at the International Theosophical Headquarters, Covina, California, on September 20, 1942, at the time of the Autumnal Equinox, known to Theosophists as the sacred season of the Great Passing.

Brilliance like the almighty wings of love knows no barriers, and can and does penetrate everywhere; and this thought was born in my mind this afternoon as I hearkened to our speaker giving us excerpts of great beauty, of great depth, from the archaic Wisdom-teachings of mankind, teachings which belong to no race, to no age, and which, since they are essential truth, must be taught in spheres not earthly but divine, as they are taught here on earth to us men. For it struck me that the burthen of his brilliant address was this: that we men, we human beings, as indeed all other things and entities everywhere, are but parts of one vast cosmic whole, intimately united together, despite our failings and our stumblings, in the working out of our common destiny. And therefore in proportion to our own individual understandings, we respond to that cosmic source which the Christian calls God, and which I prefer to call the Divine, from which we came, inseparable from which we are and always shall be, and into which again we are now returning on our ages' long pilgrimage. Oh, just that one thought, if we men could keep it alive in our hearts and allow it to stimulate our minds from day to day, how would it not soften the asperities of human life, how would it not teach us men to treat our brothers like brothers instead of bitter foes!

Don't you see, Brothers and Friends, that this teaching is brilliant

because it is a teaching of a genius? It contains everything within it, all the Law and all the Prophets. And what is this teaching? Succinctly phrased it is simply this: that the cosmic life is a cosmic drama in which each entity, be it super-god or god, or demi-god, or man, or beast, or monad or atom, plays his or its proportionate part; and that all these dramatic presentations are welded together, leading up to one vast cosmic climax — to which, by the way, there is no anticlimax. So that with every even human day we are coming closer to that time in the immensely distant future when we all shall, once more re-united, enter into the deep womb of utter cosmic being — call it God, call it Divinity, call it Spirit, call it what you wish. The drama then will have ended. The curtain will fall, and what we Theosophists call Pralaya will begin, the rest-period. But just as in human affairs, when night is over there comes the day, so when the night of pralaya ends, the manvantara, the cosmic day, dawns again. The curtain on the cosmic stage once more rises. Each entity, each being, then begins its cosmic play, its role, exactly at the metaphysical and mathematical point where it stopped when the bells of pralaya rang down that cosmic curtain on the manvantara or world-period just ended. Everything begins anew precisely like a clock or watch, which, when it has stopped and is rewound, begins to run again at the exact point at which the fingers themselves stopped.

Why, this single conception of human identity with the cosmos, together with all the religious and philosophical and scientific and moral implications which it embodies, is older than thinking man. We are one and yet we know it not, we recognise it not; so that in the drama of life we commit all the follies on the stage, and tragedy becomes comedy and comedy, alas, through our own fault becomes tragedy.

I want to quote to you something that I love and have loved from

boyhood. I learned it when I was a child and found it again once more in *The Secret Doctrine* of H. P. B., when in after life as a young man I joined the T. S. It is this: the picture is that of the Hindu guru or teacher. A pupil stands or sits before him, and he is testing the knowledge of this pupil regarding the teaching that this pupil has received, and he says: "Chela, Child, dost thou discern in the lives of those around thee anything different from the life that runs in thy veins?" "There is no difference, O Gurudeva. Their life is the same as my life." "O Child, raise thy head and look at the violet dome of night. Consider those wonderful stars, those beings radiating, irradiating, from the cosmic splendor above our heads. Seest thou that cosmic fire which burns in all things, and shines supremely bright in this and that and that and that yonder brilliant orb? Child, dost thou discern any difference in that cosmic light, in that cosmic life, from that which shines forth from our own day-star, or from that which burns in thine own heart both day and night?" And the child says, "O Gurudeva, I see no difference between life and life, and light and light, and power and power, and mind and mind, except in degrees. The light that burns in my heart is the same as the light that burns in the hearts of all others." "Thou seest well, Child. Now listen to the heart of all this teaching: AHAM ASMI PARABRAHMA." And the child, who has been taught Sanskrit, the Vedic Sanskrit, understands and bows his head, "*Pranjali*." The meaning is: "I am the Boundless, I myself am Parabrahma, for the life that pulses in me and gives me existence is the life of the divinest of the divine." No wonder the child has understood. Am I a child of God? Essentially it is the only thing I am, and if I fail to realize it, it is not the Divine's fault but mine.

I believe, Friends and Brothers, that you will find this sublime teaching with its innumerable deductions — and you will feel bound logically to make deductions for yourselves as you

understand it — I believe that you will find this teaching of Divinity in every one of the great systems to which the genius of mankind has given birth. Religion is it; Philosophy was born from it; Science is now aspiring towards it, and is beginning to get feeble adumbrations of what it means. Think even in our own small human affairs — small when compared with the vast cosmic majesty which holds us around in its sheltering care — think, if every man and woman on earth were thoroughly convinced of the utter reality of this cosmic truth! Never again would the hand of man be raised against man. Always it would be the extended hands of succor and brotherhood. For I am my brother — in our inmost we are one. And if we are separate it is because of the smallnesses that make us each one an atom as it were, instead of the spiritual monad which for each one of us is our source. That monad is of the very stuff of divinity. As Jesus the Avatara phrased it in his wonderful saying, "I and my Father are one" — the Father and the divine spark, the spark of divinity which is identic with the cosmic life, with the universal ocean of life, to use another metaphor. This idea of the cosmic ocean of life, of which we are all droplets in our inmost and in our highest, was in the mind of Gautama the Lord Buddha when he spoke of that ultimate end of all beings and things; for, as he said, all beings and things are in their essence Buddha, and some day shall become Buddha themselves, when, as phrased so beautifully by Edwin Arnold, the dewdrop slips into the Shining Sea.

CONSUMMATUM EST.

The Theosophical Forum

G. DE PURUCKER: LEADER AND TEACHER — W. E. S.

IN MEMORIAM

G. de Purucker, Leader of the Theosophical Society, Editor of this magazine, and Teacher and Friend to thousands scattered over this globe, died very suddenly Sunday morning, September 27th, shortly before nine o'clock. A letter printed in this issue from his private secretary, Miss Elsie V. Savage, gives more intimate details of his passing; and the short biography at the end of the magazine sketches his life, outwardly on the whole so quiet, yet inwardly, so full, every moment of which was crowded with study and labor that would redound to the security and future welfare of the Theosophical Movement.

Dr. de Purucker believed so truly in the beauty of death, in the further adventures it brings to the pilgrim-soul of man as it journeys from planet to planet in that true rebirth which follows when the travail of earth-life is over, that he would not have our thoughts marred by personal lamentation or grief. In this, we know, all his students concur. And the public likewise will respect the attitude of Theosophists toward death, and later perhaps come to understand it, when they see, as many have already seen, how the knowledge of its majestic processes brightens and strengthens their lives and gives them power that will sustain in sorrow, support in difficulty, and inspire in daily living.

DR. G. DE PURUCKER

WHEN HE ASSUMED THE LEADERSHIP OF THE T. S., JULY, 1929

Nobly to live, grandly to die! I recall the words — often on his lips when speaking of the ancients and their conception of life and death. But eulogy would be abhorrent to Dr. de Purucker in these pages, and we shall make none. But let these two main facts be stated. They rush to meet us as we look back on the life just

ended. G. de P. took office as Leader of the T. S. in 1929 at a critical time. The Society needed revitalizing. He revitalized it. It needed new blood. He gave it new blood. And it was literally this transfusion of energy from himself as the intellectual-spiritual channel for the Masters into the bloodstream of the T. S. that saved the T. S.; and he continued pumping this stream of psycho-intellectual-spiritual force into it until the very last moment of his life. He poured out teaching. He elucidated H.P.B.'s abstruse *Secret Doctrine*. He added to it, and much of what he gave, as he occasionally reminded his hearers, had not for thousands of years left the sanctuaries of the Mysteries. The time was ripe for him to teach, and he taught. It is stating the truth with reserve when we say that through his extensive lectures and numerous writings he made what he always liked to call "technical" Theosophy understandable for hundreds, and in so doing wonderfully transformed their lives. That is the first point: recognition of the wealth he gave of spiritual instruction, coupled with his utter fidelity to the Masters and to H. P. B. in doing this. And the second point — almost as remarkable to those who throughout the years personally witnessed its gradual accomplishment — is that by almost superhuman efforts, along material and organizational lines, he succeeded in freeing the Society from debt, so that for the first time perhaps in its history it stands today on a firm foundation of financial security. And coupled with this, as his last act, he moved the Headquarters from Point Loma and the uncertain conditions prevailing there, owing to its geographical situation and the present war, to the safer and more practical environment of Covina, in Los Angeles County, where, being nearer to the great metropolitan areas of the southwest, greater opportunity is offered for the practical work of disseminating the teachings of Theosophy.

Very heavy are the duties of Theosophical leadership. Few would

wish to bear them. They were indeed very heavy for Dr. de Purucker. But as we all look back on his thirteen years of leadership, can anyone of us doubt but that his labors were crowned with success — success in spiritual accomplishment, success in material achievement?

For the rest, turn to his writings. There, if you wish, you will find the story of a life wholly dedicated to Truth, to its dissemination and — as a particular trust to be fulfilled in this incarnation, coming first and foremost — utter devotion to the welfare of the T. S. as its loyal Servant and Leader.

To his own words then the Editors have turned in preparing this special memorial issue, and with care have chosen from unpublished letters, talks, and lectures, teaching which shows the strength, the majesty, the beauty, and the appealing commonsense of Theosophy, and reveals the remarkable range and genius of G. de P.'s exposition, pointing as ever it does to the existence of that central source and storehouse of Ancient Wisdom from which all the illuminated draw.

Your particular attention is called to the opening article, "Aham Asmi Parabrahma," an almost prophetic utterance, read in the light of his death so soon afterwards. There in simple understandable English we have a summary of the Secret Doctrine, the fundamental propositions of the Ancient Wisdom. It is a condensation in living, forceful form of all our many Theosophical doctrines, for all aspects of the Ancient Wisdom are but a ringing of the changes on the one sublime idea of Universal Brotherhood as a fact of Nature. And the facts of Nature are revealed to us through the Theosophical teachings of Hierarchies, of Inner Rounds and Outer Rounds, of Karman and Reimbodiment, of the genesis of Solar Systems and Universal Solar Systems. The more we learn of the carpentry and geography

of universal being, and indeed of the mysteries of our inner nature, the more we find that the essence and root of all teaching is that we and all beings and things — ALL BEINGS AND THINGS — are rooted in the Kosmic Heart, the Divine. How truly and beautifully is this expressed in G. de P.'s last public message above referred to! *Aham Asmi Parabrahma. I am the Boundless, the Divine.*

On other pages of this issue you will also note with particular care, no doubt, the letter from the Cabinet of the T. S., as well as the interview given to a reporter from the *Covina Citizen* by Mr. Iverson L. Harris, Chairman of the Cabinet. By this you will know that the work of the T. S. is protected; that the Leader of the T. S. in his passing left no details uncared for; that the Cabinet stands united in the carrying out of his instructions, and counts on the strength and loyalty of each and all F. T. S.

In the December FORUM cables conveying sympathy and loyal support to the Cabinet from England, Sweden, South Africa, Australia, together with messages from all over the United States and from Canada, will be recorded, showing the present unanimity of feeling throughout the length and breadth of the Society. And in that issue the Editors plan to include articles describing G. de P.'s literary output, his work for fraternization among Theosophists, his European lecture-tours, and perhaps giving other intimate glimpses of his years of leadership of the T. S.

But for this issue we have his own words. Let them speak. In them let us hear his resonant and inspiring voice again. Let us meditate on them in the spirit of high impersonal love he urged us so continually to strive for. Of the one who died, so often we heard him say: *Gaudet in astris, dormit in pace.* Now it is he who has left us. And now we say — with what inner meaning! — he sleeps in peace; he rejoices in the stars. But his message, and the eternal

message of Truth from the living Lodge of Light, the message of H. P. B. and all great Teachers of Humanity, lives. We pledge our selves to our Inner Selves that that truth shall not die.

The Theosophical Forum

THE T. S. AND THE LOST CAUSE OF MATERIALISM — G. de Purucker

Last words of Dr. de Purucker to the members of the International Headquarters Lodge, spoken at the close of their regular study-meeting, held September 13, 1942.

The origin of the Theosophical Movement began not in arbitrary decisions by the powers that be, but because of conditions of cyclic necessity. Thus, when H. P. B. came, she came because of a need to keep alive in men their spiritual intuitions, and by so keeping them alive, prevent men from falling under the sway of a world ruled by brute force, in which might was considered right and in which the only justice was the booty of the strongest. She knew that the will of brutal power would govern mankind unless checked and stayed by those innate rules of right residing in the souls of men.

How came about this situation in our world? Because of two things: A religion which had become thoroughly materialistic, thoroughly; so much so that men no longer believed that this universe was run by spiritual powers enforcing the rule of right; and therefore that men could act pretty much as they pleased if they but rendered lip-homage to an ecclesiastical set-up. This idea coming from the religious side of man's knowledge, education, and social contacts, was more than strengthened by an equivalently evil power emanating from the ranks of modern scientists. And this latter power had incomparably more influence on men's minds than the former, the dicta of the Church and its Hierarchy. Why? Because men had begun to believe that the noble research into nature undertaken by science gave us truth; and men were justified in so believing, for that is the real

work of scientists: the investigation of facts and the collating of them into a comprehensive philosophic mold. And a great many scientists do work most earnestly and with energy and most praiseworthy perseverance to that noble end. But it is a very different thing when men who themselves had already lost all belief in a spiritual control of the universe, began to theorize and lay down laws of theoretic speculation regarding the origin of the universe and the origin of man, the working of the universe and the continuation of man therein, and the future of the universe and man's future in it. These were not scientific facts discovered by research. They were theories only, speculations only, hypotheses only, derived from the imagination of men who had lost a belief in a spiritual control of the universe. Sincere efforts these were, of course, but they were based on no spiritual belief, and therefore these scientists could not render into a comprehensive whole, a philosophic whole, the facts in nature which they had discovered.

Thus, examine those early days of complete materialism beginning about the time of Voltaire and others. I use Voltaire as an example, not because he was the originator of this era; but he was one of its earliest products and one of its noblest. He was a fighter against dogmatism of any kind. More glory to him! But his work likewise destroyed belief in a spiritual universe.

Thus, then, what were these scientific theories on the one hand and religious theories on the other hand? That this universe runs itself, that there is no spiritual power in it controlling it or guiding it, and that things happen by chance not by law. This was uttered out of one side of the mouth and out of the other side of the mouth of scientists came the equally fervent statement: the universe is caused by the laws of nature. With one side of the mouth they preached fortuity and chance and with the other side they preached laws. It never seemed to strike them that these two

preachments were mutually destructive.

What were, then, the factors that Darwin stated made evolution, or what were the conditions under which evolution took place, or again what caused evolution? — phrase it as you wish. It was a struggle — it was a struggle in which the fittest survived, not the best, not the noblest, but the strongest. This was thought of as a law of nature. There was not a word in Darwin or in Lamarck or in Haeckel or in Huxley, or in any of these great men so called, of fifty or eighty years ago, about this world's being ruled by intrinsic moral sanctions, not a hint of it. It was a rule of brute force in which the strongest survived, a struggle in which the fittest survived, and the fittest meant the most brutally strong, not the best. Thus, as I have often pointed out, a man and a shark in the ocean — which is the more fit to survive in case a conflict should arise between them? The shark will survive because it is in its element. He is the fitter in that element and he will kill the man. Yet the man is the nobler creature, the better, the more evolved.

That is what Darwinism is: chance action by nature in a desperate struggle to survive, in which the weak are eaten or go to the wall and brutal strength only is the cause of victory. These ideas are destructive of the soul-life of mankind, whether they are born from theology or science. Get these facts clear, and examine, as we Theosophists have for all these years, the lapses from logic in our scientific works, the lapses in the reasoning of our scientists.

It was into a world governed by a belief in brutality as nature's sole way of functioning that came the God-Wisdom through H. P. B., and, as she proclaimed, her first work was to keep alive in man his spiritual intuitions, so that he would react against this "rule" so called and mis-called, this "accident" in nature, this rule of brutal force. Look at the actions of the peoples of the earth

during the last hundred years or more — no, the last three or four hundred years. Look at the world today. The result of soul-loss, of the stifling of the spiritual instincts of the human being. Indeed we Theosophists have reacted with power against these teachings, whether from the theologic or the scientific side. We have faced the scorn and the ridicule of a day when even to speak of the human soul meant loss of caste.

Look what H. P. B. did. Almost alone and single-handed she challenged the thought-life of the world and brought about by her courage and her teachings the founding of the Theosophical Society, proclaiming aloud and to all and sundry that the world was ruled by moral law and that he who infringed that law whether under the hypocritical guise of virtue or whether openly and desperately as the criminal does — *that he who breaks that law shall pay*. Today the world no longer believes that. It believes that the only way to make what they think is a criminal pay is to use greater brutal power than anyone else does. They no longer believe in the rule of spiritual law. They no longer believe that this universe of ours is governed by moral sanctions. They take the law into their own hands.

Is this the truth? Is this religion? Is this philosophy? Is this science? It is not religion, it is not philosophy, it is not science. All these three in their essence proclaim the rule of law in nature; that this law is spiritual and therefore moral; that there is cause and there is effect emanating from that cause, and that these effects are ineluctable and cannot ever be avoided: they should, can, and will haunt your footsteps as the cart follows the foot of the ox which draws it — a magnificent old Buddhist statement of the *Dhamma-pada* written in a day when men believed that the universe was ruled by spiritual and moral sanctions.

Do an evil deed and, sure as the cart follows the foot of the ox

which draws it, that evil deed will haunt you and find you out in this life or in a future one. This is religion, this is philosophy, this is science; especially science, teaching as this last does its doctrine of cause and effect, its doctrine that effect follows cause and is alike unto its parent cause. The world no longer believes in these things. The peoples no longer believe in them. Only those fine spirits whose intuition flames brighter than in the majority of our fellow human beings have disbelief in these teachings of materialism now dying: dying in religion, dying in philosophy, dying in science, but whose maleficent consequences afflict us like Atlantean karma even today weighing heavily upon us.

So it is important to support in the science of our time all those elements which uphold the belief in a spiritual governance of the world. It is important for us as Theosophists to support in philosophy those elements, those philosophic elements, which teach that the universe is controlled by intrinsically moral sanctions. It is important for us Theosophists to support with deepest sympathy and understanding those elements in religion which, casting aside the materialism of the last 1800 years more or less, teach that divinity filleth all vessels, whether vessels of honor or vessels of dishonor; for to divinity neither the one nor the other is dishonorable. That divinity is the spirit universal out of the womb of which come all beings and things, and back into which celestial haven in due course of the revolving ages all things and all beings shall one day return.

I think, dear Brothers and Companions, that the most needed thing today for us Theosophists is this: to do our utmost to bring about a renaissance, a rebirth, in the minds of men of the truth that this universe of ours is under the most strict cosmical moral law, in other words of harmony; for what in the universe is harmony, in the human soul we call the ethical instinct. Remember that the man who is sincerely convinced that his

thoughts and feelings are going to result in action and that he is responsible for this action, will take thought and long and searching thought before he acts. There you are. There is the secret of the whole thing. Just that simple law, a belief by us men that this universe of ours is not the product of chance; that it is infilled with moral power and that this moral force resides in the human soul and that this moral force in the human soul should be our guide in our daily conduct. If men followed just that simple rule our life here on earth would be a heaven when compared with what it now is. All too long has thinking man been under the illusion of maya, that he could take nature's laws into his own hands and in his feeble manner with his weak and shaky intellect attempt to administer cosmic justice.

