. . . A blatant world, "all ear and eye, with such a stupid heart to interpret ear and eye," has coined a score of groundless charges against her, on the assumption that a life so unconventional must have been riotous and vicious. There are people who cannot realize how any man or woman having the opportunity can be otherwise than vicious. But Mme. Blavatsky was abnormal in this respect. She deserved no credit for not being sensual, any more than a horse might deserve credit for not drinking absinthe. Her love of a wandering life sprang from no instincts of the kind that may sometimes prompt such restless activity. She cared nothing, it is true, for refinement in the ordinary sense of the word, even hating the superficial graces and ornamentation of life; but cared still less, to the extent of getting far on the other side of zero in respect to such feelings, for the whole range of emotions having to do with the pleasures of sense. As a mere subordinate illustration of this, her dislike of alcohol in all forms amounted to a comically intense loathing. The indefatigable tongue of slander

has charged her, amongst other things, with drinking. One might as well charge a polar bear with setting fire to an iceberg.

"THE PHENOMENA"

She was relatively in good health in her New York days when the Theosophical Society was first founded by a very small group of enthusiasts in 1875, and wonders of many kinds surrounded its origin. I do not propose here to argue the question of Madame's "phenomena" at any length, but one could no more write a memoir on trigonometry and say nothing about triangles, than survey the strange career just concluded and ignore the marvels coruscating all through it. And at this early period of her enterprise she seems to have depended more on the startling effect of surprising powers she was enabled to exhibit than on the philosophical teaching concerning the evolution of man and the world, and the ultimate destinies, or rather the opportunities lying before humanity for those who can appreciate them, which became the burden of her later utterances. I have never been able to gather from her that she had any settled plan of operations at New York. In a general way she wished to make known the existence of Eastern Initiates possessing knowledge and powers far transcending those of ordinary humanity. She had not yet got the whole idea of a spiritual crusade which should lead converts into "the Path" of occult development formulated in her mind. This was brought into shape later on in India when she migrated thither accompanied by Col. Olcott and when the Theosophical Society began to acquire momentum in that country.

IN INDIA

At this stage my own acquaintance with her began in 1879. Her troubles at this time were all before her, and they had not yet begun to depress her naturally buoyant spirits. Her friends of recent date have only known her weakened by illness, somewhat

embittered and disheartened by calumny, contumely, and misrepresentation; almost sternly bent on preaching the lofty ethics of the Theosophic code, and drifting into a position in which, as the recognized spiritual chief of so many earnest followers, she was hardly able to divest herself of a quasi-papal character. When the movement she set on foot was still in its infancy, she was burdened by none of these oppressive circumstances. Her bright intellect and abundant wit made her a charming conversationalist, and many people, I am sure, who met her at Allahabad in the year just mentioned, will remember her chiefly as a very delightful companion at the dinner table, full of sparkling and eccentric anecdotes, and only unconventional enough to be an amusing feature of any gathering she joined. For she would never allow herself the strong language in which she sometimes indulged when any but intimate friends were present. As I have said in describing her as she was at this period in the book already referred to: (2) "No one with the least discernment could ever fail to see that her rugged manners and disregard of all conventionalities were the result of a deliberate rebellion against, not of ignorance or un-familiarity with, the customs of refined society. Still, the rebellion was often very determined, and she would sometimes color her language with expletives of all sorts, some witty and amusing, some unnecessarily violent, that we should all have preferred her not to make use of. She certainly had none of the superficial attributes one might have expected in a spiritual teacher; and how she could at the same time be philosopher enough to have given up the world for the sake of spiritual advancement, and yet be capable of going into frenzies of passion about trivial annoyances, was a profound mystery to us for a long while, and is only now partially explainable within my own mind, by some information I have received relating to curious psychological laws under which initiates in occult mysteries, circumstanced as she is, inevitably come. By slow

degrees only, and in spite of herself — in spite of injudicious proceedings on her part, that long kept alive suspicions she might easily have allayed if she could have kept calm enough to understand them — did we come to appreciate the reality of the occult forces and unseen agencies behind her; . . . but guests, especially if they happened to be of a very materialistic temperament, would regard anything Mme. Blavatsky might do of an apparently abnormal character as so much juggling, and hardly disguise these impressions from her. The result in such cases would be a stormy end to our evening after such guests had gone. To be suspected as an impostor, deluding her friends with trickery, would sting her at any time with a scorpion smart, and bring forth a flood of passionate argument as to the cruelty and groundlessness of such an imputation.

"Recollection of this time supplies me with a very varied assortment of memory portraits of Madame taken during different conditions of her nerves and temper. Some recall her flushed and voluble, too loudly declaiming against some person or other who had misjudged her or her Society; some show her quiet and companionable, pouring out a flood of interesting talk about Mexican antiquities, or Egypt and Peru, showing a knowledge of the most varied and far-reaching kind, and a memory for names and archaeological theories she would be dealing with, that was fairly fascinating to her hearers. Then, again, I remember her telling anecdotes of her own earlier life, mysterious bits of adventure, or stories of Russian society, with so much point, vivacity, and finish that she would simply be the delight for the time being of everyone present."

HER LIFE IN BOMBAY

At this time Mme. Blavatsky's own home was established at Bombay, where she resided with Colonel Olcott and two or three

persons, Indian and European, associated with the Theosophical Society. At first she lived in a comfortless native quarter of the town, but afterwards in a small bungalow called "The Crow's Nest," at Breach Candy, which had long been unoccupied owing to a bad reputation for snakes and ghosts, and was thus let to the Theosophists, quite willing to brave all encumbrances of this sort, on reasonable terms. The building lay on the slope of a steep hill, and the upper part, an enclosed verandah with two or three rooms opening out of it, constituted Mme. Blavatsky's quarters. Here I visited her in 1881, and found her immersed in a constant ebb and flow of native visitors, members of the Society, and others. She would have admiring groups of such friends round her up to all hours in the evening, smoking innumerable cigarettes and talking Vedic philosophy with eager enthusiasm, or as eagerly and excitedly discussing some trumpery little incident connected with the progress or difficulties of the Society, or the misdoings of some "enemy," which a person of cooler temperament in her position would have found too insignificant to engage five minutes' thought. . . . And then, if I may again quote a few words from my own former account of her, "in the midst of some fiery argument with a Pundit about a point of modern Hindoo belief that she might protest against as inconsistent with the real meaning of the Vedas, or a passionate remonstrance with one of her *aides* of the *Theosophist* about something done amiss that would for the time overspread the whole sky of her imagination with a thundercloud, she would perhaps suddenly "hear the voice they did not hear" — the astral call of her distant Master, or one of the other "Brothers," as by that time we had all learned to call them — and forgetting everything else in an instant, she would hurry off to the seclusion of any room where she could be alone for a few moments, and hear whatever message or orders she had to receive."

AT SIMLA

She would make no efforts at this time to cultivate friendly relations with the European society of the place, having started indeed with a very flourishing stock of misconceptions about the character of the English in India, which gave way after a time, but at first made her fancy herself, by reason of her special sympathy with the natives, as necessarily antagonistic to the Europeans. Moreover, she hated the outer forms and ceremonies of Anglo-Indian life, and would have found it a terrible penance to give up the loose wrappers she habitually wore, or the cigarettes she constantly smoked, for the sake of commonplace parties and people who know nothing of the Vedas, and still less of the mysterious occultism in which all her deeper interests were rooted. However, it is none the less true that she did fret after a time at the isolation as regards European society, in the midst of which she lived at Bombay, and she used thoroughly to enjoy the change in this respect she obtained from time to time during her visits to Allahabad and Simla. At Simla especially she made many friends, and during the summer of 1880 she was perhaps the prominent feature of the Anglo-Indian season, for that was the year of her most sensational performances, as described in "The Occult World"; and though, of course, accounts of these no sooner began to penetrate the newspapers than they evoked outcries of ridicule and incredulity, a great many people at the time, including some very prominent members of the English community who apostatised afterwards, when the tide of scornful public incredulity set in strongly, were altogether overwhelmed by the marvels of which they were personally witness.

THE FIRST STAGE OF HER MISSION

Up to this time we had received no glimmerings of the comprehensive or systematic teaching concerning the evolution

of man and the world and the laws governing the spiritual progress of humanity, that ultimately identified the Theosophical Society with something resembling a new religion. So far Mme. Blavatsky's efforts had been altogether directed to establish the broad fact that there were people in existence whose knowledge and power transcended those of ordinary mortals; that they corresponded in the present day to the initiated hierophants of ancient religious systems; that some touch with the superior wisdom they possessed was to be got at through the study of Indian sacred literature; and that Western communities, insofar as they had begun to investigate abnormal super-physical phenomena by means of the practices resorted to by "spiritualists," were altogether on a wrong track. Many modern newspaper writers are so densely ignorant of everything that appertains to this investigation, that they not only mix up the silly, fraudulent imitations of spiritualistic phenomena with the real occurrences, such as they are, to which scores of eminent and entirely credible inquirers have borne testimony, but also confuse these occurrences, the central block of real experience connected with spiritualism with the theories of occult science, as these have been gradually developed in recent years through Mme. Blavatsky's agency and others which she in the first instance set in motion. It is only necessary here to explain occult teaching sufficiently to make her Theosophical work intelligible; and her attitude towards spiritualism will be made apparent when I say that the occultist's view of Nature recognizes a plane of phenomena and existence directly in contact with our own, though imperceptible to commonplace physical senses, in which the inferior remnants of post-mortem humanity float about and persist for a time, while the true Ego or spiritual consciousness of every departed soul fit to have anything worth calling a spiritual life, passes off into realms with which the mediumship of the spiritualist has, as a general rule, no contact whatever.

HER OBJECTION TO SPIRITUALISM

From the first moment when Mme. Blavatsky completed the apprenticeship of her wandering life and came back to Europe in 1870, at the close of three years spent in an Eastern seclusion, of which it is useless to speak except to persons knowing something of what occult initiation means, she regarded herself as especially bound to combat and oppose the spiritualistic movement, not from the ignorant and stupid point of view of those who regard the whole thing as a vulgar fraud, but from that of the inner penetralia of the movement itself. No one knew better than she that the phenomena of the spiritualists were often entirely genuine, but she felt herself in possession of knowledge which the most earnest spiritualists were entirely without, which enabled her to go behind the phenomena and explain them as originating from super-physical causes, quite unlike those to which they were assigned by spiritualists. To wean the spiritualists from their misconceptions was thus the real motive of the very first step she took — at Cairo, in 1870 — in the direction of Theosophical work. She founded a little Society for investigating spiritualistic phenomena, and of course this action on her part has been twisted later on by her detractors into the statement that she began her public career as a spiritualistic medium. Her letters to private friends written about this time and later on from New York, whither she migrated a year or two afterwards, amply establish her bitter antagonism from the first to the whole theory of modern spiritualism, so that the charge against her that she practiced as a spiritualist medium is a ludicrous inversion of the facts.

THE THEOSOPHICAL SOCIETY

Greatly promoted by the dogged determination and single-minded exertions of Colonel Olcott, the Theosophical Society grew

rapidly during the years Mme. Blavatsky spent at Bombay. . . . In this country a certain readiness to brave conventional opinion is still required by people who attach themselves to a movement resting on special knowledge and experience not yet hall-marked by orthodox authority, but in India there was nothing in Mme. Blavatsky's profession of belief in the existence of and acquaintance with occult initiates to offend public opinion. A similar conviction is so widely spread as to be general throughout India, while the whole programme of the Theosophical Society, in its exaltation of the importance of Indian literature and traditions, was flattering to native susceptibilities. So wherever Colonel Olcott wandered in the course of his incessant tours, he found it easy to establish branches of the Society, and these were counted by hundreds when the Theosophical household moved at the end of 1882 to Madras.

IN LONDON

Here are some extracts from a characteristic letter she wrote to my wife and myself in 1884, when she had come Londonwards as far as Nice for the sake of the sea voyage, being in a thoroughly bad state of health: —

"I have received the kind invitations of yourselves and of ----- and ----- and others. I am deeply touched by this proof of the desire to see my unworthy self, but see no use to kick against fate and try to make the realisable out of the unrealisable. I am sick, and feel worse than I felt when leaving Bombay. At sea I had felt better, and on land I feel worse. I was laid up for the whole day on first landing at Marseilles, and am laid up now. At the former place it was, I suppose, the vile emanations of an European civilized first-class hotel, with its pigs and beef, and here — well, anyhow I am falling to pieces, crumbling away like an old sea-biscuit, and the most I will be able to do will be to pick up and join together my

voluminous fragments, and gluing them together, carry the ruin to Paris. What's the use of asking me to London? What shall I, what can I, do amidst your eternal fogs and the emanations of the highest civilization? . . . What kind of company am I to civilised beings like yourselves? . . . I would become obnoxious to them in seven minutes and a quarter were I to accept it and land my disagreeable bulky self in England. Distance lends its charms, and in my case my presence would surely ruin every vestige of it."

In spite of this reluctance, the intense interest she felt in the progress of the Theosophical movement in London, and the continued pressure of her friends' wishes, brought her over to London eventually after a few weeks spent in Paris. At whatever house she stayed, her presence becoming known drew crowds of visitors anxious to see her. The constant ebb and flow of people round her never seemed to weary her. Ill as she often was, her nervous energy was inexhaustible, and she flung herself now into the task of promoting a Theosophical propaganda in Europe as if that were the final culmination of her work to which everything else were subordinate. No one ever more than Mme. Blavatsky acted on the principle of doing with all her might whatever work she was engaged upon at the moment.

THE ALLEGED "EXPOSURE"

But a terrible catastrophe was brewing for her all this while. A magazine published at Madras in the interest of the missionary body at that place — always bitterly inimical to the Theosophical movement, which tended to exalt native confidence in the Oriental philosophies and religions, which it was the missionaries' business to attack — obtained from a woman who had been attached to the Theosophical headquarters as a kind of housekeeper (and whom Mme. Blavatsky had very unwisely treated as a friend) certain letters purporting to be written by

Madame, the contents of which seemed to show that some of the abnormal phenomena that had taken place at Madras and elsewhere had been fraudulently concocted by Mme. Blavatsky with the assistance of the ex-housekeeper and her husband. The authenticity of these letters was strenuously denied by Mme. Blavatsky; but the Psychological Research Society sent out an agent to investigate the whole imbroglio. Mr. Hodgson, the agent in question, was entirely won over in the end by the accusing side, and published a Report condemning Mme. Blavatsky unreservedly. A complete review of this disagreeable business would take up too much time.

THE REPORT OF THE PSYCHICAL RESEARCHER

Volumes have been written about it, and while at first no doubt the leaders of the Psychological Research Society undoubtedly accepted Mr. Hodgson's view, the few people who had been intimate with Mme. Blavatsky all through the period of the transactions referred to, showed by degrees, in various pamphlets and articles, how worthless Mr. Hodgson's conclusions were, how fatally he had been hoodwinked by the enemies of the Theosophical movement at Madras, and how narrow-minded and unjust his methods of inquiry had been. To the present day, of course, people who are out of touch with the deep realities of the Theosophical movement — which, however completely its origin may be traced to Mme. Blavatsky's efforts, has long since acquired a momentum and interior justification of its own quite independent of her personality — are vaguely of opinion that Mme. Blavatsky was somehow exposed by the Hodgson Report, and that the continued regard and respect shown for her by a large Society is an unaccountable manifestation of human credulity. But, nevertheless, no one ever lived down all injurious accusation more effectually than Mme. Blavatsky, before she died, lived down the apparently at the time overwhelming

denunciations of the Psychical Research Committee.

A TREMENDOUS BLOW

It was a tremendous blow at the time, of course. She returned to India at the end of 1884, while Mr. Hodgson was carrying on his investigations there; but that gentleman never sought her explanations of the circumstances he thought suspicious, never showed her the originals of the letters on which the whole accusation turned, and disguised his unfavorable conclusions while staying as a guest at the Theosophical headquarters. Then she fell very ill again, nearly died — was in fact given over by the doctor in attendance upon her — but unexpectedly rallied, and when a little better again returned to Europe, where, however, at the time her star seemed to have set entirely, and many of the people who had exhibited a spasmodic enthusiasm for her and her teachings in 1884, fell off both from the number of her friends and from the movement.

She wrote from Naples to my wife, in June, 1885, soon after landing: —

"The sight of your familiar handwriting was a welcome one, indeed, and the contents of your letter still more so. No, dear Mrs. Sinnett, I never thought that *you* could have ever believed that I played the tricks I am now accused of, neither you nor any one of those who have Masters in their hearts, not on their brains. Nevertheless, here I am to stand accused, without any means to prove the contrary, of the most dirty, villainous deceptions ever practiced by a half-starved medium. What can I and what shall I do? Useless to either write to persuade or try to argue with people who are bound to believe me guilty to change their opinions. Let it be. The fuel in my heart is burnt to the last atom. Henceforth nothing is to be found in it but cold ashes. I have so suffered that I can suffer no more."

AT WURZBURG

This tone of despair was very unnatural to her, and in the dejection of the moment she underrated her own reserves of strength and courage. At Wurzburg, where she settled down for a time, old friends found their way to her again one by one. She had fallen out of fashion, it was true, but for all who had got upon the track of the great principles she had been instrumental in interpreting, realms of interest lay before them which would equally have drawn them on, even if Madame Blavatsky had been as personally unworthy of respect as her worst enemies declared. But in truth the more any Theosophist has at any time become attached, through experiences or mere reasoning of his own, to the pursuit of occult knowledge and development, the better he has been able to appreciate Mme. Blavatsky's career as a whole, without worrying about petty scraps of evidence seeming to impugn the *bona fides* of this or that little manifestation of abnormal energy among the hundreds or thousands of those with whom she has been concerned. That in his most seemingly injurious discoveries Mr. Hodgson had altogether blundered, became, for all who learned to appreciate the Theosophic position, a thousand times more probable than that Mme. Blavatsky was otherwise than genuine throughout, as most certainly a great many Theosophists of their own knowledge knew her to be in regard to her general relations with what I have called the Occult World.

IN LONDON ONCE MORE

So finally it came to pass that Mme. Blavatsky, having grown very tired of her isolation at Wurzburg, moved for a change to Ostend, and after staying on there till the spring of 1887, was brought back to London by the earnest invitation of a Theosophical group, by whose care and forethought the journey, very difficult for her

in her then state of health, was facilitated by every arrangement that could be made for her comfort. Norwood, where she stayed for a few months, then became the vortex of Theosophical meetings and activities of various kinds, and afterwards several members of the Society joined together in taking a house in Lansdowne Road, Notting Hill, where "H. P. B.'s" banner was set up very proudly, and everything done by all parties concerned to emphasise in the most unequivocal way their devotion to and trust in the leader whom the outer world vainly imagined to have been crushed entirely by the much-talked-of Report. "H. P. B.," I may explain, was the simple designation by which Mme. Blavatsky came to be known and addressed henceforth in the Society in accordance with her own wish. From this time on, the few remaining years of her life have seen her personal ascendancy and influence with all around her constantly increasing. Her receptions have been crowded, her spirits and energy have recovered their old vigour, schemes of all kinds have been set on foot around her for pushing on the Theosophical movement, and a practical answer has been afforded to critics who suppose that the interest Mme. Blavatsky excites turns on the "phenomena," genuine or otherwise, which have been so much talked of in connection with her, by the fact that in these last few years her public energies have been entirely bent on teaching Theosophical philosophy and ethics, and no casual frequenter of her receptions or lecture-room has ever been encouraged to expect the smallest manifestation of occult mysteries.

HER LATE WRITINGS

In spite of this, as teacher and philosopher Mme. Blavatsky has been more closely surrounded by eager admirers than at any time in the past as a wonder-worker. She has been working more productively, moreover, than ever before as a writer. Besides a constant stream of articles in the monthly magazine she edited,

she has published, during her final residence in England, the two bulky volumes known as the "Secret Doctrine." . . . She has also published "The Key to Theosophy," and a little book of great interest for occult students, called "The Voice of the Silence." Idleness never had any charms for her, and she had to be very ill indeed before she would tear herself from her writing-table and surrender herself to her bed.

THE SOURCE OF HER STRENGTH

This irresistible force or energy in her nature is the clue to a comprehension of her, as far as it is possible to understand her without explicit reference to the "occult world" from which her power, knowledge, and influence were really derived. She always, as it were, filled every place she occupied. She dominated every situation in which she was placed, and she had to be either greatly loved or greatly hated by those whom she came in contact with. She could never be an object of indifference. For people even who quarreled with her and shunned her she remained an important fact. People who knew her were always talking her over; and even, though in some cases she might give offense and exasperate friends for a time, these would generally in the long run be found amongst the number of her friends once more. She was more interesting than even she could be irritating.

A GREAT SCHEME OF PHILOSOPHY

And now the generation she has lived with is left face to face with the mass of literature she has left behind her, with the great scheme of philosophy, at the same time a vast and coherent system of thought, interpreting Nature and Man, which has been elaborated under her guidance — by herself or others in cooperation with her; and with nothing countervailing this tremendous bequest but some trumpery imputations on the *bona fides* of a few among the endless series of marvels which have

always been taking place around her, in all countries and amongst endlessly various people, all her life — imputations, moreover, which have been in themselves discredited and refuted for those who take the trouble to read both sides of that wearisome story. To discuss Mme. Blavatsky at this stage of the proceedings, with reference to a single petty controversy about a single episode in her extraordinary career, would be like criticizing some great picture with exclusive reference to the smell of the paint. . . . The broad fact remains that Mme. Blavatsky's influence in the world for good, directly and indirectly, has been world wide, and that views of Nature and spiritual evolution which are distinctly traceable for those who understand them to the impulse given out by Theosophical writings, are fermenting in modern society to an extent that bids fair to accomplish serious and important modifications of religious thinking.

The Theosophical Forum

A SERMON FROM MOUNT MERU — *Marion O. French*

Now, in this Sacred Season, let us make one wish to guide us through the New Year, for we are entering a crucial cycle of the Kali-Yuga. That Wish should be a prayer from the heart to follow the Golden Rule. It would be well to repeat it until the words run like a song from our lips. "Therefore all things whatsoever ye would that men should do to you, do ye even so to them; for this is the law and the prophets."

Thus spoke the sainted Syrian Sage, Avatara and Messiah, known to men as Jesus of Nazareth. For us He came as the embodied Christos to enlighten the Dark Age. His "Sermon on the Mount" fills Chapters 5, 6, and 7 of *The Gospel according to St. Matthew*. It embraces the whole essence of Christianity in the pristine purity and glory of that Faith. It contains the Lord's Prayer and the Rule of Gold that is the Law by which we shall be measured. Therein is the Doctrine enunciated by the first Divine Instructors of mankind. It holds within it the esoteric ethics that have been repeated in exoteric terms adapted to the age by every Saviour that links us to Divinity with an unbroken Messianic chain.

This sacrosanct preachment may, properly, be construed in perpetuity as The Sermon from Mount Meru. It begins, "and seeing the multitudes, He went up into a mountain"; and having therefrom commenced to preach "as one having authority, and not in the manner of the scribes," as a risen Helper of Humanity, Jesus spoke to the "multitudes" upon the plain below. Wandering and wondering, these people on the lower plane looked up to listen. They knew not whither they were going, nor why, for they were enmeshed in the toils of two-dimensional time that seemed to run in endless circles from an unknown past into the terrors of

an unseen future. It tied them to the surface of that plane whereon their vision was confined within a close and encompassing horizon. What lay beyond they knew not. Many, climbing upon and crushing their brethren beneath them strove in vain to see a little further.

Compassion moved the Heart of Him who stood upon the Mount and saw their suffering, "and He opened His mouth and taught them." To Him, from that coign of vantage, the paths that lay ahead of men in all directions were clearly open to view. He saw too well that "broad is the way that leadeth to destruction," and "narrow is the way which leadeth unto life." He saw "many" following the broad paved highways that ended in abysmal depths, and "few" that found the "strait gate" leading ever onward and upward. There, below Him, His fellow men faced the divergent paths of life. They lacked the psychological perspective that could see in an eternal Now the culmination of all paths and what lay in wait along those that led downward in the "easiest way."

There is a wealth of meaning in that *psychological perspective* of ancient Chinese art. It portrays in disproportionate size those forms in the background that are beyond the eyesight of figures in the foreground, but that are of vital import for their future. Those figures have freedom of choice, but what awaits them as reward or punishment lies ahead in the future in the form of Fate, of self-generated Karman.

From *The Secret Doctrine* we may know that Mount Meru is called *Sveta-Dvipa* in Puranic literature, and is the "land of the 'Gods' under their chiefs the 'Spirits of this Planet.'" (1) "As Meru is the high abode of the Gods, these were said to *ascend* and *descend* periodically; by which (astronomically) the *Zodiacal* gods were meant, the passing of the original North Pole of the Earth to the

South Pole of the heaven." (2) "It is the north pole, the country of 'Meru,' which is the seventh division, as it answers to the Seventh principle (or fourth metaphysically), of the occult calculations for it represents the region of Atma, of pure soul, and Spirituality." (3) Also, "astronomically and metaphorically the celestial pole, with its pole star in *heaven*, is Meru, or the seat of Brahma, the throne of Jupiter, etc." (4) Thus, in Christianity with its numerous sects, as in all the other religions that have arisen from the revelations of the Buddhas of Compassion, the Sermon is one and the same. Always, it is Brotherhood and the Golden Rule that Their lips utter. That "is the law," and "the prophets" always preach it. There is but One, the incognizable totality of Deity, the Center that is everywhere in the Circumference that is nowhere, now and forever. The Psyche seeing through the Eye of Siva with psychological perspective may envision all. That Vision, though, as *The Voice of the Silence* tells us, is granted only to those who seek to see solely for the sake of others. There we read: "Would'st thou thus dam the waters born on Sumeru? [Mount Meru] Shalt thou divert the stream for thine own sake, or send it back to its prime source along the crests of cycles?"

So, let us renew our faith in the recurrent rebirth of the Christos, under whatsoever religious Name we know Him. With Him, we may find at-one-ment only through love for our fellowmen, and Today is the Time in which to reassert that high resolution.

THOTH, DIVINE SCRIBE — N. A. Lewis

Who is this Thoth, of whom so many explanations are made, and who remains, even so, mysterious, inscrutable? We find references to him everywhere in occult writings, and his name is coupled with that of Hermes sometimes, and sometimes with that of Mercury, which gods — or demigods — or teachers — he resembles in his attributes. Above all, we find him associated with secret wisdom and magical arts. He seems, as much as Isis, to be a patron of the occult tradition. There is a legend of the Books of Thoth, which are (supposedly) lost, which contained all the truths, all the records, of mankind. The modern pack of Tarot cards is popularly called The Book of Thoth, although there is reason to doubt that this is the same kind of book as the above-mentioned Books. The legend of the Emerald Tablet of Hermes is probably closely related to this tradition.

We may imagine that Egypt had its Chain of Thoth before the Chain of Hermes received that name.

Thoth is said to have brought to man practically every art and science of civilization, but perhaps the very keyword of his contribution is *symbol*. With the ability to represent by pictures, diagrams, metaphors, and algebras the cumbersome objects of the material world, man can plan mentally and with a pencil and paper what he would otherwise have to try out physically with much labor, time, and expense, or not at all. Obviously the greatest mastery of time and space — or even of subjective matters — is to be achieved only through the creative use of symbols. Money, too, under the patronage of the later Mercury, is certainly an example of the common utility of symbol, a system obviating the clumsy methods of barter. Movies, with their

projection of a large image from a tiny film, show another function of Thoth. We might call *reduction to abstraction for efficiency in storing or transporting* the principle behind these various functions.

It was under the tutelage of Thoth that the Egyptians evolved their system of hieroglyphs, a very well integrated one, since it entered into every department of their lives. It is hard to tell their art from literature, their literature from art. In other words, their word for a thing, their symbol in writing, was very close to being a picture of the thing itself. It is the reverse of this relationship which is so remarkable; since any object or event was the living hieroglyph for a certain idea. A study of their hieroglyphs reveals that positions of the body, wearing of collars, aprons, etc., colors of clothing, types of headdress, in fact almost everything in life, stood as a symbol of sound and meaning to the educated Egyptian. On this basis, as we may guess, the Mysteries were subtly and secretly taught in the temples, and at least some degree of intuition must necessarily have been attained by all who were able to read.

In this connection, it might be well to bring forth a distinction encountered in later mythology between the natures of Apollo and Mercury. Apollo, it is said, was given the power of expression by means of words and sentences, the gift of language, but to Mercury went the gift of expression by omens, symbols, and all sorts of means. In this way, for example, an event could be brought to pass in the life of a man or woman, that he or she might read it, and come to know some message from the god. This last is the way of Thoth. Those who know Nature's Alphabet, so to say, and who read from the open pages of Life, are studying the universal knowledge under his guidance. It is given to some great teachers and spiritual leaders to instruct their pupils in this way, pointing out sentences and paragraphs in a hieroglyphic text that

is the Divine Life itself. Such teachers are our Masters, whose methods of "bringing to a crisis" and of demonstrating by example and experience are well known to students of their letters.

But there is another face of the matter! Thoth is also the Recorder, the Scribe of Millions of Years. Where and what are these records? Of course, in his language every scratch on a stone, every wrinkle on a cheek, every smudge on a window is a word of power; but these are at best temporary! Must it not mean that he is the keeper of the astral, or perhaps the akasic records? Then he lives in the realm of models and archetypes, he is the warden of the noumenal world, which contains not just the present forms of things, but their every form in all variations, and their eternal forms also. It is to him we must go, if we would have any definite knowledge of the past, present, or future. He has the power, as lord of those realms, over our memory and over our every thought. Indeed, if we credit the occult history of an early migration of priests from the vicinity of Egypt to Britain, we may ask if our English word *thought* may not be closely related to his name, which even today is sometimes written *Thot*.

He has been called, in ancient inscriptions, "Lord of Khemennu, self-created, to whom none hath given birth, god One"; "he who reckons in heaven, the counter of the stars, the enumerator of the earth and of what is therein, and the measurer of the earth"; and "the heart of Ra which cometh forth in the form of the god Thoth." He appears as an ibis, or a human being with the head of an ibis, often carrying the sceptre of divine power and the *ankh* or *crux ansata*, emblem of life. Sometimes he wears the crown of the crescent moon and disk, and sometimes he wears a crown of a solar significance; it must be remembered that he must surely be related in one of his aspects to the planet Mercury. Perhaps it is because of the several astronomical relationships which he

symbolizes that he is called Trismegistos, or "thrice great."

Probably an Atlantean survival from remotest antiquity is the dog-headed ape — or sometimes just a rather intelligent-looking ape — who accompanies Thoth. This ape seems to be specially related to Thoth in his moon-god aspect. One may guess his significance to be some feature of the lower nature of man, which might be under the care of Thoth.

In the *Book of the Dead* (supposedly written by Thoth, by the way), it is this ape who sits on the balance of the scales at the "Weighing of the Heart," and reports to Thoth, the recording angel, the behavior of the scales. In this ceremony, the heart of "Osiris, the deceased," is weighed in the one pan of the scales against the Feather of Truth in the other. This feather is said to represent his words or deeds, or *what has been committed* by the "deceased," a true report of his life, in other words.

Thoth was very helpful to those who faced the terrors of the underworld. He was master of dreams and trances. More important, he stood as guide of the dead; and by means of the "words of power" he gave them (be it remembered that the Egyptians had a special kind of written language) they were able to pass through safely to the Boat of a Million Years, or to the Fields of Peace of Osiris.

According to Budge, in *Gods of the Egyptians*, Thoth had particular rule over the lunar month, especially the new moon, and in a lesser way the full moon, and over the winter half of the year. The Zodiac of Denderah shows Thoth as a god of the sign Capricorn; although Kircher, in his *Oedipus Aegyptiacus*, names Hermanubis, a psychopompic variation of Thoth, as ruler of the sign of Cancer. Be that as it may, the Fourth of January is named the Day of Hermes, under certain conditions (see *Fundamentals of the Esoteric Philosophy*, G. de Purucker, page 211). In the general

astronomical and astrological confusion as to the cosmic identity of our Thoth-Hermes-Mercury deity, we must not lose sight of one paramount fact; as an *association of ideas* this figure is most enlightening. To consider in what ways all of his many phases and aspects may be reconciled and synthesized is to gain some deeper understanding of our own mentation and psychological processes. His attributes are those of our understanding itself.

The minds of some are tombs in which the resurrection of Osiris is to take place. May their dead eyes read the beautiful story of truth which is written upon the walls! May they come to know the sound in their ears of those words which stand as men, making offerings to the gods! May they translate into the speech that carries with it radiant light the stories written in autumnal colors upon their very garments! May Thoth guide them and guard them, and bring them to know that glory which first he wrote, and which will remain written to the end of time!

The Theosophical Forum

THE LIVING SYMBOL — *Clarence Q. Wesner*

From the very beginning of Aeons — in time and space in our Round and Globe — the Mysteries of Nature . . . were recorded by the pupils of those same now invisible "heavenly men," in geometrical figures and symbols. The keys thereto passed from one generation of "wise men" to the other. — *The Secret Doctrine*, I, 612

A sea-shell in its pool of living water is an object of exquisite beauty. The hues and shades and mysterious color-changes seem to belong to another world. But we lift the shell from the water, and as it dries in the air the magic colors fade, the surface becomes dulled and the tones of color vanish before our eyes. When dropped again into its pool the shell once more lives in its former beauty. This beauty is apparent only when the shell is in its proper element. There its beauty is alive; removed from its proper element, the shell is drab and spiritless.

So it is with symbols. They are alive only in the element which gave them birth. To discover the true meaning of a symbol we must recover and awaken the consciousness of the ages and men to whom the symbol was given. A symbol will not be correctly interpreted if we put it in a twentieth century setting. The mind of infant humanity was closely tuned to the Soul and the Spirit. Only if we are able to so tune our minds will we return the symbol to its proper and native element.

A few symbols are found among all men. The basic meaning of such a symbol will be found to be the same no matter what age or race has used it. The details of explanation may possibly vary considerably. It is the mind which seeks to "explain" the symbol, and as the mental characteristics of each race differ, so will the

symbols acquire a superficial meaning acceptable to the cultural or religious system then flourishing. These local variations of detail must not cause the fundamental meanings to be overlooked.

Our religions, arts, and entire culture are full of the symbols of antiquity. On every hand we find the circle, the triangle, the cross, the zig-zag line, either angular or rounded, the tree, the vine, the rose, lotus or other single blossom. Each of these is a symbol used by men at some time to express certain mysteries of nature.

A symbol has been defined as "a pictorial expression of the action of universal law." The symbol makers did not distinguish between "spiritual law" and "natural law." They knew that the same cosmic laws act throughout nature. A cosmic process is mirrored in human life. Thus each symbol has several explanations basically the same, but depending on whether the symbol is used in connection with the divine, spiritual, or human plane. Addition of detail in an attempt to limit the symbol to a specific thing generally spoils the whole meaning. A wealth of detail may obscure the main point upon which the details hang.

Our minds may become bewildered in the maze of symbology. Symbols are simple, complex, beautiful, grotesque, harmonious, and some may be considered vulgar or obscene. The intuition, nevertheless, finds in these symbols keys to the answers to the questions that all thinking mankind has asked: "Whence come I? Whither am I travelling? and Why?" Did the rising sun, *merely by analogy*, symbolize the birth of man into human life, and the setting sun the abode of the dead? Or may our ancient brethren be trying to remind us of some occult truths that are forgotten in this generation?

"Whence come you? Whither are you travelling? Why?" The Soul knows the answer to these questions; truly the Soul is the answer.

The waters of Lethe are not wholly effective. The Soul knows that it has partially forgotten and that through association of spiritual ideas the knowledge may be regained. Symbols are memory-aids to the Soul. When the Soul awakes and at least partially remembers, the mystic, the poet, the bard, thrills men with songs of the Home they but dimly remember. And when the mind is attuned to the Soul and the Spirit there appears among men a god-man, a Saviour.

A great danger, however, lies in the use of symbols. The mind, operating on the plane of things, in time confuses the symbol with that which is symbolized. Picturesque accretions grow upon and around the symbol. The concrete thing is mistaken for something of value *per se*. Absurd interpretations give way to no interpretation at all, and the symbol becomes a fetish, an object of blind and senseless veneration.

Now and then the soul of an intuitive man rebels against this symbolatry; a new interpretation is sought of the ageless symbol. If the intuitive soul is spiritually awake the new interpretation will probably be close to the original meaning. But we may rest assured that any labored intellectual analysis involving anthropological and psychological complexities has missed the point of the symbol. The mystic and not the scholar is the true symbologist.

One class of symbols may be called Natural Symbols; these are comparatively few in number, and awaken the same soul-memories in all men. The mind may say that the circle is a picture of the sun and the zig-zag line a picture of waves on the surface of water. The Soul sees in the circle the symbol of the Divinity which is the heart of the sun — the source of all Life and Light and conscious Being on this our earth; and the waves are the Waters of Space, the womb of all manifested things.

Frequently symbols require an explanation, which is usually of local application and limited interest. These mean nothing without the explanation, which is usually arbitrary. Thus the carpenter's square is said to be the symbol of St. Thomas, because he was a carpenter, and the pilgrim's staff and wallet of St. James the Greater, because he was a great traveler. Without the explanation the square and staff might mean anything, or nothing.

Words and phrases are also used as symbols; Jesus is called "the Lamb of God," and again "the way, the truth, and the life." The "baptism by water and baptism by fire" are word-symbols of the lower and higher regeneration. Parables and allegories are also word-symbols, often personifying the various principles and egos of man. The gods and goddesses of the Pagan world are personifications — symbols — of the powers, processes, of the actions and interactions of the invisible Beings that constitute what we loosely call Nature.

The cross has been held a sacred symbol in all ages and among all men. Christians see in it the crucifixion and resurrection of the Christ. However, the cross depicted as an instrument of torture bearing the figure of the dying Saviour is not a symbol, but a picture. History shows that this type of crucifix is a comparatively late innovation.

Let us in our minds go back to the days when the Heavenly Men mentioned by H. P. B. were still among us teaching by means of symbols the truths which are too soon forgotten and periodically restated for the benefit of those who have ears to hear and eyes to see. They taught us of the nature of Father Sun and of our relation to It — that from It we come and to It we shall in cyclic time return.

The vertical line dropping from the sun at meridian height to the

earth is a perfect symbol of spirit, the link between the divine spark in man and its source. The horizontal line, representing the horizon, the limit of the visible earth, symbolized matter. Spirit descending into matter, the meeting of heaven and earth, the god assuming a body of flesh — these are the things the cross will never let our souls forget. The divine heroes are not unique in their crucifixions and resurrections; every man is a divine incarnation.

The earliest form of the Christian crucifix showed the Saviour clothed in royal robes and crown standing against the cross, with the arms extended at right angle to the body, and along the crossbar of the cross. This is the universal posture of benediction and pictures the resurrected Christ embracing all existence in his limitless love.

The figure of the resurrected and glorified god-man standing in front of the cross is the promise that, just as the Divine Ones have solved the riddle of the worlds of matter and their relation to the All, so shall each of us in the course of the ages, or through initiation, manifest here on earth our Inner Divinity.

So taught the Heavenly Men through the use of symbols.

The Theosophical Forum

THE UNIVERSAL MADONNA — *Hazel Boyer Braun*

Today when Modern Science is challenging every person to Cosmic thinking, we seem to be a people climbing up a mountain side from which we view the past five hundred years as a valley, in which we have been occupied with what Plato termed "Our shadows on the cavern wall."

Now we can see the vista of so many mountain tops, each the crest wave of a culture that gained its impetus in the Mystery Schools of antiquity — each one hailing us with its art, its religious beliefs, and eternal search for truth.

No theme in all the glamor of these sunlit peaks is more fascinating than that of the Universal Mother, which is recalled to us so intimately at the Christmas time. Every race has its idealized motherhood, ranging from human to Cosmic symbolism. The beauty, self-forgetfulness, and nobility of mother love as we know it in our everyday human homes is cherished in the heart of everyone.

We have been taught that every great truth has its deeper meanings, that each one has seven keys, and as yet from the peaks on which we stand today but a few of them have been turned. At least three or four may be suggested for this motherhood idealized in every land.

The Madonna, the Virgin Mother of the Savior, is adored in every Christian Church, and the beauty with which the artists have interpreted her adorns the valley from which we are emerging. "As above, so below." Human motherhood is in every respect a reflection of Mother Nature with her Spiritual Compassion and Mercy; for, the Cosmic Forces of Universal Life reflect or manifest

according to their plane of evolution the Divine Love which is at the Heart of all Life. The beauty and compassion of this Divine Love is beyond the limitations of any descriptive terms, but manifests in human motherhood, a dim reflection, but nevertheless carrying at its core the Divine Truth.

The Madonna is, then, a symbolic figure. We have been educated, in our study of Art, to know the Italian Renaissance Madonnas, but we can better understand the tradition back of them if we take a more universal viewpoint. All of the culture of the Orient springs from the Mystery Schools where great Sages, Seers, Saviors, taught those initiated in the Mysteries the truths of Cosmic Reality, and these disciples in their turn taught the public with veiled truths and held secret the Sacred Knowledge. So we need our seven-fold keys to search out the hidden thought in type-figures, myths, and symbols.

It is generally known today that there were very many Saviors who came as did the Syrian Jesus to teach humanity. The same identical stories cluster about the birth of each one. Ever so many Saviors from the peaks beyond had mothers named Mary, or Maria, suggesting the Ocean of Space. We note that the noun mother in the Greek is *meter*, from which comes Demeter. In the Latin it is *mater*, and in the German, *mutter*, while Mut-em-Ua was the Virgin Mother of Amenhotep III of Egypt. We learn that the Sanskrit root *ma* suggests a relationship to the Sanskrit word *Maya*, which means the great illusion.

Here is a key to be turned, and we find the teaching that a Divine Being descended from a hierarchy above ours to this realm of illusion to teach. Always the Seers are born in a stable, a cave, or a meadow, where there are cows or sheep. The Divine One took on an animal or physical body as does every human being.

The Savior was born of a Virgin Mother, which means that he

attained a "Second Birth." It means that he became as a little child through Initiation in the Mysteries, and there is an even deeper and more Esoteric meaning to this term. We find this same story told about Mithras, Apollonius of Tyana, Sankaracharya and Krishna of India, Quetzalcoatl of Ancient Mexico, and so many others. All were born at Christmas time, which gives us the key to the fact that this refers to the second birth. It is the most sacred of all the initiatory cycles. The time when Great Souls are initiated, when the sun having reached the lowest point, gives birth to the New Year, and makes an appropriate time for inner illumination.

Now, we find reflected in the Art of the Ancients the more Cosmic symbolic use of the Madonna. In Egypt we find engraven on the temple walls and modelled in amazing sculpture the lovely figure of Isis holding the child Horus. This is symbolic of a Cosmic Drama. Osiris, the Sun God, represents some great Raja Sun about which perhaps our Universal Solar System or a great Galaxy is revolving. Isis is Mother Nature, the Cosmic forces, and her son Horus is the sun that rises for us in the morning. Note the beauty of these majestic thoughts.

This majesty is reflected in the sculpture and painting representing the Cosmic Mother of the Orient as well as of Egypt. The great figures of Kwan Yin, the Chinese Madonna, who in Japan is called Kwannon, often reveal a dignified and compassionate goddess of Mercy holding in her arms the child, earth.

As we look up to the skies we recall that every Madonna wears a blue cape, and this garment of heaven links the Mother of Jesus with all the Cosmic Mothers of all lands, and turns another key to her symbolism. The Spaces of Space, the Great Deep, the Womb of Being, the Unknown Darkness, is the teaching revealed with this key. The Chinese term it Tsi-Tsai, also Wu Wei.

A key to the Chinese thought about the Spaces of Space is to be found when we note the embroidered coats of Emperor Initiates, designed with Dragons, clouds, and waves — the waters of the deep.

Is it not clear, viewing it as we do from our distant mount, that all these peoples studied the same universal truths? That the Mystery School taught deep truths about the Universe, how it is mysteriously generated, its female side, the procreative power in nature?

We find this evidenced in the fact that the very word Parthenon means in Greek "virgin," and in this Temple of Athena, the virgin mind-born goddess, men and women went to be taught about "The Great Deep," the "Mysteries of the Spaces of Space."

Then there is Mylitta, the virgin goddess of the temples unearthed on the island of Malta or Melita, suggesting that the island took its very name from its Virgin Mother, as does Arizona, *Ari* being a Mexican Virgin, and *zona* meaning valley.

There can be no doubt of a cosmogony that is parent to the secret teaching, which suggests to us that we may view the trinity in so many of the ancient legends as conjoined to make the pathway for man's release, whether we call it Zeus, Semele, and the child Dionysus; Osiris, Isis, and Horus, or The Sun God, Mama Ocolla Huaca, and their son Manco Capac of the mystic isle in Lake Titicaca at that seat of the Mysteries near Cuzco in Olden Peru. The Apple so often held in the hand of the Christ Child may suggest the same thing, the fruitage of man's life, the becoming his Divine Self.

SPIRITUAL GUARD DUTY — *Abbot Clark*

In the service of one's country Guard Duty is so important that the guard is the only man in the army who can be shot for taking a nap. By one hour's neglect the whole army may be thrown into confusion or even captured. The same law works in regard to a man's life. We are all surrounded with enemies in the shape of temptations or allurements of one kind or another which may seize us at our weakest point. Usually it is some well-known weakness that betrays us but sometimes it is at the least suspected point that we are tried and found wanting. This applies in all the affairs of daily life, business or pleasure, public or private. I might almost say, waking or sleeping, for if we go to sleep with a wrong thought the elementals connected therewith may molest us and bad dreams or even nightmares result. We might call this psychic Guard Duty for there are all sorts of enemies of humanity, mostly of its own making, on the astral plane. The astral plane surrounds us as water surrounds a ship, and our weaknesses act as holes in our aura through which salt or dirty water may pour in and a bad dream or a bad day may result. Sometimes we may have what might be called lobster-salad or mince-pie dreams which come from indigestion and serve us right for our indulgence. Well, what are you going to do about it? The answer is easy. Guard your mind, thought and *feeling* before going to sleep. The wise Pythagoras gave a rule which can hardly be improved upon. I will quote it as G. de P. gave it from memory:

"Let not the setting sun reach the western horizon, nor close thine eyes in sleep, before thou hast gone over all the events of the day just past, and hast asked thyself this question: What have I done today that has been done amiss? What have I done that has been

done aright? Have I injured anyone? Have I failed in my duty? Let not the setting sun reach the western rim of space, nor let thine eyelids close in sleep ere thou hast asked thyself these questions."

Then Dr. de Purucker adds the following which is pertinent to our present subject: "If only men and women would consciously follow that simple rule, ninety-nine per cent of the world's trouble, heartache, sin and anxiety would be non-existent, would never happen. And the reason is simple. The world's troubles arise from our weaknesses, not from our strength; and if we would increase our strength, and do away with our weaknesses, every human being thereafter, in proportion to his inner evolution, would become a power for good in the world. And you see what that would mean. It cuts at the tap-root of most of the thoughts and feelings and acts that bring misery amongst us."

Mme. Tingley gave us a good rule which will keep our souls from getting caught while passing through the astral plane in going to sleep or in waking. It is as follows and is for nightly repetition:

"Let us end the day with more power of thought for self-conquest than we had at the beginning of the day. Let us close our eyes tonight with a clean conscience, and with a feeling of generous love for all that breathes, which is the best side of our natures. Let us seek more knowledge, more light, more strength, in the silence of our last thoughts before retiring."

Another way of putting these same helpful rules is in what is called "The chela's daily life ledger." The last thing before going to bed or to sleep one should carefully think over the day. Note your failures and successes and how to correct the errors and how to repeat or accentuate the successes. Note your weaknesses and use your will to be strong and resolute on such points or occasions as may need reform. Especially forgive your enemies — if you have any, and if not, think kindly of those who may need it,

particularly of those whom you may dislike, for they, like yourself, are travellers struggling on the Path. Above all note any tendency you may have to criticize, for criticism is one of the most insidious of inner enemies. It springs from the sense of separateness — which is the root of all evil. It is the negation of Brotherhood. See if it is not a hidden and insidious form of egotism, in which case it is the devil's way of praising himself. When this healthful self-appraisal is over take your favorite devotional book and read a chapter and/or meditate on the Higher Self. This frees you from earthly attachments and helps the soul to wing its way through the air-ways of the spirit to or near to where the Masters dwell.

The Theosophical Forum

WORKING WITH NATURE — *Alexandra McLean*

We appeal, therefore, to all who wish to raise themselves and their fellow creatures — man and beast — out of the thoughtless jog-trot of selfish everyday life. . . . What is wanted is true knowledge of the spiritual condition of man, his aim and destiny. — W. Q. Judge

We speak about the "nature" of things, and usually very superficially, meaning only the qualities most obviously manifested and easily perceived. We say it is the nature of a bird to fly, a fish to swim, of honey to be sweet; but are only using human terms for partial outer manifestations of these material forms. Their REAL Nature is not so easily labeled. And what is the "nature" of NATURE?

In Theosophical parlance we often speak of Seven; the seven angels, seven governors, seven keys, seven jewels, seven globes, seven rounds, seven races, etc. — and the seven-fold nature of man. It is safe to say that without understanding the seven principles of man, we can in nowise understand the "nature" of man.

Now NATURE is also seven-fold, a great Unity, a vast Hierarchical Structure that expresses through many Hierarchies. To simplify, let us consider a three-fold aspect, a trinity through which we might say NATURE manifests, the trinity of Spirit, Soul and Body.

Spirit	Law	ONE Law (Divine Justice for all)
Soul	Process	ONE Process (dual aspect of involution-evolution)
Body	Qualities (made	ONE Quality (Wisdom-Love in action)

manifest)

Now man has the privilege of working *with* Nature, thus becoming co-creator of ever more refined and glorified forms. He may *consciously* cooperate with the trinity of Nature. He who works in aiding the evolution, development and perfecting of form in any of the lower kingdoms — is at the same time refining and perfecting the expression of himself (and of the great WHOLE, for all is ONE). Thus the "body" of Nature is glorified in the great evolutionary unfoldment. And as the forms are refined they become increasingly better channels for the Higher Forces of Nature.

These Higher Forces, which we may term the Atma-Buddhi of Nature, can only become manifest as men attune themselves to the Inner Heart of Nature. As man's Higher Manas "touches the hem of the garment" of the Inner Truth, it thereby draws virtue into itself which is transmitted through his lower vehicles. Porphyrios has said "Of that nature which is beyond intellect many things are asserted according to intellection, but it is contemplated by a cessation of intellectual energy better than with it." By aspiration which is prayer, by adoration which is loving service, by faith which is a silent "listening" — we become aware of the voice and will of our own Higher Nature, which is a part of the Higher Nature of ALL.

May we change the arrangement of the Occult Law "Dare — Do — Be Silent" — in this instance to read: "Be Silent — Dare — Do." Only in the deepest part of our Nature, at the "silent center" which is Light, Life and Love in unexpressed purity — can we hear the voice of That NATURE which is the expression of the great and glorious Hierarchy of Truth. Only in that silent center may we in some faint degree catch a glimpse of the nobility and grandeur of the visible garments of Nature in the far distant

future. Only in that silent center may we become at-one with the Divine Heart, the "Nature" of THAT which is.

We hear it said, "O, what can you expect, that is human nature!" Or, "Do not expect too much, it is human nature to be jealous, to hate, lust and war!" No greater falsehood was ever perpetuated! It is destined that man shall *become* that which he desires and wills. Our REAL Nature is Divinity Itself and it is for the individual to *choose* which shall grow and predominate, his lower or his higher nature.

When Katherine Tingley met H. P. B.'s teacher at Darjiling, during a conversation with her he said, "To move away from the material plane of effort and thought and personality, — that is what the Soul is urging us to do: to move out into the hidden vast realities of life, and understand that within and above and around us, and in the very atmosphere in which our thoughts and feelings exist, Universal Life is pulsating continuously in response to our yearning and questionings. . . . So the aspirant should not think about the cultivation of powers, but live in the light and strength of his own Higher Nature. The Divine Law is in every man and woman, and each must find it there for himself, and make it manifest in his life. . . . Selflessness attains; selfishness defeats: men's possibilities are in direct proportion to their ability to see beyond themselves and to feel for others."

There is a perfect plan of evolution inherent within the Inmost Consciousness of our Galaxy (the karmic seed of a previous Manvantara). We are part of it. Shall we not rejoice in this colossal concept? What a profound privilege to become *conscious* workers with the "Nature" of this great wonder, to aid in bringing into visible form, the glories and harmonies of this "Nature."

Be Silent — Dare — Do.

"In the search for freedom, in the quest for sublime perfection, there is eternal alliance between Man and Nature . . . and it is in the plan of evolution that we should enjoy this noble silent companionship, and that all Nature should constantly appeal to and invoke that which is impersonal, and therefore godlike, in ourselves."

Working *with* Nature, we work with Divinity. We become Divine Artificers, working with the Fire of Life Itself, aiding in the work of the unfoldment of perfection through the Seven-fold Nature of ALL.

He who would follow in the footsteps of the Great Ones who have gone before, must learn through cooperation, service and sacrifice. He who would finally win the privilege to use Nature's secret key into the "ABSOLUTE" must choose to remain selfless "till the endless end."

"Thou art enlightened — Choose thy way. . . .

"Hark! . . . from the deep unfathomable vortex of that golden light in which the Victor bathes, ALL NATURE'S wordless voice in thousand tones ariseth to proclaim:

JOY UNTO YE, O MEN OF MYALBA.

A PILGRIM HATH RETURNED, BACK "FROM THE OTHER SHORE."

A NEW ARHAN IS BORN.

Peace to all Beings."

The Theosophical Forum

NATURE, THE WEB OF LIFE — *Allan J. Stover*

One of the mysteries of geologic history is the simultaneous appearance upon the earth of specialized forms of animal life and the particular plants upon which they feed. Thus the first grazing mammals appeared in the Eocene period at the same time as the grasses upon which they feed. Similarly the bees appeared with the flowering plants, neither being able to exist without the other; for without insects to distribute pollen the seeds of many plants would be infertile, and without honey and pollen the bees would starve.

One of the most interesting examples of mutual dependence between plant and insect is that of the *Yucca* of the Southwest and the *Pronuba* moth.

The *Yucca*, which belongs to the Lily family, differs from most plants in having the stamens widely separated from the pistil, and in the pollen being held within a sticky fluid which prevents the wind from blowing it from plant to plant and so fertilizing the flowers. The *Pronuba* moth moreover is interested only in laying its eggs where the young grubs will have suitable food, for unlike many insects it feels no attraction for honey as food.

The transaction then is one which provides for the continuation of the *Yucca* through the fertilizing of its embryo seeds in exchange for a number of tender seeds for the young *Pronuba* grubs to feed upon. Neither insect nor plant could survive without the other.

The female moth visits several *Yucca* plants, collecting a small ball of the sticky pollen; then she flies to a mature flower, inserts her long slender ovipositor through the succulent wall of the

pistil and deposits a single egg in an embryo seed. After laying each egg, the mother moth climbs the pistil and rubs some of the pollen on to the stigma and then returns to deposit another egg.

It is not only in the lower kingdoms that this cooperation and interdependence exists, for all the kingdoms of nature are closely linked together in a totality of life. In its history the earth has passed through many great changes, producing what is often referred to as the Age of Fishes, the Age of the Coal Forests, the Age of Reptiles, the Age of Mammals, etc. In these periods the clothing of all forms of life may be said to be made over to harmonize with the new style.

As H. P. Blavatsky says in *The Secret Doctrine* (Vol. II, page 262):

"Species and genera of the flora, fauna, and the highest animal, its crown — man, change and vary according to the environments and climatic variations, not only with every Round, but every Root-Race likewise, as well as after every geological cataclysm that puts an end to, or produces a turning point in the latter."

Along the same line G. de Purucker in a private letter explains further, — "The main point to remember is that the different great stocks of mineral, vegetable and animal and human lives follow each other with coincident or coordinate great changes of land and sea, and therefore also of climates.

"In other words, the stocks of beings, or monads, co-operate or co-ordinate and thus produce the different and serial and successive patterns of what we today call geological eras, or which the biologist and zoologist and botanist would call the successive waves of plant and animal life."

There are styles, fashions through which the world passes during which both plant and animal life is stamped with the characteristic of the times, and this characteristic is that of the

race of man then beginning its rise. G. de Purucker has pointed out that while there are remnants of both the Third and Fourth Root-Races now on earth, all these now bear the stamp of our own Fifth Root-Race because living in Fifth Root-Race times. The same may be said of the so-called "modernized" plants and animals, for while of ancient stock they all have in some degree changed with the changing times. Those who are not able to adapt themselves to new conditions finally drop out and disappear.

In other words the entire life on this living earth evolves together, and the impact of a new and vigorous race accelerates certain characteristics and retards others in both the plant and animal kingdoms.

Even today, wherever the European peoples go, there is an immediate effect upon the native tribes of a lowered birth-rate, while the host of European weeds, rats, mice, and diseases which follow the colonists work havoc upon native life of all kinds.

The science of Ecology groups the plant, animal, human, and climatic complex as a social organism, which is more than the sum of its parts. It has a body to study as well as a cell, a society as well as an individual: this totality of life is called a Biome, and any intrusion of foreign elements changes the whole structure of the organism. Man, since he dominates any Biome by his presence in any locality profoundly affects every living unit composing it, and through the destruction of forests, through poor management of land leading to soil erosion, and in other ways may even change the rainfall and climate.

Ecology then would look upon the European impact upon another land, as the invasion of one Biome by another, for, as said above, the man is accompanied by other elements belonging to his former home: food-plants and weeds, rats and mice, birds, bacteria and disease germs peculiar to himself.

Any such invasion is far-reaching in its effects upon the whole, whose nature is to some degree altered throughout.

Many have observed that important food plants decline with the passing of the animals or people dependent upon them, the Beech which once covered the ground with delicious nuts upon which immense flocks of wild pigeons fed, now with the complete disappearance of the pigeons has almost ceased to bear fruit. Deer often decline through disease more rapidly in regions where predatory animals are removed than where they are allowed to remain.

Man and nature are linked on inner lines of affinity and repulsion, forming a web of life in which everything that is done affects the whole. It is the structure of a universal brotherhood in which man has dominion over the creatures of the earth, not that he may despoil them for his own uses, but that he may be the helper and protector of these brothers of the lower kingdoms.

The Theosophical Forum

CHANGE IS GROWTH — *Mildred Hodgson*

It is more than ever necessary today for us to realize that man has reached a most critical stage in his evolution. Change is the order of the day, whether we like it or not. But although most people admit this to be true, they will at the same time confess their reluctance to accept or make changes on their initiative. We must recognize that most people have a deep-rooted dislike for anything that will disturb their routine; for man, being essentially a creature of habit, tends to take the line of least resistance.

As man is obviously passing through a transitionary period, and as there can be no growth without change, we must seek the cause of his unwillingness to welcome changes in his life. I do not think we have far to seek — it is man's greatest enemy — fear. For if we have only a slight knowledge of man's history, we will agree that fear has been the dominating force in his life. It almost seems that fear is a necessary part of the divine plan, and that without it there could be no development. There is an ancient teaching to the effect that God sleeps in the mineral, is semi-conscious in the vegetable, conscious in the animal, and self-conscious in man. It would appear that it is only when the consciousness has reached a certain degree of sensitivity, that fear is born.

So let us try to define fear. Surely it is an awareness of the forces and powers of our surroundings. Every one of us, indeed every infinitesimal atom, is unconsciously resisting the entire universe. Few of us realize the fact that everything outside ourselves stands in opposition to us. We are targets for the impacts of all nature. It is these impacts that we should welcome, for this is the only means by which the life locked up within us can be roused into activity. This outer stimulus and the inner impulse constitute the

primary duality, so far as man is concerned, and without this there could be no existence, as he knows it.

Most of us are so accustomed to associating the idea of Deity with love and compassion, that we tend to overlook the fact that there is a continual breaking-down process (often of a very ruthless character) going on simultaneously with the building-up process. This is the law of mutation and transmutation. And it is in this law that lies man's hope for the future. A pulling down of the old, that forms newer and more responsive to the life within may prevail. The fact that there is nothing static in nature offers the consolation that no matter how painful our conditions are, they too will pass.

Let us now try to see man and the world as they are today. Chaotic conditions prevail everywhere. Man himself is bewildered. He has just emerged from a war which has had no equal in history. Now he knows that man can sink to the lowest possible depths of degradation, and that he can also rise to great heights of self-sacrifice, and display superb courage. But the fact remains that the terrible sufferings and experiences through which he has passed have only intensified his fears.

Many people think that man has deteriorated. Actually he has become acquainted with the duality of his nature. Now he knows what Jesus meant when teaching that, "No man can serve two masters: for either he will hate the one and love the other; or else he will hold to the one and despise the other. . . ." Obviously we cannot love both good and evil; we cannot run with the hare and hold with the hound. We have to make a choice. And it is this choice which confronts so many of us today. There can be no compromise. We either challenge on behalf of our own higher principles, without regard to circumstances, consequences, or the personalities involved, or we continue to take the line of least

resistance, by pandering to the weaknesses of the personality.

I believe that as a result of man's terrible sufferings he has developed a much truer sense of values. Men of all colors, races, and creeds were brought together during the war, thereby weakening the many prejudices which existed between peoples. We must remember that when a man is suffering or facing death, all hatred and prejudice cease. It is as if they never existed, and indeed they did not, fundamentally.

We must also bear in mind that individual suffering passes unnoticed, but collective suffering has a dynamic effect on the humanmind. For what does intense suffering imply? Surely it is beyond trivialities. Surely it is an agonizing cry — to God — for help. And surely, when millions of people cry for help and guidance, a mighty thought-form is created — a form born from man's own suffering. Is it not reasonable to suppose that this form could be used by a powerful force that would answer man's cry for help? Could not this form serve as the vehicle for the manifestation of a universal principle — the principle of brotherhood? Is not this precisely what happened during the war?

And this divine Principle, which can truly be called the child of man, what of it? Are we going to care for this child in order that it may unfold its power, wisdom, and beauty, or are we going to sink into apathy once again, and neglect to cherish this, our most wonderful possession? It is those of us who are aware of all that is at stake, who must decide.

And what about the Theosophical Society? It obviously has a definite part to play in the world today. But are we quite clear in our minds as to the part allotted to it? Can we say with any degree of truth that each lodge is functioning to its fullest capacity? I doubt it. We should try to find out the cause. I wonder if the

answer is once again — fear? Some of our members have established certain habits of lodge procedure, and are consequently afraid of getting off the beaten track. Hence, instead of healthy changes, we have a static condition which is decidedly unhealthy. We must remember that it is the individual members in their aggregate who compose the Society; and those members, being individually subject to the law of mutation, should automatically introduce changes into the Society. Changes, however, are not very apparent.

But let us turn our attention to the nature of our Society's work. In this connection we can do no better than look for guidance to those Objects upon which our society was founded. The first and most important is the Universal Brotherhood of Man. It seems to me that the Theosophical Society was meant to be the vehicle for the divine Principle which has at last entered the consciousness of man. If this is the case, what are we going to do about it? First of all it must be given its proper place. And that place is the heart's center. It must not play the part of Cinderella, relegated to the kitchen.

I think we must admit that many of our members have tended to over-emphasize the mind principle at the expense of equally important aspects of their natures, the result being a lack of balance, or a wrong sense of values. It would be suicide if we were to develop a robot-like mind (a mind that knows all the answers), and there is every danger of this happening if more attention is not given to the creative faculty. It is by striving to be creative that we purify ourselves, for when truly creative we are temporarily detached, impersonal — and the more often we reach this stage, the greater will be our resistance to the purely personal, and the deeper will be our understanding of life and its problems. We shall be better able to apprehend what is meant by the "One" differentiating into the "Many." And when we really

understand this sublime teaching, we shall appreciate what Krishna meant when describing the sage as one to whom a lump of earth, a stone, and gold are the same. At this stage, we shall be free from arrogance and conceit, no longer shrinking from the outcast, or attaching undue importance to labels, for we shall see all forms in their aggregate as the physical form of Deity. At last we shall realize that the air we breathe, the clothes we wear, the food we eat, the ground upon which we walk, are all expressions of the "One Life" . . . the "Unity." We shall at this level admit that there could be no physical form without its archetypal form, and that indeed the physical form is a projection or reflection of that divine form, and also that the fact of physical existence implies that the Divine wills this existence, and has a divine purpose to accomplish through it. In fact each man will know that he is divine in nature, and that the contribution he makes to life is of equal value to that made by any other man. Never again will he feel unwanted; never again will he be subservient to any man, no matter how high his social position — for a man at this stage will be truly *Man*.

What line of action should we Theosophists take in order to meet the needs of present day conditions? I suggest that we try to emulate the attitude taken by that great soul, our Teacher, H. P. B., who personified the "pioneer spirit." It is this spirit of the pioneer which is so desperately needed in the world today, and likewise desperately needed in our Society. It was H. P. B.'s sublime mission to fight orthodoxy and to found a Society wholly unorthodox in its teachings.

Are we then to become merely orthodox theosophists, with crystallized ideas of our teachings? Cannot we understand that Theosophy is all-inclusive; that it can have no barriers, because it relates the known to the unknown? Cannot we understand that it seeks to reveal the relationship which exists between God and

man; between heaven and earth; between man and man; and indeed between man and all forms of life both above and below the human? Theosophy treats of the totality, and therefore the true Theosophist will not close the door on any phase of life, nor on any idea presented to him, without first of all giving it his full consideration.

Can we imagine that H. P. B. sacrificed herself in order to pander to the vanity of a few intellectuals, or would-be intellectuals? Surely her sacrifice was made for humanity! And surely it is our duty to be concerned with the masses, as well as the few! And if we are to give our attention to the masses, we shall have to propagate our teachings in a language that the masses can understand. It is possible, I think, to maintain the standard of accuracy set by Dr. de Purucker, and at the same time to relate Theosophy to current affairs and ethical problems. But in this connection it would be interesting to have the views of other Theosophists who, like the writer, share the life of the common people. I fully appreciate that the rendering of our teachings in intelligible language is a very sticky problem, but nevertheless it is one which will have to be solved, if we are to infuse fresh "life" into our lodges. Another important point to remember is the necessity for attracting young people to our movement, for it is to them that we must look for a continuance of the work.

Are we ready to change our attitude and modify our preconceived ideas in order to come into a closer relationship with younger people, and non-Theosophists? Remember that we teach primarily by example, and if we are unprepared to allow the law of mutation to operate through ourselves, we not only retard our own progress, but also that of the Society, which we profess to serve.

Let us then accept the challenge of the age, and let us ponder well

these words from that great Teacher, Sri Krishna: "Who carp at My teachings and act not thereon, senseless, deluded in all knowledge, know thou these mindless ones as fated to be destroyed."

The Theosophical Forum

CURIOSITY — N. A. Lewis

What would life be like — *if*—? Curiosity may have taken all nine of the cat's lives, but it fulfilled them also! There is something divine about curiosity, something that puts the shams of life to flight and seeks out the (perhaps painful) new truth. It takes a lot of courage, sometimes, to be the least bit curious about the dark and misty alleys of our world. There is the Old Boogey Man in the shadows, waiting to nab the timid inquirer and carry him off to the den of the Horrid Truth! Beware of him! He will get you, and take away your dearest illusions; he will strip you down to bare despair, and laugh at you; he will teach you that you are not so nice as you thought you were!

But what of the shaky, breathless joy that follows right after tears, when we realize that now we know, and we will know forever the deeper reality, the deeper and more sound truth of one more aspect of this huge and marvellous celebration, Life? What of that? What of the solemn and triumphant genie who rises up in our hearts, and shines like the Sun, and sounds like a song, to tell us we have won another battle?

Such are the fruits of curiosity, really honest curiosity, such is the great heritage of all evolving beings!

It is not enough to seek once, or twice, not enough to ask only occasionally. "What is it that is?" It is not enough to form a daily habit of asking ourselves certain selfsame questions, to which we come to have some very slick answers. We must ask always new and harder questions, more "dangerous" questions, we might say. We must go further and further in the knowledge of the *what* and the *why*, particularly, of the lives of those around us. We must know our neighbor's life, not in the sense of knowing in a gossipy

way all of his comings and goings — Heaven forbid! — but in learning to sense more and more keenly the delicate, the quiet something within him which is his real nature. Such things are not for talk, not for conversation, but belong to the holiest of holies in all the starry universe. That course of action holds some dangers for us, grave ones, and many a cat has lost some lives in it, but it is eminently worth while, as the finest education one could acquire.

No less is it important for us to inquire into ourselves; though, as important as the old saying, "Man, know thyself," may be, it is not good to inquire and inquire only into one's self, without any reference to others. That was never meant to be an injunction to the aspirant to encase himself in self-interest, and enshroud himself with selfish indifference. Our human situation is no such matter, as we all deeply know. There have been many stories written about the loneliness of the tomb, many poems written about the largeness of the world and the smallness of the blinded little creature.

Must we *fear* something? Must we fear death, or God, or the Devil — must we fear something, to come to the point of honesty with ourselves? Without curiosity, yes, without the positive interest, yes; assuredly, if we wait to be driven to school, we shall learn in sorrow and fear. Tears, sobs, mournful cries — are these the only accents of spoken truth? Without curiosity, yes: without the courage to ask, the bravery necessary to go and seek, yes.

Are we cozy, are the skies cloudless, are the flowers especially fragrant today? What is that haunting something that lurks behind the bright eyes of the perfect days? What is that tempting something, that, in the stories we heard in childhood, called the gypsies "over the hills and far away" by the very beauty and peace of nature? Perhaps it is the gypsies' taste for calamity

which makes them relish life so much — and which makes some of them so wise. Perhaps not, but their very moving is a questioning of life, their very wandering is a learning process. Perhaps they grow hungry and sick and tired, but their life surely must be rich and full!

Let us *try* life; let us touch the keys, if we would hear tones, draw the bow over the strings, if we would hear the fine clear vibration! Let us make such music as will reach to mountain peaks and skies beyond, let our music be a plea for music — because to ask is to answer, and to answer is to ask.

The Theosophical Forum

THE LAW OF THE UNIVERSE — *Kathleen Pray*

The subject of Universal Law is, or can be, a profound one. Fortunately Theosophical teachings are fascinating and provocative in both their simplicity and their complexity. Theosophy has that virtue, which led Judge to so delightfully compare it to an ocean, of varying depth — a study in truth from the shallowest understanding of it to its most unfathomable depths. So this discussion of the great Laws of Nature is only a viewpoint taken from some depth or another in the Ocean that is Theosophy. Such a discussion readily brings forth questions on freedom, for we want to know whether law has anything to do with our lack of freedom. We are not entirely free and why can we not be? What is freedom?

Freedom is only relative as probably are all such abstractions. The lack of it is certainly not due primarily to man-made laws, for these in the main give us more freedom and security of a physical kind. But even without the most confining of these laws man would not be free. This is because the Universe is based on a comprehensive law or operation which governs all Nature and makes it inevitable that we be dependent upon and responsible for all living things. Therefore we are far from being entirely free agents.

By Universal Law we mean the operation of the Universe, the inevitable, the immutable, the everlasting Laws of Nature. And our perception of these Laws, when clear and accurate, is Truth. We are not dealing here with physical law alone, which is only the outward manifestation of that which works in invisible and causal realms. If we use Dr. de Purucker's definition of Universe — "actually and literally imbodyed consciousness" — then

Universal Law is the working of these consciousnesses, the vast and complete function which expresses the individuality, the essential characteristics of the Universe. And we are a part of, we compose, we *are* the Universe.

This great Law is neither dictated nor enforced by any outside agency, or by one individual upon another, for all beings are agents, instigators, perpetuators and reapers of the Law. While this is true, it is only highly evolved beings, the gods, who are the ideal, the relatively perfect instruments through which the Law may operate. Entities below us in evolution are entirely unself-conscious agents, and we are only beginning to realize that we are agents and have the possibilities of perfecting ourselves. It is, for example, of a Dhyani-Buddha that we might say, speaking in correspondences, the very circulation of his blood, his respiration, his movements, thoughts and energies are manifestations and expressions of Universal Law.

There is enough authority in our Theosophical teachings for us to say that Karman represents, at least to our minds, the sum total of Universal Law. Perhaps the most familiar statement to this effect is from *The Key to Theosophy*, where H. P. Blavatsky says that Karman is "the Ultimate Law of the Universe, the source, the origin and the fount of all other laws which exist throughout Nature." While the literal translation of the Sanskrit term Karman is "action," we have the more or less traditional definition of the word as it is used Theosophically. It is that Law of Consequences according to which every action, every thought, every emotion is a cause which produces an inevitable effect. These actions as produced are energies that must be expended, and from this expenditure come unavoidable results.

Nevertheless, the broader definition as "action," with its implied reaction, more aptly describes Karman as the Ultimate Law. The

entire Universe is in constant action. We can see and feel this action in our world of senses: not particularly in the rather desperate hustle of our human affairs, but in the gentle breezes and the harsher winds; in the movement of trees, in the fall of snow and rain; in the tides, the shifting sands, the rise and fall of continents; in the growth of plants, the twinkling stars, the sun's rays and moving shadows; in the heart-beats and respirations, in the constant flow and interchange of atoms. Have you glanced at a patch of bare ground or grass, thinking it to be still and calm with no sign of movement; then on looking closer have you seen the dense and quicksilver activity of myriad ants? So it is with Karman, for this activity is concerned with all spheres, visible and invisible. It can be imagined that from a distance this Universal Law would seem to function as a smooth continuous flow of action, a hardly discernible movement. But on closer scrutiny this same movement would be seen as vigorous action, pushing action; impelling forces intercepting, converging, dovetailing each other, but all in one general direction.

Remembering Dr. de Purucker's definition of Universe, we might say then that Universal Law (Karman) is "consciousnesses in action," which is a statement of the function of the Universe as a whole. While it is often spoken of as one vast Law, it has many facets, many characteristics. Just as we make ourselves acquainted with a chemical by studying its various properties, its characteristics and reactions, so may Karman be broken down, not into different laws, but into extensions or properties of the One Law. The various doctrines of the Ancient Wisdom may be formulated into extensions of Karman in terms of *action*.

For example, we have the doctrine of *Evolution* which is the *reason and purpose of all action*. Our activity is for the purpose of evolving, of unfolding and developing. This process brings forth all the possibilities that lie latent within each being. The Law of

Cycles is the *measurement and rhythm of action*, the time-periods, great and small, of repetitive but progressive activity (the measurement) and the duality expressed in these periods, such as activity and rest (the rhythm). This rhythm may also be seen in the dawn, the rise, the peak, the fall, and the twilight of any cycle. The teaching of *Hierarchies* gives us the *organization or system of consciousnesses in action*. A hierarchy has been defined as "a system of delegated, directive powers and authority that exists in a self-contained body, directed and guided by a Hierarch." Theosophically this refers to the unnumbered classes of evolving entities. There is an endless chain of hierarchies, the peak or apex of one forming or being included in the base of the next highest. The nature of these *consciousnesses in action* is *composite, Seven-Principled*. All entities have the opportunity of awakening and developing and perfecting these principles.

Then we have the doctrine of *Reimbodiment*. Embodiment is one-half a cycle as previously mentioned, the activity side, the *empirical and informative aspect of action*. The other side, death or disembodiment, is rest and the assimilation of the experiential. Reimbodiment then is the coming into the experiential side of life again and again. Reincarnation, the term used when speaking of man, has been viewed with much alarm in the past, perhaps because the view has been rather myopic. It should be considered as a part of endless Universal cycles applying to every living being, not as a strange occurrence that has only to do with man. All the cycles that we know include repetitions of rest and activity; there is nothing that is in an unceasingly and everlastingly active state. Just as inconceivable is a never-ending latent or quiescent condition. Activity and rest are dual aspects of life.

As the culminating extension of action, there are the Laws of *Universal Brotherhood and Compassion* which express the co-

operative action necessary to a perfect functioning of the whole. In another sense they express the *responsibility of action*, the responsibility of every acting consciousness to all parts and to the whole. Until we recognize this Law and comply with it we hinder not only our own evolutionary activity but all such activity. We must recognize the Oneness — in source, function and purpose — of all that is.

Our study of Universal Law is important in the same way as knowing the laws that govern our cities, states and countries. We have no excuse for not knowing those that apply to us. Ignorance of these laws does not mitigate or cancel out punishment when they are not upheld. So it is with the Laws of the Universe. They work on us or through us whether we know it or not — how much to our advantage if we do know! Perhaps the most significant aspect of this knowledge is that any enforcement of these great Laws is done by us, the consciousnesses in action. We impel ourselves, we impel Karman. The divine urge within us to manifest and evolve is the same force which brings action and reaction. Therefore we can see the futility of opposing these Laws and in particular of trying to set them aside, an absurdity so well under-scored in Ambrose Bierce's *Devil's Dictionary* where he defines *to pray* as "to ask that the Laws of the Universe be annulled in behalf of a single petitioner, confessedly unworthy."

Either ignorance or knowledge of law is directly connected with that elusive quality called freedom. It is elusive because it is relative. As an instance, two definitions under *free* in *Webster's Dictionary* are: one, "not determined by anything beyond its own nature or being" and two, "not united or combined with anything else; unattached." By the first we are free because we are not determined by anything beyond our own nature or being. By the second we are not free, for we are not unattached, we are united to all things. Does it seem paradoxical to say that laws confine

only when they are ignored or actively worked against? It is true, for obedience to law is the only freedom; we are slaves when we struggle against it.

Probably all great Teachers have said in essence: "The truth shall make you free." And they have not meant a technical knowledge of truth; they mean *becoming truth*. In understanding and becoming the Laws we gain mastery over them and freedom of harmonious action. This recalls H. P. B.'s words from *The Voice of the Silence*: "Chafe not at Karma, nor at Nature's changeless laws. . ." "Help Nature and work on with her; and Nature will regard thee as one of her creators and make obeisance."

The Theosophical Forum

ROOTS — *Alexandra McLean*

Roots: it seems they hold a very important place in the scheme of things. Their work, invisible to the mortal eye, unobtrusive and silent to the mortal ear, yet brings into manifestation in the external world myriad forms of glory. What stability, strength and power they transmit to the growing and unfolding entity they serve. In all the category of words, it seems that the small word "root" is symbol for one of the greatest mysteries. It implies innate wisdom, humility, devotion, discrimination and dependability.

If we consult a good dictionary as to the meaning of "root" we are intrigued and amazed at the variety of uses beyond the one usually assigned to it, i.e., "Popularly, any subterranean part of a plant." We find it used in anatomy, astronomy, astrology, ethnology, hydraulics, law, mathematics, music, philology, etc. We consult a Thesaurus and hours may be profitably spent in considering the subtle varieties in usage of the word "root."

The Botanical definition offers, "In the higher plants (ferns and seed plants), a portion of the plant body bearing neither leaves, nor reproductive organs, but provided with a growing point and functioning as an organ of absorption, an aerating organ, a food reservoir, or a means of support." One of the specific definitions gives us, "An ancestor or progenitor and hence an early race; a stem, also, — the cause, source." There are thoughts in these definitions which applied Theosophically might be developed to great length. We will attempt to hint at a few ideas and leave it to the reader, if interested, to follow up and develop them for himself.

Dr. de Purucker in speaking of Elemental Kingdoms and Cosmic Elements tells us — "Thus then, these cosmic elements are the

different stuffs of the universe, the different substances out of which the universe is builded. We can call them the various prakritis of the universe. . . . Spirit in its sevenfold aspects is the *root* of all these cosmic elements, or prakritis." (Italics mine.)

H. P. B. calls the Higher Self (ATMA) "the Divine Root of all being. . . ." She also offers from an occult catechism (*S. D. Proem*, p. 11) "What is it that ever is? Space. . . . What is it that ever was? The germ in the root. What is it that is ever coming and going? The Great Breath. . . . The three are one . . . and this is Space."

Now what is it in man that may be analogous to the roots of a plant? Perhaps it is our aspirations. Man, possessed of "Manas," is a self-conscious entity and must learn to discriminate, to *choose* that which he needs for full development and the unfolding of the Inner Divinity. Man may direct a strong tap root deep into the SOURCE, the Truth of his being. He may send thoughts like root tendrils into the depths of his inmost, seeking the true sustenance for growth. The purity of his aspiration (not for selfish self development, but that he may be an ever more perfect expression of Divinity) and the force of his will shall be as the life energy in roots, surmounting difficulties, finding and bringing that needed to complete his life cycle. Divine Nature works with man and through the just law of his own Karma, provides him with circumstances and opportunities for growth.

We are rooted in Divinity, but the vast powers of this Divine Nature can only act through us as we by aspiration and will create channels (strong roots) for their flow. Evolution is a slow process. The lotus does not open until it has risen above the mud and water into the higher atmosphere, where light plays an important part in the flowering. Even so — man does not become "more than man" except through cycles of growth upward-inward into the "atma-sphere" of his SELF. We are gods in embryo and

must be nourished by the food of the gods, the "Celestial Fire" that is the *Reality* of our Inmost.

All manifesting entities follow the same universal law, unfolding the seed of a previous completed cycle. All have roots with their "growing point" and each according to his degree of consciousness, his aspirations and will, must seek and find the nourishment for his own growth. Roots, like all else, are sevenfold and thus each entity may be fully nourished in all its sevenfold being. Within all, the humble dandelion or "Surya" our sun, within the visible and the invisible (for all is ONE) is an urge that is part of the great Cosmic urge. At the core of Being, invisible, is the Divine Dynamo, the generator of all possibilities of expression. Into THAT, "The Dot, which is everywhere; the circle, which is nowhere" must we *consciously*, ever more consciously, send our roots and draw the Life that will in time make us "more than man."

With Tennyson we may soliloquize:

"Little flower — but *if* I could understand
What you are, root and all, and all in all,
I should know what God and man is."

In "ROOTS" we indeed have more than meets the eye or reaches the ear. The true significance, the esoteric potencies, may only be apprehended by intuitive comprehension. Roots are the humble, willing, eager servants of TRUTH, seeking persistently for that SOURCE that is the fountainhead of Life itself and bringing into visible form the glory of the secret pattern. "Tat twam asi."

DESERTS AND THE LAW OF CYCLES — *Allan J. Stover*

In the cyclic rhythm of Nature, life is always springing into new vigor and activity in some places and dropping into dormancy and obscurity in others.

The reason for this is that all life, including that of the earth itself, is closely linked and interdependent, so that anything that affects one kingdom of Nature or class of life, affects all. As the time for a new Race or Sub-Race approaches, great changes take place on the earth with the sinking of old lands, the rising of new lands, changes of climate, and the purification of large areas by desert-conditions in order to rid them of the miasmatic influences left by past populations.

All this is taking place at the present time, slowly but continuously. At present the sea level is slowly rising on those lands south of the Canadian line, while the Hudson's Bay district shows a rapid lowering of the sea by as much as three meters a century, with corresponding conditions prevailing in northern and southern Europe. In Mexico and Central America a new mountain-range is rising which is 1500 miles in length. Glaciers throughout the world have been steadily retreating for the past fifty years. The earth itself is separated, Round from Round, by a purifying dormancy or sleep during which the entire face of the globe is reworked, much as a field is plowed and harrowed before fresh seed is sown.

The same is also true of the continents which, after bearing a "crop" of life — human, animal, and plant — are renewed by volcanic outpourings, are flooded by the sea or become deserts. This is not new in principle.

We see this cyclic alternation of activity and rest-and-renewal everywhere in both large and small cycles, as in the alternation of the seasons, and even in the waking and sleeping periods of our daily life.

Perhaps that is why deserts have such a strange fascination for most people, who when they enter these Lands of the Sun feel a lifting of the spirit and a sense of freedom unknown in thickly populated regions.

Of the land-surface of the earth today fully one-sixth is occupied by deserts, and the total area is slowly increasing. Yet the soil of the desert-areas was once fertile and well watered, and amid their sands lie relicts of ancient and often unknown civilizations. To quote from Dr. G. de Purucker's article entitled "Central Asia, Cradleland of our Race," which appears in his posthumous book, *Studies in Occult Philosophy*, (page 16):

If you take a map, a map of Asia, and on it find Persia, Baluchistan, Afghanistan, Bokhara, and Turkestan, the Sea of Aral, and the Caspian, and to the east the Pamir and the Hindu Kush, and the Tien Shan, the Altyn Tagh, etc. — an enormous tract of country, most of it desert waste — there you will find the seat from which we came as a racial stock. The time was when that land was covered with highly developed civilizations succeeding each other in time. Hundreds of wonderful cities flourished there. The land was green and fertile, it was an aggregate of beautiful countries.

Then, having served as a home for the new Fifth Race (our own), the lands rose, became arid, deserts claimed the region, and the human population migrated to the new lands rising in Europe and elsewhere.

We may look upon the earth as a school of experience, where like a school during vacation-time, only a few janitors, officials and employees remain to keep things in order while the pupils are away. A somewhat similar process of alternating periods of activity, separated by periods of rest and renovation, exists on a lesser scale in cycles of smaller degree.

While deserts are a necessary and natural phase of earth-history, there is an unnatural arid condition caused by man's misuse of natural resources, and therefore out of proper time. This is evident in the "dustbowl" of America. The same is true elsewhere, and few realize the immensity of this disaster of recent years.

Specialists tell us that 100 million acres of farm-land have been completely destroyed for farming at a profit; that 125 million acres are seriously damaged; and that yet another 100 million acres belonging to the best farm-lands are seriously threatened. These figures are taken from a Government pamphlet published in 1936. During the "blow seasons" the land in the Great Plains region even now continues to move.

The atomic bomb, the widespread erosion in North and South America, the waste of forests and wild-life — all these show that man has indeed brought himself to the point where Universal Brotherhood and mutual understanding must prevail, or else future races will some day be searching sand-dunes for relics of our own civilization.

WORLDS WITHIN WORLDS — *H. Minot*

Worlds within worlds! When we use this phrase our first thought, perhaps, is of worlds not to be understood or glimpsed by our physical senses. But even on the physical plane there are worlds within worlds: worlds so different from each other in atmosphere, reactions, thought and feeling, and a multitude of other variances, that to become aware of them and of their divergences, is to understand somewhat of the interplay of action that goes on continually on this one plane, and similarly on and among other planes of being.

One may travel along a paved highway and fill one's soul with beauty — rolling hills, showing green here and there because of the heavy winter rains, but touched, however lightly, with autumn russet and gold; or pass fields where mounds of bean-straw, warm in the light of the sun, add richness to the coloring of the landscape. These are peaceful scenes, but the highway itself is a pulsing artery of life. The very pavement speaks of man's endeavor to cover the distance between any two points with the least expenditure of time, or wear and tear on his conveyance. Everywhere along that white-lined winding ribbon the demon speed makes his presence felt. Even in the midst of rural charm one is conscious of that world of hurly-burly — impinging, pressing hard upon one, and sometimes even threatening.

But take a by-road — preferably a good dirt road — and what magic results! One may be almost within touching distance of a highway, and yet, to all intents and purposes, be in a world apart. Hills, not so different from those others, dream lazily in the sun, uncaring though cloud shadows chase one another along their slopes. The fields, too, are under the same spell, and here are

horse and plow or wagon rather than the noisy tractor. But even this triumph of a modern age, if used, is not the same impressive monster in this world apart that it contrives to be when working in a world ruled by machines. In the one it is a capable servant, in the other, it and its like are well-nigh master.

Fruit trees, nut orchards, grazing cattle, a lone rider on horseback, and vast expanses of hills and sky — these bring peace, for they loosen nervous tensions that exist almost unconsciously in this age of "getting somewhere" quickly. One comes to know the quiet places of the soul — the worlds within worlds of our own being — and to find the strength that lies in repose.

The Theosophical Forum

MAN A SEPTENARY BEING — *Marion Hazleton*

I established this whole universe with a portion of myself,
and remain separate. — *Bhagavad-Gita*

Every beginner in the study of Theosophy is familiar with the sevenfold classification of man in its simplest aspects, but like all the doctrines of the Ancient Wisdom, the subject may become exceedingly abstruse in its deeper ramifications. Let us here devote ourselves more particularly to a discussion as to whether these seven principles really exist, how they correspond to the principles of Nature, and how the exceedingly complex physical, mental, and spiritual reactions of man can adequately be accounted for by any other theory, the hypotheses of body and mind, or body, soul, and spirit, being wholly unsatisfactory.

"God geometrizes." Once admit Universal Cosmogony to be based on mathematics, and that the number Seven is fundamental in Nature, and reasoning by deduction we are led to the inescapable conclusion that man is also sevenfold — for analogy and correspondence are important aids in arriving at Truth. "As above, so below." — "As in heaven, so it is on earth." — "As in the great, so in the small." These are no idle statements, but the experience of sages and seers of all ages. How often have we not heard Dr. de Purucker say that man is a child of the Universe; that he has everything in him (*in potentio*) that the Universe has; that the Universe would cease to exist if a single atom could be destroyed!

Greek philosophy required a scale of descent and ascent between the "Creator" and his "Creation." According to Plato, it was *needful* in order to explain the apparent defects and disorders of sublunary affairs "The tradition has come down from very

ancient times that the heavenly bodies are Gods, and that Divinity encompasses the whole of Nature," says Aristotle. Plotinus says: "The part has everything the soul has. . . ." "Mind is a portion of the soul which animates and governs the Universe. The principles which are implanted in the human reason must inhere in the Divine Reason, and must be reflected in the visible world. The world is assuredly the image and copy of the Divinity, the outward and multiple development of the Eternal Unity. The finite is a true expression of the Infinite Being. The world is now a Triad, combining the Monad and Duad; now a Tetrad, now a Decad, which, in combining the former four, involves all the possible accordances of the Universe," said Pythagoras.

Parmenides, in his physical theory, was an Atomist. Instead of one element, he declared that the elements or first principles were numerous, or even infinite. No point in space is unoccupied by these atoms, which are infinitely divisible. He imagined that in Nature there are as many kinds of principles as there are species of compound bodies, and that the peculiar form of the primary particles of which any body is composed is the same with the qualities of the compound body, itself. This was the celebrated doctrine of *Homoe-meria*, of which Lucretius furnishes a luminous account in his philosophic poem, *De Natura Rerum*:

. . . That bones from bones
Minute, and embryo, nerves from nerves arise;
And blood, from blood, by countless drops increased.
Gold, too, from golden atoms; earths concrete,
From earths extreme; from fiery matters, fire;
And lymph from hmpen dews. And thus throughout
From primal kinds that kinds perpetual
Spring.

Said he: "Man is the measure of all things; thought is the same

thing as the cause of thought. . . ."God is the First Principle of all principles," said Democritus. . . . "There are in Nature as many kinds of principles as there are species of compound bodies," said Anaxagoras. He considered these principles as eternal, because he held that nothing can be really created or annihilated — *de nihilo nihil, in nihilum nil posse reverti*. This doctrine was held by all philosophers of the Ionian school.

"God created man in his own image." If man is made in the image of God, it is pertinent to inquire just what this God is. Certainly no thoughtful person would interpret this to mean that God has a head, two arms, two legs, etc. God "created" man of his own *essence*, in his own likeness as regards the principles of his constitution.

The Universe has been divided in various ways by all the most ancient religions and philosophies, all, however, deriving it from a First Unknown and Unknowable Cause. Among the multitude of beautiful statues of Olympian gods and goddesses which the apostle Paul saw in his visit to Athens (not much to his liking, by the way), was a plain marble altar on which was inscribed: "To the Unknown God." He was so struck by this that it led to many discussions with the Athenian philosophers of that day. Whether they derived two, three, or five emanations or principles from this Supreme Being, this Unknown God, they eventually became the seven.

Seven is one of the fundamental numbers in Nature, and the most sacred of all, by which all kingdoms, races, genera, time-periods, qualities, etc, are correlated. It would take up all the time at our disposal to simply enumerate all the sevens mentioned in Science, Philosophy, and Religion. Let us, however, mention a few. According to the Adepts of ancient Aryavarta, seven principles are evolved from three primary principles, and these three

primary principles from a single principle or Monad. This can be demonstrated with light. The sun's ray represents the one; from it proceed the three primary colors, while the four secondary colors of the spectrum coexist with the three primary. The above gives us a perfect illustration of the derivation of man's seven principles. Then we have the seven states of consciousness, the seven Manus, the seven portals, the seven musical tones, the seven days of the week, the Seven Sacred Planets. Our Mother Earth renews her strata every seven years. The number seven appears with frequency in Genesis, Job, the Mosaic Books, the Kabala, and all other ancient mystical writings. The mysterious number seven can be traced on almost every page of the oldest Aryan scriptures and the oldest Zoroastrian books as well; in the tile records of Babylon and Chaldea, and the Egyptian *Book of the Dead*, so-called, more properly *The Book of Coming into Light*. In the *Atharva Veda* we read: "Time, like a brilliant steed with seven rays, full of fecundity, bears all things onward. . . ." "Time, like a seven-wheeled, seven-naved car, moves on; his rolling wheels are all the worlds, his axle immortality."

There are seven centers in man's head — two eyes, two ears, two nostrils, and one mouth — and seven passages connected with them. Man's monad performs seven peregrinations through the seven major kingdoms and an infinity of subkingdoms, all in series of seven, through seven chains of seven globes each, during seven manvantaras and seven pralayas. Says one of the *Mahatma Letters*: "Within a solar manvantara the number of his (man's) existences is $7 \times 7 \times 7+7$, or 777. . . . In the first seven months of gestation the foetus repeats in miniature the mineral, vegetable, and animal cycles through which it had passed in its previous reembodiments. The child's development is completed only towards the end of the seventh year."

Then we have the seven initiations, and the seven deadly sins of

the Book of Hermes. The human body is renewed every seven years. Each of the kingdoms of Nature is subdivided into seven classes. "There are seven intermediate stages between universal and individual consciousness. Nature follows the same groove from the "creation" of a Universe down to that of a mosquito. Worlds, like men, have their seven principles. Each principle remains forever within the body of its cosmic source. At the beginning of manifestation, man is an unconscious seventh principle [the unself-conscious godspark of Dr. de Purucker], with the germ of the other six lying latent and dormant within it," say the *Mahatma Letters*. When the ray from the monad enters *any* germ-cell it has the other six principles latent within it.

Thought is the same thing as the cause of thought;
For with the thing in which it is announced,
You cannot find the thought; for there is nothing,
Nor shall be, except the existing. (1)

Here we have the same conception, but with the additional idea that the phenomenal world is really non-existent, i.e., illusory and impermanent.

Both the deductive and inductive methods of reasoning must be employed if we are to get a comprehensive grasp of this subject. Says Proclus: "It is absurd to assert that the Universe is inanimate and that we who have a part of the body of the Universe have a soul. For how can a part have a soul if the Universe is inanimate? . . ." "It is not possible for anything to be generated destitute of God. The soul being incorporeal and divine, it was impossible for her to be conjoined with the body without a medium, for what the Aether is to the Universe, imagination is in man." Here, in Aether and imagination we have an example of a correlation of one of man's principles with one of the seven principles of a globe, a solar system, a galaxy, or a kosmos.

It is easily seen that physically man is compounded of all the seven kingdoms. He takes in the mineral, vegetable, and animal life-atoms through his food and drink, and the imponderable elements through the air he breathes. May it not be reasonable to suppose that his other principles are likewise compounded, each on its own plane? What more natural than to associate his appearance with *Sthula-sarira*, physical ailments with *Linga-sarira*, physical strength or weakness with *Prana*, intellect with *Manas*, intuition with *Buddhi*, spiritual exaltation with *Atman*?

Why should we doubt that man bears the same relation to the Celestial Sphere that the raindrop does to the cloud above, or that he, like it, is withdrawn again and again into his parent source? But for man to become the reflection of the Divine, it is necessary for the Divine Power to be "stepped down" from the Universal to the Particular. Even as the powerful current of the electric dynamo must be reduced by a transformer, in order that the tiny filament in the bulb may not be shattered, so must the terrific spiritual potencies of God be reduced through emanations so that man may not be annihilated by the divine splendor.

This is one of the reasons why man's principles are themselves sevenfold, as only seven "steppings down" would not be gradual enough. Through seven times seven graduations the divine potencies are sufficiently reduced to contact the lowest end of the scale — gross matter or *Sthula-sarira*. This is one of the significations of the Pillar of Light of the Hermetists, and Jacob's Ladder of the Bible. This Ladder is also the symbol of the orderly progression which the Angels, those Pilgrims of Eternity, none other than ourselves, make down and through the seven principles of the Universe. As these principles are also sevenfold, these forty nine steps aid in the process, when, in the fullness of time, man's principles are progressively withdrawn into one another, and finally into the bosom of the Monad. In Cosmogony

this is "the heavens rolling up like unto a scroll."

We often speak of *Manas* as gravitating towards *Kama* or *Buddhi*, which is a good illustration of one step in this process of progressive evolution and involution. It should be borne in mind that all the principles above *Prana* are *states of consciousness*. No two blades of grass are ever alike. No two human beings are ever alike, and this infinite variety is caused by the combinations of these states of consciousness acting upon man's complex principles. The gradations of tones along the seven octaves of the whole keyboard of life are numberless. Herein lies the key to the behaviors in human nature so familiar to psychologists and psychoanalysts. Schizophrenia — "split personality" — has become a commonplace. We have today our Jekylls and Hydes.

How is it possible to account for the multiplicity of man's emotions and reactions, if he is only body and mind, or body, soul, and spirit? It takes the infinite combinations of the "Fortynine Fires" within him, upon all the planes of his being, and the operation of his senses upon other planes than the physical to give us a really comprehensive and logical explanation of his loves, his hates, his lusts, his inhibitions, his exhibitions, his weaknesses and his strength. Only when we recognize our close relationship, principle for principle, with Nature, do these things become clear to us.

HOPE OF THE WORLD — *Louis F. Callaway*

Education today means simply what the old latin word *educere* implies — to lead out — to lead out of oneself the inherent intelligence that will instantaneously beget ideas which complete ideals in expression and in action.

Scientific study and research and progressive education are the hope of the world. We have only to look about us to see that ignorance is the root of all evil. And much of the ignorance and superstition of today lurks and stalks like a ghost within the confines of some of our structural palisades erected to God, all in the name of goodness, and as a result, some men have become as taboo-ridden, if not more so, than Andaman Islanders.

Many of the scientists and philosophers of the past have been realizationists who have been fully convinced that science is the great master-key to the hope of the world. The illustrious Euclid inscribed above the entrance of his domicile: "He who hath not a knowledge of geometry shall not enter my sacred portals." The great Descartes said: "Mathematics alone will avoid sophisms, and by it, all problems of life can be solved, if proper principles be applied"; and the intellectual Socrates wrote: "Man, know thyself."

In thinking of science let us want also to include the foundations and implications of social science. Man may extend his search into the realms of economics, man's striving for subsistence and existence; sociology, man's cooperation with man for higher hopes through his social attitudes and social ideals; psychology and metaphysics, mind or soul science, through which may come the hope of a fuller life *here and now*, or perhaps a hope of immortality. Add to these mathematics, the science of numbers

("The measured order of his plan"), proportions, symmetry, balance, truth, and beauty, all of which are manifested in the whole of the universe; add also biology and evolution, the laws of life; and anthropology, to open man's vision to the beauties of the kinship of human life with all life — and we see why Science can truly be called the hope of the world.

If one is interested in knowing just what the social and economic conditions, the philosophies, and the sentiments of men have been in any particular period of history, he has only to go back into the literature of that period. Literature, notwithstanding its artificialities, is most revealing, for it mirrors life. Let us go back into the Elizabethan period of English literature and point our pedagogical finger at Christopher Marlowe who, in one of his plays, portrays the leading man, a Dr. Faustus. Because Dr. Faustus is a scientist, he is depicted as having sold his soul to the Devil for a mess of pottage. History and literature reek with similar examples of such beliefs.

Much is said about God and religion, but little is said that may give the thinking mind something to get intellectual teeth into. A goodly part of our thinking has been *soupy* thinking — *absit invidia*. The mistaken idea that the *good* alone have found a solution to the riddle of the universe has been blown to bits since the Victorian period. That no idea could be farther from the truth is plain to scientists and men of letters who have spent years working with scholars in *pure* theology for the improvement of spiritual ideas and ideals on an intellectual rather than on an emotional basis.

The things with which truth seekers are concerned primarily are not Paul's journeys through Rome; the crucifixion (crime at the cross); tombs (morbidly); Heaven (the *happy hunting ground*); hell (fear — the most destructive psychology to man); the Devil

(like the *boogy man*, another mythical, fictitious character); mortification of the flesh (punishing the body for a cause. . . . what cause?); they are not concerned with medieval orthodoxy and dogmatic and empty theories and ideas; but rather with the fundamental spiritual principles by which man may learn to attune himself with the great Kingdom (within), and with the vibrating, pulsating laws of Life in order the better to live his individual life.

Teachings relating to an anthropomorphic God have been hammered into the minds of men since the Dark Ages, and the unwary have been led to believe that evolution and certain other scientific theories are pseudo or the lunatic fringes of science; that science is of the Devil; that psychology and metaphysics are the practices of witch-craft; and that education and scientific studies have made atheists of the younger generations. In other words, it has been considered devilish to delve into the mysteries of the universe. These teachings and beliefs, if they prevailed, would be destructive to our entire system; they are "Down with the colleges and universities!" The true scientist has breathed more deeply and has lived more fully. Nor is the true scientist a materialist. He is in touch with Life. The scientist is truly one of the Illuminati. He sees the beauty of this divine Law of the Universe and observes its activities under the microscope each day, and he feels the presence of this great Universal Mind — Infinite Intelligence — in his avid quest of the unknown. In Nature's living substance he sees the Energy and feels the great Principle in manifestation. He is attuned with Life. Life gives meaning to life.

No true scientist could be an atheist. Never more spiritual men lived than Darwin and Ingersoll, and yet, the rabble and the unhallowed have conferred upon these men diplomas of atheism. Other great scientists and philosophers of the past have been

charged with heresy and immorality, persecuted, and even put to death. But if we do not encourage the creative minds and the geniuses, whither are we going?

Many of our teachings and beliefs, outside the realms of science, have failed to give us the basic principles of an interpretation of modern life. Until the yet-existent medieval orthodoxy extends to science and progressive education the right-hand of fellowship, it will continue to be shallow and stagnant orthodoxy, and the world will continue gradually to slip into a state of social-economic decadence and intellectual and spiritual retrograde.

Anybody, even the most illiterate, can lead the religious life, but "without intellectuality, self-cultivation, and self-realization, no man is prepared even to begin to live the spiritual life." Is consciousness (intelligence, awareness) a mundane luxury, a psychological accident, or a will-o'-the-wisp figment of the imagination, induced by an indifferent law? Or could it not be a consoling depth of feeling, a controlling grace, a wealth of perception that human choices have some bearing upon an infinite order of being? To possess a faith in consciousness and to feel that it represents a universal oneness with all things makes a great difference in the lives of men and nations.

The Church has not infrequently posed an answer to the question: "Can a good scientist believe in God?" The question obviously should be: "Can a true scientist believe in a Supreme Being?" — since there are many connotations to the word God. The danger of the medieval, orthodox connotation of the term is that it implies materiality, fixity, absoluteness, and conclusiveness. "Man proposes, but God disposes." When men conclude, they cease to think.

Mankind, in an endeavor to throw off the shackles that have kept him down to earth, stands at the portal of Wisdom, petitioning

high Heaven for a new hope — a founded, glowing, enlivened spiritualism (not spiritism) that will link humankind and reestablish the great Brotherhood of Man.

Spiritual men may feel deeply with Einstein who said: "Certain it is that a conviction, akin to religious feeling, of the rationality or intelligibility of the world lies behind all scientific work of a higher order. This firm belief, a belief bound up with deep feeling, in a Superior Mind that reveals itself in the world of experience, represents my conception of God."

"On earth, peace, to men, good will."

The Theosophical Forum

THAT THOU ART! — *Mary Martin*

Theosophy teaches that all entities, from atoms to universes, are evolving beings; that what we call Monads are in themselves, in their very essence, partakers of eternity, of infinity. The heart, that Innermost Within of these beings, is utter divinity, expressed by Hindus and by Theosophists in the Sanskrit words, *Tat twam asi!*

We have so many revelations of understanding in this regard, as the poet who tells the little flower that if she will tell him what *she* is, he will tell her what God and man *is*, and they laugh quietly and joyously together, for each knows that the other has intimate knowledge of their true relationship.

Another so generously shares with us her mystical beauty in lines which the thought of the Psalmist evoked, " 'I will lay me down in peace to sleep, for Thou Lord makest me to dwell in safety.' I relax in the beautiful darkness, God's curtain of love drawn o'er the world that all may rest. Like the birds fold their wings after their evening vespers have been sung, I fold my aura of protection round about me and rest in the arms of infinite love. . . . 'Thou Lord makest me to dwell in safety.' I keep repeating these words until the assurance of that safety, under all conditions, glows with glory in my soul, and by my faith I draw from worlds unseen, the bright protective angels, waiting for the call to earth. They bring with them the same sweet peace that must have flown o'er Eden when in the cool of the day, God walked beneath the trees. 'Thou makest me to dwell in safety.' " (1)

I have recently re-read parts of *The Garden of Vision*, by L. Adams Beck in which is given the lesson of the Boundless All, and you may be interested in remembering parts of it with me;

particularly that part where the little Japanese girl, *Sayoko* and the English girl *Yasoma*, are granted the privilege of hearing Professor Kitesato talk about a "Very strange No play, which turns on the true things which lie behind the world we see" and connect it with Western Science:

How beautiful it was in the wood as they went winding through the pale russet of heaped pine needles under the pines bathing in the afternoon sunshine! How much at home were all its Presences! They went into the hall. Outside, the sunshine was golden on trees and grass, but only a few of the golden arrows shot into the brown shadows and filled the emptiness with dancing notes. Very high was the roof of the hall, lost in glooms of wood so dark that it carried thought beyond the unseen bounds of man's handiwork. But that was only outward grandeur. All the rest was of the barest simplicity — a matted floor, nothing else but a sort of reading-stand upon which might be laid a book of scriptures or commentaries or the text of the reader's discourse. All was so quiet that the fluttering of a bird outside was a violence to the silence. Voices drew near, and the men trooped in. Kitesato put his manuscript on the reading-stand, and without any prologue, but a bow to all present, plunged into his subject. His English was perfect but for accent and an overfine scholastic attention to words.

"The No play being possibly the greatest art in Japan — or certainly among the greatest — may be approached from many different points of view. Today I take it from that which you study here, the opening of the spiritual eye (Zen Buddhism) and its relation to Western Science; and that being my aim, I choose two well-known passages as indication of the road I tread. The first is as follows:

"Before a man studies Zen, mountains are mountains to him and

waters are waters. After he gets instruction in the truth of Zen by observing a good master, mountains are not mountains to him and waters are not waters. But after this, when he really attains to the Place of Peace, mountains are once more mountains and waters are waters.

"Most true, for, in the first instance he accepts them as what they seem — unquestioned realities — the matter of which the world is built in one of its most grandiose shapes. In the second instance, after a little instruction, he takes them as mere illusion, a deception of the senses. In the third, after he has received *satori*, that is to say 'Enlightenment,' he sees the mountains and waters as they are in truth and in their relation to Universal Power. And, this being so, it follows that he has realized the whole universe in its inmost mind-essence. He is a Master.

"Now the whole secret of the No Plays — that which makes them lucent to us and almost incomprehensible to the average foreigner — is *yugen*, a word of our own which has more than one meaning and which may be said to have been given to us by Zen Buddhism, since that form of Buddhism has most truly and deeply adjusted man to his place in the universe. It is for this reason that Zen has been hailed as the highest reach of human thought and the most practical of practicalities and is as such recommended in the No plays themselves.

"What then is this great word *yugen* given us by Zen? What does it mean? It means: That which lies below the surface. That which the obvious hides. It is *yugen* which gives the mysterious charm to great Chinese and Japanese landscape painting and to their portraits, whether of human beings, animals, or flowers. *To them all are one.* All reveal the Universal, sphinxlike beneath the obvious, yet answering the riddle freely to those who have opened the third eye of vision. We have used a symbol for this

yugen — a white bird with a flower in its beak. A winged thing, as you perceive, with the simplest yet most exquisite form of earthly beauty as its device. Could a man understand the whole truth of that flower, he would have mastered the secret of the All, for *yugen* is the call of the Universal to the Universal in man.

"Consider the charm of anything which charms those educated as you are, whether in literature, music, or any other art. It is *yugen*, the hidden meaning of yourself, blending with what you love. You love it because it is yourself moving you to emotion and sharing emotion with you. Together, you make and share a common sacrament. For it also is your true Self, the One Self, of all nature and all it symbolizes. *In the Universe is no room for two.*"

". . . the hidden meaning of yourself, blending with what you love. . . Together, you make and share a common sacrament." We spoke above of so many revelations of understanding in this regard — many will come to mind bearing the tender message of the 'Christ Within.' My thought returns to a ward in a hospital with rows and rows of white beds. On this particular morning, I find many new faces on "my" (a receiving) ward. The Major says, Mary, take good care of these boys — give them anything they want! Then I perceive the ethereal quality about them and know them to be boys who were prisoners of the Japanese. One boy, an English lad who was taken at Shanghai and was a slave laborer in Burma, was frail of body but had in his eyes that Light that comes only when one has made direct contact with the All. One Saturday when I was very late in reaching the ward to which he had been transferred, I went in to talk with him and the others without giving any reason for my tardiness, and this boy said, O yes, another Gray Lady told me you were attending Ozaki's funeral services. (Ozaki, a Hawaiian-Japanese, was a member of the 100th, the Purple Heart Battalion). I had been so close to Ozaki that it had not occurred to me that anyone would question the

propriety of my attending the service held in his honor. This came to me when this English lad smiled and said, "I knew a good Jap once." I was taken back for a moment and said, "You *did*"? He said, "Yes, it was a little old woman, and I and many others would have starved to death had it not been for the morsels of food she sneaked in to us." This was the only statement I ever heard him make about the Japs. Don't you believe this is another proof of that Compassionate Love that Dr. de Purucker refers to as the cement of the Universe?

The second passage given by Kitesato is as follows: "One knocked at the Beloved's door and it was asked from within, Who is there? He who knocked replied, It is I, and received the answer, There is no room for two. Finally, the Voice asking, Who is there? was answered by the rapturous cry, It is THOU! And the door was opened. Against that reply, the door is never shut."

From our beloved *Voice of the Silence* we receive this same Truth, *Tat Twam asi!* "And now thy *Self* is lost in SELF, *thyself* unto THYSELF, merged in THAT SELF from which thou first didst radiate.

"Where is thy individuality, Lanoo, where the Lanoo himself? It is the spark lost in the fire, the drop within the ocean, the ever-present Ray become the all and the eternal radiance."

Hereby know we that we dwell in him, and he in us, because he hath given us of his Spirit. — 1 John 4:13

THE MYSTIC SECRET OF SPRING (1) — *Hazel Boyer Braun*

The way to grasp an understanding of the mystic inner life and of the operations of Cosmic Intelligence is to observe in minute detail the nature of things around us, for Universal Nature is repetitive in the majestic and harmonious movement of all life.

What we see in the face of nature at this lovely Springtime Season is a reflection of a grander flow of spiritual energy in higher planes, a secret sway of the blossoming spirituality in which man may play his part if he be ready and prepared. So accurate is the law of analogy that if we were each intuitive and mystically inclined we might sit together in silence this afternoon studying these flowers, the full bloomed faces that have unfolded to the sunlight and their tight-held buds. In this symbol we might read what happens in the constitution of Man, and of the planets, solar systems, and universes.

There is optimism, a sense of inner peace and understanding when we realize that the whole effort of evolution is in the direction of resurrection. The urge of the blossoming power in every center of consciousness, in every kingdom of life must surely bring about a gradual evolutionary blooming, growing, resurrecting of life.

We have been taught that every grain of sand, every minutest particle of physical life enveils a center of divine consciousness that has and is in process of putting on these garments or souls or vehicles in order to learn by becoming. It has sometimes seemed to me that perhaps the very reason that the tempo of the more material realms or planes of being is so much more rapid than that of the higher ones that rise ever more majestically into a slower rhythm, is because they are so far from the goal that they

must hurry. This is but a whimsical suggestion as I think of the tiny cells flashing into and out of life faster than we can think, obedient to an inner urge to go ever higher.

This urge is translated by man into the activities of that part of his own being in which he happens to be centering the driving power of his life. That is why man is ever instructed by the sages and seers to know himself, to recognize this urge and to grasp the ever widening horizons of consciousness that are his heritage. As man responds obedient to the divine urge to rise to the Christ part of his nature, the range of his consciousness grows ever wider, hence the slower rhythm, for there is that within us that is capable of absolute knowledge, capable of ranging the Universe in its visible and invisible realms.

It seems very important to know ourselves, to watch how we respond to the urge of life. Some translate it into a mad chase after fame and wealth only to realize that this did not bring true happiness, that it could not, that the spiritual urge is yet unfulfilled. Truly the goal is reached only by learning to give, to consecrate one's life on the altar of the greatest of all causes, that of helping humanity.

To attain this goal of self conquest, we need guidance, we require the help of a teacher who has passed through the mystical resurrection, who has made the greatest of adventures successfully. The wisdom and love, the compassionate seership of such a teacher unlocks the heart and mind for us. It is a mystical process.

If we are content to wait for the natural processes to bring about this resurrection, we may wait eons and endure the agony of the cross along with the enduring life-wave of humanity. Yet at any time we may step forward, make an inner call for help and, if we have the character to live by this call, we can put our feet on the

short cut, we can find guidance.

Our teacher has called the Universe a Tree of Life with its roots in the heart of being, its branches the planes of Universal Life, its fruits — man and gods — at once the fruit and the seed. This tree is often called the cross. Nothing seems so important to me as knowing about this Cross of Universal Life. The process of passing from an unself-conscious godspark to self-conscious godhood brings into being a dark side and a light side of life. The great adventure is victory over this cross. The misery we see in the world is just this.

There are two symbols that we associate in our minds with the cross. One is wings and the other is the spear or sword. They remind us that we must arouse our imaginations, direct our thoughts toward the hid wonders of the universe before we can ever pass consciously through them. Plato said *nous* alone furnishes with wings: *Nous*, the higher mind, the intuitions and aspirations.

The sword is the symbol of the spiritual will which must come into action. It must come forth to help us to successfully resist temptation to do wrong or to be less than we *are*. Resurrection and renunciation seem to me to form a cross, to be vitally related. We find ourselves when we lose ourselves, but first we must want to! Like attracts like. Where we center our secret thought, there shall we be.

If we could take away from this meeting today a recognition of what it means to watch our thoughts, and how we translate this urge of our inner life which drives us always, we should have found a helpful key. Even when we come here into the Temple where our higher selves are more consciously at home than anywhere else because we come seeking light, if we were kept here several hours, what would happen? There would come that

urge to be on our way. One reason for this is that we have not learned to concentrate on spiritual things so positively that we can be quiet, be still and take instruction. Another reason is the fact that the Teacher can not walk for us. He can awaken our minds and stimulate fresh aspirations; then we must each walk the path. This is what the Lord Buddha meant when he said in the closing words of his life, "Brothers, all that is is composite and transitory, therefore work out your salvation."

In this school of the Universe we are taught that "the struggle for the eternal is not in the daring deed nor yet hundreds of them. It is the calm, unbroken forgetfulness of the lower self for all time," and in the realization that we each have within us "that same guide that the Masters possess." By obedience to it we may become what they are.

Initiation is the process of man's resurrection, raising him from manhood to Divinity, the blossoming of Truth. All nature is singing to us of this glory. If you have a garden you must feel this wonder of life daily. We can, if we try, feel just as the flowers feel when raising their faces to the morning sun, for we have been flowers. We have been the stone, the gold, the diamond, as we rose in the mineral hierarchy. The impersonal lily, the rose, all these secrets are locked up in our nature and when we are more self-conscious in a more impersonal manner we may be able not only to feel that thrill of joy that the flowers and trees feel, but we must identify ourselves with the sun itself. The *Bhagavad-Gita* says the sun is the gate of the paths which lead to the gods.

We are taught that the process of Initiation is the digestion of the truths of the universe. See how important it is, how noble and uplifting to study Theosophy, the wisdom of the gods, to spend our evenings studying together these lofty inspiring truths, to think of them when we wake in the morning and the last thought

as we fall asleep. This indeed is the process of identification with the Great Silence, the Radiant God within us and our only possible hope of ever blossoming into a Lord of Meditation, a great power in the Hierarchy of Compassion.

"YOURS TILL DEATH AND AFTER, H.P.B." (1) — William Q. Judge

Such has been the manner in which our beloved teacher and friend always concluded her letters to me. And now, though we are all of us committing to paper some account of that departed friend and teacher, I feel ever near and ever potent the magic of that resistless power, as of a mighty rushing river, which those who wholly trusted her always came to understand. Fortunate indeed is that Karma which, for all the years since I first met her, in 1875, has kept me faithful to the friend who, masquerading under the outer *mortal* garment known as H. P. Blavatsky, was ever faithful to me, ever kind, ever the teacher and the guide.

In 1874, in the City of New York, I first met H. P. B. in this life. By her request, sent through Colonel H. S. Olcott, the call was made in her rooms in Irving Place, when then, as afterwards, through the remainder of her stormy career, she was surrounded by the anxious, the intellectual, the bohemian, the rich and the poor. It was her eye that attracted me, the eye of one whom I must have known in lives long passed away. She looked at me in recognition at that first hour, and never since has that look changed. Not as a questioner of philosophies did I come before her, not as one groping in the dark for lights that schools and fanciful theories had obscured, but as one who, wandering many periods through the corridors of life, was seeking the friends who could show where the designs for the work had been hidden. And true to the call she responded, revealing the plans once again, and speaking no words to explain, simply pointed them out and went on with the task. It was as if but the evening before we had parted, leaving yet to be done some detail of a task taken up with one common end; it was teacher and pupil, elder brother and younger, both bent on the one single end, but she with the power

and the knowledge that belong but to lions and sages. So, friends from the first, I felt safe. Others I know have looked with suspicion on an appearance they could not fathom, and though it is true they adduce many proofs which, hugged to the breast, would damn sages and gods, yet it is only through blindness they failed to see the lion's glance, the diamond heart of H. P. B.

The entire space of this whole magazine would not suffice to enable me to record the phenomena she performed for me through all these years, nor would I wish to put them down. As she so often said, they prove nothing but only lead some souls to doubt and others to despair. And again, I do not think they were done just for me, but only that in those early days she was laying down the lines of force all over the land and I, so fortunate, was at the centre of the energy and saw the play of forces in visible phenomena. The explanation has been offered by some too anxious friends that the earlier phenomena were mistakes in judgment, attempted to be rectified in later years by confining their area and limiting their number, but until some one shall produce in the writing of H. P. B. her concurrence with that view, I shall hold to her own explanation made in advance and never changed. That I have given above. For many it is easier to take refuge behind a charge of bad judgment than to understand the strange and powerful laws which control in matters such as these.

Amid all the turmoil of her life, above the din produced by those who charged her with deceit and fraud and others who defended, while month after month, and year after year, witnessed men and women entering the theosophical movement only to leave it soon with malignant phrases for H. P. B., there stands a fact we all might imitate — devotion absolute to her Master. "It was He," she writes, "who told me to devote myself to this, and I will never disobey and never turn back."

In 1888 she wrote to me privately:

Well, my *only* friend, you ought to know better. Look into my life and try to realize it — in its outer course at least, as the rest is hidden. I am under the curse of ever writing, as the wandering Jew was under that of being ever on the move, never stopping one moment to rest. Three ordinary healthy persons could hardly do what *I have* to do. I live an artificial life; I am an automaton running full steam until the power of generating steam stops, and then — good-bye! . . . Night before last I was shown a bird's-eye view of the Theosophical Societies. I saw a few earnest reliable Theosophists in a death struggle with the world in general, with other — nominal but ambitious — Theosophists. The former are greater in numbers than you may think, and *they prevailed*, as you in *America will prevail*, if you only remain staunch to the Master's programme and true to yourselves. And last night I saw .'. and now I feel strong — such as I am in my body — and ready to fight for Theosophy and the few *true* ones to my last breath. The defending forces have to be judiciously — so scanty they are — distributed over the globe, wherever Theosophy is struggling against the powers of darkness.

Such she ever was; devoted to Theosophy and the Society organized to carry out a programme embracing the world in its scope. Willing in the service of the cause to offer up hope, money, reputation, life itself, provided the Society might be saved from every hurt, whether small or great. And thus bound body, heart and soul to this entity called the Theosophical Society, bound to protect it at all hazards, in face of every loss, she often incurred the resentment of many who became her friends but would not always care for the infant organization as she had sworn to do.

And when they acted as if opposed to the Society, her instant opposition seemed to them to nullify professions of friendship. Thus she had but few friends, for it required a keen insight, untinged with personal feeling, to see even a small part of the real H. P. Blavatsky.

But was her object merely to form a Society whose strength should lie in numbers? Not so. She worked under directors who, operating from *behind the scene*, knew that the Theosophical Society was, and was to be, the nucleus from which help might spread to all the people of the day, without thanks and without acknowledgment. Once, in London, I asked her what was the chance of drawing the people into the Society in view of the enormous disproportion between the number of members and the millions of Europe and America who neither knew of nor cared for it. Leaning back in her chair, in which she was sitting before her writing desk, she said:

"When you consider and remember those days in 1875 and after, in which you could not find any people interested in your thoughts, and now look at the wide-spreading influence of theosophical ideas — however labelled — it is not so bad. We are not working merely that people may call themselves *Theosophists*, but that the doctrines we cherish may affect and leaven the whole mind of this century. This alone can be accomplished by a small earnest band of workers, who work for no human reward, no earthly recognition, but who, supported and sustained by a belief in that Universal Brotherhood of which our Masters are a part, work steadily, faithfully, in understanding and putting forth for consideration the doctrines of life and duty that have come down to us from immemorial time. Falter not so long as a few devoted ones will work to keep the nucleus existing. You were not directed to found and realise a Universal Brotherhood, but to form the nucleus for one; for it is only when

the nucleus is formed that the accumulations can begin that will end in future years, however far, in the formation of that body which we have in view."

H. P. B. had a lion heart, and on the work traced out for her she had the lion's grasp; let us, her friends, companions and disciples, sustain ourselves in carrying out the designs laid down on the trestle-board, by the memory of her devotion and the consciousness that behind her task there stood, and still remain, those Elder Brothers who, above the clatter and the din of our battle, ever see the end and direct the forces distributed in array for the salvation of "that great orphan — Humanity."

The Theosophical Forum

THE THREE BROTHERS — *George Simpson*

One of the most mysterious of all nations in our occidental world is a people known today as the Celts. It would seem from the study of the remnants left to us that those people had an evolution in which the very highest of the ancient mystery schools had an embodiment lasting for hundreds of years at least. But for the Theosophical student that period runs back to thousands of years; in fact, by the Theosophical philosophy a clearer vision can be obtained, because it shows that this people that we today call the Celtic people were inheritors of a system of philosophy that had been worked out and lived in a period that far antedated their own dawn as a nation.

These islands were known in ancient days as the Sacred Isles or the Isles of the Mighty, and the old philosophy that was taught and lived there can be summed up today in a way that still shows the same universal keynotes of all philosophies. This teaching of the Celts was presented by the systems of triads, in which three of course is the key-figure. It corresponds to the symbol of the triangle, the two sides and the base; which is only another way of expressing the universal three, whether you speak of Brahma, Vishnu and Siva, or the three logoi of the Grecian system in connection with our own Christian religion: Father, Holy Ghost and Son, or Body, Soul and Spirit, as we would say with Paul — soul and spirit beginning at the other end of the triad.

Now let us see whether we can tell an old Welsh bardic tale that illustrates from a Theosophical point of view the composite nature of man. In telling these old tales no stage need be set; they were told in few words, and the action was swift. It ran something like this:

There were three brothers. The eldest was known as the Lord of Harmonies. He was able to hear the most secret of all music — that which issues forth from the Voice of the Silence, the Music of the Spheres. The wind as it passed through the trees was audible in its inmost self. He knew the music made by the growing grass, and the rhythm of the atoms in the lowest forms of life; he could hear them all; and hearing, he knew the story of their birth and their evolution and the ultimate attainment from the lowest to the highest.

But he had a brother somewhat younger than himself, and he was the Lord of Clear Vision. Nothing could be hid from his gaze. Not only the visible worlds, but the invisible worlds were open to him. He could see the rhythm and majesty of all things. He could divine with his vision not only the past and the present, but he could see the future with understanding.

Another younger brother had that gift too, but he as yet was young, and the responsibilities of life had rested but lightly on his shoulders. And as time passed on he became impatient in this land of harmony and beauty, so that the second brother became alarmed and went to the older brother whose wisdom he knew would give him guidance in this matter. The elder brother listened, and a smile came to his face, and he said to the second brother, "Go get the Gloves of Gwron and put them on the hands of the younger brother."

And this was done: and the minute the gloves were put on the hands of the younger brother he turned and looked on the far horizons and felt in need of adventure. And the gloves themselves seemed filled with magic that lured him, and he began to work and weave and create things with his hands, and in this weaving wonderful things happened. The face of the world itself began to change, and new cities arose, and new peoples filled them, and

still the work swept on and on. Civilizations rose and fell. Each time it seemed that he would build to a higher and higher peak — and yet there was something lacking, something seemed to sweep in and destroy the work. Yet again and again the urge of the magical Gloves drove him to try once more. And when it seemed to come within his grasp that something could be builded that would be lasting, a mighty wind swept in, in which man turned against man and cities fell, each one more swiftly than the last, because the Gloves had forged weapons that carried grim and dire destruction.

And when that wind had died away and desolation was everywhere, he stood to wipe the sweat from his brow, and in doing so he pulled off one of the Gloves — and lo! once more vision came to his eyes and there he beheld with him his brother the Lord of Clear Vision — and something in that clear look that he gave him told him that in all his labors and peregrinations he had never left his side. Clear vision should be his the minute he might ask for it. And as he looked and beheld the inner splendor he heard familiar harmonies, and there beheld his brother the Lord of Harmonies, and knew once more the peace that only the Voice of the Silence can bring.

.....

There is the story that has been swept down like a tiny bark along the river of time. And to a student of Theosophy its inner meaning is one of beauty, because there you have man's own composite nature. His inner divinity, his spiritual self, linked with the intellectual self, that human child which through evolution attains at-one-ment with its Higher Self.

And so in countless stories of similar nature and wondrous beauty you find, like the pearl in the oyster, the jewel of truth left by the Bards of old; and perchance we may at some other time

meet around the ancient hearthfire and through the twinkle of the flames that leap upward hear once more the voice of the ancient Bard as he strums his magical harp and tells his tale, bearing the old, old truths that today Theosophy has brought back once more — dressed in the garb of this modern time, and yet the same old truth of long ago.

The Theosophical Forum

SOCRATES — *Ingo Burmester*

Socrates, the Greek teacher-philosopher, effectively spread many new philosophical concepts, which have been influential down to our own times. The reasons for this influence are not far to seek. They lie in the originality and the inspired quality of his thought and of his methods of teaching.

In his personal life Socrates achieved a marvelous measure of physical and mental control. Initially he had a strong, though ugly, body. Whether natural or developed, he showed an unusual disregard for physical hardships. Both his physical and moral courage are evidenced by records of his military career and later by his attacks on current Athenian governmental abuses. Most of his life (470 to 399 b.c.) was spent in his native Athens.

What we know of Socrates is uncertain. He wrote nothing himself but there is plenty of information available about him, even though most of it is of a contradictory nature. Aside from numerous minor references placing him historically, the real nature of the man and his philosophy are gleaned from three authors. Aristophanes, the poet, caricatured him in his "Clouds." Xenophanes, a disciple and devoted admirer, wrote at length in defense of his memory. But Xenophanes did not truly understand the philosophy of Socrates, so his plaudits do not make a good basis for a real analysis of the philosophy. Most of what we know about Socrates comes from the "Dialogues" of Plato, who was a pupil. Most authorities think that the naturalness of Plato's treatment of the Socratic theme makes it more than likely that he attributed much to Socrates which was in reality highly colored by his own ideas. Whatever is the case, there have been attributed to Socrates, by interpreting and checking the

obtainable data, a definite historical background and a derivative or original philosophy.

Socrates claimed no origin for his beliefs except himself and his guiding *daemon*. However, because he spent a lifetime talking with and teaching a great many of the inhabitants of Athens, including many of the best minds of the time, it can be considered that he absorbed many ideas through his associations.

He consecrated his life to teaching, to awakening a moral consciousness (an awareness of real moral content and value), and to the effort to stimulate the impulse in people to seek self-knowledge. He was started on this path by the guiding and impelling force of mystical experiences. The power in the experiences consisted of what he called a *daemon*. This entity instructed by informing him of what he *must not do*; otherwise it allowed him free rein. One such injunction was to refrain from politics. Socrates believed this guidance to come from a divine, all-knowing, ethical source. He obeyed it implicitly, so it must be conceded that he did not consider the possibility of its being a keen *conscience*, subject to the limitations of such a function. Whatever is the case, it led to his death and a great antipathy to his immediate memory.

In accord with the trend of his times, Socrates' teachings and teaching were based on moderation and reason. He believed that the souls of all men have garnered knowledge somewhere, apart from their present body, and that the mind of that soul, with help, could be made to remember. In light of this, he introduced the Socratic Method of teaching. To be fair, Zeno, a pupil of Parmenides, used it first; but Socrates developed the method and illustrated its full usefulness. Socrates asserted that his wisdom lay in that he knew nothing; that all men knew nothing; that knowledge was obtainable, but that up to date only divinity was

knowledge. The Socratic method is the asking of leading, pointed questions for the purpose of eliciting answers that will lead the student to a truth without the teacher's having imparted any information. This hinges on the ability of the teacher to ask the right questions. Today this method is generally considered appropriate only to dialectical discussion — such points as pertain only to the logical association of already established fact or opinion — but is unsuited for the discovery of factual data.

The doctrine expounded by Socrates does not appear to be grounded on any basic, initial, philosophic ideas. This is because his method of teaching demanded that he approach each prospective student differently, and consequently he arrived at seemingly opposed conclusions. Socrates did affect many excellent minds of his day, and so we must conclude that his philosophy had a fundamental grounding. Otherwise it would never have satisfied some of the questions prevalent in that era. Let's put it this way: Socrates tried to and did establish an approach to knowledge. Had he not been able to excuse and defend such an approach by satisfying previous philosophical controversies, his own premises would never have been granted.

Socrates' main doctrine was that knowledge, aside from its objective aspects, such as apparent utility, has a subjective side. He considered this idea primarily with regard to ethical questions. True knowledge regarding them was only established when they could be defined. This doctrine has received much philosophical attention. This is because it raised many questions not previously considered. As an example: true knowledge, for the Sophist, was information that had utility. Socrates opposed the Sophists and defeated this idea on many occasions. This was his reasoning: to inquire about existence, we must have *ideas* of this existence. These ideas are garnered, by inductive methods, from our surroundings. The validity of these ideas can not be

surely established till we know the nature of the entity holding them. So man must first seek to know himself. This knowledge of self affords concepts from which to deduce the real nature of the idea. He believed that no one ever wittingly acts wrongly. So then, to act right, with knowledge, is virtue. Knowledge is virtue. There is but one knowledge, so there is but one virtue and it leads to happiness.

He applied this doctrine to the moral and ethical concepts of the time. Socrates' endeavor was to find a permanent, true code of behavior and so insure the welfare of all. But in doing this he did two other things: he incurred the animosity and hatred of those too lazy to think; and worse, he attacked the state by attacking the maxims and ritual of its religion. He was impeached, and rather than retract and stop his teaching, he sentenced himself to death. Another cause for his impeachment has been suggested: it is that he was divulging secret information of the Orphic Mysteries. This act was punishable by death.

Till the time he drank the Hemlock Cup, he believed that he was an emissary of God; had a responsibility to the world which he could not shirk. He must teach people what he knew and make them wish to search for knowledge for its sake alone. Socrates had a marked effect on the present. His theory of knowledge has fashioned and altered all succeeding philosophy and consequently the course of all peoples contemporaneous with that philosophy.

POWER OF THE SILENCE — *Alexandra McLean*

When we come into sympathetic relationship, into identic vibrational frequency, with this innerheart-beat, this pulsing of the Divine, then our lives are made over. — G. de Purucker

Who among us has not longed for silence? In the confusion and discordance of modern living, how ardently at times we long for silence. And this desire, this urge within our hearts — perhaps we may call it an "echo" of the *Voice* of Silence. Aware of it, we begin to seek.

Undoubtedly there are remote places on our planet Earth where relative silence may be found. On some high mountain top above timber line, we may be alone, become very tranquil and listen to the silence of the heights. But this is not the Absolute Silence. At best, it is but a poor substitute. The desert also at times offers a majestic stillness that is akin to Silence, but the Reality is not there. No matter where we go in the external world, high or low, near or far — nowhere upon the *outside* of our globe of awareness, will we find SILENCE.

What is the *Power* of this Silence, why should we seek it? The answer may be happily and aptly expressed by the Sanskrit words that the Hindu Guru speaks to his chela when, after questioning him as to his understanding of the Unity of all, the chela makes answer: "O Gurudeva, I see no difference between life and life, and light and light, and power and power, and mind and mind, except in degrees." To which the Guru makes reply, "Thou seest well, child. Now listen to the heart of all this teaching: AHAM ASMI PARABRAHMA." The meaning is: "I am the Boundless, I myself am Parabrahma for the life that pulses in me and gives me

existence is the life of the divinest of the divine."

Therefore, we seek the Inner Realm, the SILENCE — in which we may find this Reality. With true "Christ-Wisdom" the Master Jesus told his disciples, "But thou, when thou prayest, enter into thy closet and when thou hast shut thy door, pray to the Father which is in secret. . . ." And when we have gone within and closed the door — what is our prayer? Is it not a humble but expectant listening? Is it not a giving over of our personal self to the "Father Within," the ONE, that the Power and the Glory may use us? Having in-gathered all our senses, having shut the door to the outer and entered the Silence, we become aware in increasingly glorious degrees of our SELF and are illumined and filled with the *power* of the Indwelling Divinity.

The *Power* of Silence is unifying and in that unity there is strength, for we become part of the Hierarchy of Wisdom-Love in action. "It is one of our Theosophical duties to show men the way to wisdom, to peace, to happiness, to strength and to spiritual powers — the real powers, the powers which are safe and clean and sweet, which make a man lovable, which make him compassionate, which guarantee that power put into his hands will be wielded never for self but always in order to benefit others . . . man must learn the first lesson of the Higher Occultism . . . which is to control himself; and all powers that later he gains must be laid on the altar of impersonal service — on the altar of service to mankind."

The *Power* of Silence is vitalizing for we become one with the "fountain of strength." "Oh, how wonderful, holy, sublime . . . is this truth: that within each one there is an unspeakable fount of strength, of wisdom, of love, of compassion, of forgiveness, of purity. Ally yourself with this fountain of strength: it is in you, none can ever take it from you."

The *Power* of Silence is harmonizing, and in unity, strength and harmony our sevenfold being becomes integrated. A Sage of modern India, Rabindranath Tagore, has said, "It is for man to produce the music of the spirit with all the notes he has in his psychology. . . . In music man is revealed and not in noise."

The *Power* of Silence is creative. At-one with the Source, Truth which is inherent seeks to express and our rising aspirations will carry within them the power to *become*. "For God hath not given us the spirit of fear; but of power, and of love, and of a sound mind." (2nd. Tim. 1:7)

The *Power* of Silence is Peace. We become part of, aware *in* — the great Cosmic Peace, a profound Peace that may be transformed in our outer lives into dynamic action expressing wisdom-love in all our dealings with our fellow men.

And now — the *Power* of Silence completely absorbing us, we hear, we know, we understand; and the silence of earth, water, air and fire, merges in the "Song of Songs" that wells within the SILENCE of OUR-SELF. "You reach the Great Quiet, and mighty strength. You touch the vast reservoir where are stored up all the greatest forces of the Universe; for the very heart of each one is in actual fact the heart of the Universe — a "heart" which is not localized but is everywhere. . . ."

And ONE is the Kingdom, and the Power, and the Glory — forever!

"AHAM ASMI PARABRAHMA."

The Theosophical Forum

EVOLUTION — *Allan J. Stover*

The term evolution is employed here in its original sense of unfolding or unwrapping from within; as of a seed or bud. Organisms are, indeed, influenced by environmental factors, but the way in which the organism responds to one or another influence is determined by what is latent within it as a part of its inner nature. Fundamentally, the heart of any being has within it numberless phases of character and specializations of form awaiting opportunity to manifest. Then, when nature presents the proper conditions, there is a response and new characteristics appear. That this is so is shown by recent experiments in which a series of transplant stations were established across the State of California. Carefully bred seedlings from identical plants were transplanted at intervals across the State from the coastal plain through the coast range, interior valleys, foothills and Sierra Nevada Mountains to the desert valley east of the mountains. The experiment resulted in many variations in size, form, color and general appearance.

Darwin attempted to show by his discoveries that, because of outside influences, evolution proceeded by a transformation of one form into another. Thus, while the theories of Darwinian evolution, including the survival of the fittest, the origin of species and the influence of heredity and environment, may appear to be true, it is only within the smaller groups such as the genus and the species that they hold good and, then, only in appearance. In the constantly changing phases of geological history, Nature has provided many opportunities for unfolding varying aspects of character. There are many parts to be played on the stage of life and, as in a school, the student is required to study many subjects in order to become a well-balanced man or

woman.

Physical bodies are merely the houses of life in which all egos live while learning the lessons possible under particular conditions. When the ego has mastered the lessons of one condition, it passes on to other homes better fitted for its new evolutionary status. It is this inner evolving self, whether of a man, an animal, or a plant, that is the compelling force in all evolution. Today, scientists are coming to realize gradually that chance and outside influences have little to do with true development. They are a means but not a cause. Darwin said that intelligence arises first when organisms begin to cooperate. In recent times, Dr. Osborn has stated that there is an unexplainable and mysterious factor which he calls, "creative aristo-genesis"; that is, a creative urge originating in the higher portion of each being which is the cause and directing force behind evolution.

Dr. Robert Broom in his presidential address before the South African Association for the Advancement of Science in 1933 said, "The origin of species and much of evolution appears to be due to some organizing and partly intelligent spiritual agency associated with the animal or plant, which controls its life processes and tends to keep the being more or less adapted to its environment." "But in addition to this there seem to be other spiritual agencies of a much higher type which have been responsible for what may be called greater evolution — the evolution of vertebrates, the steady advance from fishes to amphibians, to mammals, and ultimately to man." With the exception that it is the indwelling life and not the house in which it lives which advances from class to class, the Theosophist finds the above quotation very well stated.

In studying nature, we find that each group of organisms, such as a genus or family, has a lifetime consisting of a birth, a youth, a

maturity and a death; as does each individual composing it. Moreover, each individual recapitulates the history of the race to which it belongs. This is supposed to be the case with transformations such as that of a caterpillar passing through a series of changes to become the winged and colorful butterfly. In the case of the higher animals, the recapitulation takes place quickly during the embryonic stage. In fact, all living things begin life as a single cell and pass along the evolutionary path as far as they may or as they are evolved to do. In general plan, all follow the same pathway until they reach their particular station in life and, there, they stop. It is this which binds nature together in an organic whole, linking each life with every other life.

The plant body contains mineral and vegetable substances, the animal body mineral, vegetable and animal substances: each kingdom includes something of the preceding kingdoms within it. What, we may ask, made these grooves of evolutionary progress in the first place? Did man pass through each of the lower types of life in turn, as the Darwinists suggested? Suppose we take a single illustration. Theosophy tells us that man was once a globular mass of light, without organs or physical form. The microscope reveals numerous creatures both plant and animal which are gelatinous, single-celled beings without organs. Nevertheless, man was never an amoeba. Neither was he ever a rabbit; although mammals follow now the general pattern of man's structure at the present time. In succeeding eras, the animals will adopt, so far as they are able, the human "style" of that period. Thus it is that all things aspire to manhood, and man, in his turn, aspires to godhood. This current of evolution has been diagrammed as a ladder or tree of life, symbols which are full of significance to the intuitive student.

A study of earth history shows that evolution is not a steady process, but moves in cycles and, at certain times, change and

development are rapid. In this, it resembles an examination; for many types of both plant and animal life fail to make the grade and are destroyed. The others, under the stimulus of rapidly changing conditions, adapt themselves to the new surroundings and become the types of the new age. Then follows a time of slow almost imperceptible growth or advance until another revolution of rapid change approaches.

What is learned from a study of the evolutionary development of plant and animal life is much more important than is generally supposed. A former Leader of the Theosophical Society, Dr. G. de Purucker, has stated repeatedly that all things follow one law, for small cycles repeat on a small scale the same pattern that large cycles pass through on a larger scale. All things follow the pattern of and contribute to all other things in a vast system of cycles, or wheels within wheels, that proceeds throughout universal nature. This being so, we find within our own experience instances of the same course of action as is recorded in the pages of the geological strata. When the student of Theosophy comes upon a time or cycle in which study is difficult and progress seems at a standstill, he or she should remember that a true evolution of character is being experienced. The student, by aspiration, has called upon the Higher Law and, in evolving through self-directed effort, is beginning to work in harmony with the rhythm of universal nature. Having once experienced evolution within ourselves and watched the cyclic development of some faculty, we have a basis for understanding all evolutionary progress. We have made that knowledge a part of ourselves by observing and considering our own experience. The test of any law of nature lies in its universality and so we see the patterns which are unfolded in a study of geological history repeated in lesser cycles of all kinds. If we study the problems and cycles of daily life in the light of this knowledge, we are taking the first step in a self-directed

evolution.

There are many parallels between the life of a race and the life of an individual. One of these is the fact that, as a life stock becomes old, it loses its ability to adapt itself to new conditions if it has become fixed or crystallized in its habits. This is as true of a race as of an individual. In general, any abnormal specialization is a sign of old age and of approaching extinction. It is an evidence of a departure from the main evolutionary stream and an entering upon some purposeless and egoistic trend which not only comes to a quick conclusion but uses up the store of vital energy. This leaves the individual unable to cope with the tests that come at periodic times.

True evolution is inspired by the inner self. The useless specializations are often due to portions of an organism "going on their own." Middle lines are necessary if a race or an individual is to live to a ripe old age. We may picture the life course of a family, whether plant or animal, as a current or stream of life in which the middle portion continues to the end. Here and there side streams develop and branch off, only to become extinct. The history of living things shows that an enormous number of plant and animal types have vanished, as out-moded vehicles, while the best adapted have continued to evolve and are still with us today. Human evolution is similar. Study literature, art, architecture, social customs, etc. and see how soon after specialization sets in with needless ornament or luxury, a rapid decline begins. The great value of a study of nature is that it shows us how closely we ourselves are linked with the universe in which we live. In a very real sense we are an epitome of that universe, builded of its materials and following its laws.

MAN KNOW THYSELF — H. Minot

How nearly do we approach hidden truths when, with an open mind, we seek to understand the ancient religions? What secrets can we rediscover in myth and legend? What, indeed, were the early shrines sacred to the gods of prophecy? Why, when man asked foreknowledge of these gods, should he be enjoined to know himself?

To have knowledge of himself was to know his relation to everything around him, and to understand that all these things — himself included — were lives in a still greater life. Man, the Earth, other worlds and solar systems were parts of a vast Universe, and this was but a child of other and greater universes. To comprehend the workings of his own consciousness was to have the power to extend that consciousness until it should embrace the Universe itself, and to feel with the sure touch of sympathy the pulse-beat of every living thing within that Universe. Thus, if he could not be his own prophet he was, at least, better fitted to interpret the words of those who were the messengers of the gods. Still more important — if he *knew* himself, knew his motive, the hidden purpose of his desires, and the strength of his own will to direct those desires for the good of all, he could make no mistake in the answer given to his questions. Had Croesus really known himself, Lydia would have not been lost to him.

Again: do we moderns understand the attitude of the ancients toward prophecy? Do we not judge them by our own standards, even by our own limitations? And does this not account for our somewhat cynical attitude toward the supposedly ambiguous replies of the oracles? A man wishes converse with the gods.

Unless the individual were unusual — that is, highly intelligent or, more important, spiritually developed — this would be possible only through some mediator (the oracle). Even then, the message that came would mean nothing to the man unless he were fit to understand it — the gods do not rule a man's life; they merely gave him a greater opportunity to rule it for himself. And therefore, the injunction at Delphi — Man Know Thyself.

What is it to know oneself? Which self? Shall one concentrate on the failings of the imperfect human self, seeking thus to be armed against them and, little by little, shrink into a still smaller self? Or, shall one reach out to the greater Self within him, and by constant aspiration come to associate, and be one, with it, thus raising the imperfect self? There is magic in the thought of interpreting the oracle in the light of the greater understanding of that Higher Self. Delphi was sacred to Apollo, the sun-god. Man, in his inmost being, is a "son of the Sun." What wonder, then, that he was enjoined "to know himself"?

If we know so little about ourselves, how then, shall we have the temerity to "sit in judgment" upon others? The more we have plumbed the depths of our own natures, the less shall we be likely to assume such an attitude, for comprehension brings compassion. Perhaps this quest for knowledge of our real Self is for the express purpose of making us more understanding of others, of their real Selves. It is something to think about, anyway. And, after all, what is Man? A universe in little, and an atomic life in the Universe surrounding him.

AT HOME IN THE UNIVERSE — *Alexandra McLean*

Everyone is rooted in the common fountain of Cosmic Life
— Intelligence — Substance.
— G. de Purucker

What and Where is our real home? Preceding the seven stanzas on Cosmic Evolution from the secret book of Dzyan, as set forth by H. P. B. in *The Secret Doctrine*, we find a wondrous poem. It is too long to quote in full, but the answer to *What* and *Where*, seems to be

"Gazing into eternity . . .
Ere the foundations of the earth were laid,
Thou wert. And when the subterranean flame
Shall burst its prison and devour the frame . . .
Thou shalt be still as Thou wert before
And knew no change, when time shall be no more.
Oh! endless thought, divine ETERNITY."

And then H. P. B. points out that "The word 'Eternity,' as understood in Christian theology has no meaning to the Asiatic ear, except in its application to the ONE existence." (S. D. p. 35) And to this ONE existence we all belong. Our HOME, in its infinite aspect is the Boundless. But she also points out — "The reader has to bear in mind that the Stanzas given treat only of the Cosmogony of our own planetary System. . . . The secret teachings with regard to the Evolution of the Universal Kosmos cannot be given. . . . Moreover the Teachers say openly that not even the highest Dhyani-Chohans have ever penetrated the mysteries beyond those boundaries that separate the millions of Solar systems from the 'Central Sun,' as it is called." (S. D. p. 13)

However, we are also taught "As above, so below." And the Talmud offers, "If you would know the invisible, open wide thine eye upon the visible." Therefore, looking upon the visible, we know that our planet is part of our Solar System and that the Solar System is a part of our Great Galaxy, which in turn is a part of something much greater (about which it were foolish at this time to speculate). Nevertheless, of "That Greatness" we *are* a part and the glory of the concept leaves us wordless.

From the vastness of this truth, which is like looking through a great telescope, we turn our attention to the minute concepts of our immediate homes which is indeed a microscopic view. But it is *here*, in our present environment, we must start the process of alchemization, changing self to SELF. Gradually — moment by moment, day by day, year by year, life by life unfolding 'That' which we ARE. Growing by sharing, expanding by giving, unifying, by love and compassion for ALL.

There is a current phrase with which we are all familiar, "One World." It seems worthy of deep and sincere effort on the part of all students of the Ancient Wisdom to help bring this ideal into actuality. How are we to do it? The ten 'Paramitas' or glorious virtues of right living, point the way. They are as ten golden links in a chain of Truth and if we add the 'Seven Jewels of Wisdom' (the seven basic operative laws) we indeed have a magic talisman, the means to self-directed evolution and harmonious expression to all.

Every great Sage and Teacher, from earliest times to the present day founder and leaders of our own Theosophical Society, have stressed the idea of UNITY. They have taught us the 'oneness' of all the brotherhood that is a *fact* of Nature. They have shown by word and deed that cooperation, compassion, overcoming evil with good is the only efficacious — the true way.

In the small book, *Golden Precepts of Esotericism* the very heart beat of Divine Love is felt and the Voice of Wisdom speaks through the kindly and sincere efforts of Dr. de Purucker, who offers us gems from the archaic teachings. Consider this (p. 11): "Man is an inseparable part of the Universe in which he lives, moves and has his being. There is no separation whatsoever between his roots and the roots of the Universe, there is no distance between them. The same Universal Life flows through all things that are. The same stream of Consciousness which flows in the mighty whole of the Universe, flows therefore through man, an inseparable portion of the Universe. . . ."

Is this not a sublime thought, worthy of becoming a living part, an activating unit in our consciousness? And if we accept this as Truth, what wonders open to us! We begin to *feel* a brotherhood with every living, evolving entity. We see beyond-*within* the myriad forms of Nature, the beauty, the harmony, the glory of LIFE. Grass, flowers, trees — seem growing in our very hearts. Our breath mingles with the breeze, the fragrance of the rose becomes a part of us. A great and constant change merges and blends throughout ALL.

We have each in our own way and in varying degrees, experienced these moments of soul-expansion. Perhaps on a mountain top above the timber line, we have communed with the Stars. Silently, in reverence — we have looked upward, lost all sense of our tiny self and entered a vaster world. "Something" entered our hearts, mingled with our awareness and surely "Something" went *from* our hearts in gratitude and blended with the 'Heart of the Stars.'

Perhaps the ocean or the desert in their vastness have conveyed to us a feeling of rhythm, power, silence, mystery, and for a time, the sense of personal smallness was lost. We *became* in

consciousness a 'conscious' part of their magnificence.

It may be some tiny, so-called weed, or wild-flower, has by its delicacy and minute perfection led us into a feeling of almost adoration — as we contemplated and thought of its cycle of involution-evolution, of its expression of beauty (it also — rooted in the Universe!).

Now this being so — each of us then finds it easier to feel we truly *are* brother with our fellow men, irrespective of race, color, creed. Humanity is ONE, the "Manas" element of our Earth Planet.

LIFE is the great mystery, an eternal expression of the Boundless. But *our* life is the expression of this Great Life through us, an evolving entity; and by every thought, word and deed, we are either helping or hindering the harmonious expression, not only of ourself but of a larger unit (and also of billions of smaller units). We make ourselves significant in the unfoldment of higher forms of life expression as we align ourselves with the basic truth of the *Unity* of All and consciously cooperate for the glory of all. We should be alert, no matter where we are — alert to the truth of Brotherhood and act it, express it, by word and deed.

We know that every being and every race has its own destiny to unfold, but each part is necessary, a part of the Great Whole. St. Paul in writing to the Corinthians gave these words. "For the body is not one member, but many. . . . If the whole body were an eye, where were the hearing? If the whole were hearing, where were the smelling? . . . And the eye cannot say unto the hand, I have no need of thee: nor again the head to the feet, I have no need of you. . . . That there should be no schism in the body; but that the members should have the same care for one another. And whether one member suffer, all the members suffer with it; or one member be honored, all the members rejoice with it." Is this not analogous to the human family, are not all human beings in

truth members of one body, which we call Humanity? It is obvious, we *know* it — but we do not *act* as if we knew it.

The heart essence, the inmost of each, is an unseparated part of the Universe. Our Home *is* the Universe and we can not be lost from it. As the Psalmist sang in the ecstasy of his knowledge of the all-pervading presence of God — "Whither shall I go from thy spirit, Or whither shall I flee from thy presence? If I ascend up into heaven thou art there: if I make my bed in hell, behold thou art there. If I take the wings of the morning, and dwell in the uttermost parts of the sea: even there shall thy hand lead me, and thy right hand shall hold me."

What stupendous possibilities unfold in our consciousness as we realize our home is *not* our body, our town, nation, race — not even our planet — but the "Universe." All of us, each one, an unseparated part of it, evolving, unfolding our innate Divinity and at the same time helping our younger brothers to progress and unfold *their* Divinity.

"ONE WORLD" surely! A world in which "Charity and immortal love" are more than a rule of conduct; where they are the natural and spontaneous outpouring of all hearts toward all because each "urgently desires to become a center of benevolent radiance." ONE WORLD, whose humanity sings its blended harmony in perfect accord with all the other "worlds" in our great Universe. ONE — with no schism.

Again referring to *Golden Precepts* (p. 90) "The Great Heresy and the only real heresy is the idea that anything is separate, distinct, different essentially, from other things. That is wandering from natural fact and law, for Nature is nothing but co-ordination, co-operation, mutual helpfulness; and the rule of fundamental unity is perfectly universal: everything in the universe lives for everything else. It is the sense of separateness that is the cause

and root of all evil."

"At HOME in the Universe" — because we have identified ourselves with the Divinity that is the reality of all.

The Theosophical Forum

KEYNOTES TO MEDITATION: 1 — Leonard Lester

"Indefatigable in Action"

That is: never to allow that sweet sustaining devotion to relax: fatigue, monotony, apparent barrenness in results, notwithstanding. The outer immediate results are not the *real* index, or crown, of unselfish endeavor.

For this inherent devotion to the greater Ideal is one with the mystic current of Life, that tide of vital renewing which swings the orbits of all beings into harmonious action.

"Look thou within; within thee is the fountain of all good, and it will ever spring if thou wilt ever delve," says the wise Marcus Aurelius. And Krishna in the *Bhagavad-Gita*, Chapter III: "There is nothing, O son of Pritha . . . which it is necessary for me to perform . . . and yet I am constantly in action. If I were not *indefatigable in action* all men would presently follow my example. If I did not perform actions these creatures would perish."

What is this action? One thing is certain: the action here referred to is not hurry and bustle, the sensation-born impulse to do things. It is the inner spirit of devotion that ensouls all actions with moral beauty and power.

"Even sages have been deluded as to what is action and what inaction. . . . One must learn well what is action to be performed and what is not to be, and what is inaction. The path of action is obscure." The man who sees inaction in action and action in inaction is wise among men; he is a true devotee and a perfect performer of all action.

"Perform thou that which thou hast to do, at all times unmindful of the event: for the man who doeth that which he hath to do, without attachment to the result, obtaineth the Supreme. . . . For whatever is practiced by the most excellent men, that is also practiced by others. The world follows whatever example they set." And again: "O son of Bharata, as the ignorant perform the duties of life from the hope of reward, so the wise man from the wish to bring the world to duty and benefit mankind should perform his actions without motives of interest."

And Devotion gladly accepts its responsibilities as well as its duty, and first among these is *constancy* in sustaining and transmitting the vital current of Being of which it is a link, a living vehicle. But more: as increase of life and power grows with practice in any art, so does an influx of higher energy and stamina enter the moral fiber of those in whom devotion has become a second nature, a regenerative, revivifying agent of the soul.

"The Fountain of all Good: and it will ever spring if thou wilt ever delve."

The Theosophical Forum

ISVARA — *Marion O. French*

Isvara is the preceptor of all, even of the earliest of created beings, for He is not limited by time. — *Yoga Aphorism 26* of Patanjali

Ineffable Spirit of Truth garbed in the effulgent glory of radiant robes, we can but touch the outermost hem of thy garment. Yet, this is enough, for the fringes thereof are the Divine Monads, the Immanent Christs in each of us. Through them, Thou speakest with infinite patience and compassion, repeating through time without end the lessons that we all must learn. Coaxing with the secret pleasure of the generous act, admonishing with the suffering that comes of evil as *live* spelled backwards, Thou leadest on. Truly, Thou art the loving Mother and stern Father without whom we, Thy children, must perish.

So we might state almost the whole of the lesson of life. Down through the Hierarchies to each of us cometh the instruction of Isvara, Light of the Darkness, and Voice of the Silence. Into each a ray shineth, lighting The Way up from the lower to the Higher Self and on into an unspeakably beautiful Beyond. Through the Spark of the Flame, the Christos within, that Higher Self under the guidance of Isvara seeks ever to lead us upward to reunion with our own Divinity. This is tuition, that of the parent for the child, of the teacher for the pupil. In ever expanding spheres of consciousness it continues on forever toward Isvara. Through cycle after cycle that pass like the seasons of the year, the blossoms of successive lives bloom forth upon the planes of manifestation from Saptaparna, the man-plant. These are our lives, fragrant and graceful, or alas, fetid and disgraceful.

Let us remember, while we are under tuition, that we do not

come back to exhibit the proficiencies that we have acquired by lessons well learned. No instructor, let alone the Higher Self, keeps a student in the same grade indefinitely for the sole purpose of permitting him, or her, to shine as brilliant in one subject. We are brought back to remedy deficiencies and can never advance very far until we do so. It takes moral stamina to return to rectify a failure. A wilful and rebellious pride seeking applause for some particular ability that repetition has made almost automatic will hold us here until aught in the way of mundane glory begins to pall upon us. Such self-adulation as is engendered by success in some highly specialized skill is a great temptation and one that leads on in ceaseless circles with the lure of subtle sophistries. Nonetheless, it binds us as securely on the wheel of life as do the cords of sodden sensuality. The tuition to which we are subjected has but the one object of developing the in-tuition. Then, we can return and take conscious direction of our lives and cease to be led like little children. Then, in simile, the golden stamen that rises in each flower will have become pollinated by pollen wafted from higher spheres.

Compassionately, when a human life has been a good one, the Higher Self drowns with the waters of Lethe all memory of some special proclivity. This is done in order that we may come to circumstances which will render it necessary for us to correct our lack of knowledge in essential prerequisites for further evolution. Kill our ambition and all sense of separateness sayeth the ancient doctrine, lest it hold over from life to life in every greater terrestrial achievement in this or that, and nothing else. This is the price we pay for pride, for the ruthless ambition that leads us on to an ever narrowing circle of consciousness in a selfish determination to excel our fellow men as though they were separate from ourselves. Surely, we should strive to be as skillful as we can in whatsoever task we are called upon to perform, or

that into which our lives lead us. We may have an impersonal ambition to do extremely well any duty that will benefit the world at large. This is a sort of professional ambition that finds its highest recompense in contributing to the advancement of a trade, an art, or a science. This will not bind us ever tighter upon the wheels of lives. Intuition will develop soon under this uninhibited tutelage that is not self-centered. Manifold skills will come as direct cognition replaces the laborious necessity for studying out each detail. The influx of illumination will be in direct proportion to our selflessness.

The Theosophical Forum

KEYNOTES TO MEDITATION: 2 — *Leonard Lester*

The Threshold of the Moment

All are familiar with Bulwer-Lytton's graphic story of The Dweller on the Threshold of Initiation. It visualizes the grim sentinel of retribution who guards the entrance to a higher state of being for the adventurous soul who would test his worthiness to advance. In the story of Glyndon's ambitious quest this Dweller is represented as a gruesome spectre, terrible in aspect to the rash and unprepared candidate, it being in reality the picture or simulacrum of his own lower nature built up heedlessly by himself, the progeny of idle thoughts and acts woven thus into character, daily and hourly. It makes a thrilling high-light in the story, this hideous Dweller on the Threshold, but also symbolizes a great truth.

But while we ponder over the grim picture of the Dweller, do we study with equal care the very real Threshold upon the brink of which we stand at every moment of our lives? Let us ask ourselves: what do we bring within us to face new experiences? In what habitual attitude do we approach this living Threshold? This instant of choice and determination is verily an initiation, and the presiding spirit in which we enter it is silently moulding our character as surely as the plastic clay on the revolving wheel is modelled after the image in the potter's mind. Is that image positive, firm and clear-cut, or negative, blurred and shapeless? Does it stand erect, active, facing the light, or is it harrassed by doubt and uncertainty drifting with the shadows of mood and temperament — the frettings and inconstancies which mark the disease of our modern life. For it is the positive attitude that always sounds the tone of Affirmation of Being — the divine

Resonance of the Eternal. But doubt, hesitation, indifference are all the dark progeny of denial of the Highest.

"The idle Word — condemned by Jesus is *inactivity of Being*. It is the cessation of the homogeneous resonance, the Logos or Word.

The Word in its highest activity is pure spirit; in stagnation it is hell. To each man it is given in trust for all men . . . Through misuse he may learn its use. If he denies it he is lost; for by it alone he lives." (1)

Always we are creating some bright or dark guardian-angel to question or encourage our progress on the path of life; and the bright angel who guards the Threshold also guards the pilgrim on his path.

Thought is cumulative; thoughts become habits; habits entertained become character, destiny. Here is a clue: from W. Q. Judge, speaking of prevalent habits — of irritability — he says "sit down on it always, it is a terrible and cowardly foe and should never be allowed to *dwell inside*." And here are some wise words by K. T. "Electing difficult things while they are easy, and managing great things in their beginnings — transact your business before it takes form — this is the way, as the sages of antiquity have taught."

Some vibrant words, again from the pen of W. Q. Judge, may aptly be quoted here. They are from his article, signed Hadji Erinn, in an early number of *The Path* magazine: "What is the daily Initiation" he asks and answers. After referring to certain greater, solemn, and set initiatory ceremonies, he says:

"This, the daily one, without success in which no aspirant will ever have the chance to try for those that are higher, comes to the disciple with almost each moment. It is met in our relations with our fellows, and in the effects upon us of

all the circumstances of life. And if we fail in these we never get to the point where greater ones are offered.

"If we cannot bear momentary defeat, or if a chance word that strikes our self-love finds us unprepared, or if we give way to the desire to harshly judge others, or if we remain in ignorance of some of our most apparent faults, we do not build up that knowledge and strength imperatively demanded from whoever is to be master of nature.

"It is in the life of everyone to have a moment of choice but that moment is not set for any particular day. It is the sum total of all days; and it may be put off until the day of death, and then it is beyond our power, for the choice has been fixed by all the acts and thoughts of the lifetime. We are self-doomed at that hour to just the sort of life, body, environment and tendencies which will best carry out our Karma."

This is a thing solemn enough, and one that makes the "daily initiation" of the very greatest importance to each earnest student. . . . But all this has been said before and it is a pity that students persist in ignoring the good advice they receive.

Do you think that if a Master accepted you He would put you to some strange test? No, He would not, but simply permitting the small events of your life to have their course, the result would determine your standing. *"It may be a child's school, but it takes a man to go through it."*

1. From "Reflections" by W. Q. Judge, *The Path*, Vol. III, February, 1889. ([return to text](#))

YOGA IN DAILY LIFE — *Ernest Wood*

It is often thought that yoga, as expounded by the most famous authority on the subject, namely Patanjali, is something to be attempted only by highly privileged persons, either particularly endowed mentally or favored by having the agreeable karma of a pleasant existence in the countryside. This is not the fact. Many of the old books touching on Yoga say to those who read them that the reader, having had the good fortune to be born a man, and especially a Brahmin (which really means a thinking man), would be indeed a fool to miss the opportunity of taking deliberate steps to reach the goal of life. To put this in modern terms I would say that yoga is life in any environment lived intelligently with a good knowledge of human psychology, as contrasted with the same life lived according to the animal instincts we have inherited. It is a life in which we make the most of our intelligence, even to the point of the conscious enjoyment of intuitions and ecstasies.

The word yoga is to be taken in two senses: (1) as describing the goal of life, which is "union with the one life" or "the uncovering of the light" and (2) as describing the practical steps which may be taken to accelerate our movement towards that desirable end. Really, no one can escape that movement, because do what we will we are bound to learn either by thought or by experience.

If we follow what may be called the positive path of yoga pursued by the man of intelligence and love and will, we shall learn by intuition — in other words, finer elements in our active being will awaken and take hold of finer realities in our lives. But even if we follow the other and common way, the path of material enlargement — the path of quantity of things, not the path of quality of life — we shall be taught by karma, and thus we shall

move towards the progressive uncovering of the light, though with pain and trouble and difficulty, instead of with freedom and ecstasy.

Now, turning to Patanjali, we find first his statement that the practice of yoga is chitta — vritti — nirodha. Chitta is the mind that deals with things. Vrittis are ideas. Nirodha means control. So yoga is control of the ideas in the mind. Patanjali goes on to say that when this control is achieved the man exists in his own true state, but otherwise he is the slave of his ideas and that implies his circumstances also. Somewhere else the uncontrolled man has been described as the slave of Nature.

Students of Patanjali do not always realize that vrittis are ideas and that ideas are objects in the mind. Ideas are not to be confused with thought. Thought is an activity of the mind in relation to objects or forms of the material world, and it uses ideas in its thinking. It is not the same as mental drift or the undirected flow of ideas.

It is quite necessary to make this clear distinction between thinking and ideas. We know it well in the study of Geometry, where first we have certain axioms, which are ideas, and then we manipulate those in various ways when we deal with propositions. In Geometry then, still further, when we have done our thinking on a certain proposition, so that that has become for us a definite result, that in turn becomes an idea upon which later on we may still further build with further thought. That vrittis are ideas and not operations of thinking becomes quite clear when Patanjali proceeds to give us a list of the vrittis.

He enumerates them as in five classes. The first group is that of right ideas, which he says can be arrived at by perception, or by inference or from the testimony of reliable witnesses. The second division is the group of wrong ideas, as in the case when at dusk

we mistake a post for a man or a piece of rope for a snake. The third group is fanciful ideas, such as the horns of a rabbit. Fourthly comes sleep. We say in the morning we slept well last night. We mean not merely that we felt well when we woke up, and therefore we infer that we slept well, but that there was some sort of conscious experience which can be described by the expression "slept well."

Lastly, we come to memory. Memories, of which there are several kinds, need not be described here.

Obviously, it is a good thing for every person, whatever he or she may be doing in life, to use his or her brains in thinking, not merely in mental drift. Mental drift occurs if, let us say, at one moment I am thinking of a cat and a few moments later I find myself thinking about a bridge which I have often admired that spans the river Indus. Now, I could ask myself how I came to think of that bridge soon after I started to think about a cat. Upon looking into my mind I find that the idea of a cat brought forth a picture of a cat lying on a hearth-rug, that then this hearth-rug reminded me of a factory where I had seen such rugs being made. That factory was near the banks of the river Indus and further up the river was the bridge of which I found myself thinking. That was mental drift. If I had controlled my ideas I might have thought of something to more purpose. I might have controlled my idea on the cat so that I would know a lot more about it. I would have directed my thought by my will. As we do in all study, I would first have concentrated and then meditated. I would have concentrated on the cat and then I would have expanded my knowledge of the cat without abandoning my concentration upon that subject. That process of thinking is really what we call meditation when we apply it to spiritual, religious, ethical, abstract or philosophical thinking.

Next, Patanjali tells us that nirodha or control becomes steady with practice and uncoloredness. (I am sorry to coin such an uncouth word, but there is nothing else for it.)

Patanjali speaks of these two as abhyasa and vairagya. Abhyasa is practice, and one need only say that it is helpful to practise occasionally, when there is opportunity, the art of controlling and directing our own ideas, in reference to anything that may occur to us at the moment, or that may come up in the business of life. We shall have to tear the word vairagya to pieces to get the real meaning out of it. Vai means contrary to or against; raga has to do with being red or colored, and the termination ya is here equivalent to our "ness," thus converting the whole thing into the abstract noun, uncoloredness. The idea is that just as you may put a block of glass on red paper and it will look red, or on green paper it will look green, so do persons have their thinking and feeling colored by their environment and ideas. But the instruction here is that the aspirant should stop, look and listen every now and then to see that he is not being carried away by external impulses, but is using his own faculties in every business that he deals with. This is a subject that could be expanded very much indeed, for multifarious are the ways small and big in which we become slaves to Nature. But this much should now be said — that first we should complete an idea by meditation, if we want to stop the mental process and derive some intuition by some uncovering of the light.

I have described the first few sutras in Book I of Patanjali's Yoga Sutras. Later in Book I that author describes the final practice of complete control, called samadhi. We can leave that for the moment and jump to the beginning of Book II, where Patanjali tells the student of yoga what he must do first of all in practical life. I have heard of cases in which a would-be pupil has come to a teacher of yoga and the teacher has sent him away, telling him to

come back after a number of years, and that in the meantime he should live an ordinary life in the world and try to practise certain things in that life.

Patanjali here gives us three things which are to be practised in the world as a kind of preparatory yoga, and in conjunction even with more advanced yoga if that is being carried on in the world of ordinary life. I must mention that these three practices are intended to weaken five difficulties or obstacles, instincts which arise in a man himself. These five are called the kleshas. They are: (1) mistake, (2) I-am-ness, (3) liking, (4) disliking, (5) clinging to form.

The first is the error of identifying oneself with the game of life. It is as though a chess player were to forget that his game is only a game. The yoga practice in this connection is to observe the distinction between the self and not-self as often as possible, to watch the business of life going on as a spectator but not as a passing spectator rather as one who is playing a very important game with a very definite purpose, and yet is playing that game outside himself. In this one watches not only the external activities but also the flow of one's own thought and feeling. One sees the vrittis and becomes aware of the kleshas which build and sustain them. One has no need to pronounce sentence upon them. The mere viveka or perception uncovers the light. There is nothing to be done or made. The second klesha is self-personality. We know that our personality is a definite compound, let us hope well coordinated and useful in the world. There is a certain type of body with certain abilities and accomplishments, accompanied by a collection of ideas and habitual feelings. Such personality is a definite thing. As long as we recognize it as such and use it as our instrument in the business or game of life, it is well, but as soon as we fall into thinking "I am this" we lose our true character. For the character or core of a man is something different, which

expresses itself in certain powers of thought, feeling and will.

The third klesha is akin to that coloredness which I mentioned before. It is a strong desire to obtain something, or even more, it is wishing. The implication is that we can become agitated and enslaved because we cannot get the thing that we want, or we cannot get enough of it, or, having obtained it, we are afraid of losing it. It colors our life. If we have it not, it worries us so that we do not employ our powers in dealing with other things that are in our power, or in our possession.

The fourth of these kleshas is just the opposite of that. It is the troubled condition which arises when we want to get rid of things or persons that we have, or conditions that we cannot get away from. If we allow this desire to escape from undesired conditions, to dominate our thinking and feeling or to govern our actions, again we lose our character and independence.

The fifth is clinging to things, even to the extent of fear of death. We have to come to that point of understanding in which we can feel that such possessions are simply for use, that they must come and go, that there is no such thing as static wealth; that life can only live on the wing — in brief, there is not life but only living, in which everything is to be used as a possession. If we fail in this, it is a fact that we become possessed by our so-called possessions. This applies to everything, even to the body itself, in regard to which there is such widespread and quite unnecessary fear of death.

I do not want to dwell particularly on these kleshas at the moment, but the three practices enjoined on the novice will deal with them quite effectively. These three practices are called tapas, swadhyaya and ishvara-pranidhana. They pertain to the three parts of our nature — body, thoughts and feelings. Tapas means literally ardor. It is from the root tap, which means to heat. It

almost means effort but not quite. Some have exaggerated it into the idea of mortification of the flesh, and there are instances in India of people doing very absurd things, such as sitting on spikes or holding an arm up until it withers, with the idea of practising tapas. Those are only superstitions for the real thing. Put simply, tapas means that the novice must do for his body whatever he knows to be best. If, for example, he thinks that it is not good to take mineral salt with his food, then he will not take it. If he thinks that a certain amount of exercise at a certain time is good, he will do it. With regard to action or abstention from action, he will live his bodily life in accordance with his best understanding, in relation to its own best functioning and his social environment, in which it should be harmonious with others.

The second practice means self-study. It is just that a certain amount of time should be given to studying the nature of man and his relation to his environment.

The third klesha is bowing to the Divine. This means a feeling of devotion with regard to everything. It is that religious life which includes both ethics and devotion. Everything has to be thought of as providing the best opportunity for self-development. This puts an end to a great many of the bad emotions in life, such as resentment, envy, jealousy, greed, pride, anger and fear. It makes the aspirant look out upon the world very much as an architect does, who takes all materials for exactly what they are: wood, stone, etc. Stone is stone, iron is iron, glass is glass, and he would be a very curious architect who would sit at the roadside and weep because he could not bend a sheet of glass as he would bend a sheet of iron. There is, however, in this practice not a mere intellectual acceptance of all things as useful. It is more than that. It is a glad and joyful devotional response to this great fulness of life in which we find ourselves. It should carry with it all that intense devotion which is sometimes found with very narrow

outlooks in religious circles, but it involves a recognition of the highest in everything.

I need not carry this idea of yoga in daily life much further. It is quite open to all of us to spend part of our day in concentration, meditation and contemplation, and in that contemplation to receive occasional inspirations and intuitions, accompanied by a corresponding ecstasy. To be able to control our thoughts, to expand them, and then to suspend them in an act of contemplation of any thing or idea, is not outside our reach and in fact should become easy when the three preliminary practices are carried on in daily life. These three practices weaken the kleshas. Later on we may perform a "meditation" that will entirely destroy them.

Patanjali mentions certain siddhis or abnormal powers which arise in a man as he progresses in the art of mind control or the control of ideas. But he mentions also that these are not of importance. If they become a source of pleasure or amusement, the man will stop at that subject and go no further. They will come, but he has merely to note them and pass them by. He can use them as white magic for the benefit of mankind, or the welfare of the world, but that will only be part of his particular business in life, and in his yoga practice they too will have to become subject to nirodha. If he delights in them he comes within the sphere of the kleshas, and will fall into black magic from which he will ultimately escape only by the tuition of karma.

I have said enough, perhaps, to show that yoga is for all of us and that there is no need to treat the subject with that kind of false respect which would make us think that it is only for uncommon people or people more advanced than ourselves.

STUDIES IN THEOSOPHIC PSYCHOLOGY: 1 — *Marion O. French*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

Consciousness

Psychology is defined as "the science of the human mind or soul and its operations." Since Occidental psychology is not based upon a clear concept of the nature of the mind and soul, its conclusions regarding the operations thereof cannot be considered as scientific. To clarify the subject, a series of studies will present the basic theosophic concepts. The text will set forth the fundamental factors in a logical sequence for practical application. For a comprehensive understanding, students are referred to *The Esoteric Tradition* by Dr. G. de Purucker. As stated therein, "Consciousness, or mind, if the word be better liked, comes first, and out of it flows everything else into manifestation." (p. 228, Vol. I) No other available treatise on the nature and operation of the consciousness is comparable in clarity or in scope to these profound volumes by G. de Purucker.

As a premise, it is obvious that consciousness is the only fact that we can study directly, since all others are perceived through it. As an implied corollary, numbers may be regarded as the concepts which all manifestation follows in evolution and devolution, or integration and disintegration. "Foreknowledge and Reason," said Nichomachus the Greek mathematician and Pythagorean, "created all according to Number, conceivable to mind only and therefore wholly immaterial; yet real, indeed, the really real, the eternal." Geometrical forms may be regarded as numerals solidified. They are, thus, the first and clearest images which

reflect creative thought. Or, as Plato declared and H. P. Blavatsky quoted (*Isis Unveiled*, Vol. I, p. 506) "God geometrizes." Therefore, mathematical postulates may be utilized, as in physics, to determine tenable psychological hypotheses. In physics, the former obstacle to progress was the assumption that matter consisted of discrete stable elements and force was an operative energy distinct from the matter on which it operated. (See *The Mahatma Letters*, p. 164.)

In psychology, the great heresy is, still, that individuals are assumed to be wholly separate entities who react to motivating factors, either subjective or objective, much in the same manner that matter was supposed to react to force. This mechanistic concept is as untenable for organic life as it was for inorganic matter. To cling to it is to assume that the motivating factors exist as an inherent sum total in the universe under the old interpretation of the "law of the conservation of energy." An innate sense of its inadequacy is what leads many to seek for the influences that affect them in astrology. The instinct is correct, but "Occidental astrology is but . . . a few tattered remnants of the ancient astrological Wisdom . . ." as G. de P. states. (*E. T.*, V. I, p. 191) Correctly, individuals should be viewed as constituent parts of aggregations and as participants in the production of all actuating agencies. The individuals, the aggregations and the factors that motivate them have the same source. It is the inexhaustible fount of universal consciousness.

That source, as we may infer by astronomical observation, consists of innumerable aggregates, or congeries of many in one. Each particular One, however, is, at once, an individual and the sum of its components. This is, in no wise, different from the fact that a man is both an entity and the sum total of the living and subconsciously thinking cells and organs that compose his body. As the ancient wisdom of mankind indicates, the Empyrean that

surrounds us is the abode of countless conscious entities, great and small. The great Ones outline sublime mural designs upon the immense rotundas of the celestial spaces. The little journeymen painters who serve their apprenticeships under this divine guidance are occupied in filling in the details. When the days of labor have ceased and the night of rest has come, that structure will represent the work of all of them. Its indelible imprint upon the akasic record that is the universal memory will remain forever as their memorial and as a model for the more beautiful and perfect edifices of the future.

Upon the *Smaragdine Tablet* of Hermes was engraved the essence of the one law: "What is below is like that which is above; and what is above is similar to that which is below to accomplish the wonders of the one thing."

"As all things were produced by the meditation of one being, so all things were produced from this one *by adaptation.*" (*Isis Unveiled*, Vol. I, p. 507) The adaptive method is that of using numerals as determinants for the harmonic proportions of all phenomenal forms. We may visualize them as the Digits of Divinity, the creative Fingers of Deity that mould matter into formative existence. There are five regular geometrical solids, or six if the transitory parallelo-piped that is analogous to the binding carbon atom be included. They are the models for all the infinite variety of mineral, vegetable, animal and human organisms. All the incessant mutations, variations, combinations and interrelations thereof are determined numerically. They constitute the observable, objective, phenomenal manifestation of noumenal, subjective thought upon the planes of existence. Literally, it is a process of reflecting the self to the self in order to attain to complete individual self-consciousness. This is the meaning of the aphorism "Man, Know Thyself" that was carved above the portal of the temple of the Delphic Oracle.

In his mathematical instruction, Pythagoras sought "to free the soul from the fetters of sense and force it to realize its powers." (*Isis Unveiled*, Vol. I, p. 7) In essence, this is the same as to emancipate the mind from the toils of time, or from the logical chronometric sequence of what we call events. They are the effects that follow causes in accordance with the Karma that we, ourselves, have generated. The filaments, spun into that seemingly interminable thread which extends from the past into the future, are those causes. As Plato puts it, the spinners of the threads are the three Fates enthroned around the distaff of Necessity. Upon it is wound the flax of Universal Life, the "Kosmic Consciousness-Force-Substance" that G. de P. discusses (*E. T.*, V. I, p. 199). From it, the filaments come that are twisted into thread upon the spinning wheel. Those Fates are the daughters of Necessity, and Lachesis sings of the past, Clotho of the present and Atropos of the future. Their song is accompanied by the harmony of the Music of the Spheres intoned by the Sirens seated upon those orbs. (*The Republic*, Book X, p. 499) The adjustments of timing in the motion of the spindle made by the Fates can be compared to what would occur in a rotating planet as it revolved upon its orbit. The equations are those of an epicycloid as a point on the circumference of a circle that rolls on the outside of a fixed circle, which will make 7 cusps if the radii are as 1:7.

Astronomically, the problem becomes complicated because the fixed circle, or orbit around the sun, advances spirally as the sun describes its orbital course. For reference see *The Mahatma Letters*, p. 46 and *Fundamentals of the Esoteric Philosophy*, p. 91.

We may imagine the threads that are spun upon the "Wheels" of life as being woven into tapestries on the warp of space with the weft of time, to form a recording cyclorama in the astronomical structures of infinitude. In each, we may sense a dynamic symmetry of space and time relations in the conformity of all to

sublime Deific Concepts. By understanding its processus, we may become conscious collaborators in that creative design rather than unconscious ones. Hegemony is exercised through mathematical laws in this Universe that "actually is embodied consciousness," as G. de P. states. (*E. T.*, V. I, p. 258) This, then, is the basic aspect of real psychology. The development of the thesis thereon will be carried forward through the next Study No. 2 on Hierarchies of Consciousness. Succeeding studies will seek to elucidate the operation of the individual consciousness within that of its Hierarchy.

The Theosophical Forum

**"THE CREATIVE URGE IS A PRICELESS THING" — Hazel Boyer
Braun**

More just now than at any other time, we need to reach out with heart and mind to grasp the feeling that we move with the current of a life greater than the human one. This tends to lift us out of the stratum of violence. The weight of our life can tell in the balance of constructive forces if we are careful to be never at war in our thoughts, to be truly creative in sending out love and courage to all who are troubled.

The reservoir of world thought requires clarifying in these times when so many persons have lost what they most cherished in life, home and loved ones. It is important that we be positive in the best ways lest we be caught up in a stream of gloomy thoughts which only add to the world's sadness. We can still be dynamic and definitely the generators of a spirit of joy and beauty.

When we have the spirit of giving and helping, we are working with nature, in harmony with the action of the sun's rays, the rain and the gentle breezes that open the petals of the flowers. This arouses in us the creative side of our natures and then we shall find at hand work to do that will be helpful. If we determine to do some beautiful thing every day of our lives we can rise to this creative level of consciousness. It may be no more than making an arrangement of flowers to send to some one or making the home more beautiful than usual. Association with creative work inspires us to do something, *then* the will comes into play.

It is possible to escape contact with the baser and ugly side of life. One may live with his chosen works of art, his garden blooming with flowers and his own thoughts, but unless the real self is stirred by some ideal of service to help humanity through the

unfortunate lessons of life, there can be little true happiness. Where there is time, it is wise to take up some form of creative work and give expression to the best self that it may become a genuine contribution to the light side of nature and the life we all share.

We need art in our lives more in times of great stress than at any other time. The magic of it is more easily comprehended when we try it on troubled minds, persons absorbed in personal affairs; for if they have learned to be quiet and sympathetic to interests outside of themselves, they will always find the effect of this magic in an hour or two all alone in an art gallery. Happy days would be found nearer if all who were unhappy would cultivate a friendship with art.

The compelling inspiration of the artist challenges self-forgetfulness in one who would get the true message intended. The artist can only interpret grand ideas when he himself is self-forgetful, lifted by the inspiration of the moment into a higher stratum of consciousness. In every age great art is the product of self-forgetfulness, of that artist who goes quietly about his work and finds happiness in it.

Whenever an artist has been carried out into the higher ranges of his consciousness by the inspiration of his work, this imprint has the power to lift the sensitive beholder out of the ordinary self and to awaken the higher imagination, to refresh the whole nature. The search for truth, for understanding that flowers in sympathy and kindness, must be in the background of all true art that will live and furnish an ideal of inspiration to others.

We must begin sometime if we are ever to come into our own as awakened artists. An artist is not made in a lifetime. It takes the mounting impress on our characters of many lives of real effort. The creative urge is a priceless thing. It drives the artist to want

discipline, to go to any trouble, to strive ever toward perfection, growing in the conception of the ideal. Discipline is the very foundation of all art. Discipline abolishes the petty and the personal and makes way for that abandon which releases the inner greatness. "One should discipline one's self in the spirit of autumn, and deal with others in the spirit of spring," said old Chang Cha'o.

As we advance away from much that we abhor in the art expressions of today, from brutality, sensationalism, fakery, vulgarity, and the reign of the evil forces in man's nature; as we approach cleaner, simpler, and more wholesome living, finer sentiment about life, more and more numbers of the human family will become artists, in the sense that all life is a school of art.

Everything moves in cycles. Just as violets blossom in the spring time and chrysanthemums in the autumn, so the human family has its dark ages of spiritual barrenness and its epochs when conditions are right for interest to center upon the nobler aspects of life, a time when latent memories of "golden ages" of enlightenment in the eons of the past blossom forth and men catch again gleams of age-old spiritual truths.

Those "golden ages" of China, Egypt, Greece, and other lands were times when art, science and spiritual truths were revered, when every person was an artist of some kind. The art expressions were noble, there was beauty in the smallest detail of daily living, simplicity, dignity and regard for others. The inner joy, the generating force that brings to flower such a cultural cycle, is deeply rooted in man's spiritual nature.

As we grow into a genuine culture in this western world it will be the usual thing for every person to be an artist just as it was in those ancient days. The value of the development of the potential

artist that dwells in every human being will then be clearly recognized, for it is a challenge to all, a chance to forget our small personal selves, to grow and to be our greater selves.

Even the products of the lowly earth, which in obedience to human hands, responsive to the artist's vision, have been transformed into vases, jars, bowls, plates, kettles, figures, and bottles of innumerable varieties of color and form, make us realize that the love and devotion of the artists who have made them have impressed something of their self-forgetfulness, of impersonality, on the very atoms of the pots they have made and have lifted them up, but not simply by the new forms they have given them.

With all our aspiration, our turning of our faces toward the stars, we are after all bound to this old earth until we have done our part to launch every atom of the vehicle of our experience, on its way toward its God-like unfoldment. Indeed we can learn even from the pots and jars; yes, and kettles. It was George Midgeley who said: "When you are up to your neck in hot water, do what the kettle does — sing!"

The artist, filled with awe and reverence, with joy in his work, his quick sympathy ever stirred by nature's manifold wonder, possesses the seer's vision that senses some of the inner beauty and harmony residing within the simple objects of life about him. All nature speaks to him in terms of rhythm; poems in line, color, mass light, shadow, movement, and repose. He is absorbed in his world of the problems of interpretation of all he sees and feels.

The power to be an artist — whether musician, poet, painter sculptor, architect, dancer, actor, or writer — is latent in every human being. An artist's career is filled with an inner joyousness that comes from obedience to the awakened positive and creative forces in his own nature, and he truly lives only when he is

waked from absorption in non-essential affairs, into the universal wonder the unspeakable grandeur of the inner spiritual qualities of the world in which we live.

As we move forward into a new time and a more genuine culture every occasion should be modeled after a plan of perfect harmony and beauty, an inspiration to carry a lovely spirit into the daily tasks, great or small.

The Theosophical Forum

THE HEART DOCTRINE — *Virginia Vaughan*

Today's thinking is wrong in that if we have been told something is true, we too often accept it as truth without bothering to sit down to figure things out for ourselves. We do not follow our *own* reasoning, we follow the reasoning of others. Yet there commonly are two types of minds: first, the coldly intellectual reasoning mind, and second, the intellectual mind lit by intuition which unerringly guides it to correct conclusions. The mind *alone* is cold. But when it is guided by the intuition, love and compassion of the heart, then the man who has this mind is truly great. The one who has not intuition must have things proven to him; he cannot accept hearsay, unverified reports — and most unfortunately, because he does not possess it — cannot acknowledge intuition. This kind of mind cannot accept your saying "I know this is so because I feel it to be the truth"; such a statement immediately causes resentment, incredulity or even derision.

Reasoning by the mind must be developed, but not mind-reasoning *alone*; for without its spiritual counterpart it is dangerous, and hinders development of the higher perceptual faculties. Frederick Clarke Prescott in his book *The Poetic Vision*, speaks of this. He calls it the Voluntary or Purposive thought, and it is guided by a "Distinct purpose or conscious interest, controlling by selection the associations spontaneously offered to fit the end in view. The will, impelled by interest, fixes the attention, and this results in reasonings, or attention. . . . It is closely in touch with sensuous experience, immediately utilizing the reports of the senses and controlling them. Its result is the knowledge which is systematized in science. The thought contained herein may be relatively cold and mainly intellectual;

the imagination is at work but controlled, working in a prosaic way."

Those who have developed their intellectuality to a great extent, yet in some way have overlooked the equal development of the spiritual compassion and brotherhood aspect, are often deluded into believing they are far in advance of their brother beings. These are the ones who are unable to discern the Real from the Unreal, and are led on devious and illusory paths. Because they have not the Heart Doctrine — Intuition — they are like half-blind persons, for without intuition they cannot perceive what is right and what is wrong. They are falsely directed because it is only their brain-mind's function directing them; they have not the higher spiritual faculties working to any great degree through the mind.

For these persons, this leads to a state of egotism, an intellectual superiority complex, which in the end will bring them nothing but misfortune and an ultimate realization that they are — not ahead — but behind on the ladder of life. By observance one sees evidence of this. People who may have very little education or a completely average intellect, are often far more advanced in certain ways than those who may be very learned and superior intellectually. These intellectuals have developed a marvelous sense of reasoning, capacity for absorption and understanding; but they have not the true compassion, the understanding and sensitivity, nor the sympathy and tolerance for others" failings that shines like a light in those who live the Heart Doctrine. Absolute Loyalty, an esteemed human quality, actually divine, is absent in these coldly Intellectual egotists. Thus we should not be overwhelmed by seemingly learned and overpowering intellects, *unless* we see that they have developed *in equal degree*, the spiritual heart doctrine that is more important in one person than twenty of great intellect without it.

One who has his reasoning intellectual mind often encounters a real difficulty when first he becomes interested in Theosophy. He must go through many more phases than he who can feel, by intuition, that these teachings are right and true. Perhaps to him the Theosophical doctrines of Karma, Reincarnation — the basic teachings — are accepted; he sees enough proofs and results to believe them reasonable. Then he enters into the more technical and deeper teachings, and there he may rebel at acceptance. It is at this point that the reasoning brain-mind, unenlightened by a conscious opening to the higher Manas and Buddhi principles, fails. There is nothing to go on except the words of our Teachers, the Leaders of the T. S., and ancient teachings of past civilizations. There are no proofs, except the realization of truth that comes from *within*, although the broad view shows that the whole philosophy fits into one logical plan which answers every problem.

There must be reception from a far deeper source than the brain-mind. Unless Intuition is developed, many teachings will be "seen through a glass darkly." Broad-mindedness, sympathy, tolerance, loyalty, and compassion for others are all methods leading to development of this faculty; and there must be a desire to learn, only not for the purpose of personal ambition, but for the purpose of aiding and imparting knowledge to others.

It is important therefore, not only to individual evolution, but to the evolution of the whole race, to develop intuition. If our present humanity is deceived by the illusion of Intellectuality without Spirituality, our civilization will regress. Let us look carefully then, in order to assure ourselves that Intellectuality leading to individual progress is not our motive or objective.

"Which wilt thou choose, O thou of dauntless heart? The Sam-tan of "eye Doctrine," four-fold Dhyana, or thread thy way through

Paramitas, six in number, noble gates of virtue leading to Bodhi and to Prajna, seventh step of Wisdom?"

The Theosophical Forum

SPEAKING OF THEOSOPHY . . . — *Robin Pratt*

Whether we are "Old Theosophists," fully informed about the intricate time schedules of the peregrinations of the rounds and the races, the complex interrelations of vast cosmic entifications and their energizing principles, — stop me if I misspeak, — or whether we are the merest fledgelings, gasping in full wonderment that here at last we find the Great Answer to It All, we like to "talk Theosophy."

Who among us, having for the first time encountered Theosophy in the questing years of life, but remembers the stunning, light-breaking impact of these great truths upon our minds, the thrill of new confidence within our hearts. You who have known Theosophy from earliest memory, having been born into it, are in a way fortunate. But you have, in this life at least, missed that throb of sudden discovery after prolonged searching, that coming into the sunlight after years of tunneling, wrestling and black conflict, — and having missed that, — you do not perhaps quite fully evaluate the wisdom that is yours nor sense how much others need it. One does not question or seek to share what seems a native inheritance.

Some of us find Theosophy only after much searching, and like most converts we are slightly fanatic about it. We want to rush out and tell others all about it, willy-nilly. This exuberance is reasonable enough if not allowed its head too long before it is broken to the bit. Ask any old Theosophist why this is. He will expatiate upon this swing of the pendulum in impressively couched terms, redolent of the more abstruse portions of the *Secret Doctrine*, touching upon the Law of Cycles with a dash, maybe, of Sanskrit to give it just that soupcon of esotericism and

ancient authority. But the point is, fanaticism, though excusable at first, is reprehensible when perpetuated beyond the time when the scales should be balanced and equilibrium restored.

Fanaticism breeds fixity, and the essence of the Theosophic teaching is away from crystallization of concepts toward the unfoldment of consciousness, toward expansion, ever becoming, adaptability and change.

If we would have others listen to our teachings, we need first to be good and receptive listeners ourselves. Some of the greatest teachers of Theosophic Wisdom never preach at all, nor even speak of it. From the eloquent silence of their vital, integrated and luminous lives, and from their understanding hearts, they elicit enquiry and inspire unsolicited emulation.

He who is not really seeking does not want to hear what we may have to say. He will not listen. If our path crosses his, nothing but lives as they are lived and our sincere compassion for his problem will make any difference to him. Therefore, conversationally speaking, one does not set out to talk Theosophy. One knows it, lives it, and one develops that special awareness of the moment's need so that no true inquirer ever goes away unaided.

The true inquirer for a reconciliation of life's seeming anomalies asks everywhere. He asks within himself, seeks out his pastor, teacher, and consults the man on the street. He is pretty desperate, mind you. What is the reason for all the suffering? Why must we live only to die? Why does not life, with its myriad inequalities, add up better than it does? He finds no answer within, and he is equally frustrated without. His pastor pontificates, or, if a kindly simple soul, he offers a well meant but unsatisfying blanket formula of dogma and the enjoinder that the supplicant open his heart to the Lord and all things will be added

unto him. And the professor, privately sharing his uncertainty, offers him cynicism in the guise of much learning. That man on the street says, "Search me! Let's have a drink."

But the quester does not give up though no light shines. He is spiritually desperate. When the striving is great enough, the answer is forthcoming. Hope is almost spent perhaps, and just then someone, somewhere, *SAYS* something. It may be only a word, a phrase, or a lecture attended with a chance acquaintance. Chance? Or it may be no spoken word at all but encounter with a life so tranquil and yet powerfully pervasive that it bespeaks a motivation one longs to fathom.

And so one gets the hint, the clue, and moves on from there to discovery of some of the many sources of answers to one's questions. Usually it is all so new and strange, so absorbingly fascinating, that the searcher yearns for plenty of soul satisfying talk, — conversation with someone who is informed about these ancient and eternal truths. Of course, he begins reading voraciously, but he needs the outlet of communication and clarification gained only through conversational interchange, especially at the beginning.

There is something in the experience of spiritual awakening, as all who know will attest, that is like recognition, as if one were in a very real sense coming home after a long journey. It is like waking from a long bad night of dreaming and seeing the sunshine streaming through the familiar ruffled curtains of one's bedroom. For a little while the novice should be given the opportunity to talk it out, — at the expense, maybe, of his guide's leisure hours and precious sleep. Usually the delight is mutual, and the opportunity to help is beyond price.

How then do we who have found our truths meet the need of the true searcher? Do we open our hearts to his problem so that we

have the compassion that helps us see life from his point of view, intuit where best to commence, how little or how much to say, and in what language? Have we clarified our own thinking, cleansed our natures of emotional colorations and pet prejudices, familiarized ourselves with the fundamentals so that we can answer the need lucidly, simply and fully enough? Having the knowledge, perhaps a great fund of it, have we the fine discrimination to say less than too much, letting the neophyte articulate his newfound wonder, haltingly express what this truth means to him?

The temptation of the teacher is to hold forth, dilate, submerge the pupil in a welter of verbiage. Time. . . . There is time for teaching in small doses, and administered only when he asks his questions, as he surely will if Theosophy has sounded a gong in his being. Whatever the degree of his enthusiasm, it is not well to gorge him before digestion has a chance to do its work.

Depending on his background, the seeker needs special intuitive response from his mentor. Does his search stem from emotional desperation, intellectual frustration, — what? What are his conditioning prejudices? To trample roughshod on his tender corns of prejudice before he has oriented himself to the new enfranchising concepts can alienate and delay him. In his nature fairly uncomplicated though well intentioned? Is his capacity for intake limited to a few simple, practical ideas and their working hypotheses, or is he one who needs to plumb the depths and reach beyond the farthest star before his questing mind can find its stillness? It is no time for blundering on the part of him who attempts to serve as guide. Though the moment is certainly not the one for withdrawal into taciturnity, and he may even wisely let the wisdom pour forth as one may who has the "gift of tongues," the general emphasis of his effort to help may safely be on the side of discreet reticence. The understanding heart in its

compassion knows what help is needed and, partly with its stillness as well as with what it is moved to say, it plays its right part in the unfolding of a budding consciousness.

As the one whose privilege it is to help senses the explicit need, savours of the problem, help must come through him. His years of study have rendered him a suitable channel, as has his life. If he is very wise, he sternly checks the temptation to air his erudition; he remembers his own long-ago exquisite moment of discovery. He tunes his spirit to that of the newcomer, finds the right rhythm. Thus joy and discovery and the wisdom of the heart blend in a true harmony of brotherhood.

Having accepted the intuitive appointment to serve in the early awakening of another, responsibility looms large in other ways than the mere imparting of the truth. One's own life and practices must come under scrutiny. How do we, the expositors, exemplify these fine truths which we teach? Though the eyes of the grateful pupil may be charitably blind to the faults of the teacher for a time, the way of the neophyte is sometimes marred by disquieting disillusionment. Therefore, disclaiming perfection, we nonetheless mend our ways and deepen the wellsprings of our hearts. And the high wisdom of the heart channels its crystalline stream to the thirsty heart of another.

The Theosophical Forum

THE COMPLEX NATURE OF BOOKS — *Allan J. Stover*

How often in browsing through a library, we sense the futility of the printed book as medium of expression for sublime ideas beyond the ordinary power of words. Too often the body of the book, such as it is, has no soul.

The ancient poets prayed to the gods to inspire them — i. e., to breathe into the words an inner meaning, a spiritual force. To read books so written is often to evoke a current of thought paralleling the printed words, like an aroma of some unearthly fragrance. Such books have souls, the spirit has breathed upon them, the writer has been in some degree illumined by his higher self, and its light is reflected in the words of the printed page. We all have certain books we treasure, and turn to again and again; it may be to a chapter, perhaps only a paragraph, but in any case we open a door through which we catch glimpses of inner beauty and light.

All the great writers whose works endure have put something beyond mere words into their books; all, though sometimes unconventional in their lives, were illumined by high and noble ideals. William Quan Judge once said: "A very truism, when uttered by a Teacher, has a deeper meaning for which the student should seek, but which he will lose if he stops to criticize and weigh the words in mere ordinary scales." The sayings of Lao-tse open up vistas of thought beyond the power of words to express and H. P. B.'s *Voice of the Silence* stands supreme in its use of words to enlighten and inspire.

The words of a true Teacher speak on all planes of consciousness and not alone to the physical brain, and this is why they become priceless treasures to the human race.

The highest class of books, then, are those whose authors were to some extent illumined by the light of the higher self. Perhaps the most abundant class are the productions of the ordinary mind (kama-manas). These include hosts upon hosts of valuable and instructive works of travel, history, description, etc., of both a technical and popular nature. In these the reader frequently finds hints of a deeper understanding of nature's laws. Then there are the books of passion and violence, the "horror tales" reeking of kama-loka, and the weird and uncanny drivel sometimes inspired by the lower astral realms.

Books are as various as the classes of people who read them, but unfortunately much of the literature of today is permeated by effluvia rising from the depths which defiles all it touches. These books, carrying no message for the soul but to the tune of "everybody's doing it" play their part to drag down humanity to the lower levels. . . It matters not that these are listed as best sellers and carry enticing blurbs — to read unworthy books is to be surrounded by and attract to oneself the leering and cruel elemental forces that accompany the acts of violence and lust the words too often describe. For the time the reader is identified, to a certain degree, with the characters whose adventures he so eagerly follows.

Is this mere fancy? Let the reader study his emotional reactions as he reads, take note of his dreams at night, and decide for himself.

Many authors, perhaps the majority, during months of intensive writing, visualize their characters, and through the creative power of imagination endow them with vitality and substance; and in his turn the sensitive reader reproduces the emotions, thought and mental images, as sound is reproduced from a record.

One's life may be changed for the better by a good book, or on the other hand sometimes started on the downward path by an evil book; because of this, the trend now becoming all too evident in literature and art carries an ominous suggestion of national degeneracy, comparable to social conditions at the time of the fall of the Roman Empire, or again during the decadent Period of the Restoration, in seventeenth century England. Both periods historians would like to forget.

The destiny of the race today hangs in the balance, and every act and every thought weighs the scale in one or the other direction. The decision rests with each individual.

The Theosophical Forum

THE THREE FUNDAMENTAL PROPOSITIONS — *H. P. Blavatsky*

The Secret Doctrine establishes three fundamental propositions:

One — An Omnipresent, Eternal, Boundless, and Immutable PRINCIPLE on which all speculation is impossible, since it transcends the power of human conception and could only be dwarfed by any human expression or similitude. It is beyond the range and reach of thought — in the words of Mundukya, "unthinkable and unspeakable."

To render these ideas clearer to the general reader, let him set out with the postulate that there is one absolute Reality which antecedes all manifested, conditioned, being. This Infinite and Eternal Cause — dimly formulated in the "Unconscious" and "Unknowable" of current European philosophy — is the rootless root of "all that was, is, or ever shall be." It is of course devoid of all attributes and is essentially without any relation to manifested, finite Being. It is "Be-ness" rather than Being (in Sanskrit, *Sat*), and is beyond all thought or speculation.

This "Be-ness" is symbolized in the Secret Doctrine under two aspects. On the one hand, absolute abstract Space, representing bare subjectivity, the one thing which no human mind can either exclude from any conception, or conceive of by itself. On the other, absolute Abstract Motion representing Unconditioned Consciousness. Even our Western thinkers have shown that Consciousness is inconceivable to us apart from change, and motion best symbolizes change, its essential characteristic. This latter aspect of the one Reality, is also symbolized by the term "The Great Breath," a symbol sufficiently graphic to need no further elucidation. Thus, then, the first fundamental axiom of

the Secret Doctrine is this metaphysical ONE ABSOLUTE — BE-NESS — symbolized by finite intelligence as the theological Trinity.

. . . the "Causeless Cause," the "Eternal," and the "Unknowable," may be essentially the same as that of the Consciousness which wells up within us: in short, [that] the impersonal reality pervading the Kosmos is the pure noumenon of thought. . . .

Parabrahm (the One Reality, the Absolute) is the field of Absolute Consciousness, *i.e.*, that Essence which is out of all relation to conditioned existence, and of which conscious existence is a conditioned symbol. But once that we pass in thought from this (to us) Absolute Negation, duality supervenes in the contrast of Spirit (or consciousness) and Matter, Subject and Object.

Spirit (or Consciousness) and Matter are, however, to be regarded, not as independent realities, but as the two facets or aspects of the Absolute (Parabrahm), which constitute the basis of conditioned Being whether subjective or objective.

Considering this metaphysical triad as the Root from which proceeds all manifestation, the great Breath assumes the character of precosmic Ideation. It is the *fons et origo* of force and of all individual consciousness, and supplies the guiding intelligence in the vast scheme of cosmic Evolution. On the other hand, precosmic root-substance (*Mulaprakriti*) is that aspect of the Absolute which underlies all the objective planes of Nature.

Just as pre-Cosmic Ideation is the root of all individual consciousness, so pre-Cosmic Substance is the substratum of matter in the various grades of its differentiation.

Hence it will be apparent that the contrast of these two aspects of the Absolute is essential to the existence of the "Manifested Universe." Apart from Cosmic Substance, Cosmic Ideation could not manifest as individual consciousness, since it is only through

a vehicle of matter that consciousness wells up as "I am I," a physical basis being necessary to focus a ray of the Universal Mind at a certain stage of complexity. Again, apart from Cosmic Ideation, Cosmic Substance would remain an empty abstraction, and no emergence of consciousness could ensue.

The "Manifested Universe," therefore, is pervaded by duality, which is, as it were, the very essence of its *EX*-istence as "manifestation." But just as the opposite poles of subject and object, spirit and matter, are but aspects of the One Unity in which they are synthesized, so, in the manifested Universe, there is "that" which links spirit to matter, subject to object.

This something, at present unknown to Western speculation, is called by the occultists Fohat. It is the "bridge" by which the "Ideas" existing in the "Divine Thought" are impressed on Cosmic substance as the "laws of Nature." Fohat is thus the dynamic energy of Cosmic Ideation; or, regarded from the other side, it is the intelligent medium, the guiding power of all manifestation, the "Thought Divine" transmitted and made manifest through the Dhyān-Chohans, the Architects of the visible World. Thus from Spirit, or Cosmic Ideation, comes our consciousness; from Cosmic Substance the several vehicles in which that consciousness is individualized and attains to self — or reflective — consciousness; while Fohat, in its various manifestations, is the mysterious link between Mind and Matter, the animating principle electrifying every atom into life.

Further, the Secret Doctrine affirms:

Two — The Eternity of the Universe *in toto* as a boundless plane; periodically "the playground of numberless Universes incessantly manifesting and disappearing," called "the manifesting stars," and the "sparks of Eternity." "The Eternity of the Pilgrim" is like a wink of the Eye of

Self-Existence (Book of Dzyan). "The appearance and disappearance of Worlds is like a regular tidal ebb, flux, and reflux."

This second assertion of the Secret Doctrine is the absolute universality of that law of periodicity, of flux and reflux, ebb and flow, which physical science has observed and recorded in all departments of nature. An alternation such as that of Day and Night, Life and Death, Sleeping and Waking, is a fact so common, so perfectly universal and without exception, that it is easy to comprehend that in it we see one of the absolutely fundamental laws of the universe.

Moreover, the Secret Doctrine teaches: —

Three — The fundamental identity of all Souls with the Universal Over-Soul, the latter being itself an aspect of the Unknown Root; and the obligatory pilgrimage for every Soul — a spark of the former — through the Cycle of Incarnation (or "Necessity") in accordance with Cyclic and Karmic law, during the whole term.

In other words, no purely spiritual Buddhi (divine Soul) can have an independent (conscious) existence before the spark which issued from the pure Essence of the Universal Sixth principle — or the OVER-SOUL — has (a) passed through every elemental form of the phenomenal world of that Manvantara, and (b) acquired individuality, first by natural impulse, and then by self-induced and self-devised efforts (checked by its Karma), thus ascending through all the degrees of intelligence, from the lowest to the highest Manas, from mineral and plant, up to the holiest archangel (Dhyani-Buddha). The pivotal doctrine of the Esoteric philosophy admits no privileges or special gifts in man, save those won by his own Ego through personal effort and merit throughout a long series of metempsychoses and reincarnations.

.

Such are the basic conceptions on which the Secret Doctrine rests.

It would not be in place here to enter upon any defense or proof of their inherent reasonableness; nor can I pause to show how they are, in fact, contained — though too often under a misleading guise — in every system of thought or philosophy worthy of the name.

Once that the reader has gained a clear comprehension of them and realized the light which they throw on every problem of life, they will need no further justification in his eyes, because their truth will be to him as evident as the sun in heaven.

The Theosophical Forum

COMMENTARY — G. de Purucker

[On the opening page of *Fundamentals of the Esoteric Philosophy* by Dr. de Purucker appear these words: "In our last two meetings we studied the Three Fundamental Propositions or Principles in H. P. Blavatsky's wonderful work, *The Secret Doctrine*." Reports of these two meetings were not included in the published work, the book starting with the third lecture. Pertinent extracts from these preliminary lectures, given respectively January 4 and January 11, 1924, are here reproduced, with closing remarks by Katherine Tingley, then Leader and Teacher. — Eds.]

We should all feel deeply and gratefully sensible of the occasion which is here given us to approach along the paths of thought the doctrines which from immemorial time have enlightened the intellect of our fellow-students, have given courage to strong hearts under persecution, and have directed the forces of the world along the lines which men hold dearest — the lines of religion and the ethical principles which govern human conduct.

Personally I am deeply sensible of the responsibility which the Teacher's remarks, preceding this talk, have put upon me, as called forth by her to say words which shall be simple, condensed, clear, helpful. Her instructions are to take the literary masterpiece of Helena Petrovna Blavatsky's life, her *Secret Doctrine*, and from beginning to end of it touch, if possible, upon every main doctrine therein contained, and produce a record and interpretation of its teachings which all minds can understand and which will be helpful to all members of the School both here and throughout the world.

The subject is a great one: great in scope, great in possibilities. I approach the duty with a true awe, with my heart filled with reverence for these venerable doctrines which from times so far back that "the mind of man runneth not to the contrary" of them, have provided the world with its religions, its philosophies, its sciences, its arts, its ethics, and therefore its governments.

Helena Petrovna Blavatsky opens her work by enouncing three fundamental propositions. *First*, is her enunciation of an inscrutable Principle; the *second* postulate, the second fundamental proposition, is her declaration that the universe is the playground, the field, the arena, the scene, of incessant, eternal, never ceasing periodicity: that is to say, cyclical movement, the manifesting of the eternal Life in the cyclical appearance and disappearance of worlds — stars, planets, and the other celestial bodies in the cosmic container which men so vaguely and inaccurately call Space. She tells us, voicing the teaching of the Ancient Wisdom, that these worlds come and go like sparks, mystically called the "sparks of eternity." The life-cycle of each of the greater bodies is of necessity of immense duration.

The *third* postulate — by no means the least in importance, that which is easiest to understand, that which for men perhaps is most pregnant with truth — is that the universe and all in it are one immense, eternal Organism. This third fundamental proposition tells us not merely that the universe is one with all that is in it, but more particularly that the being of man, his body, his bodies; his soul, his souls; and his spirit, are but the offspring, the fruitage of forces. — Here we come upon one of the doctrines most necessary for us to understand in the magnificent sweep of Theosophical philosophy, and it is the doctrine which H. P. B. has called the doctrine of Hierarchies; that is to say, that the Cosmos, the universe, while one organism, is nevertheless formed, so to

say, of steps, or gradations of beings, consciousnesses, or intellects, of all various kinds, which the universal life manifests in, and that these are interrelated, and correlated and coordinated, and work together in one unity towards one common object and end.

We see thus that we are not merely the fleshly children of earth, beings like butterflies, born of a day; but verily sparks of the Heart of Being, of the central fire of the universal life. If we could feel this wonderful truth in our hearts, and if we could carry our feeling into our daily lives, no force would be greater to govern our conduct than it; nothing could better mold our destinies, nothing could put us upon a nobler path of achievement and service than it.

.

Before resuming our talk of last week it would seem good to quote from H. P. Blavatsky the paragraph occurring at the bottom of page 13, preceding her treatment of these fundamental Propositions:

Before the reader proceeds to the consideration of the Stanzas from the Book of Dzyan, which form the basis of the present work, it is absolutely necessary that he should be made acquainted with the few fundamental conceptions which underlie and pervade the entire system of thought to which his attention is invited. These basic ideas are few in number, and on their clear apprehension depends the understanding of all that follows; therefore no apology is required for asking the reader to make himself familiar with them first, before entering on the perusal of the work itself.

These three Propositions may be called a synopsis of the entire

system of Esoteric Philosophy. They are an epitome of the religious and philosophic reasoning of the human soul from times vanishing into unknown antiquity. Necessarily, therefore, are they very difficult to understand, and in some of their reaches they cannot be understood fully by the human mind. For instance, while we cannot say with reference to this first Proposition what this *Principle* is of which H. P. Blavatsky speaks, nevertheless we can talk about it, talk around it, say what it is *not*, as H. P. Blavatsky herself does when, after saying that in the words of the Hindu Upanishad, it is "unthinkable and unspeakable," she proceeds to speak of it and to give the ancient teaching about it as it was understood by the greatest minds of olden times.

This principle beyond the reach of human thought must be all that which passes human understanding and which for that reason we can only call the ALL — a word simply expressing our ignorance, it is true; but it does express the fact that this ineffable Principle is ALL. Ultimately from it we sprang, back to it we are journeying through the aeons of illimitable time. All thoughts ultimately came from it, but by no fiat of a thinking mind however great. The ancient philosophy tells us that we may liken the first stirrings of being in this ALL to the life-germ of an egg. How marvelous it is that a thing which, when chemically analyzed, consists of but a few elements of matter, yet if not disturbed or destroyed, under proper conditions, brings forth a living being!

Many are the religions which have treated of this Principle in varying ways. The Hebrew Bible opens its cosmogony with the words: "In the beginning," that is to say, "In the principle"; and so translated in the Greek Septuagint. "God made the world and the world was without form and void, and the Spirit of God moved upon the waters." Now here is a wonderful thing. The thought in

those lines is by no means well expressed philosophically, but it does contain the esoteric teaching as we have it here in the Secret Doctrine. "In the beginning — in the Principle — in the ALL." The next statement is that "God" (the original Hebrew of this word is the plural noun "*elohim*, a curious compound of a feminine noun with a masculine plural termination), *Elohim*, made the earth and the earth was formless and "void." What does "void" mean? It means emptiness, vacuity.

The next statement is "And the Spirit of Elohim moved upon the waters." What waters? We have been told that the earth was formless and empty, and that it was void, — and let me remind you that the word *void* here means more than "empty"; it means, properly, in this application, *intangible, immaterial*, as we would say an astral world, a spiritual world, even, if you please. Upon it where were the waters upon which *Elohim* or the *Gods* moved? Why should they move upon the "waters"? Are most students of religion and philosophy aware that "water" is a term used in the ancient religions as signifying Space, the waters of space? So then we have an immaterial world, brought forth from the ALL by powers, by gods if you like, and the spirit, the force of these beings, moved over or within this intangible and immaterial globe or world. . . .

Turning to the further Orient and taking up the Sanskrit teachings as expressed in the Veda — the most ancient and highly revered religious and philosophical works of Hindusthan — we find in the translation of Colebrooke the following:

Nor Aught nor Naught existed; . . .

Think of the thought in this. Neither some thing nor no thing existed.

. . . Yon bright sky

Was not, nor heaven's broad woof outstretched above.
What covered all? what sheltered? what concealed?
Was it the water's fathomless abyss?

Again the reference to the waters of space.

There was not death — yet there was nought immortal,
There was no confine betwixt day and night;
The only One breathed breathless by itself,
Other than It there nothing since has been.
Darkness there was, and all at first was veiled
In gloom profound — an ocean without light —
The germ that still lay covered in the husk
Burst forth, one nature, from the fervent heat.

See the marvelous attempt to render into ordinary human language, into commonplace figures of speech, however beautiful they may be, thoughts whose subtlety and profundity the human mind can reach towards, grasp for, attempt to reach — and yet must largely fail. And nevertheless we sense, we feel, as it were by an inner consciousness, the existence, the reality, the actuality, of that which we know is, and fail to tell.

Here we have a statement that no thing was and not-no-thing was. To This, we can give no human name; yet, as the mind works analogically, they tell us that the germ of life arose in It as It then was. So is It now, nothing less, nothing gone, nothing added; always the same so far as we can see, and yet changing ever. Utter immobility is death. In It death exists not. Motion as we understand it, is life, and yet in It such life in reality exists not. It is in reality neither in motion nor motionless. All we can liken It to is utter Space, containing unending motion *as we understand it*, in infinity, in eternity — and all these are but words — an open confession of the inability of the human mind to reach it. Yet how noble, how proud, a statement it is of the mighty forces of the

human spirit which can reach up, and even as it were get some intimation of the unutterable. There in itself is a basis for a religion of truth. How mighty a thing is the mind of man!

On page two of the first volume of her work, H. P. Blavatsky says: "It is the ONE LIFE: eternal, invisible, yet Omnipresent, without beginning or end, yet periodical in its regular manifestations."

Is it possible inwardly to conceive the immensity of this spatial ALL and our cosmos, our universe, as hanging from It by a thread of spirit? Our *universe*, not alone our dust-speck of earth, but the universe comprised within the encircling zone of the Milky Way; and the numberless other universes hanging from It.

The ALL itself never manifests; It is the *Unmanifest*; nevertheless from It manifestation proceeds. To what can we liken It then? What were the figures of speech that the ancients used, the pictures the metaphors, by which they explained the manifest proceeding from the Unmanifest? — the material from the Immaterial, life from not-life, personality from non-personality, being, entity, from non-being and non-entity? Here is one figure: the World-Principle is the Sun. The sun sends forth innumerable rays of light eternal, in all directions, all part of that which sends them forth. The sun itself was to the ancients but the material manifestation on this plane of a hierarchic series which had its roots again inmeshed in something still higher than itself, and so forth. How did they describe this Principle, this Unspeakable, in the Vedas? Silence and darkness surrounded the thought and they simply called it *Tad* — *That*; not even "God," not even "The Shining One"; it was limited by no adjective, simply THAT.

Another figure was the World-Tree, even more universal than that of the sun, found in the Hindu scriptures, found in the ancient American Maya, Inca, Toltec, symbols, found in ancient Europe and preserved to this day in the Scandinavian Eddas. The

World-Tree — how is it imagined? It was figured as growing from above downwards, its roots rooted in THAT, and its trunk, its manifold branches, and its twigs, and its leaves, and its flowers, stretching downwards in all directions and representing the manifesting and manifested life, the incalculable things into which this cosmic river, this spiritual flood of being, runs.

Suppose a tip at the end of the lowest, utmost branch, the tip of a leaf: it draws its life from the leaf, the leaf from the twig, the twig from the branch, the branch from a larger branch, the larger branch from a larger one still, it from the trunk, the trunk from the roots, the roots — why proceed further? We can continue indefinitely. But the ancients, with their deep religious faith, simply said THAT, when referring to that which transcends human power of conception. So, when H. P. B. says here "And yet periodical in its regular manifestations," so must we understand it. It is her own teaching that It manifests never, but from It springs all life. "Between which periods reigns the dark mystery of non-Being." Between the periods of manifestation called manvantaras there are the so-called cosmic or universal pralayas. . . . Therefore, in the words of H. P. B.:

Between which periods reigns the dark mystery of non-Being; unconscious, yet absolute Consciousness; unrealisable, yet the one self-existing reality; truly, "a chaos to the sense, a Kosmos to the reason." Its one absolute attribute, which is ITSELF, eternal, ceaseless Motion, is called in esoteric parlance the "Great Breath," which is the perpetual motion of the universe, in the sense of limitless, ever-present, SPACE. [I, 2]

.

KATHERINE TINGLEY: Thinking towards the unthinkable is a wonderful, spiritualizing force; one cannot think toward it without a disposition to either think more or feel more, without

opening up the inner consciousness of man. And when that inner consciousness is awakened, the soul finds itself closer to the infinite laws, closer to THAT, or that Great Center that no words can express.

I have a very, very strong feeling that even if we turn away from the truth presented to us, it leaves its impress. If we look towards it, there is a greater impress; if we think towards it, it is still greater; and it is that very condition that opens up the soul of man and brings him nearer to the consciousness of the profound and sacred and wonderful principle, impossible otherwise to conceive.

Now I declare that I cannot think towards my higher self and accept and feel it as fully as I am capable of, without opening the doors to a higher state of consciousness. If I remain in that state of consciousness, I am closer to greater light, and as I familiarize myself with the thought that I am a part of this great universe in a very true sense; and a *necessary* entity, only so far as I serve humanity (and in serving humanity, you have got to love it), so by entering into that state day by day the thinker will take its place, and the doors will be opened to that higher state of consciousness. That is where intuition commences to work. As Professor de Purucker said, it is not that we need to get anything new, but we need to make active that which we possess, and bring our souls and winds and aspirations to a higher state of consciousness.

The Theosophical Forum

ART AND THE NEW AGE — *Hazel Boyer Braun*

Humanity finds itself moving rapidly into a new era, strikingly different from the preceding one, and with certainty we may expect marked changes in the forms of art expression. Much confusion arises, however, when artists attempt to create a new art based on supposedly new principles. A truly great art of the future must employ universal ideas, as in all illustrious periods of culture in the past, for the deepest intuitions of a people are expressed in the distinct forms of their art.

In the understanding of this intuition lies the inspiration for the art of the future, and we must reach the heart of these grand ideas before we can grasp the fundamental basis underlying all art principles. These truths, expressed in symbolic language, need not be locked secrets for us today. Certainly there is no more fascinating study than that of comparative symbology, wherein is evidence that all the peoples of the earth once understood the same universal teaching.

Symbolism and myth were not born of fear of nature's forces at all, as has been stated by some researchers, but simply constituted the language of those who had been taught some of the secrets of the universe. Symbols are universal and express reverence and understanding of nature. Today we are in touch with the whole globe in an outer sense, can hear the voices of those in remote lands and learn about their daily lives; but the ancients based their kinship upon the teachings of the Mystery Schools which provided an inner communion of thought.

In former times art and religion evolved side by side, as parallel lines of expression of man's soul life. The classic period of Greece for instance was absolutely responsive to the needs of the

spiritual development of the people. Their art presented man in heroic or godlike form, whether the subject was historic or mythological, only its quintessence was embodied in a severe and conventionalized style. The ideal Greek statues were not primarily illustrations of mythological stories, but revelations. We know how the Zeus of Phidias was regarded. Dion Chrysostomus said: "So much light and godhood had the artist wrought into Zeus that at sight of the statue even the most miserable of mortals forgot his suffering."

Democritus struck the keynote when he declared beauty to be perfect measure, free from deficiency or excess: the ethical ideal embodied in this esthetic formula. The Greek idea of the fundamental principle of harmonious proportion and measure was applied to their architecture, their entire art expression and likewise their understanding of the building of worlds, because they never thought of themselves as separate from the universe.

As we survey the history of ancient peoples we are often fascinated by their art, which like a flower springs from the soil of esoteric wisdom. Today nearly every outstanding artist has a deep regard for the art of ancient China, and every gallery and studio has its precious treasures from the old masters of the far east. There is a significant promise in the present enthusiastic interest in Chinese art, from artist to layman.

With the prevalent interest in oriental art, let us note a parallel in the opening of a new epoch in our present cultural life. The trend of art, among our nature loving people, has something of that grand reverence for universal nature which inspired the Chinese. Abstractions, surrealism, and many other more or less short-lived art impulses are searching in the same direction as the mystic who paints out-of-door themes as a hymn of praise to the inner divinity that lies at the heart of all things. The surfeit of

sophistication and surface interests is the keynote that emphasizes a growing hunger for spiritual values in art and in life.

It is not difficult to recognize soul quality in art, and to see that the rare simplicity found in the vital living rhythm of the old dragon tiles made for Chinese tombs, or those Chimeras in sculpture which suggest mystic ideas in living forms, is rooted in life-giving truths of the ancient wisdom. We believe the cruelty portrayed in the forms of some of the ancient bronzes was inspired by a realization of the danger of the elemental forces present in the cosmos, also found in the lower aspects of man's nature: forces which may lead him into destruction if not curbed by his higher nature. Another example is the Chinese dragon as an emblem of the higher man released from his body.

We find the same penetrating understanding of cosmic truths in a small stone sculpture of a three-faced deity, the Hindu Trimurti. It is significant first because of its beauty, its innate expressiveness of those qualities that we associate with the thought of divinity: serene but vitally living Splendor, the great Silence, the Sacred Flame, the Radiant Presence. No student of the ancient teachings would mistake this three-faced figure to be a personalization of deity, but would recognize in it a symbolic reminder of the primal, universal substance manifest in three aspects — Brahma, from the Sanskrit root, Brih — meaning to grow, to expand; and Vishnu from the root Vis — to pervade, being infinite space of which the gods, the Rishis, the Manus, and all in the universe are the simple potencies; and then there is Siva, the resolver, the regenerator. Modern scientists might find a relationship to the three-faced deity in their expanding and contracting universe.

It is very difficult to attain the fullest possible appreciation of the art of old India and China without making a study of the

philosophy which inspired it. But the keys to an understanding of the language of symbols are relatively simple and will carry the student far. The over-ornate decoration often found in the East is sometimes criticized, because the motive and symbolism of the design is not understood by the westerner. There exists today a highly decorated gateway to a Stupa which must have stood at Stanci, India, in very ancient times. There were four of these gates placed around a circular structure, the whole of which was symbolic of the structure of the universe. At the ends of the cross-pieces of this gateway we noted on each a concentric circle with seven spirals. The gateway itself suggests man's placing his feet upon the mystic pathway, and the three cross-pieces implies that only those of the third degree of initiation were taught there. The concentric circles are identical with those wrought on gold disks which were found in the tombs of ancient Greece, and also inscribed on the boulder blocking the entrance to a cave temple in Ireland. The symbol of the concentric circles tells all who may read it that within this temple were taught the structure of the sevenfold universe, the nature of man, the races of humanity, and the secret teaching concerning the planets.

The Greeks suggested the planes and hierarchies of existence by the various characters in their myths, each character recalling to those wise old students the fact that man may progress step by step to the place where he blends his nature and understanding with that of the cosmos and becomes godlike. The Babylonians hinted of the cosmic planes in the structure of their temples with their seven or ten steps; and sometimes many more.

Ancient Mayan artists carved a series of four faces, one above the other, on the headdresses of their monolithic statues. These heads represent the four monads or souls of man, and link with the fourfold division known in Vedic India.

The Aztec calendar stone now in the National Museum of Mexico City illustrates a tradition and calendar system of great antiquity. In it we may find evidence that the Incas, Mayas, and Aztecs have the roots of their culture, not in cave men and crudity, but in an ancient wisdom and divine knowledge that links their civilization with that of the Orient. They knew astronomy and other sciences by a process of initiation into their mystery schools. One noted American archaeologist says of the calendar stone:

It clearly determined, once and for all, the sequence of the days; the relation of all classes of the population to each other and to the whole, and set forth not only the place each group should occupy in the market place, but also the product or industry with which it was associated and the periods when its contribution to the commonwealth should be forthcoming to regular rotation. The stone was therefore not only the tablet but the wheel of the law of the state, and it can be conjectured that its full interpretation was more or less beyond the capacity of all but an initiated minority, consisting of the elders, chiefs and priests.

The grades of social and political life were similar, according to the old records, to the early civilizations of Hindustan in the Vedic period. In both Central America and India the population was divided into four grades: the agriculturist; the commercial man; the administrator, warrior, king or prince — in short the world of officialdom; and the fourth grade the Brahmana or the philosopher, sage or initiate.