How the gods must laugh at us! And if they weep, as some say they do, how at times their celestial eyes must be filled with the tears of divine pity for man!

The Theosophical Forum

STRENGTH AND BALANCE IN OCCULTISM — G. de Purucker

Short address given to his students by G. de P., June 13, 1937, in the Temple, at Point Loma, California, at the conclusion of the usual lodge study-program.

The holy mysteries are never publicized: never, never, never. You have to earn them and fit yourselves for them. It is obvious that if you are not fit to receive them, they never come to you. It would be a crime to attempt to do otherwise. It is the easiest thing in the world for a man or a woman to incur loss of the soul by following any other method of occult training than that of the Masters, taught as they themselves in their turn are by the Dhyani-Chohans, the bright and blessed gods. I mean it. If you want truth you must come to the Temple for it, and you must come in the proper spirit; you must work upon yourself so that you will train yourself to be fit to learn, to be receptive. Otherwise you just can't receive it. You won't take it in. You can't take it in until you make an opening in which to put it — to use very plain, simple language. If your mind is set against it, like a closed door, it does not open to receive. You must train yourselves first. But if you do train yourselves, and, as we say, live the life, there is absolutely no barrier which can or will prevent your going indefinitely forwards. It is exactly like a growing child. He cannot take in the world's wisdom even, even the wisdom of this world, until his mind has developed to the point where it can receive it and retain it; until it is trained to do it. Simple! It is exactly the same thing with occultism, with esotericism, with the mysteries. They are indeed in the Theosophical Movement, both the Greater and the Less. They can be had by anyone, but such a one must prepare himself, train himself, must be in deadly earnest. Then he can receive them.

The chief or fundamental rule of this training or discipline is the becoming receptive to the inner and higher part of one's own constitution, whose whisperings of truth and intimations of cosmic verities find no lodgment in minds wilfully or ignorantly closed against their entrance. There is the whole, or at least the fundamental, rule of occult teaching and learning in a nutshell, and the reason for all the safeguards that have been thrown around it. I have myself known hapless students of Theosophy who have literally gone crazy, temporarily at least, but nevertheless have gone crazy, have been crazed, from an unwise and unguided study of some of the more recondite teachings. It is pathetic; for the pathos lies in their yearning to learn and to become greater than their lower selves. The pathos likewise lies in the fact that they tried to scale the peaks before they had disciplined themselves to traverse the foothills of morals, of learning and self-control. It is one of the perils that the Masters and H. P. B. and the Theosophical Leaders have had to watch out for, and to contend with. It is a very difficult situation. I have known men and women barely escaping the loss of health in merely brain-mind overstudy without the healing, saving power of selfless devotion: a most beautiful thing in a way; one's heart warms to them in admiration for their courage, for their insistence on getting truth; but it has been unwisely done. That is why we insist upon the all-round, balanced growth, a wise, shapely growing into knowledge and wisdom, instead of the distortions and ungainly malformations, mentally and even psychically, that come from unwise study of occult things.

It is for this reason that in our own T. S. the inner, the secret, the occult, the esoteric, is so very carefully guarded and watched over and *never* publicized. Our Masters have no desire to have their students incur risks of soul-loss, or mind-loss, or even of physical deterioration, or any other human tragedy. But otherwise, having

stated these things, just remember how beautiful and simple the rules of occultism are. Nothing in our deeper and more occult studies will ever interfere with your family duties, never; for those duties are duties; and it is one of the first obligations of a Theosophist to fulfil every duty. He is no occultist if he neglects one, no matter what his temptations are. No matter if he tries to grasp the sun, if he neglects a duty he is a coward by that much. Being a coward and a weakling, he is no occultist. No injury should ever be done to another. If you do it you are beginning to descend, and you may walk into black magic. But there is a way and a chance to rescue yourself and to return to the strait and beautiful path. For it is a truly glorious path, and it brings a sense of the realization that man is akin to the gods and that the gods are present amongst us. Yes, I mean it: the gods even now walk the earth. But few are the sons of men who have trained themselves to realize it.

Now, the gods will associate with us, self-consciously to us, when we shall have learned first to know that they are there; then to make their approach to us mutually desirable. Let it, however, suffice for the main thought to carry home that the gods walk amongst us even now, as they did in far past ages, in the childhood of man, when he was still innocent and not so sophisticated that he thought he contained all the knowledge of the universe in his puny, little brain.

Let us, then, make ourselves presentable, and let us make our lives so attractive and interesting to the divinities, that they in their turn may be glad and happy to associate with us, self-consciously. I will go this far and then stop: There is a place, a geographical place on this earth, where not only is it common for the highest men that the race has produced to associate with the gods companionably, freely, friendly; but where the same relations of teachers and taught exist between gods and men, that

exist today in our schools of learning. I wonder if you grasp what that means.

And at the heart — like this omphalos, or navel, or center, in the Temple, this little pillar in the center of this auditorium — in the holiest place there, what we call the *sanctum sanctorum*, there is an invisible presence, the highest spiritual presence of this earth. Make of it what you can.

The Theosophical Forum

OUR WORK IN THE PRESENT AND THE FUTURE — G. de Purucker

During the thirteen years of Dr. de Purucker's leadership of the T. S. an enormous mass of correspondence passed through his office. Perhaps it is not so well known throughout our Society, however, how much of important instruction, practical and helpful in daily living and organizational conduct, was given out in this way to students and T. S. officials in all parts of the world. With this thought in mind the Editors have asked Miss Elsie V. Savage, G. de P.'s private secretary since 1929, to select from such letters and instructions a few extracts which stress more significantly some of the duties and needs that lie before us today. These excerpts follow.

Ways of Disseminating Theosophy

I know there are many ways of disseminating Theosophy, of casting forth the holy seed into the minds and hearts of men. To me all ways are good *if they are successful*, but in each we must be able to find the God-Wisdom which we are here to teach. If we do not teach it we are negligent of our holiest trust. Greater than showing people how broadminded Theosophists are, greater far than this, although that is most excellent and good in its way, greater still is to give men hope, to instill comfort into weary hearts, courage into their lives, and to give them vision. "Without a vision the people perish," and if it is not a good vision, so great is the hunger of human hearts for reality, alas, all too often it is replaced by an evil vision. Evil takes the place of good. And yet so wonderful is the web of nature, and so mighty the power of the spirit, that even in an evil web we will find woven through the mesh like golden threads the light of the spirit.

No, while all ways of disseminating seeds of truth are excellent, *provided the seeds be disseminated or sown*, I myself can find no grander way than that of following the traditional Theosophical habits of thought and of teaching and of living which are, first: the setting the example in your own Self of the truth that is living and burning within you; next, calling our brothers ignorant of Theosophy to the spiritual and intellectual banquet. Those who are searching for light and know not whither to turn, call them to the Master's table! And the food is set forth in our standard Theosophical books, and in all the great literatures of all the ages.

I think our best way of teaching our own God-Wisdom — I say "ours"; it is ours only because we are blessed in having received it, it is not ours in any other sense, it is humanity's priceless heritage — the best way is to show its existence in all the ages in the great books that have come down to us, in our standard Theosophical books, and by teaching it technically; for there is no other way of teaching it properly.

Learn to Think in Centuries

I look to the future, and as dear H. P. B. used to say, a phrase often humorously quoted by K. T.: "I sit by the sea and watch the future through the weather." We must learn to think in centuries, not merely in lustra of five years each; for in this way we obtain a mundial or world-picture, and build intelligently for the future, instead of having our attention absorbed by merely the present or immediately coming events. Don't allow all your thought to be swallowed up in the events and problems of the immediate present. I think it is imperatively necessary to learn to think in centuries. It is likewise extremely comforting and absolutely kills all such things as discouragement, downheartedness, pessimism, etc., etc. Indeed we have much, very much, to be thankful for, and I bless the Masters and the gods for that immensely strong yet

always outwardly invisible help which daily I can feel or sense or intuit, and which will be ours as long as we prove worthy, and therefore receptive vessels of its benign influence.

Guard your Thought – Processes

I have observed my own processes of thought many and many a time, and I notice that many and many a time I have been saved from drawing a false conclusion by being reluctant to accept that conclusion until I have examined it. That is an excellent rule that we all try to follow. But I likewise have observed that if I am cowardly or lazy, and refuse to face a thought or a problem squarely, nobody suffers but me. I am the loser. So I have learned to think, and try to think clearly, to be afraid of thinking no thought whatsoever, but always to strive to see that the thoughts that pass through my mind as the instruments of cogitation shall be high ones; not to give in to snap-judgments, not led astray by emotional volcanic outpourings, nor what is worse I think, led into judging others with injustice. This is an exercise the Hindus would call Yoga. It is an exercise I recommend to anyone who wants to improve himself. Watch your thoughts. Watch your processes as you think those thoughts. Discard the thoughts you do not like. But be careful in so doing lest you refuse to receive a divinity knocking at the door of your heart when you are at first too blind to perceive its divine character.

The Injunction of Pythagoras

Do you remember the rule laid down by Pythagoras, a very beautiful one I think. It runs something as follows, often quoted by me; but it is worth quoting again and again. It loses none of its beauty and profundity by repetition:

"Let not the setting sun reach the western horizon, nor close thine eyes in sleep, before thou hast gone over all the events of the day

just past, and hast asked thyself this question: What have I done today that has been done amiss? What have I done today that has been done aright? Have I injured anyone? Have I failed in my duty? Let not the setting sun reach the western rim of space, nor let thine eyelids close in sleep ere thou hast asked thyself these questions."

If only men and women would follow that simple rule, ninety percent of the world's trouble, heartache, sin, anxiety, would be nonexistent, would never happen. And the reason is simple. The world's troubles are from our weaknesses, not from our strength; and if we can increase our strength, do away with our weaknesses, every human being thereafter in proportion to his inner evolution or growth would become a power for good in the world. And you see what that would mean. It cuts at the tap-root of most of the thoughts and feelings and acts that bring misery amongst us.

Our Work in the Present and the Future

In these exceedingly difficult times for all men, one's heart of necessity often aches for the common sorrow and grief, and for the heavy burthen that so many are now carrying; so there is a certain gravity or sobriety of spirit that must of necessity weigh upon us Theosophists also. Yet it is one of our first, indeed one of our elementary Theosophical tenets that it is precisely in times of difficulty and stress that men's hearts open perhaps more than ever before to the reception of spiritual ideas; and it is by means of our Theosophical gatherings, whether great or small, that we can bring a large measure of hope and comfort to weary and stricken souls. You will feel yourselves as members of a great body-corporate of other men and women the world over, who are all united, spiritually and intellectually as well as by the impulses of the heart, in our blessed Theosophic propaganda-work, in

order that the Masters' teachings may reach an ever-widening circle of hungry hearts and eager minds, seeking for comfort and the sense that the great realities of life govern men and are behind all things, in spite of the turbulence and storm of human existence.

Let us never forget that mighty and strong minds are behind the spiritual government of our world, indeed of our globe; and that sooner or later karma adjusts all things to its majestic purposes, and in the spirit of universal brotherhood, peace on earth, and good will to all men.

I repeat, that in my judgment it is precisely in times of difficulty and stress, as has indeed been said by the Masters is the case of kali-yuga, that spiritual progress is more easy to achieve than in other and more quiet times; and a spiritual effort such as that in which the Theosophical Society is engaged is far more likely to be received by human minds and hearts now than in other days when the steady comforts of life and the sense of regular security, fine as these are, often blind men's minds to the reception of higher things.

Continue, then, your noble Theosophical Work with unflinching courage, and with the assurance that not only G. de P., but thousands of members all over the world, are with you in spirit; for amongst us Theosophists, national or even local, Theosophical efforts have back of them the tremendous force of united minds, strong intellects, and devoted hearts.

The Theosophical Forum

THE GUARDIAN ANGEL — *G. de Purucker*

One of the last addresses given by Dr. de Purucker in the Temple at Point Loma, shortly before removal of the Headquarters to Covina, California.

I ask your very reverent attention to a profound and beautiful fact of nature. To me this thought is one of the most beautiful of our Theosophical doctrines. It is that of the "angels" guarding us, or what the Christians call the "Guardian Angels"; but this wonderful doctrine, which is such a comfort and help to men in time of stress and trouble, is no longer understood by the Christians of this day, because they have lost the original meaning of it. They seem to think that it is an angel outside of oneself deputed by Almighty God to be a kind of protecting parent over the child; and some Christians seem to think that when the child attains adulthood the Guardian Angel departs. This doctrine of protective and guiding spiritual influences in the world is a very old doctrine of the Wisdom-Religion. It was taught in Persia, India, Egypt, amongst the Druids, in fact, as far as I know, everywhere.

It is simply this: that there is in and over man a spirit or power guiding him, instilling hope and comfort and peace and righteousness into his mind and heart; and that he who is ready to receive this and does receive it will guide himself by the inner mandates, and do so openly. He will be more or less conscious of the companionship of the Guardian Angel, be conscious of this companionship as a helper, with him day and night, never failing, always guiding, teaching him to save himself. But the mind and heart must be ready to receive, otherwise the brain does not catch the guidance and the inspiration.

What is this Guardian Angel? You may call it a Dhyani-Chohan. Our own particular technical name for it is the Sanskrit word: Chitkara: thought-worker. You remember it was stated of the great Greek philosopher, Socrates, that he was guided by his inner daimon, his constant companion, which in his case strangely enough never told him what to do, but always warned him what not to do. It is stated of him frequently when he was undecided as to what course to pursue, he would go apart and close his eyes and remain quiet, trying to free his mind from all the debris, claptrap, and noise and hurly burly of tramping thought, in other words cleansing and emptying the brain so that the Guardian Angel inside could penetrate into the brain-stuff. Such in his case was the Guardian Angel.

Now what is this Guardian Angel? Is it outside of man? It is a part of man's spirit, pertinent to his pneumatology; not the human part but a part of his spiritual being. You can call it the Higher Self, but I prefer to call it the Spiritual Self, because the phrase "Higher Self in Theosophy has a meaning containing certain restricted ideas. Thus, man's inmost entity, the Guardian Angel, this spiritual self, is like a god compared with the man of flesh, the man of this brain. Compared with his knowledge it has omniscience; compared with his vision it has vision of the past, the present and the future, which three really are but one eternal NOW in the ever present.

This Guardian Angel will always strive and is incessantly striving to guide its wilful errant child, the man of flesh. There is the whole thing in a nutshell, and if you can make your mind pervious to this inner monitor, and follow its mandates, your life will be safe and happy and prosperous. Of course, you have to go through whatever your karman has for you, that is, whatever you have wrought in the past; it will have to work itself out. If you put your finger in the fire, it will be burned. If you catch your foot in

the machine it will be crushed. But the inner warrior, the Guardian Angel, once you come into its fellowship, in time will prevent your putting your finger into the fire, or placing your foot where it could be crushed. As for myself, my own life has been saved six times by this, and I know whereof I speak. And I only blame myself for not having begun sooner as a younger man to try to cultivate and to try to bring about an even closer consciousness or self-realization of this wonderful guide, this divine spark, this spiritual self in me: the very stuff of divinity. Compared to me my Guardian is an angel, a god.

The only difference between the ordinary man on the one hand and the Christ-man and the Buddha-man on the other is this: that we ordinary men have not succeeded in becoming absolutely at one with the Guardian Angel within, and the Buddhas and the Christs have. The Buddha or Christ is one who has made himself, his whole being, his heart, so pervious to the entrance of the Guardian Angel within him that that Guardian Angel within him has actually imbodyed himself, so that the lower man is scarcely any longer there: it is then the Guardian Angel that speaks with the lips of flesh, it is the Bodhisattva, the inner Christ.

These are some of the forgotten values in human life, and I know no values greater than these two things. First: you are one with the universe, one with divinity, inseparable from it. Then it does not much matter what happens to you. Whatever comes is a part of the universal destiny. You become filled with courage and hope and peace. And the other forgotten value is what I have just called the Chitkara. Let that Guardian Angel live in you, and speak through you, and as soon as may be. I speak what I know, not only with regard to saving from trouble and from peril, but from dangers of all kinds. It will instil peace and comfort and happiness and wisdom and love, for all these are its nature. These things are especially needed in the world today by poor mankind,

most of humanity feeling today that all the trouble in the world has happened by chance, that there is no way out except by a lucky fluke of fate. That is all tommyrot. This world is a world of law and order, and if we break these rules of law and order we suffer.

Oh, that man would realize these simple verities of Universal Nature! They are so helpful. They give meaning to life and inject a marvelous purpose into it. They give incentive to do our jobs and to do them like men. They make us love our fellow-men, and that is ennobling for us, an ennobling feeling in anyone; for it is obvious that the man who loves none but himself is constricting his consciousness into a little knot, and there is no expansion or grandeur in him; whereas the man who loves his fellowmen and thereby begins to love all things, both great and small — his consciousness goes out, begins to embrace, comprehend, to take in all. It becomes finally universal feeling, universal sympathy, universal understanding. This is grand, and this is godlike.

The Theosophical Forum

STUDIES IN "THE MAHATMA LETTERS" — G. de Purucker

The following very important contribution to this series of Studies in THE MAHATMA LETTERS has been chosen from among several as yet unpublished comments made by Dr. de Purucker at the close of the Sunday evening Lodge programs. On this occasion, the meeting of September 28, 1941, he opened his remarks with some very interesting teaching about the polar magnetism of the earth; but as including this would make the present article too long, the Editors have reserved that portion of the talk for a future issue. The following remarks cover a discussion of Questions 11 and 12, page 146 of THE MAHATMA LETTERS and the Master's comments thereon to be found on pages 167-8. It is significant perhaps that this address fell on the Sunday evening exactly a year before Dr. de Purucker's passing. This and subsequent numbers of this series which may appear in the future in the FORUM had not been edited by Dr. de Purucker.

Unfortunately this question about Jupiter and the Raja-Sun is not one that can be answered outside of esoteric teachings, and I am being perfectly frank about it. I think it would be a shame to deceive any honest and thoughtful student by sidestepping. The explanation of this matter is esoteric and wholly so. Therefore it cannot be touched upon in a gathering of this kind.

Let us continue then to the subject of heat and cold on Jupiter. If our dear people would use the vast Theosophical learning which they have — and I am not speaking sarcastically — and apply it to this matter of planetary heat and cold, there would be no question or difficulty about it. They would not question, for instance, whether Jupiter is hotter than the earth or colder. Actually it is enormously hotter than our earth, and the modern

scientific theory of its being a thousand or several thousand miles of block ice is simply based on the theory that, being so much farther from the sun than the earth is, it gets a great deal less heat from the sun and therefore *de facto* must be in a state of arctic chill. But you see our teaching is that the planets do not get their heat from the sun, or very little indeed.

The sun is the great beating heart and brain of our system, the ultimate fountain and source of all the energy in the solar system as a whole. But with regard to this particular matter of heat and cold, it is the planets which keep themselves warm by their own vitality just as the human body does. It is not the sun which gives me my vital heat. The body creates its own vital heat. Of course if I go out in the sun and I feel the sun's rays pouring on my bare head, my head will be heated just as a plant will or a stone or anything else that is exposed to the sun's rays. But this is not heat coming from the sun, or very little in any case, perhaps twenty-five percent.

What is actually taking place is that an enormous efflux of electric and magnetic power flows from the sun and sets in vibration whatever this electric power falls upon. It is just exactly as every electrician knows: if you pass an electric current through a length of wire filament you create an ohmage, that is a resistance, which makes the particles in the wire through which the electric current passes, and which possesses this high resisting power, to glow with heat. It is not the electricity which carries heat and deposits it there. Electricity is neither hot nor cold. It is the power of the electricity meeting this resistance, which throws the molecules and atoms of this resisting medium into intense vibration, more rapid than that of billions and quadrillions of vibrations in a human second, and therefore heats it. Electricity is not itself hot. Just so with the sun. The sun is neither hot nor cold as we understand heat and cold. It is an enormous body of force, forces,

which include electricity and magnetism and consciousness and life and intelligence and other things.

No, what makes Jupiter so hot is its own vital power. What produces this vital power in a heated body? You could ask the same question about our earth. What makes the earth warm or cold? The vital power of the earth — call it magnetism if you wish — interacting and reacting with the magnetic continent above our heads: give and take, electric, electro-magnetic or magnetic action and interaction. Just so does my own vital heat make my own body warm. If we had to trust to exterior heat to keep us alive and had no interior natural native vital heat of our own, if we went twenty feet from a fire we would freeze up in half an hour or in quarter of an hour. But such things do not occur.

So it is with Jupiter. When planets are young, very young, they are enormously hotter than when they grow old. So it is even with the human being in a small degree. The hottest little dynamo that I have ever known is a baby. When boyhood is reached, your heat diminishes. When you reach manhood it grows still less: you are not then burning up in a constant fevered heat as a baby is. The teaching in the book shows us clearly. The Master says: Imagine if all our oceans were turned into ice and all our atmospheric fluids were turned into liquids; then, he says, just imagine the reverse process, and you will have some idea of what it is like on Jupiter, which means, so hot there that what would be our oceans are turned to gases and what we call metals, stones and such things are turned to fluids. Just the reverse process. And it is strange enough that that was originally the idea of science.

The part played by the meteoric veils over every continent which is not in obsuration, as Mars is in obsuration — the part played by these meteoric continents is enormous. Some people don't like to accept this idea, although it is true, because they think it

diminishes the dignity of our glorious Father Sun. It does not diminish his dignity. Because I have some vital heat of my own, that does not diminish the dignity of my teacher. Why should he be blamed or praised because I was born with vital heat? It is not a derogation of the dignity of the sun to say that the planets are living bodies also, living organisms.

Now Mars is in obscurity, consequently the meteoric veil surrounding Globe D of the Mars-chain is very thin. When the life-waves begin to come into Mars again, as they will before many millions of years have passed, Mars also will begin again to be re-covered with what scientists call heavy clouds, which are really veils of meteoric dust. Attracted psycho-vital-magnetically by the tremendously vital power of the planets which they surround, these meteoric continents perform somewhat the same function with regard to the planets that the human aura does for us. The meteoric veils are composed of dust, the effluvia rising up from the earth partly, but mainly and more largely from interplanetary and interstellar cosmic dust: the refuse, the sweat, the detritus, of other manvantaras, karmically drawn back, as life-atoms are drawn back to the reincarnating man.

Then there is the matter of the sun's north and south poles spoken of in this letter. Now there is one point here that needs clearing. I do not remember the Master's exact words, but it is much to the effect that the sun does not take anything from anything else, nor does it give away anything of its own. A perfectly true statement when it is understood. But do not forget this other perfectly true statement, infinitely more important: that nothing exists unto itself alone. Everything helps everything else. Everything lives for everything else. No accident anywhere. And this is a cosmic statement of what we Theosophists call our beautiful doctrine of Universal Brotherhood. The Master means this: that the sun is not vampirized — in the sense that the word

vampirize has. Nor is it a spendthrift, wasting and dissipating its vital power by pouring it out needlessly through ages, as our modern science teaches it does, to be wasted in the abysmal deeps of pluperfectly frigid spaces.

The solar system is a closed system in the sense that a human body is a closed system. Agreed that every human body is builded by life-atoms from all other human bodies; but so far as itself goes it is an entity, an individual with its own vital power, feeding itself, having naught to spare to give of vital power to other bodies unless given as a gift. And likewise not vampirizing, in the normal cases, other bodies. Vampirizing and giving of gifts happen, but these are not the normal state of things. Every atom is a closed system in that sense. Yet every atom is connected with every other atom in infinite space, feeding infinite space and infinite space feeding it.

So then, the sun does not vampirize other suns, nor has it any vitality to spare for other suns. It has all it can do to feed its own orbs, the planets and other bodies within its kingdom. Just so my heart feeds my body and its organs and its molecules. It has nothing to spare for feeding other bodies — unless giving as a gift. Nor does my body vampirize other bodies. It does not steal vitality from other bodies, although in abnormal cases any human body can become vampirized; but we are not talking of exceptions and special cases; we are talking of the norm, the rule.

Therefore, what happens is this: the sun follows the same cosmic law that every planet does. It is the heart of its kingdom and likewise the brain of its kingdom. If you look upon it as the heart for an instant, it receives the influxes of the rivers of lives, the circulations of the solar system, in its north pole. They pass through the heart of the sun, are cleansed and washed and leave at the south pole of the sun. Precisely as our earth and every

other planet have each its receptor at the north pole, and its ejector or vent at the south pole.

Why, even the ancient Greeks taught this. Do you remember Eolus and the cave of the winds? The cave of the winds was the earth, and the winds were the winds of the spirit, the circulations of the universe figured as winds: a cave of which the north gate was made of horn through which the gods descend — and through which they ascend also, but mainly descend. And the south gate of the earth, or of the cave of the winds, was made of ivory, signifying the elephants of the south, as the horn does the tusks of the animals of the north. And out of the south gate go the hoards of men. So said the ancients. Why, the occult teaching is simply expressed here without a veil.

In other words, the earth feeds itself physically, magnetically, psychically, spiritually, through the north pole. The currents sweep through the earth — every word here is worth a volume — and leave by the south pole. So it is with the sun. That is the way the sun feeds its family: just as the heart feeds the body. It sends out its blood through the south pole, as it were, and after the circulation around the body has taken place, it receives it in again at the north pole. Fascinating subject!

So be careful how you read and construe. Don't let a single statement given by the Master as an answer to a very limited and specific question cover all the horizon of your thought regarding other things. In other words use your common sense.

So now, Companions, let me close my own remarks on an expression of pleasure that I always feel after hearkening to the words of those who make really wonderful addresses from the platform and the equally wonderful contributions from the auditorium. It just warms every cockle of my heart to see the progress that you dear fellow-students have made. I think it is

beautiful, and it fills me with reverence. I think you deserve to know what I feel about these things.

Remember this, and then I go: All the laws of nature, so called, are but the play of conscious and semi-conscious forces. Therefore by their utter consistency and invariability they are called by us the laws of nature. These forces of nature are fluids emanating from great cosmic hearts beating, hearts sending the life blood, each one of its own especial and particular essence, force, spirit, to the farthest reaches that it can contain. We live not only in the presence of divinities, but are in very truth their children. We are builded of them and from them. Human parents are away, far away and distant when compared with the utterly infinite, infinitely intimate because identical relations and ties that exist between these great parents and us their children. Electricity, or magnetism, its alter ego, for instance, is but the fluid efflux from a cosmic entity, a being — of our own solar system in our case, because we are in this solar system. Heat likewise; all the real forces of nature are such. What is gravity? Just the same. We call it love. Some day when science will have learned that gravity is bi-polar as electricity and magnetism are, we may perhaps see returning the wisdom of the old Greek Empedocles who taught in his day that the universe is held in its courses and in its plans of beauty and harmony because of the two great cosmic powers, love and hate as they translate it. It is not a good translation. Attraction and repulsion: better but not good. You might perhaps say love and repulsion; hate is not a good word. Marvelous thoughts! — Good night, Companions!

QUESTIONS AND ANSWERS — *G. de Purucker*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

Types of Devachans

In *The Key to Theosophy* H. P. B. says that after death the Methodist will be a Methodist, the Mohammedan a Mohammedan, at least for some time, in a perfect fool's Paradise of each man's creation and making. Will this be in Kama-loka or Devachan? I say the latter, as there is no consciousness in the Kama-loka, and H. P. B. herself has described Devachan as a fool's Paradise. *The Mahatma Letters* (page 103) speaks of "the pleasures realized by a Red Indian in his "happy hunting grounds" in that Land of Dreams." — M. J.

G. de P. — The answer to this question is in general a Yes, an affirmative. H. P. B. certainly meant mainly the devachan, since it is a mere reflexion of the spiritual vision, imperfect and poor as it is, of the man who has just died; whatever that man was in a spiritual way he will continue to be in the devachan afterwards. Thus the imperfect vision, when compared with a Buddha, for instance, of a Methodist or a Roman Catholic or a Mohammedan, being a lack of *complete* inner vision, inner spiritual growth, will continue in the devachan in a sublimated sort of way in the "fool's Paradise," so that the Methodist will be a Methodist, but an improved Methodist, the Roman Catholic ditto, the Mohammedan ditto, and so forth. So much for this part of the question.

Yet it is obvious that the kama-loka, being the stage preceding the

devachan, will not change the character of the man who has just died; and if he has died filled with the thoughts of Mohammedanism, or of Methodism, or of the Baptist, or of the Roman Catholic, he will still be this or that in the quasi-consciousness of the kama-loka. So we can say he will still remain a Methodist, or a Roman Catholic, or a Mohammedan, through the purging process of the kama-loka; and then the finest part of the man will enter the devachan, the "fool's Paradise," in which he will still have his dreams of a glorified Methodism or Roman Catholicism or Mohammedanism, or Judaism, or whatever his quasi-spiritual thoughts on earth were. So there is a certain truth, when this is understood, in the other statement also, that even in the kama-loka the man's character is not changed. Looking over the above, I might add that of course an ego is not cleared of *all impurities* thus becoming perfect before entering the devachan, as he would then be of the status of a Buddha. Nor do I mean that it is necessarily an "impurity to be cleared away" to be a Methodist or any other religionist. Of course when a man becomes through evolution so spiritually evolved that he is a Bodhisattva on earth, or a Buddha, then he will just pass through the kama-loka and devachanic states almost unconsciously, for the man is above them, and he enters a lower or higher Nirvana according to his development. And Nirvana means a vision of Reality.

Can We Help the Kama-lokic Entity?

Is it possible for the living to give help to the human kama-lokic entity in its struggle to free itself at the time of the second death? Would a living person be likely to feel the influence from that struggle on the part of one who in life had been closely connected with him, especially on inner lines? — N. N.

G. de P. — Nature is too merciful to allow but the merest fragments of psychic or emotional contact between the living and those in kama-loka. If it were otherwise, our lives would be a hell.

The entities in kama-loka as a rule are semi-conscious or unconscious. It is only the very evil sorcerers, black magicians, or the grossest kind of beings while in body, who have a consciousness which we would call awake-consciousness when they reach the kama-loka. Consequently, all the kama-lokic processes, except in the cases of the few mentioned above, take place automatically and as it were unconsciously or as in a dream, perhaps a nightmare, perhaps perfect unconsciousness in the case of the average person; but a real hell of feeling in the cases of the sorcerer and the tremendously heavily gross person. But, after all, these last are few.

It is of course true that a spiritual love on the part of the survivors can reach even to the devachan after the kama-loka is ended; yes, and even as it were help the interim Bardo-period in the kama-loka. But it must be a spiritual love, and the effect itself is to bring an atmosphere of more peace to the kama-rupas in kama-loka; and the same thing after those in kama-loka have shaken off the kama-rupa and have entered the devachan state. Yes, a spiritual love, not an emotional one, does help the entities in kama-loka to a certain degree, especially if those entities are nice clean decent average people, and are not sorcerers or gross materialists.

The main point to remember is that those in kama-loka should be left absolutely alone. Nature is infinitely the kindest. The kama-loka experiences for average people are dreamlike or even pure unconsciousness. They are just as it were in unconscious sleep; and any attempt to touch them, even with emotional love or emotional thought, can at times, if the thought and magnetic impulse is strong enough, give them a fictitious temporary

awakening, and then they feel unhappy, for they are half awake and surrounded by atmospheres they do not understand, and they feel as if they were in a bad dream.

So it is much better to leave the kama-loka entities strictly alone, even if they are our dearest friends. Of course a gentle warm current of impersonal friendship does no harm, and as explained above, may even do a little good in helping to purify the atmosphere around the kama-lokis, if I may invent a term.

Cataclysms as Ways of Establishing Balance

In *The Secret Doctrine, Volume II*, at the end of the first part, H. P. Blavatsky gives us a description of the terrible catastrophes which will take place during the transition-period from the Fifth to the Sixth Root-Races. It seems to me that Nature works in a rather hard way. Is it not possible for the great spiritual Leaders of evolution on this planet — if not to prevent — at any rate to mitigate the effects of these terrible disasters, during which millions of human beings and animals perish? Is this due not only to cosmic but also to individual karman? — P. R.

G. de P. — Yes, to both, to both kinds of karman; and also to racial karman, and planetary karman. The questioner is a highly intelligent man, but there lurks throughout his question the old feeling that "Nature is not just as I think she ought to be." Presumably the idea is that if someone else had had the shaping or founding of natural law, of natural being, it would have been more shapely and kindly done. I wonder! Nature's heart is compassion absolute, because that compassion is absolute harmony. Nature moves on a cosmic scale, and in comparison therewith our ordinary brain-minds are microcosmic, with small reaches of understanding of the great cosmic issues involved, and, so far as the racial karman is concerned, of any Root-Race or

Sub-Race, with small understanding of her sweeping away in catastrophic or cataclysmic activities millions of animals and millions of men.

How about the millions of men and millions of animals that die daily, and, yea, that are sometimes, perhaps not in their millions, but in their hundreds and thousands, killed, murdered, wantonly slaughtered? All these things, all these catastrophes and cataclysms, are one of Nature's ways of re-establishing balance, equilibrium; just as disease in a human body is a purgation, a purging the system of poison. Just so, Nature's ways in its own purgations are these cataclysms and catastrophes.

The so-called "Leaders of evolution," of which this querent writes, do indeed strive continuously through the ages to mitigate the sorrow and pain, to stem the heavy hand of destiny, if it is possible, or at least as much as it is possible to stem the tide of intellectual and psychological disintegration. But they never work contrary to Nature's laws. They cannot. They are in very truth the servants of the Law, and therein lies their enormous power.

Cataclysms and catastrophes are occurring constantly. How about this horrible war? How many millions have perished so far from direct or indirect causes? Look at the beasts who die daily in almost countless numbers all over the earth — some of them wantonly slain; others slain by accident.

The world is full of misery and pain brought about by ignorance and by distorted mental views and by unbridled passion; and the time finally comes when these accumulate so greatly that Nature can tolerate no more; and then the crash comes. Is it not so all through natural being? A human body will stand so much abuse, so much strain, and then it gives way. Nature acts likewise on the greater scales. All of it is karmic. Yet the entities which are swept off the face of the earth, so to speak, which pass out, within an

hour, or a day, or a week, or a month, or a thousand years, or ten thousand years, learn by it — learn the karmic lessons.

Then pause and look at the other side of the picture. Look at the beauty, look at the sublimity, of the Sons of Light who work through the ages and whose strong hands hold back the accumulated karman from its crushing humanity at one blow; they form the "Guardian Wall" around humanity. Consider that carefully.

Consider the light side of Nature as well as its automatic retributive or so-called dark side. Nature is divided into two parts, into two phases, so to say, and these two phases or parts are filled on the one hand with the Sons of Light, and on the other hand with the Brothers of the Shadow: one is the realms of spirit, and the other is the realms of matter.

Our Relation to Our Atoms

How is it possible that we, who were rulers of a solar system, i.e, in the time when the atoms were our dwelling houses, cannot rule the composing beings of our body today? We are developed from the atoms and we will rule a solar system in the macro-cosmos in the future. Is our state of consciousness lower now than in the time of our atom-life? — W. K.

G. de P. — The reason that we human beings find it difficult in this stage of our evolutionary pilgrimage to control the lower elements, including the atoms, electrons, etc., of our bodies, is that we are at the mid-point in our evolutionary journey, because we are sunken in the material worlds, although we are now beginning to rise towards Spirit again. This situation means that the matter-parts of our being, including the atoms, of course, are more in their own sphere, and therefore have greater individual

power than they have in the higher spheres; and consequently they act more strongly in their own individual ways than they do when they are again in Spirit, or in the spiritual worlds, and more under the divine influence of being in the spiritual worlds. Thus the sun, the divinity in and behind the sun, can control the lower elements and lower atoms much better than we can, because this divinity, being so much ahead of us, attracts more spiritual types of atoms than we do, because we are naturally much less spiritually evolved than is the solar divinity.

Thus it is that in the future we shall be able to control perfectly not only our own matter-elements, but the very atoms, etc., which compose these matter-elements of us, because we shall in time gain in spiritual power; and even these matter-elements of us will have risen more towards Spirit, and we and our companion lower elements and atoms then will have become more alike, both more spiritual, than now we are. Hence there will be more harmony, greater ease, in what we may call brotherly co-operation, in our journey back to Spirit.

I hope this answer gives the gist of what I desire to say. The main idea can be grasped by stating that the Mahatmans can control their lower elements and atoms much more easily than we can, and this is because of the two main reasons I have just stated: In evolution the Mahatmans are beyond us, and therefore stronger than we are; and they attract to themselves for their bodies, etc., more spiritualized atoms than we do. Hence there is greater harmony there between the higher and the lower than there is with us.

Karman and Idiocy

Would it be possible for an average man to be "punished" by an incarnation as a complete idiot, and in the following life to take up afresh from the status he had before the

"idiotic" life?

In *The Esoteric Tradition* (p. 974) a footnote states that there may be cases of a lesion or injury, before birth or after, which may cause this state of idiocy. Even in this case his condition must be the result of karman, or it could not have happened? One would think that if a man is his karman such an entity must have had an attraction downwards, from which he will have to work upwards again, or go still farther down and become a lost soul. Is it possible for one who had been very cruel to an idiot to be punished by experiencing that condition himself? Hardly, I imagine, as his intermediate nature being absent, no impression could be made on it, and that life would be punishment pure and simple, and not a lesson learned. — M. J.

G. de P. — Certainly the result of karman in all cases.

Furthermore, while it is abstractly possible for a thoroughly normal human being to have to undergo an unpaid karmic debt such as idiocy in the next following life, it is so extremely unlikely that the degree of improbability almost reaches certainty.

The reasoning is this: that karman is not haphazard on the one hand, nor are its parts divorced from the general karmic frame or set-up; so that an idiotic incarnation almost certainly is preceded by shadows casting their images before, a general weakness of character, a more or less obvious degeneration, producing finally its culmination in the idiotic state. But of course, while this is logically the rule, and is clearly seen to be such by any thinking person, I would not go so far as to say that a thoroughly normal person could not possibly have a karman, as yet unworked-out from some distant life, which would produce relative simple-mindedness or idiocy. It is possible, but so extremely unlikely that

it is almost a certainty that normality is not followed by abnormality. The whole situation depends on the fact that a man is his karman, as the questioner states.