The four grades or castes of humanity are said to have taken their origin from the four paths which have been known in the Orient from time immemorial — the paths of consciousness by which man works out his own salvation through the circling years.

Some scholars consider Mayan art the greatest in America,

comparable with those monuments of the Orient which were reared in the golden ages of the past, when entire nations glimpsed something of the inner splendor of life and built magnificent temples, pyramids, and towers. Karnak in Thebes, the sun-temples of Mexico, the monuments of Peru, Java, Cambodia, Athens and down the Nile, were all reared by peoples who paid humble tribute to deity. Each is universal and impersonal in significance, without the slightest trace of sentimentality.

With abounding vitality, the mysterious megalithic structures the world over speak the same mystery language as these ancient temples, yet in tones that often seem to echo from a far greater antiquity. Wherever we find them they are so similar and so amazing; the old Peruvian walls, of which the Sacahuaman fort is typical, the stones often weighing 300 tons, yet so carefully finished and put together that they have better withstood earthquakes by their very irregularity than by a rigid wall.

The amazing statues found at Akapana, Tiahuanaco and Lima, cut in intensely hard stone, are often twenty feet in height. These stone statues of America lead one in thought to the great platforms of Easter Island, the masonry of the Great Pyramid of Egypt, the circle of Stonehenge, the Dolmens of Scotland, and the carvings and paintings discovered in the caves of Spain. Many of these belong to an antiquity greater than science is ready to admit, but decade by decade the horizon is pushed back as our knowledge increases.

The following quotation from the writings of the Old Emperor Taitsong challenges us to widen our vision: "By using a mirror of brass, one can see to adjust one's cap; by using antiquity as a mirror, one can learn to foretell the rise and fall of empires."

As we take stock of our present status with a breadth of vision

that encompasses pre-history and probes the future, we see in our United States the development of a unique architecture, that of the skyscraper erected to the god of commerce. On the other hand, the formation of our state and national parks embodies a tribute to nature that is noteworthy in a young civilization, so buried in material living and thinking that, as yet, it cannot compare in certain ways with older cultures this same land has known.

Many of us love the art of the American Indian because of its simplicity as an expression of children of nature who, having learned from the mountains and trees and sky, love silence and communion with nature above all else. Here is no brain-mind fakery of childlike naivete, but an intuitive sense of balance and rhythm which is characteristic of the repetition, accent, and dignified tempo of their music.

Indian arts are closely allied with the humble necessities of life: pots of clay to cook with, baskets to gather acorns, rugs to protect from cold, arrows to provide food and kill the menacing enemy. The creative imagination is given full vent in the elaboration of gay garments, headdresses, moccasins, deerskin suits, and jewelry. It is in the decoration of these simple necessities of life which they, even more than the white man, love to have beautiful that the Indian outlook on life is symbolized. In rugs, pottery, and baskets may be seen the patterns of clouds, rain and lightning — all those valued associations with thunder storms that make the corn grow. The colorful cubes built into stepped designs suggest the distant mountains toward which their gaze is directed as they work.

Tassels on the corners of rugs represent the four mystic directions, the four seasons of the year. The familiar squash blossom design is the emblem of maidenly purity, wrought in a

silver necklace or in the embroidery of a dress. The Thunderbird design is almost identical in significance with the Chinese Dragon; both represent the spiritual power whose home is the mists and clouds of heaven, both are the life giving power of the rain.

Truly Indian art possesses its tranquil dignity because it is above all intuitive.

Lawrence Binyon further completes our perspective and helps us to understand where we stand in the scheme:

In the East, not the glory of the proud human form, not the proud assertion of human personality, but instead of all these, all thoughts that lead us out from ourselves into universal life, hints of the infinite, whispers from secret sources — mountains, waters, mists, flowering trees, whatever tells of powers and presences mightier than ourselves.

All this tells us plainly that since the Periclean age, since the beginning of its decline, we, as a western people have, to use the Chinese saying, "Lost the way to Heaven." We turn to the art of the West and search in vain for magnificent monuments comparable to those of antiquity. Cathedrals, yes, built under the shadow of a dark and restricted understanding of life — art is there indeed, for now and then an artist broke through to a universal point of view. But may we not hope for something greater as we grow and learn?

There is hope in our being an out-of-door-loving people, for this in itself may raise our eyes to a more penetrating understanding of nature so that we may not be altogether submerged in a borrowed sophistication. Nature, art, and civilization must ever go hand in hand if we use the mirror of antiquity to make our prophecy. In the landscape painting of America, we sometimes

catch the impersonal subtle mysticism of the great old Chinese landscape painters, who are held by deep students to be the greatest artists of all time, insofar as we can know today.

The Theosophical Forum

KEEPING ON THE BEAM — *Lydia Ross*

To keep on the Beam of Intuition in Life's journey, means wise goings on all flights and timely arrivals at all landings.

The man-made birds that today soar freely above and around the earth are something more than just another brain-mind conquest of Nature's forces. The plane, moving into higher levels of the earth's atmosphere, is symbolic of new levels and wider vistas opening up in man's own nature. It must be so; otherwise the human creator would be something less than his creation.

The inventors and pilots of the airplanes may or may not be noted as aspiring individuals. But as integral human elements of the current mental and ethical life, they must feel, in degree, the worldwide urge to find a somewhat freer and higher standard of living. If the passengers mostly bring aboard their own "atmosphere" of routine personal affairs, and only casually look out at the painted picture of a world going by, they are missing the finest thrills of the flight. For the few, however, who enter into the spirit of flying, the plane may give them a lift in more ways than one.

In our endless journey of Destiny, we mere men are being carried along by Mother Earth as she cycles steadily onward and outward into new and grander spaces of Space. Wise old Earth keeps on the Beam of Progress and becomes at home in ever enlarging and finer realms of matter. She is thrilled with renewed life in her fearless journey of planetary adventure with its cosmic cycles of regulated landings for rest and vital renewal.

As we human embryonic planets are ferried along by Mother Earth, each one of us vibrates with delicate inner thrills of the

same vital cosmic urge to unfold and expand and become at home in the ever-new and finer realms of our unknown selfhood. In our age-old journey of self-becoming, we have become self-realizing, responsible pilots of our own destiny. The natural charted beam of man's progress is the invisible, voiceless, inner beam of Intuition. It is the individual something, more sure and real than an ace pilot's technical knowledge of flying. It is a mystic beam of living light generated by man's spiritual self. It is the discriminating principle of our sevenfold nature. It is the "wisdom of the Wise" which all great sages and Saviors have evolved by many lives of impersonal and unselfish thought and service for humanity. By aspiration and strong will for self-conquest, they long ago evolved beyond our present level of attainment. As Elder Brothers they show us the way by which we may work out our salvation from the evil of ignorance and its self-imposed suffering. As living men, they understand all the levels of earth life as viewed from the conscious altitude where the Higher Mind *merges* into the next higher level of spiritual vision. This evolutionary move is as natural and logical a step in progress as is that untimed movement above the field when our passenger plane lifted its little round feet on its take-off from solid earth for the levels of the air.,

Our winged ship soars upward and onward, and we at once feel at home in a free clear level of finer air. The going seems smooth and unhurried. We forget that time and space are measured on a different scale from the familiar one in the picture on the receding landscape a mile or two below. Looking down, the countless details that made up our pattern of daily life are lost in the toy pictures of towns and roads and narrow ribbons of rivers. These are now the details that dot a great moving panorama of hills and mountains and blue ocean expanse which make up the backdrop of our coastal flight.

As this vast panorama slowly unfolds and rolls by, it seems that it surely must picture a continued story of Plan and Purpose so vital and majestic that even the big cities here and there are mere punctuation points.

What, then, does earth life mean? We have caught glimpses of a few shifting scenes of an over-all picture of Mother Earth's playhouse for us. With so marvelous a stage setting, surely "the play's the thing."

Is not the airplane perspective symbolic of that of our spiritual self, patiently overseeing its bewildered human child? We think of Krishna, "tenderly smiling" upon downcast Arjuna weighed down with doubts and fears, whose recorded wisdom in the *Gita* is yet the traveller's guidebook for the Earth journey.

The Theosophical Forum

THE ASCENDANT SPIRIT — *A. S. Pratt*

Begin! The field of service is unlimited! — Arthur L. Conger

It must be a strange thing to be locked in the heart of a rose — and not know it. Or to be one with the dewdrops in the field and not suspect the ending night, the rising sun so soon to shine within each one.

The corners of life are blessedly blind. But we are approaching one today which we, as a spiritual group, must try to look around, to anticipate. For this one is our business. We are not un-self-conscious entities in the darkened heart of a bud, but thinking sons, concerned and intuitive; and responsible for subjective, causal action. Already we see the shafts of light streaming across the corner, as we press on into the new day with every step.

What, then, can we assemble in the way of preparation for the unfolding spirit which has been foretold, for the downflow of directed energy and brilliance which will move out the dark across the face of the earth? What causes can we crowd upon the astral light to insure intervention — effective and on time? For the hour is late, and we have the prime responsibility under the impress of Hierarchical planning to lead in the work, the responsibility that ever attends knowledge.

Preparation in this urgency comes in two packages — self-preparation and planet-preparation. And we open them in that order. If we look for a technique in the first, we find three requirements which appear to need incessant attention:

1. **AWARENESS.** This is that thing beyond belief and faith which stretches out into expectancy. It is the awareness that a spiritual resurgence of humanity is not only possible but imminent. It is

the song of the sparkling river which carries joy in its heart as it winds down to the certain sea.

2. OBEEDIENCE. Belief breeds obedience. When once the ear has turned irrevocably within to listen at the fount, the path purposes of the Higher Self become audible, and the preparation of a walking, working representative — up hill and down — finds expedition. Adherence to discipline is the disciple's art.

3. LOVE. How well we know the requirement! And how difficult for us to grasp the moment's love! It seems that awareness and obedience to inwardly recognized truth are all sharp corners and cold without the divine blender, love; without joy; without that spontaneity of selfless action which is the mark of spiritual height. Love it is which is lodged in the individual heart but which by nature cannot remain there since its virtue, its function, is radiation. Ever it seeks Itself in another nook of God. And Itself is everywhere.

It is permissible to open the second package without delay. Because the pain in the body of the human family is so very great, because those concerned with the dissemination of evil energies are so tirelessly active, we must get out there with what we've got — *now*. We cannot wait for perfect building materials before building a wall. As we are adding to our strength, we are to take the news to those in need, to those confused earnest men and women whose desperation at this time finds no lifting hand.

Although the plan for extending the periphery of Theosophy — and awakening men in the places where they are — can only be known in the unrolling, some things may be said to the question, "What, to whom, and how?" It is patent that the message will carry the facts in their simplicity — the fact of the divine Word within, momentarily available as traveling instructions for the pledged server; of the gift of the guide-qualities of the spirit, love

and truth; of the oneness of all men and things through interchange with the Self, who is God; of man's own responsibility for his present manifesting condition; of his inner constitution and the living divinity in all kingdoms of nature; of the ladder of evolution and his place on the cosmic organization chart — and great privilege, through rebirth, to grow consciously into the light and group usefulness. If its beauty is to be heard above the noise of the storm, the teaching will be made clear through example and analogy, poetry and — silence. And rising from amidst the necessary repetition and repetition of basic facts, we would expect to hear the NEW.

As the sun is for the flower that turns toward it, so is our teaching for those in need. Whatever channeling we who stand in the stream of love can accomplish is for those who lift their troubled hearts to receive it. Some, through long suffering, have reached the dark hour of despair, parent of surrender; others have awakened, and this is seeking-time for them. We shall find these people with courage to turn their faces to the new morning on every level of knowledge and circumstance, in every place. They await us.

It is through circulation that the blood gets its life out to the far rounded corners of the body, and it is in like manner that the fire within must send and take its light to the waiting wicks. It is circulation we are concerned with, subtle and physical. Circulation of ourselves, silent or administering, silent or answering — two parts silence to one part talk. Circulation of the One Life in our articles, letters and telephone conversations; in the products of our hands, the flowerings of our inner convictions.

In the outer work of our sacred mission to acquaint men with the native joy which is theirs, the open public meeting is of first

importance. In these, the simple facts which we have been privileged to learn are available for the taking, and travel without cease to receptive minds. If we would assist in the rehabilitation of the spirit on earth, each man among us will support and extend this activity which takes the loaves from our shelves at this time of hunger. This, and our study-groups which give circulation to the books and an understanding of their content.

Nor shall we forget or doubt the efficacy of the unseen circulation of outward-going thought, the placed causes of all effects. From meditation and dedicated action they stream forth on the lightways of the planet, quietly, swiftly, surely.

It is solemn enough, this finding oneself in the heart of a rose and responsible for its unfolding. But, working together, we shall push the petals out with joy for we are aware of the climbing sun, the Ascendant Spirit, which will assist us.

STUDIES IN THEOSOPHIC PSYCHOLOGY: 2 — *Marion O. French*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

Hierarchies of Consciousness

One cannot start with a Supreme Hierarchy called God in discussing the gradations of individualized consciousness in the Universe at large. The limitless totality of All termed Tat in Sanskrit is incomprehensible. It embraces no-thing and every-thing, unconsciousness and consciousness in what we may designate as the Kosmos. Every individual Hierarchy, or aggregate of subsidiary consciousnesses, is autonomous within its Cosmos, or space of Space, in proportion to its status of evolution. No One of them can be the All; hence each is limited by the law that governs the entire Kosmos. That law is stated on pages 137-8 by K. H. in *The Mahatma Letters*. He asserts that the "infinite FORCE" known as God or infinite mind to most men, exhibits only the functions of the human cerebellum in so far as can be ascertained. Such functions are involuntary, unconscious and mechanical. The description is that it displays "no more than the regular unconscious throbbings of the eternal and universal pulse of Nature, throughout the myriads of worlds within as without the primitive veil of our solar system." Aught else is only to be inferred from "the Kabalistic theory (correct in every other relation) of the Macrocosm being the prototype of the Microcosm." In essence, this is identical with the *Smaragdine Tablet* of Hermes mentioned in Study No. 1 of this series.

With respect to astronomical nomenclature, it is possible to picture the spaces of Space as occupied by an endlessly ascending

scale of aggregate entities. Our present knowledge permits us to surmise that a Metagalaxy may consist of a specific number of Galaxies. Our Galaxy is said to include three Spiritual Suns, a Central Sun, a Polar Sun and two Equatorial Suns with their planets, *Secret Doctrine*, II, 240. The statement is derived from the Qabalah and is set forth, hypothetically, in *Principia Nova Astronomica* by Henry Pratt, London, 1894. In accordance with the Hermetic doctrine of correspondences, our Solar System may be regarded as conforming to the plan of this prototype. Definite data that is available is not adequate for an exact delineation of its construction. This astronomical enumeration is set forth in order to establish a basis for the categories of consciousness that determine our psychological apparatus and its motivation.

As *The Esoteric Tradition*, I, 198, indicates, "It is all a matter of expansion of consciousness. . . . But our consciousness expands . . . self-consciously, first to comprehend all in the solar system, and then still later in aeonic time to embrace the Galaxy, and finally to embark upon still vaster fields within the limitless ranges of Kosmic Space." The stages of this evolution from within of the inherent powers of consciousness may be tabulated in successive steps. They will be; first, from unconsciousness to consciousness, and to self-consciousness as a normal evolutionary development thereof. This subject is analyzed scientifically in *From the Unconscious to the Conscious* by Dr. Gustave Geley, formerly Director of the *Institut Metapsychique International*. Its conclusions are closely analogous to those of the theosophic doctrines, and both have their sources in the ancient wisdom. It will be referred to specifically in the following study on the operation, or functioning, of the individual consciousness within that of its Hierarchy. In psychological terminology, the connecting link between the "eternal imperishable, but also *unconscious* "Monad" " (p. 104, *The Mahatma Letters*) and the consciousness of

the individual entity is the subconscious mind. With that link, which is the soul or psyche, fully established, the succeeding stages will be " "Full Individual Consciousness" " and "*Absolute Consciousness.*" (Ibid.) This, then, gives four states or stages of consciousness. In the final one, we will attain to "The light of *Samma-Sambuddh* —

. . . that light which shines beyond our mortal ken
The line of all the lives in all the worlds — " (Ibid.)

The "four great Planes or Bases or Worlds" that pertain to the stages of consciousness are listed by G. de P. (Ch. VIII, *E. T.*) as:

Divine, or sphere of activity of the Gods.
Spiritual, or domain of the Monads (unconscious).
Souls, or rays from the Monads (conscious but liable to recall).
Physical, or habitat of life-atom entities.

These must be understood as interpenetrating in the sense of general levels of life extending from the surface to the depths of one ocean. A more detailed description, with diagram, is given on pages 173-79, *E. T.*, and includes the ten divisions of our "Home Hierarchy." In *The Secret Doctrine*, I, 200, H. P. Blavatsky gives a diagram comparing the Gupta Vidya and Chaldean Qabalah versions of the four lower planes, or worlds, and the three next above them. They are the Archetypal, Intellectual Ideative or Creative, Substantial or Formative, and the Physical-Material which we inhabit. These are called Emanations, Creation, Formation and Labor or Works in the Qabalah and are discussed by G. de P. (Ibid.)

The four Suns in the Galaxy have been mentioned. In our Solar System, there are three planets between the Earth and the Sun, if the existence of the Intra-Mercurial Vulcan be accepted. With

respect thereto, K. H. states, p. 169, *The Mahatma Letters*, that "not all of the Intra-Mercurial planets, . . . are yet discovered."

Likewise, there are three planets with orbits outside that of the Earth. The status of Neptune and Uranus as not pertaining to our system is explained in *The Esoteric Tradition*, p. 192. The reason for not enumerating twelve planets as composing a chain is given on page 183. On page 182 it is stated that "All physical bodies in the sky that we see are fourth-plane globes, i.e., globes existing on the Fourth Cosmic Plane, and this statement is without exception, at least so far as our solar system is concerned." Inferentially, we may judge that some of those which we see nearby are not members of our chain. The location of the Earth as fourth in our chain of seven globes is shown in the diagram on page 200, I, *S. D.*, noted in the preceding paragraph. Thus, the four-fold enumeration of the Suns, of the Cosmic Planes and of the placement of the planets is in accord with the Hermetic doctrine of correspondences.

The correspondence may be carried down into the four gaseous components into which all matter, including our bodies, may be resolved. A discussion of *The Mysteries of the Hebdomad* is given in *The Secret Doctrine*, II, 590-7. Diagrams therein show the square "quaternary" surmounted by the triangle or, in solidity, the cube capped by the tetrahedron. The parallelism between the human and the physical, or inorganic, principles is indicated. The basis of the four elements is given as Hydrogen, Nitrogen, Oxygen and Carbon, which correspond to Fire, Air, Water and Earth. The statement of the "Alchemists" in regard to the four lower principles and the three higher human ones (Atma, Buddhi and Manas, or spirit, soul and mind) is quoted. It is:

"When the Three and the Four kiss each other, the quaternary joins its middle nature with that of the Triangle," (or Triad, i.e., the face of one of its plane surfaces

becoming the middle face of the other), "and becomes a cube; then only does it (the cube unfolded) become the vehicle and the number of LIFE, the Father-Mother SEVEN." — p. 593

The concept may be enhanced by quoting the beautiful imagery of B. W. Betts, inspired author of *Geometrical Psychology or The Science of Representation*, London, 1887. This volume will be referred to in subsequent studies on Symbolism of Consciousness and Mathematical Laws of Consciousness which will follow the next Study No. 3 on Individual Consciousness.

If we take the active or positing ideal activity as hydrogen we have the determining or passive real activity as carbon, and the synthetical activity of the Imagination in supporting and combining these opposites as oxygen, which, as you are aware, is a supporter of combustion. Further, the negative reactionary activity, which is not contemplated as activity but felt as resistance and gives definite substance to our Thoughts, may be compared to nitrogen, which carries off, as oxygen carries on, the opposite activities of Life. That which, therefore, enters consciousness as "I" is the equilibrium of these opposite activities or elements which cannot be explained but only felt, and we must not confuse the condition of these elements in their pure or uncombined state, with their condition when in action and reaction with one another. It is undoubted, for instance, that hydrogen and oxygen, in composing water lose all their original characteristics, and that the union is attended with activities too minute for the microscope to detect, and which can perhaps be analyzed by correspondence in the human race. If these activities exist the so-called elements interact again in a new and infinite sphere of individualities, and, at the moment of

reducing form to elementary composition, at the same moment our Panorama widens into infinitude, divisible only by Thought, and our hydrogen, carbon, oxygen and nitrogen dissolve in a flood of Light, tinting it with rainbow colors.

This transmutation of terrestrial values into those of spiritual realms is the *raison d'etre* of psychology as a science. Truly understood, it points the way to the Resurrection that will lift us to the status of the Risen Souls who inspire mankind. There be not many such, but they are the leaven in the loaf. Each *one* added to that Lodge of the Elect will help to lighten the heavy dough of misery in which men suffer. The radiation of their thought, consciously directed in accordance with Creative Law, will permeate the bread of life upon which humanity subsists. This is the token of the bread and wine, the flesh and blood of the Christos. It is Wisdom and Love conjoined in the Elixir of Life as Thought purified and freed from dross. It is nectar and ambrosia commingled in the River of Bliss that is Ananda. Borne upon its current, the consciousness may contemplate Nirvana. To forego this in the service of humanity is the great renunciation of the Buddhas of Compassion. In some degree it is attainable by all whose beautiful thoughts create an intense emotion of compassionate love.

The Theosophical Forum

ETERNAL TRUTHS (1) — *Clifton Meek*

HAS RELIGION BEEN DOING SOMETHING FOR US — OR TO US?

There appears in the April issue of the *Ladies' Home Journal* a critical analysis of present-day religion by Dr. Harry Emerson Fosdick, a Christian spokesman for whose intellectual honesty I have long had a deep regard. It is entitled: "How Religion Helps to Mess up the World," and is something every religious-minded person should read, particularly those who measure spiritual values with a sectarian yardstick. To examine one's own religion, discern its weaknesses, and point to its ineffectiveness, demands a breadth of vision and honesty of purpose few men are capable of revealing. One of the strange but familiar aspects of dogmatic religion is that it imbues its devotees with the belief that they alone have truth, and nothing but the truth, and that it is always someone else who must be reformed; the religious concepts of others must be changed and improved, rather than their own.

For too long have religious concepts been looked upon as something too sacred to be honestly questioned and weighed in the light of logic and reason. Yet the highway of history is marked by the funeral pyres and maligned reputations of honest men who have dared to question enthroned error and plead for intellectual freedom and the inherent spiritual rights of the individual. The very life-blood of dogmatism is an unquestioning blind faith which precludes the individual's inherent spiritual capacity to grow and expand toward a greater understanding of the eternal verities, and is a denial and negation of the fundamental concept upon which all religion is supposed to be based — that man is essentially a spiritual being. Granting that he is, the only logical purpose of life and his experience in a world of

matter is the progressive unfoldment of his own intellectual and spiritual capacities, and which cannot be accomplished by following anything blindly. Unless this premise is admitted, religion and life itself are meaningless, or to use the terms of a materialistic and moribund 19th Century science that life is but "A fortuitous concurrence of atoms" — — a universe without rhyme, reason or purpose. The present-day state of religion, its ineffectiveness in bringing peace to the world and brotherhood to men — which Dr. Fosdick points out and deplors — is nothing new. The germs of the weakness were present from the very beginning, and attention has been called to that fact time and again.

For centuries western civilization has been nurtured at the breast of a unique ecclesiastical system with its various sectarian ramifications, built upon dead-letter interpretation of the early Christian mystery teachings, the esoteric nature, or inner meaning of which never was revealed publicly, even by the Christian Master himself, but given at least in part to a few half-educated disciples. The church did not lose them, as has sometimes been claimed, for the reason that it never possessed them. What happened to Christian doctrine from the very beginning is well known to students and scholars. Innumerable Christian sects sprang up in the first century, and there was much bitter wrangling as to the meaning of this, and the meaning of that, and it is doubtful if Christianity per se, in its pristine purity, survived the first century of our era. Several of the early church fathers, Clement and Origen, undoubtedly had some understanding of the true nature of the teachings, judging from their writings still extant, but their influence on church doctrines soon was overcome and swept aside by the overwhelming spirit of dogmatism which was fast crystalizing as the last remnants of Christian Gnosticism and neo-Platonic thought were discarded.

That no vestige of the ancient culture remain to reveal the source of their borrowed robes, the Christian mob, led by the monks, burned the celebrated Alexandrian library, long a seat of Mediterranean culture and learning, and destroyed, as they supposed, some 700,000 ancient manuscripts, which was just the beginning of the long purge. When the perspective of time gives a cleared relationship between cause and effect, and the history of our age and civilization is written, I think the ancient stupidities of the race will again be revealed — the familiar pattern of men blindly marching down the corridors of time, following the same banners of half-truths and illusions, refusing to examine their beliefs, and screaming in rage when anyone else did, marching stiffly onward into the catastrophe that marks the end of every fool's paradise, and where we now find ourselves.

Human nature being what it is, and what it has been as far as history records — a veritable storehouse of conceit and pride — man in every age has smugly drawn the mantle of his own illusions about him; viewed his handiwork with colossal pride; pointed to the gods his half evolved mind has created and loudly proclaimed: "THIS IS IT!" From the graves of the unnumbered dead; from the monumental relics of long-forgotten civilizations lost in the night of time comes a voice of warning: "Take it easy, brother! That's what we thought, too! The last word of Divine Wisdom has not yet been revealed!"

"THAT INWARD EYE — THE BLISS OF SOLITUDE" — *M. S. Tustin*

So wrote the poet Wordsworth of the human faculty of recollection — recollection of the beautiful — that power of envisaging in tranquillity, the inspiring events or scenes of the past.

All of us have, to some extent at least, the god-given capacity for recognizing beauty of one kind or another. It is part of the constitution of man, our divine inheritance. This faculty can be fostered or retarded in childhood and youth. It can change and develop in character. It can, alas, atrophy in some natures with the passing of the years. But those who retain this power, old or young, have a storehouse of treasure that cannot be taken away from them. For them, solitude can indeed be bliss.

Just how much of this "bliss" we may permit ourselves to experience in these days is another matter. For most of us, life today brings such a constant round of necessary activity that "time to stand and stare," as another poet puts it, is a luxury. One has almost a feeling of guilt when indulging in such a pastime, and is inclined to ask oneself, "Is it productive of anything?" Wordsworth, it is true, could turn the use of his "inward eye" to some account, for he could not only recreate for himself the vision of those daffodils "beside the lake, beneath the trees," but he could convey the beauty and delight of that vision to others by the magic of his poetry. You and I, being no Wordsworths, may feel that time spent in such backward glancing is unprofitable, both to ourselves and others. "We must," we say, "get on with the job."

And in one sense this is true. To indulge in beautiful visions, of whatever nature, when we ought to be concentrating on an

immediate duty or problem is idle self-indulgence, camouflage it as we may to ourselves. And to think we can benefit the grief-stricken or destitute by pointing out the beauties of nature or the possibilities of human evolution is worse than folly, it is thoughtless cruelty. One surely would not ask a stricken Fenland farmer or a British shepherd, faced with row upon row of dead and dying sheep, frozen in the winter blizzards, to admire the beauty of the storm cloud or the pattern of snowdrifts on the frost-bound hills!

In all these matters we must use discrimination, learning by study of our own nature, our reaction to our own suffering and despair, when and where to speak, or to withhold speech. Silence is a potent balm, — service a restful sling to a broken or bruised heart.

Yet there comes a time when, warmed by quiet sympathy and unobtrusive help, the heart is ready for the spoken word, nay, it craves that word; for the spirit of man, unconquerable as the Spring, will respond to the touch of the awakening light. It may be then that we can say a few words about our great Teachings, to awaken new hope, arouse new courage. It may be we can strike the right chord by drawing attention to the everlasting optimism evinced every year in Nature's own handiwork.

Sometimes we ourselves, during the trials of last Winter, felt inspiration and tranquillity of spirit drain from us, as warmth and wellbeing denied us their comfort. It was hard, with taps frozen, and no fire in the grate, to radiate cheerfulness and humor; hard, when with a sniffling cold, and chilblained feet we had to turn out to work, to say "God's in his heaven, all's right with the world." The lark was *not* on the wing, and morning was *not* at seven.

Yet the "inward eye," for me, at least, can recall in a golden

sunrise, a magic sparkling roadway, and the sudden wonder and delight on children's faces responding to the suggestion that we were not just Tom, Harry, Mary and Jill walking with Teacher to school, but a royal family of Princes and Princesses treading a pathway strewn with priceless diamonds. That this magic carpet, this royal jewelled way, must soon vanish from beneath the feet did but enhance its beauty and its value. What matter its transience? For the time being we were richer than princes of the Orient, stirred to a new realization of beauty. We "gazed and gazed, but little thought what wealth the show . . . had brought."

It takes the pointing finger, the word in season, sometimes, to awaken in our fellow men that other "inward eye," whose faculty is to discern the diamonds of light and truth that are about our Path: to translate Life's cold and bitter experiences into jewels of inexpressible value. First we must recognize this transfiguration for ourselves; and then we shall find the opportunities to impart that wealth to others, — wealth that is indeed "treasure in heaven."

The Theosophical Forum

ENDOW THYSELF WITH JOY — A. S. Pratt

The long face of sanctity, self-conscious and taut, is losing place on the new spiritual path. Today's true pilgrim seems to be finding his progress without the benefit of black hat, black coat and black shoes balancing their gloom on the razor's edge. For Love is being discovered — and Love's ebullient youngster, Joy.

No longer need the dedicated one pocket his spirit and creep around in solemn mystery, clothed in the drab hues of frayed centuries; nor frown his way through life under a heavy burden of duty, locked in the embrace of fear. The times are against it; and God has forever been against it.

With half a look around this orderly — if troubled — planet, it is plain to see that its Informer breathed joy into every nook and atom — and took considerable delight, Himself, in doing it. The obedient sub-human kingdoms spill over with joy, just as the cup runneth over for all earnest men who have made their irrevocable commitment to assist in the work of evolution. Not for nothing does the far star in the winter sky spin his gladness into your heart as you crunch along in the snow; nor springtime, long patient, finally burst her seams and adorn hill and valley with her colors. It is the divine way of showing love to the myriad children who are looking for it. For love, whose chief attribute is that it cannot be contained, ever radiates. It is love at the center and joy all along the circumference.

It was a Master who once said to the brother he sought to train, "Endow thyself with joy"; for He knew it was all too easy to become tense on the path of initiation, to favor the intellect and conscience, and neglect the heart's throbbing need to escape to another with its essence. He might have pointed anywhere to

Nature in operation: to our friend, the brook, which ripples out its song all the way to the sea; to the slender birch rejoicing in its resiliency in the wind; to the first days of the light green leaf finding the sun, or to the expectant puppy on the schoolhouse steps, tail thumping. Beauty and joy exist wherever the all-pervading spirit is free.

What a blessing it is that mankind, rounding the low corner, is moving daily toward this expression of love, that the downflow of buddhic content is automatic with growth — a gift that goes with height. Perhaps we are lamps with green shades, very close to the table: raised, we shall spread the light in ever-widening areas.

Higher we climb in good time — as we care enough to will it. But, meanwhile, can we not sing a bit to get used to it?

It is more than likely that — this moment — the sprayed energies of joy are seeking channel into our lives and lodges, and only await the removal of debris to manifest. If we have dust and rust in either place, dead intentions, dead furniture and darkness, it is time to clear the way for the new and rejoicing. If the windows stick when we raise them, and the dust filters through our hair when we let the curtains up with a bang to the top, let us not be dismayed. The old budes slowly — although it shrinks pretty steadily before sunlight and fresh air.

It is a matter of whose side we are on. The colors and music of divinity, of gladness, belong to us and not to the Forces of Evil whose initials spell FOE. It is a fact that our one world is wounded and bleeding in these days, that traces of subjective enemy action are visible on every front. But there is no evidence that man is retreating. From his stance in sensuality and ignorance, and their results, he battles with what he has got, and tries and tries. What the gentlemen of confusion need is *help* — a shipment of light and joy to smoke and smile out the insidious foe. These are available

to us, and available increasingly for distribution.

It may be a Dark Age that we chose to get ourselves born into, but we did it because it provides such a magnificent background for the light. These are the times of opportunity, and our job's joy.

The Theosophical Forum

SPIRITUAL RESERVE — *Sylvan*

A Fellow Theosophist writing from a war shattered country gives a heart-stirring impression of the dark years in which not only theosophical but all spiritual books were prohibited and destroyed; how they were robbed of spiritual food "so we had to live from our spiritual reserve." A phrase to ponder; a theme to fire the heart and mind. Spiritual reserve! Is it just a beautiful phrase, dropped like a pearl into the vortex of our busy life? Have we not enough for our needs? In a land of plenty why contemplate want? In the light of teachings abundantly at hand why worry about spoilers and robbers? In ecstasy why toy with the thought of anguish? Why should radiant youth give even a fleeting thought to age? Want, robbers, anguish will be dealt with when they come. Old age may never come. Why worry? Worry is of no avail, but a little thought should profit us much.

We know the value of physical and economic reserves, yet remain too often indifferent, then when need stares us in the face find it impossible to establish them. To one, young or old, who has felt its sustaining power, spiritual reserve seems of inestimable value, worth all that it takes to establish. Without it even material abundance cannot satisfy. It is more permanent than vast fortunes. It is the only reserve upon which we may with surety depend. It is the rightful heritage of youth as well as of age. Without spiritual reserve how are we going to meet the dark days of stress, disappointment, loneliness, ill fortune, disaster, failing or shattered health or old age? When these shadows fall across our path shall we have that fibre of spiritual consciousness that will fortify and sustain, and enable us to live from our spiritual reserve? Shall we be able to stand unaffected when doubt or destruction hacks at every gateway of the senses, when the fabric

of life is torn by fingers of personal loss and frustration, condemnation or betrayal? It is then that the sore and hungry heart cries out; not in days of prosperity and well-being.

Does any one truly doubt that there is an indefinable fountain-head of something vital and enduring beyond the intricate web of our commonly accepted lives? Our ability and right to draw upon this source of supply depends upon the quality and the persistency of our contributions to life and to the living. We may not be conscious of spiritual accumulation. We cannot check up on total deposits or estimate interest due on the account. We may be sure, however, that according to our voluntary and continuous contributions we shall be able automatically to draw upon this reserve when all visible resources are swept away, when physical, mental and even moral strength is almost vanquished by dire circumstance. In times of stress there may be found a clear flowing spring of unshakable trust in the Law that works for righteousness, an out-flowing of a buoyant spirit from within which enables us to stand upright in the throes of anguish and say: "I know that my Redeemer liveth," or with Job declare "Though He slay me, yet will I trust in Him."

Perhaps this spiritual reserve is a natural outcome of habits of courage, endurance, kindness, understanding, generosity and compassion engendered within and by the man himself. These and other active qualities of the heart and mind are the "deposits" we must make if we are to expect the reward, the safeguards pointed to and promised by all the Saviors of the world to those who seek to follow the light and the voice of the Divine Spirit which dwells within the consciousness of every man; to those who through lives of joy and sorrow, radiant health and devastating pain, days on mountain peaks and nights in dark valleys, hear and follow the higher promptings of the human heart and mind.

Our spiritual reserve! The resultant of lives devoted to one's own proper duties, be they humble or exalted, through which the Arbiter can trace the unbroken thread of service and sacrifice guided and sustained by a constant appeal to the Supreme Being, called by any name dear to the warrior's heart.

The Theosophical Forum

MODERN ART, A MIRROR OF HUMAN PROGRESS: I — Hazel Boyer Braun

PART I

True art has a message for every age, for universality is the first measure to be applied to any claim for greatness. Order is the very law of cosmic life, producing harmony and a sense of peace. When we contemplate music, painting, or sculpture from this point of view, we immediately grasp the idea that everything is evolving, and understand that what we call art today is but the expression of today's place in progress.

Leaders in the art world are pointing to the fact that the art of our age IS WHAT WE ARE! Under it all there runs deep and true a current that represents the emotional interests of our many-sided public. In our various schools of art we find a cross-section of life, a record of an age that we are often unwilling to look in the face. We should frankly acknowledge the weak points in our "civilization" before we blame the artists for reflecting them in their work.

The well known painting "American Gothic" by Grant Wood is an example of a current effort toward realism translated into a veritable essay about those simple midwestern farmer folk. It does not make us happy even though we delight in the creative genius of the artist. We feel pained when we are reminded so vividly of the evolutionary status of minds that are so set, so rigid in the understanding of universal life, as the types in this canvas. We've known too many of them.

Many persons ask why so much of modern art is ugly. This is because there is much in our life that is ugly. We are all so closely

linked together as a humanity that everything that is done and thought affects us all. We cannot have a great art until we lift the whole to a higher level.

There are numbers of serious minded persons who really want to understand better the newer expressions, yet continue to measure them by old standards. The constant demand that the artist see exactly as they see, prevents the average layman from realizing a closer companionship with the modern artist. It is always a mistake to fail to grant art the right to progress. Surely all thinking persons must agree that art, like all other phases of life, would cease to evolve if it stands still and changes not.

It is so easy to condemn the minute we find something with which we do not feel immediately harmonious. Prejudice must be transmuted into open-mindedness. It is because there is such chaos in the general understanding of life that art is such a puzzle to so many. When we realize this we see how necessary it is for art students and persons who visit art galleries to do so with an open mind.

Dogmatism is out of the running, in religion, science, and art. Any observant person today realizes that there must be required countless grades or degrees of heaven and hell to meet the needs of the evolving individuals in the human family. So it seems necessary to have all manner of art expressions. They run the gamut from the most materialistic: brutality, vulgarity, personality, sensationalism, and the speed of this age with its fervid rapid vibrations; to the very opposite: serenity, the spiritual and impersonal, the slower tempo of the soul life.

Art is tending toward creativeness and while we may see the reason why this impulse has not always achieved greatness, let us applaud the effort. A demand should be made that an artist have something real to say to the world before he merits serious

attention. Because of the confused ideas of truth and beauty which exist in the minds of the human family, it is necessary perhaps that time be the final measure of true merit.

Man's prejudice, his inhumanity, raise a strange but very real barrier through which all truth, all illumination and, in fact, all forces that tend toward harmony must force themselves in the battle of life. Nowhere more than in the realm of art is this so evident, where trend after trend is emphasized in the forward movement.

In the attempt to recover from a position of kneeling to the idealized formula of established leaders in art, modern artists are now plunged into a maelstrom of conflicting schools and styles. Too many artists and lay persons become devoted to types and trends to the exclusion of all else, hating with wild fury. Too often the artist who is wedded to conservatism gets white with rage when recognition is given to what he terms modern; and with equal vehemence, some of the moderns not only look with contempt upon the work of their contemporary who gives a sense of reality to his creation, but then turn with adoration to an old master whose work is absolute realism.

All the phases of unkindness, of failure to sympathize with every serious effort, are due to a mistaken idea of what art is and where to seek it. While we never feel that anyone can define art, it seems evident that real art must spring spontaneously out of the experience of the individual. It cannot be made to conform to any dominion, it can neither be a slave to doctrine, serve as propaganda, nor bend in obedience to any rule. The only rule is that there shall be no rule. Art must be the instrument of its own finding, the outpouring of the realities of the artist.

Somehow we prefer to keep art in the liquid state — to feel that it will ever be challenging the art critic's vocabulary. All our

intuitions are opposed to a crystallized definition of art.

Certainly art is as universal as truth. Neither may be captured and wholly enshrouded with a label of any type that the imagination of man can conceive, for art and truth have not yet been fully comprehended. No artist can produce great art until he has evolved the broadest tolerance which permits his innate taste to find for him the finest in all things. This natural intuition is so precious to a clear vision, yet it is impossible for it to function through prejudice and mere intellectuality.

Few persons have an outlook that is universal and impersonal, while many build their conceptions of art on intellectual ideas and never see the ideal that is sensitive only to the delicate perceptions of the intuition. Just as a work of art is limited by the vision of the creative artist, it may be interpreted only with the limitations of the observer.

It behooves us to become not only intelligent in our approach to art but intuitive. Intuition is the greatest essential, for it is instant cognition directly from the higher self, from the higher reaches of man's nature.

STUDIES IN THEOSOPHIC PSYCHOLOGY: 3 — *Marion O. French*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

Individual Consciousness

The consciousness of the individual is a derivative from that of the Hierarchy of which it is a constituent. The relationship may be clarified by paraphrasing the explanation given in *The Esoteric Tradition*, II, 943. The "children-rays" from the "spiritual Hierarchy" of our Globe "are human egos." Thus, in the consciousness of every entity: "The field of vision or of thought is like a sphere whose radii proceed from one's self in every direction, and extend out into space, opening up boundless vistas all around." — *The Secret Doctrine*, I, 65. For an amplification see p. 429, *Ibid.* Mathematically, the graph of the four-leafed rose or equation $\gamma = a \sin 2 \theta$ shows on a plane four petals that typify the four stages of consciousness referred to in Study No. 2. The radii from the center of the circle represent either individuals or aggregates of egos, for each radius contains an infinite number of points. As "children-rays" they are subject to tuition, which implies duality as does a point in a line, until they have developed intuition.

No summit to the ascending scale of consciousnesses can be surmised since all are embraced in the incomprehensible totality of *Tat*, the Boundless. Consequently, no definite point can be assumed at which completely autonomous consciousness is achieved. Otherwise, the "infinite FORCE" mentioned by K. H., p. 137, *Mahatma Letters*, would exhibit the functions of an "infinite mind." The constitution of the Cosmic psychological organism, as

contained in the Boundless "Infinitude of Space and Time" that is both unconsciousness and consciousness, is explained in *E. T.*, II, 952-4. The correspondences for the psychological organism, or "dynamo-psychism," of the "unconscious" Divine Monad that constitutes the complete individual are given on pp. 949-50, *Ibid.*

In operation, the psychological organism, composed of the upper Triad and the lower Quaternary, functions as an Upper Duad, an Intermediate Duad and a Lower Triad. The lowest element of the latter is the decomposable body that, when allied to animal passion in degeneracy, could be considered as a fourth duad. Actual functioning, then, is seen as proceeding on the normal basis of force in physics as that which acts and that which is acted upon. As indicated on pp. 948-9, *Ibid.*, the Upper Duad consists of Atman and Buddhi, the Intermediate of Manas and Kama, and the Lower Triad of Prana, Linga-sarira and Sthula-sarira. The Intermediate Duad is the psychological apparatus, or Soul, per se. Specifically, it is stated in *Fundamentals of the Esoteric Philosophy*, p. 341, that "in the soul resides that particular part of the psychological processes of intellection, which makes a man self-conscious, a *self*-conscious being, capable of the ideation of individualized being."

In *The Key to Theosophy*, p. 92, H. P. Blavatsky quotes Plato as speaking of "the *interior* man as constituted of two parts — one immutable" and "formed of the same *substance* as Deity, and the other mortal and corruptible." Commenting thereon she writes:

These "two parts" are found in the upper *Triad*, and the lower *Quaternary*. He explains that when the Soul, *psuche*, "allies herself to the *Nous* (divine spirit or substance), she does everything aright and felicitously"; but the case is otherwise when she attaches herself to *Anoia*, (folly, or the irrational animal Soul). Here, then, we have *Manas* (or the

Soul in general) in its two aspects: when attaching itself to *Anoia* (our *Kama rupa*, or the "Animal Soul" in "Esoteric Buddhism,") it runs towards entire annihilation, as far as the personal Ego is concerned; when allying itself to the *Nous* (Atma-Buddhi) it merges into the immortal, imperishable Ego, and then its spiritual consciousness of the personal that *was*, becomes immortal.

Thus, the Soul may be regarded as a trichotomy of divine, human and animal. This is the same as the doctrine of Huna found in Polynesia, among the Berbers of Africa and elsewhere. In further elucidation, the statement is made in *The Key to Theosophy*, that "the Spirit (or *Buddhi*) is the centrifugal and the soul (*Manas*) the centripetal spiritual energy; and to produce one result they have to be in perfect union or harmony." — pp. 189-90. Also, in *E. T.*, I, 268, it is stated that "this human soul is itself the expression, the individualized Force, of the spiritual ray which is the Reincarnating Ego." Thus, each incarnation may be considered as one point in the infinite number that composes any line or radiant ray, whether that radius be a relatively short terrestrial one or a longer one from a solar or galactic source. As expressed in *The Key to Theosophy*, p. 184:

In its very essence it is THOUGHT, and is, therefore, called in its plurality *Manasa putra*, "the Sons of the (Universal) mind." This *individualised* "Thought" is what we Theosophists call the *real* human Ego, the thinking Entity imprisoned in a case of flesh and bones.

To comprehend the construction of that bodily encasement as engendered by consciousness, reference may be made to the physiological theories of Weissmann, which are noted in *The Secret Doctrine*, I, 223, and II, 711. In *Man in Evolution* (Sec. 17) by G. de Purucker, they are described with the "supplementary

factor" that brings them into accord with the ancient wisdom embraced by theosophic doctrines. Cellular division and the specialization that takes place for specific types of tissue is not dissimilar to the process of atomic alterations by electronic accretion or diminution. Of particular interest is the fact that brain-cells do not divide to multiply. Apparently, they are "recruited" from highly developed nerve-cells and "die on one plane and are born on another," as P. D. Ouspensky suggests in his chapter on "Esotericism and Modern Thought" in *A New Model of the Universe*. Thus, consciousness is seen as engaged continuously in creating "vehicles" wherewith it can manifest itself to itself. This is accomplished by polarization of the self-consciousness that is inherent, primarily, as a passive potency of consciousness in the encapsuled droplet of universal, spiritual thought-substance called a Monad. Secondarily, it is capable of evolving, by emanation, the polymorphous, ideoplastic protoplasm that forms the astral model-body. The latter is comparable to "the original protyle" of Sir W. Crookes, F. T. S., mentioned in *The Secret Doctrine*, I, 581. The former is its noumenal antecedent of thought as "cineritious matter" in the words of H. P. Blavatsky. Successive developments are discussed on pp. 239-41 of Volume II, *Ibid*. On p. 244, the German materialistic philosopher Moleschott is quoted as saying "without phosphorous no thought." This may be considered in connection with the theory of Crookes on "radiant matter," or the critical states that precede transmutation, for matter that has become crystallized is not ideoplastic in so far as ordinary men are concerned. It must be resolved into a more malleable state, as must the concretions of convictions in the human mind. In both cases the degree of malleability must be proportionately such as to respond to the ideative force exerted.

As B. W. Betts, referred to in Study No. 2, states:

For a determinant to have any effect at all it must be within certain limits of proportion to the activity determined, otherwise no result will arise, interaction being impossible.

This applies to the tabulation of motivating factors that affect individuals given by William James. They are tabulated from A to Z under Material, Social and Spiritual. However, all of them are indicated as having their inception in self-seeking or in self-estimation. He who rules through them as well as he who is motivated by them is, thereby, barred from attaining the states of "Full Individual Consciousness" and "Absolute Consciousness" mentioned by K. H. in *The Mahatma Letters*, p. 104. This is obvious, since these stages are dependent upon eliminating all sense of separateness in order to expand the consciousness to cosmic proportions. It can be accomplished, to paraphrase G. de Purucker, only by changing the emotional vibration from hatred to love (or from selfishness to unselfishness) at the command of the will. Thereby, the proper faculty and its co-ordinate organ will be trained for the purpose. — *E.T.*, I, 139. The same law of proportion between a determinant and the activity determined applies equally to the motivating factors that affect mankind *en masse* listed by Gustave Le Bon in *The Crowd, A Study of the Popular Mind*. They are Biological, Material, Affective, Rational and Mystic. On a still larger scale, the same may be said with respect to the ideologies that alter the destinies of nations, discussed by Le Bon in *The Psychology of Peoples*. Of national groupments, Dr. de Purucker states that a nation does not have an enduring "over-soul," since all such aggregations are due to affinities, or "karmic similarities" acquired in the evolutionary course of successive lives. He points out, however, that

the collective impulses or qualities which such groups have, together form a sort of psychical atmosphere which

these group-individuals live and breathe in. Such an oversoul of a group, however, is not a true entity or Individual. — *The Esoteric Tradition*, I, 226

From the foregoing theosophic presentation, we may turn to that of a distinguished modern scientist and student of psychology. In *From the Unconscious to the Conscious*, Dr. Gustave Geley presents a synthesis of the subject based upon scientifically demonstrable facts. From them, he deduces

One single hypothesis — that of *an essential dynamo-psychism objectified in representations, and passing, by those representations, from unconsciousness to consciousness* — suffices to explain everything, with no other limitations than those natural to the faculties we now possess.

This brings him to accept the necessary corollary to such a conclusion, which is that palingenesis is a fact. He uses this term meaning again-production or "a new and second birth" rather than reincarnation because of "the profound distinction between the Person and the Self." In Physiology, he demonstrates the "thesis of a centralising and directing dynamism" that "explains the building up of the organism" and all that pertains to it. In Psychology, he demonstrates "a superior psychism independent of cerebral functions" which "by distinguishing the Self from states of consciousness" interprets all the "complexities of mentality." In the natural sciences, his premise

reveals the primordial and essential factor of evolution and relegates to their proper places the classical factors of selection and adaptation. It explains the origin of species and disentangles the laws of natural from those of acquired finality. . . . In philosophy, it gives an interpretation of the universe and of the individual, of

their destiny and their purpose, which covers all the facts, disencumbered of verbalism and abstractions. It sketches out a great metaphysical hypothesis on the nature of things.

In his own words, Dr. Geley has made a scientific synthesis very closely in accord with the more complete theosophic treatises upon these subjects. His method is to "proceed from the apex to the base, from man to the superior animals, and from them to inferior types. . ." This is the deductive method of synthetic thought in proceeding from the general to the particular. As he states, "If, on the contrary, we proceed from the base to the summit, the conclusion that we draw from the phenomena of life is an opposite one." Verily so, and the analytical method has led to egregious errors that science is commencing to perceive.

Predicating that "The subconscious appears as the very essence of individual psychology," Geley comes to the following conclusions:

This psychic activity, powerful in itself, is reinforced by a still more potent and infallible memory which leaves the feeble and limited conscious memory far behind. By the side of the subconscious, the conscious seems but a restricted, limited and truncated psychism; and even this psychism in its more important manifestations is conditioned by that cryptoid portion of the Self which is its foundation.

Truly, the consciousness is truncated when the action of the lower quaternary is deprived of the guidance of the upper triad.

Correctly, he observes that "everything happens as though the conscious were but a part, and that the smaller part, of the Self; a part, moreover, entirely conditioned by the more important part which remains cryptoid in the ordinary circumstances of life."

Also, "everything in biology takes place as if the physical being

were formed of a single primordial substance; organic forms are mere representations."

Pursuant to conclusions drawn from a comparison of his premises and accepted scientific concepts, three terms are advanced in biology. The first "is the essential unity of organic substance." The second "is implied by the necessity of admitting a superior, organizing, centralising, and directing dynamism." "There is a third term, the most important of any: the directing dynamism itself obeys a directing idea." A quotation is given from Camille Flammarion, F. T. S., that manifestations

confirm what we know from other sources: that the purely mechanical concept of nature is insufficient; and there is more in the universe than matter. It is not matter that governs the world, but a dynamic and psychic element.

The term "Cryptopsychism" is used for the Intermediate Duad of Manas and Kama, Soul, or Psyche. Creative work is considered as "initiated by an act of will, and completed partly by considered effort and partly by spontaneous and involuntary inspiration." This is regarded as collaboration between the Conscious and the Unconscious, or "subconscious psychism." "Cryptonesia — the subconscious memory — follows naturally on cryptopsychism. . . . It does not forget; it keeps all integrally." In *The Key to Theosophy*, p. 124, H. P. B. separates memory in general into Remembrance, Recollection and Reminiscence. We remember when an idea recurs without a sensory stimulation and recollect by an effort of the will. Reminiscence is applied to the memory of the soul, usually called intuition. "And it is *this* memory which gives the assurance to almost every human being, whether he understands it or not, of his having lived before and having to live again." — p. 125

Specifically, it is stated by Geley that

Cryptonesia records not only external experiences but internal ones also. It retains not only real impressions but also those of an imaginative order. Imagination which plays so large a part in normal psychism, creates and realises fictitious positions, and these, as well as real facts, are registered by cryptonesia. Similarly, of course, all the emotions and states of the soul.

In subsequent studies on psychological symbolism and the mathematical laws governing formation, this creative role of the Imagination will be discussed. Literally, it is the shuttle of the mind that weaves the representations of successive lives on the tapestry of Life. Thus, "everything which has occupied the psychic field, consciously or unconsciously, remains indestructibly even when it seems forever lost." This is viewed as "independent of cerebral contingencies" and its extension is seen as "almost illimitable." Most pertinently, it is observed that "Metaphysic activity is in inverse ratio to functional activity." This is the same as saying that the law thereof is that of the propagation of light in which the intensity of illumination varies inversely as the square of the distance. Further, it is noted that, "In intuition, genius and lucidity, the subconscious stands above the category of representation, that is of time and space." By connecting these two statements of Geley, we may conclude that subconscious representations follow Kepler's third law in which the time periods of the planets vary inversely as the cubes of their mean distances from the sun.

In other words, the Imagination as the vector of the Self sweeps out representations in time upon a plane in proportion to the cube of its mean distance from its spiritual sun or oversoul. The use of the cube is due to the fact that placement in space must involve three coordinates or dimensions. In addition, it is

significant that, as a geometrical concept, a shadow is a solid in the sense of being a portion of space from which light is excluded. Succinctly, representations are visualized as occupying such portion of a plane as is proportional to their extension in time, or in plane-tary time. This occurs in space, but in illimitable space that cannot be localized except with respect to some such shadowy solid as the solar system. Herein, lies the essential nature of Einstein's relativity of space and time.

Supernormal physiological manifestations are analyzed in detail as "conditioned by supernormal psychology." In *The Esoteric Tradition*, this is treated as Pneumatology, or the operation of spirit. Dr. Geley is in accord with this aspect and states:

That which is essential in the universe and the individual is a single "dynamo-psychism" primitively unconscious but having in itself all the potentialities, the innumerable and diverse appearances of things being always its representations The essential and creative dynamo-psychism passes by evolution from unconsciousness to consciousness.

Theosophy adds that it rises from this subliminal status to the sublimity of "Absolute Consciousness." At-one-ment is the goal we seek and Geley remarks that

The Self is not a duality, it is a unity But during terrestrial life *cerebral* conditions only allow of a restricted and truncated manifestation of the total psychism This limitation hides from the person not only his metaphysical essence, but also the greater part of his conscious realizations.

The course of evolution of consciousness is summed up by the statement

that wherever a rudiment of consciousness appears in the primitive unconscious, individualization has begun. . . . Once this rudiment of consciousness has been acquired, it will be indelible, and will henceforward continue to increase without limit. Thus are constituted individual "monads" by rudimentary accessions of consciousness. From this continual work of analysis and acquisition there result groups of monads which constitute the whole organized representation of the universe.

Inductively, knowledge of the individual is referred back to the Universe "for what is demonstrated for the individual — the microcosm — cannot but appear true for the universe — the macrocosm." It should be recalled, however, that the "island-universes," or meta-galaxies, ascend in an unimaginable immensity of embodied Consciousness. It invites us on into inconceivably beautiful and majestic realms of the Empyrean. Throughout, as Geley asserts, "In the concept of palingenesis the ultimate realization of sovereign justice is assured with absolute and mathematical certainty." Likewise, it may be added, all representations portray the mathematical laws that constitute that "sovereign justice."

MODERN ART, A MIRROR OF HUMAN PROGRESS: II — Hazel Boyer Braun

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

We all know that there are certain goals and ideals in the arts. The study and careful analysis of them can present the most revealing light on the subject both for the education of the artist and the art lover. Why is it that so many individual aspirants cannot grasp these ideals and bring their work into conformity with them? Perhaps it is because the whole question is really a matter of consciousness. Man himself is a stream of consciousness, the complexity of which explains the varying degree of illumination. Each takes what he can get, making his work a mirror of his progress in evolution. A work of art is truly a bit of the very consciousness of the artist, a record of a portion of his thoughts, the quality of his taste, refinement, and character.

If we look into it seriously we find art, like all universal subjects, full of paradoxes and very fascinating. There are some trends in modern art which come in for intensive criticism but are not always remembered for their contribution in the direction of real progress.

We all know that the particular style of expression should not affect the standing of a work of art. If something of reality is felt in an apparently mechanical performance, something vital and alive carried over from the artist to the beholder, then the sincerity in expressing a deeply felt truth may overcome other difficulties.

Among our intellectual artists there is often great emphasis on subject matter. The truth is that a mountain landscape, some fruit or flowers, a bit of everyday life, serves the purpose of art only if it transmits some glimpse from a world that has no limits, embracing infinity of space and eternity of time. It should speak to the soul of man and uplift him.

There is a growing realization that one of the weaknesses of the art of many schools, whether they be modern or conservative, is too much dependence upon technique and too little worthwhile experience. However, we can at least thank certain trends in modern art for doing much to kill our sentimentality and triviality.

We are living in a sophisticated time, and unfortunately the sophistication that we see about us is the result of human living in which convictions about the great things of life play a small part. Sophistication is something that permits more than one interpretation and there are many who raise the question, whether or not it is the means of culture? We often find a group of young — very young artists who call themselves "The Sophisticates," but they never last long under that banner.

We all agree that everything depends upon what interpretation we place upon this word which is rooted in the Greek Sophists. They were originally men of culture, of acknowledged or professional skill — philosophers, poets, artists, musicians. Later the term seems to have come, in about the fourth century b.c. to be applied to those who were proficient enough to teach the higher branches of learning. Because times change and individuals conform to varying ideals, Sophists came into disrepute. Aristotle defines them as "men who make money by sham wisdom."

If we associate the word with the thought of thorough and honest

achievement, and the genuine ability to conform with the correct conventions in every emergency, always with sincerity and perfect taste, it has a place in the evolutionary enfoldment of the culture of a race. Yet we are faced with the reflection which is grounded upon the fact that each great culture, such as the Greek or the Egyptian, has broken on its crestwave of sophistication. Through its striving toward the perfect it has departed from naturalness, becoming empty and artificial.

Non-objective and Surrealist works of art always provoke great bewilderment among the uninitiated. It is asked why these art forms should have gained sufficient attention the world over so that most critics are afraid to condemn them even though they say they have no idea what they are about. There are probably two reasons, the first being pure human gullibility. The other may be found in the somewhat pathetic fact that many persons feel the breaking up of old traditions, old manners of thinking, and feel that we are moving into a time when we should be turning our thoughts away from complete absorption in the objective world. Therefore, they reach out to these paintings that are supposed to be soul experiences.

If they would heed the admonition of the Delphic Oracle: "Man, Know Thy Self," they would recognize that there is no more authentic soul satisfying message in these than one might find in a dream, in automatic writing, or any other manner of negative reception of contact with inner worlds.

We are moving into very dangerous times because, along with the development of intuition, which is direct perception, a flash of spiritual understanding, the psychical nature is also developing, and it is this that is largely responsible for both these trends in art.

Surrealism is the outgrowth of a direct effort to get esthetic ideas

from the "sub-conscious mind." This theory presents a much misunderstood picture of man's intermediate nature. The deeper psychologists now say "super-conscious mind." The Greeks would tell us that it is "Nous," the higher mind, that aspires and contacts the spiritual Self, rather than "Psyche," the lower aspect of the brain-mind. The latter is responsible for many of the absurdities that appear under the guise of new art.

We catch a glimpse of the dangers and the realities of these new art methods when we read Dr. de Purucker's book *The Esoteric Tradition*, from which the following quotation is taken:

The cubism and futurism of modern art, or the animal-pictures engraven on the tombs and temples of ancient Egypt with their beast-heads, as instances in point, all come from the same cosmic picture-gallery. Even the symbolic art of the Chinese is affected strongly by the same source. In themselves all of these instances embody symbolic ideas, deliberate attempts to suggest truths. These symbolic ideas are all more or less transformed by their passage through the Astral Light. In themselves they are creative thoughts, but they become clothed with astral characteristics because of their passing through the ranges of the Astral Light in order to reach the human brain, and then in the human brain become still further modified. — p. 1014

We all know we shall have empty jazz in music and art as long as we are contented with fakery, artificiality, superficiality, and remain caught in this rush and hurry. Modern science, hand in hand with the ancient philosophers, indicates to us that the rhythmic beat of life decreases as we go outward from our material selves, out into the movement of the stars and planets. When our thoughts find their inspiration out there, the ordinary mental load of non-essentials has to be thrown away.

It is possible that some of the artists who belong to the so-called Primitive school of art are striving to express a certain primal urge, a thirst for something truly spiritual which goes deeper into man's own nature. The longing for beauty and harmony is native to every human being; it is akin to our aspirations for truth and peace, for those qualities belong to the inner man. They are a part of him, that portion of him which is linked with the hierarchies in which he is an atomic entity, the Solar Cosmos where order, rhythmic movement, and silent serenity are inherent.

The artificiality so often criticized in modern art has also existed in other schools and is due to separating art from nature, yet this trend has perhaps helped to overcome the inclination to copy nature which never produces art. Nevertheless, where shall we find those inner qualities of the soul if we fail to know the heart of nature? Where may we find color to express a sublime idea if we fail to observe the beauty before us?

We get a broader vista of the great plan when we grasp the thought of an old Chinese Taoist philosopher:

We fit as naturally into this beauty around us as a tree or a mountain. If we can but remain so always we shall retain the feeling of our own well being amid all the great workings of the world system. So much has been said about human life, and scholars have created such an endless labyrinth of theories! And yet in its inmost kernel it is as plain as nature. All things are equal in simplicity and nothing is really in confusion, however much it may seem as though it were so. Everything moves surely and inevitably as the sea.

Let us hope that we are moving out into a general state of consciousness that could never express itself in violence, crudeness, nor ugliness, no more than it would in sentimentality,

emotionalism, nor empty technique. We are just beginning to take note of and truly appreciate the ancient and grand old art of China with its symbolism which was so expressive to the people of that land. They understood its inner meaning which was the soil out of which it grew. May we not hope that our recognition of the spiritual glory of it may be because we are moving into a kinship of consciousness? We cannot see beauty until we have beauty within us.

The Theosophical Forum

IN THE BEGINNING WAS THE LOGOS — *Allan J. Stover*

ALLAN J. STOVER

According to the Ancient Wisdom, worlds and universes are born and reborn, re embody, in other words. Consequently the creation myths of antiquity never speak of a beginning, or of a creation out of nothing by some extra-cosmic and manlike god; but always of a new beginning as of an awakening after sleep, followed by the stirring of spiritual and monadic forces, and lastly of the emanation and consolidation of the physical form.

Distorted and telescoped though they may often be, the creation myths of Greek and Roman times still follow the pattern of a parent doctrine. In them we see creation proceeding through the three stages which were known to the Greeks as the First, Second, and Third Logos; which according to their several natures were also known as Chaos, Theos, and Cosmos. By Chaos the philosophers meant the unformed and unorganized condition in which the seeds (or life atoms) of a former cycle or manvantara await the opening of a new period of activity. It is the condition of a planetary globe or of a universe during pralaya, and contains all the elements in an undifferentiated state, corresponding to what has been called Father-Mother in *The Secret Doctrine*, where the cosmogony of antiquity is given at length. The Second Logos, known as Theos, is of a spiritual or monadic nature and in it the ethereal structure of the world is accomplished. The Third Logos is that relating to the physical world or universe and because of its inherent order and arrangement is called Cosmos, from the Greek word *kosmos*, order.

Not only worlds, but every being, as it enters embodiment passes through its own three Logoic stages. As Dr. G. de Purucker has

stated in *Studies in Occult Philosophy*, pp. 548-549:

Every different plane has its own three Logoi: the unmanifest, the partially manifest or quasi-manifest, the manifest, otherwise called First, Second and Third Logoi. Why is this? Because Nature's operations and functions and structure are repetitive on all planes. What is in the highest is in the lowest, and vice versa; or, to put the thought differently, because the entire Universe is constructed of and in hierarchies which repeat each other on the different planes. . . . Every hierarchy, which means every plane, has its own three Logoi: the first or highest, the unmanifest for that hierarchy or plane, the Hyparxis, if you wish; its clothing or offspring or expression the Second Logos; its child or clothing the Third Logos.

And since man is himself a copy of the universe we find "Atman the First Logos, Buddhi the Second Logos, Manas the Word, Reason, the expressed reason, the reason delivering the life of its progenitor to others — the Third Logos or Manas."

Many translators and students of mythology, not understanding the cosmogony of the ancients, have so confused the three stages of creation as to make the Greek and Roman myths ridiculous; when by separating the account into the stages of the three Logoi, the symbolical story is seen to be in harmony with that given in *The Secret Doctrine* and also with what science is beginning to discover regarding the upper atmosphere and the formation of worlds and universes. On the other hand, there is much to suggest that the deeper meaning of the myths was gradually becoming lost even during the time of Classic Greece, for with the coming of the Dark Ages, withdrawal of the Mystery Schools, and endowing of the gods with all the personality and faults of weak humanity, the light was almost extinguished.

The Latin poet Ovid, near the close of a turbulent life, gathered a series of Greek myths together in his famous *Metamorphoses*, the first book of which opens with an account of the creation of the world. In this work Ovid restates the myth of creation, while something of its real significance was still understood; for it was written at the beginning of our era, when the days of pagan philosophy were numbered.

In the following translation an attempt has been made to bring out a fuller meaning, by no means disregarding the literal text, but by a more appropriate choice of words and by an occasional paraphrase, uncover the significance of the myth.

"Before the sea and land and the all-covering sky (1) there was [but] one appearance of nature in the whole orb, (2) which was called Chaos; a formless unorganized mass nor [was there] anything except an inactive weight (3) and the unharmonized [and] ununited seeds of things collected together in the same place."

"No Titan (4) [Helios or Sun god] had yet furnished rays of light to the world, (5) nor did Phoebe [goddess of the moon] by waxing [and waning] renew her horns, nor did Earth (6) float self-poised, in the encircling air, nor did Amphitrite [an early goddess of the sea] extend her arms into the long margin of the lands.

"And where the [element] (7) earth was, there also were [the elements] water and air. So the earth was unstable, the water not liquid, the air without lightness; nothing retained its own form and each thing opposed everything else, because in [the same] body, cold contended with heat, moist with dry, soft with hard, and weight with lightness."

The account so far describes the condition of Chaos, the First Logos, i e., condition of undifferentiated matter awaiting a new

cycle of activity. That which follows is descriptive of the Second Logos, wherein the four elements begin to separate one from another as the focalization of the monadic and spiritual forces of the planet to be begins.

"God (8) put an end to this strife, for he separated [all that belongs to] the earth from the sky and the waters from the lands and separated the pure aether from the thick atmosphere. (9)

"After that he evolved forth the elements (10) and taking them from the dark mass [of Chaos] he united the different kinds in appropriate places."

"The fiery weightless essence of vaulted heaven, (11) sprang forth and chose a place for itself in the highest zone [of the sky]. The air is next to that [fiery essence] in lightness and location; the earth denser than these, attracted the grosser elements and was compressed by its own weight: the surrounding moisture took possession of the outermost (12) layers of the earth and kept the solid globe within bounds."

Thus ends the second scene of the drama of creation; and now the Third Logos begins with the forming and concreting of the physical globe.

"When, whoever of the gods he was (13) he divided the mass thus disposed and separated it into [its physical] elements; first of all he rounded the earth into the form of a great globe, lest it might be unequal on any side. Then he spread out seas and ordered them to swell [by means of] rapid winds and to enclose the shores of the encircled earth. He added also springs and immense ponds and lakes; and bounded the running rivers with sloping banks, which being different in different places [the waters] are partly absorbed by [the earth] herself and partly reach the sea and being received in the expanse of the sea [literally the level place

of unrestrained waters] they dash upon the shore instead of banks. He ordered also plains to be extended, valleys to sink, forests to be covered with leaves, [and] rocky mountains to rise.

"And as two zones separate heaven to the right [i.e. to the north] and as many to the left [i.e. to the south] the fifth [the torrid or middle zone] is hotter than those: so the plan of god divided the earth enclosed by the sky with the same number [of zones] and just as many regions are impressed on the earth [as in the sky]."

"The middle one of these [the torrid or tropical zone] is not habitable from heat; deep snow covers two [polar zones]: next he placed a zone between each [of the others] and gave [them] temperatures in which heat was mixed with cold [the north and south temperate zones]."

Then follows a very significant sentence: "Scarcely had he separated all [things] within [their] appointed boundaries when the stars which, long oppressed, lay hid under [or hid by] the chaotic mass, began to shine forth in the whole heaven." This throws light on the corresponding though misunderstood passage in Genesis, I, 14, in which the luminaries in the heavens are first mentioned on the third day, not that they were not existing, as is usually supposed, but that they were not visible until that time. In fact Genesis shows many links with the Greek Cosmogony. During the Middle Ages, however, the older knowledge was almost forgotten; the spherical form of the earth, its previous embodiments, the meaning of the hierarchies of the gods, the existence of inner planes, all was lost in the dogma of a word (all the understanding left of the Logos) spoken by an extra-cosmic God in the year 4004 b.c.

Even as late as the Eighteenth century the Scottish Divine Dr. Blair wrote, "In the progress of the Divine works and government, there arrived a period in which this earth was to be called into

existence. When the signal moment predestined from all eternity was come, the Deity arose in his might, and with a word, created the world. What an illustrious moment was that, when, from non-existence, there sprang at once into being, this mighty globe, on which so many millions of creatures now dwell. No preparatory measures were required. No long circuit of means was employed. He spake, and it was done: he commanded; and it stood fast."

The Greek poet Hesiod who lived in the eighth or ninth century b.c. gathered together the already ancient stories of the gods into his *Theogony*; which because of its great age, is of long standing as a work of reference among students of mythology. Lines 116 to 129 dealing with the early stages of creation are here given for comparison with the *Metamorphoses* of Ovid.

"In truth first Chaos came into existence, but next broad-breasted Gaia the ever-enduring abode of all, and Eros [or Phanes] most beautiful among the immortal gods, who relaxes the limbs and subdues the mind and the shrewd plans within the hearts of all gods and men."

While Gaia is the earth the reference here is not to the physical earth but to the spiritual and primordial earth from which it emanates. The term broad-breasted is used in the sense of producing and nourishing all things.

"From Chaos awakened Erebus and black Night; and from Night came forth Aether and Day, whom she conceived and brought forth from union in love with Erebus."

Chaos is the absolute light of the cosmic spirit which is darkness to us, and from it issues Erebus and dark Night, the latter so called because it precedes the opening of a new cycle of manifestation; from Erebus and Night with the help of Eros come cosmic Aether, the Akasa of Hindu philosophy and outermost

zone of heaven, and Day. The distinction between Aether and Day being that the former is the light of the superior planes while the latter is the light of the sphere of earth. Eros at this stage of evolution corresponds to the Tibetan Fohat and permeates the universe as a creative and formative force.

"And therefore first of all Gaia emanated forth from within herself Ouranos, the shining heavens, like herself, in order that she might be entirely enwrapped on every side, and as an ever-enduring abode for the blessed gods."

Ouranos, often mistakenly translated the starry heavens, was the shining ocean of space which surrounds every celestial body and which is here spoken of as issuing from the heart of the primordial earth or Gaia. It is this akasic ocean which is referred to in Greek Mythology when it is stated that the abodes of the dead are on the banks of Oceanus, for it was no body of water but the shining spaces of aether surrounding the earth globe.

The remainder of the Theogony describes later stages of evolution in language which to the modern mind rather obscures than reveals the ancient knowledge, but which a study of H. P. Blavatsky's *Secret Doctrine* shows to be part of a primeval knowledge which was widely distributed.

We will now turn to the still more ancient Surya-Siddhanta of India where in chap. XII a description of the earth is given as follows:

29. "This Brahma-egg is hollow; within it is the universe, consisting of earth, sky, etc., it has the form of a sphere, like a receptacle made of a pair of caldrons."

30. "A circle within the Brahma-egg is styled the orbit of the ether: within which is the revolution of the asterisms (the Greek Ouranos) and likewise, in order, one below the

other,"

31. "revolve Saturn, Jupiter, the Sun, Venus, Mercury and the Moon: below in succession, the Perfected Ones, the Possessors of Knowledge, and the clouds."

32. "Quite in the middle of the egg, the earth-globe stands in the ether, bearing the supreme might of Brahma, which is of the nature of self-supporting force."

33. "Seven cavities within it, abodes of serpents and demons endowed with the savor of heavenly plants, delightful, are the interreanean earths."

34. "A collection of manifold jewels, a mountain of gold, is Meru, passing through the middle of the earth-globe, and protruding on either side."

35. "At its upper end are stationed, along with Indra, the gods, and the Great Sages; at its lower end, in a like manner, the demons have their place — each the enemy of the other."

36. "Surrounding it on every side is fixed next this great ocean, like a girdle about the earth, dividing the two hemispheres of the gods and of the demons."

— *Journal of the American Oriental Society*, Vol. VI, no. 2

A comparative study of the foregoing selections from Latin, Greek and Sanskrit Theogony not only shows a similarity of thought but each throws light on obscure passages in others.

.

While an area of land may differ markedly on the surface, a series of wells may yet draw from the same deep stratum of sweet water. It is not chance that we find similarities among the myths

of mankind everywhere; for they sprang from a common source — the Ancient Wisdom now known to the world as Theosophy.

1. *coelum*, as the vast reaches of the sky surrounding the earth, and often referred to as the home of the gods. ([return to text](#))

2. *in toto orbe*, in the circle or orb of the earth, as the globe has not yet been formed. ([return to text](#))

3. *iners pondus*, in the sense of an attraction toward a center, i.e., gravity in modern terminology. ([return to text](#))

4. *Titan*, here used for Helios the sun-god preceding Apollo. ([return to text](#))

5. *mundo*, the world or universe as opposed to Chaos. ([return to text](#))

6. *tellus*, here referring to the globe earth which is yet to be formed. ([return to text](#))

7. The elements here referred to are not the physical elements known to us, but are their spiritual counterparts, from which the physical elements will later emanate. The tattvas of Indian philosophy.

In the preceding Ovid attempts to describe the undifferentiated state of matter and the equally indescribable conditions existing during the pralaya between earth embodiments It is not a state of confusion but a condition in which heat and cold, wet and dry, heavy and light cease to exist and everything is reduced to its original state of matter. ([return to text](#))

8. *Deus et melior natura*, the phase of deity belonging to the Second Logos, the second aspect of the trinity. ([return to text](#))

9. *liquidum coelum ab spisso aere*, the pure, clear sky or aether is separated from the thick air of our lower atmosphere The shining

and fiery upper atmosphere corresponds to the Sanskrit Akasa and the Greek Ouranos. ([return to text](#))

10. The physical elements now begin to unfold or emanate from the primordial elements and are removed from *caeco acervo*, the dark mass. Absolute light is considered as darkness to our eyes hence the original substance of Chaos is called a "dark mass" ([return to text](#))

11. The elements ether, air, water, and earth were thus disposed in concentric circles about the earth, according to weight. Science in exploring the upper atmosphere and finding extremely high temperatures at certain levels is in a certain degree confirming the ancient tradition. ([return to text](#))

12. *Circumfluus humor possedit ultima* often translated as "the water took possession of the outermost edges" in order to support the flat earth theory. ([return to text](#))

13. *quisquis Deorum*, Jupiter or Zeus, according to the Orphic tradition represents the Mundane Egg or the corresponding Egg of Brahma of the Hindus, in other words the wholeness of the earth or of any entity living thereon; the will or command of Jupiter is simply the will of the whole But Jupiter is the fifth in descent in a line of which Phanes, Night, Ouranos, Saturn and Jupiter form a series and each in turn is spoken of as Father of the Gods and of all things. It is the same divine essence represented under different names and aspects on different planes or stages of evolution. The idea is illustrated in the monadic constitution of man, in which the stream of consciousness descends from the divine monad and builds a soul and body on each plane of man's sevenfold constitution, of material appropriate to each plane.

It was only during the downward cycle that the great gods of the Greeks assumed, in popular opinion, the weaknesses and

personality of mankind, and came to be what we find in mythology today. They were never understood by the intelligent men of Greece as we understand them today. ([return to text](#))

The Theosophical Forum

ROUNDTABLE TALK

Extracts from stenographic reports of "Mahatma Letters Group" at Covina conducted by A L Conger, using Margaret Conger's *Combined Chronology* along with *The Mahatma Letters* and the *H. P. B. Letters* to Mr. Sinnett.

Letter from K. H., *The Occult World*, pp. 125-139, under discussion:

Question — Why was this letter left out of "The Mahatma Letters" collection?

A. L. C. — This was the first letter sent to Hume, who loaned it to Sinnett, who copied a part of it out for publication in *The Occult World*. Other letters sent by the Masters to Hume were copied, and the copies found in a bundle of letters in Mr. Sinnett's strongbox, but this letter was not among them. Whether Mr. Barker had some reason for not including this record made in *The Occult World* because of some question of its correctness of text, or for some other reason, is not known.

Question — The Master here refers to the higher force of destiny which he is powerless to change. And yet he speaks of trying to help India rise above the iron stage into a more spiritual expression. Could you comment on this?

A. L. C. — The Masters' efforts on behalf of India are limited by the Karmic Law which they are powerless to set aside. Karmic consequences have to be endured. However, the Masters are constantly making history, but the nature of the work they are engaged in makes it essential for its success that secrecy be as a covering veil.

Question — In many respects the Movement did not have its desired effects in India then? Is that right?

A. L. C. — The plans of the Masters which sought to induce Messrs. Sinnett and Hume to undertake the organization of an Anglo-Indian body which would operate to create greater sympathy between the races fell through and were the seeds out of which grew the present civil war today.

Question — The Master mentions something about their numbers diminishing (p. 135). Would you say something about that? Is it because some are going beyond the bounds of humanity?

A. L. C. — Either that or turning backwards. Of course the Occult Fraternity includes a number of neophytes who may fail in their periodic tests which all are put through. In the other end of the bracket, one cannot blame those who prefer to go with the Pratyeka-Buddhas rather than remain longer in the world on this planet. However, I do not believe we have cause to worry about the passing of the Fraternity into other realms.

Question — I do not understand the Master's statement about our thoughts coalescing with the elementals (p. 131) in connection with Karman. Is that a new definition?

A. L. C. — I am afraid the Brother has not quite seized the intention of the Master. What he says is this: "Every thought of man upon being evolved passes into the inner world, and becomes an active entity by associating itself, coalescing we might term it, with an elemental — that is to say, with one of the semi-intelligent forces of the kingdoms. . . ." You see the point? Collectively these thought-elementals formed in the astral plane are cast off by the Masters, in fact by everyone, and more or less coalesce, that is to say join in with the elementals of the astral world. In this sense they may be called his Karma. However, he

has not directly created them.

Question — We create entities through our thoughts. If they are evil, can they be combated and their force lessened by thoughts of an opposite nature? Doesn't the candidate eventually have to meet and conquer them?

A. L. C. — That is quite correct, and the candidate for adeptship has to face the strongest emanation of evil thoughts and conquer — such as is described as the Dweller on the Threshold in the novel by Bulwer Lytton entitled *Zanoni*.

Question — Mr Judge speaks of the fact that thoughts come in cycles, and that when cycles of a certain kind of thought are upon us which we do not like, we should think thoughts of another or opposite kind. Is this the idea?

A. L. C. — Yes. The application of cyclic law to this question is very necessary to understand. Today an elemental knocks at your door at 5 o'clock in the afternoon, and you slam the door in his face. But the next day at the approach of the same hour of 5 o'clock you perhaps leave the door just a little bit ajar. The third day at 5 o'clock you will encounter a redoubled effort to break down your defenses until you make a determined effort to put an end to this foolishness.

The lunar cycle is next in importance to avoid the reoccurrence of evil tendencies. The daily examination by the student of his daily encounter with thoughts he will find very constructive in making an end of all undesirable tendencies which he recognizes perfectly well, but which he cannot account for. He will find the answer to his search for an explanation in the light of previous efforts in this cyclic explanation of the difficulty.

If evil thoughts are given a welcome by the student, they grow stronger with the acceleration of the evil. On the other hand, if

the candidate opposes them by thought he will be placing himself in the class of benefactors of mankind.

The Theosophical Forum

"WHAT THOU, O KESAVA, DIDST SAY . . ." — *Robin Pratt*

Upon inquiry of one more learned than myself as to the greater scriptures that include the loved *Gita*, I was put in touch with a translation of the *Mahabharata*. There, in the *Anugita*, that portion which follows unostentatiously, and forms a sort of sequel to, the story told in that far-famed guidebook for spiritual aspirants, the *Bhagavad-Gita*, I came upon a passage that arrested my attention. It is after the battle so vividly pictured in the *Gita*, that conflict which symbolizes the disciple's inner striving toward the hair-line decision between the *better* and the *best*. Comes the moment when the major crisis is transcended, the battle ended. Arjuna remembers with what clarity and logic Krishna, the charioteer, has guided him. He recalls with what pin-point attention he listened and questioned, relentlessly and tirelessly extending the frontiers of his understanding. And now, to his amazement, he finds that he cannot remember a single part of all that his Lord has told him.

"O Mighty One," he implores of Krishna, "Thy greatness was revealed to me upon the field of battle. What Thou, O Kesava, didst say at that time my restless mind can no longer remember. I would have Thee tell me these truths again."

And Krishna replies to him in this wise, "That which I revealed to thee were truths regarded as mysteries, truths that are eternal. It is greatly disappointing to learn that thou hast not remembered. Nay, I cannot tell again all that I said on that occasion, but I will speak with thee further upon this same subject."

What an anti-climax, this, to the immortal teachings of the *Gita*! And yet what a veridical commentary on human frailty. But doubtless Krishna knew that the truths were not actually

forgotten. Or if forgotten by the brain mind, they then remained available in the deep reservoirs of consciousness, ready to rise again to the surface in times of crisis. And yet He gives reproof to his disciple. He knows that the lesson learned springs out of the necessity of the moment, and the teaching, therefore, can never be repeated exactly in phrasing and circumstance.

It is a human trait to clutch at answers and solutions, as if for one's very life, when times are critical, and then, when stress is abated, to lapse into reactionary lethargy. Though ebb and flow, action and pralaya, are axiomatic, there yet remains that eternal upgrade — as the spiral ever circles upward. And it is this slight tension, that is *attention*, which should, in the great economy, be sustained at all times. And, more than meets the eye, it is sustained. In the words of the *Anugita*, "While one is enjoying the sovereignty that Yoga bestows, one should never fall away from Devotion."

Earnestly we search and delve into the great teachings. Eagerly we listen to uttered wisdom, and as eagerly we impart it to others. What hours of time we spend in study and philosophizing! In a rapture of absorption, we read a volume that seems to open up continents of awareness, page by page. We are so enthusiastic that we want to impart our findings to someone else. Fumbling with feeble words, we are impotent to articulate a fraction of the essence of what we have read. Yet we may well have absorbed the value of the book.

It is said on good authority that only an infinitesimal part of that which is spoken before an audience can be grasped by the brain mind and retained, even by attentive listeners. Like Arjuna, the listener realizes with shame that he cannot repeat even the text or the several main issues. But perhaps an essence is distilled and deposited in some inner receptacle of the mind. Who can say but

that he will conduct himself more wisely in the future because he has listened and believed?

More tenuous and fleeting than the knowledge of the eye and ear are the still small leadings of the intuition, the luminous glimpses into soul-knowledge that gleam forth, unexpected, or appear like pearls in the crystal pool of the meditative mind. Perhaps there is no reason to transmit these to others, but they are priceless to remember, and though they may have the potency to change a life, they can be lost to the mind in a moment, leaving only an elusive fragrance in the memory.

And so, though perhaps nothing is ever really lost, in a practical sense, one needs to develop the capacity of attention and retention. This does not mean burdening the mind with endless details, for discrimination and evaluation are essential, but a training up of the mental faculties, through various means, to that exact right tension that makes reception clear, attention accurate, and retention sure. To this end different measures may be taken. Some people take notes, memorize by rote, epitomize and summarize, formulate definitions, paraphrase, concoct analogies, recognize symbols. Some practice concentration, meditation and ultimately contemplation. Some indefatigably put what they have learned into practical expression in some fashion. All systems have their efficacy.

The wise ones sometimes recommend that the spiritual aspirant keep a diary, there to register the essence of his gleanings from all sources of inspiration. Upon reviewing the notations, there is a delightful discovery of new recognitions as well as a resurgence of remembered truth. Keeping such a record causes one to plumb depths of being hitherto unrealized.

The regular practice of meditation does this also, if pursued with no attitude of flaccid negativity, and, if followed daily, it induces a

mental attitude of alert attention that carries through the daily round. The attitude of attention to be found in the integrated and devoted aspirant to spiritual understanding may be summarized as a state of quiet, confident expectancy.

The Theosophical Forum

THE WORLD AS THEOSOPHISTS SEE IT — *Robert L. Moffett*

Theosophists take a long-time view of the world, of humanity, and of the physical universe. This view is in sharp contrast to the traditional orthodox religious understanding, with its "one-life-life" for the human soul and a physical world not more than a few thousand years old. Theosophists hold that there is and must be a more rational as well as a more spiritual picture of man's relationship to God than is usually presented by the old time, but really very modern church. It is known that man has existed on this earth for millions of years. It would be strange, would it not, that the machinery for effecting the "salvation" of the human soul, should have waited until around 2,000 years ago? What about the many hundreds of billions of souls who lived on this earth prior to the time of the coming of Jesus? What provision for their redemption through Grace or otherwise?

For centuries the church has maintained a doctrine that the human soul was "created" at the moment of birth, without having had any previous existence. This created being has the power of achieving "eternal life" through Grace, by acceptance of certain faiths and doctrines. This teaching gives to the traveler just one short span of life in which to learn all its multiple lessons, and to prepare itself for a possible eternal life hereafter.

With such a foundation of understanding of the environment and background of man's history and evolution, it is small wonder that an acceptance of the Theosophical view of the world of matter and of life should present certain difficulties to those who have uncritically taken for granted the kind of world which the church has presented to its adherents.

First of all it must be understood that man is a creature who on

this plane has a very limited power of comprehension. Being only one of the "creatures" man cannot expect to fully comprehend his Creator. Being less than a speck on the horizon of the physical world, his vision, even with the aid of instruments, is far too limited to give him anything like a complete view; his mental perception being bound by a three-dimensional physical world. There is good evidence, however, that we live in a multiple-dimensional world, the greater portion of which we have absolutely no means of sensing, let alone comprehending, in any real way.

So, what Theosophy conceives to be the nature of our world, is in part what you might call "natural assumptions," or postulates — concepts that seem to explain to a great extent and in the most reasonable and probable way, the phenomena that appear to our limited senses to happen.

In the first place, Theosophy insists that the worlds of both physical and living things must be without beginning, and without end, either as to time, or as to degrees or levels of development. The essence of physical matter never was created, although its elements have repeatedly gone through innumerable forms. It is likely that in the past, matter has completely disappeared in what has been called the "night of Brahm," which means probably that matter was dissolved and became suspended in the eternal ethers. Later this same matter was precipitated and became again "manifest" on this plane. It is this phenomenon which probably is referred to when "creation" is mentioned in certain ancient writings.

Therefore, there was, and is no beginning and no end of physical things, except as relates to what is known as "composition," or the reshaping and reshuffling of the elements into different combinations of forms.

Scientists point out that in physical dimensions the human frame stands midway between the electron and the star — on the one hand, units of matter so tiny that they cannot be perceived by the finest microscope, and on the other, stars so gigantic that it would require millions of our earth planets to approximate their mass.

In a very similar way, man in his present mental and spiritual development represents a middle stage of evolution between the lowest and the highest forms of life. During the countless ages of the past we as personalities have passed through many many stages of development at lower levels. The lower forms, following in our footsteps, and to whom our present stage of evolution would seem like godhood, will one day enter the human kingdom.

By the same token countless hordes of beings have trod this road many millions of years ago, and are now far, far ahead of us on the steep pathway beyond. Their level of intelligence and spirituality is utterly beyond our ability to comprehend. We are destined, however, to reach their level of development, while those ahead keep on rising. Those who have gone thus far ahead are often referred to as "illuminati," and in some cases as "Masters." Many of them devote their lives to helping those who are on the lower rungs of the ladder. In short, life is an endless ladder, extending infinitely into the depths, and infinitely into the heights. And at every point on that ladder, there are millions of living, evolving beings, each on an endless journey upward and onward.

Now the nature of this thing we call "matter" is often grossly misunderstood. The uninitiated think of just one "material" world. As a matter of fact this so-called matter is also a substance which manifests itself in countless levels and degrees of fineness. As the *Bhagavad-Gita* puts it: "God expresses on all the various levels of existence only through the matter of many planes." In

short, all phenomena occur only by the movements of matter, activated by some form of force. When we think, this phenomenon of our mental activity is the result of the activation of a higher form of matter on what we call the mental plane. The same is true of our emotional experiences, because only through the movement of matter do we experience our ordinary emotions. From this it is obvious that it is a mistake for us to depreciate events that involve the movement of such matter. The truth is, it is impossible for any being to have any experience or any consciousness whatever, except by virtue of the movement of matter on some plane.

The foregoing may help to give a foundation for an understanding of the doctrine known as "Reincarnation." This concept is based on the dual nature of the human entity. In its essence mankind is eternal, in the sense that it always has had a living existence, and will always continue to live, somewhere and on some level. The eternal part of the human being is not this physical body, not this mental or emotional organism, nor any combination of these. Theosophists call this combination our "Personalities," while the eternal man is known as the "Individuality." Reincarnation takes place when a spark of the Individuality is projected into this world, in the form of an infant, which lives its life here, and passes on the lessons of this life to the eternal Individuality. At the time of physical death, all that is not the lower physical is reabsorbed into the Individuality.

By this process the eternal human gains repeated and multiple experiences through the life of what we call the "Personality," which is not the real man at all. It is not the eternal Individuality which reincarnates, but just a branch, or projection, in the forms of physical body, mental and emotional equipment which make up the men and women we are and that we know.

Investigation by others as well as Theosophists has determined that even on this physical universe we live in an orderly world. It is a world of cause and effect. Nothing happens without a cause. Nothing happens that is not basically a movement of matter driven by an activating force or energy. Such movement is merely the result of causes, often far removed from the observable effects.

The sum of all the dynamic and latent causes affecting any particular personality, is called "Karma." The proper understanding of Karma indicates that we are not punished or rewarded for either our misdeeds or our virtues, but definitely *by* them. By our thoughts and actions (in both cases actions on differing planes) we start activating currents of energy into motion. Eventually those forces affect us, usually by modifying the environmental situations in which we must make our way. It should be understood that what is true for the Personalities of the race is also true for groups, nations, and even for all humanity. Certain group actions bring a Karma or effect which conditions our later ability to function.

It is obviously impossible for the average theosophist to prove, or to demonstrate the truth of reincarnation, except on the basis of its reasonableness — its rationality. The doctrine of reincarnation does, however, provide the explanation which all experience shows to be most "probable," which, by the way, is a type of explanation which science often accepts, as many explanations must be accepted, "tentatively." No rational explanation of the many otherwise contradictory and unjust situations of human existence is to be found apart from that given by the doctrines of Reincarnation and Karma.

"BEHOLD, I SHEW YOU A MYSTERY . . ." — *Clive F. Bellgrove*

Mystery Schools, and the Mysteries, are facts in Nature. The records of all ancient religions and philosophies that have come down to us would be meaningless in this respect if this were not so. Memory of these great facts, however, had become so dimmed for the race of men that it became the lifelong task of Helena Petrovna Blavatsky to rekindle a knowledge of their existence, and the work of the Theosophical Society in the modern world to spread far and wide not only an appreciation of the fact that Mystery Schools still exist, but also to teach those doctrines and ethics by which alone mankind can aspire upon the upward way of spiritual evolution, eventually to attain perfect humanhood.

Wherever one seeks one can find indications of deep occult teachings, though these are invariably carefully and cautiously stated, for the Guardians of the Ancient Wisdom conform to unalterable rules, one of the most important of which is that the Teachings in their fullness shall be given only to those who are worthy to receive them and who, receiving them, can be depended upon to use the knowledge and power which the Teachings confer for the good of all that lives — never for self, never for harm.

Mystery Schools as distinct centers of esoteric training, have existed as such from the time of the Fourth Root-Race, though their origin as laya-centers of occult force is almost coincidental with the founding of the Brotherhood in the Third Root-Race. Since then many pupils have studied and been loyal to the precepts and doctrines taught, and have already attained a high degree of human perfection as Masters of Life, as Christs, as Buddhas, and so forth.

During all recorded history there have been, sometimes in one country, sometimes in another, centers widely and publicly known as Mystery Schools, such as those of Pythagoras at Crotona, of Plato at Athens, of Ammonius Saccas at Alexandria, those of Denderah and Abydos in Egypt, that on the Island of Samothrace, that of Eleusis, and many other schools in both the eastern and western hemispheres. Each such school received its inflow of pupils from the outside world; each had its responsibility, not only of helping its pupils strive towards true initiation, but also of teaching the general populace as much of the Ancient Wisdom as the circumstances of the age permitted.

A great decline in the Schools had begun thousands of years before the opening of the Christian era. The progressive coarsening of the spirit of the age compelled the gradual withdrawal of the Mysteries from public notice, fewer aspirants offered themselves at the Temples. Finally the great Teachers withdrew from Schools which in earlier times had been the adornment of various lands. True occult teaching, however, is never withheld from humanity, and while many publicly known Schools closed, instruction among men by allegory, myth and parable became more complete. Open references to the hidden teachings became yet more veiled in all the countries bordering the Mediterranean Sea.

Conditions in the world are such today that a greater measure of inner wisdom is being given out, both in lecture and by the written word, than at any time since the decline of the ancient Schools began. The teachings which are merely hinted at in the New Testament, for instance, are elaborated and often explained in great detail in our Theosophical literature, books which are available for any man who walks the face of earth to read. It is not suggested, of course, that the totality of the hidden wisdom is being taught openly today; unquestionably the same conditions

apply as of old, and will forever apply, conditions perfectly expressed in Sir Edwin Arnold's inspired poem, *The Light of Asia*:

Veil after veil will lift — but there must be
Veil upon veil behind.

The thoughtful student of Theosophy knows that anyone who, in a former life or lives, had contacted the Mystery Schools will feel a deep yearning for reunion with them again in this lifetime. The sureness of their intuition, however, will be tested sometimes for long years by their inability to find that which they feel certain exists somewhere, namely, a finer, purer teaching than any they have thus far contacted in their present incarnation, as also by their avoidance of all lesser and therefore impure teachings in the meantime. It is a truism that water finds its own level, and in nothing is this more true than with the "waters of spirit." Those who formerly had contacted a lesser teaching will be content to find its equivalent in this life; those who knew a finer teaching in former lives will search until they find that finer school of thought again in this present incarnation; each, from that point, can then take up again the task of spiritual evolution through self-directed effort.

The pathway to the gaining of spiritual knowledge is beset with countless pitfalls each of which tests the discernment, the purity of motive, and the endurance of the aspirant to the full. These impediments on the path are often so like the pure truth that even advanced pupils can be deceived by them. During the ages many public statements of the Wisdom-Religion have been given by great Teachers, and each of these has eventually degenerated; it is the fact of the decay of religions and philosophies that calls for the periodical restatement of the Ancient Wisdom. But all teaching that degenerates has much of truth still embedded in it, and the aspirant can easily be deluded by some aspects of a

religion or philosophy that appeals to him, and cease the search for the source of illumination for the time being, content with his particular prison.

Again, it is a sad fact that some pupils of the Schools have tired of the discipline of the Teachings or the Teacher, have left the School, and have gone out into the world to live; usually their mouths have remained sealed, but sometimes they have divulged, betrayed, the Teachings which they had thus far received. Many of the pseudo-occult schools and doctrines have been derived from teachings betrayed by pupils of genuine Mystery Schools. Far from being sought by aspirants upon the path, such sources of knowledge should be avoided for the reason that they are degenerating through lack of the pure "force" that flows in and through and out from the great Schools and the true Teachers. Truth cannot be gained from these decaying fragments of the Ancient Wisdom; let the aspirant beware!

How, then, did men in former times find the Teaching and the Teacher? The only method, followed from time immemorial, is stated clearly and simply in the so-called Sermon on the Mount, a practical statement, meant to be taken literally. Since first inscribed upon scrolls, thousands of millions of Christians have read these words, have heard them in sermon and lecture, have perhaps wondered awhile what they meant and passed them by without understanding them. Yet here was an Avatara teaching the multitude in explicit language the only way to find "the mysteries of the kingdom of heaven." What was the procedure?

Ask and it shall be given unto you; seek and ye shall find; knock, and it shall be opened unto you; For everyone that asketh receiveth; and he that seeketh findeth; and to him that knocketh it shall be opened.

A veil has been thrown around this factual statement, which is

the reason why the truth it embodies has been so completely disregarded. A simple transposition of the phrases makes the meaning and procedure transparently clear:

Seek, and ye shall find;
Knock, and it shall be opened unto you;
Ask, and it shall be given unto you.

He who felt the urge to find the Mystery Schools had to seek them. In thus seeking he heard much to encourage his further search, all the evidence he could wish of the existence of a School, perhaps near at hand, perhaps in some distant land to which he must travel. But the time came when he stood gazing at the Temple which he felt certain housed a School of the Mysteries. If in his search he had been actuated by mere curiosity, his search, whether he knew it or not, ended then and there; useless to ask the multitude if they knew what was taught within the sacred precincts, for the multitude did not know; worse than useless to ask any of the pupils he might meet. The most such a pupil might do was to indicate the Temple and advise the inquirer that he must approach, knock, and then make his request. It was traditional that the explanation of the mysteries be kept within the School and not spoken abroad, and therefore any question asked of a neophyte in public was in fact an invitation to him to betray the mysteries, than which there could be few more reprehensible actions.

If, however, the aspirant had been moved by a sincere longing to study the mysteries, the impulse to enter the School had to come from himself alone. No one was ever invited to enter; no one came out from the Temple to welcome and conduct him in. Not as one of a group, each member of which hoped to derive moral support from the others; but as an individual, alone, with sincerity, courage and modesty in his heart, he approached the

door of the Temple and knocked.

"Behold, I stand at the door, and knock." This is a paradox! The aspirant's Higher Self, the Christ within, had brought him to the threshold of the most splendid event of his age-long series of lives, and urged him to knock that the doors of the Temple might be opened unto him. As the doors swung wide he was asked who he was, to which he gave suitable reply. Next he was asked what he wanted from the inmates of the Temple. Then came the grand moment when he asked that he might be taught the mysteries of life.

If found worthy he was received within, and the doors closed upon him. If he were found unworthy — and there were few such, for unworthiness came only through crimes against humanity — there were other lives during which he could atone and purify his character and thus become worthy to approach the School again and be received. Entering the Temple, the aspirant lived according to the rules of the order, and the culmination of his training, after who knows how many lifetimes as a chela on the path, would be his union with his own Higher Self, the Inner Christos, that "Light which lighteth every man that cometh into the world."

But first, he had to seek and find; he had to knock before the door could be opened to him; he had to ask before he could receive. Then followed lifetimes of learning, loyalty, purity and altruism with, some day, eventual attainment.

Through these Mysteries alone can peace and surcease from the trials and difficulties of incarnation in the physical world be gained, for none but they teach the sons of men to redeem their past wrong actions and cease from further wrongdoing. All other teachings are mere palliatives at best.

Down through unending time the Great Ones have taught selflessness and impersonality, and the call of the Teacher to every member of the human race has always been, and will forever be, "Come unto me, all ye that labour and are heavy laden, and I will give you rest."

At that moment when the aspirant, utterly alone, stood before the Temple door and knocked, he did so with the superb assurance of the Inner Buddha, the Inner Christ:

"Lo, I am with you alway,
Even unto the end of the world."

The Theosophical Forum

TRUE PROGRESS — *Bryan Kinnavan*

Is it Aided by Watching the Astral Light?

Perhaps those who have engaged in discussions about whether it is more advisable to become acquainted with the Astral Plane and to see therein than to study the metaphysics and ethics of theosophy, may be aided by the experience of a fellow student. For several years I studied about and experimented on the Astral Light to the end that I might, if possible, develop the power to look therein and see those marvelous pictures of that plane which tempt the observer. But although in some degree success followed my efforts so far as seeing these strange things was concerned, I found no increase of knowledge as to the manner in which the pictures were made visible, nor as to the sources from which they rose. A great many facts were in my possession, but the more I accumulated the farther away from perception seemed the law governing them. I turned to a teacher, and he said:

"Beware of the illusions of matter."

"But," said I, "is this matter into which I gaze?"

"Yes; and of grosser sort than that which composes your body; full of illusions, swarming with beings inimical to progress, and crowded with the thoughts of all the wicked who have lived."

"How," replied I, "am I to know aught about it unless I investigate it?"

"It will be time enough to do that when you shall have been equipped properly for the exploration. He who ventures into a strange country unprovided with needful supplies, without a compass and unfamiliar with the habits of the people, is in

danger. Examine and see."

Left thus to myself, I sought those who had dabbled in the Astral Light, who were accustomed to seeing the pictures therein every day, and asked them to explain. Not one had any theory, any philosophical basis. All were confused and at variance with each other. Nearly all, too, were in hopeless ignorance as to other and vital questions. None were self-contained or dispassionate; moved by contrary winds of desire, each one appeared abnormal; for, while in possession of the power to see or hear in the Astral Light, they were unregulated in all other parts of their being. Still more, they seemed to be in a degree intoxicated with the strangeness of the power, for it placed them in that respect above other persons, yet in practical affairs left them without any ability.

Examining more closely, I found that all these "seers" were but half-seers — and hardly even that. One could hear astral sounds but could not see astral sights; another saw pictures, but no sound or smell was there; still others saw symbols only, and each derided the special power of the other. Turning even to the great Emanuel Swedenborg, I found a seer of wonderful power, but whose constitution made him see in the Astral world a series of pictures which were solely an extension of his own inherited beliefs. And although he had had a few visions of actual everyday affairs occurring at a distance, they were so few as only to be remarkable.

One danger warned against by the teacher was then plainly evident. It was the danger of becoming confused and clouded in mind by the recurrence of pictures which had no salutary effect so far as experience went. So again I sought the teacher and asked:

"Has the Astral Light no power to teach, and, if not, why is it thus? And are there other dangers than what I have discovered?"

"No power whatever has the astral plane, in itself, to teach you. It contains the impressions made by men in their ignorance and folly. Unable to arouse the true thoughts, they continue to infect that light with the virus of their unguided lives. And you, or any other seer, looking therein will warp and distort all that you find there. It will present to you pictures that partake largely of your own constitutional habits, weaknesses, and peculiarities. Thus you only see a distorted or exaggerated copy of yourself. It will never teach you the reason of things, for it knows them not.

"But stranger dangers than any you have met are there when one goes further on. The dweller of the threshold is there, made up of all the evil that man has done. None can escape its approach, and he who is not prepared is in danger of death, of despair, or of moral ruin. Devote yourself, therefore, to spiritual aspiration and to true devotion, which will be a means for you to learn the causes that operate in nature, how they work, and what each one works upon."

I then devoted myself as he had directed, and discovered that a philosophical basis, once acquired, showed clearly how to arrive at *dispassion* and made *exercise* therein easy. It even enables me to clear up the thousand doubts that assail those who are peering into the Astral Light. This too is the old practice enjoined by the ancient schools from which our knowledge about the Astral Light is derived. They compelled the disciple to abjure all occult practises until such time as he had laid a sure foundation of logic, philosophy, and ethics; and only then was he permitted to go further in that strange country from which many an unprepared explorer has returned bereft of truth and sometimes despoiled of reason. Further, I know that the Masters of the Theosophical Society have written these words: "Let the Theosophical Society flourish through moral worth and philosophy, and give up

pursuit of phenomena." Shall we be greater than They, and ignorantly set the pace upon the path that leads to ruin?

The Theosophical Forum

ROUNDTABLE TALK

Extracts from stenographic reports of "Mahatma Letters Group" at Covina conducted by A. L. Conger, using Margaret Conger's *Combined Chronology* along with *The Mahatma Letters* and the *H. P. B. Letters* to Mr. Sinnett.

Letter from K. H. to A. P. Sinnett, received October 19, 1880, No. II, pp. 6-10, under discussion:

Question — I am interested in the Master's use here of the word "Lodges" — "the whole truth about our Lodges and ourselves." [para. 3, p. 7]. He does not say Lodge, but Lodges. I am wondering if you can give us some explanation about this.

A. L. C. — Yes. Lodges that are mostly written about are in Tibet. It wouldn't do any good to go there, however, because you wouldn't get in! I think there is little doubt that the Lodges he refers to are not lodges of the Theosophical Society, but of the abiding places of the Mahatmas.

Question — K. H. makes a great deal here of the point of the "inner motive" of the candidate. If the aspirant is unconscious of even a shadow of desire for self-benefit, how can he eradicate it unless he is conscious of it?

A. L. C. — The candidate has through searching self-examination to ferret out his concealed motives, and then proceed to eradicate them.

Question — I would like to ask regarding this statement here "that one of us shall take the new body 'under his patronage' " [p. 8]. Does that mean that there is one particular one, or does it signify that they shall all work through just the same? I wish the Leader

would say something in regard to that.

A. L. C. — I take it that Mr. Sinnett was over-choosey and fearful lest Mahatma K. H. would not be the direct contact between the Great White Lodge and the newly proposed Anglo-Indian body. Who does it refer to? It refers to one of the Masters. Sinnett wanted to have one Master, and that K. H., and no one else mixing in.

Question — I want to ask in reference to the Master's statement, fourth line from bottom of page 8: "Instead of going over to him he has to come to us." Does that imply a great spiritual chasm between us — how are we going to cross it?

A. L. C. — The Mahatma makes his meaning clear in another passage which I cannot refer to by page, but which is to this effect: The candidate will find that with every step he takes toward us, we will take a step toward him. Does that help any?

Question — Would you explain what is meant by the phrase "by having irrevocably pledged himself to our Association."

A. L. C. — This is one of those phrases where the meaning is not to be mistaken. I would suggest you read the whole sentence in which this phrase occurs, and then the next paragraph, and you will have the answer.

"More than that: unless he has reached that point in the path of occultism from which return is impossible, by his having irrevocably pledged himself to our association, we never — except in cases of utmost moment — visit him or even cross the threshold of his door in visible appearance.

"Is any of you so eager for knowledge and the beneficent powers it confers as to be ready to leave your world and come into ours. Then let him come; but he must not think

to return until the seal of the mysteries has locked his lips even against the chances of his own weakness or indiscretion. Let him come by all means, as the pupil to the master, and without conditions; or let him wait, as so many others have, and be satisfied with such crumbs of knowledge as may fall in his way." pp. 8-9

Does not that answer your question?

Question — In a way. But I was thinking of the Pledge as something taken outwardly but inwardly too, and it being such a tremendously sacred thing.

A. L. C. — In a very real sense the Pledge of the E. S., as well as higher degrees, is the most sacred element in the esoteric teaching. What is meant by this is that the students in the E. S. are often worried about getting new instruction whereas if they would meditate on the pledge, they would find more occult secrets than are dreamed of by the average neophyte.

Question — Mr. Judge says there is an age-limit in regard to advancement. Could you explain this?

A. L. C. — Age has a great deal to do with it. According to Mr. Judge, 44 is the age limit for passing into the Sacred Precincts. However, it is possible for a man to gain the momentum necessary to cross the threshold without realizing the fact in his brain mind.

Question — I take it we are speaking of metaphysical precincts, or is that an actual place, Colonel?

A. L. C. — Take your choice. It is an actual place and also has a metaphysical interpretation.

THE INWARDNESS OF FREEDOM — *Byron Casselberry*

To be able to see clearly, one must begin to confront the "escapism" of the mind — mind being the thinking-feeling entity in the individual, in oneself. Man, you and I, the isolated human unit, is being driven by instinctual appetite and habit. Like a tiny boat on the high seas, or the feeble flame of a candle in a shifting wind, the center of intelligence in oneself is being whipped and tossed about by the primordial and uncomprehended forces of the human psyche. It is not only possible but practically the rule for man to live out his life without any perception at all of what is happening to him. Like an explorer lost in an unknown land, he either survives or dies. Survival in this sense is the reward of compromise, *not* a forging beyond the region of storms. It is the building of a reasonably satisfactory dwelling, where, in the midst of the storm, some peace and security may for a time be enjoyed. Death, which is in store for those who are not sufficiently resourceful to build a dwelling, is insanity, neurosis, nervous breakdown, and all the many gradations of psychological ills. Hence, unless one gives much careful thought and close scrutiny to the almost ceaseless battle that is raging in one's soul, and to the nature of whatever peace one may have found, one is doomed to live in the wilderness always. One will never reach up to the region beyond the storms where dwells man, freed of all elements of conflict. To reach that region, that truly human state in which love is free of attachment, and hence of all fear, in which man moves serenely over the turbulent sea of daily living, requires the utmost care of the mind at every moment of conscious life. To shake off or wear down the elements of conflict — hate, longing, fear, self-conceit, sloth, and all the rest of the dark demons which torment man — one must see them at work

and understand the nature of their functioning within the confines of one's own nature. To see without evasion and fully comprehend the arising of any of these elements in the very first moment of their appearance in the mind is like laying the axe to a sapling before it has grown into a tree. One stroke will often cut it through. The very perception and inward acknowledgment of the thing for what it is, undermines its existence; and the continual wakefulness of aroused perception acts like a prophylactic — it kills out by degrees the limiting tendencies which have already taken root, and renders the soil sterile to the growth of like limitations. Thus man goes free through his own wakefulness; those who fail to arouse themselves will always be unhappy or contented slaves.

THE ESOTERIC CONTENT OF WORDS — *Alexandra McLean*

To pronounce a word is to evoke a thought, and make it present: the magnetic potency of the human speech is the commencement of every manifestation in the Occult World. . . . The Word (Verbum) or the speech of every man is, quite unconsciously to himself, a BLESSING OR a CURSE. . . . Yes, names (and words) are either BENEFICENT OR MALEFICENT. —
P. Christian

There is magic in words, it may be black or white. There is a mystery and wonder, there is an *inner content* — of which we are seldom aware. In the last dialogue of Socrates as recorded by Plato in *Phaedo*, we have these words by Socrates — "For you must know, my dearest Crito, that *wrong words* are not only a fault in themselves, but insinuate evil into the soul" (italics ours). This is worth serious consideration and if it be true, its opposite is also true: that words conveying truth, beauty, nobility, majesty and compassion, will create vibrations of power and harmony in our environment, causing joy to the soul.

In *The Secret Doctrine*, II, 198-199, we have a resume of the development of Speech. The First Race was, in a sense speechless, as it was devoid of mind on our plane. The Second Race had a type of sound language, chant-like, composed of vowels alone. The Third Race made a beginning of a language based on the various sounds of Nature. In the second half of the Third Race, when the creative gods, compelled by Karmic law, incarnated in mindless men, then was speech developed (monosyllabic). Then came the agglutinative languages, spoken by some Atlanteans. The Fourth Race continued in evolution and left to the Fifth Race (Aryan) the inflectional, highly developed languages. "The

inflectional speech — the root of the Sanskrit . . . was the first language (now the mystery tongue of the Initiates, of the Fifth Race)." — p. 200

At the present time there are relatively few in Europe or America, who read, write or understand Sanskrit, which H. P. B. declared was the only language in any way adequate to convey with accuracy high spiritual teachings. Very few Theosophical students (to our own great detriment) know much of this lofty language. Language, an expression of ideas and ideals is, as all else, subject to cycles and Karman. It grows, matures and declines — "dies," but in truth it is not dead, and will in cyclic time again manifest with fewer limitations, enriched and more vital. W. Q. Judge in *The Path* (May, 1886, p. 58), said "The Sanscrit language will one day be again the language used by man upon this earth, first in science and in metaphysics, and later on in common life." According to H. P. Blavatsky this cyclic law will also bring Greek and Latin out of their rest into new activity.

In the language of our day, there are many noble words with a depth of meaning, of esoteric content that we seldom realize. There is the "still small voice," the magic in a word. We may invoke it by thinking, feeling and speaking the word. According to its inner content, the hidden influence, dissonance or harmony, will come forth to curse or bless us. There is more truth than poetry in the admonition found in the Bible (*Matthew* 12: 36, 37): "But I say unto you, That every idle word that men shall speak, they shall give account thereof in the day of judgment. For by thy words thou shalt be justified, and by thy words thou shalt be condemned."

Words, as surely as man, planet, sun or galaxy, are sevenfold, having their outer form and their inner heart. It is this heart, inner, esoteric, that is the truth and the life of the word. The outer

form varies, for Love written in Sanskrit, Greek, Chinese, German and English *looks* different, but its TRUTH is the same in any language. It is an ideal, humanity's highest concept of benevolence, compassion and adoration.

If we look up references in *The Secret Doctrine* regarding Kwan Yin and Kwan-Yin-Tien we find the latter means "the "melodious heaven of Sound," the abode of Kwan-Yin, or the "*Divine Voice*" literally." And we are told that Kwan-Yin stands for the "magic potency of Occult sound in Nature and Ether," which "Voice" calls forth "the illusive form of the Universe out of Chaos and the seven Elements." — I, 137

And so with words — written, spoken or sung. They are the transmitters of lofty ideas, and ideals of beauty and wisdom. They are opportunities for a meeting of minds, that from the "Melodious Heaven of Sound" harmony may be born on earth. To be careless and indiscriminate in our choice and use of words is something we should overcome, for in our present stage of evolution we depend upon words and language to carry on our normal living. Without them, we would be quite at a loss. The time will probably come, long ages hence, as humanity follows the path upward-inward, that we will no longer depend on the spoken word, but will have a highly evolved method of thought-transference. Be that as it may, at present words are worthy messengers.

We will not try to define great words, for that is a limitation of their inner reality. It is for us to become aware, of the truth, to grow, evolve, unfold our consciousness into our highest concept of the "heart" of the word.

Some of our wise men have left us sage advice as to speech:

Speech is the index of the mind. — Seneca

Pleasant words are as honeycomb, sweet to the soul, and health to the bones. — Bible

Every word is vain that is not completed by deed. — *From the Greek*

Like a beautiful flower full of color, but without scent, are the fine words of him who does not act accordingly. — Buddha

Speech is but broken light upon the depth of the unspoken. — George Eliot

The flowering moments of the mind drop half their petals in our speech. — Oliver W. Holmes

The idea is the Flame and the words are sparks ready to kindle many flames within the darkness of a receptive consciousness.

Therefore — let us employ noble words as worthy messengers bringing joy and blessing to others. Indeed, these excellent words are magic companions, for in their inmost, they are a synthesis of all we may invoke by our sevenfold comprehension. They are a part of the Wisdom of the great SILENCE.

The Theosophical Forum

THE PRESSURE OF THE HEART — *John Peck*

When ideals are made impersonal, they have to be freed even from the individual, for even the most glorious work of an individual must ultimately blend into the supreme glory of the Whole. The little book called *Light on the Path*, although it is very small, has a potent influence on one's thoughts. What I like about it is that the author embodies one's deepest and purest ideals — so deep that it can only be lived. When you think that it is the human aspect showing, then he must be a great Being. Although I can't help noticing the author it doesn't mean that I haven't taken note of what he says. It is in fact in taking notice of the author that what is said sinks in gradually. I mean by "author" not a personality, but a universal Beauty or Grandeur. Yet it is human too. When a heart beats to a great vision it sheds a clothing of radiance and that radiance becomes the breath of the Universal Heart — it becomes Truth. Individual creativeness becomes the impersonal creative harmony of the whole.

It just shows that Theosophy is true and that self-forgetfulness, impersonality, and universality *are* the first steps. It shows that in giving one's purest life one draws nearer the springs of Life.

Perhaps the greatest problem which all "Tryers" have to face is the battle between mind and heart, and the reason why ideals are so difficult to follow (yet so easy if one impersonally loves) is because they are partly formed by the mind and therefore objectified and perishable. But the pure essence is immortal and if one holds to that and lets go of the changing forms, success is sure to follow, because the less disappears into "something" else, the greater. That is why one must not look back. The beauty of it is that no amount of mental will can prevent one looking back

until one is so pure as to forget oneself. When I say that, I mean to show that it is doubt and uncertainty which cause one to listen too much to the mind. Nature guards the SELF against the self. That is why self-forgetfulness and unity — Charity — *must* be the first key. No truly aspiring soul would *wish* it to be otherwise.

Let the heart command the intellect and the intellect will become an unconquerable warrior for Truth and for all that is enduring and immortal. By the "heart" I do not mean the passions but that which is Divine in all beings, whether it be human or god. Nor do I mean that one should suppress the mind, for that would deprive one of the means to freedom. Rather mold the mind to universal ethics and compassion. If the mind denies, then let it deny the onset of doubt and delusion, and let it open the paths of Truth into the thought-life of the world.

The problem can never be solved except by him who *experiences* it as a complete being. Thus doubt is to be resolutely conquered by courageously seeking the immortal and the enduring, and by following it however faintly and unreally the intimations may seem to come, and however loudly and insistently and subtly the mind may say "not yet," or "impossible," or "unwise." The pressure of the heart may become so strong that it takes the lead and the mind follows in a temporary daze. But the mind must ultimately lose its egoity, utterly and forever. Therefore by *living* the noblest ideal of the heart one brings upon oneself the purifying processes which enable one to be useful. By constantly meditating upon universal ethics as the true foundation of life, the mind in self-forgetfulness, by perceiving the illusion of separateness, will become wedded to the heart indissolubly.

It is not by knowing all this *with the mind* that freedom will come. The mind can know all this and more, and if it remains egoic and selfish, its knowledge becomes the most potent poison to the soul.

Let the mind give of its treasures to the uttermost for all. In fact when the mind sees that its knowledge as such is of no enduring value it will voluntarily yield itself to become the vehicle of enduring Truth.

Mind is the creator of illusion and personality and it is also the means to freedom and Truth by ceasing to act from itself, by ceasing to produce personality, by withdrawing from all action emanating from the darkness of illusion, by refusing to perpetuate misery in the world.

When the mind becomes still, then will immortal Love pour forth the divine Truths bringing to them the inspiring certitudes concerning the Real and Eternal, and the way to freedom. The intellect is a vehicle which renders available the Love which illumines it to meet the need of the world — and not only this world, but others too. The intellect itself is not enduring but it is essential as a vehicle to transmit into the "World" the Universal Love. Therefore let us seek to "live to benefit the world" by striving on the one hand to understand the cause of the world life and its need, and on the other hand to become free from the world in order that the divine Light may pour into the world through a vehicle which is clear of the darkness of the world, and therefore transparent.

If the foregoing is reasonable then it follows that we must live the lives of ordinary men and women right here, but nobly — divinely. If we think that to free ourselves from the world means that we must cease to live among our fellow humans, then we shall lose awareness of their needs — *our* needs — and we shall become free alone and unable to help them. The means must be as glorious as the end, step by step. Live like the sun and stars now. Such a path becomes the most beautiful and loving path of all — from the very beginning to the endless end of ever-

expanding vision. We can see that individual growth loses its meaning, while eternity and universal brotherhood become pregnant with meaning. Let us not forget that, if many cosmic ages ago the sun, then as a human being, had not striven so well, had not pressed its heart toward godhood, it would not now have been a sun.

The Theosophical Forum

ROUNDTABLE TALK

Extracts from stenographic reports of "Mahatma Letters Group" at Covina conducted by A. L. Conger, using Margaret Conger's *Combined Chronology* along with *The Mahatma Letters* and the *H. P. B. Letters* to Mr. Sinnett.

Letter No. IV, written at Amrita Saras, Oct. 29 [1880] by K.H. to A. P. Sinnett, under discussion:

Question — When it speaks of the Chief, on page 13 in the phrase, "Our Maha (the 'Chief) has allowed me to correspond with both of you," does the Master mean the Lord Buddha?

A.L. C — No. The Mahatma K.H. refers to the Maha-Chohan, the Khubilgan, who generally means the old gentleman who restored the envelope and seal which had been eaten by the goat at Tchigatze. The higher reaches of the Hierarchy are not enfleshed in physical bodies.

Question — Is the Maha-Chohan a Nirmanakaya then?

A. L. C. — One needs a new vocabulary. The Maha-Chohan is not to be classed among the Nirmanakayas that have passed beyond the need of physical bodies. I feel a certain embarrassment in being asked questions which seem to be probing too closely on improper ground.

Question — In the Mahatma Letters, then, references to the Chief, Chohan, and Maha-Chohan do not refer to the Lord Buddha but to the Khubilgan?

A. L. C. — Yes, he is the active head of the Fraternity.

Question — The Master's description of Olcott brings to mind the

relationship between himself and the Master during the latter part of his life when seemingly he was not working for them in the way he had before. Would you care to remark on this?

A. L. C. — It is a great embarrassment to be asked this question. Olcott's work in the early days of the Society was whole-hearted and fruitful of much good. . . . I do not think that it adds any useful knowledge, or serves any useful purpose, to go into mistakes of the latter days of his life, other than to say that he bitterly complained that he did not deserve that the Masters should abandon him as they had.

Question — I don't quite understand this matter of personal cleanliness of the neophytes whom the Master wanted to send to Sinnett. He states that his clothes were slovenly. Could the Teacher explain the connection there?

A. L. C. — I am not sure it would seem like an explanation. People in mountainous countries, especially those engaged in mountain traveling, do not need to perform the ablutions as do people on the plains. You will notice that American travelers in Switzerland in the mountain areas observe the same carelessness in cleanliness as do their Tibetan brothers. In the mountain country one does not need to perspire, and not perspiring, there is not the same physical need for cleanliness in the ordinary sense. Does that give the picture?

Question — I was wondering if there were a deeper reason.

A. L. C. — None except that in that country the people are very poor, and have few clothes and facilities for washing them, so it is an easy habit to fall into.

Question — On page 15, K. H. states that he had a "university education," but that some of the higher Tibetan adepts have not. Could the Leader say something about that?

A. L. C. — Yes. Adeptship has nothing to do with education in the Western sense of the word. K. H. received a European education in the University of Wurzburg in Germany in the forty's of last century, but this had nothing to do with his adeptship. The Western idea of education is quite different from the Eastern conception, where to be considered an educated man is not a matter of university degrees, but rather to have the adept's knowledge and powers, and to serve the growth and development of real civilization. I think if one reads over these letters, he will get the difference between the Eastern and the Western points of view. Does that answer your question?

Question — Then the requirement of the knowledge necessary to be an adept is certainly more than the equivalent of what we call a university education here?

A. L. C. — The answer is yes.

Question — I judge from that reply then that not having the opportunity of studying under a guru, one should obtain the best education available?

A. L. C. — No, I did not mean to give that implication. If a man or a woman wants it hard enough he or she will soon have a Teacher without fail; but in that case before the event took place you might have to experience contact with several strokes of lightning.

The conception of adeptship in the ordinary sense of following beautiful thoughts in the mind ought to give place to intensity of feeling adopted and adhered to for a specified time. The fact is that the attitude of the average pupil is that of complete discouragement, which is very wrong. Instead of taking literally Mr. Judge's statement, that the student must not expect to see his Teacher in the same incarnation in which he dedicates himself, or

words to that effect, I think he should look upon chelaship and adeptship as something inescapable, and that he must prepare himself for future responsibilities.

The Theosophical Forum

AESTHETICS AND THE PHILOSOPHY OF ART — *Leonard Lester*

An important contribution to the literature of Aesthetics is Professor Nahm's recent work, (1) whose title *Aesthetic Experience and its Presuppositions* indicates as precisely as possible the scope and boundaries of his work.

It is impossible in a short review to more than touch upon certain accents in the wide range of research and learning which our author unfolds for the student of Empirical Idealism. But the cultured reader who is willing to follow his line of argument through all the labyrinths and spacious ranges of this survey, although he encounter much to challenge and arrest his inquiry, will also meet much to spur him in pursuit of his author's solution to his problems, and also in admiration of his sincerity and enthusiasm.

This essay presents a problem which issues from a conflict. This conflict is defined as follows: "Art is compounded of apparently incompatible elements and the analysis of its experience seems to lay bare only an unresolvable antimony." The speculations which have arisen from these divergencies, involving philosophical, ethical and cosmological theories, both metaphysical and physical, have created a unique field for inquiry into the nature of art and its experiences. It is with this conflict that this essay begins. It is assumed that aesthetic experience is at least conditioned by "feeling" evoked by fine art, also that within the artist's product is its capacity to move us profoundly and "to open paths for creative imagination." The study follows through the centuries the history of its changes and attempted reconciliations to end with offering its own interpretation and reconciliation of these apparently incompatible elements.

One aspect of this conflict is presented by a quotation from Plato's *Republic* on the moral effect of certain poetic and imitative descriptions or portrayals in a State dedicated to justice, temperance, wisdom and courage. The assumed antithesis of this view is a quotation from *On the Sublime* by Longinus, a devoted Neo-Platonist, profoundly imbued with Plato's philosophy and hardly likely to have misinterpreted the spirit and intention of his master's teaching, as will be evident in the following excerpt from the above-mentioned quotation: "For Nature from the first breathed into our hearts an unconquerable passion for whatever is great and more divine than ourselves. Thus within the scope of human enterprise there lie such powers of contemplation and thought that even the whole universe cannot satisfy them, but our ideas often pass beyond the limits that enring us." This seems to echo and harmonize with rather than oppose the spirit and intention of Plato's strictures on art, since both philosophers are prompted from a common aspiration toward that sublimer state of being and source of diviner intelligence, which is Plato's overmastering theme. It is the source and tendency — the moral value of art that Plato is here considering. Elsewhere he extols the science and love of the Beautiful and declares that State to be the happy one "which is planned by artists who make use of the heavenly pattern." (2)

And is not Plato's stern refusal to admit anything that stimulates "images of moral depravity" or to permit trivial or ill-inspired art into the ideal State, evidence of his keen desire to maintain unpolluted its nobility of character and education — a very revealing contrast to the laxity of our present-day "civilization" in polluting the atmosphere of thought and feeling and vitiating the taste of impressionable youth with its realistic presentments of a questionable and criminal character? Would not all right-minded parents rejoice to see realized, in exchange for our mechanized

realism, the environment of health and beauty which the following words from *The Republic* portray? "Let our artists rather be those who are gifted to discern the true nature of the beautiful and graceful; then will our youth dwell in a land of health, amid fair sights and sounds, and receive the good in everything; and beauty, the effluence of fair works, shall flow into the eye and ear like a health-giving breeze from a purer region, and insensibly draw the soul from earliest years into the likeness and sympathy with the *beauty of reason*." (3)

Sympathetic readers of Professor Nahm's essay may tacitly infer that his voluntary quotation from Longinus (*On the Sublime*) as the antithesis of Plato's thought, when, in reality, the spirit and intention of both philosophers converge toward the same ideal, is significant, presaging the design and end of his thesis. For coming at the beginning of his essay it seems inspired by that positive energy of *affirmation*, of which he speaks later, which guides his argument through many exhausting and perplexing adventures to its stimulating conclusion, viz.: "*that profoundly moving art speaks primarily of sublimity.*"

He concludes also that the artist who moves men profoundly is "*a messenger of discontent.*" In stirring "the deepest depths of the soul" he initiates in aesthetic experience, "the productive powers of imagination." The author cites scientific facts of disequilibrium and bodily reactions as agents in these states of sublime exaltation and despondency. But perhaps also within the real man, there is a monitor — an intuition of the nearness of the ineffable and the un-attained which invokes that divine discontent — those "tears from the depth of some divine despair" of which Tennyson sings.

The book is rich in scholarly quotations and pointed illustrations gleaned from a wide survey and study of classic and

contemporary writers and thinkers. The following two will exemplify such as may suggest a clue or a keynote to help clarify or solve. One is taken from Boswell's *Life of Johnson*. Boswell is quoted as saying: "There is no arguing with Johnson, for when his pistol misses fire he knocks you down with the butt of it." This hyperbole may be profitably considered: the learned Doctor's "talking for victory" bespeaks the conviction that *affirmation* is essential to the proof of a thesis. Few men are convinced solely by the disproof of an alternative theory. "There is no need for the scientist of ends to adopt the practice of fighting "with all weapons" including rudeness and overbearing. But as he grasps the "guiding thread" of a science of ends, his expectation that it will lead through the maze of aesthetic, often attempted but never traversed by the ateleologist, will be fulfilled only on condition that he offer an affirmatively formulated philosophy of art. The firmest advocacy of an aesthetic that ignores ends is powerless uniquely to define the objects and events in that universe of discourse."

Commenting upon the relations of a work of art to its creator and Plato's figure of the magnetic rings in *Ion* as illustrating the transmission of the artist's "feeling" through his art, the author quotes from a modern poet in terminology acceptable to modern thought. It is A. E. Houseman, who writes: "I think that to transfuse emotion, not to transmit thought, but to set up in the reader's sense a *vibration* corresponding to what is felt by the writer — is the peculiar function of poetry." (Note that the concept of vibration unlocks a profounder range of thought.) And our author finds in the idea substantial ground for launching his new hypothesis of another status of "feeling," of what "feeling" is in relation to art.

Speaking of vibration and recent scientific findings as to the nature and constitution of matter as being in reality Force or

Energy in differing states or degrees of vibration, governed by their inner states of being or embodied Consciousness, and applying this thought to that filmy borderland of speculation of which Aesthetics hesitates to speak — is it not a little overbold to declare, as the author does, that Plotinus is in error when he maintains that form "is in the designer before ever it enters the stone," and that the art of the sculptor (its beauty) has value because of this *immaterial form* or *ideal image* in the sculptor's mind, and not in consequence of the material medium of the work of art?

Considering matter in this light, is it not easy for the analytic mentality of today to conceive that creative thought may become the molding prototype of the material expression of a work of art, through the links of Consciousness, from Spirit — to matter? H. P. Blavatsky uses a still finer illustration of this in *The Voice of the Silence*: "Before the soul can comprehend and may remember, she must unto the Silent Speaker be united, just as the form to which the clay is modeled is first united with the potter's mind." (p. 5)

In considering this question of the nature of Beauty and its Arts, and linking it with what was in the maturer mind of Keats and within the romanticism of his "Beauty is Truth, Truth Beauty," etc., together with other keen glancings by Shakespeare and others — these profound words stand forth, yet to be fathomed:

"To perceive the true relation of earthly beauty and Eternal Truth."

It is H. P. Blavatsky in *The Secret Doctrine* who wrote:

"In the oldest Aryan race, the Hindu, the worship of the intellectual classes never consisted (as with the Greeks) in a fervent adoration of marvelous form and art, which led later on to anthropomorphism. But while the Greek

philosopher adored form, and the Hindu sage alone "perceived the true relation of earthly beauty and eternal truth" — the uneducated of every nation understood neither, at any time.

"They do not understand it even now. The evolution of the GOD-IDEA proceeds apace with man's own intellectual evolution. So true it is that the noblest ideal to which the religious Spirit of one age can soar, will appear but a gross caricature to the philosophic mind in a succeeding epoch! The philosophers themselves had to be *initiated into perceptive mysteries*, before they could grasp the correct idea of the ancients in relation to this most metaphysical subject. Otherwise — outside such initiation — for every thinker there will be a 'Thus far shalt thou go and no farther, . . . ' " — I, 326

Professor Nahm's book must be carefully studied to be fully appreciated. It has won for itself an abiding niche among works of research and reference in the field of Aesthetics and the Philosophy of Art. No mere review can present more than a snapshot of what is in reality a learned and enlightening contribution to the literature of Aesthetics. Its author seeks all through his patient and closely-woven analyses to clarify and harmonize the elements of a unified aesthetic of "Beauty" which has the power to inspire feeling to levels of the transcendental. We are all learners and face the far summits of higher thought, keenly aware of "the little known, the unknown vast."

1. *Aesthetic Experience and its Presuppositions*, by Milton C. Nahm, Bryn Mawr College. Harper and Bros., New York and London. 554 pp., \$4.50. ([return to text](#))

2. These last words recall the precept of a Poet-Philosopher of more recent times. It was Thomas Carlyle who wrote: "For only in

looking heavenward, take it in what sense you may, not in looking earthward, does what we can call Union, mutual Love, Society, begin to be possible." ([return to text](#))

3. *Reason* here: spiritual knowledge, intuition. ([return to text](#))

The Theosophical Forum

JANUS AT THE PORTAL — *Allan J. Stover*

Since midsummer the sun has risen a little later each morning. The days have gradually become shorter and the nights longer until the year's cycle finally rounded to its close at the time of the winter solstice. Then came a pause of five days, after which the sun again began to rise a little earlier each day as the new year commenced. Thus does the year in its rhythmic inbreathing and outbreathing follow the pattern of cosmic cycles in which universes come and go.

It has been quite the fashion to dismiss a large part of mythology as mere "sun myth"; the learned authorities not realizing that the yearly course of the sun through the seasons and the signs of the zodiac was dramatized by the ancients in myth and mystery play because in it they saw the pattern of all cycles: of the year, of the month, of the day, of human life, and of greater spiritual cycles un-guessed by the multitude.

The year is a minor manvantara within the cycle of a larger manvantara, and it in a still larger — on and on until the whole universe is encompassed within a period of alternate waking and sleeping too vast for the mind to grasp. In each period there is a childhood, maturity, old age and death followed after a period of rest by a rebirth into a new period of activity.

Nature is thus a living demonstration of those inner laws governing all life which it is the purpose of Theosophy to promulgate. That which takes trillions of years in a distant star or solar system may pass in an infinitesimal flash of time within an atom. The passage of a great manvantara is repeated in essentials in the cycle of every day and of every year. The difference is largely one of degree, and seen as different because we are

seldom aware of cyclic changes in the inner spiritual planes.

We may sometimes wish we could witness the celebrated Mystery Dramas of ancient Greece, when quite unheeded the real Mystery Drama is played about us every day of our lives, and it is only because we are so blinded by material interests that we do not see or understand.

Christmas and New Year's falling as they do, near the winter solstice, celebrate the period when the spirit draws near to the heart of Nature and revivifies it; and Nature begins to stir in her sleep and re-awaken for a new "manvantara" of twelve months. Great initiations take place at this season and it is around the initiatory cycle that the Christmas story is written, for it is at the time of the Winter Solstice that all the saviors of the world are said to be born.

Every birth and even every cycle has something in it analogous to the creation of the world. In each case there is the manifest emerging from the unmanifest through a laya center which is often symbolized as a door or gate. In each case there is the descent through the stages of the three logoi from the spiritual to the physical. Karmic seeds sown in the previous cycle descend, come to fruition and color the opening period of activity.

The name January, the first month of the year, is derived from Janus, the two-faced god of the Romans — commonly said to face two ways: backwards toward the old year and forwards toward the new, thus forming a fitting symbol of the first month of the year.

There is a profound significance attached to the myth of Janus, for as Ovid explains in *Fasti*, (I, 73-289) Janus was known to the ancient Greeks as Chaos, who was older than any of the gods and existed before the formation of the earth, or the differentiation of

its elements: he represents the highly spiritual state in which worlds or universes exist between embodiments; and by analogy, since all cycles reflect the same cosmic pattern, the symbol applies equally well to every coming into life.

Ovid has Janus say:

"The ancients called me Chaos, for a being from of old am I; observe the long, long ages, of which my song shall tell. Yon lucid air and the three other bodies, fire, water, earth, were huddled all in one. When once, through the discord of its elements, the mass parted, dissolved, and went in diverse ways to seek new homes, flame sought the height, air filled the nearer space, while earth and sea sank in the middle deep. 'Twas then that I, till that time a mere mass, a shapeless lump, assumed the face and members of a god." (*Fasti* I, 163-114, Sir J. G. Frazer's translation).

Janus with his keys is represented as guarding the thresholds of the gods, and of all beginnings and endings. Ovid makes Janus continue:

"Whate'er you see anywhere — sky, sea, clouds, earth — all things are closed and opened by my hands. The guardianship of this vast universe is in my hands alone, and none but me may rule the wheeling pole." (*Fasti*, I, 117-120)

"I sit at heaven's gate with the gentle Hours; my office regulates the goings and comings of Jupiter himself." (*Fasti*, I, 125-127) Here Janus speaks as the voice of cycles as a "law of nature," to which the whole universe is obedient.

There is a great truth hidden in the ancient legend of Janus, for it contains laws and principles of being which enter into the very fiber and structure of the universe. The deepest mysteries lie

concealed within the system of the calendar, even though at times the calendar may be out of gear with nature, for it holds the key to many of the problems of life.

The symbolic glyph of two-faced Janus seated in the entrance to a temple is in its purity one of the great symbols of the ancient wisdom. There is something about it of the archaic past which rises above the mass of mythological fancy obscuring so much of the religious thought of Greece and Rome.

Where else may traces of this legend be found, one may ask?

In Central America, the first day-sign of the Maya calendar, Imix the earth dragon, sometimes illustrated with a head at each end represents the spiritual beginning of the earth. Among the Aztecs the corresponding sign, Cipactli, is similarly represented with two heads, one at each end. Both signs belong to the beginnings of earth embodiment and analogically to the beginning of any natural cycle.

Sir James Frazer cites the double-headed idol of the Bush negroes, facing inward and outward, which they regularly set up as a guardian at the entrance to their villages. Above it two uprights and a crossbar form a rude gate. A more primitive form is found in the "spirit sticks" of the desert Indians of Southern California who formerly placed a forked stick upright in the entrance to the cave wherein they had cached pottery or utensils. The fork with its two prongs was supposed in some way to protect against theft and to warn the owner of any attempt to intrude. So it is that sublime ideas, when their significance is lost, descend to the level of superstition and magic.

There are many correspondences between the beginning of a new year, and the beginning of a new life. As the higher self of man approaches rebirth, it sees for a moment a vision of its past

existence, and is shown what the coming life offers, what lessons are to be learned, what wrongs to be righted. The higher self sees and makes its choice. Then again at the moment of death, there comes a review of the life just finished: wherein success has come, wherein failure — and then comes peace and rest.

This moment of vision inward and outward, accompanying the entrance and exit to life, was believed by the ancients to be in some degree true of all cycles of activity both large and small. If one prepares for the moment of sleep by quiet meditation and aspiration reviewing the events of the day and resolving to do better on the morrow, he will awaken in the morning with aspiration and peace in his mind and will find the whole day illumined with an inner light.

Resolutions made at the beginning of the new cycle of a new year likewise have the forces of nature with them, and noble efforts made at that time are more likely to succeed.

The Theosophical Forum

THE PYRAMID INITIATION — *G. de Purucker*

[Several years ago one of the students at Point Loma who was giving a course in "The Mystery-Centers," asked Dr. de Purucker to trace for her the true passage of the postulant through the chambers of the Great Pyramid of Cheops.

The following is Dr. de Purucker's reply. With the exception of the first two paragraphs, the answer is not verbatim, but represents a report written down immediately after the interview. It is here reproduced, however, as it stands, as bearing the sum and substance of G. de P.'s teaching in this regard. — Eds.]

One should not think of a human soul as having been caught in the pyramid and wandering around like an astral shadow in its interior. The initiate was conducted along certain pathways, or left alone at certain times, and the pathways or channels he followed, and the rooms in which he found himself, etc., were representations to his imagination or his mind in this form of what the inner man actually went through when disembodied.

One of the main purposes of the pyramid-initiation was to have the neophyte traverse the passages under the guidance of his teacher or teachers, and thus greatly to stamp upon the mind before being entranced, symbolically what the soul was to pass through in actuality in the inner worlds.

The postulant or disciple or chela enters along the descending passage with his guide, following along the fairly smooth passage which is not very light, until he begins to descend beneath the surface of the Pyramid, down into the Underworld as it were. Then he comes to a junction-point where the guide leaves him alone. Without help the chela enters into the "Ordeal of Matter" of the Pit, and sheds his body, all the material

elements of his nature. In this Pit, which is purposely made rough and unfinished to symbolize the rough and unshapely character of matter, the disciple must throw off all veils of matter and clamber out himself, being careful not to fall into nothingness below.

As he comes out from the darkness, at the junction-point previously mentioned he is again met by his guide who either accompanies him, or points the way along another passage leading upwards. This passage gradually becomes more light, and is very smooth. Then the chela enters the Well of Deep Waters, which one may perhaps think of as the astral worlds. Alone the neophyte must now climb the "Ladder of the Soul," which again is rough and difficult of ascent. Finally, reaching the summit of this ladder, the soul enters the Fields of Aahlu, and comes into the Chamber of the Moon, the Queen's Chamber, the chamber of lunar influences.

Resting there after appropriate ceremonies, the neophyte retraces his steps along the corridor of Aahlu and stands poised as it were at the landing place, at the gate to the Grand Gallery, the Double Hall of Truth. This Hall is a grandly majestic gallery, with seven sections, and the neophyte boldly ascends until he comes to the Antechamber of the King's Chamber. Before entering the antechamber, however, the neophyte has a great step of nearly three feet to climb, then he must stoop very low, and — if the portcullis is up — he may pass through, stooping again very low, and finally, if his karman is good, he may proceed into the King's Chamber, the Home of the Hidden God, and enter the coffer of Osiris.

Now begins the real Initiation when the neophyte's body lies entranced in the coffer of Osiris. That which has been followed is actually a symbolic descriptive manner of suggesting what actually takes place in

the inner worlds.

In the King's Chamber there are the six large sections, the lower one representing our Earth, and the other five, the five planets, Jupiter, Mars, Saturn, Mercury, and Venus, while the Queen's Chamber may represent the Moon.

The soul may ascend the planetary spheres, and then this Giant Triangle is really a "Ring-Pass-Not," something which stands as the bar to further passing, but possibly if the candidate is completely freed of all earthly and planetary attributes, the spirit may wing its way through the apex of this triangle along the mystic line through the topmost peak of the Pyramid itself — and then out and beyond — at one with Divinity.

Then the descent, down from the apex of the pyramid, through the mystic line of power to the apex of the King's Chamber, down into the coffer and the soul is reunited with the entranced body. The Initiation is complete, the neophyte arises as it were from the tomb of trial, no longer a chela, but a Master, and in a daze, suffused still with the divine splendor, passes through the Grand Gallery, through the Hall of Darkness, and then ascends towards the Entrance. Now beautiful beyond description is his first sight — or was when this was supposed to have been built — for there in direct line of vision was the Pole Star, that star which in reality is the pivot of spiritual and divine things.

The Theosophical Forum

THE VINE AND THE CUP — *Hazel Boyer Braun*

This universal symbol was a part of the mystical language of initiates in the Mystery Schools of many ancient civilizations. It carries in the potency of its hidden message, depths of thought that are to us inexpressible in words when we are able to grasp even a portion of it with our intuition. It is only because the human race has moved forward to the extent of having some of the esoteric teaching given out in Theosophical literature, that we dare approach the subject with an effort to turn the key at least once.

We have been taught that each occult symbol is capable of being turned with a sevenfold key, revealing the meaning in its relation to the individual man, the races of humanity, the earth, the solar family, the galaxy or home universe, perhaps the operations of the Hierarchy of Compassion, and the greater universes of which galaxies are but atomic parts.

The Cup and Vine symbol seems to be as old as anything that we know. We find it described in the Rig Veda, the oldest book we have according to esoteric records which places it back some 20,000 years. We find it in the Sufi writings of the Persian mystics and in the writings of the apostles in the New Testament. We know that it was a prominent symbol in the Greek Mysteries where they drank from the Kykeon, but it was in the decadent remnants of Greek and Roman Mysteries that it came to its unfortunate end. The Bacchic rites, for example, became evil as we entered the dark ages and the light of the Mysteries was no longer permitted to shine.

Like all significant symbols, the Cup and Vine deals entirely with the evolution of the soul, with the lifting of the human soul to

become at one with the spiritual soul. It refers to Initiation and the life of the initiate in his relation to the teacher. For this mystical unfoldment of man's spiritual nature can come only from knowledge of the Divine Life in its magnificent scheme of manifestation. Of such is the Wisdom of the Ages and this Wisdom belongs to all planets and to all beings. So potent is it that, as Katherine Tingley said, it puts new blood in one's veins, it changes one's heart and mind.

This Divine Wisdom becomes a revelation as man lives it and becomes it. He knows then how to be quiet, how to be at peace, how to see the ineffable beauty in life all about him, how to see the light of Divinity in his fellow men because he has it awake in himself. Then he may become a channel for the flow of this wine of life which pours forth from the fountainheads of the Hierarchy of Compassion and comes to human beings through the spiritual touch of a great teacher and through the thoughts and lives of good men and women.

In the Rig Veda we read of the highest of the Gods, Indra, God of the Firmament, drinking of the Soma, being drunken with Soma-drink. This Soma juice is the fruit of the tree of knowledge. It is this that was forbidden to Adam and Eve in the Garden of Eden — truly the allegorical way of telling man when he became a self-conscious, responsible human being, that he must prepare himself, raise himself before he could partake of this elixir of life.

The third eye became ossified as man descended for experience into planes of material life, making this descent in order to self-consciously lift himself to a higher experience through suffering and learning. Originally the Soma juice was said to be the fluid of this first eye of man reaching the heart when spiritual illumination was attained. As the Persian says, "It is that wine which raises me above myself."

The Soma is linked with the teaching that we can only know God by becoming godlike. The more inwardly pure the man, the nobler his position. H. P. Blavatsky in *his Unveiled* describes Soma in this way:

This Hindu sacred beverage answers to the Greek ambrosia or nectar, drunk by the gods of Olympus. A cup of kykeon was also quaffed by the mysta at the Eleusinian initiation. He who drinks it reaches *Bradhna*, or place of splendor (Heaven). The soma-drink known to Europeans is not the *genuine* beverage, but its substitute; for the initiated priests alone can taste of the real soma; and even kings and rajas, when sacrificing, receive the substitute. . . . The soma-drink is also commemorated in the Hindu Pantheon, for it is called the King-Soma. He who drinks of it is made to participate in the heavenly king, because he becomes filled with it, as the Christian apostles and their converts became filled with the Holy Ghost, and purified of their sins. The soma makes a new man of the initiate; he is reborn and transformed, and his spiritual nature overcomes the physical; it gives the divine power of inspiration, and develops the clairvoyant faculty to the utmost. According to the exoteric explanation the soma is a plant, but, at the same time it is an angel. It forcibly connects the *inner*, highest "spirit" of man, which spirit is an angel like the mystical soma, with his "irrational soul," or astral body, and thus united by the power of the magic drink, they soar together above physical nature, and participate during life in the beatitude and ineffable glories of Heaven. (1)

We find the same idea well expressed by the Sufi poet Omar Khayyam when he sang:

For "Is" and "Is-not" though *with* Rule and Line
And "Up-and-down" *without*, I could define,
I yet in all I only cared to know,
Was never deep in anything but — Wine.

XLII

And lately, by the Tavern Door agape,
Came stealing through the Dusk an Angel Shape
Bearing a Vessel on his Shoulder; and
He bid me taste of it; and 'twas — the Grape! (2)

The ancients loved analogy and comparison. There is an interesting one suggested in the frequent use of the reference to the juice of the moon-plant (Soma). Soma is associated with the lunar goddesses, Isis, Diana, and others. We believe there is a very deep connection there in regard to the moon and its part in initiation; but the most obvious one is the fact that the moon watches over child birth, conception, etc., and the analogy is made to the quickening of the child-seed in the approach to its time of birth and the actual quickening that takes place in man's spiritual nature when the veils of selfishness begin to fall away and he heeds the call of his higher self to bring into birth the savior that is within him.

This is what Jesus meant when he spoke of himself as the Vine and his apostles as the fruit. They are the carriers of the inspiration which must bear fruit in the quality of living. In Luke 20 we find the parable of the Vine: "A certain man planted a vineyard, and let it forth to husbandmen, and went into a far country for a long time." Truly everywhere this wisdom of man's true nature and his relation to the Universe is the bread of life, the wine of life, the elixir of life, the sustainer of all mankind.

It makes clear the meaning of the Feast of the Passover, for we find the following verses in Luke 22 telling what befell after the

Lord was seated at this feast:

For I say unto you, I will not any more eat thereof, until it be fulfilled in the kingdom of God.

And he took the cup, and gave thanks, and said, Take this, and divide *it* among yourselves:

For I say unto you, I will not drink of the fruit of the vine, until the kingdom of God shall come.

And he took bread, and gave thanks, and brake *it*, and gave unto them, saying, This is my body which is given for you: this do in remembrance of me.

Likewise also the cup after supper, saying, This cup is the new testament in *my* blood, which is shed for you. — vv. 16-20

"Whoso tasteth my blood hath eternal life; and I will raise him up on the last day." The Holy of Holies in any religion refers to this communion of man's human self with the God within. It is the true meaning of the Sacrament of the church. The soma juice is the Holy water used in the Church.

When all the inner meaning of these symbols is better understood, men shall recognize themselves as brothers of divine origin. For this hunger is in every human heart and we shall all sometime set out to find the Holy Grail.

ANANDA — RIVER OF BLISS — *Robert Airlie*

High in the hills, a little lake lay like a silvered mirror under the setting sun. Its slanting rays probed the dark defile of a narrow valley leading east and cast a crimson glow on the surface of the stream that fed the lake. A brooding hush hovered over the forest and brought a benediction to the mind of the man who surveyed the scene. Standing in his cabin door, Nelson Graham breathed in the scent of balsam and sweet gum. Here was peace after four years of war and it seemed that he desired naught else. There was no need for him to work in the years ahead. His father and his mother had passed on while he was gone. There were no ties that held him to any task. It appeared pointless to return to the routine of teaching philosophy when his chosen field was so wholly unrelated to the harsh realities of life.

Stepping down to his canoe, he pushed it out on the placid stream just as the sun disappeared behind a distant ridge. Drifting as the darkness deepened, his ears caught a faint sa-a like the sound of an indrawn breath. It was the rustle of the evening breeze among the trees as the warm air rose eastward up the valley. Soon, he knew, it would change to ha-a as a cooler current descended along the Sierra slopes. Then, a gray and ghostly mist would rise from the lake to shroud it for the night. The mountains were breathing, as all that lives must breathe. A spell fell upon him at the thought and he remembered the beloved texts that he had learned to read in Sanskrit. They held real philosophy that delved deep into the heart of human life, into the universal life itself. How could he ever hope to bring the sublime truths expounded by those Oriental sages home to the skeptical minds of Occidental youth? Of what avail to struggle single-handed against the inertia of a system that sought only for scientific facts? Suddenly, a

singular clarity of perception came over him. In his mind's eye he could see the books, the pages, the paragraphs of treatises which he had read years before. The sentences stood out word for word, with a lucid sense of what the writers meant when they wrote them. This breathing of the mountains, of the forest, of himself, was but the whispering echo of the Great Breath, the living essence of the Universe of universes. The treatise on that was not the metaphysical philosophy that his fellow professors derided. It was scientific and the Science of Breath was as truly so as aught that was ever written in the western world. The Sanskrit letters were there before his eyes in the dialogue between the god Siva and his goddess, Sakti. They were the same as Isvara, Soul of souls, and Pawarti, who was but the negative phase of his positive aspect. Let the physicists call them the positive and negative poles and deal with the dialogue as an exposition of electromagnetic phenomena. It would remain equally true.

The impression was so strong that he repeated Sakti's question to Siva aloud. "Lord Mahadeva, god of gods, be kind to me, and tell me the wisdom that comprehends everything." Ere the words left his lips he felt a great elation, a veritable elan that lifted him out of the little circle of his sensory consciousness. Literally, it seemed to levitate his very soul and, looking down, he could see his body resting in the canoe. The Earth sank away beneath him as his perspective widened. He could see the cities of his own land and, with telescopic vision, the people themselves. A murmur arose from them in a babel of tongues that was not their voices but the queer confusion of their inner thoughts. It rent him with a depth of compassion that he had never felt before. Could he not descend and tell them what he had heard and how they erred — tell them in words that they must understand?

"Nay!" said a Voice that was not a voice but was Sige, the silence, speaking into an earless ear, "Look and listen!" There was no

sound, but strange shapes began to take form around him. A few were very beautiful. Others were horrible and menacing. He recognized them as phantasmal forms created by the thoughts that he had heard. The stuff that they were made of rose from mankind en masse like a miasma, like the smog that dimmed the lights of the cities, like the mist that, now, hid from him his own person drifting in a canoe far below. Yet, these phantasms were very real; quite as much so as enemy soldiers with whom he had contended in battle. He felt the need to hold fast to his courage; even though the beautiful forms gathered about as though to protect him. Were they real? He began to hope so, for they were leading him up through the stratosphere to a dreamland of iridescent splendor. "Empty, all empty," said the Voice, and he knew that he was in the psychic realm.

Instantly, there was naught around him but an utter void, a stygian negation. This was far more terrifying than the menace of the shapes. He felt congealed, crystallized and disintegrating in an atmosphere of absolute zero. His soul held her breath and the Void became a scintillant kaleidoscope of comets, nebulae, suns and galaxies and metagalaxies whirling with incredible speed. Was this cosmic consciousness? Here was the universe laid out before him. He was one with it and knew that he could watch, analyze and predict the space-time relations of all this vast continuum. "Look again," said the Voice. He looked and saw this time that these stellar orbs were also naught but the shadows cast by glorious Beings who beckoned him still higher and welcomed him as one of them with a paeon of praise. Audition had returned. This was what he had been told to listen for. It was the Music of the Spheres, the Empyrean of Gods and Goddesses. Surely, this was the highest heaven.

"You may go one step farther, one plane higher," said the Voice. "Ananda resides there and his River of Bliss cannot be crossed;

even by these Gods. Your spiritual eyes have been opened and you may look, once, a little way into what lies beyond. It is the abode of Isvara." With the same sensation that his body felt as it lay drifting in the canoe, his soul was carried along a river of light that circled all that he had seen. From his solar boat, he could witness every detail encompassed within the immensity of Brahma's Egg. It was bounded by this flowing stream of living luminescence on which he rode. Beyond its outer shore was a sky that was filled with the rainbow colors of the spectrum in incessant movement. They met and merged in brilliant vortical aurorae with every hue and tint. There was music which kept pace with the changing play of gorgeous colors; exquisite chords that echoed with overtones. Likewise, there was a thundering dissonance that followed each consonant chord. Then, the next notes drew from that discord harmonies that were higher and grander still; as though to silence all harsh tones in one sublime chorus of hallelujah.

From the Science of Breath, he recognized what he saw as the operation of the subtle ethers in the outer veil of the vehicle of Isvara. The ancient teaching came back to him: When the power of the five senses is controlled by will, then "the Tattwas begin to take their rise before the eyes." Through these Tattvic ethers his senses received their five separate sensations. In one indescribably enlightening instant, he realized that he was seeing, hearing, touching, tasting and smelling them. "He who knows their color, their motion, their taste, their places, and their sign, becomes in this world equal to the god, Rudra," was what the verse stated. Here was the foundation of all the sciences, the five modifications of the Great Breath acting upon Prakriti as undifferentiated energy-substance or force and matter conjoined. It was the body of the Sakti herself. In and upon it Siva produced the thrilling vibratory motions of all manifested life. Infinitely

variant, each and every aspect of Parabrahman's evolution was formed thus from the same substance. The atoms, minerals, vegetation, animals, men, and gods were of the self-same nature, as embodied in the great galactic organisms.

"This is what you were brought thither to see," said the Voice. "It is the philosophy which should bind scientific progress to the stability of true religion. Return now to your body, and "By your works ye will be known." "A heavy fog enshrouded the canoe in which his body lay upon the little stream in the valley. As by a miracle, he floated within a few feet of the landing where the lantern light from his cabin beckoned him ashore. Mechanically, he prepared and ate his supper. Then, before the logs in the fireplace, he came to his decision. He would return to the college that had been his Alma Mater and where the chair of philosophy awaited him. Before he resumed his seat therein he would major in physics and earn a doctor's degree in science. Then, in the terminology of the scientific Philistines themselves, he would seek to bridge the gap between mathematical physics and the metaphysical beatitudes that, alone, could save them from the abyss of materialism. In the hearts and souls of the young men and women who came to him as students, he would sow the seeds of truth. In some of them, surely, these would find fertile soil and grow to come to blossom in flowers of cosmic consciousness unchoked by the weeds of the wayside.

THE PHOENIX — *Allan J. Stover*

For constancy the phoenix serves as a type; for understanding by nature its renewal it is steadfast to endure the burning flames which consume it, and then it is reborn anew. — Leonardo da Vinci

The legend of the Phoenix Bird, periodically reborn from the ashes of its consumed body, is a myth from the mystery language of the Ancient Wisdom, so old that no man knows the time or place of its origin.

Found in both the East and the West, it everywhere sets forth in poetic imagery the law, universal throughout nature, that individuals, civilizations, races and worlds are perpetually reborn from the ashes of their former selves. Various aspects of the myth have been brought out by different peoples, and by comparing these the student's mental conception of the Phoenix myth begins to take form and color, and is seen to be, not an image of fancy and superstition, but a symbol of eternal truth.

According to the Greek historian Herodotus, the Phoenix came from Arabia at the close of every 500 years, and flew to its shrine at Heliopolis in Egypt, where it deposited the dead body of its parent (i.e., its former self) which it had brought incased in an egg or ball of myrrh. Another and later version tells of the bird at the age of 500 years building a nest or funeral pyre of frankincense and cassia and other fragrant herbs, which it lighted by vigorously fanning the pile with its wings until it caught fire. Then when its body was entirely consumed, the Phoenix rose from the flames and flew away a new bird.

In the collection of popular legends of the Middle Ages called the

Physiologus, the Phoenix is described as an Indian bird which lived only upon air, and after a period of 500 years loaded himself with fragrant spices and flew north to Heliopolis, where he entered the temple dedicated to the sun, and depositing his load upon the altar was burned to ashes. The renewed bird emerged at once and in three days was full grown and flew away.

The Phoenix was known to the Egyptians as the Bennu Bird and was closely associated with the daily rising of the sun. The Bennu was also referred to as the "soul of Ra and symbol of Osiris." In *The Book of the Dead* we find these words spoken by the deceased:

"I am the Bennu, the soul of Ra, and the guide of the gods in the Tuat [the underworld]; let it be so done unto me that I may enter in like a hawk, and that I may come forth like Bennu, the Morning Star.

". . . from many passages we learn that the Bennu, the Soul of Ra, which appeared each morning under the form of the rising sun, was supposed to shine upon the world from the top of the famous Persea tree [at Heliopolis in Egypt] wherein he renewed himself."

— *The Gods of the Egyptians*, II, 97, A. E. Wallis Budge

The Persea Tree appears to have been a member of the Laurel family and is used as a symbol of the "World Tree" which is representative of the hierarchical system in which we live, and in whose higher parts the reincarnating monad finds its rest. According to Egyptian belief the Phoenix or Bennu, self-regenerated, rises like a fragrant flame above the Persea Tree, or again at night as the soul of Osiris it rests in this tree above the sarcophagus of Osiris. Elsewhere we find the Nile god referred to as awakening to life the soul as the Phoenix-Osiris in the plants. There are also other references to the Morning Star as the one who ferries Osiris or the Phoenix from the east.

In Persia the world tree was the "Ox-Horn Tree" which contained the seeds of all plants, and possessed the power of renewing the universe at the proper time. "On it perched the sacred eagle Simurgh. When he flew upward the tree was so agitated that a thousand twigs shot forth. When he alighted again he broke off a thousand twigs which scattered seeds on all sides." — *The Rainbow Bridge*, J. S. Newberry, p. 171. Here is obviously an allegory of the cosmic outbreathing and inbreathing, expansion and contraction, which all things undergo.

Among the Turks, the Phoenix was known by the name of Kerkes, and according to tradition was said to live a thousand years, at the end of which time it consumed itself by fire and arose renewed to live another thousand years. This was repeated 7 x 7, or 49 times when the Day of Judgment came. Mme. Blavatsky says:

The "seven times seven," 49, are a transparent allegory, and an allusion to the forty-nine "Manus," the Seven Rounds, and the seven times seven human cycles in each Round on each globe. The *Kerkes* [of the Turks] and the *Onech* [of the Hebrews] stand for a race cycle, and the mystical tree Ababel — the "*Father Tree*" in the Kuran — shoots out new branches and vegetation at every resurrection of the Kerkes or Phoenix, the "Day of Judgment" meaning a "minor *Pralaya*" — *The Secret Doctrine*, II, 617

The "seven times seven human cycles in each Round" evolve through a graduated series of seven races. Each race of whatever degree is separated from its successor by cataclysms of greater or lesser magnitude. These take place at about the midpoint of the race, at the time when the peak has been reached and the downward plunge has commenced.

G. de Purucker points out that while the Babylonian Neros of 600 years comes as close as any to the Phoenix cycle as commonly understood in Europe, nevertheless the symbol represents the cyclic nature of all recurring periods of time, both great and small, rather than any particular cycle. (1)

Cycles of many lengths have been associated with the Phoenix, but it is interesting to note that Dr. de Purucker gives the life cycle of what he called a tribal generation, or the active expansive period of what we know as a nation, as about 500 years; at which time the nation having reached its crest of importance begins to decline while a new nation rises to take its place in the world. Races like the individuals composing them all have their youth, maturity and old age. Modern Europe rose from the wreck of the Roman Empire, and will when its time has come give place to its successor. It would seem that in many places in the world today, the Phoenix Bird is fanning his wings above the fragrant pyre of national consciousness in order that a rejuvenated humanity with renewed hopes and ideals may again take a step forwards and upwards.

According to *The Secret Doctrine* our European Family Race has a great many thousands of years yet to run; nevertheless there is evidence that new racial trends are already appearing, perhaps the Fifth National Race, perhaps only a new Tribal Race. The important thing is to keep the general scheme of intermeshing racial cycles in mind as an ideal pattern to brood and meditate upon.

At present the world is undergoing a series of slow alterations in climate and structure which are fully as important as the events which have disrupted human society. These geologic changes will continue and slowly increase for thousands of years since man and his home, the earth, co-operate and evolve together

throughout the ages. One sub-race after another will gradually separate from its parent stock and enter upon its golden age, and will find the physical conditions it needs for its development.

In America, the blending of racial strains is resulting in many new characteristics. In the United States the majority of people have already combined several European strains and will gradually become a race apart. In Canada the English, Scottish, French and Indian and other stocks have similarly combined. South of the Rio Grande two thirds of the population is colored with Indian blood and the Mestizo is emerging and forming a new race or races, fore-shadowings of greater races to come.

Throughout these lands, Ancient America is renascent with qualities and hopes before unknown, as fanned by the wings of the Phoenix the world awaits rebirth. (2)

In America a living symbol, the Quetzal (ket-sal) is said by many to be the most beautiful bird in the world. It lives high in the "cloud-forests" of Guatemala and Honduras and commands admiration whenever seen. In American mythology the Quetzal was the solar bird, the dweller of the great spaces and symbolic of the supreme spirit. The colors of its plumage may be seen in the green and red of the ancient wall paintings and the trailing tail is repeated in the long and colorful ceremonial robes.

The Quetzal nests only in the loftiest trees, and the nest has two openings, one for entrance, one for egress, the long plumes not permitting the bird either to turn about or to back up. Closely connected with the Quetzal was the serpent Coatl, symbolic of the earth — not the inert matter but the living fire of the globe, often represented as a two-headed dragon.

When in man the fire ascended and was united with the solar or buddhic splendor the man became illumined, his inner vision

opened upon infinity. He was clothed with the solar radiance and was then known as the plumed serpent — Quetzalcoatl, as his brothers in India were called the Great Nagas or serpents and in China or Wales as Dragons of Wisdom.

The radiance of the spirit was always symbolized in America by Quetzal plumes in the headdress. From this custom it came about that all chieftains gradually came to use feathers of other birds as a sign of honor and achievement.

Everywhere the Phoenix myth signifies, above all else, the principle of self-regeneration as a necessary part of the life cycle of both individual and race. It is therefore a doctrine of hope, and a promise of unending evolution.

In India, Karttikeya, born from fire and water and nursling of the Pleiades, combines the attributes of both Mars and Apollo. He was said to exist for the purpose of destroying Taraka, a deva-daimon who had seized occult knowledge and powers belonging to the gods alone. He is represented as having six heads, one for each century of the 600 year Neros cycle; and is shown riding on the peacock (the Hindu Phoenix). The "eyes" of the peacock feathers were said to represent the starry heavens while about the body of the bird were concealed the signs of the zodiac.

The allusion to the destruction of the daimon Taraka as a punishment for possessing occult powers may well apply to the self-destruction brought upon a race by the misuse of atomic or similar force: a possibility the greater part of the world stands in abject fear of today. Karttikeya and his Phoenix-peacock steed represented the critical midpoint of any racial cycle.

The Phoenix in Japan is represented by the Ho-wo, a mythical bird composed of peacock, pheasant and bird of paradise. The Ho-wo dwells in the high regions of the air and only descends to

earth when bearing one of the immortals or upon the birth of a great sage or emperor.

In China the Feng-Huang or Vermilion Bird dwells in the southern quarter of the heavens and rules over the midpoint of the day as well as over the midpoint of any cycle. Astrologically it is the brilliant red star Antares in Scorpio, and with its companions Regulus in Leo, Aldebaran in Taurus, and Fomalhaut in Aquarius rules over the four cardinal points. These stars, known as the Four Royal Stars by the Persians, and the Four Maharajas by the Hindus are referred to in *The Secret Doctrine* (I, 408-9) by Mme. Blavatsky who says ". . . that which Mr. G. Massey calls the four genii of the four cardinal points; and the Chinese, the Black Warrior, White Tiger, Vermilion Bird and Azure Dragon, is called in the Secret Books — the 'Four Hidden Dragons of Wisdom' and the 'Celestial Nagas.' "

The Feng-Huang was believed to have its origin in the sun and to drink only the waters from the K'unlun Mountains, feeding upon the tender sprouts of the bamboo. As in Japan it is associated with the coming to earth of great souls and with the beginning of wise and beneficent reigns. It is the symbol of Yang the spiritual principle, its plumage contains the five colors, (3) its call is a sweet blending of the five notes. "Its low notes are like a bell, its high notes are like a drum." When it flies 360 kinds of birds follow and the legends told of it are countless.

There is a thread of esotericism running through all these legends, linking the thought of east and west, vitalizing the myth, until the truth it embodies shines forth like a many faceted jewel, a constant reminder that there is no death, but only endless change and evolution, as mankind progresses from humanhood to godhood. It is the symbol of the immortal self which after playing one part on the stage of life, discards its old garments and

passes on to another act in the Great Drama.

FOOTOTES:

1. See *Studies in Occult Philosophy*, pp 36 *et seq.* ([return to text](#))

2. Among the many suggestions submitted for the great seal of the United States, was one by William Barton in which the phoenix was included as part of the design for the obverse side. This however was never adopted. Charles Thomson's original sketch and the text accompanying it, which was adopted for the obverse of the seal, specifically names and depicts the American eagle as the emblem of our country.

The unfinished pyramid and all-seeing eye of the reverse side, with the exception of the motto, is from the design submitted by Mr. Barton. ([return to text](#))

3. In America the Quetzal's plumage reflects the seven colors of the solar spectrum; while in China the Vermilion Bird is traditionally endowed with the five colors and the five sounds pertaining to the five elements of the Chinese philosophy. ([return to text](#))

The Theosophical Forum

TORCH OF PROGRESS — J. A. Long

What is it that causes civilization to move forward to new goals of perfection?

The scientist will say perhaps that it is the result of new discoveries in the vast field of technology and point to the enormous strides made in transportation and other equally phenomenal accomplishments. The philosopher may say that man has greatly improved in his ability to think and reason and the subsequent result is progress. The religionist may refer to God and credit His all-wise omnipotence as the real cause of civilization's advance. But to the mind that penetrates the outer garment of life, these ideas are soon recognized to be but effects clothing more subtle and deeply rooted causes which reveal themselves only to those having the ability to see the hidden or occult side of life.

It is difficult for the lay mind to accept, let alone conceive, the idea that there is at the center of all progress an expanding *spiritual* impulse, which impulse represents the occult side of Nature and upon which is builded the philosophy of the Ancient Wisdom — Theosophy. It is even more difficult to accept the further fact that this impulse finds its expression in the world through the medium of a group of highly developed human beings who with their predecessors have been the guardians of man's destiny, and who perform their work strictly on the basis of Nature's own rule for true progress — Universal Brotherhood. And to accept the Theosophical Society as the outer body through which these Masters of Wisdom work, seems to the lay mind too much to expect.

Nevertheless, doubts notwithstanding, humanity has been

watched over with compassion by this central Brotherhood down through the ages and has worked through a body of their representatives in the world which carried various names in different periods of the world's history. Today and since 1875 it has used the Theosophical Society, and particularly its Esoteric Section, to carry the torch of true spiritual progress for the re-enlightenment of the hearts and minds of men. Doubters need only take the trouble to investigate briefly the teachings given out by this central Brotherhood in an ever-expanding stream of occult literature through the channel of the Society. Such investigation will reveal that while this stream has been accompanied by a multitude of pseudo-occult publications based on plagiarism, the truly inspired works of the leaders of the Theosophical Movement such as *The Secret Doctrine*, *The Mahatma Letters*, *Fundamentals of the Esoteric Philosophy*, and *The Esoteric Tradition* clearly indicate there is no body of teachings extant in known history that presents so comprehensively the true basis for the progress of civilization.

As we approach the mid-point of the century it becomes obvious that those who have been so privileged as to find themselves in the midst of this stream of spiritual force flowing into and giving impulse to the life of our time, carry a grave responsibility. One need only glimpse the alignment of forces of self-interest, individual and national, to see the great burden being carried by the Brotherhood of Masters whose very existence sprang from complete unselfishness, and whose objective is to aid the orphan humanity to know itself and realize that true Universal Brotherhood is not merely a ritual of lip-service but is a fact in Nature.

What is it that causes civilization to move forward to new goals of perfection? It is the combined efforts, whether given consciously or unconsciously, of those souls both great and small, who by

their thoughts and deeds contribute something to the reservoir of spiritual strength and impersonal service through which the impulse toward true Brotherhood can find expression. Every helper of the "helpers of the helping hands" of the Masters who form the guardian wall of our humanity is a partner in the Cause which moves civilization forward to new goals of perfection.

The Theosophical Forum

IMPULSE OR INTUITION — WHICH? — *Howard Utter*

The non-existence of any relationship, either absolute or partial, between impulse and intuition makes it easy to distinguish one from the other. The two are not correlative, and the idea that they have a double or reciprocal relation is a result of lack of understanding the origin, nature, and functional laws under which each operates in its native, but separate sphere, of the human constitution.

The simplest definition of impulse is: a sudden thought. A thought that comes quickly and without warning is certain to have its origin in the intermediate nature and therefore must be considered an impulse. The simplest definition of intuition is: knowing without knowing how one knows. Intuition is not sudden, but often is an answer to a long studied problem, intense meditation, or stored up wisdom gained in former lives. It is the voice of man's own Inner god.

An impulse is a sudden or transient emotion tending to induce action. Here are three characteristics which brand its origin as no deeper than the psychological nature. This transitory emotional event, passing before the vision in a brief time and then disappearing from view after inducing some action, not necessarily for good, of the personal self, is a marked contrast to the permanent, impersonal wisdom of intuition and inspiration streaming steadily from the Monadic Spirit, which does not urge violent and unreasoned action, but more often than not warns to refrain from action entirely, which, if committed impulsively would prove to be destructive rather than constructive.

An impulse is a conative state of consciousness, occasioned by and fused with a feeling of craving, in view of some object of

sense-perception or of the imagination, with a strong tendency to discharge in some kind of purposeful movement. The faculties of desire, impulse, or exertion are functionings of the psychological Kamic-Manas and are distinguished from the intuition flowing from the Buddhi-Manas by cognition and feeling. The character and end of these impulsive movements may (1) be quite completely instinctive and not recognized, this failure to recognize being the result of habit, that of allowing desire of the lower personal self to be the ruling motive for action; (2) have the form of acquired habits of reaction; or (3) result from instantaneous judgment as to how to meet an emergency. These last two will be reactions exactly corresponding to habits of thought. If the thought habits have been to follow the desires of the lower personal nature these reactions will be impulsive; if the habit has been formed of setting aside the psychological and waiting for the Light of Understanding and Knowledge these reactions will then be intuitive. Intuition, the voice of our Spiritual Soul, is always recognized as Wisdom, and will never be confused with animal instinct.

The two psychical characteristics of an impulse are its strong tendency to initiate action and its lack of deliberation. These two characteristics designate man's psychological nature to be in full control of his actions and his life directed by impulse.

Experience has taught that the consequences of impulsive actions are always disappointing, by the reason of their failure to attain for us our highest aspirations, and only increase our unwanted Karma. These alone are adequate reasons to reach a conclusion that impulse is an incorrect and confusing basis for action and life.

Far better to keep the psychological nature of man's constitution in self-surrender to the Higher Self, flooding the Mind with the

Light of his Spiritual Monad, with intuition, inspiration, and, if self-surrender is complete, even genius.

Man's possession of divine free-will is a power to choose." confusing, failing, Karmic creating impulsive action; or Intuitive Divine Wisdom of his own Inner God. Each must ask himself and decide: WHICH?

The Theosophical Forum

THE SOVEREIGNTY OF IDEALS — *M. G. Gowsell*

Of all the live issues before the youth of today the most outstanding is doubtless that of determining upon some seemingly worth while objective in life. Bending one's course thereto, after due stock-taking and deliberation, while important, is a secondary affair, and yet it is no child's play, as we well know. Although paradoxically enough, the child is far nearer to one's ideal achievement or metaphysical goal than might be supposed, or, least of all, recognized. But this is, perhaps, to digress.

The world of today being in the throes of transition, the general situation is a peculiar one, one which is unique and wholly without precedent, where everything seems to be at the parting of the ways. The young man or woman with a view to any particular career as an objective is compelled to do some real thinking, and that without benefit of proxy. There is deep significance in the fact that the youth of today are not so disposed to turn to the older generations for advice as heretofore. And for very good reasons, as they see them. One of which is that their elders appear to be too conservative, too lacking in vision, and hence too nonplussed themselves to be of much help. It is encouragingly true that reflective minds among the younger generation are far nearer to a complete understanding of the causes underlying our chaotic social conditions than are their elders. They know for instance that the present world crisis is but the culmination, the fruit, of generations and generations of striving to achieve what are now seen to be sordid objectives, to say the least. This recognition and understanding of the situation is one of the most, if not *the* most hopeful sign of the times.

Objective objectives have too long adorned the horizon as

popular ideals to be fought for tooth and nail, while heaven alone was left to help the fellow who got in the other's way. It has not been a pretty picture. But it may yet serve as a vivid illustration as to how absolutely ideals have ruled, and will forever continue to rule the world. The reason for this is that there is a law of cause and effect in the affairs of men, one which cannot be set aside. The same law is operative throughout every department of the universe in which we live and move.

Coveted preferments and privileges of exploitation have not been confined wholly to the material resources of the planet during all these years. Nations have been exploited by nations; classes by classes; groups of individuals by other groups, equally opportunist, until today there are the glaring effects everywhere. In addition to want, woe, war and brutality, we have an almost universal negation, suspicion, fear and fevered anxiety, as one after another the ghastly gestures suggesting imminent disaster are thrown upon our screen of time.

Nor has man's emotional nature escaped an equally intensive exploitation. Religious and political charlatans, both great and small, have been intensely active in this field. Volumes might be written on this score alone, and then fall far short of an adequate description of the sorrowful wreckage left in the wake of operations in these mine-strewn waters of life. Conceived in darkness and born in ignorance, the lower man's twin twain of hate and fear have been played upon for centuries, and are even today being utilized to the limit by those, be it noted, who well know what they are about.

What more evidence could one want as to the supreme rulership of ideals in the affairs of men than what we see all about us? But there is what the chemist calls an "end point" in every quantitative analysis, wherever taking place. And during the

present process, Nature herself has supervision over the various reactions now under way in her vast laboratory. It is an accepted fact that gold must be tried by fire. And during this present-day trial what is too painfully visible is but the dross being forced to the surface during the process. "Look for the flower to bloom in the silence that follows the storm; not till then. It shall grow, it will shoot up, it will make branches and leaves and form buds, while the storm continues, while the battle lasts." (*Light on the Path*)

The Theosophical Forum

PLAN AND PURPOSE IN NATURE — *Allan J. Stover*

According to the Biogenetic Law, or Recapitulation Theory, animals in their individual development pass through the stages experienced in the evolution of the race to which they belong. This scientific theory was arrived at through the study of comparative embryology and the larval stages of insects and crustacea. In the Crustacea, which includes the lobsters and crabs, certain species pass through larval stages which resemble more primitive Crustacea. Most insects undergo a change, or metamorphosis, passing from egg to larva to pupa to adult. The caterpillar changing into a butterfly is perhaps the best example of this amazing life cycle. Both Crustacea and insects molt, shedding their skins with each change, and undergoing their growth immediately before the new skin hardens.

Among the vertebrates, these different stages of growth are hidden away in the embryo, which undergoes a series of changes in its development from ovum to the time of birth, during which it recapitulates the forms of a series of lower organisms. For instance, at one stage of embryonic growth gill slits appear. In the amphibians, birds and mammals these gill slits are modified or disappear, but in the fishes they continue to the adult stage. The development of the flounder is a striking illustration of one instance where the law of recapitulation is carried on after birth. The flounder, when young, swims upright as fish commonly do, and it has an eye on each side of its head. Being a flat fish, the flounder rapidly develops the habit of turning on its side, and the eye on the then under side slowly migrates over the top of the head to join its companion on the upper side.

The Law of Recapitulation has been used by evolutionists to

support the evolutionary theory, and has been advanced as evidence to prove that all life has developed from simple to complex in a long, end-on-end evolution. This is contrary to our Theosophical teachings. We say that the various stocks of life are distinct; that they do not pass one into the other, although the re embodying monads overshadowing the organisms do so, up to a certain point after which the door is closed. To the Theosophist, recapitulation is much more important than science yet knows; it is the law of analogy; it applies to the entire life cycle, not to a mere portion of it.

As G. de Purucker states in his book, *Man in Evolution*:

Nature repeats herself everywhere. She follows grooves of action that have already been made; she follows the line of least resistance in all cases and everywhere, and it is upon this repetitive action of our great Mother, Universal Nature, that is founded the Theosophical doctrine of the law of cycles, which is the enacting of things which have been before.

To quote one of our great geologists, Dr. L. Snyder:

Each group of organisms has a life time — a birth, a youth, a maturity, a death — as do the individuals composing it. In fact, one of the most fundamental principles of organic evolution is the fact that each individual repeats in brief, or recapitulates, the history of the race to which it belongs.

Reproduction of the amoeba is by means of single cell division whereby the single cell becomes two individuals. At times, when the vitality is running low, instead of dying two individuals will come in contact and in some mysterious way renew their vital energy. With the amoeba, death is an accident.

In another of the protozoa, the Euglena, we find a specialized

appendage for locomotion in the form of a long, slender, whip-like flagellum, which thrashes about and propels the owner through the water. At the anterior end is a small, red spot which is supposed to be sensitive to light. A number of flat, circular plates are found in the body of the Euglena, which contain chlorophyll and manufacture food by photosynthesis, after the manner of a plant. However, this creature eats also after the manner of an animal, by means of a permanent food vacuole. Reproduction occurs in the Euglena by longitudinal division.

The flagellates of which Euglena is a member are a very common type of protozoa and, as might be suspected, are claimed by both zoologists and botanists.

So far, we have considered two single-celled organisms. In one — the amoeba — any part of the protoplasm is able to perform all functions. In the other, the Euglena, certain portions of the protoplasm have specialized, definite functions.

We now approach a definite step in evolution, in which we find hundreds, or thousands, of single-celled organisms living in clusters to form a hollow globe, so that each cell is in contact with the water and at the same time joined to its fellow. The best representative of this stage of development is the Volvox, a plant according to some, an animal according to others. In the Volvox each of the many cells possesses an eye spot, chlorophyll plates, a contractile vacuole and two flagella, and acts independently of its neighbor cells. Here, however, we have specialization, for certain cells increase in size and perform the function of reproduction for the colony. As yet, the association is not sufficiently dominated by the embodying entity to be classed as a many-celled organism. The association is but loosely knit together. Still, one feels that there is a foreshadowing of organization.

We have briefly examined two examples of the protozoa, and I

may say in passing that 15,000 species are recognized by the zoologists, besides a host of bacteria, desmids, and microscopic algae belonging to the plant world.

I like to feel that the increasing complexity found in the plant and animal kingdom is due to the progressive descent and embodiment of a consciousness, of a conscious entity seeking experience and a vehicle in our physical world. Slowly at first, then more and more completely, the cells submit to a purposeful if elementary will, first by uniting in colonial order (yet each cell independent of the others), then certain cells specializing, developing organs for certain functions, so that more and more we see all cell personality subordinated to organism individuality, as in greater and still greater degree the descending conscious entity becomes identified with its body, simple though that body may be.

Passing over a number of the simpler forms of life, we now pause at the hydra, a simple type abundant in both fresh and salt water, and related to the jellyfish, sea anemone, and coral. The hydra egg develops by subdivision into a hollow ball, which then infolds to form a two-celled wall about a hollow interior. The interior wall occupies about two-thirds of the body wall, and is digestive and secretory in function. Many cells possess a number of flagella, which create a current in the water, and pseudopodia or protrusions of the cell substance project and capture solid food particles swimming in the hollow stalk.

Among the cells of the hydra's outer wall, or ectoderm, are many stinging cells, which discharge a barbed thread able to paralyze any small creature or even kill it by a poison contained in the barbs. The tentacle is able to seize prey and force it into the body cavity.

Strangely, the hydra is able to move, after the fashion of a

measuring worm, by bending forward, attaching itself by its tentacles, releasing its base, and advancing it for a new hold. Another method is to stand upside down and walk on its tentacles.

The hydra, by budding, often forms a colony, as is the case with our common coral.

In studying the hydra, we come to what is known as an alternation of generations, for the hydra produces not another hydra, but multitudes of small jelly-fish. These are free-swimming forms, and they lay quantities of eggs which develop into minute, free-swimming larvae. These larvae soon settle down, become fixed to the rocks and, by budding, produce a hydroid colony, thus completing a life cycle of which, unless we knew the whole story, we might well consider each stage as separate forms unrelated to one another.

In both the plant and animal kingdoms we find this alternation of forms appearing again and again.

There is a primitive land plant which I wish to mention here, the slime mold. In its early stages the slime mold resembles a small, flat mass of jelly, and moves about in dark, moist places in the woods, seeking and capturing bits of food after the manner of an amoeba. Later, it becomes fixed, erects a stalk crowned with a beautiful capsule in which spores develop.

Why, one may ask, should the early part of a plant's life be so active, and not the latter? We say it recapitulates, repeats the time when the plant kingdom was dominant, and much more active than at present.

A study of plant or animal life leads one to believe that we have a series of cycles, each repeating the same theme, yet ever on a higher order. Now one portion of the cycle is dominant, now

another, as different facets of the life are brought to the fore, but over and behind all, one senses the grand rhythm of the composition.

Geologic history shows plant and animal life rising in wave after wave as the climatic cycles, large and small, come and go. Each life wave suddenly develops, reaches its climax, and declines, while at about its peak another wave appears. That which we see in the world today consists in every case of but thin streams of life, each of which once had its day in the sun, during which time it was the dominant life of the globe.

The gray, creeping club-moss under our feet once formed great forests; the scouring rush along the highway once grew a hundred feet high in Carboniferous swamps. The ancient past lives for us today in the life we so lightly consider as scarcely to notice it. The flowering plants and mammals reached their peak in numbers and variety during Miocene times, millions of years ago, and have been declining ever since.

The eucalyptus tree flourished in northern Greenland in Cretaceous times. Seven fossil species of eucalyptus have been found in Massachusetts. Native now in Australia and New Zealand, and brought to America by man's aid, what a story this tree alone could tell — what an energy of life, to last so long. A tree is not the form we see: it is a stream of life, embodying and re embodying through untold ages.

But species grow old and die, as individuals do, and the life of a species is as the life of an individual: both pass through their childhood, maturity, and old age.

When an individual specializes it requires certain foods, special conditions to exist, or it soon ceases to survive as an embodied being. The same is as true of a species as of a race, and the strata

of the geologic past are full of fossil remains of types which were unable to change with the changing environment and so passed out. These were all specializations of one kind or another, departures from the evolutionary current, or main trunk, of the stock or class.

If we study the geological history of our earth, we find long periods of warm or subtropical climate, during which the polar regions were free from ice and resembled rather a subtropical jungle. During these times a new order of plant and animal life sprang into sudden dominance, starting in the north and slowly sweeping to the southward.

At periodic times this, the normal climate of the world, was brought to a sudden end by what are quite properly called revolutions — periods of sudden cold, glaciation, and mountain buildings. At these times, all life is put to the test, and either undergoes rapid evolution or faces extinction. We are at present emerging from such a revolution, and have a new future before us.

A single cycle of this kind constitutes an era. Thus we have the Paleozoic, the age of fishes and coal forests; the Mesozoic, the age of reptiles and coniferous forests; the Cenozoic, the age of flowering plants and mammals. Within each era are a number of periods which, repeating the cycle of an era on a lesser scale, bring to the fore various lesser forms of life while retarding others.

Considering large groups of related organisms as a class or stock, and using the coniferous trees as an example, we find the earliest forms such as the monkey tree, star pine, etc., rigidly geometric in pattern, while the later pines have lost much of their design and their pollen is dependent upon wind and insects for its distribution. In the earliest representatives of the gymnosperms,

the cycad and ginkgo, the sperm cells are motile if moisture is present, somewhat as is the case with the seaweeds.

Returning to the evergreens. The cretaceous fossil beds of northern Greenland contain the earliest types, which are later to be found in the Southern Hemisphere, while the later pines and spruces are confined to the Northern Hemisphere, forming a green belt around the earth.

We may study the Gymnosperms' life wave, which produced in turn the ginkgo, the monkey puzzle tree, the yew, the sequoia, the cedar, the pine, and the Ephedra or lowly desert tea, last of a great and noble line.

Consider the trees and their cousins, the shrubs and chaparral, as unfolding from a central idea, a central theme, each having its day and decline and long, slender line of surviving descendants.

Consider again the pines of the southwest — the great sugar pines and the yellow pines, tall and straight. These came to our southern mountains — the San Gabriels, the San Bernardinos, the Lagunas — during the last ice age, perhaps a million years ago, when the climate of California was similar to the climate of the Pacific Northwest today.

Then turn to the low, scrubby, brush-like, and exceedingly fragrant pinons. These pines arrived much, much earlier — during the Eocene — and have seen the San Gabriel Range worn to the level of the sea, and raised and worn again to a line of low islands, and raised again to the present levels.

Or, we might study the elephant race, as described in Professor Osborn's great work, *The Proboscidiens*, starting with the first, a little creature two feet high, seeing the expansion in variety, in size, in specialization of trunk, tusk, and ear, seeing their decline, for all but two have now vanished from the earth. Here, again, we

see the unfolding from a central focus, the expanding of a great race in great variety of form and then its contraction and near extinction.

Professor Snyder states that new forms are thrown off when a race is at its peak of vitality, and never at its close. This is true of the race, as of the individual. This, also, is true of the races of men, as explained in our Theosophical teachings.

Theosophy teaches that the current of life which is now man has been the leading force since the first formation of the ethereal earth. This current of life, moving through successive cycles of activity, has laid the pattern which all plant and animal life follow in both their individual and racial life cycles, though only the mammalian life has its origin in this Round. The other great stocks of life (birds, fishes, insects, Crustacea — all, excepting the animals and the true mammals) have arisen at different times in the far past and have only reawakened to new activity during the present life cycle of the earth, which we know as beginning with the Cambrian period.

No missing links between the larger groups have been found and none ever will be found, for there are none. For each type of life repeats after its own fashion what its predecessor did, yet it was not derived from that predecessor. Thus, to use an illustration, the fishes produced a flying fish. The reptiles produced flying, swimming, and walking species. The mammals produced the whale, the bat, and a host of land animals. Many birds are flightless; some are confined to the sea, scarcely able to waddle on land.

SPIRITUAL RESERVE — *James A. Long*

You see the surface of things; and what you would term "virtue," holding but to appearances, we — judge but after having fathomed the object to its profoundest depth, and generally leave the appearances to take care of themselves.

— *The Mahatma Letters*

We are today in the midst of a time when the need is strong for the citizens of the world to be alert to recognize the treachery of appearances. This alertness must be exercised both ways: if the appearance is good, is it really good; and if the appearance is bad, is it really bad?

The aftermath of any upheaval, whether it be war, world or national politics, sudden social and economic reforms, reorganization of societies or of an individual life, the aftermath is fraught with confusion and veils of illusion. Until the smoke of battle clears away, even the battlefield cannot be seen in its true perspective. Just so the illusory aspect of any changing situation remains to veil the true sense of values until the vision is cleared and the new scene is fully revealed.

The world-situation today represents the play of such a complexity of forces, both good and evil, each striving for supremacy within the still beclouded atmosphere of the recent great conflict. Until the wind of a strong spiritual effort clears up the haze of false appearances the future of the race is hanging in the balance.

What then is the key to the solution of the entangled international problems? What will unravel the confusing maze of intricate relationships that exist each with its respective goal or limited

objective? What of the conflicting elements in our society each supporting what appears to be that which will bring peace, and joy, and contentment? What combination of effort will create that wind of the spirit which will blow away this universal fogginess and allow us to see as well as to feel the true sense of the situation?

There is a key, a touchstone, which can be used to get beneath the surface of things, dissolve the appearances, and reveal their rightness or wrongness. It is the same key that has been used through the ages by all who have succeeded in leading the race onward: *Is the objective one that will benefit the few or benefit the many?*

At this point in history can we hope that our world statesmen will use this key as they work together to solve their respective political problems? Can we hope that the world's business leaders will use this key to unlock the door to universal economic benefits rather than seek individual or group supremacy? Can we hope that the conflicting elements in our society will find the touchstone to the peace and harmony they seek?

Utopia is not around the corner!

However, we can be grateful that today in all fields of human endeavor, political, economic, and social, our leaders are growing toward a more universal point of view. Their efforts are encompassing more and more the wider horizons of influence. But we would be deluding ourselves if we expected to find in a decade, or a century, or a thousand years, universal brotherhood in full operation. The full flowering of humanity requires ages and its true culture is the responsibility of the spiritual gardeners of our world, who by constant care and attention, by allowing the weeds to smother themselves, by watering and pruning the healthy plants, will ultimately have as Their reward — one world.

But how does all this spiritual gardening take place? How, in these intricate and complicated webs of individual and group destiny which are commingling in life, is it possible ever to discern the true from the false, the constructive from the destructive, the real from that which appears to be real? Can just a few Great Ones, seeing the world as a whole — seeing appearances as such, having fathomed the situation to its profoundest depth — can They alone leave these appearances to take care of themselves? Obviously not. They must have assistance. They must have at Their service a reservoir of spiritual energy, a reserve of spiritual aides. They must have sowers of seed, harrowers, primers, they must have helpers in all walks of life — in high places and low. And They have.

To the lay mind, unfamiliar with the true ways of spirit, it is the greater mystery. To the average theosophist, and student of the occult philosophy, it is a lesser mystery. To the true student of occultism it is no mystery at all — it is *his* responsibility. As an aide, he sees through the appearance of things, recognizes the true from the false and does his bit, however small, unnoticed perhaps but nevertheless effective, and thus leaves the appearance to take care of itself, to die, cut off from the stem of reality.

The need is strong for the citizens of the world to be alert to the treachery of appearances. The need is strong for the citizens to provide more aides in all walks of life to assist the Spiritual Gardeners. The need is strong for each citizen to take inventory of his basic objectives and aspirations: is he interested only in himself and his own? Or, is he interested in fathoming the object of life to its profoundest depth, and finding the true "virtue"? If the latter, he will become an active part of the spiritual reserve which is at the service of the Great Ones leading mankind

onward. He will become one with that effort which will cause the wind of the spirit to purify the present beclouded atmosphere. He will have joined forces with those uncovering the treachery of appearances. His aid will help swing the balance to insure the future of the race. He will have become a true Occultist, a Chela, a real Helper of mankind!

"To him that knocketh it shall be opened."

The Theosophical Forum

TIMES OF CRISIS — *G. de Purucker*

The following remarks reprinted from Volume Two of *The Dialogues of G. de Purucker* were made on June 11, 1930. These prophetic words spoken to the Katherine Tingley Memorial Group strongly accent the obligation of the Society and the responsibility of individual F. T. S "to loosen into the world a new spiritual energy."

Student — All the Teachers have told us of and hinted at great troubles coming upon humanity, and that if we did our duty, we could very much mitigate or possibly prevent them.

G. de P. — That is true.

Student — Can you tell us more about that, because humanity has suffered so hideously? We must help them.

G. de P. — That is true. Well, Companions, I can say this, that humanity is passing out of one cycle and entering into another one. Such periods of transition are always very dangerous to the spiritual and intellectual, social and political, welfare of mankind. They are always times of crisis.

At present we are not far distant in time from a social and political upheaval which will shake the very foundations of present civilizations. It will unquestionably be accompanied with bloody revolutions in different countries, and with wars; and I do not care to go farther into it. I think that I had better not. One of the efforts of the Teachers, or rather perhaps, the main effort of the Teachers, in founding the Theosophical Movement was to provide an international body of men and women who by the power of their thought expressed in words, in teachings, whether oral or written, and by their acts, would tend to alleviate the evils

that are coming, that are about to fall upon humanity.

It is amazing how much a few determined and doggedly-willed men and women can do. History has shown it repeatedly. That is why I say preach Theosophy from the housetops, teach it, declare it. Neglect no opportunity to pass the good tidings on. Our main duty is not so much to propagate the Theosophical Movement, although that is the way by which our main duty is done. In itself it is a secondary thing. Our main work is to change men's hearts, men's minds, to soften the horrors when they come, to alleviate the distress by preparing for it before it comes.

There is no humanitarian work so lofty as this. There will be an unloosening of human passions, when these things come about, which will be more terrible than anything history has known of, and while the Theosophical Society, our Theosophical Movement, will probably be quite unable to stop it entirely by the influence of Theosophical thought, and Theosophical thinking, and by its refining and alleviating power, nevertheless all this will greatly help in diminishing the evil that might otherwise be done.

Teach men brotherhood, teach men that they are inseparably bound together, that what one does all are responsible for, that what all do everyone is responsible for; that there is no fundamental separation of interests at all in any line — spiritual, religious, political, what not. Those are the thoughts that must go out into the world's consciousness.

Teach men the nature and characteristics and function of the proud and selfish brain-mind in which most men live today, and which in their ignorance they are proud of. Teach men its limitations, and also its value as the instrument for spiritual wisdom, when it is properly trained and directed by the spiritual will. These are also some thoughts that will help. These are the teachings that will raise men's ideals and ideas. Furthermore, but

by no means last, teach men the philosophy of the Ancient Religion of mankind, showing to men their common origin, their common destiny, on the one hand; and the interlocking and interwoven spiritual, psychical forces, energies, and powers of Nature on the other hand.

Do you think, for instance, that this recent Great War would or could have come about, if for the last eighteen or nineteen hundred years men had had Theosophy in their minds? If the psychic and mental atmosphere in European countries had been filled with Theosophical thoughts and ideals and truths? No! The Great War arose out of centuries of wrong thinking and wrong doing, out of selfishness, out of a lack of knowledge of the nature of man and of his being rooted in the Universe; and that the Universe is essentially a spiritual being; that man fundamentally and intrinsically is a god; and that his main and noblest duty is so to live — to live divinely, to live god-like. Deprivation and loss of possessions are as nothing at all in comparison with knowing and possessing and living these sublime truths. They could have made a civilization which would have held in chains the passions, the selfish impulses, the grasping, acquisitive spirit, which have dominated all European civilization up to the present, and which still dominate it.

It is the duty of the Theosophical Movement to loosen into the world a new spiritual energy, an illumination — to change men's hearts and to give light to their minds.

The Theosophical Forum

INDIVIDUALITY AND PERSONALITY — *Abbott B. Clark*

Much emphasis is placed upon impersonality. Why? Please explain the difference between personality and impersonality. What is impersonality?

In a word, impersonality is unselfishness, forgetting yourself and your own self-interests in thought of others. It is deep and careful thoughtfulness about what is true and right to do without self interest in the matter. It is self abnegation. This does not mean injustice to yourself nor neglect of your own natural duties. Quite the contrary. It may require much unselfishness to do one's natural duties and not forget or neglect them. In practical life the main question is one of motive. Is the motive pure and true and unselfish? If the motive is vanity, to attract attention, to display oneself, to further some scheme, ambition, desire, or, on the contrary, to express some prejudice or dislike, it is certainly not impersonal. When we lose all consciousness of self in love of the duty in hand, or in the love of others, or in love of the Work, then we are impersonal, and that would free us from most of our troubles.

In a deeper sense impersonality can be cultivated by meditation on the Higher Self. Seek to blend your consciousness with the Higher Consciousness. "Think of the Self, dwell on the Self with love and the Self will raise you." When you think of the Real Self as the actor you become the vehicle for those high powers, but when the sense of self comes in you are limited to your own small compass. Suppose you are absorbed in writing, speaking or singing and the sense of self comes in — it shuts off the light of the Higher Self, as turning the switch turns off the electric light. The brain may go on running like a flywheel by its own

momentum, but the inspiration is gone.

To express or explain the matter of personality and impersonality in a technical philosophical way: A man is essentially and fundamentally a spiritual being that has sent down a ray or stream of its own essence to express Itself in matter. It passes through plane after plane of matter. On the highest plane the force and consciousness of this being is universal, divine, all-encompassing. The lower it goes the denser and denser the substance, and the more confined and restricted it becomes until you get to the plane of the man who is limited to his five senses and their reports to his brain-mind. No matter how great this brain-mind may be it is quite possible for it to shut out all spiritual light. In that case the man is often spoken of as "soulless," meaning that the light of the soul or the spirit is not active. But the spirit is always there. By turning the attention inward and upward, by unselfish prayer or aspiration, the power and presence of the spirit can be invoked, regained. The soul or spirit is never lost. It is the man who is lost — that is, the mere brain-mind man. This brain-mind is a shut-in thing, therefore purely personal and perishable. The supreme spirit is entirely impersonal and imperishable.

It is because the personal consciousness is sunk in matter, bound and limited by matter, that we have the sense of separateness. This sense of separateness is the greatest of all delusions — the root and cause of all selfishness out of which spring all the other evils of human life. Out of the delusion of separateness blows the tornado of unbrotherliness which is the insanity that threatens the very life of civilization.

In the personal self dwells the human elemental and all the clamoring menagerie of elemental or animal instincts and passions. But the personality is not to be destroyed, killed out,

annihilated. It is a vehicle we have built up for ourselves through countless lives of effort, struggle and sorrow, for the soul's use — not abuse. It is the most complicated yet living mechanism in the world. Through its material and chemical parts it is a laboratory of all the physical and chemical elements in nature. In its vital, pranic or rajasic nature it is a switchboard of all the forces and powers of the cosmos; while through its mental and intellectual faculties it can become a symposium of godlike knowledge and wisdom.

The higher we raise our consciousness along the spiritual Ray which constitutes our link with the Higher Self the clearer the atmosphere and the wider the vision, the less the discord and the greater the harmony, for the Higher Consciousness is the source of all love and wisdom and beauty.

In the degree to which we can raise our consciousness and blend it with the ALL do we become impersonal. A mental exercise which, oft repeated, will help free us, is to affirm, as Mr. Judge told us, "I am not this body, I am not this brain, I am the Soul, I am the Self."

In the individuality and the personality of man are two great tides of thought and emotion. One makes of him an animal, the other makes of him a god. He takes his choice.

The Theosophical Forum

ASTRAL INTOXICATION (1) — *William Q. Judge*

There is such a thing as being intoxicated in the course of an unwise pursuit of what we erroneously imagine is spirituality. In the Christian Bible it is very wisely directed to "prove all" and to hold only to that which is good; this advice is just as important to the student of occultism who thinks that he has separated himself from those "inferior" people engaged either in following a dogma or in tipping tables for messages from deceased relatives — or enemies — as it is to spiritists who believe in the "summerland" and "returning spirits."

The placid surface of the sea of spirit is the only mirror in which can be caught undisturbed the reflections of spiritual things. When a student starts upon the path and begins to see spots of light flash out now and then, or balls of golden fire roll past him, it does not mean that he is beginning to see the real Self — pure spirit. A moment of deepest peace or wonderful revealings given to the student, is *not* the awful moment when one is about to see his spiritual guide, much less his own soul. Nor are psychical splashes of blue flame, nor visions of things that afterwards come to pass, nor sights of small sections of the astral light with its wonderful photographs of past or future, nor the sudden ringing of distant fairy-like bells, any proof that you are cultivating spirituality. These things, and still more curious things, will occur when you have passed a little distance on the way, but they are only the mere outposts of a new land which is itself wholly material, and only one remove from the plane of gross physical consciousness.

The liability to be carried off and intoxicated by these phenomena is to be guarded against. We should watch, note and discriminate

in all these cases; place them down for future reference, to be related to some law, or for comparison with other circumstances of a like sort. The power that Nature has of deluding us is endless, and if we stop at these matters she will let us go no further. It is not that any person or power in nature has declared that if we do so and so we must stop, but when one is carried off by what Bohme calls "God's wonders," the result is an intoxication that produces confusion of the intellect. Were one, for instance, to regard every picture seen in the astral light as a spiritual experience, he might truly after a while brook no contradiction upon the subject, but that would be merely because he was drunk with this kind of wine. While he proceeded with his indulgence and neglected his true progress, which is always dependent upon his purity of motive and conquest of his known or ascertainable defects, nature went on accumulating the store of illusory appearances with which he satiated himself.

It is certain that any student who devotes himself to these astral happenings will see them increase. But were our whole life devoted to and rewarded by an enormous succession of phenomena, it is also equally certain that the casting off of the body would be the end of all that sort of experience, without our having added really anything to our stock of true knowledge.

The astral plane, which is the same as that of our psychic senses, is as full of strange sights and sounds as an untrodden South American forest, and has to be well understood before the student can stay there long without danger. While we can overcome the dangers of a forest by the use of human inventions, whose entire object is the physical destruction of the noxious things encountered there, we have no such aids when treading the astral labyrinth. We may be physically brave and say that no fear can enter into us, but no untrained or merely curious seeker is able to say just what effect will result to his outer senses from

the attack or influence encountered by the psychical senses.

And the person who revolves selfishly around himself as a center is in greater danger of delusion than any one else, for he has not the assistance that comes from being united in thoughts with all other sincere seekers. One may stand in a dark house where none of the objects can be distinguished and quite plainly see all that is illuminated outside; in the same way we can see from out of the blackness of our own house — our hearts — the objects now and then illuminated outside by the astral light; but we gain nothing. We must first dispel the *inner* darkness before trying to see into the darkness without; we must *know ourselves* before knowing things extraneous to ourselves.

This is not the road that seems easiest to students. Most of them find it far pleasanter, and as they think faster, work, to look on all these outside allurements, and to cultivate all psychic senses, to the exclusion of real spiritual work.

The true road is plain and easy to find, it is so easy that very many would-be students miss it because they cannot believe it to be so simple.

"The way lies through the heart";
Ask there and wander not;
Knock loud, nor hesitate
Because at first the sounds
Reverberating, seem to mock thee.
Nor, when the door swings wide,
Revealing shadows black as night,
Must thou recoil.
Within, the Master's messengers
Have waited patiently:
That Master is Thyself!

OUR COMPLEX REIMBODIMENT — *Allan J. Stover*

Every living thing passes something of its life essence on to its offspring and in so doing perpetuates itself in a continual stream of existence, and as there are many grades and types of life so there are many ways in which this is accomplished. In all cases the life essence passes from adult or old bodies to new bodies or vehicles in a rhythmic cyclic process we may for the time being class under the general term of reembodiment. When in any stock of life this series of rebecomings ceases, that particular branch of life-form becomes extinct, and the indwelling monad seeks reembodiments in other houses of life. By reembodiment we mean far more than the continual reproduction of physical forms, for these are but the clothes which the inner evolving entity for a time wears.

The phase of reembodiment by which the identic life stream passes from parent to offspring in a continual coming again and again into physical life is known by the technical term of Palingenesis (Gr. *palin*, again + *genesis*, origin, coming into life). Examine a leaf on a tree. Notice the bud nestled at the base of the stem where it joins the twig. This bud grows as the leaf transfers more and more nourishment and vitality to it. In one sense the bud is its offspring, and when the leaf becoming old and useless falls to the ground, a new leaf will, in its season, unfold from the bud.

A seed is structurally a highly specialized bud which instead of producing a new leaf or twig, falls off the tree and unfolds into a new plant or tree which is both the offspring of the old and its reembodiment. But since plants have not yet evolved to the point of having an individuality or even a personality we cannot speak of

them as having a continuation of consciousness. The stream of life simply flows on and on for ages upon ages, migrating and specializing with the changing climates as geological periods come and go.

The single-celled plants and animals continue their kind by simply dividing into two halves or cells again and again endlessly. With them, there is theoretically no death save accidental, no break in such overall consciousness as they possess; but only a continual re-entering a new cycle of activity much as we enter a new day with each new sunrise; but without our sense of individual consciousness. The cells of the human body follow the habits of their prototypes, the single-celled animals and plants, in multiplying themselves and in building the body in which we live. These single-celled creatures are in many ways analogous to the First Race of Man, who also reproduced by division, knew not death, and whose bodies were globes of iridescent light.

Every form of life above the single-celled plant or animal is more or less complex according to its stage of evolution; and so the different materials or elements composing the body have somewhat different habits, according to the kingdom of nature from which they are drawn.

Man is composed of many kinds of life. The mineral is represented in his bones and in the many kinds of mineral salts found throughout his tissues. The vegetable kingdom is represented by certain types of cells, in the bacterial flora without which he could not assimilate food, in the trace of chlorophyll present in the red blood corpuscles, and lastly in the hair and nails. Including all these is the animal body which provides the physical vehicle, without which man could not exist on this plane. Above this and dominating it is the thinker overshadowed by the spiritual and divine soul and ego. In fact, man is a microcosm — a

miniature universe, as the ancients taught. To the lesser lives of which he is composed he is a galaxy of radiant starry atoms. But of his entire constitution and its complex life-cycle all that is known to the modern world is hardly one hundredth part of the whole.

The general lack of knowledge of the composite nature of man is illustrated by the following anecdote: Little Patsy went to her father, who was a well known biologist, and in great seriousness asked, "Daddy, are we animals?" He replied, "Yes dear. There is a mineral kingdom, a vegetable kingdom, and an animal kingdom; we are not minerals or plants but belong to the animal kingdom." The little girl, not completely satisfied, then went to her mother, who was an ardent Fundamentalist and asked, "Mother, are we animals, do we belong to the animal kingdom?" Her mother answered "No dear, we are not animals, we belong to the Kingdom of Heaven."

A Theosophist might have explained that as the human soul comes into reincarnation it gathers about itself materials, building blocks from all the kingdoms of nature, which it forms into a body in which it lives; and when the soul is through with its house of flesh and bone, the materials of which it was built go back to the departments of nature from which they were taken and are used again by other beings.

This gathering and dispersing of the life atoms — as a printer composes a page and when the printing is done redistributes the type into their respective boxes — was known in ancient times as Transmigration (L. *trans*, over + *mlgro*, migrate). The word means simply the changing of state or condition, as the life atoms forming man's body upon the death of the body pass into the kingdoms and planes of nature to which they are akin. This is the specific meaning of the word, but the principle is illustrated in a

degree by the metamorphosis of many insects such as the dragonfly which passes from an existence in the water as a crawling nymph, to a life in the air as a glittering winged dragonfly. Other insects such as the cicada pass many years beneath the ground to later come forth, emerge from their skin, as beautiful winged insects.

On a vaster scale the monad peregrinating from plane to plane and from sphere to sphere in its journey from spirit to matter and return transmigrates as truly as do the life-atoms in their lesser range. But the reincarnating monad in its descent through the spheres puts forth soul after soul; gathering appropriate materials to itself, and then, when its term of activity on a particular plane is finished, withdraws much as the human ego is withdrawn into the heart of the monad upon completion of earth life. This habit of ensouling after ensouling is known by the name of Metempsychosis (Gr. *meta*, over + *en*, in + *psyche*, soul). And since the bodies on the superior planes are not bodies of flesh but of substances appropriate to each plane, the term Metensomatosis (Gr. *meta*, over + *era*, in + *soma*, body) is used. Of the different phases of reïmbodiment, reincarnation applies only to the bodies of flesh assumed during earth life. Man having reached the status of a self-conscious being with awakened mind requires long periods of time between earth lives in other and higher spheres. Unlike the plant and animal he reïmbodies only after long intervals of experience in the heaven worlds. Yet, as with the plant, the stream of his physical life essence continues from parent to child for ages.

The outstanding key to a study of the various aspects of reïmbodiment is the focalizing or crystallizing effect of the indwelling monad which during its period of activity on a particular plane holds the lesser lives composing it under its dominion; and upon its departure the various elements, like

school children released from class, return to their homes.

Theosophy requires as accurate thinking as does any science and in addition develops that which Mme. Blavatsky called the plastic power of the imagination residing in the higher mind, which sees truths as wholes. A technical study of reimpodiment in all its various aspects leads one to an understanding of the subject which might be called "three dimensional" as compared with the "flat" thinking of ordinary life.

The Theosophical Forum

CREATIVE VS. VEGETATIVE LIVING — *Madeline Clark*

We want the creative faculty to imagine that which we know; we want the generous impulse to act that which we imagine. — Shelley

The divine inventive faculty is perhaps the most useful, as it is the most elusive and the most courted, of all human attributes. It is a sort of celestial lightning, a spark of Promethean fire, difficult to snatch from the gods, but priceless and necessary to all achievement. Without it we would be hardly more than graceless clods. When this spark leaps into flame, we have genius; and works of art and beauty, works of universal usefulness, are born — but not without arduous toil. When the flame burns less fiercely, we have all the lesser originalities, without which daily life could not go forward. But it is in the intensity of creative effort that we live most fully. No joy so supreme, no sense of freedom so unlimited, as that felt at the moment of "going over the top" after concentrated and sustained, often painful, effort. But the period of effort is remembered afterwards as one of purest joy. Dostoevsky has this idea when he makes one of his characters say: "Oh, you may be perfectly sure that if Columbus was happy, it was not after he had discovered America, but when he was discovering it! . . . What is any "discovery" whatever compared with the incessant, eternal discovery of life?"

Two young children in a temporarily impoverished family were told one bleak day in December: "There will be no Christmas for you this year except what you can make for yourselves." With the help of their father, an all-'round artisan and artist, and of their mother (mothers are always creative artists!) these children gathered materials and made their own toys: usable bows and

arrows, a drum, Indian flutes, a kite, a fleet of small boats to sail in the creek, surprises also for their parents — never had they known such Christmas joy, and never again would they go back to the old way of being mere recipients of purchased gifts.

It seems to be demanded of us that this creative faculty should remain aggressively active in us while life lasts. The gaining of a livelihood is a natural spur to this end. To take note of two extremes in this connection: there is on the one hand the individual who launches out, like Perseus with the winged sandals leaping from the cliff, to carve his own destiny, staking his all, risking want and hunger — lean days — while he makes his start, drawing upon his ingenuity and creative imagination to the utmost to build up his art or his business, and still doing so ever thereafter to keep it a going concern. At the other end we have the individual engaged in directed employment, if his interest in his work is entirely perfunctory, if he considers his responsibility over when the five o'clock whistle blows, and that he has no need for foresight and judgment beyond the limits of his own person or family. Between these extremes is the great body of men and women who, even in supervised employment, bring to bear their creative talents on their jobs, just because it is the normal and natural thing to do useful work in the most worthwhile way.

The observation was made years ago, in the days when moving-pictures, the radio, and other substitutes for self-created entertainment were only beginning to be prevalent, that in a civilization in which such distractions are brought within the reach of all, there is a danger that character will become lax, with having no need to draw upon the individual's own resources of native talent, perseverance, taste and judgment, etc., to this same end. The psychological contrast between the negative, receptive attitude, simply responding to stimuli, and the positive, creative,

effortful one, is here very sharply drawn. Every teacher of children knows that these souls on their way to maturity are at their best and happiest when they are busy with work and play partly of their own devising. Behind every creative idea as it goes into action lies Will, the soul of the idea is Imagination, and both of these thrive with use.

Well has it been said that he who lives creatively helps to create and re-create his portion of the World, while he who lives vegetatively stands still rooted to the same spot until the day of disintegration. Is it true, then, that an individual is vegetating whenever he is not making efforts? Obviously, one cannot be on tiptoe all the time. Nature demands her periods of rest and recuperation. Therefore the vegetative side has its place. It is only when it is over-indulged that it begins to express the evil, unprogressive aspect of things. Yet there is no doubt that our civilization and the individuals composing it could be set upon a path of spiritual improvement were the higher creative powers made more use of, were there less mere drifting.

In the production of countless gadgets that contribute to our comfort and convenience, our civilization has shown a magnificent quality of inventiveness. But just as the general mentality in our present Race has been stepped up to higher level, intellectually speaking, with the swift development of Mind, so the time has come for the inventive faculty to become active on a higher plane, and to concern itself with ways of making life kinder, more enlightened.

Perhaps this is happening already in a rudimentary way although we cannot forget that selfishness and insincerity are still prevalent. "Gracious living" is a phrase that has become almost a household word, and relates not only to artistry in the use of material things about the person, the home, or the office, but also

to human behavior. So that we actually have a sort of code that invokes the creative spirit in no small measure. In every act that involves others besides ourselves, "gracious living" demands that we put into it a little more effort and thought, a little touch of originality, to give it grace and charm.

All this, desirable though it may be, is not necessarily an expression of the deeper aspect, the ultimate good, in human nature. It may go no deeper than the psychological element in us, which is far from being a stable and spiritual thing. On the other hand, this gentle artistry may spring from that deep fount of genuine altruism which is the spiritual and relatively permanent aspect of ourselves, and which finds its natural expression in acts of considerateness and kindness.

Perhaps the creative idea is never more nobly conceived than when it is invoked on behalf of others, in forgetfulness of self, as when an F. T. S., for example, employs his quieter moments in devising new ways to help on the work of his Lodge, or to approach those he meets with the message of Theosophy. This is the beginning of occultism; and the advanced occultist must be ever more fertile in resource as his work for humanity advances. The life-stories of H. P. Blavatsky, W. Q. Judge, and the successive Leaders of the T. S. are striking examples of this. H. P. B., ill, living on borrowed time, labored unceasingly on her stupendous literary and other works, almost to the day of her death. Judge was tireless in lecturing, organizing, writing literally thousands of letters, editing and carrying on almost single-handed his magazine *The Path*.

Every Leader of the Theosophical Society, upon coming into office, must bring into play to a transcendent degree this inventive faculty, this flame of creative genius. The broad outlines of what it is hoped he will accomplish are given to him by the

Brothers who founded the Society: it is for the Messenger to work out the details, as we have often been told and have seen.

The tremendous outpouring of spiritual energy that is felt by every devoted F. T. S. as the "Lodge Force" upon the advent of a new Teacher, has its rise in that creative flame of divine will and imagination that is the heart of the work for humanity of which the T. S. is the outer representative. The Teacher is the focus of this Force, and he inspires in his pupils this *will* to inaugurate a new era of achievement. Dr. de Purucker, in the first days of his leadership called attention to the "creative individuality" that each Fellow could exercise to help on the new effort; the present Leader, when he took up the torch, called upon each member to devote his "natural talents" to the furtherance of the Work. Similarly, when H. P. Blavatsky refers to the "outpouring or upheaval of spirituality," when W. Q. Judge writes of "the large and affluent streams" of "potentialities for good" that come from the Adept; and when Katherine Tingley speaks of the "new energy" that is "being liberated from the center of life" — their effort is to arouse us to the realization of that creative fount from which our inspiration comes.

Finding this, the aspirant who concerns himself seriously with finding ways and means to help the Messengers, allies himself with forces of light in the Universe, and is actually helping on the work of the Divine Architects who, according to technical Theosophical teaching, plan, inaugurate, and set in motion the universal creative labor, which is carried out by the Builders, the more or less vegetative forces in Nature.

* * *

In the Stanzas of Dzyan, when Fohat, the Messenger of the Gods, commenced his work of building the worlds at the opening of a new "creation," the sparks of the Fiery Whirlwind that formed the

Lower Kingdoms "floated and thrilled with joy in their radiant dwellings" as Fohat gathered them up and separated them to form "the germs of wheels" — new vortices of life. Such joy can also be ours when we share in the beneficent creative work "for the benefit of the world and all creatures."

The Theosophical Forum

"THE GOD WHO DIED" — *Grace Knoche*

IN THE PRESENCE OF THOTH, SCRIBE AND RECORDER:

The two illustrations which accompany these notes are really murals epitomized. They came from no temple-walls, however, but from one of the many papyri thus far discovered containing the remarkable text known as the "Book of the Dead" — so called, that is, for the title *Pert-em-Hru*, correctly translated, means *The Book of the Coming Forth into Light*.

Supported by an explanatory text in the sacred hieroglyphic, the *Papyrus of Ani* describes the soul's after-death journey through the invisible worlds of test and trial until, these passed, it becomes "one with Osiris."

Copies of this "book" were customarily laid upon the breast of the mummy or within the mummy-wrappings, that the deceased might know what to expect on this path and make no misstep. When this or a similar papyrus came to light, the story goes, a native workman exclaimed, "Oh, the book of the dead man! The book of the dead!" Hence the name. Now let us examine this mysterious "book," so reverently limned no one knows how long ago.

The first picture, a section only, portrays the "weighing of the heart," for *Weigh me in an even balance* was the prayer sent up in ancient days to Osiris-Ra, Osiris the Sun-God, the Supreme, the object of both gratitude and devotion, "the God who died."

In the center stands the Balance or Scales, an ageless symbol. Anubis, a huge figure with the jackal-head (symbol of terror, darkness, and trial) kneels with his hand upon the pointer, to keep it exactly plumb. Opposite Anubis stands Horus, a "Son of the Sun," or Initiate, the son of Isis and Osiris. He stands, a slight, almost boyish figure, watching to note the result. Behind him stand the goddesses attendant upon Shai, Goddess of Justice. Shai, note, stands protectively behind Ani, who with bowed head also watches the "weighing of the heart," his own.

Above them sit twelve of the Forty-two Assessors or Judges (the picture, bear in mind,

is but a section) who, like Shai, are connected with what the Hindu would call "Karman."

At the right of the great Balance stands Thoth of the ibis-head, Recorder and Scribe of the Gods. Tablet and stylus in hand, he records the questions asked of Ani, and the answers or "confession" made — Ani, whose whole life is being bared.

Just behind Thoth is Aman, a grotesque, composite creature, ever on hand at such trials to seize and devour the unfortunate whose heart is so weighted with cruelty and sin that it pulls the scale-pan downwards. For it is the heart, not mind or body or money, that is being weighed, and not in chambers but in open court, against the symbolic feather: TRUTH.

But who was Ani? Keeper of the Sacred Vessels and the Treasure of the Gods — that is all we know of the outward man. But about the earnest honest soul of him, we know much more, thanks to Thoth and his patient chronicle. Quoting from the record:

I have not done evil in the place of good.
I have not consorted with worthless men.
I have not put my name forward to obtain honors.
I have not domineered over slaves.
I have caused no man to suffer.
I have allowed no man to go hungry.
I have made no man weep. No man have I slain.
I have not stolen the cakes of the Gods.
I have not cheated in the measuring of grain.
I have not encroached upon the fields of other men.
I have not taken away milk from babes.
I have not driven cattle away from the property of the Gods.
I have not extinguished a flame which ought to burn. . . .

This is a portion only of the "Negative Confession," too long to be quoted in full. It is followed by a second "Confession" before the Forty-two Assessors (each one of whom Ani must address by name) in an examination even more searching, for the "Forty-two" are specialists in the gentle task of uncovering the faults or crimes they must

condemn. This ordeal ends with the following words, Ani speaking:

. . . Behold me as I am. . . . I live on truth; I feed on truth.

I have given bread to the hungry man, water to the thirsty, clothing to the naked, and a boat to him who has need of one.

Be ye, then, my deliverers and protectors, and accuse me not of evil when I stand before the Great God. . . . Let it be said to me by those who shall behold me: Come unto peace! Come unto peace!

The second illustration, a section also, has three quite separate divisions. In the first (at left) Horus, tall and impressive now, and wearing the double crown, enters leading Ani by the hand. For Ani has passed triumphantly the dread tests of the Assessors and the trials which came after, and is now on his way to Osiris.

The center panel shows us Ani in a sitting-kneeling posture before an altar beneath which is the symbolic sheaf of wheat. The sowing and reaping that governed his life on earth is over. Thus the sheaf, significantly, is raised above the floor to rest upon a cup or chalice. Ani's hair, formerly dark, is now white, but as to what this signifies most authorities will not hazard a guess. Yet the Egyptians of the Divine Dynasties were not the ones to act without a reason in the matter of even slight details in a subject of paramount importance. Each had its meaning, and rather than leave a careless hiatus, let it symbolize the purified soul, mature in years and judgment as Ani must have been; and since the acceptance of his Confession in that grim test by the Assessors, inwardly "white as snow."

Beyond the altar, on a smaller scale yet oddly enough not belittled by it, sits Osiris, canopied and enthroned. In his hands are the shepherd's crook and flail, ancient symbols, not alone in Egypt, of divine guidance and protection, and of justice backed by might. Behind him stand the heavenly or divine Isis and her sister Hathor, the earthly Isis of external Nature. Almost concealed is the latter, as both with outstretched arms support Osiris — in a silence that as the pages of this "book" are turned one cannot but deeply feel — the "divine silence" of Hermes, Thrice the Master.

Ani is now Osirified, "one with Osiris." Darkness and dread are left behind, and

unhindered he now may pass to the peace he worked for and won: the "coming forth into Light." Or is there still risk? Yes, for no man in the net and stain of Earth could be entirely sinless, wholly pure. And why, among so many Gods should he be guided only to Osiris? Because justice alone is not enough; there must be mercy also. And Osiris, unlike so many Gods, came down to Earth out of pity and lived there, suffering too. He conquered illusion as mankind must do, while ruling as an earthly king in that still unexplored archaic day when Divine Dynasties *were* divine, not names. Who then so understanding as Osiris, so wisely merciful?

A mystery? Not at all, as every student of Theosophy must know well. Osiris was in short an Avatara, a rare and special being who out of pity at critical times in human affairs leaves his celestial home to live on earth; through an earthly body to endure the utmost in human pain, and at last to die as men die. But only to rise again. It is a sacrifice, but it is not unique. Recall the words of the Avatara Krishna:

I produce myself among creatures, O son of Bharata, whenever there is a decline of virtue and an insurrection of vice and injustice in the world; and thus *I incarnate from age to age* for the preservation of the just, the destruction of the wicked, and the establishment of righteousness.

This is why Osiris was the "Great God." This is why he had no nobler title in the torn hearts of those who suffer than these four narrow words: "the God who died."

Two little paintings on papyrus. How much that is profound hides in them!

DEFINING RELIGION — *Clifton Meek*

I would like to comment on the editorial "America Needs Religion" which appeared in the *Norwalk Hour* a few days ago. In doing so, it is not my desire, in any way, to belittle those who may disagree with my own views, but I do think that before the need of Religion can be intelligently discussed or determined, we should first have a clearer and far less confused understanding than there is today as to just what we mean by the term Religion. I am familiar with the broad and scholarly definition of the term, but I am referring to it as defining those noble qualities of the human heart and mind which spring from the divine nature of man irrespective of any profession of faith or sectarian classification, in contradistinction to the man-made superstructure of accretions, theologies, ritualism, dogmas and creeds which, all too frequently, devotees mistake for Religion itself.

If the writer was referring to religion as being morality, altruism, kindness, and the like qualities; a sense of inner spiritual kinship, not only with one's fellow man regardless of race, color, or creed, but with Universal Life itself, from the lowest to the highest, seen and unseen, and in which we "live, move, and have our being," I heartily agree that there is a great and urgent need for Religion. These are the spiritual landmarks of the human race, the common property, or should be, of every "religion," the exclusive property of none. Special "religions" come and go with the passing of time, but these are the spiritual values that ever remain constant, age after age. They are not received by ritual, nor sanctified by ceremony, but spring from the inner and divine nature of the human heart to whatever degree man will permit his spiritual nature to manifest itself. Let us not confuse them

with organizations, and the thousand and one modes and methods of worship which men have devised, and which, all too often, have contributed to the confusion of the religious thought of the world, doing more harm than good.

If these latter are the things which are meant by the term Religion, the project will have to carry on without my poor blessing and humble aid. I realize, of course, that it will make little difference one way or the other. Men have messed up Religion and misled the minds of men since the beginning of recorded history, and it is safe to assume they will continue to do so until individuals assert their divine prerogative and begin thinking for themselves. As long as there are those who follow blindly, there will always be those who will blindly lead them.

"Freedom of the human will makes religion an "elective," and that is as it should be. But too many people have voted to leave it alone" the editorial begins. Well, there may be a reason, and perhaps the man in the street is not entirely to blame. He may be confused by the multiplicity of "religions" with their contradictory beliefs, dogmas and creeds.