As regards the latter part of the question: If I understand the question correctly I would answer in this wise: We must remember that karman is not just brute mechanics. The moral principles back of karman are essentially spiritual. Keeping this in mind we can see how karman might work in the case of one who is cruel to animals, who are relatively mindless when compared with men (which does not mean that they have no mind, however), or in the case of a man who is cruel to an idiot because he despises the poor idiot's lack of mind. We can see that with the spiritual and moral causes of karman back of and working in the constitution of the cruel individual, this very cruelty will *slowly* close the gates of intellectual and spiritual inspiration in that cruel man; so that little by little the very fact of his having lack of sympathy for the beasts or for the idiot, will tend to make the cruel man himself slowly through incarnations become less and less "minded" as it were, having less and less of the seeing, penetrating manasic faculty. Thus in a sense a man is punished by the way he injures or is cruel to others. But these things do not come suddenly. They are a process of degeneration. Cruelty continued through a life, or two or three, is a degenerative process, a breaking down of the moral fiber, and of spiritual and intellectual insight. And what does this mean but a slow and gradual loss of the mind through indulging in persistent cruelty?

So reasoning thus, we can say that after a long time — two, four, six lives, heaven knows how many — one who despises another for being an idiot, or who is cruel to the relatively mindless beasts, slowly brings about incipient idiocy in himself; and we are thus punished by the backwash of the very energies we originally

set in motion. This is what is meant by the saying that the man who takes up the sword will perish by the sword. The man who is cruel will perish by his own cruelty, and others will be cruel to him. The learning of the lesson takes place during the process. Of course it is obvious that a complete idiot cannot learn lessons as a man endowed with mind can. But the process of approaching idiocy enables the soul to gather the lessons of suffering and repentance, which may even save the man from final idiocy, if he is sufficiently evolved to take warning in time. Then if he changes his cruelty to kindness and gentleness, and opens the channels above once more, his suffering and the danger he sees ahead of him, will have been his karmic retribution, what the questioner calls the "punishment," and he may suffer horribly during this process, bringing about a moral and intellectual regeneration.

The Theosophical Forum

THE LUMINOUS PORTAL OF DEATH

There is no death, if by that term we mean a perfect and complete, an utter and absolute, cessation of all that is. Death is change, even as birth through reincarnation which is death to the soul, is change; there is no difference between death, so-called, and life, so-called, for they are one. The change is into another *phase of life*. Death is a phase of life even as life is a phase of death. It is not something to be feared. . . .

Death is as natural, death is as simple, death itself is as painless, death itself is as beautiful, as the growth of a lovely flower. It is the portal through which the pilgrim enters the stage higher.

— G. de Purucker, *Golden Precepts of Esotericism*

THE BEACON OF THE UNKNOWN: V — *H. P. Blavatsky*

With our next issue this series demonstrating H. P. Blavatsky's brilliant sword-play in defence of Theosophy comes to an end. In the present number she shows how Theosophy towers above physical science, and yet is not mere metaphysics, but a universal transcendentalism which rejects any testimony not based on the evidence of the highest principles in man — the sixth and seventh. Originally appearing in the French magazine, *La Revue Theosophique*, 1889, under the title "Le Phare de L'Inconnu," the series was first published in translation in *The Theosophist*, Volume X.

The disciples (lanoos) of the law of the Diamond Heart (magic) will always help each other in their studies. The grammarian will be at the service of him who looks for the soul of the metals (chemist). — *Catechism of the Gupta-Vidya*

The profane would smile if we told them that in the occult sciences the alchemist could be of use to the philologist, and *vice versa*. They would understand better perhaps, if they were told that by this word grammarian or philologist we mean one who makes a study of the universal language of corresponding symbols; although only the members of the Esoteric Section of the Theosophical Society can understand clearly what the term "philologist" means in this sense. All things in nature have correspondences and are mutually interdependent. In its abstract sense Theosophy is the white ray from which are born the seven colors of the solar spectrum, each human being assimilating one of these rays to a greater degree than the other six. It follows,

then, that seven persons, each imbued with his special ray, can help each other mutually. Having at their service the septenary sheaf of rays, they have the seven forces of nature at their command. But it follows also that, to reach that end, the choosing of the seven persons who are to form a group, should be left to an expert — to an initiate in the science of occult rays. But we are here upon dangerous ground, where the Sphinx of Esotericism risks being accused of mystification. Yet official Science itself furnishes us the proof of what we say, and we find corroboration in physical and materialistic astronomy. The sun is one; its light shines for all the world; it warms the ignorant as well as the astronomical adept. As to the hypotheses concerning our day-star, its constitution and nature — their name is legion. Not one of these hypotheses contains the whole truth, or even an approximation to it. Frequently they are only fictions soon to be replaced by others. For it is to scientific theories more than to anything else in this world here below that the lines of Malherbe apply:

. . . . Et Rose, elle a vecu ce que vivent les roses,
L'espace d'un matin.

Nevertheless, whether or not they adorn the altar of Science, each of these theories may contain a fragment of truth. Tested, compared, analysed, pieced together, these hypotheses may one day supply an astronomical axiom, a fact in nature, instead of a chimera in the scientific brain.

This does not mean at all that we accept as a portion of truth every axiom recognized as such by the Academies. For instance, in the evolution and phantasmagorical transformations of the sun-spots — Nasmyth's theory of the moment — Sir William Herschel began by seeing in them the inhabitants of the sun, beautiful and gigantic angels. Sir John Herschel, observing a

prudent silence concerning these celestial salamanders, shared the opinion of the elder Herschel that the solar globe was nothing but a beautiful metaphor, a *maya* — thus announcing an occult axiom. The Sun-spots have found a Darwin in the person of every astronomer of any eminence. They have been taken successively for planetary spirits, solar mortals, columns of volcanic smoke (probably issuing from their own academic brains!), opaque clouds, and finally for shadows in the form of willow leaves. At the present time the god Sol is degraded. It is said to be nothing more than a gigantic coal, still glowing, but quite prepared to be extinguished upon the hearth of our little system.

Then there are speculations put forward by some of the members of the Theosophical Society, who, although belonging to the Society have never studied the esoteric teachings. These speculations can never be other than hypotheses, no more than colored with a ray of truth; enveloped in a chaos of fancy and often of unreason. By selecting them from the heap and placing them side by side, one succeeds, nevertheless, in extracting some philosophic truth from these ideas. For, let it be well understood, Theosophy has this in common with ordinary science, that it examines the reverse side of every apparent truth. It tests and analyses every fact put forward by physical science, looking only for the essence and the ultimate and occult constitution in every cosmical or physical manifestation, whether in the domain of ethics, intellect, or matter. In a word, Theosophy begins its researches where the materialists finish theirs.

"Then it is metaphysics you offer us? Why did you not say so before?" object the critics.

No, it is not metaphysics, as that term is generally understood, although it plays a part sometimes. The speculations of Kant, of Leibnitz, and of Schopenhauer belong to the domain of

metaphysics, as also those of Herbert Spencer. Still, when one studies the latter, one cannot help but think that Dame Metaphysics is introducing herself at the masked ball of the Academic Sciences adorned with a false nose! The metaphysics of Kant and of Leibnitz — as proved by his Monads — is as far above the metaphysics of our days, as a balloon in the clouds is above a pumpkin in the field below. Nevertheless the balloon, however much better it may be than the pumpkin, is too artificial to serve as the vehicle for the truth of the occult sciences. The latter is a goddess perhaps a little too *decolletee* to suit the taste of our extremely modest scientists. The metaphysics of Kant taught its author, without the help of the present methods or perfected instruments, the identity of the constitution and essence of the sun and the planets; and Kant *affirmed*, when the best astronomers, even during the first half of this century, still *denied*. But this same metaphysics did not succeed in proving to him the true nature of that essence, any more than it has helped modern physics, notwithstanding its noisy hypotheses, to discover the true nature of that essence.

Theosophy, therefore, or rather the occult sciences it studies, is something more than simple metaphysics. It is, if I may be allowed to use the double terms, meta-metaphysics, meta-geometry, etc. — a universal transcendentalism. Theosophy utterly rejects the testimony of the physical senses, if the latter have not spiritual and psychic perception as a basis. Even in the case of the most highly developed clairvoyance and clairaudience, the *final* testimony of both must be rejected, unless by those terms is meant the *photos* of Iamblichus, or the *ecstatic illumination* of Plotinus and of Porphyry. The same holds good for the physical sciences; the evidence of reason on the terrestrial plane like that of our five senses should receive the imprimatur of the sixth and seventh senses of the divine ego before a fact can be

accepted by the true occultist.

Official Science hears what we say and laughs. We read its reports, we behold the apotheoses of its *soi-disant* progress, its great discoveries — of which more than one, enriching the wealthy few, has plunged millions of the poor into still more horrible misery — and we leave it to its own devices. But, finding that physical science has not made a step towards the knowledge of the real nature and constitution of matter since the days of Anaximenes and the Ionian School, we laugh in our turn.

In that direction the best work has been done and the most valuable scientific discoveries of this century have, without a doubt, been made by the great chemist William Crookes. (1) In this particular case a remarkable intuition of occult truth has been of more service to him than all his great knowledge of physical science. It is certain that neither scientific methods, nor official routine have helped him much in his discovery of radiant matter, or in his researches into *protyle* or primordial matter. (2)

TRUTH AND SYMBOL IN THE CHRISTMAS STORY (1) — *John Gayner Banks*

What we call the Festival of Christmas or the Nativity of Jesus the Christ is not merely a date in history — actually an historical event — but it is also a Symbol of profound Reality and the focal point of a sublime truth, significant to all mankind.

A symbol has a chief meaning, and then various subsidiary meanings. For instance, the Sun is the symbol of the Logos; that is its chief or primary significance. But it is also an objective fact in the external world, capable of scientific observation and deduction by so-called Physical Science. It also stands for an incarnation of the Logos, or for any of the great Messengers who represent Him for the time, as an ambassador represents his King. High Initiates who are sent on special missions to incarnate among men and live with them for a time as Rulers or Teachers, would be designated by the symbol of the sun; for though it is not their symbol in an individual sense, it is theirs in virtue of their office.

The Sun is the physical shadow, or body, as it may be called, of the Logos; hence its yearly course in nature reflects His activity, in the partial way in which a shadow represents the activity of the object that casts it. The LOGOS, "the Son of God," descending into matter, has as shadow the annual course of the sun, and the Sun-Myth tells it. Hence, again, an incarnation of the Logos, or one of his high ambassadors, will also represent that activity, shadow-like, in His body as a man. Christmas, properly understood, is such a manifestation — both exoterically and esoterically. It is our privilege and duty to understand both these aspects. The Christian Sacred Writings in the New Testament give us the

exoteric story and some slight indication of the esoteric meaning. Alfred de Vigny has said that legend is frequently more true than history, because legend recounts not acts which are often incomplete and abortive, but the genius itself of great men and great nations. It is pre-eminently to the Gospel that this beautiful thought is applicable, for the Gospel is not merely the narration of what has been; it is the sublime narration of what is and what always will be. Ever will the Savior of the world be adored by kings of intelligence, represented by the Magi; ever will He multiply the eucharistic Bread to nourish and comfort our souls; ever, when we invoke him in the night and the tempest, will He come to us walking on the waters, will He stretch forth His hand and make us pass over the crests of the billows; ever will He cure our distempers and give back light to our eyes; ever will He appear to His faithful, luminous and transfigured upon Mount Tabor, interpreting the Law of Moses and moderating the zeal of Elijah. (2)

This deep insight of the meaning of Christian symbols is reflected in some of our greatest poets. Many examples may be found in the *Oxford Book of English Mystical Verse* (published by the Oxford University Press, New York). Francis Thompson's "The Kingdom of God" is an exceptionally fine sample.

The broad outlines of the story of the Sun-God are very clear and agree in essential detail with the story of the coming of Jesus as a baby at the first Christmas. He is always born at the winter solstice, after the shortest day in the year, at the midnight of the 24th of December, when the constellation Virgo is rising; born as this constellation is rising, he is born always of a Virgin, and she remains a virgin after she has given birth to the Sun-Child, as the celestial Virgo remains unchanged and unsullied when the Sun comes forth from her in the heavens. Weak, feeble as an infant is

he, born when the days are shortest and the nights are longest, surrounded with perils in his infancy. But He lives through all the threatening dangers, and the day lengthens towards the spring equinox, till the time comes for the crossing over, the crucifixion, the date varying with each year.

Isis of Egypt like Mary of Bethlehem was our Immaculate Lady, Star of the Sea (Stella Maris), Queen of Heaven, Mother of God. We see her in pictures standing on the crescent moon, star-crowned; she nurses her child Horus, and the cross appears on the back of the seat in which he sits on his mother's knee. The Virgo of the Zodiac is represented in ancient drawings as a woman suckling a child — a type of all future Madonnas with their Divine Babes, showing the origin of the symbol.

The relation of the winter solstice to Jesus is also significant. The birth of Mithras was celebrated in the winter solstice with great rejoicings, and Horus was also then born.

His birth is one of the greatest mysteries of the Egyptian religion. Pictures representing it appeared on the walls of the temples. He was the child of Deity. At Christmas time, or that answering to our festival, his image was brought out of the sanctuary with peculiar ceremonies, as the image of the infant Bambino is still brought out and exhibited at Rome. (3)

On the fixing of the 25th of December as the birthday of Jesus, Williamson gives us the following data: All Christians know that the 25th of December is *now* the recognised festival of the Birth of Jesus, but few are aware that this has not always been so. There have been, it is said, 136 different dates fixed on by different sects. Lightfoot gives it as 15th September, others as in February or August. Epiphanius mentioned two sects, one celebrating it in June, the other in July. The matter was finally settled by Pope

Julius I, in 337 a. d., and St. Chrysostom, writing in 390 says: "On this day (i. e. 25th Dec.) also the birth of Christ was lately fixed at Rome, in order that while the heathen were busy with their ceremonies the Christians might perform their rites undisturbed." Gibbon, in his *Decline and Fall of the Roman Empire* writes: "The (Christian) Romans, as ignorant as their brethren of the real date of Christ's birth, fixed the solemn festival to the 25th December, the Brumalia or winter solstice, when the Pagans annually celebrated the birth of the Sun." King, in his work, *Gnostics and their Remains*, also says: "The ancient festival held on the 25th of December in honor of the birthday of the Invincible One (Natalis Solis Invicti — the birthday of the Invincible Sun), and celebrated by the great games at Circus, was afterwards transferred to the commemoration of the birth of Christ, the precise date of which many of the Fathers confess was then unknown." Even Dean Farrar (author of the celebrated *Life of Christ*) writes that "all attempts to discover the month and day of the nativity are useless. No data whatever exist to enable us to determine them with even approximate accuracy." From the foregoing it is apparent that the great festival of the winter solstice has been celebrated during past ages, and in widely separated lands, in honor of the birth of a God, who is almost invariably alluded to as a "Savior," and whose mother is referred to as a pure virgin. To quote Annie Besant in *Esoteric Christianity*:

Rightly considered, the Christmas festival should take on new elements of rejoicing and of sacredness, when the lovers of Christ see in it the repetition of an ancient solemnity, see it stretching all the world over, and far, far back into dim antiquity; so that the Christmas bells are ringing throughout human history, and musically out of the far-off night of time.

Christ came then to His own flesh and blood because the world of

men drew Him and the love of the Father impelled Him. He came to give to life a purpose and fulfilment, and to indicate to us The Way: He came to give to us an example, so that we could be galvanized by the hope that "maketh not ashamed" (*Romans*, v, 5), to press toward the mark for "the prize of our high calling." (*Phil*, iii, 14). The words of Phillips Brooks, express this idea most clearly. Let me quote from his book *The Light of the World*:

Christ when he comes, finds the soul of the world really existent, really having within itself its holiest capabilities, really moving, though dimly and darkly, in spite of all its hindrances, in its true direction. And what he does for it is to quicken it through and through; to sound the bugle of its true life in its ears; to make it feel the nobleness of movements which have seemed to it ignoble, the hopefulness of impulses which have seemed hopeless, to bid it be itself. . . The worthless becomes full of worth, the insignificant becomes full of meaning. . . They faintly catch the feeble reflection of His life Who is the true Light of the World, the real illumination and inspiration of humanity. . . The truth is that every higher life to which man comes, and especially the highest life in Christ, is in the true line of man's humanity. There is the quickening and fulfilling of what man, by the very essence of his nature, is. The more man becomes irradiated with Divinity the more, not the less, truly he is man.

We are told in the Gospel story that the Virgin Mary, with her husband Joseph and bearing within herself the Christ Child, went up from Nazareth in Galilee to Bethlehem. Sometimes, through a study of the significance of the names in the Bible and in tradition, we can throw much light on the episode itself and unveil some of its hidden meaning. Thus we find that Nazareth means "that which is consecrated" or set apart. "Galilee" means

"the turning of the wheel," the wheel of life and death which turns continuously, carrying us with it and keeping us upon the "wheel of existence" as the Buddhists call it, until we have learned life's lessons.

The long journey of existence lies behind the Christ, and He with his Mother, journeys the last part of the way. Consecrated from past aeons to this very work of world salvation, He has first of all to submit Himself to the ordinary processes of birth and childhood. Christ came forth from Nazareth, the place of consecration, and went up to Bethlehem, the House of Bread, where in a peculiar way He Himself was to become "The Bread of Life" to a hungry world. He was set apart, or set Himself apart (as do all awakened sons of God) for the work of redemption. He came to feed the hungry, and in this connexion two verses in the Bible convey light upon His task in its preparation. Isaiah tells us that "Except a corn of wheat fall into the ground and die, it abideth alone, but if it die, it bringeth forth much fruit." (*John*, xii, 24). This was the destiny awaiting Him when He came to the Birth in Bethlehem. Then he entered upon the career which eventually "bruised" Him and led Him to His death.

The name Mary (according to Cruden's Concordance) means "the exalted of the Lord" (See her Magnificat — especially *Luke*, i, 52). Joseph's name means "he who shall add"; he was a builder, a carpenter, a worker in the building trade, one who adds stone to stone, or beam to beam. He is the symbol of the building-creative aspect of God the Father. In these three people, Joseph, the infant Jesus, and Mary, we have the divine Triplicity symbolized and represented — God the Father, God the Son, and God the Holy Spirit, or matter informed by Deity, and therefore typified for us in the Virgin Mary.

Today the masses are on a journey. Today the teaching of the Path

and of the Way to God is engrossing the attention of the aspirants in the world. We are on the Path of return to the individual and to the racial Bethlehem. We are now on the point of entering the Cave wherein the new birth can take place, and therefore one stage of life's long journey is nearly completed. This symbolism is truer perhaps, than we care to think it is. The world problem today is *bread*, and our anxieties, our bewilderments, our wars and our struggles are based upon the economic problems of how to feed the peoples. Because most of us here in these United States are reasonably well fed, we hardly realize how urgent and pathetic is the need for bread (for food) in the greater part of the world outside of this continent. Today the whole world is occupied with the Bethlehem idea, with bread. In this subtle implication there surely comes to us a guarantee that as He came before to the House of Bread so will He again fulfill His word and fulfill Himself and return. The cave, a place of darkness and of discomfort, was for Mary the place of pain and weariness. This cave or stable story of the New Testament is perhaps as full of symbolism as any to be found in the Bible. The long and trying journey ended in the dark cave. The long and weary journey of humanity has brought us today to just such a hard and uninviting place. The life of the individual disciple, prior to taking initiation and passing through the experience of the New Birth, is ever one of the utmost difficulty and hardness. But in the dark, and through difficulty, Christ is to be found, the Christ life can flower forth and we can stand face to face before Him as the Initiator.

The Scottish poet, George Macdonald, sensed this when he wrote the beautiful words which have brought comfort to so many:

Challenge the darkness, whatsoe'er it be,
Sorrow's thick darkness, or strange mystery
Of prayer or providence Persist intent,
And thou shalt find love's veiled sacrament.

Some secret revelation, sweetness, light,
Waits to waylay the wrestler in the night.
In the thick darkness, at its very heart,
Christ meets, transfigured, souls He calls apart.

In this cave of initiation, all the four kingdoms of nature can be seen unmistakably symbolized for us. In the rocky structure of the cave the mineral kingdom appears. The fodder and the hay, naturally there, symbolize the vegetable kingdom. The ox and the ass represent the animal nature, but they represent also far more than that. The ox stood for that form of worship which should have been passing off the earth at the time Christ came. There were still many to be found who worshipped the bull, which was the worship prevalent in the age when our Sun was passing through the sign of Taurus, the Bull, and which was preserved at that time in the mysteries of Mithras and Egypt. The sign immediately preceding the Christian era was that of Aries, the Ram or Lamb, and this is symbolized for us in the sheepfolds which surrounded Bethlehem — also in the prophecy that the Messiah was to be "The Lamb of God which taketh away the sin of the world."

We find the human kingdom represented in Mary and Joseph, with the human unity plus the duality which are so essential to existence itself. In the newborn Babe divinity expresses itself. St. Luke describes the Babe (in its divine aspect) as through the words of an Angel:

The Holy Ghost shall come upon thee and the power of the Highest shall overshadow thee; therefore also that *Holy Thing* which shall be born of thee shall be called the Son of God. (*Luke*, i, 35)

Thus in that little cave the whole cosmos is represented.

Regenerated men and women claim to share this Divine Sonship with Jesus the Christ. The expression of our divinity will bring to an end the hatred rampant on earth and break down all the separating walls which divide man from man, group from group, nation from nation, religion from religion. Where there is good will there must be peace; there must be organized activity and a recognition of the Divine Plan, for that Plan is synthesis, that Plan is fusion; that Plan is unity and at-one-ment. Thus Christ will be all in all and the Father will be glorified. The *Purpose*, the *Plan* and the *Power* are all there. But we must appreciate them; otherwise this Christmas will mean very little to us — as the first Christmas meant very little to the men and women of the First Century.

STUDIES IN "THE MAHATMA LETTERS" — *G. de Purucker*

This series of talks was given by Dr. de Purucker at the close of the Lodge meetings, mainly in 1941, when Headquarters Lodge was studying *The Mahatma Letters*. Stenographic reports of several more of these are in the hands of the editors and will be transcribed and published in issues of the FORUM early in 1943.

COMETS AND METEORS

I would never state that meteorites are fragments of disintegrated comets, nor indeed that they are cometary material at all. When you reflect that comets or cometary material are but one stage or degree less ethereal than is a nebula, you will realize that the fundamental idea here is wrong. It is perfectly true, however, that comets gather unto themselves in their peregrinations through cosmic and solar space, the waste-material of the universe. They accrete these to themselves by attraction, and often lose them because when they pass by a sun, the solar attraction for such material things is heavy, much stronger than the very weak attraction that the comets exercise.

Reflect that any comet, even the largest known comets, are composed of material so exceedingly fine, so ethereal, that Halley's comet, for instance, one of the largest ever known perhaps, could be packed in a hand-bag and the hand-bag would not be filled; and yet some of these comets stretch for millions and millions and millions of miles, if you include the head and the tail.

Returning to meteorites: what then are these bodies? They are the waste-material, the ejecta, of former suns; and hereby hangs

another wonderful tale which would take me several hours even to sketch if it were only to make that statement fully comprehensible. Perhaps I should remark that while a sun in its life-time is extremely ethereal, at its heart even spiritual, as it approaches its end, it becomes much more concrete, thick, heavy, dense, and as we Theosophists say, material, until, just before the last flicker of solar life passes out, and the sun dies or becomes extinct, all that remains is a relatively heavy body. Then with the last flicker of the solar life it passes like a shadow over a sunlighted wall, and the living center is dead: "The Sun is dead. Long live the Sun!" At death it leaves behind a body which immediately bursts into innumerable fragments, some atomic and some much larger; and these ejecta are scattered through solar and stellar space to be swept up in later aeons not only by the reimpodiment of the sun which has just died, but by other suns, and even other planets, as well as occasionally by comets. These meteorites contain many materials found also in our earth: iron, nickel, traces of copper, carbon, oxygen, hydrogen, and what not.

You will remember that H. P. B. has a passage not only in her beautiful *Voice of the Silence*, but in one of her wonderful articles, stating that every planet was once a glorious sun which became a planet in due course of time; and that before it dies this planet once a sun will become a sun again. You have a key here to a wonderful teaching. I wish I could say more about this, but I have neither the time nor is this the place — except indeed to add that every planetary nebula becoming a planetary comet passes through a sun-phase before becoming sufficiently materialized to be a planet or planetary chain. In other words I mean to say that every planet is for a time a small sun when, just before leaving the cometary stage, it passes through a temporary sun-phase before materialized enough or concreted or gross enough to be a

planet. Again, I may add that each reimpodiment of a planet or rather of a planetary chain passes again or anew through these various phases, to wit: planetary nebula, planetary comet, planetary sun, and planet.

What we call the Milky Way is already prepared world-stuff, both the luminous nebulae as well as the dark: different phases of already prepared world-stuff. You have an analogy in the human body, but of course this is not a lecture-hall on physiology, so I cannot go into that very easily.

Now then, when the time comes for a solar system to reimpody itself in the same way as a man reincarnates, a certain portion of this world-stuff which has ended its pralaya, or rather the pralaya of the former sun, detaches itself from the Milky Way and begins to pursue at first a slow and later a rapid peregrination as a comet into many portions of the galaxy, finally to reach its own destined home in space. Always keep in mind that it does this because drawn by attractions, which is really gravitation: psychic, spiritual, intellectual attractions. This nebula moves slowly at first, but gathers speed. It picks up material as it wanders through the galaxy, traversing the different solar systems: and if it is fortunate and escapes being drawn into the stomach of one or another of the always very hungry suns (strange way to speak of imbodyed divinities!) then it finds its place in space, and its movement of translation stops. It has other movements in common with all galactic bodies; but its cometary wanderings, the cometary wanderings of the "long-haired radical" as H. P. B. calls the comet, stops because it has found its home, its locus. It then settles and is now much more concrete, much less spiritual, much less astral, as we say, than it was as a nebula, because time has passed, ages have passed during which it was a comet: and furthermore it has been gathering material, the "refuse of the mother," the detritus of the cosmic dust, her breath, her refuse,

which it has been feeding on and taking into itself. Strange paradox that in all the rupa-worlds entities feed — not so in the arupa. There their food is intellectual ambrosia or nectar, as the Greeks said of their Olympian divinities.

Now when it has thus settled in the place which is the locus of the solar system reimbodied, the solar system that was, and more or less in that same place (karman you see), the nebula or comet has become a vast lens or disk-shaped body of astral stuff — call it nebular matter, call it cometary matter if you will — with laya-centers here and there scattered through it, like organs in a body. We may call these laya-centers by the more common name in science and say that they are the nuclei. In the center is the largest such nucleus which grows or develops or evolves into becoming a sun. The smaller nuclei around it in this nebular comet or cometary nebula grow to be the beginnings of the planets, and this is the beginning of the solar system. In the commencement of its beginning, as it were, the sun is voracious and attempts to swallow his younger brothers the planets, until the laws of nature come into operation, and attraction and repulsion come into play, of which science today knows only one: attraction, and calls it gravity or gravitation, although it seems to me repulsion is just as active in the universe as gravity. To me this gravity-theory is one-sided. If you will consider the behavior of the comets which come into the solar system, and how the tail of the comet always points away from the sun, you will see repulsion at work. Scientists think the repulsion is due to the action of light on the very small particles of molecules in the cometary tail. If you like. It is repulsion. As the comet approaches the sun, the head goes first, and tail afterwards; then as it sweeps around, the tail is always heading away from the sun, and when it leaves the sun after circuiting it, the tail precedes and the head follows.

Now the solar system is thus brought into being and finally becomes that solar system as we see it with our eyes. That means a lot, that phrase, *with our eyes*; and soon the solar system begins its career as a now formed entity. The planets slowly become more material and less ethereal. The divine laws of the celestial mechanism we call the solar system are established as now we see them working.

Now we pass over ages and we come to the ending of the life of the sun, which means the ending of the life of the solar system, for the sun is King in his kingdom. The sun feeds on the refuse of inter-planetary and inter-solar stuffs which it sucks in with its immense force and rejects as we humans do. This is the body of the sun I am talking about. This refuse, this matter in cosmic space, is the detritus of former dead suns, as you will see in a moment. Now we are approaching the end of the life of the sun. The sun's powers begin to weaken. Actually what is happening is that his manvantara is ending, his pralaya is almost beginning. His life on inner planes is opening, and that takes vitality from this plane. Therefore we say the sun is weakening in his power. That is all it means, and that is all death is: the transference from this plane to interior planes of a large part of the vitality existing on this plane when the body is at full strength.

Finally the sun dies. But long before this all the planets have died and have disappeared. I cannot tell you where here, it would take too long. Sufficient to say that the sun knows. The sun when the moment of its death comes bursts, explodes, into simply innumerable fragments of various sizes, sun-stuff, which originally were almost as ethereal as spirit; but as the sun grew older became more and more compacted, more and more materialized, concreted, until when the sun is dying, practically dead, it is not a solid body yet but on the way to becoming solid. But it explodes; there is a tremendous — words just lack to

explain this — not flash, a tremendous volume or outburst of light and power spreading throughout our solar system, and far beyond its confines. Every now and then astronomers today will discover what they call novae, a Latin word meaning "new stars." But what they see is just the opposite: a death of a star; and they will see some of these novae expand and then actually dim, some very quickly, some requiring years and years.

Now then, all these fragments which were once sun-stuff grow constantly more material. Finally they become the meteors and meteorites of interstellar spaces. Originally spirit-stuff, Mulaprakriti, they are now some of the most solid portions of prakriti, iron, nickel, carbon, and all the other things that our scientists have found in the meteorites which have reached this earth. These meteorites wander through space for ages and ages until the imbodiment of the solar system comes again. Thus the cometary nebula picks up uncounted numbers of these meteorites, thus bringing back as it were its life-atoms of the former body of the solar system into its new body, just as we humans do. But it takes ages and ages for the solar system to gather up all these meteorites; and as a matter of fact all the meteorites that traverse our solar system are not due to the explosion of our former sun. Multitudes and multitudes of them are, but multitudes are not, but are the explosions of other suns in interstellar space which have wandered far and have become caught by our sun in its former state, or by our planets in their former state.

And one final thing: We have thus seen what a sun-comet is, or a comet which becomes a sun in the solar system. But a comet may be the pre-birth state either of a sun or of a planet. During the lifetime of a solar system, every one of our planetary chains has its periods of manvantara and pralaya, in other words every planetary chain dies and is imbodied again, and dies and is

imbodied again in our system before the solar system and the sun in that system reach the time of their pralaya. In other words, our planetary chains re embody themselves many many times during the lifetime or manvantara of our solar system. How is this done? The chains die, their inner principles begin their peregrinations along the circulations of the universe, exactly as a man's ego dies and returns. Remember I am just giving the barest outline, just a touch here and a touch there, leaving out 99 percent of what should and could be said. How does each such planetary chain-ego, as it were, come back to our solar system? By detaching itself where it was resting as part of the already prepared world-stuff of the Milky Way exactly as the sun-comet or cometary sun did when the solar system was re embodying. In this instance the comet is a planetary comet which wanders through space, comes back to our solar system, is attracted here, becomes a small sun, and dying of this state because of materializing, becomes a full planetary chain, settles in life as what we call the planet and begins its new Day of Brahma.

The Theosophical Forum

BIRTH INTO A GREATER LIFE

Every new spiritual birth takes place through the pangs of coming into a new type of life; and these new births of the chela, of the disciple, take place at constantly recurring and indeed at cyclical intervals. The disciple is a fore runner of the race; he is a pioneer and hews his way through the jungle of human life, making a Way not for himself alone — although indeed his own face is set towards those mountains of the Mystic East — but for the poor and for the less strong who follow after him. Verily, of such stuff are disciples made; and as the chela hews his way along his own self-chosen path, the time comes when he finally achieves the grade or status of spiritual mastery, and then he becomes a Master of Life and of Wisdom. The glory of the Hierarchy of Compassion begins to pour through his being and even shows itself in his body, so that his very presence among his fellows is like a benediction, and brings quiet and peace, and evokes wisdom and love. — G. de Purucker, *The Esoteric Tradition*, II, 1075

UNIVERSALITY AND THE ESOTERIC TRADITION — *G. de Purucker*

H. P. B. wrote grandly of the Secret Doctrine of the ages, and she pointed out that this Secret Doctrine has come down to us from time immemorial in the guardianship of our great Teachers, in all their various grades. She showed that this Wisdom of the Gods was originally handed to the first human protoplasts by beings from other spheres, by spiritual beings from other planes, to use the argot which we have popularized. But it seemed to me that with all the grandeur of her teaching and the high plane of thought to which she led us, there still remained something to be given which should guard the student against the intrusion into his mind of false ideas, false teachings, doctrines leading him away from the Central Fire. In other words men lacked, Theosophists lacked, a standard, a teststone, against which they could lay a teaching presented to them and find out whether the teaching were pure gold or only tinsel, brass.

What is this really infallible touchstone, this instrument which you can use if you recognise it? It is universality. Any teaching presented to you which cannot stand that test, which can be shown to be only a purported communication from other spheres, and which has no basis in the great philosophies and religions and sciences of the past given to mankind by Masters of Wisdom — any such teaching is fraudulent and has no right, no place, in court, in the court of our conscience. The gods taught men in the beginning, man in his childhood, and led him on, and bred him up, enlightened his mind, so that it could receive and understand and pass on *in secret and open tradition* the archaic God-Wisdom, our god-teachings, the Secret Doctrine.

In getting this idea, this conception that truth, reality, has been

communicated to mankind, that it is now on earth ready for us when we prove ourselves ready for it and worthy of it, we understand that it is traditional, that it has been given forth in larger or smaller measure and in varying manners from age to age by the greatest men, the titan intellects, of the human race; and therefore that this tradition, this Qabbalah, this Brahma-Vidya, can be found in all the great religions and philosophies of the ages.

In accepting this view, you lose sight of the mere author of whatever book may be in your hands. You forget the personality, the individuality, of the Teacher, and you look to what he brings. *If he is genuine* you find, not the vague frontiers upon which structures of falsity may be erected by scheming minds; but you understand that here is a glorious and mighty Tradition coming down to us from the Universe, from the heart of Divinity, and that its appearances as communicated to men are in the great religions and philosophies of the ages.

It is this Tradition, this Secret Doctrine, which gave to H. P. B the title of her masterpiece; and it was for this same reason that I chose these actual words, *The Esoteric Tradition* (1) as the title of my latest book. It is esoteric because few have as yet understood it. It is traditional because it has been handed down from immemorial time. Thus *The Esoteric Tradition* is an attempt, feeble it may be, but very honest and sincere, to do what our Teachers are trying to do with us: to instill into our hearts and minds a reverence for and a worship of the truth before us; to awaken in our hearts the divine Fire of love for all that is, which becomes constricted and restricted and usually degraded when it is fastened solely on an individual accepted as a Teacher.

The suggestion in the title of this book is that a Teacher should receive reverence, but only in so far as his teaching is truth. In

losing sight of the man, you see the Message. Was there not need, is there not need, of just this touchstone, particularly in the Theosophical Movement today? Is it not absolutely accordant with all that dear H P. B taught us: to look within, to look up, to forget yet to revere the hand which gives; to take the Message? Inspect it. Take from it what you find good; reject the balance if you wish. You may make a mistake in so doing, but you are exercising your prerogative of choice, of discrimination, of intuition. And by so exercising it you give it strength, and as time passes it will grow very powerful, and you will then take back the cornerstone which you rejected, and in so doing you will receive the Teacher with the teaching in your hearts, and in the proper way.

One lesson I have learned: that it is the teaching and its magic working upon me which counts; for when the teaching enters my heart my reverence for the communicator grows. Is not your reverence for our Masters infinitely greater when you realize that they awaken in us the noblest and best? It is just this noblest and best in us which, when awakened, enables us to see them. And that is what they want: not to have us see them, but to have us awake, our hearts beating in steady rhythm with the heart-beat of the universal heart, and our minds fired with the truth which they communicate to us and which we value precisely in proportion as it is impersonal.

I think the Theosophical Movement will suffer from no more fakers, no more false teachers, now or in the future, provided we can remember that the touchstone of anything that may be offered to us for a teaching is universality, and the appeal to the conscience, the appeal to the voice within.

THE BATTLEFIELD OF MIND — *Lydia Ross*

At present, man is the human battlefield of his own dual mind which is fighting for selfish, personal ambitions and desires on the one hand, and for spiritual thought and impersonal feeling on the other. . . . Our dual impulses both use the brain-mind to "make out a case" for right and wrong in the inner struggles between conscience and desire. When we decide aright, our lower nature loses the strength that is gained by our better side. In recognising this power of creating a noble character, step by step, we find opportunities of winning point by point in meeting the routine affairs of daily life. These seemingly small victories unite their force and make us equal to the larger issues which try our souls severely. Even the failure to win, at times may count as success, for the man who keeps on trying builds up his moral strength, and diffuses something helpful into the very air around him.

Every day is a new beginning for all, no matter what the past has been. To unfold, to advance, to "become" is the natural and vital impulse of every thing and every being. The most dreary and difficult life outwardly, may be a cycle of opportunity for the inner man to show his heroic courage and impersonal power. — *The Doctrine of Cycles*, pp. 149-50

THE BEACON OF THE UNKNOWN – VI — *H. P. Blavatsky*

The present number of this series demonstrates how the Mystery-language, the language of symbol and allegory, if studied with a competent Teacher, will reveal under the exoteric forms of all religions and philosophies the one Universal Truth, the Gupta-Vidya. One of H. P. Blavatsky's most brilliant writings, it appeared originally in the French magazine, *La Revue Theosophique*, 1889, under the title "Le Phare de L'Inconnu" and was first published in translation in *The Theosophist*, Volume X. The editors had hoped to combine numbers VI and VII in the present issue of the FORUM, thus closing the series. For lack of space, however, the seventh and last instalment will have to be held over until February.

That which the Theosophists who hold to orthodox and official science try to accomplish in their own domain, the Occultists or the Theosophists of the "inner group" study according to the method of the esoteric school. If up to the present this method has demonstrated its superiority only to its students, i. e., to those who have pledged themselves by oath not to reveal it, that circumstance proves nothing against it. Not only have the terms *magic* and *theurgy* never been even approximately understood, but even the name *Theosophy* has been disfigured. The definitions thereof which are given in dictionaries and encyclopedias are as absurd as they are grotesque. Webster, for instance, in explanation of the word Theosophy assures his readers that it is "a direct connexion or communication with God and superior spirits"; and, further on, that it is "the attainment of *superhuman* and *supernatural* knowledge and powers by *physical processes* (!?) as by the theurgic operations of some ancient Platonists, or by

the chemical processes of the German fire philosophers." This is nonsensical verbiage. It is precisely as if we were to say that it is possible to transform a crazy brain into one of the caliber of Newton's, and develop in it a genius for mathematics by riding five miles every day on a wooden horse. Theosophy is synonymous with the *Jnana-Vidya*, and with the *Brahma-Vidya* (1) of the Hindus, and again with the *Dzyan* of the trans-Himalayan adepts, the science of the *true* Raj-Yogis, who are much more accessible than one thinks. This science has many schools in the East. But its offshoots are still more numerous, each one having ended by separating itself from the parent stem — the true Archaic Wisdom — and changing its form.