Perhaps he is conscientiously searching for that elusive factor known as Truth, and just doesn't have sufficient time in one life to investigate some 250 interpretations, I believe it is, of religion that have been erected upon the few explicit teachings of morality and right living which the Christian Master proclaimed and gave to men. In viewing this absurd situation, his confusion of thought is surpassed only by that of theologians who created it. It would seem that whatever reformation is needed in the way of religious thinking should begin at the top, rather than at the bottom. Or perhaps, as was my own case, after wandering down many ecclesiastical blind alleys, he cannot conscientiously subscribe to certain doctrines and profess to believe something, which, in his

own heart he does not, and which do not appeal to him as being true in the light of his own reason and the dictates of his own conscience. Would he be a better citizen or a whit more religious-minded by throwing his conscience and reason to the winds and pinning a sectarian label on himself? To a person with any intellectual honesty it would be unthinkable. We frequently hear it said that man's moral and spiritual development has not kept pace with his material and scientific progress, which of course is true. May it not be due to the fact that his religious concepts have not made a parallel advancement, and have become, to a great degree, static and crystallized? A dogmatic and materialistic science of the 19th century finally learned, after many bitter lessons and the shattering of more than one "last word" pronouncement, that there are always new frontiers to be explored, still greater truths lying beyond the horizon of their present ken. If this is true regarding man's quest for knowledge in the universe of matter, how much more so it must be regarding things of the spirit. The greatest frontier yet to be explored is human consciousness and the mystery of the human soul. Someone has wisely said: "The proper study of mankind is man."

Why do men, in face of this great mystery, shut themselves up in little air-tight compartments of thought and proclaim: "Here is Truth, ultimate and final. Don't look any farther; just believe." When will theologians and religious leaders learn the lesson that scientists had to learn, and that man's spiritual evolution cannot be accomplished by confining his conscience to intellectual concentration camps, fenced in by dogmas and creeds, ritualism and "last word" pronouncements which are still laden with medieval dust? These are the things which have but served to distract the attention of men from, and obscure, the great light of Christianity — the essential Divinity of Man. Not of one Man, a great Initiate and Teacher who worked and taught among his

fellow men 19 centuries ago, and around whose mysterious and little known life the drama of the Christos was woven a century or two later, but the divinity of all men, as he himself taught. Why did men, supposedly versed in spiritual wisdom, permit this noble teaching, the master key to their own religion, to be buried beneath the mass of theological excess baggage, nullified by contradictory teachings, and forgotten?

One can but speculate how differently European history might be written had the self-appointed guardians of Christian doctrine remained true to their trust. All the theological crutches of Christendom could not teach the masses to stand on their own spiritual feet and avoid the catastrophe that inevitably comes to those who stifle the inner light of conscience and follow blindly. For example, the people of some nations never have shown themselves capable of self-government for the reason that they never have been taught to think for themselves and assume responsibility for their own acts. Someone has always shown them how to act and what to think.

Religious training? They had an abundance of it for centuries. Sectarian schools flourished and religion was taught in the public schools. But their children were not taught *HOW* to think, but *WHAT* to think. When internal difficulties arose, the teachings of morality were easily sloughed off because they were not engraved on the tablets of their hearts by an awakened conscience. They had been learned by rote, and it was just as easy to follow one thing blindly as it was another.

Whenever some of our good-intentioned citizens begin agitating again, as they do from time to time, for the teaching of religion in our public schools, let us remember the lesson of Germany. Morality and character building — yes, by all means, but let's keep every vestige of sectarianism and church doctrine out of it.

Teachings which have stood the test of time can stand on their own feet and do not need propping up with theological crutches.

In Religion, as in any other field of human endeavor, man gets what he has the capacity and ability to take — what he attains by his own efforts. There is no spiritual featherbed on which someone is going to transport him to perfection. If he hopes even to approach the portals of Truth, he must be prepared to discard any preconceived ideas he may hold whenever he can replace them with one more universal in nature.

He is endowed with a thinking apparatus called mind, and a free will which it is his divine prerogative to use, to accept or reject, as conscience, the voice of his own inner god, dictates. If he permits them to atrophy by failing to use them, he has, like the son in the Biblical parable, buried his talents. If he centers his attention, hopes, and desires on externals, ritualism and ceremonies, naturally, he will receive but the externals of religion. It may appease and satisfy his worldly nature, but his divine nature, Christos, will remain unrecognized and unresurrected — crucified on the cross of matter — and the true significance of his own religion will remain to him, still, a mystery.

The Theosophical Forum

CYCLES AND THE DAILY ROUND — *Rose Barrett*

Being is an endless cycle within the one absolute eternity, wherein move numberless inner cycles finite and conditioned — *The Secret Doctrine*, I, 221

To associate our daily round with the greater cycles of the earth, the other planets, and the sun makes us realize our oneness with the universe and forget our illusions of separateness.

What do we mean by the daily round, by cycles? If we think of them as repetitions, we err. Everything changes momentarily, however minutely. The you and I who will awaken tomorrow will not be the you and I who awakened this morning, all our seven principles will have undergone some change during the twenty-four hours. Every object we had occasion to touch today will be slightly different when we handle it tomorrow, although our physical eyes may see no change. The teacher who struggles to awaken intelligence in her class of young children can often see no progress day by day, but at the end of the year she can see the development clearly.

Science states that although the sun and planets appear to be forever cycling in the same place, their circlings actually take them forward; in other words, when the sun finishes a cycle it is not in exactly the same point in space as it was when it began that cycle, but is in space where it has not lived before. We are in that picture. Our earth as part of the solar system is also moving forward into the unknown, and we are going with it. Next time you hear someone grouching about the monotony of everyday affairs, give him a shock by telling him he is actually journeying out into unknown space. When Cardinal Newman envisaged "the distant scene" this may have been in his thoughts. In THE

THEOSOPHICAL FORUM of September, 1946 is an article on "How do you grow?" which gives a vivid picture of this cyclic movement of consciousness and is a fine example of "Man, know Thyself."

Daily we try to blend the mind and soul, to reach nearer to the Master, our Higher Self. Often we seem no nearer, even as the earth and sun seem to be in just the same places as they were last year and all the previous years we have known. Let us take courage. The knowledge that all is moving forward will give us strength to push aside the materialistic world atmosphere which envelopes us and brings us doubt of the spirit. Let us recall that the Masters who have turned back to the earth to aid us only *appear* to have turned backwards. In reality they go forward with the universe, also their very turning back to us means the downward sweep of a cycle that will lift them up into higher realms of light and joy than they have known before. In the words of H. P. Blavatsky: "Everything in the Universe progresses steadily in the Great Cycle, while incessantly going up and down in the smaller cycles."

The Theosophical Forum

THE SOWER WENT FORTH — G. F. K.

Some seed fell by the wayside, other into the stony places of the heart, still other were choked by thistle and thorn, but a few "seed fell into good ground and brought forth fruit an hundredfold." That seed was the Kingdom of Heaven, the "mustard seed," the "least of all seeds," but yet the "greatest." But while "men slept, the enemy came and sowed tares among the wheat, and went his way."

Thus when the seed of Light sprung up some 2000 years ago, the tares of Darkness appeared, and there was confusion, indecision, dismay. And when the servants (those who "served," disciples) questioned: "Wilt thou then that we go and gather them up?" the Sower replied: Nay, for both the good and the evil will ye root up. "Let both grow together until the harvest; and in the time of the harvest I will say to the reapers, Gather ye together first the tares, and bind them in bundles to burn them; but gather the wheat into my barn."

When H. P. Blavatsky went forth in 1875 carrying the selfsame seed for the new Messianic sowing, some seed again fell by the wayside, other among stone and thistle; but a few seed entered fertile hearts and brought forth fruit an hundredfold. That fruit is the present Theosophical Movement whose very existence today as a vital spiritual factor in world regeneration is proof of its tested "virtue." For that seed is the seed of the Lodge, seed which has withstood the searching trial of spiritual examiners for millenniums.

The lesson of the Piscean age is the lesson of today: that where there is the greatest good, so also will the greatest of evil be; that while "men sleep" in things of the spirit, the enemies of mankind

work; that once the evil is sowed, it cannot be uprooted but must wait until the karmic reapers of the future descend to separate the wheat from the tares. But let it be clear that while the sowing is in process the will is free; yet once the reapers appear, there is no redress, for whatsoever a man soweth, that shall he reap. He that soweth of corruption, shall reap corruption, but "he that soweth to the Spirit shall of the Spirit reap life everlasting."

For seventy-five years now the "wheat" of Occultism and the "tares" of diabolism have grown abundant, side by side, until the world scarce can distinguish the true from the false. The harvest time of the "occult century" (1875-1975) is at hand; the reapers are here. The separation of the tares of destruction, of crystallization, from the wheat of progress, of enlightenment, must be made, and made soon, before the fruit of the past sowing is lost.

That the harvest is at hand should be cause for strength, not weakness; cause for hope, not despair. For the age-old law remains: he that sowed corruption will reap corruption; but he that sowed to the Spirit shall, inevitably, regardless of what the world may think, reap of the Spirit. The sowing of men, of nations, of races, has indeed been mixed; but who can tell what percentage of "wheat" there may not be in the karmic fruitage. The least may indeed become the greatest, and he who may have spent a lifetime in tragic frustration of the spirit may find himself — because of deeply rooted karmic merit — when the threshing is complete, gathered "into the barn" of a true mystery-school.

Keenly alert to the world's need, to the cry from the wilderness of pain, the Spiritual Guardians have watched with patient care the growing of the "mustard seed" sown by H. P. Blavatsky, watched the "tree," tended and nurtured by succeeding Tillers, become well-nigh strangled with the overgrowth of pseudo-occult, neo-theosophic, tares. That the world, hearing might understand,

seeing might discern, a pruning and a shaping were required. Today, with the "tree" strong through the buffeting of karmic storm, the publication of *The Dialogues of G. de Purucker* comes like a breath of the Spirit through the branches thereof. For here in the now public record of the Katherine Tingley Memorial Group we are taken into the circle of the esoteric atmosphere, and we receive therefrom exactly what we bring.

If we come seeking merely the outward perfection of verbal truth, we shall find but a scattered handling of meta- and ultra-physical subjects. If we search with the eye of intellect, we may find a jigsaw puzzle of amazing brilliance whereby our brain may be whetted to pierce through the maze of Rounds and Races, Globes and Monads, Dhyan-Chohanian Failures and Lost Souls. If our hearts yearn for comfort, solace and strength, we shall find cooling springs of the spirit bring surcease from pain. Finally, if we approach the mystery-teaching stripped of self-thought, with a desire only to serve, then the "barn" may indeed become the "Garden of Delight" wherein we "enter in peace," as did Rabbi Aqiba, and "leave in peace," with the divine illumination of the Sun streaming through our aura, for truly within these pages there may be an opening of the door into Light.

Let it not be thought that the "barn" of the mysteries consists merely in deeper revelation of secret thought. This is the least of Their aims. Discipleship is not experienced by ritual, by formal degrees, *but solely by life itself*. It is useless to attempt to "enter" where no pathway has first been cleared by aspiration, dedication, unflinching will. The words of G. de P. when pleading to his students to recognize their pledged responsibility are all that need be said:

You don't know what this School may be in the future. You don't know what you may be called upon to do; and I don't

want those who are ignorant of their esoteric duty in the School. I don't want any weak links in our chain. I dare not have them. You have had your chance. You have been given more than outer students for many, many centuries in the world's history have been given; and what you have received will remain as a precious treasury in your hearts and minds until you die.

But I want strong men and women in this Group, who are not only willing, but able, to live up to their Pledge: to take that Pledge and study it and realize what it means, and be proud of it. . . . I would liefer have a hundred men and women upon whom I could depend than one hundred thousand weaklings, forming a weak chain, a chain of straw. And in this Degree, oh, how little you are called upon to do — practically nothing, babies' play! You don't know what it is to belong to the Higher Degrees, you have no conception of it.

In the Higher Degrees you are tested by Life, by the forces of Nature, which test and wring every fiber of your being. That is the way in which the real tests come: heart and mind, soul and spirit, will and consciousness, all are tried. It is like the gold which is cast into the flaming furnace; and like it you must come out purified.

— K. T. M. G. Paper — Nine, March 26, 1930, (I, 353-4)

To discover that there does exist "a school of esoteric training among men," that there is a "line of authentic specific esoteric teaching . . . an agency in the world for transmitting direct, specific instruction in the teachings of the esoteric part of the Ancient Wisdom-Religion of Humanity" (p. 107) is a source of deep spiritual strength.

To recognize the line of living Teachers who prune and shape the

growing tree of aspiration in the heart of the pupil, is a deeper source of strength.

The seed of the Lodge grows only in the chastened heart, the purified soul, and the determined character of him who wills to join the Brotherhood. — G. F. K.

The Theosophical Forum

TIME CONSCIOUSNESS — *Chester D. Carlow*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

Reverence for beauty and truth increases as we grow in awareness through intuition, and it is proportional to our sincerity and devotion. Intuitive understanding is not something which is "given"; it is acquired or evolved.

Every scientist intuits a real fact only after he has spent a great deal of time in preparation, by giving himself completely to the unveiling of his symbol world.

This self-dedication may be through concentration on the reality of the symbol or the beauty of the symbol, or the utility of the symbol. The first is devotional and must be a constant background for one's studies, or the intuition will be frozen. The second is intellectual; it is the action-ground of "being." It is on this plane that we either prepare ourselves for higher truths or allow them to drift to vagaries and indiscrimination — to draw us nearer to the heart or to separate us from the higher Self. The nature of the third is common sense. It is essential to correlate value and fact in the necessities of every-day living. A synthesis of these three ways is necessary for the development of the complete man.

Let us further examine the second of these three, the intellect. In order to use this function to develop greater discriminating faculties, we must direct it into channels which contain doorways to intuition.

With this idea in view, we turn to the subject of time. The purpose

of life is said to be evolution or becoming more conscious. I believe it is possible to go a step further and say the evolution is not only the purpose of life, but evolution *is* life. That is — the reality is *becoming* rather than *being*; and the only justification we have for speaking of things, entities, beings, etc., is that we arbitrarily put limits on their eternal becomings — limits of *time*. In the *Diamond Sutra* (1) we find the following passage: " — discoursing upon comprehending such ideas as an entity, a being, a living being and a personality, it was declared that these are merely termed an entity, a being, etc."

Henri Bergson, the great French philosopher, stated that "All reality is incipient change of direction; there is no way of constructing this mobility of real with fixed concepts."

G. de Purucker states in *The Esoteric Tradition* that "there is That — the Reality — of which everything exists in time-space-force as an event."

Thus we see that every "thing" is an event and a function of time. The old Aristotelian theory that a thing is what it is and where it is must be changed to: A thing is what it is becoming and "where it acts." (2) This idea is being recognized by modern minds the world over. To name a few: Einstein in his fourth dimension, J. W. Dunne in his key to self-consciousness by creating the observer's observer, Oliver Reiser in the infinite-valued-orientation, Korzybski in time-binding, and Alfred Whitehead in his emphasis on the development of mathematical consciousness. All these point the way to the new thought-life of the world, in which Time is playing a leading role.

We may well ask: "What will be the effect of this new trend? What fundamental of time is behind its rise to prominence? If change is the reality, what is that which we have been accustomed to call the real? Is Theosophy in step with this trend,

and what will be its role in the future?"

The thought-life of the western world, up to the present day, has been largely built on the Aristotelian logic in which the universe was thought to consist of unchanging basic elements. "A thing is what it is" was a fundamental postulate and every deduction was characterized by a limited valued orientation, i.e. an assumption that a thing may be explained in full by a limited number of points of view.

The effect of this new trend will be that the old elementalistic limited-valued orientation will be replaced by a non-elementalistic infinite-valued orientation. This thought-change means, instead of concluding that a thing must be either good or bad, this or that, a more pliable, less confining thought-habit will spring forth; then we may say that we know in part rather than in full. (3) A new code of ethics will evolve, in which direction rather than station, and becoming rather than being, will be emphasized.

The fundamental features of time that give it prominence are as follows: significantly, the first differentiation from That, the All, to manifestation and consciousness is characterized impressively by the introduction of time. H. P. Blavatsky states that "Time does not exist where no consciousness exists." (4) Also, "We often speak of the Hierarchy of "Flames," of the "Sons of Fire," etc.

Sankaracharya, the greatest of the Esoteric masters of India, says that *fire* means a deity which presides over Time (kala)." The "fashioners of the inner man" are the Sons of Fire because they are the first beings (in the *Secret Doctrine* they are called Minds) evolved from the Primordial fire. (5) Also "Esoteric Philosophy divides boundless duration into unconditionally eternal and universal time and a conditioned one, Khanda Kala. One is the abstraction of noumenon of infinite time (Kala), the other its

phenomenon appearing periodically as the effect of Mahat (the Universal Intelligence) limited by Manvantaric duration." (6)

Thus, mind or consciousness is linked so closely with time that it is interdependent and hardly distinguishable. Emerson's *Threnody* expresses this fact:

Wilt thou freeze life's tidal flow
Whose streams through nature circling go?
Hail the wild star on its track
On the half-climbed zodiac?
Blood is blood which circulates
Life is life which generates,
And the many seeming life is one,
Wilt thou transfix and make it none?

Further, according to the time-binding theory of Korzybski, plant life has form and can be said to be form-binding. This is the first step in organized life. Animals can move and are said to be space-binding. Man has gone a step higher; he has learned to be conscious of time and to profit by his history; he has become time-binding. This fact marks a very fundamental difference between man and the lower kingdoms. Dunne, in his *An Experiment with Time*, shows that the basis of self-consciousness is that man is able to observe himself observing by becoming conscious of dimensions beyond the fourth in time. It is interesting to note that the probable relative immaturity of man's time consciousness is further shown by the fact that it is the last "sense" that develops in youth, the one which is the most unstable during life, and the one which disappears first in old age.

What we think of as ourselves is the residue of the past. Our highest principles of intuition precede us. As our intuition produces so-called permanent effective results on the lower physical, psychical, mental planes, it, remaining ever beyond,

never ceases to beckon. The development of consciousness consists in but answering this call, in brightening the shadow of the past by "living the life," in purifying the lower principles to make them more receptive to our etheric vanguard of beauty, wisdom, and peace.

The place of Theosophy in the future seems to be outlined, to a great degree, by the fact that whenever there is a great change in progress in the thought-life of man, the door to highest truth, for him, is open. What he receives at this critical time is infinitely more effective than at other more settled times. Thus consciousness of time is again seen to deserve the utmost attention.

It is for this reason that a great effort should be made to flood the world with theosophic thought at the present time. Theosophy, the Kosmic Philosophy, not only does stress becoming as the prime reason for "being," it also integrates this doctrine into a complete sublime philosophy which is embodied in the Seven Jewels of Wisdom: Reimbodiment, Karman (the universal law of cause and effect), Hierarchies, Swabhava, Evolution, the Two Paths (Amrita-Yana and Pratyeka-Yana), and Atma-Vidya.

It is possible that, through lack of structure and conscious integrated direction, the new world thought movement will have certain negative effects because of imperfect interpretation of experimental data, especially of space-time experiments; or its positive characteristic might raise it only to a slightly less restrictive dogmatism in which form is replaced by pattern. Thus a golden opportunity will have been missed.

In the last quarter of the last century, Theosophy was brought to the West to oppose negativism, "to stem the tide of materialism." We are now approaching the end of a new century in which the seeds that were then sowed have helped to bring about a strong,

enlightened positive thought movement.

No longer will those truths be so ignored by a humanity going the other way, but sacred and pure, they will sweep, unobstructed, into the thought-life of all mankind.

THE WANDERINGS OF ODYSSEUS: 1 — *Charles J. Ryan*

An Interpretation — Part I (1)

Sing, Muse, the song of Odysseus, him of the hardy heart, bravest of all the brave who sailed in the hollow ships of the Grecians, ODYSSEUS, erstwhile King of Ithaca, now held by crafty Calypso, she of the braided tresses, in far Ogygia. Gone indeed is the day of his returning! Zeus the cloud-gatherer aids him not; Poseidon the earth-shaker sends ruinous winds upon him and dire engulfings in the wine-dark sea. Only Athena would aid thee — grey-eyed Athena of the bronze-shod spear, daughter of Zeus, the thunderer. See! From the azure seats of the gods, even from Olympus, comes she now glancing down.

The wise teachers of old knew that not only children but grown men and women are always ready to listen to an interesting story. In ancient times, when few people could read, bards and story-tellers would travel about singing or reciting, as they still do in the East. Serious teachings about life and morals were put into the form of vivid and absorbing stories. Enshrined in imperishable forms, great truths were presented by the effective method of suggestion. Allegory was a recognized method of instruction, as it now is in the Orient.

The basis of many such legends was the experience and suffering of man, individually and as a race, in seeking a higher and nobler life, in the quest for enlightenment. The pilgrimage and tribulations of the awakening personality when it seriously commences to seek for purification, or in other words, union with its own higher nature, have been presented in various forms according to the varying conditions of the times, but the

underlying principle or *motif* was always the same. At a certain stage man is no longer satisfied with the ordinary pleasures and ambitions of life; he begins to suspect that a greater life awaits him, and he becomes willing to endure with patience the experiences in store for him which are necessary for his purification, even though they take many lifetimes.

The vulgar Western belief of modern times, that we live but once on earth, has deprived us of a right understanding of many of the greater truths concealed in the ancient allegories. Once comprehended in the light of reincarnation — the mechanism of evolution — human life no longer appears a meaningless frenzy, but something worthy and governed by justice.

The epics of the nations which tell the story of man's aspiration are built upon the trials, temptations, and victories that precede the union of the purified lower personality with the Higher Ego, its over-shadowing Divinity, the Father that lives in "heaven." Remember that "heaven" is said to be *within* man. The goal of attainment is symbolized in various ways. It may be the vision of the Holy Grail, or the winning of a treasure such as the Golden Apples of the Hesperides or the Golden Fleece; it is sometimes a marriage with a princess after rescuing her from a monster, as in the story of Perseus and Andromeda, or with a goddess. Perhaps a wife has to be regained. In India the subject of the semi-historical *Bhagavad-Gita* — included in the great epic of the Mahabharata — is Arjuna's battling for his rightful heritage. The Biblical story of the Israelites breaking out of bondage and passing through the Red Sea and then wandering for forty years in the Desert of Sinai on their way to the Promised Land is a very clear allegory.

In Ireland we find the legend of Bran seeking the mystic country of joy and peace; of Art the son of Conn overcoming ordeals in his search for a princess of the Isle of Wonders, and many others. In

Wales there are the legends of Pwyll and Manawyddan, and the adventurous journey of King Arthur to the Annwn, the Welsh Hades, to obtain a magic caldron — a type of the Cup of the Holy Grail.

Thanks to Wagner, the Teutonic legends of Siegfried and Brunhilde, of Tannhauser and Parsifal, and the rest are now familiar. Greece has a wealth of myths founded on the drama of the soul; some are quite transparent to interpretation, such as Perseus and Andromeda, Orpheus and Eurydice, and Jason and the Golden Fleece; but as a secular and popular story, nothing has appeared of more enduring fame than the Wanderings of Odysseus as told in the *Odyssey* of Homer.

Odysseus is representative of the awakened mind of man seeking, after long years of battling with worldly things — represented by the Trojans — to find, or more accurately, to regain, the spiritual wisdom deep-buried within his soul, and symbolized by his faithful wife, Penelope. This spiritual Intuition stands in the dim background of the whole poem as a permeating influence, calm, and waiting patiently for him to find her. While Odysseus, as the active mentality, is fighting against obstacles and pushing onward in rapid movement, Penelope sits at home and weaves her patterns, creating and preserving. Odysseus is not only separated from his wife but is an exile from his hearth and country; not only has he to keep constantly in action *but he has to find for himself* the true Path which leads homeward, a very significant point.

In tracing the plain Theosophical interpretation of the *Odyssey*, we need not follow the order of the poem as arranged by Homer or by whomever compiled the Homeric legends, but will take the simple narrative of the wanderings of Odysseus in their natural sequence of events. This paper is not an analysis of the poem

from a literary standpoint in any way, nor shall we consider the archaeological problems aroused by sundry references to customs and the construction of buildings found in the text, interesting as these may be, particularly in view of the modern discoveries of early Mediterranean civilizations.

After leaving the battlefields of Troy, Odysseus embarks for his native isle, "Ithaca the Fair," expecting to arrive there quickly, but a tempest drives the fleet out of its course, and a great fight impedes his progress at the very outset. Many students know how true this is. The destruction of all his ships but one, and of many of the sailors, follows quickly. One of the most curious stories of this introductory part is that of Polyphemus, the Cyclopean giant with a single eye in the midst of his forehead. Madame Blavatsky, in her great work, *The Secret Doctrine*, gives considerable attention to the partly-hidden meaning of this grotesque incident. She reveals the clue by showing that it is based upon historical facts, however little they may be known in modern times. Urged by curiosity, Odysseus ventures too near the giant, and with his companions, falls into his hands. In order to escape, they destroy the single eye of Polyphemus and deceive him by the stratagem of the flocks of rams, a well known esoteric symbol. The legend is based upon the disappearance from use of the "third Eye" (the existing vestige of which is commonly known as the pineal gland in the brain) at a very early period in human evolution. H. P. Blavatsky says that Odysseus'

adventure with the latter [the pastoral Cyclopes] — a savage gigantic race, the antithesis of cultured civilization in the *Odyssey* — is an allegorical record of the gradual passage from the Cyclopean civilization of stone and colossal buildings to the more sensual and physical culture of the Atlanteans, which finally caused the last of the Third Race to lose their all-penetrating *spiritual eye*. — *The Secret*

Doctrine, II, p. 769. See also *I sis Unveiled*, II, p. 423.

The story of the tribe of one-eyed Cyclops, which preserves the memory of the transformation in the human frame far more than a million years ago, is found in many countries in different forms. In China, the legends speak of men who had two faces and could see behind them; in Ireland the hero who blinds the Cyclops-eyed giant is called Finn. There is one living animal possessing the third eye in recognizable form today — the New Zealand lizard *Hatteria punctata*, a relic of long-vanished conditions on earth.

After their escape and some further perilous adventures, Odysseus and his companions soon reach the island of the enchantress Circe, which very clearly represents the fascination of sensual delights. Odysseus is unaffected by the gross temptations which overwhelm his companions, who are turned into swine by the goddess. He retains his human form and is helped by the Olympian god Hermes to frustrate the designs of Circe. Odysseus' boldness and "confidence in heaven" finally conquer the enchantress and compel her to serve him. She becomes transformed into a friend and counsellor. She restores the men to human form and instructs Odysseus how to find the way to the Underworld. This episode reminds us of and illustrates the saying of Katherine Tingley "that after a certain stage of spiritual unfoldment, the action of Karma changes from penalty to tuition," and also of a striking passage in a well-known Theosophical book, *Through the Gates of Gold*:

Once force the animal into his rightful place, that of an inferior, and you find yourself in possession of a great force hitherto unsuspected and unknown. The god as a servant adds a thousand-fold to the pleasures of the animal; the animal as a servant adds a thousand-fold to the powers of the god. . . . The animal in man, elevated, is a

thing unimaginable in its great powers of service and strength. . . . But this power can only be attained by giving the god the sovereignty. Make your animal ruler over yourself, and he will never rule others.

Now comes the ordeal of Terror, an emotion not familiar to Odysseus. Circe has warned him that, before he goes farther, he must gain some necessary information about the future from Tiresias, the ancient prophet who lives with the Shades in Hades, though he himself is not dead. The approach to this great seer and the initiation itself are surrounded by fearful dangers; safely to defy the multitudes of the vengeful shades of the dead calls forth the highest physical and moral courage of Odysseus. Like all the heroes of the epics of the Soul, he has to pass through the Valley of the Shadow of Death in a very real sense; to meet and face and remain unappalled by the Shades, the lingering remains of past sins and errors; then to learn what is necessary for his further progress; and finally to return unharmed, though tried to the uttermost. This Descent into Hell, or the Underworld, or the "Open Tomb" has more than one meaning, and it is always introduced in some form in the myths of initiation. For instance, in the legend of Perseus and Andromeda, the hero, aided by the gods, must fly to the hideous regions of cold and darkness and destroy the death-dealing monster Medusa and take her head, before he can rescue the princess of Ethiopia.

Not only Christ is said to have descended into the Underworld and "ministered to the spirits in prison" but Orpheus, Aeneas and many other Great Ones, and we are told that in the ceremonies conducted in the profound recesses of the Great Pyramid of Egypt the candidates had to descend into the subterranean chamber or symbolic Underworld, for trial, reascending the third day strengthened and illuminated. The descent into the shadows is an indispensable part of every complete story of the pilgrimage of

the soul, for it represents a necessary experience. "No cross, no crown." It is not mere *physical* death and resurrection or rebirth into a new body; that is but a natural incident, frequently recurring, in the far-stretching career of the soul, the close of a day in its life-story. When the true resurrection has been fully accomplished there will be little necessity of reincarnation on earth, except by the deliberate choice of great souls who descend for the purpose of helping humanity.

The tone of the poem changes at this point; the lightness and gaiety with which Odysseus has related his adventures is replaced by a deep solemnity, and the horrid scenes in Hades are described with intense vividness, and many curious touches of realism, as in the account of the blood-evocation — a necromantic ceremony the contemporaries of Homer would firmly believe in. In his description of the Underworld, Homer shows a real knowledge of certain conditions of the *post mortem* life, a knowledge more common then than now. He unveils only a partial glimpse of the lower states or planes, and, of course, he allegorizes everything for the popular understanding, but he gives a very striking picture of the weird and desolate sphere of restless phantoms, most of them merely "eidolons," *i.e.*, soulless images or dregs of what once were men whose real higher nature or spirit has passed onward. Leaving the impure remains to fade out, often painfully, in the lower astral planes, Odysseus gets a passing view of "stern Minos," the Judge of the Dead, the personification of the Law of Karma or Justice, rewarding the righteous and dooming the guilty, and he is privileged to gain a momentary glance into the heavenly world of Elysium or Devachan in which live in blessedness during the periods of rest between incarnations on earth, the higher immortal spirits of those whose fading shadows wander in Hades below. H. P. Blavastky says:

. . . the Hades of the ancients [is] . . . a *locality* only in a relative sense. . . Still it exists, and it is there that the astral *eidolons* of all the beings that have lived . . . await their *second death*. — *The Key to Theosophy*, p. 143

Plato and Plutarch give more complete accounts of the Greek teachings on this mysterious subject; examined in the light of Theosophy they are seen to be practically identical with the Egyptian, Indian, and other ancient teachings on these states of existence. It is very significant that wherever we go among so-called "primitive peoples" we find they are aware of the danger of intercourse with the lower and irresponsible remains of the dead, and though devoted to them in life will go to great pains to avoid the soulless relics of their parted friends.

Odysseus does not ask the shuddering phantoms to help him; he appeals to the prophet Tiresias, who, though shadowy himself, is fully human:

. . . the Theban bard, deprived of sight;
Within, irradiate with prophetic light;
To whom Persephone, entire and whole,
Gave to retain the unseparated soul;
The rest are forms, of empty ether made;
Impassive semblance, and a flitting shade.

Tiresias sees what possibilities the future has for Odysseus, outlines his trials, and warns him against the rashness of his followers. Odysseus replies to the prophet:

. . . If this the gods prepare,
What Heaven ordains the wise with courage bear.

Returning to Circe, who outlines in greater detail the dangers of his coming journey, and gives him good counsel, he once more collects his men and starts. Then comes the perilous passage of

the Straits between Scylla and Charybdis, and the subtle temptation of the Sirens. The Sirens, whose outward appearance is exquisitely fair, offer the hero the satisfaction of the pride of knowledge. They tell him they know "Whate'er beneath the sun's bright journey lies," and they sing with all the charm of celestial music:

O stay, O pride of Greece! Ulysses stay!
O cease thy course, and listen to our lay!
Blest is the man ordain'd our voice to hear,
The song instructs the soul, and charms the ear.
Approach! thy soul shall into raptures rise!
Approach! and learn new wisdom from the wise.

(To be concluded)

The Theosophical Forum

HOW DO YOU KNOW? — A. *Birch*

There is a question in the Bulletin of the Corresponding Fellows' Lodge (England, Jan. 1948) which is perennial in its interest.

"Have any of my fellow Lodge members had the disconcerting experience of after making what one feels to be a good point following some enquirer's question, having him say with a cold searching voice, and a cold cod-like eye, "How do you know?" "

The favorite opening gambit of a famous London philosopher is, "It all depends on what you mean by. . . ." Here also it all depends on what you mean by knowing. We have often been told that the doctrine of the Seven Principles of Man is a dry-as-dust bit of philosophical pedantry, but without it we could not go very far. The knowing of the animal is instinct. The animal "knows" and acts upon its knowledge with advantage many times in its daily life, but if you asked it how it knows, it could not tell you. Then there is the knowing with the brain mind, the lower intellectual knowledge. This is often brilliant and perhaps unanswerable, yet from a certain high standpoint may be quite wrong. For instance, we all know that murdering murderers stops murder. So we have been arguing for a few million years. But does it? Do we not see almost daily the foolish headlines calculated to tickle the lowest parts of our emotional nature all about someone slaying or being slain. For some thousands of years we have known that "death" ends everything, but now that the doctrine of reincarnation of the private schools of philosophy has seeped somewhat deeply into the luminous zone of the public mind, we are not so sure.

For many centuries we have "known" of the brilliant but somewhat uncomfortable region imagined as heaven, but now people are beginning to ask themselves and not their appointed

teachers if it is really anything much more than a dream or a poem, or at best an allegory.

In our vast Arizona desert there are mirages. We have there seen a lake forty miles long by about ten wide, the sand becoming shiny, then wet, then the water. From the train a group of travellers watched, fascinated. It was explained that there was no lake there; all was merely desert sand. One of the group began to take off his coat in a very aggressive way. "I know water when I see it!" he exclaimed. "If anyone tells me that isn't water, I'll fight him!" Maybe he was from Missouri, but it was not water and there was no fight. But he *knew*. That was the knowledge of the brain mind and the emotional nature. The emotional nature sees many mirages.

Higher than all that is the knowledge of the Nous, the Higher Manas, the genuine "Intuition." But who has it? Everyone. Who uses it? Not so many.

For hundreds of years it was the chief aim of Theosophists in the past to clear their intuition. It would hardly be right to say to acquire intuition. They sought to live in the Higher Manas or even the still clearer Buddhi. If they could do that they *KNEW*. We have all heard of the Adepts, Those who Know.

It is the same today. Many quiet, genuine, that is, not brain-mind Theosophists or Theosophical students have the beginnings of an unveiled spiritual perception. They are convinced that they know. But not yet being *perfect* (Initiated), they are liable to error, though less so than most, and even what they know they are forced to express very much in terms of their own technical experience of life, which may differ from that of others. That is why if a man saw an angel he would hardly be convincing to a Hindu, who would have quite a different conception as to what an angel looks like.

Now that the *Dialogues of G.de P.* have been published we may be permitted to call attention to the astonishing clearness of mind of "one who knows." We had a previous example in the case of *The Mahatma Letters*. Are such people then perfect? Not necessarily. We have already shown that their language may mean more than we are capable of understanding clearly. Also there is another very important consideration. They are not always acting in the realm of pure thought. Sometimes they may be acting as ordinary men. Again, if they are Teachers, they may often be a mirror of their public. A man asks a question, vague, woolly, dimly conceived in outline, loaded with popular misconception, not highly intuitional. Why should he expect an answer not in accordance with his question? A famous case is that of a would-be occultist who asked an occult astronomical question and received an answer which was correct as far as it went but was completely misunderstood. Something is said about it in *The Mahatma Letters*.

Another asks a question direct from the heart of compassion and the answer is responsive. That is the ancient method, still in use in 1948, without doubt.

There, then, is the answer to the original question. How do you know? By using my intuition. "That is no good to me, what do I know of your intuition?" may be the cod-eye retort. The answer obviously is, "Develop your own intuitive perception and then you will know and will not have to ask anyone else." The usual retort or a usual retort is, "I haven't time." This especially from the get-rich-quick school of theosophy and philosophy. There is no more to do than to leave it at that. It is not much use trying to force a man to see what he is not looking for.

But it is very pleasant sometimes to see with what brilliant brain-mind arguments we can smash the other fellow, though there is

always the risk that he remain "unconvinced still."

If you say you know it by intuition, the other man is quite likely to taunt you with the gibe that other people have as much intuition as you and you need not set yourself on a pedestal. He is more likely to say this if he has no intuition, so here again the answer is silence.

The man who is convinceable and convinced by brain-mind argument is the man who half-knows already. In such a case it may not be waste of time to argue. But in very many cases there seems to be no better formula than to tell the man to acquire the sense of perception of truth for himself, then he will need no one to tell him.

Even with, or especially with, Theosophical teachings, the same applies. There is hardly a Theosophical teaching which does not require intuition to understand it, and the man who says he knows usually finds out that he has still much to learn. It is not the business of a Theosophical teacher to spoon-feed tots and teens but it is his business to start the intuition working.

The Theosophical Forum

THE MIRROR OF THE MOVEMENT — H.P.B. — *Philip A. Malpas*

Perhaps there is no office more misunderstood than that of a Theosophical Leader and Teacher. Full advantage is taken of this fact by the enemies of Theosophy and that is one reason why there are periodic attacks at regular intervals on Madame Blavatsky and her memory. It is also a reason why those who profess to be devoted to Theosophy and its main public representative are often slack in defence of the one who has given them the very breath of spiritual life.

H. P. B. was a strong active woman who had travelled the world sometimes dressed as a man when in countries considered dangerous for the foreigner. When she began the work of the Theosophical Society she was healthy and vigorous and virile; a woman in her prime. By modern standards there is no reason why she should not have lived to a ripe old age, but she died a worn out old woman at 60.

What is the explanation? It is not only that she did the work of three active men or women, but that she bore strains which few round her suspected or only dimly realized. There were Theosophical babies in her day who imagined they could have become leaders and could have shone in a pleasant light of publicity for such time as was necessary. They imagined, some of them, that everything would be easy, because did they not trust in the men who act as impersonal forces behind the scenes? What did they know of the terrific energies which had to pour through her frame and flow out over the whole world? The best of them would have had their constitution shattered in a matter of weeks.

The man on whom her mantle fell, W. Q. Judge, was not constitutionally strong, but he might have reasonably expected a

normal period of life. He had suffered from Chagres fever; thousands of others had done the same and had survived. But the same forces were flowing through him as flowed through H. P. B. and they were possibly less strong than she experienced, but they were still titanic. There was not a single member of the society of that day who could have stood the strain, except perhaps one who went to Tibet for yet more severe training than W. Q. J. had undergone.

H. P. B. was fond of the occult story of the bundle of sticks which separately could be easily broken, but together were strong enough to resist any effort to break them. If those who should have supported her and who should have supported W. Q. J. had held together like that bundle of sticks, these two teachers could have stood the strain of the cosmic forces streaming through them with sufficient resistance of the physical instrument and would have been able to direct their spiritual power more towards the salvation of humanity. But so many of them wanted what they thought was occultism, unaware that this bundle of sticks idea is the very highest occultism they were ever likely to contact. And they were not big enough to see it.

H. P. B. ended as a chronic invalid, the subject of enough ailments to have shattered any ordinary constitution. Her will held the physical frame together when it ought to have been free to do more important work for humanity. Her physician asked her once when a blood vessel had burst in her brain, "Why don't you go into convulsions?" Her answer was characteristic, "Because I don't choose to!" At another time another physician, a Belgian, was completely puzzled. He had left her for the night knowing that she must die in a few hours. On the next day he found her a lively and perfectly cured patient. All he could do was to keep repeating, "Mais, elle a du mourir!" "But she ought to have died!" She chose to live and write *The Secret Doctrine*, but she had to pay

the bill for her overdraft on the Bank of Life in unspeakable suffering, made a thousand times more keen by the knowledge of what everyone around her was and would do — ambitious traitors some of them, one or two imagining that they were big enough to take her place. They thought of the ambition but never of the daily torture of suffering that would fall to their lot if they did become leader. The personal self does not think of these things.

What would have happened if such an one should have been brought into the position of leader? There would have been no coherence and little spirituality; disintegration would have ensued and though the tremendous power of the initial impulse given by H. P. B. and those behind her would have been long in dispersing, it would have gone down into psychic or material and emotional futilities, just as happened with so many movements such as the pre-early Christian school. There would have been ambitious "leaders," high-priests and people in high places setting up all sorts of theosophies of their own, without soul or spirit. At the worst there might have been positive spiritual wickedness masquerading as religion or something holy and spiritual.

It should not be forgotten that H. P. B. did some of her most magnificent work while the body was in a state which would have meant death many times over to one less strong than she and less endowed with spiritual will. The body was a wreck but the mind in the background was almost more than human in its grandeur of clear perception and spirituality.

Her wrecked body was the mirror of those whom she accepted as her students and followers; her mind was that of a Master of Wisdom most of the time. She was the mirror of the movement.

SPIRITUAL LEADERSHIP — *Marshal Ogilvie*

Avataras, messiahs, saints and sages sojourn among men from time to time and seek to enlighten them. These luminous figures, these couriers of light, vary in the degree of radiance that they shed. They have, however, certain salient points in common; some one or more of the thirty-two distinctive signs of Buddhahood. Invariably, they are fearless and care not one whit for praise or blame, for the acclaim of the multitude or the denunciation of the mob, for either reward or punishment. Inevitably, they are met with opprobrious opposition in precise proportion to the brilliance of the effulgence that shines through them. They expect and accept calumny or crucifixion because they come to combat the powers of darkness, of ignorance, of lust and of malice. We call them meek when we see them turn the other cheek, not knowing that they possess power to wreak summary vengeance on their enemies and refrain from using it. We marvel at their humility, because, unlike ourselves, they know full well that the radiant rays of compassion, of wisdom, peace and power shine through them and not from them. They speak with authority and their words seldom conform to our preconceived ideas of what will prove most profitable for our selfish interests. Their authority, however, emanates from a higher source than themselves and they are aware that they are transmissive agents only.

How may we learn to recognize and not to repudiate these messianic messengers who come to serve us? Should we catechize them with scientific psychological phrases to ascertain whether their intelligence quotients are in the upper category as philosophers or occultists? Should we seek for a sign in the manner of the Pharisees and Sadducees? We might recall that "A

wicked and adulterous generation seeketh after a sign; and there shall no sign be given unto it, but the sign of the prophet Jonas." (*Matthew* 16: 1-4) Should we cavil among ourselves as to whether he or she carries all thirty-two of the Buddhistic signs; or send for a dentist to determine that the teeth are forty in number, close together and all white as the seventh, eighth and ninth signs demand? Nay, rather let us employ the insight of the Centurion (*Matthew* 8:5) when he asked that his servant be healed. Jesus, assenting, said that he would come and cure him of the palsy. The Centurion, demurring that he was unworthy of having the Lord come under his roof, replied, "Speak the word only, and my servant shall be healed." Here was an instant recognition of superhuman authority by a man who exercised jurisdiction over those under him. Furthermore, the Centurion stated, "I am a man under authority . . ." and implied that his orders were obeyed because the power which he wielded had been delegated to him from a source higher than himself. Despite the humble outward appearance of Jesus, he saw in Him an authority that had been delegated by an omnipotent source. Remarking that "I have not found so great faith, no, not in Israel," the compassionate Nazarene Avatara healed the Centurion's servant "in the selfsame hour."

Having been trained to render implicit obedience and to exact it from those committed to his command, the Centurion did not resent a far greater authority when he encountered it. Such is not the case with those whose quaint conceit leads them to conceive that they are, themselves, fully versed in that which they know least about. Sir Norman Angell has said that "His service consists in speaking harsh truths" and this is the mission of all who come to correct humanity's most destructive misconceptions. "Nothing so infuriates the mediocre mind as to be compelled to admit to itself its own inferiority," and resentment to the authority of

wisdom is the rule; even when truth is presented in the palatable form of parables. All malicious actions stem from ignorance and to confess it is, truly, the beginning of wisdom. We are greatly deceived in expecting to find ideas in the enlightened ones that coincide with our own concepts of cosmic verities. If they agreed with the vague and erroneous notions of the majority, they would not be either saints or sages. We may ask ourselves, then, what is the processus by which such individuals acquire wisdom and become garbed with authority to communicate it? Who and what are the personages that wield the dominant authority of spiritual leadership; which leaves its ineffaceable mark upon the minds of mankind in spite of ridicule and relentless persecution?

We may agree that the inspiration of divine ideation emanates from Atman, as the spark of the spirit of God in man that is ever in contact with the universal source of all intelligence. Through Buddhi, as the soul, the intuitively perceived truth is transmitted to Manas in proportion as the personality has been purified. Manas as the discursive reason, formulates the supramundane concept in terrestrial terminology that will make it applicable to some human purpose. Then, if popular opinion can be persuaded to accept it, the body of humanity may put it in practice through physical action. For this body of humanity, or homo sapiens in toto, the leaders correspond in their characteristics to the soul, mind and body of the individual. The spirit stands ever apart and is not incarnated. Thus, the fully-ensouled man is a spiritual leader, but his inspiration is intuitive and not indigenous. He is the crowd compeller or impeller, who may exercise his power quite undetectably in the most impersonal and unobtrusive manner. Yet, exercise it he must, and it is the instinctive resistance of darkness to light that creates opposition to him. His intelligence is intuitively wise and it cannot be gauged by the sum total of worldly knowledge that he may, or more likely may not,

have accumulated. The highly intellectual man of strong purpose is a crowd exponent who formulates the aspirations of the populace. Usually, his eyes are misted and his mind is warped by ambition. "It is upon the placid surface of the serene mind that visions gathered from the unseen world reflect themselves." Consequently, as a mirror of the masses, the majority of human leaders reflect the animal impulses that they seek to control or cajole for their own benefit. Indeed, it requires purely spiritual gold to resist the corrosive sublimate of dictatorial power. The third type of leader is the crowd representative who articulates popular aspirations and whose leadership is corporeal, or physical. Soapbox orators and rabble rousers, as *vox populi*, are included in this class. Below them lurks the ravening wolf-cry of the mob.

It seems obvious that the danger of "the tyranny of the majority" spoken of by DeTocqueville is inherent always in a democracy. It is the antithesis of autocracy, but both present equally gloomy gulfs of ethical disintegration. If the social structure be turned upside down and public opinion rules unguided, the hard path of duty advocated by those of spiritual insight will be repudiated and its advocates will be suppressed. Between the two, the political leaders, whose role is to formulate policies, will find themselves consumed by the Frankenstein monster that they appeased and placated until it bulked too large for them.

"Constructive impulses percolate down from the top and destructive ones bubble up from the bottom." Consider for a moment that it is your conscience and not your concupiscence that should guide you. Free yourself from the contagion of mass impulses and consult the Voice of the Silence that speaks with the words of intuitive wisdom. Most frequently, its still, small voice is drowned out by the clamor of men en masse, by the strident propaganda from the Tower of Babel. It will require ardent

efforts to immunize the self against the infection of fear and the insinuations of subtle suggestion. If this herculean task can be accomplished, one has achieved the first step toward freedom and the development of the individuality. Then, perchance, the recognition of a highly individualized spiritual leader will become instinctive.

The influences that are operative on the psychological plane in perceiving spiritual truth in any guise may be analyzed by analogy. In music, a precise parallelism exists that can be applied in practice. Spiritual impulses are sympathetically concordant and compassion, or love, are but other terms to designate the divine equilibrium between positive and negative that is truly harmonic. One mentality may initiate the negative discords that are effective in setting up similar ones in other minds that may be attuned in unison. All contiguous mentalities are, then, subjected to the vibrational action of violent differentiation in mass chords. Naturally, the negatively discordant radiation is most antagonistic to the nearest sympathetic concordant. The least disastrous effect is to negate all coincident constructive action. The worst result is the creation of mass antagonism that increases to the proportions of mob violence. To become attuned to concordance is to attain the capacity to feel, or sense, its vibrational harmony in the presence of spiritual leadership. It should be remembered, however, that the most perfectly sympathetic and compassionate concordance must be that one which is most radically opposed to any and all discords. Therefore, messianic figures are met with opposition in proportion to the purity of their harmonic tone. "Only the noble-hearted can understand the noble-hearted." Let us put ourselves in unison with the harmonic vibrational frequencies broadcast by the thoughts of the noble-hearted. It is the Music of the Spheres, the sympathetic outflow from the heart of the sun, the cosmic

rays, the circulation of the blood of Christ. Then, as one tuning-fork held end to end opposite one in vibration, we will commence to sound forth the key-note communicated by a Spiritual Leader.

The wrong are weak, the right are strong.
This means the two terms right and wrong;
And truth sought out to any length,
Finds all wrong weakness, all right strength.
— Pope

The Theosophical Forum

THE WANDERINGS OF ODYSSEUS: 2 — *Charles J. Ryan*

An Interpretation — Part II (1)

I cannot rest from travel: I will drink
Life to the lees: all times I have enjoy'd
Greatly, have suffer'd greatly, both with those
That loved me, and alone; on shore, and when
Thro' scudding drifts the rainy Hyades
Vexed the dim sea: I am become a name;
For always roaming with a hungry heart
Much have I seen and known; . . .
I am a part of all that I have met;
Yet all experience is an arch wherethro'
Gleams that untravell'd world, whose margin fades
For ever and for ever when I move.

And this grey spirit yearning in desire
To follow knowledge, like a sinking star,
Beyond the utmost bound of human thought.

Tho' much is taken, much abides; and tho'
We are not now that strength which in old days
Moved earth and heaven; that which we are, we are;
One equal temper of heroic hearts,
Made weak by time and fate, but strong in will
To strive, to seek, to find, and not to yield.

— From *Ulysses* by Alfred Tennyson

Having passed through the initiation in the Underworld and having learned unspeakable things therein, Odysseus is in danger of being overcome by pride and rash self-confidence and may yield to the fascination of the temptation. The satisfaction of

intellectual desires alone threatens to lead him from the direct path into destruction, for the Sirens are man-eaters. Knowing well the overwhelming power of this temptation, and that before he can be safe he must be willing "to appear as nothing in the eyes of men" (2) the hero takes every precaution. He has himself firmly bound to the mast so that he cannot fling himself out of the vessel, and he stops the ears of his crew with wax so that they cannot hear the Siren voices while they work the ship. Exposed to the full force of the temptation Odysseus struggles to be free, but he gets through in safety. The sailors, whose ears are deaf to the allurements of the intellectual seductions, seem to represent the remaining traces of the gross elements in man's nature, particularly in view of the next incident of importance, when they kill and devour Apollo's sacred oxen to satisfy their gluttony. This so greatly arouses the wrath of the god that he sends a great tempest and destroys the last of Odysseus' followers. The hero is now left alone with nothing but his own strength and the favor of Pallas Athene, his Guide, to bring him safely through. But he is not yet completely free from the chains of personality and in his desperation and loneliness he meets with a temptation that nearly proves his undoing, i.e., the dalliance with the lovely nymph Calypso in her enchanted Atlantean island upon which he is cast by the waves. Seven long years he lingers with Calypso, unmindful for the most part of his purpose, and dazzled with the glories of her magic realm. Now and again something faintly stirs within him calling him to be up and doing. The poet says he has never been quite able

To banish from his breast his country's love.

Calypso even offers him

Immortal life, exempt from age or woe.

But with the help of Athene, the personification of Divine

Wisdom, he has enough strength to resist this supreme test. This is one of the passages in the *Odyssey*, that show the profound wisdom of the poet and the high quality of his teaching, for here he shows the great difference between the real immortality gained when the lower elements of the personality are dissolved and ultimate union with the Higher Self is made, and an artificial prolongation of the unpurified life of the ordinary personality with its selfish cravings and desires. Odysseus recognizes that to drink the elixir of life in any form before he is truly purified would be a fearful error. A great deal might be said upon the philosophy of this, for it goes very deeply into the roots of our being, but it would carry us too far for our present purpose. We are irresistibly reminded of the words of Christ:

If any man will come after me, let him deny himself, and take up his cross daily, and follow me.

For whosoever will save his life shall lose it; but whosoever will lose his life for my sake, the same shall save it.

— *Luke ix, 23, 24*

Paul, the "wise masterbuilder," in common with all the great teachers of antiquity, refers to the same principle when he speaks of being changed "in the twinkling of an eye," a very cryptic saying suggesting the springing into activity of the inner "eye" or power of intuition which sees the difference between the higher life and the delusions of sensual gratification. To Odysseus, after his luxurious existence in Calypso's magic island and the promise of eternal youth, the return to ordinary life and duty offers a great contrast and many trials, but at the bottom of his heart he languishes "to return and die at home." When he makes his decision the irresistible power of the Olympian deities is exerted in his favor: Calypso abandons her enchantments and, like Circe, is transformed, from the tempter she at first appears to be, to

helper.

Calypso's Isle is said by Homer to be far away, over

Such length of Ocean and unmeasured deep;
A world of waters! far from all the ways
Where men frequent, or sacred altars blaze.

Calypso was the daughter of *Atlas*, and the island was called "Ogygia the Atlantic Isle." H. P. Blavatsky points out, in *The Secret Doctrine*, that the poet, in certain passages, distinctly refers to the lost continent of Atlantis, mentioned later by Plato, and to certain historical events that took place upon that former seat of a powerful civilization.

Odysseus builds a new vessel with his own hands and sets forth joyfully, feeling sure he will soon reach his goal. But, although he has received the powerful aid of Athene and other Olympian gods, the opposition of Poseidon, who has been his enemy from nearly the beginning, is not withdrawn, and he still has many perils and trials. Poseidon, the god of the sea, was the father of Polyphemus, whose "third eye" was destroyed by Odysseus. This is significant, for the sea often stands in symbolism for the great Illusion, the ever-shifting unstable elements in life. Odysseus is no exception to the rule that all who start on the great adventure for self-knowledge and the higher life must fight continually against the false ideals and illusions of their surroundings; they are swimming against the stream of the ordinary worldly consciousness. The hero in Homer's epic is just strong enough — with the divine aid — to save his life, and though wrecked and left *without an atom of personal possessions*, he reaches the friendly coast of the wise king Alcinous who helps him to reach his native land, Ithaca.

Odysseus had rashly and without orders trespassed on the

territory of the Cyclops. It was therefore his own act that aroused Poseidon's wrath, and became the fundamental cause of his misfortunes. Pallas Athene and the other gods could not avert the consequences, and the great Zeus himself had to put forth his power to restore his fortunes after long years of suffering and sorrow.

Upon his arrival home he discovers the terrible straits to which his wife and son have been reduced by the outrageous conduct of her admirers, and he soon perceives that his greatest battle is yet to come. Though the odds are apparently against him, he knows that he cannot fail, for his cause is just and has the help of the gods.

At this point we have another opportunity to admire the profound insight of the poet, and to realize that he must have been a true initiate into the mysteries of human life. Penelope, the noble wife of Odysseus, who stands for the climax of his endeavor, his goal, his higher self, does not immediately throw herself into his arms in welcome. Ragged, worn, and disguised as an old man, he is not recognized by her, though his old nurse and his faithful dog know him quickly. Is this because they are less sophisticated? Even when Athene restores him to his prime of life and to greater dignity and beauty than before, he has to prove his identity to Penelope without possibility of doubt before she can accept him as her long lost husband. This hesitation on her part is not, as some have thought, a blemish on the story; it could not be otherwise and remain true to the meaning Homer wished to convey, if our hypothesis of the general import of the poem be true. It is the law that the aspirant for recognition by the higher self should make a clear demand; he must give the complete password before he can be admitted to the inner chamber. A mystic writing on this subject warns us:

Look for the warrior and let him fight in thee. . . . Look for him, else in the fever and hurry of the fight thou mayest pass him; and he will not know thee unless thou knowest him. If thy cry reach his listening ear then will he fight in thee and fill the dull void within. . . . — *Light on the Path*

and a greater Teacher said:

Ask, and it shall be given you; seek, and ye shall find;
knock, and it shall be opened unto you.

Odysseus' final opportunity to prove his quality comes when he finds his palace invaded and his wife surrounded by a mob of suitors all trying to persuade her that he is surely dead and that she should choose a second husband among them. They are utterly repugnant to the hero; they have no power over him; but he must destroy them before he can regain his rightful place. They represent the last lingering traces of the lower desires, even "the very knowledge of desire" mentioned by H. P. Blavatsky in *The Voice of the Silence*, which must be slain forever, even though its force has passed away.

The suitors have already received a warning from Zeus in the form of two eagles fighting in the sky. This is, of course, a direct reference to the stirring up of the lower nature when the awakening of the higher aspirations compels it to realize that the time has come for the last desperate battle in which no quarter is asked or given. The scene of the struggle which shall decide is in the very home of Odysseus itself. This seems strange, yet how could it be otherwise! It is from the heart that come the issues of life. The higher powers, symbolized by Athene in the background, give encouragement, and at last the battle is won and the evil forces annihilated. The master of the house, calm, purified, and restored to more than his former beauty, attired in his royal robes, proves his identity to Penelope and is joyously recognized

by her.

From a practical point of view, the method adopted by Odysseus in attacking the suitors may seem singular, but there is good warrant for it in the mystical symbolism familiar to Homer. Although the struggle takes place in the confined space of the palace hall, at very close quarters, the hero depends upon his mighty Bow for success — the Bow that none other can wield — instead of trusting to his sword or spear, which only come into action later. In making the Bow so prominent Homer shows his knowledge of a profoundly significant symbol in ancient psychology. The bow is the weapon of Apollo, the god of light, and the day of Odysseus' victory is sacred to that deity. In Indian philosophy the bow, or in some cases the arrow, stands for man himself who must be strong enough in texture to stand the strain or the spiritual archery will fail. The bow, not the sword, is the principal weapon of Arjuna, Prince of India, the hero of the *Bhagavad-Gita*, the Indian allegorical poem, famous as the vehicle of a profound philosophical teaching. In other Oriental scriptures the bow is a frequent symbol. One of the Upanishads says:

Having taken the bow, the great weapon, let him place on it the arrow, sharpened by devotion. Then, having drawn it with a thought directed to that which is, hit the mark, O friend — the Indestructible. Om is the bow, the Self is the arrow, Brahman is called its aim. It is to be hit by a man who is not thoughtless; and then as the arrow becomes one with the target, he will become one with Brahman. . . . Hail to you that you may cross beyond the sea of darkness.

William Q. Judge wrote a very striking article, "Hit the Mark," in *The Path*, Sept., 1890. He gives the practice and theory of archery as an illustration of concentration, poise, firmness, high aims, and other valuable qualities. In this article he says:

The bow figures in the lives of the Greek heroes, and just now the novelist Louis Stevenson is publishing a book in which he sings the praises of a bow, the bow of war possessed by Ulysses; when war was at hand it sang its own peculiar, shrill, clear song, and the arrows shot from it hit the mark.

Archery is a practice that symbolizes concentration. There is the archer, the arrow, the bow, and the target to be hit. To reach the mark it is necessary to concentrate the mind, the eye, and the body upon many points at once, while at the same time the string must be let go without disturbing the aim. The draw of the string with the arrow must be even and steady on the line of sight, and when grasp, draw, aim, and line are perfected, the arrow must be loosed smoothly at the moment of full draw, so that by the bow's recoil it may be carried straight to the mark. So those who truly seek wisdom are archers trying to hit the mark. This is spiritual archery. . . .

The *Odyssey* closes with the hero, now triumphant as the rightful king and leader, going forth and subduing the few remaining rebels, after which, the poet says, the "willing nations knew their lawful lord." His future peaceful and wise reign is left to the imagination, but it is secure, for he cannot fail after the final conquest of the enemies who found lodgement in his own house.

In an editorial in *Lucifer*, Sept., 1891, we find these eloquent words which fittingly close our very brief study of the esoteric side of the *Odyssey*: —

There is a road, steep and thorny, beset with perils of every kind, but yet a road, and it leads to the heart of the Universe. . . . There is no danger that dauntless courage cannot conquer; there is no trial that spotless purity cannot

pass through; there is no difficulty that strong intellect cannot surmount. For those who win onwards there is reward past all telling — the power to bless and save humanity; for those who fail, there are other lives in which success may come.

THE PILLAR OF LIGHT — *J. G. Crabbendam*

Address commemorating White Lotus Day, given at Pulchri Studio, The Hague, Holland, May 8, 1947.

WHITE LOTUS-DAY — this is the day which stands like a pillar of light in the days of the year. The days of the year form a liturgy; each day stands for something, each day has its deep significance in the cycle of the year. But the 8th of May, in the early part of the flowering-month, the time of flowers, the day which (in Dutch) bears the name of that significant symbol in our Theosophy, the White Lotus, is a day of special tenderness. We commemorate Helena Petrovna Blavatsky, H. P. B., because on that day she had finished her task, her mission in her visible vehicle on this earth.

To you, young members of our T. S., who have just joined our Society and for whom the memory of the day of your Initiation is still strong and vivid, I would say, you have understood the importance of Theosophy in your life, otherwise you would not have come to us. On that day you finished something in order to start something new, a new phase of life with greater vision, a wider horizon, into which you look with awe and expectation. And before you and us, older and still older members, for whom Theosophy has become a trustworthy friend and companion in life, soothing our sorrow and deepening our joy, a friend who guided and advised us and lighted the caves of Myalba; a friend wholly reliable and united with us by ties which can never be broken; indeed, before us lies this day of the first Initiation, this first entrance suffused by the tenderness and inner devotion of the past.

If we all together bear this in mind today a stillness, a rich stillness comes over us. In our hearts a warmth wells up, which

flows through us and flows out like incense round the image of the messenger, who brought back to us the wisdom of the Gods.

There is such pathos, such tragedy in the lives of the messengers! There is their greater knowledge, deeper insight and understanding of secrets which remain shrouded in mystery to us, but in that lies also their greater sorrows and pain, because of their compassion for all that happens in the world of men. They remain ordinary human beings with ordinary human vehicles. And these vehicular aspects in a way lack something of the completeness that we have. There are mysteries attached to their training! After this training somewhere on this earth, somewhere where the Masters are, something often happens with their composite nature, with their constitution, so that they can remain a channel, can be a messenger. And thus they often come back to this world of men with an incomplete constitution, an incomplete armor in contrast to ours, with which they besides have to fight a much heavier battle than we have! Oh, there are many mysteries around the messengers of the Masters, their constitution, and the great sacrifices of their lives on the altar of mankind. How shall we then judge, Brothers, we who know little or nothing about the seeming discrepancies and inconsistencies in the lives of messengers, which may sometimes surprise us in our ignorance?

There is a Light-side in Nature and also a Shadow-side. There are Brothers of Light and those of Shadow, Protectors and Guardians of mankind and the Dugpas. The latter fight their fierce, uninterrupted battle. They know something about occultism, they, masters of black magic, and they attack in secret with slyness and subtlety and subtle craft. Not you and me, for what do we mean as yet in the Hierarchy of Light? But they attack the messengers in the first place. And in proportion as we make progress on the Path, the battle between the Light- and the Shadow-side in our natures makes itself felt. When we quicken

our evolution on the Esoteric Path, the possibilities in us of the greater things, the spiritual aspects are activated and expressed, but also that which is hidden in our lower natures may be quickened; it is a karmic quickening-process: that which usually takes several lives to express itself, happens in a shorter period. And thus it may be that we see things performed by brothers who are further along the Path than we are, which we had not expected. And then we often know nothing better to do than condemning such a brother. Instead of trying to understand, what is going on within that brother, what he has to go through, the portals through which he has to pass, and instead of being ready to offer a helping hand, as is our duty, we attack him by adding our criticism to that of the world; such things as: "Can you understand this of him, or of her?! . . . Ah, theory and practice!!" But the only ones, who are really to blame, are we ourselves, because we ought to know better. Tout savoir, c'est tout comprendre, c'est tout pardonner! Do you still remember, Brothers, Companions, that beautiful charge of G. de P. at our Initiation which charge I do heartily hope we may still keep for a long time to come! Do you still remember how Dr. de Purucker impressed upon us, that it is our duty as theosophists to live with each other with love in our hearts — and so he continues — "especially when one or more of us pass through the portals of *purification* — words which you may later understand better than at present."

But the messengers are the first to be attacked! And the brothers of the shadow use their most efficient weapons: *insinuation*, *slander*, *ridicule*! Who does not know that insinuation: it is so easy, you have nothing to prove, you place some facts in a wrong light, disconnect them and assume a significant face, a shrug of the shoulder, a motion of the hand and it is done! It always works, is easily passed on, accepted and spread! And then *ridicule*,

deadliest of poisons, no argumentation, not even facts here! We theosophists know it from experience. "Theosophy? Oh, yes, heard of it, I daresay a group of eccentrics, but well-meaning, not dangerous!" Or: "Oh, not a bad fellow, a little idealistic; theosophist or something like that, teetotaller and vegetarian, you know. Surely, there is nothing bad in her, an eccentric, somewhat high-strung, don't take her too seriously!"

The Messengers, the chelas of the Masters. Before everything they have to follow one of the chief rules for the Chela: not to defend themselves! Do you know what this means? We also have to aspire in this direction as younger Chelas on the Path. You are attacked and accused, and rightly so, because you did something that you should not have done, but you have a great desire to defend yourself, to place in a favorable light what you have done, so that there will be a better and milder judgment. But you are not allowed to: you have to keep silence. That is difficult!

But now you are *unjustly* attacked and accused, slandered and your name is stained, your motives twisted and misinterpreted. And you want to justify yourself, your whole being cries: this is injustice, the grossest wrong, I shall mention my motives. I can prove them! But you are not allowed to. And your friends urge: "Speak and prove the contrary, you can do so. If you keep silent, what are people to think?" But you are not allowed to! Friends, this is awfully difficult!! These are perhaps isolated cases, just a tiny arrow that hits us sometimes. But the messenger is a *target*, which these arrows are aimed at by the dozens!

This is the rule: the chela is never allowed to defend himself, when he himself is attacked, but it is his duty to defend *others* when they are attacked, and above all his Guru! That is what they have done, all of them, who recognized H. P. B. as their Guru; her many friends during her life and after her death. That is what her

successors in the Holy Work have also done: William Quan Judge, Katherine Tingley, Gottfried de Purucker. Do you know, friends, those brilliant, striking speeches of G. de P., delivered in Sweden, in Visingsö in 1931 about: "The exoteric and esoteric H. P. B." published in the series *Questions We All Ask?* In the afternoon session of the Congress which was held on the occasion of the centenary of H. P. B., Dr. de Purucker spoke about the Esoteric H. P. B. and he showed us how she in her way was an "Avatara," how her psychological apparatus, usually called in the Occident "the human soul" could withdraw sometimes to make a channel for a human soul still higher than hers. These speeches are worth reading today. But the defenders I speak of have now gone home as has H. P. B. And the attacks continue! Can it be otherwise: H. P. B. the *Light-bringer*; now that the world is crying for more light, now that the hearts and minds of tormented mankind seem to be more open for the wisdom of the Gods than ever, are the servants of darkness, the brothers of the shadow going to keep silence and rest? Therefore, if they succeeded in representing H. P. B., the bringer of Theosophy, as an eccentric, an intriguer, an impostor, that would be effective — much easier than to fight against the doctrines. These are so complicated and they are being more and more confirmed by modern science, they often speak to the intuition, heart and mind. And once more, we see the old well-tried diabolical weapons appear: New articles in magazines, new books, which once more cast the poison of calumny on H. P. B.'s name.

And now what is our *task*? White Lotus-day is for us a day of thankfulness. Our heart is warmer than ever for all that has been given at the cost of H. P. B.'s sacrifice. We could not do without Theosophy! But this thankfulness is not sufficient, it has to be transmuted into a pledge, a deed. In her honor, in her defence! We can write and speak and it is right to do so, but will our

articles be printed and read and will they listen to what we have to say? The best thing we can do is to *live* Theosophy and so carry it out into the world.

If we become what Theosophy should make of us, artists in living, balanced men and women, going through life cheerfully and undauntedly, who know joy but who can also bear pain, we shall be the best living defence of Theosophy and of H. P. B.

"Oh, that my last incarnation may not be in vain!" We must see this hope fulfilled. Standing firm, keeping united, we are invincible, keeping the channels open for the sublime spiritual forces, which worked behind and through H. P. B. and perhaps still do so.

The Theosophical Forum

THE BUDDHIC LIGHT — *Gertrude Hockinson*

Our Theosophical Teachers have told us that as man is an aggregate of entities composed of seven principles: Atman (Divinity), Buddhi (Spirit), Manas (Mind), Kama (Desire), Prana (Vitality), Linga-sarira (Astral Body), and Sthula-sarira (Physical Body), so is our Earth an entity composed of these same seven principles, and that Humanity is the Buddhic principle of the Earth. In considering this relationship between ourselves and our Earth, we must try to keep also in mind the duality of manifestation in man as an individual and in humanity as the sixth or Buddhic principle of our Earth. Spiritual and material forces, working together, manifest as the duality which makes us not only men and women on the physical plane, but also must be considered as operating throughout all the other six principles.

Most of us, I believe, in considering this problem of the duality of life, think of it as the struggle *between* spirit and matter, or spirituality and materiality, each with a vitality of its own, fighting for complete possession or control of the individual. Well, there is a struggle going on most of the time in our constitutions, but if we shift our point of view a little and see that it is a struggle to bring *harmony* between spirit and matter, somehow a great deal of the agony and desperation of the struggle are eased.

It is not difficult to see this duality at work in humanity on our Earth: nations waging wars with other nations for purposes of material supremacy, but all the time, behind the scenes, the healing forces of Universal Brotherhood, the Buddhic Light, are at work in the hearts of individual men and women and in groups of these.

The Founders of the Theosophical Society and all the men and

women, through the years since its inception, who have gathered together from the four corners of the earth as co-workers in its Cause, the bringing forth again into the minds of men that fundamental truth of Universal Brotherhood, are those in whom the Buddhic Light has found a medium of expression on our physical plane, in varying degree. The Buddhic Light, impersonal and universal Love for all that lives, is more richly and more grandly expressed in the work and lives of those whom we know as the Masters of Wisdom, and above and beyond them we have caught glimpses of still nobler expressions of this Buddhic Splendor in the work and lives of the great Spiritual Teachers of the races of men through the ages.

With such inspiration as we have received so abundantly from these grand exponents of the Buddhic Light, our Spiritual Teachers, how can we possibly fail to carry on the work, by doing all we can to bring Their message of harmony and universal love into the hearts and lives of humanity, so that *all* men may share in the fuller realization of the purpose of life on our Earth? When all men shall have discovered that the riches of the spirit bring them greater joy than the acquisition of worldly treasures, then only can wars cease upon the face of the earth, and then, indeed, will we know the glory of the Buddhic Splendor.

In the Eternal Now it is accomplished!

The Theosophical Forum

IN THE PYRAMID — *E. A. P.*

I: THE TRIAL BY POISON

The candidate for Initiation was blindfolded and led by the Pastophores from the chambers underneath the Sphinx to the crypts under the Pyramid. There he had to pass through the greatest tests of his fortitude until he had won out to the last trial but one, the trial of the cups.

He was led before the Hierophant and told that he was now accepted as a Zealot, an Apprentice. Before he could advance he must take the oath of the Adepts, the vow of absolute obedience to the Hierophant in all that pertained to the Mysteries of the Pyramid. Behind him ranged themselves four Melanophores, or funeral officials, with a great black veil. On each side of him stood one of the Neocores, bearing cups. Immediately at his back was a third Neocoris, ready to snatch away the bandage at the proper moment. The candidate took the oath. The Hierophant warned him in solemn tones that if he had sworn with his lips alone and not the heart, death would be the penalty of his perjury.

Terrific thunders crashed through the depths of the Pyramid and lurid flashes of artificial lightning illumined the vaults when the seven lights were suddenly extinguished. Meanwhile the Neocoris behind him had torn away the veil from the candidate's face and he found himself facing the sword-points of the Adepts pointing at his breast in threatening menace.

"These are the swords of human justice," declared the Hierophant. "Yet human justice may be fallible and, being fallible, does not always deter. But divine justice never errs and no man can defy it with impunity. It is our will that you shall prove the

sincerity of your vow of obedience to me by undergoing a trial through which the gods alone can carry you safely."

The Adepts lowered their swords and the Neocores approached with the cups.

"See these two cups!" continued the Hierophant. "One is harmless; the other is full of the most deadly poison. I command you to choose one and drink it at a draught!"

If the candidate in fear refuses, a solemn roll of thunder signals the failure of the initiation. The funeral officials throw the black veil over him, overpower him and carry him away.

Is he to return to the grey life of the everyday? Never. Human nature is such that he would boast of his escape from the wicked schemes of the Adepts and would denounce the Mysteries as contemptible. Or perhaps he would found some bogus imitation of the Mysteries, a lure for unsuspecting hearts.

He was confined within the sacred limits for seven long months. Provided with bread and water, he was allowed to study the sacred texts defining the duties of a man towards himself, his fellows, and Divinity. The book of Thoth-Hermes gives the unfortunate man a gleam of hope. His failure is not final so long as he is willing to TRY again.

Once more he is given the opportunity. If he fails he must languish in the crypts seven long months more, when he is again allowed to try. If his courage fails him, every time there must always be seven months between each trial, even if he waits until his death in the silence and solitude of the crypts. If he succeeds after a first failure he is restored to liberty but may never rise above the degree of Apprentice.

If on the other hand the candidate accepted the trial without

hesitation the Hierophant informed him that he had run no risk at all, since the deadly poison was nothing more than *Fear*, which he had conquered. The cup contained a little wine flavored with myrrh to make it bitter. Possibly the password of this degree was "I thirst."

There was a Greek candidate who successfully passed this trial in the presence of the College of Adepts of old Egypt. What his family name was we cannot say. They called him the "Broad." Popular interpretation says that this refers to his broad forehead, but it may well be that it points to his extensive knowledge and the liberality of his outlook and teachings.

The Greek word for "Broad" is Plato.

II: THE FINAL TRIAL

The candidate had passed through the terrible trials of the Egyptian Mysteries and his energies were at a low ebb. He needed rest. The Neocores took him to the Royal bedchamber, or what looked like it. They removed his coat, wet with the water trial, and put on him a fine robe of white linen. Sweet perfumes filled the air. A banquet lulled his senses with dainty dishes and delicate wines. Soft music suggested sentiment and love. All with him was peace.

At the end of the room a green curtain covered with branches of myrtle slowly opened and he saw a group of young girls dancing in the varied light of colored lamps. They held ropes of roses which they intertwined in measure with the music. There was everything about the scene to capture the tired senses. These young girls were the daughters of the temple adepts, dedicated to the temple service until their marriage. They wore masks attached to golden circlets round the brow, so that they could not afterwards be identified by the initiates. They wore a short tunic

decorated with golden bees gauze scarf and scented flowers.

The music became more seductive; rich perfumes intoxicated his brain. The candidate was tempted by Form, the Calypso who imprisons human reason as Ulysses was imprisoned on her Atlantic Isle, or the Circe who turns his "men," his principles, into pigs.

As he approached and crossed the threshold two of the girls left the group and playfully bound him with a rope of roses. The others vanished like frightened birds. The light grew dim and the dancers vied in attracting his attentions, first one, then the other, as they danced round him with their garlands.

The candidate did not know this was a trial, but he did know that the Temple must not be violated in the least. He did not know that this was the most terrible trial of all. For behind him crept a silent-footed Neocoris ready to strike him dead at the slightest sign of weakness. A mere indication that he was influenced by the dancers was enough to seal his fate. This was in the days when the old symbolism of an inner truth in the Mysteries had become so materialized that death, physical death, was imposed for any violation of the Mysteries or their secrecy.

So strict was the law that a carpenter who had been initiated into some lower degree for the purpose of being able to exercise his profession was condemned to death. A friend had dreamed that he had witnessed some mystic scene and had asked if he had rightly guessed that it was what really took place in the Mysteries. The carpenter had not spoken a word, but he nodded — and he died.

Socrates, a non-initiate, died for much the same reason, only in his case an unwitting revelation of secrets of the Mysteries. They tried to save him by giving him the opportunity to escape, but he

would not.

If the initiate remained unmoved and impassive to the temptation of the dancers, the adepts dismissed the girls and congratulated their new brother who had passed the worst trial of all.

"Learn to dominate your senses in order to preserve the freedom of your soul. This is the first lesson in our sacred study." So he was told.

They returned to the sanctuary and in symbolic form the new Initiate was shown the terrible fate of the perjurer against his sacred pledge, a scene which remained in his memory for the remainder of his life.

This was the last act of the drama of initiation in the Egyptian Mysteries of a later date and of a minor degree than those of which no word ever escaped from the sanctuary.

Plato lived thirteen years among the Adepts of Memphis and Heliopolis. Some centuries previously Moses, or Thotmosis, had been brought up by the Adepts of the day. There he learned all he knew and it has been remarked how strange it is that among his laws there is no mention of the twin doctrines of reincarnation and karma which he had learnt.

The Buddha said that if there were three temptations so great as that of women, no man could ever have been saved.

For reference to a later version of this mystery see page 314, second volume of *Isis Unveiled*.

It may well be that certain minor mysteries, or pale shadows of the Mysteries which served to keep alive their memory during the ages of darkness, rightly excluded women from their brotherhoods for the reason that no man is fit for the Mysteries

who can be influenced by a woman even in the smallest things of life, because it is almost an impossibility to find a woman as such who is so manly as not to want at some time to influence a man. It may be that the truer symbolism would be that it is the womanly, the emotional, the personal, which should be absolutely excluded, whether in man or woman. And yet

"Das Ewig-Weibliche führt uns heran" — the eternal womanly leads us on.

The Theosophical Forum

THE FLAME OF SINCERITY — *John Peck*

True Individuality is revealed in the manner in which one dissolves the egoic nature.

I've a friend who is an amateur watchmaker, and I had never realized the beauty in the mechanism of a watch movement until he showed me. I believe the Universe is like that. When the darkness of the self is blown out, the mechanism is shown in its beauty. There is more; the mechanism — the movement of nature — exists because of the Supreme Spirit: THAT. Yet the Supreme Spirit is also apart, and it slowly changes the pattern, which is constantly crystallizing out of the movement, or harmony of nature. It is because of the unity between outer and inner, the deep fundamental unity out of which and because of which the "opposites," or poles come — the positive and negative, the higher and lower, mind and heart, action and inaction — it is because of the unity — THAT — between heaven and earth that at the crest or completion of every cycle, great and small, we have the influx of the Divine which is true Individuality. It is this ever-Being, or reality of the inwardness of Nature *as she is eternally* which is the Divine manifesting through Individuality; which is the Law made manifest, inwardly as a glorious constellation, web, or wheel of brilliant, white, dawn-like light.

Purged of the darkness of self we see the beauty of Nature, the form or movement. Within this form is the soul like a great starry unit; pure white yet faintly suffused with dawn-like colour from the heart in the innermost heart of which is forever . . . THAT.

What is it that forever rises out of the ashes of pure endeavor? What is that which "springs eternal" before the face of the Inexplicable? It is the consciousness of Divinity, which is the true

inward way, the flame of sincerity which leads to the heart of the Universe. It is unconquerable.

To look outward, to rely upon outward things and personalities; to act from the error of separateness between "me" and "that"; to admire or yield to the enchantment of externals, is to be ignorant, is to be in darkness.

To know that darkness as the self, born of error; to know the self as the cause and continuance of error, is to see that error, or self, is the cause of darkness. To see against darkness, to struggle and strive is already enlightening action which causes freedom from darkness. It is to cease to be identified with past error. It is to know our error, our ignorance. It is to know that there is the true, the Real.

Thus knowing, we have separated the darkness of the past from the present, thus revealing our imperfections in the present. We are no longer in the darkness of the self. The impetus of much good done in the past, and great battles fought in past lives, holds at bay the darkness of self, and repels the phantoms of delusion, and reveals their emptiness. Now in the present the battle continues. To our aid comes the immortal flame from life to life. In the flame of sincerity our imperfections are revealed. Now is the time to be undaunted by these imperfections. It is the time to strike with the sword fashioned by past lives of unconquered effort. And what is this sword? Heed not the darkness, but heed the cause revealed by countless lives — the cause which is the *illusion of separateness*, the emptiness of externals. Turning inwards, know the Divine everywhere inwardly, in ourselves and in others inwardly. Heed the Law of the Divine, the Law of self-forgetfulness. Seek the Divine, and seek not its light, for its light will pass through to others and they will reveal it to you.

And what is the sword which is fashioned by suffering in the

flame of sincerity? Knowing imperfections and seeing the cause of darkness in the illusion of separateness, strike for the cause of unity, of truth in thought and act and feeling. Unify one's whole being for TRUTH. The sword is — sincerity in the cause of TRUTH. It is that which evokes in others the knowledge of the Divine. It is the vision which rises ever anew from ideal to ideal — unconquerable. To see imperfection is to catch anew the vision, to be re-born, to see ever greater perfection.

How can a man be satisfied with imperfection? His very heart rises above it. With experience gained in such a Cause he can cleave a way through the darkness for others. His own Divinity will reveal through his own sincerity the Divinity in all. Self-forgetfulness is the very Law of the Divine; for not only do we rise again and again in a single lifetime, but we rise and live anew life after life. The truth of re-embodiment can be seen directly.

Thus, ever rising, ever pure, the Flame of Sincerity merges with the Universal Flame; which is the same as saying that the illusion of separateness is dissolved before the face of the eternal. And the God-Wisdom is directly revealed through the starry soul. When inwardly we see the inner cause we see that, however it may seem outwardly, there is no accident in our being Theosophists and that we should not be discouraged by outward circumstances, but join with each other in affirming and revealing the true.

And here is a "secret" which all true seekers share: In seeking to help others mysteries are revealed. Inwardly we know there is light, but in looking to help others we see darkness and suffering. Our very eyes seem blind, and we think that we must first see light. We are discouraged when light does not come. But when, listening, receiving and knowing inwardly, we have the courage to transmit it to others, despite the darkness, then the starry soul

draws near, the light comes back to us from others and thus, at last, the world of light is built and the world of darkness is dissolved. I believe that this resolve to transmit despite the darkness is a step on the path of renunciation of self, and will lead us to realize the Supreme.

The Theosophical Forum

THE PSYCHOLOGY OF REINCARNATION — *Ernest Wood*

When the subject of reincarnation is mentioned it is quite usual for people to think of a series of bodies as the means for experience by a soul. I use that word soul in a vague and general sense because that is the way in which people usually think of the matter. It is seldom that they dwell upon the subject of reincarnation from a psychological point of view, and ask themselves just how that soul obtains what it is seeking or what it is intended to attain through this process.

We shall understand the method if we say that a life-cycle is really an act of meditation. That is looking at it from the point of view of the mind of the soul that is going through the experience. This meditation is a composite of three mental processes in succession. First, we give our attention to something, and if we attend to it closely we get a clear and strong active consciousness with reference to that thing. One can emphasize this with a little experiment, as follows:

You hold up a pencil and ask a friend to look at it. You then put it behind your back and ask him what color it was. He says, "Yellow." You then ask him "How yellow?" He generally replies that he does not understand you. You then request him to imagine the pencil or think about it, and ask him if he can think of the yellow color that he saw. Then, after a moment, you bring out the pencil again, and you say: "Look at it carefully. Does it look more yellow than it did before?" "Why, yes," he says, with some surprise, "It does."

All I have done is to trick my friend into paying more attention to the color yellow than he did before. What he has really done is to put out more of himself towards the yellowness of the yellow.

This is what is called concentration, which is the first step in meditation. In ordinary life, the utility of things is that they compel our attention and at the same time they restrict our attention, so that at the point of concentration our consciousness achieves quality and power which would not otherwise be obtained.

The first point, then, in understanding the psychological uses of reincarnation is to see that objects or environment present us with opportunities. The environment does not do anything to us but give us the opportunity to gather ourselves together and control ourselves upon limited things whereby our state of consciousness is educated. Every such piece of education, though it be but a passing experience, produces a permanent effect in consciousness.

Here I like to mention the simile of the camera. A camera is a dark box with a little hole in front and a chemical plate of film at the back which can receive and record the effect of the pencil of light that comes through the little hole in the front. The simplest form of the camera is that which is usually shown to students at school in the physics class when they begin to study the properties of light. In that case we take just a plain box. We take out the back and put there a piece of ground glass or glazed paper to form a screen, and in the front we make a little hole with a pin. We now point this camera at a bright object and the pupil sees the picture of that object on the screen at the back of the camera. We then tell him that this is due to the fact that the same picture appears at both ends of a ray of light. We next ask him to imagine what will happen if we enlarge the pin hole, and he says we shall have more things in our picture. So we push something through that hole to make it bigger and the student finds to his surprise that the picture becomes blurred. Then we take out the whole front of the camera and no picture is to be seen on the screen. We

have at this point to tell our student that he is quite mistaken in thinking that there is no picture there, for what has happened is that many pictures are there, that all the pictures brought by all the light rays are there, that there are so many pencils of light all falling upon one another that all he can now see is a mass of light.

With the aid of this simile we can understand that the body is like the camera box and that the senses are like the little pinhole. The limiting effect of the body and the senses enables us to get a clear picture on the screen of our consciousness, but without that there would just be a blaze of glorious light which would mean nothing definite to us.

The second point in this psychological process is the expansion of our pictures. The concentration gives us grip and now we are to obtain a larger grasp and take in a bigger picture without losing the quality of consciousness which I have called the grip. It is just as with a hand we can have a firm grip and also a large grasp.

Behind every such psychological action there is something that we must call a soul-hunger. We want to experience something. Leaving aside for the moment why we want to experience it, we can see how we do it and what the effect is. A painter has the hunger to paint a picture because as he does it he gets some enhancement of his consciousness. He gives all his attention and faculty to the work, so really he is not merely making a picture but he is also making a man, himself, and it is the enhancement of consciousness that in some degree satisfies his soul hunger and gives him the joy of a richer life. This is only one illustration; it is the same with every creative act in our lives.

It is noticeable that when a soul has attained some satisfaction of that hunger it turns away from the mere object by which it was obtained. The artist is now tired of that picture; his hunger shifts a little and he will now try to satisfy a slightly different phase of

the same hunger. This explains why in the course of incarnations all objects are either destroyed or dropped aside, but the consciousness goes on with its process of self realization. We need some external thing, as we call it, to assist us in our work of concentrating our consciousness so as to educate it in the special effects of the compartments of its own being. Here, then, on the whole we see the reason why the objects should be temporary while the man is eternal, and we cease to grieve over the temporariness of those things.

There is a third step in this meditation process, which we call contemplation. It is that part of the process in which we become so intent upon the object that we forget our idea of ourselves. In the beginning of these efforts we think of ourselves as looking and making an effort to see while we examine the object but in the process at its best we just forget the idea "I, so-and-so, am looking," and we become engrossed in the object. We all know how when it is something of beauty, such as a sunset sky or a lovely piece of music, we become what is called enraptured. We have not then lost ourselves. We are in fact at our very best. We are enjoying the highest delights of enhanced consciousness. But we have forgotten ourselves, if by "ourselves" we are to mean that picture of ourselves as something in the world which so commonly accompanies our activities and thoughts.

In the contemplation we get our best awakening of consciousness, and in the result of it we find that some deeper part of ourselves has received what we sometimes call intuition or inspiration. It is something that makes such a deep and indelible impression upon us that we can speak of it as now a part of our character. Before this the thing was simply something that we knew about or we knew, but now we can say that the experience has been really digested and the result is new power in consciousness, which we rightly call character. I am not the same after that sunset or that

music as I was before.

If we give our best attention and our best creativeness to the business of life and the world, we are attaining our best growth and moving towards the fulfilment of the purpose of the incarnation. This is education. At the same time it is self-education, for the objects which give us the opportunities are of the nature of karma. Briefly, the world of each one of us is his own karma, something that he has made by his work in the past. He has made that according to his character at the time, so it is an expression of his own imperfection, that is, his own limitation. I have myself made the things that stand up there outside me and compel my attention, and profit me to the degree in which I willingly give the utmost attention to them.

At the end of a life period in the body it can be truly said that we have acquired quite a lot of experience, we have stored up thoughts and feelings, but for the most part these are only the beginnings of thoughts and feelings — they are not mature and ripe and they have but rarely attained the quality of contemplation. What then happens after death? Death is not the end of the life cycle. The principal thing now to come is what we theosophists call *devachan*, and this is described as a kind of meditation, rising to the quality of contemplation, in which we get the full value of all those experiences which are useful to the soul of a permanent man. In this state we can say that those experiences are now digested into character. It is just as though an artist painted a picture. He has brought a variety of things into his scene and has achieved a certain realization through that. He is a better artist at the end than he was at the beginning, and now he sets aside that picture and starts upon another, which will take him to further attainment.

Let us now think upon the phases of life. We go through

childhood, youth, maturity, elderliness, old age, death and *devachan*. In each of these phases there is a certain quality of experience and a certain direction of attention. This is a sort of rounded out picture, in which experience is seen from different points of view. It is evident that there is something more at work here than the karmic presentation of objects and the psychological experience of these objects. There is something that moves the man from within to go through these phases. The hunger of the soul has some plan of its own which causes it to follow this cyclic form of growth.

It is here that the will comes in and makes its decisions. It is a section of our psychology that is not mental. It is an obedience to some central spiritual law, in the intuitive obedience to which the will gets its own delight and sense of power; not a sense of power over things or power over others, but an intuition of an inner freedom. Such happy intuition is our character in the degree of attainment of unity with that part of ourselves already beyond the need of the psychological process of meditation.

There is in us a central urge, and the hunger of which I have spoken, which expresses the phases of that urge. The will in us is the future speaking to the present. That is why it is free.

It is not for the mind which deals with external objects to try to characterize that freedom and harmony of the unity-making will with any descriptions taken from its field of knowledge. Its work is in its own sphere, to assist in that psychological process in which contemplation produces fulfilment.

I AM PART OF THE UNIVERSAL WHOLE — *Louis E. van Norman*

One of the most comforting thoughts that comes to me — and it has been coming more frequently during my later years — is that I am, in a very real sense, a part of the created universe, not a thing apart. The old Latin poet, Terence, nearly two thousand years ago, said so truly, "I am a man. Nothing human is alien to me." A part of the universal, the great scheme of a creation, I am in my place. Like the rocks, the trees, the birds, the breezes, all the four-footed creatures, I fit into the picture. When my fellows suffer. I suffer. When they rejoice I too am happy. We are one.

This realization is the result — one of the results — of an acquaintance with my inner nature. Self-realization is the sum of human wisdom. The real things are those that lie below the sense perceptions. When we look without we see differences. When we peer within, we perceive the oneness of God's created world. As one devout astronomer put it, "Oh, God, I think Thy thoughts after Thee."

An extraordinarily interesting "new world" picture of modern physics has been painted by Sir James Jeans, the eminent British scientist and physicist at an annual meeting of the British Association for the Advancement of Science. The old Newtonian physics, with its fixed universe and its unchangeable laws, said Sir James, is quite gone from the credo of science. Nothing, he said, is real in the new world of modern physics except what is in our consciousness and our perceptions. As Sir James put it:

In the old physics the perceiving mind was a spectator; in the new it is an actor. Nature no longer forms a closed system detached from the perceiving mind; the perceiver and perceived are interacting parts of a single system.

Isn't it conceivable that what is true of objects perceived may be true also of the perceiving minds? When we view ourselves in space and time we are quite obviously distinct individuals: When we pass beyond space and time we may, perhaps, form ingredients of a continuous stream of life.

That versatile literary genius, George Sand, often displayed remarkable insight into cosmic realities. In her *Intimate Journal* she has a striking passage expressing her realization of her "oneness with God." She says (writing in 1840):

God is not a force outside of us. He is the sun and the skies and the gold in the chalice. He is the bread. He is all the elements of the earth. He is the heart of man, and all men, with all their yearnings and fortunes, are one in Him. He is in us and outside of us. We are in Him and never outside of Him. He is the universal spirit. He reveals himself in man. He is I and I am he.

There is one respect, however, in which the human entity we call man may be said not to resemble the rest of creation. His spirit — disposition, if you will — changes with his body. If he lives wisely and on a high plane, although the body may become misshapen with age, the spirit becomes more shapely, more beautiful, more at one with the Divine. Man can show conscious courage — which is a quality both human and divine. In other words, in proportion as one realizes that he is part of Divinity he knows no fear.

Among the better, more apt definitions of courage, is this one, of which, unfortunately, I do not recall the author: (1)

Courage does not lie alone in dying for a cause —

To die is only giving.

Courage is to feel the daily daggers of relentless steel,

And keep on living.

Think also of this, from "Grief," by Aubrey de Vere:

Count each affliction, whether light or grave,
God's messenger sent down to thee; do thou
With courtesy receive him; rise and bow;
And, ere his shadow pass thy threshold, crave
Permission first his heavenly foot to lave.

When we have reached this state, we shall have realized our near Relationship to the gods, for, as Addison put it, heaven is not to be looked upon only as the reward, but as the natural effect of a religious life — which could not be were we not an intimate part of mighty nature.

The Theosophical Forum

FATE, CHANCE, LUCK, KARMAN — *Helen G. Steward*

Just what is fate? Fate is a phantasy. Fate as fate simply does not exist. Fate as popularly understood is a haphazard concept of an unswerving and exacting destiny. Fate expresses a conception which seems to have prevailed more or less through all ages in all religions. The word is derived from the Latin *fatum*, which has a primarily passive signification, denoting a decree or ordinance uttered. This conception of fate springs from man's feeling of his own unworthiness and helplessness.

Chance may be defined as that which determines the course of events in the absence of law. Strictly speaking, it is an idea that few would now be disposed to admit. The idea of chance, as referring to some apparently capricious, or at least unexplainable, event, distinguishes it from the idea of probability. Chance means risk, hazard, a balanced possibility of gain or loss. So, in placing too much credence in the reality of what it is supposed to stand for, we profess ourselves to be the slaves of chance, and, as Shakespeare says in *Macbeth*, "the plaything of every wind that blows."

Luck means that which happens to a person "by chance," conceived of as favorable or unfavorable, as though there were some inward connection between a succession of fortuitous occurrences, favorable or unfavorable. For example: Gamblers say one ought to continue to play while luck is with one, and discontinue playing when luck is against one!

Can luck or chance or fate restore life to the murdered, honor to the dishonored, property to those who have been wronged? Can fate force the scales of human and divine Justice to recover an equilibrium that has been disturbed or destroyed? No, but

Karman can. The operations of the Universe are governed by law and order; eternal, immutable, exacting laws which leave nothing to chance! Many laws are known to us; but there are other laws operating around us all the time, silently, steadily, serenely, unseen.

These words, Fate, Chance, and Luck, which we put to work on many occasions are a means of passing a situation off lightly without thinking the matter through. Is it not much snappier and easier to say, "Oh, she is lucky!" or, "Oh, well, it's fate," than to analyze the matter carefully? Catch phrases often carry us through. Far easier to switch a subject into a lighter vein than to worry too much over it!

There cannot be such things as fate, chance, or luck operating in the Universe. This presupposes a mad Universe, that could not hold together for a fraction of an instant of time. No part could or would cohere with any other part; everything would be helter-skelter, indeed a very crazy Universe.

All the deductions of modern philosophical scientists are based on the one unquestionable fact — that Nature pursues invariable processes. So-called fate, chance, and luck are but the operation of forces set in motion perhaps today, or yesterday, or in previous lives. But always they are set in motion by us and the results are experienced by us. Occasionally one of these stern laws of compensation steps into our lives and takes its course, and man calls it fate — but this just law of compensation is simply following the fluctuations we have set in motion.

Everyone is weaving around himself, thread by thread, as a spider weaves its web, his so-called fate! The weaving, the action of the weaving, is man's *own free will!* He has free will within the circle of his own possibilities. His own choice — his actions — are not circumscribed or bounded by any law outside of himself!

When the last strand of the web is woven and man is seemingly enwrapped in the network of his own doing, his own weaving, then he finds himself under the empire of his own self-made desires and their natural results.

Our station in life, our abilities, whatever of mentality we may have, are ours because we have builded them into the fabric of our being and have hence earned them. When bad luck, so-called, comes upon us, we must stand firm as a rock, and not be swayed like a feather in the breeze or carried away in a whirlwind raised by our own emotions.

When we die, we take with us a load of Karma — good, bad, and indifferent causes — set up in this life. Where can the result of those causes be met, balanced, enjoyed, suffered? Nowhere but on this Earth in another life. We often hear the expression, "It's in the lap of the Gods." So it is — our fate, our chance, our luck — but it also lies in our good right hands! We long for the scenes that we have known, for loves we have known, for "life" — this is desire and desire draws us back to work out our fate, to get our good luck to have our chance!

We are artists, artists of character, and that character is ourselves. Character shows in our faces, lines of experience, deep lines of sorrow, pain, joy, suffering; they are there for us to read in each other's faces — strong faces, weak faces. Who wrought those lines in our faces? Chance? Luck? Fate? We make ourselves what we are, and at any instant if we are not satisfied with ourselves, we can begin to change ourselves. If we sit down every day or at night and think over carefully what we have done, said, and thought during the previous day, we will certainly see where we have set into motion causes — a string of causes — of which we will have to reap the benefits, the pain, or the sorrow.

When we submit to the urge of the Lower Self, the call of the

personality, and later bring down upon ourselves some unpleasant circumstances, we may say, "Isn't that just my luck?" But when the Higher Self is in the driver's seat, and the God within shines forth and shows us just what we can make of ourselves, then the soul has no regrets — it has a path, a goal, and it knows there is no failure for the soul.

The voice of the soul is unaccented by the pressure of outside events. The soul lives in conditions unaffected by excitements of the hour, the sorrows and joys of the world. This statement, of course, refers to the spiritual soul, the bearer of the Spiritual Ego, which is a living, conscious entity. For man is a wonderful being, and if he takes his evolution seriously, decides to leave not one single thing to chance, but to be conscious every second of his own inherent divinity, his greatness and responsibility, then he can become a living example of self-directed evolution. When he works consciously with the Law, a co-partner with the highest there is, his "job" becomes bigger and bigger, and his "web" is a golden glow that will shine forever, and will "illumine even the darkest corners of the earth."

The fourth word in our title is the only word we can really "hang something on" — Karman. Karman is the sum total of our efforts in the past, our storehouse, the result of our past actions, thoughts, and desires. Karman: our money in the bank. Karman: which all of us are making even now, which I am making as I write and which you are making as you read. It is a pleasure to know we must pay our own debts — no one is responsible for them but ourselves! No absolution can save us, no anathema hurt us, no one can harm us without harming himself.

Our strongest vitality lies in our psychological conception of our Inner God — a man can have no God that is not bounded by his own human conception of God. The wider the sweep of his

spiritual and divine powers, the greater will be his God! For, as the sun shines not only when it seems to pass away from the clouds, but has always been radiant even when hidden — so our fate, our chance, our luck lies hidden behind the veil of time, and the causes and results often seem to be obscured by vapors rising from our lower desires.

Putting into practice all the Theosophical teachings which have been so lavishly bestowed upon us, we work with the Law, we ignore phantasies, and we get results. Brushing aside or ignoring our Theosophical heritage and leaving it to chance or fate or luck, we get exactly nowhere — no place —fast. For many, the possibilities of choice become almost limitless, not only because of the complexity of our social life, but even more so because of the complexities of our natures. No one can live satisfactorily unless he has established for himself some scale of values. By doing so, man is using his own free will. He is also making his Karma. He is choosing and willing what he shall do, what he shall be; he is not leaving it to fate, chance, or luck!

What greater stimulus to courage and incentive to valiant exertion than the knowledge that the loftiest ideals, the mightiest powers, the superb beauty of character to which we all aspire, all are to be found within ourselves? The limitations which so circumscribe our actions are the barriers which we ourselves have wrought by our own actions, thoughts, desires, or inertia. All the beauty the grandeur, the splendor necessary for our unfoldment, for our peace, our perfection, lies within ourselves. The methods used to become ever more *at one* with the Divine are the actions of our own free will! We who are divine potentiality can truly fashion for ourselves "Temples of Mighty Power."

Wishful thinking gets us exactly nowhere; abstruse metaphysics

alone will also get us nowhere; no God *outside* directs our lives
We are imbodyed gods — let us make the world know it by our
actions. Therefore I shall always look upon Karman as Karman
the Blessed, the Stabilizer, the Judge and the Jury — Karman the
Sum Total of all our actions and reactions — but always, Karman
the Just.

The Theosophical Forum

EVOLUTION AND THEOSOPHY — *Patrick Clemeshaw*

Evolution, Reincarnation, Cycles, and all the fundamental truths on which the Universe is run can be linked together, so in writing this thesis I shall attempt to bring in all of these fundamentals and mold them around the subject of man's evolution, or simply evolution.

One of the greatest blunders of Science is its insistence on an ape-man evolution of the human race. The one main reason for this insistence is that they have systematically and intentionally ignored everything except what they call "proof," and nothing of any value can be understood from one aspect alone.

Now practically everyone is familiar with the Darwinian theory of life and evolution, which postulates that organisms tend to produce offspring which are slightly varied from the parent, and further that only the organisms which have developed a "natural selection," or an adaptiveness for natural surroundings, survive; thus the "survival of the fittest." These biological facts are correct up to the point where the Anthropoids were confronted with the problems of "natural selection." But is this theory an answer? No, because it gives us the means without the cause, or the reason; it represents man as a complex lump evolving for apparently no reason at all and headed for an unknown destiny. Theosophy can give us this cause and reason because it has been given first-hand information and the help of more highly evolved beings, "organisms," than ourselves. They are known as Mahatmas, wise men, who inhabit the mountainous terranes of Tibet in China. So with some esoteric facts combined with the archeological and biological findings a Theosophist is able to give evolution an objective background. Let us start from the beginning, what does

the word *evolve* etymologically mean? *E*-out, and *volvere* to unroll, thus to roll out, to expand. The word is itself a key.

From the most primitive up, all organisms have tended to specialize; the reason is really unknown to Science. They claim that it is due to environment, weather, food, enemies, and the like. This is true, but what makes a change in weather? And when the simple becomes complex why does the organism become so wonderfully precise; or when species suddenly change in form what keeps them together at all? And why does a phylum always have the same general construction as every other phylum? All these queries can be answered by one Theosophical doctrine, which is known as the teaching of the Astral Light or astral plane, a plane above the physical whose matter is more subtle and ethereal than ours. This plane is totally unknown to Science, although its lower aspect is known to those seance holders who are able to disturb the passion elements of the departed. This plane is Nature's preserver; in this plane everything has a pattern. Otherwise when species die out and reappear they would be totally different, which is not the case. When organisms specialize they develop their already existent patterns. A plant, for instance, may seem to build itself up mysteriously without a visible agent to account for its pattern; the explanation is that its pattern was there beforehand in the astral plane.

While I am talking about astral things, it is interesting to know that Theosophy teaches that matter was not always dense. Many paleozoic fossils found today are astral imprints, and likewise man was ethereal until the end of third and beginning of fourth root-race which had its rise in the Cretaceous period; the fourth being number four in the series of seven races into which the age of man is divided on this earth. Matter has had a tendency from the beginning to become more and more dense and gross. This evolution of matter only corresponds to man's tendency to

likewise become gross and when this lowest black evanescent phase has passed, things will reverse and become more ethereal, (1) the speed of this change being governed by man's ability to take advantage of upward cycles and likewise by his ability to learn by the follies of downward cycles which are the inevitable result of selfishness and tyranny. Incidentally, this thought introduces in a vague way the Law of Cycles, which is another necessary doctrine involved in evolution.

Man's evolution started geologically in the Devonian period of the Paleozoic era. This is known as the first root-race, about 345,000,000 years ago. (2) He reappeared as the second race at end of Pennsylvanian still in Paleozoic era, about 270,000,000 years ago. The third appeared at about Triassic times of the Mesozoic era, 180,000,000 years ago, the fourth in Cretaceous approximately 105,000,000 years ago. The fifth and present race of men had its rise in the Miocene period of the Cenozoic era. Its culmination has been from Pleistocene, age of man, until now. The sixth of these will have its rise in millions of years in good old America.

Now while thinking in series of root-races and ages, etc., I shall attempt to explain the existence of mammalian and simian stocks in connection with the common belief that we are the descendants of Mr. and Mrs. Anthropoid. This one common belief has retarded the outlook of Science to the extent that the hypothesis has become a dogma and all dogmas are the result of ignorance.

'Manlike apes,' and anthropoids were the sinful result of Miocene alliance, when the fourth great race had passed its climax. Proofs of this are to be found by studying the anatomical features of man and apes. Further evidences of this could be produced by scientists on this basis, except for their studied effort to belittle

man's grand background and history to a few insignificant thousands of years.

Man was endowed with this Manas 18,000,000 years ago; he was apparently unable to grapple with his new responsibilities so he took the course of least resistance, and was seduced by the influence of evil and selfishness. His evolution from that time has been that of bloodshed and fear, with minor periods of tranquillity. Once having attained to a self-conscious state and able to commit evil he did so. Leaders became ruthless despots, and the lands became rampant with sorcery and other black practices. The first forced men to evolve by overrunning each other. This brings in the Law of Karma, Sanskrit word meaning the law of cause and effect. It opposes the doctrines of fatalism and chance. We live, learn and evolve by this law. Thus the races conquered each other in payment for past actions.

To go back to early evolution, karma gives us one reason why species were wiped out and others made to suffer under the brute force of their superiors, and racially karma accounts for the tragic cataclysms which terminated each race of man. W. Q. Judge said, and this is for the sake of being pragmatic, that the white conquerors of America will have to suffer for their barbarisms in subduing the red Indians.

This would indicate that races are reborn to either suffer or repay each other; and why repay them if they hadn't lived before to deserve it? This introduces the law of Reincarnation, law of rebirth. Races of men have their hey-day as does everything. These days come in turn allowing for every race to have its hey-day. In other words when a race has had its fling it gives way to another. These fluctuations are governed by the very precise laws of nature known as Cycles upon which everything evolves.

Evolution, therefore, appears to embody all fundamentals of

nature, for it is the reason why we are here. Most men sense this, even a drug-store keeper I used to know who has above his entrance:

"Don't ask me any questions — if I knew everything I should not be here."

The human stem is the main trunk from which all springs. This is not a dogma, for evidences found today are tending to confirm it. But will animals ever evolve to become human beings? If you are talking about the visible physical form the answer is no, but the soul-mind which is what is evolving, will become or enter the human body form. Such simple truths if known would do away with dogmas which give rise to such useless theories as that of the missing link, and other "explanations" which have made famous evolutionists the cynosure of all thinkers.

In order to know the reasons for evolution it is imperative that we delve into the wisdom of the unchanged oriental scriptures, for it is materialism, not evolution, that denies the divinity of men. Another cause, unmentioned up till now, is the simultaneous involution of spirit into matter from above, for it is this spiritual "oomph" which evolves man from the mortal to the immortal.

Theosophy's greatest contribution to the world right now is through science, for science is now, more than ever, our means of expression, and even if its only contribution were to be a clear picture of man's evolution it would be enough, for evolution in part is the study of man, and the study of man is the study of the universe. It would force men to recognize and to honor a few esoteric things, and when this is accomplished men will be able to learn from their past that might does not make right, to learn also their responsibilities to humanity by loving humanity not less but humans more.

Science is objective — so is Theosophy. Ignorance is all that stands between them. The study of evolution belongs to science and religion, Theosophy. Nothing stands between them but ignorance. When will the line between the two be cut? Not until we realize that everything is divine and that we are on this earth for the same purpose — to evolve.

FOOTNOTES:

1. As a matter of fact, the lowest point has already been passed, at the middle of the Fourth Root Race, the Atlantean period. We are now on the "upward arc". ([return to text](#))

The Theosophical Forum

THE ICE OF SCHOLARSHIP — *A. Birch*

The Eye Doctrine and the Heart Doctrine are two different things. Head-Learning and Soul-Wisdom are the two powers in man which must be mutually adjusted to achieve balance. Yet "personality" is so subtle and so persuasive in its ways that those subject to it — and who are not? — find it very difficult to attain and maintain that balance.

It is a curious but true proposition that if a god *as he is* came among men as an active power, he would be an imbecile. Without the intermediate apparatus of the "mind" he or it would have no means of expressing itself. Several interesting deductions follow from this proposition, one of them being that mind in the sense of intellect, brain-mind intellect, is not a divine thing, though it may be on the way to becoming one. This being so, the cultivation of mind is a means to an end and not that end itself.

There is a strange fascination in scholarship when the student has passed a certain point. We are apt to grow into the feeling of scholarship for its own sake; it is a feeling which grows by feeding until often a scholar will imagine there is nothing more important.

Why should it not be so?

The reason is clear in the light of Theosophical teaching. It is that the brain-mind is part of the "mortal" side of man's composite nature. After the death of the body the intellect dies in its turn, but what we may call the Intellect persists. It persists by assimilating itself to the "immortal" part, technically called the Higher Manas, which in its turn blends with the still more spiritual part, the Buddhi. Sometimes in ancient literature the

Higher Manas is called the Intellect, but that does not identify it with the brain-mind function and the psyche or emotional nature, the desire nature, which is also one of the "mortal" parts of man.

The translation of "psyche" as "soul" means very little because two people appear to have the same definition of soul, and very few think of it as a vehicle for something else, which is a good suggestion as to its meaning.

Therefore it is necessary for the Divine and Spiritual in man to have their vehicles as a means of expression if they are to accomplish anything on the human plane or level. But if these vehicles are cultivated for their own sakes the object gained is of more or less temporary advantage. We have to live and work on this plane at present, therefore it is quite right to keep our tools sharp and polished, so far as we can, but it is important to remember that they are only tools, means to an end.

What is far higher than the mind and scholarship is Intuition in its true sense. This intuition is one of the functions of a higher part of man than the mere thinking intellectual apparatus. It is a spiritual function rather than intellectual and the man who uses it — all have it, active or latent — attains instantly to perceptions which for the intellect may take long years of study.

In the *Bhagavad-Gita* the distinction between these various rungs on the ladder of consciousness is well illustrated and in the recension by W. Q. Judge runs as follows: The thinking principle is higher than the senses, the discriminating principle is higher than the thinking principle, and He is superior to the discriminating principle.

This classification calls the psychic, emotional and desire parts of man's composite nature "the senses" — they are all of the lower, mortal, earthly nature. In the letter of James, the "Brother of the

Lord," the phrase runs, "earthly, sensual, devilish," and the Greek word for sensual is "psychic." The psyche belongs to the senses, not to the higher part.

Magnificent as it is and sublime the heights to which it attains, scholarship alone is cold, dry, brilliant. "It needs the gentle breezes of Soul-Wisdom to brush away the dust of our illusions," as the *Voice of the Silence* says. Crowned with the warm living human power of love and sympathy and understanding for all beings, scholarship is a splendid enterprise. Alone it is cold and lifeless, however sparkling it may seem. As Mr. Judge once said to an enquirer, "I do not want the ice of scholarship to form around me."

The Theosophical Forum

THE ILLUSION OF TIME — *Betula Baumer*

There is often a great gap between philosophy as spoken and as realized. We all know that time is an illusion, but how many of us treat that proposition as a fact in daily life. We speak of reincarnation and think of it as lives in terms of time, but it would be quite as reasonable to think of reincarnations as progressions or retrogressions in character, in growth, with knots at regular intervals where balances are struck and the next step is made with the balance carried over as a whole instead of as separate items.

Philosophers have frequently dreamed of occult centres on earth, or occult communities or brotherhoods, and many have longed to belong to such. Do they know what is involved? Some very genuine occult centres might consist of nothing more than a concentration of time and the consequences of that process. The qualification for such a centre might be the power acquired to live more intensely than in the world, or alternatively, it might be that power exercised in daily life.

We know how often some people's lives seem suddenly to be intensified like a photographic plate. Fate seems to fall on them all at once in every thinkable way. Some crumple up under the weight of circumstance, others become stronger by surmounting the waves of experience. Some aimlessly get through as best they can and are not much more than they were before.

Those who long for the trials of initiation often find these daily trials too much for them; they *are* the trials of initiation if deliberately invoked. If not so invoked they are the trials of that longer initiation called life. What other trials can we expect?

It is not difficult to imagine an occult school where the students start out with a vow to conquer all the petty failings of character, Only to find after a lifetime of effort, as they think, they have made no headway at all. If they have genuinely tried, the time of balance will come, when they find they have grown, but if they have only played the amateur it might be better that they had never vowed at all.

We imagine such a school as a wonderful place of human endeavour. It may be. It may be not. If the vow was made by the personality confusion may be worse confounded. If the vow was made by the producer behind the scenes the drama may be magnificent success or failure depending much upon the players, the tendencies, good and bad, of character. That producer is the MAN, not the personality, his servant who is ever trying to dominate him.

Can we harshly criticise such people who set out with high hopes and after a lifetime of endeavour, as they think endeavour, they fail? No. But we should be foolish if we fail to see what is happening and to profit by the lessons. Because we are not only our brother's keeper, we are our brother himself.

Let us not judge harshly then when we see a would-be pilgrim full of ambition to lead, of dislike towards a brother pilgrim, of self-indulgence, of pride, of petty personalities, of little revenges towards those who have done their duty, of desire to dominate, of desire for social prominence, of failures to rid the intuition of all these stumbling-blocks. They are positively childish and look so to the outside observer who does not know what their intensity is to the one who intensified time in his life and lives.

But we may judge the thing itself unmercifully. We should realize that it is a blot, a decayed spot in our own character appearing where it finds a more suitable stage for its public appearance; it is

ourselves. We are our brother's keeper; we are our brother himself. Let us not pander to it for any reason whatever, if we wish to help him.

There is a German saying, "When two people do the same thing it is not the same thing." This is certainly true so far as time is concerned. It has been said that a man may attain to Initiation in seven hundred years, or seven years, or seven minutes. For each of these classes the process is the same, but the time seems to be different. Is it? A civilization may take centuries to grow; when its time comes it can disappear in a year. Truly time is an illusion.

The Theosophical Forum

THE INSEPARABILITY OF RELIGION, SCIENCE AND PHILOSOPHY

— *William C. Beller*

These three terms, Religion, Philosophy and Science, represent three distinct and supplementary aspects of man's search for a proper relation to the universe of which he is a part. Religion is an expression of the yearning of the finite for the infinite.

The desire of the moth for the star
Of the night for the morrow
The devotion to something afar
From the sphere of our sorrow.

It is expressed largely in emotional terms, in feelings, aspirations, longings and deals not merely with worship and devotion to an idea of perfection, but with the problem of good and evil, the formulation of standards of right action and the motives of such action. In brief its concern is the ethical and devotional life of mankind.

But just as religion deals mainly with the heart, so philosophy is concerned with the intellect. It deals with many of the same problems as religion, such as the origin and destiny of the universe, the foundations of knowledge, the distinction between right and wrong, good and evil, and the source of the Intelligence manifested in the Cosmos, but its approach is entirely different. It uses reason, it thinks about these things; it seeks to analyze, to define, to describe and to classify all the factors of human experience.

The methods of Science are by observation and experiment. It seeks to ascertain what nature is by studying how nature works and in particular to learn the laws controlling all phenomena so

that these phenomena may be subjected to man's voluntary control.

Now these three approaches to reality so supplement each other that in the wiser ages of the past no one would ever have dreamed of separating them. The great temples of religion in the ancient world were at once the shrines of devotion, the academies of philosophy, and the laboratories of science, and the great priest initiates who were their guardians exemplified in themselves the highest attainments in all three fields of learning. The literatures of the ancient world such as those of India, Egypt and Persia, embody the three blended together in a way almost disconcerting to the shallower scholarship of a later age. It was so obvious to these men that man was an ethical-devotional being, an intellectual being and a practical being at one and the same time, that they could hardly have conceived the possibility of anyone attempting to split his many-sided nature into separate and distinct unrelated departments and categories. Holding as the cardinal tenet of their philosophy the indissoluble unity of nature and of man as a part of nature, they exemplified in all their works the statement of G. de Purucker: "Light for the mind, love for the heart, understanding for the intellect, all three must be satisfied before man can have real peace."

But with the progression of the cycles and the accumulation of Karmic tendencies, the splendid unity striven after in the archaic ages was lost and periods succeeded in which one or the other of these attitudes assumed dominance to the detriment not only of the others but of the well-being of mankind as a whole.

History provides examples: the period in Greece around the fourth, fifth and sixth centuries b.c. represents one in which the philosophic approach was uppermost. Such names as Pythagoras, Thales, Heraclitus, Democritus, Socrates, Plato and Aristotle are

too well known to require more than enumeration. They created the very word Philosophy out of two Greek roots which stand for love and wisdom, and interpreted the term in the two senses of the love of wisdom and the wisdom that springs from love. Their magnificent achievements in philosophy are a shining light to all succeeding ages, yet the decline of religious faith among their contemporaries and the neglect of the physical sciences permitted civilization to lapse into a declining cycle from which it can hardly be said to have emerged even today.

Europe of the Middle Ages, say from the sixth to the thirteenth centuries, furnishes an example of the dominance of religion to the detriment of other phases of human activity. While many apologists for this period have demurred at the expression "The Dark Ages" commonly applied to it, the term is accurate enough if we recall the widespread ignorance, the degrading superstition, the repulsive squalor, the appalling cruelty and brutality, and the insane fanaticism which characterized the life of this age, bearing in mind also, of course, a few noble exceptions which shine like lone beacon lights amid the surrounding darkness.

The modern world furnishes an example of a civilization dominated by the physical sciences to the neglect and detriment of both religion and philosophy. The consequences of this are so obvious in all the conditions around us as to call for no comment on my part. The use of natural forces for destructive rather than constructive ends, the failure to apply existing knowledge to advance the general well-being, and the absence of any generally recognized ethical standards as dominant factors in molding human relations must be obvious to all. Science has created a monster which threatens to destroy its creator, religion turns feeble and sadly longing eyes to the outworn superstitions of the past, while philosophy contents itself with merely describing and rationalizing what has transpired without any serious effort at

assuming leadership or seeking to discover the clues which would lead out of this dismal labyrinth in which mankind wanders, as *The Voice of the Silence* puts it, "in wretched desolation, starving for the bread of Wisdom, and the bread which feeds the shadow, without a Teacher, hope or consolation."

In this dark picture of despair what hope or encouragement can be found? Only that which Theosophy has to offer. I do firmly believe that the great Masters of Wisdom and Compassion had this mainly in mind, when they permitted treasures of wisdom kept secret since the foundation of the modern world to be given out by H. P. Blavatsky and the other Leaders of the Theosophical Society. Alone amid the discordant voices of the distracted world, Theosophy repeats the grand old watchwords of harmony and unity. In her monumental work, *The Secret Doctrine*, H. P. Blavatsky takes for her sub-title, "The synthesis of Religion, Science and Philosophy." But how does Theosophy hope to effect such a synthesis?

In the first place by demonstrating that the Universe, the Cosmos, in all its seeming multiplicity and diversity, is a manifestation of The One Life; that what we call matter and what we call spirit are but illusory aspects of one reality; and second, that the various departments of man's own nature, such as the ethical, the aesthetic the intellectual and the practical are but aspects, phases or facets of the same being, and that man is in no sense a complete being if any of these is neglected or given disproportionate prominence.

We see then that Theosophy propounds a philosophy in which man and the universe are essentially one, and in which the material and spiritual aspects of both are essentially one. Thus, there can be no true science which neglects religion, and no true religion which neglects science, while philosophy stands as the

organizing and harmonizing mediator between the two. In such a picture, the Universe is not viewed as a vast, lifeless machine, governed by chance, accident and purely mechanical laws, nor is Divinity something external and apart from the Universe. As a poet has said

"All are but parts of one stupendous whole
Whose body Nature is, and God the Soul."

Only nature as viewed by the Theosophist includes spiritual as well as material nature, expressed in worlds visible and invisible, and the "God" of the Theosophist is an aspect of the Causeless Cause expressed in the tiniest atoms as well as in worlds and systems of worlds. Man in this scheme stands as an inseparable part of the Cosmos, partaking alike of its spiritual and material aspects, having as the heart of the heart of his being the same Divinity which is at the heart of the universe, and expressing through vehicles of his many-sided constitution the same phases of that Divinity as find expression in universal nature.

How then can there be any separation between religion, science and philosophy? How can one know god except through nature, outer and inner, and how can one know nature except through science physical and divine? How can man know what to do with his knowledge and powers except through religion, and how, except by philosophy, can the relations between spirit and matter in nature, and spirit and matter in man and all these to each other ever be revealed?

So out of the tumults and confusions sprung from ignorance Theosophy raises the grand old Rallying Cry: Fideles, Sursum Corda! Lift up your hearts, ye faithful ones. Lift up your eyes unto the hills whence cometh your strength, the hills of the Ancient Wisdom of Mankind, which through its revelation of the essential oneness in both man and nature shows how all paths may lead to

the same goal and how all are equally indispensable and all equally profitable to pursue, providing we do not lose touch with that thread of light which, running through all, makes the Cosmos and all its component entities *one living Being*, the embodiment of a Divinity.

The Theosophical Forum

FOR YOUR CONSIDERATION — *Hazel Minot*

Who is the Doer? There is a world of conjecture in this question, especially when the results of action bring acclaim or satisfaction. Our answer is dependent, perhaps, on our way of looking at things — through which end of the telescope. If we study the heavens and try to understand them from our earth-life experience, our comprehension is going to be correspondingly limited. If, however, we try to raise our consciousness so that in some measure, even though dimly, we glimpse the majesty of those starry spaces, our whole being will expand; and with this, in time, will come real understanding.

* * *

I read a poem and it brought joy to my heart. Who wrote the poem? I do not know, but for the space of time that the poet's mind reflected the spirit of joy, genius was there.

I stood before a masterpiece in color: a landscape touched by sunlight, but swept here and there by lazy cloud-shadows. I, myself, wandered in that countryside. I learned what depth of beauty lay hidden in its hills; the many flowers that could be gathered from its meadows. Who painted the picture? I do not remember, but there was magic in the brush that touched paint to canvas.

"Cold" marble held me spellbound. But it was cold only to the touch, for life itself glowed within that sculptured form. What vision had the sculptor seen that he could tell it thus in stone? His name? Who knows — and yet he too brought gifts from heaven!

I listened to a symphony and knew in my own soul the heart-yearnings of the composer. There was anguish in that music, and

then came final triumph and — peace. Who wrote this symphony? Does it matter?

Did the poet think the spirit of those joyous lines was his creation? Were the painter and the sculptor insensible of the source from whence their inspiration came? And did the musician suppose that his power to touch the hearts of men came from himself alone? Each may have had a few such moments of blindness; but when the fire of inspiration burned, each knew how insignificant a part he played, and saw his genius as a candle-flame lighted at some Cosmic altar-fire.

* * *

Then, do we never achieve greatness by our efforts and in our own right?

Greatness lies not in the things accomplished, nor in him who achieves, except as he make himself a better instrument to express those "great ideas" which are the common heritage of all men.

"Colorless nonentity," you say. That can happen only when, for one reason or another, we fail to make ourselves fit channels for the stream of inspiration.

We may thrill with a stimulating feeling of self-realization when we think of ourselves as the Doer in some worth-while activity; but are we actually accomplishing as much in the role of minor deity, with a limited stream of inspiration, as we could if we recognized ourselves as transmitters of an infinite source of illumination? Once get the vastness of the idea and all that it implies, and the thought of helping to channel that energy is going to become more and more insistent.

Was it complete understanding of this urge that the dewdrop

experienced when it slipped into the shining sea?

The Theosophical Forum

OCCULTISM — *Howard Utter*

In technical Theosophy flows an undercurrent of pure and deep occultism. There is evidence that occultism has been confused in the minds of many earnest students with esotericism.

Esoteric, a word used at first by the ancient Greeks among those initiated into the Mysteries, was later applied in ancient as in modern times to mark a distinction supposed to exist between certain classes of writings or discourses of Aristotle. The esoteric works designed for the disciples were thought to be less popular, either in style or treatment, and to contain more technical doctrines, than the exoteric works, which were designed for the public.

Technical doctrines, esoteric because taught in secret to a select circle, are, like symbols, inseparable from dangers. Though a necessary path, it is a dangerous one by which to approach one's own Inner Divinity.

Names which stand for things are confounded with the things themselves; the means are mistaken for the end; the vehicle of interpretation for the object; and thus the technical comes to assume an independent character as truth. All our Teachers have had a deep feeling about this danger and have emphatically warned us of the intellectual mischief present.

Yet it is easy for human indolence to linger among the familiar and well-defined and refuse to pass further on. So the timid remain content to dogmatize the technical, consider it profound if taught esoterically, and continue to rotate in the same close-cropped circle where they first learned to browse, while the progressive soul roves forth "to fresh fields and pastures new" in

the regions of occultism.

Technical Theosophy is the most complete embodiment of occultism in the world today. It contains more meanings than words, its expressions are as figurative as poetry and as exact as numbers.

Existing but partly concealed from observation, this living truth is clearly perceived only by disciplined investigation; which investigation is the science of occultism. It cannot be immediately or easily known under its envelopes of paradoxical enigmas that seem impenetrable to the less wise. Revealed by experimentation, occult science, being the Universal Synthesis, supplies the investigator with the lost factors in human science, and the lost keys to human progress; but he alone understands how to avail himself of it who comprehends the necessity of never misusing it.

The Theosophical Forum

WHERE DO WE GO WHEN WE DIE? — *Abbott Clark*

Where do we go when we die? The answer is too simple for belief: we go straight to the place or state we were headed for before we passed over. We could not go anywhere else. We just continue right ahead in our habits of thought and action though the actions are no longer physical but suited to the astral plane we are naturally prepared and fitted for. The mere fact of dying has no angelic transforming power. It merely tunes us out of the physical into the astral plane where we go right on as before thinking thoughts that are heavenly in character and that take us to Devachan, or thoughts of desire which are familiar and that keep us in a familiar state — that of Kama-loka. It is just as simple as that. But remember that our desires are transitory things — rather superficial after all. They run their course and we are, sooner or later, freed from them.

In order to understand this subject more thoroughly we have to realize that a man after all is not just the physical person we behold from day to day and whose outward acts we judge him by. Man is a thinking-soul and souls have a way of asserting themselves sooner or later and outgrowing childish desires. So when the soul is freed from earthly bondage it seeks its own, and sooner or later, slowly or rapidly, gravitates towards its center of attraction, which, most naturally, we can call "the home of the soul." For a distinctive name free from false teachings we in Theosophy call it Devachan.

So let us study the nature of devachan as taught in Theosophy. In the first place we have to accustom ourselves to the fact that heaven is neither made of wood, nor brick, nor jasper, nor has it golden streets without cobble-stones or gutters. It just is *heaven*.

Now, what do you mean when in daily life you say that for an hour you were in heaven? Why, you mean a state of consciousness — a state of blissful thought and feeling. A state in which you absolutely forgot your little self and your mere personal, selfish or physical world. You were absolutely happy. Well, that is devachan.

The all important thing to grasp is that you were in a blissful *state of consciousness*. It was a *state of consciousness*, not a physical world. I do not mean a vague abstraction free from any kind of substance. Theosophy does not recognize any such absurdity anywhere, in any world, physical or spiritual. In all worlds that mind can speculate upon or religions can talk or teach about there is a corresponding degree of matter (prakriti) — real matter. The higher the plane or state the finer and more real the matter: mental matter, spiritual matter (akasa), divine matter. So, if you can get the idea, in devachan you are in the plane or state of mind natural to your most heavenly and spiritual thoughts and feelings. Remember, thoughts are *things*. Real things, but not stiff and wooden. You change them by changing your feelings and your imagination.

Remember, imagination is a man's greatest creative power — the power of creative thought by which each of us builds his future. Everything in life that amounts to anything we first imagine and then think out. That is just what we do in devachan. The difference is that in devachan we are living in a world of pure thought. Our thoughts take shape before us and we live in and are surrounded by them. Thus all our ideals are objectivized before us. They make for us an objective environment often more vividly real than physical life, hence in devachan we live in a world *exactly suited* to us for it is made by ourselves.

It may help us to realize all this if we remind ourselves that no

intelligent person lives in his body and its senses much of the time. As a matter of hard fact we live mostly in our minds right now — in our minds, and thoughts, and feelings. The difference is that in the physical state or world we are limited, bound and hedged in by reluctant matter while in devachan our thoughts and ideals are free to objectivize themselves readily and immediately. Think of how happy we would be if in daily life we could do just that. What an advantage to be in devachan.

Each man's heaven world is *exactly* what he desires and expects and requires because it is created by or *of* those desires, expectations, and imaginations. The thoughts and feelings of everyday life emanate from us moment by moment and they hang around us like a perfume or a cloud of smoke as the case may be. To be more technical and more exact, they make an *aura*, an invisible but very real astral shell or house in which we live and which we carry around with us as a snail does his shell. This is why a man can never escape from himself — because he carries himself with him. In fact this aura is himself. In it he carries his karman with him. This is one reason why a man can never escape his karman — it is himself. He carries it with him whether he goes to New York or to devachan. In other words, your aura is a sort of astral glass case which holds yourself together. In earth life it is invisible, subjective, except in rare cases of clairvoyance or vivid dream. In devachan this aura is what you live in. The thoughts within it there become our objective world. That is the whole story.

If men took their faults with them to the hereafter, what kind of place would it be? Better stay here where you can call a policeman. But what becomes of our bad thoughts? — if we took those to heaven it wouldn't be heaven. Well, kindly nature takes care of that. Take a simple illustration: Suppose you have a glass of water more or less dirty. Set it down quietly and the dirt will

settle to the bottom and the clear water will rise to the top. That is the way with a man's aura in the silence after death. The clear water of his life rises to devachan and the dirty water — we call it the "spook" — stays in the lower astral light.

Did you ever see spooks? They did not look like angels, did they? But if you could rise high enough and had clear enough inner vision (clairvoyance) to see souls in devachan they would be radiantly beautiful, angelic. The "spook" (Kama-rupa) stays in the earth's atmosphere (Kama-loka) and gradually dissolves into its primal elements (skandhas and life atoms). But it all belongs to the man who made it and so in his next life it is drawn back to him. That is a part of the man's bad Karma, while the good thoughts he had in devachan have been digested and assimilated into his character and return as a part of himself. People speak with more wisdom than they realize when they feel and say that a baby comes from heaven.

Devachan has sometimes been likened to a dream because dreams are likewise made of thought. Some dreams are almost as vividly real as devachan. Devachan is a spiritual state and spiritual states are always more real and beautiful than the grossly material state of earth life. Master K. H. says "To call the devachan existence a "dream" in any other sense but that of a conventional term . . . is to renounce forever the knowledge of the esoteric doctrine."

Having lost his physical senses the devachani cannot tune in to the jazz of the physical world. His life is mercifully undisturbed by witnessing the sorrows, misfortunes or perhaps sins of his loved ones on earth. Heaven would not be heaven if the sorrows of mortals invaded devachan.

Let us remember and remind the bereaved that there is no separation in spirit. "We are with those whom we have loved and

lost in material form, and far, far nearer to them now than when they were alive," says H. P. Blavatsky.

Pure holy love is spiritual and from the higher plane reaches the loved ones on earth, acting as a comforter and a shield. Between those with pure love on earth and those in devachan there is a play of spiritual forces as real as radio waves, obeying similar laws: that is, to register them you have to tune in to their spiritual state. Pure love is the strongest of Karmic forces and will bring all who so love together again in future lives.

The Theosophical Forum

PERSONALITIES — *Harij*

From the PATH, November, 1887.

Step aside, O toiling brother, into a convenient bye-way, and for a moment let the surging crowd pass by. Do not tremble like a child for fear that you may be hopelessly left behind, for you will be forced back all too soon, though, if you really pause, and truly ponder, you will never again be so completely identified with the pursuits of the crowd, though you will still be a part of it. Ask of your soul: "What are these personalities that make up the mighty human tide so widely rushing past — this rushing tide replenished at every instant by birth, depleted at every instant by death, yet flowing on for ever?" How read you this journey from the cradle to the grave?

Think of the countless myriads whose weary, toiling, bleeding feet have worn deep the channels of this river of time. Listen to the complaints of the weary, the cries of the wounded, the groans of the despairing. Watch with pity the ashen faces as they hear the sound of the cataract ahead, over which they know they must plunge alone into unknown depths. Many are resigned in the presence of fate, for there is true courage at the heart of humanity, but how few are joyous except through ignorance and forgetfulness, and these are the frightened ones in the presence of the inevitable.

Listen to the loud acclaims, when in the rushing stream one is for a moment borne aloft on the crest of a wave, and watch the envy and even malice of those who are inevitably drawn into the hollow of the wave as they also struggle to reach the crest. Alas! the waves of Wealth, and Fame, and Power; Alas! the bubbling foam of Love. The night cometh and the stream is still; yet even in

the arms of the Brother of Death the echoes of these mighty waves chant their requiem.

Listen a little deeper, O brother of my soul, and hear the sound of many voices: "What shall I eat? What shall I drink? and wherewithal shall I be clothed?" and then, alas! "O, whither do I tend?"

And still the surging tide rolls on. A friend is passing yonder; hail him and beckon him to thy side. He answers: "I cannot wait; I have not time." Alas! what hath he else but time, and the foam of the maddening billows?

Turn now to thy companion, he who bade thee turn aside. Canst thou stop to consider, "Is he short, or tall, or fat, or lean, or black, or white, or man, or woman?" "Are his garments soiled or clean?" "Comes he from the East, or from the West?" "Hath he letters of introduction?" "On whose authority did he bid thee halt?" "Did he speak in conventional language, and with the proper accent?" "Has his raiment the odour of the sea, or the breath of the mountain, or the fragrance of the flowery vale?"

Be sure it is not thy awakened soul that thus inquires, 'tis only the voice of the stream yonder, and when thou turnest to look for thy companion, lo! he is gone, and thou art alone, alone with thy soul, and with the echoes of the stream. Fear chills thy blood, and every separate hair stands on end, and as thou rushest back into the surging stream, even thy boon companions are terrified at thy staring eyes, and thy death-like face. . . .

How many are turned aside by personalities? How many look to the garb of the messenger, forgetting the message, and yet is not the message plain? At one time the message comes from a manger, at another it descends from a throne. Yet is the message ever the same. Nature and time regard not personalities, but

swallow up all alike, yet do nature and time and destiny teach ever the same great lesson, and he who would learn of these must both forego and forget personalities, his own and those of others. Personalities are but the fleeting waves on the river of time, caused by the friction of the winds of fortune; they are thy weakness and not thy strength. Thy strength is in thy soul, and thy soul's strength is in the calm, and not in storm revealed.

Inquire not who or what the messenger, but study well the message that comes to thy soul, and bears thee ban or blessing, according as thou receivest it, and while thou waitest with lamps untrimmed the Bridegroom passes by.

What matters it to thee what infirmities the messenger may bear, except as thou mayest help him so to bear them that truth may run a freer race? Is it not enough for thee that truth hath given him her signet ring? Judge, then, of this, and if he falter in his speech or loiter by the way, take up the theme in clearer tones and speak of it from thy soul to all thy kind.

Wilt thou withhold thy blessing from the hand that bears the gift, and covet while rejecting the very gift it bears? If thou art so at cross purposes with thyself, how canst thou be *at one* with truth?

Truth is many-sided, speaks every language, is clothed in every garb, yet is she ever still the same, *One*, and unchangeable, now and for ever. And if she is no respecter of persons, canst thou be more select than she? Alas! thou canst not find her thus, but error rather, and self-deceived rush down the stream of time, and when thy personalities fall off then shalt thou realize that thou didst refuse the banquet of the gods by scorning thus their messenger. Search out, and know and love and serve the truth, *for truth's own sake*. Follow it through all disguises with scent more sure and keen than hound in search of game. Refuse it not, though it reach thee from a dunghill, welcome it as though straight from

God's own throne, and thus shall it ne'er escape thee, and neither love, nor hate, nor fear shall mar thy harvests, and truth shall honour thee, as thou hast welcomed her.

Beware of false authority, for neither pope nor priest, nor book can of itself contain it all, and yet despise them not, for so thou'lt miss the truth. The sole authority for truth is *truth's own self*, and if thy soul is but akin to her, thy quickened soul will recognize her every garb, by ties more strong than blood, by kinship everlasting, and as the waters mingle with the sea, so flows thy soul into the bosom of the deeps whence springs afresh in thee the everlasting Life which is the vital breath of Truth.

The Theosophical Forum

PARADOX — A. Birch

Many use the word paradox without quite knowing its exact significance. A useful definition is that a paradox is a statement which looks contradictory until further information reconciles it and shows both sides to be parts of the same whole. Theosophy is a philosophy where the last word is never said and dogmas do not belong, unless you call Universal Brotherhood a dogma. That is all that is required of a candidate for membership in the Theosophical Society, a belief in Universal Brotherhood.

Here at once we have a striking paradox. It is declared that Universal Brotherhood is a fact in nature and yet it is perfectly obvious that brotherhood is about the last thing to be found in the world in general today; or for that matter in brotherhoods. How is the paradox to be reconciled? The truth is that Universal Brotherhood is a fact in nature, we are all interdependent whether we like it or not; we all have to hang together or hang separately, as someone expressed it when striking a bold blow for freedom. But nature includes many planes or levels of thought and consciousness. The one plane where brotherhood is conspicuously absent is the intellectual plane, the mind plane, and that is what it is our work to do — to make it a reality on that plane.

As an Eastern scripture says, we are made up of our thoughts. We live in the brain-mind and emotional nature, most of us, and we see the reflection of our inner selves in the outer gray of the everyday. Nothing whatever prevents us, except ourselves, from making the outer life what we think it ought to be.

A kind of paradox with which we are familiar often seems to make mental conclusions inevitable. There was a willing but

brain-mind assistant in Mr. Judge's office who was absolutely convinced that the solemn but absurd charges made against his chief were true, as many others did. His intuition, that higher sense than the brain-mind thought or psychic notions, was not in operation. But loyalty to some who had intuition gave him the power to respond instantly when they told him that the segment of vision subtending his view was not the full circle and he realized through his loyalty what the truth really was. In this case loyalty had its rich reward at least for the time. Genuine loyalty, whether to a vow or to leader, is often the same thing as clear vision, if that vow or leader represents the higher part of one's nature. The wide sweep of spiritual vision can see all round our paradoxes, the lower vision cannot.

The ancient oracle often spoke in paradoxes. The general rule was that enough was said in reply to a question to give spiritual help provided that the inquirer used his intuition. It may seem a little childish to us who do not understand the spirit of the thing that one of the famous oracles answered three applicants that the first of them who should embrace his mother should obtain what they each desired, the succession to a kingdom. Two ran off home but the third knelt down and kissed the earth. He was the successful one. But then he deserved to be; he showed intuition in embracing Mother Earth. Spiritual things are often as simple as that; the child could understand them while the man of the world is not simple enough to do so.

Another Temple paradox was that the power of money was not always spiritual power, if ever. An evil man suffered in his eyes as the direct result of his evil ways. He was rich, so he went to the Temple of healing, offering a rich reward for treatment. He stayed the night in the usual fashion but in the morning he was not told of any favorable oracle delivered during the hours of sleep. He was given his money and told to go and live a better life.

They did not want his money. We may smile at the simplicity of the tale, but there are moneychangers today who would buy the things of the spirit with money, and they are simpler than the man who recorded the tale. It cannot be done. Rather the contrary. The truly spiritual Teacher has no property of his own whatever; he gives all, he takes nothing. It is another paradox. The more he has the less he has. The widow's mite is more than the rich man's fortune when she gives her all.

There is much that is paradoxical in human nature. The reason is simple. Human nature is compound and it is quite possible for one thing to look different from itself when viewed in the light of a different "principle" or aspect of that compound nature.

Of this kind is the solemn mystery-scene of the initiate praying that the bitter cup may be taken from him. It is the "human" soul who speaks. But it adds: "Nevertheless not my will but thy will be done." This "my" is of the *personal* soul, the "thine" refers to the *spiritual* or *divine* soul in the same man. The lower man complains of the burden; the higher man willingly takes it up.

Another paradox is that in which we learn utter humility. We are too small to matter; we are so humble that we cannot do anything; we must not assert our personality. In the same breath we say we are gods; we are divine, how dare we degrade our divinity by being so humble. Many a sincere heart has been troubled over this paradox. Many a priesthood in antiquity and later has exhibited an arrogance beyond bearing and in doing so has taught and demanded that the layman shall be miserably humble. And the layman has often so forgotten how to think, if he ever knew, that he, and perhaps more often she, humbly follows a priest who is no priest, worshipping a personality, when the great flaming soul within is flouted. In many a Theosophical Society there has been personality worship by negative members and

they have always found those who are ambitious for followers, often to the neglect of the genuine spiritual leader.

Let the soul be humble before the divinity within and before no outside priesthood whatever, however garbed. There may be respect for a genuine spiritual teacher, an immense respect, but it is precisely that teacher who always insists that in the end there are no gods but God and all the Teacher can do is to point the way within to the finding of the God in the heart of all things.

Life itself is a paradox and someday we shall all find the seeming contradictions reconciled when we have a wider sweep of experience, even though that experience often comes to us in a bitter cup.

The Theosophical Forum

THE GOLDEN CHAIN OF MYTHOLOGY — *Allan J. Stover*

But the ancient and the oriental pantheons are in reality allegories or personifications of the hosts and hierarchies of cosmic powers, divine, intermediate and terrestrial, in uninterrupted sequences. And where an ignorant devotee might address prayers to some of these personifications, the enlightened one, in invoking Jupiter or Mercury, would merely seek to evoke within himself the human power corresponding to the cosmic power, and of which the human is a direct, albeit a feeble reflection. — *G. de Purucker*

There are few studies which have suffered so much from the imposition of fads, as has mythology; at one time the ancient myths were accounted for according to the *historical theory* in which the acts of men, half forgotten, have become legendary. Then there was the philological interpretation by which the lost meanings of words were supposed to have resulted in senseless stories. There is also the allegorical explanation which considers myths as symbolic of physical, chemical or astronomical facts, or of moral, religious or philosophic truth.

At one time everything mythological was explained (in many volumes) as being derived from the magic and superstition of savages; at another time the solar myth theory offered a general solution. But whatever the theory, the theorist stood at the summit of human progress and assured himself that these stories were no longer believed by anyone, and existed solely for entertainment.

But the great myths of mankind, distorted though many of them are, have too much in common to be explained away. The breath

of the universal flows through them; everywhere we find the golden chain of esotericism linking them together. We turn to them again and again, vaguely and correctly sensing something beyond our grasp.

Pythagoras, Plato, Lucretius and most of the great thinkers of classical times, deplored the ridiculous stories which even then had grown up about the gods, endowing them with all the failings of weak humanity. Many of these great men, knowing the teachings of the Mystery Schools, tried to give hints, as far as they were permitted, of the real significance of the ancient myths. Cicero, who was an initiate in the mysteries of his time, says in his remarkable essay *On the Nature of the Gods*: "But rejecting these fables with contempt, a divinity is diffused in every part of nature; in earth under the name of Ceres, in the sea under the name of Neptune, in other parts under other names." He goes on to explain that "we should reverence the spiritual forces of nature as is their due, but without superstition."

Disfigured though they often were by poet or theologian, there is still present beneath the garment with which the myths are clothed a center of primeval truth; and while the average Greek of classical times may have considered the gods of his religion much as the devout Catholic regards the saints of his own faith, within the sanctuary of the Mysteries he who proved himself worthy might learn the true nature of the gods and of the stories told about them.

The works of Homer and Hesiod point to an earlier time when the system of Greek mythology was a pure and untarnished expression of theosophic truth. What is known to history is but the latter and downward portion of the cycle of mythology. During this later time the doctrines of hierarchical structure of the universe and the constitution of man, their evolution and

destiny, were veiled in myth and allegory. Only in the Mystery Schools were the ancient stories explained openly. Why? You may ask.

A myth is essentially symbolic and depends upon analogy for its meaning. Moreover, symbolism requires different thought processes than those in ordinary use. Word thought develops logically, step by step, each unit depending from the preceding like separate links in a chain. Myths and symbols, on the other hand, develop their significance according to what may be described for comparison as a *net* pattern; as a language of analogy they reveal universal rather than particular truths. Remember too that the great myths were acted during the Lesser Mysteries and spoke directly to the intuition.

Jupiter, according to the Orphic tradition, represents the Egg of Brahma, or *holness* of the earth or of any entity thereon; but as the earth has evolved through the series of the three Logoi — the unmanifest, the partially manifest, and the fully manifest — so we find Jupiter preceded by Saturn and Ouranos each in turn spoken of as "Father of the gods and of all things." The same divine principle is thus represented under different aspects and names at different periods of evolution. A man during childhood has the nature of a child; later, that of a youth, followed by that of a mature man. Yet throughout life the individuality continues. Jupiter, then, is that stage of the evolution of our universe belonging to the present Logos. As a symbol it applies to the all-encompassing divinity of any being: an atom, a man, our earth with its surrounding veil after veil of atmosphere, the solar system, or the galaxy. So to think of Jupiter or any other of the gods of mythology is to think here, there, everywhere, at one and the same time; for the principles personified are cosmic, universal.

The universe or solar system in which we live is an organic being in which every part is interrelated and responds to the same vibratory cycle of existence. Therefore every entity, in any aspect of its life cycle, is symbolic of or analogous to the corresponding phase in the cycle of any other entity. The life of a man from conception to old age repeats the characteristics of the life cycle of the world upon which he lives. To express that which is common to the dawn of a day, the spring of the year, the childhood of a man, or the beginning of any cycle, we must use symbol or myth, since these alone represent universal principles.

The universe is composed throughout of hierarchies within hierarchies ranging from the atom to the galaxy, and in each of these systems there is an analogous structure of inner characteristics and series of evolutionary procedure; so that each unit contains within itself something of all that the universe contains. We may compare the hierarchical system to a magnet — it has a N. and S. pole, yet within it each particle has its own N. and S. pole, all oriented the same way. Strike the magnet repeatedly with a hammer, or heat it, and the particles are disarranged, their poles are no longer in harmony; the magnetism is lost.

The structure, origin and evolution of the universe may be studied today in Theosophical literature under a manner and terminology suited to the present age. In ancient times this same knowledge was given veiled in the form of sacred dramas or in the legends of mythology, so that the pantheons of Greece, Egypt or India originally embodied the same knowledge regarding the hierarchical structure and evolution of the universe as do the Theosophical teachings of the present time.

There is a saying attributed to the Roman Emperor Julian:

The sun divides the zodiac into twelve powers of the gods,

and each of these into three others, so that thirty-six are produced in the whole, in oration to the sun.

It was anciently believed that the universe was presided over by twelve gods and that this twelvefold structure was repeated in every planet within that universe, so that each of the twelve was represented on every globe. Every planet was thus considered as a microcosm of the macrocosm.

Orpheus calls the divine orders which are above the earth a "*golden chain*." Homer also, in the eighth book of the *Iliad*, speaks of a golden chain by which the gods and goddesses, the earth and sea, and all things are suspended from Zeus himself.

Beginning with Jupiter each god or divine principle functions after two manners: first as the architect, second as the builder. Thus Jupiter is found working together with Juno, Saturn with Rhea, etc., the god and goddess together personifying the twofold function of the one divine principle.

Since there are various planes or degrees in the universe, different names are often given to different grades or progressions of the divine principle symbolized by a god or goddess so as to make it plainer which hierarchy or sub-hierarchy is under consideration. To one not understanding the hierarchical structure of the universe, mythology, which is its symbolic personification or dramatization, may be confusing or even contradictory. But considered as the descent and ramification of a stream of creative consciousness the ancient myths begin one by one to reveal an underlying pattern.

THE THEOSOPHIC LIGHTNING ROD — *Philip A. Malpas*

The question has often been asked whether it is possible for one to assume the karma of another and yet not violate the law that karma is absolutely implacable in its workings, the law that an effect must follow its cause as relentlessly as the rut follows the wheel. How is it possible to have Saviours of Humanity if every man must work out his own causes with no vicarious shifting of the burden?

The question has been complicated by the prevailing religions in the West. For fifteen hundred years and more they have sedulously hammered in the idea of vicarious atonement and the most ordinary observation shows that an idea so advertised and taught must have its effects in the popular mind, whether the latter is conscious of them or not. Ideas are the soul of things and the Western world has been so taught to fear and then to desire to be saved from fear that a nightmare has been built up of sinners by the million being saved by a semi-hypnotic "belief" in something which they know nothing about, neither they nor their accepted teachers.

Yet in these popular superstitions there is usually some slight seed of half-remembered mystery-teaching and they are therefore all the more difficult to shake off. On the other hand an open mind may possibly follow the clue and find out what really lies behind. Is there any such background, however slight, to the idea that one can suffer and so save another?

The answer, or one answer, is highly philosophic. It is that the whole drama of the Christ-cycle takes place within the man himself, within each and all in due time and place. It is mere exotericism that the inner Christ is externalized into another man

altogether. The *soul* to be *saved* and the saving *Christ* are locked up as in an ark within the very complex entity known as man. If anyone wishes to tackle the problem from a practical point of view let him dwell on the shifting of the consciousness within him from the lower, material, psychic, emotional, personal part of himself to the higher, spiritual, serene, universal part of himself, the Christ-part; the Buddhi-part, if he prefers that nomenclature. We have for untold ages been doing the opposite, therefore it is not to be accomplished in a day, nor are there courses at so many dollars a time which will accomplish the desired result. But a daily and hourly expansion of the consciousness through thought and work for others will in time, perhaps a very long time, perhaps less, produce its effect. There is no short cut except concentrating on the work in hand. Many, very many, know of this and in their eager, emotional desire to excel or attain a rapid goal forget that they themselves are part of humanity, and in their efforts to help others kill themselves or cripple their efficiency with starvation or some exaggerated notion of *unselfishness*. It is obvious that we cannot help others very much if we do not through proper diet and exercise and other everyday methods keep our physical instruments in good order. *Mens sana in corpore sano* sounds like an age-old echo of the Mysteries; a sound mind in a sound body is as occult a thing as one could wish. Yet there have been many cases of a very sound mind in a frail body. Cases of spiritual development often demand that the physical shall not be too strong, but active work in the world is restricted by a lack of physical strength. H. P. B. and W. Q. Judge in sustaining and combating attacks and weaknesses in the Society used up an enormous amount of physical strength which should have been used for more important purposes in their capacity as Leaders. Only too often, instead of the members supporting them, the case was reversed.

It seems almost a true figure to imagine the Christ-part of oneself as a waiting god within — waiting for the man-part to rise into being itself spiritual and then divine. This comes only through self-effort.

Looking at it this way it is not so far-fetched to say that vicarious atonement has a seed of common-sense in it; but it must be recognized that the *soul* and the *Saviour* are in one and the same complex entity. The superstition lies in looking to an outside man or god as a saviour. The notion of such an outside saviour is akin to the notion of an infinity outside ourselves, an infinite god that is not in us and in every atom in the universe, something *outside* which one prays to.

Naturally there are analogies and one of them concerns the question in hand, that of a Leader taking on himself or herself the karma, the good or bad effects of every action done.

Mr. Judge, our second leader, was asked this question and he replied that it is a complicated matter not easily explained in a letter. But as a general statement it might be said that certain effects were drawn off and dissipated through H. P. B.'s personality in somewhat the manner that a lightning rod noiselessly and safely disperses an accumulation of electricity.

The rigidity of the idea of karma at first sight seems absolute. But a quiet consideration shows that concentration or spreading of effects is possible. This idea must be allied to that of the Guardian Wall around humanity. It cannot take our karma from us, but it can protect and modify and guide until we are able to bear and work out our own salvation.

We are reminded of the old Mystery-tale, if it is such, that a man was condemned to be stoned with a huge rock. That meant death. But one wise in spiritual things and clear in intuition immediately

pointed out that if the rock were reduced to crumbs they could be thrown, certainly with much inconvenience, but with safety to life and limb.

Whatever conclusions may be drawn from these observations, it is an obvious fact that H. P. B. and other leaders have certainly acted as very efficient lightning rods for the salvation of the organization. Someday the world will know, or partially know, what vicious attacks the Theosophical Movement has sustained and will realize that only exceptionally wise guidance has saved it time and again from being crushed. Meanwhile there are innocent souls who imagine that anyone can be a Theosophical Leader without being gifted with enormous spiritual strength. When H. P. Blavatsky was doing her grandest work, she was undergoing such physical strain as would in a matter of weeks have shattered the frame of any who lacked the highest spiritual training. Even her strong frame was only held together by a will power rarely met with through the ages.

The Theosophical Forum

HYPNOTISM — *Herbert Coryn*

We, members of the Theosophical Society and old students have read and thought much on hypnotism, so much that we have almost put it from our minds, feeling that for our own purposes it has been sufficiently attended to and is done with.

We are mistaken. As our Teacher has said, the dangers of it have not yet been half understood even by those who have given it most attention. Its subtler forms we have not traced out. As possible subjects of it we are consequently few of us fully on guard; some of us not even on guard lest we fall into the greater peril of employing it. Peril is the right word, because of the karmic retribution, loss of the path, even loss of humanity, which the continued practice of any sort of hypnotism assuredly leads to.

The more psychology — in the proper meaning of that word — we can get to know, the better we may understand what hypnotism really is. This much of it, at any rate, is clear:

The *mind* throws up a lot of thoughts about everything; the *judgment* looks at them and decides which of them is reasonable. If it is a question of conduct, the mind makes pictures of possible courses of conduct; judgment decides which of these courses will lead to the end in view. If you could split a crack between a man's mind and judgment, he could not distinguish, amongst his thoughts about anything, which thought was reasonable; nor what was a reasonable end to have in view; nor what was a reasonable way of reaching an end which he did have in view.

Hypnotism does actually split such a crack. Will stands side by side with judgment, both the allies of the self. Hypnotism makes a

crack, then, between mind, the picture-maker, and this triad, self-judgment-will. The mind is consequently manifested as insane, one idea about anything being as readily accepted as another and then held for truth. And action passes under the direction of external suggestion, instead of that of the man's own judgment and will. The triad, which is in its real nature potentially divine, is, so far as any effect upon the man goes, paralysed, made to stand back. Any kind of feeling that may happen to be thrilling in the nervous system, even the most animal or brutal feeling, may, under external suggestion, come straight out into conduct. There is no judgment to pass upon it and no will to control it.

We can make a sort of picture of the situation in this way: Consider the mind as an essence filling the nervous system, the nervous system of feeling, and the nervous system of picture-making, thought-making. On its lower side this essence touches the nervous matter; on the other, upper, side it is linked to the guiding and willing triad (of self, judgment, and will). Hypnotism somehow breaks that link, temporarily and, if very often repeated, permanently.

But then follows something else. The now *unguided* essence is also *unprotected*, for the healthily-acting self *protects* its mind, to more or less degree, from influences from without.

But it is influence from without that is now the special situation. For there is an operator, the hypnotist. *His* mind-essence can now get in and blend with that of the subject, *both* now residing in the latter's nervous system. And the operator's mind-essence has the operator's will and judgment in it and directing it. But his triad, self-judgment-will, may never have been raised into the light; its actuating center may be ambition, love of power, or any sort of sensuality. Unless it has actually *become* the light — in which case he would never be a hypnotist — it *has* more or less of those

things in it. And he is now, in part or wholly, "running" his subject. The subject sees objects and possible lines of action, just as he is wanted to see them. He thinks as he is wanted to think. He acts as he is wanted to act. Sometimes the crack is not complete; then he thinks and acts as his operator desires while knowing that he is doing so unwillingly, or that his thoughts and acts are wrong.

There is a mode of treating disease, especially mental disease, which consists in keeping the patient in a room lit by light of one color only, red, blue, yellow, or green, the furniture and walls being of the same hue. The mental state of the patient gradually alters according to the color used. He is stimulated, quieted, or otherwise affected. But the atmosphere of color is nothing but color. The brain and therefore the mind, is reached through the eyes only.

Suppose, however, that the atmosphere were not of *color* but of *mind*, of *ideas*. How much more potent would be the influence upon the subject's mind!

When two people are talking together, each of them is to some extent in an atmosphere of mind made by the other. That is all right; there is so far no question of hypnotism.

If, in the color-mode of treatment, the light were concentrated by lenses all over the patient's body and into his eyes, the effect would be much greater, perhaps dangerous.

Hypnotism is the corresponding process. When, in the conversation of two people, one of them uses his will in a special way, that is hypnotism. What way?

Normally, when one man wants to convince another, he uses his will within himself, to think his ideas more clearly, to get more of them and better ones, and to express them better. But if he is

trying to hypnotise?

Then, certainly, he will make his ideas as plausible as possible, as acceptable, so as to diminish any possible resistance from his victim's mind and conscience. But he does not let them stand on their own merits, make their own way. He uses his will directly on his victim to *force* them in. Whilst his lips are speaking, his objective of conscious concentration is inside his victim's brain. He is playing on the other's brain-cells through the eyes just as the color does; but he is focusing in, not a mere flow of therapeutic *color*, but of *ideas*. If he is successful his victim presently finds these injected ideas in his mind. To some extent the keynote of his mind is altered. His mind is no longer set in the same key as his judgment. They are out of tune. Which is only a way of saying that that crack or chink of which we have spoken, has been made. He is in the hypnotic state. Judgment being thrust back, the ideas in his mind seem to him to be valid ones and he will act and think accordingly. Moreover he may never altogether recover. Brain-cells that have once been occupied by someone not their owner, may never again be wholly their owner's. They may never recover from a foreign drenching.

On the other hand the operator has now some very heavy karma to pay. He must pay for any evil there may have been in his ideas. He must pay for all the evil that his victim may do and think while under their sway, and for all the evil he may do thereafter merely because of having once been divorced from his judgment and his brain-control. And he must pay, as well, for the act itself, an affront through his victim's soul to the soul of nature, the conscious principle of evolution. Who wants to run up such a bill as that? Certainly no one who knew of the amount of it.

Anyone who, wanting something for his personality, begins to think of some other as his agent or catspaw, has taken the first

step towards hypnotism. For into that thought, energizing will at once begins to enter. The next step is to make that entry of will *conscious*. The intended subject is held in thought, pictured, as acting in the desired way, or as having the desired thoughts or motives. The karmic bill has begun to be entered on the books. And the moment the intended victim begins to yield, begins to think of acting as he is wished to act, at that moment the operator, whether conscious in his outer mind of that yielding or not, feels and is gratified by an extension of his personality, his sense of power. He is harder, farther from his soul and from the path of right conduct. Now he will go to his victim and say plausible things, give him reasons corresponding to his temperament for the course of action he finds himself contemplating or ready to contemplate because of the poison-current already working upon him.

It is a question which of the two should be called "victim." For if the one of them is the subject of the other, that other is himself the subject of his own ambition, love of his own way, and discontent; and, very soon, the subject of karmic penalty. And on the other side, the subject has prepared his own undoing by permitting or culturing some weaknesses of his own nature, sometimes the same weaknesses — the ambition and so on — as those of the operator, sometimes mere negativity of mind and will. Let us remember that such negativity, besides involving that the subject is swept about by his own lower nature, besides involving danger in respect of some ambitious person, involves also danger in respect of those disintegrating thought-waves that do always and will more and more break upon his mind from enemies without. We and our weaknesses are perhaps watched and known from centers in human life we cannot picture; and those who are hypnotists may have been themselves invisibly energized in their evil by conscious malign forces of whose

working they were quite unsuspecting.

None of us need be open to any kind of hypnotism. That is to say, none of us need be negative. Negativity of mind comes from failure to stand habitually up to duty and at each moment to the next duty; from failure in vigilance over thought; from failure to use the will in maintaining steady good feeling toward all, and from failure to find and live in the power of inner silence. We have been taught and re-taught that it is from the development of this power by constant practice, that the sister powers of *discrimination* and *will* arise.

The Theosophical Forum

PSYCHOLOGY — PAST AND FUTURE — *J. Croiset van Uchelen*

The philosophers of all ages have taught that the visible universe is but a fractional part of the whole and that, analogically, man's physical body is in reality the least important of his composite constitution. For, as the German medic and poet, Schiller, wrote intuitively: "The spirit is the builder of the body!" Yet orthodox medical science seems to assume, that the physical is all there is of man.

Paracelsus, noting the same tendency in his day, remarked: "There is a great difference between the power that removes the invisible causes of disease . . . and that which causes merely external symptoms to disappear. . . ."

The great Paris physician Trousseau, at the bedside of a patient, restrained his pupils by saying: "By your leave, gentlemen, a little more art, and less science." Beyond technical skill and knowledge lies intuitive insight, or what Pascal called "the logic of the heart."

Although psychology and psychiatry are beginning to play a small part, and mental causes of physical disturbances are no longer wholly denied, material science refuses to recognize man as a compound entity, as the occult doctrine teaches. Mental phenomena are still considered less "real" than the physical and the body is treated as an aggregate of functional mechanistic parts. This procedure leads to specialization by those who will never thus acquire the knowledge needed to follow the operations of the organs, in which they have specialized, beyond the material frontiers. Wrote Sir Richard Clifford Tute (*After Materialism — What?*): "The triumphs of medicine and hygiene . . . are largely offset by an increase of lunacy and mental and nervous disorders."

In consequence of the new problems to be faced, medical science is bound, sooner or later, to find such means as may affect the states of human consciousness by an approach more direct than through physical measures; indications to this effect are increasing. In a recent article in the *Presse Medicale*, Drs. Hecaen and Duchene, it was said: "Psycho-somatic medicine represents the most original and the most fruitful aspect of medical thought. . . ." Well, anyway, if not original, let's hope fruitful!

An outstanding article appeared in the Netherlandish professional Journal of the N. V. V. N. April 1948, by J. L. C. Wortman m.d. The author goes a good deal further where he writes:

The soul in medicine is not a symbolic idea, nor merely an idealistic principle. It is as real as man in his outer appearance and stands in relation to it as energy and substance. Each body that alters its energy content changes in mass, as Einstein has pointed out. Energy and mass, soul and body therefore become identical in principle Atomic science teaches us that energy and mass are interrelated; mass is nothing except bound energy. This offers new points of view as regards soul-body relationship. . . . It is soulless medicine which adores techniques and loses itself in systematic knowledge; it is the science of the German systematic, which lacks the French *elan vital* and occupies itself more with diseases than with the diseased.

Ethics and morals, as Dr. Wortman points out, must be the foundation of medicine, and he concludes that if medicine is to be placed on a firm foundation, psychology in a true sense must be given the recognition it deserves by force of the very nature of man.

Recognition of the powers of mind, of consciousness, and what is

termed loosely as the subconscious, was a great step forward towards a deeper understanding of underlying causes of certain maladies. But medical science, slow in admitting psychology, psychiatry and psychosomatics within its closed circle, did so not without considerable reservations, hampering rather than helping the infant art in its development by imposing upon it the restrictions of materialistic academic views.

A basic error lies in referring mental states to a kind of brain-basement storehouse, rather than admitting sub- and superconscious spheres of mental activity — a point of view academic science will not permit. Meanwhile we know that, in the last fifty years or so, many presumably fundamental concepts had to be altered, if not completely revised. That the world went on "without being noticeably handicapped by man's erroneous views," as some have remarked, may be true. But here is the point: Man's (and we are here dealing with the mind of man) thoughts determine *his* world within the laws of a greater whole. Only extending awareness can widen that world in which he moves. This extension cannot be achieved by a strengthening of the sensory self, but rather is affected by the awakening of intuitive awareness whereby knowledge becomes instantaneous. Therefore, so long as problems of mind are approached solely from a so-called sub-conscious level, in a search to clarify classified reactions to stimuli unrecognized by the patient, so long will it be impossible to benefit from the far greater curative powers of a consciousness freed (to a greater or lesser extent) from the limitations imposed by the ego or lower self.

The far greater benefit to be derived from applied psychology lies not in freeing man from a bondage to his blind reactions, helpful though this may be, but in leading him beyond these processes to that level of conscious awareness where in self-reliance man becomes cognizant of his god-like potentialities. That is, in a

reliance on the higher self.

In passing it may be remarked that a psychologist who does *not* succeed in leading his patients beyond the initial stage, in the course of time becomes far more closely karmically linked to them than does the physician who uses merely material means. Medicine, treating individuals *en masse*, strikes an assumed average of human reactions; by becoming a Science, it ceased to be an Art. It became intent upon the experimentations upon animals to determine reactions of the human animal-body, ignoring in its fallacy the fear-reactions of tortured animals amidst their elder brothers-in-white in the laboratories!

Psychology, to be worthy of its name, is to reach the inner man through the workings of mind in its subtler phases.

Now the fundamental difference between applied psychology so-called and occult psychology, briefly then is this: The former enhances the egoic perceptions by bringing these to greater clarity, thereby incidentally strengthening man's sense of separateness — while the occult psychological approach seeks to emphasize the greater oneness in the less personal, if not impersonal awareness, reaching toward the essence of consciousness itself. It is obvious that in this latter case philosophical considerations cannot be ignored and this involves far more than a methodological loosening of personality complexes which is but part of an initial procedure. For personality clarification, as a means to greater equilibrium useful in itself, cannot produce the self-reliance that spiritual insight alone can establish. As already stated, in order that such a psychological approach be successful, men must be fully aware of this goal! This implies an inseparable link with religion and philosophy (at one time so recognized by the priest-physicians of ancient days).

That so-called healing rituals of the Egyptians were based, not upon assumed magic, but upon a highly developed comprehension of the complex workings of the human mind and its reactions upon the physical vehicle, is little realized. Just as the principles of vibro-therapeutics utilized in music, chants, or by the spoken word through mantrams — were applied not only in treating the physical, but to affect the spiritual constitution of man, i.e. for the stimulation of latent centers of consciousness. The old-new effort can be made, even today. Yet beyond this still, lies the spiritual approach by the individual himself. This principle has been touched in Christian Science, if quite apart from the manner in which it may be expressed by various followers. (Said Dr. de Purucker: We "are not Christian Scientists. . . Nevertheless, a truth is a truth wherever it exists, . . . and long before . . . , knowledge of it all existed ages and ages ago in the past." *Questions We All Ask* — II. p. 27) Faith is the antithesis of fear. Fear is the great destroyer, (as are hate and greed which are but varied forms of fear), while faith is the intuitive expression of trust, inspired by love, the greatest of all. Said Paracelsus: "When all is said, the best medicine is Love!"

In ancient times the physician was a priest. In future times all men will be physicians, as well as priests, by being truly men! Such is human destiny.

The Theosophical Forum

AMERICAN EXPERIMENT (1) — *William Q. Judge*

As I write these words there lies before me an old book written by Jacob Boehme, a German shoemaker who was a very religious and extraordinary man. His book is called *Forty Questions on the Soul*; it was printed in English in the year 1647, and was only one of the many books he wrote. In all of these he calls himself a "theosopher," which in those days was the same as "theosophist," the title really belongs to one who has put all the theosophical principles into practice. Still, popular usage is always stronger than fine distinction, and it is almost impossible to keep before the mind of the public the fact that a mere member of this society is not necessarily thereby made into a perfect being, and is indeed only one who is on trial. The famous Madame Blavatsky made this clear one day in London to a visitor who asked if she was a theosophist, to which she replied, "No, but I am trying to be one." So in my use of the title "theosophist" I mean one who is trying to put theosophy into practice and that too without regard to membership in the society. But this old Teutonic theosopher Boehme was, I think, in all senses a theosophist, for he ever lived up to his doctrines and came at last to have a great influence, which may be considered proved from the anger he aroused in the hearts of certain dogmatic priests of his day who caused him to be persecuted and driven from his town.

There was already beginning to spread among the minds of the people of Europe in the time of Boehme a revolt against the terrible orthodoxy which would not allow a man to believe that the earth was round or that it could not be possible that the globe and all thereon were created in six small solar days. This discontent at last led to the pilgrimage of the puritan fathers to America and the great nation now on this continent as a

consequence.

Among the descendants of these strong men were such as Franklin and Jefferson and Washington and their friends. But at the same time there was also another man in England who did not come here until the revolution had begun to be whispered in the air, though as yet not broken forth. This personage was the well known Thomas Paine, than whom no other man, perhaps, has been so unjustly libeled since his death. Washington said of him that the American colonies owed him a debt of gratitude, for to him more than any one, in Washington's opinion, did the people owe the impulse to strive for liberty. These prominent figures in the history of this nation — Washington, Franklin and Jefferson — were the freest of thinkers, and all the wild efforts of interested persons since then have not been able to show them as only church going pious souls, but solely as men who lived justly and did right in the eyes of men and the sight of the one God in whom they believed. Certainly as to Paine and Franklin it is clear that they were liberal and wholly untrammelled by any church or priest.

These men, with their friends and supporters, established the United States on a footing of absolute freedom from dogmatic interference, and as a revolt against tyranny. They took care to leave God out of the constitution — and why? For the reason that every man has his own conception of that Being, and if God were mentioned in that great instrument, then bigots and sectaries would enforce their notion of God on every one else, drawing their supreme warrant from the constitution. And so the great American experiment came on the world's stage; to be a success or miserable failure; to hold out to humanity for ages to come the hope of an ever-widening horizon of liberty and truth and right. Whether those hopes will be fulfilled is a mystery yet in the womb of time.

"What," you may ask, "has all this to do with theosophy?" A very great deal; for the latest and best organized attempt to revive true theosophy and spread it among the people of the earth was begun in the United States, the land of experiment and of reform. Fifteen years ago and a little over the sages of the east conveyed to their friends the intelligence that the time had now come to start the preparations for a new wave of thought and a new revival of belief in the soul and its powers, together with a new building up of the breast-works needed to stem the onrush of materialism, which had been growing under the diligent, fostering care of the scientific schools, whose masters and pupils care not for the immortal and believe not in the inner self. The result of this communication — in itself a command — resulted in the forming of the theosophical society in the city of New York, with the avowed object of forming a nucleus of a universal brotherhood — in fact, a repetition, on the purely moral side, of the declaration of independence. Unlike other bodies with broad aims, this one had from the first a basis which has given it solidity and will ever keep it alive.

The founders of the organization, believing in the intelligence sent to them that a wave of interest in the powers of the soul was about to rise and that a new seeking for the philosopher's stone upon an entirely different basis from any in the past would soon begin, wisely directed the attention of the members to the ancient stores of learning, to the end that all the superstition of the centuries might be stripped off from the doctrines and beliefs held from immemorial time in respect to man, his power, his origin and his destiny. This attention resulted in a belief in the ranks of society that there existed a key to the puzzles of the inner self, and soon upon the belief there followed a wide promulgation. But such a divulgment inevitably draws down abuse and ridicule from all who will not take the trouble to know

what it is all about, and brave men and women are required to carry the struggle forward until misunderstanding disappears. Such men and women have been found, and now a little more light begins to break, increasing the probability that the people are almost ready to give a hearing to expositions of such satisfying doctrines as those of karma and reincarnation, which are two out of many that the members of the society endeavor to place before thinking people.

These two doctrines are in fact the foundation stones of all theological edifices, for without them the universe is a hopeless jumble, while with them hardly a question of cosmogony or anthropology remains unanswered.

Evolution, so widely accepted, is admitted as an empiric doctrine only, for there is no connection between the links of evolution, and scientists are obliged to assume many things, many of them hunting forever for the missing link whether it be between the ape and man, or between the mineral and the vegetable more highly organized. But with karma and reincarnation the link appears, may be without any visible representative, but plainly seen as a philosophical conception. And in the great question of the evolution of man as a reasoning being all doubts disappear at once when we master the theosophical idea of his origin and destiny. Theosophy does not deny evolution but asserts a reasonable one. It shows man as coming up through every form from the very lowest known to science, and postulates for him a destiny so much higher and greater than any permitted to him by either church or science that the pen of comparison gives up the task. But it goes further than science, as the human nomad — the immortal spark — according to theosophy, comes out of the eternities, and in each evolutionary course it emerges upon the plane of matter as we know it in the form of an immaterial (if we may say so about that which although invisible to our sight is still

matter) being called by some an elemental and by others a spirit. But of these things more at another time.

For the present it is sufficient to know that the theosophical experiment of the present century is a product of the soil of America, although engineered at the beginning by a Russian subject, who at the same time gave up her allegiance to the Czar of all the Russias and became an American citizen.

The Theosophical Forum

SHALL WE TEACH CLAIRVOYANCE? — *William Q. Judge*

A NOTE OF WARNING

My attention has been arrested by the address delivered in the Adyar course by Dr. Daly and reported in the September *Theosophist*. It is entitled "Clairvoyance."

Coming out in the Adyar course, it has a certain flavor of authority which will appeal to many members of the Society and may cause them to adopt the suggestions for practice given in the latter part of the address. Yet at the same time it is very true that the Theosophical Society is not responsible for the utterances of members in their private capacity.

The fact that clairvoyance is a power sought after by many persons cannot be disputed, but the questions, Is it well to try to develop clairvoyance? and Shall we teach it? have not yet been definitely decided. Hence I may be permitted to give my views upon them.

At the outset I desire to declare my personal attitude on these questions and my beliefs as to facts. In using the term "clairvoyance" I intend to include in it all clear perception on that plane.

1. I have for many years been convinced by proofs furnished by others and from personal experience that clairvoyance is a power belonging to man's inner nature; and also that it is possessed by the animal kingdom.
2. This faculty is either inherited or educed by practice.
3. Those who have it by birth are generally physically diseased or nervously deranged. The cases where clairvoyance is shown by a

perfectly healthy and well-balanced person are rare.

4. The records of spiritualism for over forty years in America conclusively prove that clairvoyance cannot be safely sought after by persons who have no competent guide; that its pursuit has done

harm; and that almost every medium to whom one puts the question "Am I able to develop clairvoyance?" will reply "Yes."

5. There are no competent guides in this pursuit to be found here or in Europe who are willing to teach one how to acquire it without danger.

6. The qualifications such a guide should possess render the finding of one difficult if not impossible. They are: the power to look within and see clearly the whole inner nature of the student; a complete knowledge of all the planes upon which clairvoyance acts, including knowledge of the source, the meaning, and the effect of all that is perceived by the clairvoyant; and last, but not least, the power to stop at will the exercise of the power. Evidently these requirements call for an adept.

Who are the teachers of clairvoyance, and those who advise that it be practised? In the main, the first are mediums, and any investigator knows how little they know. Every one of them differs from every other in his powers. The majority have only one sort of clairvoyance; here and there are some who combine, at most, three classes of the faculty. Not a single one is able to mentally see behind the image or idea perceived, and cannot say in a given case whether the image seen is the object itself or the result of a thought from another mind. For in these planes of perception the thoughts of men become as objective as material objects are to our human eyes. It is true that a clairvoyant can tell you that what is being thus perceived is not apprehended by the physical eye, but beyond that he cannot go. Of this I have had

hundreds of examples. In 99 out of 100 instances the seer mistook the thought from another mind for a clairvoyant perception of a living person or physical object.

The seers of whom I speak see always according to their inner tendency, which is governed by subtle laws of heredity which are wholly unknown to scientific men and much more to mediums and seers. One will only reach the symbolic plane; another that which is known to occultists as the positive side of sound; another to the negative or positive aspects of the epidermis and its emanations; and so on through innumerable layer after layer of clairvoyance and octave after octave of vibrations. They all know but the little they have experienced, and for any other person to seek to develop the power is dangerous. The philosophy of it all, the laws that cause the image to appear and disappear, are *terra incognita*.

The occult septenary scheme in nature with all its modifications produces multiple effects, and no mere clairvoyant is able to see the truth that underlies the simplest instance of clairvoyant perception. If a man moves from one chair to another, immediately hundreds of possibilities arise for the clairvoyant eye, and he alone who is a highly trained and philosophical seer — an adept, in short — can combine them all so as to arrive at true clear perception. In the simple act described almost all the centers of force in the moving being go into operation, and each one produces its own peculiar effect in the astral light. At once the motion made and thoughts aroused elicit their own sound, color, motion in ether, amount of etheric light, symbolic picture, disturbance of elemental forces, and so on through the great catalogue. Did but one wink his eye, the same effects follow in due order. And the seer can perceive but that which attunes itself to his own development and personal peculiarities, all limited in force and degree.

What, may I ask, do clairvoyants know of the law of prevention or encrustation which is acting always with many people? Nothing, absolutely nothing. How do they explain those cases where, try as they will they cannot see anything whatever regarding certain wings? Judging from human nature and the sordidness of many schools of clairvoyance, are we not safe in affirming that if there were any real or reliable clairvoyance about us nowadays, those who offer to teach it or take pay for it, long ago fortunes would have been made by them, banks despoiled, lost articles found, and friends more often reunited? Admitting that there have been sporadic instances of success on these lines, does not the exception prove that true clairvoyance is not understood or likely to be?

But what shall theosophists do? Stop all attempts at clairvoyance. And why? Because it leads them slowly but surely — almost beyond recall — into an interior and exterior passive state where the will is gradually overpowered and they are at last in the power of the demons who lurk around the threshold of our consciousness. Above all, follow no advice to "sit for development." Madness lies that way. The feathery touches which come upon the skin while trying these experiments are said by mediums to be the gentle touches of "the spirits." But they are not. They are caused by the ethereal fluids from within us making their way out through the skin and thus producing the illusion of a touch. When enough has gone out, then the victim is getting gradually negative, the future prey for spooks and will-o'-the-wisp images.

"But *what*," they say, "shall we pursue and study?" Study the philosophy of life, leave the decorations that line the road of spiritual development for future lives, and — practice altruism.

— From *The Path*, December, 1890, p. 282

DEATH AND REBIRTH — *William C. Beller*

Death is a subject associated by most persons with very unpleasant emotions. The physical aspects of death are indeed repulsive enough, but such expressions as "The Grim Reaper" and "The King of Terrors" bear witness to a still deeper dread. Some religions have surrounded the close of human life with grim forebodings of judgment, punishment and doom. It is clear that this attitude of fear is the result of uncertainty and ignorance, the antidote to which is knowledge.

Now it may be a surprise to many that definite knowledge concerning death and what lies beyond it not only exists, but has existed for ages. The central question called up by our contemplation of death is: What is death?

Now it is obvious that death is an incident of life, so it follows that we cannot understand death without understanding life. What is the life itself, that something whose presence distinguishes the living body from the corpse?

From an objective point of view, life is recognized by its manifestations, such as activity, growth, purposeful behavior, response to stimuli, and the like; but we recognize it even more clearly by its subjective aspects, what we experience through being ourselves alive, such as feeling, willing and thinking. Materialism ascribes all these manifestations to activities of the body, and on this basis concludes that individual consciousness ends when the body dies. But what proof can it offer to support this conclusion? What do we really know about matter and its properties to justify the assumption that it can display any of the attributes of life?

The concept of matter is merely a mental abstraction, derived from certain of our experiences, whereas *life is itself the basic stuff out of which all our experiences spring*. There is no experience to support the view that matter is more fundamental than life or thought. The materialist demands proof of the existence of any reality besides matter, but we can turn right about and demand of him the proof that matter has any of the properties he attributes to it. There is no evidence that matter can produce life, thought or intelligence. On the other hand, our daily experiences deal continually with immaterial qualities. In our fellows, such qualities as character, temperament, behavior, and intelligence are far more important than bodily qualities, and in our inner life, sensation, feeling, willing and thinking form the primary basis of experience. Therefore the whole materialistic argument falls to the ground, and we are logically justified in vindicating the reality of non-physical things.

The failure of the materialistic argument leaves the question of life after death open, so we are free to consider the positive evidence in its favor. In the first place, there is no principle of science more firmly established than the indestructibility of force or energy. Now life is certainly a force or energy, so it must continue to exist in some form or other when the body can no longer give it a vehicle of expression. Then, how could consciousness be destroyed? Real things do not simply disappear into nothingness.

If we examine the beliefs of mankind we will find that there is no race of men, however primitive or however sophisticated, that does not believe in human immortality, and the very forms of this belief are strikingly similar. Of course there is a tendency today to despise ancient and universally held beliefs, attributing them to primitive superstition and wishful thinking, but this does not explain how the entire human race should have gone wrong on a

matter so important to its welfare.

But there is positive evidence that certain aspects, at least, of the human personality do survive the death of the body. The field of so-called psychic phenomena is a controversial one, yet after we make full allowance for misrepresentation and delusion, there remains a mass of evidence which cannot be explained away upon any materialistic basis. "Ghost stories" are easy enough to scoff at, but they are real to the people who have gone through the occurrences they describe, and the literature of all peoples and times contains accounts which by their very similarity of pattern indisputably point to a factual basis. Moreover, within the last fifty years or so many persons of the highest integrity and scientific attainments have taken up the study of what they term "Psychical Research" and have accumulated evidence which entitles us to maintain that the survival of the human personality after bodily death is a scientifically established fact.

But the mere fact of human survival leaves many questions unanswered about the manner and conditions of such survival. The various religions and philosophies of the world have put forward a number of teachings which it may be worth while to examine in some detail. The view most widely held, in our Occident, is that a single life on earth is followed by an eternal life as a spirit, either in a state of happiness as a reward for virtue, or in a state of suffering as a punishment for wickedness. Generally this spirit life, whether of pleasure or pain, is regarded as fixed, changeless. This concept, of course, violates the law of growth which we see manifest in all nature. If we turn to the idea of justice, we find the doctrine of eternal rewards and punishments incompatible with it. Justice requires an exact balance between cause and effect, and is not satisfied by infinite effects following finite causes. What amount of goodness in one short human life could merit an eternal reward, and what amount of evil could

deserve an eternal penalty?

This gross injustice is even greater when we remember that many religions teach the doctrine of salvation by faith rather than works. One is to be rewarded or punished not for the moral quality of his life, but for his adherence or non-adherence to some set of doctrines about which the vast majority of mankind has never even heard.

The fact that the greatest number of human beings are neither extremely virtuous nor extremely wicked, has led some religions to add to their heavens and hells an intermediate state of purification or purgation wherein all except those so extremely wicked as not to believe the doctrines of that particular religion might ultimately fit themselves for eternal happiness.

Philosophical objections to a fixed or static eternity would be overcome by the idea of continued progress and development in the spirit world. This very doctrine is upheld by certain modern religious cults. But the objection can be raised that if continuous progress towards an ultimate perfection is possible for a disembodied spirit, why did that spirit have to embody itself even once? What would be the use or purpose of earth life in a human body anyway if this belief be true?

Quite a different view, one which has appealed quite strongly to some of our poets, is that the life of a man may be merged after his death with the universal life of nature. For instance, this is expressed by Shelley in his poem on the death of his friend Keats, in the lines:

He is a portion of that loveliness,
Which once he made more lovely.

While this idea may be aesthetically satisfying to some temperaments, it will hardly withstand an unimpassioned

analysis. What part of a human personality would so merge with nature, and what benefit would result, either to the personality or to nature? And how can a self, or ego, be so divided?

A much cruder concept, albeit one widely held in some parts of the world, is that a human soul may be reborn in the lower forms of nature as, for instance, an animal, a plant, or even a stone. The objection to this is contained in the question: What good would it do? The animal, vegetable and mineral forms of nature obviously do not display human qualities, so a human soul imprisoned in such forms would be unable to express any human traits. Consequently, what would it gain by the experience?

Still another view advanced by some is that after death on earth one may be born on some other planet. This view merely exploits our ignorance. Since we know nothing about the conditions of life on any planet but the earth, we cannot categorically deny this possibility. But why go so far afield, why invoke the unknown and remote? Whatever arguments might be put forth in support of rebirth on some other planet, would support still more strongly the idea of rebirth in a human body here on earth. This last view, then, rebirth in a human body on earth, sometimes referred to as reincarnation, is one which may be worth closer examination.

In the first place, this idea of rebirth as a human being, is in no way contrary to logic or experience. Human bodies are being born all the time. As we have already seen it is most reasonable to explain the conscious, intelligent individualities of these bodies by the entrance into the body of a non-physical principle, a soul, if you will. But whence come these souls? Is it more reasonable to believe that each new-born body has a soul newly created for it, or that this soul is drawn from a vast reservoir of souls already in being, the souls of human beings who have lived and died in times gone by? Plato expressed the beautiful reasonableness of

this in the *Phaedo*. If (as is obvious) the dead come from the living, where should the living come from, if not from the dead? This teaching explains all the otherwise inexplicable differences in human beings. Why is one born a congenital idiot? Perhaps because the soul in that body has greatly deteriorated, through its own fault, in former lives. Similarly, one is born a cripple because the soul in that body has needed the experience of being embodied in an imperfect instrument. On the other hand, a genius displays abilities perfected through efforts at self-improvement in many former lives, and one born into circumstances which bestow great opportunities for service, has earned the right to such advantages by humanitarian efforts in the past.

Reincarnation not only provides future chances to correct the errors and failures of the present, but shows how the very difficulties now being encountered may in turn be the means whereby old scores are settled, and old mistakes rectified. When we search for the probable purpose of human life, what is more reasonable than to assume that it is to provide experience and evolution for the embodied entity? Yet the amount of experience available in a single lifetime is necessarily limited. Rebirth, however, makes the entire experience of the human race available to each individual member of it, provides the means for unlimited progress and development. Even if only a slight improvement is made in any one life, the cumulative effect of such advances from life to life can lead ultimately to the attainment of any conceivable goal of perfection.

Since the principle of compensation was thoroughly understood and perfectly formulated by the ancient Hindus, their word *Karma* has been taken into various modern languages, including the English. It simply means that all the activities of nature are bound together by an endless chain of cause and effect. Every

event in the universe is not only the result of a series of causes generated by many previous events, but in turn the way it is met becomes the cause of a long series of subsequent events. This law is absolutely universal in its operations, but to trace all its ramifications would take us too far afield. The operation of this law provides that all the conditions controlling a human being in any given life are the results of causes produced by that same human ego either in the immediate or remote past, and that all the actions of a human being will operate to control events affecting that same human ego some time in the future. This implies that the circumstances of early life are almost completely determined by causes carried over from former lives. During a lifetime, many events are due to causes produced in that same life, and similarly many acts in a life will bring about their consequences before that life is over. However, all the unfinished business of any life is carried over into succeeding lives.

Such conditions affecting our present life, which are seemingly beyond our control, as for example, race, nation, time of birth, physical characteristics of our body, early environment, family relations, education and contacts with other human beings, are the consequences of such past influences. Apparent accidents are not accidents at all, there is no such thing as chance or accident, everything is the result of cause and effect working out according to immutable laws. So from beginning to end, every event in life is the effect of past causes, and in turn, the cause of future effects, and past, present and future, both in one life and in many lives, are linked together by an unbreakable chain of causation.

I realize that many of the foregoing statements may at first thought seem scarcely credible, and some which I am about to make may seem even less so. Therefore you have the right to demand what evidence, what authority, I have for making them. No one will question the great accomplishments of science, but

the knowledge, which has given science its great prestige, has all been obtained with the aid of material instruments, and relates to the physical world only. It is quite obvious that knowledge of super-physical worlds can be obtained only by the use of super-physical instruments. Such instruments exist, indeed we all possess them in our inner being, in the emotional, mental and spiritual parts of our nature. Only, in the great majority of human beings, they are undeveloped, and we are scarcely conscious of their existence.

But from the very beginning of the race exceptional individuals have existed in whom these powers are active as a result of their own efforts in developing them, and these individuals have formed a group active in the accumulation of knowledge and the advancement of humanity. They are scientists in the truest sense of the word, since they deal with knowledge, not opinion or belief, and they proceed by the method of experimental investigation, but their researches are not limited to the physical world.

They are motivated, not by any desire for reputation, fame, wealth, power or any other merely selfish advantage, but solely by the wish to benefit mankind and promote spiritual evolution. So they proceed by methods consistent with these objects, carrying on their work in silence and seclusion, avoiding publicity, always ready to put their knowledge at the disposal of mankind, to the full extent that mankind is prepared to profit by such knowledge, but never seeking to force their views upon anyone. The proof of their existence is to be found in the traditions, the legends and the literature of all the peoples of the world, and in the experiences of those people in modern times who have come into personal contact with them. By reason of the powers they have developed, it is possible for them, while still living in physical bodies, to investigate the conditions ordinarily

experienced only after death. It was in this manner that they discovered the facts I am now about to relate.

The first phase of death is the withdrawal of the conscious principle from the physical body. With separation from the physical body, all touch with the physical world is lost. The person remains conscious in a subtle body which remains on a plane near the earth for a longer or shorter period, a period which in some cases may last for years. During this state the person may or may not know that he is physically dead. But sooner or later the higher vehicles of consciousness separate from the subtle body, by a process which has by some been termed the second death. Except for the bodies so cast off, the dead man, if gross or evil, is conscious much as he was in life, retaining until the second death all the desires and appetites which he formerly possessed. But in the state he is now in, the grosser bodily appetites have no means of gratification. This absence of gratification in the case of the gross or evil man causes suffering, varying in intensity with the strength of the appetites. Sooner or later, the conscious being realizes that it is distinct from these appetites, and struggles to free itself from them. This struggle causes further suffering, depending in intensity on how closely attached the person was to the lower pleasures of life, and to what degree he identified himself with them. The ordinary good man has but few of these unpleasant experiences.

Purification of the desires is finally completed, and the conscious self reaches a state which may be called the world of realized ideals. This is a purely subjective state of unalloyed bliss, in which all the higher ideals and aspirations of the preceding earth-life find full and complete realization. This state, to which the name Devachan has been given, corresponds to the various heavens or paradises as described by the various religions, but it differs from them in that it is definitely *not* eternal. Since it is the result of a

finite impulse, namely that produced by the ideals and aspirations of the preceding earth-life, it must end as soon as that impulse is exhausted. As this occurs, the thirst for life in a physical body gradually returns to the ego with increasing strength, and the ego is drawn, as by a magnetic attraction, back to the earth plane, where it enters into a human body which is born in the usual manner. The particular body entered by the ego is the result of karmic requirements. With birth begins a process which is continued throughout most of the life, the gradual adjustment of this *ego* or soul to the body in which it finds itself, and its efforts to make that body a better instrument to express its own inherent qualities. The events of the life are determined by karmic necessities, and the course of the life is accompanied by a gradual unfoldment of karmic tendencies. The purpose of life is the working out of these karmic tendencies, in such a way as to provide the ego with the lessons it needs for its own progress and development towards a goal of ultimate evolutionary perfection.

In the light of these teachings, we see that death is not to be feared; it is an incident in the life of an immortal being. It comes as a friend to free the soul from a worn-out vehicle which no longer serves its needs, and to give that soul a welcome period of rest and relaxation wherein it may attain the realization of its ideals, assimilate the lessons of its experiences, and refresh itself for the next stage in its age-long pilgrimage. We see that rebirth is inescapable, as it is the result of immutable cosmic laws. The knowledge of these truths should enable us to live purposefully, above the welter of petty personal ambitions and the struggle for selfish advantages, since we see that each earth-life is but an episode in a process of cosmic duration, the purpose of which is the development of human egos to their ultimate evolutionary perfection.

ON PARABRAHMAN AND MULAPRAKRITI

Question — Could you explain in simple language the fundamental difference between Parabrahman and Mulaprakriti? I have been studying the explanation given in *The Secret Doctrine* on pages 15 and 16, but do not seem to understand Mme. Blavatsky's definitions. Perhaps you could simplify this for me. — L. B.

Abbott B. Clark — For fifty years we have accused any one who was talking over his depth of talking about Mulaprakriti and Parabrahman. It seems now to be time to clear things up a little and try to learn the place of these two words in our philosophy.

The fundamental principle of any cosmos, solar system or galaxy in the fields of Boundless Space is Parabrahman, from the Sanskrit *Para*, beyond, and *Brahman*, the highest, most impersonal and metaphysical conception of God. The Vedic Sages spoke of the manifest and all that can be discussed and speculated upon as *This*, and reverently spoke of all beyond as *THAT* — the great mystery — to be viewed in reverent silence. It is the unthinkable, the unutterable silence. Beyond the range and reach of thought or speculation, yet it can be perceived by the highest intuition as the Real, the One Reality. Our Teachers tell us that meditating upon it as your inmost Self, the Paramatman, is the highest, most worthwhile form of meditation or yoga. Parabrahman is the omnipresent, eternal, boundless Principle which is fundamental to all manifested, conditioned being. It is the field of unconditioned consciousness, life, wisdom and love. All the gods came later into being. To attempt to describe and discuss it would be to set our own limits to the Illimitable and produce only a traffic jam of thoughts and words. It is the One

Flame of which all the gods and spiritual powers are sparks. It is not an entity but the underlying Reality of which all entities are transitory and ephemeral phenomena.

Mulaprakriti, from the Sanskrit *mula*, root, and *prakriti*, which may be translated as nature — a vague term, or as matter, also a very inadequate translation. Literally Prakriti is "production," "bringing forth," "originating," hence also signifies "primary, original substance" — according to the *Occult Glossary* definition.

Therefore, *Mulaprakriti*, as Primordial, homogeneous, undifferentiated substance, is the spiritual essence of cosmic Matter: a veil thrown over the face of Parabrahman, and furnishes the highest form of spiritual substance, by and through which Parabrahman manifests and without which Parabrahman would remain forever a mere empty and impotent abstraction. It is one with and inseparable from Parabrahman as the tangible substance of a thought is one with and inseparable from the thought. Parabrahman is the field of limitless, boundless, unconditioned consciousness; Mulaprakriti the substantial aspect of all forms on all planes of being, from the highest divine worlds to the lowest elemental worlds. The two, Parabrahman and Mulaprakriti, form a duality; for the human mind cannot conceive of a manifested universe without duality: Mind and matter; consciousness to be aware of something and something to be aware of, that is, subject and object, inner and outer, spirit and matter.

Now let us take a view of these two subjects in the general field of our cosmic philosophy.

1st: BOUNDLESS SPACE, from which all proceeds, to which all must return: the One alone: Absolute Unity.

2nd: Parabrahman and Mulaprakriti. Unconditioned

Consciousness and undifferentiated Matter.

3rd: The above shadowed forth on the fields of Boundless Space as Brahman and its veil, Pradhana or prakriti. The first differentiation by which the One becomes the many. In Greek philosophy, the First Logos; the first awakening of divine thought.

This first awakening of Divine thought acts as or liberates Daiviprakriti, the highest form of spiritual cosmic energy — "the Light of the Logos," which is at once consciousness, light and substance. The conscious energy by and through which Cosmic Ideation molds cosmic substance. On a lower plane Fohat, the electric energy vivifying cosmos.

4th: Brahma-Prakriti or Purusha-prakriti. Brahma corresponds to the active, creative god of all religions. In the Christian scheme God is obliged to make the world out of nothing. In Theosophy Brahma is furnished with Prakriti and everything that a creative God or gods may need in the shape of material: architects and builders.

Thus is given the profound philosophical basis which underlies the whole structure of theosophical thought. It furnishes a basis for, and also a key to, many of the world's religions and philosophies.

This universe is one living, throbbing, vibrating organic whole, divine in origin, nature and destiny; Parabrahman is, in theological language, both immanent and transcendent. Transcendent because it transcends all else and immanent because it abides in every atom of space. It is the heart of the heart of every man's being. "*Aham asmi Parabrahma*" — I am Parabrahman.

ONE GOD OR MANY? (1) — *Marjorie Hall*

When a person brought up exclusively in the Christian belief of the one God, comes to Theosophical meetings, he may receive a very confusing impression at first.

He will hear the names of beings he has been taught to regard as heathen idols and myths spoken of seriously as mighty spiritual influences — such names as Krishna, Buddha, Brahma, Isis, Osiris, Horus, perhaps Apollo, and others. He will hear quotations from Plato, Socrates, the Egyptian *Book of the Dead*, and many other sources, and lots of statements about "the Gods." Then sooner or later someone is sure to remark that "man is the journey-work of the stars," so apparently the stars made him, and not God, after all.

Then he will ask us the type of question so often asked: "Surely the idea of many gods is a retrogression. Why have a multiplicity of gods when unity in the one God is the progressive ideal? Why go back thousands and thousands of years when living rightly in the present moment is the real necessity? Why study all those complicated doctrines and get so far away from simplicity?"

The fact is that knowledge does help. It is true we are told that in order to enter the kingdom of heaven we must become as little children, but surely one of the strongest characteristics of the child mind is the spirit of enquiry. It *must* know how the world around it is constructed. Of course, it cannot be completely satisfied; it is a living portion of the living and infinite universe, and the more it expands the more it will find it has still got to learn. Theosophists do not pretend to teach the ultimate secrets of life and death or why the Cosmic Spirit manifests.

It would indeed be a retrogression for Theosophists if they *had* a lot of gods whom they worshiped, but that is not the case, nor is it correct to state that we worship and pray to one god.

Theosophy teaches that there is one Divine Principle pervading the whole Cosmos, not separated from it. It is not *a* being, it is *be-ness* and cannot be prayed to because it is the pure essence which contains the primeval substance of all things and beings, the pure essence of thought and intelligence and love. It does not *think* and *act* as the orthodox personal god is said to do. From our standpoint it is "beyond the range and reach of thought, unthinkable and unspeakable."

Out of this ocean of be-ness arise all beings and worlds which we see, also those which we do not see, which are much greater in number. All these worlds and beings are seeking to express the qualities of their divine root, and the reason why they appear to us as all these different things, suns, stars, animals, men, etc., and vary so vastly in their respective degrees of intelligence, independence of action, and so forth, is because of their so vastly varying degrees of spiritual unfoldment.

So, to a Theosophist, the whole universe is alive with divine consciousnesses, not gods to be worshiped in the ordinary way, but a friendly, life-giving brotherhood, the smaller lives living within the greater ones both physically and spiritually, and all equally divine at their source. These lives are bound together in bunches, groups, hierarchies. These hierarchies live and evolve within, and through, around, below and above each other, all having a measure of responsibility and free will, from the baby god at the heart of the chemical atom to the highly evolved god ruling and inspiring and infilling a solar system — a mighty god indeed to us, but to the beings above him he is just a younger brother.

What we see as matter is moved and also held together by the spirit within it. This does not mean that chairs, tables, carpets, etc., have souls. Those are only shapes which men have made out of matter. It is the living atoms forming the matter itself which are ensouled. Every tiny chemical atom has a consciousness of its own and obeys the laws of its own kingdom.

Thus, the atom arises out of that root of being, the Divine Principle, with definite desires, a definite little will of its own. It sends out feelers, little thrills of magnetism, varying in number according to the chemical element the atom forms part of. These little thrills of attraction draw other sympathetic atoms to the first one and form the various chemical substances. Of course, we all know that these chemical elements combine in their turn in many different ways to form matter.

The mineral kingdom provides the solid substance for our globe and our bodies, by the action of the minutest specks of spiritual being, working out the cosmic design on their own plane, following their own evolution and at the same time making our world for us and thereby doing an indispensable service to us and all creatures. You see, the atom is very like ourselves, it works partly by its own free will and partly through the laws of its own kingdom.

Next comes the plant kingdom. Mere specks of spiritual being, with ages, in fact, with universes of experience behind them in the mineral world, have expanded their consciousness sufficiently to utilize the inhabitants of the mineral sphere according to the laws of *their* own sphere and *their* own free will, and give us the almost uncountable varieties of plant life, the two worlds, plant and mineral, blending exquisitely to make one whole, though each living its own life.

Each thing that is brought into being by nature is a hierarchy, a

group of little lives, held together by a larger life, or hierarchy, its head, its guide and inspirer. Thus, our human bodies are hierarchies of lives, the lives of the atoms and organs, each with its own little head, all working together under one greater head, our human mind, which would appear as a mighty, unknowable god, "beyond the range and reach of thought," to the souls of the atoms. Thus, a tree is not just a collection of bark, sap, fiber, and pigment, but a blending of growing entities, living within a more evolved entity.

The teachings of Theosophy explain in this way that mysterious companionship which we feel so strongly in nature, that feeling that we should be able to have direct inner communion with it. Indeed we often have. Katherine Tingley says in *Theosophy, the Path of the Mystic*:

Truly I believe that birds and flowers know us better than we know ourselves; and when we are on the high plane of mystical knowledge, when our hearts are touched with the spiritual forces of Nature and of life, we learn to talk with Nature, we learn to work with her.

I never went into the woods but the birds sang better while I was there. Not that I gave them the power, but that they, in their simplicity, being part of the great Law, felt the longing of my soul for a touch of sweet Nature, and they sang to me. I have had some strange experiences in handling flowers; they have answered the yearnings of my soul with just the answer most needed. The tiniest atoms of the earth have voices, and these voices are even a part of ourselves.

Following up our expanding picture of struggling godhood we now come across apparently a big gulf between the plant and animal worlds. But the gulf is only apparent. It is rather like the

changing of scenes at a pantomime, when the stage goes dark without the curtain dropping and we see dark shadowy figures, like spirits moving in the underworld, doing the job, but we cannot make out what they are doing. Then up come the lights and there is a marvelous new world, the old one completely vanished. Just so when the group of entities has learned all its lessons in one of nature's kingdoms, it passes out of our sight into the deeper spiritual dimensions of nature, for long ages. An assimilation of experience takes place there, and deep rest. The entities then feel the pull towards objective existence again, seek more self-expression, find themselves capable of building and infilling much more complicated vehicles or bodies than they could last time, so there we have a new or higher realm of beings. The big change, the new focusing of consciousness, takes place in the silence and apparent oblivion between the two kingdoms. That is why scientists do not find their missing links. They are not to be found in the material world.

The law of cycles, which includes the law of reimpodiment, is seen operating here. All things great and small, move and live in cycles of reimpodiment and rest, the cycling progressions of small beings fitting within those of great ones.

Also, nothing comes out of nothing. The less always comes out of the greater, both in the case of whole kingdoms of nature and of the individuals making up those kingdoms, so that smaller beings are always backed up and supported by greater ones. "Beneath are the everlasting arms." The little ones are guided into existence by their spiritual fathers, "the Gods."

It is taught that there is not a pin point anywhere in space that is not filled with active consciousnesses, and so between the Solar and Planetary Spirits and us humans there are hierarchies of intelligences whose holy work is to watch over the races of men

and give assistance wherever possible. They are consciousnesses that have deeply awakened and widely developed the spiritual faculties lying latent in every living thing. They have struggled and rested, that is incarnated and died and reincarnated, countless times through the lower and human realms, and also through previous lifetimes of the earth until they have become "Gods."

To use a technical term, these protective powers are Buddhas. The Buddhas have striven and suffered until they have won control over all their lower principles, and have become actively self-conscious to quite a large extent in their sixth principle, Buddhi, whence their title springs. These facts make of them a link with the gods and therefore mighty healing and enlightening influences, shedding beneficent power over the whole globe.

Without their unseen help we would perish under the crushing weight of our own wrong thoughts and doings. We don't do too well even with their help, as you have probably noticed. That is because man *must* use his free will. It is the act of striving to bring into activity the good and great side of his nature, and the fact that he is *free to choose*, which make him a living building brick in a living universe, knitted into its fabric, deeply responsible to all lives around him, and those forming his own constitution, for by contact with his psychology they are elevated or dragged down.

The theosophist sees man both in death and in life, as an eternal pilgrim in a friendly universe, with infinite expansion before him. Fighting evil forces and suffering, to be sure, but surrounded by the light of Divinity in all directions, and fighting not only for himself but for all creatures.

In the fight he is (or can be) aided by his own higher self, that upper triad of principles, of which his everyday personal self (his

human soul) is a ray, and which is his link with infinity, as was said earlier. The higher self is a bright and starry god who has journeyed through many previous lifetimes of the planet. It is of the very nature of heaven, as Jesus said "The kingdom of heaven is within you" and "I tell you that ye are gods."

A CHARGE AND A TRUST — *James A. Long*

We are in the midst of a conflicting people, of an obstinate, ignorant people seeking to know the truth, yet not able to find it for each seeks it only for his own private benefit and gratification, without giving one thought to others. — *The Mahatma Letters*, p. 252

Great events in the history of civilization are seldom recognized as such when they occur. More often than not generations must pass before their true significance is seen and felt. Nevertheless, the efforts of the pioneers of progress make their impress upon the screen of time for the permanent benefit of mankind.

Take our own H. P. B. Generations more are likely to pass before her true part in the progress of the race will be known by other than her few followers. Yet H. P. Blavatsky and her work are having more effect upon present civilization in all branches of thought than is commonly realized. Were one able to examine every library, for instance, and particularly those of universities, he would find her *Secret Doctrine*, its pages soiled, worn, and dog-eared with use, studied alike by scientists, philosophers, and progressive religionists, who adapt her works to their good advantage. This without credit; but who would rejoice more than H. P. B. herself. It is what she and Those who directed this work hoped for.

Others use her teachings, presenting them as their own, but not to so good an advantage. Their efforts, twisting whole truths into halves, and festooning them with fanciful but hollow words to attract the selfish, represent but the shadow of the light of the true message.

But "the gods cast no shadows"!

Now, at the end of fifty years of the new cycle (1898-1948), we find the world-stage set for another act in the drama of spiritual progress. That there has been "injustice in the world" and "a decline of virtue," none can doubt. Karma has drawn together the necessary combination of elements to produce a phase of that phenomenon which calls forth a portion of the Supreme — "for the preservation of the just, the destruction of the wicked, and the establishment of righteousness."

The recent publication of *The Dialogues of G. de P.* is signal evidence, and represents a major victory for Those we serve. What tribute to the pioneer efforts of H. P. B. and to Those whose agent she was, that the institution they founded should be the vehicle for the expression of this force. Need there be further vindication? Her adjuration to keep the link unbroken did not fall on deaf ears. Her strength of purpose and great sacrifice have borne fruit — not merely intellectual betterment, but spiritual sustenance to strengthen the hearts and minds of men through this dark age of Kali-yuga. Our civilization moves a step nearer its true goal.

Here again, the real significance of *The Dialogues* may not be recognized by the many for generations. But what of the few?

To use these *Dialogues* for the enlightenment of the individual student is important, but not primary. More significant, perhaps, will be the use of this new information by the scientist, the philosopher, and the religionist. It may stimulate them to a more active collaboration in their efforts for the advancement of the whole. Yet even this, although an encouraging outlook, is not of foremost importance. To F. T. S., however, the event is of paramount significance. For many it is merely the "esoteric become exoteric." But what does that mean? Is it only that now

one can have more of the occult truth without the pledge "to do" — without the discipline, without the sacrifice? Or does it mean that the T. S., having earned a place in this world-drama, now offers its members the opportunity to seize their inheritance and become helpers in the genuine occult sense — worthy agents of Those whom we call the Guardians of humanity.

The insignia "F. T. S." takes on a more serious character when we consider the role of the T. S. on this greater human stage today. It imposes both a charge and a trust. Strong is the charge; and great is the responsibility that rests upon the shoulders of those who accept the trust.

The seriousness of this challenge to every member cannot be minimized. The time has arrived when a "label" on the lapel of one's consciousness, however self-satisfying, means nothing, whether he be F. T. S., a student of the esoteric school, or one of a so-called inner group. The event of *The Dialogues* is indication that henceforth all, karmically, have linked themselves with the grave task of preparing for the next major event in the life of the Movement. The purpose is plain. It is the story of the "Gita" all over again. But beware — those of us who take our responsibility lightly and work with ambition in our hearts.

In 1882 the Master M. wrote that the world had clouded the light of true knowledge, and that selfishness would not allow its resurrection. Today, selfishness of course is still rampant, but in spite of this the T. S. has won the right to share with the world a greater portion of that "true knowledge." Our gratitude for this privilege runs deep when we realize that in the same letter he said: "It is he alone who has the love of humanity at heart, who is capable of grasping thoroughly the idea of a regenerating practical Brotherhood who is entitled to the possession of our secrets. He alone, such a man — will never misuse his powers, as

there will be no fear that he should turn them to selfish ends." (1)

And that is our TRUST.

To guard with jealous care our privilege to serve in Masters' Cause; to exemplify the trust placed in us as F. T. S.; to build stronger that wall of protection around Their work; to hold firmly the touchstone of selflessness that makes of us worthy instruments; to sacrifice our every action to the common good of all — thus will we help Them that They in turn shall be able, at the appointed time, to send forth another who will lead the way into the next century and on to a still closer realization of the Brotherhood of Man.

The Theosophical Forum

THE LANGUAGE OF SYMBOLISM — *Allan J. Stover*

Every time the wind blows it is singing you a song of the gods. Every time a flower blossoms it is bringing you a message from the Higher Law. Every time you hear the ocean as it beats against the shore and recedes in musical rhythm, it is speaking to your soul — a voice from Nature, verily a voice from God. The magnitude, the grandeur of these things, the possibilities folded within them — these can truly be sensed only in the silence. — Katherine Tingley: *Theosophy: The Path of the Mystic*, p. 59

The language of symbolism runs like an undertone all through our lives. Metaphor and allegory enliven our daily speech, while signs, emblems, and symbols greet us on every hand. The very speed of modern life is once more bringing a pictorial and gesture language into daily living.

All nature is symbolic as reflecting on the physical plane inner truths, of repeating in the small a pattern of action which occupies eons of time on the cosmic scale. Other peoples, unlettered in the modern sense, have seen in every flower some living glyph of the mystery language of the gods; in every season of the year an act in the drama of cosmic evolution.

It is natural that certain plants, trees or animals should come to represent abstract or moral qualities: the strength of the oak, the courage of the lion, the purity of the lily, these and countless others have been built into the language and culture of our race. They are directly connected with ideas through analogy and suggestion. The rising of the sun at dawn is symbolic of the beginning of a manvantara or period of world-activity, because it is itself the beginning of a minor manvantara, that of a twenty-

four hour day.

From the spiritual point of view, everything lives in a greater being and it in a still greater, on and on from the atom to the solar system. Each unit is inwardly formed on the same plan and obeys the same laws; it is this which links everything in the tapestry of universal life together in a unified brotherhood. Man in his life cycle from conception to death not only repeats the history of the race in its immensely long evolution, but his coming into being is analogous to the coming into being of worlds and universes. He has within himself not only portions of the mineral, vegetable and animal kingdoms; but of the various elements or nature principles forming the solar system in which he lives. Within his inner constitution is that which corresponds to Jupiter and Saturn, Mars, Venus, and Mercury, as well as Sun and Moon. He is indeed a microcosm of the macrocosm, at his heart an embryo god.

The study of symbols requires a different approach from that required by ordinary language. Words are literal, precise, and refer to particular things and events; symbols derived from nature are general and universal in application. A symbol may be compared to a mathematical formula — itself a symbol — in that it may be used to explain the life cycle and structure of any being large or small. Yet a symbol does not reveal its meaning to the unprepared. As a map of a bit of mountainous country may be meaningless to the casual tourist, but full of rich memory and significance to one who has camped beside its many streams, so a symbol may well be called a map of inward experience to those who have entered upon the path of self-conquest. Symbols cannot be understood by merely memorizing diagrams and definitions in a book. They must be lived, for they are essentially an introduction to the study of one's self and reveal their meaning as the art of self-conquest proceeds.

Amid the mass of emblems, glyphs, and pictographic characters of all races the true symbols stand out as distinctly as do the masterpieces of art or literature from the commonplace product of the many. These immortal designs were selected and given to mankind by great Teachers in the past — they are priceless volumes of instruction. Most of them depict, first of all, the higher and the lower self in their relation one to the other. This duality is found everywhere and in all things, on every plane of existence. When the student has discovered the higher and lower elements within his own nature, then by sympathetic analogy, understanding awakens in regard to other beings. Moreover, the momentary overcoming of the lower by the higher in the conflict of daily life may at some far day find expression in the great initiations wherein the successful candidate arises from the initiation trials an illuminated Christos. The square or cross in general signifies the materialized universe or the physical man. This with the four elements: fire, air, water, earth, and the four directions, represents the lower quaternary of the seven principles: Sthula-sarira, Linga-sarira, Prana, and Kama.

The circle is everywhere representative of spiritual life and qualities, of the unmanifest as opposed to the manifested universe. The combination of these two elements, with the cross uppermost as in Fig. 1, is astrologically the sign for the earth, and it also represents a spiritually unawakened man, the cross being uppermost indicating the dominance of matter over spirit.

In Fig. 2 the same elements are shown reversed, with the circle

uppermost. In this we see a symbol for a spiritually awakened man in whom the higher self is in control of the body. It is also the sign for Venus. A variation is shown in the ansated cross of an Egyptian initiate, Fig. 3. These and many others come to mind: the relative position of the square and compass as used by the Masonic fraternity, the round Chinese coin with the square hole, the interlaced triangles with the dark triangle pointing downward, the light one upward, Fig. 4, and the Yang and Yin design of the Chinese, Fig. 5.

Fundamentally the meaning is the same in all, but as the division of the sevenfold constitution into two parts is an elementary explanation of a very complex structure, so each of the symbols shown reveals different aspects of the inner nature and functions of man and the greater being in which he lives. In a larger sense these same symbols depict evolution and involution, the out-breathing and the in-breathing, the interblending of worlds or planes of spirit and matter. But whether in the large or in the small a thread of analogy runs through all the processes of nature.

The Theosophical Forum

REINCARNATION: A UNIVERSAL TEACHING — *Bess R. Neeper*

The published records of independent research, conducted by scores of truth-seeking men and women, in the past fifty years, have corroborated statements made in the various Theosophical teachings, to the effect that Reincarnation was a universal teaching in ancient times — not purposely studied by these ancients as a specific doctrine so much as taken for granted in their lives as a fact of such undoubted verity as to be unquestioned.

We, of the Western world, particularly of the various Christian sects, have a habit of dating religious thought and religious truths from the birth of the man called Jesus. What we forget to take into consideration is the fact that the teachings credited to Jesus, as presented to us in this day and age, have come from somewhere to Jesus, and have been colored by the attempts at interpretation made by the Christian Fathers, culminating about the sixth century, a.d. in the suppression and destruction of all recorded writings which did not agree with the ideas of these same Fathers and in vogue at that time. Reincarnation, as a doctrine, held too much dynamite, capable of developing individual powers of thought among the masses, and for that reason it was one of the teachings suppressed by the priesthood of that day. This suppression was so thorough that since that time there has been only slight record of its truths having been given out, and then only among isolated groups, mostly groups which taught the Mysteries.

If we go back beyond the teachings of Jesus, into the earliest days of recorded history, and work from there forward to the present day, we will find a long and impressive list of groups and tribes

and nations to whom Reincarnation, in some form or other, was very well known, and was a part of the thought life of those days. Of the very earliest recorded history not a great deal can be authenticated and verified, since their recorded works were written down in the form of hieroglyphs and symbols, which depend for their interpretation now on the degree of wisdom attained by the scholars attempting to interpret. However, many of the symbols employed in the Aztec and Mayan records, in the records of Totems in the far North, among the many tribes of Africa and the South Seas, bear a general resemblance to each other and to the recorded hieroglyphs left by all races and prior civilizations of untold antiquity; so that it can be concluded that they, all, knew approximately the same teachings as the later Egyptians, Indians and Persians left on record.

Another very potent source of verification of the truth of this claim is the myths and folk stories handed down from generation to generation in all parts of the world by all races and tribes of man. All of them incorporate tales of the heaven worlds and after-death states, of giants and gods, of great world-floods; all of them teach a future life in some form or other, and many of them teach future lives of approximately human types.

From the Egyptians we developed our present practice of embalming our dead, and the success with which the human body was preserved in a state of perfection by these same Egyptians is a constant source of mystification to even those scientists who make a study of the mummies. There can be very little doubt but that the practice of mummifying their dead grew out of a teaching that the man would eventually return to earth, and a desire to keep their own life atoms intact and inviolate for their own use on return. Their hieroglyphs show the winged soul, the judgment, the resurrection, the body lying in state in its tomb — all teachings which go to make up our present religious

training; yet they preserved this same body in a mummified state, an operation which would seem to have no sensible explanation unless they took for granted the necessity of returning to earth in another time and age, for another life here.

As hinted at before, the teachings presented by Jesus must have come from somewhere, and a study of the sources from which he is alleged to have received his training reveals the Mystery Schools of Egypt, India, China and Persia. Reincarnation was a definite although Esoteric teaching in all these source-Schools, as is witnessed by writings left by others who trained in one or the other of these Mystery Schools. In some of Jesus's words, as handed down to us, there is definite understanding of Reincarnation hinted at, as, for instance, "Who did sin, this man or his parents, that he was born blind?"; "If ye will receive it, this is Elias. . . ."; "In my father's house are many mansions. . . ."; "And of some, that Elias had appeared; and of others, that one of the old prophets was risen again."

Contemporary with the Egyptian were the Tibetan teachings, the Chinese, the Persian, the Hindu, in all of which Reincarnation, Metempsychosis, or some other form of Reimbodiment was openly taught, and left to us as a golden thread in their poetry and other writings. The Jews, in the Qabbalah, the ancient Greeks and Romans, through Orpheus, Pythagoras, Empedocles, Plato, Ennius, Apollonius of Tyana, Seneca, a long, long list of impressive mental, psychological and spiritual giants, all have left impress on our present literature, and all have sung, in one form or other, of the indestructibility of the human soul and its life beyond the seventy years allotted to man. Many have spoken openly of reimbodiment; many have hidden its theme in allegory and myth, depending on how safely they could teach truth, openly. Philo, the Neo-Platonist, and Josephus, the historian, are two Jewish names which occur as knowing and definitely

teaching a form of reimbodiment to their followers.

In the early Christian Church there were Bishop Synesius, Origen, Clement, all of Alexandria, who accepted and taught reimbodiment, in some form. There were isolated groups of mystical bent, about the 12th and 13th Centuries, who taught it — hidden from general knowledge, because by that time the acts of the Church Council, suppressing certain of the teachings of the Gnostic philosophy and Mithraic Mysteries, had become so drastic that death was one of the kindlier punishments for open teaching. Among these isolated groups were the Manicheans, a mystical sect of Hither Asia, the Albigenses, of Languedoc, and other smaller and less known groups.

Truly, all recorded religious and philosophical writings have had Reimbodiment, and an unlimited future as an inheritance of man, to be studied, investigated, and made a part of the individual's thought-life when so desired.

The Theosophical Forum

THE LANGUAGE OF THE INITIATES — *H. Oosterink*

Initiates of ancient days promulgated their message in the shape of myths, sagas, fairy tales, symbolic stories, parables and in other ways, telling man that there exists a sacred, secret knowledge, to be acquired by whoever is ready to follow the path that leads to enlightenment and elevation. In their stories they availed themselves of a specific language, which to one who possesses the key, gives their stories an illumined meaning.

It is of the greatest importance to know this language. When reading the book we all know, the Bible, we may put our knowledge into practice for the key provided by a knowledge of the mystic language throws a new light on the doctrines of the Bible.

These initiates used the word "wine" for divine life, "water" was a symbol of the lower life, "well or source" symbolized a "source" of spiritual teachings, "man" was used for "God," "wedding" as a symbol for "communion with God."

In the Germanic literature, as well as in the Persian poems and religious writings, we find the same words used in the same symbolic sense.

These explanations are not meant as an attempt to belittle the value of the Christian religion or to reduce its beauty. On the contrary, they make the significance of the Biblical teachings more profound; they give them a new significance. Stories from the New Testament read in this light appear quite novel. The story of Jesus' talk with the woman of Samaria may illustrate this.

Jesus meets this woman at the well of Jacob and being thirsty, he bids her draw water out of that well. The woman replies: "How is

it that thou being a Jew askest to drink of me, which am a woman of Samaria?" Jesus does not give a straight answer to this question, but inquires after her husband. She replies saying that she has no husband, to which Jesus gives the strange reply: "Thou hast well said, I have no husband: For thou hast had five husbands; and he whom thou now hast is not thy husband: in that saidst thou truly." To this the woman gives an even stranger reply, for she says: "I perceive that thou art a prophet. Our fathers worshiped in this mountain; and ye say, that in Jerusalem is the place where men ought to worship." To which Jesus replies: "The hour cometh and now is, when the true worshipers shall worship the Father in spirit and in truth."

I give the story in outline. The compiler of the Scripture wished to bring home to the reader that worshiping is not limited to a particular place, but that praying arises from man's inmost being, that it means at-one-ment with God. This is in accordance with the sense of Christ's words, when he spoke of the Kingdom of God within.

Let us now see what the story means after the veil is removed.

Jesus is a Jew, the woman an inhabitant of Samaria. These two peoples had divergent opinions about the explanation of their sacred writings. Both peoples pique themselves on being descendants of the patriarch Jacob and his sons, each of whom represented a tribe of Israel. No wonder, therefore, that these two find each other back at the well of Jacob (from which both peoples draw their spiritual knowledge). The Jews maintained that God should be worshiped in Jerusalem in the temple of Solomon; the Samaritans held that it ought to be done on Mount Sinai, where Israel had received the commandments. Jesus is thirsty (after knowledge) and requests the woman of Samaria to draw water out of Jacob's well (the doctrine of the ancestors). To

this the woman naturally replies: "How is it that thou being a Jew askest of me to give thee water out of Jacob's well?" (That is, you explain that doctrine in quite a different way.) Jesus now asks: "Where is your husband?" (Who is your God?). The Samaritans were divided, their religion recognized five sects. Accordingly, Jesus in reply to her answer, "I have no husband," says: "Thou hast well said, for thou hast not one but five."

If the story had no symbolic meaning she would have reacted quite differently. Now, after Jesus' answer, she says: "I see thou art a prophet." Why? Not, I dare say, because she thinks that Jesus really believes she has five husbands, but because she understands from his reply that he is acquainted with the religious conditions in Samaria. And availing herself of this opportunity, she asks him a question which the compiler of the story had been aiming at from the outset, viz. "Where is God to be worshiped?" The answer reflects Jesus' teaching, who, averse to all outward forms of religion, constantly points out to man the essence of faith, which wells up from the heart, the Kingdom of God within man.

The story of the marriage at Cana, where Jesus changes water into wine, is told in the same symbolic language.

During this marriage, which represents the rapture of communion with God, there is a lack of wine (true divine life). But for this life, divine communion cannot exist. It is Christ who brings about this ecstasy, this divine communion, changing the water (the lower life) into wine, that is raising it into divine life.

"I am the true vine," says Jesus, "every branch that beareth not fruit He [my Father, the husbandman] taketh away."

Christ is the Christos-spirit within man. Paul says: "My little children, of whom I travail in birth again until Christ be formed

in you," meaning the Christ-spirit, not the long deceased Jesus, who was the bearer of the Christos-spirit. This Christos-spirit had been in the hearts of men, long before Jesus' birth. This is the spiritual glory, which can manifest in and wholly illuminate us, so that we may give birth to the son within us, and may experience the manifestation of divine life. Such a man was called a "twice-born," because he had, so to say, been born again, but this time "spiritually." He had entered the Kingdom of God.

Just as Christ said he was the connecting link between man and God ("I and the Father are one"), similarly Krishna says in the *Bhagavad-Gita*: "Take refuge alone with me, grieve not, for I shall deliver thee from all transgressions."

In every man's heart lives the Christ-spirit, the Krishna, the splendor of the spirit, and whoever raises himself to this splendor, enters into a new life, the realm of the spirit, to which the initiates of all ages have lifted themselves and from which they have drawn their knowledge.

Again and again Jesus the Initiate speaks of the esoteric and secret doctrine as being the essence of his teachings.

Again and again he speaks in parables: "that seeing they might not perceive, and hearing they might not understand."

To his disciples, however, he expounds the mysteries of the Kingdom of God. "It has been said by them of old times," he says . . . but "I say unto you" . . . and then his exposition follows, giving the meaning of his words, and stating the reason why particular teachings or laws have been given.

Often a mystery-school or an order of initiates is compared to a tree, which is to shed its fruit in the outer world. When the spiritual knowledge is lost, the tree will wither and die, and no longer bear any fruit. This comparison to a tree is found in all

religions, as well as in the Bible. We think of the fig-tree, which Christ curses because it has no fruit on it, and which instantly withers away. It is evident that the above explanation is to be applied also to this case, for nobody will think that so great a teacher as Jesus will really get angry because a tree happens to be without fruit.

The secret doctrine is the most valuable treasure that any man can find, for which he ought to renounce everything else that has value for him, because it will raise him to the highest life. To this Jesus continually refers in all his parables. And this spiritual treasure will be found by him who conquers his lower nature, and like the prodigal son, returns to his Father, his own highest Self.

WHEN THE CLOCK STRIKES TWELVE — *Philip A. Malpas*

THE FIFTH MYSTERY

One of the most fascinating initiation cycles as described in the exoteric mystery-stories is that of Hercules. In one aspect he is the Sun, pursuing his course through trials to the zenith and then on to the end of his acceptable year. This sun is Man in evolution.

The fifth trial or adventure of the soul is the cleansing of the Stables of Augeas. These stables were so neglected and foul that it was regarded as impossible to clean them. Impossibilities are meat and drink to the neophyte, and Hercules is saddled with the task of cleaning these famous stables. How does he do it?

It was impossible to clean them — from the physical, mental, and psychic point of view. But Hercules goes higher. He turns the spiritual river into the stables and the thing is done in a day. This spiritual river is the "descending stream," the esoteric Yarden, Eridanus, Jordan, only exoterically applied to geographical rivers as names. In India it was the Ganges, the Ganga; in Egypt, doubtless the Nile.

The Mysteries consisted of three stages, purification, instruction, illumination.

The laws do not change — ever. Without purification there can be no illumination and the instruction can only be of a kind that is possible to the unpurified. If purification takes several lifetimes, that is the time it takes and no half-measures will serve.

An old phrase covering this purification is "living the life." "Live the life and you shall know the doctrine," is an ancient maxim.

Time is the great sifter. There are regular periods when a sifting

takes place among those dedicated to the mystic life. Inevitably those whose professions are not centered in the heart fall away, though they often for a time imagine they are the regiment and all the others are out of step with them. The purification is that of all the lower qualities, based chiefly on personality and desire, which in the end are usually found to be much the same thing. An infallible sign of personality is the irritation with which those who are dominated by it resent the mention of the word or throw it back in the teeth of the one they think to be criticizing them, the "tu quoque" idea.