But while these forms varied, departing further with each generation from the light of truth, the basis of initiatory truths remained always the same. The symbols used to express the same ideas may differ; but in their hidden sense they always do express the same idea. Ragon, the most erudite Mason of all the "Widow's sons," has said the same. There exists a sacerdotal language, the "mystery language," and unless one knows it well, he cannot go far in the occult sciences. According to Ragon, "to build or found a town" meant the same thing as to "found a religion"; therefore, that phrase when it occurs in Homer is equivalent to the expression of the Brahmins, to distribute the "Soma Juice." It means, "to found an esoteric school," not "a religion," as Ragon pretends. Was he mistaken? We do not think so. But just as a Theosophist belonging to the esoteric section dare not tell to an ordinary member of the Theosophical Society the things about which he has promised to keep silent, so Ragon found himself obliged to divulge merely relative truths to his pupils. Still, it is certain that he had made at least an elementary study of THE MYSTERY LANGUAGE.

How can one learn this language? we may be asked. We reply:

Study all religions and compare them with one another. To learn thoroughly requires a teacher, a *guru*; to succeed by oneself needs more than genius: it demands inspiration like that of Ammonius Saccas. Encouraged in the Church by Clement of Alexandria and by Athenagoras, protected by the Gentiles, "he learned the *language* of the mysteries by teaching the common origin of all religions, and a common religion." To do this he had only to teach according to the ancient canons of Hermes which Plato and Pythagoras had studied so well, and from which they drew their respective philosophies. Can we be surprised if, finding in the first verses of the Gospel according to St. John the same doctrines that are contained in the three systems of philosophy above mentioned, he concluded with every show of reason that the intention of the great Nazarene was to restore the sublime science of ancient wisdom in all its primitive integrity? We think as did Ammonius. The biblical narrations and the histories of the gods have only two possible explanations: either they are great and profound allegories, illustrating universal truths, or else they are fables of no use but to put the ignorant to sleep.

Therefore the allegories — Jewish as well as Pagan — contain all the truths that can only be understood by him who knows the mystic language of antiquity. Let us quote what is said on this subject by one of our most distinguished Theosophists, Professor Alexander Wilder (2) of New York, a fervent Platonist and a Hebraist, who knows his Greek and Latin like his mother tongue:

The root-idea of the Neo-Platonists was the existence of one only and supreme Essence. This was the *Din*, or "Lord of the Heavens" of the Aryan nations, identical with the *Iao* of the Chaldeans and Hebrews, the *Iabe* of the Samaritans, the *Tiu* or *Tuiseo* of the Norwegians, the *Duw* of the ancient tribes of Britain, the *Zeus* of the tribes of Thrace, and the *Jupiter* of the Romans. It was the *Being* (non-Being), the

Facit, one and supreme. It is from it that all other beings proceeded *by emanation*. The moderns have, it seems, substituted for this their theory of *evolution*. Perchance some day wiser men than they will combine these systems in a single one. The names of these different divinities seem often to have been invented with little or no regard to their etymological meaning, but chiefly on account of some particular mystical signification attached to the numerical value of the letters employed in their orthography.

This numerical signification is one of the branches of the *mystery language*, or the ancient sacerdotal language. It was taught in the "Lesser Mysteries," but the language itself was reserved for the high initiates alone. The candidate must have come victorious out of the terrible trials of the Greater Mysteries before receiving instruction in it. That is why Ammonius Saccas, like Pythagoras, obliged his disciples to take an oath never to divulge the higher doctrines to any one to whom the preliminary ones had not yet already been imparted, and who, therefore, was not ready for initiation. Another sage, who preceded him by three centuries, did the same by his disciples when he said to them that he spoke "in similes [or parables] because to you it is given to know the mysteries of the kingdom of Heaven, but to them it is not given. . . because in seeing they see not, and in hearing they hear not, neither do they understand." Therefore the "similes" employed by Jesus were part of the "language of the mysteries," the sacerdotal tongue of the initiates. Rome has lost the key to it: by rejecting Theosophy and pronouncing her anathema against the occult sciences — she loses it forever.

TRANSACTIONS OF THE HEADQUARTERS LODGE — XXVI — G. de Purucker

Studies in "The Mahatma Letters"

This number of the present series opens with the remarks by Dr. de Purucker on the polar magnetism of the earth which were crowded out of the November issue. They refer to Question 13, page 146, of *The Mahatma Letters*, and the Master's comments thereon to be found on pages 168-9. Then follows a valuable hint or two on the meaning of the "777 incarnations" discussed on pages 82-3 of *The Mahatma Letters*. Before speaking of the "777 incarnations," Dr. de Purucker made the following comment which will be of interest: "Sometimes a little confusion was caused in the minds of earlier readers of *The Mahatma Letters* through lack of knowing all the facts. For instance they did not know that the two Mahatmans, M. and K. H., took, each one, a different side of the teaching of the rounds and the globes. I think it was K. H. who took care of the instruction to be conveyed in what we call the Inner Rounds; and M., as I recollect, took charge of the teaching concerning the Outer Rounds. As analogy rules throughout the universe, the greater teaching contains the smaller teaching in miniature; and the smaller teaching contains within its heart the reflexion of the greater. Thus what either Master gave could, by making appropriate changes, apply to what the other Master taught, but there are certain things you have to know about this in order to discern just where the reference is to Outer Rounds and where to Inner Rounds."

As stated in the November FORUM this and subsequent

numbers of this series to appear in the future had not been edited by Dr. de Purucker. Dr. Henry T. Edge, one of the few surviving pupils of H. P. Blavatsky, has kindly added an explanatory note, of interest to scientific students, concerning the magnetic poles of the earth. — Eds.

THE EARTH'S MAGNETIC POLES

I do not blame anyone for feeling confused about the apparently paradoxical comments of the Masters regarding magnetism and the poles of the earth. For as has been pointed out by all the speakers tonight, the subject is thorny, thorny mainly because of erroneous scientific teaching of the past and present — and by that I mean teaching erroneous in deductions. As long as the scientists stick to the facts of nature we have no quarrel with them but look upon them as our best friends. As soon as they begin to theorize, their theories are just the ideas of each theorizer and no more; and you can accept them or reject them just as you please. And if you do reject the scientific theorizers' views, the circumstances of the future may show that you may have been right and the scientific "sharps" wrong.

I would like to point out this: Don't confuse the two magnetisms in the two poles of a magnet with the earth's magnetism; although the earth is likewise a magnet. Its north polar magnetism we call the north polar magnet because that magnetism has its fountain at the north pole, or close to it. Similarly so with the south polar magnetism diametrically opposite. Therefore when we Theosophists say that the type of magnetism of a magnetic instrument, of a compass for instance — when we say that the north pole of that compass is the end which points to the north, we mean just that. In other words, the north pole of the compass is the north pole of the compass. Its south pole is its south pole. Now if you pause and think a moment, you will realize that that

compass needle does not point as through a magnetic vacuum to the north pole of the earth; but that the north point of the needle has to work towards the north pole through all the thousands of miles of intermediary magnets naturally. Do you see what I am trying to say?

Thus, the north pole of the needle being the actual positive pole, as scientific convention calls it, this "north" pole, when it is taken up to Boothia, where the north magnetic pole of the earth is, points downwards; but if the earth at that place were the actual north magnetic pole, it would not point downwards but would point upwards, the two like poles repelling each other. What does this mean? It means that that point in the earth *to which* the true north point of the needle attracts itself is, in that small locality, a *south* pole. *Above* the earth is the true north pole of the earth. These like poles repelling each other, repel the genuine north pole of the needle to the earth which is likewise attracted at the south pole of that point on the earth. This is simple enough.

And now we will speak in a very, very scientific way, allowing the scientific imagination full and free play, that scientific imagination which the scientists like Huxley and Tyndall and others say scientists must use. Quite so, but let them use it in accordance with the facts of nature, not to establish theories. Suppose we had twenty magnetic needles and we set them all in a row, every magnet with its north point of the needle point to the north. Then the south pole of each magnet, would be pointing to the north pole of the magnet just following it. They would attract each other. Do you get it? North pole, south pole; north pole, south pole; and so on. Now instead of twenty such magnets, such magnetic needles, imagine an uninterrupted series of such, from the magnetic needle I am holding in the laboratory up to the north pole. You see now why the actual north pole of the needle points to the north: because it is attracted by the south pole of the

magnet immediately to the north of it; and so on, as I have just pointed out with the illustration of the twenty magnetized needles. It must be so. Therefore that end of the magnetic needle which points to the north is the true north pole of that particular magnetic needle. And this is what Jenkins taught: a very intuitive man by the way, of whom we never hear much because he was too intuitive for his time. He was just ignored and sat upon.

Thus the true magnetic pole of the earth is not actually in the rocks of the earth but above the earth. And I think it was Professor Ryan who said that this true magnetic pole is believed to make a circle around the geographical north pole in about 600 years. That is close enough; and of course the south magnetic pole makes a similar turn, being just the other end of the magnet. Now I think that covers the point of magnetism.

[Note by H. T. Edge: A brief summary of the point contended for in this article may facilitate its understanding by the reader.

Scientists contend that what is called the north pole of a magnet is really a south pole, inasmuch as this so-called north pole is attracted, and not repelled, by the north pole of the earth. Some actually call it a south pole, others call it the north-seeking pole. But this article, following the statements in *The Mahatma Letters*, declares that the earth's north pole is situated in space above the earth, and not in the ground below the surface. Scientific support for this view is adduced from Fleeming Jenkins, Halley, and Christopher Hansteen. In accordance with this view, the so-called north pole of a magnet is actually a north pole, and the reason why it points downward at Boothia Felix is that its south pole points up wards towards the real north pole of the earth in the space above. Until such facts as the irregularity of the isogonic lines of dip, and the continual fluctuation of the angle of dip, have been explained, science has no sufficient ground for rejecting the views set forth in this article.]

"THE 777 IMBODIMENTS"

Now with regard to the matter of the 777 or the 777 imbodiments, I would like to point this out: The number 777 does not refer to the actual number of incarnations that souls have. Unfortunately in the days when the *Mahatma Letters* were written, there was no clearly defined terminology as we now have evolved it, and they used "incarnations" in the way we all did when we were boys, say thirty or forty years ago. We talked about an incarnation of the mineral kingdom, and an incarnation of the sun; which of course is a ridiculous way of speaking, because incarnation means infleshing. The proper word would have been imbodiment.

Now here is my point. The references here are not to what we now call incarnations of the human ego, but refer to the monads; and this was hinted at by more than a few of the speakers tonight. It refers to the imbodiments, or passings if you wish, of the families of monads through the kingdoms of nature on this earth, Globe D, and during the seven root-races. Try to figure that out. You will find it as difficult as the other conception, in a way, but there is the key.

Thus, one incarnation in every root-race. You see, you have the key right there. Every root-race demonstrates a power and a substance in cosmic planes, not fully but relatively. So, so far as our own globe is concerned — and our Master was speaking of our Globe and the monads of our Globe now — the reference is, as I have just stated, to the passings or traversings of the different families of monads through the different kingdoms of nature, or if you like, through the different cosmic planes.

Now what does this mean? It means that for every kingdom of nature, or for every cosmic plane, such a monad has to build for itself a general subtil vehicle which will be permanent for that

kingdom or for that cosmic plane. Do you follow that? When that kingdom or that cosmic plane is abandoned or left, and the monad passes on through the next succeeding kingdom or cosmic plane, that particular integument or vehicle builded for that cosmic plane or world is shed or dropped because no longer adequate for the monad; and an integument is built up fitted to allow the monad to express itself in the succeeding cosmic plane or world or kingdom. So there is an assuming of such an integument for every cosmic plane, one for every root-race, one for every great sub-race, and one such integument for every sub-sub-race; and so on down, if you wish, to a single imbodiment.

Now, counting these integuments — well, I am saying too much! But there is your key; and you will find it as a teaching identical with the teaching of the medieval Fire Philosophers when they spoke of souls manifesting as salamanders, as sylphs, as undines, as gnomes; because in those days they openly or publicly spoke of only four. You can add the three more that we teach.

The Theosophical Forum

"A NEW EARTH AND A NEW HUMANITY" (1) — *Marjorie M. Tyberg*

Dr. Reiser views the present time as a creative stage in the history of the human race, a period of unequalled opportunity, when we are experiencing the collapse of one civilization and deciding the character and beginning the building of the new one. Inventions have now removed barriers of physical distance, events have faced humanity with the fact that survival necessitates united effort, the "phantom of isolation" has been dispelled. He holds that the new "togetherness" renders possible the idea of "global democracy," with a non-supernaturalistic religion as the basis for the intellectual and social unification of the peoples of the world; and points to the necessity for a social super-organism, to centralize and unify the complex problems that have arisen with the crash of old conditions and the coming of a new age in world-history. He visions super-national institutions that shall be to the new social organism what the central nervous system, the cerebro-spinal axis, is to the physical organism, and he foresees the evolution of a world-sensorium for the social organism, a center of intellectual-social control analogous to the cerebral cortex in the individual. And, in this forward step on the ladder of human- evolution, it is his conviction that America must provide the ideology for the new age, must "dare and imagine the blueprints of the structure of a planetary abode fit for the children of all men, Oriental and Occidental, European, and American," a pattern of international living, "a planned society of universal ends."

Face to face with a new era, we must orientate ourselves to a universe of dynamic processes, must cease to function on outworn principles and ideas and advance into the new system,

the non-Aristotelian-non-Euclidian-non-Newtonian system made possible by the discoveries of relativity physics, quantum theory, etc., of recent years, which have added to our knowledge of what is fundamental in processes and relations in nature. Dr. Reiser holds, with Alfred Korzybski, the author of *The Manhood of Humanity* and *Science and Sanity*, that this newer system has one underlying structure and metaphysics giving a sound basis for a coherent theory of nature as the universal matrix of cosmic facts and relationships, a theory consonant with the facts as science now presents them, a theory, moreover, which shows man's relation to the whole of which he is a part and his interrelations with the other parts. He holds that this new system, applied to social science and policy can lift the science of relations and ethics to the level reached by technological advance, can remove the reproach now justly laid upon our civilization, that invention has outstripped ethical progress. Ethics, say the advocates of the new system, must be on a scientific basis, to show that selfishness is self-defeating. This, says Dr. Reiser, supported by the new theory of nature and metaphysics and by up-to-date biological discovery, is the remedy for the ills of society as we know them.

The mental reorientation that must be accomplished before change in any social program for human life can be effected includes understanding and acceptance of the fact that modern civilization is electro-dynamic; that none of the triumphs of electrical engineering could have been achieved had there not been developments in mathematical theory which broke with the principles of the Aristotelian-Euclidian system. Dr. Reiser aptly remarks that you cannot run a motor-car on those outmoded principles. It remains for us to humanize the new science, to apply its discoveries to ethico-social problems, and bring human relations abreast of what is now held of organism, of the inter-relations of parts of wholes to one another, of the relation of parts

to wholes, of wholes to greater wholes, in successively higher integrations. Dr. Reiser perceives the analogy between geometry and ethics — the Pythagorean key to structure — and suggests that the next step in evolution involves global thinking, thinking in terms of curvature, instead of the old planal thinking. We live on a round earth; the consequences of what we do eventually return to us. Dr. Reiser stresses this "social karma," which he mentions as the equivalent of the ancient oriental teaching of *samsara*. Global thinking might well be found to revolutionize ideas of social responsibility on the large scale in world affairs. He also recalls the argument put forward by Sir Arthur Eddington years ago apropos of the interdependence of the parts of an organism: that of the electron taken alone nothing whatever could be said; and the statement in Eddington's last book that "the only property possessed by the elementary particle is its relation to the whole structure of existence, and the particle is independent because it has contributed its quota to the universal framework of relations." Thus vitally interwoven are the destinies of the entities that compose an organism, microcosmic or macrocosmic.

Dynamic humanism, the new world-religion visioned by Dr. Reiser, is intended to give man a view of nature in harmony with the latest findings of science — he states that the whole trend in physics and biology is toward the acceptance of the concept of properties and parts within organized wholes, while in mathematics, logic, and psychology the same tendency may be marked. And dynamic humanism is to include with these views of Occidental science the mysticism of the Orient. Divinity in the new system is presented as the striving of the part, the human being, towards the completeness of the universal organism, the finite aspiring to the "As-Yet-Unknown." A hint is given as to the emergence of a consciousness of inner oneness equivalent to a

"fellowship of the spirit"; and a synthesis of instinct and reason in a higher mode of apprehension akin to the sporadic "hunches" now experienced, which would bring fellow-beings into direct inner contact with one another and with reality.

A New Earth and a New Humanity presents an arraignment of the old assumptions concerning the nature of our world, and marshals evidence showing that though scientific advance has made these no longer tenable, they remain as misapprehensions and misinterpretations of truth which can be dislodged in favor of a newer system only by study and hard thinking. This book gives a most readable summary of just how the newer science differs from the older in regard to time and space, force and matter, geometry, mathematics, logic, causality, in the universe; and, in addition, contains intuitive forward-looking concepts pointing to further scientific developments in a way that removes the dread of just another dogmatic system like the old theology or science. Dr. Reiser's charge of inadequacy is applied to the very language we use to transmit what we believe to be the truth about the universe; and he introduces readers to the new science of semantics, which aims to bring our words and symbols into accord with facts about the structure of the world we live in.

It is to an improved system of education that Dr. Reiser looks as the means of gradually passing on the cultural ideals and practices desirable in the new age — education freed from the present limitations due to subservience to the methods of "big business" and propaganda. He looks on education as "a socially accepted (conventionalized) philosophy in action," and would have educational systems given breadth and depth by the inclusive study of the religions and philosophies of the world as well as of up-to-date science. Voluntary co-operation in such synthesis on the part of the nations would stimulate men to avail themselves more fully and with added creative power, of the

essentially human time-binding faculty, which enables men to collect knowledge of and generalize upon past human experience and achievement, and become builders of progressively higher civilizations. Destroyers of civilizations, as we are learning at present, ignore and scorn this human faculty. Dr. Reiser evidently expects, in this proposed synthesis of religions and philosophies, that the Orient has much of value to contribute.

Is Dr. Reiser aware of what the wisdom of the East has already contributed to the revitalizing of Western culture? More than 50 years ago, in 1888, in anticipation of and preparation for the demand for a reorientation to philosophy, religion, and science based on the structure of the universe, *The Secret Doctrine* by H. P. Blavatsky, the Founder of the Theosophical Movement, had for its sub-title, "The Synthesis of Science, Religion, and Philosophy."