One prides himself on his social importance, frequently a child of the imagination; another supposes he is one of the spiritually advanced; he suffers from spiritual pride; another wants to turn spiritual professions to physical and material advantage or profit; another thirsts for power, even if no more than over a small group of fellows whom he calls friends; another desires offices, position, titles, money; another is a victim of the innumerable forms of self indulgence, as most people are today. There are those who follow psychic practices and imagine they are thereby spiritually progressing, sometimes hiding their heads in the sand to prevent seeing that they are psychic and not spiritual. Some are merely victims of psychic weaknesses which are so often taken for "powers," which they are not. A few have the pride of an inverted humility. Retaliation, pomposity, self-justification, the pronoun "I," speeches with great swelling words, the desire to sit at tables above the salt as if any particular table conferred social status, though this latter foible belongs to the Middle Ages rather than today; all these things and many other forms of personality belong to the heap. One could go on for pages with all the festering compost that fills the stables of Augeas.

Why should these things be bad? Has not a man a right to think himself a bit superior to others if he has position, title, a bank

account, a car, an education? This is the reason. All these things of the personality belong to the temporary, fleeting, "mortal" personality. It all has to die or fall away before the real man can live as a man and not something lower.

Initiation at one stage means just that. It is a death in life. The lower man, the personality, has to die so that the real man, in its very high aspect sometimes called the Christ in Man, may live, may rise from the dead of the personality. That is why it is included in the initiation cycle of Hercules. This Initiation is a hastening of the process which the Man passes through during the ages; it is nothing unnatural, but it is a hothouse culture. It is very desirable because without it the way would be interminably long. It is often said that life on Earth is the only hell that really exists. Then why are we here? Because we failed to go further through initiation in former lives, in former worlds. That is all. Those monads now working in beast bodies failed to go forward to the man-stage in the past, and have now to work their way up in the name-and-form they now have, as it is called in the graphic language of the King Milinda discussions of the Buddhists.

When the mighty rushing torrent of the spiritual stream comes through the stables, sweeping all before it, many who thought themselves anchored in the safety of spiritual self-approval are carried away, together with the pet foibles they cannot let go. Many such a sifting has the Theosophical Society passed through and many have been surprised to find that those they thought "big shots" of Theosophical personality have been swept away with the rest. But the Law is impersonal and time unrelenting.

The world, too, has its sifting times, since the Theosophical Society is a mirror of the world in miniature. We are now living, to all appearances, in such a sifting time, such a harvest ingathering, and it depends on us to see that the wind and the

water of the spirit have not too much dross to carry away when the clock strikes twelve.

The Theosophical Forum

SOUNDLESS SOUND — *Marion O. French*

H. P. Blavatsky predicted that the greatest scientific advance in the foreseeable future would take place in acoustic physics. This prophecy has been fulfilled, in part, by the radio and by closely connected developments in radar, television and supersonics. One result is a general familiarity with the basic principles governing the radiation of electronic and vibratory impulses. This enables the average reader to interpret many implications in transcripts from the Sanskrit sources of ancient wisdom more clearly than was possible prior to such progress. In particular, this applies to the phenomena of sound transmission with respect to propulsive wave lengths and their frequencies. Those in common usage are long enough and slow enough to obey terrestrial attraction and follow the curvature of the earth in their course. They are, however, of a much higher frequency than the tabulation of von Helmholtz covering direct reception by the human ear of music from instrumental sources. This extends from 16 cycles per second to 16,000. To traverse the distances that radio waves travel, they must be propagated with the energetic power of electricity. Also, they are inaudible to the unaided ear and require a receiving apparatus to amplify them. Microwaves of higher frequencies, such as are used in television, do not follow the earth's curvature. They must be relayed from stations that are connected by straight lines, or by lines that seem so to us because we cannot detect curves that conform to the elongation of astronomical orbits. For their reception, they require adequate amplifying tubes and a responsive diaphragm or similar device.

Physiologically, at present, eleven octaves of sound are audible to the human ear and only one octave of color is visible to the eye. However, in the course of time, evolution may extend sensory

apperceptions to include the etheric vibrations of radio waves. To these may be added those psychic faculties now known as clairaudience and clairvoyance. This will permit the sensing of vibratory impressions beyond the scope of today's scientific instrumentation. Then, humanity will stand upon the threshold of the noumena of sound, of Nada, the Soundless Sound known to all theosophists as the "Voice of the Silence." To form a concept of the nature of spiritual sound, we may consider the fact that three things are necessary for the sensation of sound. They are an energetic source, an agency of transmission, and a receptive apparatus. If this trio of essential factors be in existence, the requirements for sound as such will prevail, irrespective of whether it be audible or not.

The triune requisite is met by the conditions governing human thought on the physical plane. The mind, or brain, is the energetic source and its muscular motor impulses can be recorded by an ammeter attached to a needle in the muscle. By means of an invention of his, J.W.Keely, who is mentioned in *The Secret Doctrine*, asserted that the energy of a thought could be ascertained. Between all minds is the same ether that transmits radio waves, which fulfills the requirements in that respect. As a receiving apparatus, the brain and nervous system have not been analyzed exhaustively by current physiological and psychological studies. According to Hindu authorities, there are five ethers that act as agents of transmission for the five senses. Thus, the possibilities for perceptions are far more extensive than is imagined. Telepathy and the rapid spread of waves of thought generated by men *en masse* have been considered in a cursory manner, but the conclusions that are accepted by science fail to account for the facts. Emotion indicates the degree of energy with which a thought is broadcast, but different races, languages and customs render interpretation by the recipients very uncertain as

to its meaning.

This synopsis of some of the salient aspects of sound may serve as a basis for a more complete comprehension of the first statement in H. P. Blavatsky's *The Voice of the Silence*. The statement is: "He who would hear the voice of Nada, the "Soundless Sound" and comprehend it, he has to learn the nature of Dharana." By definition, *Dharana* is the "intense and perfect concentration of the mind upon some one interior object, accompanied by complete abstraction from everything pertaining to the external Universe, or the world of the senses." Thus, it is necessary to exclude all sensory distractions and to attain a state of meditative receptivity. Since Akasa, the sonoriferous ether, is the first and all-pervading one, sound that is audible to the ear is the most distracting influence. The other ethers — Vayu, Tejas, Apas and Prithivi, pertaining to touch, sight, taste and smell and to air, fire, water and earth — emanate from Akasa in turn. It lies between them and acts as the mediating interpreter of sensations transmitted by them. You say, or think, that you feel, see, taste or smell in words or in terms of sound. Its pervasiveness becomes apparent when you place a hollow shell against the ear and the resonance of its cavity exaggerates the faint sounds that fill the atmosphere into the roar of the ocean. The action of Akasa in interpreting sensations may be compared to the piezoelectric effect of a quartz crystal or of carbon granules in transmuting the pressure of your voice to electric energy in the speaking tube of a telephone and back to voice again in the distant receiver.

Now, we may conceive that the Divine Ideation, or cosmic consciousness in modern parlance, of the Paramatman of the Hierarchy infills our Universe. It is the noumenal essence of thought and of its first formative expression in phenomenal sound; for "In the Beginning was the Word." The initial manifestation in the transmissive medium of the Aether that

precedes the ethers may be regarded as an intonation of the open vowel sounds. It continues to echo and to reverberate down the corridors of Time as AUM. Within the Solar System it is the "Music of the Spheres." Finally, in the dense atmosphere of our Globe it becomes the sound of Nature and the voices of men. If we would ascend in the harmonic scale to hearken to the overtones, we must obey the behests of the Sages who have trod the pathway before us.

Consecutively, they have set forth the successive steps in that ascent to attunement with the Universe. Initially, philosophical curiosity will serve to launch the mind on research. If undertaken without motives of ambition, this may lead to direct tuition from the textbooks that contain the scriptural wisdom of mankind. All such verbal instruction is designed to incite the intuitive faculties. When this is the case, the student may receive unrecognized inspiration from the current of universal intelligence. It runs, as Emerson expressed it, along the wire of thought. "In the presence of the higher, the lower plane always appears to be at rest." Also, as John Tyndall stated, what we call silence expresses only the absence of motion. Theosophically, this may be conceived of as an apparent immobility, or as motion that is imperceptible to our sensory organs. Such is the case in the motion of the "Great Breath," or in the soundless sound of TAT as that which subsists in immutability. Precise analogies may be found in the resonant responsiveness of organ pipes and of stringed instruments, when their free vibrations respond as an accessory to the pulsatory motion of harmonics in a primary tone from another source. (1)

When the intuition has become awakened thus, meditation will become increasingly enlightening. With further intuitive development, ultrameditative methods may be resorted to and intuition will replace the mental concepts of tuition with direct cognition. Where mind saw form in many diverse patterns,

intuition will see one reality. White light will dawn in lieu of the colors seen through the prism of the mind. A knowledge of causes will be substituted for the study of effects. The restless rhythms of space, time, and emotion will give way to the ineffable peace of motionless duration. The mental restrictions of matter will fall like fetters from the freed intuition of the Man Ensouled.

"Hark! . . . from the deep unfathomable vortex of that golden light in which the Victor bathes, ALL NATURE'S wordless voice in thousand tones arises to proclaim:

"Joy unto ye, O men of Myalba, a Pilgrim hath returned back
"from the other shore." A new Arhan is born. . . .

"Peace to all beings."

FOOTNOTE:

1. "Were the blast (of the siren) sufficiently powerful and the siren sufficiently free from friction, it might be urged to higher and higher notes, until finally its sound would become inaudible to human ears. This, however, would not prove the absence of vibratory motion in the air; but would rather show that our auditory apparatus is incompetent to take up and translate into sound vibrations whose rapidity exceeds a certain limit. The ear, as we shall immediately learn, is in this respect similar to the eye." — *Sound*, Tyndall

Recent research has developed a supersonic siren that can create a lethal rate of vibration. Among other effects, it will hold small objects suspended in the air, set up frictional heat sufficient for ignition of inflammable material, and perform many useful industrial functions. ([return to text](#))

A BIRD'S-EYE VIEW — *Elsa-Brita Bergqvist*

"The Sun is the heart of our universe." "The circulations of the Cosmos are analogous to the circulation of blood, lymph and nervous fluids in a human body."

These are bald statements to be found scattered among Theosophical teachings in our books. What do they mean?

They mean that in infinite reaches Life abounds. The worlds of the vast spaces visible to us are merely a single aspect in an infinite range of material beings. Let us lose ourselves in the whole, in an effort to see our proportionate place in the scheme.

Throughout all Being pulsates unceasingly the flow of Nature's forces, classified in groups of numbers for our partial understanding, but infinite in fact; covering all planes of existence, known and unknown; vibrating in harmonious coordinations of the innumerable possible permutations, of which our known laws of music and mathematics give a fleeting glimpse. Flowing ceaselessly in groups of relative similarity, which form waves in cyclic motion, they conjoin in temporary unisons and disperse to re-combine again. Each wave or wavicle is a host of living consciousnesses, cosmic or atomic in magnitude, all equally the expression of infinite potentiality manifesting to the extent of the unfolded powers within. The unceasing flow of these waves of force throughout the hierarchical structure of nature is regulated by karmic attractions and repulsions generated in the infinite past and karmically forming infinite future correlations.

When the cyclic peak of each unfolding of potentiality is reached, the return to the infinite source within each center of

consciousness begins and the temporary entity is slowly, in the spiral motion of life, sucked back into the great silence.

Mankind's place in this circulatory structure of forces is that of a wave of temporarily cohering droplets, rippling the surface of the river of life. As a hierarchy man is composed of the powers that he manifests. His nature is that of the existing forces in the whole that he, as a center of consciousness, has formed for his habitation out of the essence of his being. He manifests those of the infinite potencies of his essentially infinite nature that have become activated during an age-long cycle of experience. He is the expression of a stage of evolution. The peculiarity of this stage is the beginning of self-consciousness, the thinking capacity that enables man to know his place in nature and to cooperate of his own free will in the majestic design of life.

This awakening of mind is a two-edged sword, leading on the one hand to the willing activation of god-like qualities as yet asleep, which, when awakened, endow man with glories of consciousness as yet but feebly guessed; and, on the other, to the possibility of self-destruction as an entitative being, involving sufferings of consciousness but vaguely dreamed. The "human" stage is the turning-point.

Man as a self-conscious part of nature is in his infancy in the school of evolution. The prelude to this stage is a slow and laborious unfolding of consciousness, guided by the wisdom of nature, personified in the individual expressions thereof, the super-human beings of all stages, who supervise this growth. With the awakening of mind, self-consciousness begins to be. With it awaken free will and individual responsibility. It is a turning-point of life. No longer may the elemental forces run riot in man's constitution; they are under the control of the individualized focus of consciousness grown aware of itself.

Throughout the range of his being the spiritual entity guides and controls the elementals it harbors, from the spiritual life-atoms, through the mental and emotional nature, the ethereal, sensual body and its expression, the crystallized atomic structure that appears solid to the physical senses adapted to our world.

At this point a struggle begins. Man, the thinking entity, is drawn magnetically towards the root of his being and would inevitably be drawn into the central focus of himself, partaking of the infinite which is the basis of existence, were it not for the illusory web of entanglements that he has formed about himself and which hold him captive in his responsibility towards the lesser entities of which he has composed himself. He is semi-conscious of this fact and tries mistakenly to unite with them in the innumerable disparate forms of life sprung from his experimental attempts at "creation," Thus is formed the "heresy of separateness."

Believing himself to be set apart and a creator in his own right, man forgets his place in nature, wherein he is but one aspect of divine life. The overcoming of this illusion of independence is the next step in evolution.

Those who have achieved this step see themselves in proportion, and sense the "fitness of all things." To them no hurt can ensue, for their feelings, thoughts and actions are consciously in accord with the laws of balance and harmony that bind all together in one vast whole. In accordance with this knowledge, they constitute themselves voluntary agents of natural law and become the law. In this capacity they are enabled to function as foci or centers, through which the solar rays of energy flow into the various kingdoms of life forming our earth, as an instance in point, and their conscious function is to distribute in the atmospheres of our earth on all planes the appropriate forces in

strict accordance with karma. Man, the newly evolved thinker, is thus assisted by their work in his efforts to free himself from the bondage of his own making and to rise to a stage where cooperation in this work is possible.

The central Lodge of the Masters is therefore a natural fact, one to be accepted and aspired to, not to be dreamed of with miasmatic sentimentality. As a life-wave, mankind is the necessary instrument through which the forces of the plane of mind must flow, and the efficiency of its function depends on the willing cooperation of men as individuals. We humans are the stepping-stone between the central lens receiving the solar forces and the lower kingdoms of nature that ultimately benefit from this influence. Each individual thinking mind is a minor facet receiving the cosmic influences and transmitting them over the world in prismatic array, depending for their purity on the purity of the individuals.

The Theosophical Society was formed with the purpose of instituting a nucleus of individual minds, willing to undergo the necessary purification to the end that the natural flow of divine energy might be transmitted in a relatively pure state. In the present crucial state of our world it is of great importance that this work be assisted in the greatest possible degree. Man, the thinking being, must consciously and with will array himself on the side of nature's divine forces and work for the evolution of all beings. It is in his power to do so to a great extent, and the only requisite is his desire to do so. "Behind will stands desire." We always ultimately do what we most desire and our will is the instrument which depends on our choice. With the assistance of the natural law of evolution, which tends towards spiritual growth, it is therefore possible for any one of us to be the deciding factor in the balance, as either a savior of the world or a destroyer.

WHAT IS THEOSOPHY? — *M. J. T. George*

Many friends, inquirers and brother Theosophists have been asking me to explain to them what Theosophy is, what it teaches and the contrast of the Theosophical Society with other secret societies. In answering these interesting questions I shall have to deal with them in the order the questions are put.

The first question is, What is Theosophy?

Theosophy is not a religion in itself, but is the truth which underlies all religions alike, the hidden root from which all the different religions have sprung. Theosophy is made up of two Greek words, *Theos*, God, and *Sophia*, Wisdom, and means Divine Wisdom, without the help of which it is impossible for man to know anything about the creation of the Universe, whence, how, whither does it tend; what am I, what is the purpose of my existence, what is the goal; what is God and where; how am I connected with Him and the Universe; what is the explanation of the apparent injustices of life; what is the meaning and the use of suffering and pain; what is luck, fate, or destiny; what are dreams and how are they caused; what is life, what is death — these and many such questions which the ignorant in all ages think to be inexplicable can be understood only with the help of Theosophy.

The second question is what Theosophy teaches. Here I am going to give you a rough sketch of its teachings. Its teaching can be outlined thus:

(a) That there is one eternal infinite Reality, one uncognizable real existence.

(b) That from that proceeds the manifested God, unfolding from unity to duality and from duality to trinity.

(c) That the whole Universe with everything within it is a manifestation of the life of God.

(d) That there are many mighty intelligences called Archangels, Angels, Devas, who have come out of the manifested God, and are His Agents for carrying out His thought and will.

(e) That man like his Heavenly Father is divine in essence, his inner Self being eternal.

(f) That he develops and evolves by repeated incarnations, into which he is drawn by desire under the law of Karma in the three worlds, the physical, the Astral and the Mental, and from which he is set free by knowledge and sacrifice, becoming divine in potency as he had ever been divine in latency.

(g) That there are Masters, perfected men, men who have completed their human evolution, have attained human perfection and have nothing more to learn so far as our human state is concerned.

The third and last question is the difference between the Theosophical Society and other secret societies.

In answering this question I would ask my readers to note the points I am giving because it is the question that matters much, as many members of the Society, particularly in this country, think by joining this Society they can perform miracles, invoke spirits overnight. This is not so with Theosophy.

I cannot give an idea of the teachings of other secret societies, but what I know is that the Theosophical Society does not encourage its members to nurse sectarianism, politics, phenomena, unbelievable and uncanny things, superstitions, so-called astrology, palmistry or any of those idiosyncrasies which some who call themselves Theosophists believe in and teach.

AS THE TWIG IS BENT — G. F. K.

When H. P. Blavatsky included those golden precepts in her *Voice of the Silence* that tell of the twofold path to Nirvana, she made no error in spiritual judgment. Strong and clear, her words are an ever present reminder that as the twig of the heart is bent today, so will the tree of enlightenment be inclined in the future: inclined to compassion — or to self.

The PATH is one, Disciple, yet in the end twofold. . . . Both are of merit the reward: the choice is thine. . . .

Unveiled stands truth and looks thee sternly in the face.
She says:

"Sweet are the fruits of Rest and Liberation for the sake of *Self*; but sweeter still the fruits of long and bitter duty. Aye, Renunciation for the sake of others, of suffering fellow men."

He, who becomes Pratyeka-Buddha, makes his obeisance but to his *Self*. The Bodhisattva who has won the battle, who holds the prize within his palm, yet says in his divine compassion:

"For others' sake this great reward I yield" — accomplishes the greater Renunciation.

A SAVIOUR OF THE WORLD is he. . . .

Thou canst choose either, O aspirant to Sorrow, throughout the coming cycles!

How tragic then that this cardinal teaching both of the Trans-Himalayan and Northern Buddhistic Schools should have been

clouded over with doubt and mistrust. Backed as it is by scores of Buddhistic writings one is at a loss to account for Mrs. Besant's assertion that H. P. B. had made a "mistake" in stating that a Pratyeka Buddha is a "synonym of spiritual selfishness." To quote Mrs. Besant's own words which appear in a footnote on page 416 of the collection of H. P. B.'s articles posthumously published by Mr. Mead and herself as a third volume to *The Secret Doctrine*:

The Pratyeka Buddha stands on the level of the Buddha, but His work for the world has nothing to do with its teaching, and His office has always been surrounded with mystery. The preposterous view that He, at such superhuman height of power, wisdom and love could be selfish, is found in the exoteric books, though it is hard to see how it can have arisen. H. P. B. charged me to correct the mistake, as she had, in a careless moment, copied such a statement elsewhere. — A. B.

And yet we find this "preposterous view" held by the greatest of sages, both among the Mahayana and Hinayana Schools, to say nothing of the Venerable Nagasena whose "talk plunged to the hidden depths" of the Law. Why should the populace in Buddhistic countries worship the Bodhisattva rather than the long line of Buddhas who remain in Nirvana, and cherish his act of renunciation as the highest goal of spiritual achievement if it were not that the path followed by the Pratyeka is looked on with contempt. Such are mockingly dubbed *ekasringa*, "one-horned," like unto the rhinoceros who seeks the waters (of Ananda) for *self alone*, never for family or friend.

We doubt not the sincerity of Mrs. Besant's assertion, based on her own conviction that the teaching was wrong. But sincerity is no guarantee of truth; and lightly to pass judgment on teachings given by Those who know far more than we is to court danger not

alone to ourselves, but more, to those we would lead.

Unless compassion become the dominant motif in the life of the disciple, he will indeed, should he win out, become Pratyeka; but if he fail, he may as easily, if the motive is for self-advancement alone, fall into the path of the Shadow. The life is judged not by deed or word, nor even by mighty act of courage, but solely by the *inner* motive propelling aspiration. Masters care little for pomp and circumstance. Their interest centers on the burning light of compassion, even in the least of men, for this is the stuff that Adepts are made on. Buddhas of the Pratyeka Path there will be hundreds; Bodhisattvas who win Nirvana yet turn back to the world of sorrow there will be few — but the boon of active compassion of even one such is a light for countless centuries.

Is it beyond belief that the course of theosophical history might have been different had this fundamental teaching of Compassion been understood by all branches of the Movement? As the twig is bent. . . . For within the doctrine of Pratyeka versus Compassion lies the fundamental difference between the School of the Masters and any ordinary exoteric branch of learning.

It was these thoughts that came to mind while listening one afternoon to the subtle and profound questionings of King Milinda (1) (of Buddhist fame) addressed to his preceptor, the Venerable Nagasena, and great was the reward, for when the King asked his guru, "Was the Buddha omniscient?" the remarkable reply came: "Yes, O king, he was. But the insight of knowledge was not always and continually present with him. The omniscience of the Blessed One was dependent on reflection. But if he did reflect he knew whatever he wanted to know." A perfect confirmation of the renunciation made by Gautama, the Blessed One, who "on reflection," that is at will, had absolute power to tap the source of all-knowledge (Nirvana), yet out of deliberate

compassion such "insight and knowledge was not always and continually present with him." Do not our Masters follow this same pattern? On their own admission, they are not Adepts at every moment, but when acting as such are accorded "an instantaneous, implicit insight into every first truth." (*Mahatma Letters*, 241)

Then following the ancient form of dialogue between teacher and pupil, Nagasena leads the mind of the king through seven gateways of comprehension, discoursing in detail upon the seven classes of minds, the sixth being the Pachcheka (Pratyeka) Buddhas, and the seventh, the Perfect or Complete Buddhas. Because of the marked similarity in spiritual content between the recital of Nagasena, with the Seven Portals of the *Voice of the Silence*, in which the seven strongholds of experience are graphically portrayed for the disciple who, attaining the Paramita Heights, would yet make the great choice, we reproduce his answer in brief. The first class of minds comprise

(1) "Those, great king, who are full of lust, ill-will, delusion, or wrong doing, who are untrained in the management of their body, or in conduct, or in thought, or in wisdom, — their thinking powers are brought into play with difficulty, and act slowly." Because of this they are like unto the "wide-spreading, extensive, overgrown, and interlaced vegetation, and with its branches intricately entangled one with the other. So slow and heavy are the movements of the minds of those men, O king. And why? Because of the intricate entanglements of wrong dispositions."

(2) The second class are those "who have been converted" and have attained to right views, "who have grasped the doctrine of the Master," but whose thinking powers act with ease only "so far as the three lower stages [the three Fetters of Delusion of self, Doubt, and Dependence on rites and ceremonies and outward

morality] are concerned." As for the higher regions, their faculties "because of the failings still existing within them" are brought into play with difficulty, and act slowly, like a tree that is smooth up to its third knot, but when dragged along sticks "obstinately as regards its upper branches."

(3) The third class of "thinking powers" are called Sakad Agamins (Pali for Sakrid Agamins of the *Voice*), literally those who will "come again once more" to Earth, "in whom lust, ill-will, and delusion are reduced to a minimum"; and whose powers are swiftly acting as far as the "five lower stages" are concerned.

(4) The fourth class are Anagamins, those who will "return no more" to Earth, whose Arhatship is secure,

who have completely got rid of the five lower fetters, — their thinking powers, so far as the ten stages are concerned, are brought quickly into play, and act with ease.

But even here, as regards the higher regions we are reminded that the Anagamins,

because of the failings still existing within them [are like] the movement of a giant bambu which has a smooth trunk as far as the tenth knot, but above that has its branches intricately entangled.

(5) The fifth class are those Arahats (Pali for Arhats)

in whom the four Great Evils [lust, becoming, delusion, and ignorance] have ceased, whose stains have been washed away, whose predispositions to evil have been put aside, who have lived the life, and accomplished the task, and laid aside every burden, and reached up to that which is good, for whom the Fetter of the craving after any kind of future

life has been broken to pieces, who have reached the higher insight, who are purified as regards all those conditions of heart in which a hearer can be pure, — their thinking powers, as regards all that a disciple can be or do, are brought quickly into play, and act with ease.

Yet even this fifth class of minds acts with difficulty as to "those things which are within the reach of the Pachcheka-Buddhas [Pali for Pratyeka-Buddhas]" which comprise

(6) The sixth class of minds, aptly described by Nagasena as follows:

Those, O king, who are Pachcheka-Buddhas, dependent on themselves alone, wanting no teacher, dwellers alone like the solitary horn of the rhinoceros, who so far as their own higher life is concerned, have pure hearts free from stain, — their thinking powers, so far as their own province is concerned, are brought quickly into play, and act with ease. But as regards all that is specially within the province of a perfect Buddha (one who is not only Buddha, that is enlightened, himself, but can lead others to the light) they are brought with difficulty into play, and move slowly.

"And why is this so?" Nagasena continues, and note well the precision of implication in his answer:

Because of their purity as regards all *within their own province*, and because of the *immensity of the province of the omniscient Buddhas*. [Italics ours] It is like a man, O king, who would fearlessly cross, and at will, by day or night, a shallow brook on his own property. But when he comes in sight of the mighty ocean, deep and wide and ever-moving, and sees no further shore to it, then would he stand hesitating and afraid, and make no effort even to get

over it.

And again Nagasena says, "And why?" and for answer gives the same potent reply: "Because of his familiarity with his own, and because of the immensity of the sea."

How vast in importance the pattern of thinking engendered by the foregoing. Well did H. P. B. know the direction of aspiration in which she was leading her students when she quoted that ancient precept, that "he, who becomes Pratyeka-Buddha, makes his obeisance but to his *Self*," her footnote thereto adding significant emphasis that

Pratyeka Buddhas are those Bodhisattvas who strive after and often reach the Dharmakaya robe after a series of lives. Caring nothing for the woes of mankind or to help it, but only for their own *bliss*, they enter Nirvana and — disappear from the sight and the hearts of men. In Northern Buddhism a "Pratyeka Buddha" is a synonym of spiritual Selfishness.

Why, we ask, should the simple question of Milinda as to whether the Buddha was omniscient be so painstakingly answered by a long dissertation on the seven classes of minds if it were not to lead by slow yet persuasive appeal to the distinction between the sixth and seventh classes: the Pratyeka who would be buddha or "enlightened" indeed, but only within "the shallow brook on his own property," only within the narrow province of his own buddhi; and the Buddha, perfect and complete, "whose mastery knows no limit," and whose sole aim for enlightenment is that he might shoot the dart of his omniscience into the world of sorrow and bring cessation of pain, renewal of light?

But let us continue with Nagasena as he tells of this seventh and final class of minds, who

(7) are complete Buddhas (not only themselves enlightened, but able to teach, leaders of men), having all knowledge, bearing about in themselves the tenfold power (of the ten kinds of insight), confident in the four modes of just self-confidence, endowed with the eighteen characteristics of a Buddha, whose mastery knows no limit, from whose grasp nothing is hid, — their thinking powers are on every point brought quickly into play, and act with ease. . . . And why? Because of their being purified in every respect. . . .

Now of these, O king, the last — the thinking powers of the omniscient Buddhas — altogether outclasses the other six, and is clear and active in its high quality that is beyond our ken. . . . For the knowledge of the Blessed One, O king, is dependent upon reflection, and it is on reflection that he knows whatever he wishes to know. — IV, i, 19-27

Today, some 2000 years or more after "the world famous sage," Nagasena, the Elder, had discoursed with his disciple, Milinda, king of the Yonakas at Sagala, another set of dialogues between Teacher and pupil appear, wherein this same teaching on the qualities and powers of the Buddha is hammered home in a thousand and one different ways, yet always with the power and authority of "one who knew." For again and again, do pupils today seek answers to this age-old question: "How is it that a Buddha who has attained to so lofty a stature of wisdom can still be selfish?" And true to occult tradition, G. de P. replies therein (*italics ours*):

This name "Pratyeka" means "each for himself." . . . The Pratyeka Buddha knows that he cannot advance to spiritual glory unless he lives the spiritual life, unless he cultivates his spiritual nature, but as he does this solely in

order to win spiritual rewards, spiritual life, for himself alone, he is a Pratyeka-Buddha. He is *for himself*, in the last analysis. There is a personal eagerness, a personal wish, to forge ahead, to attain at any cost; whereas he who belongs to our own Holy Order, the Order of the Buddhas of Compassion, has his eyes set on the same distant objective, but he trains himself from the very beginning to become utterly self-forgetful. . . .

The time comes when the Pratyeka-Buddha, holy as he is, noble in effort and in ideal as he is, *can go no farther*. But, contrariwise, the one who allies himself from the very beginning with all Nature, and with Nature's heart, has a constantly expanding field of work, as his consciousness expands and fills that field; and this expanding field is simply illimitable, because it is boundless Nature herself. He becomes utterly at one with the spiritual Universe; whereas the Pratyeka-Buddha becomes at one *with only a particular* line or stream of evolution in the Universe. — II, 441-2

And then again, in speaking of the Perfect Buddhas, G. de P. explains that the Compassion Buddhas

are older souls, riper in wisdom, more closely knitted to the compassionate Heart of Being, follow the instincts of their nature which urge them to remain as Guides and Inspirers of those less advanced. — I, 415

And so one might continue to elaborate by quotation this theme, but there is no need with *The Dialogues of G. de P.* now available. Truly, we are taught, that as the powers of the mind, the current of the heart, are channeled in the earliest days of discipleship, so will the stream of Arhatship be determined in the future. "Thou canst choose either, throughout the coming cycles!"

CAN HYPNOTISM HELP? — *Madeline Clark*

What is man's most precious possession if it is not his power of free will and choice? This inborn and inalienable right is the very touchstone of his responsibility for his own spiritual progress. In the ultimate, each man has to perfect himself in the exercise of this divine faculty of self-dependence, before he can come into his own, spiritually. Mediators and teachers he may have to help him, but the final choice must be within himself.

We like to think of this faculty as residing inviolate in the inner citadel of man's being, but, at least as regards his psychological nature, it can be tampered with to his very great injury. And hypnotism is one means by which this is done.

It would be useless to dogmatize on this matter, because the subject has wide ramifications and many aspects. But this much is obvious: that to gain access to the inner consciousness of another, where will and choice abide, to set aside his sovereign power and substitute it with your own, is a violation of moral law. It is not going too far, in fact, to call it a form of sorcery.

In a current book (1) the subject of hypnotism is placed in its most unobjectionable light. The author, a dentist, tells how, discovering the hypnotic power in himself, he not only used it for inducing anaesthesia in his patients, but pursued it as a hobby, curing various cases of illness, usually based in neuroses, by means of hypnotic suggestion. Each chapter gives a case-history, with its difficulties and its progress under the stimulation of salutary ideas instilled into the mind of the patient in a condition of light hypnotic sleep. Cases of failure are cited as well as the successes; and the author is careful to point out that in pathological conditions the hypnotic process cannot take the place of regular

medical attention. *He never asked any fee for his services* in the field of suggestion: and this is of a piece with the apparent fact that all of his work was that of a purely disinterested person, whose suggestions were invariably based on sound common sense and a normal attitude toward life and its obligations. His advice is throughout entirely sound and wholesome, and we are made to feel that the entire proceeding was altogether praiseworthy.

But there is one hindrance to our complete satisfaction. It is the will of the practitioner that is accomplishing the (apparent) reform in the patient. The patient's will is more than passive: it is suspended, for the time being, though it may be claimed that it has been set beforehand to cooperate with that of the practitioner. There is the instinctive feeling — especially when the "treatment" is to enable the patient to withstand some common temptation such as the pleasures of the table — that one day there will come a reckoning, when the same failing must be met in person and transcended. It becomes obvious that the evil day has only been put off: the weakness has been dammed back, only to come forth at some future time.

Taking for granted the author's complete good faith, we can only surmise that he is in ignorance of the dread possibilities that are always present when hypnotism is practised. Dr. Shaw asserts that "the hypnotist never gains control over the subject; that [the subject] can always refuse to go to sleep, no matter how many times [he] had previously been hypnotized; that the subject can, and does, wake up if any suggestion is given in opposition to what the conscience and protective instincts allow. . . ."

That may be the experience of a practitioner of decent instincts who is actuated solely by a desire to help others; but records of cases other than those cited by Dr. Shaw tell a far different story.

It is known, for example, that in the hands of an individual who has the stronger will and the knowledge of how to manipulate the hidden forces that bear on the hypnotic subject, a man of lesser will can be overpowered, and that without his knowledge. As for the claim that a hypnotized person cannot be forced to do something that is against his moral principles, a recent comment by a well-known newspaper columnist states that this has been proven a fallacy by a Danish hypnotist, and he calls attention to the fact that a contemporary English practitioner is able to put persons into a hypnotic state without their cooperation. There are well-attested accounts of persons who have actually died because it was impossible to bring them out of hypnotically-induced trance.

Dr. Shaw does insist that hypnotism should not be indulged in for entertainment purposes, but solely in the practice of therapeutics, and by an operator with medical knowledge.

It is expositions like the present book, which put hypnotism in its most innocuous and favorable light, that need to be reviewed with a warning. Other more lurid accounts would repel by their very nature. The most innocent of amateurs in the practice are handling forces the extent and possibilities of which are unknown to them: individuals less scrupulous are capable of taking criminal advantage of their fellow-beings through the use of these powers, which in hands such as theirs become more and more closely allied to sorcery.

While an extended discussion of the rationale of hypnotism in its many and various forms cannot be made here, it appears to be a duty to point a general warning against the invading of the inner citadel of another human being, or in any way to interfere with his *spiritual* power of choice and free will. And the more is this necessary in view of the widely-spreading interest and

experimentation in hypnotism prevailing today. The present writer, in the cursory reading of a single daily paper, has collected half a dozen clippings in as many weeks, all dealing with instances of hypnotization, some of them involving revolting crimes.

The question remains with us then: what safeguards have we against the obvious evils that hypnotism brings in its train? It is inevitable that in this day and age, when cyclic evolution is bringing humanity into touch with planes and powers as yet unfamiliar to it, all sorts of phenomena, among them the phenomena of hypnotism and related practices, will attract more and more attention. Here is where Theosophy is going to prove a saving power, for its teachings give the explanation of man's inner constitution, and therefore of what happens when the will is abrogated, when the psychic nature is flooded with influences from without that threaten its inner integrity. It is for those who have some knowledge of the Theosophical philosophy to sound warnings, to promote right understanding of the true role of the human entity. In the end we shall find that there are ways of arousing and developing the higher faculties: optimism, courage, the right attitude to life: all attributes of the spiritual will — for the amelioration of humanity's ills. Once aroused and brought into activity, these faculties prove to be the most potent medicine and magic for producing physical and spiritual health.

In a brief Appendix, Dr. Shaw traces the development of hypnotism from the "animal magnetism" of Franz Anton Mesmer, to the "sleeping trance" of Puysegur, and thence to the "hypnosis" of Braid and the work of Liebeault, Charcot, and others up to the present time. Names and careers so easily told off, and yet — the "inside story," if it could be told, would show how greatly various were the insights of these explorers of the unknown. The great and wise Mesmer — a giant compared to his "successors" — who

understood and was guided by the spiritual laws that govern human welfare and into whose healing work no influence of a personal nature was allowed to enter: the lesser men guided perhaps by reasoning, or blind experimentation — blind, as regards the fundamental laws behind the phenomena they were investigating. For those who are interested, many enlightening ideas are given along these lines in the writings of H. P. Blavatsky, especially in her *Studies in Occultism*, (2) and also in the writings of William Q. Judge and G. de Purucker. (3) These studies show that modern hypnotism is no true successor to mesmerism, for mesmerism never enslaved the will, as do many if not all forms of modern hypnotism.

It will of course be asked: Then, is hypnotism always wrong? The answer could be: It is always fraught with danger. There are certain keys to the right understanding of all such practices: and chief among these is the law that it is wrong to interfere with the inner processes of will and choice of any of our fellow-beings. If we move over the line onto the side of the higher psychology, which is altruistic, full of light, wholesome and rich in inspiration, hypnotism will be seen in its true character, and our perplexity is at an end.

AN ANCIENT VEDIC PRAYER — *Herbert Coryn*

Unveil, O Thou that givest sustenance to the Universe,
From Whom all things proceed, to Whom all must return,
That face of the True Sun, now hidden by a vase of golden
light,
That we may know the Truth, and do our whole duty
On our journey to Thy Sacred Seat.

This is a paraphrase of an ancient Vedic prayer. Whatever its writer may have meant, it is used now as a mental pathway inward to the Spiritual Sun.

O Thou that givest sustenance to the Universe: the invocation is addressed to the universal Divine Presence.

That face of the True Sun: the individual spiritual *inner* Sun whose light fills the heart of the awakened man.

Now hidden by a vase of golden light: the vase of vitality which holds sensation and desire, a vital light almost visible in the clear face of a healthy child. In moments of aspiration and devotion one reaches beyond this light, ceases to pulse with it, looks through it, as it were, to the Spiritual Center within it, that center which is the True Self. Then are fulfilled the conditions for the rest of the prayer: *That we may know the Truth and do our whole duty on our journey to Thy Sacred Seat.*

As, when some calamity is impending, the man awakes with a sense of dread or weight, for which he cannot at first account, and as he will feel this presence all day, even when his mind is occupied with other matters; so the man on this Path, who is finding the answer to this prayer, wakes with a sense of inner peace and joy for which he cannot account, and goes through the

day as one who has been told tidings of great joy.

At last he comes to know that Self whose light is that joy. Then he no longer lives in the pictures of memory and anticipation with which ordinary lives are filled. They no longer pass of their own will before his mental eye. He is reborn. He is the free-in-life.

The Theosophical Forum

THE EBB-TIDE OF THE YEAR — *Allan J. Stover*

There is a feel of autumn in the air as the year rounds to its finale. It is a time when the inner life of nature is withdrawing from outer activity and from the bondage of physical forms, bringing a new quality into the atmosphere, a soundless music, having in it faint cadences of spring and summer, and even a premonition of winter, but all these forming part of the autumnal undertone.

The progress of the seasons reminds one of the pattern of a "round." With the beginning of each round there is a descent into ever more material conditions, the ego becoming more and more closely identified with its vehicle; but when the midpoint and densest portion of the cycle is reached the upward arc of ascent begins. The world and all on it then becomes ever more ethereal. Or we may think of the year as of two triangles interlaced, the triangle pointing downward representing the evolution into material form, the other triangle, pointing upward, the involution back into the spiritual source.

Spring is the dawn of a new cycle: everywhere the tide of life is rising. Plants which have slept through the long winter now put forth leaves and flowers, insects emerge from the ground or hatch from eggs.

Butterflies and moths burst silken cocoon or chrysalis to brighten the landscape with their color. Birds arrive from the south in flocks and immediately engage in nest-building and the raising of young. Spring is a time of expansion, in which all of nature cooperates, yet analogically, it is a necessary descent into physical manifestation in the minor cycle of a year.

With the coming of summer the climax of activity is reached, and

as the flowering season wanes fruits and seeds begin to ripen. The young birds have already left their nest and now wander with their parents over the country, basking in the noontime of the year.

With autumn the expansive tide of nature, so apparent in spring, is replaced by an ebb-tide, for the forces of nature appear to indraw as the twilight of the year approaches.

About the time of the autumnal equinox a change takes place which makes itself felt in many ways. There are marked changes in weather, and a general reversal of life-forces which summed up is what we sense when we remark "There is a feel of autumn in the air."

As the year draws near its close the trees transfer more and more sugar into the sap, thickening it against the increasing cold, while the leaves give the last of their vitality to the buds nestling at the base of each petiole, and after a final blaze of color at the first frost, flutter to the ground. Insects lay eggs, spin cocoons, crawl into the earth, or otherwise prepare for the winter's sleep. Most of the birds follow unseen migration routes to the south, much as life-waves are said to leave the globe at the close of a globe-round. Busy as the life of spring is, that of autumn is equally so.

Remnants of a number of ancient autumn ceremonies still linger in the west. The festival of Hallowe'en or Samain was originally a Druid feast during which bonfires were lighted on the hill-tops and offerings made to the Tuatha De Danaan and the ancestral spirits. A similar ceremony was held in Egypt at the Feast of the Dead, commemorating the slaying of the Sun God, Osiris, by his brother Sitau. After this event the sun was said to decline because of his wounds, and all the forces of nature waned. In both instances, in Druid Britain and in Egypt, the feast symbolized the after-death condition and marked the withdrawal inward of the

soul of nature before the birth of a new year. It was at this time that many peoples extinguished all fires and ceremonially lighted a new flame, the embers of which were carried to every hearth in order to light new fires for the new cycle.

With the Roman conquest many features were added to Hallowe'en from the festival of Pomona, the Roman goddess of fruits; and the roasting of nuts, ducking for apples and the telling of fortunes are probably derived from this source. Still later, Christian influence changed the festival to the gods, to one of all the saints. Today Hallowe'en is an occasion for mischief and merry making. Yet like some old manuscript covered with erasures and interpolations, there is something about the day to which folk-memory still clings, some intuition of an inner meaning now lost.

The symbolism of the spring and autumn was one of the themes dramatized in the Greek myth of Ceres and Persephone which formed the basis of the Eleusinian Mysteries. These, in themselves relating to the birth and passing of the year, were divided into two parts, the Lesser Mysteries which were celebrated in the spring and the Greater Mysteries at the time of the autumnal equinox. According to the story Persephone, while playing in a flowery meadow near her home, was seized by Pluto who ruled over the underworld; and carried to those shadowy regions as his bride. Ceres, the mother of Persephone, was frantic and searched the world over for her daughter, causing cold and drought to wither all vegetation until her daughter was restored. At last she learned that Persephone was in the dark domains of Pluto, and pleaded with Jupiter to intercede. This he did, and Persephone was restored to her mother, but since the fair captive had eaten seven pomegranate seeds, she was ever afterwards obliged to spend six months of the year with Pluto in the underworld.

Those who organized the mysteries knew that nature was analogical throughout and used the symbols of nature to illustrate in veiled form the condition and experiences of the human soul, first, when bound to the body, and second, as freed from mortal bonds between incarnations. Those who had the keys saw a meaning within and behind the obvious interpretation of the myth of Persephone, while the uninitiated saw only the commonplace explanation.

Thomas Taylor in his *Eleusinian and Bacchic Mysteries* quotes many classical writers to the effect that the descent of Persephone into the underworld and her re-ascent to the world of men refers to the descent and return of the soul as it enters and leaves the body during incarnation. For in the ancient mysteries, to become identified with the body, was to enter into a prison or grave. This may be why the name Persephone means *bringer of death*, and why she is represented as bearing ears of corn emblematic of the heavenworld, pomegranates, fruit of the underworld, and poppies to represent the sleep and forgetfulness separating the two existences. But while the myth in its larger aspect personifies the spiritual forces attendant upon the outbreathing and inbreathing of worlds and universes, and in its human aspect dramatizes the peregrinating cycle of the human soul from life to life, it also shows the inner nature of autumn-time and that the season offers unusual opportunities for inner growth and reflection.

While the Eleusinian Mysteries are no longer enacted, the great drama of nature still presents to the earnest student the same age-old truths would he but pause and consider; not the piled-up sticks of dry facts, but the *rhythm of life* as a whole, as it progresses through the year.

ARE THEOSOPHISTS GULLIBLE? — *Orange I. Clark*

Because of the many misconceptions as to what Theosophy really is, it is often necessary to point out that the Theosophical Society is not composed of fantastic theorists seeking to destroy the fundamentals of right thinking. Theosophy maintains that its devotees should be among the most normal and wholesome human beings in the world, because they have discarded many of the delusions and superstitions and much of the materialism by which the mind of each race is obsessed. Quotations from all our Theosophical leaders can be found setting forth this viewpoint. No, you do not have to give up your common sense in order to become Theosophists. One is not more than half a Theosophist unless one cultivates common sense. W. Q. Judge said that common sense is one of the rarest of virtues.

Some few individual Theosophists may be prone to take up with new ideas without making sure whether or not they flout facts and possibilities. But Theosophy as such is based on what is provable, or at least rational. "Facts are pitchforks," is a famous saying of H. P. Blavatsky. None of the highest exponents of the Theosophical philosophy have been gullible, as they have invariably had the faculty of seeing through the vagaries and preposterous imaginings of befuddled minds. And they have constantly enjoined the cultivation of this fact-finding habit upon earnest students.

It is widely believed, and there is some truth in the belief, that certain minds of an idealistic type are too ready to accept the seemingly ideal on its face-value. And it is probably true that all idealists and humanitarians have to guard themselves against being taken in by deceptively idealistic pretenses and pretenders.

Yet not all or even most of those who are idealists, or who are artistic and intellectual or humanitarian in temperament are therefore necessarily "crack-pots," or belong to the "lunatic fringe," even though it is true that most fanatics and "crack-pots" are the victims of their own or someone else's imagination. There were ancient beliefs among some peoples that the insane were sometimes inspired by true visions, not ordinarily vouchsafed to normal human beings. But that is no reason why the rest of us should seek to become insane, or otherwise irrational!

It is said by pessimists that some people are so "good" that they are easily imposed upon, gullible. The accusation is false, because goodness is only half good if it is easily misled. True goodness is not weak: it is strong, and sees through shams and hypocrisies. The least deceived and most continuously happy man is the sceptical optimist.

"Prove all things; hold fast that which is good," as the Good Book says: but don't accept statements that at first sight or even at second sight sound alluring or plausible, or make wondrous promises or great assertions. It is easy for the self-deceived to make glamorous claims by ignoring some of the facts. That is the method of children and those with juvenile minds. It is part of the technique of "blind leaders of the blind," and also of pseudo-occultists and fakers of all kinds. Those who indulge in "wishful thinking," which is a sort of self-gullibility, self-deception, are easily led into the fallacy that it is possible to get something for nothing, which on the face of it is contrary to all natural law. The Theosophical doctrines of karma and individual responsibility should save all of us from this pitfall.

"Keep an open mind." One could hardly become a Theosophist who does not do this, but again this does not mean swallowing, hook, line, and sinker, everything or anything that looks

attractive. If there is one thing that human life, and all life, teaches us, it is to cast out non-essentials, and cleave to the true and the factual, practically and spiritually.

On the other hand we should not close our minds to everything but the material. Many of the fundamental facts of the Universe, and many of the details arising from those facts, are not directly provable. We know that many invisibles, such as the ties of love, and the bonds of honorable obligation between man and man, are as much facts as railroad trains and atomic bombs, and far more important.

Even many superstitions and "sea-serpent tales" contain some element of the factual. Such basis as there is for these superstitions and tales exists largely in the astral light, where there are images of prehistoric or other monstrosities, and these images may be called up or reconstructed by some undisciplined elements of the faculties of psychometry, or clairvoyance, or even by the imagination of romancers or those competing to attract attention. Unquestionably, superstitions and imaginative tales have their necessary place in the development of the minds and imaginations of children and others with youthful minds, as well as helping to prevent the race from becoming too materialistic by suggesting the presence of forces and beings beyond and behind the visible, objective world. Materialism breeds wars and kills the ethical sense. It is the most destructive, and anti-social, and anti-ethical of all *superstitions*.

Theosophy is a word to conjure with. It stands for what is balanced, dignified, and rational, and Theosophists have a right to protest against its use to lend credibility to the pseudo-occult, the irrational, or the absurd. Perhaps some of us in our intellectual childhood, or in our search for Theosophy, dabbled a little in things not entirely level-headed, but Theosophy cannot be held

accountable for our youthful credulity. One cannot be of service to Theosophy or to humanity (or to himself) who wastes his energy and lessens his power of judgment by chasing rainbows. The Theosophical Movement has seen so many clever and plausible mirages come and go that there has been ample opportunity for its followers to "cut their eye-teeth." There are enough real mysteries to study and explore in this wonderful universe so that we can well afford to leave the quality of gullibility to those with childlike minds who have no better amusement.

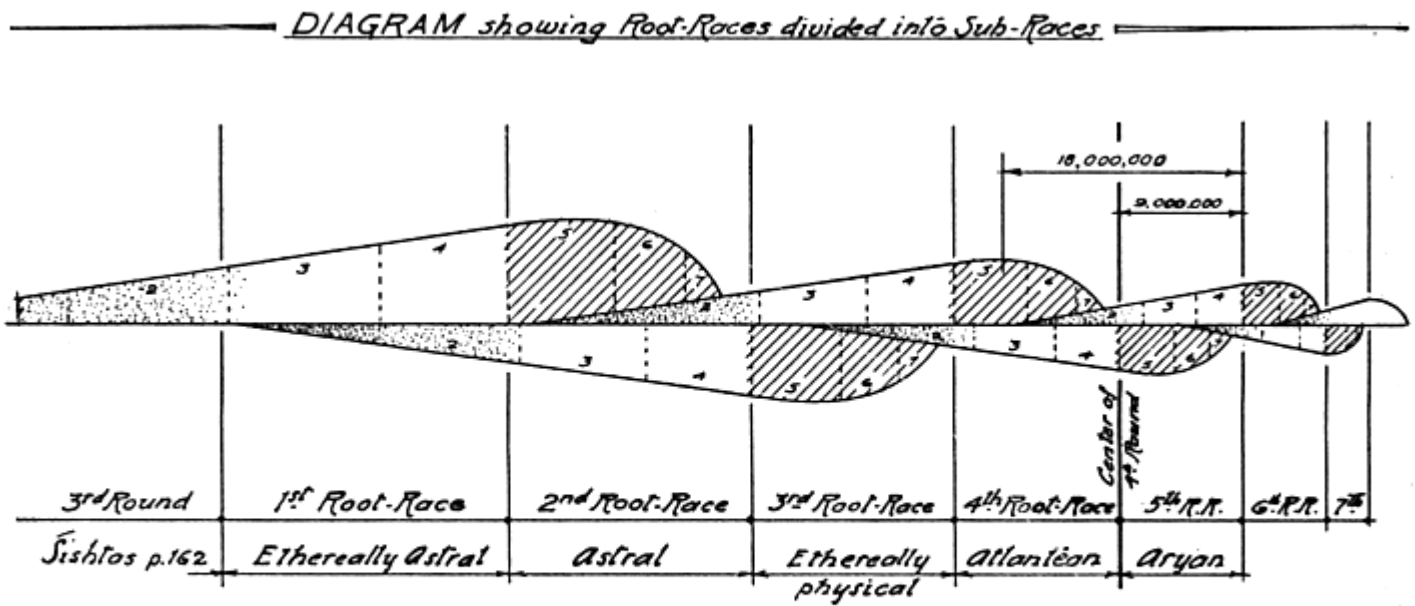

However, one need not be cynical in order to be discriminating. Cynicism makes the world worse, not better. Human nature is good at heart, and life is good, but shallow credulity is not good, and only leads to the place that is paved with failures.

Theosophy should stand before the world as the most sane and wholesome of philosophical and religious teachings, and it has been the effort clearly and constantly set forth, by all the greatest Theosophists, modern and ancient, to make their followers understand that Theosophy is not contrary to good sense and known facts, and is not another vagary of uncontrolled imagination. It is part of the mission of Theosophy to "arrest the attention of the highest minds," and to show that idealists and independent thinkers — which Theosophists are — can be sensible and sane. In brief, man's mind should be ruled, not by materialism, or psychic vagaries, or tall tales, but by the highest spiritual and moral realizations, which are the best good sense for the guidance of human life that has ever been found.

ROUNDS AND RACES (1) — F. Chapman Clemeshaw

Many students have tried to "tidy-up" this question of the Root-Races, but as G. de Purucker has said, "It is very tempting to try to collate the figures . . . about root-races and life-waves and to try to make these figures run with regularity through all the seven root-races, yet it just simply can't be done." (p. 166) (2) There is no claim to finality about this effort, but it does bring together a number of teachings that will help us to get some sort of a picture. Generally one fails to take into account the fact that the Root-Races differ greatly in length; and the teachings about the *germinal period* were little known before the publication of *Studies in Occult Philosophy*.

First, let us consider the matter of the relative length of the Root-Races: on p. 162 we find it stated that the 1st and 2nd Races are much longer and the 6th and 7th are shorter. Such being the case, there must be some harmonious rhythm in nature that determines their respective lengths. This I believe would be the Yugas; so for the purpose of this diagram the ratios of 7, 6, 5, 4, 3, 2, 1, are used. Each Root-Race is divided into Sub-Races on the same system.

Germinal Period

Kali-Yuga & Dying-out period

The *germinal period*: This teaching makes it easier to understand how a race merges into the succeeding one (p. 639). Information about its duration is not specific; it is stated to last about three million years, and that the germinal period of the Aryan Race can be traced almost to the beginning of the Atlantean Race. I have judged that the first two Sub-Races of each Root-Race would correspond to the first two Root-Races of the Round. In other words, the germinal period would be included in the life-cycle of the Root-Race and would be the 1st and 2nd Sub-Races, these being in their Satya Yuga (pp. 41-2) and irresponsible in the sense of still "living with their Parents"; nevertheless they are the more advanced egos and thus fit seeds for the succeeding Race.

We are all familiar with the statement that a Root-Race, at least ours, endures for 8,640,000 years from its beginning to its end: but on page 162 we read: "9 million years back brings us to the middle of the Fourth Root-Race." This apparent contradiction could probably be reconciled in the following manner: Since a Root-Race (or a human being) enters its Kali-Yuga and dying-out period at midlife that would be the end of that Root-Race (or that person *so far as the continuity of the human race is concerned*). Of course there is a tremendous overlap, yet it is the next Root-Race which takes over. This view is confirmed by two other statements (pp. 42, 639): the new race is "distinctly differentiated" at the beginning of the Kali-Yuga of the parent race and enters the heyday of its power at the end of the Kali-Yuga of the parent race; or it might be phrased thus: the new race is distinctly differentiated at the middle period of the parent race and enters the heyday of its power during the age of the parent race. The reason why the new race is distinctly differentiated at the beginning of the Kali-Yuga of the parent race is that the new race has been developing alongside the parent race, during the long germinal period. There is one blessing in this recent statement that it is 9,000,000 years back to the middle of the 4th Root-Race, and that is that it is now possible to make a diagram in which the familiar 18,000,000 comes somewhere near the midpoint of the 3rd Root-Race. It would appear that all previous references to the duration of Root-Races were systematically halved. This may seem an extraordinary statement to make. However if you will read pages 395 and 396 in the second volume of *The Secret Doctrine*, you will find that such procedure would be strictly in line with ancient usage.

The present writer, and no doubt other students have heretofore taken it for granted that the Kali-Yuga begins in the middle of the 4th Sub-Race; not that there is any statement to this effect

in our literature, but simply because a line divided into seven equal parts brings the center in the middle of the 4th part. For reasons already explained, this diagram does not make all Root-Races and Sub-Races the same length; so, if the Kali-Yuga comes at the end of the 4th Sub-Race, as the diagram shows, it is more likely to be correct than if it came in the middle.

The best assurance that this is substantially correct is the statement found in S. D. II, 197 to the effect that "by the end of the 5th [Sub-Race], mankind was born under the same conditions and by the same identical process as our historical generations." In other words, man entered the Human Kingdom (S.D. II, 69), and the time when this came about is given as 18,618,788 years ago.

On the diagram the 18,000,000 year point does not exactly hit the end of the 5th Sub-Race. This is not so important, as the process of the dividing into two sexes took several million years; so the expression "by the end of the 5th" Sub-Race may be interpreted to mean that by that time it had become the rule.

Referring again to S. D. II, 197, we read: "towards the end of the 4th *sub-race* [of the 3rd Root Race], the babe lost its faculty of walking as soon as liberated from its shell." Here is the picture: At the end of the 4th Sub-Race man is still androgynous and egg-born; at the end of the 5th Sub-Race the separation of the sexes is complete, a period of about 5,000,000 years. This is fully explained in S. D. II, 132-3.

On p. 163 of *Studies* we find that it is 18,000,000 years back to the middle of the 3rd Root-Race, but this occurs because nine million years is used as a factor in computing the time that the human life-wave has been on Globe D. This would make the life span of Root-Races 3, 4, and 5 the same length; whereas we find later that they are only "pretty much the same length"; so it may just as well be 21,000,000 as shown.

About the Kali-Yuga: as already suggested, it starts somewhere near the end of the 4th Sub-Race of any Root-Race, and in the case of the 5th Root-Race it started 3102 b.c. or 5050 years ago, at the death of Krishna. As we are from 16 to 20,000 years from the midpoint of the 5th Root-Race, it follows that the Kali-Yuga starts from 21 to 25,000 years before the midpoint. We are told that it lasts for 432,000 years.

This is the time of the heyday and achievement for the 5th Root-Race. Slowly after that the more progressed Egos begin to reincarnate in greater numbers in the already forming 6th Root-Race,

and that will constitute the decline of the 5th. Therefore when we use the expression, "Kali-Yuga and dying-out period," this does not mean that the *Egos* degenerate and die out, but rather that they reincarnate in the new race.

The Seeds of the 6th sub-race as well as certain seeds of the 6th Root-Race are already amongst us, not noticeably different from their fellows as yet, but possessing qualities in advance of the average humanity of today. We are told that the American continent in long ages to come is to be the home of the bulk of the 6th Root-Race.

There is, of course, a correspondence between the life of an individual and the life of a Root-Race, so we may say that man enters his Kali-Yuga at midlife at which time and thereafter he probably makes his greatest contribution to the progress and welfare of the human race. Midlife is a dying-out period only in the sense that the continuity of the mundane responsibilities of the world has passed into the hands of the younger generation. The older generation gradually withdraws from business, political or professional activities and if they have lived aright they become a benediction to their younger brothers.

From my studies of architecture I have come to the conclusion that a nation produces its greatest works during its Kali-Yuga. If you examine the buildings of Egypt and Greece, for instance, you will find that they were all built within a relatively short period of time. In Greece we call it the Periclean Age; in Egypt the Dynastic period. Slowly thereafter each loses its leadership among the nations. Kali-Yuga is also a time of strife; everything is speeded up and becomes intense. Nevertheless, the chela considers it good karman to be born in the Kali-Yuga. All nations are warlike in their 4th period. G. de Purucker discusses this in *Questions We All Ask*, II, 204-5. Is war an unmixed evil? We would appear to get rid of a lot of national karman thereby. G. de Purucker says: "Let us never forget that mighty and strong minds are behind the spiritual government of the world and sooner or later karman adjusts all things to its majestic purposes."

The Aryan Race entered its Kali-Yuga 5050 years ago, but the seeds of the 6th Race among us are in their Satya-Yuga, albeit within the encompassing Kali-Yuga of the 5th Race. Kali must have a meaning other than "black." Monier William's *Sanskrit Dictionary* gives the following: "*An unblown flower or bud.*" This is evidently what the Tamil mothers have in mind when they call their daughters, Kali. It also connotes the idea of Satya-Yuga: "*A class of mythic being.*" Maybe the Tamil Goddess, Kali, is one such. Judging by the little figures representing her, she is Mother

and Sustainer of the World. It is interesting to note that Kali is another name for Binah of the Sephirothal Tree. "*Name of Siva*" — this is especially interesting as Siva is both Destroyer and Regenerator.

Now about the so-called "Remnants": The parent race during its Kali-Yuga and period of decline reincarnates in the new race, or as has been very beautifully said, "The Old Waters mingle with the New." At the conclusion of this mingling period the new race becomes a race sui generis.

The Aryan Race became a race sui generis one million years ago. Looking at the diagram, the reader will notice that the cross-hatched areas do not reach the midpoint of the new race. This is intended to call attention to the fact that a race does not become a race sui generis until shortly before its culmination.

Those Egos who have not mingled or reincarnated in the new race by that time are called "Remnants." They are the backward and "savage" peoples scattered over the world today (pp. 44-8). The Eskimos and Andaman Islanders are remnants of the 3rd Root-Race; the Blackfellows of Australia and Tasmania, also the Maoris, are remnants of the 4th; others are 5th Root-Race branchlets; most of them are degenerate, not necessarily in a moral sense but evolutionally so. By their speech and traditions they will be recognized as a part of an old civilization. They are remnants not on account of being the unfortunate or the wicked, but for the reason that they are the "Last Comers" into the human family. When we remember that the "Door into the human kingdom" closed only at the midpoint of the Round, that is at the midpoint of the 4th or Atlantean Race, we can hardly expect them immediately to catch up with those who entered the human kingdom millions of years earlier (S. D. II, 168).

The most material point was reached 9,000,000 years ago; we of the Fifth Root-Race are on the "Ascending Arc"; Spirit is slowly disentangling itself from matter. Even our bodies are less gross than they were at the midpoint of the Fourth Root-Race. We can picture to ourselves men 27 feet high with gross solid flesh, even pebbly. The stature of man has diminished even as has that of the animals. The earth itself is less solid; it is now radio-active.

The teaching is that man's stature will grow less, but the distinctive thing about the Sixth Root-Race is that our bodies will be luminous. In the Seventh Root-Race we shall be more like bodies of light and again we shall be androgynous. Another point is that there were seven Gardens of Eden; simultaneously seven races came into being, not all of the same evolutionary status. They

are described as being of different colors — some moon-colored, golden, brown, and so on. These seven races mingled together down to the midpoint of the Round. Thereafter they slowly separated into groups again, thus being ready to repeat the process in the next Round.

This diagram makes it possible to date the "Garden of Eden." How long is it since Adam and Eve lived in the Garden of Eden? The answer is "about 18,000,000 years ago."

The identity of the Theosophical teachings about the descent of the Manasaputras and the allegory set forth in the early chapters of Genesis has not been sufficiently stressed. We shall find, perhaps, that the one illumines the other. An outline of the teachings of the Ancient Wisdom might be made as follows:

The human race was at first ethereal; we call this the 1st Root-Race. It became less ethereal or astral; this is the 2nd Root-Race.

In the 3rd Root-Race it becomes a more dense form of Astral or ethereally physical. At this stage man is sweat-born; later, egg-born from androgynous parents. At first the "chick" was itself androgynous; later, some were born female and others male. This gives us at least some idea of how the separation of the sexes took place. In Genesis the androgynous state is indicated in the words: "male and female created he them."

The time had come to enter the material plane, the ethereally physical becomes physical. This sounds mysterious, but at least it is no more mysterious than the materializations that can be made to take place in the seance room, or by an Adept. Mankind thus far is the product of a creative hierarchy called the Lunar Pitris. He is still an animal albeit slowly becoming sufficiently perfected to be the vehicle for the manifestation of higher faculties. He is said to be "mindless," guided by instinct, unselfconscious and irresponsible. At this stage occurs what is called the "sin of the mindless." Apes were produced by crossing with some species not destined to become human in this manvantara. In S. D. II, p. 185 it is shown that the responsibility for this rests with those "Sons of Wisdom" who refused to incarnate in the early 3rd Race.

To become truly human requires the assistance of the more evolved. These more evolved ones we call the Manasaputras, a word that means literally sons of mind or mind-born sons. It is a name given to our higher Egos before their incarnation in mankind. (See Glossary of *The Key to Theosophy*). For a time before incarnating, the Manasaputras are said to overshadow nascent humanity. This illustration may help: The human infant would remain mindless were it to

survive on some island surrounded by animals only. It needs the care and mental stimulus provided by its parents and fellows. The role of the parent is that of the Manasaputras, a role undertaken willingly in both cases. There is a karmic obligation in both cases. This is a difficult subject to summarize, but to continue — after studying the sources given and S. D. II, 197-8 — after the separation man was able to create creatures like unto himself, but not Man the Thinker: "An act which forced the creative gods, compelled by Karmic law, to incarnate in *mindless* men." This is the descent of the Manasaputras mentioned at the beginning. The same facts underlie the story of the theft of the creative fire from Heaven by Prometheus.

With this picture in mind, let us see how the same facts are concealed in the story of the Garden of Eden. Not that one can feel competent to elucidate all the meanings, but one can at least point out some aspects. The whole story is often referred to as "The Fall," and to the student of occultism it is part of a greater drama called "The Fall of the Angels." In Christendom Satan and his hosts are "Fallen Angels" who rebelled and were cast out of Heaven.

The Fall of the Angels is a forceful and dramatic word picture of an incident in the great evolutionary drama. The Manasaputras are the Fallen Angels and so are we all. Those who rebelled were the Angels who delayed in fulfilling their karmic obligation to incarnate. They are satanic only in the sense that their descent inaugurated in man the battle between the Higher and the Lower Self.

The "Tree" is the symbol of the Sacred Knowledge, and is guarded by a dragon or serpent: that is by an Initiate or Hierophant.

The God of the first chapter of Genesis is the Logos. The Lord God of the second chapter is the Creative Elohim. (S. D. II, 1-2, footnote). It is only Adam Kadmon, the First Adam, who is made in the Image of God. The Adam of Chapter II, the Second Adam, is not so made until he eats of "The Fruit." The Third Adam is the Race separated, and his story begins with Chapter four (S. D. II, 46).

The Angels or Manasaputras "fell" or descended because they desired to acquire knowledge, to KNOW (S. D. I, 417). They preferred the "curse" of incarnation to seeing the misery of the beings below (even though unconscious) through the semi-passive energy of the too Spiritual Creators, for to become a God one must be born human, not angelic. Perhaps the foregoing explains the words: "They of the *flaming sword* (or animal passions) had put to flight the Spirits of

Darkness." (S. D. II, 62) Not only is man more than an animal because there is a God in him, but he is more than a God because there is an animal in him. The mental torpor and unconsciousness of the first two races and the first half of the third, is symbolized in the second chapter of Genesis, by *the deep sleep of Adam* (S. D. II, 181). During this state the "rib" was taken from the side of Adam, with which the Lord God formed the woman. The story of Adam's rib may refer to the boneless becoming a Race with bones.

The "Sons of Will and Yoga" are born before the complete separation of the sexes, " 'matured in the man-bearing eggs produced by the power (Kriyasakti) of the holy sages' of the early Third Race" (S. D. II, 181). They are the "Holy Seed grain" of the future Arhats, Mahatmans and Saviors of humanity, "who, at their zenith, were described as, 'towering giants of godly strength and beauty, and the depositaries of all the mysteries of Heaven and Earth' " (S. D. II, 171-2). The Gods and Heroes of the Fourth and Fifth Races are "the *deified images of these men of the Third*" Race (S. D. II, 172). The reason for the expulsion from the Garden of Eden is said to be the jealousy of the Lord God (S. D. II, 282) at seeing the man of clay becoming a creator in his turn like the animals (S. D. I, 264). Another reason given is that in incarnating the Angels are accused of divulging the mysteries of heaven to the "daughters of men" and are therefore expelled. In trying to understand this we must remember that Adam and Eve in the Garden are not yet corporeal; they are in an intermediate state. It is only when they become corporeal and are "separated" that they are said to be expelled from the Celestial Eden.

With the foregoing to help us we may return to the story in Genesis: "And the Lord God [the creative Elohim or Jehovah] commanded the man saying, Of every tree of the garden thou mayest freely eat; But of the tree of the knowledge of good and evil, thou shalt not eat of it: for in the day that thou eatest thereof thou shalt surely die." The Pitris feared lest they lose dominion over their creatures. "Now the serpent [the Manasaputra] was more subtil than any beast of the field which the Lord God [the Pitris] had made. And he said unto the woman, Yea, hath *God* said, Ye shall not eat of every tree of the garden? [or was it only the Pitris who said so?] Ye shall not surely die: For God doth know that in the day ye eat thereof, then your eyes shall be opened, and ye shall be as gods, knowing good and evil. And when the woman saw that the tree was good for food, and that it was pleasant to the eyes, and a tree to be desired to make one wise, she took of the fruit thereof, and did eat, and gave also unto her husband with her; and he did eat." This relates to the intermediate nature of man; the woman being later in the order of creation is the nascent soul. "And the eyes of them both were opened, and they knew

that they were naked." In other words, they had become self-conscious. Whereafter: "Unto Adam also and to his wife did the Lord God make coats of skins, and clothed them." They became corporeal.

Here follow three verses telling of the curse and the expulsion from the garden. Even the Manasaputras or Sons of Will and Yoga are included in the Curse. We will recall the story of Prometheus who was also cursed and bound to a rock, and this may be interpreted to mean that thereafter he was karmically linked with those upon whom he had bestowed the heavenly fire. Just as in Genesis the Serpent (or Manasaputra) is karmically linked with those whom he had persuaded to eat of the Tree in the midst of the Garden.

The Curse against Adam and against Eve is that, now, being responsible beings with free will, they must learn by experience and abide the results of their mistakes, until they return to the Source from which they came "bringing their sheaves with them" or until the promise is fulfilled and they become Gods knowing Good and Evil.

Remembering that the role of the Manasaputra is the same as that of the Saviors of Mankind, the language of the New Testament takes on new meaning: "Who for us men and our salvation came down from heaven . . . and was made man and was crucified for us under Pontius Pilate" (i.e. the powers of this world). Both being karmically linked with those whom they have enlightened, they suffer vicariously until redemption or at-one-ment is achieved.

THINGS OF THE SPIRIT (1) — E. A. Holmes

There exists in the heart of man an intuition that somewhere in the world there is a body of teaching which sets forth the structure, the characteristics, the operations, of the Universe and therefore of man who is an inseparable child of the Universe; and this body of teaching, which actually does exist and which man's intuition has always told him exists somewhere, we Theosophists call today Theosophy. It is not new, it belongs to every age, it has always existed, and the greatest spiritual Sages and Seers of mankind have taught it in various forms according to the times in which they lived and worked.

These encouraging words, broadcast over the radio from Holland by the late Dr. Gottfried de Purucker, strike an answering chord in our own hearts. Deep down within us we feel that beyond the worldly clashing of everyday thoughts, beyond the claims and counterclaims of dogma and brain-mind opinion lies Truth, serene in its simplicity. Beyond the storms, and intervals between the storms of our so-called civilization, we feel there must be a haven where the buffeting rollers cannot reach, where peace reigns supreme, where the spiritually aching hearts of men can find lasting solace.

This same innate conviction was expressed by James Hilton in his book *Lost Horizon*, where a green valley in the remote fastnesses of the Himalayas is imagined as a spot chosen by Nature for the preservation of all that is best in humanity, and where the highest ideals of men may come to fruition.

We may differ in our individual conceptions of this idea, but if we

reject it completely then surely is our outlook circumscribed; then indeed do we resign ourselves to soul-less system, without hope, without objective.

It is related of H. P. Blavatsky, who instigated the modern Theosophical Movement, that she once returned from the streets of a great European capital with her eyes streaming with tears, and with an inner agony that such great multitudes of unensouled men and women should walk in "emptiness, prejudice, ignorance, lack of knowledge, lack of wisdom," trying to fill the aching void of their hearts from outside, and not from the springs of divinity which lay within themselves.

We say that this body of truth does exist and that this haven of spiritual peace is there for us to claim. We have but to give the right knock at the doors of our hearts. We have also to await the coming of that homesickness which alone turns the face of the prodigal son towards his ancient source.

Truth is an attribute of the Universe, and therefore of man. It is a condition, the essence of his mind, soul, and heart. It is not a matter of words, they can only delimit it, circumscribe it, bring it to our notice. Our own understanding must conceive the idea itself.

Theosophy can give us the science, the philosophy, the religion of this body of truth, can point the course towards the ultimate haven, but it cannot pour wisdom into our heads, it cannot carry us to the safe shores. We have to work out our own salvation, each individual one of us, guided by this body of universal truths.

The Theosophist then, no less than the Christian, the Mohammedan, the Jew, the Hindu, has to enter upon his pilgrimage to the Celestial City, the spiritual Mecca, the bosom of Abraham, the slopes of Meru. Truth is one whole, but its aspects

are many. "In my Father's house are many mansions."

The road is steep and stony, but the stones are worn smooth by those who have gone on ahead, the Sages and Seers of recorded history, and of history unrecorded. We do not lack guides, but there are no porters on the Path. We have to carry our own burdens, find our own foothold.

Just as advancing stages of a journey into the hills bring increasing vision of an expanding horizon, so shall we progress towards spiritual perception, the more we aspire towards the heights.

There are three stages of visioning truth, say our Teachers, three stages of inner opening. First an awakening to the material beauties of Nature, when the hills and the fields, the waving trees and the running brook, the wind on the heath, and the flower by the wayside rouse strange response in our quieted hearts; when we sense the reverence of Nature towards eternity, "nature in silent prayer." The garb of Nature, though physical, is none the less holy. We see infinitude in her infinite details. We visualize the world of the insect making its laborious way in a forest of tall trees, trees which to us are but waving leaves of grass. Our imagination soars with the lark pouring out its soul in song.

In learning the lessons which Nature teaches in this primary school of the Mysteries, we come to observe, to become alive, to rouse ourselves from the somnolence of mind. There is a somnolence of mind which may be complete, though outwardly we appear full of vigor. Too often that which passes for liveliness is physical escapism, a mad scramble from responsible thought, from vague yearnings of the heart towards finer and nobler things, things as yet unknown, and therefore distrusted.

This increasing awareness of life around us, this heightened

intensity of our lives, will enlarge our sympathies with our fellow men. The greatest mystic is the practical mystic, the one who puts spiritual insight into practice by way of more intense concern with the travails of fellow human beings. This does not mean a fussing over and a prying into their affairs, but the Path of Attainment is fundamentally the path of increasing ability to serve mankind.

There is a distinction between a mystic and a visionary. A true mystic identifies himself or herself more and more with the Universal Self, and therefore with you and me. The mystic leads the life, and thereby knows the doctrine. The visionary seeks the doctrine and may lose the Purpose. The mystic is of necessity a visionary, considered from our worldly standpoint, but the visionary is not necessarily a true mystic.

"Where there is no vision, the people perish," and the antidote to a visionary tendency is not the "matter of fact." Many, indeed perhaps most of the world's great inventions and blessings have been conceived by so-called visionaries. That winged mercury which carries our mail across the street or round the world, at our will, the humble postage stamp, was not invented by the "practical" men of the Post Office. It was first suggested by a mere layman, and was rejected by those same "practical" men who had their eyes too close to the regulations to see the fulness of what they sought to regulate.

It has been said, not by a Theosophist in this case, that there are some Christians who are so absorbed in spreading Christianity that "they fail to give a thought to Christ. It may be that we Theosophists can be so busy studying the ancient wisdom that we fail to see this very wisdom spread all around us — divinity in the heart life of all things — in the color and aroma of a rose, as in the majestic roll of the Atlantic swell, or the glory of an autumn sky.

Having become alive to nature, having become "naturalized," as Thoreau terms it, then we shall learn to discard many of our worldly cares.

What is life if full of care

You have no time to stand and stare.

These are words of W. H. Davies, the Welsh poet, journeyman, tramp, vagabond, hobo. It is precisely this standing and staring which is implied in the second stage of visioning truth, a stilling of the physical, and of the emotions, and of the brain-mind; a looking out from the windows of the soul-mind.

When we are physically still we become as one with our physical surroundings. The wee timorous creatures of the wilds accept us as part of their physical world; the robin plays around our feet seeking its food in the upturned soil which this still, kindly giant apparently lifted for the very purpose.

How much more at home shall we feel in the inner realms of nature when we have learned to still our worldly desires and impulses; when our anxieties are seen at last as phantoms without substance; when, performing all our duties, honoring all our liabilities, we can throw off cares for what the future holds, and say in truth: "Thy will be done, O Lord, not mine."

Then we shall see that the mountains, the fields, the wind on the heath and the sound of the running stream are but illusions, shadows, phantoms hiding inner realities. We shall realize that all this beauty which lies around us is but an outward effect of an inner cause; images, vestiges, reflections of an immanent THAT. "We carry a better likeness of our friends in our hearts than their countenances, save at precious seasons, manifest to us," wrote George Macdonald.

As we approach this second stage we shall begin to see the

Thought embodied in the flower, hear the inaudible behind the audible. With Siegfried we shall rise from the slain dragon and comprehend the inner natures of the birds and beasts of the forest. We shall live in a world of Idea.

We are told by modern scientists that physical substance is in reality not solid, but is a mass of holes, in the vast spaces of which live and move the atoms. We are also told that the size of the atom is infinitesimal compared with the size of the space in which it moves. Now it is submitted that if we assume the orthodox view of matter being in one plane of existence only — that only physical matter exists — then we ought to see in the mass of any object not an agglomeration of atoms, but an agglomeration of spaces.

A wooden desk appears solid because to our physical perceptions those spaces between the atoms are themselves "solid," though in the atom consciousness these spaces may assume the appearance of emptiness. So likewise we may imagine that the "empty" space of our own universe, seen in the eyes of a Divine Cosmic Being, is solid with evolving substance, idea, thought.

The Universe is a manifestation of divine thought. All things are concreated thought, from the amoeba in the pond to the vast spaces of the universe. There are material thoughts, and there are spiritual thoughts, and there is an infinite range of degrees in between. And all these degrees subsist in the same object at the same time. They are all co-existent, each in its own sphere of ethereality, each on its own plane of existence.

When we shall have fully attained to this second stage of visioning truth, we shall see characteristics objectively, which at present we look upon as intangibilities. We shall be using our senses in their highest perceptions in order to see beyond the veils which they themselves represent.

First we see the beauties of Nature and revel in their wonder. Then we recognize that this external beauty is but a mask, hiding the truth from us. Beyond the veil of physical matter lie the veils of ethereal matter, and beyond the veils of ethereal matter lies — What?

The third stage of visioning truth is union with the Divine. "Happy the man who can understand this third step," observes G. de P., and perhaps we presume too much in criticizing the critics.

History and literature are full of the narratives of those men and women who have attained to spiritual greatness by seeking personal lowliness, meekness — St. Theresa, Jan van Ruysbroek, Jacob Boehme, and hosts of others, not perhaps full Masters of Wisdom, but advanced devotees on the Path.

There have been degrees of such enlightenment nearer home. Listen to the late H. G. Wells: "At times, in the silence of the night and in rare lonely moments, I come upon a sort of communion with myself, and something great that is not myself" (*First and Last Things*).

When the devotee reaches this stage in its fulness, he sees the Oneness of all things. For greater or lesser moments of time he is one with the mountains, one with the fields, one with the rippling brook. No longer are these shadows, phantoms of the Real, but living expressions of the Divine Spirit. "When we attain this stage of evolution," says Thoreau, "the heavens will verily be our roof, the seasons will minister to us, the wind will be our breath, and our serenity will be the serenity of Nature itself" (*Week on the Concord*).

We shall have pointers on the way. We shall perhaps glimpse the far shores in some feeling of spiritual elation evoked by a passage of music, in the grip of some lines from the poets, in a glimpse of

Nature through the brush of a great artist or the chisel of a master sculptor. There are films, films of popular entertainment even, which can momentarily uplift us, causing us to leave the cinema spiritually refreshed.

Nor do we need outside stimulus to cause the soul of man to try its wings. Occasionally there come unbidden to the mind flashes and glimpses of past events, idealized now, or rather, seen in their inmost essence for one fraction of a second, yet their aroma will last out the day.

The serenity of Nature itself — this then is the very haven for which we have been seeking, the far country to which our body of truth points the way. How shall you and I attain it? "It is through the human that we must climb up to the divine," wrote George Macdonald, through the human qualities of compassion and the understanding heart, just as it was through the animal virtues of courage, fidelity, and venturesomeness that we attained to humanhood in long ages past. We shall not approach the divine until our hearts hunger for it; then nothing in heaven or hell can prevent us from reaching it.

Let us remember, when our hearts are low and we begin to despair of ourselves and of mankind, that beyond the worldly clashing of everyday thoughts, beyond the claims and counterclaims of dogma and brain-mind opinion, lies Truth — and truth will remain when all the tumult has died down. Beyond the buffeting storms of life lies the safe haven.

These thoughts are not escapism. We cannot escape from that which we are, but we can escape from what we are not.

I have tried, Mr. Chairman, in a woefully inadequate fashion, to describe the Indescribable and to point out some of the landmarks which Theosophy, and Theosophists down the ages,

have erected for our guidance. I believe that we ought to keep some such picture before our minds, however vague this one may be, for it is true. And being true, our hearts will recognize it, and gradually, piece by piece, will fill in the details, so that in the fulness of time the whole canvas will be unfurled before us. Then, in a joy of recognition, we shall move forward to claim that which is our own.

The Theosophical Forum

THEOSOPHICAL LIGHT ON ATOMS — *Ronnie Beach*

Atoms have been aptly described by modern science as being the building blocks of the Universe, while scientists in their investigations on atomic structure have more closely approached the theosophical concept of "As above, so below" and admitted that structurally an atom is patterned like a miniature solar system. The central nucleus of protons and neutrons have been likened to a central sun or suns around which revolve their accompanying electrons, just as the various planets of a solar system revolve around their central sun; and it is now postulated that the Universe is a dynamic rather than a material one with these protons and electrons considered to be centers of energetic forces, with matter and energy being convertible one into the other. Physicists in conducting certain experiments with cosmic rays now believe that they have witnessed the conversion of energy into matter, while the conversion of matter into atomic energy is now common knowledge. Another extremely interesting fact is the theory put forward by Dr. Dirac suggesting that the so-called empty spaces between electrons and their protonic centers are not empty spaces at all but are "thickly populated by an infinite number of ordinary negative electrons packed together in a very regular and uniform way." This theory is very significant and suggests the Theosophical doctrine of the "fulness of the seeming void" with the visible or positive electron but a "bubble" or "hole" whirling through a sea of negative electrons or space. Thus is demonstrated the fact that it is space which is full or solid, and these whirling centers of energy or worlds which are the "holes" in this space. The negative electrons which are visible space may perhaps be worlds in Pralayic rest while the positive or activated ones are the manifested worlds or

physical vehicles of the consciousness-centers working in and through them.

But, science, however far advanced in both theory and experimentation, goes only a small part of the way, penetrating only the outer garment of the Universe, declining to agree with occult science that these atoms are but the physical bodies of living entities and should when considered in the light of these ensouling entities be more aptly termed life-atoms or living atoms of space both visible and invisible, being present on every plane of manifested existence, and all pursuing their own appropriate evolutionary journey. Hence the idea that there is life everywhere and that there is no such thing anywhere as inanimate or dead matter. These life-atoms are on every plane of existence in appropriate kind to each particular plane, being life-atoms only relative to their own plane of being, and similarly an ordinary material atom would only be considered so on this particular plane of existence. What would appear as an atom on one plane of manifestation would become as a solar system to some lower or inferior one. An atom therefore is only a term for a condition of manifested existence which is equal to the building block of any one particular hierarchy or plane. One modern scientist (Lemaître) has drawn a close analogy here by suggesting that the whole Universe originally may have consisted of a single gigantic "super-atom" in which all the matter and energy of the universe was concentrated. With the explosion of this super-atom, he further suggests that there then commenced the beginnings of the Universe as we now know it. This idea is very suggestive of the slumbering Cosmic atom, the "Egg of Brahma" which at the dawn of the new Manvantara burst forth into further manifestation, and finally became the Universal Solar System that it now is. Thus even a Universal Solar System or Egg of Brahma may be pictured as a super-gigantic atom of a Galactic System, and a life-atom in

some Parabrahmic Entity. Again it may be that what would represent a Monad in one hierarchy, would represent merely a life-atom to one above it, and so from a certain point of view a Monad is also an atom. G. de P. expresses this fact so poetically when he explains that "Monads are spiritual droplets or atoms of SPACE, or component drops of the shoreless Ocean of spacial Being."

Thus the terms Gods, Monads, Atoms are all merely relative to this "shoreless Ocean of spacial Being," and all fundamentally of the same structure, and a life-atom on one plane may be a God or a Monad to those far below it, and an atom of material may also be a living body or solar system to some consciousness-center far below the human.

A life-atom is also composed of seven principles with its visible physical vehicle and six others invisible to us even as we ourselves are constructed. Similarly, breaking up the physical atom into its component parts of a central nucleus of protons which can be compared to a central sun and its attendant electrons which are the planetary family of the atomic solar system. These central protons or proton would according to analogy also be sevenfold as are the globes of our solar chain with only the physical globe or proton visible, while the others are invisibly placed on other planes. Similarly with the planetary electrons which would also be septenary, while upon these minute globes or worlds would dwell still more infinitesimal life of an appropriate nature. So then, the story of the atom is also that of the Kosmos, the one being a miniature of the other, and the adventures of a life-atom may well be a duplicate of those of a God only on a correspondingly smaller scale, for one is the reflection of the other, while the aim of all this evolutionary drama is ever the same. It is that of self-directed evolution, acting always as the guiding force and unfolding and expressing that

which was in latency in a never ending series of becoming.

It is this shining forth of the innate Swabhavic qualities that creates the different types of elements, of which on our Globe D there are 92 known by science as native to this earth. Recently, however, two more named Neptunium and Plutonium have been manufactured artificially through experimentation in nuclear fission, thus producing 94 known elements. Each element has a different atomic number and a different atomic weight, Uranium being the heaviest or highest atomic number, and also the most unstable structurally, and the one found by modern physicists to be the most suitable for nuclear fission. In terms of Theosophical doctrine, however, this means that this particular element has commenced to disintegrate, thus rendering it more highly radioactive, less material and more energetic. When an atom is comparatively young in its evolutionary development, it is still growing and becomes electrically hungry, thus capturing electrons which come within its orbit. When it is maturing and growing older, that is, when it is growing nearer to its evolutionary goal, it commences to shrink and break up, emitting one or more of its electrons as it commences disintegration, and producing what is known chemically as an ionized or mutilated atom. Young atoms are seeking food, and become electrically hungry, well integrated and stable atoms are those which have reached about the middle point of their evolution, while the more unstable ones such as uranium are aging atoms whose life forces are commencing to withdraw and whose structure begins breaking up. It may possibly be that the two new elements which have so recently been artificially manufactured by science, have already disintegrated so far as to have disappeared in their old atomic structure and have been transmuted into some lighter atomic elements. It is really all a process of an atom acquiring more electrons as its ensouling entity involves and clothes itself

more and more deeply into matter, and as this entity reaches the point where it again turns towards its spiritual source, it slowly sheds these electrons and breaks up into finer and more ethereal matter. It also follows that what happens to an atom also happens to a human body, a globe or a solar system, and therefore all these various grades of matter are radio-active and chemically subject to this transmutation into finer materials at a certain period in their evolutionary development. Conversely, when spirit is involving itself down into matter, the opposite procedure occurs, and instead of the atoms breaking up into finer materials, they actually add to their structure and become heavier than formerly. This is the period of the downward arc as contrasted with that of the upward arc which our Globe Earth has just commenced traversing, and this is why the atoms of our present heavier elements are now beginning to break up and become radio-active.

Man also is a radio-active entity emitting forth constant streams of life-atoms on all planes of his existence. Indeed it would decidedly surprise the average human being were he to realize the immensely powerful forces of which he is composed in all his various vehicles. But the atoms of his body are so well balanced that he is able to use and inhabit this vehicle without being at all conscious of the fact that he himself is an enormous source of potential atomic energy.

Solar Systems also are radio-active, and so carrying the analogy further and likening our solar system to an atom of space, it may be that when the planets or electrons of one solar system are captured by those of another in a similar manner to which ordinary physical atoms become ionized and their electronic structure altered by other electrically hungry atoms, these planetary captures are then transmuting that solar system into another element even as occurs in the chemical field of physical

atoms. Transmutation from one element or condition into another is thus a fundamental law in a Universe of interlocking hierarchies of endless streams of Beings who are eternally becoming. In the chemical laboratories of the Gods are created and transmuted the various Kosmic elements which combine to produce the myriad forms of manifestation, while every transmutation brings the evolving entity or consciousness-center working through these elements a little closer to its divine source. Whether considering an atom of infinitely smaller size than ours or one of infinitely larger or Cosmic proportions, the same fundamental process may be seen at work: first descending down into matter further and becoming heavier in structure, then evolving forth radio-actively in the endeavors of Spirit to release itself from the various matter forms in which it is veiled. Thus the Kosmos may be depicted as an eternal struggle between Spirit and Substance or between force and matter for balance or equilibrium, while out of this continual interaction Consciousness emerges on ever higher levels of Being than before.

Atoms therefore can be of any size, stretching into infinity in either the exceedingly small or the extremely large, and can act as a connecting link or laya center between any two planes of space both inner and outer. It is through these atomic laya centers that the various streams of consciousness-centers travel from one plane to another during their evolutionary peregrinations. Therefore an atom can both peregrinate and be peregrinated through, for in the realm of pure consciousness size, structure, and place are of no consequence, and it is the ultimate of all living entities or consciousness-centers to divest Nature of her mayavic gown of atomic unreality that they may become self-consciously at one with the Divine Being who called them forth and from whose consciousness they are projected.

THE WORLD-TREE — *Allan J. Stover*

Symbols chosen or adopted for important occasions often have a way of revealing truth beyond the knowledge or wish of those using them. This is so with the Christmas Tree, for Christmas, coming at the sacred season of the winter solstice brings with it folk memories of the ancient mysteries; and the evergreen tree decorated with lights, fruits, stars and glittering strings of tinsel is the World Tree, a symbol of the universe, with its stars and planets, and the shining pathway of the Milky Way. It belongs to the Mysteries and the cycle of initiation, and traces of its existence may be found all over the world.

It matters not that no documentary evidence directly connects the Christmas Tree with the World Tree from which it was adopted, or that puerile explanations trace the custom of decorating an evergreen tree at Christmas time to the beginning of the seventeenth century, or that old tales tell of the miraculous blooming of a thorn tree on the anniversary of Christ's birth. The symbol itself is ageless and belongs to all people, but once the church adopted the decorated tree as a symbol of Christmas its pagan origin was promptly forgotten.

Long ago, when the Ancient Mysteries still lingered in the hearts of the Northern People, it was the custom to go into the snowy forest on the eve of the winter solstice and gather in a great circle about a pine from whose branches blazing pine-knots were suspended. In the fragrant light of these torches beautiful and significant ceremonies were performed. Imagine the scene: the dark gloomy forest, the pure white snow underfoot and overhead the twinkling stars. The flaming torches were the great souls whose light illumines all things, while the cones fastened to the

branches were the ordinary men and women. Finally wreaths of pine were lighted and sent whirling down the hillside into the valley where the people were gathered, whirling in from outer space as a comet or a peregrinating soul comes whirling in from the spaces of space to seek imbodiment in a new solar system.

The significance of the Christmas Tree as an emblem of the hierarchy of manifested life is given by G. de Purucker in the following beautiful words.

Have you never heard of the World-Tree with its roots in the realms of spirit and whose branches are the great suns and systems of suns? This World-Tree began in the beginning of this Cosmic Age to bring forth all the stellar hosts. Now the Winter Solstice is the beginning of the cosmic New Year, and so these northern peoples, knowing some of the ancient truths, celebrated the cosmic event with the Christmas tree. It symbolizes the World-Tree, and the lights are the suns that bestrew the deeps of Space, hinting to us the message from the divinities who constantly give us the light of love, the light of mind, the light of hope eternal. But so far have we fallen from the wisdom of our forefathers that now the Christmas tree has become merely a sign of festivity, except for the few who preserve its significance in their hearts. — *Wind of the Spirit*

One of the most remarkable conceptions of the cosmic tree is that of the Ash Yggdrasil, called the God-bearer because of its deep and sacred significance. It is both the tree of the Universe and of Time. It has three roots: the first is fixed in Asgard the dwelling of the Gods, the second in the Jotunheim the abode of the frost giants, and the third reaches into the gloomy realms of the underworld. Beside each root is a sacred well; near the first root

Urdur, the Norn or fate of the past, waters Yggdrasil with the knowledge of past experience. In the land of the Frost Giants, Werdandi, Norn of the ever-present-time, sprinkles the World Tree with transcendent wisdom drawn from Mimer's well. It was at this well that Odin himself was required to place his eye in pledge in order to obtain a drink, for such wisdom as Mimer's well holds must never be misused. In the underworld Skuld, Norn of the future, draws from the stream of Hwergelmir such wisdom as even Odin knows not of. So the three Norns of the past, present and future are the guardians of the tree Yggdrasil, and approaching, enveloped in a dark veil, they daily sprinkle it with the waters of life.

The crown of Yggdrasil reaches high into the heavens and overshadows even Walhalla, the Devachan of the Norse. The branches spread over the whole universe, and all the kingdoms of nature inhabit the tree each at its proper level or zone. The tree, in fact, is the solar system itself with all its systems of planes and sub-planes and orders of life of many and various kinds.

It was on this tree of our home universe that Odin hung nine nights and offered himself to Himself:

I know that I hung
On a wind-rock'd tree
Nine whole nights,
With a spear wounded,
And to Odin offered
Myself to MYSELF —
On that tree
Of which no one knows
From what root it springs.

A theosophist sees in the symbol of the Tree a reference to the Earth chain of seven globes with their serial planes and sub-

planes of existence, each bearing its appropriate lives.

Analogically it is also the occult structure of man, or of an atom or even of the galaxy.

On the other side of the world, in Burma, the Bamboo is decorated and presents are piled about its base. There is also a myth among the Maoris of New Zealand that Heaven and Earth were once joined, and it became the duty of Tane-Mahuta the Forest God, to separate them so that light might fall upon the Earth. Taking the form of a gigantic tree he stood upon his head and with his feet uppermost forced the sky far above the Earth, where it has remained to this day.

The great myths of mankind should be studied wherever they appear, for different facets of truth are given according to the race and time. Altogether they begin to form a mental conception having volume and mass. It is only then we begin to grasp the inner meaning of the myth.

Turning to the literature of ancient India we find in the *Bhagavad-Gita* (Chap. XV) the following illuminating words:

Men say that the *Ashwattha*, the eternal sacred tree, grows with its roots above and its branches below, and the leaves of which are the *Vedas*; he who knows this knows the *Vedas*. Its branches growing out of the three qualities with the objects of sense as the lesser shoots, spread forth, some above and some below; and those roots which ramify below in the regions of mankind are the connecting bonds of action.

May it not be that the mystic tree represented upright in some instances and inverted in others has reference to the course of evolution downwards and involution upwards, and that like the interlaced triangles the complete symbol would include both

positions?

According to the myths of Mexico a great cosmic tree forms the center of the universe, its branches supporting the clouds which supply the earth with life-giving rain while its roots are said to be immersed in a jar of primaeval waters.

Even classic Greece was not without its World Tree, for Hesiod, the Greek poet who lived about 600 b.c. states in *Works and Days* that after the destruction of the Second Race "Zeus the Father made a third generation of mortal men, a brazen race, sprung from ash trees." While the scholars have made sheer nonsense of these lines, every ancient people had their world tree and just as metals have been used to signify the yugas through which each race passes so various trees may well symbolize the greater races or ages of mankind. It is the most natural thing in the world to speak of one's family tree, for it expresses the organic unity of a stream of life and the interrelations of part to part, as no other emblem does.

That the many aspects of the cosmic tree myth found throughout the world are intimately related is shown in *The Secret Doctrine*:

The Norse Ask [or ash tree], the Hesiodic Ash-tree, whence issued the men of the generation of bronze, the Third Root Race, and the Tzite tree of the *Popol-Vuh*, out of which the Mexican *third* race of men was created, are all one.

and then she gives a challenge to the intuition:

But the Occult reason why the Norse Yggdrasil, the Hindu Asvattha, the Gogard, the Hellenic tree of life and the Tibetan Zampun, are one with the Kabalistic Sephirothal Tree, and even with the Holy Tree made by Ahura Mazda, and the Tree of Eden — who among the western scholars can tell? (II. 97)

When the room is darkened on Christmas eve, with only the colored lights on the tree aglow, the air vibrant with the peace and love of this sacred season; could we but know what flaming glories attend the coming into life of a new year, of a minor manvantara, then indeed the night might well be an initiation. This little tree decorated with loving hands is a reminder of that greater one, our universe "in whom we live and move and have our being."

The Theosophical Forum

THE SEVEN JEWELS IN THE BHAGAVAD-GITA — *Alexandra McLean*

... you will find these Seven Jewels in all the ancient scriptures, scattered about, it is true, but you will find them if you look for them. — G. de Purucker

To Theosophists the Gita needs no introduction, but it may be we have not considered it with perceptions attuned to the "seven fundamental principles of knowledge," the "Seven Jewels," searching within its words and between its lines till we find these precious gems of truth embodied there.

The Sapta Ratnani (1) (the Seven Jewels) are said to be so fundamental that they hold true throughout the universe, inner and outer, and in all its parts, from the lowest to the highest. They have been called "the structure and carpentry of the Universe." We are told that even the Masters and Nirmanakayas study them with relation to further knowledge. These Seven Jewels are in truth seven keys to the vastness of our own true Self, opening the way to seven channels of perception with expanding vistas of profound significance. Let us enumerate and briefly consider these seven basic laws:

1. PUNARJANMAN: rebirth, reimpodiment, reincarnation and regeneration — cyclic recurrence.
2. KARMAN: the undeviating law of Cause and Effect, the reaping of that which we have sown and the sowing of that which we shall reap.
3. LOKAS and TALAS: Hierarchies and hierarchical structure, through which everything evolves in its manifestation. Through a Tala a descent into matter, through a Loka an ascent into spirit.

4. SWABHAVA: Individuality; the inner and real characteristic of every life-form, from an acorn to a galaxy: its own inherent powers; that which it unfolds; that which it has become and is.

5. PRAVRITTI and NIVRITTI: evolution and involution; the flowing forth or unfoldment, and the flowing back or infoldment — at all times a dual process.

6. AMRITA-YANA and PRATYEKA-YANA: the two paths of evolution: the "Pathway of Immortality," and the "Pathway of each for himself." The first path is the way followed self-consciously by the Great Ones, the Buddhas of Compassion. They work not for themselves alone, but take countless lesser entities with them, helping them in their evolutionary unfoldment, for all is One and every part is linked with every other part. The second and lesser path is the way of those who seek peace and wisdom for themselves, and who at the Moment of Choice will become Pratyeka-Buddhas.

7. ATMA-VIDYA: Self-Knowledge, or the Divine Universal Knowledge.

To consider the *Bhagavad-Gita* by the clear and vitalizing light of the Jewels is to gain a deeper understanding of the poem. In the second chapter we find Krishna instructing Arjuna in the doctrines of Rebirth, Reimbodiment, Reincarnation — the first of the Seven Jewels:

As a man throweth away old garments and putteth on new,
even so the dweller in the body, having quitted its old
mortal frames, entereth into others which are new. . . .

Both I and thou have passed through many births, O
harasser of thy foes! Mine are known unto me, but thou
knowest not of thine.

A solemn impression of the second Jewel, Karman, is found in the

awe-inspiring spectacle of the doomed multitudes rushing into the flaming mouths of Krishna in his divine form; and his majestic words give the key:

I am Time matured, come hither for the destruction of all these creatures. Wherefore, arise! seize fame! Defeat the foe and enjoy the full-grown kingdom! They have been already slain by me; be thou only the immediate agent, O thou both-armed one.

And in the following words the Lord Krishna points out in simple and direct language the way of release from Karman:

Whatever thou doest, O son of Kunti, whatever thou eatest. whatever thou sacrificest. whatever thou givest, whatever mortification thou performest, commit each unto me. Thus thou shalt be delivered from the good and evil experiences which are the bonds of action; and thy heart being joined to renunciation and to the practice of action, thou shalt come to me.

We find the doctrine of Hierarchies, the Third Jewel, in Krishna's reference to "all worlds up to that of Brahman," in his description of the great Aswattha Tree, "with its roots above and its branches below"; and in the myriad manifestations of Krishna in the various beings from all the kingdoms of nature, and all the elements; from gods to spirits of the lower orders.

He says:

O son of Kunti, at the end of a kalpa all things return unto my nature, and then again at the beginning of another kalpa I cause them to evolve again. Taking control of my own nature, I emanate again and again this whole assemblage of beings, without their will, by the power of the material essence (prakriti) By reason of my supervision

nature produceth the animate and inanimate universe; it is through this cause, O son of Kunti, that the universe revolveth.

The fourth Jewel, Swabhava, is subtle. We say the inner nature within a rose seed will always bring forth a rose and no other thing. Could we say the "swabhava" of *any* entity is the sum-total of all its previous evolutionary experiences, waiting in seed form and holding the potentials of the entities until the next manifestation? Good or bad, the one predominating will be locked within: the swabhava, ready to unfold through the laws of the fifth Jewel, Evolution-Involution.

Two thoughts that seem to indicate swabhava occur in Chapter Third:

But the wise man also seeketh for that which is homogeneous with his own nature.

All creatures act according to their natures; what then will restraint effect?

In Chapter Sixteenth Krishna discourses on the qualities of beings in this world: the two types of swabhava that beings may manifest: the godlike, and the demoniacal, enumerating some of the qualities of these two types:

. . . universal compassion, modesty, mildness; patience, power, fortitude, and purity; discretion, dignity . . . these are the marks of him whose virtues are of a godlike character. . . . Those who are born with the demoniacal disposition . . . they know not purity nor right behavior, they possess no truthfulness. . . . They indulge insatiable desires, are full of hypocrisy, fast-fixed in false beliefs through their delusions.

Yet, in our inmost, at the "heart of the heart of us," is the *divine* swabhava, which ultimately it is our duty and great glory to manifest.

In the Antecedent Words to his Recension of the *Gita*, Mr. Judge tells us that "the story of the Mahabharata can be taken as that of Man in his evolutionary development." Thus the entire counsel of Krishna to Arjuna — self-restraint, renunciation, devotion to the Omnipresent Spirit — by following which "the journey of thy mortal frame" is to be accomplished, and union with the Supreme attained, embodies the Fifth Jewel: the recession of the lower, material qualities, and the unfolding of the spiritual-divine. Through the discriminating action of the Higher Self comes spiritual discernment, leading to an ever more perfect evolution-involution. Spirit "involves" into matter, so that matter may evolve towards spirit.

So closely are the fifth and sixth Jewels interwoven, it is difficult to give a clear-cut example of the sixth: Amrita-Yana and Pratyeka-Yana, the two paths of evolution, but we cannot fail to see his meaning when Krishna says:

These two, light and darkness, are the world's eternal ways; by one a man goes not to return, by the other he cometh back again upon earth. No devotee, O son of Pritha, who knoweth these two paths is ever deluded; wherefore, O Arjuna, at all times be thou fixed in devotion.

and elsewhere:

As the ignorant perform the duties of life from the hope of reward, so the wise man, from the wish to bring the world to duty and benefit mankind, should perform his actions without motives of interest.

We are further told that pure devotion will lead us to freedom

from attachment to the three great qualities: *sattva*, light or truth; *rajas*, passion or desire; and *tamas*, indifference or darkness. The qualities will manifest, but we shall be free from *attachment* to them; doing all for the Self which is all, thus giving true devotion to the One. This is the path of Amrita-Yana.

And now the Seventh Jewel, *Atma — Vidya*, Self — knowledge. Throughout the entire Song of the Blessed One, the Master is teaching his chela the way to Self-knowledge. Perhaps it is best summed up in the final discourse of Krishna:

It is impossible for mortals to utterly abandon actions; but he who gives up the results of action is the true renouncer. . . . A man's own natural duty, even though stained with faults, ought not to be abandoned. For all human acts are involved in faults, as the fire is wrapped in smoke. . . . Learn from me, in brief, in what manner the man who has reached perfection attains to the Supreme Spirit, which is the end, the aim, and highest condition of spiritual knowledge. . . . And having thus attained to the Supreme, he is serene, sorrowing no more, and no more desiring, but alike towards all creatures he attains to supreme devotion to me.

Krishna has encouraged and instructed his eager chela in the "structure and carpentry" of universal, divine Involution-Evolution. The chela — each of us who has seriously begun to follow the "Small Old Path" which leads to the goal of perfection — listening to Krishna, the Higher Self, is instructed in the constant flow and change of life-forms, of death and rebirth, and of regeneration through attaining Spiritual Knowledge. The two paths are pointed out, and we must choose which we will follow.

We find the final way to union with the Inner God on a field of battle, where we must overcome the lower with the Higher. With

courage, devotion and right action, without attachment to results, with heart and mind intent on hearing and obeying the directions of Krishna, the Logos within, the final battle is won. Victory is ours. We come to the knowledge of One, and *in* one, devotion to All.

The Theosophical Forum

CHANGE — A PARADOX — Hazel Minot

Beware of change! For change is thy great foe. This change will fight thee off, and throw thee back, out of the Path thou treadest deep into viscous swamps of doubt. — *The Voice of the Silence*

I remember reading these lines long ago and thinking of the Old Man of the Sea whom some hero — was it Hercules or that inveterate wanderer Sinbad? — must overcome; and always the hero had to remember that whatever form his antagonist took, it would still be the Old Man of the Sea with whom he was struggling. The tale, almost forgotten, assumed new significance; and even the warning against change, linked in thought as it was with the story, became more understandable.

We all have our "Old Man of the Sea" — problems, habits, traits of character, or some other ball and chain that we would like to be free from — and quite often when we think we have won the mastery over any one of them, lo and behold, there the thing is again, only in another guise!

Is there a purpose, then, in all these masks of the quick-change artist? Must we forever meet the same antagonist in form after form if we would down him? Not forever, but certainly until we see beneath the panoply of change and recognize the fundamental sameness of that which wears the masks. And herein lies their purpose, for everything is sevenfold and nothing can be known completely until each aspect of its composite character is understood. Then indeed shall we hold the Ariadne's thread that can guide us through the maze of our own bewildering nature with its more than seven times seven.

Human nature being what it is, however, this quest for the real beneath the seeming can quite easily get out of hand and degenerate into a sort of "witch-hunt" in which every wholesome innovation is pounced upon as misleading, disruptive — a thing to be destroyed before it can become contaminated.

Change is not always "the enemy." Sometimes it is man's best friend. Life is a constant expression of change, and would not be possible without it, whether that change be birth or death. Change means growth — physical, intellectual, spiritual — and the inability to change means stagnation and ultimate death.

Whatever we turn our hand to as a means of self-expression, be it the arts, sciences, philosophies — or just life — one rule holds good: Change. The finished product may completely veil the effort involved, but if it has achieved its goal, good has given way to better, and that to best.

This is true throughout Nature. What more lovely than an apple-tree in bloom! Yet those delicate blossoms must wither and die if we are to taste the fruit. The caterpillar lives his life, and probably finds it good as such lives go, but the beauty and color of wings, the power to fly hither and yon would be denied him were it not for the magic of change wrought during that seeming death in the cocoon. Shall man be less than these? He too must change: outgrow the happy irresponsibilities of childhood, experience the bitter with the sweet, die and be reborn again unnumbered times, if the man is to become a god.

Change — strange paradox! Whether we think of it as "friend" or "enemy" it is worth knowing better, for to understand Change is to understand ourselves.

THE BIRTH OF ZEN BUDDHISM — *Christmas Humphreys*

It is said — and what is tradition but truth in the robes of poetry? — that once, when the Buddha was seated with his Bhikkhus on the Mount of Holy Vulture a Brahma-Raja came to him and, offering him a golden flower, asked him to preach the Dharma. The Blessed One received the flower and, holding it aloft, gazed at it in perfect silence. After a while the Venerable Mahakasyapa smiled. Such, it is said, is the origin of Zen Buddhism. But as Dr. Suzuki points out:

This smile is not an ordinary one such as we often exchange on the plane of distinction; it came out of the deepest recesses of his nature, where he and Buddha and all the rest of the audience move and have their being. No words are needed when this is reached. A direct insight across the abyss of human understanding is indicated.

— *Essence of Buddhism*, p. 22

It is further said that the Wisdom which this smile revealed was handed down through the centuries by twenty eight successive Patriarchs, the Buddha himself being the first, and the last, the Indian philosopher Bodhidharma, who arrived in China in the middle of the sixth century a.d. and became the founder of the Zen School of Buddhism. Many of the intervening Patriarchs were mighty men in the world of Indian thought and Asvagosha, Nagarjuna and Vasu-bandhu, to name but three, will be honored as long as Indian wisdom is preserved.

The recorded history of Zen Buddhism is less romantic. Its origin,

of course, is the Buddha's Enlightenment, for as the whole of Zen Buddhism exists as a vehicle for this direct Enlightenment, there would without it be no Zen Buddhism and, in this present world of avidya, ignorance, no Zen.

This all but unutterable Wisdom, the fruits of his spiritual experience, the Blessed One taught to his chosen few disciples. Such as they understood they remembered; such as they remembered they handed down. In this state, two hundred years or more after the Passing, the Buddhist Canon began to be written down. But already the Sangha, the followers of the All-Enlightened One, were splitting into manifold sects, the grounds of cleavage being partly doctrinal and partly monastic discipline. Famous pundits are still debating the genesis of these various sects, and the dates at which and the reasons for which the Mahayana or Great Vehicle, as it called itself, began to diverge from the Hinayana, the Small Vehicle as it called the older School, or the Thera Vada, the Teaching of the Elders, as the latter called itself. To students of Zen, however, these niceties of historical research are of little importance, and of none to the man who has once, for a thousandth part of a second, known *satori*. For the blaze of light which floods the mind from its own eternal inwardness when thoughts of "this" and "that" are for the moment purged away illumines unforgettably one tiny corner of the Real, and history and all that is bound in time has little interest more. It is enough, therefore, that in the course of time the fertile Indian mind began to work on the basic principles of the Ancient Wisdom which the Buddha had once more presented to mankind. The Teaching spread, south to Ceylon, southeast to Burma, Siam, Cambodia, east into China, and thence to Korea and Japan, north into the locked and silent plateau of Tibet.

It seems to have reached China in the first century a. d. In what form it came is by no means clear, but the earliest Buddhist

Scriptures to be translated into Chinese were a collection of sayings culled from a number of Sutras, or Discourses, the collection being known as *The Sutra of 42 Sections*, which may be described as a Hinayana work modified to express the views of Mahayana adherents. This was not Zen. It was, however, a prelude to its birth, for it was the Chinese genius working on the raw material of Indian thought which, with contributions from Confucian and Taoist sources, produced, with Bodhidharma as mid-wife, the essentially Chinese School of Ch'an or, as the Japanese later called it, Zen Buddhism.

Suffice it to say that the two main schools of Buddhism are as the two sides of a coin. All that is relatively stressed in one is discoverable in the other in a less developed form; and the two are one in the sense that men and women are one, two sides of a human being. The Thera Vada, now to be found in Ceylon, Burma, Siam and Cambodia, is certainly the older School. It is more orthodox, clings harder to the wording of its Pali Canon, emphasizes moral philosophy and the prime importance of the individual's working out his own salvation before he attempts to "save" his neighbor or the world. If it is puritan in its cold insistence on character-building, it is yet suffused with the sweetness of a reasonable, unemotional pursuit of a Way which leads — did not the Blessed One prove it abundantly? — to the heart's desire, that peace which comes when the heart is empty of desire, and self is dead.

The Mahayana adopted all of this, but added upon these broad and, some say, all sufficient premises a vast erection of emotion-thought which flowered in time in the intuitive white light of Zen. The Indian mind was never satisfied with the teachings, moral and philosophical, of Thera Vada Buddhism; and soon the Precepts of right living were developed into principles of cosmic truth. The Buddha, from a man who attained Enlightenment,

came to be viewed as the Principle of Enlightenment which dwells in all. As such his forms were multiplied, and fast on the heels of iconography came ritual; a moral philosophy became a religion. The metaphysical heights of Indian thought were climbed, equaled, and finally surpassed. The Bodhisattva, he who dedicates his life and the fruits of life to his fellow men, replaced the Arhat, he who strives for his perfection before he presumes to lead his brother on the Way. Compassion was raised to equality with Wisdom; the depth of the Thera Vada was turned to an expansion of interest which embraced all living things.

These changes are, so it seems to me, as inevitable as they are right if a system of thought is to claim, as Buddhism claims, to be all embracing, and to supply all human spiritual needs. In the vast field of present Buddhism there is to be found religion, philosophy, metaphysics, mysticism, psychology, and much of the science which is claimed as a western discovery of the last few years. There is also room for the poetry, the love of nature and beauty and the sense of fun which is native to the Chinese character; and behind it all is a vast tradition of spiritual truth only part of which is ever recorded and little of which has ever appeared in a western tongue. In a general way, and one must generalize in the broadest terms, the Schools are as complementary as the night and day. The austerity of the Southern School is offset by the religious fervor of some of the northern sects, and the intensive-expansive, practical-mystical, developing-preserving, tendencies of the respective points of view are neither good nor bad, pure or impure Buddhism, but parts of an inseparable whole. If in the exuberance of spiritual thought some later teachers of the Mahayana developed methods and technique which seem to run counter to the Teaching of the Buddha as early recorded in the Pali Canon, the tolerant Buddhist mind would at least admit that extremist doctrines, such as those

of the Pure Land School, may possibly be true, while reserving the right to hold, as I do hold, that it is difficult to see how they can fairly be labeled Buddhism. Yet the common ground of most of the Schools of Buddhism, North or South, is far, far larger than all their differences, and beyond all complementary emphasis on this or that particular doctrine is the direct, supreme, and to us ineffable Experience of the All-Enlightened One.

When Bodhidharma (Tamo to the Japanese) arrived in China, the Mahayana was still only partly developed, but the initial hostility to Buddhism, so notable on its first arrival, seems to have died down. The Chinese are a practical people and disliked both the celibacy and the begging habits of the Buddhist monks. A man should work for his living, they said, and part of his duty is to provide for the memory of his father and to raise up sons to care for his own. Moreover, they deeply distrusted the metaphysics of Indian thought as displayed in the Sutras already translated, and although some of these Sutras, later found to be closely akin to Zen, such as the Vimalakirti, had already been translated by the famous Indian Buddhist, Kumarajiva, the Chinese needed a transference of Indian thought, itself into the Chinese idiom before Buddhism could be assimilated into their national life. In the result, it was left to the individual Chinese thinker to choose from the wealth of material such Sutras as seemed to him of value; and about such thinkers and their Commentaries upon some favored Sutra sprang up the manifold schools or sects which together in time amounted to Chinese Buddhism. Thus, for example, were the Tendai and the Kegon Schools developed respectively from the Madhyamika and Yogacharya Schools of Indian Buddhism, and thus about the Avatamsaka Sutra, introduced to the Chinese mind in the 5th century by Buddhahadra, was built up the School which later developed into Zen.

But the Chinese mind, essentially rationalist and humanist, though with its mystical feeling developed in Taoism, produced an immense change in the form of Buddha Dharma. From the luminous heights of Indian thought was developed an emphasis on inner values which at the same time had to express itself and be expressed in action and hard work. Wisdom to the Chinese thinker is never an escape from worldly life. As shown in the famous Cow-herding pictures, when the pilgrim has so controlled his lower self that he has reached the final goal, he does not linger there.

To return to the Origin, to be back at the Source —
already a false step this!

Far better it is to stay home,

. . . he comes out into the market-place;

Daubed with mud and ashes, how broadly he smiles!

There is no need for the miraculous power of the gods,

For he touches, and lo! the dead trees come into full bloom.

— *Essays in Zen Buddhism*, I, 365-6

Hence the exciting statement in that famous Chinese classic, *The Secret of the Golden Flower*,

The holy science takes as a beginning the knowledge of
where to stop, and

as an end, stopping at the highest good. Its beginning is
beyond polarity and

it empties again beyond polarity. — p. 66

The concentration upon inner values and processes was soon to pervade all Schools of the Mahayana. As the sixth Chinese Patriarch of Zen in the 7th century taught

Our mind should stand aloof from circumstances and on
no account should we allow them to influence the function

of our mind.

And again, as illustrating this absolute idealism:

You should know that so far as Buddha-nature is concerned, there is no difference between an enlightened man and an ignorant one. What makes the difference is that one realizes it, while the other is ignorant of it.

A better illustration still, perhaps, is the famous story of the flag.

It happened one day, when a pennant was blown about by the wind, two Bhikkhus entered into dispute as to what it was that was in motion, the wind or the pennant. As they could not settle their difference I submitted to them that it was neither, and that actually what moved was their own mind.

— *Sutra of Wei Lang*, pp. 49, 27, and 24

It was easy, therefore, for the Chinese mind to adopt with enthusiasm the first verse of the *Dhammapada*, perhaps the most popular Scripture of all the Pali Canon. "All that we are is the result of what we have thought, it is made up of our thoughts. . . ." Man is indeed the product of his own past thought and actions, and it follows that his thoughts and actions today decide his condition tomorrow, and in the larger tomorrows of his later lives on earth.

The Chinese are concerned with processes, rather than with results. Things have their value, but all things are in a state of flux. Contentment of mind, therefore, is to be found in the flow of life itself, not in the buildings, either of hands or thoughts, which house that life for the space of a butterfly day or the brief span of the clay's mortality. Zen, therefore, with its insistence on direct experience, unmindful of the forms of wisdom from which the life too swiftly ebbs away, was extremely acceptable to the

Chinese mind, and if this suitability has been emphasized it is because the Chinese are in a way the British of the East, and most of the attributes above described might as well be applied to the average Englishman.

This Mahayana development was, of course, of gradual growth, and it was in the midst of the process that Bodhidharma, "the bearded barbarian," arrived from India, and into the cross-currents of the stream of Chinese thought threw the hand-grenade of Zen. His four propositions which, even if the formula was produced later, summarized his purpose and technique, were as follows:

- A special transmission outside the Scriptures;
- No dependence upon words and letters;
- Direct pointing to the soul of man;
- Seeing into one's own nature.

In brief, a direct transmission of the Wisdom without depending on words, and the direct seeing into one's own nature.

At a time when some of the best brains of the country were translating and writing commentaries on the metaphysical scriptures of Indian Buddhism, this brutal frontal attack on the citadel of truth must have caused an enormous sensation. Hence Dr. Suzuki's phrase that Zen was the Chinese revolt against Buddhism. Yet it was not until the time of Hui-neng, a hundred and fifty years later, that Zen became a genuinely Chinese form of Buddhism, to have immense effect on the Chinese art of the T'ang Dynasty. It is to be observed, however, that none of this apparent extension of the original teachings was regarded as moving away from them. Bodhidharma claimed to be returning to the spirit of the Buddha's teaching and if — and this is the very foundation stone of Zen — Buddhism is a record of Buddha's Enlightenment, he was right. It was those who petrified the flow of truth in the

written word of the Scriptures who were slaying the Dharma, and Zen, from this point of view, was the dredging of a stream made foul with ritual and worship, with the niceties of logic and rational philosophy, and the debris of all manner of conceptual thought.

Our knowledge of Bodhidharma is largely derived from *The Records of the Transmission of the Lamp*, a book which, though written in 1004 a.d., is based on contemporary records now destroyed. Our second authority is *Biographies of the High Priests* by Tao-hsuan, compiled in 645 a.d. The records differ in detail, but the outline is clear. Bodhidharma will live forever in the annals of Zen Buddhism for introducing into it the element of *satori*, the immediate experience of truth as distinct from understanding about it. Nor did he merely offer this original contribution to Chinese Buddhism; he lived it. He was born in south India — tradition says in Big Conjeeveram — and studied Buddhism under his teacher, Prajnatarā, for forty years. From Prajnatarā he acquired by merit the patriarchate of the Dhyana or Zen School, thus becoming the 28th Indian, as he was to become the 1st Chinese, Patriarch. On the death of his Teacher he sailed for China, arriving in 520 a.d. The Emperor Wu at once invited him to his capital, the modern Nanking. On his arrival the Emperor, a most devout Buddhist, began to boast of his good works. "I have built many temples and monasteries," he said. "I have copied the sacred books of the Buddha. I have converted Bhikkhus and Bhikkhunis, now what is my merit?" To which this silent, ferocious-looking Indian Buddhist replied, "None whatever, your Majesty!"

The Emperor, taken aback at this brutal answer, tried again. "What is to be considered as the First Principle of the Dharma?" he asked. "Vast Emptiness, and nothing holy therein," replied the Patriarch. "Who, then," asked the Emperor, not unreasonably,

"now confronts me?" "I have no idea," said Bodhidharma. Thus, in a brief but historic interview, was laid the foundation of a School which became the dominant sect of China, and is one of the two main schools of Japanese Buddhism, having enormously influenced both countries in their character, culture, art and philosophy.

Bodhidharma, having introduced in his own inimitable style the teaching and technique of Zen, retired to the country, and in the Shao Lin monastery meditated in silence for nine years. Finally there came to him a former Confucian scholar, by name Shen Kuang, who asked to be instructed in the Dharma. The Master took no notice. For seven days and nights the petitioner waited in the snow and finally, to prove to the obdurate teacher the life and death sincerity of his demand, he cut off his arm, and sent it in. The Master saw him. "Pray," said the exhausted student, "pacify my mind." "Let me see your mind," said the Master, "and I will pacify it." "I cannot produce this mind which troubles me so much," said the would-be pupil. "Then I have pacified your mind," said Bodhidharma, and the pupil was at last enlightened.

The truth of the story is immaterial, but as a most dramatic account of the birth in China of Zen principles it is of highest value. And that is nearly all that we know of the founder of Zen Buddhism, whose fierce, aggressive, bearded head has been the theme of a thousand artists from that day to this. Even his end is a matter of mystery, but it is in the true tradition of Zen to believe that he was last seen at a tremendous age returning through the Western Gates of China with one of his sandals on his head. This may be comic; it may have been symbolic; from such a man it was most certainly Zen.

The Confucian monk whose soul had been so swiftly pacified became the 2nd Chinese Patriarch under the name of Hui-ke. To

him the Master handed the Lankavatara Sutra as containing an epitome of the secret of Zen; hence the popularity of this Sutra with students of Zen today. It would seem that he was the first Zen martyr, for he was put to death in a.d. 593 for teaching a false doctrine. He spent his life in preaching Zen to the lowest strata of society, and the popularity of this beggar in rags aroused opposition from the forces of well-fed orthodoxy. Before he died, however, he passed on the robe which had come to be the insignia of the Patriarchate to Seng-ts'an, who survives in history as the author of the Hsin Hsin Ming, a metrical rendering of the principles of Zen. A translation of the poem appears in Dr. Suzuki's *Essays in Zen Buddhism*, I, 182-7. Here in print is the way to dissolve the Opposites.

The fourth Patriarch was Tao-hsin. He had asked the previous Master, "Pray show me the way to deliverance." Said the Master, "Who has put you under restraint?" When the enquirer answered, "No one," the Master enquired in turn, "Then why do you seek deliverance?"

Under Tao-hsin (580-651) Zen Buddhism was divided into two. One part did not survive the passing of its founder. The other branch was headed by Hung-jen, later the fifth Patriarch, who lives today in the famous Sutra of Wei-Lang (Hui-neng), the sixth Patriarch.

Like a famous character in a later religion than Buddhism, Hung-jen prepared the way for another greater than himself. This was Hui-neng whose name, according to a southern dialect, may be pronounced Wei-lang and is better known in the West as such by reason of the late Mr. Wong Mou-lam's translation of his famous "Platform-Sutra." Under the fifth Patriarch, Hung-jen, Zen rose from a small retiring sect of earnest students to a position where it was ready to support a full proclamation of Zen. This was Hui-

neng's destiny, and he became the second founder of Zen Buddhism, the mind responsible for developing Zen into a purely Chinese form of Buddhism, both in its teaching and means of expression. He was poorly educated, and was never a scholar in the usual sense of the word. His story is told in his own Sutra, which ranks as one of the classics of eastern literature. In it the close affinities with Taoism are clearly shown, and indeed the words Tao and Dharma are at times with some of the later Masters used synonymously. No student of Zen can fail to study this diamond mine of Zen, or indeed the Commentary upon it which Dr. Suzuki has written under the title of *The Zen Doctrine of No-Mind*. Here it is sufficient to point out that the failure of Hui-neng's rival, Shen-hsiu, to receive the robe from the fifth Patriarch caused him to secede from the latter's following, and to set up a northern school of his own. This Shen-hsiu was an ex-Confucian, and with his school of "gradual" enlightenment, was given Imperial protection and encouragement, but within a hundred years of the founder's death it had utterly disappeared. The "Sudden" School of Hui-neng prospered mightily. As Dr. Suzuki says,

The latent energy that had been stored up during the time of naturalization suddenly broke out in active work, and Zen had almost a triumphal march through the whole land of Cathay.

Soon after the passing of Hui-neng, who appointed no successor, the Master Hyakujo founded the system, still in use, of the Meditation Hall. In all other schools of Buddhism, and in most other religions, an image of the Founder is the central feature of a temple or a monastery. Only in Zen is the Meditation Hall of paramount importance, and when by the tenth century the *koan* (for an explanation of which please wait for the chapter on Zen Technique) had come to be the recognized means or "device" for

attaining *satori*, Enlightenment, all the main features of Zen Buddhism were in being, and have hardly varied in the thousand years which separate that period from today. It was in Japan, however, that the tradition was best carried on, for by the 13th century Zen Buddhism in China had begun to lose its initial impulse. As early as the 7th century Zen had reached Japan, but it was not until the 12th century that a Tendai monk called Eisai crossed into China to study Zen, and returned to found a Zen monastery in Kyoto. But Kyoto was the headquarters of Shingon and Tendai Buddhism, and it was in Kama-kura, under the powerful wing of the Hojo family, that Zen took root in Japan. Eisai founded the Japanese branch of Rinzai Zen. Soto Zen arrived a few years later, in the hands of his pupil, Dogen, while the third of the three sects of Zen, the Obaku, was introduced by Ingen in the 17th century, and is now but a part of Rinzai Zen. The difference between the schools is chiefly the importance given to the *koan* exercises. In the Rinzai Sect this is still the basis of spiritual development; in the Soto sect it is far less used. Zen was seized by the military class and made its own. The Tendai and Kegon sects of Buddhism, both in a way synthetic philosophies made up from diverse material, were too philosophic for the Japanese knights of the Middle Ages, who were yet most cultured men. Jodo, on the other hand, and its later extremist derivative, the Pure Land School of Shin, needing no learning, and demanding but a constant invocation to the spirit of Buddhahood, were more acceptable to the people. Shingon Buddhism, with its emphasis on ritual, was extremely popular at Court. Zen was a warrior creed. It called for action, for the most rigorous self-discipline, for self-reliance, for contempt of death. So did the iron cult of Bushido, the Way of the Knightly Virtue. The warrior owned but his swords, and his swords were his honor and his life. By the larger he lived: by the smaller he would, at his Lord's behest or when his honor was injured, die by his own hand. This

was a man's life, and it needed a man's religion. Zen is "poor," for the heart must be emptied of all else if the light is to enter. It calls for that loneliness of heart which woos the Absolute, for adaptability to outward circumstance, for contempt of the accidents of changing form, and yet, being as Dr. Suzuki calls it, radical empiricism, it is utterly practical and "lives in facts" to the utter exclusion of ideas. Nought must come between a man and his loyalty to his Lord; nought must intervene between a man and the mind's experience. To think, when the enemy's sword is descending, is death; to act, and to act rightly as the result of years of training, here is life, and the flow of life, with no intermediate.

At a later stage we shall see how this virile, stern yet laughing philosophy of life produced in Japan great art, great warriors and a culture second to none. Cradled by a warrior class, it is not surprising that Zen in Japan is violent in the means employed. But are we not all warriors? As the Buddha is given as saying in the Canon of the Southern School,

We wage war, O Bhikkhus; therefore are we called warriors. . . . For lofty Virtue, for high endeavor, for sublime Wisdom, for those do we wage war. Therefore are we called warriors.

We must take the Kingdom of Heaven by storm; only then shall we find that we have never left it.

Buddhism recognizes no authority for a spiritual truth; hence its tolerance. But the transmission of the doctrine is regarded as of great importance. Each Zen Master must be sanctioned by his Master, and he who teaches without such sanction is regarded as heterodox. Thus, through all the changes of Japanese national life, from the feudal system which extended into the 19th century to a modernism based on American patterns, still the tradition is kept

high, and if the means of arousing understanding are today less violent, the Roshi or Zen Master is a man of tremendous spiritual development, and claims to be in the direct line of the Buddha's direct experience. The power of the light within must vary with the individual; the lighting of the lamp is the purpose of Zen Buddhism, and the light is Zen.

If only for the sake of tidiness, I must finish this chapter with a brief description of the coming of Zen to Europe.

In 1906 the Open Court Publishing Company of Chicago published *Sermons of a Buddhist Abbot* by Soyen Shaku, then the Lord-Abbot of Engaku-Ji at Kamakura, the monastery where Dr. Suzuki, his pupil, is living and writing today. These reported sermons, together with a translation by Dr. Suzuki of the Sutra of 42 Sections, were the first information for the West on the subject of Zen. In the following year Dr. Suzuki wrote a paper for the *Journal of the Pali Text Society* of London which, so far as I know, was the first presentation to England of the meaning as distinct from the mere existence of Zen Buddhism. In 1913, Luzac and Co. of London published *The Religion of the Samurai* by Kaiten Nukariya, an admirable textbook about Zen, though purely on the plane of the intellect. E. J. Harrison's *The Fighting Spirit of Japan*, published in London in the same year, has a chapter on Zen, but the subject is treated without understanding.

In 1921 Dr. Suzuki founded and edited *The Eastern Buddhist*, for which he wrote between that date and its final issue in 1939 a great many articles on Zen, many of which were used as the basis for his later books. The circulation in England, however, was never large, and the same presumably applied to a 30-page booklet written by Arthur Waley in 1922 on *Zen Buddhism and its Relation to Art*. To all intents and purposes, therefore, the general public had only *The Religion of the Samurai* for their study of Zen

until Dr. Suzuki began, in 1927, the publication of his long series of works on Zen which the Buddhist Society, London, are now in the process of re-publishing in England.

The first volume of *Essays in Zen Buddhism* opened a new world of vision for the many thousands who read it, and the following two volumes, and the later works as listed in the Bibliography at the end of this volume, have now made Zen available, to the extent that it can ever be conveyed in print, to the English-speaking world. It is right to add that Dr. J. B. Pratt, who in 1928 produced his monumental work *The Pilgrimage of Buddhism*, seems to have acquired his knowledge of Zen without reference to these Essays of Dr. Suzuki's though as he adds the latter's name to those who had helped him, it is probable that he had read the volumes of *The Eastern Buddhist* from which the Essays were more or less compiled. By 1932, the three main Sutras used in Zen were available in English. William Gemmell had translated *The Diamond Sutra* in 1912. *The Sutra of Wei Lang* reached England in 1930, and Dr. Suzuki's *Studies in the Lankavatara Sutra* and the text, *The Lankavatara Sutra* appeared in 1930 and 1932 respectively. To these must be added the *Huang Po Doctrine of Universal Mind* (trans. Chu Ch'an), and other Zen Sutras now being published as fast as members in China can send them in competent translation.

From 1930 onwards books and articles on Zen began to increase in quantity, yet all of them were influenced by, if not entirely based upon the works of Dr. Suzuki. A section in my *What is Buddhism?* (1928), Mrs. Adams Beck's very lovely work, *The Garden of Vision* (1929), Dwight Goddard's *The Buddha's Golden Path* (1930), these and the steady output of Dr. Suzuki made Zen increasingly known. Then came the war, but after it, when I found the Professor, hale and hearty at 76, in his house in Engaku-ji at Kamakura, he told me of eighteen further volumes

on Buddhism which he had written during the war, and which were waiting to be translated into English as soon as he or some other competent translator could find the time. Some of these will be published in England in the next few years; his famous "Address to the Emperor of Japan" has already passed into a second edition under the title of *The Essence of Buddhism*.

And now new writers are beginning to appear. Mr. R. H. Blyth, who is writing the Professor's life, has himself after sixteen years in a Korean Zen monastery written, as a teacher of English in Japan, a rich compendious work, *Zen in English Literature and Oriental Classics*. The Buddhist Society, London, are publishing the collected works, slim though as yet they are, of W. G. Gabb, the author of *Beyond the Intellect*, and *Tales of Tokuzan*. I have written a little of Zen in my *Studies in the Middle Way*, and a brief exordium which I have called *Walk On!* Material for study is, therefore, available now in western lands, for books have appeared in German, notably *Zen, der lebendige Buddhismus in Japan*, by Ohasama and Faust, and Dr. Suzuki's *Essays* have appeared in French. Yet words are but marks on paper, or noises in the air; in the end it is work, hard work in the practice of direct, immediate living which alone produces the direct, immediate experience of Zen.

THE BHAGAVAD-GITA: ITS SCIENTIFIC ASPECT: I — *Marion O. French*

The Oriental mind is accustomed to accept the scientific accuracy of the ancient Aryan scriptural texts; as well as their deeply philosophical and religious significance. Basic cosmical concepts and the cyclical time periods of evolutionary progress were, once, common knowledge. The power over the processes of Nature that this information conferred was abused. Consequently, scriptural literature ceased to set forth the metaphysical facts that are the foundation of the natural sciences, except in cryptical allusions. Nevertheless, the keys to a scientific interpretation remain extant in all of the greatest treatises upon the constitution of the Universe and of the laws that govern it. Among these texts, the *Bhagavad-Gita* is, perhaps, the most illuminating synthesis of all the salient facts. Initially, Mr. T. Subba Row, F. T. S., drew the attention of Occidental minds to its basis of mathematical physics in his *Notes on the Bhagavad-Gita* published in 1888. Pertinent excerpts therefrom are quoted as an introduction to a further elaboration of certain specific features.

In studying the *Bhagavad-Gita*, it must not be treated as if isolated from the rest of the Mahabharata as it at present exists. It was inserted by Vyasa in the right place with special reference to some of the incidents in that book. One must first realize the real position of Arjuna and Krishna in order to appreciate the teaching of the latter. Among other appellations Arjuna has one very strange name — he is called at different times by ten or eleven names most of which are explained by himself in Virataparva. One name is omitted from the list, i.e., Nara. This word simply means "Man." But why a particular man should be called by this

as a proper name may at first sight appear strange. Nevertheless herein lies a clue, which enables us to understand not only the position of the *Bhagavad-Gita* in the text and its connection with Arjuna and Krishna, but the entire current running through the whole of the Mahabharata, implying Vyasa's real views of the origin, trials and destiny of man. Vyasa looked upon Arjuna as man, or rather the real monad in man; and upon Krishna as the Logos, or the spirit that comes to save man. To some it appears strange that this highly philosophical teaching should have been inserted in a place apparently utterly unfitted for it. The discourse is alleged to have taken place between Arjuna and Krishna just before the battle began to rage. But when once you begin to appreciate the Mahabharata, you will see this was the fittest place for the *Bhagavad-Gita*.

The *Bhagavad-Gita* may be looked upon as a discourse addressed by a guru to a chela who has fully determined upon the renunciation of all worldly desires and aspirations, but yet feels a certain despondency, caused by the apparent blankness of his existence. The book contains eighteen chapters, all intimately connected. Each chapter describes a particular phase or aspect of human life. The student should bear this in mind in reading the book . . .

The student must first go through the *Bhagavad-Gita*, and next try to differentiate the teachings in the eighteen different parts under different categories. He should observe how these different aspects branch out from one common centre, and how the teachings in these chapters are intended to do away with the objections of different philosophers to the occult theory and the path of salvation here pointed out. If this is done, the book will show the real

attitude of occultists in considering the nature of the Logos and the human monad.

It is to be observed that the number eighteen is constantly recurring in the Mahabharata, seeing that it contains eighteen Parvas, the contending armies were divided into eighteen army-corps, the battle raged eighteen days, and the book is called by a name which means eighteen.

The real Sankhya philosophy is identical with the Pythagorean system of numerals, and the philosophy embodied in the Chaldean system of numbers. The philosopher's object was to represent all the mysterious powers of nature by a few simple formulae, which he expressed in numerals.

In further elucidation, W. Q. Judge compiled commentaries on the *Bhagavad-Gita* between 1887 and 1895. The following quotation from this source forms an introduction to the more specific features that this article treats of:

It has been said of old that "the Deity geometrizes." All forms evolve from within outwards. From the "point" whose center is everywhere and circumference nowhere, a radiation equal in all directions begins, and establishes a circumference; a sphere within which the activity of the "point" is particularly confined. The "point" spreading out horizontally becomes a diameter dividing the sphere into positive and negative hemispheres, forming a basis for action and reaction. A further extension of the point vertically to the circumference divides the sphere into four parts, represented on a plane surface as a cross within the circle. Remembering that these extensions of the "point," or center, are lines of force proceeding from the center and tending to return to it, we can conceive of the beginning of

a revolution of the sphere whereby the ends of the vertical and horizontal lines extend towards each other, forming at first the ansated cross, and finally the square within the circle, in reality, a cube or six-sided figure within the sphere. The cube, if looked at from either side presents the appearance of four angles, which, if we can conceive of them as being luminous points equidistant from the bright center, would be seen as a four-pointed star, the symbol and sign of the animal kingdom. If we can imagine Arjuna as seeing within the "divine form" all living lines of force and the forms produced by them, the four, the five, the six-pointed star, and the many-sided figures, all in motion and of wonderful brilliancy of light and of many colors, presenting the activities of all beings of every grade in the universe, we may obtain some conception of the descriptive parts of this chapter.

Primarily, we may assume that the number eighteen is connected directly with the "positive and negative hemispheres" in the foregoing paragraph. They form "a basis for action and reaction" as between the 180 degrees of each hemisphere. Otherwise stated this sets forth eighteen categories with each of them in action and reaction on ten planes of consciousness.

Their mythological personifications are enumerated in the 18 Puranas and, in the Mahabharata there are 18 Prajapatis exclusive of the Trimurti: Agni, Vayu and Surya. The attributes are specified for Prakriti (Mulaprakriti) by H. P. Blavatsky, as: Causeless, eternal, universal, immutable, single, independent, unqualified, simple, sovereign and their polar opposites. Furthermore, with reference to the ten planes of consciousness, the *Kabbalah Unveiled*, by S. L. MacGregor Mathers, lists ten each of the following personifications: Sephiroth, Divine Names, Archangels, Orders of Angels, Demons and Arch Devils.

Numerically, the 432 of Mahayuga divided by 18 equals 24. The precession of the equinox of 25,920 years and the recession of the apsides (solstitial axis of the ecliptic ellipse) of 115,200 years come into equilibrium in 9,331,200 years. This divided by 18 equals 5,184, or one-fifth of the 25,920 year period. Also, four square yards contains 5,184 square inches. Thus, time, space (93,312,000 miles Earth to Sun) and the ancient English square measures (planes of consciousness or manifestation) are linked by the factor 18. Finally, the division of the 24 hours into 18 and 6 marks the day's thermal and the night's rotative effects from the magnetic Solar Sweep as indicated in *Cosmic Machinery* by H. A. Staples. Their summation is in the 360 degrees of the circle and brings us to a consideration of the "Music of the Spheres" of Pythagoras. Its essential aspects may be clarified by the following statement of H. P. Blavatsky in *The Secret Doctrine*:

Tetraktys or Harmony is a diatesseron in sesquitertia (4:3) and the division of the canon of the monochord was made by the tetraktys in the *duad*, *triad* and *tetrad*; for it comprehends a sesquitertia, a sesquialter (3:2), a duple (2:1), a triple (3:1), and a quadruple (4:1) proportion, the section of which is 27. In the ancient musical notation, the tetrachord consisted of *three* degrees or intervals, and *four* terms of sounds called by the Greeks diatesseron and by us a fourth.

Obviously, the Tetraktys is a symbol of universal application. Its ten dots in the four rows of an equilateral triangle are the ten integers or Digits of Divinity. They represent the ten solar influences that pertain to the ten planes of consciousness. The three corner dots signify the three hierarchical aspects of Atma, Buddhi and Manas that remain unmanifested. The remaining seven dots form a hexagon of six principles with their synthesis in the seventh central one. In his treatise on The Twelve Signs of

the Zodiac, Subba Row summarizes the Signs as follows:

1. Eternal Brahma
2. Pranava (Aum)
3. Androgyne Brahma (Adam Kadmon)
4. Tetragram (4 States)
5. Fivefold Brahma (Jeevatma)
6. Astral Light (Holy Virgin)
7. 36 Tatwans (Ratios of Avidya from Tat or categories)
8. Universe in Thought (Divine Concept)
9. Nine Prajapatis (Assistants of Demiurgus, Elu. of the Nine three triads)
10. Dodecahedron in mind of Demiurgus (Derived geometrically from Icosahedron or, inferentially, the Astral Light)
11. Fourteen Lokams (spiritual spheres and material worlds)
12. Five Elements (Aether, fire, air, water, earth)

The first ten pertain to the realm of divine ideation, or the Empyrean. The seventh indicates the dual ratios of the eighteen categories as in pairs of opposites.

Harmonically, we find that Thomas Taylor in his *Theoretic Arithmetic* sets forth the greatest harmonies as lying in the ratios 12-9-8-6 and 24-18-16-12. His information was derived from Boethius as the most reliable commentator on the musical connotations in the "Pythagorean system of numerals" mentioned by Subba Row.

The first ratio may be regarded as the celestial harmony and the second, containing 18, as its terrestrial reflection in the lower hemisphere noted by Judge. Its ratios are geometrical 24-18-16-12, arithmetical 24-18-12 and harmonic 24-16-12. A tone (9-8 ratio) is in 18-16 relation, which is sesquioctave. Incidentally, it is a

dissonance that must be resolved in the living of life if it is to be harmonic. The 16-12 is sequitertian and gives the harmony diatesseron. The sesquialter ratio is in 18-12, giving the diapente, and the duple 24-12 gives the diapason. The triple is 18-6 and the quadruple is 12-3 in the relation of differences. Thus, as in the Tetraktys, the complete division of the monochord is represented. In addition, we find that John Tyndall utilized the 18-16 ratio on the upper disk of the double siren by which he established scientifically the exact vibratory rates per second of musical consonance. His other disks had 15-12, 12-10 and 9-8 for their perforations and he drew attention to the fact that 12 was common to both sirens, as in the harmonies given by Taylor.

TOUCHING THE TEACHER AND THE WAYS OF PEACE — D. M. S.

But when the King heard how Siddhartha came
Shorn, with the mendicant's sad-colored cloth,
And stretching out a bowl to gather orts
From base-boms' leavings, wrathful sorrow drove
Love from his heart. . . .

"Son! why is this,"

"My Father!" came reply,

"It is the custom of my race."

"Thy race,"

Answered the King "counteth a hundred thrones
From Maha Sammat, but no deed like this."

"Not of a mortal line," the Master said,

"I spake, but of descent invisible,

The Buddhas who have been and who shall be:

Of these am I, and what they did I do."

— *The Light of Asia*

There are those who because of an innate lack of spiritual perception are never privileged to see the Teacher. Though their work may take them in daily contact with him, they see only a man and the physical body in which he lives. They may even be quite fond of the "man." His pleasing personal appearance often calls forth their admiration of the perfect match in color between his eyes and his necktie. The obvious qualities of patience, fortitude, understanding and compassion which he possesses, they attribute to a naturally good disposition. His good leadership they consider the results of his former business or professional training.

If such as these continue to do their Theosophical duty, and be

loyal to the "man," they cannot be considered guilty of disloyalty, though their spiritual loss is tragic.

From the time of H. P. B. there have been four distinct types of members of the Theosophical Society. To begin from the bottom and work up: *first* — those who sought to discredit and besmirch the character of the Teacher; *second* — those who recognized the Leader, but denied the Teacher; *third* — those who recognized the Teacher and immediately set out to get from the Teacher all they could of spiritual or material help for themselves; and *lastly*, those whose daily prayer was, "*Help me to help the Teacher.*"

Among this last group are those of H. P. B.'s day, who, sixty years after her death, use their failing strength writing in her defense in an effort to stem the tide of venom proceeding from the prolific pens of her defamers. And let us not overlook the fact that almost without exception, present-day writers of books defaming H. P. B. have gotten their material from *Theosophists* of the 19th Century who belonged in one of the first three groups listed in the previous paragraph.

Each Teacher gives to his pupils infallible rules for recognizing a Teacher, one of which is the absolute essential of spiritual perception within the pupil himself.

Carlyle once said, "No greater proof can a man give of his own littleness, than his disbelief in great men."

To those of us who have been members during the leadership of two Teachers, and have been intimately associated over a period of years with older members who have served the movement under three or even four Teachers, it is understandable that one might feel closer to a certain Teacher than to his predecessor or his successor. But that very closeness to one Teacher increases the spiritual perception to such a degree that he cannot fail to

recognize the basic similarity among them all which sets them apart from the ordinary run of mortals.

Some of us who in our professional life before and during the war were privileged to work in close contact with what the world calls "great men," have a pretty good yardstick with which to measure greatness. Perhaps that is why the difference between the "worldly great" and the "spiritually great" is brought home to us in such clarity. It is perfectly apparent to us that though the gulf between us sergeants and our generals was a sizeable one, the gulf between the greatest of our generals and any one of our spiritual Leaders of the Theosophical Society is immeasurably greater.

Realizing that fact does not make the individual feel small, or little, or unimportant. On the contrary, such perception gives one a feeling of wonder and joy that it was his karma to be privileged to serve not only the worldly great, but the spiritually great.

Once we recognize the Teacher, and work with him completely, we notice day by day an increasing perception of the spiritual qualities in our companions with whom we are associated. The personal habits of the little man working nearby which used to irritate us so much, seem to have disappeared, and we discover one day to our wonderment that he really is a very nice person. We learn to see our associates through the Teacher's eyes. And what is more, we put forth more effort to change our own personalities, so that we can face the clear eyes of the Teacher, without wondering how much of the selfishness and pettiness within us he can see.

Do not be confused by specious arguments that loyalty and obedience to the Teacher is "personality worship." The Theosophical Movement is not a structure built of wood and

stone and brick. *The Theosophical Movement is the Teachers, all of them in hermetic succession, and THEIR Teachers, the Masters of Wisdom and Compassion.* These, and those who serve them faithfully, unselfishly and loyally comprise the Theosophical Movement.

KEYNOTES OF DAY TO DAY LIVING — *Hazel Boyer Braun*

The fundamental thoughts of a human life might be likened to the keynote of a musical composition. Thoughts are living energies and our tomorrows and our next lives are actually created by the vision of today. It is important to make a deliberate effort to strike certain notes in our lives.

The most far reaching thought we can embrace in the effort to shape our own characters is found in the Ancient Wisdom, in the concept of the Divine Reality at the root of everything that lives. As the matrix of our thought life this revelation colors every phase of our daily existence. It washes out of our minds triviality and personal pettiness, it quickens our feeling of relationship with all beings. All fear is driven out because we can know more of love. Individual responsibility is then so strongly impressed upon us that we have no time to be much concerned about what others do to us or think of us.

As trees grow most of them fling their confining bark to the winds each year, and in this we have an analogy with the development of the human mind. We do break through our crystallized thoughts and fling the old ones away as we awake into broader understanding, lifting the level of our thoughts, expanding the reaches of our consciousness.

We all have flights of imagination, but we each have a certain individual characteristic landing place for all our flights. We have each our special way of thinking which creates our lives and enwraps us in an atmosphere that is felt by every person we contact. Very often we have far more effect on the life of others than we fully realize.

We all have some aspirations, we might say some secret hopes that are truly the keynote of our inner life. There are many who are only vaguely aware of the yearnings of their real selves and the quality and direction of their inner experience is not well defined. Yet the substance of our secret hopes fashions our tomorrows.

When we wake in the morning we really strike the note of the day in those few minutes before we rise and take up our work by the vision we have then of our day. When we die we do the same, our last thoughts are likely to be akin to those deep secret aspirations even more than to our personal loves; and they strike the keynote for our time spent in the dreaming of Devachan, fashioning also to a great extent our next life.

The ancients knew this so well that it actually is the explanation of the icons and the countless statues of Buddhas, Bodhisattvas, and Kuan Yins. They were formed by the artists to help in the visioning of these full-blown divinities, to serve as a model for our expectations, to symbolize the fundamental concept of the purpose of life: becoming divine, knowing companionship with the great Souls.

The Theosophical Forum

STELLAR PROOF OF REINCARNATION — *G. Cardinal LeGros*

*He saw a vision and he dreamed a dream;
He heard the heart-beat of Eternity.
Through crystal-flooded aisles of heaven's symbol-world
Each constellation was a Voice proclaiming Law.*

In the writer's opinion the much-maligned science of astrology may yet go a long way toward promoting a general acceptance of reincarnation. The astrology here referred to is not, of course, the tawdry fortune-telling variety that deserves to be deplored and ignored, but that true Celestial Science based upon immutable Law, and concerning which the modern astrologer knows so little. Fragments of it are extant in the outer world, and the sincere, intuitive mystic may find his way to them — gems of truth disregarded by the professional practitioner unless he be illumined by that Light which the Esoteric Tradition alone gives. Spiritual truth is a sacred trust, and dare not be denied or misused. When this happens, the inner Radiance departs, leaving nothing but an outer shell to stand as an incomprehensible symbol of the vanished Reality.

The skeptics are right in one respect: astrology cannot predict specific events, situations, or circumstances. An example in point is the embarrassment of several leading astrologers who "foretold" the results of the recent Presidential Election. Knowledge of the future cannot be obtained so cheaply. Knowledge of the present is difficult enough to grasp.

But that genuine astrology is one aspect of the Eternal Truth goes without saying, or should; and that its cardinal theorems are based upon inflexible mathematical laws is clearly demonstrable to anyone with a knack for figures and a little patience. Madame

H. P. Blavatsky herself stated in *Isis Unveiled*, Vol. I, page 259, that "Astrology is a science as infallible as astronomy itself, with the condition, however, that its interpreters be equally infallible. . . . Astrology is to exact astronomy what psychology is to exact physiology. In astrology and psychology one has to step beyond the visible world of matter, and enter into the domain of transcendent spirit."

The general pattern of progressive experience in anyone's life can be traced by the unfolding potentialities of the birth-chart; but *what the individual will do with such developments* no one can say. The released dynamics can work out in literally millions of ways. This must be so because man is essentially an immortal, spiritual being, an agent of free will and choice. He is not a puppet riding helplessly on the wheel of his horoscope — or isn't, once he realizes that he is free.

The birth-chart is a photograph of the planetary pattern which existed when the soul reincarnated. There is an intimate symbolical and psychological correspondence between it and the basic factors of the personal self to be. But that is all. No horoscope can capture *the character of the Inner Man*, the Divine Pilgrim wandering the celestial highways, himself a Son of the Sun, Child of the Infinite, because within him flames a Splendor greater than all the planetary influences that impinge upon his body at its birth.

But to the chief purpose of this article. In rectifying birth-charts — determining the actual moment of delivery by mathematical calculations based upon important events in the life — an amazing fact emerges. Planetary configurations, measured by arcs of time into the years *before birth*, correspond with events *taking place in the following life-time*. In other words, the unborn soul is shown to be linked with causes awaiting opportunity to

manifest as effects. The soul resting in spiritual consciousness contains within itself the seeds of objective experience yet to come. From character-potentials unfolds the manifest destiny.

No predestined fate is suggested. But a definite correlation between planetary aspects *before* birth and the subsequent release of their dynamics *during incarnation* can be demonstrated with absolute mathematical certainty. The *specific form* that such a release may assume cannot, in the writer's opinion, be foretold, but the *time-periods* of the release can. And this seems to him a very strong argument for the existence of the soul before birth; and, further, if one accepts a law of unerring justice in the universe, then the soul would have had to have lived on earth before to involve itself in such causes.

In his research along this line the writer has rectified many horoscopes, and has yet to see one in which salient events failed to measure to significant stellar patterns before birth. Major events invariably fall at logical points in the unfolding key-cycles. Several such points can be located in a given period, and, while it cannot be positively determined *at which one of the points* the event will occur, *it will still coincide with one of them*. To him this reveals the omnipresence of Perfect Law within whose harmonies all things, from snow-flake to constellation, live, move, and have their being.

The Theosophical Forum

FRIEND OF THE FRIENDLESS — GANDHI (1) — Grace Knoche

Reporters rushed to the typewriter and commentators to the script-desk when the news flashed over the Seven Seas that Mahatma Gandhi had been killed — - precipitating such a downpour of newsprint in reportage, story, digest, reminiscence, editorial, bulletin and review, in both East and West, as we have not known — shall we say in centuries? Certainly not in generations.

And quite naturally, because for decades the thinking world has been watching the quietly thunderous procedures of this incredible man "who tackled the thing that couldn't be done — and did it." Without guns or butter, either one (though the half-fed multitudes who looked to him for succor could have made good use of the latter) this man, *plus* fifty years of frail health, smiles, and perseverance, gave back to more than 400 millions, their country, their self-respect, and their hope.

To a reviewer whose craft depends for its usefulness and integrity on sympathy and the ability to appraise, yet who has thus far merely bypassed the principles and precepts which Gandhi by untiring effort built into his life, and without some knowledge of which we cannot hope to understand him, a request to review this book soon looks like a consignment in a vacuum. On the other hand, those who see East and West, Orient and Occident, as two sides of a single fact, a single shield, know that "the twain *shall* meet," as a human necessity and a natural result when the driftwood of apathy and opinion edges past the millwheel of Time, and gets on with its journey downstream.

This book does not deal, even *en passant*, with religions or philosophies as things in themselves, and not at all with magic or

sham metaphysics, or psychism, or purposeless self-torture, or temptations (there are so many) to leisured "thought." It deals with the mystery of human conduct: *human conduct*, which to the Roman Seneca was "three-fourths of life," but to a Theosophist actually four-fourths. Conduct — the basis and cradle of which is brotherhood, universal brotherhood.

So don't be surprised if you hear a Theosophist say of this modest and powerful book, "It is almost a brief for Theosophy." For Gandhi was no tight religionist; he was an artist in what we call today "human relations." Brotherhood, as with him, has been the goal and platform since the T. S. came into being. H. P. Blavatsky herself published the new creation as *The Theosophical Society and Universal Brotherhood*. And when Katherine Tingley expanded the Society, to make philanthropy first and not last (let us not forget the Master's written words: "We are, above all, philanthropists"), it was rechristened *The Universal Brotherhood and Theosophical Society*, a gesture of faith and understanding. Powerful indeed were the reverberations loosed at this last expansion. Were they confined to the Western World? They could not be. It was One World even then on the plains of hidden sorrow, for the world was in a parlous state at the time, although only the few in any land could be aroused to see it. Broken hearts everywhere cried with Omar:

There is a Door for which there is no key,
There is a Veil through which I cannot see. . . .

But Gandhi found the key — Brotherhood and the tenderness and troth that it inherits, and any Theosophist who has followed the course he took — always with gentleness, never with force — and who now tries to find his way through this unique yet exasperating book, so supremely honest that in places it reads like a testimony of abasement, will inevitably say, "How

theosophical!"

He was not a Theosophist, was never a member of the T. S. — let that be understood — although during his two years in England while studying law, he met H. P. Blavatsky at the Lodge in London, invited there to meet her by "two Theosophists" whom he does not name. Nor have we the date of this meeting, but it must have been shortly before he left England for home, in 1891, when he was about twenty years of age. And it was a theosophical book (in the sense that it was the most beloved of all books by Theosophists) the *Bhagavad-Gita*, that Gandhi re-discovered at that time, to make it the guiding star of his life.

Is this an assumption merely? By no means. Before us is a translation into English (from Hindi, a vernacular) of an address made by Gandhi — date unknown. Speaking to the students at Benares, he said (we give but excerpts):

Early in my childhood I had felt the need of a Scripture that would serve me as an unfailing guide through the trials and temptations of life. The *Vedas* could not supply that need, if only because to learn them would require fifteen or sixteen years of hard study at a place like Kashi, for which I was not ready then.

But the *Gita*, I had read somewhere, gave within the compass of its 700 verses the quintessence of all the *Sastras* and the *Upanishads*. That decided me. I learned Sanskrit to enable me to read the *Gita*. Today the *Gita* is not only my Bible or my Koran; it is more than that — it is my mother. I lost my earthly mother who gave me birth, long ago; but this Eternal Mother has completely filled her place by my side ever since. She has never changed, she has never failed me. When I am in difficulty or distress, I seek refuge in her bosom. . . .

The *Gita* is the universal mother. She turns nobody away. Her door is wide open to anyone who knocks. A true votary of the *Gita* does not know what disappointment is. He ever dwells in perennial joy and peace that passeth understanding. But that peace and joy come not to the skeptic or to him who is proud of his intellect or learning. It is reserved only for the humble in spirit, who brings to her worship a fulness of faith and an undivided singleness of mind. . . . As a "Satyagrahi" I can declare that the *Gita* is ever presenting me with fresh lessons. If anyone tells me that this is my delusion, my reply to him would be that I shall hug this delusion as my richest treasure.

The "two Theosophists" mentioned introduced him to the *Gita*, no doubt reviving memories of his father's love for it and echoes of the sacred *slokas* he repeated from it every day. They also introduced him to *The Song Celestial*, Sir Edwin Arnold's metrical translation of the *Bhagavad-Gita*, and invited Gandhi to read it with them in the original. He had never read it in Sanskrit or in the vernacular of his birthplace — nevertheless, he began. The following *slokas* from the second chapter he tells us "still ring in my ears":

. . . If one
Ponders on objects of the sense, there springs
Attraction; from attraction grows desire,
Desire flames to fierce passion, passion breeds
Recklessness; then the memory — all betrayed —
Lets noble purpose go, and saps the mind,
Till purpose, mind, and man are all undone.

Introduced also to Arnold's *Light of Asia*, he read it eagerly "Once I had begun it I could not leave off." He also read *The Key to Theosophy*, H. P. B.'s (for that day) startling work, which, he

records, "stimulated in me a desire to read books on Hinduism, and disabused me of the notion fostered by the missionaries that Hinduism was rife with superstition." When his new friends suggested that he join the Theosophical Society, he very honestly declined saying: "With my meagre knowledge of my own religion I do not want to belong to any religious body." His work was to be other and perhaps intuitively he knew it even then.

A Christian friend about this time said to him, "Do please read the Bible." Accordingly he invested in a Bible, with maps and concordance, etc., read through the Book of *Genesis*, but what followed "invariably sent me to sleep." He plodded through the Old Testament, but "with much difficulty and without the least interest or understanding." But the New Testament was different, "especially the "Sermon on the Mount," which went straight to my heart. I compared it with the *Gita*. . . . My young mind tried to unify the teaching of the *Gita*, the *Light of Asia*, and the "Sermon on the Mount." That renunciation was the highest form of religion appealed to me greatly."

Far from having been brought up in one single sectarian faith, Gandhi tells us that he was imbued in childhood with "a toleration for all faiths." His father had scholarly friends in the Moslem, Parsi (or Zoroastrian), and Jain religions, who frequently visited him and discussed their faiths, the little Mohandas quietly listening.

While in London he met Mrs. Besant at the Blavatsky Lodge. She had just joined the Society. He attended the funeral of Bradlaugh, "as I believe every Indian residing in London did." Bradlaugh's humanitarian work among the very poor of London is no doubt what impressed Gandhi, though at that time Gandhi was a lad of twenty years, quite unaware of what his future work would be.

He contacted the Theosophical Society later in Johannesburg,

South Africa. Of this contact he writes: "I never became a member of it as I had my differences, but I came in close contact with almost every Theosophist." The dates needed to place this contact with Theosophy are found in an unrelated topic in his book. In his own words: "I passed my law examinations, was called to the bar on the 10th of June, 1891, and enrolled in the High Court on the 11th. On the 12th I sailed for home."

Intensive study enabled him to complete the three-year course in two years — part of the time, so straitened were his means, in a single room in one of the poorer parts of London, doing his own cooking: the total cost of living one shilling and sixpence a day. Such a chapter deserves a colophon, and here it is:

Let not the reader think that this living made my life by any means a dreary affair. On the contrary the change harmonized my inward and outward life. It was also more in keeping with the means of my family. My life was certainly more truthful and my soul knew no bounds of joy.

Disheartened over the petty intrigues in his home-state, Kathiawad, he soon saw that he could not pursue his profession and keep his integrity — "influence" was the deciding factor in court-cases there, not justice. Even the laws nodded to bribes and trickery. It was not long before he left for South Africa as legal counsel to a firm of which a Moslem friend of long standing in Gandhi's family was the head. He went to stay a year. He stayed twenty!

Nor was that too long to straighten things out for the many thousands of Hindus, suffering both insult and injury as "coolies" for no reason save that they had something that we of the "white race" will have in the far future, when the rolling cycles will have carried the Aryan Races, that are younger than that of India,

slowly but surely to the lands bordering and below the equator — namely, a dark skin. In the nearly twenty years before he returned to India to stay, needed laws were passed and disabilities removed. What he worked for was accomplished, and without a shot fired or even an act of resistance, let alone violence, on his part or that of his friends, nor a penny changing hands to buy or bribe.

Then back to India where he seems to have made his first contact with the Untouchables. Most of us have seen, in one or another of the illustrated news-magazines, staff-photographs of Gandhi entering the doors of Parliament House, accompanied by men high in government, his only garment the native *dhoti* or loin-cloth, and shawl. Nothing else. It is the dress of the Untouchables, and he wore it thirty years. If he really was a "politician," no government in our time ever saw his like before. As Vincent Sheean remarks in his sympathetic review: "Mr. Gandhi was not very much interested in politics. . . . What interested him was the poverty of his people, and his whole life was spent trying to find ways of helping them."

How did Gandhi get that way? By means of his own stored qualities, helped by earned karma on both sides which, difficult and discouraging at first, at last became benign. He himself does not answer directly, but his book gives us some clues. Since a sense of responsibility for childhood is rising in the public mind to the dignity of a science from the status of a fad, and since H. P. Blavatsky stressed this responsibility again and again as of first importance — "Educate! Educate! The children are our salvation!" were her words and battle-cry — let us point very briefly to a few items from Gandhi's own account of his childhood and youth in India.

He was born in Kathiawad, a kingdom of many states, and in that

day with a population of Hindus and Moslems living in friendly relations. Gandhi was of course born a caste-Hindu, although officially he became "out-caste" when he left India for England. His father was a Diwan, that is, First Counsellor to the Thakore or Ruler — we should call him Prime Minister or Secretary of State — as his father and grandfather had also been. He says of his father that he was a man of incorruptible integrity, with the practical approach in solving "intricate questions" and "managing hundreds of men." Of his mother Gandhi says that the outstanding impression she left upon his memory was "saintliness."

A Hindu boy, Gandhi had the usual schooling of his caste, doubtless a little more, as he seems to have had a gift for languages — he tells us that he studied Sanskrit; when he left for England he studied Tamil and Urdu on the boat, French somewhere or other, and Latin when obliged to know it for his Matriculation for Law. But he remembers that he found the multiplication tables "difficult."

But he persisted, for in later years he records the profound conviction that every boy should learn to keep personal accounts. He began this (apparently in England) balancing his accounts every night, even to the smallest coin, farthing or copper. Years later, when he had to handle "lakhs" intrusted to him (2) he had no trouble. There was always a surplus of funds, never a deficit.

When only thirteen he was married to a little girl of the same age, as was the caste-custom. Of this he writes:

It is my painful duty to record my marriage at the age of thirteen. As I see the youngsters of the same age about me who are under my care, and think of my own marriage, I am inclined to pity myself and to congratulate them on having escaped my lot. I can see no moral argument in

support of such a preposterous early marriage . . . the poor mite that was born to my wife scarcely breathed for more than three or four days. Nothing else could be expected. He does not refer to the subject again.

This book is not a biography, auto- or other. Actually it is a case-history. Gandhi's own title for the book was a good title: "The Story of my Experiments with Truth." For he was not only a great man; he was a great Experimenter, and in a very great field: the field of human nature and its fruitage in human relations. And he succeeded, for he went back to the Golden Age of his own, his native land, the Vedic Period, his objective not a universal gadget but the universal panacea. And he found it: love, brotherhood, compassion, the gift of the gentle but understanding approach.

Others have found this in other ways — there are many trails up a mountain. But this man, in his own field, was by today's standards unique. He wrote what is really a textbook in one sense, a laboratory record in another. It will be revived and read no doubt in centuries to come.

We hope that translator and editor, in publishing Volume II, and later reprinting Volume I, will add to the excellent Index a glossary of words and unexplained allusions that are in large part foreign to Western scholarship. In the meantime, "Close the book and let it lie."

FOOTNOTES:

1. Gandhi's Autobiography: *The Story of my Experiments with Truth*. By M. K. Gandhi. Translated from the Gujarati by Mahadev Desai. Public Affairs Press, Washington, D. C. 640 pp. Indexed. \$5.00. ([return to text](#))

2. A *lakh* is the equivalent of 100,000 rupees. The dollar-value of a rupee has in the last 20 years swung between 42c. and 30-35c.

The Theosophical Forum

TRUE PSYCHOLOGY — E. D. Wilcox

To those of us who can look back to the opening years of this century, the almost complete transformation in the thought-life of the western world is revolutionary. At the time that Madame Blavatsky published *The Secret Doctrine*, the two dominant yet opposing trends of thought were the materialistic with its theory of man as an animal, and the theological with its man-god and his helpless human creations; both equally mechanistic. Any other concept of man than as a creature of five senses in a physical world was taboo as a subject of conversation except on Sunday, and even then in low tones.

Most of our philosophy came from the Greek teaching of man as a triune of *soma*, *psyche* and *nous* (body, soul and mind), of which the latter two were almost synonymous, since knowledge obtained by the conscious mind was called psychology. Almost coincidentally the occurrence of phenomena not attributable to the five senses, such as demonstrated in Spiritualism, differing states of hypnosis, and emotional and mental phases of what was termed the sub-conscious mind, opened a new field of thought and experiment. As none of these were deemed strictly physical or intellectual, they were referred to the "soul" or "psyche," and derivative words were coined.

At the same time, the sudden discovery by Science of the existence of substance in other than the accepted solid atom of physical matter, brought proof of what seemed to be matter in a hyper-physical or supersensuous state. Thus, today, energy has usurped the place of matter and the electronic atom that of the "billiard-ball." Eddington has given a humorous reference to this discovery. The picture is that we have a table which we use as a

solid object. We see it as such, but to a physicist it is empty space with innumerable electric charges rushing here and there: nothing substantial about it, yet no physicist can exorcise that table.

In a study of the history of the Earth, Geology has unfolded from its rock layers the fact that in each Era some one type of life has risen to dominance, and has specialized in its individual forms until either ends in general extinction or degenerates to dwarf remnants. As we study the history of Man, we find that the same law holds good as regards types of racial growth, social relations and ruling beliefs. Dominance produces its own downfall. The mechanistic theories of Science which ruled the past century are giving way to philosophy, But a philosophy whose seeds sown in the arid fields of materialism are putting forth such a variegated coating over its sprouts as to be well-nigh unrecognizable either as philosophy or psychology.

The awakening of Science out of the darkness of the Middle ages was due to the heroism of a few minds open to the perception of the great Truth that God, Man and Nature were inseparable, acting under a uniform law which the human mind *could* cognize and study. God was overthrown, Man took his place, making Nature his slave. Man without God is a machine which has grown into a juggernaut as relentless as ever Jehovah was. Within this century Nature herself has awakened, and with one bursting forth after another has thrown open the doors of her inner kingdom to an appalled humanity.

Formerly, Science referred to the study of what is called the material world, that which is perceptible to the senses or capable of demonstration, while Psychology limited itself to the study of mental processes. Today, the line between what is physical and what is mental has not only shifted from its previous fixed

position but varies in almost as many points as there are individual thinkers. As to Metaphysics and Psychology, they vie with each other in multiplicity of meanings, most of which show neither law nor limit. In fact, conservative psychologists deplore the ambiguity shown in the relationship between the two.

Furthermore, it is too often forgotten that much of our scientific knowledge has begun with theory which, if proven by test, becomes law; if not, is yet retained as theory until disproven. In the field of psychology this same method of theory and experiment is used in studying the self-directed impulses of the mind, but what is termed mind is a question of debate between what is called "behavior" and "reflex responses."

Physical, psychic and mental faculties are deemed subjective processes of emotional reaction. Man, the Thinker, is now the receiver and transmitter of different rates of sensory vibration. Thus, the study of functional responses in physiology, of energy vibrations in physics, and the uncontrolled entries of impulses into the brain, have been grouped into a science called psychology, which has absorbed into itself physiology and philosophy.

As proof in science, anyone can select an object, test it by himself, and have witnesses to attest his acts; but, in any mental action, thoughts can be recognized only by the thinker and need have no relation to objects in space. Where man places his thoughts, there will be his destiny. When we are awake we are aware of the physical world through our senses; when asleep, to us there is no such world. Yet, even that awareness of the waking mind is limited by the focus of our thought, and that focus is placed or altered by the will. When analyzed, such is the field of action in which students are spending their time, making their tests and confining their thoughts much like a squirrel in its cage. The key

to the cage and full freedom in the field of knowledge is bestowed on the earnest student by the Ancient Wisdom today called Theosophy. It lies with Theosophy to prove to the psychologist that what is, to him, mind, is no more a purely physical fact than is the atom.

What we know as man, physical man, does not live *on* this Earth, he is a part of the Earth, builded of its material, belonging to its evolution. Whatever man has of substance, of garment, of personal faculties, even of ordinary thought, is part of the Earth. How could it be otherwise? We have learned that something cannot come from nothing, nor life from non-life. All is life, and life manifests itself in matter — "thing," not "no-thing."

To the Theosophist, the real man, the Self, is a ray from the center of universal Being, embodying on Earth for experience. How could he do so without using the materials of the Earth in which to dwell? To breathe in its atmosphere he must have a material organ for it; to have a body he must form it out of the mineral and vegetable substance of the plane on which he now lives. Could he have anything physical without the Earth having it? Even our thoughts belong in part to the Earth; they pour through the mind at every waking moment, and we take or refuse what we will of them. What is this "we," this Self, that can say "I," *my* mind, *my* body? It cannot be described, it can be given no form; it is neither physical nor psychic nor mental; it has no attributes of Earth. We give it a name as the spiritual Self, we cognize it as Self-consciousness, we are aware of it in the power of aspiration. The study that leads us to a knowledge of this Self is the only true psychology.

AWARENESS — *J. Croiset van Uchelen*

The doctrine of Maya, is one of the most profound of all the doctrines of the ancient wisdom, and the least understood. To say that the Sanskrit word, derived from the root *Ma*, "to measure out" means illusion, does not help unless we comprehend the meaning of illusion itself. That we behold but the appearance of things has been set forth by the most ancient philosophers, and we find this repeated in the idealism of Kant, Hegel and especially Schopenhauer. Theosophy presents an objective idealism allowing for objective relationships as long as they last, but not enduring. And modern science has confirmed the illusory aspect of what we call matter. Nevertheless, to understand the nature of illusion in a philosophic sense a complete reorientation contrary to inherited habit-thought is necessary.

The first question we must ask ourselves is: how are we cognizant of anything? And the answer is that all we know, is known in mind; that there is nothing, either objective or subjective so-called, of which we can be aware, except in consciousness.

Descartes said "I think, therefore I am." We might paraphrase this and say: I am aware, therefore I am awareness itself; for as is pointed out in *The Secret Doctrine*, "the cognizer itself is but part of the reflection." The thinker and the thought, the perceiver and the perceived, are not two, but one. All our "experiences" are like a stringing together in mind of ungraspable moments, complete in themselves, as are the stills on the motion picture reel to which the illusion of motion, in space and time, is lent. The reason why this seems so difficult to grasp is because we are caught in the self-limitations of sense-illusion. We *think* we see, we feel, we touch. Yet, these so-called sense perceptions, too, are only realized

after, not before they are a mind perception! The image caught on the curved flat surface of the retina, reversed, one six hundredth size, certainly is not what we think we see in space and time. It is a concept in dimensionless mind. And what is time? Past and future are but dreams and the present is past, the moment we pronounce it.

The whole phenomenal world is made of such stuff as dreams are made of! And this applies equally to such objects as one's own and other bodies; beings as well as things. At first these ideas may be somewhat bewildering. It may be helpful therefore to consider dreams. In dreams too, we see and feel (apparent perception by sense) move in space and time amidst other "separate" entities with whom we converse, etc. There need not be any difference in the appearances met with in the waking-, or the dream-world, at the time we are involved in either one or the other state of consciousness. Upon awakening, we have no difficulty in realizing that the whole of the dream-world is within mind. Is it so difficult then to fathom that there may be another state of consciousness where the waking-world is realized as illusive, just as the dream-world is seen in the waking state?

. . . the *root* of all nature, objective and subjective, and everything else in the universe, visible and invisible, *is*, *was*, and *ever will be* one absolute essence. . . . This is Aryan philosophy, fully represented only by the Vedanta and the Buddhist system. — H. P. B., *The Key to Theosophy*

These ideas are clearly and beautifully set forth in the *Lankavatara* and *Surangama Scriptures* and in the profound Commentary upon the *Mahayana Shradhotpadda Shastra*.

Perhaps we may approach the idea in yet another way. In Absolute Infinitude there is ever as much in front as behind as to

the sides so named, for there cannot be less than infinitude. Therefore "we" are always at the center of a sphere; the symbolical circle of the Kabalists whose center is everywhere and circumference nowhere. This obviously makes evolution as impossible as retrogression, and plurality as little Real as all else in the Mayavic worlds.

It is when "the sense perceptions are losing their individual differences, as they become merged into the pure essence of mind that with this merging the habitual illusions lose their existence also," says the *Surangama Sutra*. And further:

When the intuitive and Essential Mind becomes free . . . it derives its discriminations and ideas, not by means of contact with objects . . . nor in the order and limited manner of the senses, but while it continues the use of the sense-organs for its purposes, henceforth the sense-conceptions become universalized.

This form of mentalism does not deny the world. It comprehends its Illusion. Illusion is not synonymous with non-existence. For Illusion to *be* it must exist — but is not real. All we have done so far is to point out, very briefly, that Maya instead of being something hypothetical, can be realized for what it is.

Nothing of this is new, but for the Western materialist it is hard to realize that besides the intellectual quality, there is a heart quality, which must equally be developed; that both must fuse in unison before a next step can be conceived, let alone accomplished. Intellectualism is not intelligence, less wisdom. The great Teachers of the human race came not to aid material achievement, but self-realization, enlightenment of the selfless Self.

Correct the disseminating mind, for it is the mind that is "the

Slayer of the Real." The clinging to ideas and definitions can only be "cleared away" and be entirely "discarded after attaining a great heart of compassion." Only as one "gets rid of all arbitrary conceptions of phenomena and passes from outward morality to inner Wisdom" . . . can "transcendental mental freedom" be awakened, "where there is no further thought of self or not-self, of self and otherness," but perfect equanimity. This is what the *Commentary upon the Mahayana Shradhotpadda Shastra* teaches. Intellectualism may serve man, it cannot save him.

Because the mind does not realize the perfect purity of the all-embracing wholeness it falls into the habit of imagining differences where there are no differences, and thus the mind, being inharmonious with itself, becomes the puppet of Ignorance. — (*Ibid.*) p. 373

It has been said: Learning is good, unlearning is better. However the latter cannot be achieved before the former is completed. We cannot discard what we do not possess. Ignoring the intellect has retarded progress in the East. Exclusive concentration on intellectual achievement in the West ultimately reveals the intellect as its own barrier.

It is not surprising therefore that more and more scientists are turning philosopher. Millikan, Schrodinger, Langmuir, Compton, *et al* have come to abandon the determinism of Darwin's time. Schrodinger even denounces the inherited "custom . . . of thinking causally." Prof. W. A. Hocking does not hesitate to say that modern physics has now become so abstract that it has left the phenomenal world behind, its frontiers being accessible only to the mathematician. Biologists similarly and with every step forward are confronted with new mysteries and are left to ponder the frankly metaphysical premises of Stromberg's immaterial genii. And from there to Cosmic Consciousness the

latter finds an easy step. (See *The Soul of the Universe*.) Others in this outstanding group are A. Cressy Morrison, author of *Man Does not Stand Alone*, and Lecomte du Nouy, who wrote *Human Destiny*. Dr. C. B. Chrisholm, a respected Canadian psychiatrist, believes that the only thing that can save man is a revolution in mind; and Hocking in his *Science and the Idea of God* writes "A man's religion . . . must finish what psycho-analysis begins." Striking also are the oft reported quotes from Jeans, Planck and Eddington, who intuitively brought everything back to consciousness. "Recognizing that the physical world is entirely abstract and without actuality apart from its linkage to consciousness," they restore consciousness to its fundamental position. (*Nature of the Physical World* — Eddington.)

Thus in the late scientific approach, every point in space becomes endowed with consciousness. In mentalistic philosophy consciousness is arbitrarily discussed as points in space. The one becomes objective, the other subjective idealism. Both are transient; they are steps, not stops. Western materialism and Eastern mentalism meet in mind, but must merge in Essence.

The self structure of Mind Essence alone is called the ever-abiding, permanent, underlying reality. — *Buddhist Scriptures*

Breath . . . is *nothing* because it is *all* . . . for it has become . . . *Be-ness* itself. — H. P. B., *The Key to Theosophy*

As long as we remain in structural concepts, we can go on to ever subtler forms, realms, planes, but we form concepts nevertheless, and so we remain in duality. But the Real is neither one nor the other, since there is nothing beyond itself. The mind seeking to erect a structure of comprehension ultimately discovers that it must leave the intellect behind to let direct awareness in.

Spoke the Buddha:

. . . every disciple who is seeking Anuttara-samyak-sambodhi should discard, not only conceptions of one's own selfhood, other selves, living beings and a Universal Selfhood, but should discard, also, all ideas about such conceptions and all ideas about the non-existence of such conceptions.

While the Tathagata, in his teaching, constantly makes use of conceptions and ideas about them, disciples should keep in mind the unreality of all such conceptions and ideas. They should recall that the Tathagata, in making use of them . . . always uses them in the resemblance of a raft that is of use only to cross a river. As the raft is of no further use after the river is crossed, it should be discarded . . . as one attains enlightenment. — *Diamond Sutra*

Such paradoxes are less incomprehensible to the Eastern mind trained toward turning within in stillness, than to the Occidental taught to go after "things" in strife. Instead of releasing, letting go, he goes out and grasps. Living in the noise concept of the West, he knows not silence, and when looking upon the physical immobility of the Eastern Sage, he sees but inactivity, knowing not the real.

We too must learn to quiet the mind, to stand back, to release and let go. Having discovered the Illusion, we must seek the Real. This search lies not in contemplation or meditation, nor can it be willed, though all these may be means. But rather is it a selfless "submerging; a stepping through the looking-glass; action in non-action. Life is met, not held. Responsive action becomes detached, freed in momentariness.

What is this state of Awareness, of Samadhi? Mystics, poets, philosophers in vain have attempted to describe a state of Be-ness which is indescribable. G. de Purucker in *Fundamentals of the Esoteric Philosophy* refers to a French mystic of the Middle Ages, Bernard of Clairvaux, who spoke of "emptying the mind" so that the temple may be cleansed to receive the light of God. Lines like the following (we cannot recall the author) carry the same idea:

If thou couldst empty all thyself of self
Like to a shell dishabited
Then would He fill it with Himself instead.
But thou art all fulfilled with very thou,
And hast such shrewd activity
That when He comes He says, "It is enow.
The place is full, there is no room for Me."

"What has been realized by myself and all other Tathagatas," spoke the Buddha, "is this Reality, the eternally abiding self-orderliness of Reality . . ."

. . . There is no more, no less, no difference . . . the state of self-realization is free from words and discriminations and has nothing to do with the dualistic way of speaking. —
Lankavatara Scripture

We cannot discover the illusion of something we do not understand. That is why H. P. B. says that these ideas cannot be understood until we understand the principles of man, which must not be regarded as bodies, but, as she says, as "*aspects and states of consciousness*" — *The Key to Theosophy*, p. 99

And on p. 70 of the *Key* she writes:

I repeat that we believe in "communion" and simultaneous action in unison with our "Father in secret"; and . . . in the mingling of our higher soul with the Universal Essence . . .

— a state called during life, *Samadhi*, and after death,
Nirvana.

Here we have reached a point where attempts at discussion are frustrated by the very words we use. And henceforth instructions, if such there be, can only be imparted in the silence.

The Theosophical Forum

OCCULTISM 1949 — *Madeline Clark*

True Occultism or Theosophy is the "Great Renunciation of SELF," unconditionally and absolutely, in thought as in action. It is ALTRUISM. — H. P. Blavatsky: *Studies in Occultism*

The very word — Occultism — sets up vibrations in the soul that are felt as a yearning for spiritual adventure. The god that dwells in the inner chamber of the Self — the god that possesses unimaginable faculties and powers — presses to be free to expand its energies "for the benefit of the world and all creatures." Genius, the power to save, protect, harmonize and inspire, is this inner god finding some measure of expression, and heaven knows its work is needed in a world of scrambled motives, courageous but confused, a world headed it knows not where — our world of 1949.

To some minds "occultism" is merely hocus-pocus. But among countless others perhaps Occultism means something different for every aspirant: to some it means magic; to others psychic power, hypnotism and the like; to still others, a knowledge of symbolism, or of color and number, with the powers attaching thereto, or of astrology, or even of healing in its various forms. But whatever knowledge of any one of these occultism may confer, it is in itself none of them. It is simply the hidden wisdom that sheds the lustre of significance upon commonplace events and conditions as well as giving insight into the sublimest operations of the Universe. It is skill in living. It is also the self-existent school of training into which all aspirants enter, consciously or unconsciously, and through which all must pass who would be of real use to their fellowmen.

The spirit of the hour in the hearts of all lovers of humanity is

altruism — the giving of the self in service, as a means of offsetting the menacing and disintegrative forces that make the downfall of our civilization no longer a remote contingency, but a very present possibility. We all want power to do the good that we would. We want "the knowledge of what is good to do, as to the right discrimination of good from evil . . . that power through which [a man] can do the good he desires, often without even apparently lifting a finger," as H P. Blavatsky eloquently puts it.

It is the training in occultism that will help us to attain these powers if we are worthy. The minute a man desires with all his heart to give his best to the Cause of Humanity, the polarity of his life alters. His whole resolve and purpose turn, like the compass needle, to the spiritual north. Something that is a part of himself, yet almost a stranger to him, emerges from the background of his consciousness, and thenceforth is forever at his side, urging to altruistic action. Never again can this silent Companion be banished into the background, and the door wholly closed upon it. Life takes upon itself the aspect of a training for something higher. Casual incidents can no longer be matters of indifference. In course of time the aspirant inevitably finds his Teacher. But the training experienced in association with the true Teacher is always in harmony with the inner urgings of the silent Companion (the Higher Self), and is not viewed with aversion, or as something too difficult to be undertaken.

Let us then not delay; neither should we make rash vows, but rather seek balance and find happiness in the thought that we have made a beginning and are every day nearer to the goal. Instead of drifting, let us direct our lives in harmony with our intuitions — do this, and we have already stepped across the fine line that divides the ordinary life from the inspired life. Those who have the courage to do this make a surprising discovery. They find themselves, not, as they might have expected, moving

in a world of mists and mystery. They find themselves bathed in the clear light of common day. As they proceed, the light clarifies. It is the light that enables them to *see things as they are* — one of the basic laws of occultism. They find themselves in the world of *causes*, thrown back upon themselves to learn the very essence of self-reliance, for it is the possession of self-reliance — "the steadfast power within" — that is the first step and the last in fitting them to give their lives to others.

The training in occultism is surrounded by natural safeguards, not devised by man, and no one can advance to greater powers until he has proven himself wholehearted, and no trace of selfishness or vacillation is left in his nature. The real occultism therefore is so simple that those who have their eye on some outer pageantry of magic and phenomena do not see this simple training as occultism at all, or as necessary. Yet it is as important as five-finger exercises for a future piano virtuoso.

Then why are we warned of the dangers of occultism? It is because the true occultism has so many counterfeits, leading to a search for power or powers for merely selfish ends, which bring about a disintegrative process in the character, because they are divorced from ethics. Ethics, the simple, time-honored virtues, are inseparable from, indeed form the very heart and core of, the real occult wisdom. The elemental strength of human nature, difficult to restrain and subdue, must be taken account of, but it need not daunt us.

Must we then steer clear of occultism because of the warnings? No; for this simple system, based on natural laws of right and fitness, is safe and beneficial to follow, and actually "delivereth a man from great risk," as Krishna tells Arjuna in the *Bhagavad-Gita* (1) The danger is present when the limpid stream of consciousness is colored by thoughts of self, thus drawing in to

the nature all other evils that follow in their wake.

But you would not refrain from buying an automobile because of the dangers that attend its use. You willingly take the somewhat exacting training in learning to drive, and when you go out on the highway you are safe as long as every sense is alert, and every moment is watched for its possible situations. This alertness soon becomes second nature, as every driver knows; and so it is in every other kind of training, likewise, toward whatever end one is working, success depends on putting self aside and concentrating on the effort of the moment.

The most difficult thing of all, apparently, is this idea of renunciation of self: it seems like a sort of death, a forsaking of all that is warm and natural and dear to us. But we all know this is only an illusion. It is a temporary impression, due to the reluctance of the limited human self to keep moving, in crossing the bridge of life. Yet we know there are those who have pressed on, and reached the other side, "the other shore " We desire to be in their company, be their co-workers, because in them genius has blossomed and in their mastery of power and faculty, in their disciplined and impersonal charm, they are the best company in the world. They have "got that way" by the very means we now must make use of in order to reach their side.

Those who have the good fortune to work in the company or under the direction of teachers dedicated to Altruism learn much from observing how they proceed by unbreakable laws, never intruding upon the consciousness of their pupils, but leading them out of themselves and awakening their unsuspected virtues and talents. We see the results of their own training in practical occultism, in that they *are* "able to do the good they desire, often without even apparently lifting a finger." Unless they had become proficient in setting aside the self and considering first the good

of others, they could not deal so skillfully with the human problem in individuals nor make the wise and far-reaching decisions that react to the benefit of all. Unless they had learned "to see things as they are," to distinguish between essentials and non-essentials, they could not have the ready judgment as to what is best to do. Unless they were firmly fixed in Self-reliance, they could not so completely give themselves to the service of others. And unless they had formed the habit of listening for the voice of the intuition in each detail of life, they could not have the sense of timing that tells them *when*, as well as why and how, a move should be made. But among thousands who are as yet aspirants "on the way," there will be a few who have crossed "to the other shore," relatively speaking, within this present world of action and karma. These now responsible ones, taking leadership to help on the general good, cannot attain their ends single-handed. They must have support and help. The opportunity of working with these helpers of the race is the answer to that "yearning for spiritual adventure" felt by the aspirant. It offers the perfect setting for a training in practical occultism, whose object is work, here and now, "for the benefit of the world and all creatures."

FOOTNOTE:

1. Textbooks for those wanting specific instructions in practical occultism are: *The Bhagavad-Gita*, *The Voice of the Silence*, and *Studies in Occultism*, by H. P. Blavatsky, *Golden Precepts of Esotericism*, by G. de Purucker; W. Q. Judge's *Letters That Have Helped Me* and *The Mahatma Letters to A. P. Sinnett*. The teachings of "technical" Theosophy are an indispensable background to this study, because they give the fundamental reasons for ethics and altruism. ([return to text](#))

THE NATURE OF ZEN BUDDHISM — *Christmas Humphreys*

There are men, and plenty of them, who think that when something has been classified in accordance with the prevailing system of filing, they know more about it. But nothing has happened. Such men know nothing more about a flower to which they have in triumph added a Latin name of fourteen syllables; and they are no nearer to the spiritual experience known as Zen by announcing that Zen is this or that. Zen *is*, and the noises made in its presence affect it no more than a flower is impressed by its labeling.

Yet questions are asked, and some of these are worth answering.

Is Zen Buddhism a religion? It depends, of course, upon what is meant by religion.

It is not a religion in the sense that the term is popularly understood; for Zen has no God to worship, no ceremonial rites to observe, no future abode to which the dead are destined, and, last of all, Zen has no soul whose welfare is to be looked after by somebody else and whose immortality is a matter of intense concern with some people. Zen is free from all these dogmatic and "religious" encumbrances.

— *Introduction to Zen Buddhism*, Suzuki, p. 14

If, on the other hand, it is as Professor Whitehead conceives it, the answer is otherwise.

It is the vision of something which stands beyond, behind and within the passing flux of immediate things; something which is a remote possibility and yet the greatest of present facts; something that gives meaning to all that passes and

yet eludes apprehension; something whose possession is the final good, and yet is beyond all reach; something which is the ultimate ideal, and the hopeless quest.

— Quoted in *Diagnosis of Man*, Walker, p. 100

Much depends on the alleged relationship of the Teacher to the Teaching which is later taught in his name. No Teacher ever founds a religion. He teaches, and men listen to his Teaching. He passes, as all else passes, and about the memory of his Teaching men build up, as a wall about some holy object, a system of thought and doctrine, of ceremonial and worship, which all too soon bears little resemblance to the Teacher's own attempt to promulgate his spiritual experience. In time, indeed, the religion becomes a substitute for the actual experience, and as such becomes evil. As Dr. Jung points out, "Creeds are codified and dogmatized forms of original religious experience," and these are easily used as shields against the terrors of direct experience.

What is usually and generally called "religion" is to such an amazing degree a substitute that I ask myself seriously whether this kind of "religion," which I prefer to call a creed, has not an important function in human society. The substitution has the obvious purpose of replacing immediate experience by a choice of suitable symbols invested in a solidly organized dogma and ritual.

— *Psychology and Religion*, pp. 6 and 52

And as the purpose of Zen is "direct seeing into the heart of man," anything which stands between a man and such direct experience is evil, to be thrust aside as a barrier which intervenes between the seeker and his goal.

Yet religion can be used as a raft whereby to cross the raging flood of Samsara, and to reach the farther shore. But he is a fool who carries the raft thereafter, and religion is at the best a means

to an end, to be cast aside when its purpose is fulfilled. And without doubt religions may be used to heal: "All religions," says Dr. Jung, "are therapies for the sorrows and disorders of the soul," for when the part is sick it seeks reunion with the whole, and religion, a re-binding, is a means for effecting, by penance and sacrifice and inward prayer, a re-integration of the soul. And in a way it would seem we are all sick men, for only in a state of consciousness beyond the desires of self lies health or wholeness, and until we find that light within we sit in the darkness of the soul's dis-ease.

It seems that man must have a religion, even though it should bear a disguise remote from its normal seeming.

Having lost the old faith, they turn eagerly to new ones, and science, psycho-analysis, spiritualism, social reform and nationalism have all in turn acted as substitutes for religion.

— *Diagnosis of Man*, p. 243

Of these the most evil is the State. God, a convenient invention, may at least be a God of love. The State is cold, impersonal, has neither warmth nor love nor mystery: is purely conscious, having no controllable relation with the vast forces of the unconscious mind and being without heart, it rejects the devotee in the moment of his greatest need. Like all things large, it has no meaning, and I for one hate all things large, be it a department store, a limited company or a world society. These lack humanity; they make and are bound by foolish rules; they do not care. But "the race is run by one and one and never by two and two," and only one man, not a crowd or a nation or a committee, finds deliverance. In the end the Truth is beyond all formulation. Is it not written in the Diamond Sutra:

"Subhuti, what do you think? Has the Tathagata attained

the Consummation of Incomparable Enlightenment? Has the Tathagata a teaching to enunciate?" And Subhuti answered, "As I understand the Buddha's meaning there is no formulation of truth called Consummation of Incomparable Enlightenment. Moreover, the Tathagata has no formulated teaching to enunciate. Wherefore? Because the Tathagata has said that truth is uncontainable and inexpressible. It either is or it is not. Thus it is that this unformulated Principle is the foundation of the different systems of all the sages."

— *The Jewel of Transcendental Wisdom*, p. 32

In brief, although Zen Buddhism is in some sense a religion, Zen itself is the light of all religions; it is not one of them.

Is Zen Buddhism truly a part of Buddhism? Or is it accidental that this fierce, direct approach to reality flowered from the stem of Buddhism, when it might equally have flowered elsewhere? To the extent that "Buddhism" limits Zen, Zen is not Buddhism, for "anything that has the semblance of an external authority is rejected by Zen." On the other hand, as Dr Suzuki also says, "If Buddhism were to develop in the Far East so as to satisfy the spiritual cravings of its people, it had to grow into Zen," which accords with his constant statement that Zen was the Chinese way of absorbing and applying Buddhism. (*Introduction to Zen Buddhism*, pp. 21,9)

Professor Coomaraswamy begins by describing Zen Buddhism as the more philosophical and mystical aspect of the Mahayana, and as essentially indifferent to idolatry and to scriptural authority.

This phase of Mahayana is little determined by special forms, and can scarcely be said to have any other creed than that the kingdom of heaven is in the heart of man. This school of thought most fully represents the Mahayana

as a world religion.

— *Buddha and the Gospel of Buddhism*

This is on account of its amazing flexibility. Being bound to no forms using any or no philosophy and all convenient manner of technique, Zen is the flowering of the mind from the seeds of spiritual experience. It is based upon, draws its life from and actually is the Enlightenment which made Prince Siddhartha, Kumar of the Kshatriyas, the Buddha, the Enlightened One. Zen is therefore the *Buddh* in Buddhism, and "the definition of Buddhism must be that of the life-force which carries forward a spiritual movement called Buddhism." One may therefore agree with Professor Kaiten Nukariya:

Beyond all doubt Zen belongs to Mahayanism, yet this does not imply that it depends on the scriptural authority of that school, because it does not trouble itself about the Canon, whether it be Hinayana or Mahayana, or whether it was directly spoken by Shakya Muni or written by some later Buddhists.

Or, one might add, written by a small boy on the nursery wall or published in the local railway guide. If it appeals to the intuition it is food for Zen; if not, it has no more value than a speech on politics. Zen Buddhism, in brief, appears in and uses the vehicle built for it called Zen Buddhism; it also appears on the race-course, in the cathedral, and in the w. c.

Within the fold of the Mahayana, Zen Buddhism is often referred to as the Meditation School. It uses meditation and, as already explained, the Zen-Do or Meditation Hall in a Zen monastery is the very heart of the community, but its meditation is far from the meaning of that term in India. There is no deliberate abstraction from the things of sense. Non-attachment, the cure for desire which is the cause of suffering, is an incidental

development. Nor does it analyze phenomena, as in the Southern School of Buddhism, with a view to understanding their essential evanescence and "soul-lessness." Rather it seeks to develop the intuition, which cares not for the opposites and is neither attracted nor repelled. It is the Meditation Sect in that it uses profound meditation, with or without the *koan* exercise, as a means to the awakening of *Buddhi*, the intuitive faculty which is the light of Enlightenment. But it is by no means the Contemplative Sect which certain armchair scholars seem to believe. No one who has lived in a Zen Monastery would describe the life of the monks as contemplative in the sense applied to certain Christian Orders. "No work, no food," was laid down as the rule for the monks one thousand years ago, and the general impression of the daily round is one of strenuous activity. A *koan* may as well be solved with a spade in the hand as in locked, ecstatic silence, and the humblest chores are carried out with the same efficiency and good will as the longest session of deep meditation in the Zen-Do.

What, then, is the place of Zen Buddhism in the field of the Mahayana? It is a revolt from the formalism inherent in the Japanese character. Outwardly, there are services for the people, with the officiating priests appearing in the most gorgeous robes. Inwardly there is only the silent striving for direct experience, and every "form," however tenuous, is looked upon as a net to ensnare the awakening consciousness. Like a butterfly it rests on the branch of the tree of Wisdom which men for the moment call Buddhism. If it fluttered away it would still be — what it is.

Is Zen but a form of pantheism? Yes and no. If pantheism means, as my dictionary suggests, that the whole universe is God, or that every part of the universe is a manifestation of God, then Zen is not pantheism, for Zen would deny the validity of the partial conception of God. The Zen view, borrowed from Buddhist

philosophy, is that behind or beyond the manifest is the absolute Void or Emptiness wherein no "thing" essentially exists. Yet there is no duality in the faintest conceivable form. The Void is a Plenum-Void; Samsara, the Wheel of Becoming, is Nirvana. There is no need for the interposition of an outside Reality called God. Human is divine. If there is a God, we are so much part of it and it of us that there is no difference. Why, then, make use of this man-made symbol in the sky? John Donne was near to the Buddhist conception, holding that "God is an angel in an angel, and a stone in a stone and a straw in a straw." For, as Dr. Suzuki points out,

In Zen each individual is an absolute entity, and as such he is related to all the other individuals, and this nexus of infinite interrelationships is made possible in the realm of Emptiness because they all find their being here even as they are, that is, as individual realities.

— *Zen Buddhism and its Influence on Japanese Culture*, p.

220

This and no less is the tremendous theme of the Buddhist philosophy as developed particularly in the Kegon School. As he most reasonably adds to the above passage, "This may be difficult to grasp for those who are not trained in the Buddhist way of thinking." It is, however, essential to appreciate that the only philosophy of practical use in Zen is that which is based on the intuition. The intellect cannot grasp that the Many is the One without ceasing to be individual things; that the One can be Many and still be One. This is Jiji-Muge, the complete interfusion of opposites and, as such, a stage yet higher than the Brahman's "Thou art THAT," for even in THAT, says the Buddhist, thou art not a whit less thou!

Is Zen atheistic? Yes, if "God" is different from any other form of life which moves to its own enlightenment. "Buddhism is what

the world is when you look straight at it," as somebody has said. Why, then, do so through the eyes of an intermediary?

It would, however, be more accurate to say, as Rene Guenon says, that

Buddhism is no more atheistic than it is theistic or pantheistic; all that need be said is that it does not place itself at the point of view where these various terms have any meaning.

— Quoted in Walker's *Diagnosis of Man*, p. 184

We cannot know God intellectually; when we have learnt to know him, or the Reality of which he is the anthropomorphic dummy, intuitively, we have passed beyond the need of the conception of God. Even reasonably, the God of the Christians is an absurdity in terms of Zen. If he is good then he must be evil; if he is only good he is opposed to evil; in which case there are two things in the Universe, evil and God. If, on the other hand, God is a term for the absolute ultimate All, why chatter about it? "The Tao that can be expressed is not the eternal Tao," and in the same way,

Every statement about the transcendental ought to be avoided because it is invariably a laughable presumption on the part of the human mind, unconscious of its limitations.

— Jung, *Secret of the Golden Flower*, p. 135

This is one of the many reasons why Zen hates and strives to avoid abstractions. When a question is put as to the meaning of such terms as Buddha-hood or Reality, the Zen Master invariably turns them down, making the questioner realize that they have no direct hold on life. As an example, the Master Ganto (829-887 a.d.) was asked, "What is the original, eternal reason?" "Moving," said the original Master. "What about it when moving?", asked the

questioner. "It is no more the, eternal reason," replied Ganto, who for once "explained" his reply. "When you assert, you are still in the world of the senses; when you do not assert, you sink into the ocean of birth and death." In Zen, affirmation and denial are equal and opposite, and ultimately both are a waste of time. It is, therefore, wise to wipe out the folly of the pursuit of God, and lo! when the pursuit is finally abandoned he will be found waiting in the lounge.

Is Zen, then, a form of mysticism? Have it as you will, for it depends on what is meant by the much-abused and quite exhausted word. There are many forms of mysticism, which Evelyn Underhill defines as the art of union with Reality. Zen would suggest it were better to have tea, being grossly irreverent in the face of vague abstractions. Yet mysticism is a convenient term for the factor which alone gives life and warmth to all religion, and the lack of which makes mere intellectual reasoning such a cold, unprofitable ploy. It is this vision, this self-communion with the vast unconsciousness which lies about the circle of our conscious life which lifts mere verse into the realm of poetry, fires the imagination, the creative power of the mind, and makes of beauty in all its forms a nobler pursuit than the love of sensuous enjoyment. But it must not be controlled; it must never be fastened or confined. It is "the bloom on the hills at the close of day, the light on the hills at dawn," and if it be fastened to the mind's conception of some extra-cosmic God, though it may produce great poetry, with the love of the Beloved as a golden refrain, yet it cannot lead to the heart's enlightenment. For still the Lover and the Beloved are two, not one, and even in union there is still not an end. For if all things are reduced to the One, to what is the One reduced? Such mysticism may lift the eyes a long way up the hill, but the will o' the wisp of Zen still moves ahead, and its laughter is heard still further up the mountain side.

JIRIKI AND TARIKI

Early Buddhism stressed the necessity of individual effort. "Irrigators guide the water; fletchers straighten arrows, carpenters bend wood; wise men shape themselves." Thus the *Dhammapada*. Again, "Though a man should conquer a thousand times a thousand men in battle, he who conquers himself is the greatest warrior." And again, "By oneself evil is done; by oneself one suffers. By oneself evil is left undone; by oneself one is purified. Purity and impurity are personal concerns. No one can purify another." It is therefore strange that into such a noble and dynamic faith, with its clear command to control and purify the lower man until the last stain of personal desire and its consequent suffering is purged away, there should have crept, as late as the 13th century a.d., its very antithesis, the doctrine that effort, however splendid, will never of itself avail, and that faith must supply the deficiency. And the faith was not in the Buddha within, as a guide and teacher, but in Amida, the personified Principle of Buddha-hood who dwells in a conventional heaven. Only by Tariki, this "other Power," could man be saved; and after a while the middle way of Jodo Buddhism, with a balance of Jiriki, "self-power," and Tariki, was replaced by the extreme of Shin Buddhism, wherein all morality and the mind's development was declared to be of no importance so long as faith in Amida was held in the mind and repeated constantly. Thereafter Amida's vow, to save mankind, was sufficient means to Enlightenment, and all who believed would find themselves in the Pure Land of his All-Compassionate Mind. The basic doctrine of early Buddhism, whereby a man is the product of his thoughts and acts, and the sole creator of his destiny — no God nor all the powers of Heaven having the power to stand between — all this was ended. He who believed would be saved.

If it be argued that faith and love are stronger than the law of

Karma, of action-reaction, then it is no law. I prefer the Christian doctrine, "Love is the fulfilling of the law," and regard it as the finer Buddhism. If it be said, and so it was said to me in Japan, that the original doctrine is too hard for the many, then let the many tread, as in other Buddhist countries, so far as they can up the hillside until they are ready for the noble truths of Buddhism. It seems to me wrong to describe this attitude as Buddhism. Of course, there is more to the Buddha's Teaching than this law of moral philosophy, of Karma and rebirth, but the element of love, of a wide compassion for all living things, is no monopoly of the Mahayana, and it is a power that comes, as all comes in the end, from within. "Seek in the impersonal for the Eternal Man, and having sought him out look inward — thou *art* Buddha." (1) True, this spiritual factor, which of course is Zen, may seem to come from without, and so produce an inner experience, or seem to come from within, in which case it will manifest without. But I cannot accept as Buddhism a School which denies the importance of self-development, nor, I gather, can Dr. Suzuki. "The absolute "other power" doctrine is not psychologically valid, nor metaphysically tenable." To the extent, therefore, that Zen Buddhism is on one side or other of this Japanese fence, it is undoubterly *Jiriki*, moving by "self-power" to its own and the world's Enlightenment. There is a well known story in Zen which may be summarized here. A monk named Dogen, who sought enlightenment, was sent on a very long errand which he thought would interfere with his studies. Sogen, a fellow monk, took pity on him and agreed to accompany him. One evening, when Dogen implored his friend to help him solve the mystery of life, Sogen told him there were five things which he could not do for his friend — to eat and drink for him, to respond to the calls of nature for him, and to carry the "corpse" of his body along the way. Dogen saw the point in a flash, and attained *satori*. But presumably the truth is some way above and beyond this pair of

opposites. Dr. Suzuki himself has written of the inner truth of Tariki Buddhism, and is in fact a Professor of the Otani College of the principal Shin Temple in Kyoto. And it was the Prince Abbot of the twin monastery of the Nishi Hongwanji in Kyoto who presided, as I have related elsewhere, at the Conference at which I debated this point with his pundits. In the end he announced, "Mr. Humphreys is right; *Tariki* and *Jiriki* alike are means." And that, as I said in my book, (2)"ended the discussion."

Tariki and Jiriki, then, are both means to an end, another of the opposites which only exist as such on the plane of discrimination. But as Zen is itself above such a plane it must exist in both "means" equally, though its principal vehicle, Zen Buddhism, is unquestionably of the Jiriki School. It is in the degradation of a spiritual truth that evil lies, in teaching the people that morality and character-building are of *no* importance. A balance must be obtained, and in practice I found that it was so in all but the lowest rank of the Pure Land followers. Thus

Self-hood is revealed in otherness and otherness in self-hood, which means a complete interpenetration of subject and object, Amida and his devotees. And we can see that Buddhism is after all one, and remains so in spite of apparent diversity.

— *The Eastern Buddhist*, Vol. IV, Part 2, p. 32 (of reprint)

THE ARHAT AND THE BODHISATTVA IDEAL

The ideal of the Thera Vada was and is the Arhat, he who by his own efforts attains Enlightenment. But as the Mahayana developed, this limited ideal was held to be insufficient.

His object of spiritual discipline does not extend beyond his own interest, however exalted it may be in itself, — the object being the attainment of Arhatship, a solitary saintly

life. This is all well as far as it goes, but as we are all living within a most complicately organized communal body, not excepting even a Buddha or a Bodhisattva, we have to think of this side of life. The conception of a Bodhisattva was thus inevitable.

— Suzuki, *Studies in the Lankavatara Sutra*, p. 124

But is it all as simple as all that? "The sages of old got Tao for themselves, then gave it to others," said the Taoist sage, Chuang Tzu. Or, in the words of the Dhammapada, "Let a wise man first go the right way himself, then teach others." After all, there is precisely one mind which he can purify, his own; one character to be ennobled, one vision to be widened, his own. How shall he save another from the burning house of desire, that has not saved himself? The change, it would seem, is from depth to width, from the profound study of the few, reaching the whole way to the goal, to a more superficial improvement of the many. As such it may have been an "inevitable conception," but I cannot lightly accept that the Arhat is the less noble ideal. It is, therefore, to be noted that elsewhere Dr. Suzuki modifies his view.

The Arhat and the Bodhisattva are essentially the same. But the Mahayanists, perceiving a deeper sense in Enlightenment as the most important constituent element in the attainment of the final goal of Buddhism, which is spiritual freedom, . . . did not wish to have it operated in themselves only, but wanted to see it realized in every being, sentient and non sentient.

— *Essays in Zen Buddhism*, I, p. 52

Thus was born the Bodhisattva doctrine which, running as a golden thread through the whole Mahayana, affects Zen Buddhism. The single aim of the Hinayanist became dual. Mahayana stood thereafter on two legs, Maha-Prajna, supreme

wisdom, and Maha-Karuna, supreme compassion for all living things. Of these Dr. Suzuki says, in a most illuminating phrase, that "the former sees into the unity of things, and the latter appreciates their diversity." (*Studies in the Lankavatara Sutra*, p. 229)

He expands this in *The Essence of Buddhism*, when talking of *Jiji-muge*.

It is by the Great Compassionate Heart that the Kegon world of *Jiji muge* moves. If it were just to reflect one individual *Ji* after another in the mirror of *Ri*, the world would cease to be a living one, becoming simply an object of contemplation for the hermit or Arhat. It is the Heart indeed that tells us that our own self is a self only to the extent that it disappears into all other selves, non-sentient as well as sentient. . . .

— *The Essence of Buddhism*, p. 55

This mystical sense of union is, of course, found alike in eastern and western philosophy. Marcus Aurelius wrote in his Diary, "Enter into every man's Inner Self, and let every man enter into thine." And John Donne's famous observation is in the same vein. "Any man's death diminishes me because I am involved in mankind. And therefore never send to know for whom the bell tolls. It tolls for thee."

The Bodhisattva, therefore, at first a name reserved for the few who had neared Nirvana, but later applied to all who vowed to live for the benefit of mankind, was raised as a nobler ideal than that of the Arhat, and the latter was covertly regarded as a selfish aim. Yet

in finding fault with the Hinayanist ideal, the Mahayanist failed to realize that a selfish being could not become an

arahant, which consisted in a spiritual exaltation which transcended the limitations of temporal individuality. In what intelligible sense can a system which aims at the elimination of the phenomenal ego be described as egoistic? . . . The arahant could not have reached full spiritual development if he had failed to act in accordance with the principle that each man forms a part of a spiritual whole of which all of his fellow men are also parts, and that to serve them is to enrich, while to neglect them is to impoverish, his own higher self.

— *Buddhist China*, R. F. Johnston, p. 73

But whether or not the Arhat is selfish, and whether or not in his narrower objective he avoids the pitfalls of the rival doctrine, including those of over-officiously minding other people's business, the Bodhisattva ideal does liberate the force of compassion. Every monk in a Mahayana monastery recites at intervals the "Four great Vows."

However innumerable sentient beings are

I vow to save them;

However inexhaustible the passions are

I vow to extinguish them;

However immeasurable the Dharmas are

I vow to study them;

However incomparable the Buddha-truth is

I vow to attain it.

Thus China and Japan make echo to that noblest of all works of Northern Buddhism, *The Voice of the Silence*. For depth of spiritual feeling and purity of thought it is in a class of its own. Even the Metta Sutta of the Thera Vada is but the song of human love as against the "pure serene" of this ancient Tibetan fragment.

Let thy Soul lend its ear to every cry of pain like as the

lotus bares its heart to drink the morning sun.

Let not the fierce sun dry one tear of pain before thyself
hast wiped it from the sufferer's eye.

But let each burning human tear drop on thy heart and
there remain; nor ever brush it off until the pain that
caused it is removed.

"To live to benefit mankind," is the first step on the Path, not the
last, in this philosophy, and it is dynamic.

Point out the "Way" — however dimly, and lost among the
host — as does the evening star to those who tread their
path in darkness. . . . Give light and comfort to the toiling
pilgrim, and seek out him who knows still less than thou . . .
let him hear the Law.

Love is a noble theme, and love itself may be, as Aldous Huxley
says, a mode of knowledge,\

and when the love is sufficiently disinterested and
sufficiently intense, the knowledge becomes unitive
knowledge and so takes on the quality of infallibility.

— *The Perennial Philosophy*, p. 81

There is, indeed, as W. J. Gabb points out, "a kindness of the heart
and a kindness of the head. Kindness of the heart prompts us to
shake up the pillows of a bed-ridden sufferer, but Jesus told such
an one to take up his bed and walk." (From the MS. of a lecture).
Love, to be wise, must be lit with Prajna, Wisdom; and Wisdom
cannot be complete that is devoid of Love. Thus once more the
pair are a pair of opposites and Zen, that seeks not wisdom nor
love, being both on the plane of the opposites, drives straight for
the state of consciousness which lies beyond all opposites, where
Wisdom and Love, Arhat and Bodhisattva, are one — and at the

same time what they severally are.

ZEN AND MORALITY

Where is Zen in relation to morality? This is a vague term, having at least two meanings. It may refer to our relations with our fellow men and other forms of life. As such it equates with ethics, and would scarcely obtain if one were alone on a desert island. It may also refer to the inner life of the mind, and equate with character building, the elimination of low desires and qualities, and their replacement with nobler qualities. What does Zen have to say about either? Does it take the view of Shin Buddhism at its most extreme, that morality is of no importance so long as the mind be concentrated on the light within? Or does it regard the moral cleansing of the mind as an essential preliminary to further growth? Or does it consider that when the kingdom of Heaven is attained, all else shall be added unto you — that right morality is the result rather than the cause of *satori*, enlightenment?

It seems that Zen adheres to the doctrine of causation as governing the world of duality in which we live. "As ye sow, so shall ye also reap," is the doctrine known in the East as Karma, action-reaction. Zen, therefore, denies the convenient doctrine of sin-transference, whereby the great ones of the earth apply to those less fortunate, i.e. more lazy, the surplus of their own tremendous merit, acquired from innumerable good deeds. But the law of causation is tempered with compassion, for the love of the loving minds of the earth will affect the incidence of woe, and make the suffering to be borne as the result of folly easier to bear. Moreover, Zen, being of the essence of freedom, resents all rules which hamper and confine the mind. According to Dr. Suzuki, this is one of the reasons for the Japanese preference for art over morality. "Morality is regulative, but art creative. The one is an imposition from without, but the other is an irrepressible

expression from within." (*Zen Buddhism and its Influence on Japanese Culture*, p. 21) Zen, he concludes, therefore, finds its inevitable association with art, but not with morality. For rigid form is a symptom of departing life.

When the great Tao is lost, spring forth benevolence and righteousness. When Wisdom and sagacity arise, there are great hypocrites. Where Tao is, equilibrium is. When Tao is lost, out come all the differences of things.

This spiritual principle applies specially to the artificial distinctions of "good" and "bad," and Taoism is at least consistent in its philosophy in that it has no moral code.

The Sage has no self (to call his own). He makes the self of the people his self. To the good I act with goodness; to the bad I also act with goodness.

— *Tao Te Ching*, chs. 18, 49

Why formulate rules unless the original sense of "right" has been somehow paralyzed?

Zen admits that outward conduct should conform with the laws of the state and the customs of the time, but the inner life should be above all rules imposed from without.

Definition is always limitation — the "fixed" and "changeless" are but terms expressive of a stoppage of growth. . . . People are not taught to be really virtuous, but to behave properly.

— *The Book of Tea*, Okakura Kakuzo, p. 53

Yet some degree of discipline is needed, and it is useful so long as it comes from within. It is desire which has to be corrected, not action, for we behave according as we will, and it is an old truth that behind will stands desire. And desire will be purified as the

higher, intuitive range of mind increasingly gains control. There is danger in the denial of both good and evil as having real validity, for gross immorality can appear thereby. Zen monasteries are therefore run to a discipline, but it is a control shared willingly, as distinct from a set of rules which most, when occasion offers, will be swift to disobey.

In Zen there is one enemy in the path of final enlightenment, and this is self, the self which stands between a man and the sun while he bitterly complains that it is dark. For self is a knot in the flow of life, an obstruction in the flow of becoming. Life walks on and we strive to prevent it. Yet how bitter our complaint when we are hurt thereby!

A Master was asked, "What is the Way?" "What a fine mountain this is," he said, referring to the mountain where he had his retreat. "I am not asking you about the mountain, but about the Way." "As long as you cannot go beyond the mountain you cannot reach the Way," replied the Master.

The same Master was asked the same question by another monk. "It lies right before your eyes," said the Master.

Why do I not see it for myself?

You do not, because of your egoistic notion.

If I do not because of my egoistic notion, do you?

So long as you have dualistic views, saying "I don't" and "You do" and

so on, your eyes are bedimmed by this relativity view.

When there is neither "I" nor "You," can one see it?

When there is neither "I" nor "You," who is it that wants to see?

The "self may acquire merit unceasingly by virtuous thoughts and actions, but, as Bodhidharma explained to the Chinese Emperor, such merit, though it will by the law of cause-effect improve the character, will have no bearing on the fact of enlightenment. Zen begins where morality leaves off, and its subsequent progress is on a plane where the opposites, like "good" and "bad," have lost their meaning. As Kaiten Nukariya pithily puts it, "Man is not Good-natured or Bad-natured, but Buddha-natured" (*Religion of the Samurai*, page 105).

It is not right conduct, therefore, which matters, but right thinking, thought which springs from the Essence of Mind. Right conduct may be performed in obedience to a moral code, and have no relation to the mind. Right thinking, however, liberated from the illusion of the opposites, will automatically produce "right action," the third step on the Eightfold Path to Enlightenment. "Form and virtue and charity, and duty to one's neighbour, these are accidents of the spiritual," said the Taoist, Chuang Tzu, having in mind, no doubt, the dull Confucian of his day whose life was bound by rigid obedience to an endless code of equally rigid rules.

Zen ethic, therefore, springs from a sense of the unimportance of self, and is fed by the understanding of this fact which flows from the increasing light of enlightenment. Hence the willingness to help all living things to the same liberation of mind. As the Lama said in Talbot Mundy's immortal *Om*,

My son, there is no such thing as sacrifice, except in the imagination. There is opportunity to serve, and he who overlooks it robs himself. Would you call the sun's light sacrifice?

As a Zen Abbot said to me in Kyoto, "Get Enlightenment; the rest follows," yet, as Alan Watts points out,

While morality should not be confused with religion, it does take one a certain distance towards the goal; it cannot go the whole way because morality is essentially rigid and limiting, and Zen begins where morality leaves off.

— *The Spirit of Zen*, p. 63

Like the intellect, it must be used and then transcended. Meanwhile, perhaps Aldous Huxley should have the last word of all these quotations.

The relationship between moral action and spiritual knowledge is circular, as it were, and reciprocal. Selfless behaviour makes possible an accession of knowledge, and the accession of knowledge makes possible the performance of further and more genuinely selfless actions, which in their turn enhance the agent's capacity for knowing.

— *The Perennial Philosophy*, p. 129

And so on, until this pair of opposites is merged in Zen.

(To be continued)

The Theosophical Forum

THE VEDIC PERIOD IN HINDU PHILOSOPHY (1) — *Marjorie Reineman*

The study of Hindu Philosophy takes us back to the earliest God-Wisdom, given by great teachers to the early human races. We learn of ancient continents, now submerged, from which peoples migrated to the center of Asia and thence to the parts of the earth now inhabited. We learn particularly of the migration into India and neighboring lands; and of the great Aryan race, its religion, its literature, its civilization. Our whole horizon is broadened to include great cycles of human life, and noble heights of wisdom.

Before going on, it would be wise to mention a fact that is fundamentally necessary to proper understanding of this subject. Everywhere we find traditions of the Four Ages of Man. These were actual historic cycles of civilization, called by the Greeks: the Golden Age, the Silver Age, the Bronze Age, and the Iron Age. In ancient India, called Yugas: Satya-Yuga, the Age of Truth; Treta-Yuga, the Age of three parts Truth; Dwapara-Yuga, the Age of two parts Truth; and Kali-Yuga, the Age of Strife and Discord.

Satya-Yuga, the childhood of mankind, was happy and peaceful. There was no war, because man as yet knew nothing of strife or discord. Mankind was blessed with plenty, with abundance; fruits and grain sprang from the earth without labor, and there was no winter or summer — only an endless spring. This age was called the "Saturnian Age," (2) probably because, as G. de Purucker says, there were no real responsibilities. However, under Cyclic Law it passed away, and next came the Age of Three Fires — Treta-Yuga. At this point selfishness, one of the greatest of all evils, crept in, and with it cruelty and injustice. Winter came too, with its chill, and men had to build shelters for protection. Jealousy was born,

and hatred. Evil slowly increased until came Dwapara-Yuga, the Age of two parts good, two evil. Nature became more and more harsh, and selfishness increased. There was sickness and unhappiness, and one by one the bright Gods left the earth, and man now had to find his way alone. Kali-Yuga, the Age of Strife and Discord, is the Age in which we are living at present. Everywhere we turn there is injustice, fear, hatred, selfishness and unhappiness. Yet it is well to remember that this is only three-fourths darkness, for the Gods have not forgotten; and at the right cyclic time will come messengers to tell us of the new Golden Age which is near. Soon will come the dawn, the daybreak, and Brotherhood will again predominate.

A brighter morn awaits the human day,
When every transfer of earth's natural gifts
Shall be a commerce of good words and works. . . .

— Shelley, *Queen Mab*

The Manasaputras, those wonderful beings who lighted the latent fires of mind, made their appearance on earth during the later cycles of Lemuria. The spiritual minority in Lemuria were guided and protected by Great Initiates of the Mystery Schools and thus became (as they were reborn) the spiritual "seed race" in Atlantis, which, in migrating bands under great Teachers, went finally to the Central Plateau of Asia. From the northern parts of this "cradleland of the Human Race," (3) later descended into the Indian peninsula those peoples who called themselves Aryans, or the so called High Caste, who later were divided into Four Castes: Brahmanas, priest-philosophers; Kshatriyas, warriors and administrators; Vaisyas, traders and agriculturists; and Sudras, servers, lowest caste.

In time our archaeologists may uncover remains of wonderful advanced civilizations in what are now the sandy, arid plains of

Turkestan, Persia, and Baluchistan. In fact, great literatures have already been unearthed there.

It is well to note that the homestead of the human family is the geographical center of the Eastern hemisphere. Its borders rise on every side into majestic mountain ranges, that look eastward over the steppes of Tibet and the plains of India, westward down the Assyrian lowlands towards the Mediterranean, northward over the wide sands of Central Asia, and southward across Arabia and the Tropic Seas. The languages and mythologies of nearly all the great historic races, point back to these mountain outlooks of Iran. The homes of ancient civilization rose around their bases, and there they were taken into the dust.

Central Asia is our mother-land. To it went the earliest of the Fifth Race colonists. As Age after Age passed by — this race climbed from innocence to knowledge and on to the misuse of knowledge, until we come to the present day. We are paying for our mistakes in what is now our Kali-Yuga.

Originally, the teachings were given to the people of India in *oral* form, the written form undoubtedly being of a much later date. They were given mostly, if not entirely, in the form of Suktas, or Hymns, stated to have been communicated clairaudiently and clairvoyantly to the Rishis by the Gods themselves. It is an enormous literature, much of which is still untranslated, and containing many parts which are misunderstood by Western Scholars. According to H. P. Blavatsky, in her *Theosophical Glossary*, "they are the most ancient as well as the most sacred of the Sanskrit works." The Ancient Wisdom teachings (later called the Vedas) of the earliest Aryans, went forth before they were written, into every nation of the Atlanto-Lemurians, and sowed the first seeds of all the now existing old religions. (A most beautiful and enlightening thought!)

From this literature we know what kind of civilization grew up at that early date — with one basic religion, and one basic philosophy, until the coming of the Dark Ages. Even then, the innermost teachings were preserved in the hearts of sincere men.

In those days there was a pure and beautiful relationship with the Gods, a constant sense of their nearness, and to sin was knowingly to separate oneself from divine companionship.

It was a child-race in its simple devotion to everything in nature. There was worship of Father Sun and Mother Earth, who nourished the race through life and drew it into her heart after death, when the spirit turned to the stars. Life was a matter of kindness and gratitude, no bickering over finances, no burnt offerings, no slaughter; only a trust in the Universal Order, and love of nature as being Divine.

. . . the trees,
The grass, the clouds, the mountains, and the sea,
All living things that walk, swim, creep, or fly,
Were gods; the sun had homage, and the moon
Her Worshipper. — Shelley, *Queen Mab*

There are many methods of classification. That which distributes the Vedas into hymns, formulae, and chants — called the triple Veda. That which classifies the Vedas into four parts, the oldest, most famous of these being the *Rig-Veda* — which is made up of Hymns of Love, praise or devotion to Nature and Nature-forces; *Yajur-Veda* — in which all the prescribed formulas are included; *Sama-Veda* — a collection of chants (hymns chanted or sung). And the *Atharva-Veda* — a collection of hymns of later date which must have been employed in the ritual of worship. During this period the rules of caste were more thoroughly laid down, and belief in a future life is more positively stated.

The religion which is transmitted to us in these hymns is, in its principal feature . . . "Nature is throughout Divine." (4) Everything capable of affecting man may become an object of adoration. The mountains, wind, trees, and springs, are worshiped as divinities. Even the animals surrounding him receive from him the worship of either homage or deprecation. Nevertheless, it is neither the direct adoration of objects, or of natural phenomena, which figures most prominently in the Hymns. The two single divinities of the first rank which have preserved their physical character pure and simple are *Agni* and *Soma*.

Agni is symbolical of terrestrial fire, and the fire of the lightning and the sun; he is the lord and generator of sacrifice. He organizes the world and preserves universal life. It is *Agni* who pervades all nature, making all seeds and plants grow. But even with the many powers ascribed to him, he never ceases to be the fire which consumes the wood on the altar.

The Hymn to Agni, from the Rig-Veda, is an invocation calling on the gods to descend and be present at the sacrifice.

5. May *Agni*, sapient-minded priest, truthful, most gloriously great,

The god, come hither with the gods.

6. Be to us easy of approach, even as a father to his son;

Agni, be with us for our weal.

Agni is the messenger and mediator between earth and heaven, announcing to the gods the hymns, and conveying to them the oblations of their worshipers, inviting them with the sound of his crackling flames and bringing them down to the place of sacrifice. The simplicity of this is pure and lovely.

Soma is the fermented drinkable juice of a plant so named. It has an intoxicating effect, and is offered to the gods, especially *Indra*,

whose strength it intensifies. But it is not only on earth that the soma flows; it is present in the rain which the cloud distils, and it is shed even beyond the visible world wherever sacrifice is performed. Like Agni, Soma also has a mystic existence. He generated the heaven and the earth, Indra and Vishnu, and with Agni, he kindled the sun and the stars.

The Hymn to Indra, from the Rig-Veda, is a hymn to the thunder-wielder who slew the dragon on the mountain, overcame the enchanter, and gave life to the sun and dawn.

4. When, Indra, thou hadst slain the dragon's firstborn, and
overcome the charms of the enchanters,
Then, giving life to Sun and Dawn and Heaven thou
foundest
not one foe to stand against thee.

The original purport of the legend of Indra slaying Vritra lies in the fact that Vritra is nothing more than the accumulation of vapor, condensed or figuratively shut up in a cloud. Indra, with his thunderbolt, or atmospheric influence, divides the aggregated mass, and vent is given to the rain which then descends upon the earth. The Supreme God of the Aryans was first Varuna, then Indra. Indra gives victory to his people, defends their causes, brings the rain, and strikes down Vritra, the drought. Indra is presented as a war-like god, but that is only one side. He is a giver of gifts; he gives the milk to the cows, he traces the course of the rivers, and holds up the sky.