In two large volumes, dealing respectively with Cosmology and Anthropology, it presents a system inclusive of these three "offsprings of the spirit of man," that meets the requirements of the world today. The new cycle then about to open upon the upward arc of spiritual evolution for the human race warranted the renaissance of that most ancient wisdom-science — the source of all the wisdom and science that reached Europe and came to the West by way of Greece. The ancient wisdom and science, however, were free from, were unadulterated by, the dogmatic distortions and misinterpretations later to be undergone during a period favorable to the observation and study of the physical, vehicular side of nature, but less favorable to the understanding of the Divinity and Intelligence which are the consciousness aspects of the Great Being whose physical form is the external universe studied by the scientists.

It is interesting to note that this most ancient science is in close accord with the most recent scientific discoveries of our day. In

his book, *Man in Evolution*, Dr. G. de Purucker, the late Leader of the Theosophical Society, gives a list of theories concerning force, matter, modes of motion, radio-activity, the descent of man, electro-magnetic phenomena, similarity of large- and small-scale systems, etc., showing how the ancient teachings are a forecast of the modern findings; and he devotes several chapters to enlarging upon this subject. Scores of other examples of this agreement of the most ancient and the most modern theories have been recorded by students of Theosophy in Theosophical books and magazines.

Any comprehensive survey of science must include recapitulation of these early theories, which are not only abreast of what scientists have discovered today but also point the way to further knowledge of processes in the universe which have not yielded their secret to analytical scientific methods.

Theosophy presents a theory of Nature as a complete organism, an inner, invisible Nature as well as a physical form. Each infinitesimal life in that cosmic organism partakes of everything that is in the greater life in which it lives, and has the ultimate possibility of evolving from within itself, in an ascending scale during vast cycles of growth and expansion, the spiritual consciousness, the high intelligence of the great whole. Man is in his inmost a spark of universal divinity, man's intelligence is a part of cosmic mind. Man came into manifestation with the universe; his destiny is indissolubly linked with it, as is that of every part, and as is every part with every other part. There is "an open future" for the human race in future cycles during which the human spiritual and intellectual faculties will have their fruition. Theosophy presents the cosmology which includes increasingly greater whole systems in which planetary and solar systems are to the higher organisms as the atom is to the physical body of man. The correspondence between large-and small-scale

systems holds throughout. There is one cosmic law, one pattern of structure for all life.

"There must be an intelligent entity to act upon environment," writes Dr. G. de Purucker in his *Man in Evolution*. Man is the entity which can act consciously upon his environment. It is human destiny to contribute "the human quota" to "the universal framework of relations"; and this consists in becoming aware of his higher faculties and consciously exercising them in conformity with the cosmic laws and patterns of life. It is the performance of this function that makes of man an individual in the truest sense of the word. It is the presence in the human constitution of a ray of the cosmic mind that enables man to seek to know and to understand the structure of the universe.

Dr. Reiser has a happy faculty of bringing to light intuitive statements made by writers on science. He quotes from the works of Mary Everest Boole, the wife of the pioneer exponent of the new mathematics, and his co-worker, her belief in "the Ancient Secret that mathematical notation is not a mere mechanism for calculating numbers, but the supporting framework of the same organic relations of man's mind to the As-Yet-Unknown of which religions are various outward expressions." This explains the ability of the intuitive scientist to predict the evidence of the theory he holds, and rediscover in the external world the proof of the processes which he has intuited. The age-old injunction, Man, Know Thyself, implied as much for scientific as for ethical knowledge and advance.

The Secret Doctrine presents also a comprehensive study of the mythologies and religions of the world, showing conclusively that the source of all of them is one original wisdom-teaching that combines religion and science. The symbols common to them all, now in many cases sadly distorted and degraded in meaning,

originally gave the story in "super-verbal" form of the processes in the evolution of man and of the universe. They have ever been the shorthand record of the science of the invisible and the visible, decipherable only to those whose inner faculties have been awakened. For those who can thus read there have never been barriers of ignorance and prejudice dividing human beings of different faiths. When humanity develops these inner faculties, when there is a revival of the true "geometric instinct," when the false theories of man and nature have been thrown aside in the coming reorientation to Truth, once more there need be no conflict between religion and science. The Theosophical teaching concerning the complete constitution of man offers a convincing explanation also of that inner conflict which marks individual experience but which is destined to result in the triumph of the upper triad of the principles which make up human nature.

With a theory of nature in agreement with the discoveries of science, with a conception of man's destiny as part of universal destiny, a conception consonant with man's highest aspirations and his human dignity, with a science of invisible as well as of visible Nature, with its teaching of a common source for the great religions which would give a new motivation to universal ethics, the Theosophical synthesis, accepted by intellectually and spiritually alert thinkers in groups throughout the world, is a strong factor in promoting the unification of the peoples of the world. The Theosophical Movement is in fact a significant influence in the direction of the humanization of science, of social integration, and a powerful stimulus to that inner process of reorientation to universal truth which must precede any change in the institutions of mankind. Out of the Ancient East came to man in his need, this noble heritage from the past.

The signal merit of Dr. Reiser's book is the clear presentation of the necessity and the reasons for reorientation on the part of the

human race, and his excellent summary of the trend in various departments of thought in the direction of what could verily be "A New Earth and a New Humanity."

PERSONALIZED KARMAN — H. T. Edge

In pondering over the workings of Karman in our own destiny, we must not become so interested in our own fate as to overlook the consequences of what we have done to other people. It is pointed out by H. P. Blavatsky in "The Beacon of the Unknown," in the October number of this magazine, that to have one's own sins forgiven does not undo the wrong we may have done to other people. In Dickens's *Little Dorrit*, Mrs. Clennam, a sombre type-figure of extreme Calvinism, has committed a grave wrong against others. But, instead of making the reparation, easily within her power, but involving self-sacrifice, she considers that her own protracted sufferings from paralysis have sufficiently expiated her guilt. Dickens is of course indignant at this selfish keeping of a personal balance-sheet with the Almighty, regardless of the interests of injured parties. If I have caused much mischief and suffering among other people by my misdeeds, does it set matters right, or ease my feelings, if I am made to undergo the same sufferings in my own person?

What we can glean about Karman from competent teachers is that by it we are all linked together; and it would seem that to dwell too exclusively on the personal aspect of the question is to reintroduce the old evil which so often attaches to the idea of vicarious atonement.

We are taught that the first step to knowledge is to overcome the sense of personal separateness, and to give up making self-interest the mainspring of our life. It may well be that failure to make enough progress in this first step is at the root of our failure to understand Karman. And so we call it abstruse and contradictory; and well it may seem so, to such distorted vision.

But the universe is not constructed on any such plan; and what seems so mysterious when we try to fit it into our own scheme, may appear in its grand simplicity when viewed in the clear light of an unobstructed vision.

The Theosophical Forum

FEAR, THE GREAT DESTROYER — *G. de Purucker*

The Great Destroyer is fear, horror, apprehension of what is going to happen to *me*. Fear is destructive because it is based on egoism. Think how true this is. If a man utterly forgets himself, fear vanishes because he no longer thinks of the effect that anything may have upon himself. Fear is a concentration of attention upon oneself in an expectancy of disaster happening to one. Lose track of yourself, forget yourself, and fear will vanish.

Fear is often said to be a protection, but a protection only to the weak whose second nature is to fear; it is never a protection to the strong. It is horribly destructive. Of what? Of self-composure, self-confidence. It undermines will. It often makes one cruel in one's treatment of others. Fear is crippling. It stops the life-forces: it makes one shrink and tremble, for, harboring it, one no longer has the daring, the vigor, the strength and the power to go forth. Yet the timid man is always in far greater danger than the man who has no fear. Fear actually attracts danger. Your chances of safety are infinitely greater if you have no fear. Think it over.

Who would like to live in fear of his life, fearing everything that is going to happen, always slinking around the corner and running into cellars, and trying to go up and yet afraid to go up for fear he will fall? All his life would be a continuous horror. Whereas the man who has love in his heart, who recks not of what is going to happen to himself, how happy and joyful he is; and he is strong and affects others with his self-confidence. If fear ever comes into his soul, it is because for the time being he has forgotten.

Forget yourself, and fear will vanish. Do you know the royal way to the forgetting of the self — utterly losing track of the thought of self in your life? It is to love all things both great and small; for

perfect love casteth out all fear. Do you fear the things you love? Never. You want them, you long for them, you yearn for them.

Learn therefore to love, and fear will go; and you become strong; for love is a mighty power enchained in the human breast.

Why is love so great a protection, outside of the fact that it casts out fear? Because its vibrations are infinitely harmonious; and fear is always shaken, distorted vibrations. The Divine is perfect harmony, and all beneath it can arise to that. But fear is inharmony, trembling, shattering, undermining vitality. Look at the picture of a thoroughly frightened beast or man. You say to yourself: Where is the love in that man's heart which would give him peace, strength and utter composure? He has lost it, he has forgotten it; if it were there, there would be no fear. And what is this perfect love which casteth out all fear? Why, it is simply living in that part of our own self which is universal. It is becoming allied with the Divine. Therein lies perfect peace, perfect harmony.

The Theosophical Forum

PRAYER AND ASPIRATION — *G. de Purucker*

When we are asked the question "Do Theosophists pray?" I for one answer Yes and No; it depends upon what the questioner means by prayer. If he means getting down on bended knee and addressing a petition to a god outside of himself, purely imaginary, which the intellect has enormous labor in attempting to conceive of, and therefore which is not instinctive in the human heart as a reality, then we must answer: No, not prayer of that type. That is an abdication of the god within the individual denying its own rights and appealing for help outside itself. That is mere supplication, mere petitioning, a mere begging for benefits. It is purely exoteric.

True prayer is the rich, deep, spiritual humility of the human self envisioning the ineffably grand. It is a yearning to become like the heavenly Father, as Jesus phrased it: yearning to become a son of the Divine. It is almost a command of the man to himself to arise and pass on to higher things, upwards towards the Divine, of which a spark pulsates in every human soul. When we come into sympathetic relationship, into identic vibrational frequency, with this inner heart-beat, this pulsing of the divine, then our lives are made over, we are completely reformed, we become no longer mere men begging for favors, and thereby weakening ourselves. We begin to recognise our identity with the Divine. Dignity steals over us and enfolds us like a garment. And what prayer is nobler than this for the son to yearn to become like unto its divine parent?

This is the kind of prayer Theosophists love. I, for my own part, never sleep at night, never arise from my bed in the morning, until at least once. I have raised myself and attained the

experience. And prayer of this kind is not merely an attitude of mind. It is a way of life, a way of living, clothing him who falls in love with it and follows it, with dignity, enriching his mind with understanding, making him sympathetic to all else that lives.

He prayeth best who loveth best
All things both great and small.

Yes, for this is a becoming at one with all around us. It simply means progressively making your consciousness greater, expanding every day a little more, to include a little more, to encompass, to embrace a little more of the world around us. Our consciousness, after this way of prayer, of living, of thinking, of feeling, grows ever larger, until finally some day we shall be in our thoughts and feelings able to encompass the universe. Then no longer shall we be merely men, we shall be god-men, and after we die we shall take our place with the gods, the cosmic spirits, archangels, angels, powers — if you like the Christian phrase.

What is the difference between the ordinary man and the genius? The ordinary man is one who lives in the small, circumscribed, shell of personal consciousness; he cannot go beyond it. He has no intuition, no inspirations. The man of genius is the man who has broken this shell. He wanders out in consciousness and feeling to the surrounding universe. He vibrates in synchronous frequency with the universe around him, and then comes inspiration and marvelous ideas. He sees, he feels — and men say, "A genius has arisen."

This then is the prayer that we love. It puts us in touch with all things. It gives us qualities that have been latent in us before but now have an opportunity *to come out, to evolve, to unroll, to expand*. And by true prayer we mean not only enlarging the personal consciousness towards becoming at one with the universal consciousness, but putting this experience into practice.

And this is a pleasure just as exquisite: to practice what we preach. Otherwise we are but as tinkling cymbals and the rolling bellow of empty drums — *Vox et praeterea nihil*, a voice and nothing more. But when you *practice* prayer, then you reinforce your own powers by exercise. What you have yourself felt, you begin to practice. You see the light of understanding flash in the eyes of other men, a new and secret sympathy springing up between man and man. It is a new life-force. Thus this kind of prayer is likewise a way of life. It is likewise science; it is philosophy; it is religion. That kind of prayer we do believe in, and some of us practice it constantly.

We are children of the Infinite, of the Divine. Our Deity is intracosmic and yet transcendent, just exactly in the same way as a man is not only his physical body, and not only his mind or his spirit. He is body and feelings and emotions and mind and soul; but above these he is transcendent; there is something in him which is greater than all this. That is the spark of the Divine, the spark by which man is linked with the Invisible, with Divinity. That spark is the most important, the most powerful element in us. It is the predominating and governing factor in our destiny, and if we want to grow grander and greater and nobler and higher, we have to raise ourselves up towards that spark, we have to raise ourselves by living what we know. And then our life will become grand. And finally, when practice has become relatively perfect, the vision of genius will steal into the mind. For genius is cosmic wisdom. With genius, understanding grows and grows, and finally we begin to realize that we are not merely a man with perhaps a post-mortem life in heaven or hell, but that our destiny is the destiny of the infinite all: that we are endless, co-eval with duration, with cosmic time, that the boundless universe is our home; that we are here on earth merely for a day-night; that this is just a phase in our evolutionary journey upwards and onwards.

This is what we aspire towards, this is what we pray for: an ever-enlarging consciousness by aspiration, by study, by living the life we profess — an ever enlarging consciousness towards that Ultimate, a unity with the Divine. We pass through all the kingdoms of nature, grow from being a man to becoming a super-man; from a super-man becoming a demi-god; from demi-godhood to god-hood, to super-godhood, and so on and up the endless ladders of life. What a marvel! What a conception!

That divine spirit of which we speak so glibly — because it does represent an intuition, an answer to that yearning, that ineffable hunger within every normal man — we realize that that divinity was but our human conception of something still more wonderful, vaster, that we can never reach an end, that it is growth and advance and enlarging genius of consciousness for ever and ever and forever.

Do Theosophists pray? In that way we try to make our daily lives a prayer in action. We have the Ariadne's thread, we have the key, and we are trying to use it. And do you know what this key is? It is our own god-wisdom. And do you know what the lock is? It is man himself, taking this key. Inserting it into our own consciousness, turning it however slightly, magic streams forth from the slightly open door, from the ineffable mysteries hidden within, drawn from the cosmic font. No man can ever name it. It is nameless. Names but degrade it. Aspiration towards it always and forever — that is prayer. By living it we grow. What hope and what peace! What increase of understanding comes to the man who from within himself, from his own consciousness, has got the end of the Ariadne's thread. This, in its steadily progressing stages of experience and growth is what we call Initiation. He who hath ears to hear, let him hear!

Dr. de Purucker often spoke on the subject of Prayer and its

Theosophical interpretation, and from among articles of this nature the Editors have chosen the above, which was given as a talk in the Temple at Point Loma some years ago.

[The Theosophical Forum](#)

THE BEACON OF THE UNKNOWN — VII — *H. P. Blavatsky*

This instalment of H. P. Blavatsky's brilliant article concludes the series which was begun last July. In this issue, starting with the profoundest metaphysics and an exposition of the "God Nothing," the Unnamable Deity, and pointing to the Truth which is behind all religions, she brings her series to a close by an almost prophetic vision of the times in which we now live. What role does the Theosophical Society play in this tremendous drama? Her paragraphs in answer to this question show the importance of the Movement with which all true Theosophists have linked their destinies. Originally published in the French magazine, *La Revue Theosophique*, 1889, under the title "Le Phare de L'Inconnu," the article first appeared serially in translation in *The Theosophist*, Volume X.

We hope that we have by this time sufficiently refuted in these pages several grave misconceptions of our doctrine and beliefs; that amongst others which insists in regarding Theosophists — those at least who have founded the Society — as polytheists or atheists. We are neither the one nor the other, any more than certain Gnostics were, who, while believing in the existence of planetary, solar and lunar gods, offered no prayers to them nor dedicated any altars. Not believing in a personal god, *outside of man who is the temple thereof* according to Paul and other Initiates, we believe in an impersonal and absolute Principle (1) so far beyond human conception, that we see nothing less than a blasphemer and presumptuous madman in anyone who tries to define that great universal Mystery. All that has been taught us about this eternal and unique Spirit, is that it is neither spirit nor

matter nor substance, nor thought, but is *the container of all these things, the absolute container*. In a word, it is the "God nothing" of Basilides, so little understood even by the learned and ingenious annalists of the Musee Guimet (Vol. XIV), who define the term somewhat satirically as this "god nothing, who has ordained and foreseen everything, although he has neither reason nor will."

Yes, truly, and this "god nothing," being identical with the Parabrahm of the Vedantins — the grandest as well as the most philosophical of conceptions — is identical also with the *Ain-Soph* of the Jewish Kabalists. The latter is also "the god who is not," "Ain" signifying *non-being or*: the Absolute, the *Nothing* or Τὸ οὐδέν ἔν of Basilides: that is to say, the human intelligence, being limited on this material plane, cannot conceive anything that *is*, which does not exist under any form. Since our idea of a *being* is limited to *something* which exists, either in substance — actual or potential — or in the nature of things, or only in our ideas, that which cannot be perceived by the senses, or conceived by our intellect which conditions everything, does not exist for us.

"Where, then, do you locate Nirvana, O great Arhat?" asked a king of a venerable Buddhist ascetic whom he was questioning about the Good Law.

"Nowhere, O great king," was the reply.

"Nirvana, then, does not exist?" said the king.

"Nirvana, *is*, but does not exist," answered the ascetic. The same is true of the God "who is not," a faulty *literal* translation, for one ought to read esoterically "*the god who does not exist but who is.*" For the masculine of οὐδέν is οὐδ-εἰς and means "and not somebody," which signifies that that which is spoken of is not a *person* or any *thing*, but a negative of both (οὐδέν, neuter, is employed as an adverb; "in nothing"). Therefore the *to ouden hen*

of Basilides is absolutely identical with the *En* or "Ain-Soph" of the Kabalists. In the religious metaphysics of the Hebrews, the Absolute is an abstraction, "without form or existence," "without any likeness to anything else" (Franck, *Le Kabbale*, p. 153, 596). "God therefore is NOTHING, nameless, and without qualities; that is why it is called AIN-SOPH, for the word AIN signifies *nothing*." (*Ibid.*)

It is not from this immutable and absolute principle, which is only *in posse* (2) that the gods, or active principles of the manifested universe emanate. The Absolute neither having, nor being able to have, any relation with the conditioned or the limited, that from which the emanations proceed is the "God that speaks" of Basilides: that is to say, the *Logos*, which Philo calls "the second God," and the creator of forms. "The second God is the Wisdom of God One" (*Quaest. et Solut.*). "But is this *Logos*, this "Wisdom," always an emanation?" it will be asked, "for to make *something* emanate from *Nothing* is an absurdity." Not in the least. In the first place, this "nothing" is a *nothing* because it is the *Absolute*, and consequently the Whole. In the next place, this "second God" is no more an emanation than the shadow that our body casts upon a white wall is an emanation of that body. At all events this God is not the effect of a cause or an act that is reasoned, or of conscious and deliberate will. It is the periodical effect (3) of an eternal and immutable law, independent of time and space, and of which the *Logos* or creative intelligence is the *shadow* or the *reflexion*.

"But that idea is ridiculous!" we fancy we hear the believers of a personal and anthropomorphic God declare. "Of the two — man and his shadow — it is the latter which is *nothing*, an optical illusion; and the man who projects it is the intelligence, although passive in this case!"