In the *Hymn to Varuna*, also from the Rig-Veda, the singer is mourning that the god Varuna has withdrawn his friendship, and he pleads for a renewal of that precious relationship.

5. What hath become of those our ancient friendships,
when

without enmity we walked together?

I, Varuna, thou glorious lord have entered thy lofty home,
thine house with thousand portals.

6. If he, thy true ally, hath sinned against thee, still, Varuna,
he is the friend thou lovedst.

Let us not, Living One, as sinners, know thee: give shelter,
as a sage, to him who lauds thee.

One of the most beautiful hymns of the Rig-Veda is the Gayatri.
Theosophists know it particularly in this paraphrase:

Oh, thou golden sun of most excellent splendor, illumine
our hearts and fill our minds so that we, recognizing our
oneness with the divinity which is the heart of the
universe, may see the pathway before our feet, and tread it
to those distant goals of perfection, stimulated by thine
own radiant light.

This invocation is an appeal for the heart-wisdom — in order to
be able to help all our fellows. It is a plea for the right ideas of
philosophy with which to keep our thinking on the path of truth.

The great Hindu poet, Rabindranath Tagore, writes of the Hindu
Scriptures in this manner: They have the significance of a
revealed divine word, and are a poetic testament of a people's
collective reaction to the wonder and awe of existence. A people
of vigorous and unsophisticated imagination awakened at the
very dawn of civilization to a sense of the inexhaustible mystery
that is implicit in Life. It was a simple faith of theirs that
attributed divinity to every element and force of Nature, but it
was a brave and joyous one, in which fear of the gods was
balanced by trust in them, in which the sense of mystery only
gave enchantment to life, without weighing it down with
bafflement. But, as when children grow they gather an increasing
awareness of their selves, the later authors sought more and

more a center of reference in their own consciousness, a subjective counterpart to the objective majesty that had so long held them enthralled in awe, an answer in their own being to the cosmic challenge of the visible universe. If the Supreme Self is unknowable and incomprehensible, it is yet realizable through self-discipline and knowledge of the Self in man, for the two are ultimately one. Thus man is delivered from the fear of the Cosmic Forces and is made part of the Divine Will.

The Upanishads approach Reality by means of the intellectual nature, and philosophic imagination, whereas the Bhagavad-Gita stresses love and devotion. The latest of these scriptures, the Bhagavad-Gita, is the scripture that is most widely studied in the world today.

The interest of these ancient hymns lies not so much in their poetical value, though their close contact with nature gives them at times a glow and rapture that are the essence of poetry. It lies rather in the brave adventures, made so long ago and recorded here, of those who seek to discover the significance of our world and of man's life within it.

Belief in the gods is still preserved in the literature of India, while in other parts of the world the belief in one God has robbed humanity of this glorious association of Divine beings — taught in the Vedas. It is a grander conception of divinity, which upholds the idea that nature contains a potential God Spark. It is much more logical to believe that the great mountains, the broad rivers, the stately trees, and the delicate shrubs and flowers, are a part of the Cosmic plan; and it is a friendlier religion which sees in all the animals some part that they can play in the great scheme of life. As to the dawn and the sunset — who can doubt that divinities are present, when such beauty is before our eyes!

An inspiring thing about the ancient sacred literature is that it

presents a universe full of potentialities, a universe in which every living thing has a divine spark of its own, and plays an important part in the drama of life. This satisfies the imagination and intuition and it creates a happier picture of life and destiny for every entity.

A beautiful thought — that from the very beginning, human beings were given truth about the universe, and will continue to receive teachings in proportion to Cosmic Law.

PSYCHIC OR SPIRITUAL? — *Philip A. Malpas*

We have been often enough reminded to study technical Theosophy. The advice is more timely than many may think. The word Theosophy is not copyrighted and it is not illegal to make it mean whatever we wish it to mean. But the origin of it is clear enough and it should mean today what it meant originally, if for no other reason than that it obviously originated with the class of people who have been described as "Those who know."

The meaning is "God-Wisdom," "The Wisdom of the Gods," "Divine Wisdom." But already in the Western world we have the word God crystallized into meaning a personal god, and the "God-Wisdom," with many, automatically suggests the wisdom of a personal god, such as Jehovah, or Jesus, or any of the other denizens of the Hebrew Pantheon. That means a personification of the God-principle in all men and all things.

Again the word god has come to mean, correctly enough in its way, the manifold and multiple powers in nature, whose number is legion. This is quite a different field of meaning.

So let us say that Theosophy is the wisdom of the god-part which is in all men and all things in the universe and beyond. If others choose to define it otherwise, they may, but we hold that the originators of the word defined it as we say. They had one advantage over the average Theosophist of today in that if they were such as we believe them to have been, they were consciously exercising that god-power or consciousness, and not, as we are, looking at it from outside, as it were. We are speculatives and they were operatives.

We have been taught about the seven principles in man. One or

two of them may be called the psychic principles, and anyone who has had the merest training in genuine psychology is perfectly aware that psychism is so far from spirituality (or spiritualism in its original pure sense, not the popularly accepted sense of the word in modern Europe and America, which more properly answers to the word *spiritism* or some other term not suggesting spirit) that it is its antithesis. Either you can have psychism or spirituality, but taken together they "cancel each other out." A flood of book-mind argument will doubtless meet this statement, but the simplest apprentice of the true training of the life of a mystic will know how to value it.

So in the same way, technically, the Divine is far higher than the spiritual. One of the most beautiful things in all pseudo-mystic literature is the phrase — the English phrase, not the Greek — "the peace of god which passeth all understanding." In the Greek it means what we say, "the peace of the divine which is far above even the glorious peace of the spiritual part of everyman." We are forced to say pseudo-mystical because the English is so very different from the original Greek.

H. P. Blavatsky, who spent so much of her life trying to drum the elementary principles into nineteenth century noddles, was forever warning us that to reach the spiritual and divine as active things in our nature we had to pass through the morass of psychism. It is as fascinating to our lower unspiritual selves as the vegetation of a tropical swamp, and about as dangerous to the tyro — and we are all tyros.

After a fierce battle Theosophy began to rise above the miasma of the psychic marshes and the world today is quite well enough acquainted with the difference between the psychic and spiritual, so far as it desires to be. That is an immense step forward, even though that desire may be quite rarely evident.

We have been passing through a phase of softness and lack of self-discipline culminating in two great struggles which in their way have shown the necessity for that discipline. The Theosophical Society, if you like, *any* Theosophical Society, not any one in particular, mirrors the world conditions or vice versa, according to the way you look at it. Or at least the living core, if any, does this.

Therefore it is only natural to find in Theosophical circles a somewhat mushy or hazy idea of just what spirituality is. And of course the self-confident and self-assertive man who has not yet fully risen above the fascination of the lower, emotional, psychic realm is going to be the first to protest that he is right and that psychism in one or another of its subtle forms — and they are subtle beyond conception — is just as important as anything spiritual: that psychic practices are just as important as the effort to attain, spiritually. It is true no step may be omitted on the way up, but beyond saying that, we need not pay much attention to the psychic, any more than we need emphasize the demands of the body when talking about intellectual progress.

To save any roundabout rigmarole let us say at once that perfect self-control is necessary before we can profitably play in our psychic backyards. And it might be well for most of us to devote a few lifetimes to that alone before talking about psychic things as being of interest. And, let us remark as an aside, that when we have done that we shall, with few exceptions, hardly bother our heads about psychic things; we shall have more important things to do. A great philosopher may have dreams or even nightmares, but very few philosophers, if any, spend time over seriously considering those dreams.

"Ye cannot serve God and Mammon" is one rather pithy phrase expressing much the same idea as we are dealing with. It is

Jewish.

We have a great regard and admiration for the doughty editor of *Eirenicon* but here we must allow ourselves to take issue with him in what he says in No. 86, of the summer of 1948.

After a preliminary quotation he says

The Covina Society cannot present 100 per cent . . . Theosophy of H. P. B. and debar astrology, psychic problems, or any other branch of science. We intend to prove shortly that the theosophical message of the Masters and H. P. Blavatsky embraced astrology, psychic powers and other sciences, and integrated them into the spiritual whole. They were against science and psychism that was unilluminated by the Light of the Spirit, but they considered that the theosophical task is to bring illumination to those subjects, not to sheer off from them; to build bridges to the spiritual world from every phase of human life, not to run away from possible englamourment. The Theosophist is a man who aims to meet every enquirer on his own ground without being carried away by maya. We quite agree with our Covina friends that a Lodge which interests itself exclusively or excessively in any branch of knowledge, and fails to bring to it a comprehensive background of the spiritual philosophy that gives such special studies a balanced setting, is unworthy of being called Theosophical.

Are we correct in thinking that this is written a little from the point of view that the Theosophical movement, that is, the part that moves, has not advanced beyond H. P. B.'s day? In private teaching she gave at least an hour to the subject of dreams. Are we to assume from that that Theosophists today should busy themselves with dreams, that fascinating psychical subject? Is it profitable today to enter into long polemics as to what is

popularly known as spiritualism? Are we to say that the dangers of hypnotism are not better known now than then? In short, the world has had its chance to know what psychism is from a general standpoint and if it does not act up to what has been shown to it, so much the worse for the world. At this date spiritual issues are in the air, and though the whole atmosphere is murky and alive with the fascinating will-o-the-wisps of psychism, the sunlight is breaking through and the dawn will disperse with the wind of the spirit much that we have thought was permanent and important. The plea that we must busy ourselves with all sorts of pseudo-Theosophy so that we can answer any fool question correctly is not convincing. Our work is Theosophy, not psychic curiosity.

The sifting time comes as surely as the harvest, and the winnowing fan will in its due time thoroughly purge the spiritual floor. It is not psychic things that stand against that wind; spiritual things are made stronger thereby.

* * *

In the same number of *Eirenicon* doubt is thrown upon the statement that there is but one "formally organised" esoteric school. This is hardly a matter of opinion but one of fact, and it stands to reason that some know the fact of the case while others do not.

The statement that the work of the T. S. is linked in with similar work which is secretly going on in all parts of the world certainly speaks of secret work, but there are many secret activities which are not the formally organized work of the one esoteric school connected with the Great Lodge, or whatever its title should be, and yet the people carrying on those activities may or may not be members of that school. Who knows whether there may not be much unorganized secret work carried on by the students of the

organized esoteric school? Or on the other hand by those with whom they are in touch who do not even know of the school?

The Theosophical Forum

The Bhagavad-Gita: Its Scientific Aspect: II – Marion O. French

For practical application, the musical connotations that lie concealed in Sanskrit sources are of the highest importance to psychology and to the sciences. As stated in *The Secret Doctrine*, I, p. 555: "Sound is a tremendous occult power," which western physics is commencing to discover through supersonic research. With respect to physiology, the body is described by H. P. Blavatsky in *Studies in Occultism* (Psychic and Noetic Action) as:

an Æolian Harp, chorded with two sets of strings, one made of pure silver, the other catgut. When the breath from the divine Fiat brushes softly over the former, man becomes like unto *his* God — but the other set feels it not. It needs the breeze of a strong terrestrial wind, impregnated with animal effluvia, to set its animal chords vibrating. It is the function of the physical, lower mind to act upon the physical organs and their cells; but, it is the higher mind *alone* which can influence the atoms interacting in those cells, which interaction is alone capable of exciting the brain, *via the spinal "center" cord*, to a mental representation of spiritual ideas far beyond any objects on this material plane.

As to the silver string, its metallic structure is not subject to alterations due to temperature, humidity and other terrestrial factors that affect organic matter most rapidly. Furthermore, experiment has indicated that the molecular vibratory rates of platinum, gold and silver are in the proportions of 3, 6 and 9. Also, the oscillatory equilibrium may be altered by vibratory impulses created by striking the same chord in three octaves, representing the third, sixth and ninth of the scale. The third, as dominant, may induce a rearrangement of the oscillatory vibrations. The harmonic sixth reduces the oscillatory range of vibrations, bringing the neutral, or *laya* centers (neutrons in physics) closer together in densification. The enharmonic ninth extends the vibratory range to effect a greater tenuity, or etherealization, in the mass. Hence, Blavatsky presents it as the psychologically spiritualizing "string" of the human harp that induces intuitive consciousness by the vibratory action of the pituitary body on the pineal gland.

The striking similarity that the basilar membrane in the ear bears to the keyboard of a piano has been commented upon by Sir James Jeans in his *Science and Music*. An amplification to include the entire physique has been discussed by J. W. Keely who stated:

The normal brain is like a harp of many strings strung to perfect harmony. The transmitting conditions being perfect, are ready, at any impulse, to induce pure sympathetic assimilation. The different strings represent the different ventricles and convolutions. The differentiations of any one from its true setting is fatal, to a certain degree, to the harmony of the whole combination.

All abnormal discordant aggregations in these resonating convolutions produce differentiation to concordant transmission; and, according as these differentiations exist in volume, so the transmissions are discordantly transferred, producing antagonism to pure physical action.

The question arises, what are these aggregations and what do they represent, as being linked with physical impulses? They are simply vibrometric resonators, thoroughly subservient to sympathetic acoustic impulses given to them by their atomic sympathetic surrounding media, all the sympathetic impulses that so entirely govern the physical in their many and perfect impulses (we are now discussing purity of conditions) are not emanations properly inherent in their own composition. They are only media — the acoustic media — for transferring from their vibratory surroundings the conditions necessary to the pure connective link for vitalizing and bringing into action the varied impulses of the physical.

In the technique of music, Daniel de Lange, draws additional parallelisms with the consciousness. He states in *Thoughts on Music* that we need three keynotes to form a scale and presents them thus:

Attention is drawn to the fact that everything in music has a threefold basis and De Lange summarizes this foundation as follows:

- a. Three different elements: Melody-Rhythm-Harmony.
- b. Three notes, three times repeated for Melody.
- c. Three beats, three times repeated for Rhythm.
- d. A chord of three notes (in thirds) three times repeated for Harmony.

We may, then, relate Atman, or spirit, to Harmony, Buddhi, or soul, to Rhythm as the temporal relation between Duration and Time, and Manas, or mind, to Melody as a melodic living of life. With reference to the chords, De Lange's formula is:

- a. Increasing of vital force I — V
- b. Diminishing of vital force I — IV
- c. Conclusion V — I

It should be noted that the primary classification of chords is:

Western music does not reach above the fifteenth harmonic, whereas Hindu music

embraces the thirtieth. In the composition of the diatonic scale, the initiated Pythagoras accepted only the interval of the fifth.

Further, enlightening interrelations between man and the musical scale are set forth in *The Musical Scale and Man: an Analogy*, by George de Cairos Rego, *Lucifer*, 1893. The most pertinent points from this article were quoted in THE THEOSOPHICAL FORUM for June, 1948.

Mathematically, we might say that the *Bhagavad-Gita* is a dissertation on how to construct a dodecahedron (first shape in Nature of Pythagoras) from the icosahedral form of the Astral Light and its reverse process, in order to perceive the divine pattern of the Cosmic Architect. In further explanation of the fact that "the Deity geometrizes," as stated by Judge, attention is invited to the brilliant exposition of the geometric processes involved by F. J. Dick. In his *The Pythagorean Solids*, he states:

In the first place, they may be all considered as generated by Twelve Points on the surface of the Sphere, at equal adjacent distances or by six diameters of the sphere mutually inclined at angles whose tangent is 2, the number of the octave in music. Joining each of the twelve with every other point, we have 66 lines, of which 36 are internal. Six of the latter being diameters, there remain 30, intersecting at 20 points, which give the 30 edges of the INTERNAL DODECAHEDRON. The 30 outer, or external lines of the 66, form the edges of the ICOSAHEDRON.

Joining one set of alternate corners of the Dodecahedron by 12 lines a CUBE appears. So far, there are 33 points defined, including the center of the sphere. Joining opposite corners on each Cube-face by 12 lines, *two* interlaced TETRAHEDRONS appear. These define, by their intersection, 6 new points and 12 new lines forming the OCTAHEDRON, beautifully poised in the heart of the Sphere.

Thus only 39 points, including the central point, are needed to define the Pythagorean solids, only one solid form being repeated, the Tetrahedron, which in fact is seen to repeat itself ten times. For between the interlaced Tetrahedron corners and the eight faces of the included Octahedron, eight smaller Tetrahedrons are seen.

The interlaced Tetrahedrons suggest the origin of the plane symbol — the

interlaced triangles; but the full beauty of the symbol does not appear until we notice that the axis of symmetry of the Tetrahedrons coincides with the diagonal of the Cube, and that the orthographic projection of all these on a plane perpendicular to the diagonal gives a perfect hexagon with the interlaced triangles in the center. The interlaced Tetrahedrons — one a reflection of the other — in fact, define the eight corners of the Cube. The Tetrahedron is "3" and the Cube is "4" (or 6). So we see one way in which the "three fall into the four," and why it is a septenary, and a decad, as well as a three, or a four, according to the various aspects and interrelations considered of the electric, rotary, magnetic, or vibratory forces symbolized by the various lines.

The number Five penetrates the whole system of the Five solids in a remarkable way. Thus there are 24 pentagons visible, and by joining other corners of the Dodecahedron, Five Cubes are seen, which of course produce Five Octahedrons, and twice that number of principal interlaced Tetrahedrons. Five has been said to be the Number of Life.

Confining ourselves to one rectangular system, we find Four axes of symmetry for the Tetrahedrons and Three for Cube and Octahedron. Thus there are really 73 principal lines in the complete system defined by the 39 points. A study of the three principal orthographic projections shows that the circle should be divided into 3, 4, 5, 6, parts, and the products of these, or 360 degrees. Certain angles are found in abundance, such as 36, 60, 72, 90, 108, 144; and their combinations and products by 10 and 12, and their multiples, give figures bearing a strong resemblance to the various cyclic periods of eastern chronology. Periodic orbits are vibrations on a large scale.

Twice the perimeter of an Icosahedron-face divided by the perimeter of a Dodecahedron-face is 3.1416, the value of *pi* used in all ordinary scientific and constructional work.

Cyclically, the 18 of the *Bhagavad-Gita* is the Chaldean period of 18 years in the Saros. The name is from Sar or circle and Saros was the Babylonian god whose circular horizon was the visible symbol of the invisible. The horizon, of course, is the plane, or diaphragm, that divides the upper hemisphere of 180 degrees from the lower. (See page

114, Vol. I, *The Secret Doctrine*.) Certain additional data may serve to supplement the foregoing outline. Sat, Chit, and Ananda have their lower hemispheric reflects in Atman, Buddhi and Manas. The Christians have the Holy Trinity, as have all other religions. It is epitomized in Aum, or A (Agni or fire), V (Varuna or water), and M (Maruts or air). In western theology it is AVM or Ave Maria. There are three generators of the key in music and three harmonic series. Also, there are three principal Lokas and five subsidiary ones; as well as three Upadhis. Six is the first perfect number that is equal to the sum of its aliquot parts. In the sixth race man will have six senses and these for the thrice-born who unites his Manas and Buddhi in his Atman make eighteen. Krishna in speaking to Arjuna, states that: "My Prakrit (Mulaprakriti) is divided into eight parts — earth, water, fire, wind, ether, mind, intuition, and egotism." Further, Krishna specifies: "Understand my Paraprakrit (Daiviprakriti), as something distinct from this. This Daiviprakriti is the one life by which the whole Universe is supported." In brief, it is the Holy Ghost of Christianity, or the active intelligence of self-consciousness. From it emanate all force or energetic manifestations. As such, it is differentiated from its crystallized twin, Mulaprakriti, as substance or matter.

In elaboration, the 3 parts (mind, intuition and egotism) correspond to the 3 Gunas, Sattwa (light or truth), Rajas (desire or willed activity), Tamas (darkness or inertia). Kapila, author of the Sankhya philosophy, held that Mulaprakriti, or the essence of substance, had no existence in itself and was a combination of the 3 Gunas. Likewise, as a trinity, the three produce the 5 senses as instruments. They, in turn, produce the 5 subtile elements (sound, tangibleness, odor, visibleness and taste) together with the 5 Tattwas or ethers that are their transmissive agents. Lastly, the subtile elements produce the five gross elements, and their gaseous prototypes (Aether, hydrogen, oxygen, nitrogen and carbon). This gives $3 + 5 + 5 + 5$ to equal 18. In the "Prakrit" of Krishna the 5 elements are $\frac{5}{8}$ or .625, and this is the Golden Section or ratio. The total 8 of the "Prakrit" plus Daiviprakriti equals 9 and the ratio is a tone in music, and that of diameter to side of square of equal area in any circle as given in the Rhind Papyrus and as noted by Plato in *Timaeus*. These form the Octahedron of the solar forces as they lie within the dodecahedron of the Zodiac and, perchance, within the icosahedron of the Milky Way. To explicate, Krishna says:

Know that Prakriti or nature (substance) and Purusha, the spirit, are without

beginning. And know that the passions and the three qualities are sprung from Nature. Nature or prakriti is said to be that which operates in producing cause and effect in actions.

Thus, whether it be in crystallography, botany and biology (Mendelian law), chemistry (Mendeleef's tabulation of elements), atomic physics or other science, the octave of the octahedron of solar forces and of harmony is the determining factor.

Placement of the *Bhagavad-Gita* chronologically gives it the dynamic character of its applicability to our own era. A paraphrase of the *Bhagavad-Gita* would read, "The Holy Song of God Himself, who, at the beginning of Kali-Yuga or the dark age, descended upon earth to aid and instruct Man." Kali-Yuga commenced with the death of Krishna in 3102 b.c. and it has 432,000 years to run. With respect to time, Krishna asserts: "There dwelleth in the heart of every creature, O Arjuna, the Master Iswara who by his magic power causeth all things and creatures to revolve mounted upon the universal wheel of time. Take sanctuary with him alone, O son of Bharata [India], with all thy soul; by his grace thou shalt obtain supreme happiness, the eternal place." We might glean from this that the time-space continuum spoken of so glibly by modern physicists is, still, terra incognita to the western mentality.

Specifically, the descents of Krishna are cyclical and the date of 3,102 b.c. does not mark the authorship of the *Bhagavad-Gita*. To Arjuna, Krishna states:

I am the Samvatsara among the years (which are five in number), and the spring among the seasons, and the Margasirsha among the months, and the Abhijit among the asterisms (which are twenty-eight in number).

According to the Commentary on the above:

This clearly points out that at one time in the first year called Samvatsara, of the quinquennial age, the Madhu, that is, the first month of spring was Margasirsha, and Abhijit was the first of the asterisms. It then coincided with the vernal equinoxial point, and hence from it the asterisms were counted. To find the date of this observation: There are three asterisms from the beginning of Mula to the beginning of Abhijit, and hence the date in question is at least $16301 - \frac{3}{7} \times 90 \times 72 = 19078$ or about 20000 B.C. The Samvatsara at this time began in

Bhadrapada, the winter solstitial month.

The three Gunas correlate force and matter in the six dimensions of space-time (length, breadth, thickness and past, present and future) . In conclusion, let us remember that the icosagon is the eighteenth rectilinear figure, and $18^2 = 324$, which is the significant number of the entrance to Solomon's Temple. Through knowledge that evolves into wisdom and eventuates as worship, we may attain to "The Vision of the Universal Form." Then, we may say with Arjuna: "My delusion is destroyed; and by thy favor, Divine One, I have recovered my senses, I remain free from doubt, and will do thy bidding."

In order to discover the successive layers of scientific knowledge that lie concentrically concealed in the matrix, which is the *Bhagavad-Gita*, requires great erudition. It is as H. P. Blavatsky states written in Devanagari characters, with thirty-five consonants and sixteen vowels utilized to express the Sanskrit words. Each letter of that alphabet has a numerical equivalent as in the gematria of Hebrew, as well as other significations. Personal and place names may designate cosmological forces, astronomical functions, stellar bodies, or supramundane entities. Permutations, transpositions and the use of unknown Senzar terms may, also, serve to conceal the facts of physics that western science has commenced to investigate in such dangerous realms as atomic fission and supersonics. Finally, as asserted of the Vedas by Subba Row, there is "a distinct dual meaning — one expressed by the literal sense of the word, the other indicated by the meter and the *svara-intonation*."

The Theosophical Forum

LAW AND ACTION — *J. H. Graham*

SATYAN NASTI PARO DHARMAH — There is no religion higher than Truth. That is the motto chosen for the title page of *The Secret Doctrine* of H. P. Blavatsky.

Dharma is one of those Sanskrit words rich in meaning and shades of meaning. One comprehensive translation is "Law." The word is difficult to define exactly but we may say that what is usually described as Dharma is really but the manifestation of Dharma. The Law itself has not any attributes that we can specify. I believe it was Pythagoras who said that the Universe is ruled by Law and Order and works with mathematical exactitude. We often have a habit of saying Karma when we mean Dharma, and in that sense Karma is what happens when, so to speak, we run our heads against the hard wall of the Law.

Dharma says if you touch fire you burn. Not as a punishment but as an automatic reaction. I may burn my hand by being careless with a hot iron; or I may burn it rescuing someone from danger. The immediate result and treatment are the same, but the Karma is different. So the widely held idea that suffering is the result of wrongdoing rather needs a broader approach.

Many a man has gone into a burning building knowing he would be hurt; knowing he was acting contrary to the Law, yet going because the Law once more — being disguised as compassion — says you must rescue your fellow creatures. But the Law itself neither acts nor reacts. It is we who do the action. If we are called upon to rescue someone, karma has put us there at that time. If one is burnt by carelessness, it is for the gaining of discernment.

The tendency of all manifestation is to restore balance. In the first

place, however, the balance must have been disturbed. The Universe is said to exist for the soul's experience and in order to gain that experience we are bound to deviate from the rigid course of zero. We can only gain experience by knowing the thing through its shadow — the Buddha is reported to have said that sorrow is shadow to life. This being so, and it is in effect the first noble truth of the Buddhists, the real problem is to gain discernment and the purpose of evolution with the minimum of deviation from the norm. In other words the minimum of karmic punishment.

It may well be that this is the origin of the queer idea that we are "born in sin." We cannot learn without reacting against Dharma. Is that sinning? And is it wicked to gain soul experience? There is, however, much needless "sinning."

As for the word Dharma, it is "that which holds" — the container of the Universe. It holds the Universe together, and without it all would be chaos. That being so and remembering that love is the motive power of the Universe, how can one think of *bad* Karma? For it is all love — Karma, Dharma, and all the other aspects of universal being.

There is no such thing as my Dharma or your Dharma, but there is one's own relation to it.

Another equivalent of the word Dharma is "Duty." A famous verse in the *Bhagavad-Gita* runs:

Better one's own dharma imperfect
Than the dharma of another well done.
Better death in one's own dharma;
The dharma of another brings danger.

CYCLES IN NATURE — *Letha Olson Reineman*

A glimpse into the cyclic movement of Nature brings the greatest encouragement. Without such understanding one is easily led to feel that we follow a path which at the best would be endless repetition, getting us nowhere. But when we learn that cycles are not mere repetition, but a majestic pathway, forever going forward and forever expanding, a new hope and courage are given to life.

As the law of cycles goes to the very heart of Nature, we find countless examples in the natural phenomena around us. Of especial interest is the method of the growth of plants and of all kinds of organisms. One of the best examples is the plan of growth in sea shells. Here we have a beautiful example of the working out of a law of cycles, which is not much written about, but which is full of inspiration for us as evolving entities. There is tremendous significance in the fact that this growth, this evolving, takes place with nearly mathematical precision, and that the ratio of growth is always almost exactly the same, and follows the course of a rapidly expanding spiral. It is not a matter of addition, but is a ratio of expansion known to mathematicians as the Pythagorean Golden Section, and can be easily demonstrated by geometry. The chambered nautilus shows the proportions perfectly. Innumerable other things in nature develop according to the same plan. The spider uses it in building her web, the palm tree in the growth of its trunk, and the development of the nodes on the stalks of growing plants are other examples.

The ancients knew this law well, which is indicated in much of their art work and architecture. The proportions of the Golden Section set the keynote for the design of the finest Greek pottery,

the volute capitals of the Ionic columns, and especially for the design and ornamentation of temples and buildings held sacred. The Egyptians used it in their bas-reliefs and it is also found in a special angle of the great pyramid. It is exemplified in the proportions of the five pointed star. It was well known to be one of the proportions of all rectangles excepting the square. Early writers have referred to it also as the "Divine Proportion," "Sectio Divina" and "Proportio Divina." (Kepler, Fra Luca Pacioli and others.)

The Egyptians worked out a primitive scheme of surveying about 4000 b.c. which required only a length of rope and two men to operate. Because of the periodical overflowing of the Nile, all boundaries of land were washed away, and it was necessary to reestablish property lines after each seasonal flood. The rope was knotted at intervals to form twelve units. The right angle was determined by laying out the rope in a triangular form on the ground, four units forming one side, three the other, and five the hypotenuse. This was the origin of the historic "cording of the temple" and is a method still used today. From the knowledge of ratio relationship which was gained from the right angle in surveying and laying out rectangular floor plans it was only natural that they should carry it farther, in working out architectural design and ornamentation.

In a method worked out by Girard of expressing the ratio of segments of a line cut according to the Golden Section he takes the sequence, 0, 1, 1, 2, 3, 5, 8, 13, 21, etc., every turn of which after the second equals the sum of the two turns that precede it; thus 5 is to 8, as 8 is to 13, 13 is to 21, as 21 is to 34, and so on, or $1/1, 1/2, 2/3, 3/5, 5/8, 8/13$ — etc. nearly expresses the segments of a line cut in Golden Section. However the exact proportions are to be found in the numbers 0.3181966 over 0.618034, then this denominator 0.618034 becomes the numerator, and so on in the series. A simple diagram of a parallelogram shows this ratio, and the rapidly expanding spiral which follows its course, and which many sea shells follow as a plan of growth. Neike defined the term Golden Section as applied to different units such as areas and volume and not alone line segments, as a ratio where the smaller part is to the larger, as the larger is to the whole.

In his book *Dynamic Symmetry — The Greek Vase*, Jay Hambidge points out that there are two kinds of symmetry expressed both in nature and in art, one of which he calls dynamic symmetry, and the other static symmetry. Dynamic symmetry is expressed in the rapidly expanding spiral, as described above, and is developed from the application of the Pythagorean Golden Section. It has qualities of activity and in art it is considered the most beautiful,

the most subtil. In modern times it has been entirely lost sight of by artists, but the Greeks and the Egyptians had it worked out to perfection. Static symmetry is in a state of passivity, and all artists follow this naturally, because there could be no proportion without it, unless the dynamic symmetry were used. Nature gives us examples of it in certain crystal forms, diatoms, radiolaria, etc. All this implies two kinds of cycles. It would seem that all cyclic movement which is continuous repetition, such as day and night, the seasons following each other with such regularity, the tides, and many others might be placed in such a classification. But we must not lose sight of the fact that all cycles, no matter how often repeated are never exactly the same, and that they are contained within larger cycles, that are all following a pathway of growth and expansion. Scientists today are using such terms as "our expanding universe."

What a thrill and inspiration came with the knowledge of this law, and what it can mean as applied to our lives. It opened up avenues of thought and speculation as to how it works out for humanity. When did humanity begin to take the great step forward which would be indicated by the outward swing of the expanding spiral? It must have been with the coming of the Manasaputras, when mind and light began to work in our unfolding. We know that as individuals we spend aeons of time in countless numbers of incarnations, making only little progress, even sometimes going backwards, and this would be very discouraging if we did not know that when we begin to apply will and effort we can begin to take this mighty swing of the spiral, which is Nature's plan for us. We need not remain in a passive or static condition of endless cyclic repetition.

We might wonder why the plan works out so perfectly in the sea shell, and why our own growth does not go ahead in the same way. With a little thought, however, we can realize that the shell,

the plant and all the less evolved things of nature do not put any resistance in the way of Nature's plan working out perfectly, while we with our wills and desires, our minds and our power of choice are constantly blocking the Divine plan for our evolving. When we begin to work with Nature, and not against her, to take down all barriers to our growth and development, we make possible our own rapid evolution. When we realize that it is Divinity back of this great law, that the Divine Spark is in every living entity, we begin to glimpse the glorious pathway that lies ahead of us, to have vision and strength to go ahead, and to allow nothing to interfere with our progress along this golden path.

The Theosophical Forum

"DEVELOPMENT OF MAN'S PRINCIPLES DURING THE ROUNDS"

[At a meeting of the Headquarters Lodge at Point Loma, April 14, 1940, G. de P. gave an exposition of the particular aspect of involution and evolution dealing with the synchronous progress of the spiritual and material elements in perfecting the sevenfold MAN. This address, printed in *Studies in Occult Philosophy*, has provoked much thought in the minds of members and earnest students of the philosophy. Observations submitted independently from Melbourne and London are printed here as being of interest to FORUM readers. A brief explanation of Sanskrit words used herein appears at the end of the article. — Eds.]

Man, like the planets and the stars, is also a sevenfold entity composed of seven principles. These principles, however, are not separate parts added to him to make him sevenfold, but one complete unit, each part emanating from the one higher to it and all linked together in an indissoluble tie which is temporarily dispersed at death but reassembled with each new embodiment.

From the Divine spark Atman is born its sheath Buddhi which in its turn produces its sheath Manas, and so on down to the dense physical body which is the material expression of the atman or god-spark. Thus man ranges from the divine to the physical, a potential god encased in a material vehicle, so that the full gamut of the evolution of spirit into matter and back again into spirit may be traversed by the pilgrim monads: unself-conscious monads thrown off from some distant parent star in order that these their children shall one day return from their eternal wanderings to self-conscious knowledge of those who gave them birth.

This pilgrimage of the development of the principles into self-conscious knowledge of their own nature takes the monad of each individual far afield, from solar system to solar system and from planet to planet and back again on its journeyings in the Outer Rounds, evolving always on its travels.

In particular, however, the principles evolve during the Inner Rounds, that is, the planetary and global rounds of this particular Earth Chain or the seven planetary Rounds and the Seven Root-races manifested forth on each of the seven globes.

It is an important point to remember that each one of these seven principles is itself sevenfold. There is a sthula-sarira of atman and so on even as there is an atman of sthula-sarira. One may say that each principle always contains all the others to a certain degree while still maintaining its own swabhavic qualities in particular.

From *Studies in Occult Philosophy*, page 95

Now when a planetary chain, this Earth chain for instance, commenced

building its seven lower globes, the life-waves of all the kingdoms, including the human, first appeared on Globe A in what is termed the First Round. At this time, owing to the work of the three elemental kingdoms, the seven globes are just commencing formation, and when the human life-wave first appears on Globe A it is manifesting the sthula-sarira of atman. Because of the pull of matter during this Arc of Descent, atman, buddhi, manas, etc., of atman manifest in rapid succession, racing on until the sthula-sarira is reached. The life-wave then leaves the body of atman as it were on Globe A and the surplus of life then overflows downwards to Globe B. Here the descent of the principles goes down as far as the sthula-sarira of buddhi. This descent of the seven principles is of course the manifestation of all the seven root-races on each of the seven globes. The same process is repeated on each globe in serial order from A to G, leaving behind the most evolved of the monads comprising the human life-wave on each globe. This is the First Round, the formative one, and may be termed the atman Round. However, atman has not been fully developed during this round, only the lowest part of atman having become manifest.

During the Second Round, the buddhi is emanated forth, but not in its entirety. It is the linga-sarira or astral mould of buddhi which is brought out in this round on all the seven globes. So that in evolving forth the sevenfold seven principles, it is the sthula-sarira of atman which is brought forth in the First Round, the linga-sarira of buddhi during the Second Round, the prana of manas during the Third Round, the kama of kama in the Fourth Round, the manas of prana in the Fifth, the buddhi of linga-sarira during the Sixth Round, and the atman of sthula-sarira in the Seventh and final Round.

During the seven rounds the human life-wave on each of the seven globes manifests forth a little more completely each of the principles with each successive round until at the end of the planetary or Inner Round, the seven principles are evolved forth in all their sevenfold completeness. The Monads comprising the human life-wave shall then have become fully developed seven-principled beings, that is to say they shall have become Dhyanchohans or Manasa-putras, gods possessing bodies of light, radiant like the

sun. The linga-sarira will then be enabled to catch every vibration like a sounding-board, while the prana will be under the control of the mind, so that such a being may work all manner of magic, smashing rocks or trees merely by the electrical power of his prana controlled by his will.

Man is at present in the Fourth Round and during this Fifth Root-Race is but an imperfectly developed being, now engaged upon manifesting forth the kama of kama on all the globes in this Round. With the passage of the root-races however, is further brought forth one of these sevenfold seven principles on a minor scale to the rounds. So that during the Fifth Root-Race the manas of prana is being developed on this Globe D at present. It is during the Fifth Sub-Race of the Fifth Root-Race that Man is consciously learning to control the forces and energies of nature, such as the harnessing of electricity and atomic energy.

Also may be seen the reason why the Atlantean or preceding Root-Race was the turning point in the history of the development of humanity not only upon this Globe D but of the entire seven globes. It was the mid-point of the rounds and of the root-races on this middle or lowest of the globes — definitely a very critical period. The desire principle was very much in evidence and on this most material globe matter had its strongest pull on mankind. The Arc of Descent had reached its densest point and materially speaking, physical matter was at its most compact, the very atoms being hungry for each other at this period of time.

Since then we have passed on, just commencing upwards towards the Arc of Ascent so that gradually matter will become less compacted and more ethereal. Man's physical vehicle will undergo many wondrous changes during the future Root-Races Six and Seven, one of them being the development of two backbones; and at last his Fourth Round body will become more and more ethereal and shine with radiance.

During the Third Root-Race, there occurred on this globe the Descent of the Manasaputras, who, it has been hinted, came from the planetary chain Venus. This may possibly be connected with the fact that formerly, during

the Outer Round, the collective hosts of monads comprising the Earth's planetary chain were evolving forth upon the Venus chain. These Manasaputras came to give a spark of mind, to awaken manas in the then undeveloped human vehicles, which at this period had only manifested — so far as the root-races were concerned — the prana of manas. Thus the manas of manas which is now much in evidence at the present time, was not then fully evolved. There was not then the proper vehicle for these Manasaputras, and this is a possible reason why some of these Manasaputras at first refused to embody themselves in these inadequate vehicles. Thus the Manasaputras awakened the manasic principle or the minds of the humanity of that time during the Third or Manasic Root-Race. For as the principles develop during the rounds on each of the different globes so also they follow the same general pattern in each of the seven root-races on the globes in each round.

It may be seen that there are two main lines of evolution, the spiritual and the material; the one the consciousness side, the other the vehicular side; and these commence at opposite poles, converge and diverge again, the monads involuting into matter, so that they may evolve forth the appropriate vehicles in which they may manifest as self-conscious gods. During the seven rounds these monads comprising the human life-wave build for themselves fit vehicles in which to manifest as the Dhyan-Chohans they shall eventually become.

So that the Fourth Round and the Fourth Race finds the two converged together much as we are at present, having only just turned the Arc of Ascent. This is the reason why on this Globe D in this particular round, matter is the dense, gross thing we recognize it as being today, because the kamic or fourth principle, being the middle one, is the densest and furthest from the spiritual. In future rounds, and on other globes, and even in future root-races on this globe, physical matter will not be the gross dense kind we know today, but of a far more etherealized and refined quality, just as in the earlier rounds and also in earlier races on this globe such was the case, as the spiritual side had not then become so intensely imbedded in the matter

side or the two had not so closely converged together.

The seven principles, however, are not to be thought of as mere abstractions in Man but as a constant chain of monads ranging from the highest to the lowest. They are actual beings, consciousness-centers, each living on its own appropriate level, but all strung together with a thread-self and in their totality they make up Man in all his complex constitution. Thus on the manasic level Man is one being, on the buddhic another, and at the divine level still another. It has been stated by G. de Purucker that "all of our principles are in transit all the time and pass from Sun to Moon and from Moon to Sun and from planet to planet, but under different conditions for each set of principles." This of course has reference to the Outer Rounds, but is worth mentioning as being an example of the vast scale on which Man lives and moves and has his being.

When the Manasaputras came down, and, as it were, manasaputrized humanity or helped to evolve forth the manasic principle, they did not actually descend, but extended a ray from themselves down to the evolving human vehicles. But humanity by the time it reaches its Seventh Round on the globes of this chain shall then have evolved forth the manasic principle fully, and thus from each Manasaputra springs forth its child which is a ray from itself. When however, we, their children, shall have evolved to their present level they shall have evolved still further again in the chain of endless becoming. Nevertheless, they are ourselves at one level, even as we are ourselves at our present level. We are rays from them even as they are rays from beings still more highly advanced.

These seven principles are in reality ten principles, but as with the globes of a planetary chain, only the lower seven are manifest. These higher three principles are Man at an even grander scale of evolution than his divine atman, and this fact brings home the injunction: "Man Know Thyself."

These upper principles have been termed "the link by which Man hangs from the heart of the Universe," and they bear the same relation to him that the upper unmanifest globes bear to a planetary chain, even as the lower

seven globes correspond to his lower seven principles. They are exoterically generalized under the one term of Atman — the Essential Self. Man, at present, is involved in his four lower principles and will in future rounds evolve forth his three higher ones in their entirety.

It is during the Fifth Round, which evolves forth the manas of prana or the vehicle of manas, that will occur the period of the great choice before humanity — whether they shall continue to evolve forth their higher principles and become Dhyān-Chohans or fall back to wait for the next manvantara.

Thus may be pictured the whole purpose of evolution: that it ever brings forth the core of each entity, continually drawing out what was latent, and evolving and manifesting more completely the innate powers of all entities. Self-unfoldment and Self-knowledge go hand in hand in the unraveling of the greatest of all mysteries — Man himself. — Ronnie Beach, *Melbourne, Australia*

* * * * *

I am still pondering over G. de P.'s article "Development of Man's Principles in the Rounds." It is a lovely picture, fully manifested Man, which comes out of his article.

Forgetting for a moment the origin of the Monads and the Tattvas, and "astral moulds," one comes across a wealth of references for study. As G. de P. says, the diagrams are intended to show the importance of the 4th — then forget the diagram.

Now is this what happens? — In the beginning the Human Monad awakes in Adi-Tattva and clothes itself therein (sthula-sarira). It proceeds to do so through all the tattvas. Having accomplished this the impulse (supplied in the first round by the experience of meeting Anupapadaka) necessitates a second journey and it clothes itself in its second *outer* garment (the vehicle of the next *inmost*), linga-sarira. Then the third round.

Now in the fourth round one can feel the position better than describe it. It is strained to the uttermost by the inertia of its position (like trying to separate two liquids almost identical in every respect). There is the *immense* "stilling" power of Vayu-tattva opposed to the karmic or spiritual memory of the Monad whose very *principle* is of the *same* nature as Vayu-tattva! (I well remember something very similar in dreams when, by an *enormous*, it seemed to me, exertion of will, I succeeded in maintaining my own individuality.) See how profound are the depths of karman in operation!

At this moment pause and see the push-pull of spirit-matter in present-day life. See the terrific pull of the Vayu-tattva towards (the lower principles in) the higher tattvas already involuted by the Monad within its first three principles. See the spiritual power of the Monad "holding" its kama-principle and penetrating the cosmic elements! Observe also the sublime act of compassion of the Manasaputras!

For a moment longer, look at the wonder of full materialization. Vayu-tattva is called spirit (not in the sense of degree-of-spirituality, but the animating source of physical life), because the fully evolving kama of Vayu can work relatively quickly down through the imperfectly held lower three principles in fully defined physical form. Likewise (by means of the human *animal* monad?) the animal kingdom leaps into physical form — as the wind stirs the waves, carries the seed, and fills the nostrils.

With each succeeding round, down into the fourth, physical forms appear a little sooner and are more clearly defined.

Now see this wonderful panorama, and pass on. . . .

There is the spiritual impulse of the monad, acting through the strengthening lower principles in the higher tattvas, brightening the face of kama as it yearns more strongly to answer the "passive call" through the higher principles held in the lower tattvas. The manas of prana is evolved (manas: thinker and builder, prana: the instrument of manipulation). The Buddhi of linga-sarira: universal, sustaining, malleable. Atman of prithivi-

tattva is evolved: the direct image or thatness of the Human Monad fully made Man.

Thus is the Human Monad as Manas a Cosmic being operating on four cosmic planes: his task to guard the Rupa planes during the coming manvantara for all the kingdoms up to, and including, the Human Kingdom — just as it was his task during the passing manvantara to rise through kama-vayu and to purify the spirit-base of the physical world; and just as the wise aspirant purifies his blood and circulation (not only as an end in itself, but incidentally to his self-purifying aspirations to chelaship or illumination).

Thus is the Human Monad, as a fully manifested Divine-Human Being, a seven-principled Being with each principle manifesting in its rupa aspect, and with each principle having the other 6 principles recessively as harmonics blending with those of each of the other six dominant principles. And again you see his duality on four planes, suggestively pointing to a vaster scheme of evolution. There are even the great attributes reflected: Courage, Individuality, Understanding, Wisdom, Love. Out of these come the ethical teachings. — John Peck, *London, England*

* * * * *

A brief definition of the various Sanskrit terms used in the above two studies: *Atman*, *buddhi*, *manas*, *prana*, *kama*, *linga-sarira*, *sthula-sarira*: the principles as manifesting in man, respectively: Universal Spirit, the highest principle; enlightened discriminating faculty; mind; vitality; desire; astral body; and physical body. They exist correspondingly in every living entity. *Dhyan-Chohans*: lit. "Lords of Meditation" — beings in the next stage of evolution above the human. *Manasaputras*: lit. "sons of mind" — evolved beings from a former cycle of evolution who sponsored the awakening of mind in the Third Race. *Manvantara*: an evolutionary cycle. *Tattwas*: the seven (or ten) fundamental Element-Principles or Element-Substances in Universal Nature, also represented in the human constitution. *Adi-tattwa*: the highest, original, universal principle, corresponding to *atman*.

Anupapadaka-tattwa: the second, or spiritual principle, corresponding to *buddhi*. *Vayu-tattwa*: the fifth principle, the principle of air, corresponding to *kama-prana*. *Prithivi-tattwa*: the 7th, or earth-principle, corresponding to *sthula-sarira*. *Rupa* planes: the manifested (material) planes (*rupa*, body, form).

The Theosophical Forum

IN SEARCH OF ZEN — *Christmas Humphreys*

Asked, "What is Zen?", there is only one truthful answer, "That's it!" For Zen is beyond description. It is the life within form and only a form can be described. It refuses to commit itself to any specified pattern of thinking, to conform to the rules of man's imagining, to fill any mold. "It is a world-power, for in so far as men live at all, they live by Zen." (Blyth, *Zen in English Literature*, p. vii). If this be vague it is not the fault of Zen but the fault of the mind's persistent refusal to focus on truth, preferring the forms of truth. Yet Zen, "though far from indefinite, is by itself indefinable because it is the active principle of life itself" (*Ibid.*, p. 2). Nor is its teaching vague. Coal is black, says Zen. Coal is not black, says Zen. This is clear enough, and both are equally true — or untrue. For Zen slips from the grasp out of either trap, affirmation or denial, both of which limit the boundless, cage the illimitable. Below sense is nonsense, where understanding has not reached the plane of formulated truth. Beyond sense lies non-sense, when the limits of all formulation have been transcended, and only a smile or the lifting of a flower can reveal a shared experience.

Zen is a way of looking at life, a rather unusual way. For it is the direct way, whereby all things are seen just as themselves, and not otherwise, and yet at the same time seen as the interfused aspects of a whole. In Zen all things are ends in themselves, while having no end. To the pure all things are pure; to the Essence of Mind all things just are. And the nearer we are to the Essence of Mind the nearer we are to the things about us which are and yet are not the Essence of Mind. "Consider the lilies of the field, how they grow . . ." said Jesus. "Consider the flower in the crannied wall," said Tennyson. Consider anything you please, but just consider it, not as a symbol of eternity, as God in miniature, as a

moral lesson or a Great White Hope, but just consider it. "Mysticism uses the object, the finite, as a telescope to look into the infinite. Zen looks at the telescope" (Blyth, p. 216). As the Master Jimyo said, "As soon as one particle of dust is raised, the great earth manifests itself there in its entirety." It is there, all of it, not symbolically, but actually. There is no need to do more than just to consider it, whatever it may be. The flower is enjoyed for what it is, not otherwise, and he who can rightly look at a flower, without a shadow of aught else intervening, is looking at Zen. Thereafter he is in direct communion with *all* living things, and who shall hate these toes and fingers of his larger self which lie on the mind's periphery? For they are God, if you care to call them so, or Reality, and therefore deserving the gesture which a lover of Zen may pay with the raised hands of respect to a landscape or a noble picture or even to his bowl of tea. Or they are brothers, born of the same father, life, out of the same mother, illusion; or they just are.

For those who prefer the language of modern psychology, he who has achieved this power of direct and therefore illumined vision

is no longer preoccupied with the images of things but merely contains them. The fullness of the world which heretofore pressed upon it [his consciousness], loses none of its richness and beauty, but no longer rules consciousness. The magical claim of things has ceased because the primordial interweaving of consciousness with the world has finally been disentangled. The unconscious is not projected any more, and so the primal *participation mystique* with things is abolished. Therefore, consciousness is no longer preoccupied with compulsive motives, but becomes vision.

— *Secret of the Golden Flower*, Jung, pp. 121-2

Zen is therefore a matter of experience, and if this has been said many times before, there is little else to be said. It has a subject but no object. It is impersonal, undirected, purposeless. There is no reference in the vast literature of recorded *satori* to union with the Beloved, or of union at all. Zen is a zip-fastener between the opposites. It passes, and they are no more. Yet they are, as none shall deny that once more opens the fastener. Zen is dynamic; it moves and will not wait to be expressed or fastened by the ankle with a phrase. Like Tao,

When one looks at it, one cannot see it;
When one listens to it, one cannot hear it;
But when one uses it, it is inexhaustible.

— *Tao Te Ching*, Chap. 35

Still less can it be the subject of chatter, still less possessed. Said a Master to a pupil who talked about Zen, "You have one trivial fault. You have too much Zen." "But is it not natural for a student of Zen to talk about Zen?" asked the puzzled student. "Why do you hate talking about Zen?" intervened a fellow student. "Because it turns my stomach," said the Master. Well?

Zen has no form, and therefore it has no religion or philosophy of its own. It flowers on a hundred stems, and may use any man-made system to climb to its own integrity. Yet whatever it uses is a substitute for Zen, a mere finger pointing to the moon. No thing, no compound of matter or thought or feeling, must be thought to be the moon when it is but the finger. Or is it the moon?

Zen is a state of consciousness beyond the opposites. It is also the way to such a condition. It has no form and destroys the forms which are made for it. "Coal is black" may be true. So, says Zen, is the opposite, that coal is not black. Both statements limit the truth by an intellectual equation between two things of relative existence. Do we know the coal any more by sticking upon it the

label "black"?

Yet the mind is partial to clothing for truth, being prudish-minded about her essential nakedness. Even Bodhidharma is said to have laid down the four fundamental principles already set out. Let us consider them.

A SPECIAL TRANSMISSION OUTSIDE THE SCRIPTURES

Is Zen, then, esoteric? Some say yes, that in fact it never had an exoteric form. The Robe was handed down from Patriarch to Patriarch, and for a long time nothing of this "transmission" was written down. In the Samyutta Nijaya of the Pali Canon is the famous story of the simsapa leaves. Taking up a handful of leaves, the Buddha asked his disciples, "What think ye, Brethren, which are the more, these leaves that I hold in my hand or those in the grove above?" The inevitable answer being given, he made his point. "Just so, those things that I know but have not revealed are greater by far than those that I have revealed. . . . And why have I not revealed them? . . . Because they do not conduce to profit, are not concerned with the holy life." To those who have need of words to communicate experience, there is a limit to what may be taught with profit. Yet those who have opened the "third eye" of the intuition may speak with the Master on his own exalted plane.

A Confucian came to a Master to be initiated into Zen. The Master quoted Confucius, "Do you think I am holding something back from you? Indeed, I have held nothing back!" The Confucian was about to answer, when the Master thundered, "No!" The enquirer was troubled in his mind, but later, when walking in the mountains with the Master, they passed the wild laurel in bloom, and the air was redolent. "Do you smell it?" asked the Master. "There," he said, when the Confucian agreed, "I have kept back nothing from you!"

There is, therefore, a transmission outside the Scriptures, yet these Scriptures form a remarkable body of literature. All alike must be read with the intuition.

They are direct expressions of spiritual experience, they contain intuitions gained by digging down deeply into the abyss of the Unconscious, and they make no pretension of presenting them through the mediumship of the intellect.

— *Essays in Zen Buddhism*, Suzuki, III, p. 7

None is canonical in the sense that it is authoritative, for Buddhism knows no authority. The most used Scriptures are the *Lankavatara Sutra*, bequeathed to the fold of Zen by Bodhidharma; the Diamond Sutra, the hearing of which converted the 6th Patriarch, Hui-neng; the *Sutra of Hui-neng* (Weilang) himself, and perhaps the *Huang-Po Doctrine of Universal Mind*. All these are available in English. Portions of the Avatamsaka Sutra, described by Dr. Suzuki as the consummation of Buddhist thought and Buddhist experience, appear in Mrs. Suzuki's *Mahayana Buddhism*. In Zen monasteries in Japan the *Prajnaparamita-hridaya Sutra* (the Shing-yo), being short, is recited on all occasions, and the Kwannon Sutra, the Japanese name for the Samantamukha-parivarta, appears very frequently. But all these are, as Kaiten Nukariya calls them, "religious currency representing spiritual wealth." They are substitutes, at the best, for actual experience. Indeed, the scorn of the Zen practitioner for the printed word has at times been carried too far. Even the ability to read and write has been frowned upon, and the utmost ignorance of normal affairs been praised as a virtue. This is the folly of extremes, like the burning of books. Though the finger points to the moon and is not the moon, it is foolish to cut off the finger until the way to the moon is clear. Even if "the Universe is the Scripture of Zen," as Mr. Nukariya insists, there are volumes in which its learning is made more

immediately available. Yet "the man who talks much of the Teaching but does not practise it, is like a cowman counting another's cattle; he is no disciple of the Blessed One" (*Dhammapada*, v. 19); or, in the later words of Hui-neng,

Whether Sutra-reciting will enlighten you or not depends on yourself. He who recites the Sutra with the tongue and puts its teaching into actual practice with the mind "turns round" the Sutra. He who recites it without putting it into practice is "turned round" by the Sutra.

— *Sutra of Wei Lang*, pp. 70-1

NO RELIANCE UPON WORDS OR LETTERS

This seems but an extension of the first, almost the antiphonal principle of the Psalms. Yet it rubs the lesson in. Words are but marks on paper or noises in the air. At the best they are symbols for the truth, substitutes, and poor ones, for another's experience.

"Those who know do not speak; those who speak do not know," says the *Tao Te Ching*, yet words are needed to transcend words, and intellection is needed to rise above the intellect, except that this rising must not be made in a dualistic or "escapist" sense, for no such escape is here possible.

— *The Essence of Buddhism*, Suzuki, p. 26

Words are the pins on which the butterflies of life are stuck to a board. They may look pretty, but their *raison d'être* has gone. Words exist for their meaning, of which they are but the shadow, and if they enshrine some part of the meaning, they probably obscure still more. Hence the Zen search for other and better ways to convey experience. These methods, a shout, a blow, a joke, a paradox or gesture, silence itself, are more direct as a medium, and

this medium functions "directly" and "at once" as if it were the experience itself — as when deep calls to deep. This direct functioning is compared to one brightly burnished mirror reflecting another which stands facing the first with nothing in between.

— *Philosophy, East and West*, Suzuki, p. 113

Some "devices" are frowned upon in Zen. Images have their value as a focus point for concentration and for the paying of respect to the memory of the Teacher whose Enlightenment is Zen. But not otherwise.

When the Master Tanka was bitterly cold he took a wooden image from the shrine of the temple where he was staying and put it in the fire. The keeper of the shrine was not unnaturally horrified. But Tanka was poking about in the ashes with his stick. "What are you looking for?" asked the keeper. "The holy *sariras*," said the Master, referring to the relics said to be found in the ashes of a saint. "But there aren't any in a wooden Buddha," said the keeper. "Then give me the other two images," said Tanka.

Zen is indeed iconoclastic. "Do not linger where the Buddha is, and where he is not, pass on." When Jo-shu found a monk in the temple worshiping the image of the Buddha he struck him with his staff. "Is there not anything good in the worship of the Buddha?" asked the monk. "Nothing is better than anything good," was the famous reply.

DIRECT POINTING TO THE SOUL OF MAN

Zen points, and is what is pointed at. This "soul" or *hsin*, the Chinese word which covers inmost heart or mind, is the Tao of the Taoist; to the Buddhist, the Buddha within. All that points to it points truly, and according to Zen all things are fingers pointing to the same experience. The way is clear enough; it is a process of

dropping the veils which we hold in front of us, all of them, not a carefully selected few. "Straightforwardness is the holy place, the Pure Land," said Hui-neng, quoting the Vimalakirti Nirdeśa Sūtra. And between the two ends of straightforwardness nothing at all must intervene. Speaking of the folly of definition, a monk asked a Master, "Am I right when I have no idea?" Jyōshū, the Master, answered, "Throw away that idea of yours." "What can I throw away?" asked the monk. "You are free, of course, to carry about that useless idea of no idea." The monk, it is said, was enlightened. Then why, if this be true, do we need a library of books wherewith to find ourselves? For fifteen hundred years Zen Masters have "pointed" without them, and as Dr. Suzuki asks, "when a syllable or a wink is enough, why spend one's life in writing huge books, or building a grandiose cathedral?" — *The Eastern Buddhist*, Vol. VI, p. 121 (All right — I know, but this is my way of *learning* Zen.)

SEEING INTO ONE'S OWN NATURE

This nature is *hsin*, the personal veil which hides from us the Essence of Mind. It is everywhere and everything, and when anything is suddenly seen for what it is, then *hsin* is seen, and Zen. Pointing to a stone in front of his temple, Tō-shi said, "All the Buddhas of the past, the present and the future are living therein." But this would not have stopped him using the stone as a hammer to crack nuts. When Tennyson plucked the flower from the crannied wall and held it in his hand he realized, "But if I could understand what you are, root and all, and all in all, I should know what God and man is." But as R. H. Blyth (p. 68) points out, a Zen master might take the flower and crush it and ask, "Now do you know what God and man is?" For the crushing of the flower is like the burning of the text book; it destroys the last veil, in this case of sentiment, which hid from the poet the essence of the flower. Things, in brief, are not symbols, but things,

and the whole of Samsara, the manifested Universe, is only the Essence of Mind in reverse. See it "right," and it is One, though none the less a rose, or a committee meeting, or a pint of beer. Such is the nature of things, and

This Nature is the Mind, and the Mind is the Buddha, and the Buddha is the Way, and the Way is Zen. To see directly into one's original Nature, this is Zen.

— *Essays in Zen Buddhism*, I, p. 220

What are the symptoms of awakening Zen? They are many, and may be better considered in the chapter relating to Satori. Yet here are three.

There is, first, an increasing serenity, however disturbed at times by the usual gusts of emotion or doubt. There is a sense of certainty, not boastful or aggressive in manifestation, but peaceful, as of a ship which, storm-tossed in a sea still visible, now lies safe-harbored while the storm howls overhead. There is a withdrawal of interest from the manifold means of escape from Reality in which we pass our lives, an increasing intensity of purpose and awareness which yet has lost to a large extent the quality of tension. There is a sense of airiness, of the lightness which comes of dropping the burden of self and its desires, of the health and vigor of youth on the uplands of new thought in the dawn-light of the world. There is a sense of returning, a feeling of having recovered the natural simplicity of life which springs from the rediscovery of our Essence of Mind. There is even a sense of inconsequence, from understanding of the relative unimportance of habitual affairs. Yet at the same time there is a growing awareness of the significance of things and events, impersonal now, but immediate. The humblest act is a sacrament, the

humblest thing, mind-made though it is, is now of absolute value. There is, in brief, an increasing sense of balance, a refusal to rest the mind in any of the pairs of opposites, a refusal, indeed, to let the mind rest anywhere at all.

This firm refusal comes from a new-born sense of flow. Asked, "What is Zen?" a Master replied, "Walk on!" For life is like a river, filling each form and bursting its limitations as it moves unceasing on. It is therefore useless to sit down in achievement, or in any concept, even "Zen." Hsin, (in Japanese, *shin*) becomes *mu-shin*, "no mind," for who shall confine the sunset or the morning wind in a labeled box of thought, however splendid its construction and design? Speaking of Hui-neng, Dr. Suzuki writes,

The Mind or Self-Nature was to be apprehended in the midst of its working or functioning. The object of dhyana (Zen) was thus not to stop the working of Self-Nature but to make us plunge right into its stream and seize it in the very act. His intuitionism was dynamic. . . . [For] the truth of Zen is the truth of life, and life means to live, to move, to act, not merely to reflect. Is it not the most natural thing for Zen, therefore, that its development should be towards acting or rather living its truth instead of demonstrating or illustrating its truth in words, that is to say, with ideas? In the actual living of life there is no logic, for life is superior to logic . . . Zen is to be explained, if explained it should be, rather dynamically than statically. When I raise the hand thus, there is Zen. But when I assert that I have raised the hand, Zen is no more there.

— *Essays in Zen Buddhism*, Suzuki, 207, 283-4

"Be prepared," say the Boy Scouts, echoing Hamlet's

If it be now, 'tis not to come; if it be not to come
It will be now; if it be not now, yet it will come:

The readiness is all.

Hence the value of what Geraldine Coster calls "sitting loose to life," a fluid adaptability to unyielding circumstance, attached to nothing, experiencing all.

He who binds to himself a joy
Doth the winged life destroy;
But he who kisses the Joy as it flies,
Lives in eternity's sunrise.

— William Blake

Security, to many the principal purpose of life, is seen to be as undesirable as it is impossible of attainment. Emily Dickinson is right.

In insecurity to lie
Is Joy's insuring quality.

In brief, without thought of security or achievement, or any purpose, much less an ultimate goal, "Walk on!"

A third of the many symptoms of awakening Zen, and the last to be mentioned here, is a sense of "rightness." "All that happens happens right," said the Emperor Marcus Aurelius. "I know that the enterprise is worthy. I know that things work well. I have heard no bad news — " thus Thoreau, and they are brave and splendid words. From the first experience of Zen is born a willingness to let things happen, a diminishing desire to control the Universe, even though the purpose be to "rebuild it, nearer to the heart's desire." Action becomes increasingly "right action," done without haste or delay, without thought of self, without thought of merit or reward.

He who pursues learning will increase every day.
He who pursues Tao will decrease every day.

He will decrease and continue to decrease
Till he comes to non-action;
By non-action everything can be done.

— *Tao Te Ching*, Chap. 48

Yet herein lies the paradox of personality. As self dies out, the true self grows. Of the Tao or Zen it is later said,

When merits are accomplished it does not lay claim to them.

Because it does not lay claim to them, therefore it does not lose them.

— *Ibid*, Chap. 51

The secret lies in action in inaction, or inaction in action, as explained at length in the *Bhagavad-Gita*. Deeds are done because it is "right" to do them, regardless of consequence, and merit; the results of right action which accrue to the doer as long as there is a "doer" to receive them, are a by-product which comes, like happiness, unsought.

Yet the habit of right action is itself presumably the result of previous lives of merit-producing action, by which the mind, increasingly lightened of the weight of personal desire, is slowly enlarged by the deliberate expansion, in range and depth, of its activity. I found in *The Westminster Problems Book* (1908), a delightful quatrain by Philip Castle which puts this admirably.

Good Taste

Merit acquired in incarnations past,
And now by the unconscious self held fast;
So the hand strikes the right chord, in the dark,
And, codeless, runs the right flag to the mast.

For the law of Karma, action-reaction, operates unceasingly as

long as a self exists to receive the consequences, "good" or "bad" of action. Hence the advice in *The Voice of the Silence*:

Follow the wheel of life; follow the wheel of duty to race and kin, to friend and foe, and close thy mind to pleasures as to pain. Exhaust the law of karmic retribution. . . .

And the law can only be exhausted, as already set out, by exhausting the selfish desires which keep alive the separate, personal self.

Buddhism in the East is known as the Buddha-Dharma (Pali: Dhamma). The word Dharma has a vast variety of meaning, one of which is "duty." But duty in English has the unpleasant connotation of compulsion. It is something which ought to be done but which generally speaking, we do not wish to do. Yet in the Buddhist sense it is that which is the next thing to be done, and the emotional labels of dislike or like are not applied. One just does it. In a memorable passage Chuang Tzu says,

To act by means of inaction is Tao. To speak by means of inaction is exemplification of Tao. . . . To follow Tao is to be prepared. [Cf. "The readiness is all."] And not to run counter to the natural bias of things is perfect. — p. 137

This "natural bias of things" is the rhythm of nature, the rhythm of the Universe.

It connotes acting in harmony with the swing of the Universe — whether spiritually, intellectually or in the least movement of the body — from the physical movements of the dance of happy youth to the dance of the planets about the sun and the systems about the infinite.

— *The Story of Oriental Philosophy*, Adams Beck, p. 413

Alan Watts has much to say of this in *The Meaning of Happiness*.

Talking of the Taoist conception of the significance of the moment, he says that this implies that all things happening now have a definite relation to one another just because they have occurred together in time, if for no other reason.

This is another way of saying that there is a harmony called Tao which blends all events in each moment of the Universe into a perfect chord. The whole situation in and around you at this instant is a harmony with which you have to find your own union if you are to be in accord with Tao.

The right life, therefore, is the natural life, and he who has found and lives in Zen lives naturally. To what extent his new found harmony affects his outward life, to bring his outward mode of living into accord with his inner awareness is a matter of time and the individual, but just as the direct drive of an engine is sweet and without discordant tension, so the right use of action, direct action, is sweet and frictionless. Only self, the desire of self for self intervenes and pulls the machine out of alignment. Alignment becomes the operative word. From the "power-house of the Universe" as Trine calls it, to the individual self the power is direct, and the right means used in the right way at the right time and place make up increasingly the perfect act.

A sense of serenity, a sense of flow, and a sense of rightness in all action, these are three of the symptoms of awakening Zen, and the number of men in whom such a state of awareness flowered in China and Japan between the 6th and 19th centuries produced in their outward influence what may be fairly called the visible fruits of Zen, as manifest in Zen Buddhism.

DEATH IS SLEEP — SLEEP IS DEATH — *Philip A. Malpas*

The worst inheritance of the West in the present era is the fear of death.

It has been said that it dates from a very short time before what we know as the year 1 b.c. It need not have attained the proportions it has but for the emphasis laid upon it by the growing Christian cult in all its many phases. Unfortunately it was the central point of that cult and was given a home in every shade of the churches. If Reincarnation and Karman had been made that central doctrine, the world might be better today. Even to the Christian system, these doctrines would not be strange, because, though it would be going too far to say that they were taught in their fulness in the early Church, yet in the Gospels they are indicated as accepted doctrines. Karman in the Wheat or Corn teachings is expressed in the terms "What ye sow that shall ye also reap." Reincarnation, among other instances, is expressed by the idea that "Jesus" is made to say that John is Elias.

Many a mystic saying woven into the Gospels has more than one meaning, and both or more may be true. A case very much in point is that in one aspect the Resurrection is Reincarnation, though there are one or two reasons why this fact was played down a good deal. One is that the Mystery intended to be conveyed by the drama was desired to relate more to the final drama of "Reincarnation" from the deadness of material life to the real "body" of the spiritual perfect man, a thing which might take place at the end of countless incarnations on earth, the becoming of a god from being a man.

This is well expressed in the figure of the man dying in order that the god might live, the Jesus dying that the Barabbas might live.

Unfortunately hard and fast materialism was growing apace and even the learned men of the churches believed the whole drama referred to the physical death of a man on a cross of wood; this in spite of the fact that for centuries the wood of the cross itself was worshiped — the man on it is a later addition.

So for a couple of millenniums the West has been soaked in the idea of the terror of death, and it cannot be expected that this "hypnotic" idea of death being so terrible, inculcated for many centuries until it had become a mold of mind, should be outgrown or broken in a day. But the gentle influence of Theosophy and its presentation in the West of other religions than the orthodox religion of the Middle Ages is working its ferment, and fear is beginning to recede.

The whole matter is admirably expressed in a nutshell by saying that when we die we enter into a perfect sleep and when we sleep we enter into an imperfect death. It has also been roughly expressed by saying that when we sleep we put on the same clothes the next morning, but when we die we put on an entirely new suit, though even that suit is made of the same atoms as the old one. In fact we are always attracting out ancient atoms and throwing off those which do not rightly belong to us.

In all this there is always more to be learned or explained. For instance, instead of "body and soul," Theosophy shows that MAN breaks up after death into several constituent parts or aspects, each going its own way. We do not often think of it, but in sleep likewise we break up into more than one part: the body is left more or less inert; the "mind" may dream; the "soul" may go here, the "spirit" there. Most of us are so untrained that we can hardly appreciate these distinctions. Someday we shall. But they have always been known by trained mystics of the private schools. Lucretius makes Ennius say (a verse also attributed to Ovid):

Terra tegit carnem, tumulum circumvolat umbra,
Orcus habet manes, spiritus astra petit.

The earth covers the flesh; the shade, the spook, hovers around the tomb, The manes go to Orcus and the spirit seeks the stars.

Orcus is the Underworld, usually translated for want of better knowledge by the fantastic word Hell.

Obviously volumes could be written, have been written, on this fascinating subject, but here we would like to call attention to a matter of the utmost importance with regard to both sleep and death.

It is clear that one of pure, calm, lofty, spiritual thoughts normally dreams of corresponding things. It is also clear that one whose whole mental atmosphere is populated with low, hot, turbulent, earthy thoughts will be more likely to dream of similar things. Diet and illness also have their effects on sleep and are also causes set going by the individual himself. There are some exceptions where evil influences from outside affect him, but even so he is responsible for his weakness if he is susceptible to them.

Since a man's karman is the sum total, the resultant, of all he has done to date, in fact is himself, it is normal for him to think before bedtime of the main impressions of the day, though there may be some other strong thought in the ascendant. It is equally natural that the last thought should color the whole night's experience or dreaming, and also give the keynote for the starting of the next day. A problem or a question thought over just before sleeping almost invariably returns to the mind the next morning, digested and solved in the simplest fashion. Some observe this process more than others, but it must be a commoner experience than many imagine.

This is the reason for seeking to hold a state of mind before sleeping which is as high and spiritual as possible, free from lower thoughts and tendencies. There is an ancient saying, "Those who worship the gods go to the gods." If the thoughts are divine in tendency then there is no reason to suppose that the real MAN will not go to the divine in his hours of sleep. There is an old Sanskrit verse which reads: "That which a man longs for, that he becomes." It is the same idea, which if we accept leads to another remarkable conclusion. It is wrong to attempt to draw down to earth the souls of departed friends or relatives, particularly when we realize that the amount of impersonation of such by all sorts of spooks and "spirits" is enormous. It is good, however, to raise one's self to the plane where the real, pure, Self of our loved ones may be, and commune with them in that way. Words have little or nothing to do with the matter, but often enough the impression received by a higher part of the nature, a spiritual impression so to say, translates itself on the way down to the brain mind into actual pictures and words often giving a feeling of great happiness, and of even having really seen and talked with the loved one.

It would be well if more were known of the after-sleep states, if sleep and death are the same in differing degree, then the identical statements must apply, with such variations as are called for by the different situation.

When death comes and the body lies still, the brain occupies a short space of time in passing in review the events of the life just concluded. Impartially the higher faculties of the MAN assess and judge every thought and deed, however small, much as one might imagine a spiritual film unrolling before the eye of the spirit. Time being an illusion it is just as possible for a whole lifetime to pass through the brain in a few moments as it is for it to pass in a single dream.

The analogy with sleep is that the last thoughts at death color the whole of the after-death state so far as thought processes are concerned and give it a direction which may color the beginning of the following life. Precisely as the thoughts of the day tend to give the tone at the end of the day, so the actions and thoughts of the life give the tone at the end of the life. The Egyptians pictured the life as a day and the many incarnations taken together as a lifetime.

The practical application of these observations is that when a person dies, there should be no great lamentation and grief or other disturbing influences, but it should be remembered that the one who is passing is engaged in the most solemn process, call it initiation if you will, of the whole life, and one which affects the life after "death" and the future life after that. Quiet, still and calm should be the atmosphere of the death room that the speeding soul may go on its way in peace.

Even after that there should be no attempt at all to recall the soul of the loved one. It cannot be recalled, but it is quite possible that some injury may be done to it by the attempt to disturb it. And if we do believe that the soul rests after death, it is plain that the desire to recall it is purely selfish. The desire to rise to a spiritual plane of purity and unselfishness where there may be some sort of "synchronous vibration" with the spiritual part of the dead may be good, even though the stepped down effect may seem to the brain-mind like a vision or a conversation such as belongs to no spiritual plane at all.

Another practical application of the above ideas is the voluntary and conscious marshalling of the events of the day, in our minds before sleeping, impersonally examining the thoughts and desires, failures and successes, and judging them in the light of the impersonal Nous, the spiritual discriminating part of our

nature. Like the forty-two assessors of the dead in the Egyptian book of the "Coming Forth by Day," Higher Manas, spiritual Man, the "immortal" part of our being, will calmly pass in review each thought, each word, each deed, and will say, "That was right"; "That was wrong"; "That must be bettered"; "That should not have been omitted"; "That must be done next time," — as it is roughly expressed in a Pythagorean fragment. Those thoughts and actions which have the password of purity and selflessness may pass the portals into the "Kingdom of Heaven." The others must go into the melting pot and be refined, changed, purified.

If at death some such process occurs, surely it is most natural that we ourselves should institute on the brain-mind plane such an analogous little ceremony of initiation, not as a mere formality but with the full intention and will to act up to the judgment formed. This is appropriate during the half hour before sleeping. Real life has a distinct purpose in every minute of the day if we wish to grow away from the irresponsibility of children.

Hypnos kai thanatos adelphoi — Sleep and death are brothers.

The Theosophical Forum

ON DEATH AND IMMORTALITY

From a conversation between Goethe and Johannes Falk on the day of Wieland's (1) funeral, 25th January, 1813.

... "You have known for a very long time," said Goethe, "that Ideas which have no firm foundation in the world of the senses, even with all their other values, do not bring conviction to my mind, because I want to *know* about nature, not merely to suppose and to believe. Now as concerning the continued existence of our soul after death, this puts it out of my province. It stands not at all in contradiction to the observations of many years which I have made as to the qualities of our being and of all beings in nature, but quite the contrary, it proceeds from them with new power of proof.

"But however much or however little of this personality deserves to continue in existence is another question and a point which we must leave to God. For the moment I will only make this remark: I accept various classes and degrees of the ultimate ingredients of all beings, as also of the beginning-points of all the phenomena in nature, which I should like to call souls, because the ensoulment of the whole proceeds from them, or rather I would call them Monads — let us always keep to this expression of Leibnitz! There could hardly be a better word to express the simplicity of the simplest being. Now some of these Monads or beginning-points, as experience shows us, are so small and so insignificant that they are suitable at the very most only for a subordinate service and existence.

"Others on the other hand are quite strong and powerful. Thus the latter have a way of dragging everything which approaches them into their circle and changing it into something belonging to

them for instance, a body, or a plant, or an animal, or even into something higher, such as a star. They continue this until the small or great world, whose *intention* (2) lies spiritually within them, also comes outward to bodily appearance. I would call only the latter really souls.

"It follows from this that there are world-monads, world-souls, just as there are ant-monads, ant-souls.

"Every sun, every planet bears in itself a higher *intention*, a higher task, by reason of which its development must come about just as regularly and under the same law as the development of a rosebush through leaf, stem and crown. You may call this an idea or a monad, as you like; I have nothing to say against that. Sufficient to say that this *intention* is present invisibly and prior to the development out of it in nature. The chrysalids of the intermediate condition which this idea assumes in the transition should not mislead us.

"It is ever only the same metamorphosis or capacity for change in nature which produces from the leaf a flower, a rose, from the egg a caterpillar and from the caterpillar a butterfly. Moreover the lower monads obey a higher one, because they needs must do so, not that there is any special pleasure to them in doing so. In a general way this takes place quite naturally.

"For instance, observe this hand. It contains parts which stand at every moment at the service of the chief monad, which it was able at the moment of its coming into being to attach inseparably to itself. I can play this or that piece of music by means of it; I can at will cause my fingers to fly over the keys of a piano. In this way they indeed create for me a spiritually beautiful enjoyment; but they themselves are deaf, only the chief monad hears.

"Thus I may assert that little or nothing at all of my hand or my

fingers is laid upon my piano. The monad-playing, by which I prepare an intense pleasure for myself, does no good to my subordinates, except that maybe I make them a little tired. How much better it would be for their sense-pleasure if, following the disposition present in them, they could rove industriously about the meadow, something like busy bees, or if they could sit on a branch of a tree or regale themselves on its blossoms instead of flying around busily on the keys of my piano.

"The moment of death, which may with good reason also be called a release, is precisely that moment when the ruling chief monad releases all those who have hitherto been its subjects from their faithful service. Like coming into existence, I consider also the passing away as an independent act of this chief monad which in its real being is completely unknown to us.

"But all monads are by nature so indestructible that at the moment of their release they do not cease their activity or lose it, but continue without pause. They thus leave their old conditions only to enter new ones on the spot. In this change everything depends on the power of the *intention* which is contained in this or that monad. There is an enormous difference between the monad of an educated man and that of a beaver or of a bird or fish.

"That brings us once more to the question of degrees of souls which we are forced to assume even if we only want, to some extent, to explain the appearances of nature. . . .

"Each monad goes where it belongs, into the water, the air, into the earth, the fire, the stars; indeed, the secret urge which leads it thereto, contains at the same time the secret of its future destiny.

"Annihilation is not to be thought of; but to be stopped on the way by some powerful and at the same time low or common monad

and to become subject to it is a danger which has something serious in it, and I am not able entirely to set aside the fear of it as a mere observation of nature of my own. . . ."

Falk asked if Goethe believed that the transition from these conditions was connected with consciousness for the monads themselves, and Goethe replied: "I cannot deny that there may be a general historical survey or that there may be among the monads higher natures than we ourselves.

"The *intention* of a world-monad can and will bring forth much out of the dark bosom of its memory which looks like soothsaying and yet at bottom is only a dim memory of a past condition and is therefore remembrance; just as human genius discovered the tables of the law as to the coming into existence of the universe, not through dry efforts but through a lightning flash of memory falling into the darkness, because it was present at its very conception. It would be presumptuous to set a limit to such lightning flashes in the remembrance of higher spirits, or the degree to which such enlightenment must restrict itself. So in general and taken historically I find nothing at all unthinkable in the continued existence of personality of a world-monad.

"So far as concerns ourselves directly it almost appears as if the earlier conditions through which this planet has passed were in general so insignificant and so mediocre that there is not much in them which in the eyes of nature would be worth a second remembrance. Even our present condition might be in need of a great selection and our chief monad will probably just summarize it at some future time, that is, in some great historical focus points."

"If we want to go into theories or suppositions," proceeded Goethe in his observations, "I really do not see what is to prevent the monad for which we have to thank the appearance of Wieland on

our planet, from entering in its new condition into the highest connections of this universe. By its diligence, by its zeal, by its spirit with which it took to itself so many conditions of world-history, it is entitled to everything. I should not wonder, in fact I should find it quite in accord with my views, if after thousands of years I again *met* and saw this Wieland as a world-monad, as a star of the first magnitude, and if I were to be witness of the way in which he enlivened and illuminated with his lovely light all that came anywhere near him. Verily, to compose the nebular being of some comet in light and clarity, that is what we might call a joyous task for the monad of our Wieland, because indeed as soon as one thinks of the eternity of this world-condition, one cannot think of any other destiny for monads than that they for their part should share the joys of the gods as blessed co-creative powers.

"The coming into being of creation is entrusted to them. Whether summoned or not summoned they come of themselves by every path, from every mountain, from all the seas, from every star; who can prevent them? I am as certain as that you see me here that I have been here already a thousand times and I hope to come again a thousand times." Falk interposed that he did not know whether he could call a return without consciousness a return at all, for he only returned who knew that he had been here before. He would be disposed to demand greater certainty than that which we gain by intuitions and flashes of genius such as sometimes lighten the dark abyss of creation, and he asked:

"Would we not come closer to our goal if we presuppose a living chief monad in the centre of creation, one which makes use of all the subordinate monads of this whole universe in the same manner as our soul makes use of the smaller subordinate monads which serve it?"

"I have nothing against this proposition, considered as a belief or faith," replied Goethe, "only I am accustomed to attribute no exclusive value to ideas which have no basis in sense-perception. Yes, if we only knew our brain and its connection with Uranus and the thousandfold threads which cross one another! But we only recognize the flashes of thought when they strike. . . . In one of our earlier conversations I called man *the first speech which nature holds with God*. I have no doubt that this speech can be held on other planets in a higher, deeper and more intelligent way. What we lack is self-knowledge; all the rest follows. Strictly speaking I can know nothing more of God than that to which the somewhat narrow circle of vision of the sense-perceptions on this planet gives me the right, and that is little enough in all conscience.

"But this in no way means that through this limitation of our observations of nature, limits are also placed to belief. On the contrary, through the direct divine perception in us the case could quite easily come about that knowledge must appear an unfinished thing, especially on a planet which, considered as torn out of its connection with the sun, makes all and every observation incomplete, and for that very reason can only have its complete fullness through belief or faith. I have already remarked in regard to the teachings as to colors that there are basic phenomena which we must not disturb and degrade in their divine simplicity by our useless experiments, but must leave to common-sense and faith. If we try boldly to force our way forward on both sides we only keep the boundaries strictly separated while doing so. Let us not prove what is in no way to be proved.

"Where knowledge suffices, we certainly have no need of faith-but where knowledge loses its power or appears insufficient we must not deny faith its rights. So long as one only proceeds from

the principle that knowledge and faith are not there to destroy one another, but to fulfil one another, the right will everywhere be found."

— Philip A. Malpas, translator

FOOTNOTES:

1. Christoph Martin Wieland, (1733-1813) German epic poet who made the first translation into German of Shakespeare's plays. In his first great poem, *Die Natur der Dinge* (*The Nature of Things*), he showed the quality of lofty spiritual aspiration that characterized much of his work. In his later years he was influenced by the philosophy of Plato. The heroic poem *Oberon* was his best-known work. The friend of Goethe, the two great poets were at the same period attached to the brilliant court at Weimar. Wieland said of Goethe at this time that "his soul was as full of him as a dewdrop of the morning sun." ([return to text](#))

2. Intention: used by Goethe obviously with a special meaning. We understand it to convey the idea of an innate will and native characteristic: self-becoming — what in Sanskrit Theosophical terminology would be called *swabhava*. It presupposes the latent particular genius of every evolving being, making it at once one with the All, and distinct in its own individuality. ([return to text](#))

The Theosophical Forum

THEOSOPHIC CONSOLATION — *Hazel Walker*

Who called thee strong as death, O Love?

Mightier thou wast and art. — Felicia Hemans

Theosophists are frequently asked to explain their philosophy regarding death and sorrow. The majority of inquirers have a background of Christian teaching, but very often that does not satisfy the searching souls of those who mourn.

The appealing precepts in scriptural texts, poetry and song, though beautiful in sentiment and to a degree comforting, are not always sufficient to silence the overtones issuing from the voice of that great organ, the heart of man; the *vox humana* which, in moments of distress and fear, trembles and vibrates with uncertainty and dissonance.

If we could look beyond today into the tomorrows, we might be able to understand how sorrow sometimes comes as a blessing in disguise, when it causes man's mental fingers to reach out and touch thoughts, which in his search for harmony within higher octaves of Life, he finds he cannot readily interpret. He falters because of lack of knowledge and misinterpretation of signatures in Time and Space. Thus man passes through the gateway of sorrow, seeking the blessings of the Ancient Wisdom: Life — the Boundless; without beginning and without end!

Do the Theosophical teachings correct and strengthen man's spiritual advance toward greater harmonies in the scale of Life? Is there a technique which enables him to transpose discord into harmony; from the false pitch of affliction into true affection; from sorrow into happiness? YES.

Can there be plucked from the vibrating strings of the heart a

melody, the theme of which constitutes a Theosophic basis for the variations of life, the effects of which may be produced by what we might call syncopation — from weakness to strength, from despondency to confidence? *Yes!* The dominant key of life is determined in the scale of Being by the flats, sharps and minor accents of the shifting Will and Aspiration within the individual-octave. The great Teachers have said: "Man, know thyself."

Theosophy is a Way of Life which is enlightened by the flame of Divinity, patterned by Divine Mind. The flame may express an extension of its light through the vehicle of a body, even as a candle does not add to, nor subtract from, the flame whose Essence lights it; for the flame is imperishable, limitless, imponderable. In it is the warmth of love, and love is deathless.

The anguish of sorrow is a very real and terrible experience for those who cannot realize the unity of all life, bound by that golden thread, a ray of the Holy Flame which brings light and solace "even to the darkest corners of the earth."

If death terminates the love of "the departed," then it should also break that invisible strand for those who mourn. Why not? Does sleep annihilate the love of the sleeper for the one who stands and waits for the awakening? Behold the functioning laws of Nature! How do we know that the stars still shine in the heavens when it is day and we cannot see them? What tells us that the sun will rise in the morning and set at eventide? Is the earth plunged into complete and everlasting darkness at the close of day, because we, specks of global consciousness, cannot see beyond the horizon, cannot perceive the eternal, infinite light of truth, which does not shine for one alone, but for the whole Universe?

Consider the giant sequoias, the tallest and noblest of trees. By analogy, in their particular hierarchy of Nature, they are the avatars of plant life; like Christ, above and beyond ordinary

humanity. The "wine of life" circulates throughout their beings for ages and ages, winter and summer; while younger, frailer, more immature trees in the forest, like men of human destiny, must apparently die in the winter, only to renew their latent vitality in the spring; re embodying, as it were, when the life-urge responds, as did Lazarus, to the Voice which called, "Come forth." . . . "He is not dead but sleepeth."

Man and tree, each a channel for the divine River of Life, each a Path through which flows *consciousness*, whether un-self-conscious or self-conscious; each having an appropriate vehicle through which the life-force flows. After aeons of time both man and tree reach god-head in their respective spheres, through evolution and involution; until the time comes when the soul of each ascends into a higher kingdom. "In my Father's house are many mansions. . . ." One stands in silence before the mighty sequoias, awed by their majesty and age. What, after all, is three score years and ten!

Then again, one beholds with ecstasy a delicate rose and breathes the subtle fragrance from its heart, sensing the invisible spiritual soul of a beautiful character; and it enfolds one as though it were the unseen love of a Beloved. In the structure of affinities we may recognize that essence, love, which like the fragrance of the rose, is the real life of our beloved.

Therefore, do not crush this rose against your heart! Let its fragrance be wafted by the "wind of the spirit" into the world of freedom. Let the beloved live! Unpossessive love raises the aroma of your own soul's love to communion with theirs, and through this release the beloved is able to attain complete rest and peace. Our dread of separateness, uncontrolled grief and unsuspected self-pity retard the flight of him who passes. Love is strong, unselfish and sacrificing. Love endures. It is without limitation. It

flows in currents which are swift, deep and powerful. It enfolds us in the same divine quality which is in true sympathy; sympathy which does not undermine, but understands and aids moral fortitude.

Love dissipates the illusion of time, even of death, which becomes to man a bridge, for his life is linked inseparably with the Universal Whole. "Death and sleep are brothers." This is the Theosophic consolation for the so-called "great orphan, humanity."

"O death, where is thy sting? . . . Death is swallowed up in victory." For the love that stirs the strings of your heart is your beloved, whose invisible touch is like the fragrant breath from the understanding heart of the rose.

The Theosophical Forum

OF "METAPHYSICAL HEALING" — *William Q. Judge*

The time for temporizing or for silence in respect to what are severally styled "Mind Cure," "Mental Science," "Christian Science," and the like has now come to an end, and the moment has arrived when something definite should be said on these as well as some other subjects. The first note was sounded at the theosophical convention for 1890, (1) when in the message sent by H. P. Blavatsky she wrote that some of these practises were of the nature of black magic as explained by her in that message. She says "In other words, whenever the healer interferes — consciously or unconsciously — with the free mental action of the person he treats, it is Black Magic." At that time many persons were hurt, some on their own account and others on account of the feeling they had that people of the class who believe in and practise these so-called sciences would be thus driven away from the Society. Several members accordingly studiously refrained from mentioning the matter, and in many quarters it fell into silence absolute.

In the first place, it cannot be said that no cures have ever been accomplished by means of the practises referred to. There have been cases of cure. For, indeed, one would have to be blind to the records of the medical profession to say that the mind has no part to play in the cure of diseases. That it does have, as any physician knows, for if the patient continues to be depressed in mind there may be a failure or even a death. But this is not "mind cure" nor "mental cure." It is an assistance to the regular treatment. And as very many of the troubles of people are imaginary, sometimes in the acute form because of imagination, it does happen in those cases that a cure may be effected by the schools we are speaking of. Some nervous derangements may be thus cured. And if that is

brought about by directing the mind of the patient to high thoughts, there can be no objection to it. But if the mind is filled with wrong philosophy, or if the affirmations and denials found in these "sciences" are used, or the "construction of the divine and spiritual form" be gone into, the whole thing is bad.

And here it is well to state our position about the cure of bodily ailments. It is that inasmuch as they are of and in the body, those that come from a wrong attitude of mind will disappear when we are contented and self-centered, while those that are chronic, being mechanical and physical, ought to be treated by such means and not by an attempt to drag the spiritual and divine down to this plane of being. In none of the ancient schools was it permitted to one to use for himself, or to sell, the divine or spiritual powers. Furthermore we see that the savages are the most healthy of men. Yet they know none of these things and do not care for such ideas. Yet although the Red Indian of the early days did much murder and lived not righteously, he was a fine specimen of physical health. This shows that health may be maintained by attention to the ordinary laws of nature on the material plane by attending to hygiene and exercise. Yet again, looking at the prize-fighter and the athlete, it is plain that they, by attending to the same rules and wholly disregarding the fine theories of the mental healers, become well and strong and able to bear the greatest fatigue and hardship. It was the same in the days of the athletes of Rome and Greece.

A number of fallacies have to be noticed in these systems. Using the word "thought," they say that our diseases are the product of our thought, but they ignore the fact that young children of the tenderest age often have very violent diseases when no one will say they have had time or power to think. Babies have been found to have Bright's disease and other troubles. This is a fact that looms up before the arguments of the mental healer and that

never will down.

But regarding it from the theosophical side, we know that the thoughts of the preceding life are the causes for the troubles and the joys of this, and therefore those troubles are now being exhausted here by the proper channel, the body, and are on the way *down and out*. Their exit ought not to be stopped. But by the attempt to cure in the way of the healer they are stopped often and are sent back to the place they came from, and thus once more are planted in the mind as unexpended causes sure at some other time to come out again, whether in this or in another life. This is one of the greatest of dangers. It will in many instances lead to insanity.

The next fallacy is in the system of affirmations and denials. To assert as they do that there is no matter, that all is spirit, and that there is no evil but that all is good, and that "this my body is pure and sweet and free from trouble," is philosophically and as a mere use of English false in every respect. "Spirit" and "Matter" are terms that must exist together, and if one is given up so must the other disappear. They are the two great opposites. As the Bhagavad-Gita says, there is no spirit without also matter. They are the two eternities, the two manifestations, one at one pole and one at the other, of the absolute, which is neither matter nor spirit but wholly indescribable except as said — it is at once spirit and matter. Likewise Good and Evil are two opposites mutually existing, the one necessary in order to know the other, for if there were no evil we should not know what to call the good. One might as well say that there is no darkness but that all is light. By these foolish affirmations all relativity is abolished, and we are asked to abandon all proper use of words in order to satisfy those who wish to show that optimism in all things and at all times is the right position. The "Christian Scientist" goes further and says God is all good, the argument being in fact nothing at all but a play on

the word god. It would not work in Spanish, for there good is *bueno* and god is *dios*. This assertion calmly refuses any admission of the patent fact that if God exists he must be evil as well as good, unless we revert to the old Catholic idea that the devil is as strong as God. And even if we say that God made the devil and will one day stop him, the evil is a part of God unless in some respects he is not responsible for the world and beings. But the last affirmation, that one's body is sweet and pure and free from disease, is degrading as well as false. It may be true that bodies are illusions, but they are not the illusions of single individuals but of the great mind of the race, and therefore they are relatively real — as they are now constructed — for the minor beings who make up the race. No one has the power to escape from this great illusion of the total mind until he has risen to an actual conscious realization of that mind in all its departments. The affirmation has its refutation in itself, for if one person can thus destroy this relativity so far as he is concerned by merely affirming against it, how is it that the illusion still remains for and has sway over the remaining millions? Still more we know that the body is a mass of things that are not good nor pure, and that in the abstract sense of these affirmations the most unnoticed physiological operations are actually disgusting.

The line of demarcation between black and white magic is very thin, but it is quite plain when one sees the art of healing by means of such high forces as are claimed by these schools practised for purely selfish ends or for money in addition. There is danger in it, and all theosophists ought to look well that they do not fall themselves or cause others to.

The great danger is from the disturbances that are brought about by the practise. It is a sort of yoga without any right knowledge of method; it is blind wandering among forces so subtle and so violent that they are liable to explode at any moment. By

continuing in the way taught a person actually from the first arouses latent currents of the body that act and re-act on the astral and physical and at last bring about injury. I have in mind several cases, and some of them those of actual insanity due wholly to these practises. Of these I will say more at another time, and may be able to present a record that will astonish those who, merely to cure some ailment that medicine is fully able to deal with, go aside instead and play with forces they have no knowledge of, and put them also into the hands of others still more ignorant, all the while deluding themselves with the idea that they are dealing with high philosophy. The philosophy has nothing to do with it except to act as a means to centre the thought so that inner currents may come into play. The same result might be brought about by any system of talk or thought, no matter how erroneous.

The Theosophical Forum

PASSAGES FROM THE BHAGAVAD-GITA — *John P. Van Mater*

I will now declare to thee, O best of the Bharatas, at what time yogins dying obtain freedom from, or subjection to rebirth. Fire, light, day, the fortnight of the waxing moon, six months of the sun's northern course — going then and knowing the Supreme Spirit, men go to the Supreme. But those who depart in smoke, at night, during the fortnight of the waning moon, and while the sun is in the path of his southern journey, proceed for a while to the regions of the moon and again return to mortal birth. These two, *light* and *darkness*, are the world's eternal ways; by one a man goeth to return not, by the other he cometh back again upon earth. (*Chapter viii, Judge's recension*)

This paragraph must have many meanings, some of them general, some more in detail, the latter being the most difficult to put down on paper. Speaking generally the two paths of Pravrittimarga and Nivrittimarga are here referred to. One is the pathway of light and immortality; the other the dark way that leads to re-embodiment.

In the words of the *Bhagavad-Gita* man may "unite himself with Brahman" and thus become an immortal spiritual being in the cosmos, no longer subject to reincarnation, nor to the trials of human life. He attains to this state by following the pathway of life. The training and discipline for disciples of this pathway are given in the *Bhagavad-Gita*. It is the pathway Krishna is recommending to Arjuna throughout the work. On the other hand, concentrate energies on the matter-side and revel in material existence, and man will continue to be bound to the wheel of rebirth with its accompanying duality of pleasure and

pain. These two pathways are eternal in manifested existence, although at different cycles there is a predominance of the influence of one or the other. To paraphrase the last sentence in the quotation: "These two, *light* and *darkness*, are the world's eternal ways; by the light path a man goeth never to return [as a human being], by the dark path he cometh back [into incarnation] again upon earth."

Words are not wasted in the *Bhagavad-Gita*, each one has its purpose and meaning. For instance when the Northern and Southern Solstitial pathways are spoken of, there is clear reference to the fact that in normal death egos leave the earth through the lunar or southern pathway, and this journey has much to do with the Kama-loka, where the Inner Man sheds his gross (lunar) bodies preparatory to post-mortem peregrinations. And the Northern Solstice refers to the pathway of initiation by which the initiate ascends to Light and Spirit, never to return as a human being — but as a god.

The various terms, such as "fire," "light," "day," and "smoke," "night," etc., all have their meanings in painting a detailed picture of what is spoken of above. They refer, in the words of the commentary (*S. D.*, I, 86), to the "names of various deities which preside over the Cosmo-psychic Powers." The bright array of deities are those belonging to the Hierarchy of Compassion, the Agnishwattas, the Manasaputras, etc., and the dark or lunar deities refer to the lunar side of Nature and ourselves. Man is a compound of both sides. He has two paths before him.

OF TIME AND LIFE — *Ida Ryder*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

Time is a delusion. All is the eternal now. But in a world in which all is delusion, of which time is a controlling element, there is a proper time for all things. We cannot mount the camel that has passed us, nor the camel that has not yet come.

— Talbot Mundy: *Om: The Secret of Ahbor Valley*

Nowhere is the sense of timing more important than in the developing of that spiritual perfection through alignment with the Inner Self which is the ultimate goal of, not alone the Theosophical student, but of the devotees of each of the great systems of Enlightenment that have been taught man throughout the ages, be it Yoga, Mysticism, Occultism, Taoism, Zen or the Noble Eightfold Path of the Lord Buddha. Each stresses the need for continuous striving on the part of the neophyte, the slow sure progress through self-effort that leads onwards step by step at the appropriate time. The next step cannot be undertaken until the now-step is accomplished. The true motive for self-development is the attainment of wisdom whereby we may serve all mankind. To be of service one must be wise, and conversely, to be wise one must carry knowledge into balanced action. Balanced action is timing. It is so in music, in art in dancing, athletics — and the attainment of Spiritual Illumination

"Prepare thyself, for thou wilt have to travel on alone. The Teacher can but point the way" is the advice and warning given in *The Voice of the Silence*. How often we feel that the preparation

is overlong. Could we but, by some miraculous circumstance, be accepted as a disciple of a Master, all unprepared as we may be, would that not in itself be of more benefit to mankind and ourselves than all the years spent in study, in training the mind, in service to enlarge the heart and in discipline in the control of body, mind and heart? Unwisely we would leap from kindergarten to University and fail in the attempt. It is fortunate that there are certain laws provided to protect the over impetuous from spiritual disaster. Before any teaching can reach fulfillment there is need for self-discipline, for what is a disciple if not one who is prepared to accept discipline?

Individual training becomes more and more an apparent necessity, a motif of our present age. Large groups of persons all over the world talk of peace, think of peace, organize for peace and yet as individuals they are unable, or unwilling, to keep peaceful relations with their own groups, their neighbors or their families. It is sheer stupidity to believe that any organization or nation can have more integrity than is within the character capacity of the individuals composing that group or nation. It is perhaps a little disconcerting to be forced to realize that, with lofty humanitarian ideals for saving humanity through the gentle compassionate teachings of the Enlightened Ones, we might begin our Way of Peace by forgiving the trespasses of the neighbor who appropriated our last year's tulip bulbs. Still we only truly accept a teaching when our actions prove we believe it to be true.

If we assume a universe run by Law, wherein we may depend upon night following day, the seasons running through orderly cycles, planting preceding its harvest, all within their humanly deductible time element, it is reasonable to assume that nothing happens by chance, that all exists according to that Law. That we should be at this time expressing ourselves in physical bodies in a physical world indicates the pattern for development in our age.

To proceed through life with one's heart and mind set on the far horizon of Aspiration is, all too often, to overlook the small plain duties of physical life. Aspiration is a splendid necessity, but it must be approached and perfected through balance on all planes. No part of the self reaches perfection until such time as the whole nature has assimilated the experiences that produce the perfected.

The Master K. H. wrote, in answer no doubt to Mr. Sinnett's complaints against time-consuming trivialities: "Does it seem a small thing to you that the past year has been spent only in your 'family duties'? Nay, but what better cause for reward, what better discipline than the daily and hourly performance of duty? . . . The man or woman who is placed by Karma in the midst of small plain duties and sacrifices of loving kindness, will through these faithfully fulfilled rise to the larger measure of Duty, Sacrifice and Charity to all Humanity. What better path toward enlightenment are you striving after than the daily conquest of self . . . the bearing of ill fortune with that serene fortitude that turns it to spiritual advantage."

It is the inspiration and the joy of all true students of the Ancient Wisdom to pursue their studies. Many absorbing and fascinating subjects are unfolded before our eager minds. Sometimes it seems as if they were isolated bits of learning until later we realize that they fit together like pieces of a picture puzzle into one grand whole, a tableau of vast antiquity and importance. Let us continue to be inspired and uplifted by the words and writings of the Great Teachers but, in all humility, may we ever remember that the acquisition of knowledge having no relation whatever to every day living, is not fulfilling the purpose for which the teaching was given — Enlightenment through the conquest of self. To know Truth one must be the living expression of Truth, for knowledge is a neutral energy becoming a force for good or

evil, bitterness or joy, hate or love, according to the application of that knowledge to thought and action.

If then we yearn to go forward — and who doesn't? — it is well that we remember we have always the means at hand, here and now. The nerve-trying interruptions, the small daily claims on patience and sympathy, the sacrifice of the things we want to do to the things that must be done, as well as the great bereavements and tragedies of life, are all part of a system of training and discipline timed by the Law of Necessity. Nothing is too trivial to be used and no burden is too heavy to be carried if viewed impersonally as the just working out of Karmic Law and as an opportunity to learn and grow. In a universe that is without accident man can grow only through his own self-directed intention to enlarge his capacity through self-effort. Inspired he is by his teachers, but they, by their own admission, "but point the way."

The building of character through daily living, learning to be patient, self-sacrificing, gentle, humble and truthful in small things, can be greatly aided if the tranquillity of the meditation hour can be carried over as a constant undercurrent to the round of activities. We have been told that it is on the serene, unruffled waters of the mind that spirit is reflected; that only the mirror kept free of dust gives back the picture of reality. One can strengthen serenity by clinging to it consciously until such time as it becomes a habit formed by constant application in action. There is a sound psychological basis for the teaching. It produces the least possible strain on the nervous system. How often one becomes exhausted from the emotional stress of contemplating the unwanted duties, the job one hates to do. The energy used on working through the feeling of repulsion, shilly-shallying with the idea, putting off, trying to avoid, leaves one fairly worn out. If a thing is to be done, concentrate on it, do it thoroughly, and pass

on, and in so doing build the disciplined self-control that alone can become the firm foundation upon which future spiritual instruction may be erected with any degree of permanent security.

To grow toward spiritual perfection to the end that all may become a perfected unity, is, actually, our whole mission in life. No other answer to the question "Why are we here?" has ever been found satisfactory. Growth is a slow evolutionary process attained through self-effort. Each experience in life takes place as a result of past action in this or former lives to become the future seed of progress. No longer may any thinking person anticipate some Divine outside agent to lean down from Heaven and produce a miracle of redemption. To meet the test of living, to learn and improve through experience, to learn to use the knowledge we have to deal wisely with human affairs, these are the tools we create for ourselves. Future instruments of greater power and precision justly depend upon how we employ those we have here and now.

The effect of timing on the affairs of man is all important. To rush at life is to get off balance. To dawdle aimlessly along without purpose or direction is to delay orderly progression. Indeed there is nothing in human experience that leads us to believe we can "mount the camel that has passed us, or the camel that has not yet come."

QUESTIONS OF KING MILINDA — *Marion O. French*

Milinda was Menander, Indo-Greek King of northern India. He was a capable soldier who extended his territory very widely by conquest. His capital was Sakala in the Punjab. He died in 160 b.c. The orthodox Buddhist *bhikkhu* who converted him was Nagasena. The "Questions" constitute a commentary on the psychology of the *Thera Vada* (Doctrine of the Elders) midway between the Nikayas and the fifth century. Some fifty pages are purely psychological and fifty more are concerned with psychic-philosophical dialogue concerning the soul. Seven types of *chitta* (states of consciousness) are described. They pertain to the seven principles of man. Progressively they expand the group consciousness from the small circle of selfhood to the illimitable expanse of selflessness that merges with the cosmic consciousness. Then, the mind as *manas* has become a completely flexible and "omni-scient" instrument. It should be noted, however, that even the omniscient mentality requires time for self-conscious cognition. Herein is the difference between the Consciousness that knows itself not, because it possesses no self, and that which can say *I know*. All selves are limited within the illimitable, and the limitation imposed upon them is the time of their existence. In that sense, time is life or *prana*.

Great stress is laid upon mental culture that leads to the evolution of high intelligence. Evil is presented as stemming from ignorance or the inertia of matter as *mulaprakriti*. However, human intellect is indicated as being uniformly of one distinctive type from the lowest to the highest. Specifically, that type is stated to be an aggregate, or group, of closely associated components that serve to combine various aspects into one concept. Definitely, it is stated that "there exists no permanent entity." The distinctive

difference between human and animal cognition is "insight," or intuition, as contrasted with empirical or reasoned thinking from cause to effect. Eight "attainments" are requisite for "applied insight." Analogically, they correspond to the four ventricles of the brain as operative in complete conjunction and accord with the two ventricles and two auricles of the heart, which form the octahedron of the solar "forces," or intellection.

The relationship between the individual entity and the solar collectivity may be comprehended most readily through music. Man, as perfected, will have six senses synthesized within the seventh of his spiritual essence. The ratio of his six perceptive powers to the superior eightfold "pure apperception" or complete octave of Surya is 6:8, which is the same as 3:4. This is the ratio of harmony between the three degrees or intervals and the four terms of sounds in the tetrachord that correspond to the upper triad and the lower quaternary of man's "principles." As noted by H. P. Blavatsky, *S. D.*, II, 600, the 4:3 "is a diatesseron in sesquitertia." In music, the size of the steps in the scale has varied, but the octave has not. In it, the eighth note is the first in a new pitch as indicative of evolution to a new plane of consciousness upon attaining at-one-ment with the Divine.

Milinda is informed that the three "intervals" of the upper triad are consciousness (*vinnana*), insight (*panna*) and the soul (*jiva*). Also, that "Awareness, Sire, is the mark of consciousness, and discernment, of insight; there does not exist a soul in beings." Here the integration of the soul in Be-ness is implied and awareness is identified with *vayu* (contact), and *surya* (collectivity of self-consciousness). In regard to the soul, it is explained that "The life [principle] (*jiva*) within, which sees through the eye, hears through the ear . . . and cognizes phenomena through mind," can in effect "see through" any one of the five senses now operative. Milinda inquires whether the senses could not be

dispensed with and the answer is that the "eye-aperture" does not see better with the eye removed. In other words, the senses should be utilized to perceive the universe in such a manner that the individual may participate in the architectural task of improving it. Sensation, then, becomes self-conscious perception as *jiva* causes the vehicle to "glow" like "fire in hot iron." Withal, *purusha*, as consciousness *per se*, that knows itself not remains quiescent, impassive, separate, and indivisible.

Stress is laid upon the orderly operation of the senses as acting in coordination (*mano*-consciousness). Essentially, this action in conjunction represents logical thinking in conformity to mathematical laws. They may be summarized in the four operations of arithmetic (addition, subtraction, multiplication, and division) that are continuous even when unrecognized. The sequence is asserted by Nagasena to take place through "inclination, existing structure, habitual process, and practice." As such, it is *vayu* or contact in all four quadrants of the circle of consciousness. In the process, volition is actively energetic "conation" that is fourfold as "being made to think, effort, fixing, and arranging." In the Abidhamma-Pitaka this is called "the solid grip of the burden." It involves the repeated pulsations of attention-inattention that must be sustained. Thus, the "fixing" entails constant "effort" as "mindfulness or *sati*." Seventeen ways in which it arises are enumerated, two of which are subjective as "association by way of similarity or contrast." This brings "mindfulness" into the category of "reminiscence" as the memory of past lives is termed by H. P. Blavatsky. It is a far more comprehensive concept than the "association of ideas" in occidental psychology. In the "orderliness" of perception throughout, the repetitive pulsation, or mind-heart beat, is rhythmic if "harmony" is to ensue.

The dialogue discusses the three operations of mnemonics:

remembrance of recent events, recollections of more distant ones, and reminiscence of antecedent life experiences. In the latter the trained intuition utilizes its "super-knowledge," or contact with cosmic consciousness. Likewise, the theory of dreams is brought into question. This involves the four states of consciousness referred to by H. P. Blavatsky as waking, waking-dreaming, sleeping-dreaming, and sleeping. In Sanskrit they are Jagrat, Swapna, Sushupti, and Turiya-samadhi. The contact with the "collective unconscious" of C. G. Jung is effected in the two dreaming states. Then as Job states, xxxiii, 14-16, "God speaketh once, yea twice . . . and sealeth their instruction." In general, this summary adheres to that given in *Buddhist Psychology* by Mrs. C. A. F. Rhys Davids. Of principal import is the consideration that the *Thera Vada* consists of psychological commentaries upon the scriptural texts of the four Vedas. Consequently, we may conclude that all religious doctrines deal primarily with psychology, or the study of consciousness as a "Holy" (synonymous with healing) system of therapeutics for the redemption of mankind. In view of which, H. P. Blavatsky stated that "Theosophy is the exact science of psychology."

EARTH'S MEMORY BOOK — *Allan J. Stover*

Everything that happens leaves a permanent impression upon both living beings and objects, whose past history may often be read as one reads the pages of a book.

To a geologist, a pebble picked up on a beach shows traces of its origin upon some mountain range, which he may even be able to identify. The first rough shaping of the angular fragment was received during its long journey to the sea. This may have taken many hundreds of years until through rolling and pounding amid the boulders of the stream bed during winter floods, the pebble became more or less ball-shaped. Once on the beach, years and centuries of flattening produced by the restless waves continually moving the pebble back and forth on the sandy shore finally reduced this ball to a flattened disk.

To a botanist a tree shows by its structure the history of its kind, for the individual in its development recapitulates the evolution of its race. Moreover the series of annual rings records the climate for every year of growth, indeed every rain leaves its imperishable writing in the wood of that year.

The history of the earth is divided into eras and periods which differ widely in climate and life. Yet a slender line of living plants and animals has continued from each period down to the present time, so that we may study the life of hundreds of millions of years ago, in what can be seen on an afternoon's walk. Each of these descendants from past ages, has received an impression from the succeeding periods through which it has lived.

Recent geological history reveals a series of alternate fluctuations in climate as the epochs of the great ice age were separated by

times of general warmth. Since the decline of the ice age some 25,000 years ago, cycles of warmth and cold, rain and drought have come and gone like the successive waves of a retreating tide; each leaving traces of its passing in the flotsam of lives, colonies, and arboreal islands scattered here and there over the country.

Sometimes these examples of past ages are quite impressive. Such is the case with two of whose existence I have just learned. The first, the Desert of Maine, a 500-acre area a short distance from Freeport, Maine, is described in an interesting tourist folder. Here amid the pine forests and fertile farms of a state far removed from desert conditions, lies an area of drifting sands which is with every year seizing upon more and more of the surrounding country. Where it will end no one can tell. According to the records this desert was at one time a fertile farm, then about fifty years ago a small patch of sand appeared which has steadily increased in size to the present day. Geologists believe the area was once the bed of a desert dry lake which had become overlaid by a thin layer of top-soil. When this was washed or blown away the fine sands were exposed and began to form moving dunes, which quickly invaded the surrounding country. Small as the desert is it is remarkable for its great variety of colored sands, and, strangest of all, there is even a tiny oasis about a spring of ice-cold water.

Maine itself is said to occupy some of the oldest land in the United States, great mountains have worn down almost to the plain, and large portions of the ancient land-mass now lie beneath the Atlantic Ocean. More recently continental across the country, carving and smoothing the land to its present form.

The second example of prehistoric survival, is described in the *Ford Times* for February under the title of "The Mislplaced Muskeg," by Burgess H. Scott.

Deep in the mountains of West Virginia lie a number of small bogs filled with a tangled growth of reindeer moss, sedge, sphagnum and lichen, characteristic of the Muskeg and Tundra over a thousand miles to the north.

It is as though a bit of northern life and atmosphere had been transplanted entire to this southern location, for even the animals and birds are of northern species. Spruce trees growing between the bogs, though in some cases a hundred years old, have only reached a height of 15 to 20 feet.

Unlike the preceding instance of a relict desert, the Muskeg Glades are isolated areas left by the great continental glaciers when they retreated at the close of the Ice Age. A period of increased warmth brings a wave of southern types far beyond their normal range. On the other hand a time of lowered temperature and increased rainfall forces boreal plants and animals far to the south. Both climates upon retreating or contracting leave colonies which may survive for thousands of years. It is thus nature preserves seeds of former vegetation in case she may need to use them again. It is more than that, it is a memory of the past preserved intact for him who chooses to read.

The Theosophical Forum

HALF-WAY HOUSE — *Elsa-Brita Bergqvist*

. . . for without vision the people perish.

There is always danger in extremes. Vice has been said to be excess of virtue, for any quality, however noble in itself, when carried to excess, deviates too far from the delicate balance that is required to hold the ship of life on an even keel.

The study of theosophical doctrines is no exception, for where much knowledge is gained, there is need for the counterbalance of understanding and goodness to maintain the equipoise of wisdom. Because of their immense fascination, these doctrines can cause us to become mere intellectual robots, possessing impressive quantities of knowledge and storing our minds with pat analogies and clever arguments. Our logic is unanswerable, our erudition, gleaned largely from the fruits of other people's research, impressive, and these benefits we confer on all who will listen.

But do we give anything of real value in so doing? Technical Theosophy, like any technical science, is a two-edged sword. It may be used to wound as well as to protect. We may indeed inflict serious damage on ourselves and others in pursuing knowledge without wisdom. For every fact that we truly understand, how many do we just learn? And in passing on our acquired knowledge, how often do we succeed in awakening a responsive glow of genuine comprehension?

It were better to lead one simple soul to intuit the bare fact of universal brotherhood than to convey to a thousand scientists how better to know and handle the matter of the earth.

Today, no one is blind to the factual possibility of the destruction

of civilization. We know this to be a physical possibility. We know also that the saving power lies, not in physical means, but in the deciding factor — the mind and will of man. If man wills, he may preserve the state of things now existing. If he wills, he may reduce humanity to an existence of primitive simplicity. The workings of karma may be plainly seen in this bald fact: If the destructive forces *in man's own nature* take the upper hand, he will be karmically forced — through his own agency — into a state of life wherein no further such barbarous disturbances of nature's harmony will be possible. Think of what it would mean, the destruction of our cities and "modern conveniences" — life with scarcely the barest necessities; no books, radios, electric light, concrete mixers, automobiles, at least for a long period of rehabilitation. This would necessitate a concentration on essentials, and life would be much simplified. Karma would see to rebalancing the forces, and man would be in a state of receptivity to the simple natural things that are essential. The superfluous additions, that appertain to civilized life and that blind us to the fact and purpose of living, would give place to a necessarily uncomfortable but salutary mode of existence.

The important thing is to see things as they are and to face the facts without bias. We are all instrumental in bringing humanity to this point, where the choice must be made between materialistic lust for power and the ethical principles that are of lasting value. To know this in theory is one thing. To *realize* that we can destroy our present civilization, as we formerly participated in the destruction of others, is a much more difficult thing to do, and one that demands insight and intuition. We may condense our thought to this: If we are incapable of refraining from destruction, then our spiritual welfare will demand that we suffer the consequences of this destruction. The fact is clear, yet it is astonishingly difficult to grasp.

Therefore, I repeat: It is better to bring home to a man, any man, the bare fact of universal brotherhood, than to present science with yet another weapon.

Humanity is composed of individual units, few of whom are incapable of unselfish devotion, provided they recognize the need therefor. Mankind as a body *can* be raised to glorious heights of altruistic cooperation and a grander civilized life than ever before, if each human individual can be persuaded to assume his share of the common responsibility. If each one of us were to resist one egoistic impulse and make one positive effort toward betterment each day, the collective result would be stupendous. More, it would add impulse to future efforts of a similar trend and the ensuing regeneration would gain momentum endlessly.

Nations and races, taken as units, develop more slowly than the individuals composing them, but, given the impetus of collective individual effort, would of necessity pursue the course followed by the mass of individuals. What a glorious prospect may be conjured up before the mind's eye of a world of peace and constantly growing and enlarging spiritual endeavor! We need not be discouraged by the obvious fact that the great majority of people would at first, or even for a long time, disregard or ignore any such collective effort. We, you and I, may make a beginning, and, however insignificant our contribution, it is nevertheless a step in the right direction. As we progress, more and more people will join our ranks until the majority will be working on the side of the gods.

When that point is reached, there will be a reversal of the balance, for the weight of public opinion will then add its overwhelming pressure. There is still no force so powerful as the tacit approval or disapproval of our associates, for, when all rewards and punishments fail to make an impression, we still

depend on our fellow-beings to gauge our estimate of ourselves. Among certain people it suffices to say that a thing is "not done" to prevent a man from breaking an unwritten rule.

There is so much of beauty, so much of peace, durable and glorious, in the teaching concerning the oneness of man and of nature, embracing, as it does, all others. The more this thought finds lodgment in our hearts, the greater does it grow. The more we permit ourselves to ponder on its endless ramifications, the closer do we feel ourselves united with all the living, pulsing, radiance of life under the sun. For the never-ceasing flow of the life-forces of spiritual nature touches us all and is most intimately concerned with every particle throughout the moving worlds. Those who would live for themselves, have they ever paused to reflect on what their fate would be, if they could, for even an instant, divorce themselves from all surrounding life? Without the cooperation of all nature, they could not exist. What air would they breathe, what food imbibe, what would the lone consciousness cognize? We live only by our impact upon other lives, their impact upon us, on which interchange we are entirely dependent. It is a beautiful thought and one that inspires to genuine altruism and grateful service to all beings.

The Theosophical Forum

THE SPLENDOR OF SERVICE — *Douglas Kingsley*

The light of man's Inner God is forever shining into the darkness of his lower self, its radiance prevented from presentation by a consciousness of selfish interests.

Splendor is exceeding brilliancy of emitted or reflected light. A consciousness busy conferring advantages on others deprives the personal selfish portion of man's composite nature of subsistence, and the dark clouds of self-ness, for want of this consciousness which is necessary for its maintenance, prove to be only the baseless fabric of a vision which vanishes, leaving not a rack behind, under the splendor of the rays of man's Spiritual Sun.

Service is the act of helping another or of promoting his interests in any way.

True Service does not consist in meting out to another that exact measure of assistance which we think and decree his merit. This is a reasoning of the human intellect which erects its own little and narrow notions of what is effectual Service and measures off something with its own little tape-line, and calls that Spiritual Service.

Service confined to intellectual computation and performed according to the rigid rules of legal right tends to thicken the veils of selfhood, because it is not Splendor creating Service, but becomes selfish indulgence.

Splendor of Service is that brilliancy occasioned by any work done for the benefit of another.

A liberal spirit, generosity, and earnestness to be of any kind of Service are the marks of the one whose inner Splendor has been

evoked by acts of Service. He is not careful to return no more than he receives. He serves to the limit of his ability to give to others all they desire and refuses to inquire to what purpose the recipient has set the bestowal. Not content with the duties found along the path of his everyday life, he goes out to find them, not only *willing*, he has a signal *longing* to find the deepest opportunities where he may serve. The natural work of such a man is practical life. Love of generosity and Service, as the swabhava of his Spiritual Monad, must appear in the life marked by these qualities. That is the only operative decree of the Ancient Wisdom.

The Service performed for another may not astound the world; even the beneficiary may deem it as inadequate; but this is no concern of the dispenser. He has only one examination to conduct, that of the motive in his heart. When the motive has been one of pure generosity, the results of his conferral are not investigated, the consequences of his motives and actions are regulated to Karma for continuance of action, and where these altruistic motives are present the irrevocable Law is that Splendor will be displayed to him who has fulfilled his duties of unselfish Service.

The contemplation of Spiritual Splendor implies that of its opposite, Darkness. When the Spiritual Self is held to be Splendor, it is not because Darkness is non-existence, but because Darkness is not included in the Swabhava of man's Inner God, it being a condition of Cosmic consciousness-substance with its own swarupa or characteristic vehicle, which is Splendor. This does not mean that Darkness has a separate and independent existence, but that man, corresponding to all other Beings and connected with all in the Cosmic Unity, has both natures, that of an active cause which is the Principle of Light that comes from the ethereal substance that composes the active cause, and that of

a passive cause which is the Principle of Darkness that comes from the earth or the gross matter which composes the passive cause.

A departure from the subtilities of Logic will lead to more familiar ground, where the Splendor of Service is reduced to its simplest terms. The fulfillment of the Law is a common observation. They who have lived a life of Service are radiant with the Splendor which comes only with the enjoyment of pure happiness; they who have lived a life for self and worldly acquisition can attest for themselves to the absence of Light.

The Theosophical Forum

THOUGHTS ON A NEW ACQUISITION — *J. H. Calmeyer*

We have all of us sometimes experienced that feeling of slight disappointment when we finally did get a thing that we had long wanted to possess and keenly looked forward to possessing. There is at first, of course, a sense of elation, of achievement and gratitude. But then, with a little pang of regret, we may have felt that momentary sensation of a void, that feeling of something irrevocably lost. Never again to be warmed by that glow of expectancy, that watching of the unfolding of the petals of this flower, the seeds of which we planted ourselves — let us admit it — with such tender care in our mind.

Now there is a particular significance in this. A significance which, under the law of correspondences, we see repeated in other fields of human consciousness. It is briefly this, that our comprehension can only encompass a state of being, not what H. P. Blavatsky in another connection has called a state of be-ness. We can understand an active growing-into, not the state of utter, passive attainment. Action is our sphere of human endeavor. At the end of action there looms up the distant, ultimate goal, which to us is an impenetrable and implacable void, a nothingness of which we cannot even say that it is not because there is nothing there that can either be or not be.

When deep in ourselves we sink the plummet of our searching mind to find the essence of our being, we find beyond the heavy layers of our emotions and our habit-conditioned thinking, something that forever observes our very observations and all the varied field of our thoughts and actions — our true, eternal self. Somehow it is loose from, and yet tied to, this body of ours. It is like a star in heaven tied to the dragnet of our physical, emotional

and mental body.

Why, we ask ourselves, should it be necessary for this heavenly body to be tied to such mortal ballast? Is it that everything that is in itself perfect has a natural tendency to purify whatever it comes in contact with, and that mankind is thus given the chance of rendering its lower vehicles perfect through the purifying agency of the kernel within us that is of God? But this is not an altogether satisfactory answer, for why should it be necessary for the immaculate kernel to be mixed up in the first place with these lower vehicles and be contaminated with the imperfections of the unachieved?

Is it not rather that the Universe can manifest itself to us only within the limits of our comprehension, or, to put it more correctly, that we can take mental cognizance only of that aspect of the manifested Universe that we, with our limited understanding, can comprehend?

Of the stars we have no immediate cognizance. There may have been other races of men that had some understanding of the heavenly spheres as we understand our fellow beings who are near and dear to us. But if such a "feeling" ever existed, mankind as a whole has now lost it. Our senses are only able to translate the radiations of the stars into impressions of physical size and luminosity. And so would the "star" of our ego to which we are "hitched" be wholly incomprehensible to us in the ultimate perfection of its God-like essence, but for our striving towards that perfection, but for the evolution of our imperfect being in a specific and discernible direction, which alone makes the far-away goal intelligible to us. Without this action, without this constant development and growing-into, which gives meaning to our life, there would be no consciousness of the spirit of God. There would be no consciousness at all, for consciousness in its

essence is one and indivisible. Our actions would have the mechanical causality of the toy and the robot. For it is only in the consciousness of the whole that we can understand the parts.

This then is the law of our human understanding. Our brain is but attuned to an approximation of the ultimate values. We can never comprehend the ultimate. We can only understand the action which draws constantly nearer, but never reaches its goal. The principle involved in the differential calculus illustrates this quite effectively.

The ultimate goal is to us a mysterious and almost frightening void from which the causal mind shies away.

This is so much part and parcel of our mental make-up, that our mind rebels at inactivity of any kind. And this is what causes the wishing for a thing to be sometimes sweeter than the actual possession, when the wishing has come to an end and we can look forward no more to the miracled delight of fanciful anticipation.

However, even if we do feel at times that certain momentary pang of slight and undefinable disappointment, there are fortunately compensations. For having a thing is not by any means fully knowing and possessing it, and every day we can discover it anew. In every unseen angle of it, in every new use, in every new appreciation of it, again we receive it as a new gift to us. Not until the day has come that we do not notice it any more, that we use it mechanically and fail to derive from it any new delight, does it become a dead thing to us. What we have gained in the acquiring, we shall then have lost in the possession of it.

THE MESSIANIC FORCE — G. F. K.

"Neither do men put new wine into old skins, lest the skins be burst, and the wine is poured out, and the skins will be destroyed; but men cast new wine into new skins, and both are preserved together" — thus did Matthew, publican and scribe, record his Master's teaching: that the power and strength (*dunamis*) of a new Messianic force will not be poured into the musty "skins" of formalism, but will seek fresh vessels of interpretation. (Note the word in Greek is *askos*, meaning "skin," into which wine is poured, and not "bottle," as usually translated.)

Today, after some 2000 years of straining after the preservation of the wine-skins of Truth, we are beginning to recognize that it is the wine, and not the vessel, that is the Message; and that unless the vehicle of interpretation is constantly renewed by spiritual experience, the force of Truth will burst the vessel, and both "wine" and "skin" be destroyed.

There is no lack of earnestness in contemporary religionists, but there is indeed a lack of confidence in their ability to solve what one Presbyterian minister, Dr. Kenneth Miller of the New York City Mission Society, calls the "unprecedented needs of today." With not a little insight he questions:

How else may one explain the many attempts made this year to interpret afresh the life and works of the great souls of the past such as Thomas a Kempis, Francis de Sales, John Woolman, Soren Kierkegaard, as well as Luther, Calvin, Thomas Aquinas? Water for the revival of the soul must come from deep wells. — (Quoted from the *Saturday Review of Literature*, February 19, 1949.)

We echo: water for the revival of the soul, and of the spirit, must come from the wellspring of Truth — and not suffer taint by its passage through literalism. But where the wellspring? How find that pure stream of Truth unpolluted by dogma, creed, hypocrisy or priestcraft? Book after book on religious themes has appeared for generations, and religion today is by no means a "dead issue" we are assured, with the Bible continuing to be a "best seller." But organized religion has not yielded the answer as casual glance at the quality of religious output confirms. A grave insecurity of the spirit plagues the ministerial world, whose resources are badly strained to make religion a *must* in everyday affairs: in education, politics, social conditions, morals, psychology, as well as in international relations. Perhaps never before in recorded history has the search for religion played so prominent a role in Western psychology. Despite the avowed atheism in the modern (often but skin-deep, because born of contempt for the sham of pretended faith), there is sensed a deep yearning for religion *per se*, for the *re-ligio* or "leading back" towards spiritual foundations. The World Council of Churches which met last year at Amsterdam, Holland, where broad-scaled clergy from all parts of the world frankly discussed the problems facing them, was dubbed the "greatest church meeting since the Reformation." Still the problems remain unsolved, this exchange but serving to emphasize the spiritual inadequacy of existing religious formulas. The age-old circumstance rears its ugly head: old skins, cracked and withered by literalism, cannot retain fresh wine; aged formulas of faith, crystallized and degraded by priestly observance, cannot produce the vital solvent. Is there, then, no answer?

For seventy-five years the theosophist has studied and absorbed the Oriental atmosphere of thinking, leaving in large measure the Christian Scriptures to follow their well-grooved lines of

procedure. There was ample justification in this, for H. P. Blavatsky could no more have poured the wine of her new spiritual Message into the already dried skins of credal Churchianity, than could Jesus 2000 years ago have utilized the dying formulas of thinking of his day. The present upheaval in priestly circles, however, and the insistent demand by both clergy and layman for *a new and living interpretation* of the Message of Jesus, produces its call, and theosophists are challenged once again to open their Bibles and with fresh vision untrammelled by dogma search out the *universalism* of the Christ-teaching.

In the words of A. L. Conger, students should attempt to

decode and make intelligible to the Christian adherents in the West the true value and meaning of the so-called Christian scriptures, and to develop the philosophy in the New Testament in the light of Theosophy, which will ultimately draw out an exposition of the Western conception of the SELF.

Armed with this incentive, we have opened our Bible, and in the light of the Greek original stand amazed at the pristine beauty of the Master's teaching: for within its pages, hidden here, and in places widely open, is the purity of a great Occult force. Rules of training, so simply stated, that their profundity is lost in miracle, allegory, or symbol.

And yet, even with the Sermon on the Mount, the Lord's Prayer, and the story of the Great Passion — may we not better say Compassion? — the searching question arises: how is it that the record of these teachings made so long after the passing of their Lord could have wielded so powerful an influence on Western civilization? Who was Jesus? To aver that he was indeed the Son of God, an incarnation of the Logos, born of the Virgin, one with the Father, either speaks volumes *if understood* — or says nothing

at all. To recognize that here a spiritual-divine Force incarnated for the world's redemption at a balancing point in racial cycles is to come nearer the truth: one more effort of The Lodge had been tried.

It is the Messianic force that concerns us, not the intellectual depth of philosophy, for truth to tell, one ventures to suggest that had it not been for the *backing of The Lodge at this particular junction point in racial history*, the entire episode of the coming of Jesus might well have been lost in the shuffle of evolution. How remarkable that not a single historian of the period even notices his existence, much less his dramatic death! And yet, is it indeed so strange to a theosophist, who considering present day history will observe that not a single text-book, either of religion or philosophy, ever mentions Blavatsky, much less Theosophy; and when she is mentioned in literature it is more often than not as some strange weird phenomenon, or a charlatan to boot!

What, then, is the theosophical concept of Jesus? For answer we could hardly do better than quote from *Isis Unveiled*, the first theosophical work of Blavatsky, published in 1877:

. . . all the civilized portion of the Pagans who knew of Jesus honored him as a philosopher, an *adept* whom they placed on the same level with Pythagoras and Apollonius. Whence such a veneration on their part for a man, were he simply, as represented by the Synoptics, a poor, unknown Jewish carpenter from Nazareth? As an incarnated God there is no single record of him on this earth capable of withstanding the critical examination of science; as one of the greatest reformers, an inveterate enemy of every theological dogmatism, a persecutor of bigotry, a teacher of one of the most sublime codes of ethics, Jesus is one of the grandest and most clearly-defined figures on the panorama of

human history. His age may, with every day, be receding farther and farther back into the gloomy and hazy mists of the past; and his theology — based on human fancy and supported by untenable dogmas may, nay, must with every day lose more of its unmerited prestige; alone the grand figure of the philosopher and moral reformer instead of growing paler will become with every century more pronounced and more clearly defined. It will reign supreme and universal only on that day when the whole of humanity recognizes but one father — the UNKNOWN ONE above — and one brother — the whole of mankind below.

— II, 150-1

Before opening our Bibles, however, we should well understand that the first problem in contacting the Christian mind is the following: the entire structure of Christian psychology is one built on "faith." Now faith *per se* is one of the most beautiful and cherished qualities of discipleship; but it must be a true *pistis* — to use the old Greek and Gnostic term — a *pistis* or "faith" born of knowledge, of inner conviction, of absolute trust in the LAW. When the *pistis* or faith becomes merely a blind unreasoning following of some one else's say-so, without the spirit meeting with the mind in knowledge, then the faith becomes sterile, and at worst a deterrent. No matter how released the individual Christian adherent may be from the dominance of the *rule of faith*: faith in the blood of Jesus, in the Christ as the only begotten Son of God; in the Immaculate Conception as such, in the Crucifixion and Resurrection *as such* — no matter, we repeat, how emancipated he may be from the overlordship of the Creed, there is still the psychology of the entire Christian belief, which is founded on, supported by, and expands today on, the *faith in the supernatural and unique appearance or manifestation* of the Christ, as the Son of the Father. For despite the preponderance of

evidence that Jesus, the Christ, was but one of a "long line of Wise Men," Saviors of the Race, who come at appointed times, despite the vast array of Teachers, who have been born of an Immaculate Virgin, who have suffered Crucifixion, Descent into Hades, Resurrection and Ascension on the third day, there are still those who cling tenaciously to the theory propounded by embarrassed Church Fathers in the first and second centuries of the Christian Era, that the "Devil has his Christs," and that, as Tertullian and St. Justin explained, "a long time before there were Christians in existence, the devil had taken pleasure to have their future mysteries and ceremonies copied by his worshipers"! The promised Savior — Jesus the Christ — was, in their view, the culmination of the gropings of former periods, the "Desire of all Nations."

But with Church history we have no immediate concern. Those who are interested in the development of the Church during the first three centuries are strongly recommended to study F. C. Baur's *Church History*, published in English translation in 1878, the culmination of years of intensive labor to divest the supernatural and unique from the elements of Christianity, and with reverence yet powerful scholarship to interpret all the phenomena surrounding the appearance of Jesus, the coming of Christ, as "part of the great historical development." It is refreshing to realize that always there are pioneers, independent investigators, who despite the overbearing theological atmosphere of their surroundings, yet have courage, intuition, and the tenacity of purpose to search for Truth, and finding it declare it boldly.

It may seem strange to some today, who ungrounded in Christian belief, and to whom at best the Christian scriptures are but good literature, to make so "much ado about nothing." But it must be remembered that we live in a Christian land, where millions of

earnest men and women are spiritually starving, hungering for just that sound philosophy which can be found in Christian thought. However much the concept of Tertullian has become broadened by time and scholarship, however much we may feel that the Christian world as a whole has advanced beyond the narrowness of such a belief, there is still that closed-door attitude of faith first, inquiry second. We say, faith yes, but strengthened, illumined by "inquiry," the investigative spirit, for as Plato truly said: "Life for man without inquiry is not worth living."

A study of the present illumines the past; research into the past makes clear the present. A glance at the spiritual unrest of 2000 ago should give courage and a new hope. What happened is taking place now. Physically, politically, morally, education ally, socially, to say nothing of the spiritual turmoil of the period the nations surrounding the Mediterranean basin were in a flux of change, unrest, of spiritual and psychic ferment. The old forms of the spirit had cracked, yet the religious yearning was deep, insistent tempestuous in its demand for expression. The Greek mysteries had become but orgies of a degraded type; the old gods and goddesses of Classic mythology were but a mockery of a once deific communion—the rites of Isis in Alexandrian Egypt, while retaining much of the splendor of ancient days, were despoiled of the Spirit. Zoroastrianism had become a form, a mere shadow of a vanished glory. The Hebrews no longer produced their Jeremiahs whose integrity and courage marked the highpoint of Jewish power; even the heroic defiance and benevolent rule of the first Maccabees had gone, and the Jews once again had become a dominated people — their religion formalized.

What was the secret of this decadence — the three once potent religious streams, Hellenism, Judaism, and Zoroastrianism, now but empty sepulchers, the living spirit long since fled? Was it the influx of the new Christian force that shattered and crumbled the

old? Should the decay of Paganism in all its forms be laid at the door of Christianity? Not at all. Was it not rather that the turbulence of the time was utilized by Those who watch over the destinies of nations to sow the new seed in the fresh turned soil of inquiry? Was it not that the new cycle then aborning had slowly, but surely, been in seeding for generations, and that only then at that particular convergence of cycles when the Sun slipped into the new zodiacal influence, the Piscean, it could manifest? For suggestive answer we quote from Professor Baur of the Tubingen School, whose indefatigable researches into primitive Christian origins have earned him the gratitude of scholars and thinkers the world over:

Decay and dissolution, . . . had completely seized on the old religions. . . But what had so thoroughly broken up the old faiths? They were crumbling into ruins before Christianity came to touch them. Some other power must have been at work on them which was stronger than they. It is a mistake to think that ages of transition, like that immediately preceding the appearance of Christianity, are simply times of decay and disintegration, when all spiritual and religious life is completely moribund. At such a time the old forms in which religion used to move do indeed decay. What used to fill them with life and reality departs from them, till the hollow forms alone are left. But the very cause of this process is, that the *spirit, whose religious feelings the forms once served to express, has expanded and risen beyond them.*

— F. C. Baur, *Church History*, I, 9-10 (itals. ours)

Some "other power" had indeed been at work. For The Lodge wastes not its force on dying forms, on departmentalized religious expression. The once wide-sweeping *universalism* of the old philosophies and religions, of Hellenic, Persian and Hebraic

thought — a universalism of *spiritual* concept, not of material power, had given way to particularisms, so that the spirit of Truth had "expanded and risen beyond them." Professor Baur continues:

Where an old system decays we may be sure it is because the new truth which is to succeed it is already there; the old would not decay if the new had not arrived, be it but in germ, and been long labouring to undermine and eat away the existing structure. — *Ibid.*

We can be assured that the "balance of power" in spiritual things is maintained: where it retreats in one sphere, the spirit is sure to pour forth in a new and ready vehicle. Constantly is The Lodge alerted to the great cyclic turnings of the wheel of destiny, so that not only do human and divine cycles conjoin, but the convergence of terrestrial with solar cycles is well observed. Is it so strange, then, that when the Sun slips from one sign of the Zodiac to another (in its precessional cycle) that the forces then released should be utilized for a special outpouring of Spiritual force; that the solar power magnetically generated by the transfer of zodiacal emphasis from one mansion to another should not be accompanied by a *spiritual* release through some "angelos" or messenger from the Sun? This thought is not unnatural to the Orient, for every child there is taught at its mother's knee of the ten "incarnations" of the Vishnu Avatara — nine of which have already appeared, the tenth to come serving as the prototype in fact of the Christian Messiah still to appear, the "second coming" of the Lord. Nor is this concept so foreign to the emancipated West to whom the *Gita* has become a companion and guide, for Krishna addresses Arjuna, his disciple, as follows:

Even though myself unborn, of changeless essence, and the lord of all existence, yet in presiding over nature — which

is mine — I am born but through my own *maya*, the mystic power of self-ideation, the eternal thought in the eternal mind. *I produce myself among creatures*, O son of Bharata, whenever there is a decline of virtue and an insurrection of vice and injustice in the world; and thus *I incarnate from age to age* for the preservation of the just, the destruction of the wicked, and the establishment of righteousness. (ch. iv, ital. ours).

But what of the present cycle of tortuous upheaval? The Age of Pisces is closing, the Aquarian Age is arriving. Is it not marked by unrest, disintegration and decay, and a thorough breaking up of old ideologies, so that the world hungers for a new Messiah, a new revelation, a new dispensation? Strange that "the Light shineth in darkness, but the darkness comprehendeth it not" remains as true today as when John first wrote those immortal words. The light of Theosophy is clear and strong, but the darkness of credal thinking is still too comfortable for religionists and the world-at-large to welcome the light of Truth. Yet this is not remarkable, nor is it unique in history, whether spiritual or profane. Always the borning time of new growths is slow, taking centuries perhaps before the fruitage is seen. The pregnant words of Baur come again to mind, which though applying to the advent of the Christian Messianic force of 2000 years ago, are equally applicable to the reception of Theosophy since the coming of H. P. Blavatsky in 1875:

It may be long before a new kind of spiritual life takes such shape as to arrest the notice of the world. But the plastic spirit is active all the while, though unobserved; the leaven is working deep out of sight, and the unresting vital process cannot be stayed, but goes evenly and regularly forward, in its successive stages, until it has produced a new creation.
— *Church History*, I, 10

Slow though the reception of theosophic ideas may appear, we have no quarrel with the speed of transition. The emancipation of thought during the last 75 years has been gargantuan, and needs no defence. The important point is to draw the parallel sharp and clear between the movement of 2000 years ago which Jesus initiated, and the Theosophical movement of today. Both shattered and thundered at hypocrisy, at sham, at the vanity of selfish prayer. Where Jesus scorned the Scribes and Pharisees of his day, who represented all that was constricted and formalized (though be it noted that the Pharisees embraced far more liberalism in spiritual thinking than the Sadducees, being used by Christ merely as an example), H. P. Blavatsky scourged and lashed at the hypocrites and pretenders of her day. Liberalism in Christian thought in the 19th century was a thing to be dreaded. Originality of belief some three or four centuries ago meant burning at the Stake. And as for the Inquisition and the cruelties it has perpetrated in the "name of religion," one wonders that there is yet left an atom of strength in the Christian faith. So great, however, is the force and power (dunamis) of the original Messianic expression of Jesus, that even today, with its wornout formalisms, it brings a message of strength to many in need. It is not enough, however, to satisfy the present demand for more light, more hope, more sound philosophy.

Where then is the wine of the spirit belonging to this age, to this Messianic cycle? In the vehicle established by Those who sent forth the new "angelos" or messenger to establish a fresh vessel of Truth that men might once again feel the freedom of a universalism of teaching, instead of the narrow particularism of a crystallized faith. In other words — in that movement started by H. P. Blavatsky who was the vehicle of that titanic Messianic force that was to pour into new vessels of the spirit a new wine from The Lodge. She might have called it anything — she called it

Theosophy — a most appropriate term, it being the secret name among the occultists of the past fifteen or more centuries, kept alive in crypt and cave through those dark terrible Ages in Europe when the few, tired of the dregs of literalism, thirsted and found a draught of true wine.

The Theosophical Forum

THE ORIGIN OF MAN — *Peter Stoddard*

The origin of Man is a subject which engages the earnest attention of every intelligent person at some time of life. Who has not heard the questions of children on this subject? Do not our scientists constantly revert to it? And do we not all in our maturer years ponder upon it?

What sources of information have we on this subject? Mainly two: —

- (a) Ancient documents, whether considered sacred or profane.
- (b) Ancient remains, such as skeletons, implements, etc.

At certain periods in European history free inquiry on this subject has been impossible because of religious intolerance, but at the present time that hindrance is largely inoperative, and men are at liberty to explore the whole field as far as they can discover it. How far have the pronouncements of European Religion and Science taken us towards a solution of the problem of the origin of Man? We have the Bible account of creation, which, taken literally, is just impossible nonsense. We have the gropings of Science — and what do they amount to? Let me quote from a world-authority on this subject, Professor Frederick Wood Jones of Manchester University: "Thirty years ago Scientists thought they had solved this problem, but today they are in a state of complete uncertainty."

Now what does Theosophy say about it? Broadly, that in spite of the unsatisfactoriness of both the religious and the scientific teachings, they do, if properly understood and interpreted, constitute a considerable approach towards a solution of the

question.

The problem is: In what form, and where, and at what period, did Man first appear? The questions are simple, but the answers are complex. And where there is a complexity, it is desirable to try to establish a General Principle.

There is an age-old Principle which supplies the need — Evolution; not "Evolution" in the modernly accepted meaning of the term, which should be rightly called "Transformism" — this Transformism teaching that one stock or phylum in Nature can become another stock or phylum by physical transformation. Not at all. But Evolution in its ancient etymological meaning in the sense of unfolding what is within. Yet Evolution is only one side of the problem. Do not picture Evolution as simply a straight line of development from the lesser to the greater. There are no straight lines in Nature and every curve upward is followed by a curve downward. When the curve of Evolution has proceeded far enough, its opposite curve Involution, on the other arc, sets in. In fact, as Theosophists see it Evolution is inevitably accompanied by Involution, and vice versa.

If Evolution is a bringing out of what is within, what is Involution? Involution is a process of infolding, of what was previously unfolded. Involution is the reverse process of Evolution. As a simple illustration, take a wave or billow of the sea. When it rises it is pushing back the air and the air is receding; but when the wave falls the water is receding and the air is taking its place. As one advances, the other recedes, and as the one recedes the other advances. That is what we mean by Evolution and Involution — they are concurrent processes.

Now Theosophy teaches that these two processes are ever-present in Nature, and that Man, being an inseparable part of Nature, is subject to the same processes; and that the appearance of the

Human Stock, its development, its maturity, its future history and its final destiny, are an illustration of this double process of Evolution and Involution. Thus the Principle is theoretically established. What are the details by which it can be practically demonstrated? How can it be shown that the Human Race experiences both an Evolution and an Involution?

First of all, What is Man? Let us look at ourselves. We have a body; but we also have volitions, thoughts, desires, impulses, feelings, ambitions, aspirations. Roughly, Man is Dual — the material and the immaterial, Matter and Force, Body and Soul, Substance and Spirit. Can anyone point to any material action in Man or in any other part of Nature, which is not preceded by an invisible Force, or Desire or Will? The visible is always animated by the invisible; and in the long processes of Man's Origin and Development, the same observation holds good — the Material is preceded by, and caused by, and animated by the Immaterial. This is a fundamental Theosophical concept, but I am stating it very baldly, for simplicity.

Now a step further. Sir James Jeans' theory of "Singular Points" postulates vortices in the starry depths of space, where matter emerges from the invisible into the visible. In the process of condensation invisible vapor becomes visible water or hoar frost. What are clouds but collected vapor or matter which was previously present but invisible?

Theosophy says it is true that matter as we know it once existed in refined forms on more ethereal planes; and prior to that it was in a spiritual condition; but that through a certain number of Ages, and on various globes of life, it gradually condensed, thickened, grossened, until it became material as we know it. That was the evolution of Matter and the involution of Spirit. Further, Matter, as we know it, will, in the far distant future, become less

gross, more etherealized, and will return to a super-refined or spiritual condition — gradually, and through various globes of life appropriate for such processes. That will be the involution of Matter and the evolution of Spirit. Thus, the visible emerges from the invisible, and, after a full period of expression, retires again into the invisible.

So with Man — the Human Stock. Human flesh and bones, etc., have undergone a gradual solidification in the far past, and in the far future the process will be reversed, and human bodies will become more refined and less gross.

Man's association with this earth is comprised in Seven Great Races, or "Root-Races," of which we, at the present time, are in the Fifth. The present Great Fifth Root-Race had its beginnings four or five million years ago, and it will persist for a similar period in the future, after which it will be followed in due course of time by the Sixth, and then later by the Seventh. This Fifth Root-Race grew out of the preceding Root-Race, the Fourth, and that grew out of the Third, and so on up to the First Root-Race. Prior to the First Root-Race on this globe the Human Life-Wave had a history on a previous globe — but we shall not speak of that for the present. The First Root-Race on this Globe (called Globe D in Theosophical parlance) possessed forms and characteristics which are quite unfamiliar to present-day conceptions. They were the original protoplasmic sketches of the true Man or mankind that was to follow in far later Ages. Their bodies were composed of "astral" matter, a kind of matter that would be quite invisible to normal present-day sight. Their size was gigantic, and their shape was ovoid. They were not truly Human as we now understand the term — for they were mindless, instinctual. As the Ages passed, this First Root-Race slowly grew more material in structure, *i.e.*, the Astral slowly thickened or condensed, became more concreted.

The Second Root-Race, which was the First Root-Race merely become more concrete and material, was likewise distinctly semi-astral, was indeed a gelatinous, filamentoid race, physically speaking. Both the First Root-Race, and the Second, had neither bones, nor organs, nor hair, nor a true skin. In the latter part of the Second Root-Race, the internal structure was distinguished by nuclei, which were destined to become the organs as we know them, and filaments which were destined to become muscles, nerves, blood vessels, etc.

The First Root-Race reproduced itself by fission, that is to say, by a portion of the parent breaking off, such portion growing to be like its parent, by division much after the fashion that living cells today follow. They were sexless.

When the Second Root-Race gradually appeared on the scene, though still ovoid in general form, they began to show an imperfect outline in form of what was in ages later to become bodies of human shape. They were still mindless, and their method of reproduction had changed to budding or gemmation, *i.e.*, a small part of the body, a bud, separated from the parent, dropped off from the main trunk, and thereafter began to grow and to develop into a being which was in all important respects like its parent. At about the middle period of the Second Root-Race, these buds grew more numerous and became what Zoologists would call human spores or seeds, or what H. P. Blavatsky more accurately called "Vital Sweat."

Neither the First nor the Second Root-Races left any skeletal remains. The latter part of the Second Root-Race, and the early Third, through the production of these vital cells, became the progenitors of certain forms of life, which, ages later, developed into the various Stocks of Mammals.

After several millions of years, the Third Root-Race began, perhaps 26 millions of years ago in Geologic conditions which are recognized by Science today as the Paleozoic, Mesozoic and Eocene. The continent they inhabited was the Lemurian, roughly where now is the Pacific Ocean. It was during the Third Root-Race that skeletal human remains began to be deposited.

From the commencement of the Third Root-Race, the bodily condition showed a further gradual thickening or concretion into flesh, the shape also gradually becoming more human, but still gigantic in size. This was the era of the colossal Pre-Tertiary Giants and Titans, in the Secondary period, recognized by Science as the Age of the Gigantic Reptiles and Monsters of Air, Sea and Land.

The psychological condition of the Third Root-Race was, in the early part, still mindless and instinctual. Man was indeed at that time merely an animal, but a Human animal, derived from his own stock, not from any animal stock. In general appearance somewhat similar to man as we know him today, but still gigantic. It was while Man was in this dazed, unawakened, mindless condition, after the separation of the sexes, that he allied himself with certain mammals, and produced the simian monkeys, but not the Anthropoids (they were much later). But let us not go too fast. In the early Third Root-Race, which was then double-sexed or bi-sexual, androgynous or hermaphroditic, the method of reproduction was by means of the exudation of vital cells. They were called "The Sweat-Born." Later, they were actually egg-layers. Even today the human ovum is an egg.

Later, as said, before the awakening of the Human Mind, the separation of the sexes occurred, and the method of reproduction which is known today had its commencement. But sex, as we know it, is only a "passing phase," affecting the latter part of the

Third Root-Race, the Fourth and the Fifth. It will have disappeared in the Sixth and Seventh Root-Races of Mankind.

And now we approach that period in the biological history of Man when he truly became Man in the fullest sense of the word as we know him. It was about 18 million years ago, and something happened which can truly be described as the most important, the most marvelous and far-reaching event in the life of Man on this Globe up to the present time. It was when his Mind awoke — it was when the powers of the Mind began to be used, the power of independent judgment, discrimination, self-analysis, the power to discern and control the emotions and impulses — in a word, self-consciousness. From that time human beings became Thinkers, contrivers, planners, builders, artists, conscious learners. They acquired the knowledge of good and evil. They began to be potential Gods. They entered upon a new phase, the most important one of their existence, a phase which will not be complete until they have become self-conscious Gods.

This new grade could not be, and was not, achieved without help. Higher Beings, from a previous period of evolution in prior worlds, made it their sublime work to light up the mental powers in Man by deliberate mental contact with them. These Higher Beings are called the Manasaputras, or Sons of Mind. They were, as said, highly-evolved Men of a previous period of evolution, and by a species of perfectly natural White Magic they awakened Man's sleeping quality of Mind.

No evolution of manifested life occurs without the co-operation or the original intervention of more advanced beings — as witness the seed, which is born from the matured plant. And just as Man's physical form and lower principles developed under the guidance of the Lunar Pitris or Fathers, physical generation, as it is well-known, being largely influenced by the Moon, so the development

of his Mind was achieved through the help of the Manasaputras. Before that time, men were merely human animals, that is to say, the only parts of their constitution which had come into manifestation were those known as the Lower Quaternary. The Upper Triad of Man's Constitution was still in embryo or dormancy, and it needed the intervention of beings who had already developed this Principle of Mind in order to awaken it. These Beings, Manasaputras, belong to a superior Hierarchy of Intelligences on the Light-side of Nature and are connected with the Sun. They are the Men of a former period of manifestation, who incarnated in the semi-conscious, quasi-senseless men somewhat later than the middle period of the Third Root-Race. It was an act of sacrifice on their part, because they belong to one of the Hierarchies of Compassion. They did it in order to give us intellectual Light — the Divine flame of self-consciousness, relatively small though that may yet be. They set us on the path of self-directed evolution. We became responsible.

As we all very well know, the Manasic Principle in Man is not yet fully developed. In the masses of people the intellect is used in a very small degree compared with its possibilities. And even intellection is only one of the lower powers of the Mind (or Manas). We must remember that Manas was only awakened in the Third Race, although for immense periods its use and enjoyment were unsullied by the lower passions and desires. But inevitably, the Third Race being on the Descending Arc, a grossening and a coarsening process was to occur, especially so when the Fourth Root-Race became dominant at the lowest point of the Descending Arc. In those former innocent times, when the Gods walked with men and conversed with them and guided them, mankind enjoyed the use of the THIRD EYE. This was the organ of Spiritual Perception. But as the fall of man became accelerated on the downward cycle, this organ gradually receded from its

functions and eventually became atrophied. It is now laid aside for future use, and its vestigial form is to be found as the Pineal Gland. Records of those dying Lemurian Races are perpetuated in the legends of wicked giants who had an eye in the forehead. The story of Odysseus putting out the eye of Polyphemus, a Cyclopean giant, with a red hot brand; and Finn in Ireland who is said to have destroyed a wicked giant's eye with a heated iron spit (iron being a symbol of passion and desire), epitomize the history of Man's decline from purity to grosser materiality.

Thus was the birth of the Fourth Root-Race commenced, it also being destined throughout the millions of years of its Seven Sub-Races, to experience periods of great material splendor and those of grosser unhappiness. But the wonderful civilizations of Atlantis have now all disappeared, and the Fifth Root-Race is now limned upon the screen of time. Mankind is once more slowly climbing on the upward or Ascending Arc, gradually etherealizing and spiritualizing his Fifth Principle (Manas) in this Fifth Root-Race.

And as he will eventually approach the beginnings of the Sixth Root-Race, the Manas Principle will expand with ever greater power as it becomes illumined with the Sixth Principle, Buddhi.

The Theosophical Forum

ON PYTHAGORAS — *Irene Croiset van Uchelen*

Pythagoras was born about 528 B.C., and his parents, Mnesarchus and Pythais were citizens of Samos and descendants of Ancaeus, who, it is said by Iamblichus, was directed by the Pythian oracle to colonize the marine island of Samos. His mother, Pythais, it is told, received intimation of his birth by divine revelation, for Pythagoras is one of the seers of antiquity for whom an immaculate conception has been claimed, and his birth is surrounded by many legends.

Pythagoras stated that he was not *sophos*, wise, but *philosophos*, a "lover of wisdom," Pythagoras himself originating the term "Philosopher." In a discourse with Leo, Prince of the Phliasians, we find this interesting passage:

Human Life seemed to resemble that public convention which is celebrated with the pomp and games of all Greece, for as some by bodily exercises aim at the glory and nobility of a crown, others are led away by gain in buying and selling. But there are certain persons, and those of better quality, who seek neither applause nor gain, but come to behold and curiously observe what is done and how. So we, coming out of another life and nature into this life, as out of some city into the full throng of a public meeting, some serve glory, others riches; only a few there are, who, despising all things else, studiously enquire into the nature of things. These he called enquirers after wisdom; these are philosophers. Thus, whereas learning before was called *Sophia*, wisdom, and the professors thereof *sophoi*, Pythagoras more modestly called it philosophy, love of wisdom — conceiving the attribute of "wise" not to belong to men, but to God only.

Perhaps Pythagoras had come to give the teachings of the esoteric

wisdom to the people of Greece as Orpheus, "the Initiate of the Dawn of Greece," had given them to her priests, and as Plato had kept them alive in the setting sun of the Greek flowering. He was a torchbearer in the long chain of those who have so consecrated their lives, and brought a philosophy which was to influence the artistic and intellectual splendor of Grecian and other civilizations and to lay the foundations for the future scientific thought of the new world.

Pythagoras taught reincarnation and karma, and it is said in Mead's *Orpheus* that he had given some details of his former births to his disciples. In the life in which he became known as Pythagoras, his father died while he was quite young. He was much respected and honored even as a child, and was trained by the most learned thinkers of his time. Accounts of historians differ, but it is known that he sat at the feet of many masters. It is told that at the age of eighteen he secretly left Samos, the island being somewhat disturbed by political tyranny, and went to Sidon, where he sought the great Phoenician hierophants and was initiated into the mysteries of Byblus and Tyre. Here he lived in the seclusion of the temple. Later he went to Egypt to study. Although he was known to the Egyptian priests, they did all they could to discourage him, administering severe tests, but the young Pythagoras was not disheartened, submitting to them with an unflagging courage and determination. After he was accepted he was taught the epistolic, hieroglyphic and symbolic writing in order that he might understand the sacred lore. He lived for 22 years among the priests in the temples and was initiated into the mysteries. In Babylon he learned of the highest in music and mathematics; also of the motions of the stars, their power and properties, and their various effects upon men in health and disease. He was also initiated into the Babylonian and Chaldean Mysteries. He visited many other countries, making perhaps his greatest travel through Media and Persia into Hindustan where it is said he remained some years as a pupil and initiate of the learned

Brahmans.

Historians tell us that during his travel among the Jews he was instructed in the secret knowledge of Moses, the lawgiver of Israel, upon which the school of the Essene Mysteries, also attended by Jesus, was founded. Upon his return to Samos at the age of 56, he established a school which is still known as the semi-circle of Pythagoras. However, he was not very successful in teaching his own countrymen for the times were not fertile for the sowing of the seeds of philosophic truths, and so he moved to Crotona, Italy, where he established his now world-famous school. He discoursed to the people, and became much honored. Gradually he gathered around him a group of followers, and out of these came a small nucleus whom he instructed in the secret wisdom, and also in the fundamentals of occult mathematics, music and astronomy, which Pythagoras held to be the triangular foundation of all the arts and sciences. His temple, amidst flowering gardens, was a circular colonnade which rose above the two wings of the main building. The men, in white robes, worshiped in the Temple of Apollo, and the women in colored robes in the Temple of Ceres, over the gate of which was a stone image of Hermes and the inscription *Eschatoi Bebeloi* (no entrance to the profane). It was dedicated to the nine muses of ancient mythology, who presided over their various fields of astronomy, divination, science of life and death, etc., with Hestia, divine science, making ten, the sacred decad.

The disciples of Pythagoras lived as a brotherhood in the temple, but joined in ordinary life, each candidate being admitted to the different grades of initiation according to his inherent ability, his intelligence, and earnestness in study. Thus, each belonged where he was according to the just measure of his own merit, the whole being under the supervision of the Head. Those who lived within the temple shared everything, possessing nothing individually, while those who lived outside forming a community around the temple, retained their

possessions. The philosophy of the outer court was exoteric, while that of the inner temple was more rigid and the studies more advanced. It is related that Pythagoras was very strict in admitting candidates, saying that "not every wood is fit for the making of a Mercury." The aspirant was put through various trials. First he had to spend a night in a lonely, and perhaps haunted, cavern, and if his courage was not equal to this he was rejected. After this, he found himself in a gloomy cell where he was asked to solve the meaning of a Pythagorean symbol, such as "Why is a dodecahedron confined in a sphere, the symbol of the universe?" After working this out through many solitary hours, he was taken before an assembly, and if he could prove the symbol, he was honored; but if he had not succeeded, he was ridiculed, while the Master stood near, observing. If he failed in self-respect, or respect to the school, by expressing chagrin or giving way to temper, he was asked quietly to leave. Some to whom this happened afterwards became enemies of the school, and among these was one named Cylon who later stirred insurrection against Pythagoras, with the ultimate result that the group was disintegrated.

Pythagoras believed the study of geometry, music and astronomy to be essential to a rational understanding of the universe, and his pupils were required to study these sciences.

He believed and taught the One that is everything. He described that One as the Supreme Mind which causes and is the power of all things, whose motion is circular, whose body is of the substance of light and whose essential nature is truth.

He discovered the therapeutic power of music and color, and of certain plants, and he was against surgery which he said was a sacrilege against the dwelling place of the Gods. His doctrine of friendship as the truest and most perfect of relationships is very beautiful because he extended it not only to humans, but to the kinship of the soul for the body, of Gods to men, of all to all, in fact

the underlying unity of all things. This doctrine is said to be the foundation of the order of the Knights of Pythias. Pythagoras defined knowledge as mental accumulation through observation, and wisdom as the understanding of the underlying cause of all. And this could be reached by raising the intellect to where it could intuitively become aware of the invisible form of things manifested, and so become attuned with the ultimate spirit of things. His monad is that which the Pythagoreans called the mysterious permanent atom.

He also believed that the stars and planets were the visible bodies of great spirits just as our bodies are merely the reflection of our inner selves, and that behind or overshadowing these sacred planets were great deities, forgotten by humanity today, but worshiped and adored by the ancients.

The Pythagorean Y signifies our innate freewill and choice. On the path of life we may walk to the right or left; no matter what the circumstances, that power is man's. It is quite probable that Pythagoras derived this from the Egyptians, for this symbol is still preserved in the Tarot cards. It is called the forking of the ways and is symbolic also of a ritual used in initiations where the candidate had to choose between the hall of learning and the way of pleasure and gratification of the senses.

Pythagoras said: "All things consist of three . . . establish the triangle and the problem is two-thirds solved." Therefore he divided the universe into three states: the supreme or absolute state the archetypal world and the home of the demi-urgos; secondly, the devas who supervise nature; and thirdly, the world of mankind.

No doubt everyone has heard of the Pythagorean numbers, supposedly the basis for various numerological systems used today; but because these were highly esoteric, it is safe to assume that the real key to their meaning and significance is lost. Pythagoras taught that the dot symbolized the power of the number One, the line the

power of the number Two, the surface the power of the number Three, and the solid the power of the number Four. The numbers one and two are not considered by the Pythagoreans because they belonged to the unmanifested spheres. Therefore, their numbers begin with three, the triangle, and four, the square, and these added to the one and the two produce the number ten, the archetypal or sacred number. The origin of the true significance of these numbers is lost in the mists of time, the ancient writers linking them with the sacred planets, or intelligences overshadowing these planets.

Plutarch says in *Isis and Osiris*:

For as the power of the triangle is expressive of the nature of Pluto, Bacchus and Mars; and the properties of the square of Rhea, Venus, Ceres, Vesta, and Juno; and of the Dodecahedron of Jupiter; so we are informed by Eudoxus, is the figure of fifty-six expressive of the nature of Typhon.

The number One is the monad, the mysterious permanent atom, because it is both the all including One, and the sum of any combination of numbers; the One and the many, the tree and its branches, the seed and its continuous flowering. Therefore it remains separate from the many. "I create myself and remain separate," says Krishna in the *Bhagavad-Gita*. It is the void and the fullness. It is the odd and the even, the beginning and end of itself, the center and circumference. Therefore, the Pythagoreans called it the evenly-odd. From it are produced the even or feminine numbers, because these can reproduce themselves, and the odd which are masculine, not to be divided equally. It is the androgynous number because it contains both the odd and the even. As the monad it has been called the germinal reason, because it is the origin of all the thoughts in the Universe. It is the seed of past and present, and therefore the Eternal Now. In the monad, time and space, or number and form, exist, but the monad does not exist in time.

The Pythagoreans had a proverb that all things were assimilated to number.

That the eternal essence of number is the most providential principle of the universe, of heaven and earth and the intermediate nature; and further still, that it is the root of the permanency of divine natures, of gods and daemons. . . .

Number is the ruler of forms and ideas; to the most ancient and artificially ruling deity, number is the canon, the artificial reason, the intellect also, and the most undeviating balance of the composition and the generation of all things.

— Pythagoras in *The Sacred Discourse*.

From numbers we come to the Pythagorean geometrical solid. That is from number, which engenders time, we come to form which is derived from time and space. First there is 1-0 the sphere, the most perfect of forms, and the five symmetrical solids of the Pythagoreans which are the tetrahedron, the cube, the octahedron, the icosahedron, and the dodecahedron. Some of the old writings associate each of the sacred planets with one of the geometrical solids, such as the cube to Saturn, and the icosahedron to Venus, etc. This is attributed to Plato, but to us can only be speculative. Moreover, Plato did not consider the stars and planets in their manifestations of form, but as focal points of Intelligences. His astronomy was concerned only with the excellences of things beyond form.

On the Pythagorean theories of music and color much could be said, but his grandest conception was of the music of the spheres.

Exoterically, this meant that each planet, moving in its course with a certain velocity, gives forth a certain note corresponding with the seven notes of the scale, the zodiac or inerratic sphere forming the eighth or octave. Inwardly we know that every single atom in the spaces of space, giving forth its sound, swells the music of the spheres. At the heart of our solar system is a fire, and around this

revolve the planets, including the sun. The intervals or spaces between the planets are given thus in Stanley's *History of Philosophy*, London, 1687:

Earth to Moon	— 1 tone.	Sun to Mars	— 1 tone.
Moon to Mercury	— ½ tone.	Mars to Jupiter	— ½ tone.
Mercury to Venus	— ½ tone.	Jupiter to Saturn	— ½ tone.
Venus to Sun	— 1½ tones.	Saturn to Zodiac	— 1½ tones.

These intervals added together make the seven tones, or "the Diapason harmony." Much could be said of the interval. Its presence permits the dance of the cosmic circle and governs light, color, sound, and the crystallization of the manifested worlds. By means of the interval, perhaps, life may live in form. But what did Pythagoras mean by the harmony of the spheres? Not that the planetary notes as we know these notes would produce harmony when united, for this does not work out. Surely it must have been that divine symphony, heard with the inward ear, which Plato also knew, and which relates to no manifested form or sound, but has its being in the celestial heavens. As Shakespeare says in the *Merchant of Venice*:

Look how the floor of heaven
Is thick inlaid with patines of bright gold:
There's not the smallest orb which thou behold'st
But in his motion like an angel sings,
Still quiring to the young-ey'd cherubims;
Such harmony is in immortal souls;
But whilst this muddy vesture of decay
Doth grossly close it in, we cannot hear it.

No great Teacher neglects the ethical side of philosophy, and neither did Pythagoras. But ethics founded on great cosmic significance and workings, on rightness which stands of itself, are immeasurably greater than a mere morality based on emotion and custom. The most well-known of writings ascribed to Pythagoras are *The Golden Verses*,

in which he describes a way of life and urges men to consider their acts; the necessity for self-control and transmutation of the lower nature so that man may win his immortality and converse once more with the Gods. "Having departed from your house, turn not back; for the furies will be your attendants," says Pythagoras in some precepts gathered by Iamblichus, thus warning that he who enters the Path can never turn back.

The Theosophical Forum

KARMAN IN ANCIENT MYTH: THE NORNS — *Allan J. Stover*

Peoples who have not fallen under the skepticism of materialistic science or the fear inspired by a narrow religion, almost universally have a deep trust in the eternal justice of Nature's ways.

The great law of the universe is equilibrium, for nature quickly restores harmony wherever it is disturbed. On the ethical side this law is often known as the Law of Immanent Justice; for every act carries with it the seeds of future adjustment. This is not punishment for evil-doing, but is justice as inherent within every act, whether good or bad. Seen thus Karman is the working of a cosmic harmony which all things obey, from the unseen atoms in the air we breathe, to the highest gods.

It is only in the sphere of effects that concepts of fate, kismet and destiny, assume a personal aspect and the broader vision of Karman in its majestic sweep is lost. In order to understand Karman it is well to consider the organic structure of the life-web in which we live, and that everything we do affects the whole fabric of Life; so intermingled are its innumerable cycles of activity. The doctrine of Karman thus goes hand in hand with Universal Brotherhood.

There is scarcely a philosophy or religion which does not teach some aspect of this great law. We find it in the Bible, in Buddhism, in Islam, in the religions of China, in fact everywhere. In mythology especially are many beautiful and thoughtful symbols or allegories portraying certain phases of Karman; and by comparing these as understood by other peoples we greatly enrich our own concept of this great teaching of the Ancient Wisdom.

We may look upon myth and symbol as a vehicle or garment for clothing spiritual truth. In one sense they are a dramatization of inner laws of nature which are cosmic in their range of action. Words are not sufficient to give expression to the idea, since they are designed to convey precise and definite information. Symbol and allegory, like mathematical formulae, are better fitted to explain general truths which apply to a large number of analogous conditions on different planes of being.

Karman is one of these great universal truths and has been known to all peoples. It is symbolized in Greek Mythology by the Moirae, or Fates, three in number, Clotho, Lachesis and Atropos, who spin the thread of destiny, severing it when the time comes. In the mythology of the Norse and early Teutons, the Fates appear as the three Norns who tend the World-Tree. In each case the original meaning has been largely obscured and distorted by succeeding religious ideologies, each seeking to shape the tradition to their own ends. But the keys given us by our Theosophical teachers offer a guide through the maze of apparent contradictions.

Of the many myths representing the nature and action of Karman, that of the Three Norns seems to come closest to the original doctrine; yet even here there has been a deliberate alteration and destruction of ancient books.

A writer of the seventeenth century (Svigota ok Normanna Edda) states that Snorre and Saemund did not compose the Eddas, but copied or recorded them after the old Runboker or rune books. He further explains that in the time of King Olof Skot about 1200 A. D. the Pope wrote King Olof complaining that the old Rune-books were hindering the progress of the church in Sweden and asking that he do something about it. Olof held *Thing* (a council), wherein it was decided to burn all the old Rune-books on the

excuse that they were full of "Spellcraft." Previously, however, numbers of the writings had been taken to Iceland, then a great center of learning; and it was from these old books that the present Eddas were composed.

But while the greater part of their precious Rune books went up in smoke, there still lives in the hearts of the northern peoples an intuitive understanding of the ways of Karman. And while the Eddas today represent but a portion of the original sacred writings, the Theosophical student can recognize in them the basic teachings of the Ancient Wisdom as once given to the Norse and Teutonic peoples. Thus, in the Edda Karman is depicted under the guise of the three Norns, Urd, Verdande and Skuld, who guard and water the roots of the World Tree, Yggdrasil.

The World Tree is of course our hierarchical system of Sun, Planets and Moons in all their various planes and sub-planes. It is the hierarchical system of every being from an atom to a universe. And since man in his inner and outer nature is a miniature replica of the solar system, he too has his planes and sub-planes of consciousness reaching from the physical vehicle upwards to divinity.

One approaches the subject of the Norns with hesitation and with the feeling that full knowledge of this ancient tradition is to be found, not in books, but about the firesides of northern homes.

Just as the Yggdrasil Tree is a symbol of the inner constitution of both man and universe, so the Norns who tend and water the Tree of Life are also many. In fact a Norn is given to every child when he enters life. It selects the mother that child is to have and guides the little one through life; only departing at the time of the second death. Always the Norns deal out utter justice, and nourish the soul with the waters of wisdom. In fact they appear to have been to Norse thought, what the Lipikas were to Hindu

thought.

The names of the three chief Norns — *Urd*, from a root carrying the idea of the primeval, the inmost; *Verdande*, signifying the coming into being, emerging or unfolding from within; and lastly *Skuld*, which is obscure in meaning but seems to imply debt, as of something owing that will have to be paid — are commonly said to represent the three aspects of past, present and future. The names, however, suggest a deeper and more occult significance lying within the other. Anciently men who were in many ways wiser than ourselves did not think in terms of time as we do now, but rather of things emerging as a stream of consciousness from within without; from spiritual planes to material ones.

Now suppose we consider an act of Karman, such as sickness, as a seed deep within the timeless inner consciousness, planted there by actions in another incarnation, this seed maturing in its proper time emerges upon the physical plane, where like the thread of the Fates it is severed and thrown off.

In the Greek mythology the three names of the Moirae, Clotho, Lachesis and Atropos, mean respectively the spinner, the allotter, and that which cuts off, or withdraws nourishment. The Latin word *Fatum* even means the Laws of Nature. The nature of the Norns is well illustrated by the picture of the three Fates drawing forth a strand from the mass of wool, of latent Karman, twisting it into a thread and finally severing it. This graphic illustration of the course of Karmic action does not conflict with the usual interpretation but rather deepens and adds form to the concept.

Dr. de Purucker once explained our life's Karman by comparing it to a deck of cards which we pick up at birth stacked in a certain way. But he continued, there are many decks, the accumulation of many lives, and as the soul approaches imbodiment it chooses which features of past Karman can best be worked out in the

coming life. It is the soul itself which chooses what the new life will be. And having chosen the deck of cards or, to use the ancient symbol, the wool, strand after strand is drawn forth from the Karmic bundle, spun into a thread, and severed. Finally the life itself, its purpose accomplished so far as may be, is cut off.

Such seems to be the significance of the Karmic Norns or Fates as found in mythology. But there are still deeper reaches of thought, greater vistas of beauty which a closer study of the Edda discloses.

The Yggdrasil Tree has three roots, watered from three fountains or wells. The first root is watered from Urd's well with the knowledge of past experience; the second root is sprinkled with transcendent wisdom drawn from Mimer's well. Even Odin was required to sacrifice an eye to obtain a drink from Mimer's Well. The third root is sprinkled with water from the stream of Hwergelmir, the nature of which cannot be told. It is said that the waters of the well were so pure that anything they touched became as white "as the membrane between the egg and the egg shell."

The crown of Yggdrasil overshadows even Walhalla, the Devachan of the Norse. The branches spread over the whole universe with all its system of globes and planes each teeming with countless lives. This majestic symbol of the oneness and inherent justice of the universe has fallen upon sad days. Yet even they will pass and truth once more be sought. Should the earth be swept by devastation of fire and flood, Yggdrasil would remain untouched, for the World Tree "defies both edge and fire." The faithful who remain would dwell in Mimer's groves until the regeneration of the world. Such is the teaching of the Edda.

"MAN MUST MAKE HIS CHOICE" — *Jalie Neville Shore*

The title *Man Must Make His Choice* is a quotation from Mohandas K. Gandhi. It was noted in my journal the day after I had attended one of the famous prayer meetings in New Delhi. The date of the entry was the day before Gandhiji's assassination, two days before I saw the flames from the sandal-wood funeral pyre consuming the slight body of the man who had led India to her freedom.

Specifically the little Indian leader was speaking of the freedom of the press at the time he made the above utterance. As bad as current journalism often is, thought Gandhi, it would be infinitely worse to have an imposition of censorship in regard to the written word. "The useful and the useless must, like good and evil," he said, "generally go on together and man must make his choice."

Gandhi perhaps more than anyone of our times knew the divine assurance of freedom and the character building power that comes from the exercise of choice in every day matters. From childhood to mature manhood he made choices that strengthened the inner fiber of his nature, choices that led successively one into the other. It might seem a far cry from a decision to keep a promise to his mother when still a boy, and the choice that made him turn from the prosperous life of a successful barrister in order to become the impoverished leader of a nondescript group of misery-ridden people in South Africa. But without the completed exercise of the first, the courage it took to make the latter choice would have been impossible.

But the pattern of Gandhi's career was molded on other choices — made both by him and by other people. Early in his young

manhood Gandhi was in London. There he chose two friends who were theosophists and who invited him to attend a theosophical meeting one night. (1) It was through these theosophical contacts that the young Indian became interested in the deeper meaning of the *Bhagavad-Gita*, and although he never joined the Theosophical Society he began in earnest a study of the *Gita*.

It has seemed to me of more than passing importance that the two friends Gandhi *chose* in London *chose* in turn to speak of Theosophy to him and to invite him to a theosophical meeting. Of perhaps greater significance was the fact that members of the H. P. Blavatsky Lodge made the *choice* of attending the meeting that night, of adding to the Lodge force of the two friends. The *Bhagavad-Gita* influenced, guided, and quickened his spiritual nature more than any other one thing, he said. If there were nothing else to tell of the life of Mohandas K. Gandhi, the fact that the millions reading of his life and death in the periodicals at the time of his passing were acquainted for the first time with the title "Bhagavad-Gita," would be significant. Excerpts from the third chapter — *Devotion through the Right Performance of Action* — were actually cabled from New Delhi to presses in America. If you believe in the occult power of words and thought, you cannot overlook the spiritual influence that must have been derived from this action on the part of foreign correspondents covering the event. Because of the quickened interest in Gandhi who was unswerving in his devotion to truth and duty as he saw it, theosophists have been able to speak more effectively at times of the spiritual importance of the *Gita*. It is a refreshing experience to be able to witness the light of interest on the faces of persons hearing for the first time an intelligent presentation of that part of the Hindu scriptures so well beloved by a man like Gandhi.

The pendulum of time swings in a mighty arc, and great events appear often far spaced from each other. Yet, there is not a point

on the curve that is skipped. Indeed, it appears to be a single line of destiny from the initial starting point to the "final" dot on an upward curve, so rhythmic and unhesitating is the swing of the pendulum on the arc. The coming of the manasaputras and the moment of final choice are separated by millions of years, and theosophists have perfect faith that they participated in the one event and will take part successfully in the second. But too often the drama of the two great events obscures the importance of making the right choices on the line the pendulum is marking at present.

Of such glamor are the hues of distant events that we often deem it "too difficult," "too strenuous," or "too premature" to strive immediately for perfection in theosophic life. Yet every one of us overlooks the plain injunctions of all our Teachers when we merely "try" to lead theosophic lives. "Each one of you is an incarnate god. Be it." Thus spoke G. de P. (Don't *try* to be it, just *be* it.) We waste too much of our lives in explaining to ourselves chiefly that we have a "long way to go" before we can reach important goals.

Either this is silly sophistry on our part, or what our Teachers tell us is straight-out deception. We know the rules: serious meditation morning and night, and for that matter, all day long; strict adherence to personal duty; thinking of others first; tolerance; forgiveness; love so overwhelming that only divinity can be seen in the eyes of the people who may disagree with us; compassion so great that pity instead of scorn is uppermost in our hearts at the mistakes of others; impersonality and nonattachment. We should not have to worry about "reaching people" if we put into practice those rules.

We have been taught that each person is a sphere of influence, and that in proportion to the amount of Truth that we have heard

we are responsible for the alleviation of suffering. We love our Teachings and we want to do "something for Theosophy." But this is an absurdity. We cannot do anything for Theosophy. Theosophy is Truth. We can only promulgate that Truth and build it into our lives to shine like beacon-lights in a world of darkness.

We long to do something big for our Lodges and study groups, and we devise schemes to "get people to our meetings." When empty halls and indifference confront us we say too often, "People aren't ready for the spiritual truths we have to offer." This is sheer nonsense and bigotry on our part. People are ready! Millions are longing for more light than the wee specks they are holding on to in the form of membership in religious organizations of various kinds. The real trouble is that so few of us are ready! Most of us have pinned too little importance to living the life and teaching by example.

The saddest experience in the life of any theosophist is to have it said, "Your philosophy sounds so grand, but how can theosophists act so, embracing as they do these noble Teachings?" It is sad because such a thing could never have been said to one whose life exemplified the theosophic truths. By his own inner light brought forth by his daily efforts in *right choices* and right conduct — in thought, word, and deed — he would have stilled the critic's tongue before he had uttered a word. Our Lodges and study groups will grow by the law of natural attraction, if we as members make ourselves purified centers of devotion which will draw the confidence of those seeking light. One person who "lives the life" has more power to assuage the pain of human suffering than one hundred with faith so weak there is no practice in their preachments.

"No man ever resteth a moment inactive," says Krishna in the *Bhagavad-Gita* (Chapter iii). "Every man is involuntarily urged to

act by the qualities which spring from nature. He who remains inert, restraining the senses and organs, yet pondering with his heart upon objects of sense, is called a false pietist of bewildered soul. . . . Do thou perform the proper actions: action is superior to inaction."

That is plain enough. We have a choice: action or inaction. We have three qualities of nature from which to choose our action: that of truth or wisdom, that of muddled emotions, that of dark ignorance. We need not deceive ourselves that we do not know — or cannot learn — which quality is which. We have been taught to develop the discriminating principle and use it. Our choice of doing just that, or not doing it, indicates the direction our path is taking at that moment.

In a civilization that is sick because of lust, greed, vanity, power-ridden ambitions, and dissensions, theosophists cannot afford to be anything less than their higher selves. The whole thing is too serious. Every one of us has a responsibility too great to overlook, any minute of the day, too great for us to perform any action "other than as a sacrifice to God." Only the god-enlightened will be able even to "save the pieces." There is no time to fritter away. The theosophist must truly make his choice.

FOOTNOTE:

1. H. P. Blavatsky was present at this meeting. ([return to text](#))

The Theosophical Forum

THE BRETHREN OF THE ROSY CROSS — *Alexander Wilder*

[In response to requests for data regarding the founding and history of the original Rosicrucian Brotherhood, this article is reproduced from the February, 1880, issue of *The Theosophist*. Dr. Wilder, a close associate of H. P. Blavatsky during the writing of *Isis Unveiled*, was then Vice-President of the Theosophical Society. Eds.]

Were there Rosicrucians or were there not? This question agitated Europe two centuries ago, as Luther before that, and Savonarola, and Markion had each in his own time and way shaken the Church to its very foundations. All this was because a little book had appeared in the country of Wurttemberg purporting to unfold the existence of a secret fraternity possessing arcane and scientific knowledge, and devoted to the amelioration of human suffering, and the enlightenment of mankind.

The religionists of the seventeenth century could see only blasphemy and iniquity in such a proposition. They invoked fire from heaven upon the Brotherhood, and threatened them with death by breaking on the wheel. A few years before, Bruno had been burned at the stake by order of the Holy Office for teaching the Copernican system and the Pythagorean philosophy; and now Lutherans were emulating Romanists in their frenzy to get human blood to shed. A few years later these vultures were sated to the full. In 1618 began the thirty years' war between Catholic and Protestant Germany, which sucked all Europe into its bloody vortex, and continued till whole districts were depopulated, and the wild beasts of the forest succeeded to the abodes of more ferocious humankind. After the war came pestilence. Smallpox

broke out spontaneously, and the Black Death accompanied. Europe was a prodigious charnel.

The tale of the Brotherhood was modest enough. Christian Rosenkreuz had been a traveler in the East, where he had received instruction into the profoundest lore — magian, rabbinic, theurgic and alchemic. Among other acquirements, were the knowledge of the philosopher's stone, the art of transmuting metals, and the elixir of life. Returning to Germany, he established a little fraternity of eight disciples, obligating them to keep the doctrine secret for the space of one hundred and twenty years after his death. This occurred in 1484; and accordingly in 1604 there appeared *The Discovery of the Brotherhood of the Honorable Order of the Rosy Cross*. It appealed to all who desired to co-operate with them to make public their names. The Rosicrucians, it declared, were genuine Protestants. They were engaged in no movement or conspiracy against the ruling powers. Their aim was the diminishing of human wretchedness, the spread of education, the advancement of learning, science, universal enlightenment, and love. They possessed profound and occult knowledge, such as the alchemists, Arabian thaumaturgists, Egyptian and Chaldean wise men had brought forth; but all that was of little account. Their one high purpose was to benefit their fellow-creatures, body and soul.

A fire-brand of more destructive nature could not have been hurled into the combustible pyre of Europe. The Pope, the Emperor, the Christian and Catholic kings, the Protestant monarchs of the Baltic and North seas, exploded with terrible concussion. Not till thirty years of war and massacre had passed by, could the boiling caldron become quiet. Universal love and enlightenment, even now, if duly proclaimed, would imperil every throne in Europe from that of Alexander to the royal seat of Victoria; and even the political factions of the United States,

blatant in their professions of freedom and democracy, would crumble to their primeval atoms.

Nevertheless, they tell us that there were no Rosicrucians. The Brotherhood was all a fond dream, written out by a Lutheran mystic divine named Andreae, on purpose to rouse the philanthropic minds of oppressed Europe to concerted action. A confederacy of such men, he believed, would renovate the world. But no great convention was held for the purpose. The reporters and daily newspapers of the time had no sensational articles unfolding the plans of the Grand Alliance for the Amelioration of Human Calamity. It may be added that there was no country in Europe where such a convention could have met, except in secret. They would have needed that extraordinary Temple of the Holy Ghost under ground, if they had ventured upon their World's conference. As the matter stands, nobody can intelligently declare that they did not so assemble.

Learned men have made but a very indifferent handling of the matter. Des Cartes advertized all through Germany for men who belonged to the Rosicrucian Fraternity, or knew of it. He received letters from every sort of adventurer, but nothing affording the least light upon the subject of his enquiry. It was finally his opinion that there was no such association in existence. It is plain enough that if there were Rosicrucians, the knowledge concerning them had been "hid from the wise and prudent but was revealed to babes."

Andrese declared that the Rosicrucians had symbols and occult means of communication similar to those of the Alchemists and Astrologists. Indeed the Red Cross had been the badge of the Templars. That Order had been suppressed in 1307, yet Francis I had burned four members alive, a short time previous. He had also exterminated the Albigenses of Provence, a Gnostic

brotherhood, with secret rites and symbols, dating from the earlier Christian centuries. The Rosicrucian Brotherhood then, had usages in common with both.

Ignorance has always been the mother of unquestioning orthodoxy. Nobody is so hostile to the general dissemination of knowledge as a priest. Greater cruelty has never been perpetrated among mankind than that authorized and commanded by the ministers of religions. From Theodosius down, the record of the Christian religion has been the autobiography of the seven-headed bloody red Dragon.

The Persian conquest of Asia Minor had led to the establishment of the religion of Mithras in that country. After the destruction of the Empire of Alexandria, the kingdom of Pontus was established, having Mithraism for its ruling faith. When Pompey conquered the country, the religion was carried thence to every part of the Roman Empire. The father of Jesus it is said was a "soldier of Mithras." It flourished as a secret worship till its suppression by Theodosius; and even then, the *pagani* or country-people kept up the observance away down into the Mediaeval period. The Popes and Bishops denounced the rites as magic, witchcraft and commerce with the Powers of Darkness. Probably the Witchcraft of the Middle Ages was a relic of the old Magian worship.

In the seventh century, Sylvanus, a native of Samasata, established the fraternity of Paulicians, including in it the various Gnostic communes, the Manicheans of Armenicus, and the Mithraites of Pontus. Their doctrines were an amalgamation of the Pauline and the Zoroastrian; but they denounced the Ebionite religionists of Judea. They were fiercely persecuted by all the Christian Emperors, Arian as well as Athanasian. For near two centuries they maintained an independent government in the Caucasus. One of the emperors colonized a part of them in

France, whence they spread into Bulgaria. Being employed in the Roman armies, they were transferred to various countries of Europe; Italy and France abounded with proselytes. Among these were the Albigenses.

Other believers in the *Gnosis* or arcane knowledge had been removed into Persia. They were denominated *Sophi* or sages, the worshipers of Sophia or Heavenly wisdom. Their converts were known as *Sufis*, and long constituted the learned class of the country. They were expert in medicine and astronomy, and adepts in secret doctrines. They believed in a grand universal creed which could be secretly held under any profession of an outward faith; and in fact, took a similar view of religious systems to that entertained by the ancient philosophers. A mystic union with the Divinity, theurgic powers, and a tendency to asceticism, characterized them.

Thus the Rosicrucian Brotherhood possessed a heritage of all the arcane systems and religions of the earlier world. Hargrave Jennings, their latest chronicler imputes to them the symbols, traditions and learning of the principal mystic fraternities. The Hermetic philosophy of Egypt, the fire-theosophy of Persia, Druid-worship, Gnosticism, the Kabala, the Ancient Mysteries and Orders of Knighthood, Magic, Alchemy, Hindu beliefs, etc., all are treated by him in this connection. His style is curiously complicated; he tells little where he seems to be telling much, and with an obscurity of expression which seems to show little real knowledge or understanding of his subject. Yet he reveals the secret when to the non-expert he apparently hides it closest.

Could they change metals into gold? "Nature herself," said Mejnour to Glyndon, "is a laboratory in which metals and all elements are for ever at change. Easy to make gold — easier, more commodious, and cheaper still, to make the pearl, the

diamond and the ruby." Raymond Lulli, a Franciscan monk, born in 1234, a rare expert in medicine and alchemy, is said by one writer to have supplied Edward I with six millions of money to enable him to carry on war against the Turks in Palestine. Another writer affirms that he made gold for Edward III in the Tower of London, for an entire coinage of gold nobles. He endeavored to unite the European countries in a project to Christianize Asia and Africa; but failing in this, set out alone. He made several converts; but was finally stoned to death by the Moslems in 1314.

Thomas Vaughan (Eugenius Philalethes) lived in the reigns of the first James and Charles, who were rather famous for persecutions of "witches." (1) He relates that he endeavored once to sell 1200 marks' worth of gold to a goldsmith. The man told him at first sight that that gold never came out of the mines, but had been produced by artificial means, not being of the standard of any known kingdom. He hurried away, leaving his gold behind.

Indeed, if a single element lies at the foundation of nature, as Dr. Thomas R. Frazer of Halifax, N.S., has demonstrated, an opinion in which he is followed by S. Pancoast of Philadelphia and J. Norman Lockyer, to whom the credit is given — then the transmutation of metals is a matter perhaps in reach.

Is there an Elixir capable of prolonging life? Thomas Vaughan was born about the year 1612. A writer in 1749 remarks:

He is believed by those of his fraternity to be living even now; and a person of great credit at Nuremberg in Germany affirms that he conversed with him but a year or two ago. Nay, it is further asserted that this very individual is the president of the illuminated in Europe, and that he sits as such in all their annual meetings.

Artephius, who lived 750 years ago, wrote a book entitled *On the Art of Prolonging Human Life*, in which he asserted, that he had already attained the age of 1025 years. Several asserted that he was the personage whose life was written by Philostratus under the name of Apollonius of Tyana. He wrote a book on the philosopher's stone, which was published at Paris in 1612.

"All that we profess to do is this," said Mejnour to Glyndon,

to find out the secrets of the human frame, to know why the parts ossify and the blood stagnates, and to apply continual preventives to the effects of time. This is not magic; it is the art of Medicine rightly understood. In our order we hold most noble — first, that knowledge which elevates the intellect; secondly, that which preserves the body.

The late Major-General Ethan A. Hitchcock was like his grandfather the noted Ethan Allan of Ticonderoga fame, addicted to curious study. In his treatise *Alchemy and the Alchemists*, he deduces an allegorical interpretation for the philosopher's stone, the transmutation of metals, and the elixir of life. "The genuine adepts," says he, "were searchers after truth in the highest sense of this word." The philosopher's stone, he adds, "can be found in no other thing in the universe but the nature of man, made in the image of God." The Elixir, under this interpretation, would signify spirituality — "eternal life." Sallust the Neo-Platonic philosopher has instructed us that "that which in a literal sense is manifestly absurd and impossible, must be understood in some other sense."

Lord Bulwer-Lytton has forcibly depicted the careers of Zaroni and Mejnour, living through the ages from the period when the Chaldean Akkads ruled in Babylonia. He has shown that the boon of life is not desirable, though he represents it with none of the

horrors which characterize the story of the Wandering Jew, forgotten by death. Mr. Jennings, following in a similar vein remarks that Rosicrucians evade the idea that they possess any extraordinary or separate knowledge, they live simply as mere spectators in the world, and they desire to make no disciples, converts nor confidants. They submit to the obligation of life, and to relationships — enjoying the fellowship of none, admiring none, following none but themselves. They obey all codes, are excellent citizens, and only preserve silence in regard to their own private convictions, giving the world the benefit of their acquirements up to a certain point; seeking only sympathy at some angles of their multiform character, but shutting out curiosity wholly when they do not wish its imperative eyes. This is the reason that the Rosicrucians passed through the world mostly unnoticed, and that people generally disbelieve that there were ever such persons; or believe that if there were, their pretensions are an imposition.

It is not generally known that the Rosicrucians bound themselves to obligations of comparative poverty but absolute chastity in the world, with certain dispensations and remissions that fully answered their purpose; for they were not necessarily solitary people: on the contrary they were frequently gregarious, and mixed freely with all classes, though privately admitting no law but their own. Their notions of poverty, or comparative poverty, were different from those that usually prevail. They felt that neither monarchs nor the wealth of monarchs could endow or aggrandise those who already esteemed themselves the superiors of all men; and therefore, though declining riches, they were voluntary in the renunciation of them. They held to chastity, entertaining some very peculiar notions about the real position of the female sex in the creation; the Enlightened or Illuminated brothers held the monastic state to be infinitely more consonant

with the intentions of Providence.

Mr. Jennings refuses to explain these views more at length.

We have drawn to ourselves a certain frontier of reticence, up to which margin we may freely comment; and the limit is quite extended enough for the present popular purpose, — though we absolutely refuse to overpass it with too distinct explanations or to enlarge further on the strange persuasions of the Rosicrucians.

They held that all things visible and invisible were produced by the contention of light with darkness. The grossness and denseness in matter is due to its containing little of the divine light. But every object contains also in it a possible deposit of light, which will eventually and inevitably be liberated from the dark, dead substance. Unseen and unsuspected, there is shut up there an inner magnetism, an ethereal spirit, a divine aura, a possible eager fire. All minerals, in this spark of light, have the rudimentary possibility of plants and growing organisms; all vegetables have rudimentary sensitives which may eventually enable them to change into locomotive creatures, of meaner or nobler function.

The Rosicrucians claim to be able to pass into the next world, to work in it, and to bring back from it gold and the *elixir vitae*. This last was only to be won in the audacity of God-aided alchemic explorations, and was independent of those mastered elements, or nutritions, necessary to ordinary common life. The daily necessary food taken for the sustenance of the body was the means of dissolution. . . .

The existence of the Brotherhood is yet in dispute — and probably always will be. Flood says:

There is scarcely one who thinks about us who does not

believe that our Society has no existence; because, as he truly declares, he never met any of us. And he concludes that there is no such brotherhood because, in his vanity, we seek not him to be our fellow.

Certainly, so long as men believe in no such mysterious fraternity, its members are safe from persecution, and interruption in their hallowed pursuits. They may carry their secrets with them safely, — secrets possessed during all the ages of human existence, and yet sacredly preserved from far-off time till now. De Quincey has aptly and admiringly remarked of these Mejnours and Zanonis:

To be hidden amidst crowds is sublime. To come down hidden amongst crowds from distant generations is doubly sublime.

The Magians and Chaldean theurgists were massacred and driven into exile by Darius Hystaspes. Diokletian destroyed the sacred books of Egypt. Theodosius, Justinian and the fanatic Moslems extirpated all whom they could find possessed of mystical learning. The hordes of Scythian banditti who ravaged all the East — China, India, Persia, Western Asia and even Europe — destroyed every shrine and crypt of which they discovered the existence. Even the Catholic Church, King James I of England, the Royal Council of Sweden, and the Colonial Legislatures of the United States, made the possession of occult knowledge a capital offence.

Yet they all missed the Rosicrucian Brotherhood. When Cagliostro-Balsamo was immured in a Roman dungeon, to be tortured and murdered, it was fondly imagined that the Golden Secret would be disclosed. The hope was illusory. It could be communicated to none except those who were able to comprehend it. A preparatory discipline was necessary for this purpose; and whoever accomplished that successfully, would

certainly never betray it. If such a one could entertain the impossible idea of doing such a thing, the treasure would certainly be found not to be in his possession.

So the Rosicrucian philosophers have lived in every age. They have jostled others in the church or at the market place, yet without being recognized. They are numerous enough now, to constitute the salt of the earth. They always have maintained their existence, and each of the Brotherhood knows infallibly every member of the fraternity. Their existence may be a myth, yet it is not. The parable is for those who can comprehend it. "None of the wicked will understand, but the wise will understand," said the prophet Daniel.

FOOTNOTE:

1. Witch is precisely the English word for *Gnostikos*. The Gnostics were accused of Sorcery. ([return to text](#))

MAN'S SPIRITUAL POSSIBILITIES — *Madeline Clark*

A survey of the field of human consciousness as far as it can be made by the study of philosophies and the output of thought makes us ask how far has mankind, in our Western civilization, concerned itself about its spiritual future as an active and ever unfolding adventure? And how many have taken seriously Jesus' words to his disciples as they find them in their Bibles: "Ye are gods!"? Of course we can understand that the multitudes, to whom the struggle for existence is the most engrossing thing, can hardly be expected to have thought of very much beyond the immediate responsibilities of this world. But a few, the great philosophers and thinkers, have always been at the question: What is man? What is his origin and destiny? They have not been satisfied with one life, followed by an eternity vaguely beautiful but static.

A present-day philosopher, Martin Buber, who has only recently been translated from German into English, remarks:

The special dimension in which man knows himself as he can know himself alone, remains unentered, and for that reason man's special place in the cosmos remains undiscovered.

— An admission that he made after an exhaustive study of the philosophic systems of the greatest thinkers since Aristotle. Some, like Pascal, or even Kant, have been terrified at the immensity and the mystery. Even Martin Buber is forced to conclude:

The question about man's being faces us as never before in all its grandeur and terror — no longer in philosophical attire, but in the nakedness of existence. No dialectical

guarantee keeps man from falling; it lies with himself to lift his foot and take the step which leads him away from the abyss. The strength to take this step cannot come from any security in regard to the future, but only from those depths of insecurity in which man, overshadowed by despair, answers with his decision the question about man's being.

He quotes another philosopher, Heidegger, to say:

No age has known so much, and so many different things, about man as ours . . . and no age has known less than ours what man is.

And yet, listen to this from another thinker, Scheler:

We are the first epoch in which man has become fully and thoroughly "problematic" to himself.

There indeed is a gleam of hope. It means that man's inquiry into the mystery of his own nature is becoming more general. There have been, as we know, in the West, all through the centuries, occasional great minds who intuited some part of the truth about man: there was Giordano Bruno, there was Jacob Boehme, Spinoza, Pico della Mirandola, Albertus Magnus, Paracelsus, William Blake, and the great and wise Goethe who envisioned man in a higher evolution "sharing the joys of the gods as blessed co-creative powers."

But these men were not widely understood or listened to in their time, and the unavoidable impression remains with us that some of our cleverest philosophers have been like men groping in the dark.

The poets have often been men of intuition, with flashes of insight into ancient truths. Offhand we can think of Whittier and Dante Gabriel Rossetti, both of whom gave us fleeting glimpses of

reincarnation; Tennyson, on whose bed-table at the time of his death, was found H. P. Blavatsky's *The Voice of the Silence*; Keats, who wrote of this world as a school for the soul on its long pilgrimage; and Poe, who in his *Eureka* worked out a scheme for the birth of universes which is very close to pure Theosophy.

And Walt Whitman is so rich in bold and far-reaching ideas that he is in some respects the greatest genius of them all. This is one of his unforgettable inspirations:

This day before dawn I ascended a hill and look'd at the
crowded heaven,
And I said to my spirit, When we become the enfolders of
those
orbs, and the pleasure and knowledge of everything in
them,
shall we be fill'd and satisfied then?
And my spirit said No, we but level that lift to pass and
continue beyond.

Some systems of mysticism, such as Quietism, have led men to go within, but have rarely given breadth and definiteness to man's conception of his spiritual possibilities and responsibilities. They have, indeed, led to spiritual selfishness, and are even capable of a certain sensuous quality. The subjective no doubt is needed in man's efforts to evolve, but it must be balanced by the objective, the turning outward towards others in mutual solidarity. The Master K. H. spoke of Quietism as "that utter paralysis of the soul."

In the nineteenth century, civilization, or at least one phase of it, had reached a climax of materiality. It was necessary to remind men that they could not remain static behind their ramparts of materialism. Thus it is ever with civilizations: as is pointed out in a magnificent passage in *The Mahatma Letters to A. P. Sinnett*:

. . . at the very point of material perfection, that is when a civilization is ripe to fall, because it can no longer give man scope to develop his spiritual possibilities. Men have to be urged along the path of spiritual development, reminded of their destiny.

It is like the old tale in the Arabian Nights:

The princes and the princesses had built their palace and it was perfectly appointed, and surrounded with gardens and filled with every invitation to pleasure and delight; when an old mysterious woman visits them, and tells them, Yes, it is all very beautiful, but it will never do as it is: they must go in search of some further treasure that she names. So they leave it all behind, and one by one take up their long pilgrimage again.

We have to build up civilizations — we need them as vehicles to develop our creative genius and to implement our earth-experience; but then we become too engrossed in the thing we are creating and forget all about the object of it or our destined goal.

H. P. Blavatsky was able to shake loose the shackles that bound us in a spiritual sleep. She did it by superhuman labors, as we know; but she left with all those who were moved by "love of collective humanity" a grand philosophy of the universe to pass on to mankind. She turned the clear waters of Universal Wisdom into the turgid stream of Western thought, and gradually a clarification is taking place. Men are beginning to think in terms of humanity on the human plane; in terms of the universe on the scientific plane.

The terms used in the teaching of definite doctrines in Theosophy are capable of as exact an interpretation as the terms in science: and when we describe man's composite nature as having in it

elements of the material, the psychic, the mental, the spiritual and the divine, and that these principles are simply small replicas or portions of the same principles as they exist in the universe; these are as much scientific truths as any that come out of our laboratories.

Man will not always be man. Already some men (a very few) have come into association with greater men, adept in Wisdom, who are on the verge of becoming more than human. They are the guardians of the race, the vanguard of humanity in its upward march. The technical teachings of Theosophy have a place and a name for them; these teachings also describe the hierarchical grades of still higher beings whose activities are ever more grand in their scope, until we reach the high divinities for whom only the stars are a fit abode.

All these, as evolution proceeds, man can become, once that he gains the realization of his spiritual possibilities and the secret of bringing them forth. As this growth proceeds, more and more deeply will he intuit the meaning of H. P. B.'s words in *The Voice of the Silence*:

"Knowest thou of Self the powers, O thou perceiver of external shadows?"

The Theosophical Forum

BEYOND THE CLOUDS — *Hazel Minot*

The way leads upward, always, though at times it appears to plunge downward abruptly or to lose itself completely in a sea of cloud and mist. At such moments the pilgrim may doubt its existence; but according to legend an old, old path lies hidden there, and those who follow it to its very end will find a glory unspeakable. Yet between the plain and the attainment of the goal many an obstacle bars the way, and more than courage and persistence must go with him who would successfully master them.

— *The Legend of the Path*

Roger had spent a restless night: the weather was hot and uncomfortable, with promise of a fiercer heat to follow with the coming day; all the windows were open in the hope of capturing some stray breeze, but neither breeze nor sleep could be cajoled into that room.

Strange thoughts were buzzing in Roger's head. He had been reading the legend of the path, and as he lay there sleepless, he wondered if such as he might find it. The idea possessed him with so urgent a yearning that he determined to steal forth with the first faint rays of dawn. If luck were with him he might make his way across the plain before the sun was high enough to intensify the humid heat. He began making plans: what he would take; what he would wear; what course he would chart across the plain, and soon he was so lost in dreams that he knew not whether they were waking or sleeping.

Noiselessly he had stolen from the house even before there was a trace of light in the east, and striking in the general direction of the foothills, he followed a cow-path that gave promise of leading

him to a road. Long before he reached the foothills, however, the sun had won the race, and beat down with a force that seemed to chide his efforts to evade it. The road was not much better than the cow-path and dust rose about him, making his eyes and throat burn intolerably. Roger thought he had never experienced such heat and felt as if every bit of moisture had been drained out of him. Parched, yet hesitant to draw upon an all too scant supply of water, he plodded on, the tantalizing thought of the canteen at his side beating through his consciousness with the rhythm of a drum.

"Water, water!"

The words came insistent and near at hand. It was not his own voice that repeated them, but a feeble cry from beside the road. Roger, startled into greater awareness of his surroundings, turned in the direction of the cry and saw, but a few feet from him, the emaciated form of a little child, its tiny hands reaching imploringly for his canteen. His own thirst, his purpose to save what little water he possessed for a greater need, swept over him, and the instinctive motion of his hand to give, was stayed. Again came the cry:

"Water, water!"

The sound was hardly a whisper now, but it hurt with the sharpness of a knife, and the eyes of the child were like burning coals to sear the wound. Roger, with one quick step, gathered the child in his arms and held the canteen to its lips. Long and greedily it drank, and once, when he thought it had finished, it snatched again at the canteen and only ceased when there was no water left.

What should he do with the child? He could not leave it alone and uncared for. It needed food, too, though at present it was too

weak to eat. So with this added burden he trudged on towards the foothills. Surely, if he could last that long, he would find water there and, perhaps a herdsman who would care for the child.

The way seemed easier now, even with the child in his arms; and strangely, too, his thirst was lessened. On and on he went, and then at last the sound of running water greeted him. It was only a tiny hillside stream, but it was life to Roger and the child. And there beside it stood a shepherd.

"I will take the child," said the shepherd. He looked at Roger as though he knew all about him and what he had done and there was no need for further words.

Roger stopped by the stream and ate a frugal meal; then, refreshed, he began the climb anew. His spirits were high; the way was clear, the ascent easy, and he was companioned by a happy consciousness of the balance between what had been his professed belief and the manner in which he had acted under stress. It was a pleasant reverie from which he was rudely awakened. On a sudden, the trail had disappeared and, search as he would, he could find no trace of it.

At what point had he begun to stray? How had he so lost himself without being aware of it? Here was dense growth with matted vines that clung to his feet and tripped him as he sought to clear a passage. Roger stood bewildered, thought he saw a thinning of the undergrowth and made towards it, only to fall in a twisted heap as a vine caught in his sandal and threw him. Bruised, and angry that he should be so helpless in his search, he yanked at the vines and tried to force his way through them without regard to the direction.

At once it seemed a thousand imps were set to bar his progress: clinging to his feet, blinding his sight, pulling him here and there.

"This way, Roger!"

"No, no, just the opposite."

"Follow me, follow me, follow me!"

"No, me, I'm over here, follow me, Roger!"

He turned this way and that, trying to catch the direction of their voices, but nowhere could he see them. There was only the silvery echo of their laughter as they taunted him.

Wearied, he dropped to the ground and stared at the vines which now seemed to form a wall around him. As he looked the "wall" took on a pattern with tendrils here and there, the loosing of which seemed the key to untwining all the others. Roger studied the pattern, testing first one strand and then another; then, with infinite care, he began loosing the tendrils. As he worked, other tendrils freed themselves and fell away. Sometimes, however, he was too eager and pulled impatiently at the vines. Instantly they sprang back and became more closely enmeshed than ever. At long last he realized that only patient, unruffled effort would clear the way for him. Working thus, the vines appeared to untwine themselves, and to Roger's amazement, once an opening had been made, the trail stood revealed just beyond.

Stretched out by the side of the trail he asked himself if this were the same day that he had left home with the first faint glimmer of dawn? He could not say. True, the sun was not so high in the heavens as when he lost his way, but did that prove anything? The wall of vines had seemed impenetrable, yet it had parted as if by magic when he had learned its secret. And the trail — so hopelessly lost a short time ago, was right before him. Its course was easy to follow, and pleasant, too, for the mountain air was clear and invigorating, and fragrant with flowering shrubs. Yes, anything could happen, and it might be today, yesterday, or

tomorrow — possibly all three rolled into one.

Higher and higher the trail wound its way, and the exuberance Roger felt on refinding it was beginning to wane. His muscles ached, and a sudden thunder-shower, catching him without protection, left him drenched to the skin. The trail was narrower, now, and not so clearly marked — or was it? Roger, pausing to rest, suspected that his eyes were playing tricks on him. One moment the trail was there, and his spirits rose accordingly; the next, its outlines faded and a black gloom settled upon him.

"Strange!" he thought. "What illusion plagues me now? Do I joy in the quest for the path because it is pleasant to follow, and therefore scorn it when the way seems rough? Small chance that I shall reach the goal if I blow hot and cold that way!" And forthwith he started on again, and cared not whether in rain or shine.

On, on, up and up he went. Clouds gathered and swirled around him; fingers of mist, damp and clammy, waved in and out of his sight, beckoning, pulling, enticing. He lost the trail again, and checked himself only in time to avoid slipping over a precipice. Nothing was real, nothing substantial: even the rocks that cut his feet became a part of the phantasmagoria as they ceased to be solid ground, turning to mire that bogged him down till he could scarcely move. Roger thrashed this way and that in an effort to free himself, and sank still deeper. All he could see or feel was loathsome mud, and his heart was sick that he should have come so far to end thus. The idea that it might very probably be the end, turned his thoughts with a new vision to the purpose of his quest. In imagination he saw the path as he had pictured it that night which now seemed lifetimes distant. He glimpsed the goal, too, though what it signified was hidden from him. With an energy he had not supposed he possessed, Roger flung out his arms towards

the vision of his dream and touched solid rock. He was certain it had not been there a moment before, but there was no mistaking it, and clutching with desperate strength wherever he could find a hold, he pulled himself up from the clinging mud, and climbed at last to freedom.

Exhausted, he lost consciousness. How long, he did not know, but when he woke there was the path before him, leading from the rock whereon he had slept and winding ever upward in a blaze of golden light.

Someone was on the path ahead of him, and Roger quickened his pace that he might join the traveler. The distance separating them appeared a trifling thing, yet try as he might Roger could not lessen it. He would have hailed the stranger, but something strong within him warned against it. Step after step he strode forward, striving as he went to understand what had happened, how it was that the stranger was here on the path, so near to him, and yet he had not discovered his presence before. What relation was that other to himself? for there was a relation, he was certain, and that must be why they were on the path together. Pondering the question, he lost all consciousness of himself as Roger, and for a fleeting moment seemed one with the stranger ahead of him. It was then that the traveler turned.

Here was no stranger. Roger was looking into the eyes of the child he had befriended, only the child-body had become that of a youth.

He smiled at Roger. "That is the answer," he said. "You and I are one, have been, always, only you did not know me. But I have been with you even when the way seemed darkest. It was to understand this that you sought the path." He held out his hand. "Come, we will go the rest of the way together."

The golden light was all around them, pulsing as with the beating of unseen wings — overpowering in its effect; and even as he took a step forward, for a second time Roger slipped into unconsciousness. When he awoke the sun was shining full upon his face from the open window. He rubbed his eyes. Where was his companion? Was it only a dream, and had he not gone forth to find the Path?

Who should say? Roger, in his heart, knew that he had journeyed beyond the clouds.

The Theosophical Forum

WORLD BROTHERHOOD — IN SPITE OF OURSELVES — *Louis E. van Norman*

A realization that all men are brothers is the greatest need of the world today. No "ism" or ideology, no social, economic or political system, no plank in a political party platform, could be as important or significant for the human race as a whole, or for any nation in particular, as a practical carrying out of the aim of the Theosophical Society which aims to form "an active brotherhood among men."

Such a realization would dispel fear and fear is the enemy of all peace and all happiness. Teaching nations or national groups to resent, or fear, or hate other nations, or races or groups, or other types of culture, is the sure road to the destruction of all.

The inner consciousness of brotherhood is deeply imbedded in our human existence. It is in fact a life principle which we are powerless to resist. Civilizations rise and fall. Worlds die and are born again. But, with all of them, are reborn the belief in the perfectibility of man, of his divine essence, his brotherhood with all his kind, and the knowledge — as yet secret from some — that man is one and indivisible. It is this esoteric knowledge that has inspired all religion and all true art. It is this message that Theosophy teaches to modern man, who, apparently, in so many lands has forgotten his divine origin and his familyhood on earth.

Biologically, physiologically and spiritually we are brothers. Life is ever demonstrating this truth. Theosophy brings to us modern men evidence of belief in this truth from the most ancient times, from all religions. Science is coming to the same conclusion. Philosophy is wholeheartedly of the same mind. Religion has always taught it. It is a blessed relief for thoughtful, spiritually-

mindful people to witness the increasingly chastened mood of scientific men today and their willingness to admit the insufficiency of materialistic conceptions to account for the universe and man's place in it. As for the philosophers, not only Shakespeare's Horatio, but ever more and more humble but honest thinkers are realizing that there are many more things in Heaven and Earth than they have ever dreamed of. The old tribal god has gone. The personal god in man's image will follow. Theosophy brings again to our memories the ancient truth that God is everywhere, in everything, *is* every thing, that we *are* God, and gods, and brothers.

What interests us in these days particularly is the fact that earnest people all over the world, of every race and culture are drawing together in the bond that always draws men and women together who are honestly seeking after truth, who understand their own common origin and destiny. In the words of Carlyle, there is after all but one race — humanity — and a mystic bond of brotherhood makes all men one.

It may seem a very bold statement, that, in spite of all the rivalries, hatreds, ambitions, misunderstandings and opposing "ideologies" now apparently dominating the human race, mankind is actually nearer to accepting — and practicing — the religion and rule of brotherhood than ever before in the race's long life on this planet. Yet it is the truth.

This realization — and practice — has come about, is coming about, through advances away from the law of the jungle and the reign of tooth and claw on the one hand, and, on the other, because of an ever more lofty conception of what we mean by God. It is a long story and the details are not important. But that progress is made is the most important thing in the history of the human family.

All human history has shown that there is no permanent remedy for evil in vengeance or violence. It has shown that, in acting on the assumption that we are saving our lives as nations when we do economic moral and spiritual wrongs, we are really denying the brotherhood of man. The unity of the family, now generally recognized, must be extended so as to include a recognition of the unity of all mankind in the essentials of life. If this recognition comes about only slowly, let us not be impatient. Recently, a Christian missionary, who had spent 25 years trying to convert the heathen, finally became discouraged and decided to resign and return to the West. To his superior he complained: "There's no use going on. Think of the few converts I have made, compared with the thousands who will not see the light." To this the superior replied, "The trouble with you, my friend, is that you want to work quicker than God." We modern men have enough brain power, courage and vision to launch what we Americans call brotherhood on a business basis. What we lack is spiritual understanding — and patience.

You are impatient to say that this is contrary to human nature. Is it? You will point to the fact that, two thousand years after the birth of Jesus the Christ, known as the "Prince of Peace," and in spite of the wisdom and admonitions of all the other great saviors, saints, and sages, who have assured us that he who would save his life must lose it, and that all men are our brothers, we are again facing the ferocities of war, hatred, and destruction in more than one corner of the world.

There are signs that an understanding of world interdependence and solidarity is growing and deepening. The common interest that has already destroyed seclusion and isolation includes the vast reach of modern industrialism, the school, the advance of woman, the motor car, the airplane, the moving picture, the radio. All these have revolutionized our age-old notions of time

and space. Today no nation can isolate itself from other nations, no matter how loud and strident may be its blatant nationalistic propaganda. Good will and the interchange of ideas, goods, and services are making narrow nationalism unprofitable. Even the most fanatical advocates of totalitarian autarchy are beginning to perceive that (as an English writer has put it) we simply must prepare, deliberately, sincerely and confidently for "a more majestic acknowledgment of common interests, material, social and spiritual."

The reiteration of the truth that man is, at the same time and of necessity, both a physical and a spiritual being and that he must fight the battle of life along both fronts, will gradually sink into our consciousness until it conditions our lives as individuals, and our acts and policies as nations.

More and more it is being charged that orthodox religion has failed to keep up with the thoughts and spiritual yearnings of human beings, with the changing social order. Consequently, it has been said, religion has lost — or is losing — its influence on the masses, or that it has failed to take into account changing moral ideas and standards.

History has something to say on this point. In industrial nations in the old world, when the church has failed to maintain sympathetic contact with the working classes, to inculcate love rather than hate, the workers have finally deserted the church and many of them have lost faith in any conception of God.

A revival of religious and ethical spirit can have far-reaching and deeply-searching effects on national destinies. Although such revivals often work in rather obscure ways, and their influence is not always easy to trace, they sometimes provide an emotional outlet for forces and psychological impulses which, otherwise, might easily blow off in violent forms. Why did England have no

bloody revolution in the second half of the eighteenth century and the first half of the nineteenth, when the continent of Europe was convulsed with the play of rifles and bombs in what one historian has called the "ultima ratio regorum"? Another historian believes that the rise of the Methodist movement and the birth of the Salvation Army during these periods, both emphasizing brotherly love, may be the answer.

The salvaging power of religion and the spiritual instinct in national affairs was referred to in emphatic words by the late President Calvin Coolidge in the public statement of a truth no less profound because it has been enunciated so many times before. Outside the teaching of religion, he reminded us (no matter what form it may take), there is no answer to the problems of life. Our international and social relations cannot be determined by material facts and forces. Armaments, wages, profits, are not matters of mere quantity. They are at bottom problems of quality. Changing or fixing their amount will not — cannot — afford a final solution. The real problems of the world are not material but spiritual. Love in its highest manifestations, love and a realization of the basic fact of human brotherhood — these are the only answer.

It is finding its lodgment in human hearts, this truth. Increasing numbers of young people, boys and girls alike, are going direct from their studies into social work of some kind, into activities that have to do with public health and the relief of poverty and labor, as well as into work of education and aiding the ill and aged. This impulse must be rooted in an ethical interest. The youth of our day seems to be growing more and more conscious of the worth of the vision and conception implied in the question posed by a novelist in a book widely read and recently put on the moving-picture screen. "Have you any credit at the bank with God? When you pray for something your heart desires, has your

deposit at God's bank been exhausted or overdrawn?"

But it is not only the young laity who are awakening. The clergy is also being aroused. In spite of every temptation to express the prejudices and instincts of well-to-do congregations, increasing numbers of young ministers, priests and rabbis are becoming the fearless and sometimes the lonely champions of the poor and down-trodden, whom they recognize as their brothers in fact and deed. In his book, *Great Men of the Bible*, Dr. Walter Russell Bowie says of many of the congregations of fashionable American churches today:

There are young men in college, or just out of it, who cannot rest in the complacent ideas of their families or their social groups, but who wrestle in mind and spirit with the insistent question of how to take their place in the world's every day affairs and still be just and fair and generous and brotherly.

There are women in settlements and organizations like the Consumer's League who have daily contact with the problems of the poor and who have transferred their

passionate loyalties from the class into whose exemptions they were born to the class with which, vicariously, they have become identified.

Then there are the almost innumerable societies, groups, and organizations of many kinds which have for their aim the cultivation of good will and understanding among men without regard to race, nationality, or position in life. It is a long and ever lengthening list. The entire world is becoming conscious of its economic, social, and spiritual interdependence and solidarity. The causes of many of our economic — even financial — crises are moral and intellectual. Even in this machine age man is often

moved by intangible forces and impulses. Beyond the material techniques of the engineer there has been this growing consciousness of human solidarity, and this consciousness, this realization, this understanding of brotherhood, of the essential divinity of man, has come to be the inspiration of the artist and the poet. Beyond the material face of things the mystical soul has ever sought God. Love, in the words of a Japanese sage, Toyohiko Kagawa, "is the fuel of the universe." It behooves man to see that the engine of the world is not stalled for lack of fuel.

We are prone to be critical of those who are different from ourselves. This attitude is born of complacent self-satisfaction, contempt, and indifference. But the great mass of the people are good-natured folk who find no difficulty in showing good will.

The spread of the idea of brotherhood is due to our deepening understanding of our identity as "pilgrims of eternity" on this planet called earth. Although he was not a Theosophist consciously, the old Roman poet, Terence, was really one. You remember his dictum: "Homo sum. Humani nihil a me alienum puto." — "I am a man and nothing human can I regard as alien (foreign) to me."

In conclusion, a word for those who, consciously or not, are Theosophists, believers in the honest brotherhood of all men, there are the ringing phrases of the English poet, Sir Edwin Arnold. He understood the ancient wisdom of the East, and, you will remember, made a beautiful translation of that splendid Indian poem and scripture, the *Bhagavad-Gita*. In his other poem *Armageddon, the War Song of the Future*, he flung abroad this challenge:

We are they who will not take,
From palace, priest or code,
A meaner law than brotherhood,

A lower Lord than God.

The Theosophical Forum

THE EARTH, A LIVING BEING — *A. James*

The more we study the mineral, plant, animal and human life of our home the earth, the more apparent it becomes that all life is linked together in a vast hierarchy so interwoven as to resemble a living organism.

Moreover, recent scientific studies of the upper atmosphere, the depths of the ocean, and the magnetic currents of the earth, approach every year closer to the Theosophic understanding of the mutual relationship existing between the world and its surrounding layers upon layers of atmosphere. Truths hinted at in *The Secret Doctrine* in 1888 are now becoming subjects of scientific investigation. Even the interior of the earth is beginning to yield up its secrets.

In the fifth century of our era, the Alexandrian philosopher Proclus taught that:

Gold and silver, and each of the other metals, as likewise other things, grow in the earth, from the celestial Gods, and from an effluxion thence derived.

According to his philosophy, each of the planets was the outer expression and home of a divine being, and when it is said that gold pertained to the Sun, silver to the Moon, copper to Venus, or iron to Mars, each of these metals was understood as being derived or concreted from one or other of the divine essences. Moreover, it was thought that every planet, like the solar system itself, was surrounded by these same divine essences, each partaking of the nature and characteristics of the planet itself. Thus gold was thought to be of an earthy nature on Earth, of a solar nature on the Sun or of a martian nature on Mars. These

subtle essences symbolized by the planets were the spiritual cause or source of all things, or as Proclus expressed it, "The metals which are here, derive their concretion from the effluxions of the celestial Gods." Growing within the Earth they are "extended to a partial nature, *apostatizing from the whole.*"

It is now believed by many geologists that the emission of different types of lavas from the same volcano is due to what is called "magmatic differentiation." According to this theory homogeneous magmas of molten rock deep within the earth split up into different kinds of lava because of conditions which are as yet unknown.

Most primary deposits also issue forth from the earth's interior in a gaseous condition during volcanic or igneous activity, or else rise from the depths dissolved in the magmatic waters. Examples of such deposits are the copper and zinc veins of Butte, Montana, and the gold-bearing veins found at Tonapa, Nevada.

It is difficult for the average person to realize the extent to which air and water are continually renewed by additions from deep within the earth itself. A number of years ago a careful study was made of a single minor vent on Mount Etna for a period of 100 days. At the end of that time it was found that 460,000,000 gallons of water had issued forth in the form of steam. Due to the great amount of water continually added to the air by volcanos and hot-springs, Suess went so far as to state that "the body of the earth has given forth its ocean."

In Alaska, in the Valley of "Ten Thousand Smokes," literally hundreds of thousands of tons of chemicals are emitted by the numerous vents, mostly in the form of steam and gas. These include such substances as hydrochloric and hydrofluoric acids, hydrogen sulphide and many others.

Further light is thrown on the emanation of substances from within the earth by Dr. de Purucker where, in speaking of the "singular points" postulated by Dr. Jeans, he says:

Every globe that you see in space has as its center, its heart, just such a "singular point," to adopt the language of Jeans, the English astronomical physicist; and through this center of each such globe come into that globe the streams of entities, the river of living things, by which that globe is inhabited, all of them on their evolutionary pathway. They then enter into the atmosphere of any such globe, such as our earth, and find, if they be human entities, their habitats in the bodies of little children; and similarly so is it the case with the beasts and the vegetables, as well as the atomic entities of the mineral kingdom.

— *Questions We All Ask*

Here is food for thought. But if as Suess suggested the body of the earth has given forth its oceans from within itself, what about the mineral content of marine waters?

We know that desert streams and lakes in evaporating leave a deposit of alkali; and that where salt lakes are found they have resulted from the slow evaporation of trapped or uplifted arms of the sea. The same is true of the large underground salt deposits found in many places.

The question arises, can it be that, contrary to all established opinion, the waters of the oceans have always been much as they are today? When Dr. de Purucker was asked this question he replied in the affirmative and added "It is the vast body of mineralized water which the oceans are, which gives the gravitational pull of the moon its chance to produce tidal action." Then as an afterthought he continued: "I believe there are small tides on the big fresh-water lakes, but very small."

It is an important teaching of the Ancient Wisdom that the Earth is indeed a living being, and that the life of all kinds in all kingdoms forms a universal brotherhood, in which every part affects and is affected by every other part.

There is a myth found in both East and West, of a beautiful virgin goddess who became the earth. From her bones were formed the rocky framework. Her hair became the vegetation, her eyes the lakes, her teeth the gems and crystals and her breath the wind. Each portion became a part of the world, not a globe of dead matter but a living being.

The Theosophical Forum

LITERARY NOTES: TRAGEDY — Isabel B. Clemeshaw

The philosopher finds that life is the greatest of all mysteries, and the mind of man is the most overwhelming fact in life. By his higher intellectual processes the philosopher endeavors to reason in a world of ideas beyond the fetters of the passions and desires. Then an abstract principle of conduct becomes clear. To that world of ideas he must discipline his will and brain, and condition his everyday life so as to compel the realization of these floating ideas.

The poet *sees* the mystery of life pictured in the invisible side of nature. He has a vision, as Jacob saw the Ladder of Life up which living beings were ascending and descending. Dante and Milton saw the planes of the inner worlds through which the soul of man ascends in its cycle of incarnations. Dante was impressed with the journey along the circulations of the cosmos of the spiritual ray in man in its after-death experiences, symbolic of the Path of Initiation; Milton, with the descent of the divine spark clothed in garments of Hell, and the problem of its return toward regaining its divinity.

The tragedian finds himself confronted with a different problem. He intuitively portrays on the stage not what John Jones seems like to himself or to Bill Smith, but how the lower part of the human soul of John Jones performs as seen by the spiritualized portion of it, the reincarnating ego: that sum total of what he has learned in former lives on earth. What appears *in action* is man as "but a walking shadow . . . that struts and frets upon the stage . . . a tale told by an idiot." But what the spectator understands in reality from the entire play is that "Man [is] the author of his own proper woe," and that there is no assignment of justice either in

degree or in kind.

Greek tragedy pressed the point of justice and retribution. Fate, biding her time, administered a Spartan thwack, more as though she had arranged the catastrophe for the hero. Medieval "tragedy" was a narrative urging that man should live in fear; he was the plaything of circumstances, and helpless before some outside influence which struck suddenly, perhaps in the loss of some possession.

Shakespearean tragedy shows both an inner ('spiritual') and an outer struggle:

. . . things outward

Do draw the inward quality after them,

To suffer all alike.

In the earlier plays more of the outer struggle appeared, and in the later ones the hero's conflict was almost entirely with himself. Therefore these later plays have little *tragic* interest: the initiation was taken. In the four great tragedies — *Hamlet*, *Othello*, *King Lear*, and *Macbeth* — a more or less balanced dual conflict rages. Though

The web of our life is of mingled yarn, good and ill together,

we must not compromise between the two. To know what is regarded as a spiritual force, we have only to examine the great tragedian's view of its opposite. Evil is shown as pride, credulousness, irresolution, excessive susceptibility to the opposite sex, whatever is negative, barren, or destructive. If any of these is the principle that animates him, or if he identifies himself with others who embody these weaknesses, he will be led to disunity, isolation, madness — death.

The hero was always an eminent figure in society: a king, a

prince, a great general or official of State; and was at the height of his renown when the thought occurred to him which he translated into an act, thus resulting in a chain of acts and reactions — or omissions — which caused his death.

He was usually an averagely good man. The short time into which the events of the play are crowded intensifies the life of the hero and magnifies him so that it is his grandeur that impresses us. When one so responsible and trusted suffers agony, frustration and death, it has a paralyzing effect upon his entire world: he pulls that world down with him.

A sight most pitiful in the meanest wretch
Past speaking of in a king.

Yet, the spectator is not depressed, for he has seen more than one link (one earth life) in the chain of circumstances, and is more than ever convinced of human worth. The cross-section of evolution shown on the stage where ". . . from hour to hour, we ripe and ripe . . . And thereby hangs a tale," involves him anew in the contemplation of life itself. Here, he has seen telescoped, from the past, considerable maturity of intellectual and emotional experience. This gains momentum as the play so rapidly proceeds, and unfolds an infinite complexity of interrelated cause and effect in which the hero is enmeshed. The spectator has focused his attention not only on the genius before him, but on the mystery of the *tale* of life.

It is this mystery, that is untold and so forcefully brought home to the audience, that makes the tragedy so impressive. In character the hero is like ourselves; his conflicts are ours. We sympathize even when we know that while he identifies his passion or habit of mind with his whole being, a smaller man than he could have overcome it. Why can the hero not yield? we ask, while we can see that the tragic error lies in the very nobility of mind and soul

that is interwoven with human weakness. The hero is rarely conscious that he is in the wrong. The mystery is laden with sadness at the spectacle of the great waste. "Another incarnation wasted," a theosophist would say, "unless he has assimilated his lesson and built it into the fabric of his soul," as Hamlet is shown to have done:

I shall the *effect* of this good lesson keep
As watchman to my heart.

It is the effect of each experience taken to heart, rather than the accumulation of experiences that makes for growth. ". . . life is a shuttle," the poet assures us:

When we are born, we cry, that we are come
To this great stage of fools.

Each time the hero, man, shuttles back into birth, he brings the storehouse of his experiences with him.

What a piece of work is a man! How noble in reason and infinite in faculty! in form and moving how express and admirable! in action how like an angel!

It is the fact that we are shown the godlike qualities of man that increases the mystery enshrined within him; this and the *tale* of the shuttling on and off the stage of life, "where every man must play his part" according to what he has woven into his nature. But there is yet another mystery: the consistent denial of the idea that truth and virtue shall at last succeed. The man who does not understand himself may *mean* well, but his reward usually will be the opposite of what he intended when the first thought is translated into the acts that snare him. He may be as well-meaning as Brutus, yet with others

. . . be winnow'd with so rough a wind

That even our corn shall seem as light as chaff.
And good from bad find no partition.

He will exclaim: "How my achievements mock me!" Yet feel that

Such harmony is in immortal souls;
But whilst this muddy vesture of decay
Doth grossly close it in, we cannot hear it.

It is in the restoration of this harmony that the mystery seems hidden. "There is no darkness but ignorance" while man is unaware that he is a part of a greater organism. Let the individual attack the Whole, or fail to conform to its moral order, and he will find that "the wheel has turned full circle" upon himself. The Whole, or Nature, is shown as an intelligence bent upon perfection and "There is a special providence in the fall of a sparrow." Until man works unselfishly for the common good, living a spiritual and intellectual, rather than an emotional life, he does not begin to pay off against that outstanding account of evil which he has banked against himself. He feels like one

. . . imprisoned in the viewless winds,
And blown with restless violence roundabout
The pendant world.

This Higher Order, *karman*, has the last word. It is a just and compassionate cosmic law that teaches the individual while it heals the wounds made by him on his environment. In each life man is haunted by fear; he cries, "Out, out, brief candle!" in his desire to end it and begin anew. When he turns and works with Nature, he knows that

There's a divinity that shapes our ends,
Rough-hew them how we will —

PSYCHISM — *Claire Wesner*

There is often a fine line of demarcation between theory and practice which, if not checked, can become a wide chasm of misunderstanding. It is well therefore to return occasionally to fundamental principles to determine the basis of mutual agreement. As the years roll by since the founding of the T. S. in 1875, the circumstances surrounding that event fade into history. Thus are formed the various lines of theory concerning not only the policies of the T. S., but even the expression of the theosophical teachings themselves. Some bits of interesting correspondence in recent months on the subject of psychism show the need of a sympathetic co-ordination of thought along this line. We are reminded in this connection of a statement familiar to many of us, "You are all correct from your own viewpoint, *but*." In other words, to synchronize individual opinion we must of necessity approach the matter from a broad and basic viewpoint so that "opinion" is replaced with knowledge.

Any sincere student of theosophy accepts its teachings as a source of knowledge; our individual interpretation of these teachings may often be opinion. So to find that basis of knowledge in this particular instance concerning the teachings and practice of psychism, let us examine the original purpose of Mme. Blavatsky in presenting them to the world. Creeds, laws, and dogmas are not laid out for us to follow. The way is shown, both right and wrong, and it is up to us to choose the path we take.

For direction one can of course quote H. P. Blavatsky and other theosophical leaders on the subject of psychism, but such quotations are seldom convincing and in fact can often prove contradictory. The old saying that anything can be proved by the

Bible may just as well be said of H. P. B. We can also examine the objects of the T. S., but here again we can lose our perspective in trying to determine exact and literal definitions instead of penetrating a bit deeper to the *purpose* of those objects. As has been pointed out before (see Theosophical Forum, Oct., 1947, *Our Directives*), the wording of Object No. III, which concerns the investigation of the powers in man, has been changed two or three times.

The original wording of this Object as given in 1882 was, "To investigate the hidden mysteries of Nature and the Psychological powers latent in man." In 1886 this was changed to read thus: ". . . to investigate unexplained laws of nature and the psychological powers of man." In 1888 we have an addition to Object No. III which reads, "The Fellows interested in this third Object now form a distinct private division of the Society under the direction of the Corresponding Secretary." This addition however, was cancelled in 1890. After other changes made during the passing years, the present and last reading of this Object (now No. V, Covina T. S.), was made in 1929 by G. de Purucker and reads, "To investigate the powers innate in man." (Theosophical Forum, Oct., 1929)

The consciousness and environment of the world has changed completely since 1875 and if the T. S. is to give any assistance or guidance to this changing world, its objects must be fluidic enough to meet this change; otherwise we shall become a dogmatic sect built on creed and phraseology. There was a definite need in 1882 which called forth the wording of Object III of the T. S. to "investigate the *psychical* powers in man." Note the wording of this Object today, "To investigate the powers *innate* in man" — a much wider compass of investigation, without destroying the original.

When the original objects of the T. S. were formulated, interest in spiritualism and psychic phenomena had reached a period of unwholesome intensity. Ignorant of the dangers or causes of such practices, seekers of a more spiritual way of life believed they had found the keys to unlock the shackles of scientific materialism and religious dogma. Here was proof (as erroneously assumed) of life after death, proof of unknown powers in man. Science of course could see no further than its laboratory test-tubes and denounced all psychic phenomena as impossible and absurd. The church doctrines of salvation, sin, and a personal god could no longer co-ordinate blind faith with scientific reasoning. So the field for spiritualism was laid wide open.

Anyone familiar with the life of H. P. B. knows what stupendous efforts she made to "prove" to the materialistic Nineteenth Century the existence and powers of psychic phenomena. It was this very thing which brought so much derision upon her shoulders. Yet, when she also tried to show the dangers and illusions of psychism, H. P. B. was scorned by the professional mediums and spiritualists. The task was gigantic, the need heart-rending. So in addition to the broad field of theosophical teachings, particular emphasis was given by H. P. B. to the investigation of the psychical powers in man.

Today, the premise of psychic investigation is established and it is gradually being placed upon a firm basis of scientific study. The forward-looking writers and thinkers of the present day are coordinating the fields of science, religion, and philosophy. Psychic and occult phenomena are more or less accepted as fact. The need today is to *explain* such phenomena and to give them their rightful place in the scheme of life. Emphasis now must be placed on the *complete* man, man as a physical, mental, and spiritual, as well as psychical, being and his relation to life of this world and the universe of which he is a part.

A survey of the field of occultism shows us that during the past fifty years an increasing number of organizations and cults have sprung directly or indirectly, from the T. S. Many such groups stress only certain aspects of the original theosophical teachings, particularly those of psychism and the latent powers of man. So we shall always have those among us who seek sensationalism. Others of course are searching for the basic truths of the ancient wisdom. If the T. S. is to remain the fountain-head of occult and spiritual knowledge, then we have a certain moral obligation to such groups insofar as it will be accepted. Guidance and not criticism is needed to change the focus of attention from the astral, psychical, and phenomenal to the broader concepts of our innate human and spiritual faculties.

The various psychical research groups and societies are making sincere and commendable investigations into the field of psychic phenomena. The general attitude is one of scientific research in an endeavor to "prove" the existence of intelligent life beyond the reach of our physical senses. This attitude is in contra-distinction to the hostility expressed by the S. P. R. of Blavatsky's time. However, such groups do not consider the dangers involved in such investigations nor their accompanying moral responsibilities. Guidance is needed. So a consideration of the "*innate* powers in man" is an essential object of the T. S. today, if we are to retain those principles for which the Society was originally founded.

We can safely say that the greatest advance made in the study of the complex human being, outside of theosophical or occult circles, has been in the field of psychology. Scientific recognition of psychic faculties is admitted when psychologists make a distinction between psychism, which they term Psi, and other fields of psychological experiment. Dr. J. B. Rhine of Duke

University is perhaps the leading figure in establishing "proof of man's extra-sensory perceptions and even of deeper innate capacities. His experiments and writings are now accepted in many scientific circles and have done much in removing the sensationalism from psychic phenomena. Many leading religious counselors combine the use of psychology with spiritual guidance to give practical as well as spiritual aid. Medical treatment is concerned today with the psychological and mental ailments in diagnosis. Perhaps we do not always agree with such analysis but modern psychologists have touched an important aspect of our human complexity. They have not yet plumbed the depths of real human development but they have reached beyond the astral and psychic to the more human elements. It can be said with some reservations that modern psychology has assumed the burden of investigating the "psychical powers in man." In keeping with such trends, the emphasis of the T. S. needs to be on the broader level of investigating the more *spiritual* "powers innate in man." We wonder if this trend is the prelude to the coming religious era which we are told will be with us towards the last quarter of this century?

The human race is in a short cycle of astral development which is manifested in our modern inventions such as aircraft, radar, television, etc., as well as in our human sensitiveness to psychic phenomena. This is a natural condition and should be accepted as such without undue emphasis. Perhaps the great danger is one of morals and ethics as it is obvious that humanity has displayed its lack of moral control over affairs of the physical plane. Why then should we try to force the development of our psychic faculties which we do not know how to control and which we do not understand? It reminds one of the trite analogy of giving a child chemical explosives to play with. Let us give greater attention to those human faculties which are so neglected, control of our

thoughts and emotions, and the development of our real sixth sense — intuition.

The abuse of anything soon brings deterioration and destruction and that is what is being done to the latent psychic faculties which are awakening within us. They are used too often for sensationalism, personal gain, and a misplaced sense of spiritual development. There is a difference between magical tricks and real psychic faculties, yet we are often deluded by them. Motive is the keynote to follow. If our interest is for unselfish purposes and for the good of human development, a great step forward has been made. In this respect modern psychology is outstanding, but a firm basis still needs to be established.

The position of the T. S. in this modern world of expanding psychic research and practice, is still based on those broad precepts set forth by H. P. B. It is not sufficient to admit the existence of psychism; it needs to be explained and given its rightful place in the scheme of human evolution. The dangers of psychic practice in its various forms, without the guidance of a true teacher, need to be stressed. Attention must be drawn to the development of the higher human and spiritual faculties of man. These objects can only be attained by extending a helping hand, not through criticism. A responsibility and a charge have been placed upon the shoulders of every F. T. S. How much we assume that responsibility depends upon our knowing the fundamental teachings of the ancient wisdom so that we may pass them on to others as we have received them.

THE ADEPTS AND WESTERN SCIENCE: I — *H. P. Blavatsky*

Reply to an English F. T. S. — Mr. F. W. Myers of the Psychological Research Society and member of the London Lodge, T. S., whose questions were answered by Master M. through H. P. Blavatsky in *The Theosophist*.

It was not in contemplation, at the outset of the work begun in *Fragments*, to deal as fully with the scientific problems of cosmic evolution, as now seems expected. A distinct promise was made, as Mr. Sinnett is well aware, to acquaint the readers of this Journal with the outlines of Esoteric doctrines and — no more. A good deal would be given, much more kept back, especially from the columns of a magazine which reaches a promiscuous public.

This seeming unwillingness to share with the world some of nature's secrets that may have come into the possession of the few, arises from causes quite different from the one generally assigned. It is not *Selfishness* erecting a Chinese wall between occult science and those who would know more of it, without making any distinction between the simply curious profane, and the earnest, ardent seeker after truth. Wrong, and unjust are those who think so; who attribute to indifference for other people's welfare a policy necessitated, on the contrary, by a far-seeing universal philanthropy; who accuse the custodians of lofty physical and spiritual though long rejected truths, of holding them high above the people's heads. In truth, the inability to reach them lies entirely with the seekers. Indeed, the chief reason among many others for such a reticence, at any rate, with regard to secrets pertaining to physical sciences — is to be sought elsewhere. (1) It rests entirely on the *impossibility* of imparting that the nature of which is, at the present stage of the world's

development, beyond the comprehension of the would-be learners, however intellectual and however scientifically trained may be the latter. This tremendous difficulty is now explained to the few, who, besides having read *Esoteric Buddhism*, have studied and *understood* the several occult axioms approached in it. It is safe to say that it will not be even vaguely realized by the general reader, but will offer the pretext for sheer abuse. Nay, it has already.

It is simply that the gradual development of man's seven principles and physical senses *has* to be coincident and on parallel lines with Rounds and Root-races. Our *fifth* race has so far developed but its *five* senses. Now, if the *Kama* or *Will-principle* of the "Fourth-rounders" has already reached that stage of its evolution when the automatic acts, the unmotivated instincts and impulses of its childhood and youth, instead of following external stimuli, will have become acts of will framed constantly in conjunction with the mind (Manas), thus making of every man on earth of that race *a free agent*, a *fully* responsible being — the *Kama* of our hardly adult *fifth* race is only slowly approaching it. As to the 6th sense of this, our race, it has hardly sprouted above the soil of its materiality. It is highly unreasonable, therefore, to expect for the men of the 5th to sense the nature and essence of that which will be fully *sensed* and perceived but by the 6th — let alone the 7th race — *i.e.*, to enjoy the legitimate outgrowth of the evolution and endowments of the future races with only the help of our present limited senses. The exceptions to this quasi universal rule have been hitherto found only in some rare cases of constitutional, abnormally precocious individual evolutions; or, in such, where by early training and special methods, reaching the stage of the 5th rounders, some men in addition to the natural gift of the latter have fully developed (by certain occult methods) their sixth, and in still rarer cases their seventh,

sense. As an instance of the former class may be cited the Seeress of Prevorst; a creature born *out of time*, a rare precocious growth, ill adapted to the uncongenial atmosphere that surrounded her, hence a martyr ever ailing and sickly. As an example of the other, the Count St. Germain may be mentioned. Apace with the anthropological and physiological development of man runs his spiritual evolution. To the latter, purely intellectual growth is often more an impediment than a help. An instance: Radiant stuff — "the fourth state of matter" — has been hardly discovered, and no one — the eminent discoverer himself not excepted — has yet any idea of its full importance, its possibilities, its connection with physical phenomena, or even its bearing upon the most puzzling scientific problems. How then can any "Adept" attempt to prove the fallacy of much that is predicated in the nebular and solar theories when the only means by which he could successfully prove his position is an appeal to, and the exhibition of, that sixth sense consciousness which the physicist cannot postulate? Is not this plain?

Thus, the obstacle is not that the "Adepts" would "forbid inquiry," but rather the personal, present limitations of the senses of the average, and even of the scientific man. To undertake the explanation of that which at the outset would be rejected as a physical possibility, the outcome of hallucination, is unwise and even harmful, because premature. It is in consequence of such difficulties that the psychic production of physical phenomena — save in exceptional cases — is strictly forbidden.

And now, "Adepts" are asked to meddle with astronomy — a science which, of all the branches of human knowledge, has yielded the most accurate information, afforded the most mathematically correct data, and of the achievements in which the men of science feel the most justly proud! It is true that on the whole astronomy has achieved triumphs more brilliant than

those of most other sciences. But if it has done much in the direction of satisfying man's straining and thirsting mind and his noble aspirations for knowledge, physical as to its most important particulars, it has ever laughed at man's puny efforts to wrest the great secrets of Infinitude by the help of only mechanical apparatus. While the spectroscope has shown the probable similarity of terrestrial and sidereal substance, the chemical actions peculiar to the variously progressed orbs of space have not been detected, nor proven to be identical with those observed on our own planet. In this particular, Esoteric Psychology may be useful. But who of the men of science would consent to confront it with their own handiwork? Who of them would recognize the superiority and greater trustworthiness of the Adept's knowledge over their own hypotheses, since in their case they can claim the mathematical correctness of their deductive reasonings based on the alleged unerring precision of the modern instruments; while the Adepts can claim but their knowledge of the ultimate nature of the materials they have worked with for ages, resulting in the phenomena produced. However much it may be urged that a deductive argument, besides being an incomplete syllogistic form, may often be in conflict with fact; that their major propositions may not always be correct, although the predicates of their conclusions seem correctly drawn — spectrum analysis will not be acknowledged as inferior to purely spiritual research. Nor, before developing his sixth sense, will the man of science concede the error of his theories as to the Solar Spectrum, unless he abjure, to some degree at least, his marked weakness for conditional and disjunctive syllogisms ending in eternal dilemmas. At present, the "Adepts" do not see any help for it. Were these invisible and unknown profanes to interfere with — not to say openly contradict — the *dicta* of the Royal Society, contempt and ridicule, followed by charges of crass ignorance of the first elementary principles of modern science would be their

only reward; while those who would lend an ear to their "vagaries," would be characterized immediately as types of the "mild lunatics" of the age. Unless, indeed, the whole of that august body should be initiated into the great Mysteries at once, and without any further ado or the preliminary and usual preparations or training, the F. R. S.'s could be *miraculously* endowed with the required sixth sense, the Adepts fear the task would be profitless. The latter have given quite enough, little though it may seem, for the purposes of a first trial. The sequence of martyrs to the great universal truths has never been once broken; and the long list of known and unknown sufferers headed with the name of Galileo, now closes with that of Zollner. Is the world of science aware of the real cause of Zollner's premature death? When the fourth dimension of space becomes a scientific reality like the fourth state of matter, he may have a statue raised to him by grateful posterity. But this will neither recall him to life, nor will it obliterate the days and months of mental agony that harassed the soul of this intuitional, farseeing, modest genius, made even after his death to receive the donkey's kick of misrepresentation and to be publicly charged with lunacy.

Hitherto, Astronomy could grope between light and darkness only with the help of the uncertain guidance offered it by analogy. It has reduced to fact and mathematical precision the physical motion and the paths of the heavenly bodies, and — no more. So far, it has been unable to discover with any approach to certainty the physical constitution of either Sun, stars, or even cometary matter. Of the latter, it seems to know no more than was taught 5,000 years ago by the official astronomers of old Chaldea and Egypt; namely, that it is vaporous, since it transmits the rays of stars and planets without any sensible obstruction. But let the modern chemist be asked to tell one whether this matter is in any way connected with, or akin to, that of any of the external gases

he's acquainted with; or again, to any of the solid elements of his chemistry. The probable answer received will be very little calculated to solve the world's perplexity; since, all hypotheses to the contrary, cometary matter does not appear to possess even the common law of adhesion or of chemical affinity. The reason for it is very simple. And the truth ought long ago to have dawned upon the experimentalists, since our little world (though so repeatedly visited by the hairy and bearded travellers, enveloped in the evanescent veil of their tails, and otherwise brought in contact with that matter) has neither been smothered by an addition of nitrogen gas, nor deluged by an excess of hydrogen, nor yet perceptibly affected by a surplus of oxygen. The essence of cometary matter must be — and the "Adepts" say *is* — *totally different from any of the chemical or physical characteristics with which the greatest chemists and physicists of the Earth are familiar* — all recent hypotheses to the contrary notwithstanding. It is to be feared that before the real nature of the elder progeny of *Mula Prakriti* is detected, Mr. Crookes will have to discover matter of the *fifth* or *extra* radiant state — *et seq.*

Thus, while the astronomer has achieved marvels in the elucidation of the visible relations of the orbs of space, he has learnt nothing of their inner constitution. His science has led him no farther towards a reading of that inner mystery, than has that of the geologist, who can tell us only of the Earth's superficial layers, and that of the physiologist who has until now been able to deal only with man's outer shell, or *Sthula Sarira*. Occultists have asserted and go on asserting daily the fallacy of judging the essence by its outward manifestations, the ultimate nature of the life-principle by the circulation of the blood, mind by the gray matter of the brain, and the physical constitution of Sun, stars and comets by our terrestrial chemistry and the matter of our own planet. Verily, and indeed, no microscopes, spectroscopes,

telescopes, photometers or other physical apparatuses can ever be focussed on either the *macro* or *micro*-cosmical highest principles, nor will the *mayavirupa* of either yield its mystery to physical inquiry. The methods of spiritual research and psychological observation are the only efficient agencies to employ. We have to proceed by analogy in every thing, to be sure. Yet the candid men of science must very soon find out that it is not sufficient to examine a few stars — a handful of sand, as it were, from the margin of the shoreless, cosmic ocean — to conclude that these stars are the same as all other stars — our earth included; that, because they have attained a certain very great telescopic power, and gauged an area enclosed in the smallest of spaces when compared with what remains, they have, therefore, concurrently perfected the survey of all that exists within even that limited space. For, in truth, they have done nothing of the kind. They have had only a superficial glance at that which is made visible to them under the present conditions, with *the limited power of their vision*. And even though it were helped by telescopes of a hundred-fold stronger power than that of Lord Rosse, or the new Lick Observatory, the case would not alter. No physical instrument will ever help astronomy to scan distances of the immensity of which that of Sirius, situated at the trifle of 130,125,000,000,000 miles away from the outer boundary of the spherical area, or, even that of (a) Capella with its extra trifle of 295,355,000,000,000 (2) miles still further away, can give them, as they themselves are well aware — the faintest idea. For, though an Adept is unable to cross bodily (*i.e.*, in his astral shape) the limits of the solar system, yet he *knows* that far stretching beyond the telescopic power of detection, there are systems upon systems, the smallest of which would, when compared with the system of Sirius, make the latter seem like an atom of dust imbedded in the great Shamo desert. The eye of the astronomer, who thinks he also knows of the existence of such systems, has

never rested upon them, has never caught of them even that spectral glimpse, fanciful and hazy as the incoherent vision in a slumbering mind — that he has occasionally had of other systems, and yet he verily believes he has gauged INFINITUDE! And yet these immeasurably distant worlds are brought as clear and near to the spiritual eye of the *astral* astronomer as a neighboring bed of daisies may be to the eye of the botanist.

Thus, the "Adepts" of the present generation, though unable to help the profane astronomer by explaining the ultimate essence, or even the material constitution of star and planet, since European science, knowing nothing as yet of the existence of such substances or more properly of their various states or conditions has neither proper terms for, nor can form any adequate idea of them by any description, they may, perchance, be able to prove what this matter *is not* — and this is more than sufficient for all present purposes. The next best thing to learning what is true is to ascertain what is *not* true.

Having thus anticipated a few general objections, and traced a limit to expectation, since there is no need of drawing any veil of mystery before "An English F. T. S.," his few questions may be partially answered. The negative character of the replies draws a sufficiently strong line of demarcation between the views of the Adepts and those of Western science, to afford some useful hints at least.

On August 22, 1883, Col. Henry S. Olcott joined H. P. B. at Ootacamund, the hill-station of Madras, where she was staying then at the residence of Major-General Morgan. In *Old Diary Leaves*, Vol. II, p. 466, Col. Olcott writes:

"Part of her work was the taking from dictation from her invisible teacher of the "Replies to an English F. T. S.,"

which contained among other things the now oft-quoted prophecy of the direful things and many cataclysms that would happen in the near future, when the cycle should close. That she was taking down from dictation was fully apparent to one who was familiar with her ways."

* * *

Writing to A. P. Sinnett on September 27, 1883, from Adyar, H. P. B. says:

"As M. says, "remains to be seen how Mr. F. V. Myers will receive their *Replies*" — Whether he will not be the first one (and if not he, then other members) to call them ignorant fools, illiterate *Asiatics* "with a small Oriental brain" as Wyld expressed it, wanting to make believe, I suppose, that his Jesus was an Anglo-Saxon Aryan. I say that these *Replies* to "An English F. T. S." are time lost; they will not accept the truth, and they occupy half of every number of the *Theosophist* that comes out, crowding off other matter. . . ." — *The Letters of H. P. Blavatsky to A. P. Sinnett*, p. 59.

* * *

On October 8, 1883, K. H. writes to Mr. Sinnett:

"I have nought to do with the *Replies* to Mr. Myers, but, you may recognise in them, perhaps, the brusque influence of M." — *The Mahatma Letters*, p. 396

* * *

From Ootacamund, H. P. B. wrote to A. P. Sinnett, on August 15, 1883, as follows:

"Well again — I wish your "London Lodge" new members

should not write questions necessitating such ample answers. Why bless you only the *half* of the Replies fill up a whole form of the September *Theosophist!* and fancy the pleasure. It is *I* who had to copy most of the Replies written half by M., half by either chelas or handwritings that I see for the first time, and as no printer the world over could make out M's handwriting. It is more red and fierce than ever! and then I do not like them a bit the replies. Where's the necessity of writing three pages for every line of the question and explaining things that after all none of them except yourself, perhaps, will understand. Science, science and science. Modern physical science be hanged! . . ." — *The Letters of H. P. Blavatsky to A. P. Sinnett*, p. 46

" who is Mr. Myers that my big Boss should waste a bucket full of his red ink to satisfy *him*? And He won't; see if he does. For Mr. Myers will *not* be satisfied with negative proofs and the evidence of the failings of European astronomers and physicists. But does he really think that any of the "adepts" will give out their real *esoteric* teachings in the *Theosophist*?" — *Ibid.*

Question I

Do the Adepts Deny the Nebular Theory?

No; they do not deny its general propositions, nor the approximative truths of the Scientific hypotheses. They only deny the completeness of the present, as well as the entire error of the many so-called "exploded" old theories, which, during the last century, have followed each other in such rapid succession. For instance: while denying with Laplace, Herschel and others, that the variable patches of light, perceived on the nebulous background of the galaxy ever belonged to remote worlds in the

process of formation; and agreeing with modern science that they proceed from no aggregation of formless matter, but belong simply to clusters of "stars" already formed; they yet add that many of such clusters, that pass in the opinion of the astro-physicists for stars and worlds already evolved, are in fact but collections of the various materials made ready for future worlds. Like bricks already baked, of various qualities, shapes and colour, that are no longer formless clay but have become fit units of a future wall, each of them having a fixed and distinctly assigned space to occupy in some forthcoming building, are these seemingly adult worlds. The astronomer has no means of recognizing their relative adolescence, except perhaps by making a distinction between the star-clusters with the usual orbital motion and mutual gravitation, and those termed, we believe, irregular star-clusters of very capricious and changeful appearances. Thrown together as though at random and seemingly in utter violation of the law of symmetry, they defy observation; such, for instance, are 5 M. Lyrae, 52 M. Cephei, Dumb-Bell, and some others. Before an emphatic contradiction of what precedes is attempted, and ridicule offered, perchance, it would not be amiss to ascertain the nature and character of those other, so-called "temporary" stars, whose periodicity though never actually proven, is yet allowed to pass unquestioned. What are these stars which, appearing suddenly in matchless magnificence and splendour, disappear as mysteriously as unexpectedly without leaving a single trace behind? Whence do they appear? Whither are they engulfed? In the great cosmic deep — we say. The bright "brick" is caught by the hand of the Mason — directed by that Universal Architect *which* destroys but to rebuild. It has found its place in the cosmic structure and will perform its mission to its last *Manvantaric* hour.

Another point most emphatically denied by the "Adepts" is, that

there exist in the whole range of visible heavens any spaces void of starry worlds. There are stars, worlds and systems *within*, as *without* the systems made visible to man, and even *within our own atmosphere* for all the physicist knows. The "Adept" affirms in this connection that orthodox, or so-called official science, uses very often the word "infinitude" without attaching to it any adequate importance; rather as a flower of speech than a term implying an awful, a most mysterious Reality. When an astronomer is found in his Reports "gauging *infinitude*," even the most intuitional of his class is but too often apt to forget that he is gauging only the superficies of a small area and its visible depths, and to speak of these as though they were merely the cubic contents of some known quantity. This is the direct result of the present conception of a three-dimensional space. The turn of a four-dimensional world is near, but the puzzle of science will ever continue until their concepts reach the natural dimensions of visible and invisible space — in its septenary completeness. "The Infinite and the Absolute are only the names for two counter imbecilities of the human (*uninitiated*) mind"; and to regard them as the transmuted "properties of the nature of things — of two subjective negatives converted into objective affirmatives," as Sir W. Hamilton puts it, is to know nothing of the infinite operations of human liberated spirit, or of its attributes, the first of which is its ability to pass *beyond* the region of our terrestrial experience of matter and space. As an absolute vacuum is an impossibility *below*, so is it a like impossibility — above. But our molecules, the infinitesimals of the vacuum "below," are replaced by the giant-atom of the Infinitude "above." When demonstrated, the four dimensional conception of space may lead to the invention of new instruments to explore the extremely dense matter that surrounds us as a ball of pitch might surround, say — a fly, but which, in our extreme ignorance of all its properties save those we find it exercising on our earth, we yet call the *clear*, the *serene*,

and the *transparent* atmosphere. This is no psychology, but simply occult physics, which can never confound "substance" with "centres of Force," to use the terminology of a Western Science which is ignorant of *Maya*. In less than a century, besides telescopes, microscopes, micrographs and telephones, the Royal Society will have to offer a premium for such an *etherscope*.

It is also necessary in connection with the question under reply that "An English F. T. S." should know that the "Adepts" of the Good Law, reject gravity as at present explained. They deny that the so-called "impact theory" is the only one that is tenable in the gravitation hypothesis. They say that if all efforts made by the physicists to connect it with Ether, in order to explain electric and magnetic distance-action have hitherto proved complete failures, it is again due to the race ignorance of the ultimate states of matter in nature, foremost of all the real nature of the solar stuff. Believing but in the law of mutual magneto-electric attraction and repulsion, they agree with those who have come to the conclusion that "universal gravitation is a weak force," utterly incapable of accounting for even one small portion of the phenomena of motion. In the same connection they are forced to suggest that Science may be wrong in her indiscriminate postulation of centrifugal force, which is neither a universal nor a consistent law. To cite but one instance; this force is powerless to account for the spheroidal oblateness of certain planets. For if the bulge of planetary equators and the shortening of their polar axes is to be attributed to centrifugal force, instead of being simply the result of the powerful influence of solar electro-magnetic attraction, "balanced by concentric rectification of each planet's own gravitation achieved by rotation on its axis," to use an astronomer's phraseology (neither very clear nor correct, yet serving our purpose to show the many flaws in the system) — why should there be such difficulty in answering the objection

that the differences in the equatorial rotation and density of various planets are directly in opposition to this theory? How long shall we see even great mathematicians bolstering up fallacies to supply an evident hiatus! The "Adepts" have never claimed superior or *any* knowledge of Western astronomy and other sciences. Yet turning even to the most elementary textbooks used in the schools of India, they find that the centrifugal theory of Western birth — is unable to cover *all* the ground. That, unaided, it *can* neither account for every spheroid oblate, nor explain away such evident difficulties as are presented by the relative density of some planets. How indeed can any calculation of centrifugal force explain to us, for instance, why Mercury, whose rotation is, we are told, only "about one-third that of the Earth, and its density only about one-fourth greater than the Earth," should have a polar compression *more than ten times greater than the latter*? And again, why Jupiter, whose equatorial rotation is said to be "twenty-seven times greater, and its density only about one fifth that of the Earth," has its polar compression seventeen times greater than the earth? Or, why Saturn, with an equatorial velocity fifty-five times greater than Mercury for centrifugal force to contend with, should have its polar compression *only three times* greater than Mercury? To crown the above contradictions, we are asked to believe in the Central Forces as taught by modern science, even when told that the equatorial matter of the Sun, with more than four times the centrifugal velocity of the earth's equatorial surface, and only about one-fourth part of the gravitation of the earth's equatorial matter, has not manifested any tendency to bulge out at the solar equator, nor shown the least flattening at the poles of the solar axis. In other and clearer words, the Sun, with only one fourth of our earth's density for the centrifugal force to work upon, has no polar compression at all! We find this objection made by more than one astronomer, yet never explained away satisfactorily so

far as the "Adepts" are aware.

Therefore, do they say that the great men of science of the West knowing nothing or next to nothing either about cometary matter, centrifugal and centripetal forces, the nature of the nebulae, or the physical constitution of the Sun, stars, or even the moon, are imprudent to speak so confidently as they do about the "central mass of the sun" whirling out into space planets, comets, and what not. Our humble opinion being wanted, we maintain: that it evolutes out but the *life* principle, the *soul* of these bodies, *giving and receiving it back* in our little solar system, as the "Universal Life-giver," the One Life gives and receives it in the Infinitude and Eternity; that the Solar System is as much the *Microcosm* of the One *Macrocosm*, as man is the former when compared with his own little solar cosmos.

What are the proofs of science? The solar spots (a misnomer like much of the rest)? But these do not prove the solidity of the "central mass," any more than the storm-clouds prove the solid mass of the atmosphere behind them. Is it the non-co-extensiveness of the sun's body with its apparent luminous dimensions, the said "body" *appearing* "a solid mass, a dark sphere of matter confined within a *fiery* prison-house, a robe of fiercest flames?" We say that there is indeed a "prisoner" behind, but that having never yet been seen by any *physical*, mortal eye, what he allows to be seen of him is merely a gigantic *reflection*, an illusive phantasma of "solar appendages of *some* sort," as Mr. Proctor honestly calls it. Before saying anything further, we will consider the next interrogatory: — *Is the sun merely a cooling mass?*

— *The Theosophist*, Sept., 1883

FOOTNOTES:

1. Needless to remind our correspondent that what is said here, applies only to secrets the nature of which when revealed will not be turned into a weapon against humanity in general, or its units — men. Secrets of such class could not be given to any one but a regular chela of many years' standing and during his successive initiations; mankind as a whole has first to come of age, to reach its majority, which will happen but toward the beginning of its sixth race — before such mysteries can be safely revealed to it. The *vril* is not altogether a fiction, as some chelas and even "lay" chelas know. ([return to text](#))

2. The figures are given from the mathematical calculations of exoteric Western astronomy. Esoteric astronomy may prove them false some day. ([return to text](#))

The Theosophical Forum

THE NATURAL PHILOSOPHY OF THEOSOPHY (1) — *Georg Saalfrank*

The word "Theosophy" means knowledge about God and divine things. As with all knowledge, theosophical knowledge has been expressed in specific teachings. The theosophical teachings are the very knowledge about God, Universe, Nature, and Man that has been known from immemorial times by the greatest minds, and has been collected and verified by competent men to be given out to the world in different epochs, in the guise of philosophic, religious and other systems adapted to the understanding and mental capacity of the men of every age. In modern times the knowledge was promulgated in a more comprehensive and scientific form under the name of "Theosophy" by H. P. Blavatsky in the latter half of the 19th century. This new promulgation had become necessary owing to the great progress achieved in the development of the intellectual and intuitive faculties of modern man. Now, since H. P. Blavatsky's days, thanks to the devotion of its loyal students, the theosophical knowledge is not only keeping up with the development of said faculties, but constantly runs ahead of them.

One of the most important theosophical teachings concerning man, to which we chiefly make reference in the following, is the doctrine of the divinity of man's inmost essence, the supreme part of his soul. That means that the divine faculties and qualities inherent in his innermost core, all that we appreciate as man's sublime and glorious virtues, must become predominant in his life; it means that man is called upon to fashion the whole world in a divine way, above all to fill it with divine love and brotherhood, thereby expressing to an ever larger extent his divine essence. In doing this he is on the right path in his

evolution towards the Divine, with which he will become ever more assimilated until he, the "prodigal son," returns to his "Father."

Man has widely gone astray from this goal and destiny set for him by the eternal laws of the Universe. This has become evident in the recent years of horrible carnage and insensate destruction of material, cultural and moral values, the result of continued wrong thought and action. But man, in his present state of suffering and questioning, could draw immense help and resources from the knowledge of the fact of his own inner Divinity and the immeasurable potentialities lying in it.

The fact of man's Divinity has always been upheld by German philosophers, educationalists and poets. The Bible, too, confirms this in numerous passages, especially in the New Testament. "The Kingdom of God is within you," "Ye are Gods and altogether children of the Most High," "We are of divine kin," "Know ye not that ye are the Temple of God and that the spirit of God dwelleth within you?" — to quote a few passages.

The divinity of man constitutes the basis of all real education, the higher development of man, and of a real and lasting improvement of the conditions and circumstances of his life. That is why the Theosophical Society has always considered as one of its chief objectives the helping of all men to recognize their own inner Divinity and to make it the motive and directing power of their own personal lives. This means incessant aspiration towards truth and purity by means of self-knowledge, self-conquest and fulfilment of duty, and a life of constant brotherly love towards all that lives. These statements concerning the divinity of each man are likewise true with reference to a nation, and indeed the whole world. "The soul of a nation, the life-giving source of its existence is constituted by such of its former thoughts, deeds and

ideals as have sprung from the God in man, and to the degree a nation feeds its national soul on thoughts and acts of this spiritual, divine kind, is it guarded, protected and beyond the reach of humiliation." These words are quoted from the writings of Katherine Tingley, one of the great Theosophical teachers.

In the course of time a Theosophical literature of its own has sprung up. In it — as also in non-theosophical writings — have Theosophical teachings been presented more or less clearly and correctly, but often inadequately. The clear and unadulterated presentation of these teachings, however, is to be found in the writings of H. P. Blavatsky, W. Q. Judge, and their successors. In their fundamental works and writings Theosophy constitutes a vast system of philosophy that resolves the most intricate problems, and which answers the most recondite questionings of the human heart. This great complexity of teachings also includes in itself the uttermost and supreme knowledge of non-theosophical scientists and students in the fields of philosophy, science and religion, for it is the fundamental synthesis of these three realms, which must not be segregated from each other, but which always must be studied and considered in their mutual correlation, if fatal errors and grave misconceptions are to be kept out of human thought and philosophy. It is a well known fact that the mere study of science seldom will lead man beyond sheer materialism, while the study of philosophy or religion alone only opens a way to abstruse speculations or blind dogmatism and superstition.

The problems of the universe and mankind are thoroughly elucidated by the Theosophical philosophy both in their general relations and in specific details.

The Theosophical doctrine of the septenary constitution of man supplies an exact explanation of the inner build-up of man: his

body, soul and spirit. For the purpose of easier understanding there has been enunciated a doctrine of the duality of human nature: a higher, divine nature, urging man towards the "realms of high ancestors" (Goethe), his lower nature dragging him down to the depths of egotism, of the passions, of crime and final annihilation. Whether he likes it or not, at every moment and hour of the day, with every thought and act, man must decide in favor of the higher or the lower side, and passive indifference and indolence with regard to this choice constituting already an addiction to the lower side. Fortunate is he, who by means of Theosophy and through his own divinity, has learned to practice self-control and self-conquest, thus being able to walk upwards instead of falling into ever greater depths.

The doctrine of Karma or the law of cause and effect elucidates the fact that both in the life of nations and in the life of every individual reigns absolute justice: that individual man as well as an entire people have in no way any chance of escaping the consequences of false and wicked thought and act that, on the other hand, good seeds will produce good harvest, that literally we must reap what we have sown, though the time of maturity be far ahead and lie beyond the gulf of several incarnations.

Likewise, Theosophy considers the reincarnation of man as a natural law, and general ignorance about the underlying causes and actual processes, as well as the conceivable aversion of many men to live more than once on earth, are not a proof to the contrary. Many of our great men, poets and philosophers have expressed belief in reincarnation. How could it be possible to us to attain to the state of divine perfection, which is our destiny, in only one brief earth-life? And how can we account for the different faculties, talents and dispositions of character that men bring along with them into this life, unless we admit that they have been acquired already in a former life? By mere heredity

these phenomena cannot be explained; according to Theosophical teaching, heredity is only the channel or means by which these characteristics are transmitted from a previous earth-life.

The scope of this article on Theosophy permits us to give only mere suggestions. To get a comprehensive view of its teachings and all they imply, an earnest and thorough study of standard Theosophical literature is a prerequisite. We must emphasize that the fundamental teachings outlined above are not beyond the scope of even a child's mind, and that they can be made an active part of its life; the child will all the more readily accept them as it still has an unveiled intuition. An earnest and thorough study and acceptance of these teachings will offer to a more comprehensive mind an invaluable help towards placing life on an unshakable foundation of philosophy, a new outlook which will give new scope and meaning to life and fill it with great hope and joy. The vast system of Theosophical philosophy with all its teachings, however, will offer the greatest minds an inexhaustible source, aye, an unfathomable ocean of knowledge. It will lead man towards an ever deeper understanding of the eternal laws of the universe and make him realize the glorious goal of human evolution.

THE ADEPTS AND WESTERN SCIENCE: II — H. P. Blavatsky

[Reply to an English F. T. S. — Mr. F. W. Myers of the Psychological Research Society and member of the London Lodge, T. S., whose questions were answered by Master M. through H. P. Blavatsky in *The Theosophist*. — Eds.]

Is the Sun a Cooling Mass?

Such is the accepted theory of modern science: it is not what the "Adepts" teach. The former says — the sun "derives no important accession of heat from without": the latter answer — "the Sun needs it not." He is quite as self-dependent as he is self-luminous; and for the maintenance of his heat requires no help, no foreign accession of vital energy, for he is the heart of his system, a heart that will not cease its throbbing until its hour of rest shall come. Were the Sun "a cooling mass," our great life-giver would have indeed grown dim with age by this time, and found some trouble to keep his watch-fires burning for the future races to accomplish their cycles, and the planetary chains to achieve their rounds. There would remain no hope for evolving humanity; except perhaps in what passes for science in the astronomical text-books of Missionary Schools, namely, that "the Sun has an orbital journey of a hundred millions of years before him, and the system yet but *seven thousand years old*"! (*Prize Book, "Astronomy for General Readers."*)

The "Adepts," who are thus forced to demolish before they can reconstruct, deny most emphatically (*a*) that the Sun is in combustion, in any ordinary sense of the word; or (*b*) that he is *incandescent* or even *burning* though he is *glowing*; or (*c*) that his luminosity has already begun to weaken and his power of combustion may be exhausted within a given and conceivable

time; or even (*d*) that his chemical and physical constitution contains any of the elements of terrestrial chemistry in any of the states that either chemist or physicist is acquainted with. With reference to the latter, they add that, properly speaking, though the body of the Sun, — a body that was never yet reflected by telescope or spectroscope that man invented — cannot be said to be constituted of those terrestrial elements with the state of which the chemist is familiar, yet that these elements are all present in the sun's outward robes, and a host more of elements unknown so far to science. There seems little need, indeed, to have waited so long for the lines belonging to these respective elements to correspond with dark lines of the solar spectrum to *know* that no element present on our earth could ever be possibly found wanting in the sun, although, on the other hand, there are many others in the sun which have either not reached or not as yet been discovered on our globe. Some may be missing in certain stars and heavenly bodies still in the process of formation; or, properly speaking, though present in them, these elements on account of their undeveloped state may not respond as yet to the usual scientific tests. But how can the earth possess that which the Sun has never had? The "Adepts" affirm as a fact that the true *Sun* — an invisible orb of which the known one is the shell, mask, or clothing — has in him the spirit of every element that exists in the solar system; and his "Chromosphere," as Mr. Lockyer named it, has the same, only in a far more developed condition though still in a state unknown on earth; our planet having to await its further growth and development before any of its elements can be reduced to the condition they are in within that chromosphere. Nor can the substance producing the coloured light in the latter be properly called solid, liquid, or even "gaseous," as now supposed, for it is neither. Thousands of years before Leverrier and Padri Secchi, the old Aryans sung of *Soorya* . . . "hiding behind his Yogi (1) robes his head that no one could see"; the

ascetic's dress being, as all know, dyed expressly into a red-yellow hue, a colouring matter with pinkish patches on it, rudely representing the vital principle in man's blood — the symbol of the *vital principle* in the sun, or what is now called chromosphere. The "rose-colored region"! How little astronomers will ever know of its real nature even though hundreds of eclipses furnish them with the *indisputable evidence* of its presence. The sun is so thickly surrounded by a *shell* of this "red matter," that it is useless for them to speculate with only the help of their physical instruments, upon the nature of that which they can never see or detect with mortal eye behind that brilliant, *radiant* zone of matter. . . .

If the "Adepts" are asked: "What then, in your views, is the nature of our sun and what is there beyond that cosmic veil?" — they answer: *beyond* rotates and beats the *heart and head* of our system; externally is spread its robe, the nature of which is not matter, whether solid, liquid, or gaseous, such as you are acquainted with, but *vital* electricity, condensed and made visible. (2) And if the statement is objected to on the grounds that were the luminosity of the sun due to any other cause than *combustion* and *flame*, no physical law of which Western Science has any knowledge, could account for the existence of such intensely high temperature of the sun *without combustion*; that such a temperature, besides burning with its light and flame every visible thing in our universe, would show its luminosity of a homogeneous and uniform intensity throughout, which it does not; that undulations and disturbances in the photosphere, the growing of the "protuberances," and a fierce raging of elements in combustion have been observed in the sun, with their tongues of fire and spots exhibiting every appearance of cyclonic motion, and "solar storms," etc., etc.; to this the only answer that can be given is the following: the appearances are all there, yet it is not

combustion. Undoubtedly were the "robes," the dazzling drapery which now envelopes the whole of the sun's globe withdrawn, or even "the shining atmosphere *which permits us to see the sun*" (as Sir William Herschel thought) removed so as to allow one trifling rent — our whole universe would be reduced to ashes. *Jupiter Fulminator* revealing himself to his beloved would incinerate her instantly. But it can never be. The protecting shell is of a thickness, and at a distance from the universal heart that can hardly be ever calculated by your mathematicians. And how can they hope to see the sun's *inner* body once that the existence of that "chromosphere" is ascertained, though its actual density may be still unknown, when one of the greatest, if not *the* greatest of their authorities — Sir W. Herschel — says the following:

The sun, also, has its *atmosphere*, and if some of the fluids which enter into its composition should be of a shining brilliancy, while others are merely transparent, *any temporary cause which may remove the lucid fluid will permit us to see the body of the sun* through the transparent ones.

The underlined words written nearly eighty years ago embody the wrong hypothesis that the *body of the sun* might be seen under such circumstances, whereas it is only the far away layers of "the lucid fluid" that would be perceived. And what the great astronomer adds invalidates entirely the first portion of his assumption.

If an observer were placed on the moon, he would see the solid body of our earth *only in those places where the transparent fluids of the atmosphere would permit him*. In others, the opaque vapors would reflect the light of the sun without permitting his view to penetrate to the surface of our globe.

Thus, if the atmosphere of our earth, which in its relation to the "atmosphere" (?) of the sun is like the tenderest skin of a fruit compared with the thickest husk of a cocoanut, would prevent the eye of an observer standing on the moon to penetrate everywhere "to the surface of our globe," how can an astronomer ever hope his sight to penetrate to the *sun's* surface, from our earth and at a distance of from 85 to 95 million miles, (3) whereas, the moon, we are told, is only about 238,000 miles! The proportionately larger size of the sun does not bring him any nearer within the scope of our physical vision. Truly remarks Sir W. Herschel that the sun "has been called a globe of fire, *perhaps metaphorically*!" It has been *supposed* that the dark spots were solid bodies revolving near the sun's surface.

They have been *conjectured* to be the smoke of volcanoes . . . the scum floating upon an ocean of fluid matter. . . . They have been *taken* for clouds . . . *explained* to be opaque masses swimming in the *fluid matter* of the sun.

Alone, of all astronomers, Sir John Herschel, (4) whose *intuition* was still greater than his great learning, came — all anthropomorphic conceptions set aside — far nearer truth than any of those modern astronomers who, while admiring his gigantic learning, smile at his "imaginative and fanciful theories." His only mistake, now shared by most astronomers, was that he regarded the "opaque body" occasionally observed through the curtain of his "luminous envelope" as the sun itself. When saying in the course of his speculations upon the Nasmyth willow-leaf theory: —

the definite shape of these objects; their exact similarity one to another . . . all these characters seem quite repugnant to the notion of their being of a vaporous, a cloudy, or a fluid nature.

— his spiritual intuition served him better than his remarkable knowledge of physical science. When he adds:

Nothing remains but to consider them *as separate and independent* sheets, flakes . . . having *some sort of solidity*. . .
. Be they what they may, they are evidently *the immediate sources of the solar light and heat* . . .

— he utters a grander physical truth than was ever uttered by any living astronomer. And, when furthermore, we find him postulating — "looked at in this point of view, we cannot refuse to regard them as *organisms* of some peculiar and amazing kind; and though it would be too daring to speak of such organization as partaking of the nature of life, yet *we do know that vital action is competent to develope at once heat, and light, and electricity*." Sir John Herschel gives out a theory approximating an occult truth more than any profane ever did with regard to solar physics. These "wonderful objects" are not, as a modern astronomer interprets Sir J. Herschel's words, "*solar inhabitants*, whose fiery constitution enables them to illuminate, warm and electricise the whole solar system," but simply the reservoirs of solar vital energy, the *vital* electricity that feeds the whole system in which it lives, and breathes, and has its being. It is, as we say, the storehouse of our little cosmos, self-generating its vital fluid, and ever receiving as much as it gives out. Were the astronomers to be asked — "what definite and positive fact exists at the root of their solar theory; — what knowledge they have of solar combustion and atmosphere" — they might, perchance, feel embarrassed when confronted with all their present theories. For, it is sufficient to make a *resume* of what the solar physicists *do not know*, to gain conviction that they are as far as ever from a definite knowledge of the constitution and ultimate nature of the heavenly bodies. We may, perhaps, be permitted to enumerate: —

Beginning with, as Mr. Proctor wisely calls it, "the wildest assumption possible," that there is, in accordance with the law of analogy, some general resemblance between the materials in, and the processes at work upon the Sun, and those materials with which terrestrial chemistry and physics are familiar, what is that sum of results achieved by spectroscopic and other analyses of the surface and the inner constitution of the sun, which warrants any one in establishing the *axiom* of the Sun's combustion and gradual extinction? They have no means, as they themselves daily confess, of experimenting upon, hence of determining the sun's physical condition; for (a) they are ignorant of the atmospheric limits; (b) even though it were proved that *matter*, such as they know of, is continually falling upon the sun, being ignorant of its real velocity and the nature of the material it falls upon, they are unable "to discuss of the effect of motions wholly surpassing in velocity . . . enormously exceeding even the inconceivable velocity of many meteors"; (c) confessedly — they "have no means of learning whence that part of the light comes which gives the continuous spectrum," hence no means of determining how great a depth of the solar substance is concerned in sending out that light. This light "may come from the surface layers only"; and, "it may be but a shell" (truly!); and finally, (d) they have yet to learn "how far combustion, properly so called, can take place within the Sun's mass"; and "whether these processes, which we (they) recognize as combustion are the only processes of combustion which can actually take place there." Therefore, Mr. Proctor for one comes to the happy and prudent idea after all

that what had been supposed the most marked characteristic of incandescent solid and liquid bodies, is thus shown to be a possible characteristic of the light of the glowing gas.

Thus, the whole basis of their reasoning having been shaken (by

Frankland's objection), they, the astronomers, may yet arrive at accepting the occult theory, viz., that they have to look to the 6th state of matter, for divulging to them the true nature of their photospheres, chromospheres, appendages, prominences, projections and horns. Indeed, when one finds the greatest authority of the age in physical science — Prof. Tyndall — saying that

no earthly substance with which we are acquainted — no substance which the fall of meteors has landed on the earth — *would be at all competent to maintain the Sun's combustion,*

and again:

. . . multiplying all our powers by millions of millions, we do not reach the Sun's expenditure. And still, notwithstanding this enormous drain in the lapse of human history, we are unable to detect a diminution of his store.

After reading this, to see the men of science maintaining still their theory of "a hot globe cooling," one may be excused for feeling surprised at such inconsistency. Verily is that great physicist right in viewing the sun himself as "a speck in infinite extension — a mere drop in the Universal sea"; and saying that,

to nature nothing can be added, from nature nothing can be taken away, the sum of her energy is constant, and the utmost man can do in the pursuit of physical truth, or in the applications of physical knowledge, *is to shift the constituents of the never-varying total. The law of conservation rigidly excludes both creation and annihilation . . . the flux of power is eternally the same.*

Mr. Tyndall speaks here as though he were an Occultist. Yet, the

memento mori — "the Sun is cooling . . . it is dying"! of the Western Trappists of Science resounds as loud as it ever did.

No, we say; no, while there is one man left on the globe, the sun will not be extinguished. Before the hour of the "Solar Pralaya" strikes on the Watch-tower of Eternity, all the other worlds of our system will be gliding in their spectral shells along the silent paths of Infinite Space. Before it strikes, Atlas, the mighty Titan, the son of Asia and the nursling of Aether, will have dropped his heavy manvantaric burden and — died; the Pleiades, the bright seven Sisters, will have upon awakening hiding Sterope to grieve with them — *to die themselves for their father's loss*. And, Hercules, *moving off his left leg*, will have to shift his place in heavens and erect his own funeral pile. Then only, surrounded by the fiery element breaking through the thickening gloom of the *Pralayan* twilight, will Hercules *expiring amidst a general conflagration*, bring on likewise the death of our Sun: *he will have unveiled by moving off the "Central Sun"* — the mysterious, the ever-hidden centre of attraction of our Sun and System.

Fables? Mere poetical fiction? Yet, when one knows that the most exact sciences, the greatest mathematical and astronomical truths went forth into the world among the *hoi polloi* sent out by the initiated priests, the Hierophants of the *sanctum sanctorum* of the old temples, under the guise of religious fables, it may not be amiss to search for universal truths even under the patches of fiction's harlequinade. This *fable* about the Pleiades, the seven Sisters, Atlas, and Hercules exists identical in subject, though under other names, in the sacred Hindu books, and has likewise the same occult meaning. But then like the *Ramayana* "borrowed from the Greek *Iliad*" and the Bhagavat-Gita and Krishna plagiarized from the Gospel — in the opinion of the *great* Sanskritist, Prof. Weber, the Aryans may have also borrowed the Pleiades and their Hercules from the same source! When the

Brahmins can be shown by the Christian Orientalists to be the direct descendants of the Teutonic Crusaders, then only, perchance, will the cycle of proofs be completed, and the historical truths of the West — vindicated!

— *The Theosophist*, September, 1883

FOOTNOTES:

1. There is an interesting story in the Puranas relating to this subject. The Devas, it would appear, asked the great Rishi Vasishta to bring the Sun into Satya Loka. The Rishi there went and requested the Sun-god to do so. The Sun-god replied that all the worlds would be destroyed if he were to leave his place. The Rishi then offered to place his red-coloured cloth (*Kashay Vastrarn*) in the place of the Sun's disk and did so. The visible body of the Sun is this robe of Vasishta, it would seem — T. Subba Row. ([return to text](#))
2. If the "English FTS" would take the trouble of consulting p. 11 of the *Magia Adamica* of Eugenius Philalethes, his learned compatriot, he would find therein the difference between a visible and an invisible planet as clearly hinted at as it was safe to do at a time when the iron claw of orthodoxy had the power as well as disposition, to tear the flesh from heretic bones. "The earth is invisible" — says he — . . . "and which is more, the *eye of man never saw the earth*, nor can it be seen without *art*. To make this element visible is *the greatest secret in magic*. . . As for this feculent, gross body upon which we walk, it is a *compost*, and no earth but *it hath earth in it* . . . in a word all the *elements are visible but one*, namely, the *earth*, and when thou hast attained to so much *perfection* as to know why *God* hath placed the *earth in abscondito* thou hast an excellent figure whereby to know *God himself*, and how he is *visible*, how *invisible*" The italics are the author's, it being the custom of the Alchemists to emphasize those

words which had a double meaning in their code Here "God himself" *visible* and *invisible*, relates to their *lapis philosophorum* — Nature's seventh principle. ([return to text](#))

3. Verily — "*absolute accuracy* in the solution of this problem (of distances between the heavenly bodies and the earth) is *simply out of question*"! ([return to text](#))

The Theosophical Forum

KEEP THE LINK UNBROKEN (1) — *Kenneth Morris*

In 1891 the most significant figure of the Nineteenth Century was relieved of the intolerable burden of life, and passed into the Golden Silence of the God-world from which she came. The day was May 8th, which was that on which Joan of Arc relieved Orleans; and the day the Romans held sacred to Flora, Goddess of Flowers. Now Flora symbolized ever recurring life, the blossom that puts forth again and again, Resurrection; and from the ashes of Joan, France arose like the Phoenix, a Resurrection. H. P. Blavatsky's last words were, "Keep the link unbroken; do not let my last incarnation have been in vain"; which was in a sense a command to us, that she should be resurrected in our lives, and her message never die from the world.

What is meant by keeping the link unbroken? Look back into history: to the age of the Great Teachers, the sixth century b.c. when the Buddha, Confucius, Laotse, the Founder of Jainism, Zoroaster, and Pythagoras were teaching in the world. They all turned their backs on the official Mysteries of the day, which had ceased to be efficient links or channels between men and the Masters. Each one of them founded a new organization to be such a link or channel. Confucius, Laotse, the Buddha — especially the Buddha: how grandly those three succeeded! Out of Confucius came the stable basis of life in China and the surrounding countries. Out of Laotse came the wizard imagination of the Chinese. Out of the Buddha came the glory that flowed down from that Serene Figure through age after beautiful age of Asiatic life!

In Buddhism the link was kept unbroken for ages. Before he died, the Blessed One gave his begging-bowl to Mahakasyapa,

appointed him to be Head of the Church or Order after him; and Kasyapa passed on the bowl and the headship to Ananda; and Ananda to Nagarjuna; and he to another; and he to a long line of Adept-leaders, the Buddhist Patriarchs, until the twenty-seventh of them, Bodhidharma, in 520 a. d., went to China, and lit China to amazing spiritual splendor; and was followed in turn by a line of Chinese Patriarchs. Each Adept-leader appointed by his predecessor: no election, no conclave of cardinals, nothing of that sort; but the appointment of an Adept by an Adept, to keep the link unbroken through the ages. Bodhidharma preached in China what he called Esoteric Buddhism — the Doctrine of the Heart, of the Buddha, as distinguished from the Doctrine of the Eye: he established there the Dzyan School, which is that to which our Masters belong. His seventh or eighth successor was that Hsin Shien quoted in *The Voice of the Silence* to whom his predecessor gave a mirror, and bade him write an essay on it; and he wrote: "The mind is like a mirror; it gathers dust while it reflects. It needs the gentle breezes of Soul-wisdom to brush away the dust of our illusions." Hsin Shien lived in 700 a.d. during the reign of the Empress Wu, and was often at her court.

If we contrast the glory, deeply dyed with spiritual tints, of Oriental civilization during its great ages, with the squalor and brutality of European civilization, realizing how that Eastern splendor derived itself chiefly from the Buddha, and was made possible because the link with the Buddha was kept unbroken through that long line of Adept-Teachers for at least twelve centuries, we may learn something of the meaning of what H. P. Blavatsky asked of us when she pleaded that we would "keep the link unbroken."

And now see what happens in Europe. Pythagoras also founded an order, and established his headquarters at Crotona in Italy. But the people rose and wiped out his school; and the link was

broken. Instead of a living, organized body coming down through time like the Mahayana of Buddhism, there was but a sporadic train of devoted torch-bearers: Aeschylus, Plato, and then a gap of centuries; Plotinus, Porphyry, Iamblichus, Maximus of Tyre and his disciple Julian the Blessed Apostate; then a gap of centuries; then the Persian Al-Kindi, the Turk al-Farabi, the Persian Avicenna, the Spanish Arab Averroes; and through and from them a tiny trickle of light down through the centuries, to be the inspiration of any stirring toward the light. No organization, no definite propaganda; no body of men to which one might go saying, I desire to learn, teach me! For the failure of the Pythagorean Movement was followed by, and probably had its sequence in, the ability of the Enemies of Mankind to send Caesar into Gaul to smash the one body, the one vehicle of the Mysteries in the Old World which had not declined, Druidism. And though a thin trickle of the waters of life did flow down the European ages also from that which Caesar smashed, it was mostly here in our own Wales; it sweetened feudalism a little with chivalry, but was not effective for much. As for Christianity, the light of Theosophy had died out of it long before the rise of European civilization in the thirteenth century.

Now while that thin ray of light had shone down from Pythagoras, via Plato, the Neoplatonists and the Moslem philosophers, and had quickened such men in Europe as Pico della Mirandola, Giordano Bruno, and through him Spenser and Shakespeare, the Cambridge Platonists, Welsh mystics such as Vaughan, Traherne and the Herberts, and Shelley, another stream of inspiration or another impulse had come down, strangely enough mainly through the same channel, from Aristotle; and its tendency was toward materialistic intellectualism. This ray fell on Bacon of Verulam, and set him alight; as someone said, he out-*aristotled* Aristotle, and quite staggered the Stagirite. He sent

things matterward with a vengeance; his spiritual, or unspiritual children, were the great lights of Nineteenth Century Science: if lights they could be called, which light had none, but rather darkness visible. And so you got, for China's wonderful luminaries like Bodhidharma and Hsin Shien, England's Darwins and Tyndalls; who had set up a new and deadlier orthodoxy of science to replace the dying orthodoxy of religion: prophets of a gross and now happily exploded superstition called materialism. And these two orthodoxies, both materialistic, both lightless — the one a mere matter of intellect gone wrong, the other a mere matter of emotionalism gone wrong — shared the western world's allegiance. Into their realm the Lodge sent its Messenger, H. P. Blavatsky, to make a new link between the Gods and men.

She came prepared to meet these grand Sciencasters, carrying weapons usable in the war she had to wage with them. They lived on the plane of unilluminated intellect. She had to invade the plane of intellect and carry on her warfare there, building a new heaven in hell; showing that mere intellectualism can never even be really intellectual, that a universe you build of matter alone, has something very terrible the matter with it. But more, she lit on the plane of intellect a fire of aspiration, of mysticism, of devotion, of spiritual light.

All the world was against her; she was *Y Gwir yn erbin y byd* — "the Truth against the world," H. P. Blavatsky *contra mundum* — and pity the poor old world in that fight, for it hadn't a ghost of a chance against her! She crashed in: a lonely, sick old woman — but with all the spiritual worlds behind her; with the Gods behind her, and the stars in their courses fighting for her. For fifteen terrible years she took into her heart all the slings and arrows of outrageous fortune; and gave out in exchange her grand ideas, her spiritual concepts and teachings, her marvellous light. She gave materialism its deathblow. She lit up the universe, so that we

may see it built up of divinity, peopled with gods. She lit up the worlds within us, so that we may see gods at the heart of our being, and strive with new high hope and inspiration towards the greatest of attainment. She made every bud on the trees, every note of birdsong, every gleam on the waters of the world, wonderful, and a message to us from Eternal Beauty. Then, on May 8th, 1891, she was permitted to return into the God-world: leaving that last word to us, the last mantramic phrase, "Keep the link unbroken. Do not let my last incarnation have been in vain!"

That link she had forged between the Gods and men: between this world and the Masters; between the crowd and stir of the marketplace and the calmness of the silent Himalayas. How shall we keep it unbroken?

The answer is, by truth to her teachings. She showed us a spiritual universe; and godhood as the reality behind men. Men as things you can't judge, you can't criticize, you can't condemn: things your sole duty is to help; to regard them as what they are — gods in the inmost of their being; doing your utmost at all times to bring them to a realization of that inmost; appealing always to, dwelling always upon, that inner divinity in them. Seek ye first that kingdom of the inner god, and all else shall be added unto you. To live to benefit mankind is the first step; and the way to do it is to spread Theosophy; which means, to arouse in men the feeling that that inmost god is the ultimate reality about them; to change the temperature of the world, making men see that it is a spiritual universe they live in, and that they are responsible for their thoughts and actions, and cannot shuffle off that responsibility on to any god or man beside. Thus can we keep the link unbroken; thus not let the Lion-heart's last incarnation have been in vain.

The Theosophical Forum

COPTIC Gnostic MSS. — Charles J. Ryan

Theosophical students are well aware of H. P. Blavatsky's frequent references to the unexpected discoveries of ancient archeological or literary remains which seem to be "accidentally" made just at the appropriate time to solve unexplained problems. One of these, and a most important one for Theosophy, is just attracting wide attention. We refer to the discovery by peasants at Nag Hammadi in Egypt in 1946 of 850 pages of Coptic Gnostic manuscript on papyrus sheets. The Egyptian Government bought a portion soon after they came to light for \$240,000, and now it is acquiring the rest. Translation by distinguished scholars is being made, and with the text, will be published as soon as possible at Louvain, Belgium, sometimes called a "Phoenix of learning" from the brilliant work of resurrection of ancient documents it has done.

According to H. P. B., the Gnostic teachings precede by some hundreds of years the Christian Gospels, and are directly derived from Babylonia and India. She says:

A Brahmin needs only to read *Pistis Sophia* to recognize his forefathers" property, even to the phraseology and similes used. . . . *Pistis Sophia* is an extremely important document, a genuine *Evangel* of the Gnostics. . . . It is genuine and ought to be as canonical as any other gospel.

— *The Secret Doctrine*, II, 566

G. R. S. Mead's translation and comments were originally published in H. P. B.'s *Lucifer*.

H. P. B. shows that when the Essenes (a Gnostic sect) disappeared in the beginning of the second century b.c. their place was filled

by the *Christian* Gnostics who introduced Platonism, etc., into Christianity, adapting many of the teachings of the ancient Theosophy to the framework of the growing Christian faith and even taking over the names of sacred personages employed by the early Christians. (See *Isis Unveiled* II, 325, and the valuable quotations from Renan on pages 334-5). On page 12, Vol. I, H. P. B. shows that the Gnostics held firmly to the doctrine of metempsychosis or transmigration "in its esoteric sense," so widely accepted at that time, and adds that the Gnostics are "unhesitatingly proclaimed by history as a body of the most refined, learned, and enlightened men." In *The Secret Doctrine*, II, 389, she explains how certain early Christian sects were denounced as heretical through complete misunderstanding of the secret meaning of their particular teachings. After explaining some of these, she adds:

As a direct consequence, the tenets of the Gnostic sects also become clear. Each of these sects was founded by an Initiate, while their tenets were based on the correct knowledge of the symbolism of every nation.

It is most regrettable that very little remains of the pure teachings of Gnosticism. As H. P. B. says, every effort was made after the days of Constantine, when the Church became entangled with the State, to destroy every vestige of Gnosticism. How the *Pistis Sophia* escaped is a wonder, but though a very important contribution to our knowledge of Gnosticism it is only a fragment of the teachings. Scholars have had to depend mostly on scraps of information derived from its prejudiced critics. For this reason the publication of a genuine Coptic Gnostic text of the magnitude of the newly discovered MS. will be a great event not only to scholars of Christian Theology but to students of Theosophy, who will now have the rare opportunity of studying one of the ancient presentations of the Esoteric Wisdom as given out by its own

followers and not garbled or mutilated by its enemies.

A well-informed contributor to *The Manchester Guardian*, England, who reports the forthcoming publication, makes some remarks of great significance to Theosophical students as they show that modern scholars are considering Gnosticism from almost, if not quite, the position taken by H. P. B., though of course without her understanding of the real importance of it as a part of the ancient world-wide "Wisdom Religion." When she wrote on the subject her views must have been highly unpalatable to the orthodox theologians. But times are changing.

The contributor to the *Guardian* writes:

The study of the vast mass of new documents from Nag Hammadi (most of which have so far only been read cursorily by one man, M. Doresse) will cast light on the question whether Gnosticism is a later product of religious thought than Christianity or whether it may not be older and have adopted the names of Christ and the Christian saints when these gained prestige. There is some reason to think that the same revelations were attributed successively to Zoroaster, Seth, and Christ. . . . The first impression of the new manuscript seems to suggest that the non-Christian element in Gnosticism is of very great importance.

We might ask the writer why "the non-Christian element" should be so important unless it contains revelations of the *true origin* of the comparatively modern presentation of the Ancient Wisdom, called Christianity, as well as matter that will tear away the obscurities that have been placed in the canonical Gospels to protect the deeper interpretation of their content from being profaned by the unprepared, "blinds," as H. P. B. calls them.

The writer touches on another problem of interest to all students of the religions of the Near East when he refers to Manicheism, "the synthetic religion which competed so long successfully with Christianity and spread as far as China. How far did Mani take over a synthesis already made by the Gnostics and merely give it the impetus of his personality and his gift for organizing a Church?"

H. P. B. in *Isis* speaks of Manicheism as a Gnostic sect, which regarded Buddha, Jesus and Mani as essentially one.

It will easily be seen how important in our studies of the various forms under which the Ancient Wisdom Religion has been presented, this new and unexpected discovery of *original* documents is likely to prove in view of H. P. B.'s teachings in regard to Gnosticism.

The Theosophical Forum

THE FOUR GOSPELS — *Marion O. French*

The textual variations in the versions of the Four Gospels regarding the incarnation, crucifixion and resurrection of the Christos have puzzled many people. Usually, they are attributed to presentation in accordance with a physical, intellectual, psychic, and spiritual point of view. This is symbolized by the bull, lion, man, and eagle that stand as their insignia.

Amplification of this basic concept will serve to indicate what a wealth of religious, philosophic, and scientific information can be culled from the cryptic biblical texts. In a lecture before the Theosophical Convention of 1887 on "The Sankhya and Yogi Philosophy" (*The Theosophist*, IX, 342) H. P. Blavatsky is quoted (*Isis Unveiled*) as having made the following pertinent assertions:

All systems of religious mysticism are based on numerals. With Pythagoras, the Monas or unity, emanating the duad, and thus forming the trinity, and the quaternary or Arba-il (the mystic *four*), compose the number seven. The sacredness of numbers begins with the great First — the one, and ends only with the nought or zero — symbol of the infinite and boundless circle which represents the universe. All the intervening figures, in whatever combination, or however multiplied, represent philosophical ideas, from vague outlines down to a definitely established scientific axiom, relating either to a moral or a physical fact in nature. They are a key to the ancient views on cosmogony, in its broad sense, including man and beings, and the evolution of the human race, spiritually as well as physically — II, 407

Furthermore, in *Isis Unveiled*, I, 9, H. P. B. states that:

The harmony and mathematical equiformity of the double evolution — spiritual and physical — are elucidated only in the universal numerals of Pythagoras, who built his system entirely upon the so-called "metrical speech" of the Hindu *Vedas*.

Also it is stated in this reference that:

All the powers and great symphonies of physical and spiritual nature lie inscribed within the perfect square, and the ineffaceable name of Him, which name otherwise, would remain unutterable, was replaced by this sacred number 4 the most binding and solemn oath with the ancient mystics — the *Tetractys*.

Under the subject "Four" in the index to *The Secret Doctrine*, much collateral information may be found regarding the aspects of the Tetractys mentioned herein. Four is the first rational, or formulate, number having an integral square root. Numerically, the circumference of a circle of diameter 4 is $12 \frac{52}{81}$ and that is, also, the square area of that circle. In other words, the plane of representation is in equiformity with the circle of consciousness. The septenate of man's upper triad (Atma, Buddhi, Manas) and his lower quaternary (Kama-Rupa, Linga-Sarira, Prana, Sthula-Sarira) combine to initiate that series of ratios in which the middle term is the difference of the other two. Astronomically, the basis of the lower quaternary lies in the fact that there are 1 Central, 1 Polar, and 2 Equatorial Suns in the Galaxy (*S. D.*, II, 240). The Central Sun is a laya center, or neutron, and the other three revolve around it on the polar orbit and equatorial orbits. This is the Kabbalistic doctrine and it is set forth hypothetically in *Principia Nova Astronomica*, by H. Pratt, M. D., Edinburgh, 1894. Above, or superior to, them are 3 Spiritual Suns of the Metagalaxy. Presumably, the 4 Suns are the "four living

creatures" of Ezekiel, I. In any case, the description of them in that chapter may be construed as an adequate analysis of their electro-magnetic functioning in a manner similar to that of the electrons in an atom. Likewise, it may be assumed that they constitute the 4 "Bodies" of Brahma above which stand his 3 "Qualities." The 4 Royal stars Aldebaran, Regulus, Fomalhaut, and Antares mark the 4 cardinal points in the Earth's revolutionary course. There are 4 "Sacred Seasons," equinoctial and solstitial, and 4 "Great Circles," ecliptic, equator, and tropics. The Earth is the 4th sphere from the Sun, if the Intra-Mercurial Vulcan be counted, and there are 3 outside the Earth, if Saturn be accepted as outermost of the 7 "Sacred Planets" pertaining strictly to the solar system.

The Hindus of Hind state that there are 4 Truths and 4 Vedas; as there are 4 Gospels. In his *Crest Jewel of Wisdom*, Sankaracharya lists 4 Vestures for the encapsulated droplet of consciousness called the Monad. They are the Food-formed, the Vital Breath-formed, the Mind-formed, and the Intelligence-formed. In operation, their psychological motivation is through the 3 Potencies termed Substance, Force, and Darkness. It is based, functionally, upon the numerical interrelations of the triad and the tetrad within the hebdomad. Essentially, this is exemplified in music by the symphony diatesseron which is constituted in the sesquitercian ratio of 4 to 3. Within the septenate of the musical scale, it possesses the power of an element with respect to the other symphonies, or forms an harmonic proportion between the arithmetical and the geometrical.

In the pantheons of all religions the names vary, but the functional figures remain the same. There are 4 Devas, or "Watchers," at the 4 corners of the cardinal points. They observe the evolutionary progress of the 4 castes of humanity during the cyclical repetition of the 4 Yugas. There are 4 active or operative

Kumaras and 3 others. Similarly, there are 4 principal Archangels: Michael, Gabriel, Raphael and Uriel, with the 3 other traditional ones, Chamuel, Jophiel, and Zadkiel. Gautama is called the Kumara of the Kshatriyas and Michael is the hierarch of the heavenly hosts. There have been 4 Buddhas and Maitreya will be the 5th for the 6th Race. The present 5th Race is in its 4th Round on the 4th Globe D of the dual evolution of spirit and matter. We have 4 fingers opposed by 1 thumb on each hand, and 4 senses synthesized in sound as the primary one of audition. So, in the tetrahedron, there are four faces, with 3 edges to each face. It is circumscribed by the 4 other symmetrical solids: cube, octahedron, dodecahedron, and icosahedron. Sequentially, there are 4 Natures in Nature: Akasic, Ethereal, Watery and Fiery. By correspondence, there are 4 Elements: Fire, Water, Air, and Earth. They are embodied in the 5th, which is Ether. The 4 gases of Hydrogen, Oxygen, Nitrogen, and Carbon are their immediate prototypes. There are 4 Sons of Fohat functionally operative in the 4 Kingdoms of Mineral, Vegetable, Animal and Human dynamism. In arithmetic there are the 4 operations of addition, subtraction, multiplication and division. Correspondingly, there are 4 steps in the formulation of concepts: genesis from cosmical source, mathematical or geometrical symbolization, categorical generalization, and formative classification.

Psychologically, there are 4 "Worlds": Archetypal, Intellectual, Formative, and Physical. Pertaining to them are the 4 states of consciousness that we experience every day. They are Waking, Waking-Dreaming, Sleeping-Dreaming and Deep Sleep. Transcendent correspondences are Jagrat, Svapna, Sushupti, Turiya-Samadhi. (See *Occult Glossary*, 82, 89). In *Job*, xxxiii, 14-16 we may read:

For God speaketh once, yea twice, yet man perceiveth it not. In a dream, in a vision of the night, when deep sleep

falleth upon men, in slumberings upon the bed. Then he openeth the ears of men and sealetH their instruction.

As indicated on page 104, *Mahatma Letters*, the 4 states of consciousness are: consciousness *per se*, self-consciousness, full individual consciousness, and absolute consciousness. The basis of these states lies in the 4 "Principles" of the Kosmos that find their expression in the 4 forms of Vach, or Voice as the enunciated "Word" of "In the beginning." These 4 states of consciousness have been called dimensional as related to the 3 static dimensions of space as becoming kinetic in time. A very suggestive tabulation of the forms that they take is appended to *Tertium Organum* by P. D. Ouspensky. There are 4 rows of precious stones of 3 each in the breast-plate of the Hebraic high-priest.

If the entries under Four in a comprehensive concordance be consulted many more references will be discovered that biblical exegetes can apply to elucidate the occult philosophy of the Four Gospels.

In the *Bhagavad-Gita*, the battlefield that confronts Arjuna is his own soul. It is "God's Acre," a square measure of 4 roods. Upon it, the equiformity in the dual evolution of spirit and matter must be accomplished by "squaring the account" between the pairs of opposites. As the soul, it links the spirit and the flesh. As an area, it is the Champ de Mars upon which the Kshattriya must wage the conflict that will decide the issue. If you wish to solve the equation in so far as the space-time continuum of terrestrial existence is concerned, consult page 63 of *Key to Hebrew-Egyptian Mystery* by Ralston Skinner, that is referred to frequently in *The Secret Doctrine*. One acre, 4 roods, equals 6,272,640 square inches and there are 5,184,000 sixtieths of a second in 24 hours. The area is exactly divisible by the time and the quotient is 1.21 and this is

the square of 1.1, and 11 is 4 plus 7, or the lower quaternary plus the complete septenate of man's principles.

If you prefer to solve it another way, 4 square yards, or Jareds, equal 5,184 square inches. There are 1440 minutes in 24 hours and 5,184 divided by 1440 equals 3.6, or the digits for 360° in a circle. The 144 refers to the 144,000 "saved" of the Bible. The "luck" in "come seven, come eleven" of dice consists in this "solution" when we cast the "dice" of life. That game, like the Tarot cards and dominoes, was invented to perpetuate correct numerical nomenclature in the minds of men. So, also was the game of chess and there are 64 "acres" on the board and 640 in one square mile. In the brain are 4 ventricles and there are 4 compartments, 2 auricles and 2 ventricles, in the heart. Mind and heart function in conjunction and the pure of heart think pure thoughts.

In the words of an ancient Persian inscription, "O, square thyself for use; a stone that may fit in the wall is not left in the ways." That "wall" is the "Guardian Wall of Humanity."

The Theosophical Forum

THE ENIGMA OF NATURE — *Allan J. Stover*

An kindly old lady, who was college librarian in a small town, once told me the following story of her life.

She had married a rising young lawyer and they had two lovely children and a beautiful home in which all were supremely happy. Suddenly one winter an epidemic struck. Within a few weeks, she had lost husband and children and the home had been taken for debt. All she had was gone and life seemed at an end. It was spring and the close of a difficult, cold winter. Going out she wandered into their little orchard where the peach trees were in bloom. The peace of nature, in such contrast to her own overwhelming tragedy, seemed too much to bear. Sinking down upon a bench, "suddenly," as she expressed it, "I seemed to disappear and looking about felt as though a part of everything. I was a part of the flowering trees and understood their dreamy thoughts. I was a part of the clouds floating overhead in the blue sky and of the birds singing in the tree tops. I was no longer I, but seemed one with everything and understood the living world around me as I understood myself — for we were one." With tears in her eyes she added, "Happy as we had been in our home and great as my loss had been, I had never known such happiness before."

The aroma of the experience clung to her during the remainder of her life, and through the years many of the students were helped by her intuitive understanding of their problems.

Just as every individual has at its heart a spark of divinity, so outer nature is but the shell of an invisible spiritual universe. But this inner reality can only be sensed by rising in some degree towards the spiritual consciousness within oneself.

Sometimes when the soul has been prepared through many lifetimes of aspiration, a sudden shock will rend the veil and for an instant the student will awaken to a new world, a world within the old. For a time he knows, because he *is*, and all the museum collecting, classifications and brain-mind speculations fade before the pure ecstasy of this illumination. Strangely enough, in such moments, when knowledge may be had for the taking, curiosity disappears.

The Theosophical study of nature differs from that of science, since with each step forward one approaches closer to reality; yet with each step ever greater adherence to truth is demanded. The utterance of an untruth closes the mind to receive truth or to perceive clearly.

Science confines its investigations to the physical plane, ignoring the innumerable links connecting individual facts with spiritual and universal law. To a Theosophist, on the other hand, these links form a network by which he can check and cross-check his conclusions; for nature follows one law in both the small and the great.

The student of nature treads a narrow path bordered by pitfalls. Sentimentality and fancy on the one hand, materialism and selfishness on the other, may draw him from the path of truth to the level of the lower mind. Only an awakened humanhood in its finer sense can keep to the path which leads to the mountains of wisdom.

The great need is to teach the Soul of Nature, and that what we see is but the outer shell of a mystical and wonderful universe.

I once knew a promising young poet who fled on a mountain homestead in hopes of finding inspiration in the beautiful valley. Years later he confessed, "No! I haven't written anything for some

time. In building the home I wanted, the *land got me*, I became trifling and no account, I know it but now I don't care."

This attitude of indifference often submerges the "human" beneath the exuberant flood of physical nature. On the other hand the great religions and philosophies of the world have originated in the solitudes of nature. There also poets have reached their highest level of thought. How, one may ask, can this enigma be explained?

Perhaps it is something like this. A farmer who fails to exercise a quiet sympathetic control over his horse soon finds the horse losing respect for his master, and doing as he chooses. Similarly, since nature is also within us, one who fails to exercise control over the desires of the animal nature will soon find himself their slave.

The essence of Theosophical training is equilibrium, balance, the keeping to middle lines. For one having control over himself gains wisdom to understand and aid all nature and she responds by revealing vista after vista behind the veil of outer seeming.

The Theosophical Forum

SOME WORDS ON DAILY LIFE

WRITTEN BY A MASTER OF WISDOM

It is divine philosophy alone, the spiritual and psychic blending of man with nature, which, by revealing the fundamental truths that lie hidden under the objects of sense and perception, can promote a spirit of unity and harmony in spite of the great diversities of conflicting creeds. Theosophy, therefore, expects and demands from the Fellows of the Society a great mutual toleration and charity for each other's shortcomings, ungrudging mutual help in the search for truths in every department of nature — moral and physical. And this ethical standard must be unflinchingly applied to daily life.

Theosophy should not represent merely a collection of moral verities, a bundle of metaphysical ethics, epitomized in theoretical dissertations. Theosophy *must be made practical*; and it has, therefore, to be disencumbered of useless digressions, in the sense of desultory orations and fine talk. Let every Theosophist only do his duty, that which he can and ought to do, and very soon the sum of human misery, within and around the areas of every Branch of your Society, will be found visibly diminished. Forget Self in working for others — and the task will become an easy and a light one for you. . . .

Do not set your pride in the appreciation and acknowledgment of that work by others. Why should any member of the Theosophical Society, striving to become a Theosophist, put any value upon his neighbours' good or bad opinion of himself and his work, so long as he himself knows it to be useful and beneficent to other people? Human praise and enthusiasm are short-lived at best; the laugh of the scoffer and the condemnation

of the indifferent looker-on are sure to follow, and generally to out-weigh the admiring praise of the friendly. Do not despise the opinion of the world, nor provoke it uselessly to unjust criticism. Remain rather as indifferent to the abuse as to the praise of those who can never know you as you really are, and who ought, therefore, to find you unmoved by either, and ever placing the approval or condemnation of your own *Inner Self* higher than that of the multitudes.

Those of you who would know yourselves in the spirit of truth, learn to live alone even amidst the great crowds which may sometimes surround you. Seek communion and intercourse only with the God within your own soul; heed only the praise or blame of that deity which can never be separated from your *true self, as it is verily that God itself*: called the HIGHER CONSCIOUSNESS. Put without delay your good intentions into practice, never leaving a single one to remain only an intention — expecting, meanwhile, neither reward nor even acknowledgment for the good you may have done. Reward and acknowledgment are in yourself and inseparable from you, as it is your Inner Self alone which can appreciate them at their true degree and value. For each one of you contains within the precincts of his inner tabernacle the Supreme Court — prosecutor, defence, jury and judge — whose sentence is the only one without appeal; since none can know you better than you do yourself, when once you have learned to judge that Self by the never wavering light of the inner divinity — your higher Consciousness. Let, therefore, the masses, which can never know your true selves, condemn your outer selves according to their own false lights.

The majority of the public Areopagus is generally composed of self-appointed judges, who have never made a permanent deity of any idol save their own personalities — their lower selves; for those who try in their walk in life, to follow their *inner light* will

never be found judging, far less condemning, those weaker than themselves. What does it matter then, whether the former condemn or praise, whether they humble you or exalt you on a pinnacle? They will never comprehend you one way or the other. They may make an idol of you, so long as they imagine you a faithful mirror of themselves on the pedestal or altar which they have reared for you, and while you amuse or benefit them. You cannot expect to be anything for them but a temporary *fetish*, succeeding another fetish just overthrown, and followed in your turn by another idol. Let, therefore, those who have created that idol destroy it whenever they like, casting it down with as little cause as they had for setting it up. Your Western Society can no more live without its Khalif of an hour than it can worship one for any longer period; and whenever it breaks an idol and then besmears it with mud, it is not the model, but the disfigured image created by its own foul fancy and which it has endowed with its own vices, that Society dethrones and breaks.

Theosophy can only find objective expression in an all-embracing code of life, thoroughly impregnated with the spirit of mutual tolerance, charity, and brotherly love. Its Society, as a body, has a task before it which, unless performed with the utmost discretion, will cause the world of the indifferent and the selfish to rise up in arms against it. Theosophy has to fight intolerance, prejudice, ignorance, and selfishness, hidden under the mantle of hypocrisy. It has to throw all the light it can from the torch of Truth, with which its servants are entrusted. It must do this without fear or hesitation, dreading neither reproof nor condemnation.

Theosophy, through its mouthpiece, the Society, has to tell the Truth to the very face of Lie; to beard the tiger in its den, without thought or fear of evil consequences, and to set at defiance calumny and threats. As *an Association*, it has not only the right, but the duty to uncloak vice and do its best to redress wrongs,

whether through the voice of its chosen lecturers or the printed word of its journals and publications — making its accusations, however, as impersonal as possible. But its Fellows, or Members, have *individually* no such right. Its followers have, first of all, to set the example of a firmly outlined and as firmly applied morality, before they obtain the right to point out, even in a spirit of kindness, the absence of a like ethic unity and singleness of purpose in other associations or individuals. No Theosophist should blame a brother, whether within or outside of the association; neither may he throw a slur upon another's actions or denounce him, lest he himself lose the right to be considered a Theosophist. For, as such, he has to turn away his gaze from the imperfections of his neighbour, and centre rather his attention upon his own shortcomings, in order to correct them and become wiser. Let him not show the disparity between claim and action in another, but, whether in the case of a brother, a neighbour, or simply a fellow man, let him rather ever help one weaker than himself on the arduous walk of life.

The problem of true Theosophy and its great mission are, first, the working out of clear unequivocal conceptions of ethic ideas and duties, such as shall best and most fully satisfy the right and altruistic feelings in men; and second, the modelling of these conceptions for their adaptation into such forms of daily life, as shall offer a field where they may be applied with most equitableness.

Such is the common work placed before all who are willing to act on these principles. It is a laborious task, and will require strenuous and persevering exertion; but it must lead you insensibly to progress, and leave you no room for any selfish aspirations outside the limits traced. . . . Do not indulge personally in unbrotherly comparison between the task accomplished by yourself and the work left undone by your neighbours or

brothers. In the fields of Theosophy *none is held to weed out a larger plot of ground than his strength and capacity will permit him*. Do not be too severe on the merits or demerits of one who seeks admission among your ranks, as the truth about the actual state of the inner man can only be known to Karma, and can be dealt with justly by that all-seeing Law alone. Even the simple presence amidst you of a well-intentioned and sympathizing individual may help you magnetically. . . . You are the free volunteer workers on the fields of Truth, and as such must leave no obstruction on the paths leading to that field.

The Theosophical Forum

JACOB BOEHME — *Franz Hartmann*

The Life of a Christian Philosopher

[In view of the publication of *Theosophic Correspondence between Louis Claude de Saint-Martin and Kirchberger, Baron de Liebistorf*, readers will undoubtedly be refreshed to see once again an account of Jacob Boehme. Called by H. P. Blavatsky "the nursling of the genii (Nirmanakayas) who watched over and guided him," Boehme in turn became the inspirer and guide to a surprising number of mystics, philosophers, and seers, notable among these being the Count de Saint-Martin who under the title of "the Unknown Philosopher" labored untiringly that the self-same seed of theosophic thought might penetrate the Christian thinking of his day.— Eds.]

Jacob Boehme was born in the year 1575, at Alt Seidenburg, a place about two miles distant from Goerlitz in Germany. He was the son of poor country people, and in his youth he herded the cattle of his parents. He was then sent to school, where he learned how to read and to write, and afterwards he entered as an apprentice a shoemaker's shop.

It seems that even in early youth he was able to enter into an abnormal state of consciousness and to behold images in the astral light; for once, while herding the cattle and standing on the top of a hill, he suddenly saw an arched opening of a vault, built of large red stones, and surrounded by bushes. He went through that opening into the vault, and in its depths he beheld a vessel filled with money.

He, however, experienced no desire to possess himself of that

treasure; but, supposing that it was a product of the spirits of darkness made to lead him into temptation, he fled.

On a later occasion, while left alone in the shoemaker's shop, an unknown stranger entered, asking to buy a pair of shoes. Boehme, supposing himself not entitled to make such a bargain in the absence of his master, asked an extraordinary high price, hoping thus to get rid of the person who desired to purchase. Nevertheless, the stranger bought the shoes and left the shop. After leaving, he stopped in front of the shop, and, with a loud and solemn voice called to Boehme: "Jacob, come outside."

Boehme was very much astonished to see that the stranger knew his name. He went out in the street to meet him, and there the stranger, grasping him by the hand, and, with deeply penetrating eyes looking into his eyes, spoke the following words: "Jacob, you are now little; but you will become a great man, and the world will wonder about you. Be pious, live in the fear of God, and honour His word. Especially do I admonish you to read the Bible; herein you will find comfort and consolation; for you will have to suffer a great deal of trouble, poverty, and persecution. Nevertheless, do not fear, but remain firm; for God loves you, and is gracious to you." He then again pressed Boehme's hand, gave him another kind of look and went away.

This remarkable event made a great impression on the mind of Jacob Boehme. He earnestly went through the practical exercises necessary in the study of practical occultism; that is to say, he practised patience, piety, simplicity of thought and purpose, modesty, resignation of his self-will to divine law, and he kept in mind the promise given in the Bible, that those who earnestly ask the Father in Heaven for the communication of the Holy Ghost will have the spirit of sanctity awakened within themselves, and be illuminated with His wisdom.

Such an illumination, indeed, took place within his mind, and for seven days in succession Jacob Boehme was in an ecstatic state, during which he was surrounded by the light of the Spirit, and his consciousness immersed in contemplation and happiness. It is not stated what he saw during those visions, nor would such a statement have the result of gratifying the curiosity of the reader; for the things of the spirit are inconceivable to the external mind, and can only be realized by those who, rising above the realms of the senses and entering a state of superior consciousness, can perceive them. Such a state does not necessarily include the exercise of the external faculties; for, while Plato says about Socrates, that the latter once stood immovable for a day and a half upon one spot in a state of such ecstasy, in the case of Jacob Boehme we find that during a similar condition he continued his external occupations in his profession.

Afterwards, in the year 1594, he became master-shoemaker, and married a woman, with whom he lived for thirty years, and there were four sons born to him, who followed the same profession as himself.

In the year 1600, in the twenty-fifth year of his age, another divine illumination took place in his mind, and this time he learned to know the innermost foundation of nature, and acquired the capacity to see henceforth with eyes of the soul into the heart of all things, a faculty which remained with him even in his normal condition.

Ten years afterwards, *anno* 1610, his third illumination took place, and that which in former visions had appeared to him chaotic and multiplied was now recognized by him as a Unity, like a harp of many strings, of which each string is a separate instrument, while the whole is only one harp. He now recognized the divine order of nature, and how from the trunk of the tree of

life spring different branches, bearing manifold leaves and flowers and fruits, and he became impressed with the necessity of writing down what he saw and preserving it.

Thus, beginning with the year 1612, and up to his end in the year 1624, he wrote many books about the things which he saw in the light of his own spirit, comprising thirty books full of the deepest mysteries regarding God and the angels, Christ and Man, Heaven and Hell and Nature, and the secret things of the world, such as before him no man is known to have communicated to this sinful world, and all this he did, not for the purpose of earthly gain, but for the glorification of God and for the redemption of mankind from ignorance regarding the things of the Spirit.

But his first work, entitled *Aurora* (the beginning of the new day), was not quite finished, when, by the indiscretion of a friend, copies of the manuscript came into the hands of the clergy. The head parson of Goerlitz, whose name was Gregorius Richter — a person entirely incapable of conceiving of the depths of that religion which he professed to teach, in ignorance of the divine mysteries of true Christianity, of which he knew nothing but its superficial aspect and form, too vain to bear with toleration that a poor shoemaker should be in possession of any spiritual knowledge which he, the well-fed priest, did not possess — became Jacob Boehme's bitterest enemy, denouncing and cursing the author of that book, his hate being raised to the utmost degree by the meekness and modesty with which Boehme received the inquiries and denunciations directed toward him.

Soon the bigoted priest publicly in the pulpit accused Boehme of being a disturber of the peace and a heretic, asking the City Council of Goerlitz to punish the traitor, and threatening that if he were not removed from the town, the anger of God would be awakened and he would cause the whole place to be swallowed

up by the earth, in the same manner in which he claimed that Kora, Dathan, and Abiram had perished after resisting Moses, the man of God.

In vain Jacob Boehme attempted to reason personally with the infuriated Doctor of Divinity. New curses and insults were the result of his interview with him, and the parson threatened to have Jacob Boehme arrested and put him in prison. The City Council was afraid of the priest, and, although he could not substantiate any charge against Boehme, nevertheless, they ordered him to leave the town for fear of the consequences that might result if they did not comply with Rev. Richter's request.

Patiently Boehme submitted to the unjust decree. He requested to be permitted to go home and take leave of his family before going into banishment, and even this was refused to him. Then his only answer was: "Very well; if I cannot do otherwise, I will be contented."

Boehme left; but during the following night greater courage entered into the hearts and a better judgment into the heads of the Councilmen. They reproached themselves for having banished an inoffensive man, and the very next day they called Jacob Boehme back, and permitted him to remain, stipulating, however, that he should give up to them the manuscript of the *Aurora*, and that henceforth he should abstain from the writing of books.

For seven years, Boehme, in obedience to this foolish decree, restrained himself from writing down the experiences which he enjoyed in the realm of the spirit, and, instead of bringing light to mankind, contented himself with mending their shoes. Hard was the battle required to stem the tidal wave of the spirit, which with overpowering strength descended upon his soul; but at last, encouraged by the advice of his friends, who counselled him not

to resist any longer the impulse coming from God, for fear of disobeying man-made authorities, he resumed the labor of writing.

The writings of Jacob Boehme soon made their way in the world, and attracted the attention of those who were capable of realizing and appreciating their true character. He found many friends and followers among the high and the lowly, the rich and the poor, and it seemed, indeed, as if a new outpouring of the Spirit of Truth was intended to take place in priest-ridden and bigoted Germany.

Jacob Boehme during that time wrote a number of books and pamphlets: — *Aurora; The Three Principles of Divine Being; The Threefold Life of Man; The Incarnation of Jesus Christ; The Six Theosophical Points; The Book of Terrestrial and Celestial Mysteries; Biblical Calculation Regarding the Duration of the World; The Four Complexions; His Defence;* the book about *The Generation and Signature of all Beings; of True Repentance; True Regeneration; The Supersensual Life; Regeneration and Divine Contemplation; The Selection of Grace; Holy Baptism; Holy Communion; Discourse between an Enlightened and an Unilluminated Soul;* an essay on *Prayer; Tables of the Three Principles of Divine Manifestation; Key to the most Prominent Points; One Hundred and Seventy-Seven Theosophical Questions; Theosophical Letters;* and other smaller works and articles regarding philosophical matters.

In March, 1624, and shortly before his death, began for Jacob Boehme a time of great suffering. In 1623, Abraham von Frankenburg had some of Boehme's works published under the title of *The Way to Christ*, and the appearance of this book, full of Divine Truth, again inflamed the envy and rage of the angry parson of Goerlitz, being blown into a flame by the observation of the great

favor with which the book was received by all truly enlightened minds. With the utmost fury he began again his persecutions of Jacob Boehme, cursing and damning him from the pulpit, and published against him a pasquillo, full of personal insults and vulgar epithets, which contained neither reason nor logic; but in their places innumerable calumnies, such as only the brain of a person made insane by passion could invent or concoct.

This time Boehme did not remain so passive as on a former occasion; but he handed over to the City Council a written defence in justification of what he had done, and he moreover wrote a reply to Richter, answering in a quiet and dignified manner every point of the objection raised by Richter, annihilating his arguments by the force of his logic and by the power of truth. This defence was not in an ironical style, but pregnant with love and pity for the misguided man, modest and eloquent to a degree such as rarely can be found even among the greatest orators.

The City Council, however, being once more intimidated by the blustering priest, did not accept Boehme's defence, but expressed a wish that he should voluntarily leave the town, and they expressed their wish to him in the form of a well-meant advice, to save him from incurring the fate of heretics, which was to be burned alive on a stake by order of the Kurfurst or Emperor, either of whom might have been inclined to lend a willing ear to the representations of the clergy, being supposed to hesitate very little to give the requisite order, if the whim of the priesthood could be gratified by such a comparatively insignificant thing as the execution of a troublesome person who disturbed their peace.

Boehme, in obedience to that advice, which he well knew was a command in disguise, left Goerlitz on the 9th day of May, 1624, and went to Dresden, where he found an asylum in the house of a

physician named Dr. Benjamin Hinkelman. There he received many honors and offers of aid; but he remained modest, writing to a friend that he intended to put his trust in no man, but in the living God; and that, as he was doing so, he was full of joy and all was well.

About this time Boehme, by order of the Kurfurst, was invited to take part in a learned disputation which was to take place between him and some of the best theologians of those times, including two professors of mathematics. The discussion took place, and Boehme astonished his opponents by the depths of his ideas and by his extraordinary knowledge in regard to divine and natural things; so that, when asked by the Kurfurst to give their decision, the theologians begged for time to investigate still more the matters which Boehme had represented to them, and which seemed to reach to the limits of what they believed themselves capable of grasping. One of these theologians, Gerhard by name, was heard to say that he would not take the whole world if it were offered to him as a bribe to condemn such a man, and the other, Dr. Meissner, answered that he was of the same opinion, and that they had no right to condemn that which surpassed their understanding; and thus it may be seen that not all the theologians were like Gregorius Richter; but that in the clerical profession, as in any other, there may be wise men and fools. Such theologians, of noble mind and without bigotry, were henceforth to be found among Jacob Boehme's admirers and friends, and whenever he met them he treated them with respect.

Soon afterwards he wrote his last work, entitled *Tables Regarding Divine Manifestation*, and, having returned to his home, he was taken sick with a fever. His body began to swell, and he announced to his friends that the time of his death was near, saying: "In three days you will see how God has made an end of me." Then they asked him whether he was willing to die; and he

replied: "Yes, according to the will of God." When his friends expressed the hope to find him improved on the following day, he said: "May God help that it shall be as you say. Amen."

This took place on a Friday; but on the next Sunday, on the 20th of November, 1624, before 1 a.m., Boehme called his son, Tobias, to his bedside, and asked him whether he did not hear a beautiful music, and then he requested him to open the door of the room so that the celestial songs could better be heard. Later on, he asked what time it was, and when he was told that the clock struck two, he said: "This is not yet time for me; in three hours will be my time." After a pause he again spoke, and said: "Thou powerful God Zabaoth, save me according to thy Will." Again he said, "Thou crucified Lord Jesus Christ, have mercy upon me, and take me into Thy kingdom." He then gave to his wife certain directions regarding his books and other temporal matters; telling her also that she would not survive him very long (as, indeed, she did not), and, taking leave from his sons, he said, "Now I shall enter the paradise." He then asked his eldest son, whose loving looks seemed to keep Boehme's soul from severing the bonds of the body, to turn round, and, giving one deep sigh, his soul gave up the body to the earth to which it belonged, and entered into that higher state which is known to none except those who have experienced it themselves.

Jacob Boehme's enemy, the bigoted head-parson, Gregorius Richter, refused a decent burial to the corpse of the philosopher, and, as the City Council of Goerlitz, again in fear of the priest, were wavering and uncertain what to do, it was already decided to take the body for burial to a country place belonging to one of Boehme's friends, on which occasion, undoubtedly, a row would have taken place, and the ceremony be disturbed by the populace, whose prejudices were aroused by the clergy; but at the appropriate time the Catholic Count Hannibal von Dronha

arrived, and ordered the body to be buried in a solemn manner, and in the presence of two of the members of the City Council. This took place accordingly; but the parson pretended to be sick, and took medicine so as to avoid being obliged to hold the funeral sermon, and the clergyman who held the sermon in his place, although he himself had given absolution and the sacrament to Boehme shortly before the latter died, began his speech by expressing his great disgust at having been forced to do so by order of the Council.

Some friends of Boehme in Silesia sent a cross to be put on his grave; but it was soon destroyed by the hands of some bigot, who imagined to please God by insulting the memory of a man who was obnoxious to the priests; but who had done more to bring to mankind a true knowledge of God than priestcraft ever did in modern or ancient times.

In his exterior appearance, Boehme was little, having a short, thin beard, a feeble voice, and eyes of a greyish tint. He was deficient in physical strength; nevertheless, there is nothing known of his having ever had any other disease than the one that caused his death. But, if Jacob Boehme was small in body, he was a giant in intelligence and a powerful spirit. His hands could accomplish no greater works than to write and to make shoes; but the power of God having become manifest in that apparently insignificant organism and compound of natural and spiritual principles which represented the man Jacob Boehme, on this terrestrial globe, was strong enough to overthrow, and is still overthrowing, the most petrified and gigantic superstitions existing in his own and subsequent centuries. His "Spirit" is still battling with the powers of darkness, and the Light which was kindled in the soul of poor little Jacob Boehme is still illuminating the world, growing larger and brighter from day to day in proportion as mankind becomes more capable of beholding it, and of receiving and

grasping his ideas. . . .

Among the most prominent followers and successors of Jacob Boehme might be named many celebrated theologians and philosophers, such as Dr. Balthasar Walther, Abraham Frankenberg, Friedrich Krause, and even the son of Boehme's worst enemy, Richter of Goerlitz, who published eight books containing extracts of Boehme's works.

Boehme's works were translated into different languages, and attracted the attention of Charles I. of England, who, after reading his *Answers to Forty Questions*, exclaimed,

God be praised that there are still men in existence who are able to give from their own experience a living testimony of God and His Word.

Johannes Sparrow, in the years 1646-1662, produced a translation in English of Boehme's works, and Edward Taylor another during the reign of James II. A third translation was made in 1755 by William Law, and many authors (the great Newton included) are said to have drawn largely from Boehme's works. His prominent disciples, however, and the ones most capable of grasping his ideas, seem to have been Thomas Bromley (1691) and Jane Leade (died 1704), the founder of the society of Philadelphians (if comprising under that name all persons who have entered a certain stage of development can be called the founding of a society).

Henry More, professor at Cambridge, was requested to examine the books of Jacob Boehme, and *to report against them*. He examined them; but his report had turned out differently from what had been expected; for even if he, on account of his own engrafted theologian ideas, was not fully capable of comprehending Jacob Boehme, and misunderstood him in many

ways; nevertheless, he pronounced himself in his favour, and said that he who treated Boehme with contempt, could not be otherwise but ignorant and mentally blind; adding that Jacob Boehme had undoubtedly been spiritually wakened for the purpose of correcting those false Christians who believed merely in an external Christ, without regard whether or not they had the Spirit of Christ within themselves.

For the instruction of those who believe that the present may learn a lesson from the experience of the past, we must prominently mention the name of Johann George Gichtel, a pious man and one of the greatest disciples of Boehme, a man of great insight and power.

He was a deep thinker, leading a blameless life. In 1682, he re-published Boehme's writings, and added to them many valuable engravings, with explanations, showing great profundity of thought and spiritual knowledge. By exposing the faults of the clergy, he made them his enemies. He wanted to reform them by force. Several times he was put into prison, and once he was even publicly exposed in the pillory in consequence of his sincerity. He established a society called the "Angelic Brothers," in which every member was supposed to have actually renounced the world and entered into a state of angelic perfection. These "Angelic Brothers" were to be free from all human imperfections and so situated as not to be pestered with terrestrial cares. They were supposed not to be inclined to marry, and not to do any manual labour; but to live in continual contemplation and prayer, and by penetrating to the centre of good to abolish all evil, so that the wrath of God might be extinguished within the souls of all men, and universal love and harmony prevail everywhere. They were to depose the clergy, and, in their places, to be true priests, after the order of Melchisedec, taking upon themselves the *Karma* of all men and the sin of the world for expiation and redemption.

Thus, this otherwise well-meaning man forgot that the organization of an angelic brotherhood would require, above all, the acquisition of angels to constitute its membership. Such angels are not easily to be found, and if they were to be found, they would require no external organization. Nevertheless, Gichtel's society, although being presumably neither angelic nor divinely wise, is said to have done a great deal of good, and Henke, a church historian, writes that they especially were tolerant, and never condemned any person on account of his belief or opinions, and that they never boasted, but silently accomplished many good works.

The followers of Jacob Boehme were not always left in peace. There will be theological and other bigots as long as ignorance exists in the world. Such persons, incapable of understanding the spirit of Boehme's teachings, imagined them to contain heresies, and, in 1689, Quirinus Kuhlmann, a follower of Boehme, was burned alive at the stake at Moscow, because he had been too free in expressing his opinions regarding the iniquities of the clergy of those times.

All the arguments which the enemies of Jacob Boehme have ever put forward consist merely in the application of vile epithets, such as "Fool! Atheist! Swine! Shoe-patcher! Crank! Hypocrite!" and phrases such as the following: —

Boehme's sect is truly Devilish, and the vilest excrement of the Devil; it has the father of lies for its origin; the Devil had possession of Boehme, and grunted out of his mouth.
(Johann Trick.)

We have no desire to climb up the ladder of dreams created by Boehme. To do so would be to tempt God and lead us down to perdition. *(Delitsch.)*

The writings of Jacob Boehme contain as many blasphemies as there are lines. They have a fearful odour of shoemaker's pitch and blacking. (*Richter.*)

Christ used to drink good wine; but shoemakers drink whiskey. (*Rev. Gregorius Richter.*)

The above will be sufficient as specimens of the theological arguments of those times. However laughable they may appear at the present time, there was a serious aspect attached to them for Jacob Boehme and his successors. Hobius of Hamburg, a follower of Boehme, had to leave the city for fear of being assassinated by the rabble, whose fury was excited against him by the bigoted parson, Rev. J. Frederic Mayer; and Abraham Hinkelman, from the same cause, died of grief; while Joh. Winkler, a theologian, who had refused to express a contempt for Jacob Boehme, was saved from his persecutors by the protection offered him by the King.

On the other hand, there were many of the more enlightened theologians who stood up in defence of Boehme and his doctrines; foremost of all John Winkler, John Mathaci, Frederick Brenkling, and Spencer, and especially so, Gottfried Arnold, the author of a history of churches and heretics. The wise can find wisdom in everything, even in the prattle of a child; but the fool sees his own image in everything, and therefore the great historian Mozhof (1688) sees in Jacob Boehme a saint and a sage; while F. T. Adelung, who wrote a book on human folly, denounces him and Theophrastus Paracelsus as fools. The so-called "Rationalists," and the great bulk of the theologians, combined with each other to fight against that which they were unable to understand, while Johann Salomo Samler, a self-thinking man and capable of entering into the spirit of Boehme, calls the writings of Boehme a fountain of happiness and spiritual knowledge, from

which every one may drink without having the order of his external life disturbed thereby.

Among those who were pre-eminently capable to grasp Jacob Boehme's ideas, we will only mention the great theologian, Frederic Christop Octinger, Pastor Oberlin, and Louis Claude de St. Martin, the "Unknown philosopher," who translated his works into French. Many other persons, whose names are well-known in history, and who had more or less penetrated to the fountain of truth, such as Henry Jung Stilling, Friederich von Hardenberg, Friederich von Schlegel, Novalis, Heinrich Jacobi, Schelling, Goethe, Franz Baader, Hegel, and many others might be named. . .

The writings of Jacob Boehme are all in accordance with, and based upon, the statements contained in the Christian Bible, and this circumstance will at once prove to be an obstacle in the way of those who have no understanding for the internal meaning of the Bible accounts, and may frighten them away from giving any attention to his works. . . .

Thus prepared, we may take up the study of Boehme's works. He himself says in the introduction to one of his books as follows:

God-loving reader! If it is your earnest and serious will and desire to devote yourself to that which is divine and eternal, the reading of this book will be very useful to you; but if you are not fully determined to enter the way of holiness, it would be better for you to let alone the sacred names of God, wherein his supreme sanctity is invoked; because the wrath of God may become ignited within your soul. This book is written only for those who desire to be sanctified and united with the supreme power from which they have originated. Such persons will understand the true meaning of the words contained therein, and they will

also recognize the source from which these thoughts have come.

One of the most enlightened critics of Jacob Boehme says, in regard to his book on divine mysteries: —

This book is a treasure-box wherein all wisdom has been hidden from the eyes of the fool; but to the children of light it is always open. No one will clearly understand it unless he has the key necessary for that purpose, and that key is the Holy Ghost. He who is in possession of that key will be able to open the door and to enter to see the mysteries of Divinity; divine magic, angelic cabala, and natural philosophy. That key opens the door of divinity, and, like a lightning flash, it illuminates the darkness of material conditions; for its imperishable spirit is contained within all things. This spirit and no other can teach the soul of man from what depths the truths contained in this book have originated, for the purpose of glorifying the Divinity in nature and man. . . .

Let, then, the reader *pray*; not with his mouth nor with mere words, but with his spirit — that is to say, let him open his heart to the influence of the power of God, and by the power of the Divine Will rise up to that universal realm of Light from which Jacob Boehme received his illuminations. It is the realm of the living *Word* which was in the beginning, and by whose power the world was created; the Christ that continually whispers consolation to the despairing and dying soul; the heart and centre of God, of which the material sun that fills our terrestrial world with light and life is merely a symbol, an outward representation. Then will we see the internal world filled with a superior and living light, incomparably superior to that of the physical world, and in that world we shall find God and the Christ and the holy

Spirit of Truth revealed, together with all the angels and mysteries; truly and satisfactorily beyond the possibility of being disputed away; because we shall not then need to be taught by mere letters or words, but by the truth itself, and learn what it is, and not what it appeared to be to another, because we shall then ourselves be one with the Truth and know it by the knowledge of self.

In the year 1705, the saintly Gichtel wrote:

Whoever in our time wishes to bring forth anything fundamental and imperishable, must borrow it from Boehme. Boehme's writings are a gift of God, and, therefore, not every kind of reason can apprehend them; therefore, you must not be satisfied with mere reading and rational speculation, but beseech God to give you His Holy Spirit, that shall lead you into all truth.

These prophetic words, quoted in Mrs. A. J. Penny's excellent essay on the way to study Jacob Boehme's writings, have been fully verified by the succeeding events; for every great philosopher that has come before the public since that time seems to have received his inspiration from Boehme's books. Even the great Arthur Schopenhauer, one of the most admired modern philosophers, whose works are praised by many who would treat with contempt the works of Boehme, which they have never studied, was a follower of Boehme, and his writings are fundamentally nothing but an exposition of Boehme's doctrines from the point of view of Mr. Schopenhauer, who misunderstood Boehme in many respects. Schopenhauer likewise says about Schelling's works:

They are almost nothing except a remodelling of Jacob Boehme's *Mysterium Magnum*, in which almost every sentence of Hegel's book is represented. But why are in

Hegel's writings the same figures and forms insupportable and ridiculous to me, which in Boehme's works fill me with admiration and awe? It is because in Boehme's writings the recognition of eternal truth speaks from every page; while Schelling takes from him what he is able to grasp. He uses the same figures of speech; but evidently mistakes the shell for the fruit, or at least, he does not know how to separate them from each other.

(Handschriften, Nachlass, page 261.)

It would be too tedious to produce a collection of what the various modern philosophers in different nations have said about the writings of Jacob Boehme; the only way to form a correct estimate about him is to enter into his spirit and to see as he did. We will, therefore, in conclusion, merely quote the words of Claude de Saint Martin:

I am not young, being now near my fiftieth year; nevertheless, I have begun to learn German merely for the purpose of reading this incomparable author. . . .

I am not worthy to open the shoestrings of this wonderful man, whom I regard as the greatest light that has ever appeared upon the earth, second only to Him who was the Light itself. . . .

I advise you by all means to throw yourself in this abyss of knowledge of the most profoundest of all truths. . . . I find in his works such a profundity and exaltation of thought and such a simple and delicious nutriment, that I would consider it a waste of time to seek for such things in any other place.

— *Theosophic Correspondence* — Saint-Martin and Kirchberger.

THE ADEPTS AND WESTERN SCIENCE: III — H. P. Blavatsky

[Reply to an English F. T. S. — Mr. F. W. Myers of the Psychological Research Society and member of the London Lodge, T. S., whose questions were answered by Master M. through H. P. Blavatsky in *The Theosophist*. — Eds.]

Are the Great Nations to be Swept Away in an Hour?

No such absurdity was ever postulated. The cataclysm that annihilated the choicest sub-races of the 4th race, or the Atlanteans, was slowly preparing its work for ages; as any one can read in *Esoteric Buddhism* (page 54). "Poseidonis," so called, belongs to historical times, though its fate begins to be realized and suspected only now. What was said is still asserted: every root-race is separated by a catastrophe, a cataclysm — the basis and historical foundation of the fables woven later on into the religious fabric of every people, whether civilized or savage, under the names of "deluges," "showers of fire" and such like.

That no "appreciable trace is left of such high civilization" is due to several reasons. One of these may be traced chiefly to the inability, and partially to the unwillingness (or shall we say congenital spiritual blindness of this our age?) of the modern archaeologist to distinguish between excavations and ruins 50,000 and 4,000 years old, and to assign to many a grand archaic ruin its proper age and place in prehistoric times. For the latter the archaeologist is not responsible — for what criterion, what sign has he to lead him to infer the true date of an excavated building bearing no inscription; and what warrant has the public that the antiquary and specialist has not made an error of some 20,000 years? A fair proof of this we have in the *scientific* and *historic* labelling of the Cyclopean architecture. Traditional

Archaeology bearing directly upon the monumental is rejected. Oral literature, popular legends, ballads and rites, are all stifled in one word — *superstition*, and popular antiquities have become "fables" and "folk-lore." The ruder style of Cyclopean masonry, the walls of Tiryns, mentioned by Homer, are placed at the farthest end, — the dawn of pre-Roman history; the walls of Epirus and Mycenae — at the nearest. The latter are *commonly* believed the work of the Pelasgi and *probably* of about 1,000 years before the Western era. As to the former — they were hedged in and driven forward by the Noachian deluge till very lately — Archbishop Usher's learned scheme, computing that earth and man "were created 4004 b.c," having been not only popular but actually *forced* upon the educated classes until Mr. Darwin's triumphs. Had it not been for the efforts of a few Alexandrian and other mystics, Platonists, and heathen philosophers, Europe would have never laid her hands even on those few Greek and Roman classics she now possesses. And, as among the few that escaped the dire fate not all by any means were trustworthy — hence, perhaps, the secret of their preservation. Western scholars got early into the habit of rejecting all heathen testimony, whenever truth clashed with the *dicta* of their churches. Then, again, the modern Archaeologists, Orientalists and Historians are *all* Europeans; and they are *all* Christians, whether nominally or otherwise. However it may be, most of them seem to dislike to allow any relic of archaism to antedate the supposed antiquity of the Jewish records. This is a ditch into which most have slipped.

The traces of ancient civilizations exist, and they are many. Yet, it is humbly suggested, that so long as there will be reverend gentlemen mixed up unchecked in Archaeological and Asiatic societies; and Christian bishops to write the supposed histories and religions of non-Christian nations, and to preside over the meetings of Orientalists — so long will Archaism and its remains

be made subservient in every branch to ancient Judaism and modern Christianity.

So far, archaeology knows nothing of the sites of other and far older civilizations except the few it has stumbled upon, and to which, it has assigned their respective ages, mostly under the guidance of biblical chronology. Whether the West had any *right* to impose upon *Universal* History the untrustworthy chronology of a small and unknown Jewish tribe and reject at the same time, every data as every other tradition furnished by the classical writers of *non-Jewish* and non-Christian nations is questionable. At any rate, had it accepted as willingly data coming from other sources, it might have assured itself by this time, that not only in Italy and other parts of Europe, but even on sites not very far from those it is accustomed to regard as the hot-bed of ancient ruins — Babylonia and Assyria — there are other sites where it could profitably excavate. The immense "Salt Valley" of Dasht-Beyad by Khorassan covers the most ancient civilizations of the world; while the Shamo desert has had time to change from sea to land, and from fertile land to a dead desert, since the day when the *first* civilization of the 5th Race left its now invisible, and perhaps for ever hidden "traces" under its beds of sand.

Times have changed, are changing. Proof of the old civilizations and the archaic wisdom are accumulating. Though soldier-bigots and priestly schemers have burnt books and converted old libraries to base uses; though the dry rot and the insect have destroyed inestimably precious records; though within the historic period the Spanish brigands made bonfires of the works of the refined archaic American races, which, if spared, would have solved many a riddle of history; and Omar lit the fires of the Alexandrian baths for months with the literary treasures of the Serapeum; and the Sibylline and other mystical books of Rome and Greece were destroyed in war; and the South Indian invaders

of Ceylon "heaped into piles as high as the tops of the cocoanut trees" the *ollas* of the Buddhists and set them ablaze to light their victory, — so to the knowledge of all, obliterating early Buddhistic annals and treatises of great importance: though this hateful and senseless Vandalism has disgraced the career of most fighting nations — still, despite everything, there are extant abundant proofs of the history of mankind, and bits and scraps come to light from time to time by what science has often called "most curious coincidences." Europe has no very trustworthy history of her own vicissitudes and mutations, her successive races and their doings. What with their savage wars, the barbaric habits of the historic Goths, Huns, Franks, and other warrior nations, and the interested literary Vandalism of the shaveling priests who for centuries sat upon its intellectual life like a nightmare, an antiquity could not exist for Europe. And, having no Past of record themselves, the European critics, historians and archaeologists have not scrupled to deny one to others — whenever the concession exacted a sacrifice of biblical prestige.

No "traces of old civilizations" we are told! And what about the Pelasgi — the direct forefathers of the Hellenes, according to Herodotus? What about the Etruscans — the race mysterious and wonderful if any, for the historian and whose origin is the most unsolvable of problems? That which is known of them only shows that could something more be known, a whole series of prehistoric civilizations might be discovered. A people described as are the Pelasgi — a highly intellectual, receptive, active people, chiefly occupied with agriculture, warlike when necessary though preferring peace; a people who built canals as no one else, subterranean water-works, dams, walls, and Cyclopean buildings of most astounding strength; who are even *suspected* of having been the inventors of the so-called Cadmean or Phoenician writing characters from which all European alphabets are

derived — who were they? Could they be shown by any possible means as the descendants of the biblical *Peleg* (Gen. x. 25) their high civilization would have been thereby demonstrated, though their antiquity would still have to be dwarfed to 2247 "B.C." And who were the Etruscans? Shall the Easterns like the Westerns be made to believe that between the high civilizations of the pre-Roman (and we say — *pre-historic*) *Tursenoi* of the Greeks, with their 12 great cities *known* to history; their Cyclopean buildings, their plastic and pictorial arts, and the time when they were a nomadic tribe "first descended into Italy from their northern latitudes" — only a few centuries elapsed? Shall it be still urged that the Phoenicians with their Tyre 2750 "B.C." (a chronology, accepted by *Western* history) their commerce, fleet, learning, arts and civilization, were only a few centuries before the building of Tyre but "a small tribe of Semitic fishermen"? Or, that the Trojan war could not have been earlier than 1184 B.C., and thus *Magna Graecia* must be fixed somewhere between the 8th and 9th century "B.C," and by no means thousands of years before, as was claimed by Plato and Aristotle, Homer and the Cyclic Poems, derived from, and based upon, other records millenniums older? If the Christian historian, hampered by his chronology, and the free thinker by lack of necessary data, feel bound to stigmatize every non-Christian or *non-Western* chronology as "obviously fanciful," "purely mythical" and "not worthy of a moment's consideration," how shall one wholly dependent upon Western guides get at the truth? And if these incompetent builders of Universal History can persuade their public to accept as authoritative their chronological and ethnological reveries, why should the Eastern student, who has access to quite different — and we make bold to say, more trustworthy — materials, be expected to join in the blind belief of those who defend Western historical infallibility? He believes — on the strength of the documentary evidence, left by Yavanacharya (Pythagoras) 607

"B.C." in India, and that of his own national "temple records," that instead of giving hundreds we may safely give thousands of years to the foundation of *Cuma* and *Magna Graecia*, of which it was the pioneer settlement. That the civilization of the latter had already become effete when Pythagoras, the great pupil of Aryan Masters went to Crotona. And, having no biblical bias to overcome, he feels persuaded that, if it took the Celtic and Gaelic tribes *Britannicae Insulae*, with the ready-made civilizations of Rome before their eyes, and acquaintance with that of the Phoenicians whose trade with them began a thousand years before the Christian era; and to crown all with the definite help later of the Normans and Saxons — two thousand years before they could build their mediaeval cities, not even remotely comparable with those of the Romans; and it took them two thousand five hundred years to get half as civilized; then, that instead of that hypothetical period benevolently styled the childhood of the race being within easy reach of the Apostles and the early Fathers, it must be relegated to an enormously earlier time. Surely if it took the barbarians of Western Europe so many centuries to develop a language and create empires, then the nomadic tribes of the "mythical" periods ought in common fairness — since they never came under the fructifying energy of that Christian influence to which we are asked to ascribe all the scientific enlightenment of this age — about ten thousand years to build their Tyres and their Veii, their Sidons and Carthagenes. As *other* Troys lie under the surface of the topmost one in the Troad; and other and higher civilizations were exhumed by Mariette-Bey under the stratum of sand from which the archaeological collections of Lepsius, Abbott, and the British Museum were taken; and six Hindu "Delhis," superposed and hidden away out of sight, formed the pedestal upon which the Mogul conqueror built the gorgeous capital whose ruins still attest the splendour of his Delhi; so when the fury of critical bigotry has quite subsided, and Western men are

prepared to write History in the interest of truth alone, will the proofs be found of the cyclic law of civilization. Modern Florence lifts her beautiful form above the tomb of Etruscan Florentia, which in her turn rose upon the hidden vestiges of anterior towns. And so also Arezzo, Perugia, Lucca and many other European sites now occupied by modern towns and cities, are based upon the relics of archaic civilizations whose period covers ages incomputable, and whose names Echo has forgotten to even whisper through "the corridors of Time."

When the Western historian has finally and unanswerably proven who were the Pelasgi, at least, and who the Etruscans, and the (as) mysterious Iapygians, who seem also to have had an earlier acquaintance with writing — as proved by their inscriptions — than the Phoenicians, then only may he menace the Asiatic into acceptance of his own arbitrary data and dogmas. Then also may he tauntingly ask "how it is that no appreciable trace is left of such high civilizations as are described in the Past?"

"Is it supposed that the present European civilization with its offshoots . . . can be destroyed by any inundation or conflagration?" More easily than was many another civilization. Europe has neither the Titanic and Cyclopean masonry of the Ancients, nor even its parchments to preserve the records of its "existing arts and languages." Its civilization is too recent, too rapidly growing to leave any positively indestructible relics of either its architecture, arts or sciences. What is there in the whole Europe that could be regarded as even approximately indestructible, without mentioning the *debacle* of the geological upheaval that follows generally such cataclysms? Is it its ephemeral Crystal Palaces, its theatres, railways, modern fragile furniture; or its electric telegraphs, phonographs, telephones and micrographs? While each of the former is at the mercy of fire and

cyclone, the last enumerated marvels of modern science can be destroyed by a child breaking them to atoms. When we know of the destruction of the "Seven World's Wonders," of Thebes, Tyre, the Labyrinth and the Egyptian pyramids and temples and giant palaces as we now see are slowly crumbling into the dust of the deserts, being reduced to atoms by the hand of Time — lighter and far more merciful than any cataclysm, the question seems to us rather the outcome of modern pride than of stern reasoning. Is it your daily newspapers and periodicals, rags of a few days; your fragile books bearing the records of all your grand civilization, withal liable to become annihilated after a few meals are made on them by the white ants, that are regarded as invulnerable? And why should European civilization escape the common lot? It is from the lower classes, the units of the great masses who form the majorities in nations, that survivors will escape in greater numbers — and these know nothing of the arts, sciences, or languages except their own, and those very imperfectly. The arts and sciences are like the Phoenix of old: they die but to revive. And when the question found on page 58 of *Esoteric Buddhism* concerning "the curious rush of human progress within the last two thousand years," was first propounded, Mr. Sinnett's correspondent might have made his answer more complete by saying: "this rush, this progress, and the abnormal rapidity with which one discovery follows the other, ought to be a sign to human intuition that what you look upon in the light of "discoveries" are merely *re-discoveries*, which, following the law of gradual progress you make more perfect, yet in enunciating, you are not the first to explain them." We learn more easily that which we have heard about, or learnt in childhood. If, as averred, the Western nations have separated themselves from the great Aryan stock, it becomes evident that the races that first peopled Europe were inferior to the root-race which had the Vedas and the pre-historic Rishis. That which your far-distant forefathers

had heard in the secrecy of the temples was not lost. It reached their posterity, which is now simply improving upon details.

Is the Moon Immersed in Matter?

No "Adept," so far as the writers know, has ever given to "Lay Chela" his "views of the moon," for publication. With Selenography, modern science is far better acquainted than any humble Asiatic ascetic may ever hope to become. It is to be feared the speculations on pp. 104 and 105 of *Esoteric Buddhism*, besides being hazy, are somewhat premature. — *The Theosophist*, October, 1883

[Writing to A. P. Sinnett, on this same question, from Ootacamund, H. P. B. says:

". . . . And now speaking of moons why, should you in pity's sake, speak of *forbidden* things! Did I not tell you a hundred times that They allowed no one to know or speak of this eighth sphere, and how do *you* know it is the moon, as we all see it? And why should you print about it, and now "an English F. T. S." comes out with his question, and this ass Wyld calling it a dust bin. I called his head a dust bin in *Light*. You will both catch it in the answer you may bet your bottom dollar; for they (the answers) have arrived, the last ones tonight and *vous ne Vaurez pas vole* as the French say — your *savonade*. When Subba Row read the question discussed in your Book he nearly fainted, and when he read it (Mr. Myers" question) in the galleys — Damodar writes that he *became green. . . .*" — *The Letters of H. P. Blavatsky to A. P. Sinnett*, Aug. 23, 1883.]

SCIENTIFIC AND OTHER NOTES — *Charles J. Ryan*

Intelligences Guide the Universe

ore and more closely is scientific research dealing with the problems of mind and its direct relation with matter and life. Duke University is becoming noteworthy on this line. Recent experiments with the very primitive single-celled pond-animal called *paramecium* are unmistakably in favor of the remarkable fact that the human mind can strongly affect the behavior of that tiny brainless and structureless bit of jelly, which normally, however, can use its own will and power of choice. The Duke bulletin reports that in 927 out of 1495 experiments, Dr. Richmond was able to make a paramecium move in any desired direction by will power alone and without any physical contact or influence, which would be expected by chance only once in billions of such attempts! In each case he spent fifteen seconds in willing the direction that the paramecium should move. The importance of this to us is that it comes from a recognized scientific source, but other examples of the power of a trained will could be drawn upon. Snake charming is one, not the commonplace tricks of the Hindu or Egyptian jugglers who exhibit their trained and fangless reptiles before the gaping tourist, but the strictly practical activities of the few real experts whose lives are devoted to the discovery and destruction of poisonous snakes that hide in obscure holes and cracks and have to be lured into the open by the will power of the snake charmer. The amazing feats in this line of the celebrated Egyptian Sheik Moussa are fully described in *A Search in Secret Egypt* by Dr. Paul Brunton, who had exceptional opportunities of studying the subject. He insists that there can be no shadow of doubt that Moussa (and others) could not only discover dangerous snakes

hidden in inaccessible places but possessed complete control over them and could handle them with perfect impunity.

The paramecium experiment is of significance in support of one of the teachings of Theosophy, according to which living beings are largely aided in their evolution and protected by superior beings known as "angels" or "archangels," etc., in Christian literature, and in India as "Dhyani Chohans," and in lesser order "Devas," etc. They are widely known elsewhere by other names, such as demi-gods, Fravarshi, Principalities, Powers, Messengers, etc.

H. P. B. says they are Guiding Intelligences, the Creative Powers or higher Causes that generate "Elementals" or semi-intelligent Nature Forces as active agents on lower planes. They were formerly men but are now at a stage far surpassing human consciousness and only our modern materialism prevents our belief in the existence of such minor but very potent "gods," all descending in hierarchies of different stages or grades. Ill-informed critics may say that such beings are purely imaginary or they would be visible, but this is a very poor argument, for many recognized physical agencies are invisible and can only be detected by the effects they produce. *The Secret Doctrine* makes it clear how necessary such active intermediaries are in carrying on the work of "Mother Nature." The queer and generally invisible entities, "nature spirits," so called, that produce sounds or other effects in haunted houses, the Irish and other fairies, and the like, are among the lowest orders of such hierarchies, nearest the physical plane, and are demonstrable to any one who approaches the subject with an open mind. To a certain degree, such phenomena demonstrate the existence of mind and will-control over matter by semi-intelligent entities which in other lines is now being demonstrated by the Duke experiments with the paramecium, etc.

In a measure this brings up the problem of instinct, a most convenient but unexplained word to use for one of the greatest mysteries in nature. Yet when once the reality of conscious or semi-conscious Deva-control and general protection over evolving forms of life is realized to be a fundamental and indispensable part of the hierarchical working of the Divine Plan of the Universe, light is thrown upon all such problems.

Mud or Mason Wasps

Take the mud wasps for example, not at all a high form of animal life. By his studies of their habits the great French naturalist Fabre, "threw a monkey wrench" into the ingenious but purely mechanistic interpretations of Darwin's valuable discovery of Natural Selection — so useful when kept in its place as a minor factor, and not strained to explain the *causes* of evolutionary variations. Fabre showed that the improbabilities demanded by Natural Selection alone to explain the establishment of these complex habits were so enormously large as to make them unthinkable. Recently further discoveries have been made by Dr. G. D. Schafer of Stanford about the mud wasps' domestic affairs still more damaging to the mechanistic theories, but all in favor of some kind of intelligent, or spiritual, if you prefer the word, guidance and protection.

For the preservation of one species of mud wasp by carefully protecting the single egg from marauders, eleven different processes have to be performed by the mother wasp, each of which, if she was a human being, we should say showed reasoning, choice, good judgment, skill and training. Yet the wasp has had no teaching; its mother died before it was hatched! But it knows exactly what to do, and, as Fabre remarks, "There is no apprenticeship in this trade. Every action must be complete and perfect or — the egg dies." And some of them are highly technical

and would require special knowledge on the part of a man!

These remarks were aroused by Dr. Schafer's new discovery that in addition to the known marvels of the mason or mud wasp, the little cell in which the young wasp grows to maturity is furnished with a first class sanitary arrangement by which all effete matter, instead of poisoning the air by its effluvia, is carefully disposed of until the hibernation period when the young wasp is fully closed in, and there is no reason for precautions! How could this mechanism in the cell be evolved by the slow process of "blind Natural Selection"?

The mud wasp affords only one example of direction acted upon from a superior mind, but thousands of others exist. In view of such evidence are we not justified in accepting the world-wide teaching of the ancient world that some kind of Higher Intelligences exist and help to keep the wheels of Nature moving? Do not forget that this belief was held by the greatest philosophers and wisest men throughout the ages until the tide of skepticism and spiritual darkness swept over the earth, especially the West.

Evolution Not a Haphazard Process

Today scientists are discovering facts and putting forth bold hypotheses that can be shown to be perfectly harmonious with the point we are considering. Dr. R. Goldschmidt of the University of California, one of the leading biologists of the world, has concluded from three years' research that *heterochromatin*, one of the principal substances found in the *genes*, those minute agents of heredity found in the germ cells, can suddenly produce marked changes in the evolutionary development of higher animals. But *why*, is another matter. Dr. Goldschmidt is famous for his anti-Darwinian theory that evolution is not a slow process, moving along by a *very gradual* accumulation of accidental

changes which finally result in a new species but takes place with almost explosive suddenness by a new combination of the genes, the elements of heredity. Such a theory obviously leaves plenty of room for the Guiding Intelligence to call upon the physical means (such as heterochromatin) to come into play at any period found suitable for a new step in terrestrial evolution. We have previously drawn our readers' attention to the attitude of Dr. Goldschmidt in this most significant matter, for it is one of the definite proofs of the truth of H. P. B.'s statement in the Introduction to *The Secret Doctrine* that the 20th Century would see a strong and increasing approach by scholars to the Ancient Wisdom in spite of all the apparent dominance of materialism. And we are only half way through yet!

Recent demonstrations of the power of the human will mentioned above make the "accidental coincidence" theory still more unlikely; particularly so in relation to the problem of weather control by collective or mass wishful thinking. Can prayers or intense desire for rain or fine weather be answered without interfering capriciously or "miraculously" with the orderly processes of nature?

Less than ten years ago Mr. E. L. Hawke, Secretary of the British Royal Meteorological Society published many examples which support this. During Queen Victoria's reign the expression "Queen's Weather" became proverbial, because with hardly an exception her numerous outdoor ceremonials were graced by brilliant sunshine, not too frequent in England. Her death was followed by specially violent and widespread storms. Swedenborg, a scientist as well as a mystical theologian, is cited as having first suggested the idea of mass thought affecting the weather, but it is said to be mentioned in the Vedas. According to *The Mahatma Letters* (p. 161) rain, wind and storms are produced by affections of the earth's magnetism. *The Secret Doctrine* speaks

of "the *mythical* Dragon, the actual Adept," who "has the power of influencing the weather" (II, 280, ftn. 555), and several significant references are made in Volume II on page 615, etc., to the *Maruts* or storm gods who are connected with human emotions.

The Theosophical Forum

CHRISTMAS — A UNIVERSAL EXPERIENCE — *John H. Manas*

According to the Bible and the Christian tradition, at twelve o'clock, middle night, on the 24th of December, 1949 years ago, Jesus was born in Bethlehem of Judea, the Messiah, the Christos, the Savior of the world. In commemoration of this event, a special religious ceremony is celebrated on that night throughout the world among the peoples of the Christian Faith.

The Biblical story is but an allegory veiling a great Cosmic Truth, as all other Cosmic Truths were veiled from the profane in suitable allegories or myths by the ancient hierophants. Only the Initiates to the ancient Mysteries knew the inner meaning of the religious rituals which were enacted at certain times of the year in the temples. Because the consciousness of the masses was not yet able to understand the esoteric meaning of these rituals the priests had to use exoteric tangible forms, symbols and allegorical stories in order to impress on the minds of the people certain Cosmic Truths, upon the observance of which the peace and the well-being of society were based.

The date of the religious ceremony of Christmas was borrowed by the Christians from the civilizations of more ancient and more spiritually advanced nations. It is as old as the world itself. This religious ceremony was celebrated in all civilized ancient nations of the world in their temples many hundreds, if not thousands of years before the birth of Jesus in Palestine.

The Churches through the centuries gave and are still giving a literal interpretation to this cosmic event of the birth of the Cosmic Christos, who through his life force sustains the Universe. The same religious ceremony and ritual, on or about the Winter Solstice, and which is now celebrated on the night of the 24th of

December in all Churches of Christendom, was celebrated with more splendor, with more religious feeling and with more understanding in the temples of ancient Greece, Crete, Egypt, Persia and India. Although the names of the deities were different, the substance and the truth of this Cosmic Law, veiled in the allegory or ritual, are the same, then as now.

The universe is sustained by the Breath of God, the Holy Spirit. The Creator breathes out and creation is on its way. When He breathes in, creation returns to the source whence it came, and the night of God prevails. This is a cosmic law that applies to all things and to all beings on every plane of the universe.

Man also breathes in and out, and thus is his life sustained. He goes to sleep for a certain period of time, when his life activity apparently comes to an end, disappears temporarily. In the morning on awakening, his soul activity comes forth again; he reappears in active life.

This same law governs the Earth: the divine life force which permeates all and is responsible for all living beings, at certain periods of the year retires into the earth for rest, and vegetation comes to a standstill. Then at another period of the year, from within the earth this same life force comes forth again, and manifests in the magnificent growth of plants and the rejuvenation of Nature.

In ancient times this natural phenomenon and law were symbolized in the myth of the birth of the Sun-God, which was intimately related to the four seasons of the year, marked by the summer and winter solstices in June and December respectively, and by the spring and autumn equinoxes in March and September respectively. From about the 21st of September to about the 21st of December the night becomes longer and longer and the darkness seems to engulf the earth and bring death to all

life, which would happen if it were allowed to continue unchecked. The crisis between darkness and light is reached between the 21st and 23rd of December, when on the midnight of the Winter Solstice darkness is checked, recedes, and light again begins to win. The day starts to grow longer, the night shorter. A cosmic event which in ancient times, in all lands and in all civilizations, was celebrated truly as the re-birth of the Sun-God — the Savior of Mankind.

The Jews borrowed this Sun-God from the Egyptians, when he became Adonai and replaced one of the sacred names of Jehovah. The same ceremony in honor of this Sun-God was also performed on the 24th of December in Palestine each year. Jerome tells us that

"Bethlehem, the traditional birth place of the Lord, was shaded by a grove of that still older Syrian Lord Adonis, and that where the infant Jesus has wept, Adonis was bewailed." The effigy of a wild boar is said to have been set over one of the gates of Jerusalem in honor of Adonis and his rites were celebrated in the grotto of the Nativity at Bethlehem. Adonis represented the solar energy which in the winter months was destroyed by the evil principle of cold — the boar.

In Phrygia a Savior Sun-God known as Attis, counterpart of Adonis, was born at midnight of the 24th of December each year out of a myrrh tree. Myrrh, the symbol of death, due to its connection with the process of embalming, thus received immortality. This is the reason why myrrh was one of the three gifts brought to the manger of Jesus by the Magi. Attis was gored to death by a boar, the winter cold. He died under a pine tree. His body was taken to a cave by the Great Mother Cybele. He arose from the dead on the 25th of March. To the rites of Attis or Adonis the modern world is indebted for the symbolism of the Christmas

tree. Attis imparted immortality to the tree beneath which he died. He remained in the tomb for three days, the three winter months, and he rose from the dead upon a date corresponding to the Easter morn. By his resurrection he overcame death for all those who were initiated into His mysteries.

In the Phrygian mysteries every year a pine tree was cut down and inside the tree the image of a youth was tied.

In Egypt in the mysteries of Isis and Osiris, the trunk of a pine tree was cut. The middle of the trunk was nicely hollowed out, the image of Osiris was made from those hollowed pieces, which was buried with sacred rites.

In the Greek mysteries of Proserpine a myrrh tree was cut and made into the effigy of the Virgin Mother Demeter. It was carried within the city and mourned for forty nights; on the fortieth night it was burned. Also in the Greek Mysteries, Dionysos, the son of Zeus and Semele, was born at midnight of the 24th of December, as a Savior to the world. He was shown therein as a babe with His Virgin Mother Semele in the sacred rites in the temple.

The same religious celebration was held on the 24th of December in India when the god Krishna was born. It is reported that the same ceremony was held in Yucatan, in Mexico, and in general all over the ancient world. In all these religious celebrations it was the commemoration of the same Cosmic event and law, the birth of the Sun-God, the Savior of the world.

Under this interpretation of the Cosmic Christos, the myth of the Sun-God, one can see that this religious ceremony is not an exclusive Christian affair, but belongs to the peoples of all faiths all over the world — a universal event reflecting upon all mankind.

THE "VISION" OF GEORGE RUSSELL — *H. F. Norman*

The light is the real person in the picture." Monet's phrase was constantly on George Russell's lips and is repeated in many of his letters. In the sense in which this essay will imply it, Æ would not have claimed it for himself, albeit he knew and said his work was lit by "the candle of vision": "a flickering lantern." But it is on Æ himself that I would ask readers who would relate this poet to his poetry to direct Monet's illuminating words. For if Æ is not understood as a visionary his poetry will seem incomprehensible. The normally imaginative man early discovers within consciousness a self, a soul, however he may later define that being and whatever may be his previsioning of its *post mortem* existences. It was Æ's distinction to look deeper: "I know that I am a spirit." He had written thus in his foreword to the then unpublished *Homeward* when I first talked with him in 1894. "Your coming," he said, in our last talk in London before his death, "is included in the laws of spiritual gravitation." It was in searching out the constitution of hidden spiritual realms and living subject to their laws — the idea involved in Karma — that he spent virtually all of his life.

"I am a spirit." Was that the romantic but callow utterance of a budding poet or, as he believed it to be, an authentic discovery, the aftermath of anterior living in previous incarnations? He certainly held to that conception of himself throughout the forty years separating those two statements I have quoted above. To meditate upon that conception is to contemplate the fundamental mystery of Æ. I cannot attempt within the compass of a very brief essay to penetrate that mystery. Instead, I will ask the reader, when he has considered such clues as may be indicated here — slight clues, but I claim reliable — to turn to the sources from

which (as well as from my own memory) I draw them, by spending eight half crowns, three upon Mr. John Eglinton's balanced and just *Memoir of Æ* with its ennobling and fascinating reconstruction of the pellucid and yet elusive man I knew so well, and five on Mr. Monk Gibbon's very skillfully chosen anthology from Æ's own prose work, *The Living Torch*, with its generous, understanding and finely written introductory essay. It will be well spent money. If the reader is sensitive to spiritual beauty, alert and sanely imaginative, he will find himself engaged upon a problem more subtle and profound than Hamlet's, a problem of the essential nature of man.

Mr. Monk Gibbon's book is inspired by the temper in which forty years ago young men, Russell's own contemporaries, found themselves led to realize him as a seer, as a man, that is, whose reliance is on inner realities personally tested, and whose insight, therefore, needs no stimulation of sensational foretelling (vaticination) to confirm his natural title as Prophet. The selections in *The Living Torch* exhibit a wide comprehension of the author's mind, tastes, powers, flexibility and, in spite of temperamental boundaries, amazing diversity. From different angles and exhibiting varying outlines of their subject, each book singularly confirms the other in presenting a man, not a posed and imaginary portrait. If Mr. Eglinton, the elder writer, seems at first more tentative in his approach to Æ as poet and mystic — as painter he is discussed in a weighty note contributed by Dr. Bodkin and some of Æ's own reactions to art are incidentally discussed in Mr. C. P. Curran's entertaining account of a visit they paid together to Paris — and if Russell's work is subjected to a careful scrutiny, it is not only because Mr. Eglinton as one of our best living writers of English prose is "zealous" of good work, but also because, before committing his pen to a final eulogy, he can draw on a comprehensive and comprehending knowledge of

great literature. When, therefore, the statuesque figure of Russell on which he has worked with affectionate caution emerges as a poet whom a future age may accept as one of the really important religious writers, we feel a sense of security for an intuition of our own which we might else have challenged as a too daring guess.

Before further examining that intuition something, however slight, must be said of Æ the publicist. As co-operative official, pioneer, journalist, I have written of him elsewhere; of how he worked towards the new economic of a "Co-operative Commonwealth," of his hurried but distinguished output of luminous idealism weekly in the *Irish Homestead* and the fervid but dignified oratory with which he influenced farmers at home and enquirers and publicists from abroad. I can here but mention the striking gifts of speech which drew him, reluctantly, to the doomed Irish Convention and which were so often fruitfully spent in private interviews with people of public importance, who were led by his eloquence, force and reasonableness to aid causes he supported, or his distinguished work as Editor of *The Irish Statesman*, the most remarkable weekly ever issued in Ireland, which gave him a cosmopolitan reputation he had not sought; whilst his painting, the product of a scant leisure, brought him the more welcome prestige dear to the child-like heart of the artist. These aspects of *M* form an engaging study and are interestingly discussed in both books. But for all their evidences of an astonishing energy they do not exhaust him; indeed, these relatively outward aspects may but confuse our approach to the essential man, the poet. It is a truism that no biographer can recreate the soul of any, even the most ordinary fully vitalised, human being, and certainly no pen is fully adequate to measure the stature of this large minded, big hearted, well willed, companionable spirit. I can here but attempt a few glimpses of

the aspect of him I most valued, aided by these two books — but fully aware of the inadequacy of the effort.

Our enquiry is as to what was "the master light of all his seeing." The insight discovered by many acute minds with which his own came into contact, when as publicist his reputation had reached its zenith, was a natural growth from the young truth-seeking visionary I had first met a generation earlier. Yet of himself he said: "I was only wise when I was about twenty-one." But perhaps because he could affirm (and with how great an integrity): "I have never ceased from the inward search," a perennial wisdom, changing its hues rather than its pattern, emanated from his many colored mind. What was this wisdom, this light? So much of it as came from books was either a fundamental concern with universal ideas or was the literary expression of certain devotional emotions, native to his virginal mind. Both these springs of thinking and feeling he would have named theosophical. Taking the last first, as potent sources of his inspiration I can name two books which set the key-note for after years of activity. *The Voice of the Silence* and *Light on the Path* were books of counsel. A few sentences will show the quality of the counsel: "Before the eye can see it must be incapable of tears. Before the ear can hear it must have lost its sensitiveness." (Comprehending readers will interpret the tears, the sensitivity, as relating to the limiting, personal self). And, again: "Kill out desire, kill out ambition" or "Avoid the deadly heresy of separateness" (*i.e.* from other human beings). Save to an exceptional will these injunctions may appear as exacting the impossible, though Philip Sidney (was it not?) could write, "Desiring only how to slay desire." But our concern here is with a poet's mind and the sentences just cited will be found, otherwise expressed of course, in much of Æ's writing, whilst what interested his friends were his own response, his inward "vows of

poverty."

Some years later W. B. Yeats wrote of him: "If he convinced himself that any peculiar activity was desirable to the public interest or in that of his friends, he had at once the ardour that came to another from personal ambition." Perhaps this is doing better than killing ambition, transmuting it. It was the work of his specific genius for spirituality that no passing whiff of vain delight in his own powers to stir an audience, move a public or amuse a group (his humor was at once subtle and boyish) no natural wish to seem accomplished could ever remove George Russell more than momentarily from his persistent concentration on the inward ethic in which his homage had been rooted by such counsels as I have quoted.

Besides these there were the source books of his complex cosmogonies, and in chief Madame Blavatsky's great tomes, *The Secret Doctrine*, *Isis Unveiled*, and the *Key to Theosophy* (he avowed to an audience in Dublin a debt to these so late as 1933) and the slender, more scattered writings of his fellow-countryman, W. Q. Judge — "more impressive than any other man I ever met," he said late in life — whose redaction of the *Bhagavad Gita* gave him a wisdom he prized more deeply than any. These books, with the Vedas, Plato, Plotinus, the Gospels, the Epistles attributed to St. Paul, were germinal to his thinking and transposed into the highest keys a temperament which without their classic restraint might have spent itself vainly in a merely ebullient brilliancy, pictorial, auriferous, but void of moral substance.

What, then, was this theosophy? Madame Blavatsky's Theosophical Society had three objectives set for it: To form a nucleus for universal brotherhood; to study religions, sciences and philosophies; to investigate psychic powers latent in man.

There were other and varied studies relevant to esoteric enquiry or belief pursued by many, but only the first object was obligatory and as pendant to that fact she had written . . .

"whoever feels his interests are one with those of every being poorer or less fortunate than himself . . . is a Theosophist by birth and right." He left the Society in 1898, but the idealism it represented in his early twenties was to continue and mature throughout his life. His withdrawal arose in part through changes in the form of the organization and in part because, as I remember it, his theosophical chiefs seemed to fear that his "thronging" spirits might lure him from whole-hearted devotion to purely human causes, but he never abjured his early homage. Indeed, four years later he re-applied for membership in the Society, but his application seems to have been mislaid or pigeon-holed. This leads us to a pivotal point in his psychology, since Mr. Eglinton's carefully wrought study reveals Æ as poet of the cosmic consciousness and some duality may be here suspected between the poet and the man. Let us examine it.

One may ask, of the cosmic consciousness as of poetry, "what is it? is it a true thing?" Mr. Eglinton holds Æ's view of it to be implicit in a line of his own he often repeated: "all my thoughts were throngs of living souls." Are we here, then, on the brink of some sacrosanct spookism? Are these "living souls" the "spirits" of the Spiritist, the discarnate denizens of the seance room? A review of these two books in a Dublin daily makes an unworthy, but I hope, accidental suggestion of "seances," when Æ and John Eglinton held discourse together as young men in Kill o' the Grange churchyard. No such ghoulish element belonged to Æ's mind. He abhorred and denounced necromancy. Utterances of the noble dead as of the noble living — Milton's "two great families" — were, indeed, the constant companions of his thoughts. But these "throngings" are of a subtler origin. Except in

the *Dark Lady* (of Shakespeare's Sonnets), whose narrative, as he wrote to me, he had imbibed in meditation, Æ's spiritual visitants were not what the plain person calls "actual" people. They were spirits of earth and sea and air such as he painted, and of whom he averred most positively that he saw them, though he would add: "I do not know whether I see them directly as I see you directly, *if I see you directly*, or . . . as in a mirror." But, if one allows them substance, what then were these beings? Here are two of his answers: "I think with many others that the universe we see is made by the congregation of spirits which inhabit it, as they live again and have their being in an incomprehensible Absolute." Again, "the earth is a person, a goddess and we are part of her, in her." And also he speaks, in a letter I think, of "that spirit whose body is earth." Was this phantasy? I am not here concerned to define phantasy, but let us ask ourselves what we mean by it. A child, a youth, lays, like the young dreaming Æ, his hand or head upon a rock and "feels the Mother Nature warm," magnetic, alive; its inner substance permeable by his own. Is that fantastic? And is it realistic, in contrast, to see in the sun moving in the sky, a burnished, or, in mists, a crimson disc, though astronomers assure us that what in fact we are seeing is a flaming world almost inconceivably distant and that it is we and our stable earth that move? Is vision, illumination, the less real if it come through an indefinable "imagination"?

I am not here propounding a "case" for the veridicity of Æ's visions — his veracity is in no doubt for those who knew him — or for a "planetary consciousness." The poet's "case" is to convince not through text-book evidences but by the music of his verse. Yet there does remain a question or two. Even if there is no conflict between the "actuality" of external seeing and these esoteric visions, is there no danger that the visionary may lose his terrestrial bearings? Did Æ's theosophical friends fear this for

him? Did he a little fear it himself? Is there even a hint of some needed reconciliation in that noble aspiration in which he reveals the spiritual desire behind the inner call of reincarnation to which he would subject himself, reverberant in the poem he called "Love":

Ere I lose myself in the vastness and drowse myself with
the peace
While I gaze on the light and the beauty afar from the dim
homes of men
May I still feel the heart pang and pity, love ties that I
would not release;
May the voices of sorrow appealing call me back to their
succour again.

He need not have feared. His wish to serve humanity was granted even in his life. Æ, temperamentally an Irish patriot and a romantic, was something even more. O'Leary's "romantic Ireland," whose death Yeats deplored, survived in O'Grady, and no less romantically survived O'Grady, again, and with a more indomitable fortitude, in Pearse; it survives Pearse's fate in Russell's poetry, conjoining in one vision the cosmic consciousness and devotion to mankind. Whilst he could say that:

. . . . from fleeting voices
And visionary lights a meaning came
That made my myth contemporary,

no such lights or voices from within overbore the voices of pity. If, like Wordsworth, he did hear two voices and could follow both, these were not contending divinities. One, rather illumination than voice, "the light in the picture," was "the real person" in the poet. The other, his reliance on the promptings of "the spiritual will," was the real person in the man. He had sought ever "behind the conscience, the love." That is why Mr. Eglinton, who cares

greatly for truth, can say of him: "he was all that a man should be." And better than any inadequate praise of mine are the words of a working woman who, sending her subscription to the Æ Memorial, wrote to me, a stranger: "Dear Æ. He walked with God, surely."

The Theosophical Forum

THE PATH OF ACTION — *Hadji Erinn (W. Q. Judge)*

The Mohammedan teacher directs his disciples to tread carefully the razor's edge between the good and the bad; only a hair line divides the false from the true. In this the Asiatic took an excellent illustration, for the "hair line" is the small stroke *alif*, which, placed in a word, may alter the sense from the true to the false.

In chapter four of the Bhagavad-Gita, entitled, "Jnana-Yog," or the book of the Religion of Knowledge, the blessed Krishna instructs Arjuna upon the nature of action, saying: "Renunciation of and devotion through works, are both the means of final emancipation; but of these two, devotion through works is more highly esteemed (by Him) than the renunciation of them"; and, "the nature of action, of forbidden action, and of inaction must be well learned. The Path of Action is obscure and difficult to discern."

In ordinary humdrum life these words of Krishna are true enough, but their force is strangely felt in the mind of the devoted student of Theosophy, and especially if he happens to be a member of the Theosophical Society.

That body of investigators has now passed its probationary period, so that, as a whole, it is an accepted chela of the Blessed Masters who gave the impulse that brought it into being. Every member of it, therefore, stands to the whole Society as every fibre in the body of any single chela does to the whole man. Thus now, more than ever before, does each member of the Society feel disturbing influences; and the Path of Action becomes more and more likely to be obscured.

Always existing or coming into existence in our ranks, have been centres of emotional disturbance. Those who expect that these perturbations ought now to cease and grow less likely to recur, will find themselves mistaken. The increase of interest that is being taken in the Society's work, and the larger number of earnest students who are with us than at any previous period, constitute elements of agitation. Each new member is another nature added, and every one acts after his own nature. Thus the chances for being discomposed are sure to increase; and it is better thus, for peace with stagnation partakes of the nature of what is called in the Bhagavad-Gita, *Tamagunam*, or, of the quality of darkness. This quality of darkness, than which there is nothing worse, is the chief component of indifference, and indifference leads only to extinction.

Still another element in this equation that every earnest Theosophist has to solve, and which in itself contains the potency of manifold commotions, is a law, hard to define, yet inexorable in its action. For its clearer comprehension we may say that it is shown in nature by the rising of the sun. In the night when the moon's rays flooded the scene, every object was covered with a romantic light, and when that luminary went down, it left everything in a partial obscurity wherein many doubtful characters could conceal their identity or even masquerade for that which they were not. But on the sun's arising all objects stand out in their true colors; the rugged bark of the oak has lost the softening cover of partial day; the rank weeds can no longer be imagined as the malwa flowers. The powerful hand of the God of day has unveiled the character of all.

It must not be supposed that a record has been kept by any officials, from which are to be taken and published the characters of our members. There is no need of that; circumstances taking place in natural order, or apparently from eccentric motion, will

cause us all, whether we will or not, to stand forth for what we are.

Every one of us will have to stop and learn in the cave outside of the Hall of Learning, before we can enter there. Very true that cave, with all its dark shadows and agitating influences, is an illusion, but it is one that very few will fail to create, for hard indeed to be overcome are the illusions of matter. In that shall we discover the nature of action and inaction; there we will come to admit that although the quality of action partakes of the nature of badness, yet it is nearer to the quality of truth than is that which we have called darkness, quietude, indifference. Out of the turmoil and the strife of an apparently untamed life may arise one who is a warrior for Truth. A thousand errors of judgment made by an earnest student, who with a pure and high motive strives to push on the Cause, are better than the outward goodness of those who are judges of their fellows. All these errors made in a good cause, while sowing good seed, will be atoned by the motive.

We must not then be judges of any man. We cannot assume to say who shall or shall not be allowed to enter and to work in the Theosophical Society. The Masters who founded it, wish us to offer its influence and its light to all regardless of what we may ourselves think; we are to sow the seed, and when it falls on stony ground no blame attaches to the sower.

Nor is our Society for good and respectable people only. Now, as much as when Jesus of Nazareth spoke, is it true that there is more joy in heaven over one sinner who repenteth, than over ninety-nine just men who need no repentance.

Remembering then, that the Path of Action is obscure and difficult to be discerned, let us beware of the illusions of matter.

The Theosophical Forum

SAINT-MARTIN: THEOSOPHER AND ADEPT — G. F. K.

On May 22nd, in the year 1792, Kirchberger, Baron of Liebistorf, and member of the Sovereign Council of the Republic of Berne, Switzerland, filled with an urge not to be stayed, wrote a letter:

. . . . I will declare to you, Sir, with Swiss frankness and sincerity, that the most eminent writer, in my eyes, and most profound of his age, is the author of "Des Erreurs et de la Verite," and that to correspond with him would be to me one of the greatest satisfactions of my life.

That letter, addressed to *le Philosophe Inconnu*, or "the Unknown Philosopher," proved to be the opening of a five years' remarkable correspondence, in which two "theosophers" of the late eighteenth century discoursed on the "active and intelligent Cause" of the universe, and the means by which man might again attain to conscious union with his Divine Principle.

Le Philosophe Inconnu — by which nom-de-plume Louis Claude de Saint-Martin sought, vainly it is true, to screen his identity — was, however, no ordinary "theosopher." Here was a man far and above the mediocrity of savants, *spiritualistes*, masons, rosicrucians, and so-called mystics, that thronged the continent of Europe during the French revolutionary period. For well may it be said that Saint-Martin was of those "who walk with God," whether for a moment, or longer, the reader may judge. But that he was thoroughly convinced of the actuality and experiencibility of the Divine Center — Sophia or Wisdom — there can be no doubt. His daily prayer epitomizes the one-pointed aspiration which dominated his life:

My God, be Thou with me so entirely that none save

Thyself can be with me!

— *Portrait Historique*, I, 27

The republication of *Theosophic Correspondence*," (1) after some 150 years have elapsed since these two "theosophers," the one a pupil, the other a guide and cherished friend, wrote each other, presents a stirring challenge to the modern theosophist. There is here no clear-cut outline of theosophic doctrine, no strongly etched system of rounds and races globes and monads, planetary and solar chains. Yet, within the 110 letters may be found that indefinable "something" called *atmosphere* — the aroma of a strongly spiritualized individual, who conscious of his mission lived in whole-souled dedication to the restoration of erring man to God. To some, the form of this dedication may seem strange, difficult to grasp, perhaps even insignificant. To others, trained to sensitivity of inner concerns, recognition will be simple, and the validity of Saint-Martin's own words readily seen:

Those having soul will lend to my work what is wanted, but the soulless will deny it even that which it has.

— *Port. Hist.*, I, 129

Born at Amboise, in the province of Touraine, France, on the 18th of January, 1743, of "pious and noble parents," Louis Claude de Saint-Martin was reared strictly in the Catholic faith, to which he adhered nominally throughout his life. Entering the college of Pontlevoi (or Portlevoy) at an early age, the first seeds of mystic thought were sown by a small book on *The Art of Self-Knowledge*. It was to this apparently insignificant treatise by Abadie, which he later termed "sentimental rather than profound," that Saint-Martin owed his primal impulse toward the inner life. Thence to the study of jurisprudence on his father's advice; but, on attaining the position of King's Advocate at the High Court of Tours, Louis Claude realized that as a magistrate it would be his duty to devote

his entire time to his office. He therefore chose the army, in which profession, "during peace, he would have leisure to pursue his meditations, and to study man," to quote his friend and admirer, Mons. Gence, in *Biographie Universelle* (*Theos. Cor.*, iv).

Thus, at twenty-two years of age, Saint-Martin, with a lieutenant's commission in the regiment of Foix, then garrisoned at Bordeaux, entered upon the next stage of his promising career. Unknown to himself, yet none the less potently, the mystic was being led through the labyrinth of worldly experience that he might himself, consciously, pick up the ancient thread of truth. For the very next year, at Bordeaux, the young subaltern was to meet Don Martines de Pasqually de la Tour, otherwise Martinez de Pasquales, who was permanently to stimulate the urgent desire for the inward life. In 1768, joining the Order of the Elect Cohens (Priests), founded by this Portuguese (2) theurgist, rosicrucian and mason, Saint-Martin was forever to be indebted to this teacher. With zeal and exactitude he gave himself to the cause of his Master, so that in 1771 he felt called upon to abandon the military profession in order the more fully to devote himself to the propagation of those seeds of wisdom which he had already received in no small measure.

Fortunately for him, in 1772 his preceptor was called to St. Domingo, never to return, death following for de Pasquales in 1774; for it was not long before Saint-Martin had far outdistanced the practices and rites of this Order. Nevertheless, as his letters to Kirchberger abundantly show, written twenty years and more after this period, Saint-Martin maintained to the last grateful reverence for the man who had turned him to the inward life, and firmly believed that if Martinez de Pasquales had lived he might very well have shown to him the "inward" way rather than merely the "external." As he writes on the 12th of July, 1792:

My leader therein was a man of very active virtues, and most of those who followed him, with myself, received confirmations thereby which may have been useful to our instruction and development Nevertheless, I, at all times, felt so strong an inclination to the intimate secret way, that this external one never further seduced me, even in my youth, for, at the age of twenty-three, I had been initiated into all those things, so that, in the midst of what was so attractive to others, in the midst of means and formulas and preparatives of all sorts, in which we were trained, I, more than once, exclaimed to our master, "*Can all this be needed to find God?*"

— Ibid., pp. 12-13 [italics ours]

By the death of Pasqually in 1774, Saint-Martin had already established himself in his own line of work which had taken a twofold direction: the one, of private social contact with personages of the higher circles of society, at Lyons, Paris, as well as at Bordeaux, whom he hoped to interest in the deeper issues of life; and secondly, in literary labors. Of Saint-Martin's personality, Mons. Matter, his biographer, writes:

At the age of thirty years [1773] M de Saint-Martin found himself very favourably placed in the world. An expressive countenance and polished manners, marked by great distinction and considerable reserve, presented him to the best advantage. His demeanor announcing not only the desire to please but something to bestow, he soon became known widely and was in request everywhere.

— *Saint Martin le Philosophe Inconnu*, p. 74

As for his literary output, one has only to read Mon. Gence's careful description of the works of *le Philosophe Inconnu*, included by Penny in his Preface to *Theosophic Correspondence*,

to recognize that in 1775 (note the year!) the publication of his first work, *Des Erreurs et de la Verite* ("Of Errors and of Truth") had definitely enlisted Saint-Martin in the fight for truth. It was this work, as stated, that was to inspire the Bernese philosopher, Kirchberger, eighteen years later, to take up his pen and seek the guidance of the "Unknown Philosopher." Significantly enough, it was also this first book which was to be condemned twenty-three years later by the Spanish Inquisition as "subversive of true religion and the peace of nations," to quote A. E. Waite in *The Life of Louis Claude de Saint-Martin, the Unknown Philosopher*, p. 32. Herein Saint-Martin, indignant at Boulanger's assertion that "religion sprang from the fright occasioned by the catastrophes of nature," declared with vigor that there did reside within man a Divine Principle, and that it was not only possible but the duty of man to gain intuitive knowledge of this "active and intelligent Cause" from which all things sprang. Furthermore, contrary to prevailing opinion, he asserted that the "Will constituted the essential and fundamental faculty of man."

In 1782 his next work in two volumes appeared, also pseudonymously, *Tableau Naturel* or "Natural Table of the Correspondences between God, Man and the Universe," in which man's fall into generation was described, but also the hope instilled that man could, by the exercise of his moral and intellectual virtues, recover that which he had lost.

During the next five years there is a considerable "gap" in our knowledge of Saint-Martin's whereabouts. This should, of course, not surprise us, as the recorded history of other adepts, whether recognized as such or not, always includes a "lacuna" in their outward life. What takes place at these periods is not the concern of the public, nor is it ours today. It is believed that he did considerable traveling, not only to England, Germany, but even possibly to Russia.

In 1787 on his visit to England, it is known that he became acquainted with the works of William Law (who had died in 1761), a theosopher and ardent student of Bohme. It was not until the next year while at Strasbourg with Madame de Boecklin that he became fully introduced to the profundity of Jacob Bohme's writings — "What depths this author opens to me!" he was later to write to Kirchberger (*Theos. Cor.*, p. 91).

In his forty-fifth year, Saint-Martin had at last come into his spiritual majority; for without question in the shoemaker of Gorlitz he had discovered a companion-in-arms, whose revelations through divine inspiration and a fearless defense of truth brought Saint-Martin lasting strength. In fact, so intense was his admiration that he applied himself, despite his nearing fifty years and failing eyesight, to learn the German language that he might not only read for himself the original, but also share with his compatriots in French translation his magnificent Bohme, whom he regarded as "the greatest human light that had ever appeared" (p. vi).

L'Homme de Desir or "The Man of Aspiration" did not appear until 1790, though it is believed he had begun it in England. Of this work, reputed to be the most exalted and inspired of all his writings, Saint-Martin gives evidence of that steady "guidance" which was to direct his inner genius throughout his life. Writing to Kirchberger, who had said that he regarded this work "as the most refreshing, and the richest in luminous thoughts, that has appeared in this age" (p. 126), Saint-Martin replied:

I acknowledge also that there are germs scattered in this work the properties of which I knew not when I sowed them, and which open to me daily, thanks to the aid of Providence and our authors. — *Ibid.*, p. 130

More books followed, each one a development of the initial theme: that man is primitively a "thought of God," and that for renovation he must think and act solely by the Divine Principle within him. The reader is again referred to Mons. Gence's summary of Saint-Martin's numerous works, and his translations also of Bohme's writings, found included in the Preface of the book under study.

Let it not be supposed that these letters of Saint-Martin and Kirchberger lack in human appeal. Far from it. Besides the tender and affectionate exchanges between two patricians bred in the grace of *noblesse oblige*, we find as backdrop the dramatic scene of the French Revolution. The tortuous days, commencing with that fateful 10th of August, 1792 are thrown in bold relief as Saint-Martin casually, yet continuously, makes references while discoursing on the lofty theme of "their object." As he later wrote (in 1796) to Kirchberger, he felt the power of a great force behind the upheaval, "which springs from grounds unknown to those who have taken part in this great drama" (p. 235)

The great picture of our wonderful revolution rivets me, I am best situated here [at Paris] to contemplate it *en philosophe*. — p. 99

I listen to everything, I see all that come . . . There are some who had described to me beforehand, almost to the very letter, the shaking we have just experienced [1795], in which I have again seen how fortunate and powerful the star is that presides over our revolution. — pp. 177-8

Do not believe that our French revolution is an indifferent thing upon the earth, I look upon it as the revolution of human nature, as you will see in my pamphlet, it is a miniature of the last judgment, with all its features, except that things succeed one another in it, whilst, at the last,

everything will be done instantaneously. — p. 184

The pamphlet referred to was a treatise of considerable size and importance entitled: "Letter to a Friend, or Philosophical and Religious Consideration of the French Revolution," published in 1796, and which he hoped Kirchberger would translate into German for circulation among the German speaking countries. But though the Baron was deeply impressed with Saint-Martin's original, and in some instances startling views, and considered this the most remarkable treatise of its kind, he feared greatly that the Germanic peoples at that time would only turn it to bitter use.

There was danger, and plenty of it, for Saint-Martin during those years, who "walking on the borders of fire" (p. 223) had suddenly become *persona non grata*, of the proscribed classes, and whose *mandat d'arret* or Order of Arrest was soon to come. Yet, those who "walk with God" are under His care, and we find Saint-Martin not too surprised but deeply sensible of the "numerous proofs of the divine protection over me, especially during our revolution." (p. 150) He afterwards wrote to Kirchberger on the 30th of April, 1797:

There were many reasons for suspicion and arrest for one in my situation, civil, pecuniary, literary, social, etc, and yet I have been quits with an order once given to arrest me, which did not reach me till a month after the fall of Robespierre, who issued it, and which was cancelled before it could be executed. Moreover, I have three times passed through every crisis, I lived a whole year on the borders of La Vendee, and you will be not a little surprised when I tell you that, during these infernal agitations, when I went everywhere just like anybody else, things have been so ordered on high, that, since the Revolution, I have literally

not heard the report of a cannon, except those which were lately fired here to announce peace with the Emperor (of Austria). You can tell this, if you like, to Mr. Jung, with my kind compliments. Do not let him take this for miracles, I am not worthy that any should be enacted for me: it was simply the care of Divine goodness, for which I am very grateful. — p. 297

The import of this correspondence is not the temporal events, however fascinating these may be. Of chief concern to our theosophers is the search after the Central Principle, the Divine Source, God, Sophia — whatever name came most readily to hand. We should not imagine, however, that the all-absorbing power of the inner life in any wise detracted from the performance of worldly duties on the part either of Saint-Martin or Kirchberger. Ample evidence is given in both cases that their duties in the world of men were fulfilled with diligence, exactitude and imagination.

Choice bits of wise counsel enrich the letters, where Saint-Martin kindly, affectionately, but always directly, urges Kirchberger to eschew the secondary or external way. It is difficult for us today to realize what a network of *secret* bodies, possessing in greater or less degree "masonic connections," had surrounded the entire continent of Europe by the late eighteenth century. Offshoots of original theosophic efforts, the dying embers of magical incantations, theurgic practices, secret formularies with numbers, were explained "behind closed door, with mouth to ear." Masonic, Rosicrucian, Kabbalistic Orders, so called, flourished by the dozen, not openly as today with far less danger to the unwary, but *secretly*, hidden under the spell of mystery, with mystifying signs and passwords, occult rites and ceremonial, "initiations," "traditions," and what not. "Brothers" of the different occult bodies would travel from one country to another, contacting

isolated members of these fraternities. From time to time a few deeply intuitive and inspired "masters" did undoubtedly participate; but as with all such Orders, unless the flame be kept pure and tended by selfless motive, the fire dies and only the smoldering ashes testify that another "attempt of the Lodge" has failed.

Saint-Martin would have none of this mummery. Invited to participate in the re-opened school of Martines de Pasqually in 1784, which now called itself the Order of Philalethes, he refused, stating that they seemed "to speak and act only as freemasons, and not as real initiates, that is, as united to their Principle," as Mons. Gence records (*Ibid.*, p. v). His uncompromising strength and chaste spirituality have cumulative force as one reads, consecutively, letter by letter. Never does this theosopher, and indeed adept, deviate one hair's-breadth from the Central Core, which to him was the only direct road to God. One is tempted to quote passage after passage, but the following will be suggestive evidence of the luminous quality of Saint-Martin's purpose:

I know, in short, that the whole earth is full of these prodigies, but, I repeat, unless things come from the centre itself, I do not give them my confidence. . . .

The inward or centre is the principle of everything, so long as this centre is not open, the greatest external wonders may seduce without advancing us, and, if I may venture to say so, it is our inward which ought to be the true thermometer, the true touchstone, of what passes without. If our heart is in God, if it is really become divine, by love, faith, and ardent prayer, no illusion can surprise us.

If God is for us, who can be against us?

— pp. 62-3

Innumerable references to numbers and their significances are to be found, particularly in the letters from Kirchberger who appeals to Saint-Martin for direction on behalf of friends of his similarly inclined. Though Kirchberger recognizes the wisdom of Saint-Martin's judgment, in fact his reverence for his friend's counsel adds a richness and a beauty not to be overlooked, he nevertheless is himself not a little intrigued by the power that numbers appear to have in revealing facts. Saint-Martin's sane, practical remarks give a timely warning to those today who in their over-enthusiasm at discovering part of the web of truth believe they have found all. Writes Saint-Martin:

They [numbers] have given me, and still occasionally give me, a sort of intelligence, but I never thought that they gave more than the mere ticket of the package, and not *commonly* the substance of the matter itself. I felt this from my first entrance into my first school. Friend Bohme came to justify this presentiment. . . .

— pp. 194-5

Further, Saint-Martin takes pains to reiterate that numbers do indeed express laws, but that, in the case of Man, they are "already removed from the divine sphere: we may work them, and they will always give us the representation of the same wonders; but only as images. . . ." (p. 209)

One interesting point must be included, and that is the rigid silence maintained by Saint-Martin in regard to Cagliostro. There are at least a half-dozen references by Kirchberger to Cagliostro, whom he regards with candid disfavor, deeming him the author of dangerous practices. But never a comment in return from Saint-Martin. Was this adept under the reserve imposed by The Lodge which would prevent him even from hinting to his beloved correspondent that there might be "another side" to the coin of

the Cagliostro mystery?

Mention must also be made of the doings of "our other good theosophists" where Kirchberger furnishes important information on the works of Doctor Pordage, Jane Lead, and Thomas Browne of England, as well as of Gichtel of Germany who deeply impressed by Bohme produced his now famous edition of Bohme's Works of 1682, later enlarged in 1715. Silverhielm, nephew of Swedenborg, also is mentioned by Saint-Martin who had met him personally; and though Saint-Martin was conscientiously interested in all these theosophers, whether through their writings or by personal contact, and would attend "meetings" whenever he felt that some seed of wisdom might be sown, he always returned to Bohme as the primal source of inspiration.

"Would you leave your work incomplete? . . . would you lose the fruit of six years" correspondence, or, what amounts to the same thing, would you not enjoy the satisfaction of seeing the grain you have sown arrive at its full maturity?" — Thus Kirchberger appeals to Saint-Martin when he discovers, in May 1797, that after months of hoping and planning for Saint-Martin to visit him in Switzerland, the latter has decided not to undertake the journey. And why? Because Saint-Martin has not received, he says, "the desired opening" which points to such a visit, and "however strong this desire may be [to visit K.], until I have more light than at present I must wait." — p. 299

Kirchberger's disappointment, naturally, is keenly felt, the more so as it unfolds that he is most desirous that Saint-Martin transmit to him "certain truths" which could not be told in writing. He writes:

I beg of you to weigh all this in your wisdom; and if present circumstances do not allow you actually to make the

journey, to compensate me, in part at least, by some preparatory instructions which will make me more worthy and more fit to enjoy your conversation. — p. 300

Saint-Martin's answer (Letter CX) is a masterpiece of tender understanding yet firm adherence to esoteric principle. Initiation cannot be conferred, it must be earned; and in Saint-Martin's simple direct way he again affirms:

The only initiation which I preach and seek with all the ardour of my soul, is that by which we may enter into the heart of God, and make God's heart enter into us, . . . There is no other mystery, to arrive at this holy initiation, than to go more and more down into the depths of our being, and not let go till we can bring forth the living vivifying root. . . .

This is the language I have held to you in all my letters; and certainly, whenever I may be present with you, I shall never be able to communicate to you any mystery more vast than this, and more suited to promote your advancement. . . . I cannot think you are in want, and I shall think so still less for the future, if you will only work your capital wisely.

— pp. 304-5

The two friends were destined never to meet. Kirchberger died suddenly in a year or two, and Saint-Martin continued in Paris occupied with further writings. Sensing that his end was near, he said to a friend:

I feel that I am going — Providence may call me — I am ready. The germs which I have endeavoured to sow will fructify. — p. 10

The next day he left for the country-seat of Count Lenoir la Roche at Aunay, near Sceaux, where after a slight repast, he "prayed in

silence, and departed without a struggle, and without pain, on the 13th October, 1803." — p. xi . . .

To theosophists of the present, ingrown perhaps with too great a concern over the problems of the hour, *Theosophic Correspondence* comes as a refreshing spring. Somehow one is lifted out of the narrow sphere of isolationism into the broad expanse of that ageless theosophic force which has been "active since the commencement of our racial experience," as stated in the Foreword.

For in both the Preface by Edward Burton Penny, and in the Appendix by Christopher Walton, we find theosophers in the middle of the last century, the nineteenth, boldly planning a course of theosophic propaganda. And heaven knows, if the world must grope for the light in the fifties of our present century, it was far in arrears in spiritual expansiveness one hundred years ago. Is it of such slight importance to us today to realize that Mr. Penny of Topsham, Devon, England, found it worth his while to translate from the French these letters, and then with the aid of Walton and other like-minded "theosophers" accomplished in 1863 the sending of free copies to literally hundreds of libraries the world over: in Great Britain, Ireland, Canada, Nova Scotia, India, Ceylon, Australia, The Cape, Gibraltar, France, as well as the United States?

We ask the reader to enter the courtly and noble rhythm of this book, and discover for himself much more than is here recorded.

Spaniard. ([return to text](#))

The Theosophical Forum

IN THE BEGINNING — *Hazel Minot*

The words "to create" are often understood by the ordinary mind to convey the idea of evolving something out of nothing. This is clearly not its meaning, we are mentally obliged to provide our Creator with chaos from which to produce the worlds. . . . Out of a void Nature cannot arise. .

..

— *Through the Gates of Gold*

To different peoples at different times has come a "revelation" of universal truths. In the beginning each such revelation has been as a blinding light, and men have felt a nearness to "God," an awareness of unseen divinities who were their guides and protectors, and deep within themselves there has been a glowing something which they knew was akin to the flame burning on the altar-stone of heaven. But time does strange things, and however far-reaching the "revelation" or pure the source from which it came, as the ages have rolled by the original inspiration has become hidden from the eyes of men, even as a mountain stream may lose itself at last in desert sands.

Where the "voice of God" has been imprisoned in formalized religion, creed and dogma have done their part to still the magic of its tones and, with the passing years, echoes of far earlier "revelations" have been all but silenced; or, if heard, have lingered on as remnants of an age when men believed "strange things" about themselves and Nature. From time to time there is a resurgent interest in these very remnants: myths and legends, folk-lore and fairy-tales are gathered together and collated, but it is rarely that they take their place as source-material, giving an accurate though often fragmentary picture of the opening of any

great period of manifestation.

There are a number of understandable reasons why these folk and other tales have not been recognized as hiding grains of ancient truth, and this despite the fact that the treatment of the subject has been extensive. Main groupings of the study include "Ideas and Superstitious Beliefs"; "Traditional Customs"; "Traditional Narratives"; and "Folk Sayings" — all having several sub-headings. The approach is in large part from the standpoint of gaining an advance in the "general knowledge of folk industries, folk aesthetics, and folk sociology."

Scientific investigations of myths and their origin, or the tracing of the migrations of tales, have contributed information in respect to community of descent or with reference to interchange of ideas through geographical proximity or through emigration. (1)

The method and purpose of this type of research have not concerned themselves with tracing the pattern of fundamental cosmic truths but rather with discovering the similarity of religious beliefs; the inner meaning of those beliefs being hidden under the manner of presentation peculiar to any particular locality. Often enough this "cover-up" has been deliberate: at the time when legends and myths were first given to men those who wove these tales gave out esoteric teaching in this form, using the simple means of symbol and allegory to convey their meaning. The relatively few who understood the symbols could interpret them; to others, they were just charming fairy-tales. But the message was there, the story thus veiled has endured through the centuries, and today it is as vital for him who can trace its meaning as it was at the time of its first recounting.

There are other factors that help to bewilder. The story does not always begin, grow to a point, and finish with a grand climax.

Events, especially those dealing with the birth of worlds and humanities, have a way of apparently doubling back on themselves, or suddenly telescoping, so that the hope of beholding a sequential unfolding of the picture is hardly to be realized. This may be due to "wear and tear" and the strange twists and turns that come with the retelling of any tale; it may also have started out a little "on the bias" with the express purpose of confusing the issue. In addition, one has always to bear in mind that all the world loves a good story, and many a tale has as its prime object relaxation and entertainment.

To anyone delving into this wealth of material for proof that the Sacred Wisdom was indeed known to the peoples of ancient times, and that remnants of it still inhere in tribal beliefs and customs, the most responsive field of research is that of "Traditional Narratives"; for under this heading are included the myths concerning creation and various cataclysmic occurrences. Searching among these legends we are reminded of H. P. Blavatsky's statement in *Isis* (Vol. II, 431), that "there are few myths in any religious system but have an historical as well as a scientific foundation."

Comparing some of these tales of creation, one senses as a predominant factor the recognition, on the part of those who originally told them, of already existing material out of which earth and its humanities are gradually formed. For instance, in the Prose Edda, we have the story of the coming into being of the giant Ymir, from whose body the earth is later formed. Ymir took shape out of Ginnungagap (All Space) from the conflict of the elemental forces represented by Niflheim, the region of ice and snow, and Muspelheim, the region of elemental fire. This conflict caused the rime and ice of Niflheim to melt, and the falling drops assuming the shape of a mighty giant became Ymir.

H. P. B. says of Ymir that he is

the personified matter of our globe in a seething condition. The cosmic monster in the form of a giant, who is killed . . . by the three creators . . . Odin, Wili and We. . . . This allegory shows the three principal forces of nature — separation, formation and growth (or evolution) — conquering the unruly, raging "giant" matter, and forcing it to become a world, or an inhabited globe. It is curious that an ancient, primitive and uncultured pagan people, so philosophical and scientifically correct in their views about the origin and formation of the earth, should, in order to be regarded as civilized, have to accept the dogma that *the world was created out of nothing!*

Turning to the Greek story of creation as given to us by the poet Hesiod, we have *Chaos* as that from which the earth is formed. But this chaos, in the light of the Ancient Wisdom, is not a wildly disordered mass, but a repository, the storehouse of seeds from *previous* periods of manifestation, seeds that will develop into beings as well as things. It is not dissimilar to the Ginnungagap (All Space), for Space, too, is no empty nothingness, but filled full with being or life not yet manifested. A seeming contradiction, perhaps, but then, H. P. B. describes this very Ginnungagap as "the cup of illusion (*Maya*) the boundless and void abyss . . . this world's matrix. . . ."

From Chaos there came first of all the spirit of love, Eros; and though his wings may have been sadly soiled through the long, long ages, there is something surpassingly beautiful in this conception of Love as the first active principle in the evolution of the earth and the preparation for the races of men — a symbol of harmony, balance, and the never-ending quest of sentient beings for completion that this harmony and balance may be achieved.

Next came Gaea, the broad-breasted Earth, and still later Ouranos (Uranos), and from the union of these two came the Titans.

Ouranos tried to stay the course of evolution by hurling his children back into the womb of their mother as soon as they were born, but was himself slain by his youngest son Kronos. It is but a momentary halting of the work of generation which

passes into the hands of *Kronos, time*, who unites himself with *Rhea* (the earth in esotericism — matter in general), and thus produces, after celestial — terrestrial Titans. The whole of this symbolism relates to the mysteries of Evolution.

— *The Secret Doctrine*, II, 269

The story repeats itself with the children of Kronos. It is the Hellenic rendering of the unsuccessful attempts of "Earth or Nature" to create a *humanity* unaided, and is reminiscent of stanzas in the *Book of Dzyan* dealing with this very period of evolution. The vehicles are as yet unprepared — not merely the physical body but, more important, the intermediate nature — and not until they are fit receptacles for the divine "spark" will there really be a race of men on earth.

The gods are closely linked with man: witness the case of Deukalion and Pyrrha who are commanded by the gods to found a new race following their survival of a "flood." The pattern is not new, any more than was that relating to Noah, but the details vary to suit the age and race to which it applies. Nor is this link with divinity limited to august commands: the gods have literally given of themselves to form our earth and its children. Recall the names borne by the planets of our solar system and the teaching that each has played a part in the building of the earth chain. May it not have been this very truth that was suggested when, in the Prose Edda, Ginkir, a wise king, "travels in search of knowledge to

the home of the Asa folk — the Norse gods — each of whom supplies the visitor with some piece of special information": the bringing together of these separate items resulting in the cosmogonic history portrayed in the Edda? Also, it is significant that the "Asa folk" consist of Odin and the twelve Aesir, or gods.

Turning now to the Western Hemisphere, there is much food for thought in the Creation myth of the Wichita; especially in the names of the protagonists.

It was Man-never-known-on-Earth who created all things, and when he had formed the earth he then made a man whose name was Having-Power-to-carry-Light. He also made a woman, and her name was Bright-Shining-Woman. Though these names foreshadow a future time of "spiritual illumination" the man and the woman were as yet in darkness. Then came a thought into the mind of Having-Power-to-carry-Light that he must journey towards the east, and he did so, having many strange adventures. The myth tells how there came to be night and day, and how other promises were fulfilled that had been made by Man-never-known-on-Earth, who was henceforth to be known as Reflecting-man, the Sun. There were now more people on the earth, and Having-Power-to-carry-Light and Bright-Shining-Woman became their instructors, teaching them how to grow the precious corn, how to hunt with bow and arrow, and the use of various implements which the people had in their possession but did not understand. Then there came a time when the man and the woman must leave the people they had dwelt among, for each was to become something else. But before leaving they gave final instructions: how the people might tell what things were about to happen; how they should pay reverence to the stars and other heavenly bodies, and many other things important for them to know. Bright-Shining-Woman said she would be seen after the sun had gone down, and in the evening they beheld her in the

sky, for she had become the moon. Having-Power-to-carry-Light told the people that they would see him early in the morning, before the light of day, and that henceforth his name would be First-Star-seen-after-Darkness-passes-by.

This simple tale, simply told, leaves no doubt but that the ancient American Indian was aware of the Divine guardians who cared for the race in its infancy. He knew, too, of his kinship with the Sun and Moon, and his debt to the planet Venus.

All peoples have had their "Bibles" and a profound study of the subject could well be the work of a life-time. To the interested reader there is a veritable gold-mine of interpretation to be found in the pages of *Isis Unveiled* and *The Secret Doctrine*. The sacred literatures themselves, their myths and legends, even of the most "primitive" peoples, fill one with reverence for the beauty of their language and the depth of their intuition.

The Theosophical Forum

ALCHEMY IN THE NINETEENTH CENTURY: I — *H. P. Blavatsky*

(Translated by Thomas Williams from *La Revue Theosophique*)

The language of archaic chemistry or Alchemy has always been, like that of the earlier religions, symbolical.

We have shown in the *Secret Doctrine* that everything in this world of effects has three attributes or the triple synthesis of the seven principles. In order to state this more clearly, let us say that everything which exists in the world around us is made up of three principles and four aspects just as we have shown to be the case with man.

As man is a complex unity consisting of a body, a rational soul and an immortal spirit so each object in nature possesses an objective exterior, a vital soul, and a divine spark which is purely spiritual and subjective.

The first of this threefold proposition cannot be denied, the second cannot logically be objected to, for if we admit that metals, certain woods, minerals and drugs possess inherent powers to produce effects on living organisms, then official science practically admits its truth. As for the third, of the presence of an absolute quintessence in each atom, materialism, which deals only with the *anima mundi*, denies it utterly.

Much good may it derive from this agnostic attitude. We for our part, finding in materialism an undoubted proof of the existence of moral and spiritual blindness, make no account of the denial and, leaving the blind to lead the blind, proceed with our subject.

Thus as with natural objects, so every science has its three fundamental principles and may be applied through all three or

by the use of only one of them.

Before Alchemy existed as a science its quintessence alone acted in nature's correlations (as indeed it still does) and in all its planes.

When there appeared on earth men endowed with a superior intelligence they allowed this supreme power to have full and uncontrolled action and from it they learnt their first lessons. All that they had to do was to imitate it. But in order to reproduce the same effects by an effort of individual will, they were obliged to develop in their human constitution a power called Kriyasakti in occult phraseology.

This faculty is creative, and is so simply because it is the agent on an objective plane of the first creative principle. It resembles a lightning conductor in that it conducts and gives definite direction to the creative quintessence which otherwise, if led blindly into the lower planes, kills; but which brought down through the channel of the human intellect creates according to a predetermined plan.

From this Alchemy was born; and magnetic magic, and many other branches of the tree of occult science.

When in the course of ages nations grew up so intensely saturated with egotism and vanity as to be convinced of their complete superiority to all others living in the present, or who had lived in the past; when the development of Kriyasakti became more difficult and the divine faculty had almost disappeared from the earth, then they forgot little by little the wisdom of their ancestors. They even went further and rejected altogether the tradition of their antediluvian parents, denying with contempt the presence of a spirit and of a soul in this the most ancient of all sciences. Of the three great attributes of nature they only

accepted the existence of matter or rather its illusory aspect, for of real matter or *substance* even the materialists themselves confess a complete ignorance; and truly they are right, nor have they even the vaguest conception of what it is.

Thus there grew up the science of modern chemistry.

Change is the constant effect of cyclic evolution. The perfect circle becomes One, a triangle, a quaternary and a quinary. The creative principle issued from the rootless root of absolute existence, which has neither beginning nor end, and of which the symbol is the serpent or *perpetuum mobile* swallowing its tail in order to reach its head, has become the Azoth of the alchemists of the middle ages. The circle becomes a triangle, emanating the one from the other as Minerva from the head of Jupiter. The circle hypothecates the absolute; the right line issuing from it represents a metaphysical synthesis and the left a physical one. When Mother Nature shall have made of her body a line joining these two, then will come the moment of awakening for the Cosmic Activity. Until then Purush, the spirit, is separated from Prakriti — material nature still unevolved. Its legs exist only in a state of potentiality, and cannot move nor has it arms wherewith to work on the objective forms of things sublunary. Wanting in limits, Purush cannot begin to build until it has mounted into the neck of Prakriti the blind, when the triangle will become the microcosmic star. Before reaching this stage they must both pass through the quaternary state and that of the cross which conceives, this is the cross of earthly mystics, who make a great display of this their beflowered symbol, namely: the cross divided into four parts, which may be read Taro, Ator, and Rota, Tora. The Virgin, or adamic earth substance which was the Holy Spirit of the old Alchemists of the Rosy Cross, has now been changed by the Kabbalists, those flunkeys to modern science, into Na²Co³ Kali

(?) and C H O or Alcohol.

Ah! Star of the morning, daughter of the dawn, how fallen from thine high estate — poor Alchemy. All on this ancient planet, thrice deceived, is doomed to tire and, sliding into oblivion, to be destroyed; and yet that which once was, is and shall be for ever, even to the end of time. Words change and the meaning underlying them becomes quickly disfigured. But the ideas which are their root and parent shall endure. The ass' skin in which nature's queen wrapped herself in order to deceive fools as in the story of Perrault — for the disciple of the old philosophers will always recognise the truth, no matter under what garb, and will adore it, this ass' skin we must believe is more congenial to the tastes of modern philosophy and materialistic alchemists, who sacrifice the living soul for the empty form, than Royal Nature naked and unadorned. And thus it is that the skin only falls before Prince Charming, who recognises in the ring sent the marriage betrothal.

To all those courtiers who hover round Dame Nature while cutting at her material envelope, she has nothing to present but her outer skin. It is for this reason that they console themselves by giving new names to old things, old indeed as the world itself, declaring loudly the while that they have discovered something new. The necromancy of Moses has in this way become modern Spiritualism; and the Science of the old initiates of the temple, the magnetism of the gymnosophists of India; the healing mesmerism of sculapius "the Savior," is only received now on condition that it is called hypnotism, in other words Black Magic under its proper title.

Modern materialists would have us believe that Alchemy or the transmutation of base metals into gold and silver has from the earliest ages been nothing more than charlatanism. According to

them it is not a science but a superstition, and therefore all those who believe, or pretend to believe in it, are either dupes or impostors. Our encyclopaedias are full of abusive epithets levelled at Alchemists and Occultists.

Now, gentlemen of the French Academie, this may be all very well, but if you are so sure of yourselves, let us have at least some clear and irrefutable proof of the absolute impossibility of the transmutations of metals. Tell us how it is that a metallic base is found even in alkalis. We know certain scientists, men of recognized ability even, who think that the idea of reducing the elements to their first state and even to their primordial essence (see for instance Mr. Crookes in his meta-elements) not so stupid as it seemed at first sight. Gentlemen, these elements when once you have admitted that they all existed in the beginning in one igneous mass, from which *you* say the earth's crust has been formed, these may be reduced again and brought through a series of transmutations to be once more that which they originally were. The question is to find a solvent sufficiently strong to effect in a few days or even years that which nature has taken ages to perform. Chemistry and, above all, Mr. Crookes has sufficiently proved that there exists a relationship between metals so marked as to indicate not only a common source but an identical genesis.

Then, Gentlemen, I would ask you who laugh at alchemy and alchemists with a mirth bred of a consciousness of superior wisdom, how it is that one of your first chemists, M. Berthold, author of *La Synthèse*, deeply read in alchemical lore, is unable to deny to alchemists *a most profound knowledge of matter*.

And again, how is it that M. Chevreul, that venerable sage, whose great age, no less than his living to the last in the full possession of all his faculties, has moved to wonder our present generation, which, with its over-weening self-sufficiency, is so difficult to

penetrate or rouse; how comes it, we say, that he who made so many practical and useful discoveries for modern industry, should have possessed so many works on alchemy.

Is it not possible that the key to his longevity may be found in one of these very works, which according to you is but a collection of superstitions as useless as they are ridiculous.

The fact remains that this great savant, the father of modern chemistry, took the trouble to bequeath after his death, to the library of the Museum, the numerous works he possessed on this "false science," and here in this act of his we have an unmistakable revelation of the estimation in which he held them. Nor have we yet heard that those luminaries of science attached to this sanctuary have thrown these books on alchemy into the waste paper basket as useless rubbish full of fantastic reveries engendered by the sick imagination of a diseased brain.

Besides, our wise men forget two things — in the first place never having found the key to these hermetic books, they have no right to decide whether this *jargon* preaches truth or falsehood, and secondly, that wisdom was certainly not born for the first time with them, nor must it necessarily disappear from the world on their demise.

Each science, we repeat, has its three aspects; all will grant that there must be two, the objective and the subjective. Under the first head we may put the alchemical transmutations with or without the powder or projection; under the second we place all speculations concerning the nature of the mind. Under the third is hidden a high and spiritual meaning. Now since the symbols of the two first are identical in design and possess moreover, as I have tried to prove in the *Secret Doctrine*, seven interpretations varying with their application to either of the three natural kingdoms the physical, the psychic, or the purely spiritual, it will

be easily understood that only great initiates are able to correctly interpret the jargon of hermetic philosophers. And then again, since there exist more false than true hermetic writings, even those of Hermes himself may be found distorted. Who does not know for example, that a certain series of formulas may be correctly applied to the solving of concrete problems of technical alchemy while these same on being employed to render an idea belonging to the psychological plane will possess an entirely different meaning? Our late brother Kenneth Mackenzie expresses this well when he says, speaking of Hermetic Societies:

For the practical alchemist whose object was the production of gold by the use of laws belonging especially to his own peculiar art, the evolution of a mystic philosophy was of secondary importance, for his work could be carried on without any direct reference to a system of theosophy, whilst the Sage who had raised himself to a superior plane of metaphysical contemplation rejected naturally the simply material part of his studies, finding it beneath his aspirations.

— *Royal Masonic Cyclopaedia*

Thus it becomes evident that symbols taken as guides to the transmutation of metals, become of small value to those methods which we now call *chemical*. There is yet another question we would like to ask: — Who of our great men would dare to treat as impostors such men as Paracelsus, Van Helmont, Roger Bacon, Boerhaven and many other illustrious alchemists?

While French Academicians mock at the Kabbala as well as at alchemy (though at the same time taking from this latter their inspirations and their many discoveries) the Kabbalists and occultists of Europe begin *sub rosa* to prosecute the Secret sciences of the East. In fact the wisdom of the Orient does not

exist for our wise men of the West; it died with the Magi. Nevertheless, alchemy, which if we search diligently we shall find as the foundation of every occult science — comes to them from the far East. Some pretend that it is only the posthumous evolution of the magic of the Chaldeans. We shall try to prove that this latter is only the heir, first to an antediluvian alchemy, and then to an alchemy of the Egyptians. Olaus Borrichius, an authority on this question, tells us to search for its origin in the remotest antiquity.

To what epoch may we ascribe the origin of alchemy? No modern writer is able to tell us exactly. Some give us Adam as its first adept; others place it to the account of an indiscretion of "the sons of God, who seeing that the daughters of man were beautiful, took them for their wives." Moses and Solomon are later adepts in the science, for they were preceded by Abraham, who was in turn antedated in the Science of Sciences by Hermes. Is it not Avicenna who says that the Smaragdine Tablet — the oldest existing treatise on Alchemy — was found on the body of Hermes buried centuries ago at Hebron by Sarah the wife of Abraham? But Hermes never was the name of a man, but a generic title, just as in former times we have the Neo-Platonist, and in the present the Theosophist.

What in fact is known about Hermes Trismegistus, or Hermes three times the greatest? Less than we know of Abraham, his wife Sarah and his concubine Agar, which St. Paul declares to be an allegory. Even in the time of Plato, Hermes was already identified with the Thoth of the Egyptians. But this word Thoth does not mean only "intelligence"; it means also "assembly" or school. In truth Thoth Hermes is simply the personification of the *voice* of the priestly caste of Egypt; that is to say of the Grand Hierophants. And if this is the case can we tell at what epoch of prehistoric times this hierarchy of initiated priests began to flourish in the

land of Chemi. And even if this were possible we should still be far from having arrived at a complete solution of our problem. For ancient China, no less than ancient Egypt, claims to be the land of the alkahest and of physical and transcendental alchemy; and China may very probably be right. A missionary, an old resident of Peking, William A. P. Martin, calls it the "cradle of alchemy." Cradle is hardly the right word perhaps, but it is certain that the celestial empire has the right to class herself amongst the very oldest schools of occult Science. In any case alchemy has penetrated into Europe from China as we shall prove.

In the meantime our reader has a choice of solutions, for another pious missionary, Hood, assures us solemnly that alchemy was born in the garden "planted in Haden on the side towards the east." If we may believe him, it is the offspring of Satan who tempted Eve in the shape of a Serpent; but the good man forgot to follow up his assertion to its legitimate conclusion as is proved even by the name of the science. For the Hebrew word for Serpent is Nahash, plural Naha-shim. Now it is from this last syllable *shim* that the words chemistry and alchemy are derived. Is this not clear as day and established in agreement with the severest rules of philology?

Let us now pass to our proofs.

The first authorities in archaic sciences — William Godwin amongst others — have shown us on incontestable evidence that, though alchemy was cultivated by nearly all the nations of antiquity long before our era, the Greeks only began to study it after the beginning of the Christian era and that it only became popularised very much later. Of course by this is meant only the lay Greeks, not of course the Initiates. For the adepts of the Hellenic temples of Magna Grecia knew it from the days of the

Argonauts. The European origin of alchemy dates therefore from this time, as is well illustrated by the allegorical story of the Golden Fleece.

Thus we need only read that which Suidas says in his lexicon with reference to this expedition of Jason, too well known to require telling here:

Deras, the Golden Fleece which Jason and the Argonauts, after a voyage on the Black Sea in Colchis, took with the aid of Medea, daughter of Metes, of Æetes, of ÆEa. *Only instead of taking that which the poets pretended they took, it was a treatise written on a skin which explained how gold could be made by chemical means.* Contemporaries called this skin of a ram the Golden Fleece, most probably because of the great value attaching to the instructions on it.

This explanation is clearer and much more probable than the erudite vagaries of our modern mythologists (1) for we must remember that the Colchis of the Greeks is the modern Meretie of the Black Sea; that the Rion, the big river which crosses the country, is the Phasis of the Ancients, which even to this day contains traces of gold; and that the traditions of the indigenous races who live on the shores of the Black Sea, such as the Mingrelians, the Abhaziens and the Meretiens are all full of this old legend of the golden fleece. Their ancestors say they have all been "makers of gold," that is to say they possessed the secret of transmutation which in modern times we call alchemy.

In any case it is certain that the Greeks were ignorant of the hermetic science up to the time of the Neo-Platonists (towards the end of the fourth and fifth centuries) with the exception of the initiated, and that they knew nothing of the real alchemy of the ancient Egyptians whose secrets were certainly not revealed to the public at large. In the third century we find the Emperor

Diocletian publishing his famous edict and ordering a careful search to be made in Egypt for books treating of the fabrication of gold, which were collected together and made into a public auto-da-fe. W. Godwin tells us that after this there did not remain one single work on alchemy above ground in the kingdom of the Pharaohs and for the space of two centuries it was never spoken of. He might have added that there remained underground still a large number of such works written on papyrus and buried with the mummies ten times millenarian. The whole secret lies in the power to recognize such a treatise on alchemy in what appears to be only a fairy tale, such as we have in that of the golden fleece or in the romances of the earlier Pharaohs. But it was not the secret wisdom hidden in the allegories of the papyri which introduced alchemy into Europe or the hermetic sciences. History tells us that alchemy was cultivated in China more than sixteen centuries before our era and that it had never been more flourishing than during the first centuries of Christianity. And it is towards the end of the fourth century, when the East opened its ports to the commerce of the Latin races that alchemy once again penetrated into Europe. Byzantium and Alexandria, the two principal centers of this commerce, were quickly inundated with works on the transmutation.

Let us compare the Chinese system with that which is called Hermetic Science.

1. The twofold object which both schools aim at is identical; the making of gold and the rejuvenating and prolonging of human life by means of the *menstruum universale* and *lapis philosophorum*. The third object or true meaning of the "transmutation" has been completely neglected by *Christian* adepts; for being satisfied with their belief in the immortality of the soul, the adherents of the older alchemists have never properly understood this question. Now, partly through

negligence; partly through habit, it has been completely struck out of the *summum bonum* sought for by the alchemists of Christian countries. Nevertheless it is only this last of the three objects which interests the real Oriental alchemists. All initiated adepts despising gold and having a profound indifference for life, cared very little about the first two.

2. Both these schools recognize the existence of two elixirs: the great and the small one. The use of the second on the physical plane transmutes metals and restores youth. The Great Elixir, which was only symbolically an elixir, conferred the greatest boon of all: the immortality of consciousness in the Spirit, the Nirvana which in the sequence of evolution precedes Paranirvana or absolute union with the One Essence.

3. The principles which form the basis of the two systems are also identical, that is to say: the compound nature of metals and their emanation from one common seminal germ. The letter *tsing* in the Chinese alphabet which stands for "germ," and *t'ai*, "matrix," which is found so constantly in Chinese works on alchemy, are the ancestors of the same words which we meet with so frequently in the alchemical treatise of the Hermetists.

4. Mercury and lead, mercury and sulphur are equally in use in the East and in the West, and adding to these many others we find that both schools accepted them under a triple meaning, the last or third of these being that which European alchemists do not understand.

5. The alchemists of both countries accept equally the doctrine of a cycle of transmutation during which the precious metals pass back to their basic elements.

6. Both schools of alchemy are closely allied to astrology and magic.

7. And finally they both make use of a fantastic phraseology, a fact which is noticed by the author of *Studies of Alchemy in China* (2) who finds that the language of western alchemists, while so entirely different from that of all other western sciences, imitates perfectly the metaphorical jargon of eastern nations, proving that alchemy in Europe had its origin in the far East.

Nor should any prejudices be entertained against alchemy because we say that it is closely connected with astrology and magic. The word magic is an old Persian term which means "knowledge," and embraced the knowledge of all sciences, both physical and metaphysical, studied in those days. The wise and priestly classes of the Chaldeans taught magic, from which came magism and gnosticism. Was not Abraham called a *Chaldean*? And was it not Joseph, a pious Jew, who, speaking of the patriarch, said that he taught mathematics, or the esoteric science, in Egypt, including *the science of the stars*, a professor of magism being necessarily an astrologer?

But it would be a great mistake to confuse the alchemy of the middle ages with that of antediluvian times. As it is understood in the present day it has three principal agents: the philosopher's stone used in the transmutation of metals; the *alkahest* or the universal solvent; and the *elixir vitse* possessing the property of indefinitely prolonging human life. But neither the real philosophers nor the Initiates occupied themselves with the last two. The three alchemical agents, like the Trinity, *one and indivisible*, have become three distinct agents solely through falling under the influence of human egotism. While the sacerdotal caste, grasping and ambitious, anthropomorphized the Spiritual One by dividing it into three persons, the false mystics separated the Divine Force from a universal Kriyasakti and turned it into three agents.

(To be concluded.)

FOOTNOTES:

1. M. de Gubernatis (*Mythol. Zool*, 1427) finds that because "in Sanscrit the ram is called mesha or meha, he who spills or who pours out," so the golden fleece of the Greeks should be "the mist . . . raining down water"; and Mr. Schwartz compares the fleece of a ram to a stormy night and tells us that the ram speaking is the voice which seems to issue from an electric cloud. We imagine these learned men are rather too full of vapours themselves to be ever taken seriously by students. And yet M. P. Decharme, the author of *Mythologie de la Grece antique* seems to share their opinions. ([return to text](#))

The Theosophical Forum

LIGHT IN DARKNESS — Benjamin W. Koske

Address delivered on New Year's Day, 1950, in the Temple at Covina

I have come from what has been thought of today as the dark continent, the continent of Europe; and I certainly left England with a feeling that through the many years we have passed, spiritual things have seemed very, very dark. But during the last six or seven days a transmutation of my whole vision has taken place. My feeling has singled down to one immense impression: I am no longer looking at the dark things of Europe. Instead I seem to be wrapt around with and looking at the light, feeling as though a great battle has been fought, and a great victory won for the light. Now we are looking ahead, and the mission when I return home is to tell of the glories that I feel are near. So clearly, so strongly do I feel this, that I feel it is the first thing that I must say.

Throughout the course of some 40 years I have been trying to lend such efforts as have been possible to the study of Theosophy and the spreading of its ideas. The studying of Theosophy is one thing; the spreading of its ideas is quite another. By the study of its teachings one by one, the errors that dominated our minds were one by one removed. We took the vision that opened up and discovered the truth about those dark problems of life which have so confused human living and civilization. As the hidden places in our hearts were illuminated, so did the elimination of those errors fortify and strengthen that natural ray of hope that living was a beautiful thing, and that we were here for a great and noble purpose.

From H. P. B. to our present Leader always there is maintained and sustained the promise that life is worth living. Everything

they teach of, the deepest and even the most elementary teachings, have the ring of hope for mankind, hope for the individual. From the moment he sets his feet upon the path that Theosophy reveals, his own experiences bring forward conviction of the truth of what is taught. It is when we go through the cycles of the terrible conflicts of the world, of the hideous things by which men are confronted and through which we have had to live, that we ever turn to the force that flows from the Leaders of this work. Always we find there is a flow, a power, sustaining, beautifying, a power that upholds and demonstrates that all that is taught, all that is promised by the teachings, is an imbodiment of living force. That is the essential value of the Movement as it is incorporated in the society itself.

One of the great difficulties in proclaiming these teachings to the minds of the people has always been the attitude: "Yes, they are very nice, some of it we can believe to be true, but we do not like organizations, we do not like societies." All of us have had to meet that with a degree of understanding, for it is only as we find ourselves more and more imbodied in this work that we discover it is not an organization, or a society — such as the world understands. Rather is it a channel for a living spiritual power emanating from those — shall we ever know how great the privilege is that it is so? — emanating from those who have come to take upon themselves the task of guiding and helping and living with the fragments of mankind who become this society; infusing it with their deep heart-force that we may know that the promise of the teachings is a living vibrant hope. That is a very difficult thing to convey to the people to whom we present these teachings, and our heart yearns that they should know it.

There is some advantage in being able to look back upon a long number of years in this work, for within that period our own experiences bring forward for our own conviction the truth of

what we are taught through Theosophy. We see this work then from various angles: sometimes as an intellectual presentation of concepts and ideas which challenge what we have hitherto believed, and with which few of us were really satisfied. As a body of teachings we study them in our books, in our conversation, and in the silence of our own places. That is a good and beautiful thing to have come into the life of one who has not known before where to find the teachings. There are times then when we vision the work as a challenge to ourselves. We begin to realize that we are beings who are *to become*. We examine ourselves. We have the vision of the ideal we are to become, of the spiritual being that ultimately that vision points to, and we see in it task of the reconstruction of ourselves. It is then we find that within the teachings there runs the guidance of how to deal with discouragement – how to live with hope, how to act with science — the science that understands, that teaches the potency of all the faculties with which we are blessed, how these faculties may be developed to a power and a strength that, if used rightly, will not only change our environment, but will guide us to become that ideal. We think perhaps that then we have the full picture; but another vision presents itself to our minds: that the entire family of humanity is not made up of, say ordinary people, with theosophists something apart, but that *all is one*. We begin to perceive that within the function and nature of the theosophical work there is the force, the intention of the ultimate inevitability that all humanity is to move towards. Shall I call it a civilization based upon those qualities which only a clear perception of the truth, of our own nature and of the universe, can really bring about, can really sustain? Once again, we see it as a hope, not alone of our own regeneration, but a hope that out of this a mighty civilization is to be reared that will more truly embody the divine things that are at the heart of the universe.

There is still another angle that impresses itself very deeply in the course of ordinary daily living as we journey along amidst the blindness and misconceptions and errors of human thinking. It is the one that is perhaps most palpable, and has the strongest impact upon us: that is the sorrow, the burden, the weariness, the despair in human life as we move amongst it from hour to hour, from moment to moment. One of the saddest, most tragic things that a human being can feel is that he has nothing to give, that he has no real word of help, no sympathy based upon conviction, with which to do a little for his fellow man who is floundering. In the course of the tragedies of the last few years I have so many times felt that not the least of the privileges that Theosophy confers upon its students is the power to help, to feel that even in a word, an act, a gesture, we can bring a little of that sustaining power to another's life. There is conferred upon us a great privilege to be able to pass on to another an idea that brings light in darkness. That is itself a moment worth living for. To be able to live in our daily contacts so that each day we hear something of the melody that is Theosophy — for our hearts are indeed anchored to a great joy, to a permanent and sustaining hope — to be able to help another to sing it with us is something that does not pertain to the common level of human life in this world. It is a singular thing that emerges from the heart of a Theosophist as he truly feels the great inwardness of this work.

Now these aspects grouped together form the nature of a Theosophist's work anywhere. Though one lives at opposite ends of the globe to where the real heart and center of the Work is, the power of Theosophy is felt strongly, palpably. As a young man one of the things that used to strike me as most enlightening was the altitude of the remarks of the different Leaders as they dwelt upon the beauty of the fulfilment of evolution. It has seemed so far beyond the possibilities of our own attainments that perhaps

it has been like a promise that is too far ahead to mean much; yet that again is where it is of some value to look down the years and see some of the secrets that have undoubtedly been in the minds of those Teachers.

In this work every step forward brings us a little experience of the beauties that are to be, and that adds and accumulates as time goes on until it becomes as natural as knowing that the sun shines even when the clouds are there, becomes as natural for us to feel and to know that these grand promises before our minds are realities which are right to pursue, right to hope for, and right to achieve by degrees of experience as we move along.

When we enter the theosophic field we often hear the word "training" as though members who joined the society were to be immediately given opportunity of a very specific and definite training in order to become the ideal to which their hearts had yearned. And the revelation of what that "training" actually is leads us to see that it is nothing that we had speculated upon; and we soon realize that the training is made up of being taught how to deal with the momentary circumstances and events of our ordinary daily lives. Almost immediately we begin to apply Theosophy, we get larger concepts of what that means — *to be either slave or master*; and the moment we begin to bend our intelligence in this application, to transmute the small circumstances so that from them may begin to emerge peace, harmony and beauty of relationships instead of chaos and the irritations that make, and mostly mar, the daily life, we then begin to find that we are actually in the process of that training. The field of help and work is our own selves, so that conforming with universal truth and all the teachings, we find that no matter where we are, no matter in what family we are placed, or into what circumstances we are brought, the principles of Theosophy may be immediately employed. All these are the material, the

circumstances, by which we apply the teaching, by which we get the very life that we yearn to live. It is no faraway place, it is no out-of-the-way guidance, no special subtle unsuspected training we are given; but in applying the teachings to our individual lives, we therein realize all the beauty and joy of making human life that which Theosophy enjoins as the true destiny. There we find there can be no idle moments, no insignificant events, no circumstances without their meaning, but all have to be understood, all taken in hand. Thus our own worthwhileness must prove itself: either we emerge from these circumstances in peace, in harmony, and with joy in life, or with doubts and despairs.

And now I would like to return to where I started. I have moved around the world a good deal in the course of the years, and one of the strongest feelings that I have had, and perhaps one of the saddest, has been — not loneliness, but the feeling that there is no home in the sense of being at one and at home with your fellowmen. Nowhere has it been possible to meet with six or seven, or even two or three, fellow human beings, and feel instantly you meet there is simplicity, friendship and that utter trust in the harmony of human essentials. In the world everyone is on guard with everyone else, someone else distrusts something about somebody else, until relationships are all jangled — even if not discordant, they are none too happy. That is something so ordinary in human experience that you all know what I mean.

Coming here to these Headquarters has been a revelation of the promise of what human life can be when this fulfills itself by an ever wider spreading among humanity. When men can live their lives without fear, without distrust, without want of confidence in each other; when we can all go about our daily tasks knowing that around us there are friends who are dealing with themselves

so that the irritations and suspicions and distrusts need no longer be a part of our nature — when all these are eliminated, there may be a wonder, a beauty in the life we live.

And now the last word, which to me is the biggest and best of all. So many of us out in the world have to work alone, and yet our natures being placed right inside this work we look always towards Headquarters, and above all to the Leader. The Leader is the palpable, beautiful, inspiring power, though we may never have seen him. Of all the experiences that have been so beautiful here, is to have been able to live, even if only a few days, in a close and intimate relationship so near to the presence of the teacher. It is like the fulfilment of what has only been dreamed of. . . . For that alone I would have traveled round the world.

The Theosophical Forum

ALCHEMY IN THE NINETEENTH CENTURY: II — *H. P. Blavatsky*

(Translated by Thomas Williams from *La Revue Theosophique*)

In his *Magie Naturelle* Baptista Porta tells us this clearly: "I do not promise you mountains of gold nor the philosopher's stone, nor even that golden liquor which renders immortal him who drinks it. . . All that is only visionary; for the world being mutable and subject to change all that it produces must be destroyed."

Geber, the great Arabian alchemist, is even more explicit. He seems, indeed, to have written down the following words with a prophetic forecast of the future: "If we have hidden aught from thee, thou son of science, be not surprised; for we have not hidden it especially from thee, but have made use of a language which will hide the truth from the wicked in order that men who are unjust and ignoble may not understand it. But thou, son of Truth, seek and thou wilt find the gift, the most precious of all. *You, sons of folly, impiety, and profane works, cease endeavoring to penetrate the secrets of this science; for they will destroy you and will hurl you into the most profound misery.*"

Let us see what other writers have to say on the question. Having begun to think that alchemy was after all solely a philosophy entirely metaphysical instead of a physical science (in which they erred), they declared that the extraordinary transmutation of base metals into gold was merely a figurative expression for the transformation of man, freeing him of his hereditary evils and of his infirmities in order that he might attain to a degree of regeneration which would elevate him into a divine Being. (1)

This in fact is the synthesis of transcendental alchemy and is its principal object; but this does not for all that represent every end

which this science has in view. Aristotle said in Alexandria that "the philosopher's stone was not a stone at all, that it is in each man, everywhere, at all times, and is called the final aim of all philosophers."

Aristotle was mistaken in his first proposition though right with regard to the second. On the physical kingdom, the secret of the Alkahest produces an ingredient which is called the philosopher's stone; but for those who care not for perishable gold, the alkahest, as Professor Wilder tells us, is only the *allgeist*, the divine spirit, which dissolves gross matter in order that the unsanctified elements may be destroyed. . . . The *elixir vitae* therefore is only the waters of life which, as Godwin says, "is a universal medicine possessing the power to rejuvenate man and to prolong life indefinitely."

Dr. Kopp, in Germany, published a *History of Chemistry* forty years ago. Speaking of alchemy, looked at especially as the forerunner of modern chemistry, the German doctor makes use of a very significant expression such as the Pythagorean and the Platonist will understand at once. "If," says he, "for the word World we substitute the microcosm represented by man, then it becomes easy to interpret."

Irenaeus Philalethes declares that:

The philosopher's stone represents the whole universe (or macrocosm) and possesses all the virtues of the great system collected and compressed into the lesser system. This last has a magnetic power which draws to it that which affiintises with it in the universe. It is the celestial virtue which spreads throughout creation, but which is epitomised in a miniature abridgment of itself (as man).

Listen to what Alipile says in one of his translated works:

"He who knows the microcosm cannot long remain ignorant of the macrocosm. This is why the Egyptians, those zealous investigators of nature, so often said: *Man, know thy Self.*" But their disciples, more restricted in their powers of appreciation, took this adage as being allegorical and in their ignorance inscribed it in their temples. But I declare to you, whoever you may be, who desires to plunge into the depths of Nature, that if that which you seek you do not find within yourself you will never find it without. He who aspires to a first place in the ranks of Nature's students will never find a vaster or better subject of study than he himself presents.

Therefore following in this the example of the Egyptians and in agreement with the Truth which has been shown to me by experience, I repeat these very words of the Egyptians with a loud voice and from the very bottom of my soul, "Oh man, know thyself, for the treasure of treasures is entombed within you."

Irenaeus Philalethes, cosmopolitan, an English alchemist and Hermetic philosopher, wrote in 1659 alluding to the persecution to which philosophy was subjected:

Many of those who are strangers to the art think that to possess it they must do such and such a thing, like many others we thought so too, but having become more careful and less ambitious of the three rewards (offered by alchemy), on account of the great peril we run we have chosen the only infallible one and the most hidden. . . .

And in truth the alchemists were wise so to do. For living in an age when for a slight difference of opinion on religious questions men and women were treated as heretics, placed under a ban and proscribed, and when science was stigmatised as sorcery, then it was quite natural, as Professor A. Wilder says, "that men who cultivate ideas which are out of the general line of thought should

invent a symbological language and means of communication amongst themselves which should conceal their identity from those thirsting for their blood."

The author reminds us of the Hindu allegory of Krishna ordering his adopted mother to look into his mouth. She did and saw there the entire universe. This agrees exactly with the Kabbalistic teaching which holds that the microcosm is but the faithful reflection of the macrocosm — a photographic copy to him who understands. This is why Cornelius Agrippa, perhaps the most generally known of all the alchemists, says:

It is a created thing, the object of astonishment both to heaven and earth. It is a compound of the animal, vegetable and mineral kingdoms, it is found everywhere, though recognised by few, and is called by its real name by no one, for it is buried under numbers, signs, and enigmas without the help of which neither alchemy nor natural magic could reach perfection.

The allusion becomes even clearer if we read a certain passage in the *Enchiridion* of Alchemists (1672):

Therefore I will render visible to you in this discourse the natural condition of the philosopher's stone wrapped in its triple garment, this stone of richness and of charity, which holds all secrets and which is a divine mystery the like of which Nature in her sublimity has not in all the world. Observe well what I tell you and remember that it has a triple covering, namely: the Body, the Soul, and the Spirit.

In other words this stone contains: the secret of the transmutation of metals, that of the elixir of long life and of *conscious immortality*.

This last secret was the one which the old philosophers chose to

unravel, leaving to the lesser lights of modern times the pleasure of wearing themselves out in the attempt to solve the two first. It is the "Word" or the "infallible name," of which Moses said that there was no need to seek it in distant places "for the Word is close to you; it is in your mouth and in your heart."

Philalethes, the English alchemist, says the same thing in other terms.

Our writings will be like a double-edged knife for the world at large, some will use them to hew out works of art, others will only cut their fingers with them. Nevertheless it is not we who are to blame, since we warn most seriously all those who attempt the task that they are undertaking to master the most elevated philosophy in Nature. And this is so whether we write well or badly. For though we write in English, these writings will be Greek to some who will, nevertheless, persist in believing that they have well understood us, while in reality they distort in the most perverse manner that which we teach; for can it be supposed that those who are naturally fools should become wise simply by reading books which testify to their own natures?

Espagnet warned his readers in the same way. He prays the lovers of Nature to read little, and then only those of whom the veracity and intelligence is above suspicion. Let the reader seize quickly a meaning which the author may probably only darkly hint at; for, he adds, truth lives in obscurity; (Hermetic) philosophers deceive most when they appear to write most clearly, and ever divulge more secrets, the more obscurely they write. The truth cannot be given to the public; even less in these days than in those days when the Apostles were advised not to cast pearls before swine. All these fragments which we have just

cited are, we hold, so many proofs of that which we have advanced. Outside of the schools of Adepts, almost unapproachable for western students, there does not exist in the whole world — and more especially in Europe, one single work on Occultism, and above all on Alchemy, which is written in clear and precise language, or which offers to the public a system or a method which could be followed as in the physical sciences. All treatises, which come from an Initiate or from an Adept, ancient or modern, unable to reveal all, limit themselves to throwing light on certain problems which are allowed to be disclosed to those worthy of knowing, while remaining at the same time hidden from those who are unworthy of receiving the truth, for fear they should make a selfish use of their knowledge.

Therefore, he, who complaining of the obscurity of writers of the eastern school, should confront them with those of either the middle ages or of modern times which seem to be more clearly written, would prove only two things: first, he deceives his readers in deceiving himself; secondly, he would advertise modern charlatanism, knowing all the time that he is deceiving the public. It is very easy to find semi-modern works which are written with precision and method, but giving only the personal ideas of the writer on the subject, that is to say, of value only to those who know absolutely nothing of the true occult science. We are beginning to make much of Eliphas Levi, who alone knew probably more than all our wise men of the Europe of 1889 put together. But, when once the half-dozen books of the Abbe Louis Constant have been read, re-read and learnt by heart, how far are we advanced in practical Occultism, or even in the understanding of the theories of the Kabbala? His style is poetical and quite charming. His paradoxes, and nearly every phrase in each of his volumes is one, are thoroughly French in character. But even if we learn them so as to repeat them by heart from the beginning

to the end, what pray has he really taught us? Nothing, absolutely nothing — except, perhaps, the French language. We know several of the pupils of this great magician of modern times, English, French and German, all men of learning, of iron wills, and many of whom have sacrificed whole years to these studies. One of his disciples made him a life annuity which he paid him for upwards of ten years, besides paying him 100 francs for every letter when he was obliged to be away. This person at the end of ten years knew less of magic and of the Kabbala than a chela of ten years" standing of an Indian astrologer.

We have in the library at Adyar his letters on magic in several volumes of manuscripts, written in French and translated into English, and we defy the admirers of Eliphas Levi to show us one single individual who would have become an Occultist even in theory, by following the teaching of the French magician.

Why is this since he evidently got his secrets from an Initiate? Simply because he never *possessed the right to initiate others*. Those who know something of occultism will understand what we mean by this; those who are only pretenders will contradict us, and probably hate us all the more for having told such hard truths.

The secret sciences, or rather the key which alone explains the mystery of the jargon in which they are expressed, cannot be developed; like the Sphinx who dies the moment the enigma of its being is guessed by an Œdipus, they are only occult as long as they remain unknown to the uninitiated. Then again they cannot be bought or sold. A Rosicrucian "*becomes, he is not made*" says an old adage of the Hermetic philosophers, to which the Occultists add, "The science of the gods is mastered by violence; conquered it may be, but it never is to be had for the mere asking." This is exactly what the author of the Acts of the Apostles intended to

convey when he wrote the answer of Peter to Simon Magus: "May thy gold perish with thee since thou hast thought that the gifts of God may be bought with money." Occult wisdom should never be used either to make money, or for the attainment of any egotistical ends, or even to minister to personal pride.

Let us go further and say at once that — except in an exceptional case where gold might be the means of saving a whole nation, even the act itself of transmutation when the only motive is the acquisition of riches, becomes black magic. So that neither the secrets of magic nor of occultism, nor of alchemy, can ever be revealed during the existence of our race, which worships the golden calf with an ever increasing frenzy.

Therefore, of what value can those works be which promise to give us the key of initiation for either one or the other of these two sciences, which are in fact only one.

We understand perfectly such Adepts as Paracelsus and Roger Bacon. The first was one of the great harbingers of modern chemistry; the second that of physics. Roger Bacon in his "Treatise on the admirable Forces of Art and of Nature" shows this clearly. We find in it a foreshadowing of all the sciences of our day. He speaks in it of powder for cannons, and predicts the use of steam as a motive power. The hydraulic press, the diving bell, and the kaleidoscope, are all described; he prophesies the invention of flying machines, constructed in such a way that he who is seated in the middle of this mechanical contrivance, in which we easily recognise a type of the modern balloon, has only to turn a mechanism to set in motion artificial wings which begin to beat the air in imitation of those of a bird. Then he defends his brother alchemists against the accusation of using a secret cryptography.

The reason for the secrecy which is maintained by the Wise of all countries is the general contempt and indifference

shown for the profounder truths of knowledge, the generality of people being unable to use those things which are of the highest good. Even those amongst them who do have an idea which proves related to something of real utility, owe it generally to chance and their good fortune; so that failing to appreciate its full meaning they fall into scientific errors to the great detriment and ruin, not only of the few, but often of the many.