Quite so, but that is true only upon our plane, where all is but

illusion; where everything is reversed, like things seen in a mirror. For, since the domain of the real is for us, whose perceptions are falsified by matter, the unreal; and, since, from the point of view of the Absolute Reality, the universe with all its conscious and intelligent inhabitants is but a poor phantasmagoria, it follows that it is a shadow of the Real, upon the plane of this latter, that is endowed with intelligence and attributes; while the Absolute, from our point of view, is deprived of all conditioned qualities, *by the very fact that it is the absolute*. One need not be versed in Oriental metaphysics to understand all that; and it is not necessary to be a distinguished palaeographer or palaeologist to see that the system of Basilides is that of the Vedantins, however twisted and disfigured it may be by the author of *Philosophumena*. That it is so is conclusively proved even by the fragmentary resume of the Gnostic systems which that work gives us. It is only the esoteric doctrine that can explain what is incomprehensible and chaotic in the little understood system of Basilides, as it has been transmitted to us by the Fathers of the Church, those executioners of *Heresies*. The *Pater innatus* or God not begotten, the great Archon, and the two Demiurgoi, even the three hundred and sixty-five heavens, the number contained in the name of Abraxas, their ruler — all this was derived from the Indian systems. But this is denied by our pessimistic century, in which everything goes by steam, even human life; in which nothing that is abstract — which only is eternal — interests anyone but a handful of eccentrics; and in which man dies without having lived for one moment in the presence of his own soul — swept away as he is by the whirlwind of egoistic and mundane affairs.

Apart from metaphysics, however, each person who enters the Theosophical Society can find therein a science and an occupation to his taste. An astronomer could make more scientific

discoveries by studying the allegories and symbols relating to each star (4) in the old Sanskrit books, than he could ever make by the aid only of Academies. A doctor who had intuition would learn more from the works of Charaka, (5) translated into Arabic in the 8th century, or in the dusty manuscripts to be found in the Adyar Library — not understood like all the rest — than in modern works on physiology. Theosophists interested in medicine, or *the art of healing*, might do worse than consult the legends and symbols revealed and explained through Asclepios or Aesculapius. For just as Hippocrates consulted the votive tablets at the temple of Epidaurus (surnamed the Tholos) at Cos, (6) so could they find therein prescriptions for compounding remedies unknown to the modern pharmacopeia. (7) From thenceforth they might perhaps cure, instead of killing.

Let us repeat for the hundredth time: The Truth is one! but the moment it is presented, not under all its aspects, but according to the thousand and one opinions which its servants form about it, it is no longer the divine Truth, but the confused echo of human voices. Where can one look for it as a whole, even approximately? Is it among the Christian Kabalists, or the modern European Occultists? Or among the Spiritists of today, or the early spiritualists?

A friend said to me one day, "In France there are as many systems as there are Kabalists. Here they all pretend to be Christians. There are some of them who are all for the Pope, to the point of dreaming about a universal crown for him — that of a Pontiff Caesar. Others are against the papacy, but in favor of a Christ, not indeed the historical Christ, but one created by their imagination, an *intriguing* and anti-Caesarian Christ, and so forth. Every Kabalist believes that he has rediscovered the lost Truth. It is always his own science that is the eternal Truth, and every other nothing but a mirage; and he is always ready to support or defend

it with the point of his pen."

"But the Jewish Kabalists," I asked, "are they also in favor of Christ?"

"Well, they have their own Messiah. It is only a question of dates."

There can, indeed, be no anachronisms in Eternity. The only thing is, that since all these variations of terms and systems, all these contradictory teachings, cannot contain the true Truth, I do not see how our friends, the French Kabalists, can pretend to a knowledge of the Occult Sciences. They have the Kabala of Moses de Leon, (8) compiled in the 13th century; but his *Zohar*, compared with the "Book of Numbers" of the Chaldeans, represents the work of the Rabbi Simeon Ben Iochai, about as much as the *Pimander* of the Greek Christians represents the true Egyptian Book of Thoth. The ease with which the Kabal of Rosenroth and its medieval Latin Manuscripts, when read by the *system of Notation*, transform themselves into Christian and Trinitarian texts, is like an effect in a fairy scene. Between the Marquis de Mirville and his friend the Chevalier Drach, a converted Rabbi, the "good Kabala" has become a catechism of the Church of Rome. The Kabalists may be satisfied therewith if they like; we prefer to stick to the Kabal of the Chaldeans, the "Book of Numbers."

Whoever is satisfied with the dead letter, may wrap himself up in the mantle of the Tanaim (the ancient initiates of Israel); in the eyes of the experienced occultist he will never be anything but the wolf disguised in the nightcap of Little Red Riding Hood's grandmother. But the wolf will not gobble up occultism as he does Little Red Riding Hood, symbol of the profane outsider athirst after mysticism. It is the "wolf" more likely who will perish, by falling into his own trap.

Like the Bible, the Kabalistic books have their dead letter, the exoteric sense, and their true or esoteric meaning. The key to the true symbolism, which is that also of the Hindu systems, is hidden to-day beyond the gigantic peaks of the Himalayas. No other key can open the sepulchres where, interred thousands of years ago, lie the intellectual treasures which were deposited there by the primitive interpreters of the divine Wisdom. But the great cycle, the first of the Kali Yuga, is at an end; the day of resurrection for all these dead cannot be far away. The great Swedish seer, Emmanuel Swedenborg, said "Look for the lost word among the hierophants of Great Tartary and Tibet."

However much appearances may be against the Theosophical Society, however unpopular it may be among those who hold all *innovation* in horror, one thing is certain. *That which our enemies look upon as an invention of the 19th century, is as old as the world.*

Our Society is the tree of Brotherhood sprung from a seed planted in the world by the angel of Charity and of Justice, on the day when the first Cain killed the first Abel. During the long centuries of the slavery of woman and the misery of the poor, this seed was watered by all the bitter tears shed by the weak and the oppressed. Blessed hands have replanted the seed in one corner of the earth and another, and in different climes, and at epochs far apart. "Do not to another the thing thou wouldst not he should do to thee," said Confucius to his disciples. "Love one another, and love every living creature," preached the Lord Buddha to his Arhats. "Love one another," was repeated like a faithful echo in the streets of Jerusalem. To the Christian nation belongs the honor of having obeyed this supreme commandment of their master, in a particularly paradoxical fashion! Caligula, the *pagan*, wished that mankind had only one head that he might cut it off with a single blow. The *Christian* powers have improved upon

this idea, which remained only in theory, by seeking for, and at last finding a means to put it in practice. Let them make ready to cut each other's throats; let them continue to exterminate in one day in their wars more men than the Caesars killed in a year; let them depopulate whole countries and provinces in the name of their paradoxical religion, and let those who kill with the sword perish by the sword themselves. What have we to do with all that?

Theosophists are powerless to stop them. Be it so. But it is their business to save as many of the survivors as possible. As a nucleus of true Brotherhood, it depends upon them to make their Society a bridge destined in the near future to carry the humanity of the new cycle beyond the muddy waters of the deluge of hopeless materialism. These waters rise continuously, and at this moment are inundating all civilized countries. Shall we leave the good to perish with the bad, terrified by the clamor and mocking cries of the latter, whether against the Theosophical Society or ourselves? Shall we watch them perish one after the other — this one of lassitude, that one unable to obtain a ray of the sun that shines for everyone — without stretching to them a plank of safety? Never!

It may be that the beautiful Utopia, the dream of the philanthropist who sees as in a vision the accomplishment of the triple desire of the Theosophical Society, may be far off. Full and entire liberty of conscience allowed to all, fraternity reigning between the rich and the poor, equality recognised in theory and practice between the aristocrat and the plebeian — are still so many castles in the air and for a good reason. All this must come about naturally and voluntarily on both sides, but the time has not yet arrived for the lion and the lamb to lie down together. The great reform must take place without any social shocks, without a drop of blood being spilled; which can happen in no other way

than by the recognition of the axiomatic truth of Oriental Philosophy, which teaches us that the great diversity of fortune, of social rank and of intellect, is due but to the personal Karma of each human being. We reap only what we have sown. If the *personality* of each physical man differs from that of every other, the immortal *individuality*, or immaterial being in him, emanated from the same divine essence as does that of his neighbors. He who is thoroughly impressed with the philosophic truth that every Ego begins and ends by being the indivisible Whole, cannot love his neighbor less than he does himself. But, until this becomes a religious truth, no such reform can take place. The egoistical proverb: "Charity begins at home," or that other one: "Everyone for himself and God for us all," will always impel "superior" and *Christian* races to oppose the practical realization of this beautiful pagan saying: "The poor man is the son of the rich one," and still more that which tells us, "Give to eat first to him that is hungry, and take that which remains for thyself."

But the time is coming when this "barbarian" wisdom of the "inferior" races will be better appreciated. What we must try to do in the meantime is to bring a little peace into the world, in the hearts of those who suffer, by raising for them a corner of the veil which hides the divine truth. Let those who are strongest show the road to those who are weaker, and help them to climb the steep hill of life; and let them teach these to fix their eyes on the Beacon which shines on the horizon like a new star of Bethlehem beyond the mysterious and unknown sea of the Theosophical Sciences — and let the disinherited ones of life recover hope.

The End

FOOTNOTES:

1. This belief only concerns those who think as I do. Every Fellow has the right to believe what he likes, and how he likes. As we

have said elsewhere, the Theosophical Society is "the Republic of the Conscience." ([return to text](#))

2. "Qui n'est qu'en puissance d'etre." ([return to text](#))

3. For him at least who believes in an uninterrupted succession of "creations" which we call "the days and nights of Brahma," or the *Manvantaras* and the *Pralayas* (dissolutions). ([return to text](#))

4. Every god or goddess of the 333,000,000 that compose the Hindu Pantheon is represented by a star. As the number of the stars and constellations known to astronomers hardly reach that figure, one might suspect that the ancient Hindus knew more stars than the moderns. ([return to text](#))

5. Charaka was a physician of the Vedic period. A legend represents him as the incarnation of the Serpent of Vishnu, under the name of Secha, who reigned in Patala (the infernal regions) ([return to text](#))

6. Strabo, XIV, 2, 19. See also Pausan., II, 27. ([return to text](#))

7. It is known that those who were cured in the Asclepica left pious memorials in the temples; that they had the names of their maladies and of the medicines that cured them engraved upon plates. A number of these tablets have lately been dug up in the Acropolis. See *L'Asdepicion d'Athens*, M. P. Girard, Paris, Thorin, 1881. ([return to text](#))

8. The same who compiled the *Zohar* of Simeon ben Iochai, the originals dating from the first centuries having been lost. He has been falsely accused of inventing what he has written. He collated all he could find, but he supplemented from his own resources where passages were wanting, with the help of the Christian Gnostics of Chaldea and Syria. ([return to text](#))

A NOTE OF CHEER FOR THE FUTURE (1) — *G. de Purucker*

Our Work, the offspring of the Gods in their starry dwellings, continues in beauty and in inner peace. Spread the word wherever you may or can, that now we have a greater chance to do our work than ever before — a strange paradox. The reason is that while all the governments have their hands full, restrictions of all kinds are numerous and the penalties for their violation are heavy, yet the hearts of men, precisely because they bleed and ache, are more ready than during the sunny days of peace and prosperity to hearken to the God-Wisdom which blesses us. The very uncertainties of life make this so in whatever country, with friends or so-called enemies, for they are all human beings, and we have brothers in the so-called enemy-countries, whose hearts ache like ours ache, and whose hearts bleed as ours bleed. They do their duty as we do ours, and for that they should have the respect which we ask to be given unto us. I cannot say much, but I know this: that I do not think we have lost one single Fellow through the abandoning of his belief, his convictions, or his Theosophical duty; although in many countries now his work is confined to his own fireside, or, if he be solitary, to his own study. I know this: that wherever they may be, in any part of the world and speaking any language, our Theosophists are looking forward to what they know will some day come — to peace and an enlargement of the spirit, and to a rebinding of the old ties of fellowship amongst us all.

Beautiful indeed and wonderful is it that the things of the spirit over-ride and rise above the things of the mind and of the body. What would Theosophy be if it could be overthrown in a man's heart by any calamity or catastrophe whatsoever? It would not be worth a snap of the fingers! There is where we are invincible —

in the fire of the spirit and in the flame of that fire which burns in all our hearts. No matter what a man's belief may be, no matter what his brain-mind thinking or convictions may be, within, as the inmost part of himself, there burns forever that soul-light of union with the Divine, which means union with our brothers, all brothers of the human race. And it is good that this should be so; for this holy light never tells a man to neglect a duty he owes to his own country. It tells him to do his duty and to do it manfully, but to do it in the light of the Divine.

Remember this: all clouds one day shall roll away and the blessed golden sunlight shall bathe us all once again, a sunlight which is inner as well as outer; and I mean by that the sunlight of vision and of conviction and of hope and of what the early Christians called *pistis* or faith, which is the essence of things unseen but known; and the things of the body are what we owe to Caesar. Render unto Caesar the things which are his and unto the Spirit Divine all other that is Its.

Do you realize, Companions, that these simple, fundamental Theosophic thoughts, easy of comprehension even by a child but full of profoundest meaning and reality to the grown man or woman, live in the minds of all our Theosophists everywhere? Keep this thought in your hearts: Russian or German or Briton or Italian or American or Chinese or Japanese, it matters not: wherever Theosophy sheds its light there burns this inner fire; and if the time shall ever come, as we believe it will in the future when all men shall be so regenerated by our God-Wisdom that reality to them will be higher than ambition or profit or anything else, tragedies like the present will never, never come again.

A man is great in proportion to his thinking, and by naught else. Shall I add, his feeling? It may not be required, because deep thought is likewise deep feeling.

RETURN TO A PHILOSOPHIC SCIENCE — *Helen Savage*

There must be something very wrong with our educational systems when our youth grow up without any philosophical standard by which life-in-the-living may be measured and evaluated. Because they lack this standard, a great many young people, observing the chaotic state of the world, imagine that chaos must be, *de facto*, a fundamental characteristic of nature, and that lawlessness and irresponsibility are therefore justified or at least to be accepted as a natural part of human life. On the other hand, because youth is naturally idealistic, there are thousands who still look for meaning and purpose in the turmoil of present-day living, many who are demanding that they be given a philosophy that will reawaken their faith in life, their faith in the soundness of ethics, and their enthusiasm for the infinite possibilities of the future.

It has become customary to blame science for the present deplorable outlook; to declare that science has elbowed out religion and has put a taboo on anything smacking of mysticism or metaphysics. Perhaps our scientific researchers will have to take some of the blame. They have, indeed, lost sight of the pattern of the whole in their attempt to understand the parts. Each researcher, wearing the blinkers of the purely analytical mind, has traveled down his own bypath, gathering about him such a bewildering mass of facts that Truth herself has been barricaded out. And Truth is the mighty whole. The part reveals truth only as it is related to that whole. Of what value is a knowledge of the structure and workings of the atom except as that atom is a building brick in a grand cosmic edifice?

This point is of first importance, because without the principle of

wholeness the universe becomes meaningless and human life too loses its meaning; it becomes a sort of crazy nightmare where each unit must struggle with and overthrow its fellow units in order to survive. Such is actually the attitude abroad in the world today. Are the scientists entirely to blame?

There are those in the scientific world who realize that science has taken the wrong tack. They recognise that specialization has gone too far. They see the necessity of pooling all available knowledges in order that, correlated and interpreted, these may provide a consistent picture of universal and human life. The very pressure of the present-day turmoil is forcing to a quick birth a new era of synthesis. There is again dawning a belief in the ancient idea of the "wholeness" of the universe, a conviction that, more basic than an analysis of the minutiae of the parts, is an understanding of the relationship of part to part and of all the parts to the whole. What that "whole" is — whether just a gigantic machine, a living organism, or merely a metaphysical concept which gives psychological weight to man's ethical instinct — many are not prepared to say. It would of course be unscientific to probe into such matters!

A few, however, are somewhat bolder; and such a one is Professor Frederic Wood Jones. At present professor of Anatomy at the University of Manchester, Wood Jones has behind him many rich years of teaching experience, and as a scholar and man of wide and varied culture, he far outruns what might be considered the limits of his special line as an anatomist. His latest book, *Design and Purpose* (1) is a lecture given by him at Trinity College, Dublin, in December, 1941, and at the suggestion of appreciative friends later somewhat enlarged for publication. What he sets forth in this slim volume are "the convictions at which he arrived at the end of an extended period of dealing with the problems of human life and living and with the recurrent

questings of the successive generations of students that have come to him, passed through his theatres and laboratories, and gone on into their destined spheres of utility and service to mankind." Convictions born of such experience are bound to bear the stamp of something more vital and genuine than any mere theorizing; for youth always challenges its teachers, and if the teachers through an eagerness to educate rather than to merely instruct can build up the necessary "electrical potential," there follows the lightning flash of truth.

Wood Jones declares, from his experience in meeting the perplexities of modern youth, that what they lack is a comprehensive outlook on life and its place in the cosmic order. This, he admits, is due in part to the tendency to scientific specialization, already mentioned, which has obscured the significance of life as a whole. He is not content, however, with immediate causes only, but traces the long chain of cause and effect back many centuries and shows how and when the ancient belief in a universal scheme, in which man held his proper and purposive place, was undermined. It is true that his sketch of the development of religious thought is based on the accepted lines which begin man in a state of savagery, pass him through phases of primitive animism, then on through the pantheistic stage, and thence to the monotheistic. In spite of the fact that, for the Theosophist, this puts rather the wrong slant on man's beginnings, we still can agree with the author that it was the development of monotheism in the countries adjacent to the Mediterranean Sea which had a large part in distorting man's universal viewpoint. From that "restless ancestral centre" the stultification and crippling of man's conception of the nature of Deity took place *pari passu* with the development of western thought, gaining a stronghold upon the plastic mind of the then young western nations and basically affecting western

psychological reactions. Instead of the many gods, who, according to the esoteric tradition, emanated from an immutable and unnamable central source, there was now the One God, the God of Abraham — "personal, anthropomorphic, domestic." The impersonal, unintellectualized Tao of Lao-Tzu, even the All-wise Creator of Plato, had been whittled down into a cramped and narrow image of God patterned after man himself.

With this monotheistic conception, man's idea as to his own place in nature became utterly changed. Now he thought of himself as a special creation of the Deity, who, in fact, had built the universe about man for the latter's particular delectation and edification. Man no longer saw himself as in and of nature, one with her other folk, partaking of that same stream of life which informed the whole organism, but as something special, set against nature, separate, superior, and intrinsically different from his environment. And so, says Wood Jones, beginning with the reawakening of Europe, as western scientific knowledge progressively expanded, their god failed to expand with it; the religious framework proved too cramped to comprehend the new knowledge.

Of course there have been enlightened minds through the centuries who never worshiped an anthropomorphic god; and attempts have been made by lesser minds to reconcile the supposed disparity between man and nature, and between scientific facts and theological dogma. Wood Jones cites, for instance, the work of the Rev. William Paley (1743-1805), who in his *Natural Theology* made a noteworthy compromise between the noble conceptions of the older philosophers and the orthodox theology of his time. His work, and that of his followers who expanded Paley's thesis and gave to it the imprimatur of the science of their day, became by the middle of the 19th century the bulwark of all intellectual minds, who saw in this conciliation

between religion and science a happy solution to long perplexing difficulties and "a most satisfying and spiritually comfortable conception of the universe."