All of which proves that he who divulges our secrets is worse than foolish, unless he veils that which he discloses to the multitude, and disguises it so cleverly that even the wise understand with difficulty. There are those amongst us who hide their secrets under a certain way of writing, as for example using only consonants so that he who reads this style of writing can only decipher the true meaning when they know the meaning of the words (the hermetic jargon). This kind (of cryptography) was in use amongst the Jews, the Chaldeans, the Syrians, the Arabs, and even the Greeks, and largely adopted in former times especially by the Jews. This is proved by the Hebrew manuscripts of the New Testament, the books of Moses or the Pentateuch rendered ten times more fantastic by the introduction of massoretic points. But as with the Bible, which has been made to say everything required of it except that which it really did say, thanks to Massorah and the fathers of the Church, so it was also with kabbalistic and alchemical books. The key of both having been lost centuries ago in Europe, the Kabbala (the *good* Kabbala of the Marquis de Mirville, according to the ex-rabbi, the Chevalier Drach, the pious and most Catholic Hebrew scholar) serves now as a witness confirmatory of both the New and the Old Testaments. According to modern kabbalists, the Zohar is a book of modern prophecies, especially *relating to the Catholic dogmas of the Latin Church*, and is the fundamental stone of the

Gospel; which indeed might be true if it were admitted that both in the Gospels and in the Bible, each name is symbolical and each story allegorical; just as was the case with all sacred writings preceding the Christian canon.

Before closing this article, which has already become too long, let us make a rapid *resume* of what we have said.

I do not know if our argument and copious extracts will have any effect on the generality of our readers. But I am sure, at all events, that what we have said will have the same effect on kabbalists and modern *Masters* as the waving of a red rag in front of a bull; but we have long ceased to fear the sharpest horns. These *Masters* owe all their science to the dead letter of the Kabbala; and to the fantastic interpretation placed on it by some few mystics of the present and the last century, on which "Initiates" of libraries and museums have in their turn made variations, so that they are bound to defend them, tooth and nail. People will see only the raging fire of contest, and he who raises the greatest conflagration will remain the victor. Nevertheless — *Magna est veritas et praevalabit.*

1. It has been asserted that alchemy penetrated into Europe from China, and that falling into profane hands, alchemy (like astrology) is no longer the pure and divine science of the schools of Thoth-Hermes of the first Egyptian Dynasties.

2. It is also certain that the Zohar, of which both Europe and other Christian countries possess fragments, is not the same as the Zohar of Simon Ben Jochai, but a compilation of old writings and traditions collected by Moses de Leon of Cordova in the thirteenth century, who, according to Mosheim, has followed in many cases the interpretations which were given him by Christian Gnostics of Chaldea and Syria he went to seek them. The real, old Zohar is only found whole in the Chaldean Book of Numbers, of which

there only now exist two or three incomplete copies, which are in the possession of initiated rabbis.

One of these lived in Poland, in strict seclusion, and he destroyed his copy before dying in 1817; as for the other, the wisest rabbi of Palestine, he emigrated from Jaffa some few years ago.

3. Of the real hermetic books there only remains a fragment known as the "Smaragdine Tablet," of which we shall presently speak. All the works compiled on the books of Thoth have been destroyed and burnt in Egypt by the order of Diocletian in the third century of our era. All the others, including Pymander, are in their present form merely recollections, more or less vague and erroneous of different Greek or even Latin authors, who often did not hesitate to palm them off as genuine hermetic fragments. And even if by chance these exist they would be as incomprehensible to the "Masters" of today as the books of the alchemists of the middle ages. In proof of this we have quoted their own thoroughly sincere confessions. We have shown the reasons they give for this (a) their mysteries were too sacred to be profaned by the ignorant, being written down and explained only for the use of a few initiates; and they are also too dangerous to be trusted in the hands of those who might mistake their use; (b) in the middle ages the precautions taken were ten times as great; for otherwise they stood a good chance of being roasted alive to the great glory of God and His Church.

The key to the jargon of the alchemists and of the real meaning of the symbols and allegories of the Kabbala only are now to be found in the East. Never having been rediscovered in Europe, what now serves as the guiding star to our modern kabbalists so that they shall recognise the truths in the writings of the alchemists and in the small number of treatises which, written by real initiates, are still to be found in our national libraries?

We conclude, therefore, that in rejecting aid from the only quarter from whence in this our century they may expect to find the Key to the old esotericisms and to the Wisdom religion, they, whether kabbalists, elect of God or modern Prophets, throw to the winds their only chance of studying primitive truths and profiting by them.

At all events we may be assured that it is not the Eastern School which loses by the default.

We have permitted ourselves to say that many French kabbalists have often expressed the opinion that the Eastern school could never be worth much, no matter how it may pride itself on possessing secrets unknown to Europeans *because it admits women into its ranks*.

To this we might answer by repeating the fable told by brother Jos. N. Nutt, Grand Master of the Masonic lodges of the United States for women, to show what women would do if they were not shackled by males — whether as men or as god.

A lion passing close by a monument representing an athletic and powerful figure of a man tearing the jaws of a lion said: "If the scene which this represents had been executed by a lion the two figures would have changed places." The same remark holds good for Woman. If only she were allowed to represent the phases of human life she would distribute the parts in reverse order. She it was who first took Man to the Tree of Knowledge, and made him know Good and Evil; and if she had been let alone and allowed to do that which she wished, she would have led him to the Tree of Life and thus rendered him immortal.

FOOTNOTE:

1. *Hermetic Philosophy*, by A. Wilder ([return to text](#))

JACOB BOEHME AND THE SECRET DOCTRINE — *William Q. Judge*

Jacob Boehme (or as some say, Behmen) was a German mystic and spiritualist who began to write in the 17th century. In his works he inserted a picture of an angel blowing a trumpet, from which issued these words:

To all Christians, Jews, Turks and Heathens, to all the nations of the earth this Trumpet sounds for the last time.

In truth it was a curious emblem, but he, the author, was a mystic, and as all experience shows, the path of the mystic is a strange one. It is, as Job says, a path which the "vulture knoweth not." Even as a bird cleaves the eternal ether, so the mystic advances on a path not ordinarily manifest, a way which must be followed with care, because like the Great Light, which flashes forth and leaves only traces when it returns again to its center, only indications are left for those who come after seeking the same spiritual wisdom. Yet by these "traces," for such they are called in the Kabbala, the way can be discerned, and the truth discovered.

Boehme was poor, of common birth, and totally devoid of ordinary education. He was only a shoemaker. Yet from the mind and out of the mouth of this unlettered man came mighty truths.

It would be idle to inquire into the complications of Karma which condemned him to such a life as his appeared to be. It must have been extremely curious, because though he had grasped the truth and was able to appreciate it, yet at the same time he could not give it out in its perfect form. But he performed his work, and there can be no manner of doubt about his succeeding incarnation. As Krishna says in the *Bhagavad-Gita*, he has been already or will shortly be "born into a family of wise devotees";

and thence "he will attain the highest walk."

His life and writings furnish another proof that the great wisdom-religion — the Secret Doctrine — has never been left without a witness. Born a Christian, he nevertheless saw the esoteric truth lying under the moss and crust of centuries, and from the Christian Bible extracted for his purblind fellows those pearls which they refused to accept. But he did not get his knowledge from the Christian Scriptures only. Before his internal eye the panorama of real knowledge passed. His interior vision being open he could see the things he had learned in a former life, and at first not knowing what they were, was stimulated by them to construe his only spiritual books in the esoteric fashion. His brain took cognizance of the Book before him, but his spirit aided by his past, and perchance by the living guardians of the shining lamp of truth, could not but read them aright.

His work was called "The Dawning of the Eternal Day." In this he endeavors to outline the great philosophy. He narrates the circumstances and reasons for the angelic creation, the fall of its chief three hierarchies, and the awful effects which thereupon fell upon Eternal Nature. Mark this, not upon man — for he was not yet — but upon the Eternal Nature, that is BRAHM. Then he says that these effects came about by reason of the *unbalancing* of the *seven equipoised powers* or forces of the Eternal Nature or Brahm. That is to say, that so long as the seven principles of Brahm were in perfect poise, there was no corporeal or manifested universe. So in the *Bhagavad-Gita* we find that Krishna tells Arjuna that

after the lapse of a thousand ages (or Night of Brahm) all objects of developed matter come forth from the non-developed principle. At the approach of that day they emanate spontaneously. — ch. 8

Such is the teaching of the Secret Doctrine.

And again Boehme shows the duality of the Supreme Soul. For he says in his work *Psychologia Vera cum Supplemento* that these two eternal principles of positive and negative, the *yea* and the *nay* of the outspeaking *Supreme One*, together constitute eternal nature, — not the dark world alone, which is termed the "root of nature," — the two being as it were combined in *perfect indissoluble union*.

This is nothing else but Purush and Prakriti, or taken together, what is referred to in the *Bhagavad-Gita* where it is said:

But there is another invisible, eternal existence, superior to this visible one, which does not perish when all things perish. It is called invisible and indivisible. This is my Supreme Abode.

Clearly the *Supreme Abode* could never be in Purush alone, nor in prakriti alone, but in both when *indissolubly united*.

This scheme is adhered to all through this great philosopher's works, no matter whether he is speaking of the great Universe or macrocosm, or of its antitype in man or microcosm. In *De Tribus principiis* he treats of the three principles or worlds of Nature, describing its eternal birth, its *seven* properties, and the *two* co-eternal principles; and furthermore in *De Triplici Vita Hominis* he gives the threefold life of man from which the *seven* is again deduced.

In *De Electione Gratia* he goes into a subject that often proves a stumbling block to many, and that is the *inevitableness of evil* as well as of good. From this it is easy to pass to a contemplation of one of the difficult points in occultism as shown in the Secret Doctrine, that nothing is evil, and that even if we admit evil or wickedness in man, it is of the nature of the quality of guna, which in the *Bhagavad-Gita* is denominated *Rajas* — foulness or

bad action. Even this is better than the indifferent action that only leads to death. Even from wickedness may and does come forth spiritual life, but from indifferent action comes only darkness, and finally death.

Krishna says in *Bhagavad-Gita*, Chap. XIV: "There are three kinds of action; first, that which is of the nature of *Satyam*, or true action; second, that which is of the nature of *Raja*, or bad action; third, that which is of the nature of *Tamas*, or indifferent action."

He then says: "Although thou wert the greatest of all offenders, thou shalt be able to cross the gulf of sin in the bark of spiritual wisdom"; and a little farther on, "The ignorant and the man without faith, whose spirit is full of doubt, is lost and cannot enjoy either world." And in another chapter, in describing Himself, he says that he is not only the Buddha, but also is the most evil of mankind or the Asura.

This is one of the most mystical parts of the whole Secret Doctrine. While Boehme has touched on it sufficiently to show that he had a memory of it, he did not go into the most occult details. It has to be remembered that the *Bhagavad-Gita*, and many other books treating on the Secret Doctrine, must be regarded from seven points of view" and that imperfect man is not able to look at it from the center, which would give the whole seven points at once.

Boehme wrote about thirty different treatises, all of them devoted to great subjects, portions of the Secret Doctrine.

Curiously enough the first treated of the "Dawn of the Eternal Day," and the second was devoted to an elucidation of the "Three Principles of Man." In the latter is really to be found a sevenfold classification similar to that which Mr. Sinnett propounded in *Esoteric Buddhism*.

He held that the greatest obstacle in the path of man is the astral or elementary power, which engenders and sustains this world.

Then he talks of "tinctures," which we may call principles. According to him, there are two principal ones, the watery and the igneous. These ought to be united in Man; and they ardently seek each other continually, in order to be identified with Sophia or Divine Wisdom. Many Theosophists will see in this a clue not only to the two principles — or tinctures — which ought to be united in man, but also to a law which obtains in many of the phenomena of magic. But even if I were able, I should not speak on this more clearly.

For many inquirers the greatest interest in these works will be found in his hypothesis as to the birth of the material Universe. On the evolution of man from spirit into matter he has much more than I could hope to glance at. In nearly all of it he was outlining and illustrating the Secret Doctrine. The books indicated are well worthy of study not only by Western but also by Eastern metaphysicians.

Let us add a few sentences to support this hypothesis from Count Saint Martin, who was a devoted student of these works.

Jacob Boehme took for granted the existence of an Universal Principle; he was persuaded that everything is connected in the immense chain of truths, and that the Eternal Nature reposed on seven principles or bases, which he sometimes calls powers, forms, spiritual wheels, sources, and fountains, and that those seven bases exist also in this disordered material nature, under constraint. His nomenclature, adopted for these fundamental relations, ran thus: The first *astringency*, the second *gall* or bitterness, the third *anguish*, the fourth *fire*, the fifth *light*, the sixth *sound*, and the seventh he called BEING or the *thing*

itself.

The reader may have begun to think the author did not rightly comprehend the first six but his definition of the seventh shows he was right throughout, and we may conclude the real meanings are concealed under these names.

The third principle, *anguish*, attenuates the *astrigent* one, turns it into *water*, and allows a passage to *fire*, which was shut up in the astrigent principle.

There are in this many suggestions and a pursuit of them will repay the student.

Now the Divine Sophia caused a new order to take birth in the centre of our system, and there burned our sun; from that do come forth all kinds of qualities, forms and powers. This center is the Separator.

It is well known that from the sun was taken by the ancients all kinds of power; and if we mistake not, the Hindus claim that when the Fathers enter into Para-Nirvana, their accumulated goodness pours itself out on the world through the "*Door of the Sun.*"

The *Bhagavad-Gita* says, that the Lord of all dwells in the region of the heart, and again that this Lord is also the Sun of the world.

The earth is a condensation of the seven primordial principles, and by the withdrawal of eternal light this became a dark valley.

It is taught in the East, that this world is a valley and that we are in it, our bodies reaching to the moon, being condensed to hardness at the point where we are on the earth, thus becoming visible to the eye of man. There is a mystery in this statement, but not such an one as cannot be unravelled.

Boehme proceeds:

When the light mastered the fire at the place of the sun, the terrible shock of the battle engendered an igneous eruption by which there shot forth from the sun a stormy and frightful flash of fire — Mars. Taken captive by light, it assumed a place, and there it struggles furiously, a pricking goad, whose office is to agitate all nature, producing reaction. It is the gall of nature. The gracious, amiable Light, having enchained unerupted Mars, proceeded by its own power to the bottom or end of the rigidity of Nature, whence, unable to proceed further, it stopped, and became corporeal; remaining there, it warms that place, and although a valet in Nature, it is the source of sweetness and the moderator of Mars.

Saturn does not originate from the Sun, but was produced from the severe astringent anguish of the whole body of this Universe. Above Jupiter the sun could not mitigate the horror, and out of that arose Saturn, who is the opposite of meekness, and who produces whatever of rigidity there is in creatures, including bones, and what in moral nature corresponds thereto.

(This is all the highest astrology, from one who had no knowledge of it.)

As in the Sun is *the heart of life*, so by Saturn commenceth all corporeal nature. Thus in these two resides the power of the whole universal body, and without their power there could be no creation nor any corporification.

Venus originates in *effluvia* from the Sun. She lights the unctuousness of the water of the Universe, penetrates hardness, and enkindles love.

Mercury is the chief worker in the planetary wheel; he is *sound*, and wakes up the germs in everything. His origin, the triumph of Light over Astringency (in which sound was shut up silent), set free the sound by the attenuation of the astringent power.

It is certain that if this peculiar statement regarding Mercury is understood, the student will have gained a high point of knowledge. A seductive bait is here held out to those striving disciples who so earnestly desire to hold converse with the elemental world. But there is no danger, for all the avenues are very secret and only the pure can prevail in the preliminary steps.

Boehme says again:

The Mercury is impregnated and fed continually by the solar substance; that in it is found the knowledge of what was in the order above, before Light had penetrated to the solar center.

As to the Moon, it is curious to note that he says:

She was produced from the sun itself, at the time of his becoming material, and that the moon is his spouse.

Students of the story of Adam being made to sleep after his creation and before coats of skin were given, when Eve was produced from his side, will find in this a strong hint.

The above is not by any means a complete statement of Boehme's system. In order to do justice to it, a full analysis of all his works should be undertaken. However, it is sufficient if thoughtful minds who have not read Boehme shall turn to him after reading this, or if but one earnest reader of his works, or seeker after wisdom, shall receive even a hint that may lead to a clearing up of

doubts, or to the acquisition of one new idea. Count Saint Martin continually read him; and the merest glance at the *Theosophic Correspondence* or *Man — His Nature*, etc., of Saint Martin, will show that from that study he learned much. How much more then will the Western mind be aided by the light shed on both by the lamp of Theosophical teachings. "Let the desire of the pious be fulfilled."

— *The Theosophist*, April, 1886

The Theosophical Forum

KARMAN IS FULFILMENT — *Madeline Clark*

Oddly, but undeniably, when we think of karman we generally consider it in its immediate relation to ourselves, and associate it in our minds with the idea of punishment or retaliation for acts committed or omitted. Tacitly, it comes to be a sort of Nemesis or agent of divine retribution. But this is only as our consciousness is touched by the ever-immanent mystery surrounding this most recondite, most mysterious doctrine of the theosophical philosophy. Let us once begin to broaden the idea of karman to universal proportions, and we see it as one of the majestic rhythms of the universe, protective even in its most awesome aspects. Protean in its forms, it appears variously to our imagination. It is divine justice; it is compassion; it is an energy of the Hierarchy of which we all are parts, continually rectifying itself, just as we in our smaller way continually bring ourselves into line. It is the music of the universe ever developing its themes and arriving at its resolutions. It is the activities of all beings of whatever kind, moving on to their respective culminations. It preserves and restores proportion, balance, and equilibrium throughout the cosmos. We ourselves share in its mighty rhythms, and are just one of the armies of beings hastening on to the fulfilment of our destinies.

For karman is fulfilment: it is a rhythmic interaction between beginnings and endings, between acts initiated and acts completed, between causes and results, which are in reality one, because they cannot be separated.

According to the dictionary, fulfilment is to bring to completion or consummation, to carry out the purport of, to bring out or manifest fully — though this last meaning is given as rare. We

add, it is significant. We have fulfilment of hopes, of desires, of expectations, of promises, of prayers, of prophecies, of duties and obligations, but all of these are karman. In the light of this teaching fulfilment is a flowering, the crowning reward of effort, the consummation of a long series of efforts, an ending, a completion, of any related series of actions. It is not stationary, because it is forever coming into being, ever moving towards an ending, which is at the same time another beginning.

But fulfilment presupposes a promise, and in fact we could not be discussing this aspect now, were it not that in the past such a promise, fundamental and spiritually binding, had been born at the inmost center of our consciousness. This goes back to the time, in the very beginnings of our planet, when as a host of souls, of spirit-monads, coming over from an older world, we began our evolution on this new sphere. In these beginnings was registered a purpose — not of words, but sounded in the atmosphere itself of the subjective worlds — to fulfil the destiny for which this planet was to furnish the setting. Thereafter a series of actions began, which has proceeded even to the present day, in fulfilment of that early promise; and the present human race, whatever may be its present status, and into whatever byways it may have strayed, is in reality deep in its struggle to win out to the light and peace of spiritual maturity, forecast for itself in that early and innocent time.

In the same way our birth into any one earth-life is a promise: there has been, before the birth of the soul, a contact, a connection, with that same godlike part of our nature which started us off in the beginning, in which resides wisdom and the prophetic faculty. There has been a moment of vision, when our human self, the self that is going to be conscious during this life, sees in perspective the life to come, and what needs to be accomplished in that life in terms of character and essential

achievement. We can picture the human self, like the knight-errant of old, full of the energy of hope, embarking on the journey of life, soon forgetting, perhaps, the promise of that vision; or perhaps it does not utterly forget, and then we have an individual with a sense beyond the present moment, a sense of the hidden significance of his existence.

In the training of children the teacher, whether consciously or not, is striving to keep that memory alive in the child. If the child is responsive, it establishes habits that lead in the end to the fulfilment of its spiritual aspirations. It tends to gravitate towards *essential* actions, to heed those impulses that are always urging it to act creatively. Then, as deeper understanding dawns, the soul will recognize what is its "appointed work in life," and move forward to a maturity where peace of mind is possible. The old motto: "Do well the smallest duty and when the day is done, there will be no regrets, no time wasted — then joy will come," takes on a poignant meaning when applied to a lifetime rather than to a single day.

There must be many causes that keep us from fulfilling all that we might do in one lifetime, but one such cause, undoubtedly, is the failure to act in close harmony with the essentials of our destiny, the neglecting to make sufficient use of the faculties we possess. As Krishna says in the *Bhagavad-Gita*: "He who doth not cause this wheel thus already set in motion to continue revolving liveth in vain, O son of Pritha."

Directly connected with the doctrine of fulfilment, certainly, is the teaching that at the end of life there is an accounting to be given. We might say that the Higher Self has set the human self a task to be performed. Yet its decrees are not arbitrary. Its energies are attracted to the weak points in our character-fabric, as air rushes into empty spaces, and we are impelled toward the fulfilment of

our own profound purposes.

We can rarely trace this thread of consequence from life to life. But one instance is found in the marvelous story "Karmic Visions," found in an old volume of H. P. B.'s *Lucifer*, and probably written by H. P. Blavatsky herself. The first vision is of Clovis, king of the Franks in the 5th Century a.d. He was a great warrior, conqueror of the Romans and of the Visigoths, powerful and clever, but unscrupulous and ruthless when his warlike spirit is roused. He is called in the story a heartless despot, and is shown refusing mercy to the aged prophetess of the German barbarians, whom he has just conquered. As she dies by the hand of Clovis himself, the prophetess makes the following prediction: "Clovis, thou shalt be reborn among thy present enemies, and suffer the tortures thou hast inflicted upon thy victims. All the combined power and glory thou hast deprived them of shall be thine in prospect, yet thou shalt never reach it!"

We next see that same Ego-soul, in another incarnation — the next but one, perhaps, as hinted — as the unfortunate Frederick III, king of Prussia and later Emperor of Germany, at first victorious in war (in the Austro-Prussian conflict of 1866, and the Franco-Prussian war of 1870). As Emperor he lived but a few short months, all the time suffering intensely with an incurable and agonizing disease. The story of his life is well known. He is shown resting in his villa on the Mediterranean, a prey to unbearable thoughts, to a sense of frustration arising from his deep desire to carry out many needed reforms and humanitarian works among his people, yet powerless to fulfil these hopes, and knowing that he will never in this life be able to serve his people as he so longs to do. He is transformed and spiritually awakened through the prolonged months of agony. And in his turn he exclaims: "Why, oh why, thou mocking Nemesis, hast thou thus purified and enlightened, among all the sovereigns on this earth,

him whom thou hast made helpless, speechless and powerless?"

W. Q. Judge, in *The Ocean of Theosophy*, in naming a few such possible reincarnations, confirms this one of Clovis and Frederick III. As historical curiosities and examples these instances are of interest, and serve to bring home to us the drama of karman as it plays itself out from life to life.

From one great Race to the next, the same law applies. Our present Fifth-Race civilization struggles with evils that had their origin in the less evolved, grossly material days of Fourth-Race Atlantis: our "Atlantean Karman" holding us back, slowing up our progress toward our racial fulfilment.

Even from one great cycle of planetary activity, geologically speaking, to the next, there are still consequences, unfinished beginnings to be completed and fulfilled. Take such a little thing as our lead pencil. The graphite in that pencil was once a part of the luxuriant foliage that waved in the lush forests of the pre-Cambrian jungle. Take the uses of coal, or the various derivatives of coal-tar, or the changes in our way of life since the discovery of the great oil-deposits, and right there we have an object-lesson showing how the activities of one cycle or epoch can affect the conditions of a later one.

The same is true of still greater cycles — even the life-span of universes. Whatever causes are still not worked out when a great universal imbodiment comes to an end, those causes are held over and will come to fulfilment in the next great imbodiment. In fact, as the ancient Hindus teach, each manvantara is a karman; the new one could not come into being save for the karmic causes left unfinished by the actions of entities in the former one.

Human beings all, at times, are subject to a sense of doom, of an impending fate, of prophecies about to be fulfilled, of destiny,

kismet "the twilight of the gods," expressed in the god Krishna's sombre words: "I am Time matured, come hither for the destruction of these creatures." Perhaps this is especially true in this age, when as a race we are at a crucial point in the endings (and therefore in the beginnings) of several important cycles. Whatever the age has brought about by its actions, the fulfilment is at hand. "The old order changeth, giving place to new, and God fulfils himself in many ways." Yet, the new is being born amid the very husks of the old. Certain phases of a great civilization, let us say, dissolve before our eyes. The over-all picture changes. But for the individual human beings who have been involved in that change, a new era has begun. The field of experience is as rich as ever, only different. Old orders fulfil their destiny and pass away as such, but new institutions come into being because they have not yet developed their possibilities. And so it is with individual lives: there are episodes: a phase of experience begins, gathers momentum, reaches its peak, declines and comes to an end, *but* — at about the mid-point of that phase a different one has begun, and is on the way up towards its climax.

Life, evolution, is full of endings as well as of beginnings: the thing is done, it is of the past. It is the Nitya-pralaya that the ancient Hindu philosophy speaks of, the moment-by-moment continuous dissolution of all things, their karman having been fulfilled. Yet there is also, moment by moment, something new being born.

It is the destiny of the races of men, as of all other beings below man, to reach at some time conscious godhood. There are two ways of arriving at this point: one, the long, long way appointed by nature for the mass of humanity who drift and as it were simply respond to the stimulus of events, driven by their karman; the other, conscious altruistic effort, sustained creatively and in harmony with the trends towards a sublime fulfilment. And that

fulfilment, that consummation, brings with it the greatest of all rewards: "the power to bless and serve humanity."

The Theosophical Forum

THE ABSOLUTE WAS ONCE A MAN — E. A. Holmes

Man is all symmetry,
Full of proportions, one limb to another,
And all to all the world besides:
Each part may call the farthest, brother:
For head with foot hath private amity,
And both with moons and tides.
— George Herbert in *Man*

When we look around at the immensity of the universe, and consider how small we ourselves are in comparison; when we consider how puny man is against the mighty forces of nature, how ignorant he is of the cosmic scheme, we may perhaps be forgiven for looking upon ourselves as of no great importance.

Yet our plea is for recognition of a fundamental importance in the individual, not from egotistic assumption that man is "lord of all creation," summit and acme of evolution (which he is not), but from sober realization that we and our fellow human beings whom we jostle in the streets, have individual divine origins and individual glorious destinies. For this true conception of the worth of each one of us is of vital concern for the welfare of men — and of nations.

The process of changing the minds and hearts of men is a slow process of evolution — evolution of each and every individual. True, it is said that there are masses of individuals who will have to await the next cosmic term in this school of life; but in general, not until the least amongst us has achieved perfection can the highest move on.

What, then, do men "move on" to? What is it that makes

attainment of relative perfection a logical and inevitable aim? In the words of G. de Purucker: "the Absolute was once a man." There you have the sweep of the plan — evolution from below the animalcule up to the Godhood, and even beyond. *The Absolute was once a man*. What evidence have we to accept this assertion so pregnant with affirmation of each man's potential greatness? If it is true, we ought to be able to find the same doctrine hidden in the teachings of the ancients, and it should show itself again in flashes of inspiration amongst the moderns, for one of the tests of truth is universality.

"That which is above is the same as that which is below," declared Hermes Trismegistus.

Man was made "in the image of God," says the Bible.

"The higher organism" (for instance, man) "is a universe in miniature; in the profoundest, truest sense of the word is it a small world, microcosm." These last few words are from a book published in England in 1847, a translation of a work by Lorenz Oken, Professor of Natural History at Jena University during the early part of the last century.

Again, from the same author, in his preface to *Elements of Physio-philosophy*:

In my essay entitled "Concerning the Universe as a continuation of the sensory systems," I showed that the Organism is none other than a combination of all the Universe's activities within a single individual body. This doctrine has led me to the conclusion that World and Organism are one in kind, and do not stand merely in harmony with each other.

In other words, Universe and Man are "one in kind." Man is a universe, an "island universe," and within him are all the

phenomena of a universe. He contains, in his physical makeup, in his structure, organs, circulations, motivations, aspirations, potentialities of future worlds, suns, planets, moons, cosmic systems, galaxies — potentialities which some day in cosmic time will unfold into cosmic realities. And all these things are there in our feeble human constitution, behind our feeble human fallibility. It is time we forgot the theological doctrine of "original sin," and turned our faces inward to our innate divinity, the central sun of our own universe, remembering the while that love, love for our fellow men, love for all created things, is the integrating factor in the universe and therefore in ourselves.

This world we live in is indeed a vast and complex entity. Think of the infinite number of objects which meet our gaze in whatever direction we turn — all the birds, all the trees (or bricks and mortar!), all the grasses, plants, shrubs, animals, insects, multitudes of all things, bewildering in their infinite diversity; and think that this we see is but a minute corner of the whole universe, stretching, so our astronomers say, on and on beyond the reach of the greatest telescopes, depth upon depth of stars and galaxies, "beyond the range and reach of thought," vaster than comprehension — but in all this infinitude of finite things, there is no chaos.

Astronomers, scientists, biologists, have labored to find system in the midst of complexity, and lo, we are told of island universes, cosmic solar systems, a home universe, and we learn about species, genera, classes, tables, laws, and so on. We are even brought to the conclusion as Emerson says, that the world is built up out of a few notes, which are so interwoven and interblended that the whole divine melody issues forth from them. In Indian mythology, Krishna is fabled as creating worlds out of the seven notes of his flute.

Take these seven notes, and one of the variations on them, and you have a rose. Nature in other keys, in other variations, produces a man, a universe. Man and the earthworm are kin to the stars, and contain the same fundamental notes in their make up. This is indeed fact, not metaphor.

We can go a little deeper into correspondences between man and universe. Obviously we must not expect to find our bodies already consisting of free planetary organs revolving round a central sun, any more than we could recognize the outline of a chicken in our breakfast egg, that is if the egg is a fresh one! Plants dig their roots down towards the center of the earth; their center of gravity lies in the earth itself. The animal kingdom, however, consists of organisms which have freed themselves from being static parts of earth. The animal has separated itself from earth, centered its gravity in itself, and become, as it were, a planet circulating round the face of the earth. So it is, or will be, with ourselves; these organs and parts within us are worlds in embryo, worlds in the making. They are being born within us, and in the course of cosmic time, will separate themselves from us, while still remaining parts of the greater beings who will be ourselves at that long-distant date. It is said that already the whole of man's anatomy is present in a human eye.

"Such is the mystery of the human eye that, in their vain endeavours to explain and account for all the difficulties surrounding its action, some scientists have been forced to resort to occult explanations" — wrote H. P. Blavatsky in *The Secret Doctrine*, II, 295.

"The eye is an entire body, a whole animal," writes Oken in his *Elements of Physiophilosophy*, p. 420.

If the Absolute was once a man, then the earth itself was once an atom in the body of that divine human being. There is an old

legend about a goddess whose beauty and soul became embodied in this planet "earth." Professor Oken, lecturing to his matter-of-fact undergraduates at Jena University, taught how the circulating seas are like unto man's digestive juices, how man's body is like unto crystals of earth, how our respiratory system provides bodily atmosphere, how our bones provide planetary stability, our muscles planetary motion, our nervous system planetary light, and the inherent sensibility in those nerves, he said, is as a central sun in the midst of the planets.

You see, then, the implications of this doctrine; not only do we owe it to ourselves to remember our humble greatness as individuals, but for the future welfare of universes we owe care and right treatment to our own physical bodies and to the spiritual faculties within them.

It is asserted, and I think, theosophically, that disease and infection are not due primarily to causes outside the human body. If we "catch" a cold from someone, for instance, the infection from the other person is only a secondary reason for getting the cold ourselves. The primary reason is presence of germs of the cold inside ourselves, or rather, a state of our own bodily tissues not one hundred per cent healthy, in which their vitality and will to resist the invading virus cannot prevail over it. We cannot absorb the virus and transmute it, with the result that our own bodily tissues begin to break down and to give birth in their turn to germs of the cold, just as cheese gives birth to maggots.

The same thing applies to spiritual health. We are, all of us, capable of the 7, 77, or 777 deadly sins just as we are all capable of the greatest of good works, and of the highest spiritual attainments. The gulf between the prisoner in the condemned cell, and the most respected, honored, and right living individual amongst us, is no broader than a razor's edge. Should we

ourselves lose hold of our ideals, should we open the doors of our hearts to doubt and despair, then these seeds within us will fructify, and may bring about our downfall.

Should the prisoner in the condemned cell catch a glimpse of that hope and purpose, and of his divine potentialities, those seeds of altruism and self-sacrifice may fructify, and in some future incarnation he may become a savior among men.

We are indeed compounded of everything that is. It has been well remarked that completely to destroy one human being you would have to unravel the whole universe, for contained in man are all the characteristics of the cosmos, and all the potentialities of universal life. "Man is thus a microcosm in very truth," says Dr. de Purucker in the *Dialogues*:

If we were able by some wonderful cosmic magic to isolate a man and allow him to pursue his destiny in isolation through life after life after life after life until the Manvantara ended, and there were none to begin the next manvantara except this isolated one individual, do you know that coming down into manifestation as the inaugurator, initiator, and evolver of the world, that one single man from the seeds of lives locked up in him even now, would produce ten classes of monads? Out of him would flow all the families of beings, all the races of beings. From him would come the three Elemental Kingdoms, the Mineral Kingdom, the Vegetable Kingdom, the Animal Kingdom, the Human Kingdom and the three Dhyani-Chohamc Kingdoms. — *The Dialogues of G. de P.*, III, 422

So you see, we humble individuals are not such small fry as we would like, perhaps, to think. We are responsible to untold millions of lives for what we think now, for what we do now. We are so inescapably linked with all creation around us, that we

cannot ignore our fellow men, or even our fellow gnats for that matter. If they both irritate us, then all we can possibly do is to help speed up their evolution out of the stage of conflict. For, just as the entities which make up the kingdoms below man are slowly evolving to become men, so are we individual entities growing in mental and spiritual stature, so that in aeons upon aeons to come we shall have grown into god-like creatures, and all creation will have moved up one step with us.

Thus do men become gods, and gods become worlds, and worlds become suns, and suns become universes, and universes in their infinitude make up the Absolute, who was once — a man.

The Theosophical Forum

WORLD TREES — Hazel Minot

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

From the days of myth and legend to the busy whirl of modern life, the tree has held an honored place in the hearts of men. The oak and pine, palm, laurel, silvery olive and many another have had their votaries. The oaks at Dodona voiced through their whispering leaves the will of Zeus, and groves of this mighty tree were held sacred by the Druids of Britain and Gaul. The palm from of old was a symbol of victory, as was also the laurel or daphne, the prize for those who were successful in the Pythian games in honor of Apollo. The olive, too, though linked with the dove as a symbol of peace, is emblematic of victory, a wreath of olive being the prize contended for in the Olympic Games of ancient Greece, it was likewise the highest mark of honor that could be extended to a citizen meriting well of his country. In Egypt the tamarisk was held sacred as possessing occult virtues, and it was often planted around temples. It is also in Egypt that we find the Lady of the Sycamore, otherwise the goddess Nut, who is pictured as if standing in the midst of the tree from which she is offering to her worshipers the fruit or the water from the Tree of Life.

Here we meet a universal symbol — the World Tree. What more natural than that early man should choose the tree to represent Life — not merely the never-ending force itself, but the very source from whence it comes. So truly did the ancient Hindus understand this that they represented their world tree, the Aswattha, as growing with its roots in the heavenly worlds, and

its trunk and branches extending downwards into the world of men. When we consider the sevenfold nature of the Universe, and of man its seed, and take into consideration the possibilities of only a seven times seven ramification, the pattern of a majestically spreading tree is easily visioned. The pattern, however, is too intricate to suppose that awareness of it came to man from the piecing together of untutored observations. The symbol of the World Tree, variously called the Tree of Life, the Tree of Knowledge, the Tree of Speech, is, by its very universality, a truth given to infant humanity by those wise ones who are ever our guides and protectors. H. P. Blavatsky refers to it as follows:

The Symbol for Sacred and Secret Knowledge was universally in antiquity, a Tree, by which a Scripture or a Record was also meant. Hence the word Lipika the "writers" or scribes; the "Dragons," symbols of wisdom, who guard the Trees of Knowledge: the "golden" apple Tree of the Hesperides; the "Luxuriant Trees" and vegetation of Mount Meru guarded by a Serpent. Juno giving to Jupiter, on her marriage with him, a Tree with golden fruit is another form of Eve offering Adam the apple from the Tree of Knowledge. — *The Secret Doctrine*, I, 128-9

And she says further, in *Isis Unveiled*:

The tenacious vitality it exhibits all over the globe . . . is the best proof that the seed planted by our fathers on "the other side of the flood" was that of a mighty oak, not the spore of a mushroom theology. No lightning of human ridicule can fell to the ground, and no thunderbolts ever forged by the Vulcans of science are powerful enough to blast the trunk, or even scar the branches of this world-tree of Knowledge. — I, 574

In one of the works of Robert Fludd, spoken of as "the chief of the

"Philosophers by Fire," is an interesting pictorial interpretation of the Arber Sephirotheca, or the Sephirothal Tree of the Kabbala. (1) This World Tree, like the Aswattha, is shown with its roots above, and its branches below. In this representation of Cosmogonic emanations we have the ten Sephiroth extending from the highest, the Crown — the heart and center of the spreading roots on the spiritual plane — surrounded by a glory of light whose rays extend with lessening power behind the remaining Sephiroth, ending with the tenth, or our world. From the "Crown" the succeeding Sephiroth are represented as globes extending from arms or branches on the trunk of the tree. The nine form three groups of three, each group or triad being the expression of the spiritual, intellectual and material aspects or qualities of that particular plane. The tenth Sephirah, our globe, being the link, as it were, between the Universe and Man. H. P. B. speaks of the ten as representing the seven manifest and the three unmanifest worlds. In the illustration of Fludd referred to, the World Tree is a palm, whose ten spreading branches ray forth from the lowest world and, named after the ten Sephiroth respectively, they are a symbol of the Macrocosm in its reflection, the Microcosm, Man. In this simple manner is represented a volume of esoteric truth. H. P. Blavatsky turns a goodly number of the pages of this Volume," giving many valuable keys to their interpretation both in *Isis* and *The Secret Doctrine*. She remarks, following a quotation of several paragraphs from Franck, the translator of the Kabbala, that

This kabalistic conception is . . . proved identical with that of the Hindu philosophy. Whoever reads Plato and his *Dialogue* Timaeus, will find these ideas as faithfully re-echoed by the Greek philosopher. — *Isis Unveiled*, II, 40

It is not surprising that the mediaeval Rosicrucians should have taken the rose itself as the symbol of their World Tree. (2)

Pictured as a gigantic rose sought by bees from near-by hives, it tells a most interesting story. Anything said *sub rosa*, "under the rose," was said in confidence; and if this applied to worldly affairs, how much more binding was it with teaching given only to those who had earned the right to it! Among the ancient Greeks "bees" was a name for disciples, and the sacred wisdom that they sought was "honey." Referring to this, Dr. de Purucker comments:

In Greece, *Melissai* or Bees, was a title given in certain cases to priestesses having certain recondite functions to perform; while frequently "honey" or "honey-dew" is spoken of by some ancient writers as signifying or symbolizing Wisdom, or wisdom gained from life's experiences: just as the bees collect and digest the nectar of flowers, turning it into honey, so do human beings collect knowledge from life and spiritually and mentally digest it into Wisdom. We are reminded of the "ambrosia" and "nectar" on which the gods, the spiritually wise ones, feed, and which nourishes them. — *The Esoteric Tradition*, p. 848

And H. P. B. links this thought with the Scandinavian Eddas, pointing out that

the honey-dew — the food of the gods and of the creative, busy Yggdrasil — bees — falls during the hours of night, when the atmosphere is impregnated with humidity; and in the Northern mythologies, as the passive principle of creation, it typifies the creation of the universe *out of water*; this dew is the astral light in one of its combinations and possesses creative as well as destructive properties. — *Isis Unveiled*, I, 133

Possibly the best known of the World Trees, at least in the Occident, is the Ash Yggdrasil of the Eddas. This mighty tree has three roots reaching out into three different worlds, and, like the

Sephirothal tree and the Aswattha, links these worlds together. One root extends into the land of the gods, the Asa folk, who gather each day beneath the branches of the tree to hold their council meetings; and under this root is the fountain of Urd. The middle root goes to the land of the Frost giants, and Mimir's well or fountain lies beneath it. The third root extends to the underworld, and here is the fountain Hvergelmer, while gnawing at the roots of Yggdrasill is Nidhogg, variously described as a demon, a giant and a Serpent. Now the well of Mimir conceals within its waters wisdom and knowledge, and the inspiration for poetry and song, but the fountain of Urd is the most sacred of the waters. Here dwell the Norns, who sprinkle Yggdrasill daily with the waters of the fountain

that it may not wither. It remains verdant till the last days of the Golden Age. Then the Norns — the three sisters who gaze respectively into the Past, the Present, and the Future — make known the decree of Fate (*Karma, Orlog*), but men are conscious only of the Present. — *The Secret Doctrine*, II, 520

H. P. B. says of the Norse Legends that

one recognizes in Asgard, the habitat of the gods, as also in the *Ases* themselves, the same mystical *loci* and personifications woven into the popular "myths," as in our Secret Doctrine; . . . The Norse Ask, the Hesiodic Ash-tree, whence issued the men of the generation of bronze, the Third Root-Race, and the *Tzite* tree of the *Popol-Vuh*, out of which the Mexican *third* race of men was created, are all one. . . . As in the Gogard [the Hellenic tree of life], among the luxuriant branches of all those mundane trees, the "Serpent" dwells. But while the Macrocosmic tree is the Serpent of Eternity and of absolute Wisdom itself, those

who dwell in the Microcosmic tree are the Serpents of the manifested Wisdom. One is the One and All; the others are its *reflected* parts. The "tree" is man himself, of course, and the Serpents dwelling in each, the conscious *Manas*, the connecting link between Spirit and Matter, heaven and earth. — S. D., II, 97-8

Almost poles apart, geographically, yet with a marked sympathy of thought, is the World Tree of Fiji — a conception brought there from the Friendly Islands by the Tongans. Here, again, is a tale of the beginnings of things, and the "Tree of Speech" is but an episode in the recounting of the coming of men to earth and their subsequent knowledge of decay and death. As with the Ash Yggdrasill, this is the gathering-place of the gods, and the tree grows by a fountain, the Water of Life. Told by Ma'afu, a Tongan Chief, the legend charms and impresses one with its simple dignity. The following passages are taken from the legend called "The Beginning of Death" — suggestive of the Norse legend! — in this instance the Tree of Speech fulfills the office of the Norns, making "known the decree of Fate."

A fine land is Bulotu, and happy are its people; for there, close to the house of Hiku-leo [the Loki of Tonga], is Vai-ola, the Water of Life, which the gods drink every day. Oh, that we had it here on earth, for it will heal all manner of sickness! Moreover, near the brink of the fountain stands Akau-lea, that wondrous tree, the Tree of Speech, under whose shadow the gods sit down to drink *kava*, the tree acting as master of the ceremonies, and calling out the name of him to whom the bowl shall be carried.

There came a time, however, when Maui, the king of the gods, decided to sail forth from Bulotu. It was the closing of the Golden Age, the passing of the first and second races, and the coming of

the third with the knowledge of death. There was argument among the gods about this going forth, and then they heard

a rustle and a stir among the leaves of the Tree of Speech, as if a sudden blast were sweeping through its branches; and all the gods kept silence, for they knew it was going to speak.

"Hear my words, Maui," it said. "Hear my words, Hiku-leo, and gods all. Go not! Evil will come to pass if you go — an evil so great and terrible that you could not understand if I were to tell you what it is. I pray you not to go."

And in the parting injunctions of Maui, who will not be stayed, there is a sadness, and a boding of ill for the future.

"Look you, my brothers," he said, "it will be well for you to stay behind and watch that evil one, lest he do mischief while we are away. . . . Do you keep the rest together, and have a care of Hiku-leo. What if he should cut down the Tree of Speech, or defile the Water of Life! There is nothing too evil for him when he is in one of his raging moods.

— *Folk Tales of All Nations*, F. H. Lee, pp. 444-5

Thus, to every Race, as to every normal child, comes the urge to pass beyond the Golden Age, to learn from Life, and to grow through experience. Even the Lord Buddha had to meet the three awakening sights: sickness, old age, and death.

Lastly, let us speak of the Kounboum, the World Tree of Tibet. It is called the "tree of the 10,000 images and characters," and it is said that it will grow in no other latitude. H. P. B., in describing it, quotes from the Abbe Huc as one who could have no possible interest in magnifying its marvels, and we can do no better than follow her example.

Each of its leaves, in opening, bears either a letter or a religious sentence, written in sacred characters, and these letters are, of their kind, of such a perfection that the type-foundries of Didot contain nothing to excel them. Open the leaves, which vegetation is about to unroll, and you will there discover, on the point of appearing, the letters or the distinct words which are the marvel of this unique tree! Turn your attention from the leaves of the plant to the bark of its branches, and new characters will meet your eyes! Do not allow your interest to flag; raise the layers of this bark, and still other characters will show themselves below those whose beauty had surprised you. For, do not fancy that these superposed layers repeat the same *printing*. No, quite the contrary; for each lamina you lift presents to view its distinct type. How, then, can we suspect jugglery? I have done my best in that direction to discover the slightest trace of human trick, and my baffled mind could not retain the slightest suspicion. — *Isis Unveiled*, I, 440

H. P. B. adds that "the characters which appear upon the different portions of the Kounboun are in the Sansar (or language of the Sun), characters (ancient Sanscrit); and that the sacred tree, in its various parts, contains *in extenso* the whole history of the creation, and in substance the sacred books of Buddhism." (*Ibid.*)

Nourished among the branches of the Tree of Life, Man can know the realms in which its roots find strength only through daring to eat of its sacred fruit. This is the knowledge of good and evil, but having dared to eat, he has the power to choose the good.

THE CONSCIOUS CELL — *J. Croiset van Uchelen*

Science, dividing matter into organic and inorganic, repudiated the idea of an absolute life and life principle which precludes even a geometric point in space from being inorganic in essence. Nevertheless, reason itself compels the acceptance of an infinite mind, which rules and governs the ocean of life, in order to account for an Intelligent Universe and the activity of forces working in it harmoniously. Still, many continued to look upon man as a mere biological accident, in the assumption that science had given the deathblow to a belief in a greater reality. And science itself had come to assume that it would be only a matter of time when it could be demonstrated that the whole vital process, so called, is nothing more mysterious than a very complicated phenomenon of motion, regulated by physical and chemical laws, even if it had to ignore the mystery of the origin and controlling force of the latter. However, the deeper we penetrate into facts, the more we try to fathom and speculate on the phenomena of life, the more we find that even those phenomena we had hoped to thus explain, in reality prove unfathomable.

For instance, it was held that the phenomena of digestion and assimilation could be explained by the laws of diffusion and endosmosis. Instead, we found the cells themselves acting as living organisms with very complex functions. In the most elementary, formless and structureless protoplasmic drops, we found discrimination in the selection of food. The mysterious processes of selection, of extracting from the blood one substance, rejecting another, of transforming by means of decomposition and synthesis, of directing some of the products one way and redirecting others — as in the activity of cells in the human body

— evidently cannot be explained by diffusion or endosmosis, or any chemical laws of an inanimate nature. Electro-biology too, came to show other forces at work.

True, there are close correspondences between physiological and physical processes, as in the function of the eye and the camera; but although the same laws of refraction apply to the reproduction of an image in the eye (living or dead) or on the photographic lens, the life phenomena of the evolution and development of the eye itself remains unexplained. The same applies to other departments of physiology. Admittedly the blood circulates and moves in accordance with hydro-dynamical laws — as far as its passive activity is concerned — but the active function of the heart and its vessels has not yet been explained by physical laws.

Occult science explains that it is the innate power, indwelling in the germ plasm of the cell which brings the individual entity to growth along its own path. Moreover, the structure of cells belonging to the higher creatures can — in our period of evolution — follow only that particular line of growth which the central entity, whose body they form, allows them to follow. It is a case where the innate tendencies of individual cells are overpowered by the dominion of the inner central entity which works through those cells.

The cells constituting the human body are the microcosmi reflecting the macrocosmos man; the infinitesimal being, the container of the vastness of the infinite, sharing in all its potentialities. This idea certain Greek philosophers expressed by the word *holenmeria*, meaning that the all is contained in part of the all, body of its body, blood of its blood, thought of its thought.

Is there anything more miraculous than man evolving from one tiny cell, a microscopic nearly transparent seed, in which the

rudiments of a new world are locked; a cell, the basis of racial continuance! All that has gone before, all that is yet to come, is veiled in its mystery. Physical man is a product of the cleavage taking place in this single cell which represents the whole individual with the organs and parts of organs imprinted on it. Looking through a microscope at the spermatozoon lashing its way through the seminal fluid, who could fathom the inherent potentialities dormant within it? And is there a single atom vibrating in space that does not bear similar evidence of purpose and order? Looking upon cell life in this manner, we are of course regarding substance less than the vital principle of which it is the carrier; the activating forces evidenced by their physical chemistry.

We are moved by the thrill of that infinite life which pulsates through the arteries and veins of space. Infinite smallness, infinite greatness on every side, but always infinite order and wisdom. How profound Charron's words, when in his work *On Wisdom* he exclaims with the ancients that "The proper science and subject for man's contemplation is man himself." Man, not cut up anatomically in unrelated parts, but man the trinity: spirit, soul and body. For as Dr. Carrel said in his *Man the Unknown*, "It is utterly impossible to divorce body and what we commonly call soul." Is it not the same life, the self-moving origin of all activity that sustains the cells and the atoms of man visible and invisible, nay of the whole of this Universe?

Following the sweep of his own reasoning and deductions, man once more comes face to face with the unknown — the very mystery he seeks to elude. One reason is that all hypothesis must be limited by our sense perceptions; that is, vibrations, upon reaching the brain along differentiated nerve-paths, become conscious perceptions. It is the limitations of these senses, conveying the impress of only a limited realm of motion, which

prevent us from being aware of other forces.

But with the evolutionary progress there comes the awakening of an inner sense, revealing an inner nature, quite distinct from and unlike what is presented by the senses we call physical, themselves developing and widening the perceptivity of the experiencing entity and his field of awareness.

This sense of a growing awareness is exemplified by Dr. Lecomte du Noüy, in his remarkable book *Human Destiny*, of which Dr. Millikan wrote that its publication is an event such as occurs once or twice in a century. In this book Dr. du Noüy sets forth the fundamental fallacies of the materialistic philosophy. An eminent biologist, he has the courage to declare the fallibility of science which in a mighty Kosmos toys with tiny fragments of knowledge. Man, he affirms, does not represent the end of evolution, but only a middle stage between the past with all the memories of the beast and the future rich in the promise of the soul. By logic and reason, he presents a far grander, truer picture of progress than any of our present-day scientists has thus far given, in a full recognition of a dependence of progress upon self-directed evolution. Works like these are the spans of a bridge which one day will link the esoteric and exoteric sciences.

The Theosophical Forum

WHAT CAN A SINGLE INDIVIDUAL DO? — *J. Alin*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

The world today is full of agony; the hearts of millions of men are very sore, and their minds full of bitterness, despair, pessimism and hopelessness. What are we to do? What can I do? I, who am but one, and these are so many. Might those little endeavors that one human being can make, do much? Would it not just be throwing away, wasting energy on a forlorn cause?

Social reforms are invented and put into action, pacts are written and signed. But do such things change the hearts of men? In our way we use different methods that we find suitable from time to time for different purposes. This is natural, but we cannot say that these methods and varying ways of working or of activity in themselves solve the problems of today. Changes that are made on the surface, reforms that do not aim at creating a friendly feeling towards each other inside our own selves, cannot seriously improve human conditions.

There will remain forever only one universal principle that can effect any real change for good, and this is the keynote of Theosophy — *Brotherhood*. There is no other way. Therefore, there is no quicker way. Agony, bitterness, despair, and pessimism are shadows that come and go, they certainly are not eternal. They are the results, the reaction of those evil thoughts that we have been nourishing in the past, therefore they come to manifestation, and through them we might become aware of the voice of the spirit in our inner being.

The heart of Theosophy is the understanding heart, the heart and mind combined that endeavors to understand others, that takes consideration not only of his own bent of mind, but strives to study the nature of the hearts and minds of his fellows, so that all men might understand each other ever better and realize our common unity and oneness with the universe. This, in fact, becomes the most fascinating study we could undertake.

What can a single individual do? If he expects to see great manifestations due to his activity springing up around him, he might be disappointed. For if we compare our work, which is of the ages, with the mushroom growth of the outer world of today, what we accomplish may indeed seem invisible, and insignificant. But we should know that the deeds of spirit have a great reach and are backed by the Spiritual Powers in the universe. We are not alone in this sublime Cause, and all we have to know is that we are doing the right thing, and that the results will take care of themselves.

We can help others to find the way to themselves, their real selves, which is in union with the All. If we ask for miracles, this is the greatest miracle which each one of us can work: to change our hearts and minds. We do not have to act with a view that our own accomplishments are small compared to what others may do. If we work in that way, then any deed becomes small or insignificant compared to that which is truly great. And also there is always something greater to strive towards, and always something smaller which we have left behind. All is relative, and a deed is only comparable to our abilities — and our motive. We can do our best; we can try. And yet it may also be said that our capabilities are infinite, because in the inmost heart of our being we are Infinity itself.

The period of today is a time of unrest, of speed and intensity. But

the very speed and intensity of this age of Kali-Yuga, when material illusion is at its greatest, makes whatever we endeavor to do more speedily carried out than in any other age. Therefore spiritual growth may be as quickly effected now as any other.

What can we do? What do we mean to do? Are we wanting to make a great show, or do we want to work for peace in the world? The greatest thing possible for any man to do is to foster in his heart the holy flame of compassion and brotherhood, and to dwell on the thought of peace.

There are many different centers of consciousness in man, and it is in exact proportion to our use of any one of these, how far-reaching, capable or clear our understanding of a thing may be. The ranges of consciousness of the various entities, egos or souls in man, are given by G. de Purucker as follows:

(a) the Divine Monad, whose range of consciousness and functional activity is over and in the Galaxy; (b) its Ray, the Spiritual Monad, whose range of self-consciousness and functional activity is over and in the Solar System; (c) the Higher or Spiritual Soul, the Ray from the Spiritual Monad, whose self-consciousness and functional activity is over and in the Globes of the Planetary Chain; and finally (d) the Human Ego, the Ray from (c), whose self-consciousness and functional activity belong to our Earth and last for the duration of a single incarnation.

— *The Esoteric Tradition*, II, 852

All these ranges of consciousness are contained in our inner being, although they are very feebly expressed as yet. Still they are there, and it is by evolving them, exercising them, that they can be brought into activity.

The higher ones of these consciousness centers are tremendous

and far beyond our comprehension. Still they are limited, and have a beginning and an end. In that respect, they are analogical. But deeper still and beyond these is our inner link with the Ineffable, with THAT, which has no bounds.

By study and practice, by thought and living, we come to realize ever more, and therefore evolve ever more of THAT which is our inmost. There is knowledge to be had, and we do not have to say that we cannot reach it. We can dare, instead of just drifting along. As W. Q. Judge expressed it: "That which is never begun, shall never be accomplished."

Thus we see that if we want an explanation of the tragedies of life, we must look for that explanation where it exists. In other words, we must turn to the teaching of Reincarnation and Karman. But in order to understand these, we must look deep within and learn of the true structure of man in his relation to the spiritual universal principle.

The Spiritual Soul, or our Manasic part, is that center of consciousness which is the source of the Human Ego, which sends out a Ray which is this Human Ego, and therefore is the receptacle of all the experiences of all our incarnations or imbodiments on this earth. The consciousness we have here on earth while incarnated in our daily life is limited to and active and functioning only as long as an incarnation of earth-life. It knows nothing of that which was before, and nothing of that which is after its termination. But the Spiritual Soul does. It tells the truth in a direct way, and instantly; and, it may also be a voice that comes to us in the silence from regions of our being still higher, and more inward.

There is also the voice of conscience, which has been explained as the voice arising out of the experiences garnered in previous lives on earth. But this is a voice of warning usually, telling us what not

to do, a negative good. So that the gist of our destiny might be summarized as follows: the whole purpose is the thinning of the thick veils of mind and matter in order that the light in the Holy Temple, which is the human heart, may illumine man with its divine splendor.

The action of the brain alone is given to criticism, to deceit at times, is sceptical and argumentative. It is quarrelsome and noisy like an empty barrel; while the characteristics of the functions of our higher consciousness are that of peace, of understanding, impersonal love, consideration for others, and quiet.

Now, therefore, if we identify ourselves with this body of ours, this vehicle which should be the instrument by which our true Self gathers experience here on earth, then we do indeed die at the termination of the activities in the body. But that which we call "we" is not the body, it is our consciousness that dwells in, or better informs the body.

Every incarnation is thus a new attempt and a new opportunity to open up a greater and better contact with our own origin and root — our Divine source; to bring forth that which is within, to express that which is the inner realms of our nature.

As above, so below; as in the great, so in the small — this is the old golden key to many mysteries of Nature, so much stressed by the Hermetists.

Truth has existed always. In all ages it has been promulgated by the Elder Brothers of mankind, by the White Lodge. However, if we would accept Truth at the very instant it was spoken or expressed, then we would have a world of wisdom and peace long ago. The difficulty does not lie in whether Truth exists, but in realizing what is Truth. In order to know truth, we must become true. In order to understand, we must become. And the first thing

is to realize that all lies within our own hearts: all the realities, all the wonders of the Universe.

The Theosophical Forum

INTO THE FUTURE FROM THE PAST — *Audrey Klosterman*

Out of the Past into the Future sweeps the mighty, majestic Law of Karman, the law of cause and effect, the law of consequences. Its source rises in the very heart of the Universe which is Love, Harmony, Compassion. Karman is Life itself for it is immortal, impersonal, infinite in its action and encompasses the activities of the Kosmos, solar systems, planets, man as well as every atom in space.

In order to understand Karman and its twin-doctrine Reincarnation it is necessary to realize that the Universe in which we live and move and have our being is an organic whole — one single Organism composed of an infinite number of lesser organisms embodying varying degrees of consciousness and development. We are intimately linked to the stars, the sun, the planets and all celestial bodies which not only act upon us, but which feel the results of our actions and reactions.

Francis Thompson, a modern poet, has intuitively felt this intimacy and expressed it beautifully as follows:

All things by immortal power
Near or far,
Hiddenly
To each other linked are,
That thou canst not stir a flower
Without troubling of a star.

Karman is derived from a Sanskrit verb meaning "to do" or "to make" and this implies action — cause and effect. This action has two aspects. First, there is the action from within outwards of the awakened consciousness-center or seed of life, whether it be a

solar system, planet, man or atom. From its birth the consciousness-center begins to unfold as a scroll its own essence — that which is locked up within itself — its inherent nature, qualities, attributes. These characteristics have been formed by the thinking, feeling, willing of the entity concerned over a succession of past lives. Thus, the man we see today is the sum total of countless past lives. The second aspect of Karman is the effect, or impact, of this consciousness-center or entity on the Nature surrounding it. If you throw a pebble into a pool of water the ripples reach out until they make an impact on the bank. In so doing numberless atomic lives are affected and thus react to these ripples. Just so do vibrations of thought and energy sent out from a man reach out into infinity, and affect all the lives that are touched by him. Equally, however, do our thoughts, good and bad, "come home to roost," to give us comfort or pain.

Being an absolute, immutable law of the Universe, Karman is unerring and never-failing in its justice. It is a dark, inscrutable law to us, because the people of the West have been taught to believe in a personal god outside ourselves to whom we could pray and beg favors and free ourselves from wrong-doing by penance. Also, the West has been deprived of the teaching of Reincarnation since 553 a.d. when this doctrine was anathematized by the Church at the second Council of Constantinople. In our Christian teachings we have this law of cause and effect, or Karman, expressed clearly in the following words of St. Paul: "God is not mocked; for whatsoever a man soweth that shall he also reap." Without the light of Reincarnation to explain and clarify this law of Karman, or absolute justice, the inequalities, suffering, pain and injustices experienced in one life seem bitter and cruel — one life of sorrow seems meaningless and purposeless.

Karman is intricate because it operates not only on the physical

plane, but on the mental and spiritual planes as well. We not only have our individual karman, but we have our family karman, our national karman and our racial karman. It is no wonder that today we stand bewildered and stunned before such horrors as the atom and hydrogen bombs — the Frankenstein of our own making. Our knowledge is stupendous, but we fail to perceive that the laws of the Universe are moral and ethical, being rooted in Harmony, Compassion and Equilibrium. The exact and precise nature of the law of cause and effect has been stated by H. P. Blavatsky as follows: "There is not an accident in our lives, not a misshapen day, or a misfortune, that could not be traced back to our own doings in this or another life."

We understand the laws governing physical nature because we can see results and can measure and prove them. It is not so easy to observe the workings of the mind and follow the avalanches of thought that pass through the mind. But it is in this thought realm that lie our difficulties, for ideas rule the world; and yet we do not even know how to rule our thoughts or our lives. What motivates our thoughts — selfishness, greed, personality, or love, altruism, and impersonality? Love evokes love, hate attracts hate — both are equally magnetic and dynamic.

"Thoughts are things" — living, vital entities that have a life and power of their own. The force and intensity with which a thought is conceived gives it its vitality. Within the circumference of a thought are a positive and negative pole — a pull upwards and a pull downwards. Man as a thinker has the free will to choose his pathway moment by moment, thought by thought, up or down in this world of duality. Everything is dual that one can think of, with the exception of the middle way. It is the pathway of balance and discrimination — in other words the razor's edge.

It is in a fine attunement of union between mind and heart and

all the principles of man's constitution that such a balance and equilibrium is attained. *Golden Precepts of Esotericism* states: "Sow an act and you will reap a habit, sow a habit and you will reap a destiny because habit builds character. This is the sequence, an act, a habit, a character, a destiny." Man is the creator of his own destiny and so is his own savior or his own destroyer. As Dr. de Purucker has said, "No one can think for man, feel for him, choose for him, will for him, but the man himself."

Man is not a victim of fatalism whose lot in life is fixed, nor is he a victim of chance, tossed hither and yon without purpose. The knowledge that strict, impartial justice rules the world gives a man strength to face whatever comes his way for in some way he realizes he is getting his just deserts and he knows by facing his problems with courage he will transcend them. Thus, a firm foundation is laid in a man's character whereby he realizes that he is creator of his own destiny. As he works on and gains in mastery over himself his vision broadens; he has found something of value to share with his fellowmen and he can become of service to those Helpers of Humanity who are always working in the world. Doors open and point the way toward a purposeful collaboration with Nature's Plan.

Although we shun pain and suffering, such experiences are our best teachers. We then have an opportunity to test our inner strength. And as Emerson has observed our defects which may appear a hindrance may prove of usefulness just as the stag in the fable admired his horns and blamed his feet; but when the hunter came his feet saved him and afterwards caught in the thicket his horns destroyed him. From out of our weaknesses grows our strength for we gain the strength of the temptations we resist. A man who lives without suffering, without change, is like a stagnant pool without the flowing currents of life passing through

him to refresh and purify.

Theosophy, the archaic wisdom of the ages, helps man to understand himself and the universe in which he lives.

Theosophy is the science of right living, for within each man's inmost being there is a blue-print, a pattern, of what he would like to be. When a man strives toward his ideal it begins to take form. He molds and models this form as a sculptor giving it symmetry, grace, proportion; and as he works he realizes this model must have warmth, color, life, vitality, compassion, understanding. When the last touch is added he recognizes he has produced a work of art — a masterpiece. Like Pygmalion love fills his entire being for this creation which is himself. He has become his own creation, his own ideal, man perfected, a perfect vehicle of universal love, free from earthly Karmic bonds — a product of aeons of laborious work.

The man thus freed is now qualified to become an active co-worker with the Brotherhood of Great Men, true Sages and Seers, whose life and entire work are devoted to watching over the spiritual and intellectual destiny of men.

The Theosophical Forum

IN THE BEGINNING WAS THE WORD — *J. H. Calmeyer*

One of the main points of dissension which led to the Reformation, and caused Christians to split up into Protestants and Catholics, was the contention that it should not be the exclusive privilege of the priesthood to interpret the Bible to the faithful. The Holy Book should be the common property of every son and daughter of the Church and should diligently be read by all.

This dissension must have arisen as the result of one of two assumptions. Either the Bible is plain sailing and holds a clear and simple message for everybody to understand, needing no interpretation; or, the priest is not the ideal and rightful interpreter (having failed in his task or his title thereto being denied), and it is rather the divine heritage of every individual believer to gain, through study and introspection, a measure of understanding — a greater measure, presumably, than could be his through any vicarious interpretation, and one better suited to the particular limitations of his comprehension. It must be obvious to anybody who has read the Bible and has seriously tried to understand its meaning, that the contention that the Bible contains nothing but plain narrative and a straightforward message cannot conscientiously be upheld. Whatever the merits may be of the dispute as to the means whereby textual enlightenment should be obtained, the need for enlightenment itself can scarcely be denied.

One of the most cryptic statements and one which must be meaningless to many people is to be found in the well-known opening phrases of the Gospel according to St. John:

In the beginning was the Word, and the Word was with God, and

the Word was God.

What was this mysterious "Word" whereby "all things were made," and without which "was not any thing made that was made"?

When we think of a "beginning" we are naturally led to think of an all-embracing Omnipotence, a Cause without cause, in which all the potentialities of the manifested world are hid. We cannot think of a beginning out of nothingness. Mainly because we cannot think of nothingness. And quite rightly so. For nothingness is a meaningless word. Derived from "not something," it is extended to "not anything," but this is a logical absurdity, for the full meaning of "not something" is of course "not something, but something else." That which precedes a "beginning" can, therefore, not be "nothingness," but must hold in its womb the seeds of all things to come.

Now just when do these seeds spring to life? It is obvious that they do when it is consciously known that they do. In other words, their coming to life is in the consciousness thereof. Prior to the beginning of all things, i.e. the beginning of existence as we know it, there was no such consciousness. We cannot conceive of the great Cause of all causes being conscious of Itself. For consciousness means appreciation, appraisal, whether praise or criticism. This again postulates an intelligence outside of what is being appraised, an "observer" on a level of its own. But this would imply a duality which runs counter to our conception of a beginning. There must be "one" before there can be "two."

But if there is no consciousness at the beginning of all things of whatever there is supposed to exist, then we may reasonably assert that it does not in effect exist in the sense we apply to that word. Therefore, for there to be any effective existence something must issue out of this seeming state of nothingness, something

that, because of its being part of the whole, will have a recollection of the whole.

When we think, therefore, of a "beginning," we can only think of something that we know to be a secondary phenomenon, an effect of that Cause without cause, which must needs be produced to enable that First Cause to manifest itself, in other words to "gain existence." Why it should be necessary for that First Cause to have an existence at all, is something that simply cannot be answered. Presumably the question is irrational because it is based on our conception of things in dealing with matters which are entirely beyond our limited, poor three-dimensional comprehension. We know that there are certain things of which our mind cannot conceive. Infinity, eternity . . . In mathematics we have a language which goes on from the point where our mental images fail us, and which proves to us that there must be conceptions which we cannot at present grasp. But "there is nothing covered, that shall not be revealed, neither hid, that shall not be known," and it is our divine heritage to attain in due course to the knowledge of all these things.

On the basis of the duality inherent in consciousness, we must assume that the conscious part is less perfect than that of which it is conscious, because the former has issued from the latter and can, therefore, never in any sense be "more." Neither can it be perfectly equal, as in that case there would be no duality. Manifestation then becomes an aspect of loss of perfection and the essence of the Divine Origin is reflected in the Manifested World as consciousness. Consciousness may thus be seen as a yardstick: the part applied to the whole. And we are equally justified in saying that every emanation from the whole, by being of its substance, must have a consciousness of the whole, as in saying that being part of the whole is in having this consciousness.

There is nothing in the Universe which the researches of man have found to be stationary. Neither can we reasonably impute to this secondary phenomenon a state of absolute immobility. In analogy of all that nature has taught us, we can only think of the issuing of the manifested world from a state of non-manifestation as a kind of vibration. In order to manifest itself, the Divine Source must externalize itself. Looking at it as we would at a physical phenomenon we would say that this would set up a tension. The externalized part is irresistibly drawn towards its source, like a string that is pulled away from the bow. On the outward swing it loses some of its "perfection." Adhering to this scientific analogy, we might say that some of the energy of this "perfection" is converted into the power required for the outward movement. On the inward swing it gains "perfection," until it identifies itself again with its source, thus completing one pulsation. Of course, we should beware of taking this literally. It is an image which helps us visualize a difficult concept. It helps building a bridge to cross the gap between the beginning of all things, which our logic tells us can have no effective existence, and our conception of a world which surely must have had its origin in a material manifestation of some sort. The duality of an oscillatory movement — in-and-out, wave and node — makes this easier for us to understand: a going-out-of-itself for the purpose of manifestation, to "gain existence," yet a constant returning to itself so as to retain the essence of its indivisible divine being.

It may be mentioned in passing that this idea of the manifested part, i.e. the created world, being of necessity the product of a loss of perfection, may be at the bottom of the notion of "original sin."

Manifestation then means existence and a higher or lesser degree of consciousness. And existence — or consciousness — implies substance. For we cannot think of any kind of existence, without

thinking at the same time of substance: something observable outside the self, be it physical or mental matter — "such things as dreams are made on." Looking at it again as we would at a physical phenomenon, it is easy to understand that the primary pulsations of manifestation will propagate themselves in this externalized substance. Just as a pebble thrown into the water will not cause an isolated ring to open and close again around the point of impact, but send ripples all over the surface of the water, so will cosmic ripples, pulsations of energy, be sent out in all directions. There is consciousness, there is matter, there is pulsation: a new world has come into being.

These "ripples," as the new world grows and unfolds itself on the breath of Brahma, may travel a long way from their source. They may, on the same principle as has been applied to the first pulsation, lose "perfection" and gain lesser manifestations of power; they may, as it were, lose spirit and gain matter, but they cannot go on in the outward direction for ever. In common parlance: in that direction there is nowhere for them to go. Their only fulfilment is in their ultimate return to their Source. This is what we all instinctively know and all we ever can know of the "purpose" of God's Creation.

Let us now go back to John, the Apostle.

In his days it was not the custom to write long and explicit philosophic dissertations. Certain records were kept in a cryptic style for those "who had ears to hear," and for those who had not, explanations were given orally by the initiated.

Now if you had to express in a short and cryptic message what we have so ponderously tried to explain, what image would you think of? How would you convey the idea of a Nothingness fraught with the potentialities of a whole new world; the throbbing pulsation of the birth of this world; its existence —

separate yet inalienably related to its Source . . .? A nothingness which is the Ultimate Perfection and which is so complete, so all-encompassing, that it is beyond the sphere of conscious perception.

The Word, says the Apostle, was with God, and the Word was God.

A void, therefore, which holds in its womb everything that ever is or will be. For it holds the "Word."

Try to visualize what this means. Here we have the larynx, connected with the lungs as with a pair of bellows. Lungs and windpipe are filled with air. Can we think of anything less substantial than air? The bellows begin to work and still nothing happens. Some particles of air are displaced. For the rest: nothingness.

And again air is pressed upward through the larynx. But this time larynx, tongue and lips assume certain positions, make certain movements, and lo! . . . there is suddenly not only sound, but meaning: a word. Materially, we can hardly trace what has happened. Vibrations have been set up. But with what tremendous consequences! Just think of the prisoner in the dock; of the youth to whom Life holds out a glorious promise; of those who are laden. . . .

"To be hanged by the neck" . . . "till death do us part" . . . "I am the Resurrection and the Life" . . .

Just words. . . . Vibrations out of the nothingness of thin air. But to those who hear the words, reality is created. The reality of the ransom of a wasted life; the reality of blissful adventure; the reality of the solace of eternal life because of eternal love. . . .

Out of No-thing-ness new worlds are created. . . .

In the beginning was the Word, and the Word was with God, and

the Word was God.

For those who have ears to hear, could a better image have been chosen?

The Theosophical Forum

THERE IS A ROAD — *Hazel Minot*

Roads have a magic of their own. They beckon to unexpected things, and conjure up pictures of far distant places, visions of hopes to be realized, dreams that are ever beyond the receding horizon.

There is the country road — hardly more than a lane — that leads nowhere in particular, and brings a quieting of tensions to him who forgets himself in following its peaceful meanderings. There is the road climbing a hill from whose summit a whole new world is revealed. Breath-taking these panoramas are sometimes, leaving a memory more pregnant with joy than is that same scene revisited. Between such roads and the broad highway there are countless others — good, bad, and indifferent; lanes and even foot-paths that may one day be a link in some vast artery of commerce, leading who knows where? And then the highway! — winding along valleys, going over and even through mountains: this is a road that brings us beauty at all seasons, but leaves us gasping on occasion at the majesty of earth and Nature with which we are suddenly brought face to face.

One such road opened a window into another world. The time was early Spring. There had been rain in the lowlands which had turned to snow on the higher slopes and in the mountains. Trees and shrubs were cloaked in bewildering loveliness; here and there slate-gray rocks stood out in stern contrast to the soft whiteness all around them; and winding its way like a black ribbon was the road, disclosing beauty on beauty with every turn. The air was clear and still with the stillness of fallen snow — a world apart, yet linked with the life of the lowlands by that ribbon of winding road. Up and up it went, and then it was no

more: a sign said "Road not cleared beyond this point." So simple a thing could make a cleavage almost unbelievable! Here were snow-covered slopes, but here also was the cleared road with human life in evidence — cars parked momentarily before turning to go back down the mountain; beyond, all was whiteness. Footprints that disappeared around a jutting cliff showed where the road lay buried, but there was no sign of those who made them, and a phantom mist rising from the snow only added to the sense of mystery. It was a different world, a strange and unreal world — or was it real, and where we stood was unreality?

How many have traveled these roads, sensing romance behind their making and wishing for the story of their coming into being, a history of their evolution from a well-worn cow path, or an Indian trail, to a four-lane highway connecting busy centers of industry? How many others have passed that way, content to enjoy the changing scene and season, but unaware of the toil and labor, the far-seeing vision of those who planned, the expert work of engineers who carried out those plans? There is the mystery of transmutation here, and as with other worthwhile things, the part that meets the eye is but a fraction of the whole. The more important part remains unknown and often unsuspected. A symbol, mayhap, of that road "steep and thorny" which "leads to the Heart of the Universe."

It is said that one cannot travel on that road until one has become the Way itself. There is a link, then, between the pattern of the broad highway and that of the evolving soul: the final achievement is the sum-total of that which has gone before, and none, perhaps, who sees it thus will guess the toil and heartache that have made it possible. Countless hours of thought and labor — incarnations of shaping and reshaping are represented here; and at no time can it be said with absolute finality, "This is the

end."

The Theosophical Forum

THE SECRET OF CONTENTMENT — *Earle C. Hostler*

Contentment in no sense means self-satisfaction, but rather inner tranquillity, peace of mind. Does Theosophy throw any light on the secret of its attainment?

The opposite of contentment is the lack of inner calm, the lack of inner peace, inner strife or discomfort. In spite of the fact that a great many people, without realizing it, seem to thrive on the excitement of this condition — because excitement and agitation, the play of the lower emotions seem to be the very nature of the personal man — in spite of this, I believe we are safe in saying that this *inner* strife is in reality the most fertile cause of unhappiness, pain or sorrow.

It was Gautama, the Lord Buddha, who after witnessing at an early age the three awakening sights of old age, disease and death, could not rest in peace until he had eventually learned the truth about this world's pain and its sorrow; and having learned, he in turn could not rest until he had taught it to his disciples and the people of his own country. What he taught is imbodyed in his doctrine of "The Four Noble Truths," which in condensed form may be summarized as follows:

1. That pain and sorrow exist;
2. That there is a cause for the suffering and sorrow that exist;
3. That there is a way to get rid of this sorrow and pain;
4. That there is a path, which if followed, leads to the extinction of this pain and sorrow.

That path itself was called by the Buddha the Noble Eightfold Path:

- | | |
|---------------------|----------------------------|
| 1. Right Conviction | 5. Right livelihood |
| 2. Right resolution | 6. Right endeavor |
| 3. Right speech | 7. Right alertness of mind |

4. Right conduct

8. Right absorption or right meditation

Right conviction — conviction based on a recognition of The Four Noble Truths.

Right resolution — having the courage of one's convictions and resolving to follow them, is right resolution. Each time we resolve anew it is like a wise sailor periodically charting his position from the heavens in order to keep on his true course.

Right speech — speech that is thoughtful, kindly, truthful and controlled.

Right conduct — conduct that is based on moral worth, integrity and sincerity.

Right livelihood — that way of making a living that gives full value for payment received and which at the same time causes no loss or hurt to another.

Right endeavor — the fixing of the mind's eye on the true goal in life and making every thought, word and deed conform to that end.

Right alertness of mind — that mental attentiveness to life which aids us in performing every duty well, and which helps us to grasp every opportunity for right action.

Right absorption or right meditation — if we practice successfully the first seven there will follow a gradual awakening of our spiritual perceptions so that we shall come to know what right meditation is.

In his *Esoteric Tradition*, Dr. de Purucker says that following this path consists in a continuous changing to betterment of the factors or *samskaras* of our consciousness. These *samskaras* are those attributes of character, whether mental, emotional or otherwise, which are the seeds or tendencies of past actions. A little reflection shows that these eight points have been so chosen and so devised that if we follow

them and practice them, they will help men to raise or improve the entire range of those wrong tendencies which we have built into our natures in our many past lives. In other words, all those energies and forces which play through our natures will be brought into balance, into a harmonious relationship, which is inner unity, giving birth to an inner calm, or, in a word, *contentment*.

So this path with its eight points of instruction shows us the road we must travel. It is an inner road and a difficult one, perhaps; but anything that is worth while is difficult to attain, and just because it is a difficult road, let us light a beacon, and let that beacon be trust in our ability ultimately to succeed.

When learning some new skill or when undertaking some new accomplishment, how very hard it seems at first. In fact sometimes the initial effort seems so difficult that we become discouraged and feel inclined to give up before we have hardly begun; but if in spite of discouragement and momentary despondency we carry on, persistence and real effort bring success and proficiency. Isn't it likely that the same sequence holds true for inner growth? Isn't this also why we are taught that despondency is the greatest foe to progress? Applied to outward things, this is easy to see, for in looking back on past accomplishments, we can note that slips and failures were part of the process of learning, and that in the light of final success, to have allowed failure to deter us, in the sense of freezing our will to go on, would not only have been ridiculous, but would have negated all the effort thus far made.

Again the same thing holds good for inner growth, for, in trying to give expression to our ideals we can readily see that little failures along the way are part and parcel of our travel through life. The trick is in learning to ignore them; that is, in the sense of not dwelling on them other than to extract the lesson they teach. All our past successes, inward or outward, give promise of future accomplishment

and teach us that despondency need never be indulged in. We have only to remember that exertion and continuity of effort are needed. Even the Masters tell us that there is no failure except the refusal to try again, or as a Zen teacher might say, the one and only great commandment of Zen is: "Thou shalt walk on."

We must trust in our ability to succeed, which is the same as saying that we must never admit the possibility of failure. And why? For two good theosophical reasons. The first, because man is essentially a spiritual being and therefore has a constant source of spiritual power within himself to call upon. And second, because man is inwardly a deathless being and therefore has an eternity in which to progress. The doctrine of reimpodiment teaches us that man lives many lives here on earth so that whatever is unfinished or lacks complete accomplishment in this life will be picked up and carried on to a successful conclusion in the next or succeeding lives. The idea that the self in man imbodyes or reincarnates repeatedly on earth, coupled with the idea that there is a law operative in the very scheme of things that moves toward readjustment, forms two of the most important and hope-filling of our theosophical teachings.

The question may well be asked: "If man is essentially a spiritual being, why then does he have so much difficulty manifesting that spirituality here in his earthly life?" A whole philosophy could be written around the answer to such a question, but putting it simply and without *too* much detail here is one answer and it lies in the word *essentially*. Man is *essentially* a spiritual being. In order for the essential self of man to manifest at all in this gross physical world, this self had to "step" itself down, and clothe itself with substances and forces, matters and energies of varying degrees of density and ethereality, finally appearing here on earth in these fleshly bodies, which so many of us so mistakenly think of as ourselves. Man is a spiritual being, living in an animal body, but before the spiritual self can manifest its own nature through this animal body, it not only has

to learn to control the physical forces of that body, but it has also to learn to control and to bring into harmonious and synchronous relationship the forces and energies of his inner vehicles as well. Is it any wonder then that man is sometimes bewildered and does such strange things! He is a very highly complex being, a fact our physicians and psychiatrists are rapidly discovering.

The reaction of this complexity of human nature on our health has been engaging the attention of the medical and scientific world for some time now. So much so that the more enlightened doctors are realizing that there is an intimate association between mind and body. The psychiatrist too has evolved a long list of technical terms descriptive of psychologic and mental ailments, such as the many types of phobias, manias, psychoses, neuroses, and what not. The chances are that the human entity has been heir to these various disorders for a long long time, and while they may be new to our Western thinkers, dealing as they do with the great mysteries of consciousness, these variations, both mental and physical, have been known and understood for ages by the great Eastern occultists. The better psychiatrists are also discovering that the quickest and most permanent cures of insanity or near insanity occur when they are able to give their patients a firm philosophic or religious basis for life. In other words, if the ill — mentally, emotionally, or even physically — can come to feel that life has both meaning and purpose, this alone will help to restore sanity and balance.

Man is a composite being, having actually six other principles besides the physical body and is therefore quite complex. The simple knowledge of his dual aspect, however, is a tremendous help in understanding himself. Man has a higher mind and a lower mind, or a higher and lower ego. The lower mind is more or less closely associated with the four lower principles — the desires, the vital forces, the astral body and the physical body. The higher mind lives in the light of the three higher principles — the divine, the spiritual and

the spiritual-intellectual. The lower mind or ego, when functioning as such, is pure selfishness, concerned only with itself and its own wants; while the higher mind or ego is spiritual and therefore universal in its scope, expressing the qualities of love and unselfishness. There is the duality — the personality on the one hand, and the higher individuality on the other.

The question is now, how do we, who live mainly in our lower personality, reach up to our higher spiritual self, which is the real self, and bridge the gap between the two? It is done with will and aspiration and the creative imagination, by trying to live up to the best and noblest that we can visualize, but while this is patently simple to say, everyone knows that it requires all the strength of our manhood and womanhood to put it into practice. We shall know we are succeeding when we find ourselves learning to think more of others and less of ourselves, when it becomes natural to feel welling up in our hearts a warm and sincere love for our fellows. — And let us not be frightened by this word love.

Recently I came across an old number of the *Magazine Digest* and found an article by Harry Emerson Fosdick entitled: "Are We Fit to Live With?" There is here a definition of love that is well worth sharing:

Mark this! Love in the New Testament is not a sentimental and affectionate emotion as we so commonly interpret it. The great Christian word for love is *agape*. Over 250 times the New Testament uses it, and *agape* means nothing sentimental or primarily emotional at all; it means understanding and creative goodwill. "Love your neighbors as yourself" — that is *agape*. "Love your enemies" — it is nonsense to command that if it means feeling affection for our foes but if it means, as it does, extending even to them an understanding and creative goodwill so that, by God's grace, enemies may at last be turned into

friends, that makes sense.

In view of our present critical world situation, Mr. Fosdick's article, written three years ago, is even more applicable today than when written. He continues:

. . . . this is the world's cry, with catastrophe awaiting failure: Wanted! Those qualities of life and character that make men and nations fit to live with.

We have always talked about world brotherhood. It was a beautiful ideal. But now it is the absolute condition of civilization's survival It is world brotherhood now, or else!

The dramatic conquest of the air, the shrinking of the planet in travel time and the release of atomic power, have as it were suddenly confronted us with history's most momentous crises, long building up but unmistakably here at last — races and nations forced to live together before we are fit to live with.

And the most serious aspect of this situation is that being fit to live with is a spiritual matter. It can be politically expressed but it cannot be politically manufactured it must start in the intelligence and conscience and good-will of people.

Theosophy and all true religions make a constant appeal to the best in man, but theosophy, because it makes understandable the underlying reasons for ethics, probably more so than any other system of thought, exerts a continual pressure on the conscience of man, awakening in him a knowledge of his full responsibility in life. There is ample evidence all about us that a world conscience is emerging out of the urgency and stress of our times and there are movements in the outward as well as the inward affairs of human life which give promise of the dawn of a new day for humanity.

Theosophists feel that the great universal ideas that have poured

through the theosophical society into the thought life of the world, have been no mean factor in bringing about this awakening world conscience, and we feel definitely that now is no time to relax our efforts, but rather it is this urgent need of the times that prompts the increased efforts now being made to spread this enlightening philosophy among men. It is quite possible that the influence exerted in the next five years by the theosophical society and all other religious and philosophical organizations to keep the conscience of the world alive and sensitive to the great issues of right and wrong, may mark the difference between seeing that new day dawn with all its spiritual promise, or of seeing the heavy clouds of human folly and ignorance obscure the light for a thousand years to come.

World brotherhood has indeed become a "must." The one and only prerequisite to membership in the Theosophical Society has been the acceptance of the belief that universal brotherhood is a fact in nature. Of course this applies to more than just human brotherhood. It points to that fundamental doctrine of the underlying unity of all life. Nevertheless, it also proclaims the fact that the Theosophical Society is working for world brotherhood, although it is working primarily to disclose those great fundamental truths which, if universally known, would make a true and lasting spiritual brotherhood a possibility. In fact to form a working nucleus for such a brotherhood is the society's avowed purpose.

Isn't it a strange thing how humanity, having traveled the long weary road upward in evolution, has finally, through human intelligence and ingenuity, almost gained complete control of all the kingdoms of nature *below* his own — in other words, has gained virtual control over his *external* environment, and has now only himself left to fear? Only man threatens and is the enemy of man, and he has now but to learn to conquer himself. As nations and as individuals we must learn how to make ourselves "fit to live with." But this business of making ourselves fit to live with resolves itself first of all into an individual

matter, because a nation reflects the spiritual advancement of its people. Each individual must say to himself: "What am I doing to make myself fit to live with." A man's inner growth is something he alone can undertake. No one, not even a Christ or a Buddha, can do our growing for us. We can of course be helped, we can be taught and encouraged; but upon each one alone falls the labor of evolving forth and expanding his own inner consciousness, and the key to it we are taught is discipline.

Cord Meyer, Jr., has well expressed this thought in the closing chapter of his book, *Peace or Anarchy*:

Measured against the infinite age of the earth and stars, the span of human existence is brief indeed. Yet in the comparatively few years that man has inhabited the planet, he has achieved great and wonderful things. From the caves where he once lived in savage ignorance, he has won his way to a nearly complete control over his natural environment. Now he has only himself to fear. He can use his new-found power to destroy himself and all that has been built and thought through the laborious centuries, or he can find a more generous existence on this earth than ever before was possible. This is the decision which we, as the living representatives of the race, must make in our time.

To come back to our subject of contentment — the secret of contentment. We have already defined contentment as meaning inner peace, peace of mind, and we have also indicated that the secret of its achievement is the reaching out in thought and in action unselfishly towards others. It is really no secret at all.

The greatest of all gifts is the *giving of the self*. But this movement outward, away from ourselves, in service to others, is not an automatic thing for our lower personal selves. It follows, therefore, that we must, through discipline, which means by training and

practice, learn to control the lower will by the will of the higher self. This is done naturally and without strain, but it has to be done, and not just thought about. Even though it may appear to be a relatively slow process, it is a safe one and leads eventually to the true path in life, a path which once entered upon brings a rapid acceleration of spiritual growth.

Perhaps it is also the last step and every step in between, for only by living for others can we impersonalize ourselves sufficiently for the Great Peace to be ours. May we not truly say, then, that contentment or inner peace is but the fruit which develops when the aspirant travels successfully the path which leads to illumination and union with the God within?

The Theosophical Forum

THE THIRD EYE — *Allan J. Stover*

There are many statements in theosophical literature referring to a time when mankind, much wiser though less developed intellectually than at present, possessed a Third Eye which served as an organ of spiritual clairvoyance as well as of objective sight.

The pineal gland was in earliest mankind an exterior organ of physical vision, and of spiritual and psychic sight. But due to the evolutionary course that the human frame followed, as time passed on and our present two optics began to show themselves, the pineal gland or the "Third Eye," the "Eye of Siva," the "Eye of Dangma" began to recede within the skull, which latter finally covered it with bone and hair. It then lost its function as an organ of *physical* vision, but has never ceased to continue its functions even now as an organ of spiritual sight and insight. — G. de Purucker, *Man in Evolution*, pp. 367-8

Since nature repeats herself everywhere and each creature records in its form and life cycle the age-long history of the race to which it belongs, it may be expected that what took place in the history of humanity must surely have been reflected in the evolution of the lower animals as well. This is shown in *The Secret Doctrine* where H. P. Blavatsky says:

In the beginning, every class and family of living species was hermaphrodite and objectively one-eyed. In the animal, whose form was as ethereal (astrally) as that of man, before the bodies of both began to evolve their coats of skin, viz., to evolve from *within without* the thick coating of physical substance or matter with its internal physiological mechanism — the third eye was primarily, as

in man, the only seeing organ. — II, 299

Continuing, H. P. Blavatsky discusses the development of the lateral eyes:

The two physical front eyes developed later on in both brute and man, whose organ of physical sight was, at the commencement of the Third Race, in the same position as that of some of the blind vertebrata, in our day, *i.e.*, beneath an opaque skin. Only the stages of the *odd*, or primeval eye, in man and brute, are now inverted, as the former has already passed that animal *non-rational* stage in the Third Round, and is ahead of mere brute creation by a whole plane of consciousness. Therefore, while the "Cyclopean" eye was, and still *is*, in man the organ of *spiritual* sight, in the animal it was that of objective vision. And this eye, having performed its function, was replaced, in the course of physical evolution from the simple to the complex, by two eyes, and thus was stored and laid aside by nature for further use in Aeons to come. — *Ibid.*

The foregoing outlines the evolutionary development of the organs of sight in both man and beast from theosophical records.

Now to examine the physical evidence as known to modern science and as found in the structure of various creatures.

To begin with, most insects have two kinds of eyes; two compound eyes containing many hundreds of facets, and usually three simple eyes or ocelli arranged in a triangle near the top of the forehead. There are certain insects which possess one or the other type only, but when this occurs a portion of these organs is structurally modified for specialized use in dim light. This reminds us of the distribution of the rods and cones in the human eye so that the central portion of the eye is adapted to bright light

while the outer portion is more sensitive to night sight.

Among the night-hunting spiders three of the eight ocelli, there being no compound eyes, show an opalescent lustre and are believed to function where there is little light.

The May-fly in its adult state lives only for a day, and having no need to eat possesses only rudimentary mouthparts. Yet for that single day a portion of each compound eye (there being no simple eyes), is modified to serve during the mating flight of evening. Short as is the adult life of the May-fly there is a previous existence when as a water-nymph it crawls about on the bottom of a stream, finding its way by means of primitive ocelli. After some twenty moults the insect larva crawls above the water on a small twig and bursting its skin emerges as a winged May-fly. But there is still another moult and early in the course of its *one* day, it sheds a final delicate skin from the body and even the surface of the wings and appears more a creature of air than of substance, however refined.

Stranger still are the bi-focal eyes of many water-bugs which have double compound eyes, and so can see both their enemies in the air and beneath the surface of the water at the same time.

The common ant has a pair of elaborate compound eyes, with the addition of three ocelli forming a triangle above the lateral eyes. It has been suggested that the simple eyes are of value for close vision or in dim light, although this is not definitely established. That ants have some very efficient means of night vision seems certain.

The great majority of insects, like the ant, are equipped with both types of visual organs, and it is interesting to note that in the metamorphosis cycle of those insects like the Dragonfly and Butterfly the larva (caterpillar or nymph) possesses only the small

ocelli, and acquires the compound eyes at the time it emerges as an adult. This cycle of metamorphosis, like the embryonic development of the higher animals, is believed to recapitulate the history of the species. For this and other reasons entomologists are agreed that the simple eyes still present in most of the insects, are a remnant of what was formerly the *only* organ of sight. In other words the evolution of the insect eye parallels that of other branches of the animal kingdom in many ways.

Among the vertebrates vestiges still exist, concealed within the skull, of what corresponds to the traditional Third Eye of man, although science speaks of it as the Median Eye and states that there were originally not one eye but a pair arranged tandem, one slightly behind the other, on each side of the median line of the skull.

Dr. G. L. Walls says:

There are indications from elasmobranch embryology, that the provertebrates possessed a metameric series of paired visual organs on the roof of the head. Most of them rapidly disappeared as the lateral, ordinary eyes became perfected; but two pairs of dorsal eyes still hung on almost until the cyclostome level of evolution was reached. In most modern cyclostomes, two dorsal eyes are present. They do not represent a pair, however, for they are arranged in tandem with one behind and below the other.

(1)

Each, according to Dr. Walls, is one surviving member of an original pair.

Remnants of this median eye are found today in fishes, amphibians, reptiles, birds and animals in such variety that it would be tiresome to name any but outstanding examples. The

common lizard and also the so-called horned toad have such a remnant in the middle of their foreheads although covered with scales. The brow-spot of the tadpole has a similar origin.

A number of the more primitive lizards possess a median eye which still functions as an organ of sight. Best known of these is the Tuatera which is now confined to a small islet on the coast of New Zealand. The Tuatera is a living fossil of the most primitive order of reptile known. In the center of its forehead is located, beneath a protective scale, a lens and retina, which still functions as an organ of sight although the Tuatera has the ordinary eyes common to all reptiles also.

Although the facts discovered by scientists regarding the evolution of sight appear closely to parallel the teaching of theosophy, Science has advanced little in its understanding of the function of the median or pineal or third eye in man, or in the animals.

The philosopher Rene Descartes, who died in 1650, thought the pineal gland to be the seat of the soul, that through it "the soul comes into contact with the body, whence it radiates by means of the animal spirits, nerves and even the blood." Commenting on this Dr. Adolph M. Hanson remarks:

It now seems that it may influence the acts of that fundamental ego that is back of human personality more than any other gland.

This small gland, that median eye of our arachnoid [!] ancestors, from being the lone all-seeing eye of the past seems to be the hidden, back-seat driver of human destinies, that in some way, for good or for evil, may influence the acts of the ego in the flesh more than any other one gland. It was laid down with the foundation of

the face and therefore, was most likely the very first tissue, or one of the first tissues, to take on the function of internal secretion. — *Minnesota Medicine*, February, 1937 p. 78

Unfortunately medical science, in addition to misunderstanding Descartes, confines its investigation to the one aspect of glandular secretion and its effects upon the body alone, and makes no distinction between the lower animals and man.

Here the theosophical doctrines open up a new vista of thought. For they show that with the obscuration of the Third Eye within the skull in man, its function changed from that of objective vision to that of spiritual clairvoyance and that its destiny in the future is to become increasingly active. As shown in the *Dialogues of G. de Purucker* (III, 374), there are three lines of evolution for the human being, each of which has its focus or point of contact in the human body. These three also are three states of consciousness. Of these the Divine-Spiritual functions through the heart, the Psycho-Mental through the brain, and the Vital-Astral-Physical line of evolution through the liver and spleen. Since the descent of the Manasaputras and the coming of mind, the brain has developed enormously and at present contains the highest and most ethereal substance in the human body, being composed of quasi-spiritual energy or fluid derived from the manasic plane and beyond the reach of scalpel or test-tube analysis.

As expressed in *Man in Evolution*:

Connected with the brain are the two wonderful glands, the pineal and the pituitary, already mentioned. The pineal gland is as it were a casement opening out into infinite seas and horizons of light, for it is the organ that in us men receives the direct mahatic ray, the ray direct from the cosmic intellect. — p 366

The pituitary gland is described as the lieutenant of the pineal for "It is the organ of will and urge and growth and impulse; but when the pineal sets the pituitary vibrating in synchrony with its own vibration, you have a god-man, for there is the intellect envisaging infinity." (*Ibid.*)

It is, however, the Buddhist light of compassion and divine love which illumines the heart causing it to glow and which in turn sets the pineal gland vibrating. Thus, after all, the way to awaking the Third Eye is through the *living* of compassion and love for all that lives.

H.P.B. — THE MAKER OF THE FUTURE — *Orange Clark*

Until H. P. B. put on public record an outline of the Ancient Wisdom no such complete system of philosophy and religion had been given to our world at any one time in recorded history. Jesus and most of the other great teachers of religions taught orally. In each case only fragments have come down to us and those fragments chiefly in the form of mutilated and misunderstood symbologies. Such systems of thought are entirely unlike the Goddess of Wisdom, Athena, who sprang full-fledged from the brow of Zeus. It was thus that Theosophy came from H. P. B. and her Teachers.

H. P. B. was too great and too brilliant to fit any everyday standards. So many facets she had to her unmeasured and, it seemed to many, unpredictable character that few could understand her except in part. Consequently some few concluded that she must be the greatest of unexplainable impostors.

Because of her astonishing intuition she saw the good and bad in every one and what she often saw made her life a martyrdom. The kindly and the perceiving often see much that makes their hearts ache.

A few, feeling that they were understood by her too well for their own comfort, were furious and, losing all sense of proportion, attacked her bitterly and even with dishonest and subtle monomania.

Thus it has been with most of the greatest theosophists in all ages — most of the world's greatest spiritual leaders — for only the noble of heart can understand the great of soul. A book was once published, not by a theosophist, entitled: *The World's Sixteen*

Crucified Saviors', and truly they were crucified on worse than crosses of wood. However the bitterness of the attacks upon H. P. B. helped her to keep this little known philosophy before the world. Because slander travels faster than truth, her enemies obtained a hearing to which they were in no wise entitled, thus her enemies were her most effective advertizers. And now we and the race are reaping the benefits of her martyrdom, the benefits of the enlightenment her widely spreading doctrines are bringing. Thus it has often been. For instance, the story of the crucifixion made Jesus the greatest figure of our Western world; without that story he might have remained an almost unknown Jewish prophet.

We can well consider much and ponder often on all the factors that went to make H. P. B. so potent a force in influencing the ideas and ideals of our time. She and her following had such effects because small beginnings at the right time may change the course of history; a minute trace of medicine given at the right time by a wise physician may put physical and mental health into the whole body. A microscopic germ of pollen put upon the breeze may make a great tree. The tree may produce a forest. The right idea started at the right time and place may be the match that starts a conflagration or lights a beacon, or it may change the literature and music of a nation. The right thought given at the right time by a chance acquaintance to the little known intimate of a great statesman may change a trend of world events. Such incidents are a matter of history. A catalyst may be the minute quantity that starts a reaction and changes the whole compound.

Thus it was that the little known but so potent H. P. B. and her ideas started at the right time made so deep an impress on the present and longtime future of the race.

She brought a philosophy so broad and so fundamental in its logic

that foremost thinkers of our time are using many of her ideas as their very own. We congratulate them for it, for thus they are building toward a new civilization based upon a wholesome philosophy of life and an attitude of brotherhood toward our fellow men.

H. P. B.'s book *The Secret Doctrine* has been spoken of by some great modern thinkers as the "bible of the future," to which all sects and religions will proudly trace their origin. Her teachings are so vast and rich that every individual and every small or worldwide group can and will take therefrom as much as they desire, as much as their souls need at the time. Already we can see the widely scattered beginnings of this, though no one can take in all that she has offered. From the seeds she sowed whole forests of ideas are growing of many shades of foliage and many varieties of fruitage. Not all the fruitage may be equally good. She foresaw that and could not help it; imitations are inevitable and dilutions may seem desirable to many.

As all the great religions of the past and present sprang from one primeval source so will those of the future spring from, or wander from, or be regenerated by, the broad outlines and multitudinous details she flung wide to the world. In an age of change no one can stop the chain reaction of truth. No one can dam back the flood of regenerating ideas that is sweeping many parts of the world.

She gave to Christianity, and to every other religion, the magically enlightening explanations of the symbology back of their fundamentalist dogmas. She reshaped the trend of religious thought into liberal and what the enlightened public can now see to be common-sense interpretations of the symbolisms and allegories of the otherwise preposterous dogmas handed down from the Middle Ages.

At times throughout many years I met, knew and worked with many who had worked with or known and crossed friendly swords with H. P. B., including some few who never became theosophists. Having begun my intellectual life in H. P. B.'s lifetime, and under the impact of her writings as they came from the press, and surrounded as I was by many shades of thought and constant discussions of the trends of independent thinking, I can truly say that no other person or group of persons produced such deep and ever-growing impressions on this age as she has produced. Until H. P. B. brought her philosophy, outside of a few almost unknown mystics and incomplete ancient oriental systems, there was in the Occident no generally known doctrine of karma, practically no knowledge of reincarnation; no thought that universal brotherhood is a fact in Nature; no doctrine or realization of the god within; and no explanation of how the spiritual generates the mental and material and all of the world we know.

All of these ideas and enough more to keep philosophers busy for an age she brought, and they are now definitely, or in part, incorporated into the thinking of mankind. But with all of this, let us not forget H. P. B.'s human side, her love of adventure, her scintillating humor, her love of human beings, which was what made her work possible.

The Theosophical Forum

H. P. BLAVATSKY AND PEACE OF MIND — *Grace Knoche*

A few days ago I came across a book entitled *Peace of Mind*. The author is a Jewish Rabbi, a very great man, a scholar, and highly thought of everywhere. His book (selling by the tens of thousands), breathes love and gentleness, for its object is to bring Peace of Mind, so far as possible, to a world that is gripped by fear. But outside of the Christian Bible, all that he tells the reader to go to for help, is psychiatry and modern psychology!

Well, if you have seen some of the books on the last two subjects that are now required reading in our colleges, you would wonder, as I did, why this great man did not lead us instead to the deeper teachings of his own religion — for in large part they are pure Theosophy. Perhaps he thought we could not understand — I do not know.

But as I read on, my mind kept gravitating first to H. P. Blavatsky, and then to the atomic bomb which is keeping the nations in such a state of fear. And naturally, too, because in her greatest work, *The Secret Doctrine*, H. P. B. gives some ten of her glorious pages to a description of a similar atomic experiment, made in the early 1870's by one John Worrell Keely, but now lost and forgotten. He was never able to pass the final secret on to others. Something in his own nature blocked it, and the world was saved. He was not "*permitted* to succeed." In another passage, H. P. B. states that "he was not *allowed*."

H. P. Blavatsky tells us that Keely's discovery was the frightful "sidereal Force" of the Atlanteans, called by them *mash-mak*, and later by Bulwer-Lytton in his book *The Coming Race* called *vril*. And now the same frightful Force has been discovered and harnessed by modern scientists, and the result is the atomic bomb

— a weapon so frightful that the whole world is afraid.

Yet it need not be. Consider those cryptic words: "was not *permitted*," and "he [Keely] was not *allowed*," to succeed. Think them over and then ask yourself whether the Great Beings who watch over and protect this world of ours would ever "permit," ever "allow" the nations today to destroy each other when, comparing them with the past and taking them as a whole, they are earnestly trying to find the better, the brotherly way — the only way that is left.

This is just one instance, one example, of what H. P. B. is doing now for a world that was yet unborn when she wrote *The Secret Doctrine*. Through her teachings she is more alive now than when she was with us in that poor aching body. Let us take one more, just one out of almost numberless teachings or hints in this remarkable book that will be studied for centuries, indeed for millennia to come: the doctrine of Cycles — practically unknown in its *universal* reach for thousands of years. When we studied Ovid's *Metamorphoses*, with its Great Cycle of the famous Four Ages within it: Golden, Silver, Bronze, and Iron, we were told that it was a myth, and soon forgot it. But H. P. Blavatsky tells us that this Great Cycle was a part of Universal Nature, that it *happened*. Moreover, that India carried this story down *as history* from the most ancient days in the *Rig-Veda*, "the oldest document in the world."

In the very early days of India men lived in a true Golden Age. In Sanskrit it was called Satya-Yuga, the Age of Truth, when all men were brothers, and knew it; happiness and justice prevailed; they felt that loving nearness to the Gods and to their Great Teachers or Rishis that all mankind should feel. Fruit and flowers alone were laid upon their altars, never flesh and blood.

But centuries passed, and selfishness crept in. Burnt offerings lay

upon the altars; unhappiness and disease began to appear. It was the Treta-Yuga, the "Age of the Three Fires," when the people were three parts good, with one part evil. Then came the Dwapara-Yuga, the "Age of Two," when two parts were good, two parts evil, and wickedness increased. Lastly, the Kali-Yuga, the "Age of Iron," the Age we ourselves have been living through during the last five thousand years, with its injustice, persecution, misery, poverty, deceit, disease, and almost constant wars. Are things to go on getting worse and worse, or what? That is the world's question now.

Again *The Secret Doctrine* has the answer in these Four Ages, known to every land, every period, somewhere in the world. For humanity, for this world, the worst is over, for we are now just entering another Golden Age, or Satya-Yuga, an Age of Brotherhood and Truth, and it is comforting to know that in the long cycle we have passed the lowest point, and that while things do look discouraging, too much like twilight, still the day is here.

And so with all the teachings that H. P. B. left for us to profit by. They give us hope; they give us faith in divine justice. Reincarnation, Karma, Evolution, the true meaning of Hierarchies, the long-lost teaching that man has a higher as well as a lower nature, and that all depends upon whether he faces this truth and determines to go up instead of down. You cannot be discouraged, even by the newspapers, if you believe that men are brothers, and that this brotherhood is *universal*.

Nor has the work of H. P. Blavatsky been unsupported by men prominent in the philosophic and scientific world. Camille Flammarion, the great French astronomer of the day, and a member of the Theosophical Society, literally sat at her feet. If you can find a copy anywhere of his book, *Urania*, long out of print, do read it. It is the purest Theosophy. There was Alfred

Russel Wallace, another scientist who studied H. P. B.'s teachings for years, and endured persecution for doing so. In one book in particular he dismisses the current belief that man became Thinking Man by the long slow processes of evolution as seen in the lower kingdoms, and tells us that the gift of Mind was not "evolved" but was *bestowed* upon man, and *at a certain definite period in time!* There was the great scientist Crookes whose success in discovering "radiant matter" drew the attention of the very Adepts who had taught H. P. Blavatsky. They watched his work, and left the record of Their help in *The Mahatma Letters*. There was Edison also, for years a close student of the teachings of Theosophy, and a member of the T. S. And many more, in the East as well as the West.

There were her Successors whom she trained in leadership by means of the teachings that she left. You cannot touch them with the breath of fear; they are equal to any emergency, any attack, as she was. Their daily bread is disappointment — yet they carry on.

Returning to India — because H. P. B. so loved that country and its people, although she herself was trained in a higher school "beyond the Snowy Range" of the Himalayas — I do want to quote a few lines from a letter written by her to one M. D.-A. Courmes in France, a writer, a member of the Theosophical Society, and her devoted disciple and friend: published in English for the first time in *THE FORUM* for May, 1950. It reads as follows:

"Let us conclude this then from the writings of your articles in the *Revue Spirite*, for you are right, the time is near, nearer than you may believe perhaps — when the Occident will be finally initiated by the Orient."

BHAGAVAD GITA

Therefore, perform thou that which thou hast to do, at all times unmindful of the event; for the man who doeth that which he hath to do, without attachment to the result, obtaineth the Supreme. Even by action Janaka and others attained perfection. Even if the good of mankind only is considered by thee, the performance of thy duty will be plain; for whatever is practised by the most excellent men, that is also practised by others. The world follows whatever example they set. There is nothing, O son of Pritha, in the three regions of the universe which it is necessary for me to perform, nor anything possible to obtain which I have not obtained; and yet I am constantly in action. If I were not indefatigable in action, all men would presently follow my example, O son of Pritha. If I did not perform actions these creatures would perish; I should be the cause of confusion of castes, and should have slain all these creatures. O son of Bharata, as the ignorant perform the duties of life from the hope of reward, so the wise man, from the wish to bring the world to duty and benefit mankind, should perform his actions without motives of interest. He should not create confusion in the understandings of the ignorant, who are inclined to outward works, but by being himself engaged in action should cause them to act also. All actions are effected by the qualities of nature. The man deluded by ignorance thinks, "I am the actor." But he, O strong-armed one! who is acquainted with the nature of the two distinctions of cause and effect, knowing that the qualities act only in the qualities, and that the Self is distinct from them, is not attached in action.

Those who have not this knowledge are interested in the actions thus brought about by the qualities; and he who is perfectly enlightened should not unsettle those whose discrimination is

weak and knowledge incomplete, nor cause them to relax from their duty.

Throwing every deed on me, and with thy meditation fixed upon the Higher Self, resolve to fight, without expectation, devoid of egotism and free from anguish.

Those men who constantly follow this my doctrine without reviling it, and with a firm faith, shall be emancipated even by actions, but they who revile it and do not follow it are bewildered in regard to all knowledge, and perish, being devoid of discrimination.

But the wise man also seeketh for that which is homogeneous with his own nature. All creatures act according to their natures; what, then, will restraint effect? In every purpose of the senses are fixed affection and dislike. A wise man should not fall in the power of these two passions, for they are the enemies of man. It is better to do one's own duty, even though it be devoid of excellence, than to perform another's duty well. It is better to perish in the performance of one's own duty; the duty of another is full of danger.

The Theosophical Forum

REINCARNATION — *Alice Comerford*

An intense and far-reaching quest is insistently and subtly manifesting in humankind the world over. Hearts are heavy with care, and many minds are replete with bewilderment and restless confusion. Particularly is this true of the Western nations, who, harassed by the self-inflicted perplexities of a mechanistic philosophy, and now losing faith in a seemingly unjust Creator, are plagued by a cynical and desperate outlook. Yet the peoples of the world have only to open their hearts and minds to Truth, for it does exist, in purity and immediate accessibility. Once souls are turned in sincere search for the realization of life's true meaning — for the answer to the enigma of the inexorable Sphinx — there is no longer room for self-created despair and disharmony.

There has long been made available to the public full and fascinating collations of material which reveal, to a surprising degree perhaps, the widespread acceptance and understanding of the ancient and eternal doctrines of Reincarnation and Karma, which doctrines once permeated, in a natural and unquestioning way, the whole of civilization. Through the advancing ages, however, portions of the world have forgotten, have obscured the truth in a murky materialism which lauds wealth, personal gain and power, and condemns the altruistic philosophical motive which embodies the potentialities for the realization of the Brotherhood of man — the law of harmonious interdependence fundamental in Nature.

People may and do vary in motive, in depth of sincere desire to obtain, or more accurately to awaken, the realization of the truth latent within all hearts. Many are curious, but are satisfied with contemporary dogma and creed. There are those who know that

the dark corners of life can be illuminated by the understanding of the doctrine of Reincarnation and of its sister truth, Karma. Happy are those whose eyes are unveiled of the mists of skepticism, obdurate bigotry, and inflexible opinion, who can look with clear sight upon this doctrine so comprehensible, logical and satisfying, and begin to understand deep within.

Many Theosophical writers are chiefly concerned with reaching the Western mind, as the doctrine of Reincarnation is already inherent in most of the Eastern religious and ethical systems, and has been for countless ages. Of course, original Christianity also included the teachings of re-birth. To the modern Christian this fact is foreign because the truth has been veiled and distorted as the religion has passed from a purer state to one which dwells on the indoctrination of malformed conceptions.

Reincarnation is part of the Universal law of Reimbodiment, which includes all creatures in all degrees of evolution. In specific application to mankind, reincarnation is the reimbodiment of the soul or Ego in the flesh body upon the earth many times, for the purpose of spiritualizing the Ego through the experience offered in the human realm of existence. The doctrine implies the immortality of the soul, and reveals the supreme justice of the laws which govern evolution. Within all sentient beings dwells a center of consciousness which is a portion of the great Universal Consciousness which is Reality and the native substance of Being.

E. D. Walker, in his book, *Reincarnation: A Study of Forgotten Truth*, describes the soul as

an eternal water-globule, which sprang in the beginningless past from mother ocean, and is destined — after an unreckonable course of meanderings in cloud and rain, snow and stream, spring and river, mud and vapor — at last to return with the garnered experience of many

separate existences into the central Heart of all.

This teaching stands aloft, and is accountable, with unsurpassed depth and logic, to any current "enlightened reason."

To the skeptic who sees no evidence to support the doctrine, this philosophy offers many ideas which appeal to the imagination, intelligence, and to sound reasoning. For the believer by blind faith who envisions the soul after death in a region of eternal bliss, and who finds no explanation for the origin of the soul; for the fatalistic or scientific materialist who relegates all the tangible and intangible human faculties to a "variety of atomic qualities" which does not find a reason for the vast and variegated character of living things — for these a study of Reincarnation reveals the complete sequential picture which rounds out the incomplete and often irrational creeds and doctrines which exist.

Most of the world professes belief in the immortality of the soul. Yet, an immortal state succeeding death, as the Christian asserts, should necessarily presuppose a pre-existent state. The Christian idea of "special creation" at birth must therefore have to include annihilation at death, for it is meaningless to think of something created spontaneously from nothing and enduring forever more. What is created in such a manner must logically be destroyed when a life span is complete. None of the ordinary schemes so satisfies the inner sense of logic, reason and intuition as does the idea that the soul of man and indeed of all beings, is of an eternal past, an eternal present, and an eternal future, prevailing as an eternal NOW, and that this soul is periodically embodied by the unfailingly just laws of Nature. Each of the separate souls is a part of an Over-Soul, in Emerson's terminology, which encompasses and composes all the offspring, or individual souls, which contain, complete within themselves, the entire nature of the Universal Soul.

Analogous relations between the various living things upon the earth are further evidence of a oneness, manifest in different forms. The process of the developing embryo, which the biologists examine, is a recapitulation of the numerous forms which the Ego has ensouled in its evolutionary progress. Physical evolution necessarily demands a parallel evolution of the moral, intellectual and spiritual aspects of man. This appeals to the receptive mind as conclusive evidence that this evolutionary process necessitates a long series of lives, each with its contribution of enriching experiences for the progress of each evolving entity.

Today our attention is called to the fact that science has begun to realize that the soul is reimbodied and that the marvelous "corporeal organism" is directed by a "pre-existent soul-monad." The law of cause and effect which science demonstrates experimentally is unavoidable evidence of an underlying cause which produces the effects of which we are consciously aware at all times. Plato once remarked that "the soul has a natural strength which will hold out and be born many times . . . and always weaves her garment anew."

Further, this teaching is evidenced in a satisfying explanation of "original sin," which idea plagues the minds of many religionists. Original sin, attributed to the fall of Adam, is a misrepresentation of the idea and fact of Karma, or the Law of Consequences. How much grander to think that man is not born in a state of corrupt depravity, but is essentially Divine, with a free will which determines the nature and extent of suffering and evil, or of goodness and happiness which will be each man's lot!

A final evidence of Reincarnation is its service as a satisfactory explanation for the strange reminiscences and experiences which men often know. How often are we awed by a peculiar sense of familiarity with new people, places and situations. Does not this

attest to previous associations? Accounts of strange experiences are found in the writings of such literary lights as Coleridge, Poe, Hawthorne, Dickens, and men of the deeper past as well as our contemporaries. Eastern and Western prose and poetry are replete with convictions of belief and evidence of understanding of this ancient, undying doctrine. Men need only use a discerning eye, and exercise a broad fluidity of thought and opinion to unearth the many affirmations of Reincarnation, metempsychosis, and Reimbodiment which appear throughout the literary world.

Such a magnificent and all-encompassing teaching incurs natural objections from those to whom it is foreign, and to whom it is apparently antagonistic to popular religion. Briefly, these objections are classed in four general categories. The first most often presented is: "Why do we have no memory of our past lives?" The fact is, we do, as nothing is lost in the Universe. Details are obscured, but character remains as the result of the causes which we self-established in past lives. Character is the result of Karma, which directs and molds our very persons.

To the plea of injustice for having to suffer for forgotten deeds of the past, the fact of the absolute balance and infallible law of Justice which rules all life, is pointedly reiterated in the Wisdom-Religion doctrine. Whether our lives are going to reflect high ideals in ethical and moral standard and action, causes which result in effects of *just consequence*, depends wholly on our own choice.

Heredity, which seems to conflict with the Wisdom-Religion doctrine is, on the contrary, more thoroughly and logically explained than science has heretofore satisfactorily done. And for those who fear the loss of contact with loved ones, it is well to understand, and comforting to know, that kindred souls have

imperishable bonds which maintain an attraction throughout the countless ages and phases of evolutionary progress.

Reincarnation, referred to in the Christian Bible as pre-existence, is therein alluded to many times. Solomon, in *Proverbs*, spoke with wisdom when he said, "The Lord possessed me in the beginning of his way, before the works of old — when he prepared the heavens I was there." This and the very familiar passage, "In the beginning was the Word, and the Word was made flesh . . .," from the *Gospel of St. John*, are further examples of the presence of the pre-existence idea which conduces directly to the spiritual idea of Reincarnation within the Bible. Allegories therein delineate the progress of the soul and teach the responsibility of the individual in matters of his own sin.

A serious misconception which has been widespread throughout the world for some ages is that of the passage or the transmigration of the soul through animal forms as a consequence of corporeal sins. This erroneous conception is found within certain schools of Brahmanism and Buddhism in the East. The idea has permeated the native races of Africa and America which believe that immediately after death the soul must find a habitat, and thus passes to animal bodies. Some Eastern philosophies affirm the presence of the human souls of relatives and friends within animal bodies, and so prohibit the slaughter and consumption of them. Distortion of the *inner* idea of transmigration has resulted in these grotesque conceptions of the truth. Actually, it is the component atomic constitution of a man which disperses after death and seeks the various home-planes of consciousness, be they animal, vegetable, mineral, or divine. The Higher Ego or human element of man could not possibly assume an animal habitat after it has reached the evolutionary height of humanhood. E. D. Walker appropriately remarks:

It would be as impossible for a gallon to be contained in a pint measure, as for a human spirit to inhabit an animal body.

Fearsome conjectures of Hell and blissful hopes of an eternal paradise of a conventional Heaven, coupled with an unassuaged fear of death characterize much thought today. The beautiful teachings, of which Reincarnation is a part, are, however, embracing far greater portions of the total consciousness of man than has been true for great time periods. Slowly is man beginning to understand that the only Hell is that evil and misery which he self-predisposes and precipitates. The Heaven of blissful rest is called by Theosophy the Devachanic state between incarnations.

Death is not the terrifying conclusion to existence, but the liberator of the soul as it moves from stage to stage in the great evolutionary plan. The personality is mortal, the soul and spirit, immortal. Through the beneficent law of Karman man proceeds along the path to ever greater spiritual heights. Karman, the Benefactor, perfect in action, equitably dealing with the causes set up by individual wills, directs and molds the infinite number of evolving beings. And it is this infallible law of Justice, operating in and through the inner, causal and invisible as well as the visible worlds — Karman — which activates the reincarnating process.

The most natural question then to arise in the probing mind is: "What reincarnates?" It cannot be the physical body, for we know that that disintegrates soon after death; nor is it the personality with which we are so familiar and which we too often mistake as the real man — the personality which is found to be a mere mask of the Inner Man, the Essential Being. So that which perpetuates the human being, with his numerous appearances on this earth in

varying personalities, is "the EGO, the individual and immortal, not personal I; the vehicle, in short, of the ATMA-BUDDHIC MONAD," says H. P. Blavatsky in *The Key to Theosophy*.

To cover the intricate and fascinating process by which the Ego reincarnates into earth lifers a study complete in itself. Consequently, a very brief outline of the occurrence is all that can be mentioned here.

When the man dies — and death is only a passage to another state of consciousness, not the annihilation of the real Being — there occurs a breaking up of the astral-vital energies, followed by the dissipation of the personality, or mental-emotional being. The Spiritual Ego, Buddhi-Manas, absorbs all the good which the personality has enfolded and expressed, and this Ego then retires to a blissful rest in the Devachanic state or heaven-world of subjective consciousness.

For a time after the death of the physical body the Ego hovers near the earth where its attraction is strongest, and it experiences a panoramic review of the life just past, seeing every event in full detail. This experience makes clear to the Ego the reasons for every incident which came to pass in the human society, linking them in such a manner as to depict the complete pattern, and to confirm the justice of Nature.

After a period of time, relative as time is, the Ego is awakened by the magnetic force of Karmic seeds or causes which demand their equitable consequence. In perfect cosmic rhythm the Law of Reimbodiment marks the course of the Ego, as it is once again drawn to material manifestation, reclothing itself with the several sheaths of consciousness or principle-substance, composed of the life-atoms of which all planes of substance are formed. The Ego builds its physical body, and once more appears on earth in order to undergo its next series of lessons through experience in the

human realm.

No one retires at night with a deadly fear of the permanent loss of waking consciousness — sleep comes as a welcome rest to tired body and mind. In parallel manner, no one should approach the event of death with the terrible fear of the consequences. For, as so often said in our Theosophical literature, "Sleep is the imperfect death, and death the perfect sleep." The cycle is repeated throughout all forms and planes of being, always for the purpose of spiritualizing the vehicles of the Essential SELF.

This is Karma and Reincarnation — twin doctrines basic in the whole of Eternal Truth. Beautiful, practical, and as real to the heart and mind as they are inherent in Being. As Man looks up and out he cries for understanding — for as Frances Quarles once said:

"The weary traveller oft doth seek to know
How far he's come, how far he has to go."

The Theosophical Forum

THE VEIL OF MAYA — *E. A. Holmes*

There are times when life seems dull, and too much composed of routine office-work, or washing up of dishes. Of course, we may have read of Brother Lawrence, who felt himself in the presence of God even when washing up dishes, and a little thought will show that provided we "keep our heads above water," we must be moving towards better things, even if only on the slow current of evolution. Yet most of us enjoy a change, if it only takes the form of an occasional visit to the theatre. We may be inclined to blame ourselves for this state of things, for displaying some form of escapism, for not facing squarely up to life, but one wonders if this is the whole story?

Another diversion in which many people indulge are holidays, and it would seem that one idea in taking a vacation is to find interests which are entirely foreign to the molds of our minds, something new, something free from the rust and scale which clings around too familiar things. We find folk who live by the sea taking holidays in the country, and country-folk flocking to the seaside, or even to the cities, incredible though this may seem to sophisticated city folk! Yet even we perhaps can remember a time when we found glamour and romance in city lights and sounds and smells, when our occasional visits to the city remain in our child-memories as phantasies or dreams, hardly related at all to daily life.

Some of you may have been abroad, in foreign parts, and will recall the sense of unreality surrounding the strange sights and customs you came across. For one person, at least, no matter how many times he visited Egypt during the war, and no matter how many weeks or months he stayed on each visit, the sight of white

robes and red fez never failed to raise a sense of phantasmagoria, and make-believe.

It would seem that in such cases when we come across something entirely unfamiliar to us, we have no physical sense, no physical awareness with which we can contact it, and we have to take things in with some non-physical faculty, just as we do during sleep, the result being that it all seems like a dream.

Arthur Schopenhauer, the German philosopher, in his book *The World as Will and Idea*, wrote:

The Vedas and Puranas have no better simile than a dream for the whole knowledge of the actual world, which they call the web of maya.

The Vedas and Puranas are ancient Indian works which treat of things from an inner point of view. From this inner point of view the physical world is a world of make-believe, and it may be that our craving for "fields and pastures new" is only part escapism, and part a revolt of our souls from the sham and unreality of ordinary life.

Schopenhauer went on to show that, physically, we know not a sun or an earth, but only an eye which sees the sun, and a hand which feels the earth. Our conceptions of sun and earth are at best only second-hand, and according to Theosophy, are still further removed than this. Theosophy speaks of the seven principles of man, each of which is a stratum of cosmic substance. Among these strata are located man's centers of consciousness, from the lowest to the highest. The lowest levels of our consciousness are the furthest removed from reality. The highest levels partake of that universal essence, which to us, from our human standpoint, is reality itself. And all these principles and vehicles and organs which divide us from reality, make up the

web of maya, or the veil of illusion.

The Sanscrit word *maya* roughly translated means "illusion," and the doctrine of Maya refers to the illusionary nature of the world in which we live. What form of illusion is it which Theosophy postulates as surrounding our every-day lives? Is it the illusion such as a mirage in the desert, when something is seen which is not in that vicinity at all? Is it something we only imagine, but which doesn't take place at all? Did we only imagine, for instance, that we came to the Lodge room this evening; do we only imagine that we eat, sleep, and carry on our particular vocations? These are examples of possible illusions, but they are not examples of maya.

An example of maya is given thus: You are walking along in the dusk and suddenly you see what appears to be a snake in your path. After jumping aside, you find, much to your relief, that it is only a piece of rope. The rope was there; it was real enough as a piece of rope, but your vision of it as a snake was illusory, and hence maya.

According to Theosophy, life is not a fiction, and we have not just imagined that we came here tonight; but do we know who or what we are? Can we see for what purpose we live, and have we any inkling of the patterns of destiny which have led us into our families, among our friends, and into our social and economic circles? These things we want to know, and these things are not apparent.

Two courses are open to us. We can say that there is no pattern of destiny, that there is no purpose in life, or we can say there is a purpose and it is up to us to find it. Mankind in general follows the former course. Orthodox opinion has it that chance, not justice, not natural law, rules our lives, and that life has little or no purpose beyond expressing our own ego, and the will to live.

From this conception rises the picture which Schopenhauer paints in the fourth section of his book. "Homo homini lupus" he calls the picture, a gruesome panorama of the prisons, torture-chambers, slave kennels, battlefields, and places of execution, sufficient to make everyone pause before accepting these things as the real human lot. In his delusion of separateness, man seeks his own well-being even at the expense of his neighbor. The pleasures he gets thereby are illusory and vain, says this German philosopher. The wish for them is a sort of pain, attainment begets satiety, possession takes away the charm, and there remains only — ennui, boredom. "The wicked man, by the vehemence of his volition suffers constant consuming inward pain."

This is indeed a pessimistic outlook for the transgressor, and we should imagine that in the face of such experience he would soon become a reformed character. Maybe in the full course of evolution, many aeons from now, this effect will come about, but it doesn't seem to happen overnight on any large scale, judging from our history books!

Schopenhauer's remedy is self-denial and resignation, the subduing of wishes and the conquering-of the will.

These moments in which, delivered from the ardent strain of will, we seem to rise out of the heavy atmosphere of earth, are the happiest which we experience.

So that in seeking for reality behind appearances, Schopenhauer would deny those appearances altogether, and seek direct for Nirvana, utter bliss and oblivion to this world.

The question of reality is approached from many angles in articles on Theosophy. In one case, truth was observed to lie beyond the strife and turmoil of everyday life, and only to be

approached by taking up the pilgrim's staff and leaving aside all that the world holds dear. Schopenhauer would seem to subscribe to this view. In another case it was asserted that spiritual reality lies at our elbow, and that only wilful blindness veils heaven on earth. Life is joy, and a spiritual Jerusalem can be built here on earth, now! Do these two convictions clash, and if not, how do we reconcile them?

Perhaps we shall find that these two apparently conflicting views are two aspects of the same thing. One aspect postulates the veritable existence of Truth and Reality behind things which are fleeting. Here is a sheet-anchor for us among the vicissitudes of life — something we can hang on to in times of stress. We could call it a philosophy of Life. The other aspect sets forth our relationship to this Reality, and gives us a philosophy of Living.

In just the same conjunction and contrast lie the Mosaic Law on the one hand, and the Sermon on the Mount on the other. "Ye have heard that it hath been said, an eye for an eye, and a tooth for a tooth." This is indeed the universal cosmic law from which none may escape, the law of karman, "as ye sow, so shall ye reap," "to every action there is an equal and opposite reaction," an ineffable law, a philosophy of Life in toto, but not a rule for human conduct. "But I say unto you," continued Jesus, "that ye resist not evil." Man has his free will, his power of choice, his power to control some of the causes, from which come new effects breaking the vicious circle of "jungle law," and setting forth a philosophy of Living.

Self-denial and resignation, the subduing of wishes and the conquering of the will, these remedies which Schopenhauer prescribes, can also nurture giant weeds of self, if the motive behind them is attainment of bliss for oneself. This is the path of the Pratyeka Buddhas, those highly spiritual Beings, who, on

attaining perfection, turn their backs upon mankind, and enter into Nirvanic bliss.

The great White Lodge, which ceases not its care for mankind, and amongst whose Work the Theosophical movement is perhaps a minor activity, is of the Order of the Buddhas of Compassion, those highly spiritual Beings who have renounced their perfection in order to remain within the veils of maya to instruct and enlighten orphan humanity. From time to time They send forth Their messengers, and the world knows a Jesus, a Buddha, a Sankaracharya, or a Lao-tze.

Self-denial and resignation, the subduing of wishes and the conquering of the will, these same processes can be used as sources of power enabling us to help our fellow men. We could call them, in other words, humility, gentleness, generosity. Franz Hartmann, writing of Jacob Boehme says (THEOS. FORUM, Dec. 1949):

He earnestly went through the practical exercises necessary in the study of practical occultism, that is to say, he practised patience, piety, simplicity of thought and purpose, modesty, resignation of his self-will to divine law.

One of the Great Ones has said: Blessed are the poor in spirit; blessed are the meek; love your enemies; do good to them that hate you — but we of the world find that the meek are ignored, that the humble attain to no eminence, that the poor in spirit will not emulate Caesar, Napoleon, nor Alexander the Great so-called. Yet, says Theosophy, only by humility can one enter into communion with Nature, and begin to love her humble creatures. Only in gentleness does the individuality shine through the mask of personality. Only by mastering the passions and desires can the soul of man begin to see through the veils of maya, through this sediment in the vials of life.

H. P. Blavatsky was careful to point out in *The Key to Theosophy* that indiscriminate self-sacrifice is wrong. Our own selves, our own personalities, have their rights, their part in the scheme of things, and only when this right clashes with the general weal of men, is it good and proper to sacrifice it. "The first step on the path is to live to benefit mankind."

We have seen, that in appraising Schopenhauer's philosophy of life, we could yet imagine flaws in his philosophy of living. Beyond the evil and strife of the world do indeed blossom flowers of perfection, but in seeking for these, there is no need to destroy the physical flower, petal by petal, leaf by leaf. Such a practice, by strange inversion, would emulate the materialist seeking to find the soul with scalpel and microscope. The misery which Schopenhauer adumbrates, and which undoubtedly exists in this benighted world of ours, is a shadow cast by its reality, joy, just as lust is the shadow of love. Whence came this shadow? It is cast by man, and only man himself can banish it.

Man has had his golden age, and will rise to see it again, for it is still there. This age of darkness, this kali-yuga, is but a veil hiding the eternal sun from our eyes. It is we ourselves who deny the sun; we ourselves who blind ourselves to its rays. "Never the spirit was not, the spirit shall cease to be never." There is no need to abjure the world in order to find reality. Reality is there in the faces of our fellow men, frown-hidden and glower-hidden though it may be. The meanest wretch, could we look at him aright, is a god, radiant and shining. Well might the myths and legends of the whole world scream at us this fact! The monster turns into a fairy princess when the true hero appears. She had been a fairy princess all the time, but we in our blindness took her for a monster.

Whence came this blindness? It is a disease which has come upon

man from one cause only — man's inhumanity.

Two forces are at work in curing man's spiritual blindness. One is the slow process of evolution, of lessons learned by karmic retribution throughout many incarnations on earth. The slowest evolving things on earth are the rocks, but even these are beginning to prod man forward. According to Theosophy the earth has passed its most material point, and is slowly beginning to etherealize. The grosser elements like uranium are beginning to break up, and to give out what we have come to know as atomic energy. There will come a time, says Theosophy, when even the less gross matter which makes up the flesh of the lower animals will no longer exist, and these animals will become extinct. Of course, we are talking in geologic time now. Later, much later, will come a time when there will be no suitable material on earth to make up our human flesh, as we know it. Those among men who at that far-distant date have not evolved their natures concurrently with the slow sweep of life, who have not become more spiritual, will also become "extinct." They will go into what Theosophy calls "pralaya," the interval between two planetary ages of life. They will have to start all over again in the next great cycle of life.

The second force at work among men is one in which we as theosophists can take part. It is a kindling of the Light in the hearts of men. We may only play an infinitesimal part in the process, but we can know that we are backed by the greatest minds and the greatest hearts that humanity has produced, and the effort is sustained by the gods — the most noble pursuit to which man can dedicate himself.

THEOSOPHY AND CHRISTIANITY — *John S. Hasbrouck*

"The very thing which is now called the Christian religion, really was known to the ancients, nor was it wanting at any time from the beginning of the human race up to the time Christ came in the flesh; from which time the true religion, which had previously existed, began to be called Christian." — St. Augustine, the great Church Father, has stated the matter well, for truly, Christianity is in the main stream of the Ancient Wisdom Religion.

Now what is Christianity? Today we are prone to identify Christianity with its organizational aspect. Nothing could be more confusing. Clamoring for the attention of the inquirer on the one hand are the churches of authority, the Roman Catholic and Greek Orthodox; and on the other hand is arrayed the maze of Protestantism, comprising literally hundreds of warring sects, each with its own interpretation of the meaning of Christianity.

This does not represent anything more than organized confusion, and an attempt at a discussion of the ins and outs of theology would not be profitable. Let us, therefore, look to the root of the religion, to its scriptures, and in particular, to those sayings which have been attributed to the Master Jesus. In so doing, let us try to find the outline of the Ancient Wisdom of the Ages.

Who was this Jesus? Surely he is the most publicized and least understood individual who has ever lived. In his name great philosophies have been given to the world, while ordinary men and women have found peace in their simple faith. Great cathedrals have been raised toward the skies, and plain country churches, too. Armies have marched in glorious Crusades, while other men died for their faith — on the cross, at the stake, and in the arena. In the name of Jesus, great paintings and sculptures

have been wrought, great books written — while the Inquisition rained violence and terror upon the face of the Western world. Men taught salvation by "Bell, Book and Candle," while others shouted their defiance, claiming that there was no salvation but by "the shed Blood of the Lamb." Who was this Jesus? What *did* he teach?

In our Theosophical literature it is said that while the Biblical story of the historical Jesus is not accurate, still there is some basis of fact. Theosophy says that a Syrian Initiate taught in Palestine about one hundred years before the time commonly alleged as that of Jesus. This Teacher is said to have been initiated into one of the Mystery Schools of the period. Stories have been circulated in occult literature which variously describe this place of training as in Egypt, in India, in Arabia, and in the deserts of Palestine. The place and the organization are not important. What is important is that this great person passed through veil after veil until there was no more to be learned. Then having achieved a realization of his inner divinity, he turned back, and taught others of the Path he had trodden.

Theosophy tells us that the fundamental basis of all that is, is one life, one spirit, one consciousness, that this one life is beyond the power of our finite minds to comprehend, but that all which is in manifestation about us, is a part of this One Life. Further, that manifestation is governed by one law. Nothing is outside of this law. Law reveals itself in the pattern of action and reaction. Since we are part of one life and governed by one law, it follows that we are all part of one Brotherhood.

Now if we are to prove that Christianity is in the main stream of the Ancient Wisdom Religion, it is necessary to show that Christianity throws light on the ideas just stated. Let us turn to the scriptures for our answer. In *The Gospel According to John* we

read, "God is a Spirit; and they that worship him must worship *him* in spirit and in truth." (*John* iv, 24) "All things were made by him; and without him was not any thing made that was made. In him was life; and the life was the light of men." (*John* i, 3, 4)

In Paul's *Letter to the Ephesians* it is written: "One God and Father of all, who is above all, and through all, and in you all." (iv, 6) Still further in *Jeremiah* we read: "Am I a God at hand, saith the LORD, and not a God afar off? . . . Do not I fill heaven and earth?" (xxiii, 23-4) And in *Psalms*, "If I ascend up into heaven thou art there: if I make my bed in hell behold, thou art there. If I take the wings of morning, and dwell in the uttermost parts of the sea; Even there shall thy hand lead me, and thy right hand hold me." (cxxxix, 8-10) We can see then that "God is Spirit," "God is Love" and "God is Light."

These passages from the Bible are dealing with a universal presence, that which has no beginning and no end, that which presided at the birth of man, at his awakening from sleep, that which guided and upheld man on his long pilgrimage through manifested life. But this is not all. Not only is the Universal Life above us, below us, on every side, but it is also within us. In 1 *Corinthians*, iii, 16, we find this statement, "Know ye not that ye are the temple of God and that the Spirit of God dwelleth in you?"

The great message of Jesus is that of the Kingdom of Heaven. Over and over in the New Testament we find references to the fact that we have within us a spark of the one life. Jesus commanded of his disciples, "Be ye therefore perfect, even as your Father which is in Heaven is perfect." (*Matthew*, v, 48) But Jesus did not leave the matter there. He realized full well the spiritual benefit which results from a realization of the inner divinity — so in the manner of the Ten Commandments of Moses and the Eightfold Path of Buddha, he lists the eight Beatitudes:

Blessed are the poor in spirit: for their's is the kingdom of heaven.

Blessed are the meek: for they shall inherit the earth.

Blessed are they which do hunger and thirst after righteousness: for they shall be filled.

Blessed are the merciful: for they shall obtain mercy.

Blessed are the pure in heart: for they shall see God.

Blessed are the peacemakers: for they shall be called the children of God.

Blessed are they which are persecuted for righteousness" sake: for theirs is the kingdom of heaven. — *Matthew*, v, 3-10

We have had these passages so imbedded in our minds that to us they seem rather insipid from too much repetition. But in essence, they present the Rule of Life: Take hold of the problem which is before you; recognize your perfect oneness with all that is; and conquer the difficulty as you ascend on the Ladder of Life.

Much more could be said about God and the Father which represent in the Bible the principle of Universal Life, but perhaps we should now try to find instances where the one Law of the Ancient Wisdom is presented in Christianity.

In the Sermon on the Mount, which is the epitome of Jesus' teaching, we find the following passage:

Think not that I am come to destroy the law . . . I am not come to destroy, but to fulfill. For verily I say unto you, Till heaven and earth pass, one jot or one tittle shall in no wise pass from the law, till all be fulfilled. — *Matthew*, v, 17, 18

In other words, Jesus understood that a law is a law, that there could be no exceptions made through vicarious experience, as

has become the teaching of the religion which bears his name. For Jesus this universe was a thing of beauty because of the supreme Law which governs its expression. He was constantly drawing analogies from the facts of Nature about him: a sparrow which could not drop to earth outside of the Law, lilies gently waving in a field which were beautifully clothed in fulfillment of the Law; men who could not disguise themselves as sheep, because inwardly they were raging wolves. Yes, Jesus strongly believed in the power of the Universal Law.

Judge not that ye be not judged. For with what judgment ye judge, ye shall be judged: and with what measure ye mete, it shall be measured to you again. — *Matthew*, vii, 1

Jesus is stressing the inevitability of the law of action and reaction. One thing he was most anxious to put across to those who followed him was the principle of spiritual dissipation which is an aspect of the Law.

And when thou prayest, thou shalt not be as the hypocrites are for they love to pray standing in the synagogues and in the corners of the streets, that they may be seen of men. Verily I say unto you, They have their reward. But thou, when thou prayest, enter into thy closet, and when thou hast shut thy door, pray to thy Father which is in secret, and thy Father which seeth in secret shall reward thee openly. — *Matthew*, vi, 5, 6

In other words, he gave strong warning that man's moral energies would be dissipated and have no effect if they were used for material things and the world of men. But that if the moral force were expended for the spiritual principle itself, it would carry great force, and would bring about definite results in the world of manifestation.

Companion with the great idea of justice, we have that of re-embodiment. Jesus considered this law so much a part of Nature that he did not feel required to lay great stress upon it. The people of that time accepted the idea more than now. Still, he did touch upon it when in speaking of John the Baptist, he said that for those who would accept it, John was a reincarnation of the Prophet Elijah. Again he says,

But as touching the resurrection of the dead, have ye not read that which was spoken unto you by God, saying, I am the God of Abraham, and the God of Isaac, and the God of Jacob? God is not the God of the dead, but of the living. —
Matthew xxii, 31, 32

In *The Gospel of John* we read:

Let not your heart be troubled, ye believe in God, believe also in me. In my Father's house are many mansions, if it were not so, I would have told you. I go to prepare a place for you And if I go and prepare a place for you, I will come again, and receive you unto myself, that where I am, there ye may be also. And whither I go ye know, and the way ye know. — xiv, 1-4

Jesus is saying here that the divine spark within us leads us on a spiritual pilgrimage through many manifestations until we arrive at the point of self-conscious union with our Christ principle. Those who formulated the Jesus Christ religion gave strong hints throughout of the initiatory path which was available to all in the pattern of the life of Christ. The injunction to take up your cross was an open invitation to enter into the mysteries and to strive for spiritual advancement.

Thus far an attempt has been made to show that the religion of Christianity contains the teaching of the One Life and of the One

Law. It now needs to be shown that the idea of One Brotherhood is the great theme of this religion. Gradually during the past two thousand years, this principle has been permeating the thought life of our western humanity. Slowly, to be sure, but all sound growth is accomplished by imperceptible degrees. Over the centuries have come such statements as,

Ye have heard that it hath been said, Thou shalt love thy neighbor, and hate thine enemy. But I say unto you, Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you, and persecute you; That ye may be the children of your Father which is in heaven. . . . For if ye love them which love you, what reward have ye? — *Matthew*, v, 43-46

And again he said,

This is my commandment, That ye love one another, as I have loved you. Greater love hath no man than this, that a man lay down his life for his friends. — *John* xv, 12, 13

Christianity is a thing of great beauty. There is a mystic quality in the sacraments — the initial consecration of your life to a spiritual ideal — later, confirming your dedication to that principle; then throughout life, periodically attempting to achieve a union with the spiritual energy dormant within, through communion with the Christ dwelling ever closer than our hearts. In spite of its inherent greatness, in our day, Christianity has in large measure lost its self-respect — it is not altogether sure that what it teaches has any basis of fact. This seems a shocking pity. There is no more beautiful way of life set forth in the world than the Christian. The pathway of true discipleship is marked out in bold lines. If the average nominal church-goer could but realize the great moral force which is behind the real Christianity, what a

revolution we would see in our world.

Theosophy has a wonderful message to give to Christianity. As has been set forth so plainly in our literature, this body of teachings has always existed in every religion from the beginning of time and is the common property of all mankind. Christianity should be proud of its heritage. Christians should be made to realize that their religion points to the pathway of initiation, to the road leading within, on the upward arc of spiritual evolution leading ever closer and closer to a glorious union with the Christ principle within.

The Theosophical Forum

ROBERT G. INGERSOLL (1) — *Clifton Meek*

I would like to pay tribute, in my own small way, to the man who first taught me the importance of thinking for myself. It was more than 30 years ago that I first picked up a volume of his works in a San Francisco book store, and I was immediately impressed with the philosophical trend of his clear thinking and excellent command of English. Like many others brought up in an orthodox religious faith, I had been led to believe that this man was very irreligious, and that his chief aim had been to destroy everything of spiritual value that men held sacred. I was pleasantly surprised to learn first hand that he stood for many things which I had always felt religion should stand for, but all too often does not, particularly intellectual honesty and a loyal adherence to the dictates of conscience without which any religion becomes a mere form of external observances, blind faith, and a collection of prejudices from which the soul and spirit have fled.

While I have never considered that his philosophy of life was complete, nor did he claim it to be, I believe, it was sound as far as it went and was a step in the right direction, and one which opened up new avenues of investigation and search, and hence, a necessary step. It is frequently necessary to do a little unlearning before an advancement can be made. With this preamble let us turn to the man.

One hundred and seventeen years ago, August 11, 1833, Robert Green Ingersoll was born in Dresden, Yates Co., New York, the son of a Congregational clergyman. He had a distinguished career in many fields; as a lawyer, soldier, author, diplomat, and statesman, but he won his greatest renown as an orator, probably

the most distinguished the western hemisphere has ever produced, and his ideas on religious and intellectual freedom, expressed with originality of thought and a fluent command of language, probably influenced the trend of mass thinking more than did any other single individual of his day.

Although he has been dead more than 40 years, there are still many people, particularly those who have never read his works, who have a totally wrong impression of the man and his ideas regarding religion philosophy and morality, due to the fact that they accept hearsay rather than the truth which is available to anyone who will read his works. Like all others who have dared to challenge the popular beliefs of any day and age, he has been misrepresented and maligned and things which he never said have been charged against him. It is a common practice of small souls, that when an honest argument cannot be answered, to start a campaign of misrepresentation. This was certainly true in the case of Ingersoll, and has continued for many years, long after his death. Simple justice and common decency among men demand that what he said, and what he did not say, be better understood.

Contrary to popular misconceptions, Ingersoll never denied the existence of God. What he did deny, just as many liberal minded people with religious inclinations today, deny, was the existence of such a God as described in the Old Testament. On this subject he stated as follows:

Let me say once for all, that when I speak of God I mean the being described by Moses the Jehovah of the Jews. There may be for aught I know, somewhere in the unknown shoreless vast, some Being whose dreams are constellations, and within whose thought the infinite exists. About this Being, if such an one exists, I have nothing to say.

Yet in view of this frank and clear-cut statement made many years ago and published in the authorized edition of his works, the following is found in the *Universal Encyclopedia*, Vol. 6, page 252:

Col Ingersoll's notoriety has been made by his public lectures denying the existence of a God.

The writer and publishers of such gross misrepresentation might well have taken a lesson in morality and honesty from the victim of their bias and prejudice. Regarding truth Col. Ingersoll said:

To love the truth is mental virtue — intellectual purity. This is true manhood . . .

A fact will fit every other fact in the universe, because it is the product of all other facts. A lie will fit nothing except another he made for the express purpose of fitting it.

Ingersoll wrote an intellectual declaration of independence for many who came within the sound of his voice or who have later read his lectures. His foremost plea was for intellectual honesty.

Standing in the presence of the Unknown, all have the same right to think, and all are equally interested in the great question of origin and destiny . . .

No subject can be too sacred to be understood. Each person should be allowed to reach his own conclusions and to speak his honest thought.

Regarding education he said:

Nothing should be taught in any school that the teacher does not know. Beliefs, superstitions, theories, should not be treated like demonstrated facts. The child should be taught to investigate, to understand, and, if possible, to

know.

The charge has often been made by his critics that he sought to take away the solace of religion while giving nothing in return. The most cursory reading of his works by any fair minded person will reveal that such was not the case. While he was the avowed foe of blind, unreasoning superstitions of the past, I am convinced his only aim was to banish fear and mental servitude from the minds of his fellow men, and I have always considered that he was a true friend of real religion, if by that term is meant the highest aspirations of the human heart and mind. The moral tone of his philosophy was a plea for intellectual honesty, justice, truth, love, kindness and compassion.

The higher we become in the scale of being, the grander, the nobler, the tenderer you will become. Kindness is always an evidence of greatness. Malice is the property of small souls. Whoever allows the feeling of brotherhood to die in his heart becomes a wild beast. You know it and so do I

The consequences of a bad action cannot be avoided, they are the invisible police, the unseen avengers, that accept no gifts, that hear no prayers, that no cunning can deceive.

He reiterated the essence of all religion when he said: "Every man should be true to himself — true to the inward light." Nearly 2,000 years ago a Great Teacher of men said virtually the same thing when he stated: "The Father and the kingdom of heaven are within." Referring to this same teacher Ingersoll stated that for him he "had only tears of admiration and respect." Thus it will be seen by any impartial observer that Ingersoll did not attack religion per se, as has often been charged. What he did attack was modern Phariseism, with its theological errors and dead-letter observances which have always killed the spirit of real religion. It

was Henry Ward Beecher who said: "A Pharisee is one who worships instruments. Whoever believes that churches, or books, or institutions, or customs, are more valuable than men is a Pharisee."

The following paragraphs are chosen from several of Ingersoll's lectures:

The truth, plainly told, naturally commends itself to the intelligence. Every fact is a genuine link in the infinite chain, and will agree perfectly with every other fact. A fact asks to be inspected, asks to be understood. It needs no oath, no ceremony, no supernatural aid. It is independent of all the gods.

Truth is neither young nor old, it is neither ancient nor modern, but it is the same for all times and places and should be sought for with ceaseless activity, eagerly acknowledged, and loved more than life, and abandoned — never.

Ingersoll never denied the immortality of the soul. He expressed his views on that subject in what I consider one of the most beautiful passages of any language when he said: "In the night of death hope sees a star, and listening love can hear the rustle of a wing."

I believe that every man who wants to learn to think for himself; to exercise the divine prerogative of searching out his own intellectual and spiritual pathways of thought should read the works of Ingersoll. I do not mean that he should necessarily agree with everything that Ingersoll said, for to follow anyone or any school of thought blindly is the very thing which should be avoided, and would be contrary to Ingersoll's philosophy. The burden of his message was to teach men to think for themselves.

Each man, in the laboratory of his own mind, and for himself alone, should test the so-called facts — the theories of all the world. Truth, in accordance with his reason, should be his guide and master.

Only in that way can we really grow inwardly — intellectually and spiritually.

EINSTEIN — THE MAN — *Raymond Rugland*

Is it strange that the name Einstein be heard wherever men of good will and serious thought gather for discussion? Is it strange that Einstein has become a household word among those who have not the slightest inkling of the concept of Relativity or the Unified Field Theory, and still less of mathematics? He is first of all a man, entitled to his complete identity. We see a shadow of that identity in his portrait — a kind of humor which sees in human existence a brief role in a divine comedy; a kind of sadness welling from a heart bound to those who yet know war and oppression. We see no age in the eyes, well-springs of inner enthusiasm, revealing that urge toward a grander Purpose he "feels." Whatever he has found good in life he has given wholeheartedly to those about him. In a world of struggle he has stood fast as a humanitarian. He assumed the affirmative for Science at a time when its methods and purposes are in process of regeneration.

In this study of Einstein and his works, we have selected Alan Harris' translation of *Mein Weltbild*, now titled *The World As I See It*. (1) A non-technical abridgment, this collection of letters, addresses and essays, from the years 1922-1933, is successful in revealing his many-sided personality. As a humanitarian he speaks simply and forcibly on education, life and its meaning, pacifism, liberty, and the cause of Jewry. These views take on meaning even with the briefest glimpse of his formative years.

Albert Einstein entered school in Munich at the age of six. Sensitive and shy, his childhood was an extreme trial. He gained no sympathy from his Catholic schoolmates, the harsh discipline of school, nor from teachers who could not arouse his aptitude

for languages, history, or other required subjects of primary education. It was geometry that captured his enthusiasm. By the age of fourteen he was a better geometrician than his instructors. Moving with his family to Milan, and freed of many handicaps, young Einstein entered upon a period of hard study. Examinations successfully passed, he gained admission to the Academy of Zurich where his progress was outstanding in the fields of philosophy, science, and mathematics. He worked for an assistant professorship at Zurich, but promises made to him were broken. Always practical, Einstein accepted a position as Patent Examiner at Berne. Though he served his appointment with diligence, his leisure was given to further speculation in physics and mathematics. In 1905 he published his first monogram, *Annalen der Physik*. Zurich was ready to listen this time and appointed him lecturer at the university; soon after — professor. He reached his later eminence with the Prussian Academy of Sciences and as Director of the Kaiser Wilhelm Institute for Theoretical Physics. But these were trying times also. A pacifist, an exponent of world-disarmament, and a supporter of the cause of Jewry, he found peace of mind difficult in his native land. By 1933, the bright star among scientists, the principles of humanity for which he stood compelled him to be an exile. Among countries offering him refuge was the United States. As professor of theoretical physics and mathematics at Princeton University, he found a relative peace.

We ask of Albert Einstein whose mind has reached to heights beyond our ken, whose formulations can only be followed by able and trained scientists — what have you for the "little man"? He answers in typical direct simplicity, ". . . the man who regards his own life and that of his fellow-creatures as meaningless is not merely unfortunate but almost disqualified for life." And we ask again, To what end does life assume meaning? "Each of us is here

for a brief sojourn; for what purpose he knows not, though he sometimes thinks he feels it. But from the point of view of daily life, without going deeper, we exist for our fellow-men . . ." When Einstein himself goes "deeper," he concludes that "the fairest thing we can experience is the mysterious. It is the fundamental emotion which stands at the cradle of true art and true science." But we ask — Is not the greatest science and the truest art that which directs one to inner growth and mastery of life itself? The professor's own humility is confirmation. He has his "inner chamber" which "never belonged to my country, my home, my friends, or even my immediate family," and treats with contempt the pursuit of possession and luxury. Truth, Goodness, and Beauty are the ideals that have beckoned him. Einstein admits his life would have been empty without "the eternally unattainable in the field of art and scientific research." He continues in the same mystical vein:

A knowledge of the existence of something we cannot penetrate, of the manifestations of the profoundest reason and most radiant beauty, which are only accessible to our reason in their most elementary forms — it is this knowledge and this emotion that constitute the truly religious attitude, in this sense, and in this sense alone, I am a deeply religious man. — p. 5

Religion, it appears to Einstein, undergoes three stages of development: religion of fear, moral religion, and what he calls "the cosmic religious feeling." This last, he feels, is apart from dogma, from church, from theology. It knows no anthropomorphic deity, or God with human attributes. United in a cosmic religious bond, the great Teachers of the past were closely akin.

While marveling at the "eternity of life," while himself propelled

toward the "unknown," while giving to the world a "fourth" dimension, and recognizing loftier intelligences behind the processes of Nature, Einstein has failed nevertheless to see that dimension, that extension, which follows the chord of consciousness in Man to the Universe. Within is the immortal spark and undying Self, inseparable from the undying and eternal Scheme of Life. It is perhaps true, as Einstein indicates, that it is the egoists and fearful who want *life-after-DEATH*. Is it because they fear the passing of that portal they call "death," which through centuries of wrong teaching, challenges the very instincts of our soul? What can be more logical than *Life-after-LIFE* right here on earth, till our thirsting souls, till our love of justice, knows satisfaction and the lessons are learned? Will the seeds man sows in this life, have only a partial or no reaping? Will man thus be cheated by "death" from reaping the effects of the causes he has sown?

It is Einstein himself who crowns our argument, speaking for science: ". . . the scientist is possessed by the sense of universal causation. The future, to him, is every whit as necessary and determined as the past." To know a man can never be complete until we know his *potentiality*. And is that potentiality resident in the physical atoms of his body alone? Man's value is in direct ratio to his *inner* potential, the potential of the Self within. In this sense do we accept Einstein's definition: "The true value of a human being is determined primarily by the measure and the sense in which he attained to liberation from the self." And we deduce from all the foregoing, that this is accomplished by an attaining to the "cosmic religious feeling" which is but a feeble adumbration of man's cosmic destiny.

Einstein notes, as his eyes survey the world, that the greatest gifts of civilization, the material, the spiritual and moral, have stemmed from certain individuals, the Saviors and geniuses of

humanity. If we stop at this point, we become guilty of the sheerest human egoism, which assumes there are no intelligences to fill the gap between the "best" of men and "cosmic mind," that human destiny is unique in its isolation and self-determination, and that it is only "good fortune" that has endowed us with saviors and geniuses.

The brotherhood of mankind, if unrealized, is yet a reality not to be escaped. If human justice is erring, it does not mean that a higher form of justice, operating among all beings — especially appropriate here, among men, nations of men — must also err. Men will never generate moral strength while morals, ethics, and philosophy *remain speculative*. Further education along this line is worthless. When it is conceded that ethics and justice are as fully a part of the universe as a granite mountain; that true progress is inseparable from the concept of the Unity of all Life, then will the dawn of a Golden Age come forth.

* * *

Einstein's breach with the German academies is outlined in a series of letters in Part III.

A powerful exponent for the cause of Jewry and the reconstruction of Palestine, his hope and ideal for the Jewish people is simply and wholeheartedly expressed.

If Einstein "hates" anything, it is the institution of War. A strong advocate of disarmament and pacifism, he has labored many years to achieve this end. Is it a true "pacifism" that encourages the role of the conscientious objector? It is as conducive to peace as a mutiny on shipboard, but with this difference. On a ship the captain is the law-giver. In most modern states, the power to make law is delegated from the people — they are the watch-dogs of their own civil liberties if they will assume that responsibility.

Were 50,000 men, according to Einstein, to refuse to serve in the army at time of crisis, the machines of war would not be able to function. But should not the pacifist — if he really be one, positive and sincere — do as thousands of young men are doing, set themselves as the ideal, and work within the limits of their own respective national Constitutions. By positively working *for* Brotherhood among men, those of vision will rally and see to it that their own national houses are set in order *before* war can strike.

Einstein himself glances back on *The World As I See It*. With an honest man, inner change is as inevitable as the years that lay bare the soul.

A SKETCH OF THE LIFE OF H. P. BLAVATSKY — *William Q. Judge*

The evil that men do lives after them; the good is oft interred with their bones. The finely drawn lines of karma, however, have a way of weaving justice in the pattern of circumstance.

Such was the case in 1892 when the *New York Sun* published the following editorial in the issue of September 26th:

We print on another page an article in which Mr. William Q. Judge deals with the romantic and extraordinary career of the late Madame Helena P. Blavatsky, the Theosophist. We take occasion to observe that on July 20, 1890, we were misled into admitting to the *Sun's* columns an article by Dr. E. F. Coues of Washington, in which allegations were made against Madame Blavatsky's character, and also against her followers, which appear to have been without solid foundation. Mr. Judge's article disposes of all questions relating to Madame Blavatsky as presented by Dr. Coues, and we desire to say that his allegations respecting the Theosophical Society and Mr. Judge personally are not sustained by evidence, and should not have been printed.

The article by Mr. Judge follows:

A woman who, for one reason or another, has kept the world — first her little child world and afterward two hemispheres — talking of her, disputing about her, defending or assailing her character and motives, joining her enterprise or opposing it might and main, and in her death being as much telegraphed about between two continents as an emperor, must have been a remarkable person. Such was Mme. Helena Petrovna Blavatsky,

born under the power of the holy Tzar, in the family of the Hahns, descended on one side from the famous crusader, Count Rottenstern, who added Hahn, a cock, to his name because that bird saved his life from a wily Saracen who had come into his tent to murder him.

Hardly any circumstance or epoch in Mme. Blavatsky's career was prosaic. She chose to be born into this life at Ekaterinoslaw Russia, in the year 1831, when coffins and desolation were everywhere from the plague of cholera. The child was so delicate that the family decided upon immediate baptism under the rites of the Greek Catholic Church. This was in itself not common, but the ceremony was — under the luck that ever was with Helena — more remarkable and startling still. At this ceremony all the relatives are present and stand holding lighted candles. As one was absent, a young child, aunt of the infant Helena, was made proxy for the absentee, and given a candle like the rest. Tired out by the effort, this young proxy sank down to the floor unnoticed by the others, and, just as the sponsors were renouncing the evil one on the babe's behalf, by three times spitting on the floor, the sitting witness with her candle accidentally set fire to the robes of the officiating priest, and instantly there was a small conflagration, in which many of those present were seriously burned. Thus amid the scourge of death in the land was Mme. Blavatsky ushered into our world, and in the flames baptized by the priests of a Church whose fallacious dogmas she did much in her life to expose.

She was connected with the rulers of Russia. Speaking in 1881, her uncle, Gen. Fadeef, joint Councillor of State of Russia, said that, as daughter of Col. Peter Hahn, she was grand-daughter of Gen. Alexis Hahn von Rottenstern Hahn of old Mecklenburg stock, settled in Russia, and on her mother's side, daughter of Helene Fadeef and granddaughter of Princess Helena Dolgorouky. Her

maternal ancestors were of the oldest families in Russia and direct descendants of the Prince or Grand Duke Rurik, the first ruler of Russia. Several ladies of the family belonged to the imperial house, becoming Czarinas by marriage. One of them, a Dolgorouky, married the grandfather of Peter the Great, and another was betrothed to Czar Peter II. Through these connections it naturally resulted that Mme. Blavatsky was acquainted personally with many noble Russians. In Paris I met three princes of Russia and one well-known General, who told of her youth and the wonderful things related about her then; and in Germany I met the Prince Emil de Wittgenstein of one of the many Russo-German families, and himself cousin to the Empress of Russia, and aide-de-camp to the Czar, who told me he was an old family friend of hers, who heard much about her in early years, but, to his regret, had never had the fortune to see her again after a brief visit made with her father to his house. But he joined her famous Theosophical Society by correspondence, and wrote, after the war with Turkey, that he had been told in a letter from her that no hurt would come to him during the campaign, and such turned out to be the fact.

As a child she was the wonder of the neighborhood and the terror of the simpler serfs. Russia teems with superstitions and omens, and as Helena was born on the seventh month and between the 30th and 31st day, (1) she was supposed by the nurses and servants to have powers and virtues possessed by no one else. And these supposed powers made her the cynosure of all in her early youth. She was allowed liberties given none others, and as soon as she could understand she was given by her nurses the chief part in a mystic Russian ceremony performed about the house and grounds on the 30th of July with the object of propitiating the house demon. The education she got was fragmentary, and in itself so inadequate as to be one more cause

among many for the belief of her friends in later life that she was endowed with abnormal psychic powers, or else in verity assisted by those unseen beings who she asserted were her helpers and who were men living on the earth, but possessed of developed senses that laughed at time and space. In girlhood she was bound by no restraint of conventionality, but rode any Cossack horse in a man's saddle, and later on spent a long time with her father with his regiment in the field, where, with her sister, she became the pet of the soldiers. In 1844, when fourteen, her father took her to London and Paris, where some progress was made in music, and before 1848 she returned home.

Her marriage in 1848 to Gen. Nicephore Blavatsky, the Governor of Erivan in the Caucasus, gave her the name of Blavatsky, borne till her death. This marriage, like all other events in her life, was full of pyrotechnics. Her abrupt style had led her female friends to say that she could not make the old Blavatsky marry her, and out of sheer bravado she declared she could, and, sure enough, he did propose and was accepted. Then the awful fact obtruded itself on Helena's mind that this could not — in Russia — be undone. They were married, but the affair was signalized by Mme. Blavatsky's breaking a candlestick over his head and precipitately leaving the house, never to see him again. After her determination was evident, her father assisted her in a life of travel which began from that date, and not until 1858 did she return to Russia. Meanwhile her steps led her to America in 1851, to Canada, to New Orleans, to Mexico, off to India, and back again in 1853 to the United States. Then her relatives lost sight of her once more until 1858, when her coming back was like other events in her history. It was a wintry night, and a wedding party was on at the home in Russia. Guests had arrived, and suddenly, interrupting the meal, the bell rang violently, and there, unannounced, was Mme. Blavatsky at the door.

From this point the family and many friends testify, both by letter and by articles in the *Rebus*, a well-known journal in Russia, and in other papers, a constant series of marvels wholly unexplainable on the theory of jugglery was constantly occurring. They were of such a character that hundreds of friends from great distances were constantly visiting the house to see the wonderful Mme. Blavatsky. Many were incredulous, many believed it was magic, and others started charges of fraud. The superstitious Gooriel and Mingrelian nobility came in crowds and talked incessantly after, calling her a magician. They came to see the marvels others reported, to see her sitting quietly reading while tables and chairs moved of themselves and low raps in every direction seemed to reply to questions. Among many testified to was one done for her brother, who doubted her powers. A small chess table stood on the floor. Very light — a child could lift it and a man break it. One asked if Mme. Blavatsky could fasten it by will to the floor. She then said to examine it, and they found it loose. After that, and being some distance off, she said, "Try again." They then found that no power of theirs could stir it, and her brother, supposing from his great strength that this "trick" could easily be exposed, embraced the little table and shook and pulled it without effect, except to make it groan and creak. So with wall and furniture rapping, objects moving, messages about distant happenings arriving by aerial post, the whole family and neighborhood were in a constant state of excitement. Mme. Blavatsky said herself that this was a period when she was letting her psychic forces play, and learning fully to understand and control them.

But the spirit of unrest came freshly again, and she started out once more to find, as she wrote to me, "the men and women whom I want to prepare for the work of a great philosophical and ethical movement that I expect to start in a later time." Going to

Spezzia in a Greek vessel, the usual display of natural circumstances took place, and the boat was blown up by an explosion of gun-powder in the cargo. Only a few of those on board were saved, she among them. This led her to Cairo, in Egypt, where, in 1871, she started a society with the object of investigating spiritualism so as to expose its fallacies, if any, and to put its facts on a firm, scientific, and reasonable basis, if possible. But it only lasted fourteen days, and she wrote about it then: "It is a heap of ruins — majestic, but as suggestive as those of the Pharaohs" tombs."

It was, however, in the United States that she really began the work that has made her name well known in Europe, Asia, and America: made her notorious in the eyes of those who dislike all reformers, but great and famous for those who say her works have benefited them. Prior to 1875 she was again investigating the claims of spiritualism in this country, and wrote home then, analyzing it, declaring false its assertion that the dead were heard from, and showing that, on the other hand, the phenomena exhibited a great psycho-physiological change going on here, which, if allowed to go on in our present merely material civilization, would bring about great disaster, morally and physically.

Then in 1875, in New York, she started the Theosophical Society, aided by Col. H. S. Olcott and others, declaring its objects to be the making of a nucleus for a universal brotherhood, the study of ancient and other religions and sciences, and the investigation of the psychical and recondite laws affecting man and nature. There certainly was no selfish object in this, nor any desire to raise money. She was in receipt of funds from sources in Russia and other places until they were cut off by reason of her becoming an American citizen, and also because her unremunerated labors for the society prevented her doing literary work on Russian

magazines, where all her writings would be taken eagerly. As soon as the Theosophical Society was started she said to the writer that a book had to be written for its use. "Isis Unveiled" was then begun, and unremittingly she worked at it night and day until the moment when a publisher was secured for it.

Meanwhile crowds of visitors were constantly calling at her rooms in Irving place, later in Thirty-fourth street, and last in Forty-seventh street and Eighth avenue. The newspapers were full of her supposed powers or of laughter at the possibilities in man that she and her society asserted. A prominent New York daily wrote of her thus:

A woman of as remarkable characteristics as Cagliostro himself, and one who is every day as differently judged by different people as the renowned Count was in his day. By those who knew her slightly she is called a charlatan; better acquaintance made you think she was learned; and those who were intimate with her were either carried away with belief in her power or completely puzzled.

"Isis Unveiled" attracted wide attention, and all the New York papers reviewed it, each saying that it exhibited immense research. The strange part of this is, as I and many others can testify as eyewitnesses to the production of the book, that the writer had no library in which to make researches and possessed no notes of investigation or reading previously done. All was written straight out of hand. And yet it is full of references to books in the British Museum and other great libraries. Either, then, we have, as to that book, a woman who was capable of storing in her memory a mass of facts, dates, numbers, titles, and subjects such as no other human being ever was capable of, or her claim to help from unseen beings is just.

In 1878, "Isis Unveiled" having been published, Mme. Blavatsky

informed her friends that she must go to India and start there the same movement of the Theosophical Society. So in December of that year she and Col. Olcott and two more went out to India, stopping at London for a while. Arriving in Bombay, they found three or four Hindoos to meet them who had heard from afar of the matter. A place was hired in the native part of the town, and soon she and Col. Olcott started the *Theosophist*, a magazine that became at once well known there and was widely bought in the West.

There in Bombay and later in Adyar, Madras, Mme. Blavatsky worked day after day in all seasons, editing her magazine and carrying on an immense correspondence with people in every part of the world interested in Theosophy, and also daily disputing and discussing with learned Hindoos who constantly called. Phenomena occurred there also very often, and later the society for discovering nothing about the psychic world investigated these, and came to the conclusion that this woman of no fortune, who was never before publicly heard of in India, had managed, in some way they could not explain, to get up a vast conspiracy that ramified all over India, including men of all ranks, by means of which she was enabled to produce pretended phenomena. I give this conclusion as one adopted by many. For any one who knew her and who knows India, with its hundreds of different languages, none of which she knew, the conclusion is absurd. The Hindoos believed in her, said always that she could explain to them their own scriptures and philosophies where the Brahmins had lost or concealed the key, and that by her efforts and the work of the society founded through her, India's young men were being saved from the blank materialism which is the only religion the West can ever give a Hindoo.

In 1887 Mme. Blavatsky returned to England, and there started another theosophical magazine, called *Lucifer*, and immediately

stirred up the movement in Europe. Day and night there, as in New York and India, she wrote and spoke, incessantly corresponding with people everywhere, editing *Lucifer* and making more books for her beloved society, and never possessed of means, never getting from the world at large anything save abuse wholly undeserved. The "Key to Theosophy" was written in London, and also "The Secret Doctrine," which is the great textbook for Theosophists. "The Voice of the Silence" was written there too, and is meant for devotional Theosophists. Writing, writing, writing from morn till night was her fate here. Yet although scandalized and abused here as elsewhere, she made many devoted friends, for there never was anything half way in her history. Those who met her or heard of her were always either staunch friends or bitter enemies.

The "Secret Doctrine" led to the coming into the Society of Mrs. Annie Besant, and then Mme. Blavatsky began to say that her labors were coming to an end, for here was a woman who had the courage of the ancient reformers and who would help carry on the movement in England unflinchingly. The "Secret Doctrine" was sent to Mr. Stead of the *Pall Mall Gazette* to review, but none of his usual reviewers felt equal to it and he asked Mrs. Besant if she could review it. She accepted the task, reviewed, and then wanted an introduction to the writer. Soon after that she joined the society, first fully investigating Mme. Blavatsky's character, and threw in her entire forces with the Theosophists. Then a permanent London headquarters was started and still exists. And there Mme. Blavatsky passed away, with the knowledge that the society she had striven so hard for at any cost was at last an entity able to struggle for itself.

In her dying moment she showed that her life had been spent for an idea, with full consciousness that in the eyes of the world it was Utopian, but in her own necessary for the race. She implored

her friends not to allow her then ending incarnation to become a failure by the failure of the movement started and carried on with so much of suffering. She never in all her life made money or asked for it. Venal writers and spiteful men and women have said she strove to get money from so-called dupes, but all her intimate friends know that over and over again she has refused money; that always she has had friends who would give her all they had if she would take it, but she never took any nor asked it. On the other hand, her philosophy and her high ideals have caused others to try to help all those in need. Impelled by such incentive, one rich Theosophist gave her \$5,000 to found a working girl's club at Bow, in London, and one day, after Mrs. Besant had made the arrangements for the house and the rest, Mme. Blavatsky, although sick and old, went down there herself and opened the club in the name of the society.

The aim and object of her life were to strike off the shackles forged by priestcraft for the mind of man. She wished all men to know that they are God in fact, and that as men they must bear the burden of their own sins, for no one else can do it. Hence she brought forward to the West the old Eastern doctrines of Karma and reincarnation. Under the first, the law of justice, she said each must answer for himself, and under the second make answer on the earth where all his acts were done. She also desired that science should be brought back to the true ground where life and intelligence are admitted to be within and acting on and through every atom in the universe. Hence her object was to make religion scientific and science religious, so that the dogmatism of each might disappear.

Her life since 1875 was spent in the unremitting endeavor to draw within the Theosophical Society those who could work unselfishly to propagate an ethics and philosophy tending to realize the brotherhood of man by showing the real unity and

essential non-separateness of every being. And her books were written with the declared object of furnishing the material for intellectual and scientific progress on those lines. The theory of man's origin, powers and destiny brought forward by her, drawn from ancient Indian sources, places us upon a higher pedestal than that given by either religion or science, for it gives to each the possibility of developing the godlike powers within and of at last becoming a co-worker with nature.

As every one must die at last, we will not say her demise was a loss; but if she had not lived and done what she did, humanity would not have had the impulse and the ideas toward the good which it was her mission to give and to proclaim. And there are to-day scores, nay, hundreds, of devout, earnest men and women intent on purifying their own lives and sweetening the lives of others, who trace their hopes and aspirations to the wisdom-religion revived in the West through her efforts, and who gratefully avow that their dearest possessions are the results of her toilsome and self-sacrificing life. If they, in turn, live aright and do good, they will be but illustrating the doctrine which she daily taught and hourly practised.

The Theosophical Forum

THE DWELLER OF THE THRESHOLD — *Murdhna Joti*

I have no desire for any other line of life; but by the time I had awakened to a knowledge of this life, I found myself involved by circumstances against which I do not rebel, but out of and through which, I am *determined* to work, neglecting no known duty to others.

— *Letter from a Friend*

The "Dweller of the Threshold" which stares even advanced occultists in the face and often threatens to overwhelm them, and the ordeals of Chelaship or of probation for Chelaship, differ from each other only in degree. It may not be unprofitable to analyze this Dweller and those ordeals. For our present purpose, it is enough to state, that they are of a triune nature and depend upon these three relations: (1) To our nationality; (2) to our family; and (3) to ourselves. And every one of these three relations is due to the assertion of a portion of our own past Karma, that is to say, to its effects.

Why should we be born in a particular nation and in a particular family? Because of the effect of a particular set of our Karmic attractions, which assert themselves in that manner. I mean that one set of our past Karmas exhaust themselves in throwing us in our present incarnation amidst a particular nation, another set introducing us into a particular family; and a third set serving to differentiate or individualize us from all the other members of the nation or of the family. One of our Eastern proverbs says: "the five children of a family differ like the five fingers of a hand." Unless we look at this difference from this standpoint, it must always appear to us a riddle, a problem too difficult to solve, a mystery, in short, why children born of one family, while they

have some traits common to all, should still appear to differ vastly from one another. What applies to the family applies also to the nation, of which families are but units; and also to mankind as a whole, of whom nations are but families or units. The only way to decide the great question of the age, whether the laws of nature are blind and material, or spiritual, intelligent and divine, is, it seems to me to point out in connection with every subject, the absolutely intelligent and divine manner in which these laws act, and how they force us to realize the economy of nature. This is the only way by which we could become spiritual; and I would, once for all, call upon my co-workers for the cause, to realize at every step of their study, as far as possible, the Divine Intelligence thus manifesting itself. Otherwise, how much soever you might believe or take it for granted, that the forces that govern the universe are spiritual, the belief, however deep rooted it might appear, would be of little use to you when you have to pass through the ordeals of Chelaship; and then you are sure to succumb and exclaim that the "Law is blind, unjust and cruel," especially when your selfishness and personality overwhelm you. When once a practical occultist and a learned philosopher met with, what seemed to him a "serious calamity and trial," in spite of himself he exclaimed to me frankly, "the law of Karma is surely blind, there is no God; what better proofs are needed?" So deep-rooted in human nature is infidelity and selfishness; no one need therefore to be sure of his own spiritual nature. No amount of lip learning will avail us in the hour of need. We have to study the law in all its aspects and assimilate to our highest consciousness — that which is called by Du Prel super sensuous consciousness — all the data which go to prove and convince us that the Power is spiritual. Look around and see whether any two persons are absolutely identical, even for a time. How intelligent must be the power that ever strives to keep each and every one of us totally different *on the whole*, while, if analyzed, we possess some traits

in common.

In this connection I shall refer you to a passage in the article on "Chelas and Lay Chelas" (vide column 1, page 11 of "Supplement to the Theosophist" for July, 1883): "The Chela is not only called to face all latent evil propensities of his nature, but in addition, the whole volume of maleficent power accumulated by the community and nation to which he belongs . . . until the result is known." I shall only ask you to apply the same principle to your family relations affecting your present incarnation. Thus seven things are found to secure us a victory, or a sad, inglorious defeat in the mighty struggle known as the Dweller of the threshold and the ordeals of Chelaship: — (1) The evil propensities common to ourselves and to our family; (2) those common to ourself and our nation; (3) those common to ourself and to mankind in general, or better known as the weakness of human nature, the fruits of Adam's first transgression; (4 to 6) the noble qualities common to us and to these three; (7) the peculiar way in which the 6 sets of our past Karmas choose or are allowed to influence us now, or their effects in producing in us the present tendency. The adept alone can take the seventh or last mentioned item completely into his own hands; and every mortal who would, as I have since recently begun to reiterate, direct all his energies to the highest plane possible for him ("Desire always to attain the unattainable" — says the author of "Light on the Path"),— such a mortal too could more or less do the same thing as the adept, in so far as he acts up to the rule. Every Chela, and also those who have a desire to be Chelas even, as they suppose secretly, have to do with the first six propensities or influences.

The world is inclined — at least in this Kali Yuga (the Dark Age) — always to begin at the wrong end of anything and direct all its faculties to the perception of effects and not of their causes. So the ideas of "renunciation," "asceticism" and of the "true feeling of

universal Brotherhood" (or "mercy," as I call it, in accordance with South Indian Ethics), all of which are compatible with Gnanis, or the most exalted of Mahatmas, all these have come to be recognized by all our Theosophists, in general, as *the means* of progress for a beginner; while the real means of progress for us mortals — duties to our own families and to our own nation, or "kindness" and "patriotism" in the highest and ethical sense of the terms — are discarded. True, from the standpoint of a Jivanmukta, a true friend of humanity, these two Sadhanas are really "selfishness"; still, until we attain that exalted state, these two feelings should be made the ladders for raising ourselves, the means of not only getting ourselves rid of our family defects and natural idiosyncrasies, but also of strengthening in ourselves the noble qualities of our families and of our nation. Until we reach that ideal state where the blessed soul has to make neither good nor bad Karma, we must strive to be constantly doing "good" Karma, in order that we might become Karma-less (nish Karmis).

Let it not be understood at all, that I mean by "family duties" and "national duties," false attachments to the family or to the nation. Family duty consists not in sensuality or pleasure-hunting, but in cultivating and in elevating the emotional nature (the fourth principle), of ourselves and of our family; in being equally "kind," not only to the members of the family, but also to all creatures, and in enjoying all such pleasures of the family life as are consistent with the acquirement of "wealth" (all the means necessary for the performance of Dharma or whole duty) according to the teachings of Valluvar, and in utilizing such pleasures and means for the performance of our duty to our nation. Patriotism consists similarly in theosophising our own nation, in not only getting ourselves rid of our national defects, as well as other members of the nation rid of the same, but also in strengthening in ourselves and in our nation as a whole, all the

noble qualities which belong to our nation; in the enjoyment of the privileges (1) of the nation and using them as a means for the performance of *Dharma*. If family duties are taken due care of, our duties to the nation and to humanity would, to a great extent, take care of themselves unimpeded. Our national duties, if strictly performed, serve to purify our fifth lower principle of its dross and to establish and develop the better part of it, while the performance of our duty to Humanity or the *realization of universal tolerance and mercy*, purifies the lower (human) stuff in the fifth higher principle and makes it divine, thus enabling us to free ourselves gradually from the bonds of ignorance common to all human beings.

The above assertions, might, at first sight, seem rather bold and untheosophical. But I should venture to state my conviction that the whole edifice of Aryan religions and Aryan philosophy is based upon these principles, and that, on a careful consideration of the subject, the great importance attached to household life (Grihasta ashrama) in that philosophy, would be fully borne out. To my mind no ascetics, no teachers of mankind, however eminent and full of the highest knowledge, are really such good and practical benefactors of humanity as Valluvar, of ancient times, who incarnated on earth for the express purpose, among others, of setting an example of an ideal household life to mortals who were prematurely and madly rushing against the rocks of renunciation, and of proving the possibility of leading such a life in any age however degenerated; or as Rama, who, even after having become an *avatar-purusha*, came down amidst mortals and led a household life.

It has often been contended that the world has not progressed on *the path* because gnanis, or Mahatmas, have dwindled in their number and greatness, and because it is Kali Yuga, or the dark age, now. Such arguments are due to our mistaking the effects for

their causes. The only way to prepare the way for the advent of a favorable Yuga and for the increase of the number and greatness of Mahatmas, is to establish gradually the conditions for the leading of a true household life. I should unhesitatingly state, that that is the duty of earnest Theosophists and real philanthropists.

Is it not conceded by all philanthropists that unselfish labors for humanity can alone relieve us from the ocean of Samsara (rebirth), develop our highest potentialities and help us to alchemise our human weakness? Applying the same principle to unselfish discharge of our family and national duties, my position becomes tenable. A Mahatma has, it appears, declared that He has still "patriotism." But He has not said nor would say, that He has still family "attachments." This proves that He has got out of the defects of the family to which He belongs, while He is only striving to get out of national defects, some of which at any rate cling to Him. A Buddha would say, that He has "mercy," but no "patriotism."

The only effectual way to get out of family defects is to discharge all our duty to our family before leaving it, as ascetics, or before we die. Blessed is he (2) who, in each of his incarnations, *then and there*, gets rid of the defects of the family into which he is ushered, thereby converts those defects in his parents, brothers and sisters, into noble qualities, thus strengthening and developing the good qualities both of himself and of his family, then strives to be born in the same family again and again, until he himself becomes a Buddha and assists his family to become a family fit for a Buddha to be born into, while he becomes the cream of all the noble qualities of the family without being tainted with its idiosyncrasies. A Dugpa (Black Magician) is frequently born in the same family and becomes the cream of all its evil propensities. Here again is the operation of the sublime and divinely intelligent law of universal and natural economy

asserting itself. This is beautifully allegorized in the story of a Jivanmukta churning out of the ocean, the elixir of life and leaving the *visha* (the poison, all the evil propensities) for the Dugpas. This is one of the meanings of the allegory. Avoiding all personalities and questionable facts, I shall rely solely upon our Puranas and scriptures to prove that in every family where Adepts and Gnanis are (or choose to be) frequently born, often Dugpas are also born, as a matter of course. Krishna was the greatest of Gnanis and his uncle Kansa (for our present purpose) was a terrible Dugpa. The five Pandavas had a hundred wicked cousins, the Kauravas. Devas and the whole brood of wicked Asuras were born of the same parent. *Vibhishana* had for his brother, *Ravana*, the prince of Dugpas; so had the good Sugriva a brother like Vali. Prahlada had a monster for his father.

Take the case of one who has not done all his duty to his family, before he dies, or before he takes the vows of renunciation and becomes an ascetic. Such ascetics find themselves attracted by the family defects and selfishness of themselves (which hitherto perhaps lay more or less dormant and now become kindled and awakened by the selfishness of the relatives) and are disturbed in the performance of the duties of their new order or *Ashrama*, however unselfish their relatives might have been "unconsciously" or unintentionally. In spite of themselves these relatives arrest the progress of the ascetics in whom the family defects become thus strengthened and developed. Such is the mysterious law of attraction. This man must be born again (1) either in the same family, with the family defects strengthened, both in himself and in his family; (2) or in another family. In the first case, the noble qualities of the family are not strengthened and therefore gradually disappear both from him and from the family. In the second case, he becomes an undutiful son, brother or husband, in his new family, firstly because of the natural law

of repetition, which, with the terrible Karmic interest, strengthens the tendency in him to disregard duty; secondly because of the "counter family attractions" (or repulsions). Let not this unfortunate wanderer from the post of his family duty console himself with the foolish idea that this tendency would confine its havoc to family traits (good and evil) and to family duties alone. It would extend itself in all directions, wherever it can; it would make him disregard his duties to his nation and to himself (or in other words, to humanity). He would suddenly be surprised to find himself apathetic to his nation and to his highest nature, or to mankind. Such are the mazes and unknown ramifications of our evil or good propensities. Any evil or noble element of human nature converts itself, under "favorable" conditions into any other element however apparently remote. The conditions are there ready wherever the element is strong; where there is a will there is a way. Performance of family duties therefore develops patriotism and mercy.

I do not at all mean to say that the effects of Karma *always* assert themselves in the same shape or form; but they often might and do. Nor do I mean that the affinities above stated, blossom and ripen in the incarnation immediately succeeding; they might develop ten or even one hundred incarnations after; but in such a case, the Karma only accumulates enormous interest. The affinities might not develop *at the same time* in both him and her, who was once his wife; if they did at the same time, the account could be easily settled, — otherwise, woe to him and to her! Supposing that the attractions for him are developed in her, while the attachments for her are not developed in him at the same time; the result might be, that she pines and languishes for him, sends her poisonous darts consciously or "unconsciously" against him; if these arrows do not kindle the corresponding nature in him, for the time being they frustrate his achievements in other

directions. Supposing by the time the affinities in him are developed, he becomes an initiate and she becomes, (let us suppose) his pupil (male or female). If at the time the pupil's affinities have become converted into devotion for the initiate, the latter becomes blinded in his philanthropic work and noble duties of a sage, and commits, through the infatuation of a love for the pupil, serious blunders, which result in a catastrophe to both of them and to humanity: and both the pupil and initiate fall down and have to mount their rugged pathway again with increased difficulties in their way.

Once, in an age and in a country, when and where household life continues to be ideal, one single wretch commits the first act of transgression by impetuously rushing into the circle of ascetics, or by dying before wholly discharging his duty to his family, the natural result is that both himself, his family, and his nation, become thereby seriously affected. The Akasa (3) becomes affected by the impulse to transgress in this direction; this impulse forces itself gradually (with accumulated interest, redoubled force) upon others; the ignoble example becomes a precedent; other cases of a like nature follow in quick succession. In course of time, (just when a sad descending cycle begins, such is the divine intelligence of the law that economizes energies and makes things fit it) the leading of the ideal family life becomes almost impossible and very rare; the whole community is thus ruined. Learned and great adepts retire to other spheres (where there then is an ascending cycle) and leave the nation to be swallowed by a cataclysm after ages of degradation and vice.

Let us now reverse this case, and suppose that in the most degenerate nation, in the darkest of cycles, one philanthropist becomes unselfish and intelligent enough to set a noble and intelligent example by fulfilling all family duties; then, as naturally as in the preceding case, the precedent gradually gains

acceptance; the way is paved for the advent of an ascending cycle; Gnanis bless the noble man and come down from other unfavorable spheres, where descending cycles begin to dawn.

Now it may be easy to understand why Chelas and lay Chelas (who have not yet thrown off their family defects and thus become the cream of their family's good qualities) are told to be careful lest they become Dugpas (Black Magicians).

I will ask you to apply the same kinds of arguments to the necessity for performing (and the failure to perform) our duties to our nation and to mankind. You can see that the phenomena of heresy, downfall of religions, rise of new religions, the birth in Europe of a Max Muller, who expatiates upon the greatness of the Vedic philosophy, and of Bradlaughs and other infidel sons of Christian parents — all these are due to the fact (and also to other causes), that the individuals concerned had not in some one or other of their past incarnations, done their duty to the nations (or religions), to which they respectively belonged. A study of the times when and in the manner in which the traits of these men are brought into play should be profitable in several ways. Extending the analogy, it may be said that heartlessness, murder, cannibalism, etc., are due to failure to discharge, in past incarnations, one's duty to humanity (that is to one's self).

In conclusion it might be added that the most important element in the "Dweller of the Threshold," and in the ordeals of Chelaship, is family defects, which ought to be *first* "conquered"; then in order come national defects and the "diseases of the flesh" in general. Though all these three have to be got rid of simultaneously as far as possible, and all the three kinds of duties performed, still beginners should pay more attention to the first than to the second, and more to the second than to the third, and none of these neglected.

In those happy Aryan ages, when Dharma was known and performed fully, those men and women who did not marry, remained in the family for performing their family duties and led a strictly ascetical and Vedantic life as Brahmacharis and Kannikas (or virgins). Those alone married, who were in every way qualified for leading a grihastha (household) life. Marriage was in those days a sacred and religious contract, and not at all a means of gratifying selfish desires and animal passions. These marriages were of two kinds: (1) Those who married for the express purpose of assisting each other (husband and wife) in their determination to lead a higher life, in fulfilling their family duties, in enjoying all pleasures enjoined for such a life and thereby acquiring the means for attaining the qualifications for higher ashrama of renunciation (Sannyasa), and, above all, for giving the world the benefit of children, who would become gnanis and work for humanity. Such a husband and wife might be regarded as not having in their previous incarnations been able enough to become ripe for Chelaship. (2) Those who had, in their past incarnations already fitted themselves completely for entering the sanctuary of Occultism and gnana marga (path of wisdom). One of them, the Pati (the master or "husband") was the Guru who had advanced far higher than his Patni (co-worker or pupil or "wife"). As soon as the alliance between them was made, these retired into the forest to lead the life of celibacy and practical Occultism. But, before so retiring, they had invariably promised to their parents and other members of their family to assist and elevate them even from a distance and offered to periodically adjust (4) the inner life of all the relatives. I quote the language generally used in making such promises: — "Whenever mother, father, sister and brothers, any of you think of me in your hour of need, wherever or whatever I may be, I solemnly promise to lend you a helping hand."

Needless to say, that such vows were conscientiously kept, and that those who were not really able to do so never made such promises nor retired from the side of their family, but chose to belong to the first class of married people. This second class of persons who thus retired into the forest and became hermits, were called Vanaprasthas. They always obtained the full consent (5) of their near relatives and renounced "pleasures" and material prosperity (money making, etc.).

The fourth highest order of life was complete renunciation (Sannyasis). These were the blessed few who had, then and there, in each incarnation, got out of family defects. Only those *were* admitted into this order whom the defects of no family could affect. Long before their admission into this order, they had, by fulfilling family duties, successively, incarnation after incarnation gone far beyond the reach of family defects. Brahmacharis and Kannikas could, after they had discharged family duties, become Sannyasis. All except those belonging to the second order of life, were called upon and did take a vow to give up one or more of their dearest and strongest defects.

Such, my friends, were the Laws of Manu. If any of you could establish a community on a better foundation, I should be happy to give up my allegiance to the great Sage, Saviour and Legislator. As every Manu establishes the same Manava Dharma again and again, and as the Manus are higher than Buddha and other founders of religions, I should call upon you to pay all possible attention to this subject. Manu is higher, because he overshadows a Buddha.

I must request the readers, to study every word and the whole of this paper (if it deserves to be so called) and not tear it piece-meal or interpret passages and phrases in it, as they please. I must add, that by "family duties" I do not at all mean sacrificing your duty

or conviction and Truth, to gratify the whims or selfish nature or sectarian views of any of your "relatives." But I use the expression "family duties" in a peculiar sense, namely "that course and *only that course* of action, speech and thoughts by which you can not only get rid of your family defects in this very incarnation, but also strengthen in yourself all the noble qualities of your family, and which will at the same time enable your relatives (parents, brothers, sisters, wife, children, etc.,) also to get rid of *the same* defects and strengthen in themselves *the same* good qualities — so that you might be born again and again in the same family." "Patriotism" is used in a similar manner; and the article "Elixir of Life" (see *Theosophist*) should be read in the light of this paper.

The question is asked, "Has the dweller of the threshold an objective form; upon what does its objective form depend; does it always appear to every one in the same form as it did to Glyndon in Bulwer's story?"

It is objective to those who have gone very far. It depends upon (1) a certain thing I shall not here name; (2) the stage of development to which the chela or occultist has attained or is near attaining; (3) the mode of regarding elementals and the Dweller, peculiar to the chela or occultist, to his family and to his nation, or rather to the national and family legends or religion; (4) which form, more or less monstrous or incongruous, would be most frightful and overpowering to him at the critical period. Subject to the above four conditions, the Dweller assumes a form according to the manner in which the chela or occultist *has or has not fulfilled his threefold duties*, and according to the manner in which the sevenfold elements of the Dweller assert themselves upon him. The better he has fulfilled the threefold duties, the less does the Dweller affect him. Of course the form is not necessarily the same for every one.

Why did the Dweller appear to Glyndon's sister, who was not undergoing probation, and why in the same form?

Because she was sympathetic and sensitive enough. The principle involved in this case is the same as in obsession. The Dweller might either be but one elemental, or a group or several groups of elementals assuming one collective form. It is one elemental, when the crisis comes at the very commencement of the chela's or occultist's attempt to elevate his lower nature. This is the case when he has the least (Karmic) stamina for the "uphill path." The later on his path he is waylaid the more numerous are the elementals of which the Dweller is composed.

It need not be imagined that this appearance or influence confronts the chela only once until he reaches the first initiation, and an initiate only once during the interval between two initiations. It appears as often as the stock of his Karmic stamina falls below the minimum limit.

By Karmic stamina is meant the *phala* (effect or fruit) of past unselfish, good Karma that has become ripened. Though the occultist might have an immense quantity of past unselfish good Karma stored up, still, if during his crisis there be not a sufficient number of present unselfish good thoughts to ripen a sufficient portion of that quantity, he finds himself destitute of the necessary stock of stamina. Few are they who have already laid up a good quantity of unselfish good Karma; and fewer still are they who have the requisite degree of unselfish and spiritual nature during the period of trial; and there are still fewer who would not rush for further Yoga development, without having all the requisite means.

When not qualified fully for it, we ought to and could go on developing ourselves in the ordinary way, and try to secure the necessary means by leading an unselfish life and setting an

example to others, and this is the stage of nearly all ordinary Theosophists. They, in common with all their fellows, are influenced by a "Dweller," which is the effect upon them of their own, their family, and national defects; and although they may never, in this life, see objectively any such form, the influence is still there, and is commonly recognized as "bad inclinations and discouraging thoughts."

Seek then, to live the Higher life by beginning now to purify your thoughts by good deeds, and by right speech.

— *The Path*, July and August, 1886

FOOTNOTE:

1. I use this word "privilege" in its ethical sense; privileges are to the patriot what the "pleasures" are to the family life. ([return to text](#))
2. This is the man to be in the family and not of the family like the water on the lotus leaf, making only the good traits of the family the seat of his higher self. ([return to text](#))
3. The Ether, the Astral Light. [Ed.] ([return to text](#))
4. I use the word in the peculiar sense which I have already attached to it. ([return to text](#))
5. "Full consent" including the consent of all their various consciousnesses. If the Patni or Pati saw, and they ought to be able to see, that even in one of the consciousnesses of any of their near relatives there lurked a latent spark of hesitation to consent or of unwillingness, then the pair unselfishly gave up their determination to become Vanaprasthas and remained with the family until the proper time came. ([return to text](#))

THE PROMETHEAN MYTH — *M. A. Duncan*

Myth was the favorite and universal method of teaching in archaic times.

— *Isis Unveiled*, II, 493

Truth is that imperishable Fire which, like a sacrificial flame within the sanctuary of the temple, illumines man and differentiates him from the creatures of all other kingdoms. Inasmuch as man reveals a potential Divine Self merged in and obscured by a mortal and material envelope, the light from that fire of Truth within is inevitably dimmed, if not completely hidden by the dark and massive curtains of sense and matter. Today, a multitude of links, clues and evidence speak to him of his vast and glorious ancestry. Some see in such evidence a pretty but meaningless fabrication of "barbarian" imagination; others a confirmation by "primitive races" of certain cherished up-to-date dogmas; while the few revere and cherish these potent and suggestive clues of past glory, as the outer vesture of esoteric truths, which, known and understood, must unfold a drama of a god-born humanity, waning in spiritual power and vision, but gaining experience throughout the aeons of time.

What then is the veil through which the Seers and Masters of Compassion have sought to display before men's vision these forgotten records that are his rightful heritage? It is the *veil of myth*. Could we read aright the mythologies of all ages, we would have unrolled before our gaze the scroll of man's pedigree, the legend of a divine ancestry rising from the mystic deeps of immeasurable antiquity.

Classic mythology, therefore, is the mystic veil of Truth. To read it correctly is to evaluate its dim and shadowy figures at their

proper worth; to sense in them the yet living and potent forms of fact whereof they are but the shadows; to *lift* at length the veil and seek face to face those realities whose presence these uncertain shadows now proclaim. To seek to do these things is to undertake a great quest, and one involving the exercise of moral courage, since it is a quest calling for a revolutionizing of long crystallized modes of thought natural to man, of the nature of the universe, the scale of time in which the drama of evolution has been enacted, and of the vast arena whereon it has its setting.

The quest involves, first, a complete and unqualified acknowledgment of man's innate divinity and divine origin; second, a willingness to concede periods of growth and evolution for man and our earth infinitely exceeding in scope those we have been accustomed to hold; third, a readiness to conceive of phases of existence for man and the worlds he inhabits utterly differing from those we are now acquainted with; fourth, a realization that, inasmuch as man in the course of his long train of earth-lives has passed through many progressive phases in physical, mental, and spiritual structure until he at last reached his present gross material form, so too, our firm substantial universe has progressively materialized from a purely etheric consistency to its present solid state.

Beyond all this there are still two vital concepts absolutely essential to the proper comprehension of mythology: a) an appreciation of the existence of a sublime Intelligence moving, inspiring, controlling every slightest vestige of change or growth in our universe; and b) a realization of the existence of great and advanced Souls who, by long ages of unselfish effort towards self-purification and renunciation for the welfare of others, have fitted themselves to become the channels or instruments to aid in the carrying out of the plan of the great Artificer of the Universe.

Can we revolutionize our crystallized notions of the existing scheme of things, as measured by the criterion of this twentieth century civilization, so as to conceive of the existence in the past of other worlds growing up under other conditions and nourishing civilizations *grander* and far different than ours? If so, then there is hope we may extract something of life and meaning from classic mythology. Is such an attainment worth the sacrifice?

We shall endeavor to present the Promethean myth, and after citing the story as it has come down to us from the bright dawn of Hellenic culture, we shall seek to lay bare the significance and truth of the myth by the light of interpretation given by that Promethean flame-bearer, H. P. Blavatsky; for she it was, who by her writings, rekindled in the materialistic thought of Europe the fires of spiritual intelligence. Perchance after a proper appreciation of the keys set forth in her works, Greek mythology will take on more real form, and the devout subscribers to the legends of old Hellas obtain more credit for insight and philosophical understanding of life and the universe. It is high time that some such justice were done the ancients when one volume of these old legends, designed for the use of youthful unformed and inquiring minds, opens with the words:

Wise men and scholars have spent their lives in trying to find out where these wonderful stories came from first, and different men have given different explanations. Of course no one believes the stories nowadays, nor has any one believed in them for hundreds of years. Yet, at one time, the foremost nations of the earth, the Greeks, and the Romans, not only believed the stories but worshiped the gods and made sacrifice to them. It is because the stories are so beautiful, and because so many painters, sculptors, and writers, both then and ever since, have used them for

subjects, that today we are interested in them and must know about them if we are to understand what we read, and see, and hear.

A perusal of H. P. Blavatsky's works suggests that possibly something more than mere beauty has procured for these myths their immortality; hence, in place of treating them "briefly and literally," it may be very worth our while to examine the Promethean Myth at length and endeavor to evoke the spirit which inspired its origin and character.

Prometheus, the Light-Bringer, comes before us as a great-souled brother of the Titan line rising out of the beginning of things in Hellenic thought, a giant lord of earth when man, as man, was not. Legend has it that the huge contest between gods and Titans had ended, leaving the gods masters of Olympus and the Titans relegated to the realms of Tartarus. Prometheus, their regent, mighty though deposed, looked upon those beings that should be men; beheld them endowed with all that was vouchsafed the animal world but lacking that which should render them superior to their fellow animals. Prometheus, the "Fore-seer," took upon himself to dare the wrath of Zeus himself that these lesser fellows upon earth should achieve a great destiny. Mounting the dawn-lit battlements of the gods, he seeks the gleaming chariot of the Sun. Here at the flaming source of universal light the recreant Titan kindles his own torch, bears it again to earth and gives to earth's superior creation the flame that is to make them men. Not heedlessly or blindly did Prometheus procure this boon to man, but with a full foreknowledge of the doom that must be his — to bow before the flaming anger of a "jealous" god; to suffer captive anguish in unworthy chains upon a lonely peak where ravening vultures should each day devour the flesh that with the night should be made whole again to furnish forth new anguish for the morrow. Such was the fate he gloriously incurred, and having

met with it disdained to accept succor. His was the flaming hero spirit that should cry

I would not quit

This bleak ravine, these unrepentant pains. . . .

Pity the self-despising slaves of Heaven,

Not me, within whose mind sits peace serene.

— Shelley, *Prometheus Unbound*, Act I, Sc. i

Such was the legend of Prometheus and such his sublime significance to the Hellenes — a type of the compassionate spirit spurred by adamantine will to the endurance of utmost ill that those of lesser power may rise and live.

Titan! to whose immortal eyes

The sufferings of mortality,

Seen in their sad reality,

Were not as things that gods despise;

What was thy pity's recompense?

A silent suffering and intense;

The rock, the vulture, and the chain,

All that the proud can feel of pain,

The agony they do not show,

The suffocating sense of woe.

— Byron, *Prometheus*

Is it not possible that this legend is not wholly myth? Is it too gross a violation of the "established" canons of modern science to suppose some lurking vein of truth hid deep within the root of the matter to which that vagrant and deplorably fertile imagination (!) of old Hellas attached itself in the development or acceptance of this tale?

"How ridiculous!" says your matter-of-fact man in the street.

"Who ever heard of 'giants' outside of fairy tales?" "And as for the

'chariot of the sun' —why, hasn't science measured, tested, analyzed and otherwise investigated the secrets of that source of light?"

Nevertheless, there *are* those who *have* heard of giants quite apart from fairy tales, and science may yet have occasion to do some hurry-up researching in order to keep its votaries posted as to the origin and doings of these same Brobdingnagian specimens. And as to this fatal term — "chariot of the sun" — there are suns and — "suns"; if a race of people possess that exalted and poetic vision which leads them to a lofty and artistic conception of the forces of nature, it surely does not therefore follow that all they say of these forces is false!

Indeed there is much of truth in this legend, and to come upon it we have to bear in mind H. P. Blavatsky's words to the effect that in these ancient myths gods and mortal heroes invariably are but personifications of "lands, islands, powers of nature, elements, nations, races and sub-races." In the legend of Prometheus, we are confronted with a record of one of the great cyclic steps in human evolution which took place far, far back in the beginning of the Fourth Race — the birth of MIND in the heretofore senseless Third Race. As H. P. B. says, the Promethean myth

belongs to neither Hesiod nor Aeschylus; but, as Bunsen says, it "is older than the Hellenes themselves," for it belongs, in truth, to the dawn of human consciousness. The *Crucified* Titan is the personified symbol of the collective Logos, the "Host," and of the "Lords of Wisdom" or the HEAVENLY MAN, who incarnated in humanity. — *The Secret Doctrine*, II, 413

What inspired Aeschylus to write his drama of *Prometheus Bound*, a work which has immortalized in the human mind that "mythical" hero as a sublime and selfless Titan offering up a

mutilated sacrifice of his own soul and body on the altar of humanity's weal — cursed of Zeus and clawed of vultures? The simple fact that the poet and dramatist was an Initiate and had glimpsed the supernal glory of that mystic offering of salvation for which the Titan stands. Let us invest this fire-bringer with all of grandeur and celestial splendor that we may, since that which he represents transcends the power of mortal mind to comprehend. That which the most ardent and devout Christian claims in reverence and worship for his equally "mythical" Adam and Eve that trod the blessed precincts of Eden before the 'curse' — all that, this Prometheus is worthy of, since he is that Adam and Eve of humanity in personification, or, at least, one aspect of these.

Prometheus bringing fire to man symbolized that spiritual and psychological event in racial history when man's physical body "belonged to the earth and the monads remained on a higher plane altogether," as H. P. B. explains. At that period the evolutionary cycle was on a descending arc; physical and intellectual materialization becoming more and more pronounced; while those bright spirits — denizens of another sphere than ours, dwelling apart, unsorrowing and unsullied — looked down upon this mindless race of beings; saw them with unknowing instinct dishonor the creative power with which they had become endowed.

In their compassion, those lofty hierarchs of the upper worlds *voluntarily* "fell." From the resplendent abode of "Apollo," from the "palace of the Lord of Light," they came netherward — luminously lovely, rainbow-robed, "sons of the fire mist" and like to dazzling angels "trailing clouds of glory" did they "come from God," which was their home, down to the dim and sunless house of wan mortality. This occurred, say the Theosophical teachings, at the beginning of the Fourth Race, when the earth was peopled

by monsters, huge animals, gigantic creatures of human shape, and creatures neither to be called man nor beast, but with resemblances to each. Material evolution was creeping upward, from the dim and waning glories of the past the atmospheric universe had waxed nebulous; nebulosity had in its turn assembled itself and taken on mass and form; form through vast centuries of time had grown from vagueness into definitude, substance, and at last solidity.

While all this drama of materialization was weaving and working its evolutionary patterns on planetary spheres, spiritual and divine consciousness was seeking vehicles wherein to find embodiment and make descent, planetary spirits were informing human principles with the power to manifest in dynasties of celestial beings. With the advance of intellect and matter, these airy denizens became ever more "of the earth earthy," until at the beginning of the Fourth Root Race the human principle, as before stated, was enwrapped with the solid physical casing with which we are today familiar — "*human*" because of the benign descent, the voluntary and self-sacrificing "fall" of the beneficent "sons of mind" who from the high heavens of spiritual existence brought down to earth the "Fire." That Fire from the gleaming chariot of Apollo they themselves *were* and by their entry into human bodies made of each human being a ray from the infinite sun. Because they felt man is today a potentially divine being, a celestial ray imprisoned in "coats of skin." These physical impedimenta it is his destiny to dominate, control and spiritually inform to the extent that they shall become the fit vehicle for the expression of the Real Lord — the Prometheus, fettered and feasted on by ravenous passion and desire within the outer casing of flesh.

H. P. Blavatsky points out most clearly in her *Secret Doctrine* that the "curse" so often referred to in relation to the birth of

consciousness in man — the ability to know good from evil — lay not in the acquirement of that knowledge itself, which had to come sooner or later, nor yet in the acquirement of the creative faculty, the rightful heritage of the race, but in the disease and suffering engendered by a *misuse* of a power heretofore exercised blindly and instinctually. This is strikingly illustrated in the words from her works:

The divine Titan has then suffered in vain, and one feels inclined to regret his benefaction to mankind, and sigh for those days so graphically depicted by Aeschylus, in his "Prometheus Bound," when, at the close of the first Titanic age (the age that followed that of ethereal man, of the pious Kandu and Pramlocha) nascent, physical mankind, still mindless and (physiologically) senseless, is described as —

"Seeing, they saw in vain,
Hearing, they heard not, but like shapes in dreams,
Through the long time all things at random mixed."
— *Op cit*, II, 411

The effect of an acquirement of new and higher powers without the transmutation of existing taints and tendencies is elsewhere in the same work strikingly commented on and the resulting evils pointed out where the writer says:

Prometheus having endowed man, according to Plato's "Protagoras," with that "wisdom which ministers to physical well-being," but the lower aspect of *manas* of the animal (Kama) having remained unchanged, instead of "an untainted mind, Heaven's first gift" (Aeschylus), there was created the eternal vulture of the ever unsatisfied desire, of regret and despair coupled with "the dreamlike feebleness that fetters the blind race of mortals" (p 556), unto the day when Prometheus is released by his heaven-appointed

deliverer, Herakles. — *Op cit*, II, 412-13

Many who have read and delighted in the Promethean legend must have been struck by the seeming conflict between Prometheus — the fallen Titan — and Zeus the ruler of the gods; taken literally, the dignity and rectitude of the Light-bringer would seem to suffer seriously in thus resisting the great ruler of gods and men. This discrepancy, so marked in Aeschylus' drama, is referred to and explained in *The Secret Doctrine* wherein the author says:

The translators of the drama wonder how Aeschylus could become guilty of such "discrepancy between the character of Zeus as portrayed in the 'Prometheus Bound' and that depicted in the remaining dramas" (*Mrs A. Swanwick*). This is just because Aeschylus, like Shakespeare, was and will ever remain the intellectual "Sphinx" of the ages. Between Zeus, the abstract deity of Grecian thought, and the Olympic Zeus, there was an abyss. The latter represented during the mysteries no higher a principle than the lower aspect of human physical intelligence — *Manas* wedded to *Kama*, Prometheus — its divine aspect merging into and aspiring to *Buddhi* — the divine Soul Zeus was the human soul and nothing more, whenever shown yielding to his lower passions — the *jealous* God, revengeful and cruel in its egotism or I-AM-NESS. Hence, Zeus is represented as a serpent — the intellectual tempter of man. — II, 419

It has already been pointed out that the heavenly achievement of Prometheus was a *conscious and voluntary* sacrifice, a willing martyrdom; as such this bringing of fire and *entering with it* into the prison cell of the flesh has both past and present significance. It symbolizes the deeply significant cyclic evolutionary achievement already spoken of, and it likewise has reference to

that crucifying of the god within by the bodily desires and passions in their riotous carnival of each day's life here on earth. As H. P. Blavatsky says:

The gift of Prometheus thus became a CURSE —though *foreknown* and *foreseen* by the HOST personified in that personage, as his name well shows it is in this that rests, at one and the same time, its sin and its redemption. For the Host that incarnated in a portion of humanity, though led to it by Karma or *Nemesis*, preferred free-will to passive slavery, intellectual self-conscious pain and even torture — "while myriad time shall flow" — to inane, imbecile, instinctual beatitude. Knowing such an incarnation was premature and not in the programme of nature, the heavenly host "Prometheus" still sacrificed itself to benefit thereby, at least, one portion of mankind. But while saving man from mental darkness, they inflicted upon him the tortures of the self-consciousness of his responsibility — the result of his free will — besides every ill to which mortal man and flesh are heir to. This torture Prometheus accepted for himself, since the Host became henceforward blended with the tabernacle prepared for them, which was still unachieved at that period of formation. . . . — *Op. cit.*, II, 420-1

This drama of the struggle of Prometheus with the Olympic tyrant and despot, sensual Zeus, one sees enacted daily within our actual mankind: the lower passions chain the higher aspirations to the rock of matter to generate in many a case the vulture of sorrow, pain and repentance. . .

When man understands that "*Deus non fecit mortem*" (*Sap*, I, 13), but that man has created it himself, he will re-

become the Prometheus before his Fall. — II, 422

Such are some of the Truths whose jewelled lights gleam through the translucent veil of an ancient, and *authentic* legend, which, like all true legends, is but a rehearsal of the deeds of the human soul.

The Theosophical Forum

ON THE FUTURE: A FEW REFLECTIONS — *William Q. Judge*

Although I am an American citizen, the place of my birth was in Ireland, and in what I am about to say I cannot be accused of Columbianism, for no matter how long might be my life, I could never be an American. For that perhaps it is right, since it is compulsory, to wait for some distant incarnation.

Now, either H. P. B. was right or she was wrong in what she says in the *Secret Doctrine* about the future of America. If wrong, then all this may be dismissed as idle speculation. But, if right, then all thoughtful Theosophists must take heed, weigh well, mentally appropriate and always remember what are her words as well as the conclusions to which they lead.

In the first pages of the second volume she speaks of five great continents. *First*, the Imperishable Sacred Land (1); *second*, the Hyperborean, now part of it is in Northern Asia; *third*, Lemuria, sunk long ago, but leaving some remains, islands, the points of high mountain ranges; *fourth*, Atlantis, presumably in the Atlantic Ocean, now below the level of the water, but with perhaps Teneriffe and Atlas as reminders; and *fifth*, "was America."

From a survey of the book, digging in notes and culling from the text here and there, the conclusion is irresistible that, although the present America is not the actual Continent as *it is to be*, it is a portion of it; and certainly is now the nursery for the race that will in the future occupy the *sixth* Continent, which for the sixth Great Root-Race will emerge from the waters. Where? Perhaps when the present America has been split up by tremendous cataclysms, leaving here and there large pieces on its western side, it is in the Pacific Ocean that the great mass of the new one will come up from the long sleep below the sea. Rightly then will

the great far western ocean have been named *Pacific*, for that Race will not be given to contest nor hear of wars or rumors of war, since it will be too near the seventh, whose mission it must be to attain to the consummation, to seize and hold the Holy Grail.

Turn to page 444 and onward of the second volume. Read there that the Americans have become in only three hundred years a primary race *pro tern.*, in short, the germs of the sixth sub-race, to blossom in a few more centuries into the pioneers of that one which must succeed to the present European fifth sub-race in all its characteristics. Then after about 25,000 years, which you will note is meant for a great sidereal cycle of a little over that length of time, this new race will prepare for the seventh sub-race.

Cataclysms will then fall upon you; lands and nations will be swept away, first of all being the European, including the British Isles — if not gone before — and then parts of both North and South America. And how puny, mongrel, indeed, will be the remains of the scientists of today, great masters of microbes now, but then to be looked upon as strange remains of the Nineteenth Century, when, as the people will tell each other then, so many, with Truth before them, laughed at it and stoned its apostles, dancing a fantastic dance meanwhile around the altar of invisible matter.

It seems as if some power, deliberately planning, had selected North and South America for the place where a new primary root-race should be begun. These two continents were evidently the seats of ancient races, and not the habitation of wild undeveloped men. The red man of the Northern one has all the appearance and beliefs of a once great race. He believes in one God and a Devachan of happy hunting after death. Some tribes have diagrams of how the world was formed and peopled, that strangely resemble the Hindu cosmogony, and their folk-lore bears deep marks of having come down from an older and better

time. Following the course of exploration southwards, we find accumulating evidences all the way of a prior civilization now gone with the cyclic wave which brought it up. Central America is crowded with remains in stone and brick; and so on south, still we discover similar proofs. In course of time these continents became what might be called arable land, lying waiting, recuperating, until the European streams of men began to pour upon it. The Spanish overflowed South America and settled California and Mexico; the English, French and Dutch took the North, and later all nations came, so that now in both continents nearly every race is mixed and still mixing. Chinese even have married women of European blood; Hindus are also here; the ancient Parsi race has its representatives; the Spanish mixed with the aborigines, and the slaveholders with the Africans. I doubt not but that some one from every race known to us has been here and has left, within the last two hundred years, some impression through mixture of blood.

But the last remnants of the fifth Continent, America, will not disappear until the new race has been some time born. Then a new Dwelling, the sixth Continent, will have appeared over the waters to receive the youth who will tower above us as we do above the pigmies of Africa. But no America as we now know it will exist. Yet these men must be the descendants of the race that is now rising here. Otherwise our philosophy is all wrong. So then, in America now is forming the new sub-race, and in this land was founded the present Theosophical Society: two matters of great importance. It was to the United States, observe, that the messenger of the Masters came, although Europe was just as accessible for the enterprise set on foot. Later, this messenger went to India and then to Europe, settling down in the British Isles. All of this is of importance in our reflections. For why in America at first does she begin the movement, and why end her

part of it in England? One might be led to ask why was not an effort made at all costs to give the last impulse outwardly in the land of promise where she began the work?

Do not imagine for one moment, O ye English brothers of mine, that London was selected for this because the beauties of your island called her, or for that she had decided at the finish that after all a mistake had been made in not going there first. It was all out of stern necessity, with a wisdom derived from many older heads, having in view the cycles as they sweep resistlessly forward. The point where the great energy is started, the centre of force, is the more important, and not the place at which it is ended. And this remains true, no matter how essential the place of ending may be in the scheme. What, do you suppose India is not as important? And would not that land have offered seemingly a better spot than all for the beginning of the *magnum opus*? Adepts do not make mistakes like that.

America's discovery is ascribed to Christopher Columbus. Although it is doubted, yet no one doubts that the Spanish people did the most at first in peopling it, meanwhile working off some old and making some new Karma, by killing many of the aborigines. Thus it is that doomed people rush on to their doom, even as the troops of insects, animals and men were seen by Arjuna to rush into Krishna's flaming mouths. But later came the sturdy stock from England, who, in the greatest nation, the most enduring on this continent, have left their impress indelibly in the people, in its laws, in its constitution, its customs, its literature and language. Perhaps England and Ireland are the gateways for the Egos who incarnate here in the silent work of making a new race. Maybe there is some significance in the fact that more lines of steamships conveying human freight come to the United States from England, passing Ireland on the way as the last seen land of the old world, than from anywhere else. The deeds of men, the

enterprises of merchants, and the wars of soldiers all follow implicitly a law that is fixed in the stars, and while they copy the past they ever symbolize the future.

Did H. P. B. only joke when she wrote in her book that Ireland is an ancient Atlantean remnant, and England a younger Isle, whose rising from the sea was watched by wise men from Erin's shore? Perhaps the people of that old land may have an important influence in the new race of America. It would appear from comparison that they might have had, and probably will in the future. Perhaps, politically, since many expect social disturbances in America. In such a case any student of character will admit that the Irish, ignorant or not, will stand for law and order — for her sons are not battling here with an ancient foe. Why, too, by strange freak of fate is the great stone of destiny in Westminster Abbey fixed under the coronation chair on which the queen was crowned? Let us also be informed if there be any finger shadow pointing to the future in the fact that England's queen, crowned over that stone, (2) is Empress of India, from which we claim the Aryans came, and where their glorious long-forgotten knowledge is preserved? Her name is Victory. It is the Victory for "the new order of ages"; and that new order began in America, its advent noted and cut on the as yet unused obverse side of the present seal of the United States government. A victory in the union of the Egos from East and West; for England stretches one hand over to the home of the new race, which she can never own, with the other governing India, and completes the circuit. It may be a fleeting picture, perhaps to be wiped out for a while in a stream of blood, but such is the way the cycles roll and how we may learn to read the future. For England's destiny is not complete, nor has the time struck. None of us hug foolish delusions too long, and even if Ireland were once a most sacred place, that is no reason why we should want to go there. For in America those

whose Karma has led them there will work for the same end and brotherhood as others left in India and Europe. The dominant language and style of thought in America is English, albeit transforming itself every day. It is there that silently the work goes on; there European fathers and mothers have gone, establishing currents of attraction that will inevitably and unceasingly draw into reincarnation Egos similar to themselves. And the great forward and backward rush is completed by the retarded Egos as they die out of other nations, coming meanwhile into flesh again among the older races left behind.

* * * *

At least such seemed the view while the clouds lifted — and then once more there was silence.

— *Lucifer*, March 1892

ARIADNE'S THREAD: I — Hazel S. Minot

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

All down the centuries there has been a persistent search for the answers to those gad-fly questions: "Where did we come from?" "Why are we here?" and "Where do we go from here?" Questions that we begin to ask even before we learn to read, and sometimes we are not so very much wiser when we come to the last chapter of this present life.

You know the story of Theseus: how he was enabled to reach the Minotaur, slay the monster, and then find his way back through the bewildering passages of the Labyrinth by means of the thread given to him by the princess Ariadne. It is, in fact, a story of universal life, and the "whys" and "wherefores" are so complicated because man — an important figure in the solution of the puzzle — is a mystery to himself. Long ages before present-day psychologists were posing the question of man's "psyche" the search was on, and with the ups and downs of the passing cycles there have been greater and lesser degrees of applied knowledge concerning true inner development. Progress has never been in a straight line, and this fact has served nicely as a smoke-screen to the real course of human progress — at any event, for those believing in an end-on evolution.

The way to the very heart of this "world labyrinth" has been found by more than one seeker, and the knowledge brought back has been a veritable Ariadne's Thread for the many others who have essayed to penetrate the mystery. The pattern created by these efforts tells its own story, and gives a revealing picture of

the human race, guided and instructed from age to age by those who held this Ariadne Thread of spiritual truth. Throughout great cycles of time there have come those who were head and shoulders above their fellows in spiritual thought; then there have been smaller cycles, represented by outstanding figures of intellectual and spiritual capacity; and in between these latter have been the many of lesser stature who nevertheless also "held the thread" by reason of their will "to know God" — not through creeds and dogmas, but by clearing away misconceptions, by probing the Universe around them, studying their relation to it, and by seeking always for a greater knowledge of themselves.

We are more or less familiar with these names — whatever group they may belong to — but do we realize quite so readily their relation to the "pattern," especially those (searchers after truth) who have "filled in the gaps," as it were? Time and patience show that over a period of some twenty-five centuries, there have been names, sometimes two or three in each century, whom we can recognize as carrying the Ariadne Thread. The pattern is so continuous that where an occasional break seems to come we may well believe the work was carried on in silence, or else — entirely possible — our own research needs to be extended.

It is worthy of note that a great many of these men have been born towards the middle or last portion of one century, thus carrying their work over to the beginning of the following century. Also, while empire was slowly moving westward, the East was recognized as holding the keys to spiritual knowledge, and more than one wise man of the West received teaching from the sages of the East.

Our beginning — the seventh century, B.C., — is necessarily arbitrary, and through the succeeding centuries we shall confine our research in large part to representatives of European thought.

The following table (1) will assist the reader in tracing the Ariadne Thread: unhampered by the usual details of biography, he will be free to make his own deductions from hints suggested in the appended quotations.

SEVENTH CENTURY, B.C., c. 639-559

Solon, mentioned by H. P. Blavatsky in both *Isis Unveiled* and *The Secret Doctrine*. He studied with the Egyptian priests who told him, among other things, about Atlantis.

SIXTH CENTURY, B.C., B. c. 584

Pythagoras, whom H. P. B. designates as a great adept, and calls him "the most mystic of the eastern philosophers." He studied with the Brahmins in India.

522-443 ? 525-455

Pindar and Aeschylus: Both give evidence in their writings of a knowledge of the Mysteries, and H. P. B. says of the latter: "it is not the 'father of the Greek tragedy' who invented the prophecy of Prometheus; for he only repeated in dramatic form that which was revealed by the priests during the MYSTERIA of the Sabasia." Thus indicating that Aeschylus had been initiated, "as otherwise," she says, "he must, like Socrates, have had a *daimon* to reveal to him the secret and sacred allegorical drama of initiation." — *The Secret Doctrine*, II, 419

FIFTH CENTURY, B.C., 469-399

Socrates. Dr. de Purucker points out that "this great but unfortunate Greek suffered the penalty of death at Athens not so much for the reasons publicly promulgated for the carrying out of his execution, but really because he had unwittingly betrayed the teachings of the Greek Mysteries."

— *The Esoteric Tradition*, p. 1030 This betrayal was unwitting because Socrates had not been initiated.

FOURTH CENTURY, B.C., c. 427-347

Plato, the pupil of Socrates. Dr. de Purucker writes of him: "The great Plato was once accused of the same crime of "impiety," which in this sense meant divulgence of forbidden knowledge connected with the Mysteries, but Plato was unquestionably an Initiate; and he wisely fled his fatherland for a time." — *E. T.*, pp. 1030-1 H. P. B. states that "Plato having been initiated, could not believe in a personal God — a gigantic Shadow of Man. His epithets of 'monarch' and 'Law-giver of the Universe' bear an abstract meaning well understood by every Occultist." — *S. D.* II, 554

384-322

Aristotle, the pupil of Plato. Of him and his age, H. P. B. makes the following significant statement: ". . . the too great dependence upon physical facts led to growth of materialism and a decadence of spirituality and faith. At the time of Aristotle, this was the prevailing tendency of thought. . . . Few were the true adepts and initiates, the heirs and descendants of those who had been dispersed by the conquering swords of various invaders of Old Egypt. . . . The triumphant brand of Aristotle's pupil swept away from his path of conquest every vestige of a once pure religion, and Aristotle himself, the type and child of his epoch, though instructed in the secret science of the Egyptians, knew but little of this crowning result of millenniums of esoteric studies." — *Isis Unveiled*, I, 15-16

THIRD CENTURY, B.C.

Druidism active in Britain and Gaul.

SECOND CENTURY, B.C.

No outstanding historical representative.

FIRST CENTURY, c. 99-55

Lucretius, a disciple of the atomistic philosophy. Dr. de Purucker says that he "has been greatly misunderstood in modern times." Citing *De Rerum Natura* ('On the Nature of Things'), by Lucretius, he adds: "in all important points, this is a fair approach to the Theosophical doctrine of Monads ensouling Atoms." — *E. T.*, 276 H. P. B., writing of the atomists, states that "from Anaxagoras down to Epicurus, the Roman Lucretius, and finally even to Galileo, all those Philosophers believed more or less in ANIMATED atoms, not in invisible specks of so-called "brute" matter." — *S. D.*, I, 568

70-19

Vergil, "versed as every ancient poet was, more or less, in esoteric philosophy." — *S.D.*, II, 594 "Vergil, who speaks as a type of the initiates of his time in saying that after dissolution 'all beings return to the Divine,' doing so 'conscious and alive.' " — *E. T.*, 847

MESSIANIC CYCLE

Jesus the Christ. A "Messianic Cycle ended — or a new one began — some 2160 years ago, more or less, with the life and work of the Avatara whom the West knows under the name of Jesus the Christ." — *E. T.*, 1058 "Christ — one of the several followers, but only a great and glorious Initiate for all the rest." — *S. D.*, I, 653

B. C. 25 - A.D.?

"Philo Judaeus, or Philo the Jew, the great Platonizing Jewish philosopher, whose writings exercised a tremendous influence in their way over not only contemporary and later Jewish thought, but likewise on the beginnings of the Christian theology and therefore on the minds of many of the Church-Fathers. . . . The entire purpose of Philo's writings was to show the common grounds of mystical and theological thinking that, according to him, existed between the Platonic doctrines and the sacred books of the Jews." — *E. T.*, 615

FIRST CENTURY, A.D., cir. beginning.

Apollonius of Tyana who, with Iamblichus, "held that it was not 'in the knowledge of things *without*, but in the perfection of the soul *within*, that lies the empire of man, aspiring to be more than men.' Thus they had arrived at a perfect cognizance of their godlike souls, the powers of which they used with all the wisdom, outgrowth of esoteric study of the hermetic lore, inherited by them from their forefathers." — *Isis*, I, 64 H. P. B. also says that the story of Apollonius is symbolically written, and that his journey to the wise men, and various interviews held with them "would disclose, if understood, some of the most important secrets of nature."

SECOND CENTURY, (end of 1st) 51-117, 76-138

Trajan and Hadrian: Though the Mysteries were no longer what they had been, these two of the "five good emperors" "did actually pass through the Eleusinian Rite . . . they did receive something; for as long as the Mysteries lived, the men who conducted them . . . still had some lingering sparks of the ancient verities, and were enabled to clothe their procedures and rites with at least a semblance of the

Holy Fire of archaic times." — *E. T.*, p. 1051

SECOND CENTURY, A.D., Cir. end & beginning of 3rd.

Ammonius Saccas, "the founder of the Neo-Platonic School of the Philalethians or 'lovers of truth.' " He was "endowed with such prominent, almost divine goodness as to be called *Theodidaktos*, the 'God-taught.' " — *The Key to Theosophy*, p. 313 "Ammonius, speaking of his philosophy, taught that their school dated from the days of Hermes, who brought his wisdom from India." — *Isis*, II, 342

THIRD CENTURY, A.D., c. 205-270

Plotinus, a pupil of Ammonius Saccas, called by his contemporaries *Theiotatos*, "divinest." "He taught a doctrine identical with that of the Vedantins, namely, that the spirit soul emanating from the One Deific Principle was after its pilgrimage on earth reunited to it." — *Key*, p. 360

233-c. 304

Porphyry, the pupil of Plotinus, to whom — as H. P. B. tells us — he gives the credit "of having been united with "God" six times during his life, and complains of having attained to it but twice, himself." — *Isis*, I, 292, fte. "A natural-born mystic he followed, like his master Plotinus, the pure Indian Raj-Yoga system." — *Key*, p. 361

FOURTH CENTURY, A.D., c. 283-c. 330

Iamblichus, whose school "was distinct from that of Plotinus and Porphyry, who were strongly against ceremonial magic and practical theurgy as dangerous, though these two eminent men firmly believed in both." Yet Iamblichus, in line with the teaching of his

predecessors, strictly forbade any endeavor to procure "phenomenal manifestations; unless, after a long preparation of moral and physical purification, and under the guidance of experienced theurgists." — *Isis*, I, xliii, 219

c. 331-363

Julian the Apostate. Dr. de Purucker writes of this misunderstood Emperor: "Julian one day will be vindicated for what he really was, and will be regarded in esoteric history as one of the most unfortunate martyrs in the ranks of the workers for the Ancient Wisdom." — *E. T.*, 1052 H. P. B. refers to Julian several times in *Isis*, and gives the following regarding initiation: " 'And were I to touch upon the initiation into our sacred Mysteries,' says Emperor Julian, the kabalist, 'which the Chaldean bacchised respecting the *seven-rayed God, lifting up the soul through Him*, I should say things unknown, and *very unknown to the rabble*, but well known to the *blessed Theurgists*.' " — II, 417

FIFTH CENTURY, A.D., 410-485

Proclus, the last teacher of importance among the Neo-Platonists. Writing of the Mysteries, H. P. B. says: "What the hierophant was allowed to see at the last hour is hardly hinted at by them. And yet Pythagoras, Plato, Plotinus, Iamblichus, Proclus, and many others knew and affirmed their reality. . . . As Taylor correctly observes . . . it may be inferred, 'that the most sublime part of the *epopteia* . . . consisted in beholding the gods themselves invested with a resplendent light,' or highest planetary spirits. The statement of Proclus upon this subject is unequivocal: 'In all the initiations and mysteries, the gods exhibit many forms of themselves, and appear in *a variety of shapes*, and

sometimes, indeed, a formless light of themselves is held forth to the view; sometimes this light is according *to a human form*, and sometimes it proceeds into a different shape.' " — *Isis*, II, 113

SIXTH CENTURY, A.D., 480-524

Boethius, Roman statesman and Stoic philosopher; one whose firm belief "in the truth of his philosophic ethics" governed his actions in both his official and his private life. His translation of some of Aristotle's works into Latin, and his commentaries on them served largely to acquaint the Middle Ages with the writings of the Greek philosopher. H. P. B. refers to the *Geometry* of Boethius in vindication of the Pythagoreans and their knowledge, and use, of "the 1 and the *nought* as the first and final cipher."

The latter part of the sixth century leads into the seventh with the coming of Mohammed. Though concerned chiefly with the Moslem world, the rise of Mohammedanism had a tremendous impact on the nations of Western as well as Eastern Europe. We find, now, a definite change in the outward form of man's search for himself, though the inner drive is always the same. Thus the seventh century, a.d., offers a natural pause in our theme: the age-old quest for Truth, with those who have handed on the Ariadne Thread.

FOOTNOTE:

1. Not meant to be an exhaustive table, but one inviting to further study on the part of the reader. ([return to text](#))

DRUIDISM: THE THEOSOPHY OF ANCIENT WALES — *Kenneth Morris*

This subject is a vast one; it is difficult to know how to tackle it intelligibly. Books and books have been written on it; hardly any two agreeing about anything. If you want to establish any conclusion you may draw, you have to bring forward pages and pages of evidence, from Greek literature, from Latin literature, from Welsh literature; and argue and argue and argue. That is the correct scientific way of doing things. I shall have to ask you to take all that for granted, and say that what I am going to give you are the conclusions my own mind has formed after considerable study, considerable pondering of all the evidence that remains to us; and that I could not prove any of these conclusions to anyone who did not want to believe in them.

You see, there are two types of mind, or two sides to the mind. One says, I'm from Missouri; show me; I won't accept anything unless it is proved; you've got no business to believe anything unless you can prove it in a chemical laboratory; measure it, weigh it, tie it up neatly into little packages, and stick a label on each. For that type of mind, or that side of the mind, there is nothing to say about Druidism; it dismisses the subject as something we know practically nothing about. But the other type is alert to catch suggestions of unknown greatness. When it hears of something, it does not ask for that something to be proved, but asks: Can I use that? Is that of value to me? Can I enlarge my soul, so to speak, by contemplation of it? To this second type of mind the subject of Druidism is one that must appeal very greatly.

The Druids were the priests of certain Celtic peoples in antiquity. They and their religion preceded Christianity in Gaul (France), in

Britain and in Ireland; their headquarters was in Britain, where the religion started, and where the training colleges for the priesthood were situated. In the literature of Greece and Rome we find references to them from about 200 b.c. to 200 or 300 a.d.

The first is from an Alexandrian Greek writer named Sotion, about 200 b.c. He speaks of it as a common belief in Greece that philosophy came to the Greek world from certain foreign peoples: from the Brahmins, the Magi of Persia, the Egyptian priesthood, and the Druids. All that is proved by this is, that the highly civilized Greeks regarded the Druids not as the medicine men of a savage tribe, but as the possessors of a highly developed philosophy, capable of teaching the Greeks. Then we get references to them from the century before Christ as students and teachers of a very sublime philosophy. Then comes the time when Rome was at war with the peoples whose religion was Druidism. First there was Caesar's attack on and conquest of Gaul. It was quite unprovoked; its cause was Caesar's personal ambition; he is said to have caused the death of some three to five million Gauls in the course of the war. It is on his account of the Druids that the popular view of them is based: their supposed human sacrifices, etc. Now whatever Caesar was, there is no doubt that he was thoroughly unscrupulous. We know that he deliberately misrepresented and understated the civilization of the Celtic peoples, his enemies. We know that their civilization was in some ways more advanced than that of the Romans who conquered them: e.g., they used sailing ships, while the Roman ships were propelled by oars; and they manufactured better textiles, made and wore better clothes than the Romans, or even the Greeks. We know, too, that to lie about your enemies in war-time is a common practice with erring humanity; and Caesar did it liberally; as is proved by this fact: In giving his account of the Druids, he speaks of them as not only the priests, but as also in

charge of the legal system of Gaul: which is correct. In this latter capacity, he says that the severest punishment they inflicted was excommunication: a criminal was forbidden to attend the religious services; but then two pages later he goes on to tell horrible tales about their punishing criminals by erecting huge wicker cages, filling them with criminals and burning them to death. Now if his first statement that the worst punishment they inflicted was excommunication was true, this second statement, made with a view to war-time propaganda, could not also have been true; nor does it jibe with what he says further about their being students and teachers of philosophy and science: in which connection he, like every other classical writer, speaks of them with high respect.

From Caesar's time, who conquered Gaul and twice invaded Britain unsuccessfully, for about 150 years until the Roman conquest of southern Britain was accomplished, we get a good many Roman writers referring to the Druids. They all copy Caesar in speaking of the human sacrifices; during this period the Druids were still actively or potentially the enemies of Rome. Then, when Britain was conquered and the war was finished with, we find that supposed dark side of Druidism forgotten; no writer seems to know about it any more; and we get references once more classing the Druids with the Brahmins, the Magi and the Egyptian priesthood as possessors of a high wisdom, as the teachers of the Greeks in philosophy; as a class that knew the wisdom of the gods, the secret laws of the universe. Even in that period during which it may be supposed war-time propaganda would have influenced the Roman mind, every reference made to the Druids speaks of them as possessors of an occult knowledge, something not in possession of the Romans themselves. Sometimes it is in the way of poking a bit of fun at them — they alone knew or they alone were ignorant of the secrets of the gods; sometimes it is

very respectful indeed; but always it is there. I do not think an absolutely unprejudiced student could examine all the evidence from the literature of Greece and Rome without coming to the certain conclusion that the classical world held strongly to the belief that the Druids were philosophers, possessors of an esoteric wisdom, a deeper knowledge of the secrets of life and death than their neighbors and contemporaries. That undoubtedly was their reputation. Caesar with all his efforts could not shake that; indeed he does not attempt to; he accepts it. What he did was to add to it the statement that they were cruel and barbarous; which statement was believed while the Romans were at war with the Druidic peoples. When that war was over, and civilized Romans had the opportunity of mixing with civilized Celts and knowing their minds, the belief in Druidic barbarism seems to have died away.

Naturally, the Romans forbade the practice of Druidism during their occupation of Gaul from b.c. 50 say to a.d. 450, or about 500 years, and during their occupation of south Britain from about a.d. 70 to 410, say 340 years. But they never went to Ireland, which was also Druidic by religion, nor to northern Scotland; and even their occupation of Wales was very partial. There was nothing to prevent British, or to give them the modern name, Welsh, Druids from taking refuge in Ireland — which country all along must have had a good deal of intercourse with Britain; there was very little to prevent Druidism being carried on on the quiet in Wales throughout the Roman occupation.

The cardinal doctrine of the Druids, according to the classical, i.e. Greek and Roman authors who refer to them, was Reincarnation. Almost every Latin author who speaks of the Druids emphasizes their belief in that natural law or fact. The idea was familiar enough in the Roman world; since it was a cardinal teaching of Pythagoras. But the way the Celts held to this doctrine or

knowledge struck the Romans with surprise. To the Roman, as to us, death was rather an important event; it was the end of the book: you might speculate as to what lay beyond it; but you weren't quite certain at the best of times. *Tuum semel occideris, et de te splendida Minos Fecerit arbitria, Non, Torquate genus, non te facundia, non te restituet pietas*, says Horace, expressing the feeling of the Roman man in the street: When you die, and Minos, the judge of the dead, has passed judgment on you, neither genius nor piety nor wit will restore you; therefore spend what you have, enjoy your wealth now. But the Celt, the Welshman of those days, felt very differently; the Roman was both amused and amazed at the way he felt. To him, death was not much more than going to bed nightly; it was not any interruption in the long course of his life. At the appropriate time a new body would be born for him; he knew perfectly well that he would live again, here on earth. You could always even borrow money from him, to be repaid next life, or in the next but one, or in some future life, as the borrower and lender might agree. You could bank on the fact of reincarnation, just as you could bank on the sun's rising tomorrow.

Now thrice in my lifetime I have come on families in Wales wherein that knowledge had been handed down even to our own day. They were all pious Christians; but they knew that Reincarnation was a fact. Who then shall pretend to say that Druidism died out under the Roman proscription?

Soon after the Romans went in 410, Welsh literature began to be created. One of the first of the poets was Taliesin. Seventy-seven poems attributed to him come down. Scholars have fought over the question as to whether there ever was such a person, when he lived, who wrote his poems, and so forth. But according to the tradition — and the most advanced scholarship these days believes that tradition is the best possible historical evidence,

although the scholarship characteristic of last century was chiefly interested in picking it to pieces and pouring scorn on it — according to tradition Taliesin made those poems in the sixth century, when Wales was freed from Roman rule. And if there is one idea they reek with, it is Reincarnation. "I have been in many a shape before I attained my congenial form; I have borne a banner before Alexander; I was in Canaan when Absalom was slain; My original country is the Region of the Summer Stars; I was formerly little Gwion. Now I am Taliesin."

So we see that when the classical writers contacted the Druids, they found them believers in Reincarnation as their first and most characteristic doctrine, and we find that same doctrine blazing up in Wales as soon as the Roman proscription was lifted. I think we are bound to believe that the Welsh remembered and held to their Druidism through the period of the Roman occupation.

Now I am going to speak of something rather intangible, but within the rights of a literary critic. If you take two literatures, the Welsh on the one hand, and the English, French, German or Italian, any modern literature on the other, you will notice one thing in particular. The great literatures are concerned with life as we know it. They sort and examine human experience; explore human thought. The best part of them is the work of great minds reaching out for something, trying to announce new truths concerning life; reaching out from here, from this present life in the world into the unknown. Welsh literature on the other hand, small and unimportant as it is compared to those others I have mentioned, does nothing of that kind. But — and the farther you go back in it the more you feel it — it is haunted by something, a feeling of something vast, mysterious, in the past. Go back to the Triads, to the Mabinogi and romances, to the sixth century poetry, and you are drenched in this atmosphere. It issues from a grand

mystery; it is haunted by a great unrecoverable memory. If I said that it was haunted with the memory of a real knowledge as to the inside of the universe, the secrets of life and death, once possessed in great fullness, now to be mentioned only with bated breath, to be only hinted at — I think I should explain just the feeling that one gets.

Put that side by side with what the classical authors say about the wisdom possessed by the Druids, and I think we have the strongest kind of suggestion of the truth. Matthew Arnold, one of the very greatest of English literary critics, felt it strongly; he said that in studying the oldest Welsh literature he felt as if he were in a village of peasants' huts built of the ruins of Ephesus. Ephesus can be taken as implying a grand, beautiful and forgotten city of the ancients, of which every stone had been curiously carved by a master artist. The literatures of the modern great nations: stones quarried out of the mountains of thought by each great writer, and built by him into the architecture of his imagining; the old Welsh literature — stones quarried by giants and demi-gods of old, and by them fashioned into heaven knows what heaven-touching towers and pinnacles long since fallen into ruin; and of the broken ruins, peasants' cabins built. In those, the human spirit, blinded it is true, working its way from everyday human experience towards greatness, and achieving a high measure of greatness; in this one half understood reminiscence of an even greater greatness foregone. The very greatest poetry is that which most exalts the human spirit, most reveals its divinity. You *might* find in Shakespeare, in Dante, in Goethe — to name the three grandest figures in European literature — lines which assert that divinity and lofty origin as strikingly, as daringly, as those I quoted of Taliesin's — "My original country is the Region of the Summer Stars"; but I have failed to find them; and I doubt whether they are to be found.

Now to every people come alternately centuries of waking, active dynamically creative life; and centuries of sleep and inactivity. Great literatures, like all other great works, are only produced by peoples in their waking or active periods; never otherwise. All great thought comes from waking peoples; all great art; all great building. Now consider that from about the thirteenth century the peoples of western continental Europe and England have been in their waking state; consequently all great literature, European and not ancient, has been produced by each of the European nations. Before the thirteenth century there was nothing of importance from any of these peoples. Of books written in this island before the thirteenth century, three make interesting reading today. They are, the *Mabinogion*, which was written in Welsh; and two that were written in Latin, a *History of the Kings of the Britons*, by a Welshman named Gruffydd ab Arthur, and an *Itinerary of Wales* by one Geraldus Cambrensis or Gerald the Welshman. Which means, to put it shortly, that while England, France, Germany and the other countries of western Europe, have been in the waking state, Wales, and for that matter Ireland, have been sound asleep; but that between 400 a.d. or earlier and 1200 or so, the Welsh (and Irish) were to some extent awake. We may say that the period 400-1200 was night for the Europeans, and the period 1200 to the 1900's has been day for them; but that for the Celts, 400 to perhaps 1480 was twilight, and 1480 to now has been night. Now you will find this rule applying all through history wherever you may look; there are no exceptions.

II

The most interesting thing in all Welsh literature is the matter contained in a book called *Barddas* or Bardism, which won a prize in the National Eisteddfod of 1858. It is the most interesting thing, because it expounds a great system of thought. That great system purported to be the doctrine of the ancient Druids. It is

freely accused by the pundits of having been forged by a man named Iolo Morganwg in the eighteenth century. To a student of history and world literature, it is quite certain that it — that is, the system of thought, the philosophy — could not have been created by any native of a sleeping race, Welshman or other. It comes out of Wales beyond doubt; it explains and makes intelligible a thousand references in early Welsh literature. But no Welshman could have invented it in the sleeping time of Wales; because that would have implied a highly dynamic use of creative thought, which does not happen among a sleeping people. Nor could it have been invented in a twilight time, or say between the Roman conquest of Britain in 68 a.d. and the battle of Bosworth; because in such twilight periods you can get literature with a reminiscence or echo of ancient greatness, but not great creative thought such as is implied in the thinking out of a philosophy to explain life and the universe. The conclusion therefore is irresistible that this system does come down from a time when the Celtic peoples were awake, alive, dynamic; which they have not been since the Romans landed in Britain.

Now when you get that law of history firmly fixed in your mind, that for every people periods of activity and periods of rest alternate; and put that side by side with what the classical writers, Greeks and Romans, say about the Druids as possessors of a lofty philosophy, you will, I think, conclude that (1) the Celts had a waking period which ended, for the Welsh, with the Roman conquest; and (2) that a lofty philosophy broached in Wales in the eighteenth century could only have been an echo of the philosophy held to and believed in in Wales before the Roman conquest: or in other words, that the doctrine put forward in the book *Barddas* is an echo or reminiscence of Druidism.

An echo or reminiscence necessarily; not the complete thing. A pagan system that had come down in Christian and troubled

Wales through all those troubled Christian centuries, could not but have been corrupted in some degree; could not but have lost some elements of greatness and taken on some elements of imperfection. Just as old Welsh literature has a thousand references in it that need this philosophy of *Barddas* to make them intelligible; so does the philosophy of *Barddas* need Theosophy to explain and complete it. To explain and show the real meaning of certain parts that have become dimmed by age; to fill in certain parts that have been lost through the centuries.

We are introduced first to two principles: Duw and Cythraul, names very familiar to the Welsh, being the common words for "God" and the "devil." I shall however leave them both in Welsh, to come at their meaning more easily. Duw undoubtedly has taken on something of personality from Christian teaching; but this personalizing has not gone the whole way; in the case of Cythraul it has not even begun. Cythraul, the opposite pole of existence to Duw, is thus defined: it "is destitute of life and intention" — a thing of necessity, not of will; without being or life in respect of existence and personality; vacant in reference to what is vacant; dead in respect to what is dead; and nothing in reference to what is nothing.

Duw, uniting Itself with Cythraul with the intention of subduing it to life, imparted the existence of vitality to animated beings; and thus did life lay hold upon the dead, whence intellectual animations first sprang. Intellectual existence first began in the depths of Annwn for there is the lowest and least grade. The greatest cannot exist in an intellectual existence before the least; there can be no intellectual existence without gradation. Thus may be seen that there is to every intellectual existence a necessary gradation, which begins at the lowest grade, progressing from thence incessantly along every addition, intervention, increase, growth in age, and completion.

Animations in Annwn are removed gradually, by means of dissolution and death to a higher degree, where they receive an accumulation of life and goodness, and thus they progress from grade to grade nearer and nearer to the extremity of life and goodness. That state of extremity of life and goodness is to be reached when these "intellectual animations" have attained to the state of humanity.

Now there we see that Duw and Cythraul, in simple modern terms, are translatable as Spirit and Matter; Duw uniting itself to Cythraul, speaks of the involution of spirit into matter, whereby is caused the evolution of matter towards spirit. The Druidic map of the universe, so to speak, consists of two concentric circles. The space within the inner circle is called Cylch yr Abred, the Cycle of Inchoation; it is the world in which we live, the plane we live on. The space between the inner and outer circle is called Cylch y Gwynfyd, the Cycle of Bliss; it is the world above ours, so to say, the state to which we evolve after learning all the lessons existence as human beings can teach us. Outside the outer circle are rays shooting out; they represent the Cylch y Ceugant or the Cycle of Infinity, in which we are told there is only Duw.

Now below the innermost circle or Abred there is what is called Annwn, the great deep; a word I believe poetically used for hell; a word occurring much in Welsh folklore with more or less that meaning. But in Bardism it is explained as simply the inception point of existence; where life begins; the worlds below the human, through which in Druidism as in Theosophy, all life, all existence, must gradually evolve up to the human stage. There, says *Barddas*, are the manred or atoms, the stuff out of which the worlds were built; Duw uniting itself with Cythraul started these on the pilgrimage of evolution. Each had innate in itself its own awen, different from that of all others; its own peculiar nature, which should be evolved, during the course of innumerable ages,

by undergoing every imaginable, every possible, form of experience, in stage after stage of evolution: elemental, mineral, vegetable, and animal, up to self-consciousness in the human stage or state: that which began as the unself-conscious god-spark becoming the self-conscious human being.

The further you go down in Annwn, says *Barddas*, towards the beginnings, the more does the nature of Cythraul, and the less does the nature of Duw, preponderate; until when the human state is reached, the two natures equiponderate, and you have free will, and a choice between good and evil at every turn of thought or action. If, says *Barddas*, the nature of Cythraul has come to preponderate in a man, through gross thought and evil action, dying, that man descends below the human state to that point in Annwn or the evolutionary journey which corresponds to the character he has made for himself. If, through noble thought and action the nature of Duw has come to preponderate in him, dying he passes out from the human state, and from the Cycle of Abred, into the Cycle of Gwynfyd.

Now there you see what main doctrine, known to have been the cardinal doctrine of Druidism in the days when it was a living religion, has dropt out of Druidism as presented in this book *Barddas*. I refer to Reincarnation. The philosophy of *Barddas* is absolutely sound and logical and inspiring as far as it goes; but since its chief insistence is that evolution comes by experience, by the gaining of all possible experience, we can see that logically human reincarnation is a necessity. There is no passing out of Annwn into Abred we are told, without gaining first all the imaginable experience every state of existence in Annwn can teach us; and no passing out of Abred into Gwynfyd without gaining first all the possible experience that life in Abred can give us; and as you can't get all possible human experience in one human life, we have to see that sometime during the troubled

centuries of Welsh history the folk who were the custodians of the tradition of Druidism withdrew the teaching of Reincarnation; ceased to speak of it. They ceased to speak, also, of the evolution of the soul beyond the human stage; of the existence of the Gods; although we know that this teaching was a part of Druidism of old.

Now I shall turn from *Barddas* to another matter. When European civilization was at its lowest depths of degradation and brutality, in what are called the Dark Ages, a light shone out into it from Wales through the Normans who came here conquering. It was chivalry, centering about the Arthurian legend; at the core of which was the legend of the Holy Grail. This was supposed to be a vessel which held the blood of Christ; it was very miraculous in character; vision of it might be attained by the absolutely pure in heart. Now England had its national legend — of Beowulf; and France had its, of Charlemagne; but this legend from Wales drove out and covered over both of those, so that Englishmen forgot Beowulf and talked of Arthur as their national hero — although he was supposed to have spent his life fighting them, and Frenchmen forgot Charlemagne and his Paladins, and both tried more or less, as did Spaniards, Italians, Germans, to model their lives on the knightly ideals of Arthur's court: that purity being the centermost one, which might enable them to have vision of the Holy Grail.

Now, what was that Holy Grail?

There's no time to prove it to you now, but it can be amply proved. It was originally the symbol of Druidism just as the cross is the symbol of Christianity. In the old Welsh stories it is called *Pair Ceridwen*, and *Pair Dadeni*: the Caldron of Ceridwen, the Caldron of Rebirth.

Dadeni, Rebirth, Reincarnation: you can't make it mean anything

else; the ideas, the symbolism that lie behind it are vast.

First of all, it was the symbol of Initiation. There is a cave in Snowdon, and a rock on Cadair Idris, of which the popular legend is that one who spends a night in the one, or on the other, will wake in the morning either dead, or mad, or an initiated bard, inspired — with wisdom and illumination beyond what normal human beings possess. This shows how that great central idea of all the ancient religions, Druidism included, impressed itself in Druid days on the race mind. Otherwise it could not have lived on in folklore through the Christian centuries.

The candidate for initiation, whether in Greece, Egypt, India, or Wales or any other country, prepared himself for it by a long course of training and discipline, the object of which was to bring all the lower elements of his being into subjection. Then, when he was ready, the initiation took place. In some kind of crypt — in the King's Chamber of the Great Pyramid, for example; probably in the cave on Snowdon also: he, or his body, was placed in a vessel or receptacle or sarcophagus, or tied to a wooden cross; and he himself, the human soul, voyaged out into the inner spaces of the universe and learnt the secrets of these inner spaces at first hand. Returning, he was illuminated, an initiate; in Welsh, Bardd, a bard; which word does not originally mean a poet, but an illuminated seer, a teacher, an initiate.

In Druidism, that receptacle, or vessel, or sarcophagus, was called a caldron — the Pair Dadeni, or Caldron of Rebirth, or the Caldron of Ceridwen, the Goddess of Universal Nature. It took the place in Druidism that the cross does in Christianity; it was the symbol of Religion. Religion existed to bring men to the point of initiation, to the Caldron of Ceridwen as it were; the initiation, which made of the neophyte a Bard, was regarded as a rebirth, a second birth — dadeni.

Of the seventy-seven poems of Taliesin one stands out as, I think, the greatest; it is my favorite, because of its more than Miltonic loftiness of tone. It is called Preiddiau Annwn, the spoils of Annwn; which, as you will remember, is the deep, the underworld, even by an extension of meaning, this material universe. It tells how the Caldron was held in Annwn in Caer Pedryfan, the four-square Castle, in Ynys Pybyddor, the Strong-doored Isle; and how Arthur voyaged in Prydwen, his ship of Glass, into the Underworld to recover it; and Taliesin with him.

One could spend an evening, or many evenings, lecturing on Arthur alone, with all his implications and meanings. No doubt there was a Welsh prince who died in the year 540, after winning some striking victories over the Saxons; whose invasion of Britain certainly was held up for some twenty or thirty years before 540; that invasion actually made no progress during those years. But unquestionably that chieftain came to be identified with one of the old Gods of Druidism; we know of a Gaulish god named Artaios; the Egyptian god we know as Osiris, was called in Egyptian Ausar; he may be the same god. Scholars have identified Arthur with Hu Gadarn, Hu the Mighty, the chief God of Druidism; who figures a good deal in the Welsh triads; and who was actually worshiped in Wales as late as the fifteenth and sixteenth centuries. In 1538, in the reign of Henry VIII, a statue of this god, known as Darfell Gadarn, which attracted great crowds of worshipers, was, with its priest, brought up from Wales to London and burnt at Smithfield: the priest, the last Druid martyr; and in the fifteenth-century Welsh poetry there are many references to Hu Gadarn, hymns to his praise; also a poem by a Christian priest-poet, Sion Cent, which says that there were then two religious influences in the world: one from Jesus Christ, and the other from Hu Gadarn among the bards of Wales. Thus we see that even then, in the time of Owain Glyndwr and Joan of Arc and

the Wars of the Roses and the first Tudor kings of England, Druidism was still alive in Wales.

But to go back to the poem, the Spoils of Annwn. The Arthur it tells of is the first Arthur; the earliest stage we have in his metamorphosis from the Leader of the Gods to the chivalrous king who appears in Malory and Tennyson. He voyages through the deep, he descends into the underworld, the manifested universe, in quest of the caldron of initiation. I do not know any poem, in any language, that conveys to me so much of that sense of hidden and mysterious grandeur as this one does. What does it mean? It figures the involution of spirit into matter; the descent of the gods into the underworld, this world, this life we live, in quest of — what? Wisdom, experience, initiation. For the Caldron, the sacred symbol of Druidism, means not only that receptacle or sarcophagus that held the body of the neophyte while he himself explored the inner universe; it means that, and something more. It means life, the world. It was the Caldron of Reincarnation; the world into which we incarnate again and again; each life in its degree an initiation, a gaining of wisdom by experience. Sublime thought, this of the evolution of the god-spark in each one of us into at last the fully self-conscious God, through endless life, successions of experiences of life, of entries into the Caldron of Reincarnation, until that entry into it which shall bring us initiation, and from men we shall become bards and gods.

H. P. Blavatsky says, in an article published after her death, that in the century before Christ, Druidism was the only branch of the Mysteries of the Old World which had not degenerated; and that Caesar was inspired to attack and conquer Gaul by the black forces, the enemies of mankind, in order to stamp out that last pure light, to break its power. But even though he did so; even though he forced it underground as it were, so that from the ruling religion of Britain, Gaul and Ireland, it became a secret

cult, we see that he could not quench its power and influence. Here in Wales it lived on; and, as Wales inch by inch was conquered by the Normans, its influence, spiritual and uplifting still, though strangely metamorphosed, spread out into the darkness of Christian Europe, a light to lighten the Gentiles with the noble ideals of chivalry, the vision of the Holy Grail. This illustrates the workings of the spirit, of the Masters of Wisdom, the spiritual Leaders and Guides of Mankind. There is nothing about it you can prove. You can't prove that Iolo Morganwg, the eighteenth century Glamorgan stonemason, didn't forge every document in the book *Barddas*; you can't prove anything spiritual for that matter. No; proof you may not have; but you may have suggestion; a hint; which, taken, used and followed up, will lead you on to heights of ennobling thought and knowledge. You may take these things and ideas that the materialist and the academic reject as unproved, and let them work upon your inner nature until they have made a god of you.

I told you the subject was a vast one; and far beyond my satisfactorily setting forth in an evening's lecture. But what I hope you may have gotten out of it is this: New evidence of the universality of the grand Theosophical teachings; evidence, too, that will show you that in bringing Theosophy to Wales, we are bringing nothing strange, exotic or foreign; but simply the lost secret of the ancient greatness of the Celtic peoples.

The Theosophical Forum

THE MEASURE OF A MAN — *Allan J. Stover*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

Once, while looking over the harvest of shells and seaweed left by the outgoing tide, a man approached with a curious question.

"Will you please tell me," he asked, "where is the ocean?"

In astonishment, I replied: "You are looking at it."

To this he said, with disappointment in his voice: "Is that the ocean? I expected to see something much larger."

I explained that due to the curvature of the earth he could see only the distance his height above the water permitted, which was not quite three miles. But by climbing a nearby hill somewhat more could be seen, but not much. (1)

Childish as the foregoing question may seem, we are even worse off when it comes to understanding the ocean of space and consciousness with which we are surrounded. Even the thoughts of the animal kingdom are hidden from us, and many deny they think at all. Many persons when first faced with one of the immensities of nature are stunned for a time with lack of comprehension, until they build a link with past experience when understanding gradually awakens. The starry multitude of the heavens, the vastness of the desert, the shifting color-music of the Grand Canyon, the size and age of the Giant Sequoia, all these require more than the brain of man to comprehend. They need the understanding of the soul as well.

Even in ordinary life there is a higher and a lower mind, and

those who are accustomed to think with the higher portion stand above ordinary humanity. Not only is their thought more vivid and intense but they see intuitively into the hearts of men and are less likely to be deceived by appearances. To them also nature reveals her secrets.

Thus Mind is dual, and is the balancing point between spirit and matter. Its higher portions are linked with Buddhi, the Spiritual Soul; the lower is linked with Kama, the Animal Soul or principle of desire. Yet in man the lower mind receives a ray from the higher mind which illumines it. The materialist or one of a selfish nature who denies his spiritual nature finds it difficult to raise his thoughts above a certain level or to realize inner truths. He can see only the reflection of his own nature, the measure of his own stature.

Man and nature are sevenfold in structure, containing seven kinds of materials and states of consciousness, ranging from the physical to the Divine. In this ladder of consciousness the Human Monad or Ego exists for the length of one life on earth, breaking up soon after the death of the body. Whatever essence of a spiritual nature has been acquired during the life is drawn up into the Spiritual Monad where it rests until the next imbodiment. The Human Ego thus has a range of action limited to this earth and the experiences it offers.

The Higher Ego or Monad or Higher Manas has a range of consciousness and activity embracing the seven globes of the Earth Chain. Its span of life lasts as long as the Earth planetary chain itself. In it is preserved the spiritual essence of all the imbodiments on this planetary chain. But there are other rungs in this ladder of consciousness.

The Spiritual Monad has a range of activity embracing the seven sacred planets of our solar system and a life that endures as long

as the solar system itself.

Higher still, the Divine Monad is self-conscious throughout the Galactic Universe especially through the spiritual and divine planes of the system and exists as long as the galaxy itself does. Through all the series, there runs a golden thread of divine radiance illumining each plane. (2)

The destiny of the human race is in the far future to awaken union with these higher portions of being and to realize that man's home is in very truth the universe. At present the mind can scarcely grasp the significance of this stream of consciousness which is our inmost. We live like fish in the darkness of the deep sea, bearing our feeble lights, unaware of the sun, moon and stars shining overhead.

However far away realization of this destiny may seem, since each principle is itself sevenfold and reflects in some degree the whole series, the key of analogy suggests that there are corresponding levels in the faculties we now use. And that, by living in the highest level of these, we are taking the first step upward. This everyone can do, now.

We commonly see only the outer shell of nature and little guess the spiritual reality within. The earth is not only a globe of rock but is itself a sevenfold being, divine in its upper portion, material in its lower as is man himself. As Katherine Tingley said:

"There is something very wonderful about this brain-mind of ours; there is even something sacred about it because, though it does belong to the physical make-up of man, there still shine upon it as upon a flower the rays of the Spiritual Sun."

THE PHAETON MYTH — *M. A. Duncan*

Hellas was ever a land of light and the Hellenes a light-loving race. They gloried in the fair hours and bright moods of nature; they were the children of the dawn time to whom the rising of the sun meant far more than the mere physical phenomenon. We can picture their exultation of spirit as their favorite deity, Apollo, guided his gleaming chariot over the rosy hills of the east. It would be natural, therefore, to find sun myths abounding in their religious and legendary lore. One such, the myth of Phaeton and Apollo, however, must be carried back in origin to times far more remote, and traced to sources of inspiration far deeper and more comprehensive than the land of Hellas alone could boast.

The myth tells us that the youth Phaeton, angered at the doubt cast by his playmates on his reputed divine origin, begged his father to allow him to vindicate his celestial parentage. This the Sun God is said to have granted *unconditionally*, whereupon Phaeton asks leave to take a turn at guiding his father's resplendent sun chariot. Apollo stands aghast at the fatal petition, but having given his promise, cannot refuse. After anointing his son with a powerful unguent, and giving him every possible warning and advice as to the management of the steeds, he sends him forth on his perilous day's journey. No sooner have the steeds sprung free than, becoming aware of a light and inexperienced hand upon the reins, they straightway "rush headlong and leave the travelled road," so that "the great and little bear were scorched with heat . . . and the serpent which lies coiled up around the north pole, torpid and harmless, grew warm, and with the warmth felt its rage revive." Still the rash youth is borne helplessly hither and thither, till at length he encounters the great arms and tail and crooked claws of Scorpion "reeking with poison

and menacing with his fangs" — whereupon in sheer terror the youth lets fall the reins from his hands.

The rebellious steeds rush madly into unknown regions of the sky, now high above the clouds scorching the open heavens, now nether-ward with fearful nearness to the teeming earth, whereon cities with their inhabitants are reduced to ashes; fountains parched to dryness-verdant and smiling cornlands seared to a desert waste. This naming sun chariot in its ungoverned course gives Libya her wasted leagues and turns the Ethiop tribe an ebon black; dries up the life-giving waters of the Nile, the Euphrates, and the Ganges, together with their tributary streams. The surface of the parched earth cleaves into yawning chasms whose deeps reach down to gloomy Tartarus, and whose wan and cheerless denizens flee in terror from the light of day. Seas that had been were now dry land; mountain peaks sometime submerged now pierced the bosom of the waters, becoming solid islands. Frightful chaos and supreme devastation stalked in flame and fury over the world until the very earth cried out in woe, calling upon the gods to intervene.

In answer mighty Jupiter launched a thunder-bolt that struck the youthful charioteer from his seat and sent him hurtling "headlong like a shooting star which marks the heavens with its brightness as it falls, and Eridanus the great river, received him and cooled his burning frame."

And Phaeton, caught in mid career,
And hurled from the Sun to utter sunlessness,
Like a flame-bearded comet, with ghastliest hiss,
Fell headlong in the amazed Eridanus,
Monarch of streams, who on the Italian fields
Let loose, and far beyond his flowery lips
Foam-white, ran ruinous to the Adrian deep.

— Worsley

Him the Thunderer hurled
From the empyrean headlong to the gulf
Of the half-parched Eridanus, where weep
Even now the sister trees their amber tears
O'er Phaeton untimely dead.

— Milman

In the above, as in all myths, there is a wealth of symbology; symbology applicable to and illustrative of many planes of thought and feeling. To consider the psychological bearing of the legend before entering upon its larger relationships, one might readily see in it a plain and obvious simile of human Passion liberated by desire or inclination, and once free proving itself beyond the control of the unthinking mortal that evoked it. Like this sun chariot careering through space, a man's passions once beyond control, send their lurid flames throughout his whole nature, parching and withering all those fair productive fields of spiritual endeavor and inspiration. They know no course or boundary, but sweep wherever their yearning may lead, until at length the very force of their fury begets those evils in the organism of the victim which strike him as with a thunder-bolt, hurling him from the chariot of the body into the waters of oblivion.

Yet, if this is one of the vital applications of this sun myth, there are still others more far-reaching in their relation to the affairs of this earth. They yield a revelation of cosmic truths from which the legend took its rise in days far antedating Hellenic culture.

According to the theosophical teachings, the Phaeton myth in its primary significance is the recorded memory of one or several cosmic disturbances. As H. P. Blavatsky writes, the story

is an allegory referring directly to the changes of climate in those distant times when, from a frigid zone, the polar lands had become a country with a moderate and warm climate.

— *The Secret Doctrine*, II, 770, fte.

These words bring us to a consideration of the phenomenon of radical changes in the earth's distribution of climatic conditions as well as land masses. Such climatic changes come about owing to the constant motion of the earth's axis, a motion extremely gradual yet *unceasing*. Embracing and explaining as it does the law of cycles, Theosophy shows that this axial motion, proceeding through vast periods of time, tends at the close of the Greater Cycle or Age to become accelerated, thereby bringing about those major cataclysms which mark the close of a Root-Race and the appearance upon the earth of a new Race. Such cataclysms as those just referred to would have occurred at the time of the decline of that great Root-Race known as the Third Race and inhabiting the Lemurian Continent. This continent, H. P. Blavatsky explains, extended over the

whole area of space from the foot of the Himalayas, which separated it from the inland sea rolling its waves over what is now Tibet, Mongolia, and the great desert of Schamo (Gobi); from Chittagong, westward to Hardwar, and eastward to Assam. From thence, it stretched South across what is known to us as Southern India, Ceylon, and Sumatra, then embracing on its way, as we go South, Madagascar on its right and Australia and Tasmania on its left, it ran down to within a few degrees of the Antarctic Circle, when, from Australia, an inland region on the Mother Continent in those ages, it extended far into the Pacific Ocean, not only beyond Rapa-nui (Teapy, or Easter Island) which now lies in latitude 26 S., and longitude 110

W. . . .

This statement seems corroborated by Science, — even if only partially, as, when discussing continental trends, and showing the infra-Arctic masses trending generally with the Meridian, several ancient continents are generally mentioned, though inferentially. Among such the "Mascarene continent," which included Madagascar, stretching north and south, is spoken of, and the existence of another *ancient* continent running "from Spitzbergen to the Straits of Dover, while most of the other parts of Europe were sea bottom," is taught. The latter corroborates, then, the Occult teaching which shows the (now) polar regions as the earliest of the seven cradles of Humanity, and as the tomb of the bulk of the mankind of that region during the Third Race, when the gigantic continent of Lemuria began separating into smaller continents. This is due, according to the explanation in the Commentary, to a decrease of velocity in the earth's rotation —

When the Wheel runs at the usual rate, its extremities (the poles) agree with its middle circle (equator), when it runs slower and tilts in every direction, there is a great disturbance on the face of the earth. The waters flow toward the two ends, and new lands arise in the middle belt (equatorial lands), while those at the ends are subject to pralayas by submersion. — Op. cit., II, 324-5

Here we have a description first of the extent of the great continental home of the Third Race, Lemuria, together with a general statement of the conditions bringing about radical changes in position and condition of our earth. In the same way, further cosmic changes *brought about by the spiritual needs and*

conditions of humanity caused the submersion of Lemuria, and the elevation of Atlantis, concerning both of which one may find innumerable legends in all parts of the world, clothed in different language, attributed to different authors and sources but referring directly to these two cataclysms. Nor have we reason to believe that in any age there existed *none* who thoroughly understood and appreciated the true meaning of the legends or the astronomical and geographical conditions to which they point. The Egyptian priests assured Herodotus that the Sun had not always risen where it *now* rises, "and that in former times the ecliptic had cut the equator at right angles"; and while a Greek, Xenophantes, guided by his religious belief that Phaeton "in his desire to learn the *hidden* truth, made the Sun deviate from its usual course" declared that "the Sun turned towards another country," we find Joshua in the Jewish Bible saying:

Sun, stand thou still upon Gibeon, and thou, Moon, in the valley of Ajalon.

And the sun stood still, and the moon stayed, until the people had avenged themselves upon their enemies — x, 12-13

— which achievement, rather astounding if taken literally, has probably its esoteric significance.

If then, we can with unbiased judgment accept the facts which these legends seek to symbolize, we shall be in a position to appreciate the significance of this myth of Phaeton and Apollo.

The first event we are apprised of in the legend is the desire of Phaeton, as he declares, to vindicate his divine origin. No philanthropic or altruistic motive is suggested for this, but simply the satisfaction of the personality. As we have seen, one Greek writer speaks of Phaeton as seeking "*inner*" truths. Needless to

say, every legend has at least *seven* aspects; hence whatever interpretation we attempt in this instance can be but *one* out of a number. However, in view of the teaching that the great continent Lemuria was destroyed *by subterranean fires* at a time when its inhabitants had acquired immense occult knowledge, had abused this knowledge, and in seeking to acquire added knowledge of still more hidden mysteries must necessarily bring more evil upon themselves, may we not interpret Phaeton's quest as symbolizing this very ambition of the Lemurians for hidden knowledge and the power it should bring with it? Under such an interpretation Phaeton becomes the Third Race on the eve of its destruction; his rash interference with his father's task of driving the chariot of the sun, the unholy exploitation of the men of the Third Race, in their decline, of potent occult forces; the mad and fatal career of Phaeton in his sun chariot through the sky, the mighty cosmic disturbances brought about karmically by the needs of the Third Race; his death by Jupiter's bolt and his descent into the river Eridanus, the destruction of the Race by fire and the ultimate submersion of the continent itself.

The above is *one* aspect of the myth. When, however, we come to consider the symbology of that wild ride through the heavens we are called upon to enlarge our interpretation, to take in periods still more vast and a field of cosmic evolution yet more comprehensive.

The steeds of Apollo, it will be remembered, bore the chariot first northward to the domain of the Great and Little Bear, and to the sleeping place of the Serpent which lies coiled about the north pole. Later the ungoverned team rush southward and netherward where they are said to have scorched the lands of Greece, Scythia and Africa until at length the hapless occupant of the chariot is cast into the Eridanus where his three sisters the Heliades wept over his loss, their tears becoming drops of amber.

This portion of the myth, according to the Theosophic teachings, refers to two Great Ages in evolution. The course of the chariot up to the domain of the Bear and Serpent symbolizing the change of climate which converted the polar regions at that period into a land of warm semi-tropical climate — the home and birth-place of nascent physical man. The later southerly turn and the ultimate ejection of Phaeton into the river Eridanus depicts for us the second great change when once more the "burning north" was chilled in the icy waters of those Polar Regions familiar to us today.

As our Sun is the center of our universe, it stands to reason that such changes as these could come about only in one way — changes in the position of the earth's axis. To such changes H. P. Blavatsky refers again and again, from some of which we quote:

According to the old teaching, the axis of the earth gradually changes its inclination to the ecliptic, and at the period referred to, this inclination was such that a polar day lasted during the whole period of the earth's revolution about the sun, when a kind of twilight of very short duration intervened; after which the polar land resumed its position directly under the solar rays. This may be contrary to astronomy as now taught and understood: but who can say that changes in the motion of the earth, which do not take place now, did not occur millions of years back? — *S. D.*, II, 292

It is of this cataclysm [the submersion of Atlantis] that the old records say (*See the "Book of Enoch"*) that "the ends of the Earth got loose"; and upon which the legends and allegories of Vaivasvata, Xisuthrus, Noah, Deukalion and all the *tutti quanti* of the Elect saved, have been built. Tradition, taking into no account the difference between

sidereal and geological phenomena, calls both indifferently "deluges." Yet there is a great difference. The cataclysm which destroyed the huge continent of which Australia is the largest relic, was due to a series of subterranean convulsions and the breaking asunder of the ocean floors. That which put an end to its successor — the fourth continent — was brought on by successive disturbances in the axial rotation. It began during the earliest tertiary periods, and, continuing for long ages, carried away successively the last vestige of Atlantis, with the exception, perhaps, of Ceylon and a small portion of what is now Africa. — *Op. cit.*, II, 314

Herodotus (*Thalia*, No. 77) tells posterity that when Cambyses entered the temple of the Kabirim, he went into an inextinguishable fit of laughter, on perceiving what he thought a man erect and a woman standing on the top of her head before him. These were the poles, however, whose symbol was intended to commemorate "the passing of the original North Pole of the Earth to the South Pole of the Heaven," as perceived by Mackey. But they represented also the poles *inverted*, in consequence of the great inclination of the axis, bringing each time as a result the displacement of the Oceans, the submersion of the polar lands, and the consequent *upheaval* of new continents in the equatorial regions, and *vice versa*. — *Op. cit.*, II, 360

And so one might continue to accumulate evidence brought forth by that champion of Truth, who gave generously and without the timidity of bias and prejudice. One turns from her works to the contemplation of such legends as the above with a gratifying sense that those imaginative symbols of the past are *not* childish, meaningless, and unreal, but in very truth crystallized memories of a great and glorious past for this race of man. As H. P. B.

pertinently remarks, the allegory of the Phaeton and Apollo myth, "if well understood ought to be a demonstration of the enormous antiquity of the human races." (*Op. cit.*, II, 770, fte.)

Such is the native grandeur of this solar myth of ancient Greece when clothed in its true symbology.

The Theosophical Forum

APPLIED OCCULTISM — *Jean Van Mater*

Applied Occultism boasts a vast and ancient history, for it is the heart of all true religions and philosophies. It is the motivating power behind the words of World-Teachers and inspired or illuminated men; and it is the core of Theosophy, the modern presentation of an ageless wisdom. The truths of occultism have been available always to people of every age, although necessarily veiled by secrecy in dangerously dogmatic periods. Today there is an almost unequalled spiritual liberty which allows mankind to pursue truth freely, unhindered by traditional doctrines.

In *Studies in Occultism*, H. P. Blavatsky writes:

Will these candidates to Wisdom and Power feel very indignant if told the plain truth? It is not only useful, but it has now become *necessary* to disabuse most of them and before it is too late. This truth may be said in a few words: There are not in the West half-a-dozen among the fervent hundreds who call themselves "Occultists," who have even an approximately correct idea of the nature of the Science they seek to master. With a few exceptions, they are all on the highway to Sorcery. Let them restore some order in the chaos that reigns in their minds, before they protest against this statement. Let them first learn the true relation in which the Occult Sciences stand to Occultism, and the difference between the two, and then feel wrathful if they still think themselves right. Meanwhile, let them learn that Occultism differs from Magic and other secret Sciences as the glorious Sun does from a rush-light, as the immutable and immortal Spirit of Man — the reflection of the

absolute, causeless, and unknowable ALL — differs from the mortal clay — the human body. — p. 21

This passage points up the sharp distinction between Occultism and the occult arts. Succeeding leaders of the Theosophical Society have given added warnings of the dangers confronting the student who confuses these two terms. Occultism is Altruism, the science of right living. It is an awareness of the Reality behind and hidden within manifested life. Inner development, inner realization, are states of consciousness; they cannot be sold or purchased.

In our time, particularly, we are faced with an increasing interest in the occult arts. People are offered, for a price, certain powers guaranteed to bring material gain; perhaps more money, a better job, or power over others. Students of the occult sciences assume they are becoming Occultists — usually because they have not been told differently. Perhaps the greatest single danger connected with the occult arts is a growing appetite for the sensationalism of psychic phenomena. Held captive by the fascination of this aspect of Nature, the opportunities for spiritual growth which daily life offers slip by the student. This hunger for sensationalism has no place in the life of the true Occultist, for in its highest and strictest interpretation Occultism *per se* can be practised only by those who have mastered life, men and women of high spiritual standing whose selfless devotion and service make them Helpers of Humanity.

Because Occultism is a spiritual art, its application demands a certain amount of study, a knowledge of the teachings to be made manifest in life. Such a study will strengthen the student's concentrative ability and prepare him to explain his beliefs coherently to others. One might say that study is a method of concreting intuitive thought. Still, hand in hand with learning

walks the power of application, each supporting the other and maintaining balance. The student who retains this inner equilibrium also gains confidence, in himself and in others.

There are examples in daily life. The individual who wins respect and confidence in any capacity is one who has learned to apply his knowledge expertly and whose interest and enthusiasm urge him on to greater accomplishments. Just so in Occultism, the student enlarges his understanding by practical application and gradually becomes skilled in the science of right living. Even a brief review of the world's sages and seers would reveal a study in Applied Occultism, for their lives illustrate the occult teachings and serve as examples for all who would follow the pathway to Truth.

Occultism, or Theosophy, teaches that man is a spiritual being in whom burns the flame of Divinity. Man is also mortal, which results in his duality. Life's purpose is the merging of the human with the spiritual, a continual transmutation of the lower by the higher. All life flows from a single spiritual source, making the universe a unit of interdependent, inter-acting parts. Nothing is separate and all things work toward the same spiritual destiny.

Included in this synthesized statement of the doctrine of non-separateness is that of Brotherhood, undoubtedly the most basic for the would-be occultist, since its violation is in direct opposition to Universal Harmony and Unity. As Plotinus stated, "When thou reverest the soul of another, thou art revering thyself." The constant practice of Brotherhood is the only way to Self-Knowledge. Almost everyone agrees that the *idea* of Brotherhood is magnificent, but the instability and insecurity of world affairs, the outbreak of war, the constant bickering among nations and among the peoples within each nation, make the idea of a practised Brotherhood seem wholly impossible. One is

inclined to look at world affairs and then put Brotherhood into the background until things look more promising.

There will never be a Brotherhood of mankind without effort and leadership, for it involves a transition of character and the acquirement of a set of values quite foreign to the limited sphere of human values. Individuals with the courage and will to practise Brotherhood in small ways, in the family, among friends and acquaintances and in the community, could establish the starting-point for a reformed and more harmonious world. Small kindnesses, forgiveness, sympathy and understanding will mature quite naturally into greater expressions of these qualities. These simple yet difficult rules *are* Applied Occultism and constitute the only means for a spiritual and peaceful world.

Each man has the power to direct his own evolution. Because man is a thinker and a creator, within him lie salvation or destruction. In any one life a man may go forward, stand still, or go backwards, according to the thought-world in which he has his existence. Yet there is nothing except man's own lower nature to bar his spiritual progress, provided his aspirations lie in that direction.

Occultism does not change with the passage of time, for Truth and the way to a realization of Truth are ageless. Today the Ancient Wisdom is given more freely than has been possible for many long ages. The mysteries of Nature are before the public eye in the form of teachings which explain true Occultism. A comprehension of these teachings will unlock the door to man's inner nature. With its application come the qualities of compassion, gentleness, justice and non-retaliation, the only gifts which lead to the Heart of the Universe.

ARIADNE'S THREAD: II — *Hazel Minot*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

Through some fourteen centuries we have watched the pattern of the Ariadne Thread, held for the most part by those who were disciples of the Pythagorean, Platonic and Neo-Platonic Schools of thought. With the first quarter of the seventh century a.d., the pattern changed: a new World Religion was to find birth, and during some of the succeeding centuries which were barren periods for Europe, culturally, Mohammedan annals were filled with brilliant names in many fields of learning. Moreover, the conquest of Spain by the Arabs placed that country, during Moorish supremacy, far ahead of the rest of Europe in civilization. And while this influence was still at work there were learned men, students of the symbolic Kabala, who were handing on the Ariadne Thread. H. P. Blavatsky tells us that "History catches glimpses of famous kabalists ever since the eleventh century. The Mediaeval ages, and even our own times, have had an enormous number of the most learned and intellectual men who were students of the *Kabala*." — *Theosophical Glossary*

The Middle Ages were represented by two other distinctive groups: the Alchemists, and the Christian mystics. Of the former H. P. B. says:

"Some people — nay, the great majority — have accused alchemists of charlatanry and false pretending. Surely such men as Roger Bacon, Agrippa, Henry Kunrath, and the Arabian Geber (the first to introduce into Europe some of the secrets of chemistry), can hardly be treated as

impostors — least of all as fools. Scientists who are reforming the science of physics upon the basis of the atomic theory of Demokritus, as restated by John Dalton, conveniently forget that Demokritus, of Abdera, was an alchemist, and that the mind that was capable of penetrating so far into the secret operations of nature in one direction must have had good reasons to study and become a Hermetic philosopher." — *Isis Unveiled*, xxv

We continue, then, from the

SEVENTH CENTURY, A.D., 570-632

Mohammed, referred to by William Q. Judge, as a minor, intermediate Avatara. Dr. de Purucker, answering a question on this statement writes: ". . . a strong emphasis should be laid upon the word 'minor,' the truth being that Muhammed can be called an Avatara, but only by a great extension of the meaning of the word 'Avatara.'

Muhammed did a certain racial work under the influence of a Ray from the Planetary Spirit, but was not conscious of his mission in this sense of the word, and was, in fact, but very little higher than any other noteworthy man who is made an instrument of karmic activity. In this sense only was Muhammed a minor Avatara, and he did indeed, as Judge says, belong to the 'civil, military, and religious' type." — *Studies in Occult Philosophy*, 697-8

EIGHTH CENTURY, A.D., last quarter-c. 1492

Sufiism, a form of Mohammedan mysticism, and "having its home chiefly in Persia." Dr. de Purucker writes that "the Persian Sufi mystics . . . were adherents of what may be called the Theosophy of Persian Mohammedanism."

Quoting from Abu Yazld, "I am the wine I drink, and the

cup-bearer of it," he adds: "The wine-cup, for these mystical writers, symbolized in general the 'Grace of God' as Christians might say, the influences and workings of the spiritual powers infilling the Universe." — *The Esoteric Tradition*, 76

NINTH CENTURY, A.D., c. 800-c. 891

Johannes Scotus Erigena, who stated that "in the larger process of the world the primal causes descend into the elements, and the elements into bodies, then bodies are resolved into the elements again, and the elements into the primal causes." — *The Division of Nature*. And Dr. de Purucker comments: "Thus even in the writings of a mediaeval Neo-Platonist Christian theologian-philosopher may be found a clear echo of the archaic Wisdom-Religion and its teachings of the serial evolution or unfolding of the Universe, and its final return to its primordial divine source.

"Yet it must be remembered that Erigena's work was formally condemned by the official church and put on the *Index* in the thirteenth century, though it had dominated all mediaeval Christian thought for more than two centuries." — *E. T.*, 566

TENTH CENTURY, A.D.

The thread of mystical thought carried by various Sufi writers.

ELEVENTH CENTURY, A.D., 1091-1153

Bernard of Clairvaux, one of the mediaeval mystics who wrote thus on union with the Divine: "To lose thyself as it were, as if thou thyself wert not, and to have no

consciousness at all of thyself — to empty out thyself almost to nothingness — such is the heavenly intercourse. . . . To achieve this, is to become the Divine: God." — Quoted in *E. T.*, 1004

TWELFTH CENTURY, A.D., 1135-1204

Moses Maimonides, "the great Jewish theologian and historian, who at one time was almost deified by his countrymen and afterward treated as a heretic. . . . This learned man has successfully demonstrated that the Chaldean Magic, the science of Moses and other learned thaumaturgists was wholly based on an extensive knowledge of the various and now forgotten branches of natural science." — *Isis*, I, 17

THIRTEENTH CENTURY, A.D., 1214-1294

Roger Bacon, "the friar, was laughed at as a quack, and is now generally numbered among "pretenders" to magic art; but his discoveries were nevertheless accepted, and are now used by those who ridicule him the most. Roger Bacon belonged by right if not by fact to that Brotherhood which includes all those who study the occult sciences." — *Isis*, I, 64-5

FOURTEENTH CENTURY, A.D., 1265-1321

Dante, about whom Dr. de Purucker gave the following as his own private conviction. "I think," he says, ". . . there was sufficient spiritual life in the man to allow the entrance into his consciousness, if you understand me, of a divine ray, which touched his brain, so that when he wrote his immortal poem he mentally set forth, although in Christian phrasing and terms, a great deal of the teaching of the ancient doctrine. There are the nine stages, or the nine or

ten hells; there is purgatory and the terrestrial paradise; there are the nine or ten heavens — a typical mediaeval example of the Oriental teaching of the lokas and talas." — *Studies Occ. Phil.*, 504

FIFTEENTH CENTURY, A.D., 1401-1464

Nikolas de Cusa, whose "extraordinary genius in investigation, and in what was then broad-minded and courageous exploration of the mysteries of the Nature surrounding him and of the inspirations of his own inner nature, brought upon him charges of heresy including that of pantheism; and it is likely that only the personal friendship of three Popes, who seemed to stand in reverential awe of the genius of this great man, saved him from the fate which later befell Giordano Bruno, and still later, but in less degree, Galileo. Cardinal de Cusa has often been called a 'Reformer before the Reformation.' " — *E. T.*, 356-7

SIXTEENTH CENTURY, A.D., 1493-1541

Paracelsus, whom H. P. B. terms "the greatest occultist of the middle ages." She quotes from Pfaff as follows: "What man has ever taken more comprehensive views of nature than Paracelsus? He was the bold creator of chemical medicines; the founder of courageous parties; victorious in controversy, belonging to those spirits who have created amongst us a new mode of thinking on the natural existence of things." H. P. B. says of his doctrine: "His incomprehensible though lively style must be read like the biblio-rolls of Ezekiel, '*within and without.*' " Further, she asks: "How did Paracelsus come to learn anything of the composition of the stars, when, till a very recent period — till the discovery of the spectroscope in fact — the

constituents of the heavenly bodies were utterly unknown to our learned academies?" — *Isis*, I, 52, 167-8

1548-1600

Giordano Bruno. "In common with the Alexandrian Platonists, and the later Kabalists, he held that Jesus was a magician in the sense given to this appellation by Porphyry and Cicero, who call it the *divina sapientia* (divine knowledge), and by Philo Judaeus, who described the Magi as the most wonderful inquirers into the hidden mysteries of nature, not in the degrading sense given to the word magic in our century. In his noble conception, *the Magi were holy men, who, setting themselves apart from everything else on this earth, contemplated the divine virtues and understood the divine nature of the gods and spirits, the more clearly; and so, initiated others into the same mysteries.*" — *Isis*, I, 94

A paragraph from Bruno's *Confession* will give added light on his philosophy: "I hold, in brief, to an infinite universe, that is, an effect of infinite divine power, because I esteemed it a thing unworthy of divine goodness and power, that being able to produce besides this world another and infinite others, it should produce a finite world. Thus I have declared that there are infinite particular worlds similar to this of the earth, which, with Pythagoras, I understand to be a star similar in nature with the moon, the other planets, and the other stars, which are infinite." — Quoted in *Isis*, I, 96

1575-1624

Jacob Boehme, "one of the most prominent Theosophists of the mediaeval ages. . . . He was a thorough born Mystic, and

evidently of a constitution which is most rare; one of those fine natures whose material envelope impedes in no way the direct, even if only occasional, intercommunion between the intellectual and the spiritual Ego. It is this *Ego* which Jacob Boehme, like so many other untrained mystics, mistook for God." — *Theos. Gloss.*

In *The Secret Doctrine*, II, 634, H. P. B. refers to Boehme as "the Prince of all the medieval Seers," and in I, 494, as "the nursling of the genii (Nirmanakayas)."

SEVENTEENTH CENTURY, A.D., 1614-1687

Henry More. "His faith in immortality and able arguments in demonstration of the survival of man's spirit after death are all based on the Pythagorean system, adopted by Cardan, Van Helmont, and other mystics. The infinite and uncreated spirit that we usually call GOD, a substance of the highest virtue and excellency, produced everything else by *emanative causality*." — *Isis*, I, 205-6

1632-1677

Spinoza. This "Netherlandish Jewish Pantheist re-echoed the teaching of the Upanishads of ancient Hindusthan in stating as the essence of his own philosophical doctrine that the Universe is but a manifestation or a reflection of the consciousness of the Kosmic Divinity." — *E. T.*, 150. H. P. B. writes as follows: "It may be correctly stated that were Leibnitz" and Spinoza's systems reconciled, the essence and Spirit of esoteric philosophy would be made to appear. From the shock of the two — as opposed to the Cartesian system — emerge the truths of the Archaic doctrine." — *S. D.*, I, 628-9 Of Leibnitz (I, 619-20) she says that he "came several times very near the truth, but defined monadic

evolution incorrectly, which is not to be wondered at, since he was not an INITIATE, nor even a Mystic, only a very intuitional philosopher."

EIGHTEENTH CENTURY, A.D. ?

St. Germain. "He never laid claim to spiritual powers, but proved to have a right to such claim. . . . As a matter of course, he had numerous enemies, and therefore it is not to be wondered at if all the gossip invented about him is now attributed to his own confessions. . . . If he said that "he had been born in Chaldea and professed to possess the secrets of the Egyptian magicians and sages," he may have spoken truth without making any miraculous claim. There are Initiates, and not the highest either, who are placed in a condition to remember more than one of their past lives. . . . However that may be, Count St. Germain was certainly the greatest Oriental Adept Europe has seen during the last centuries. But Europe knew him not." — *Theos. Gloss.*

1743-1803

Louis Claude de Saint-Martin. "He was an ardent disciple of Jacob Boehme, and studied under Martinez Paschalis, finally founding a mystical semi-Masonic Lodge, "the Rectified Rite of St. Martin," with seven degrees. He was a true Theosophist. At the present moment [c. 1890-1] some ambitious charlatans in Paris are caricaturing him and passing themselves off as initiated Martinists, and thus dishonouring the name of the late Adept." — *Theos. Gloss.*

In the Foreword to *Theosophic Correspondence*, A. L. Conger writes: "Louis Claude de Saint-Martin, Cagliostro, and the Count Saint Germain in their respective ways exerted a major influence on the thought of their time as

did Jacob Bohme in an earlier period. Old and crystallized molds of dogmatism were broken through, at least in the field of the best educated researchers. The courage of their followers, risking "burning at the stake" for their heresies, has given us, however, some fruits of their labor that we of the 20th century may benefit by their efforts."

NINETEENTH CENTURY, A.D., 1831-1891

Helena Petrovna Blavatsky. "The Theosophist says that all these great names represent members of the one single brotherhood, who all have a single doctrine. And the extraordinary characters who now and again appear in western civilization, such as St. Germain, Jacob Boehme, Cagliostro, Paracelsus, Mesmer, Count St. Martin, and Madame H. P. Blavatsky, are agents for the doing of the work of the Great Lodge at the proper time. It is true they are generally reviled and classed as impostors — though no one can find out why they are when they generally confer benefits and lay down propositions or make discoveries of great value to science after they have died. . . . Madame Blavatsky brought once more to the attention of the West the most important system, long known to the Lodge, respecting man, his nature and destiny." — *The Ocean of Theosophy*, 10-11

In a tribute to H. P. Blavatsky after her death, W. Q. Judge wrote: "Amid all the turmoil of her life, above the din produced by those who charged her with deceit and fraud and others who defended, while month after month, and year after year, witnessed men and women entering the theosophical movement only to leave it soon with malignant phrases for H. P. B., there stands a fact we all might imitate — devotion absolute to her Master. "It was

He," she writes, "who told me to devote myself to this, and I will never disobey and never turn back."

In 1888 H. P. B. wrote to William Q. Judge, whom she addressed as her "*only* friend": "Night before last I was shown a bird's-eye view of the Theosophical Societies. I saw a few earnest reliable Theosophists in a death struggle with the world in general, with other — nominal but ambitious — Theosophists. The former are greater in numbers than you may think, and *they prevailed*, as you in *America will prevail*, if you only remain staunch to the Master's programme and true to yourselves. . . . The defending forces have to be judiciously — so scanty they are — distributed over the globe, wherever Theosophy is struggling against the powers of darkness."

Thus — the Ariadne Thread.

The Theosophical Forum

THE THEOSOPHY OF WILLIAM BLAKE — *Madeline Clark*

The path of the mystic is a strange one. . . . Even as a bird cleaves the eternal ether, so the mystic advances on a path not ordinarily manifest, a way which must be followed with care, because like the Great Light, which flashes forth and leaves only traces when it returns again to its center, only indications are left for those who come after seeking the same spiritual wisdom. Yet by these "traces," for such they are called in the Kabbala, the way can be discerned, and the truth discovered.

— William Q. Judge.

Gradually, like a star emerging from behind dark clouds, the work of William Blake is coming into its own. By most of his contemporaries considered to have been three parts mad, Blake is now seen to have been eminently sane and percipient — the *sanest* mind in England of his time, as more than one scholar has recently asserted. This is because, while showing notable sagacity and prudence as regards the affairs of this life, to him the mundane scene was interpenetrated by the Reality that escapes the unseeing eye. It speaks well for the growing perceptions of the present age that the prophetic books and symbolic poems which were his gift to the world are now being taken seriously and meeting with ever-increasing comprehension.

To all who have ever joyed in even one of Blake's luminous verses, a new book (1) by Dr. Bernard Blackstone, Lecturer in English Literature in the University College of Swansea, England, will open further doors in the labyrinth of understanding. For the author makes us see the mighty diorama of Blake's philosophy, he parts the curtain and we see what Blake saw: the Eternal Worlds,

and man a potential collaborator with the gods therein.

The lofty symbolism of Blake is in truth an overpowering challenge, utterly beyond the scope of the lesser personal mentality. Each must grapple with it for himself and find its inmost meaning: this Dr. Blackstone has obviously done, and what he passes on to us is not only a faithful account of Blake's life and an interpretation of his system ("tentative" though he claims it to be), but an urge to go exploring on our own account.

English Blake, he calls his book; not but what, all through its pages, Blake the universal overtops and overshadows the Blake of England, but that "Will Blake," as he often called himself, exemplified the very soul of what was best in English character on the one hand, and on the other, made England and its people the symbol of his dream of regeneration for all mankind. Dr. Blackstone says in his Preface:

Blake was proud of being an Englishman. His mind was soaked in the spirit of English history, in the rhythms of Milton and the Bible, in Chaucer and Shakespeare, and in the sights and sounds of the English countryside and the English metropolis. His art is the expression of a revolt from something peculiarly English towards something even more English — a revolt from the imposing tradition of philosophical thought from Bacon to Hartley, towards the ancient wisdom of the patriarchs who were the first inhabitants of "Albion's ancient Druid rocky shore." And he gave the name of Albion to the ancient primeval Man from whose torn body the earth and the heavens were created, and all the host of them. — p. vii

Moreover, there is no doubt that in some degree Blake represented, for England, along with the group which included the Anglo-American Thomas Paine, Joseph Priestley, William

Godwin, and Mary Wollstonecraft, the great spiritualizing effort of the closing years of the 18th Century. Born in 1757, Blake's best period came at this time, and his boundless energy and forward-leaping imagination fitted him to take an adequate part in the new movement. This English group, contemporary with Saint-Germain and Saint-Martin in France, and with the inspired founders of the American Republic, held weekly private meetings in the little room over Joseph Johnson's Bookshop in London; and it was here that in 1792 Blake saved the life of Paine, warning him not to go home from the meeting (where he had just been describing an inflammatory public address he had made the night before) but to proceed at once to France — "or you are a dead man." Only twenty minutes after Blake had seen Paine off on the packet for Calais a government order was issued for his arrest.

Dr. Blackstone discusses at some length the theosophists who influenced Blake, and their views regarding the Universe. Jacob Boehme was the first and chief of these: Boehme, like Blake, he says, used Beauty as a window to the Divine. Robert Fludd and Thomas Vaughan gave to Blake ideas of alchemical symbolism; Blake held with the Hermetists that Man is the Microcosm of the Divine. William Law's works were well known to him. Dr. Blackstone comments:

Whatever the defects of the theosophical view of the universe, it did at least stress two points which orthodox Baconian doctrine tended to forget First, the unity of all things. Second, the quality of life in all things. Nothing is dead, and there is no dualism of body and spirit, of Man and Nature, or of Man and God. There is, however, a balance of contraries — in the world, in Man, in the divine nature, and in this aspect theosophy forms as great a contrast to orthodox mysticism on the one hand as it does

to orthodox science on the other. Orthodox mysticism insists that God is a unity, a *simplicity* inexpressible in any terms, even symbolic, the best we can do is to speak of Nothing, or Darkness, and we must not venture to suppose contradiction in the Divine Essence. Theosophy says No. there are contraries in the Divine Essence, through the interplay of these contraries Eternity becomes an ever-growing thing, not a static perfection. And through the doctrine of the contraries Boehme and Blake can explain . . . the creation of the world, and the existence of evil. — p. 215

William Q. Judge, in his article on "Jacob Boehme and the Secret Doctrine," republished in *THE THEOSOPHICAL FORUM* for March, 1950, explains this doctrine of contraries from the present-day theosophical standpoint.

The general trend of Blake's life is well known: his incessant work as an engraver to keep bread in his mouth; his poverty, shared by his faithful wife Catherine; his absolute refusal to depart from his convictions, from his self-originated methods of preparing for the world his awakening doctrine. Yet we must not dwell too closely upon a picture of pinching poverty. There was another side; and Dr. Blackstone points out:

The idea still current of Blake as an uncultivated naif must be abandoned when we consider not only the intellectual level of the society to which he had access for the major part of his life but also the great variety of literature with which he was obviously acquainted. "I never look upon him as an unfortunate man of genius," said one who knew him. "He knew every great man of his day." — p. 27

At the weekly meetings at Joseph Johnson's, Blake discussed politics, philosophy, religion and literature, and met the authors

who resorted to the bookseller's. Frederick Tatham, Blake's friend in his latter years, wrote of him:

His mental acquirements were incredible, he had read almost everything in whatsoever language, which language he always taught himself. — p. 28

And Professor Milton O. Percival sums up Blake's intellectual background as having included:

The Orphic and Pythagorean tradition, Neoplatonism in the whole of its extent, the Hermetic, kabbahstic, Gnostic, and alchemical writings, Erigena, Paracelsus, Boehme, and Swedenborg. . . . Anyone who undertakes to do Blake's reading after him will respect his prowess as a reader. . . . When Blake, in an impetuous moment, referred to himself as a "mental prince," he uttered no more than sober truth.
— *William Blake's Circle of Destiny*, pp. 1, 2

In addition, Blake eagerly read the English translations of the works of Hindu philosophy by Sir William Jones and Wilkins, which were coming out for the first time.

There is a curious parallelism between the life-story of William Blake and the successive works that came from his pen and brush (or graver). The matchless lyrics of the *Poetical Sketches*, and of the *Songs of Innocence* have the freshness of the morning of life — the lovely verses addressed to the four seasons; and that other, "To the Evening Star" with the exquisite lines

. . . Let thy west wind sleep on
The lake, speak silence with thy glimmering eyes,
And wash the dusk with silver . . .

which Dr. Blackstone likens to some of the hymns of the Rig Veda, especially the hymn "To Night" in its English translation.

The Songs of *Innocence*, with their primitive emotions of unreasoned joy and infant woe, of Mercy, Pity, Peace and Love, have the power — momentarily at least — to create in us once more, "the child-state we have lost." They bring us a vision of "the child playing among the vital forms of the universe." Here, and later in the *Songs of Experience* and *The Four Zoas* are countless instances showing how Blake's whole soul was continuously working over the ills and pitiful wrongs of humankind: the terrors and sufferings of the little chimney-sweeps, the "charity children" sold into slavery in the factories; the harlots of the streets, the moral hypocrisy, the spiritual stagnation.

The gigantic framework of Blake's mythology embraces the complete "Circle of Destiny" — his own phrase — in which Man is caught up. "Before Time and Space were, Eternity was," paraphrases Dr. Blackstone. And the spiritual body of Man — the Adam Kadmon of the Kabbala — existed alone in Eternity "before Earth was, or globes of attraction." It is in this "Heavenly Man" that the Four Zoas, or Four Faces, have their being — rather, the Four Zoas are the Four Faces, or aspects, the divine energies, of the Man in Eternity. They are the principles, recognizable in theosophy: Los, the Inner God, the Imagination, "each man's portion of Eternity"; Urizen, the cold principle of Reason and materiality; Luvah, the passions and emotions; and Tharmas, the body (matter). *The Book of Urizen* begins the narrative of the Fall of the Heavenly Man into matter, into the maelstrom of experience, "the valleys dark of self-hood." And Man is at grips with the task of transmuting the "base" passions into the pure gold of the Eternal. To help on this cosmic process, Blake personifies in the fiery Ore the Awakener, the Spirit of Revolution and renewal, he who sings:

The times are ended, shadows pass, the morning 'gins to
break

— *America A Prophecy*, 217.

Los and Enitharmon, Luvah and Urizen and Ore are not to be placed in categories: they are archetypes, Protean in their various forms and aspects according to the phase of evolution in which they act. Significantly, "Seven Watchers guard the fallen Man."

"*Europe: A Prophecy*, *The Song of Los*, *The Book of Los*, and *The Book of Ahania*, all develop the grand scheme of the Circle of Destiny, each with a greater clarity, until in the Four Zoas (to which Dr. Black-stone devotes an elucidative chapter) the scheme is expounded in detail. The Heavenly Man, the microcosm of the Universe (Albion, in Blake's terminology), in his Fall has become divided from his divinity, and now through ages must re-unite himself with the Divine. In Blake's conception, "the soul itself is disintegrated, and has to reconcile every element of her being on the road back to Eternity." (Dr. Blackstone's words). This is reminiscent of the ancient Egyptian myth of the dismemberment of Osiris in the beginning of time, and man's obligation in gathering together the dismembered parts in order to arrive once more at spiritual wholeness. To do this, "man requires a new Selfhood continually," as Blake himself expressed it: "Self-annihilation" was necessary. In *Milton*, and again in *Jerusalem*, his later works, Blake brought forth this gospel of Renunciation, the complete surrender of the human self to the Divine. Milton, used as a symbol of man, is made to plunge into the Abyss of experience, lest in the Last Judgment he be found un-annihilate, and be bound once more to his selfhood. And in *Jerusalem*, Albion, the "Ancient Man," unregenerate humanity, (especially English) "Throws himself into the Furnaces of Affliction," which immediately become

Fountains of Living Waters flowing from the Humanity
Divine.

Los, the Divine, "the Inner God of Man," could live in Eternity if he wished, but renounces this felicity and through love remains in the world of generation. On his own behalf Blake cries, in the Preludium to the *Book of Urizen*:

Eternals! I hear your call gladly
Dictate swift winged words, & fear not
To unfold your dark visions of torment.

Even the Eternals (Immortals) "must forego each his own delight." "The rotation of the Wheel of Destiny is accompanied with the keenest anguish." Freedom from this wheel is only found in "the unconditioned, the Kingdom of Heaven, which is within." Milton addresses his Spectre with the words:

Such are the Laws of Eternity, that each shall mutually
Annihilate himself for others" good, as I for thee. . . .

. put off

In self-annihilation all that is not of God alone,
To put off Self and all I have, ever & ever . . .

. . .

The Negation is the Spectre, the Reasoning Power in Man.
This is a false Body, an Incrustation over my Immortal
Spirit, a Selfhood which must be put off & annihilated
always.

— *Milton* 541-6.

Dr. Blackstone comments:

It is only when this shell has been sloughed off — this mask discarded, that the true joy can spring, the joy of being what one really is.

It takes a poet, a poet of bardic power, to give expression to this most profound, most fundamental, of man's spiritual problems. But there was actual experience in the poet's own life to give

reality and convincingness to these greatest of the prophetic books, the ideas for which poured into his consciousness during the one easeful interlude in his otherwise toilsome existence. This interlude was his three years' residence at Felpham in Sussex, where he was under the patronage of William Hayley, a well-to-do dilettante and poetaster, whose verse Blake was commissioned to illustrate. The relief of the change from London to the country, and his ecstasy on finding himself among the glories of nature were short-lived; he soon became uneasy in the conviction that at Felpham he had stepped out of the path of his destined mission, since Hayley thought nothing of Blake's own creative work, and demanded his complete application to his patron's affairs.

The almost universal lack of recognition of the value or seriousness of Blake's mystical works and his art seems to have reached a peak at this time, and at last he declared in a letter to his friend Thomas Butts:

I am not ashamed, afraid, or averse to tell you what Ought to be Told: That I am under the direction of Messengers from Heaven, Daily & Nightly; but the nature of such things is not, as some suppose, without trouble or care.

Temptations are on the right hand & left; behind, the sea of time & space roars & follows swiftly; he who keeps not right onward is lost . . . — But if we fear to do the dictates of our Angels, & tremble at the Tasks set before us; if we refuse to do Spiritual Acts because of Natural Fears or Natural Desires! Who can describe the dismal torments of such a state! — I too well remember the Threats I heard! — "If you, who are organized by Divine Providence for spiritual communion, Refuse, & bury your Talent in the Earth, even tho" you should want Natural Bread, Sorrow and Desperation pursues you thro" life, & after death shame & confusion of face to eternity. . ."

The following year saw him back at his graver's bench in London. In course of time the inner picture cleared, and Blake was able to write:

I am again Emerged into the light of day; . . . but I have travel'd thro" Perils & Darkness not unlike a Champion. I have Conquer'd, and shall Go on Conquering. Nothing can withstand the fury of my Course among the Stars of God & in the Abysses of the Accuser.

He had indeed plunged into the Abyss; for his return to London (1803) marked the beginning of years of struggle with poverty and non-recognition. He was called "an unfortunate lunatic" in the public prints. About 1807 his fortunes were at their lowest ebb. And Dr. Blackstone records how "In his commonplace book for Tuesday, 20 January, 1807, we find the simple and terrible entry: 'Between Two & Seven in the Evening — Despair.' "

The years 1811-17 were "years of obscurity," during which Blake was almost lost sight of. But he retreated not from his "determination to go on thinking and writing for his country's good." Moreover, the quality of what he produced still continued to mature and was leading up to the final splendor. He was still working on *Jerusalem* at this time, and we find these lines, which bespeak the undaunted heart:

. . . I rest not from my great task!
To open the Eternal Worlds, to open the immortal Eyes
Of Man inwards into the Worlds of Thought, into Eternity
Ever expanding in the Bosom of God, the Human
Imagination.

— *Jerusalem*, p. 5

To his friend Butts, he had written in 1802:

The Thing I have most at heart — more than life, or all that seems to make life comfortable without — Is the Interest of True Religion and Science.

The truth is, he was an original in a highly conventional age. He was pitted against forces of complacent materialism which could not be resolved by gentle reasoning, hence the violent imagery and thunder of his language as prophet and bard. While the age in which he lived had been nourished on the pale and artificial systems of Bacon, Locke, Hobbes, and Pope, Blake's mental fare had been the works of the great theosophists of all ages. Dr. Blackstone is at great pains to make clear to us just what this rationalistic web of thought was, against which Blake was at such odds. He traces back to Francis Bacon (1561-1626), whom H. P. Blavatsky describes as "one of the first to strike the keynote of materialism," (2) the origins of this pernicious and soul-destroying philosophy, which gave to man no higher faculty than the Reason, and no broader field of study than the phenomena of the material universe — and that only for his own increasing sense of comfort and well-being. The soul was to be lulled to rest in a cradle of finality and material security.

Francis Bacon, according to Dr. Blackstone, opposed the theosophical view of Nature, in both its mystical and its alchemical aspects, and refuted the teachings of the great English cabbalist Robert Fludd, though he does not refer to him by name. "But there is no doubt," continues Dr. Blackstone, "that the mainspring of Bacon's *Novum Organum*, his *machina technica* for the advancement of the sciences, was a turning away from the vitalistic universe of the theosophists to a mechanical universe: a manifold of material objects in space, dead matter analysable by dissection and experiment." Locke followed Bacon, but was more skeptical, and advocated sitting down "in a quiet ignorance of those things which, upon examination, are found to be beyond

the reach of our capacities." (3) "The great thing," Blackstone summarizes, "is to fix the "horizon" accurately, and then attend strictly to the territory on this side of the bounding line." But Blake's position was that "less than All cannot satisfy Man." "The Desire of Man being Infinite, the possession is Infinite, and himself Infinite." Then came Hobbes, in the later 17th century. With him the virtues and vices were simply reflexes, and man therefore not responsible. Alexander Pope, whose *Essay on Man* was sufficiently rich in moral reflections, still kept primly within the boundary with his "Presume not God to scan." Even Newton failed to give the utmost spiritual meaning to his new conception of the material universe. The mental outlook for Blake's generation could be summed up, at least in the aspects of it that roused his cosmic indignation, in this way: Knowledge is merely sense-perception. *Laissez-faire*: "Life is just like that: we can do nothing about it." Man is merely a passive being. Self-love is the well-spring of all in man. Reason is the only curb upon nature. The attainment of pleasure and avoidance of pain is the end and aim of life. There is no free will.

Hence Blake's fierce denunciation of such theories, on the ground that they were the very negation of those energies of spiritual enterprise through the exercise of which alone there could be inner growth. To him it was essential that this smug complacency should be broken up; and he became, what the world in general did not welcome, a disturbing spiritual force, urging men to awaken — and to dare to change and grow.

His language is like a foreign tongue to all but the few. But take any one of the great prophetic poems, and without regard to its rational meaning, read on:

Thus were the stars of heaven created like a golden chain
To bind the Body of Man to heaven from falling into the

Abyss

Each took his station & his course began with sorrow and
care . . .

Traveling in silent majesty along their order'd ways
In right lined paths outmeasur'd by proportions of number,
weight,

And measure, mathematic motion wondrous along the
deep,

In fiery pyramid, or Cube, or unornamented pillar square
Of fire, far shining, travelling along even to its destin'd end

. . .

Read on in this way, and you find yourself at large in the Universe
— in the awful freedom of the Boundless.

The poetry of Blake is effortless and purely inspirational: "a direct transcription of reality." This is undoubtedly because there was behind it the inexhaustible energy of the eternal worlds. "His intelligence . . . is perfectly at home with conceptions from which the ordinary mind would shrink in alarm at the unusual and the gigantic." And Dr. Blackstone gives this astonishing evaluation:

The writings of Blake stand beside the Gita, the Upanishads, and the *Tao Teh Ching*, among the spiritual masterpieces of the world. In English literature there is no one to compare him with after the mystical writers of the Middle Ages . . . He has no progenitor, and he founded no school. He stands quite alone as a prophet at the close of the materialistic eighteenth century and the opening of the mechanistic nineteenth century, proclaiming in a spiritual wilderness the doctrine of the eternal world.

and intuitively he adds:

It is possible that the second half of the twentieth century

will see a growing interchange of thought between East and West, and here Blake is undoubtedly our representative thinker.

We have no hesitation in adding that it is largely through the efforts of H. P. Blavatsky and the Theosophical Society since 1875, that the modern West has developed its perceptions up to the point where it can adumbrate a state of consciousness above the rationalizing faculty, and is the more ready both to make an intelligent approach to Oriental metaphysics, and to understand in degree the Western exponents of the same ancient doctrine.

In 1818 Blake was introduced to John Linnell, the Swedish-English artist, who became Blake's friend and benefactor, and who saw to it that Blake was given some part of the consideration that he deserved. Around the now aging poet-bard a group of young men gathered of their own accord, to listen to his discourse. They have left it on record that to them he seemed "a new kind of man." "He was energy itself, and shed around him a kindling influence." To them his humble lodging was "the House of the Interpreter." . . .

There have been mystics in all ages, each with his peculiar genius; but in William Blake we have one who combines the characters of mystic, philosopher, painter, and poet — "and presents all of these in the supreme degree."

Dr. Blackstone's book is illustrated with a reproduction of Linnell's head of Blake, and with a representative group of Blake's mystical designs and his engravings.

OURSELVES AND OTHERS (1) — *Kenneth Morris*

In the Chinese language the word *Jen* is written first with a stroke which looks like the numeral ONE in our Arabic figures, and then two horizontal strokes. The first element, the figure one, stands for Man; and the two horizontal lines stand for the numeral two. The word means: Do unto others as you would they should do unto you. Man + two. The Individual, you or I, any man, and the plurality; the Ego -and the Non-ego; the right relation between a man and the world, humanity, the universe; which is, according to the Chinese way of thinking, reciprocal love, or Ourselves and Others and that relation that does really, and ought actually, to exist between us.

Now, what are we? To say we are human beings explains nothing. If you don't think at all; if your life is as that of the beasts of the field, why, that statement is quite satisfactory; all that needs saying has been said. But if you think and examine into things, you will need much more than that. You think a little more, and perhaps say: I am two things in one, a body and a soul. Or you may go to your Testament and say with Paul, a body, soul and spirit. Then comes up the question, What is the soul? And then, What is the spirit? And what is the difference between the soul and the spirit? Possibly, if you are curious, you will go to your minister about that; and I don't know what he will tell you.

Let us look into ourselves, and see what we can find out. Here first are our bodies: are they ourselves? Are our clothes ourselves? Of course not. We put on our clothes in the morning, and take them off at night; we get a new suit, and it lasts us a year or two, and then gets sold in a jumble sale — we have done with it. Our bodies are suits of clothes we put on at birth and take off

and discard at death; they are the means whereby we live in this world and gain experience of life in this world.

Next consider the consciousness inside the body, the consciousness, I said; but I am not so sure about that; I should have said consciousnesses, I think. For all in the same day three different types of thought may come into your mind or mine, and may find expression in words on our lips. We may say, I am hungry, I want a drink, I want a smoke; I desire this, that or the other thing. Or we may say, reasoning from the evidence in front of me, I believe the world to be round; or, I think man is a good deal more than his body; or, I believe in this or that philosophy or religion. Or again, the thought may come into your mind and pass your lips as words, I love my country; I wish to God I could do something to better the condition of humanity; I aspire to be something much grander and more noble than I am.

Here we see a different self speaking in three ways. This exemplifies three souls at least. Lowest is the animal soul, that desires. Above it is the human soul. We can call it so, as we have called the other the animal soul, because the lowest soul we have in common with the animals; they too desire things, but they don't think and reason; they don't believe the world is round, or that the angles at the base of an isosceles triangle are equal, or have religions or philosophies. And then, above the human soul, is what we may call the divine soul: that in us which aspires, which loves impersonally — loves without thought of getting anything in return for ourselves.

Now, which of those is ourself — our self-most self, so to say? Not the animal; because the animal soul may say, I want a drink, I desire this or that: and something else in us may reply: Yes, but you are not going to get it, because it would be bad for you! The thinking soul, the human one, may reason it out from experience

that gratification of the desires of the animal self or soul leads to bodily sickness and to the dimming of its own, the human soul's, powers to think; so it may exercise control over the animal soul, and forbid it what it clamors for. So obviously that human soul is, so to speak, a selfer self in us than the animal self.

And as the human soul can train and educate the animal self, can permit it this and forbid it that, hold it in check, and even direct its energies, so that it shall come to desire ever finer and finer things; does it not follow that the divine soul can also so educate and raise up the human soul? Doesn't it also follow that the three are associated thus together in each human individuality, for the purposes of evolution? The animal may evolve by association with its betters, the human; and the human may evolve by association with its better, the divine.

Did you ever think of the meaning of self-sacrifice? To sacrifice is what they call a transitive verb. It must have a subject, the one who does the sacrifice; and an object — the thing sacrificed. Thus we read of Abraham sacrificing the ram. Subject Abraham; verb sacrifice; object or thing sacrificed, the ram. And we read of many who sacrificed their lives for great causes, as Joan of Arc to free France from the English. But the fact that she sacrificed her life — gave her body to be burned — proves that her body was not herself, her life was not herself. Her Self was something behind and above body and life that decided that she could afford to give up body and life, things not herself, for the cause she believed in, because the Self-most-self of Joan of Arc is something higher and more inward still. And it is — Compassion.

Now what is compassion? The deepest feeling within one, that although one knows oneself to be suffering hell forever, yet there is a more real self within that will live forever, that Joan of Arc, for example, would live on forever in her people, her freed

people. France was more really herself, more permanently herself, than she was herself. The self that was sacrificed was all that could be included under the term Joan of Arc, now and forever; the sacrificer was something greater than Joan of Arc.

To extend this thought. There is still a bigger self in us than the self of our country. It is the self of humanity. The man who had really found himself would live in and for humanity. He would never be able to rest content till all the suffering in the world was eliminated; he would feel it his — not duty so much as ardent pleasure to be making war on human suffering, and what causes human suffering, which is human selfishness; and what causes human selfishness, which is human ignorance. That ignorance which makes us identify ourselves with the lowest selves in us; which keeps us from feeling and acting as the higher selves, the real selves in us. Now if we are those higher selves really; if the highest self is the divinest and inmost self in us — there is a saying of Jesus that ought to take on a new light "Ye are Gods; be ye perfect." Ye are Gods; that is, I am a god, thou art a god, he is a god, she is a god; we are gods; you are gods; they are gods.

Now we have come back to our starting point again, the Chinese word *Jen*. Ourselves and Others — *who are ourselves*.

Let us approach it from another angle. Let us forget all we have been taught, all religious and scientific views, and become as little children, that we may enter into the kingdom of heaven and discover something about the mysteries of the kingdom of heaven. For if you are going to believe Jesus, the kingdom of heaven is something we can get into any moment, because as he said, It is within us here and now. Religion, however, has made it something you can get to when you are dead; but Jesus when he used those words — and his opinions, like yours and mine and anybody else's, are worth finding out and looking into — meant

something within us that is not generally known or considered; something divine, that we could come to know about. Let us call it the truth, or the secret of life and death, or the reality behind Religion. So if we are going to enter into it, we have to approach things with a child's mind: seeing what we do know very well for ourselves, and never mind what we have read in books or been taught in Sunday school or chapel or church or wherever else. What is the one thing you *know* for certain? Why, that you exist; that you are a conscious being. What is the one book you can read, everyone can read, literates and illiterates, Jews, Turks, infidels and heretics, and you and I? Why, ourselves.

And starting out from that certain knowledge, what can we infer? That we are conscious beings; and that we know we come from this universe. We know we are the children of the universe. And we have seen that our inmost self is universal; that the most real man is the most compassionate man; the biggest man is the man with the biggest and widest sympathies. He is the man in whom, the human soul has trained the animal soul to discipline and obedience; and in whom the divine soul has trained the human soul to think and feel as it, the divine soul, does. He therefore is the man in whom the process of evolution has gone furthest. Now, doesn't it strike you that there we have stumbled on the purpose of life? — EVOLUTION.

There those three are associated in each of us; and unless we take the lowest of them, the animal soul, in hand, and evolve it, make it evolve, by disciplining our desires and passions, we suffer in health. Doesn't that suggest that they are there to evolve? And if so, that such evolution is the purpose of life? The purpose of nature — the thing the universe is doing, that it exists for?

It isn't a case of monkeys changing gradually, in generation after generation, until their children have miraculously been born

men. That theory should not be called evolution at all, because evolution means the unfolding out of something, of some potentiality that is already in it; thus the oak tree evolves out of the acorn. The Darwinian theory ought to be called, not evolution, but as it is in French, Transformism. Evolution, so far as we are concerned, denotes the possibility of the human, thinking soul in man capturing, taming and training the animal soul, and making it human; and of the divine soul capturing and inspiring the human soul, and making it divine. Anyone who wants to believe that this process begins, for every triad of animal, human and divine souls, at the birth of the body they are to inhabit, and that it ends with the death of that body, may do so; but he must have queer ideas as to the economy of the universe. It would be like a book that begins half way down page 308 and ends in the middle of a sentence; but for the moment, never mind that. What I want you to hold in mind is, that the purpose of life, of nature, of the universe, is *Evolution*.

Now who is wise, who is sensible, who is likely to succeed? The man who works in accordance with natural law, or the man who works against it? The man who furthers the purpose of the universe and life and nature, or the fool who tries to stop the broad stream of evolution from flowing on its majestic way? I need hardly ask, need I? Obviously the man who allies himself with evolution is the sensible man. How can we do it?

Well, first and foremost, by being the human soul in us instead of the animal soul; and that can only be done by making the human soul gravitate up towards the divine soul. Now what is the divine soul? The one that thinks and feels not in our limited personalities, but in humanity. The one that lives for others, not for self. The motivating force of evolution.

That much can be said to everyone in the world. I want to say

something particularly to the Rhondda people.

My home, up till two years ago, was in one of the most beautiful spots in one of the loveliest countries in the world, California. There the sun shines, I suppose at least three hundred and fifty days in the year; all day long on about three hundred days. There the cities have wide clean streets; the buildings are fine and handsome, nearly all of them. In the suburbs, where the people live, the gardens run down to the pavements, with no dividing wall or hedge; you walk with the flowers beside you; at the ends of the streets you see vistas of mountains, pale blue, dark blue, purple, sometimes capped with snow. The streets are avenues of beautiful trees. That is a lovely land, and, in general, mankind works to preserve and enhance its loveliness. Well — hiraeth called me back to Wales.

And then I chanced to come to the Rhondda to lecture. And I saw the Rhondda, that once was a valley of pure beauty; how grimly hideous men have made it. And I spoke to Rhondda people; and I said to myself, There is where I must live.

I saw the Rhondda, where there is not a street or building that isn't hideous; where even, so far as it is possible to do it, men have spoilt the outlines of the eternal hills themselves with vile coal-tips; where the children seem to have nowhere to play but in the hideous streets; where the automobiles kill them. Little Doris Pennington was killed at Llwynypia the other day; I owe it to her memory and her parents' sorrow to press this point on you. And — I spoke to Rhondda people.

It wasn't just that they are my own people: of my own race, or if not that, of my own country. There was more to it than that. I'll try to tell you how I felt: how I always feel in speaking to Rhondda people; how they — how you — make me feel.

Have you ever tried the experiment with salt and a glass of water? You put a spoonful of salt in, and it melts, and the water is still clear. And you put in another, and the water is still clear. And you go on putting salt in, spoonful by spoonful, until what I think is called the saturation point is reached; anyhow, that will convey the meaning. Then suddenly, after the last spoonful is put in, there is no longer clear water in the glass, but opaque, unliquid salt.

Or, haven't you felt in singing: that you can start singing, and go on, and in your singing reach upwards, and get something greater, and something greater again, and something still greater; until you feel that somewhere above you or ahead of you that you might reach is a point where you could transform the universe; where it wouldn't be just singing any more, but magic?

Or again, sometimes in the East, in China or Japan, you hear the temple bells. They are not like our churchbells, that flurry out their peals impatiently, and seem extraordinarily excited about something. Instead, a low, deep, round, clear note booms out, and drifts along the twilight valleys, and steals into your consciousness with deep and deep and deeper peace. And when the vibration is dying, out it booms and sings and rolls again, and lifts you yet higher; until you feel that sometime will come a boom, gonglike, that will shatter the visible universe, and reveal the fairyland that is behind it, and reveal the villagers, the coolies, everyone, yourself included, as a god, an angel, the disguise of his vulgar humanity thrown aside.

Well — that's how the Rhondda miner makes me feel every time. That if just the right note could be struck; just the right word said; just the last spoonful of the salt of inspiration put into the water of his mind — there would be a transformation.

I see a lot of evidence of the animal soul in him, and above all in

the valley he lives in. It is chaotic, undisciplined, unimproved; hideous is this once lovely valley; and it is man that has made it so. But, I see a deal of evidence of the human soul behind all that waste. I contact the men who think, who study. I speak to men who listen keenly, who weigh what I say, who appreciate thought and reason. But — and here is the point: I never look into your eyes but I see the divine soul. I meet young men roaring and shouting through the streets at night, keeping sleep from the eyes of tired women, of the sick and the aged: and, Yes, the animal soul is undisciplined, I say to myself; and that is the work of the chaotic, undisciplined animal soul; but behind it there is still that which makes me say to myself: Yes; Jesus was right after all when he said, Ye are Gods; that each of us, in the inmost reality of his being, is a god, a divinity, a thing of wisdom, power, beauty and compassion. And, a passion comes on me to evoke, to call forth, to bring into conscious life and action, that wonderful divinity I sense in you.

How do it? You who are out of work, who have all the hours of the day to fill somehow, could you find no means of furthering the work of evolution in those hours? To go against nature is to live in and for yourself; to go with nature is to live for others. He who makes what is hideous beautiful, what is inharmonious harmonious, is working with and for evolution. He who joins with his fellows in such a work, subordinating himself and his desires, is doubly working with and for evolution. Is there no way in which the unemployed could combine to improve the Rhondda? To make beauty of this ugliness, brightness of this gloom, playgrounds for the kiddies or parks or gardens of the vile coaltips? I don't know. But — is there no way? And — it would be bringing happiness into lives that can't be too happy; because there is no happiness like that gainable from working for no reward, for no personal benefit, but for the good of others. There

is no happiness like that; because, think! When the animal soul or self gets what it desires, it looks upon that as happiness; but there comes a quick reaction; to tell us that that animal soul or self is not really ourself but something in our charge; a servant we must train; gratifying it is not gratifying our Self. To gratify the human self, to think — yes, that is not so bad; that is satisfying up to a point; but it does not bring the real thrill of happiness which gratifying the divine self does.

And there is one other point I would like to bring before you. There is a way of finding out about things. If you have been interested in any of the thoughts I have brought before you: there is a way of following it up. The kingdom of heaven is within you, here and now; it may be given to you to know the mysteries of the kingdom of heaven. Or rather, that privilege is one that you may take for yourself; as it says, the kingdom of heaven is taken by violence, that is, by a man's own efforts. What does that mean but that a man may come to know, he may learn, he may find out for himself, the truth about the universe and life, the hidden things? I have just been trying to tell you a little about Theosophy, which word means divine wisdom, wisdom from the divine self in man. If you want happiness, why, follow up that teaching, and find out by its aid for yourselves: it will give you the key, what is the real truth about Ourselves and Others. It isn't a new religion; it isn't a religion, one of the many religions, at all; but simply the key to the truth underlying all religions.

FOOTNOTE:

1. Address given before a group of Welsh miners in the Rhondda Valley where Kenneth Morris from 1930 until his death in 1937 labored to establish active theosophical centers among his countrymen. ([return to text](#))

WHAT IS TRUE PHILOSOPHY? — C. Woodhead

"Philosophy," says George T. Ladd, one-time professor of philosophy at Yale University, "is a critical and rational system of man's judgments and beliefs, that have reference to reality." If, however, we consult other standard authorities we shall find that philosophy covers a great deal more ground than that. One man sums it all up by calling it "reasoned science." Another says that it is "the equable temper that results from the study and understanding of the principles that govern things," in which he agrees with Bulwer Lytton who says, "Philosophy has become another name for mental quietude." Etymologically, as it is generally understood today, philosophy is said to mean *the love of wisdom*. But there is an older and deeper meaning hidden within its derivation, which will be referred to presently.

No man can live without philosophizing, and every man has a philosophy of his own. To each man it represents his comprehension of those laws of being which define his position in life, and the motives which govern his deeds, thoughts and aspirations. Such has been the case ever since man, in the course of his long dual evolution, united a self-conscious mind to the other principles of his nature. And so we may expect to find some evidences of a philosophy, wherever we find traces of the ideas and mental processes of long vanished races. In every part of the world where archeologists are now busy in upturning these buried memorials, we find allegorical symbols and carvings, many of them still unread, which unmistakably convey across the ages, in veiled language, the concepts of the earlier races of mankind. Of the meaning of some of these concepts we are already fairly well informed. Others remain undiscovered. And so the history of philosophy is as old as the human race.

In recognizing the existence of this archaic philosophy, we may note that in the days of ancient India, Egypt and Chaldea, the intelligent and conscious beings and forces which rule the destinies of the world through the agency of man, were represented by poetic symbols in the forms of men, animals or geometrical figures. It is only within the last century that modern research has begun to understand this. The ignorance which attributed these symbols to a superstitious worship of gods or idols, is well nigh exploded. We might as well believe that the people of the United States worship the goddess of Liberty erected on a lofty pedestal in New York Bay, or the eagle upon the American flag.

Better known but still woefully misunderstood, is the symbolic cosmogony of ancient Greece. The mythological gods and goddesses of the Greeks were regarded by them as typifying the forces of divine and material nature, the aspirations and passions of man, the action of the Great Law of the Universe in its various harmonious manifestations. Shall we still unwisely persist in calling these heroic and cultured people superstitious pagans, because we fail to understand the beautiful allegories which underlie their poetic myths, and which are as true today as they were in the times of their inspired authors?

All these archaic philosophies are as yet comparatively unexplored. They afford a wealth of knowledge, and a depth of wisdom, which are not generally understood. They represent the highest ideals of learned and heroic civilizations. And those ideals have yet to become recognized once more, and incorporated in the philosophy of our modern every day life. When properly studied they will raise us far above that which has been sarcastically called "the philosophy of the steam-engine."

Before proceeding further, reference must be made to the Ancient

Mysteries which have been so much misunderstood by some modern uninformed writers. In these representations the archaic philosophy of the early sages was dramatically presented and explained. So many centuries have elapsed since the Mysteries were obliged to give place to the prevalent degradation of ancient wisdom, that modern students have almost lost sight of these sacred symbolic ceremonies. They served to keep alight for ages the most arcane knowledge of man's divine origin and destiny, and almost every great philosopher of old times was one of their Initiates. In *Isis Unveiled*, H. P. Blavatsky speaks of them as follows:

They were observances, generally kept secret from the profane and uninitiated, in which were taught by dramatic representation and other methods, the origin of things, the nature of the human spirit, its relations to the body, and the method of its purification and restoration to higher life. . . . As Plato and many other sages of antiquity affirm, the Mysteries were highly religious, moral and beneficent as a school of Ethics. . . . In short, the Mysteries were in every country a series of dramatic performances in which the mysteries of cosmogony and nature in general, were personified by the priests and neophytes, who enacted the parts of various gods and goddesses, repeating supposed scenes (allegories) from their respective lives. These were explained in their hidden meaning, to the candidate for initiation and incorporated into philosophical doctrines....When men like Pythagoras, Plato, and Iamblichus, renowned for their severe morality, took part in the Mysteries, and spoke of them with veneration, it ill behoves our modern critics to judge them rashly upon their merely external aspect.

"The wisest and best men in the Pagan world," says Dr.

Warburton, "are unanimous in this, that the Mysteries were instituted pure, and proposed the noblest ends by the worthiest means."

More recent than this archaic philosophy, that which is generally called *ancient* philosophy is supposed to have taken its rise in Greece somewhere about the Sixth Century, b.c. It is almost entirely the product of Greek thought and it reached its culmination in Athens and in Alexandria.

Pythagoras, Socrates, Plato and Aristotle are the four great teachers of the early Greek philosophy, and of these Plato and Aristotle are the two best known to us. The teaching of Plato was highly intuitional and shows clearly that he was an Initiate of the Mysteries, while that of Aristotle was coldly intellectual. "The philosophy of Plato," says Dr. Draper, "is a gorgeous castle in the air; that of Aristotle is a solid structure laboriously founded on a rock." However this may be, it would indeed have been well for humanity had succeeding generations pinned their faith to the teachings of Plato rather than to those of his great pupil Aristotle. For Aristotle was the founder of the modern science of intellect, the contriver of the syllogism, the inventor of that inductive philosophy which is little more than brain-mind argument. Could this great man only have foreseen how terribly his system of thought would be misused in future centuries, he would surely have adhered more closely to the teachings of his revered master.

For, fathered by ignorance and love of power and nourished by Aristotle's system of inductive logic, grew up that monstrous system of creed and dogma, which degraded the pure teachings of primitive Christianity and has held the world in ignorance of their true meaning for eighteen centuries. "Aristotelianism," said Professor W. A. Hammond of Cornell University, "became practically the official philosophy of the Catholic Church, which it

still continues to be."

And so the ancient purity of the teachings of the Mysteries, of Pythagoras, of Plato and of Jesus became almost lost to humanity. The casuistry of Eusebius and Tertullian led the way to the mediaeval inquisition and to the teachings of the sons of Loyola. And even today, though the sun is plainly breaking through the clouds, and humanity is once more looking for the landmarks of ancient knowledge and true wisdom, yet the strife is by no means ended. Look for a moment at the signs of the times in both Europe and the United States.

With the exception of a brief revival at the great university of Alexandria in the Second and Third Centuries a.d., the archaic intuitional philosophy may be said to have died out with the school of Plato. The schools of the Sophists, the Cynics, the Stoics, the Epicureans, the Skeptics led the way to the work of the ecclesiasts of the early Christian centuries. St. Augustine devoted his great genius to explaining and justifying the theological dogma of his times by the aid of a purely intellectual philosophy, and ultimately a blight of darkness and ignorance fell over Europe and Western Asia. Of these dark ages Professor James E. Creighton of Cornell University wrote as follows:

Scholasticism was the form under which the thought of the Western nations was molded and schooled for long centuries. Ostensibly at least, philosophy during this period was entirely subordinated to the accepted theological doctrines. *Credo ut untelligam* — I believe that I may understand — was its professed motto.

Then came the Renaissance, the various reformations of ecclesiastical system, and the revival of learning. Since that time a slow awakening has come to the Western world. Men of vast genius and learning have brought forth systems of thought which

have swayed the minds of men, and have gradually broken up those perverted ideals which had passed through torrents of human bloodshed and suffering, and been found wanting. Copernicus, Kepler, Galileo, Descartes, Francis Bacon, Locke, Hume, Priestley, Kant, Hegel, Schopenhauer, Fichte, Comte, Darwin, Spencer, Mill, have left noble records. Later days again have brought forth still more numerous speculations. Yet the intelligent yearnings of humanity are not satisfied. The Ancient Mysteries have passed away. The light of archaic philosophy has been nearly extinguished. And the world has discovered that there is something wanting. It is in danger of being overwhelmed in a chaos of self-seeking and of moral destruction. The signs of unrest are everywhere. Surely there is a remedy if it can be found. Let us try and find it.

In searching for a remedy for the existing troubles of the world a very little study will convince us that a merely speculative philosophy will be of small service. We need something lasting, true and eternal. Nothing less than this can do any good. For 2000 years and more, in fact since the times of Pythagoras and Plato, the world has been troubled with speculations. They have appealed very largely to the intellect, to selfishness and ambition. And now the time has come when a widespread opinion has gone abroad that (in the words of H. P. Blavatsky) "there must be somewhere a philosophical and religious system which shall be scientific and not merely speculative. And in one of his dialogues Plato says:

The philosophers are those who are able to grasp the eternal and immutable; they are those who set their affections on that which in each case really exists.

There is a tradition among the pupils of H. P. Blavatsky, that she solved the problem in a few pregnant words: "The ancient and

real meaning of philosophy," she said, "is not the love of wisdom but the wisdom of love."

In endeavoring to fathom the depth of this profound truth, we have to recognize the eternal nature of the divine man himself; he who dwells within the mortal frame of the outer man, and for whom the philosophizing brain is but an instrument. If we regard reason as the eye of the mind, then intuition is the eye of the soul which is the real man. The more a man meditates and philosophizes, the more he becomes aware that there is a subjective self within him, which is not that of his ordinary waking consciousness. Says Prof. G. T. Ladd:

The mind of man continues to believe that the forms of man's own mental life and cognition, do somehow represent the beings and events of a world which lies outside that of mental life.

All this the wise archaic sages knew well, but it is not generally taken into account in the systems of modern philosophy. Yet it is the key to the whole question of real philosophy. For if the divine soul of man which is the real perceiver of the good, the beautiful, the true, is other than the thinking brain mind, it can only be that which is omniscient on its own plane, and every effort of philosophy is but an aid to its unveiling. The nature, validity and limits of human reason, as defined by reason itself, is therefore a hopeless task.

All the philosophers of ancient days, amongst whom some of the greatest were the founders of the world-religions, were agreed in teaching that the supreme motive in the Universe is that of boundless love and compassion. Tracing the evolution of existing things from this one unity, a wonderfully harmonious yet complex system was disclosed for man's intuitive recognition. This system included the totality of possible existences of men

and things. The conviction that man, and all which he perceives, are thus but part of one great whole, is the first step to the unraveling of the great riddle of the universe.

What we need therefore in these days, is to cease the further comparative analysis of complexities, and seek the synthetic values and ideals which will lead us back to the heart of true being, on the road to which we are all fellow pilgrims. We should seek the similarity of religions rather than their divergences, and try to study the teachings of their divinely inspired founders themselves, rather than the theological dogmas of would-be interpreters which have grown around and obscured them. We should seek to do away with the differences of caste, creed, and color in our own minds and hearts. We should acknowledge the potential divinity of every human soul. These are the "counsels of perfection."

"Depth in philosophy," said Francis Bacon, "bringeth men's minds about to religion." For what is true religion but that tie which unites men in the common bond of their innate divinity, and what is the *philosopher's stone* of ancient allegory, but that wisdom of love which turns all the baser metals of our lower nature into the golden promise of a higher, truer and nobler life.

"Fear and hatred," said H. P. Blavatsky "are essentially the same. He who fears nothing will never hate, and he who hates nothing will never fear." This is but the analogue of the ancient maxim: "Perfect love casteth out fear." So the wisdom of love gives us boundless courage. It is well illustrated by the lives of those who have not feared either to die for humanity or to live a life of martyrdom in its service. It is a scientific fact on the plane of true being.

And this wisdom of love shows us also the wisdom of the forgiveness of injuries, the wisdom of toleration of each others'

weaknesses, the wisdom of non-resentfulness, the wisdom of the divine law which without favor combines justice with mercy.

It is the basis of the teachings of those Masters of human life, such as Gautama the Buddha, and Jesus the Christ, who having solved the mysteries surrounding the relationships which *really exist* between man and man, between every human soul and every other, have left behind them precepts for our guidance, that we also may solve these problems for ourselves and walk in their footsteps.

Although millenniums have passed away since these precepts were uttered, yet they remain as landmarks for our help and direction, and they shine with a light which can never be effaced. No effort to explain them away, nor to involve them in a cloud of smoky dogma or soul-destroying creed, can diminish their luster. They explain themselves to every man who will consider them with an unbiassed and unclouded mind, for the divine soul of each of us can always be trusted to recognize its own.

The Theosophical Forum

THEOSOPHY, THE INTERPRETER — *Audrey Klosterman*

Theosophy is no longer a word unknown to the world. It is no longer a mysterious sounding word, but is recognized as a body of teachings embracing Science, Philosophy and Religion. The origin of these teachings is lost in the mists of time and antiquity. They are as old as thinking man and the truths of this Wisdom teaching lie deeply imbedded in the consciousness of man.

This secret doctrine of the archaic ages has been recorded in all times and countries from ideographs to Devanagari. The literature of the world is filled with fables, myths, legends and fairy tales which would have little meaning if some great Truth were not hidden in the rich imagery and symbol of the tale. The literary historian, the mythologer and the anthropologist have brought to light evidence of these esoteric truths, but they have been unable through either lack of imagination or intuition to detect a Parent Doctrine.

It is a well known fact to scholars that all the great teachers — Buddha, Zoroaster, Jesus and many others — taught by parable, and thus hid mystical secrets in allegory and symbol. This treasury of beautiful literature and teachings, inspired, lofty and noble, is the heritage of the modern world from the ancients. But to understand and comprehend its beauty in fulness, a key, an Interpreter, is necessary and that Interpreter is Theosophy, the Source from which all these ancient systems sprang.

A restatement of this wisdom of the gods was presented to the West in 1875 by H. P. Blavatsky, a Russian noblewoman. She has been called the lion-hearted because of the tremendous trials she endured in order to serve as a channel for these teachings. "In the words of Montaigne" she said: " I have here made only a nosegay

of culled flowers, and have brought nothing of my own but the string that ties them." Pull the "string" to pieces and cut it up in shreds, if you will. As for the nosegay of FACTS — you will never be able to make away with these. You can only ignore them, and no more."

Today Theosophy has infiltrated into the thought-life of the world, especially the Western world. Great numbers of thinkers have come to drink from the pure, radiant, unadulterated Source of ancient wisdom. Some thinkers have discovered through Theosophy that they had a message to give to the world, some have established pseudo-cults, and others, particularly scientists, have had to remain silent in approving Theosophy for fear of ridicule from their colleagues. Nevertheless, Theosophy succeeded in breaking the molds of mind of nineteenth century dogmatism and is continuing to battle against the materialism of the twentieth century.

Aside from influencing the creative thinkers of today Theosophy has touched many thousands who have absorbed as much as they were capable of assimilating. No one can approach Theosophy, even superficially, without a quickening of the intellectual and spiritual faculties due to the force of vitalized, spiritual energy pouring forth from these teachings. The inner tendrils of man's nature are touched, and his mind and heart open up to new vistas of thinking and feeling which create a greater and vaster conception of living.

In the ordinary sense Theosophy is not a religion, science or philosophy, but it embraces these departments of thinking, perceiving Truth in its invisible as well as visible aspects. It is at the point of the visible and invisible where the majority and the few take separate paths. Of course, religion in the true sense has plumbed the depths of the invisible as evidenced by the reports of

those "men who have walked with God." Science has studied and analyzed the behavior and contents of this physical universe. The scientist in his devotion to Truth is proving to himself step by step the laws governing the universe, benefiting mankind by the results of his labors and discoveries. However, arriving at the door of the Unknown, the scientist is baffled, and finds himself verging towards philosophy and the mystical. Philosophy is able to pull the veil aside a little more than science and enters into intellectual realms. Only a synthesis of the three, religion, science and philosophy equals Truth as three sides of an equilateral triangle.

The entire teachings of the Secret Doctrine are founded on three fundamental propositions. To understand them well is to have light on every problem of life, and to think towards them stretches the imagination and expands the consciousness of man lifting him from the personal and limited to the impersonal, which is a world of freedom compared with the former.

To sketch briefly, the first proposition postulates an Omnipresent, Eternal, Boundless, Immutable Principle which is the Absolute All, the Unity of all Life. This principle is the Causeless Cause, the Rootless Root of all manifestation. It is unthinkable and unspeakable to the limited brain-mind for It is Being and non-Being, Spirit and Matter, positive and negative. Its two aspects are Abstract Space and Absolute Motion. Be-ness rather than Being describes its unconditioned condition.

The second proposition affirms the Eternity of the Universe in toto as a Boundless Plane. Abstract Space is filled with galaxies, universes, solar systems, worlds, gods, men and atoms which are all subject to the law of periodicity. There is a constant ebb and flow of life, flux and reflux from the unmanifested to the manifested planes of existence. Each life energy has its allotted

life-time-cycle which is like the wink of an eye in Eternity.

The third proposition asserts the fundamental identity of all life with the Universal Over-Soul. Every soul is a spark from this eternal flame of Being. Starting its adventure in manifested life in an elemental form this monadic essence progresses through a process of metempsychoses and reincarnations through all the kingdoms of Nature to godhood.

Based upon these three propositions man is weaving his destiny in this Cosmic drama on the vast stage of existence. He is a microcosm within a macrocosm, in other words he is a universe in miniature. Rooted in Divinity man has all the powers and forces of the Universe flowing through him. He has free-will and a choice conditioned by the law of karma to use these forces constructively or destructively. Every thought that man thinks is either a building block in the structure of his being or a weakening of the foundation upon which he stands. Absolute justice rules the Universe and man is held responsible for every thought and act — being a collaborator and co-worker with the creator.

It is only by countless ages of suffering that man reaches the point where he rebels against being tossed about on the ocean of life like a bit of flotsam. He begins to see that every effect has a cause which he can control if he will but use his powers of awareness, discrimination and above all maintain a dogged determination to keep alert to the thought processes of his mind and the natural tendencies of his desires. He discovers that the qualities of Nature are real essences which can be made an integral, active part of his being. By striking a positive attitude of confidence in himself he can attract an array of helpers such as courage, optimism, trust, poise, conviction. Thus man becomes his own creator upon the pathway of self-directed evolution toward the goal of perfection.

Not only does he benefit himself, but he lifts, strengthens and encourages all entities whom he contacts. In this way he becomes of real service to humanity.

What thousands of people today are crying for is proof that altruism exists in the reality of earth-life, that Universal Brotherhood is a fact in Nature, that there is Unity in all life. Theosophy can answer these questions, but it takes Theosophists who can prove that Theosophy can be a living power in their lives. Then humanity will be eager to listen to the doctrines of the Ancient Wisdom. It is a practical and materialistic age and the pull downwards is great; therefore, the pull upwards must be greater. Every fiber in man's nature is tested to the limit. Equanimity and equilibrium must be maintained, but it must not be the equilibrium maintained by a machine. Impersonal Love, Harmony, Compassion as well as Equilibrium is at the Heart of the Universe and is likewise in the heart of man. By so constituting himself as a center of light man can be of real value to humanity giving confidence and reassurance that there is a purpose to life, that man is spiritual and divine in origin, and that the evolutionary pathway of life is carrying man into the realm of the gods. This seeming chaos will eventually resolve into a magnificent conclusion. Such are the teachings of Theosophy.

The Theosophical Forum

THE ENIGMA OF EVOLUTION — *Allan J. Stover*

Those who attempt to trace the lines of plant and animal evolution through the scattered pages of history, find many places where the trail is lost, leaving gaps and missing links which science still hopes will someday be filled.

The average scientist sees but two choices: either there has been a continuous series of types ranging from the most primitive organism to the most complex; or there have been a number of special creations. The latter is of course unthinkable, so the student of evolution is thrown back upon the hypothesis of a continuous end-on line of development which has become a rigid dogma for many.

It is as though a two-dimensional being refused or was unable to recognize the existence of a third dimension, and attempted to explain the universe from this limited point of view alone. This shortcoming becomes apparent when we begin to study the life of the earth as a whole, for it is then that many questions arise. Why, for instance, is it that each new stock of life comes, not as one or two individuals which gradually increase in numbers to become families and genera; but suddenly appears in a flood of new and highly developed families, genera and species as though with a long period of evolution behind them? In fact, there appear to have been many diverging lines whose point of origin is lost in mystery.

Moreover, evolution does not proceed at anything like a uniform pace, but may remain at almost a standstill for immense periods of time. Then, coincident with a cycle affecting the whole earth, changing the climate and bringing about what is known as a geological revolution, there may occur a retardation of the old

types of life and an almost explosive outpouring of new forms in a widespread rush of energy and vitality. This change in style is often so pronounced, it seems as though the world had come under new management.

In his article "Evolution — Is there Intelligence Behind It?" Dr. Robert Broom quoted Henry Fairfield Osborne as saying:

One after another, the original Buffonian, Lamarckian, Darwinian, Weismannian and De Vriesian theories of causation have failed. . . . All we can say at present is that nature does not waste time or effort with chance or fortuity or experiment, but that she proceeds directly and creatively to her marvellous adaptive ends of biomechanism. . . . We are more at a loss than ever to understand the causes of evolution.

— *South African Journal of Science*, 1933, XXX, 8

To this Dr. Broom adds from his own study and observation:

The origin of species and much of evolution appears to be due to some organizing and partly intelligent spiritual agency associated with the animal or plant, which controls its life processes and tends to keep the being more or less adapted to its environment.

But on a larger scale Dr. Broom sees the possibility of spiritual agencies of a far higher type whose duty is the care and evolution of larger groups such as the fishes, birds or mammals.

Compare the foregoing with the statement of H. P. Blavatsky as found in *Transactions of the Blavatsky Lodge*:

But the noumenal germ of the oak exists beyond the plane of the Astral Light; it is only the subjective picture of it that already exists in the Astral Light, and the development of

the oak tree is the result of the developed prototype in the Astral Light, which development proceeds from higher to lower planes, until on the lowest plane it has its last consolidation and development of form.

Gen. Jan Smuts with his understanding of "Holism" and Ecology carried the scientific understanding a step nearer the occult by declaring that the elimination of previous errors in regard to time and space has brought a new conception of "the nature of scientific knowledge and of the relation of mind to matter. And this relation points to a still greater synthesis looming ahead, in which a spiritual view of the universe may not only be justified but may receive firm support from science itself." (Dr. Broom, *op. cit.*, p. 19)

The problems of plant and animal evolution will never be solved until the existence of inner planes of being are recognized and also that the life stream not only comes from the past, but even more important, from spiritual realms of which science knows little.

The more intuitive of the scientists are beginning to see the necessity for a spiritual conception of evolution, for it alone can solve the mysteries of plant and animal life. It is not the bodies (the houses of life) which evolve, but the indwelling spirit or eternal pilgrim itself which passes from plane to plane and from form to form through the ages. The bodies do not change from class to class but remain, so long as there is need for the type of experience offered by that particular form of life.

One great aid in the study of life through the geological ages, is to associate the times of accelerated evolution with corresponding cycles of climatic change and mountain building; for it is only when we view the interworking of all nature that need for the "greater synthesis" suggested by Gen. Smuts becomes apparent.

Another fact which should be better known is that whole chapters of evolutionary history are lost, although this is seldom mentioned in the average textbook.

The transition periods when one type of life gives way to another are far more important than is usually supposed. Such a time marked the merging of the Mesozoic or Age of Reptiles and that of the flowering plants and mammals which followed. The transition time just mentioned has been called "The Time of the Great Dying," since it marked the disappearance of the hosts of Giant Reptiles and the evergreen forests were largely replaced by the broadleaved trees.

Regarding the eras of geologic history G. de Purucker has said:

The main point to remember is that the different great stocks of mineral, vegetable, and animal and human lives follow each other with coincident or coordinate great changes of land and sea, and therefore also of climates.

In other words, the stocks or beings, or monads, co-operate or co-ordinate and thus produce the different and serial and successive patterns of what we today call geological eras, or which the biologist or zoologist and botanist would call the successive waves of plant and animal and human life.

— *Studies in Occult Philosophy*, p. 475

We may learn something of the nature of these times of great change by studying the past, provided we are willing to accept whatever we may find. There are many indications that the world may be approaching a period of this nature again.

In 1893 W. Q. Judge wrote in a letter to the London Lodge:

So the Masters have said this is a transition age, and he

who has ears to hear will hear what has thus been said. We are working for the new cycles and centuries. What we do now in this transition age will be like what the great Dhyan Chohans did in the transition point — the midway point — in evolution at the time when all matter and all types were in a transition and fluid state. They then gave the new impulse for the new types, which resulted later in all the vast varieties of nature. In the mental development we are now at the same point, and what we now do in faith and hope for others and for ourselves will result similarly on the plane to which it is all directed Hence we are not working for some definite organization of the new years to come, but for a change in the Manas and Buddhi of the race. That is why it may seem indefinite, but it is, nevertheless, very defined and very great in scope.

— *Irish Theosophist*, July 15, 1897, p. 186

Nature does not evolve unaided, a prey to chance and environment, for the "Builders" follow the plans laid out by the "Architects" as the stream of life, whether of an individual or a race, descends from spiritual realms through plane after plane to the physical earth where outer forces shape and give final form to the design. The missing links which science is ever seeking will never be found on this plane.

W. Q. Judge continues:

Let me refer you to that part of *The Secret Doctrine*, penned by Master himself, where the midway point of evolution is explained in reference to the ungulate mammals. It should give you a glimpse of what we have to do, and remove all vain longings for a present sojourn with our unseen guides and brothers. — *Op. cit.*

Turning to the reference in Vol. II of *The Secret Doctrine*, p. 186,

we find that

The "midway point" of evolution is that stage where the *astral* prototypes definitely begin to pass into the physical, and thus become subject to the differentiating agencies now operative around us. Physical causation supervenes immediately on the assumption of "coats of skin" — i.e. physiological equipment in general. The forms of Men and mammalia previous to the separation of sexes are woven out of astral matter and possess a structure utterly unlike that of the physical organisms, which eat, drink, digest, etc, etc, etc.

The ungulate mammals are referred to in this connection because there is probably no instance of animal evolution which is better understood or which so clearly illustrates the mysterious midway point beyond which fossil evidence ceases in that line of evolution.

The ungulate or hoofed animals are divided into two sections, the solid hoofed having an odd number of toes and the split hoofed in which the number of toes are even. These two types appear as two lines of descent diverging from a common ancestor, which has never been found.

This "midway point of evolution" where "all matter and types are in a transition and fluid state," has not been penetrated by science, although a few of the more intuitive begin to see its necessity.

The time of rapid physical evolution lies in the past when the life-waves were rushing downward to their fullest expression on the material plane, during the midpoint of this fourth round. Dr. Broom doubts if there has been any true evolution since the Eocene period or if new orders of plant or animal life can appear

in the future.

At present we are entering the upward arc of our evolutionary course, and as stated by W. Q. Judge in his letter to the London Lodge the Masters are working "for a change in the Manas and Buddhi of the race." The midpoint of our Fifth Root-Race is approaching and the way must be prepared. Similarly all midpoints are important and follow the same pattern on a lesser scale, each offering special opportunities to those who wish to serve humanity and help in the great work.

The Theosophical Forum

ENVIRONMENT — *Hadji Erinn (W. Q. Judge)*

To the Western mind the doctrines of Karma and Reincarnation contain difficulties which while they seem imaginary to the Eastern student, are nevertheless for the Western man as real as any of the other numerous obstructions in the path of salvation. All difficulties are more or less imaginary, for the whole world and all its entanglements are said to be an illusion resulting from the notion of a separate I. But while we exist here in matter, and so long as there is a manifested universe, these illusions are real to that man who has not risen above them to the knowledge that they are but the masks behind which the reality is hidden.

For nearly twenty centuries the Western nations have been building up the notion of a separate I — of *meum* and *tuum* — and it is hard for them to accept any system which goes against those notions.

As they progress in what is called material civilization with all its dazzling allurements and aids to luxury, their delusion is further increased because they appraise the value of their doctrine by the results which seem to flow from it, until at last they push so far what they call the reign of law, that it becomes a reign of terror. All duty to their fellows is excluded from it in practice, although the beautiful doctrines of Jesus are preached to the people daily by preachers who are paid to preach but not to enforce, and who cannot insist upon the practice which should logically follow the theory because the consequences would be a loss of position and livelihood.

So when out of such a nation rises a mind that asks for help to find again the path that was lost, he is unconsciously much affected by the education not only of himself but also of his

nation through all these centuries. He has inherited tendencies that are hard to be overcome. He battles with phantasms, real for him but mere dreams for the student who has been brought up under other influences.

When, therefore, he is told to rise above the body, to conquer it, to subdue his passions, his vanity, anger and ambition, he asks, "what if borne down by this environment, which I was involuntarily born into, I shall fail." Then when told that he must fight or die in the struggle, he may reply that the doctrine of Karma is cold and cruel because it holds him responsible for the consequences which appear to be the result of that unsought environment. It then becomes with him a question whether to fight and die, or to swim on with the current careless as to its conclusion but happy if perhaps it shall carry him into smooth water whose shores are elysian.

Or perhaps he is a student of occultism whose ambition has been fired by the prospect of adeptship, of attaining powers over nature, or what not.

Beginning the struggle he presently finds himself beset with difficulties which, not long after, he is convinced are solely the result of his environment. In his heart he says that Karma has unkindly put him where he must constantly work for a living for himself and a family: or he has a life long partner whose attitude is such that he is sure were he away from her he could progress: until at last he calls upon heaven to interpose and change the surroundings so opposed to his perfecting himself.

This man has indeed erred worse than the first. He has wrongly supposed that his environment was a thing to be hated and spurned away. Without distinctly so saying to himself, he has nursed within the recesses of his being the idea that he like Buddha could in this one life triumph over all the implacable

forces and powers that bar the way to Nirvana. We should remember that the Buddha does not come every day but is the efflorescence of ages, who when the time is ripe surely appears in one place and in one body, not to work *for his own* advancement but for the *salvation of the world*.

What then of environment and what of its power over us?

Is environment Karma or is it Reincarnation? THE LAW is Karma, reincarnation is only an incident. It is one of the means which The Law uses to bring us at last to the true light. The wheel of rebirths is turned over and over again by us in obedience to this law, so that we may at last come to place our entire reliance upon Karma. Nor is our environment Karma itself, for Karma is the subtle power which works in that environment.

There is nothing but the SELF — using the word Max Muller does to designate the Supreme Soul — and its environment. The Aryans for the latter use the word *Kosams* or sheaths. So that there is only this Self and the various sheaths by which it is clothed, beginning with the most intangible and coming down to the body, while outside of that and common to all is what is commonly known as environment whereas the word should be held to include all that is not The Self.

How unphilosophical therefore it is to quarrel with our surroundings, and to desire to escape them! We only escape one kind to immediately fall into another. And even did we come into the society of the wisest devotees we would still carry the environment of the Self in our own bodies, which will always be our enemy so long as we do not know what it is in all its smallest details. Coming down then to the particular person, it is plain that that part of the environment which consists in the circumstances of life and personal surroundings is only an incident, and that the real environment to be understood and cared about is that in

which Karma itself inheres in us.

Thus we see that it is a mistake to say — as we often hear it said — "If he only had a fair chance; if his surroundings were more favorable he would do better," since he really *could not* be in any other circumstances at that time, for if he were it would not be he but some one else. It must be necessary for him to pass through those identical trials and disadvantages to perfect the Self; and it is only because we see but an infinitesimal part of the long series that any apparent confusion or difficulty arises. So our strife will be, not to escape from anything, but to realize that these *Kosams*, or sheaths, are an integral portion of ourselves, which we must fully understand before we can change the abhorred surroundings. This is done by acknowledging the unity of spirit, by knowing that everything, good and bad alike, is the Supreme. We then come into harmony with the Supreme Soul, with the whole universe, and no environment is detrimental.

The very first step is to rise from considering the mere outside delusive environment, knowing it to be the result of past lives, the fruition of Karma done, and say with Uddalaka in speaking to his son:

"All this Universe has the Deity for its life. That Deity is the Truth. He is the Universal soul. He Thou art, O Svetaketu!"

— *The Path*, February 1887

The Theosophical Forum

THE CLOSING CYCLE — *William Q. Judge*

In the November number the "expiring Cycle" is referred to by Mr. Sinnett, and members are rightly warned not to be so absurd (though that is my word) as to think that after 1897 "some mysterious extinguisher will descend upon us."

Who is the person who gave out the concrete statement that 1897 was to be the close of a cycle when something would happen? It was H. P. Blavatsky. There is not the slightest doubt about it that she did say so, nor that she fully explained it to several persons. Nor is there any doubt at all that she said, as had been so long said from the year 1875, that 1897 would witness the shutting of a door. What door? Door to what? What was or is the end? Is the T. S. to end and close all the books?

Nothing is more plain than that H. P. Blavatsky said, on the direct authority of the Masters, that in the last twenty-five years of each century an effort is made by the Lodge and its agents with the West, and that it ceases in its direct and public form and influence with the twenty-fifth year. Those who believe her will believe this; those who think they know more about it than she did will invent other ideas suited to their fancies.

She explained, as will all those who are taught (as are many) by the same Masters, that were the public effort to go on any longer than that, a reaction would set in very similar to indigestion. Time must be given for assimilation, or the "dark shadow which follows all innovations" would crush the soul of man. The great public, the mass, must have time and also material. Time is ever. The matter has been furnished by the Masters in the work done by H. P. Blavatsky in her books, and what has grown out of those. She has said, the Masters have said, and I again assert it for the

benefit of those who have any faith in me, that the Masters have told me that they helped her write the *Secret Doctrine* so that the future seventy-five and more years should have some material to work on, and that in the coming years that book and its theories would be widely studied. The material given has then to be worked over, to be assimilated for the welfare of all. No extinguisher will fall therefore on us. The T. S., as a whole, will not have the incessant care of the Masters in every part, but must grow up to maturity on what it has with the help to come from those few who are "chosen." H. P. Blavatsky has clearly pointed out in the *Key*, in her conclusion, that the plan is to keep the T. S. alive as an active, free, unsectarian body during all the time of waiting for the next great messenger, who will be herself beyond question. Thereby will be furnished the well-made tool with which to work again in grander scale, and without the fearful opposition she had without and within when she began this time. And in all this time of waiting the Master, "that great Initiate, whose single will upholds the entire movement," will have his mighty hand spread out wide behind the Society.

Up to 1897 the door is open to anyone who has the courage, the force, and the virtue to TRY, so that he can go in and make a communication with the Lodge which shall not be broken at all when the cycle ends. But at the striking of the hour the door will shut, and not all your pleadings and cryings will open it to you. Those who have made the connection will have their own door open, but the public general door will be closed. That is the true relation of the "extinguisher" as given by H. P. Blavatsky and the Master. It seems very easy to understand.

"Many are called but few are chosen," because they would not allow it. The unchosen are those who have worked for themselves alone; those who have sought for knowledge for themselves without a care about the rest; those who have had the time, the

money, and the ability to give good help to Masters' cause, long ago defined by them to be work for mankind and not for self, but have not used it thus. And sadly, too, some of the unmarked and unchosen are those who walked a long distance to the threshold, but stopped too long to hunt for the failings and the sins they were sure some brother pilgrim had and then they went back farther and farther, building walls behind them as they went. They were called and almost chosen; the first faint lines of their names were beginning to develop in the book of this century; but as they retreated, thinking indeed, they were inside the door, the lines faded out, and other names flashed into view. Those other names are those belonging to humble persons here and there whom these proud aristocrats of occultism thought unworthy of a moment's notice. . . .

We have entered on the dim beginning of a new era already. It is the era of Western Occultism and of special and definite treatment and exposition of theories hitherto generally considered. We have to do as Buddha told his disciples: preach, promulgate, expound, illustrate, and make clear in detail all the great things we have learned. That is our work, and not the bringing out of surprising things about clairvoyance and other astral matters, nor the blinding of the eye of science by discoveries impossible for them but easy for the occultist. The Master's plan has not altered. He gave it out long ago. It is to make the world at large better, to prepare a right soil for the growing out of the powers of the soul, which are dangerous if they spring up in our present selfish soil. It is not the Black Lodge that tries to keep back psychic development; it is the White Lodge. The Black would fain have all the psychic powers full flower now, because in our wicked, mean, hypocritical, and money-getting people they would soon wreck the race. This idea may seem strange, but for those who will believe my unsupported word I say it is the

Master's saying.

The Irish Theosophist, January 15, 1895

The Theosophical Forum

QUETZALCOATL — *Allan J. Stover*

Next to the sun itself, the most widespread concept of religious thought in Pre-Columbian America was that of the Plumed Serpent. It was to Ancient America what the cross was to Christian Europe: the focal point of human thought and conduct, an epitome of religious aspiration.

Everywhere in America, like the flotsam and jetsam left by a retreating tide, there exists the evidence of a culture which once spread its influence throughout Central America, Mexico, and far into both North and South America.

In *The Mahatma Letters* (p. 149) we find the following statement in regard to this period:

What do you know of America, for instance, before the invasion of that country by the Spaniards? Less than two centuries prior to the arrival of Cortez there was as great a "rush" towards progress among the *sub-races* of Peru and Mexico as there is now in Europe and the U. S. A. Their sub-race ended in nearly total annihilation through causes generated by itself; so will yours at the end of its cycle. We may speak only of the "stagnant conditions" into which, following the law of development, growth, maturity and decline every race and sub-race falls into during its transition periods.

Here lies the key to an understanding of history, not only of men, but of nations and races as well; for all are subject to the same cyclic law of periodic expansion and contraction. It explains the successive expansion of Greece, Rome and Europe to a position of world domination, and why each, after its period of world

leadership, retires to rest and comparative inactivity.

Yet this period of rest also passes, and already the ancient peoples of America, invigorated by a new impulse, are looking forward to a renaissance as a new racelet approaches rebirth.

What was the spiritual impulse, for high impulse there certainly was, which illumined this ancient civilization before it began its downward rush?

Many think the legends of Quetzalcoatl refer to the founder of a great culture. Others doubt if he actually existed and regard him as a mythical Sun-God who was reported to have left his solar abode to dwell among men for the purpose of founding a just civilization.

There is more here than mere myth, for once research passes beyond the debris left by the rush of the downward cycle — the ambitious priestcraft, the human sacrifice, the continual petty wars and the worship of dark elemental forces — we sense the illumination of the Ancient Wisdom and see unmistakable signs of a great Teacher.

The word Quetzalcoatl seems to have been the name of a historical personage who later became deified and worshiped as his teachings were either forgotten or rejected. But Quetzalcoatl was also a title held by a series of initiated Teachers, and held the same significance as the Naga of India or the Dragon of Wisdom of China.

While there are a multitude of legends obscuring rather than clarifying the historical Quetzalcoatl, most versions agree that a wise teacher came from the East, from the mystic region of Tlapallan landed on the coast, made his way inland to the highlands of Tule and later to Chululu, where he taught for twenty years. At the close of his life he is said to have instructed

his four most faithful followers to rule the land until his return. Then he is believed to have departed for the East on a raft of serpents.

The four disciples debated long and at last decided that the best way to preserve the teachings was to incorporate them in the government and social customs of the country, and especially in the calendar system.

The principal teachings ascribed to him were those of all genuine teachers — to live a virtuous life, to offer no sacrifices save the symbolic ones of fruits and flowers, and to engage in no wars or violence of any kind. To him also are credited the introduction of ideographic writing, metal-working, agriculture, and the intricate Central American calendar. His influence was very great. In Yucatan he was known as Kukulcan; among the Toltecs and Aztecs as Quetzalcoatl. Among the Zuni of New Mexico, Awana, the feathered serpent, still figures in an important ceremony. Quetzalcoatl is usually described as a white man with noble features, long black hair, and a full beard, in striking contrast to the Toltecs who were nearly beardless.

To attempt to record the multitudinous and often conflicting myths and legends gathered about this mysterious figure would only result in added confusion. There has been too much speculation about the person of the Teacher and too little about the message and meaning of the myth. There is, however, an understanding of the inner significance of the legend still preserved among the descendants of the Maya peoples of Central America. The symbology of this tradition is that of the bird and serpent, the higher and the lower, and is part of the Secret Doctrine of antiquity.

High in the cloud forest of Guatemala there lives what is considered by many the most beautiful bird in the world. The

Quetzal, which is about the size of a pigeon, possesses a tail-like appendage three feet in length. The plumage is principally a golden green with a metallic lustre flashing an iridescent blue in certain lights. The underparts are vivid red, ranging from scarlet to crimson. The feathers about the head form a flat, circular crest, giving the head the appearance of a golden disc. In striking contrast to the rest of the plumage are the black and white wing feathers. The bird has a poise and dignity more commanding than any eagle. The globular nest, built only in the highest trees has two openings, one for entrance and one for exit.

The natives (1) to whom the Quetzal is a sacred symbol call it the Solar Bird, (2) the Dweller in the Great Spaces. To them it is the symbol of the Solar Spirit which is in every one and whose home is the Sun, but which comes winging its way to earth to abide for a time. The Quetzal was the *Nehual*, or guardian spirit, of the Quiche emperor and therefore a symbol of the Supreme Deity. The High Priests in their trailing ceremonial robes copied the color and form of the Quetzal's plumage.

The feathers or plumes of the Quetzal were always representative of the Great Ones, the Illuminated, the Ones born of Fire and Light. In Quiche mythology the Supreme Deity was *Gukumatz*, a name derived from *Gug*, the call of the Quetzal, and *Ku*, descriptive of its colorful plumage.

In those days, position in life was dependent upon the degree of initiation into the mysteries of the time, and to wear the plumes of the Quetzal identified the wearer as a "plumed serpent." In other words, the serpent of the physical man was united to the spiritual self, represented by the solar bird, the Quetzal, dweller of the spaces of Space. In other countries the plumes of a bird were replaced by the solar halo about the head, or by rays of light issuing from the head. Such a one was a Dragon of Wisdom, a

Quetzalcoatl or Plumed Serpent, a Son of the Sun, an Initiate.

FOOTNOTES:

1. I am indebted to Dr. C. F. Secord of Guatemala for much of the following. ([return to text](#))

2. From *quetzal* — a sacred bird living in the Cloud Forests of Guatemala, and *coatl* — a serpent symbol corresponding to the Earth-dragon of China. The combination signified an initiate, one illumined with the solar splendor, or in Quiche imagery — a plumed serpent. ([return to text](#))

THE GODS TAUGHT US TO LAUGH — *Ethel G. Bailey*

I can remember so well an afternoon in the Temple at Point Loma, California, many years ago, when Dr. de Purucker was to speak. The room was crowded with an eager, expectant audience. He walked with his deliberate stride to the rostrum and then, without saying a word, just stood and looked at us. The entire audience held its breath. The waves on the beach below the cliffs plainly heard, at the Temple, must have come and gone more than once and still not a word. Then suddenly G. de P. smiled. At first gently, then quite broadly. Immediately, like a sudden shaft of sunshine through a dark room, an answering smile swept the audience and ended at the outer edges in a little ripple of laughter.

"You looked so awfully solemn," he remarked, half laughing. "I wanted to see if you *could* smile."

It is interesting to realize that the human is the only animal that laughs. No doubt it is because he is so very much more than animal. While some dog-lovers claim that their pets smile, and hyenas and loons are said to laugh, that is really stretching the word. True laughter, that is, a real sense of humor, is not found in the scale of evolution below the human. It arises from a sense of the grotesque or the startling and surprising, or from a sense of the incongruity of ideas.

A baby laughs when you surprise it with, "Peek-a-boo!" A sage chuckles at some metaphysical incongruity. It is the gift of a human to be able to compare, and comparing, he judges. He alone can make for himself a ladder into abstract ideas and into impersonality. When the Manasaputras lighted the mind of man in the Third Race, I believe there was one jolly old god who used a

candle of *Nonsense*, a taper of pure *Fun* for the work. It was one of the best gifts made to mankind.

Dr. Wm. Crawley of Stanford University said recently that the "test of Education is maturity," and "not so much our words, as the things we *laugh at* show what we are."

It seems to me that we cannot lay much claim to maturity of mind till we have learned, in all sincerity, to laugh at ourselves. We know a trick or two of modern living that would make the Australian bush-man open his eyes, but compared to the Elder Brothers of mankind we are ignorant toddlers. And as for our magpie collection of trinkets, they might tolerantly remind us that the ancient Greeks had the right idea when they said the "fewer our wants, the more nearly we resemble the gods."

We might extend somewhat the significance of laughter, this gift of the gods. There is a deeper laughter than that of the lips, which latter too often is thoughtless or cruel, or an expression of mere animal spirits — Kipling's phrase for it was "hob-nailed mirth." But this other kind of laughter most often is silent. It is the laughter of the heart — laughter that may take the form of lovely music or simply rise like a beautiful cloud of harmony and serenity, wrapping the earth in a garment of glory. There is a music of the spheres of which all the poets sing, all the sages and seers speak, which indeed all the modern scientists expound as a fact in nature. Music of the spheres that is no sentimental vapor of the imagination but a scientifically established fact.

Let us go a step farther into the realm of intuitive perception. May not this music of the spheres be the compassionate laughter of the gods? For surely they, seeing that all laws, all processes, always and forever go forward according to the inescapable and compassionate and magnificent plan, cannot help but sing. And beneath the song springs up a wonderful cosmic laughter, so

much deeper and richer than our own that we can only wonder what it may be.

It is interesting to note what an important place even the joke has begun to hold in modern education. General Barrows, ex-president of the University of California, used to begin every public address with a humorous story to get a laugh. It relaxed the audience and put it in sympathy with the speaker more quickly than any other approach. After nearly half a century I am amused to realize that I can remember some of his jokes, although their context is now completely forgotten.

Angelo Patri was talking one day on Palomar to a group of teachers, speaking quite informally, and some one asked him what he thought was the most common failing among teachers as a class. He thought a moment, smiled, then let us have it: "You don't laugh enough," he said, "you are always standing on tiptoe. It won't make you any taller, you'll miss a lot of fun, and you'll just have strained arches."

David Grayson tells how he met a country preacher in the small farming community where he lived. He was shocked at the man's sad and care-worn face, there was something hopeless about his whole manner and appearance. Before Grayson could stop himself he blurted out the thought that had been thrust upon him. Laying his hand sympathetically on the preacher's arm and looking earnestly into his face, he asked, "Is *God dead*?"

The preacher recoiled. "Why do you ask that?" "Because it seemed to me that nothing else in the world could make you look so sad."

"Did I really give you that impression?" asked the minister. He sighed deeply, and after a few moments said, "Then it is just as I feared. As a preacher I have failed."

Then follows a little sermon preached not by the minister this

time, but by David, who gets him to laughing and shows him that even Care has another face. It too has a countenance of joy which is far more healing and acceptable to the world.

Was it Stevenson who said that a difference of taste in jokes can break up a home? That may be an exaggeration of a point but it serves to illustrate how fundamental in character, how closely interwoven in temperament, a sense of the humorous can be.

A practical joke with a custard pie for the main prop, and a banana peel and a fat man thrown in for good measure, might convulse a certain type of person and leave another cold. And a subtle play upon words or an absurd double meaning might amuse a philosopher for years, while the practical joker would marvel at the ease with which the thinker was entertained.

We are a little hurt and out of sympathy with one who doesn't see eye to eye with us about a point of humor. It is almost as bad as to differ about politics or religion, or modern art or music. We feel that the other person is almost deliberately "playing dumb." It is hard to forgive him.

There is a story about Queen Victoria that illustrates an interesting point. It seems that after the death of her husband, to whom she was very deeply devoted, she was sunk in a deep melancholy. No one ever saw her smile. The weight of the duties of the State fell heavily upon her and no one knew how to help. Her friends tried in vain to comfort and cheer her. The fine old bishops of the Church of England offered the consolations of religion without avail. Then one day the servants outside the door of her rooms heard her laughing. Amazed and delighted, they contrived to send in one of her maids under some pretext or other to discover what had worked such a miracle in their Queen.

"A book," exclaimed Victoria, holding up a volume, "such a lively,

amusing book. So gay, so absurd! It has done me a world of good. I wish I had one like this to read every day."

The Queen's wish was law, of course, and an order was immediately sent for all the books by the same author. They arrived shortly and were examined with a lively interest, but her face fell quickly. "There has been some mistake," she said. "These books are all concerned with mathematics. They are not even written by the same man at all. These are the works of a C. L. Dodgson and my funny little book, *The Adventures of Alice in Wonderland*, is written by Lewis Carroll."

Lewis Carroll — the pseudonym taken by C. L. Dodgson, the professor of mathematics when he wrote, perhaps in shamefaced fun, the gay little book to please a small girl, had succeeded in lifting a queen from melancholy. His serious books are all but forgotten, but *The Adventures of Alice* has been a best-seller for generations.

When Abraham Lincoln was President he used sometimes to disappear, to the great annoyance of his secretaries, during the dark days of the Civil War when the burdens of the Commander-in-chief were almost too heavy for any mortal to bear. Although it often was difficult to locate Lincoln, his best friends knew where to search. He was most apt to be where common men were telling stories, himself most often the story-teller. He said it rested him more than sleep — of which he had practically none.

When Cicero describes the Eleusinian mysteries, one of his chief recommendations for them is that "those initiated attain the art of living joyfully and of dying with a fairer hope."

There is a touching picture of the poet Milton: old, blind, and disillusioned, sitting in the perpetual night of those to whom the sun never rises. But past joy and laughter have the very special

gift of returning with remembrance. I cannot but believe that Milton, sitting imprisoned in his blindness, still smiled as he recollected the joys of his youth. His poem "L'Allegro," so rich in the vital urge of living, carries a warm handclasp of hearty good-fellowship and cheer to this day. It was a gay soul who wrote charmingly of:

Sport, that wrincled Care derides,
And Laughter, holding both his sides.

There is a great army of those who failed and yet were not defeated. Soldiers who lost the battle, sportsmen who smiled and shook hands with the victor, sages who died scorned by their contemporaries but who retained their equanimity. All those who never, no matter what happened to them, ever gave up! How much of their magnificent spirit is due to that wisdom of the Higher Self which allows them to see all round any situation. To even extract a certain grim humor from the very bitterness of their experiences; to know intuitively, as Theosophy teaches, that there is always another chance. To that end let us keep ever alert.

Ina Coolbrith was a California poet who wrote about half a century ago. Her book is probably out of print now. I don't believe she called herself a theosophist; poets seldom tabulate themselves at all, for they only know truth as it enters their hearts. But she speaks as eloquently as anyone I know of the consciousness in Nature. She tells us that life is indeed joy to one who sees, and that Nature is a comforting, smiling, helpful mother who tries to guide her children toward happiness and understanding. We need only to look with the inner eye, to listen with the fine inner ear, to understand and indeed to joy.

Oh, Earth,
Thou hast not any wind that blows
That is not music.

Every weed of thine,
Pressed rightly, flows with aromatic wine.
And every little humble, hedge-row flower that blooms,
And every little, brown bird that doth sing,
A message bears to every living thing;
Although it bears the message unawares.
A spirit breathes amid the grass,
Vague outlines of the everlasting thought,
Are in the melting shadows as they pass.
The thrill of an Eternal Presence fills
The fringes of the sunset and the hills.

PURPOSE AND DESIGN (1) — *Leroy V. Alwin*

What is the object and purpose of living? What is the infinite design back of life? For assuredly there is one; for it is faintly reflected in the life of every normal human being. No living thing can move without purpose. This fact of observation in our daily lives has become so commonplace, has become so taken for granted, that we fail to study it to recognize its true import. There is purpose in every life, self-directed within the limits of its understanding. No man, woman, or child will raise a hand without some object in view. This fact does not limit itself to human beings. As forms of life taper back and downward from the estate of self-will as found in human beings they become more supple and yielding to the general purpose of the infinite. We can, therefore, truly say that the plants and animals, within their range of life, are more obedient to the "Word of God" than we human beings are. They do not practise the abuses that we do. They do not commit the crimes against their species; nor engage in epidemics of wholesale murder.

The difference between man and the life beneath him is that man has advanced, through growth, into the estate of self-consciousness. He has become aware of himself and his effects in relation to others. He has become an agent of free will. Now, the advancement of life to this point is all a matter of purposeful design. There is nothing hit or miss, or chance, about it. The development of an intelligent, self-conscious, and responsible human being is a vitally important and purposeful creation. Even as men and women are impelled to prepare themselves for a useful function in human society, so is humanity, as a whole, impregnated and impelled by the cosmic will of the Deity eventually to grow to the fulfillment of a cosmic purpose.

Conceived and exercised at first in the petty and personal, man's self-conscious will and responsibility grow and expand out of the selfish and purely personal, expand in sympathy and understanding to comprehend the welfare of mankind, as was exemplified by the Master Jesus. Through spiritual aids and self-directed effort, man advances in will and knowledge self-consciously to witness the unseen worlds and the unseen truths that lie in the bosom of the infinite. Thus man self-consciously advances through wilful growth to meet his God, and, in the meeting, to comprehend and to do His will. Man can understand his reason for being only through growth to eventually make himself one with his divinity.

It should be very plain that, if man is ever to attain Heaven and qualify there as a useful citizen, he will have to grow into it. No clergyman, of whatever degree or persuasion, is spiritually authorized to tell you otherwise. To observe that a child must grow to manhood before it can attain its physical majority, and then to persist in the premise that men and women in their spiritual infancy need not grow to their spiritual majority to enter self-consciously the world of God is the rankest blasphemy and paralyzes the purposes at the basis of being. Take self-willed growth out of life and the universe and all within it will cease to exist. Growth, physical, mental, spiritual, and divine, is the purpose of living. He who would stem or subvert that spiritual force faces annihilation.

Of one thing we can be as certain as we are of the rising sun, and that is that this life of ours is governed by the law of cause and effect. "As you sow so shall you reap." The Law of Consequences measures out, on accurate and exacting scale, every degree of growth or failure in every unfolding principle in the complex nature of man. This limits and conditions man in any life. No form of self-deception to evade responsibility, or to justify self-

indulgence and the practice of evil, will change that fact one iota. No force on earth or in Heaven can intercede for man and save him from the consequences of his ignorance and his weakness. God would not, because it would deprive man of the experience by which he learns and grows. Man must be taught to know and to become master of himself. Thus he rises to the dignity and grandeur of his true calling and executes the Will of God. And in all this grandiose program, death is but a restful interlude, but no escape.

THE YOGA OF SELF-DISCIPLINE (1) — *William Q. Judge*

The *Bhagavad-Gita* is a personal book. It is for each man. No one need feel any hesitation now, for we are face to face with ourselves. The weak man, or he who does not care for Truth no matter where it leads, had better shut the book now.

— William Brehon

We assume, quite justifiably I think, that the *Bhagavad Gita* sets forth Aryan philosophy. The Aryan is white and noble in contradistinction to the black and ignoble. This book then, if Aryan, must give us a noble system of philosophy and ethics, useful not only for speculative minds but also in daily life. Whoever was the author, represented by the mythical person Vyasa, he — or they — compressed into a short conversation — that is, short for Indians — the essence of religion and philosophy.

The singular manner in which this conversation or lecturing or teaching came about should be first noted. It is after the very beginning of a battle, for the arrows had already begun to fly from side to side. A rain of arrows would first be thrown in before the hand to hand encounter began. Arjuna and Krishna are in Arjuna's great chariot. And there, between the two armies Arjuna asks for advice and receives it through eighteen chapters. All of this has significance.

Arjuna is man or the soul struggling to the light and while Krishna was one of the Avatars, or manifest atoms of God among men, he is also the Higher Self. Arjuna as man in this world of sense and matter is of necessity either always in a battle or about to begin one, and is also ever in need of advice. This he can get alone, in a valuable way, from his Higher Self. So the singular

manner of placing the conversation where it is and of beginning it as it begins is the only way it ought to [be] done.

Arjuna is in the life his Karma has produced, and he must fight out the battle he himself invited. Arjuna's object was to regain a kingdom, and so each one of us may know that our fight is for a kingdom gainable only by individual effort and not by any one's favor.

From the remarks by Arjuna to Krishna we can perceive that the kingdom he — like ourselves — wishes to regain is the one we had in some former age upon this planet or upon some far more ancient one. He has too much insight, too much evident soul-power and wisdom to be an Ego who only for the first, or second, or third time had visited this earth. We likewise are not new. We have been here so many times that we ought to be beginning to learn. And we have not only been here, but, beyond doubt those of us who are inwardly and outwardly engaged in the theosophical movement for the good of others, have been in a similar movement before this life.

This being so, and there being yet many more lives to come, what is the reason we should in any way be downcast? The first chapter of the Book is really not only The Survey of the Armies but also The Despondency of the principal person — Arjuna. He grows downcast after looking over all the regiments and seeing that he had, on both sides, friends, teachers, relatives, as well as enemies. He falters because want of knowledge prevents him from seeing that the conflict and many apparent deaths are inevitable. And Krishna then proceeds to give him the true philosophy of man and the universe so that he can either fight or refrain from fighting, whichever he sees to be at any time the best.

Krishna leads him gradually. He plays upon his pride by telling

him that if he backs out all men will say he is the most ignoble of all cowards; then he plays upon his hindu religious teaching telling him that a warrior must obey the rules of his caste, and fight. He does not plunge at once into high metaphysical speculation or show him occult wonders. And herein it seems to me is a good lesson for all working theosophists. Too many of us when trying to spread forth the theosophical teachings drag the poor Arjunas we have caught right into obscure realms where theosophists themselves know nothing at all but terminology. Krishna's wise, practical and simple method should be followed, and much better results will be obtained. Our object is to spread theosophical philosophy as widely and quickly as possible. This cannot be done if we indulge in words and phrases far removed from daily life. What good does it do to talk about the Absolute, Parabrahm and Alaya, and to say *manas* when we mean mind, and *kama* when desire and passion are the english equivalents? It only puzzles the new enquirer who feels that he has to learn a new language before he will be able to do anything with theosophy. It is a good deal easier to show that the new terms can be learned afterwards.

The first chapter having introduced the practical question of life, the second is equally practical, for it directs attention at the outset to the larger and eternal life of which each incarnation is a day or a moment. For Krishna says:

I myself never was not, nor them, nor all the princes of the earth, nor shall we ever hereafter cease to be. As the Lord of this mortal frame experienceth therein infancy, youth and old age, so in future incarnations will it meet the same One who is confirmed in this belief is not disturbed by anything that may come to pass.

Thus continued *practical* existence as opposed to continued

theoretical and so-called heavenly existence and as opposed to materialistic annihilation, is declared at once. This is true immortality. The Christian Bible has no word in the original teaching immortality such as this; and the preaching of the priests does not lean to an unselfish view of continued existence. And it is very certain that if one is fully confirmed in the knowledge of eternal life through reincarnation he is quite unlikely to be disturbed by things that disturb other people. So at the very outside [outset] the teachings of Krishna open up a tremendous vista of life, and confer a calmness most necessary for us in the fight.

The generality of men have many and widely branching objects for mental devotion. It is a devotion to sense, or to self, or to wrong belief or to improper practice. But the follower of the *Bhagavad Gita* gradually comes to see that the true devotion is that which has but one object through all changes of scene, of thought, or of companion-is immovable, whereas the objects taken up by the unwise are movable and transitory.

Equal mindedness and skill in the right performance of duty are the true rules — this is Yoga. This right performance of duty means the mental state, for the mere performance of an act has no moral quality in it, since even a machine may be made to perform acts done usually by men. The moral quality resides in the person inside and in his presence or absence. If a human body, asleep or devoid of a soul, raised its hand and took the life of another, that would not be a crime. And oppositely the performance of a good [act] is no virtue unless the person within is in the right attitude of mind. Many an apparently good act is done from selfish, hypocritical, crafty or other wrong motives. These are only outwardly good. So we must attain to a proper state of mind, or mental devotion, in order to know how to skilfully perform our actions without doing so for the sake of the

result; doing them because they ought to be done, because they are our duties.

Krishna warns Arjuna also against inactivity from a false view of the philosophy. This warning was necessary then, is so still. On hearing this teaching for the first time many say that it teaches inaction, sitting still, silence. And in India great numbers, taking that view, retired from life and its duties, going into the caves and jungles away from men. Krishna says:

Firmly persisting in Yoga perform thy duty.

To endeavor to follow these rules empirically, without understanding the philosophy and without making the fundamental doctrines a part of one's self, will lead to nothing but disgust and failure. Hence the philosophy must be understood. It is the philosophy of Oneness or Unity. The Supreme Self is One and includes all apparent others. We delude ourselves with the idea that we are separate. We must admit that we and every other person are the Self. From this we will begin to see that we may cease to be the actor although outwardly doing every act that is right. We cease to be the actor when we know that we can withdraw ourself from the act. Attachment to the act arises from a self interest in the result that is to follow. It is possible for us to do these things without that self interest, and if we are trying to follow the rule of doing our actions because they ought to be done we will at last do only that which is right to be done.

A great deal of the unhappiness of life comes from having a number of interests in results which do not come out as expected. We find people pretending to believe in Providence and to rely on the Almighty but who are continually laying down plans for those powers to follow. They are not followed, and as the poor mortal fixed his mind and heart on the result unhappiness follows.

But there is a greater unhappiness and misery caused by acting as is the usual way for the sake of results. It is this that causes rebirth over and over again unendingly. It is by this that the great humdrum mass of men and women are whirled around the wheel of rebirth for [ages], always suffering because they do not know what is happening to them, and only by an accident altering the poor character of their births.

The mind is the actor, the person who is attached. When it is deluded it is not able to throw off the subtle chains that bind it to reincarnation. Having spent an incarnation in looking after results it is full of earthly impressions, and has made the outer skandhas very powerful. So when its stay in Devachan is at its end the old images, impressions and the powerful skandhas drag it back to another life. At the time of bodily death the mind is temporarily almost altered into the image of the dominant thought of life, and so is beside itself or insane by comparison with the sage and with what ought to be its proper state. Being so it is impossible for it either to prevent rebirth or to select and take up an incarnation with a definite end and work in the world in view.

The bearing of the teaching upon ethics is in my opinion very important. It gives a vital system as opposed to a mechanical one. We are to do our duty with the thought that we are acting for and as the Supreme Being because that being acts only by and through the creatures. If this be our real rule it would in time be impossible for us to do wrong because constantly thinking thus we grow careful as to what acts we commit and are always clearing up our view of duty as we proceed.

On the other hand a mechanical code of ethics leads into error. It is convenient because any fixed code is more convenient to follow than the application of broad principles in a brotherly spirit.

Mechanical codes are conventional and for that reason they lead to hypocrisy. They have led people to mistake etiquette for morality. They cause the follower of them to unrighteously judge his neighbor who does not come up to his conventional code which is part of his ethics. It was a mechanical system of ethics that permitted and encouraged the Inquisition, and similar ethics in our later days permit men professing the highest altruism to persecute their brothers in the same way in intention. If the law and liberty of the times were not opposed they would slay and torture too.

But I have only time to touch lightly upon some of the many valuable points found in the first two chapters. If but those two chapters were preserved and the others lost, we would still have enough.

The remaining chapters deal with universal cosmical truths as well as with philosophy and ethics. They all enforce the great doctrine of unity or non-separateness. In going over them we find such references as require us to know and believe in the Wisdom Religion. The rise and destruction of races is given, the obscurities and darkness between evolutionary periods, the universal great destruction and the minor ones are there. Through all these the Self sits calmly looking on as the spectator, the witness, the receptacle.

Where Arjuna the Archer is, he who was taught by Krishna, with him is glory, honor, fortune and success. He who knows Arjuna knows himself.

1. From a manuscript entitled "Aryan Philosophy, etc.," in the handwriting of William Q. Judge, and preserved in the archives of the Theosophical Society. ([return to text](#))

THE DOCTRINE OF SELF-BECOMING — *Madeline Clark*

Western humanity, in its religious moods, has expended much energy in speculation on its future, but this speculation has been confined almost solely to the life after death — when, as far as this earth was concerned, there was to be an end of things for the soul that passed on. In philosophic mood, this same humanity should rightly concern itself with a far more comprehensive picture, not only of its destiny, but of its origin and the real purpose of its existence. And this it is progressively doing as the larger ideas in science and philosophy build the basis for a metaphysical conception of the Universe and man's place in it.

There are certain teachings in the theosophical philosophy that present this far-flung concept with such fundamental clarity that they may be regarded as keys — keys that open doors of understanding not only into other aspects of the doctrine, but into the humble problems of every day.

One of these key-teachings, a phase of the philosophy of spiritual evolution, is the doctrine of Self-becoming, the doctrine of the unfolding of innate powers and characteristics from the interior being of all creatures. For according to the esoteric philosophy, all evolution is through the bringing forth of powers and faculties already latent in the entity — not through an accretion added layer upon layer from without.

The Sanskrit word *Swabhava* is what describes this inherent power and faculty, this innate characteristic and its spontaneous evolvment. Its literal translation is just that: self-becoming: *swa*, self, and *bhava*, from *bhu*, to become. "Everything becomes what it actually is in the heart of its being." This is the teaching of the oldest existing school of Buddhism, the Swabhavika, and there is

a sense of completeness, of philosophic satisfaction, in the thought that the teaching is true of every entity whatsoever, whether it be a star or an atom or a human being. We are always becoming, we are always on the way. Our own world and all its beings are an outer manifestation of inner vital causes: the work, the activity, is within, it flows outward into the visible.

The symbols of this process are all about us in equal prodigality with the manifestations of nature. Go out on any clear evening, and at this time of year the sky is peopled with the winter galaxy, crowded with brilliant and less brilliant stars, encircled by the silvery haze of the Milky Way, itself composed largely of incomputable hosts of stars. I say peopled, because there is a companionship in the stars, the companionship of greatly evolved beings — of which the stars are the bodies or vehicles for beings less evolved. How did these beings become clothed in such splendor? By unfolding that splendor from within their essential selves. They shine there as a prophecy, a promise, of what we, their younger brothers, will one day arrive at. They are the ultimate visible forms that are still brothers to us in the galactic universe; and the kinship that we feel with them extends itself to take in all the hosts of our fellow-beings, of whatever kingdom. No longer can we conceive of a static condition in any of these inhabitants of the universe; we are all moving on to greater spiritual stature, in a progress that is accomplished by that unfolding from within of already inherent powers and faculties; and in this sense we can truly say with the old Sanskritists: "Without moving, O Holder of the Bow, is the travel along that road."

The palm-tree, so common in semi-tropical gardens, is one of the most obvious symbols of this self-becoming: it continually renews itself from within itself; as the old leaves drop lower around the trunk and become successively less bright and finally withered,

new ones forever unfold from within the upper part of the trunk, where there is a central bud that pushes out and up endlessly. Everything that lives is verily such a symbol, so near to us are the reminders of these deep-seated teachings that comprehend all life, harmonize and revitalize it.

There are two distinct aspects of this teaching of Swabhava that we might consider here. One is the thought of all the multitudes and hosts of beings in the universe ever moving out of themselves — then-present selves — into a greater expression of themselves, under the urge of a vital energy that springs from an intelligent energy, which springs in its turn from a spiritual energy, coming from a divine energy — at the heart of it all being the Essential Monadic Self, which is one with the Universal Self. Back of us, therefore, are the energies of the whole universe, if we can rise to a realization of this fact and in some degree make use of them.

The other aspect of the doctrine of self-becoming is that of Individuality: that each individual, however minute in the great hierarchy, has its own essential characteristic, its own inherent character, which differentiates it from all other individuals. At the same time, all individuals in the universe are essentially *one*, partake of, spring from, and will return to, the One Life — i.e. the Greater Being, of which we are a part. In this paradox lies one of the greatest mysteries of the Ancient Wisdom. As we become more highly evolved, this individuality becomes more marked, because every godlike faculty is more fully brought forth. We can conceive of the Masters of Wisdom, the most evolved types of human beings, as mighty geniuses in anything they wish to set their hand to. Yet at the same time, in their relatively perfected compassion, they are more at one than ordinary men with all that lives. Again a paradox.

This doctrine of Swabhava is not solely metaphysical. None of the

great doctrines are. They have their application to the most familiar things on earth. It is this fact of essential individuality in all the inhabitants of the universe that causes the absolutely endless variety of beings in all the kingdoms, a variety which leaves us no excuse for not finding life intensely, thrillingly interesting. It is simply a matter of bringing into play the imaginative faculty, to see all the wonders of nature as *wonders*, as examples of the intriguing ways in which all the creatures proceed to show forth their various quaint characters.

In the course of a morning's walk you encounter a series of adventures. You go along beside a hedge of bright berries — itself a wonder of vegetable swabhava. You look into the hedge, and right into the bright eye of a mocking-bird, who looks back at you boldly without a sign of fear. Bold, aggressive, you know him for the fellow who out-sings all the other birds, sitting in his particular tree, from which he has driven off all comers, and you remember his battles with other mockers, when the luscious notes of his song are altered to a raucous scolding. You walk on and come upon a lizard sunning himself on a stone. He blinks a small black eye at you but continues his nap — apparently — until he spies an unsuspecting insect about a yard away, makes a lightning dash for it, and you hear the click of his jaws as they close upon it. Next, on a flowering shrub, you may see both a humming-bird, a tiny dynamo of one-pointed energy, and a dallying butterfly, both sipping — a study in contrasts. Or you may notice underfoot the telltale burrow of a mole — the funny little blind, velvet-coated dweller underground, whose consciousness is chiefly concerned with damp earth and worms, but even at that is a more evolved consciousness than that of the worm he feeds upon. On the same walk you may encounter a snake, with its secretive, sinuous habit — various birds, even a sea-gull flying over perhaps; and in the vegetable kingdom such

divers characters as poison-ivy, ferns, the sturdy oak and prickly cactus; and in the minerals, soils and rocks of varied colors and compositions.

As we come on to the higher animals this difference among the individual characters becomes greater, they have advanced farther in the bringing out of their respective individual traits — but these traits were all latent in them to begin with. Take the coyote, an animal so cunning and intelligent that even its most inveterate human enemies are obliged to accord it a reluctant admiration. Again, take the ancient friend of man, the little ass or donkey; any owner will tell you tales of its sagacity. The age-old custom of these animals, when gathered together into a herd, as is their natural habit, is to detail one of their number to stand watch at the stable door at night — the custom is said to have survived from the ancient days of Egypt among the wild asses of that country, who were preyed upon by wild beasts. At midnight a second ass among the herd will invariably wake and go to the relief of the one at the door.

Another most interesting animal is the pig, which has, according to Louis Bromfield, "nearly always been maligned and underrated.... The pig," he says, "has countless amusing, endearing, and irritating qualities. He can never be accused of lack of character and even individual personality . . . probably the most intelligent of all farm animals, and certainly the shrewdest. . . Pigs make the best and most humorous pets in the world. They are instinctively ham actors and have a highly developed sense of humor. . . . Pigs have been associated with man about as long as any animal, and appear again and again in history and legend back into the misty reaches of prehistoric time." (1) It is material for a lifetime's reflection to wonder how these animals ever developed such well-defined characters, and further, why the domesticated ones should have had the karmic association with

man that has brought them both benefit and suffering.

And when we come to the human kingdom, we are well aware of the vast differences in temperament and physiognomy as well as in the manifestations of character. Only now we come to the higher attributes, which at moments take on a hint of the godlike. This matter of human individuality and possibilities is recognized by students of human behavior, and there are flashes of insight. Professor Irwin Edman, who holds the Chair of Philosophy at Columbia University, conceives of individuality, "not as competition and assertiveness, but as the realization of one's own qualities and capacities in one's own special way." And he thinks that education should foster this type of individuality, a certain *distinction*, — for all, not just for a few. Allen Boone also, in his book *You are Adventure*, speaks of "the unmatched spiritual individualists who, in a sadly massed-up and messed-up world . . . dare to live their own lives for the good of all. . . ."

For of course this unfolding from within of the individuality is for all: as Louis Untermeyer says in his sketch of the life of Robert Frost: "The creator, the artist, the extraordinary man, is merely the ordinary man intensified."

The human scene looked at in the large presents evidences of racial and national swabhava in the characteristic architectures, arts, languages, customs, dress and in their music — differences that again show the variety of ways in which human beings in their various categories unroll and unfold their peculiar racial or national genius.

There are many other examples of distinguishing characteristics in all the kingdoms of nature: the peculiarities of metals, for instance, their colors and atomic structures; the sound that comes from a silver bell as contrasted with that from one of bronze. Even the woods from different trees not only differ in grain and

hardness, but when seasoned, cut, and tapped with a suitable instrument or the finger-tip, each will give out its distinctive musical tone. The fragrances of different flowers, the flavors and forms of different fruits, vegetables and nuts — all are due to the various swabhavas of these creatures of the kingdoms. In the night sky, the colors of the different great stars, some fiery red, some rose red, or icy blue, flame, or golden, come, Dr. de Purucker suggests, from the individual characters of those stars, or of the beings who use them as vehicles; and more advanced studies of the planets would show them to be each quite distinct in character.

But all this visible detail, you may say, is mere froth — the most superficial manifestation of that majestic law of swabhava — and yet it is all we can *see*, our living evidence, of the working of that sublime law.

The ethical implications of this teaching take us into the great world of spiritual and divine possibilities. We, in our present human condition, are curiously conscious chiefly of the differentiation, not to say the sense of separateness of ourselves from other individuals; but the nearer we reach to the Inmost, the more we shall be able to see our fellows as our other selves, or at least as brothers, semi-counterparts of ourselves. Only to hold these great thoughts close to us in our daily living opens the way to all brotherly kindness and understanding and mutual helpfulness, and a trust in the inexhaustible energies always welling up from within. As Katherine Tingley expresses it:

The Soul can rest on nothing this side of infinity, it loses its vitality if it seeks to do so. All eternity awaits it, how should it be satisfied with the half-life we live and the many imperfections that mar us? The nature of the Soul is to be winging its flight forever towards the boundless, to be

working, hoping, and conquering, to be going forward forever and ever.

— *The Gods Await*, p. 173

The doctrine of self-becoming is closely tied with cosmic evolution. For what is it that is the impelling cause of evolution if it is not the Essential Self, the Monadic Ray,

The eternal thing in man,
That heeds no call to die —

as Thomas Hardy conceived it. And the process of evolution is simply "the interior self self-expressing itself, unfolding always what is latent within," to use the words of Dr. de Purucker. It is this Inmost that is the unbroken connecting thread in all the existences of any one entity, in all the kingdoms, through all the aeons, immortal in any one galactic manvantara, the innate characteristic or swabhava running through them all. Its expressions on this plane of ours point back to its pervading presence, enlivening, sustaining, giving impulse to all life.

Here among nearby things we have the genes, those mysterious portions of the cell-life, that seem to be the ultimate vehicle for "the continuous transmission of an identic life." Back of our uncertain science of heredity there is a spiritual heredity arising in the innate character of the being itself.

Look at fingerprints, of which it is said that no two on earth are exactly alike. Someone had the intuition once that possibly these imprints of character on the hand of the individual might reproduce themselves in that individual from one incarnation to the next. The answer to his question as given by Dr. de Purucker was as follows:

I am quite sure that fundamentally your idea is not only sound but absolutely correct. The great difficulty would be

to find the thumb-print or finger-prints from former lives of an individual. It is perfectly true that for Theosophical or occult reasons the markings of the thumb and fingers of each body taken up by a reincarnating ego would very closely parallel and perhaps are almost identic with the dactylographic markings on the thumb and fingers of the preceding body of the same ego. Any changes that would be found, if we could compare two such markings, would be those brought about by evolutionary changes in the soul producing modifications in the body, and also the hereditary influences from the ancestry which would tend to modify markings of such character.

— Studies in Occult Philosophy, pp 421-2

This individualizing process begins at the very commencement of manifestation in a manvantara, it is the differentiation spoken of by the philosophers. William Blake's system embraces it. And this individualization becomes progressively more marked as the manvantara proceeds and the entities become more truly self-directed. Yet, in spite of individuality, nothing can stand alone in the universe — the "heresy of separateness" is the idea that one can do so. Again the paradox. We have to stand each one alone, yet come to realize that we are all but different facets of the One. At moments of inspiration this realization comes even into the human mind, in a flash of insight. Instances of this are often come across, recorded in literature. Mary Austin, in Note 13 of her *Earth Horizon*, describes a summer morning when she, a child of five or six, wandered alone down beyond the orchard to a breezy prominence with grass waving in the wind, and one tall tree reaching into infinite immensities of blueness" — when suddenly earth and sky and tree and wind-blown grass and the child in the midst of them came alive together with a pulsing light of consciousness." She recalled in later years the "swift, inclusive

awareness of each for the whole — I in them and they in me, and all of us enclosed in a warm lucent bubble of livingness."

And Blake's famous vision as he sat on the sands at Felpham:

My eyes did expand
Into regions of air,
Away from all care,
Into regions of fire,
Remote from desire;
The light of the morning
Heaven's mountains adorning
In particles bright
The jewels of light
Distinct shone and clear.
Amaz'd and in fear
I each particle gazed,
Astonish'd, amazed,
For each was a Man
Human-form'd. Swift I ran,
For they beckoned to me.
Remote by the sea,
Saying "Each gram of sand,
Every stone on the land,
Each rock and each hill,
Each fountain and rill,
Each herb and each tree,
Mountain, hill, earth, and sea,
Cloud, meteor and star,
Are men seen afar."
All I ever had known
Before me bright shone,
Such the vision to me
Appear'd on the sea.

These are visions of the Many in the One: how at the same time, the many can be and are the One, a mystery rarely to be sensed except in inspired moments.

Then there is the question of Immortality, which has preoccupied the mind of man from time immemorial. We will take the thought from Dr. de Purucker that: the Atman-Buddhi, the Upper Duad in the sevenfold human constitution, is the seat of the swabhava in man; it is the Essential Self, the perpetual root of man's constitution, the divine-spiritual monad. It is unconditionally immortal throughout the immense time-period of the life of a galaxy. This immortal and ever-enduring Essential Self, the seat of the fundamental selfhood in man, is the unifying and binding root which not only holds the composite man together, but is the lasting link from life to life. It brings the compound man together again and again, out of its identic life-atoms. It is the persistent individuality, the inner originant, the swabhava. At the end of the Great Cycle, when a universe indraws into the subjective worlds, all the individualities which have made up that universe are re-absorbed: "The dewdrop slips into the shining sea." But at the re-emergence of the universe into manifestation, the individualities re-emerge in their integrity, and commence a new unfoldment of their inexhaustible energies and powers.

The Theosophical Forum

THE YANG AND THE YIN — *Allan J. Stover*

The disk of the Chinese Yang and Yin Monad and the eight diagrams composed of single and broken lines surrounding it are well known to many; as is the fact that the unbroken lines and the light half of the disk represent Yang or spirit, and the broken lines and dark portion of the disk represent Yin or matter.

Those who have made further inquiry may have learned that there are several interpretations of this fascinating symbol and that a lifetime could be devoted to the subject. A well informed Zen Buddhist once showed me a large volume of commentaries on the Yang and Yin trigrams of Fu Hsi with the remark — "It is very difficult and few even among the educated Chinese can understand it."

Unfortunately that which was intended as an aid to the intuition has become a maze to befuddle the intellect.

Briefly, the Yang and Yin symbolize that duality which is present throughout the manifested universe, and the philosophy of which it is a part is based upon a profound knowledge of both inner and outer nature. The word Yang (Giles, *Chinese Dictionary*) carries the significance of light, spirit, the positive masculine element in nature, and is representative of the expansion or outbreathing of the universe. Opposed to this is Yin, which is representative of darkness, matter, the negative or feminine element in nature and the contraction or inbreathing of the universe. Both qualities were developed simultaneously from the Great Monad, and by their continual interaction of light and darkness all things are produced and cosmic harmony is preserved.

This symbolic system of the Orient is not fancy or mere

philosophical speculation, but is based upon nature herself. The researches of Baron von Reichenbach on magnetism and the vital force made during the last century, demonstrated the presence of what he called plus and minus odile in varying proportions in everything. The primitive Indians of Southern California still retained a classification of plants, animals and men, sun, moon and stars, under two divisions which they designated as solar or lunar, land or water people.

Returning to the thought of the Chinese — one man may have the quality of Yin predominant in his nature, another that of Yang, while a third may have the two nicely balanced. A man who is ill, may owe his difficulty to a congestion of Yin in his nature, and may recover if given an herbal remedy which is strong in the opposite or Yang quality, reinforcing the Yang in his system and thus restoring equilibrium.

It is not difficult to think in these age-old terms, providing we do not carry them too far, for many have doubtless known them in former lives. Students of *The Secret Doctrine* will see in the evolution of the trigrams the same story of the emanational unfolding from the Boundless to the complexity of a teeming cosmos, as is contained in the Stanzas of Dzyan.

The interpretation of the Yang and Yin diagrams as an ideographic system of cosmology seems to underlie the archaic philosophy as an undertone, from which the more intricate details unfold to the inquiring mind. It is well to remember that we are dealing not with words but with the elements of nature herself, as depicted in fitting combinations of unity and duality in their several interrelations. We may trace the evolution of these diagrams as they develop and increase in complexity; growing as does the world itself, from within-without, much as the stream of life descends from spiritual planes through stage after stage of

physical concretion to the world as it is today.

The more one studies, the more it becomes apparent that all Creation Myths, if they be genuine, stem from the same primeval trunk of esoteric teaching. It is not surprising then if a careful examination of the Chinese Creation Myth does show the same profound significance underlying it.

In the beginning, the Illimitable, the soul or heart of Heaven T'ien Li, awakened the quality of finiteness in sleeping space and produced the "Great First" or as more often called the Great Monad T'ai Chi. The "Great First" began to move and by rotation, divided along the diameter producing the principle of light or Yang; simultaneously the appearance of light called forth its opposite or darkness which is known as Yin. The primeval Yang and Yin thus produced by their continual alternations of light and darkness brought all things into being.

In the words of Dr. Williams, "Heaven was formless, an utter chaos; the whole mass was nothing but confusion. Order was first produced in the pure ether, and out of it the universe came forth; the universe produced air, and air the Milky Way." (Dr. S. Wells Williams, Professor of the Chinese Language and Literature at Yale.)

The terms "*curds*" and "*Milky Way*" are often used interchangeably in old Creation Myths, and refer to the "curds" of Space spoken of in *The Secret Doctrine*, as in the following quotations:

From the ONE LIFE formless and Uncreate, proceeds the Universe of lives. First was manifested from the Deep (Chaos) cold luminous fire (gaseous light?) which formed the curds in Space. — 1, 250

And again, speaking of the primordial elements, H. P. Blavatsky

says:

Those were formed from "*the curds of the cold radiant mother*" and "*the fire-seed of the hot Father*" who "*are one,*" or, to express it in the plainer language of modern science, those elements had their genesis in the depths of the primordial fire-mist — the masses of incandescent vapour of the *irresolvable* nebulae. —1, 543

The separation of the disk or egg of the Great Monad and the formation of the primeval Yang and Yin, in Chinese Occultism; the division of the formless mass of Chaos in the pairs of opposites in the Greek myth; and the appearance of a dot within the circle, followed by the line across the diameter as given in the Proem to *The Secret Doctrine*, are all statements of the same truth.

In the words of the great authority Herbert Giles:

The Yin and Yang — the primeval forces, developed the Great Monad, by the interaction of which the whole universe has been produced.

If we examine the dark and light portions of the design we find a small dark spot or "eye" in the white Yang, and a light "eye" in the Yin, for each portion of the great duality has something of the other within it. In other words, every Yang has within a bit of Yin, and every Yin its Yang. A statement which is not only true occultism but typical Chinese concept as well.

On the other side of the world, the Creation Myth of the Zuni Indians of New Mexico relates how at first all beings dwelt in the midmost center of space in the "city of mists," and how after long ages the creatures spread out in the six directions North, East, South, West, Above and Below; and how each group as they left the midmost took representatives of each of other directions with them that nothing might be lacking anywhere.

After the separation of the great egg or circle of the Great Monad, the formation of the four figures took place. The two principles Yang and Yin, placed one above the other formed the "four exemplars."

- 1) T'ai Yang (large Yang) ☰ corresponds to the sun and warmth in nature;
- 2) Shao Yin (little Yin) ☷ corresponds to the moon and cold in nature;
- 3) Shao Yang (little Yang) ☱ corresponds to the stars;
- 4) T'ai Yin (large Yin) ☵ corresponds to the planets in nature.

After the four figures, the eight are formed by adding an extra line to each design, and from the eight, sixty-four are made by multiplying successively each of the trigrams by itself and one of

the other seven in turn. (☰ ☰ etc.) It is of interest that in the eight trigrams arranged about the egg of the Great Monad, the position of North is occupied by Earth ☷ while opposed to it in the South is Air ☱. The East is represented by the element Fire ☲, and in the West is Water ☵; the four forming a

cross. Later it became the custom to transpose Air and Water for purposes of fortune telling.

To the people of old China, the Great Monad was a map of the universe, for the belt of the zodiac was also divided into quadrants which were presided over by the Four Royal Stars; the Azure Dragon in the East, the Vermillion Bird or Phoenix in the South, the White Tiger in the West, and the Tortoise or Black Warrior in the North. The nature of each of these mythical creatures was indicated by the structure of the trigrams occupying corresponding positions in the diagram.

The Great Monad was well known in Japan and Korea, and its meaning was practically identical with that in China. In Korea, the design was adopted as the national emblem and was depicted in red and blue, the colors of royalty and the East, region of the morning. The Tah-gook as it was called in Korea meant "The Kingdom of the Morning." Research has shown that the design of the Tah-gook has been used in Korea since ancient times and has suffered less change there than elsewhere.

The Chinese people lived much closer to nature than we do ourselves for they held that the veritable spirit of all life waxed and waned with the cycles of the sun and moon. Thus to be born at the time of an incoming tide was considered fortunate since it was believed that all the forces of nature were rising at that time.

From ages immemorial, Man has sensed the truth that he must live in harmony with the forces of Heaven . . . with natural law. ... To the Chinese — it is well to remember — the planets and the constellations are the abiding places of sainted heroes who rule the heavens and exert continuous influence upon the course of human destinies. . . . Climatic change is directly related to the moral conduct of the people. Through the sun, moon and stars

such climatic changes are produced.

— *Chinese Astrology*, Los Angeles, Calif.

To the old Chinese as yet untouched by the blight of western civilization, nature is Father and Mother, and thus he strives to live in harmony with all that lives. It is to be hoped that something of the old wisdom survives the present turmoil of ideas.

The Theosophical Forum

THE SEARCH FOR TRUTH — *Clifford Carr*

A day that sees some prejudice cleared from our thoughts, or the frontiers of our minds pushed farther away, or some cherished illusion destroyed, is a day well lived, we think. It is a regrettable fact that many theosophical students in common with the rest of mankind, tend to ridicule, or belittle lines of thought or intellectual effort different from their own. This is particularly so in the realms of modern science and the researches of scientists.

It is true that when H. P. Blavatsky wrote her books *Isis Unveiled* and *The Secret Doctrine*, 1877 and 1888 respectively, she vigorously attacked the dogmatic and narrow-minded scientists of her day while at the same time paying highest tribute to certain leaders in scientific thought. It is also true that many of her statements which seemed incredible then, and which had not been discovered by scientists, are being proved true now.

But more than this is happening and has been for many years. Theosophy maintains that only by combining science, religion, and philosophy can man attain a true and relatively comprehensive knowledge of the Universe and of Man. Pick up any one of a dozen recently published books, and you will find that it is the scientists, the leading men of science, who are embracing this threefold approach to knowledge in their investigations and researches. There is a book, for instance, *The Great Design*, published in 1936, and contributed to by 14 men of international eminence each in his own branch of science, and its pages are strongly reminiscent of H. P. Blavatsky's "Three Fundamental Propositions" as set forth in *The Secret Doctrine*. In the broadening effect it has on one's mind, the awakening of one's intuitions, and the furthering of one's own glimpses into the

Unknown, it is sheer delight to read, and one is tempted to share many of its illuminating passages. Here, however, is one, taken from the contribution by C. Lloyd Morgan, F.R.S., and D.Sc, LL. D., Emeritus Professor, University of Bristol, his contribution being entitled "The Ascent of Mind." After discussing what science has been able to find out about the mind of man, Professor Morgan says:

But there are many who have been led to believe that there is at the heart of things somewhat that the man of science *as such* leaves out of account. They ask him. Whence comes all this novelty, whence the recurrent routine which so often follows in its wake? In reply he may say: "That is no concern of mine, I am content to accept what I find, and to tell its story as best I can. " Such is my attitude as man of science. In that capacity I have tried to sketch in outline the story of the ascent of mind as I read it. None the less I confess my belief that this ascent may be regarded as a manifestation or revelation of a Supreme Mind, conceived as the Creator of all that we are led to interpret as new. What I find in evolution is *one great scheme from, bottom to top, from first to last.*

What I also believe is that this advance throughout nature is a revelation of Divine Agency. And since mind at its best is the highest term in the course of evolutionary ascent, it may well be said that the evolution of mind reveals the agency of Mind. But it is, as I believe, Mind or Spirit infinite and timeless. Therein the words "first" and "last," "novelty" and "recurrence," are divested of the meaning which attaches to them in discussing the ascent of mind through new products to further novelty. Spiritus Creator as eternal and omnipresent is not the outcome of evolution, but that of which evolution is the progressive revelation.

No, we cannot afford to sit smugly at home reading only our theosophical books, or take part in discussions at lodge meetings with the complacent air of ourselves and ourselves alone having "truth", and neglect to recognize and delight in the intellectual and intuitional achievements of others who, though they may not call themselves theosophists, are engaged in the same search that we are, and are striving for the same goal — TRUTH.

The Theosophical Forum

TO ASPIRANTS FOR CHELASHIP — *William Q. Judge*

Sincere interest in Theosophic truth is often followed by sincere aspiration after Theosophic life, and the question continually recurs, What are the conditions and the steps to chelaship (1); to whom should application be made; how is the aspirant to know that it has been granted?

As to the conditions and the discipline of chelaship, not a little has been disclosed in *The Theosophist*, *Man*, *Esoteric Buddhism*, and other works upon Theosophy; and some of the qualifications, difficulties, and dangers have been very explicitly set forth by Madame Blavatsky in her article upon "Theosophical Mahatmas" in the *Path* of Dec, 1886. To every one cherishing even a vague desire for closer relations to the system of development through which Masters are produced, the thoughtful study of this article is earnestly commended. It will clear the ground of several misconceptions, deepen the sense of the seriousness of such an effort, and excite a healthy self-distrust which is better before than after the gate has been passed.

It is entirely possible, however, that the searching of desire and strength incited by that article may only convince more strongly of sincerity, and that not a few readers may emerge from it with a richer purpose and a deeper resolve. Even where there is not a distinct intention to reach chelaship, there may be an eager yearning for greater nearness to the Masters, for some definite assurance of guidance and of help. In either of these cases the question at once arises before the aspirant, Who is to receive the application, and how is its acceptance to be signified?

The very natural, indeed the instinctive, step of such an aspirant is to write to an officer of the Theosophical Society. None the less

is this a mistake. For the Theosophical Society is an *exoteric* body, the Lodge of Masters wholly *esoteric*. The former is a voluntary group of inquirers and philanthropists, with avowed aims, a printed Constitution, and published officers, and, moreover, expressly disavowing any power, as a Society, to communicate with Masters; the latter is an Occult Lodge, of whose address, members, processes, functions, nothing is known. It follows, therefore, that there is no person, no place, no address, to which an aspirant may appeal.

Let it be supposed, however, that such an inquiry is preferred to a person advanced in Occult study, versed in its methods and tests and qualifications. Assuredly his reply would be directly to this effect: —

If you were now fitted to be an accepted chela, you would of yourself know how, where, and to whom to apply. For the becoming a chela *in reality* consists in the evolution or development of certain spiritual principles latent in every man, and in great measure unknown to your present consciousness. Until these principles are to some degree consciously evolved by you, you are not in practical possession of the means of acquiring the first rudiments of that knowledge which now seems to you so desirable. Whether it is desired by your mind or by your heart is still another important question, not to be solved by any one who has not yet the clue to Self.

It is true that these qualities can be developed (or forced) by the aid of an Adept. And most applicants for chelaship are actuated by a desire to receive instructions directly from the Masters. They do not ask themselves what they have done to merit a privilege so rare. Nor do they consider that, all Adepts being servants of the Law of Karma, it must follow that, did the applicant now merit their visible aid, he would already possess it and could not be in

search of it. The indications of the fulfilment of the Law are, in fact, the partial unfolding of those faculties above referred to.

You must, then, reach a point other than that where you now stand, before you can even ask to be taken as a chela on probation. All candidates enter the unseen Lodge in this manner, and it is governed by Laws containing within themselves their own fulfilment and not requiring any officers whatever. Nor must you imagine that such a probationer is one who works under constant and known direction of either an Adept or another chela. On the contrary, he is tried and tested for at least 7 years, and perhaps many more, before the point is reached when he is either accepted (and prepared for the first of a series of initiations often covering several incarnations), or rejected. And this rejection is not by any body of men just as they incline, but is the natural rejection by Nature. The probationer may or may not hear from his Teacher during this preliminary period; more often he does not hear. He may be finally rejected and not know it, just as some men have been on probation and have not known it until they suddenly found themselves accepted. Such men are those self-developed persons who have reached that point in the natural order after many incarnations, where their expanded faculties have entitled them to an entrance into the Hall of Learning or the spiritual Lodge beyond. And all I say of men applies equally to women.

When any one is regularly accepted as a chela on probation, the first and only order he receives (for the present) is to work unselfishly for humanity — sometimes aiding and aided by some older chela — *while striving to get rid of the strength of the personal idea*. The ways of doing this are left to his own intuition entirely, inasmuch as the object is to develop that *intuition* and to bring him to *self-knowledge*. It is his having these powers in some degree that leads to his acceptance as a probationer, so that it is

more than probable that you have them not yet save as latent possibilities. In order to have in his turn any title to help, he must work for *others*, but that must not be his motive for working. He who does not feel irresistibly impelled to serve the Race, whether he himself fails or not, is bound fast by his own personality and cannot progress until he has learned that *the race is himself* and not that body which he now occupies. The ground of this necessity for a pure motive was recently stated in *Lucifer* to be that "unless the intention is entirely unalloyed, the spiritual will transform itself into the psychic, act on the astral plane, and dire results may be produced by it. The powers and forces of animal nature can be equally used by the selfish and revengeful as by the unselfish and all-forgiving; the powers and forces of spirit lend themselves only to the perfectly pure in heart."

It may be stated, however, that even those natural forces cannot be discovered by any man who has not obtained the power of getting rid of his personality in some degree. That an emotional desire to help others does not imply this freedom from personality may be seen by the fact that, if you were now perfected in unselfishness in the *real* sense, you would have a conscious existence separate from that of the body and would be able to quit the body at will: in other words, to be free from all sense of self is to be an Adept, for the limitations of self inhibit progress.

Hear also the words of the Master, taken from Sinnett's *The Occult World*. "Perhaps you will better appreciate our meaning when told that in our view the highest aspirations for the welfare of humanity become tainted with selfishness if, in the mind of the philanthropist, there lurks the shadow of a desire for self-benefit or a tendency to do injustice, even when these exist unconsciously to himself."

While setting forth these facts, as well as the dangers and difficulties — both those set ones appointed by the laws of the Lodge and the more innumerable ones adjudged by Karma and hastened by the efforts of the neophyte, it should also be stated that the Masters desire to deter no man from entering the path. They are well aware, however, from the repeated trials and records of centuries, and from their knowledge of our racial difficulties, how few are the persons who have any clue to their own real nature, which is the foe they attempt to conquer the moment they become pupils of the occult. Hence They endeavor, so far as Karma permits, to hold unfit individuals back from rash ventures the results of which would recoil upon their unbalanced lives and drive them to despair. The powers of evil, inadequately defied by the ignorant man, revenge themselves upon him as well as upon his friends, and not upon those who are above their reach. Although these powers are not hideous objective shapes coming in tangible ways, they are none the less real and dangerous. Their descent in such instances cannot be prevented; *it is Karma.*

To lose all sense of self, then, implies the loss of all that ordinary men most value in themselves. It therefore behooves you to seriously consider these points: —

1st. What is your motive in desiring to be a chela? You think that motive is well known to you, whereas it is hidden deep within you, and by that hidden motive you will be judged. It has flared up from unseen regions upon men sure of themselves, has belched out in some lurid thought or deed of which they esteemed themselves incapable, and has overthrown their life or reason. Therefore test yourself ere Karma tests you.

2d. What the place and duties of a true neophyte are.

When you have seriously considered both for 21 days, you may, if

your desire remains firm, take a certain course open to you. It is this.

Although you do not now know where you can offer yourself to Masters themselves as a chela on probation, yet, in forming that desire in your heart and in re-affirming it (if you do) after due consideration of these points, you have then to some extent called upon the Law, and it is within your power to constitute yourself a disciple, so far as in you lies, through the purity of your motive and effort *if both are sufficiently sustained*. No one can fix a period when this effort will bear fruit, and, if your patience and faith are not strong enough to bear you through an *unlimited* (so far as you know) period of unselfish work for humanity, you had better resign your present fancy, for it is then no more than that. But if otherwise, you are to work for the spiritual enlightenment of Humanity in and through the Theosophical Society (which much needs such laborers), and in all other modes and planes as you best can, remembering the word of Masters; "He who does what he can and all that he can, and all that he knows how to do, does enough for us." This task includes that of divesting yourself of all personality through interior effort, because that work, if done in the right spirit, is even more important to the race than any outward work we can do. Living as you now are, on the outward plane chiefly, your work is due there and is to be done there until your growth shall fit you to pass away from it altogether.

In following this course you work towards a fixed point under observation — as is, indeed, the whole Theosophic body, which is now, as *a body*, a chela of Masters — but specialized from other members in the sense that your definite aim and trust are understood and taken into consideration by the unseen Founders and the Law. The Theosophical Society then stands to you, for the time being, as any older chela might who was appointed for you to aid and to work under. *You are not*, understand, a chela on

probation, since no one without authority can confer or announce such a privilege. But if you succeed in lifting yourself and others spiritually, it will be known, *no matter what the external silence may seem to be*, and you will receive your full dues from Those who are honest debtors and ministers of the Just and Perfect Law. You must be ready to work, to wait, and to aspire in *silence*, just as all do who have fixed their eyes on this goal. Remember that your truest adviser is to be found, and constantly sought, *within yourself*. Only by experience can you learn to know its voice from that of natural instinct or mere logic, and strengthen this power, by virtue of which the Masters have become what They are.

Your choice or rejection of this course is the first test of yourself. Others will follow, whether you are aware of them or not, for the first and only right of the neophyte is — *to be tried*. Hence silence and sorrow follow his acceptance instead of the offer of prompt aid for which he looks. Yet even that shall not be wanting; those trials and reverses will come only from the Law to which you have appealed.

— *The Path*, July, 1888.

The Theosophical Forum

THE MYSTERY-SCHOOLS — *Clifton Meek*

An interesting fact, especially to people of Europe and America, and startling too, is that all the great historic religions of mankind, as well as every one of their important sacred books have originated in Asia. . . .

We of America sometimes approach others with an air of superiority and even arrogance. But it is good to see the rest of the world in perspective. Non-Europeans and non-Americans are behind us, but only in material things. . . . I think it is good for us who are products of Western civilization to make a few honest comparisons once in a while. We sometimes criticize and condemn a little too ignorantly and lightly. We must realize that we have no monopoly on nobility and character.

The basic truth of life is that all men have groped and searched for God and have tried to learn his will. To this search, we brought our ignorances, our superstitions and our cruelties because we were only human. To each of us has been granted some glimpse of the truth, and this truth embodied itself in our religions.

Our religions, despite the human weaknesses we injected into them, have nourished humanity's higher life as nothing else has done. They have given to man's spirit its deepest consolations, its brightest hopes and its strongest wings.

Through the web of religious experience runs a single, common thread, the desire to understand life — that is the desire to know God and to live by His will. It is the unity in

the diversity of religion. It makes us humble before the task of achieving one world, but it compels us to recognize that it is possible and with God's help it will be achieved.

— Rabbi Samuel Schwartz, *Congregation Beth El, Norwalk, Connecticut*

After being so thoroughly deluged with sectarian propaganda on the radio, screen, and in the press, it was like a breath of intellectual fresh air to read *The Norwalk Hour* account of the very interesting and broad-minded approach to religion made by Rabbi Samuel Schwartz in his recent talk before a local service club. Unfortunately, all too few religious leaders show an inclination to look beyond the confines and doctrines of their own creeds for spiritual values, and speak with such a high degree of intellectual honesty. It is high time that western minds were outgrowing the medieval concept that their religion is something entirely different and superior to other historic religious movements, and that preceding its revelation, for incalculable ages mankind had been a cosmic orphan — evil, barbaric and devoid of spiritual attributes — completely ignored and neglected by its supposedly loving Creator who followed a unique code of behaviorism in celestial snobbery.

No greater illusion and error has ever been inflicted upon trusting human hearts and believing minds than that some particular exoteric religion is the sole repository of truth. European, and even our own early American history reveals what bigotry and spiritual corrosion such illusions can engender in the hearts of men.

There was one point in particular brought out by Rabbi Schwartz that I would like to comment on. He said, and rightly so, that all of the historic world religions, including their sacred books, were of Eastern origin. However efficient we may be in producing a

highly materialistic civilization and a war every generation, the East always has been, and still is, our master in things of the spirit. Their sacred literature, the oldest known to mankind, embraces a lofty religious-philosophical concept of life from which all other religions, including Christianity, albeit second-hand from Jewish and Greek sources, have drawn. Today Christian theology is but a feeble and distorted reflection of teachings of the ancient sanctuaries, the Mystery Schools, and from which the real meaning and spiritual aroma have long since been distilled. The Christian idea of Deity is a strange mixture of misunderstood Kabbalistic thought derived from Jewish sources, and Neo-Platonic concepts borrowed from the teaching of the Mystery Schools of Greece. Such a thing as a "new" religion simply does not exist and never has. All have borrowed from older sources, with the result that the world is filled with multiple versions and distortions of the one primordial truth about Man and the Cosmos in which he lives, moves, and has his being. Every religious impulse which has been inaugurated from age to age is but the restatement of truths as old as mankind, a re-veiling rather than a revealing, of the Mystery-teachings, clothed in the language and poetical imagery of the day, and each such effort a part of a single movement manifesting at periodical and cyclic times of human history to enlighten superstitious man, for that is exactly what mankind is at our present stage of evolution.

These teachings never have been revealed publicly in their entirety for the reason that the mass of mankind is as yet intellectually and spiritually unprepared to receive and understand them, and they have been given out only in a degree commensurate with the understanding and enlightenment of any particular age in which they may have been given.

The Christian movement itself, in its very beginnings, was an attempt made by one of the Elder Brothers whose incarnation

was very closely associated with that of the Buddha, to found and establish a Mystery School, the purpose of which was to ameliorate, at least in some degree if possible, the effects of the dark cycle which was slowly but surely settling over the Mediterranean civilization, by keeping alive the dying embers of spirituality in the hearts and minds of the men of that day.

Deterioration of the Mystery Schools had begun about five centuries previously, and at the time of the beginning of the Christian era had become little more than mere form and ceremony, much as orthodox religion is today, and from which the spirit had fled. Actually, for many centuries, the noblest minds of Greece had journeyed to ancient Hindusthan for spiritual enlightenment and Initiation into the Mysteries, and returning home had founded similar schools, passing the light to other minds and producing a cultural civilization which has since been unequalled — a fact verified by many leading scholarly minds of today.

Religion, Science and Philosophy were taught as a synchronized unit, each being but a single aspect of TRUTH, and not as three separate and conflicting schools of thought as they are today, thanks to the limited vision and understanding of the church fathers who very conveniently arranged a speedy divorce, the most notorious one of our age. Facts of Universal Nature which conflicted with their ever-increasing number of dogmas, simply were not tolerated. Several of them, particularly Origen and Clement of Alexandria, had some understanding of the Neo-Platonic thought underlying Christian doctrines, and tried nobly but vainly to preserve some of the intellectual and spiritual aroma of these noble teachings, but the trend towards dogmatism was too powerful, and the befogged minds that believed and taught that the earth was flat won the day.

Theologians found it far more important to enter into lengthy disputations as to how many angels could dance on the point of a pin than to teach men that "the Father and the kingdom of heaven are within."

In lieu of this, men were given theological crutches upon which to lean lest they learn to walk on their own spiritual feet, and were told that by simply "believing" something they would be transported to heaven on a spiritual featherbed. Today, western civilization, particularly Europe, is harvesting the bitter fruit of this historic betrayal. Why is it that in countries where ecclesiasticism has been the strongest for centuries there is more vice and crime, poverty and wretchedness, and the people turn more readily to any "ism" that offers them the ghost of a chance of escape from their hellish plight?

That the very early Christian movement was an attempt to found such a Mystery School is evidenced by several quotations in the canonical books of the New Testament. Jesus is quoted as saying that to the multitude he spoke in parables, for having eyes they saw not, and having ears they heard not, while to his few chosen disciples He taught Mysteries.

Again, in the picturesque but somewhat uncomplimentary jargon of the day He warned against casting pearls before swine and giving holy things unto dogs lest they turn and rend you. Several centuries later, the tragic death of Hypatia whose memory and martyrdom are today enshrined in Christian sainthood under the name of St. Cecelia, and who was stoned to death by the fanatical Christian mob under the leadership of the monks, might be cited as one historical example of the grim necessity of this age-old law of occultism, and why there have been in the past, and still are, Mystery Schools.

The "resurrection" or "raising" of the Christos was enacted in the

Mystery Schools of Greece for centuries before the beginning of the Christian era. Christos is the Divine Principle in every man, crucified on the cross of material existence during its earthly pilgrimage, awaiting recognition and resurrection. In another school of thought, it is the Grand Architect who lies buried in the rubbish of the temple. It is the drama of the ages, the central theme of every religion under whatever name or allegorical presentation. One version of this mystery wherein the hero of the tale bears another name, and derived from Jewish Kabbalistic sources and preserved for posterity via the "underground" of the dark ages, comes down to us today in Freemasonry. It is based on the allegorical story of the building of King Solomon's temple, which symbolizes man's final attainment of Divine Wisdom in future ages by conscious union with his own Inner God.

Truly then he will have found the lost word. This is one historic example where the early church fathers, and some later ones as well, did not quite succeed in obliterating every vestige of the much maligned "pagan" thought and teachings in their effort to eliminate all evidence from whence their doctrines had been derived. It is no disgrace to wear a borrowed robe, but it is hypocritical and a gross deception to claim that it is an original creation.

I trust that at this sacred season of the year which has been revered by religious minded people of every age, and particularly so by those who have had some understanding of its deeper import, that no one will misinterpret what I have said as voicing any irreverence regarding the Great Teacher for whom the present holiday is named, or what He himself taught. For Him, and his teachings, I hold the highest regard and respect. But for the veritable Collyar Mansion of man-made accretions and dogmas which were no part of his program, and which have virtually nullified the noble effort he made to rekindle ancient

truths in the hearts of men in an unfortunate age, in all honesty and frankness I must say I have none.

The Theosophical Forum

THE FUTURE AND THE THEOSOPHICAL SOCIETY — *William Brehon*

In 1888 H. P. Blavatsky wrote:

"Night before last I was shown a bird's eye view of the theosophical societies. I saw a few earnest reliable theosophists in a death struggle with the world in general and with other — nominal and ambitious — theosophists. The former are greater in number than you may think, and *they prevail* — as you in America *will prevail*, if you only remain staunch to the Master's programme *and true to yourselves*. And last night I saw. . . . The defending forces have to be judiciously — so scanty are they — distributed over the globe wherever theosophy is struggling with the powers of darkness."

And in the *Key to Theosophy*:

"If the present attempt in the form of our Society succeeds better than its predecessors have done, then it will be in existence as an organized living and healthy body when the time comes for the effort of the twentieth century. Not only so, but besides a large and accessible literature ready to men's hands, the next impulse will find a numerous and united body of people ready to welcome the new torch-bearer of truth. He will find the minds of men prepared for his message, a language ready for him in which to clothe the new truths he brings, an organization awaiting his arrival which will remove the merely mechanical material obstacles and difficulties from his path. Think how much one to whom such an opportunity is given could accomplish. Measure it by comparison with what the

Theosophical Society actually has achieved in the last fourteen years without any of these advantages and surrounded by hosts of hindrances which would not hamper the new leader."

Every member of the Society should be, and many are, deeply interested in the above words. The outlook, the difficulties, the dangers, the necessities are the same now as then, and as they were in the beginning of this attempt in 1875. For, as she has often said, this is not the first nor will it be the last effort to spread the truths and to undertake the same mission as that taken up by Ammonius Saccas some centuries ago — to lead men to look for the one truth that underlies all religions and which alone can guide science in the direction of ideal progress. In every century such attempts are made, and many of them have been actually named "theosophical." Each time they have to be adapted to the era in which they appear. And this is the era — marked by the appearance and the success of the great American republic — of freedom for thought and for investigation.

In the first quotation there is a prophecy that those few reliable theosophists who are engaged in a struggle with the opposition of the world and that coming from weak or ambitious members will prevail, but it has annexed to it a condition that is of importance. There must be an adherence to the program of the Masters. That can only be ascertained by consulting her and the letters given out by her as from those to whom she refers. There is not much doubt about that program. It excludes the idea that the Society was founded or is intended as "a School for Occultism," for that has been said in so many words long ago in some letters published by Mr. Sinnett and in those not published.

Referring to a letter received (1884) from the same source we find: "Let the Society flourish on its moral worth, and not by

phenomena made so often degrading." The need of the west for such doctrines as Karma and Reincarnation and the actual Unity of the whole human family is dwelt upon at length in another. And referring to some of the effects of certain phenomena, it is said "They have to prove . . . constructive of new institutions of a genuine practical brotherhood of Humanity, where all will become co-workers with Nature." Speaking of present materialistic tendencies, the same authority says:

"Exact experimental science has nothing to do with morality, virtue, philanthropy — therefore can make no claim upon our help until it blends itself with metaphysics. . . . The same causes that are materializing the Hindu mind are equally affecting all western thought. Education enthrones scepticism, but imprisons spirituality. You can do immense good by helping to give the western nations a secure basis on which to reconstruct their crumbling faith. And what they need is the evidence that Asiatic psychology alone supplies. Give this and you will confer happiness of mind on thousands. . . . This is the moment to guide the recurrent impulse which must soon come and which will push the age towards extreme atheism or drag it back to extreme sacerdotalism, if it is not led to the primitive soul-satisfying philosophy of the Aryans."

This is the great tone running through all the words from these sources. It is a call to work for the race and not for self, a request to bring to the west and the east the doctrines that have most effect on human conduct, on the relations of man to man, and hence the greatest possibility of forming at last a true universal brotherhood. We must follow this program and supply the world with a system of philosophy which gives a sure and logical basis for ethics, and that can only be gotten from those to which I have adverted; there is no basis for morals in phenomena, because a

man might learn to do the most wonderful things by the aid of occult forces and yet at the same time be the very worst of men.

A subsidiary condition, but quite as important as the other, is laid down by H. P. B. in her own words that we must "remain true to ourselves." This means true to our better selves and the dictates of conscience. We cannot promulgate the doctrines and the rules of life found in theosophy and at the same time ourselves not live up to them as far as possible. We must practise what we preach, and make as far as we can a small brotherhood within the Theosophical Society. Not only should we do this because the world is looking on, but also from a knowledge of the fact that by our unity the smallest effort made by us will have tenfold the power of any obstacle before us or any opposition offered by the world.

The history of our sixteen years of life shows that our efforts put forth in every quarter of the globe have modified the thought of the day, and that once more the word "Theosophy," and many of the old ideas that science and agnosticism supposed were buried forever under the great wide dollar of present civilization, have come again to the front. We do not claim to be the sole force that began the uprooting of dogmatism and priestcraft, but only that we have supplied a link, given words, stirred up thoughts of the very highest importance just at a time when the age was swinging back to anything but what the informers had fought for. The old faiths were crumbling, and no one stood ready to supply that which by joining religion and science together would shake the one scientific and the other religious. We have done exactly what the letter quoted asked for, led the times a step "to the primitive soul-satisfying philosophy of the Aryans." . . .

Our destiny is to continue the wide work of the past in affecting literature and thought throughout the world, while our ranks see

many changing quantities but always holding those who remain true to the program and refuse to become dogmatic or to give up common-sense in theosophy. Thus will we wait for the new messenger, striving to keep the organization alive that he may use it and have the great opportunity H. P. B. outlines when she says, "Think how much one to whom such an opportunity is given could accomplish."

— *The Path*, March, 1892

The Theosophical Forum

INITIATION — A UNIVERSAL CUSTOM — *Francis M. Hazleton*

Real initiation cannot be considered apart from the Mystery Schools of antiquity, as they constitute its historical foundation. It is well known that in the sixth century a.d. the last of the Mystery Schools as a state institution was closed by Justinian. This may have been caused by their degeneration, or at the request of the schools themselves. At any rate, they have been regarded as "dead" ever since, despite evidence that such was not the case. The simple fact is that the Mystery Schools at that period "went underground."

The sceptic will deny that these Mystery training-centers were anything other than popular spectacles at best, or at worst where licentious orgies took place. Fortunately, abundance of unimpeachable evidence to the contrary from the most ancient times, as well as the researches of modern authorities, absolutely disproves such a gross misconception. Modern theosophy has said the last word to date on this subject, through the writings of the theosophical leaders; but as their testimony is not needed to make a strong case the writer has purposely based his thesis exclusively on non-theosophic sources. As far as possible the direct words of these sources are given that the reader may judge for himself how far-reaching was the belief in these Mystery Schools.

Humanity would be in a helpless state indeed were initiation not a real fact — were not the primal and universal truths about man and the universe passed on from hierophant to initiate from age to age, so that the body of Great Teachers of humanity may be recruited and maintained. Every day some few are taking the first step on the path which leads thereto. Just as initiation has been possible in all ages, so it is to be had today if it is searched for in

the right place, and with sufficient intensity of purpose. But only after many lives of continuous effort may the final goal be attained.

Initiation is a vast subject, about the arcana of which little is known. That the Mysteries have existed from time immemorial, among all peoples, is the universal verdict of myth, legend, and history. The philosophy by whose assistance these Mysteries were developed is coeval with the universe itself, and however much its continuity may be broken, it will always reappear again. All so-called "revelation" proceeds originally from the same source. Plutarch is for us one of the best authorities for the statement that all religions are fundamentally one, under different names and practices. He says:

It is clear from the Orphic poems and the Egyptian and Phrygian writings, that the archaic natural science, both among the Greeks and non-Greeks, was for the most part hidden in myths — a secret and mysterious theology containing an allegorical and hidden meaning. — *De Daed. Frag. IX, 1, 754*

And Clemens Alexandrinus remarks:

All who have referred to divine things, whether Greek or non-Greek, have veiled the primal principle and have spoken the truth in riddles, symbols, allegories, metaphors, and similar figures. — *Stromata, v, 4*

And from Herodotus the following is pertinent:

I can by no means allow that it is a mere coincidence that the Bakchic ceremonies in Greece are so nearly the same as the Egyptian. . . . The rites called Orphic and Bakchic are in reality Egyptian and Pythagorean. — II, 49, 81

Whether Eleusinian, Orphic, Bacchic, Samothracian, Phrygian, Phoenician, or Egyptian, the Mysteries were all the same, as evidenced by this epigram of Ausonius:

Greece calls me Bakchos;
Egypt thinks me Osiris,
The Mysians name me Phanax,
The Hindus consider me Dionysos;
The Roman mysteries call me Liber,
The Arabian race Adonis.

— *Epigram*, xxx

The Eleusinian were the most celebrated of all the Mysteries. Every act, rite, and person engaged in the lower degrees was symbolic, and the person revealing them we are told was "put to death." This seems to have been a universal custom. "Every initiate," says Agrushada Parakshai, "to whatever degree he may belong, who reveals the great sacred formula, must be put to death."

In his *History of Magic*, Ennemoser makes the following observation:

How comes it, it may be asked, that so little has become known of the mysteries, . . . through so many ages and amongst so many different times and people? The answer is, that it is owing to the universally strict silence of the initiated. Another cause may be found in the destruction and total loss of all the written memorials of the secret knowledge of the remotest antiquity. — II, 11

That some have been put to death for divulging the mysteries is undoubtedly true, although as regards the *higher* mysteries, the phrase "put to death" could have had a secret meaning. There is no doubt that the hierophants of all the old religions and

mysteries intentionally "swaddled up" the religious texts in coils of insuperable difficulty, the keys to which were held only by the high Initiates. As one modern writer put it:

The initiate received the keys which unlocked the elaborate system of mythology. The Mysteries explained not only the spiritual factors behind material action, but the universal principles behind the theogones of the exoteric religions. — Nilsson, *Greek Popular Religion*

In the Mysteries it was required that all candidates should be admitted first to the Lesser Mysteries. It may be said that these "initiates" were to be found "a dime a dozen," as anyone of good moral character, free from crime, was eligible for admittance. After a process of fasting and other purifications, such as abstaining from flesh foods, they were called *mystae*, or "initiates." The dramatic spectacles of this degree were designed to signify occultly the condition of the unpurified soul invested with an earthly body, in which state it was considered to die, as far as a soul *could* die, and that upon the death of the body it would experience a death still more permanent. Thus, the secrets of the Underworld, so prominent in all the Mysteries, had a twofold meaning. For the initiates of the first degree only, the *Earth* was the Underworld into which unembodied souls were born from a previous state and locality of bliss. Plato considered the body as "the sepulcher of the soul," and Empedocles truly says:

The aspect changing with destruction dread,
She makes the *living* pass into the dead.

After a year's probation, the initiate could enter a degree in which he learned the secret meaning of the rites he had previously beheld. There is not space to go into a description of these rites. The basis of part of them was the old agrarian cult dealing with

the myth of Ceres or Demeter, and Persephone. These rites have been discussed repeatedly by modern scholars, and numerous hypotheses have been put forward, some intelligent, others fantastic, none of them certain or even probable. The symbolism is fairly well known from vase-paintings, some of the formulae, for instance, having come down to us in the Egyptian *Book of the Dead*.

One such formula has been preserved by Clement of Alexandria, as follows:

I have fasted: I have drunk of the *kykeon*: I have taken from the chest, and having worked, have laid down in the basket, and from the basket into the chest. — *Protrepticus*, ch. ii

Theon of Smyrna, in his *Mathematica*, divides the mysteries into five parts. The first three we may pass over, except to say that the last act of the Lesser Mysteries was the *muesis*, denoting the separating or veiling" of the initiate from the former exoteric life. The fourth is the binding of the head and the fixing of the crowns." The fifth, and most awful is, "*friendship and interior communion with God.*" Christian authors have denied the pretensions of the "pagans" to such communion with God, affirming it reserved for Christian saints only. The candidate by a system of gradual education, purification both physical and moral, and religious experience, finally approached the supreme test (which few could stand) through which he was united in actuality with God, or his own Higher Self. To the higher degrees only a select number obtained admission, those attaining the highest degree, or *epopteia*, being *very* few indeed. The Hierophant, or highest, was bound to celibacy and expected to consecrate his entire life to his sacred office.

Those who attained the degree of *epopteia* were the "perfect" or

"twice-born." The apostle Paul proclaimed himself to be such when he said:

I knew such a man, (whether in the body, or out of the body, I cannot tell God knoweth,) How that he was caught up into paradise, and heard unspeakable words, which it is not lawful for a man to utter. — 2 *Corinthians*, xii, 3, 4

H. P. Blavatsky says Paul was the only one of the Apostles who was initiated. There is little doubt that Paul referred to himself, being prevented from speaking openly by his oath of secrecy. In the same *Gospel* he says "we speak wisdom among them that are perfect," i.e. initiated. Porphyry says that Plotinus had this ecstatic experience six times during his life, and he himself three times. But this experience could not be had without long training, great self-control, and great purity of life. Ammonius Saccas says:

The Egyptian priests used to tell me that a single touch with the wing of their holy bird could charm the crocodile into torpor, it is not thus speedily that the pinions of your soul will have power to still the untamed body. The creature will yield only to watchful, strenuous constancy of habit. Purify your soul from all undue hope and fear about earthly things, mortify the body, deny self, and the inner eye will begin to exercise its clear and solemn vision.

In the Scriptures it is written: "He that conquereth himself is greater than he who taketh a city."

From what has been said, it may be inferred that the most sublime part of the Mysteries, the *epopteia*, or final revelation, consisted in beholding the Inner God (or the Gods also) invested in a resplendent light. And this God, under whatever name he may have been known, was considered as being the Sun. Pythagoras regarded the Sun as the highest revelation of the

Supreme Being. We are reminded of that wonderful chapter in the *Bhagavad Gita*, "Vision of the Divine Form as including all Forms" —

The mighty Lord of mysterious power, showed to the son of Pritha his supreme form, . . . the glory and amazing splendor of this mighty Being may be likened to the radiance shed by a thousand suns rising together into the heavens. The son of Pandu then beheld within the body of the God of gods the whole universe in all its vast variety. — ch. xi

Of this ecstatic state which was the reward of those initiates who were pure and strong enough to stand this final unveiling and thus become absorbed into their divine Parent, Plato said:

In consequence of this divine *initiation*, we became *spectators* of entire, simple, immovable, and *blessed visions*, resident in a pure light, and were ourselves pure and immaculate, being liberated from this surrounding vestment, which we denominate body, and to which we are now bound like an oyster to its shell. Being *initiated* in those *Mysteries*, which it is lawful to call the most blessed of all *Mysteries*, . . . we were freed from the molestations of evil which otherwise await us in a future period of time. — *Phaedrus*, 64, Taylor trans.

The reference to being "freed, etc." clearly indicates that the initiate of the highest degree had some, at least, "of his sins washed away," i.e. he was newly born, or twice-born, *dwija*, as the Brahmans say. This was what Jesus meant when he said: "Verily, verily, I say unto thee, Except a man *be born again*, he cannot see the kingdom of God." (*John*, iii, 3)

In his *Commentary on the Republic of Plato*, Proclus makes this observation:

In all the initiations and Mysteries, the gods exhibit many forms of themselves, and appear in a variety of shapes, and sometimes, indeed, a formless light of themselves is held forth to the view, sometimes this light is according to a human form, and sometimes it proceeds into a different shape — p 380

From this, it may be inferred that the *epopteia*, or final revealing, was symbolic of those transporting visions which the virtuous soul will constantly enjoy in a future state, and of which it is able to gain temporary glimpses even while yet connected with the cumbersome body. As explained by da Costa, in *Dionysian Artifices*:

The initiation rites were always directed towards restoring the rulership of the higher nature over the lower self. Once the complete union of the lower and higher is achieved in the Mysteries, it is no longer possible for materiality to take away the reason of the soul. — xlvi

As mentioned earlier, the Underworld or Hades had an additional significance in the Greater Mysteries over what it had in the Lesser Mysteries. The more important secrets of the *epopteia* revolved around what was called the "Descent into the Underworld" — which is known to everyone, but without being understood by any but the choice few. But very broad hints have been given out by some who had, without doubt, made the journey. We may mention Pindar, Homer, Pythagoras, Plutarch, Plotinus, Plato and Vergil, among the many whose writings show that they had the knowledge; but the one who has perhaps spoken to us in the clearest language is Vergil. The whole of the sixth book of the *Aeneid* deals with this subject:

Facilis descensus Averno — Easy is the descent to Avernus; night and day the door of black Pluto stands open, but to

retrace thy step, this is the labor, this the toil. A few, whom glowing merit has raised to the heavens, have been able to do it. — vi, 126

From this we get an idea of the extreme peril encountered by one who undertook to pass the final initiation. In moral purity he must indeed be like Sir Galahad, "whose strength was as the strength of ten. . . ."

Said Iamblichus:

The soul has a twofold life, a lower and a higher. In sleep the soul is freed from the body and enters as one emancipated on its divine life. The nobler part of the soul is thus united to its higher nature and becomes a participant in the wisdom and foreknowledge of the gods. The nighttime of the body is the daytime of the soul.

Thus the experiences of the soul of the initiated in the Underworld are the same as those it has when the body is sleeping, and after the body is dead. There is good reason to believe, from the descriptions of ancient writers, that when the highest initiation was taken in the Mysteries, the body of the Initiate remained in a death-like trance of longer or shorter duration, while the soul underwent its journey in the Underworld and other places. And that the soul, upon returning to the body, impressed upon the brain a recollection of what it had passed through. There is a famous passage in an ancient Egyptian text relating to the worship of Osiris which speaks of the loyal votary of the God after death:

As truly as Osiris lives shall *he* live;
as truly as Osiris is not dead shall *he* not die;
as truly as Osiris is not annihilated shall *he* not be annihilated.

The one who has passed the final initiation is to share eternally in the divine life; indeed, he does already share it. "Blessed is he who, having seen those *common concerns* in the underworld, knows both the end of life, and its divine origin from Jupiter," said Pindar (quoted by Clemens Alexandrinus in his *Stromata*, bk. iii). And again, as the Homeric *Hymn to Demeter* runs:

Happy is he who has seen this. Who has taken part in the initiations will not have the same lot after death in the gloomy darkness.

Sophocles repeats the same idea in these words:

Those who have seen the Mysteries are thrice happy when they go to the Underworld.

From this we are to understand that after death *all* go to the Underworld and that those who have taken a high initiation are much happier, because freer, than others. Of these others, much has been said by the initiated poets and philosophers. In the *Phaedo* Plato reminds us: "Those who instituted the Mysteries appear to have intimated that whosoever shall arrive in Hades unpurified shall lie in mire: but he who arrives there pure and initiated shall dwell with the gods."

As he who in this life pursued realities, would, after death, enjoy the highest truth, so he who pursued deceptions would hereafter be tormented with fallacies and delusions in the extreme: as the one would be delighted with true objects of enjoyment, so the other would be tormented with delusive semblances of reality. — Ficinus: *De Immortal. Anim.*, book xviii

This conviction of a happier lot in the Underworld which filled the minds of the initiated sprang from ancient roots, the worldwide idea that the other life is a repetition of this one. Four

centuries before Jesus, in the Phrygian Mysteries, the worshipers sang:

"Take courage, ye initiated, because the god is saved; to you also will come salvation from your troubles."

In ancient times each degree of initiation was considered to be a new birth; in the highest the initiate became truly reborn, his past railings, so far as their results were concerned, becoming to a large extent neutralized. "Except a man be born again, he cannot see the kingdom of God."

Although the secrets of the Eleusinian and other mysteries were supposed to be kept as carefully as are those of *true* Freemasonry today, Christian writers like Origen, Clement, and Arnobius, knew something about them. Only those who gave no heed to the duty of silence have given information concerning the secret rites.

Quoting again from Nilsson:

Their testimony is subject to the gravest doubts In the first place, what did *they* know? Had they any first hand knowledge? Had they themselves been initiated? Clement lived in Alexandria, the others in Asia or Africa. It is much more probable that what they related was only hearsay. Ecclesiastical writers did not trouble themselves much about truth and about such questions of fact if only they could succeed in impressing upon their hearers or readers, a sense of the contemptibility of the Mysteries. — *Greek Popular Religion*

Some of the noblest passages referring to the Mysteries were written by the great poets. Pindar, Homer, and Vergil have been mentioned, but many more bear the unmistakable signs of initiation, of whom may be included Aeschylus, Sophocles, and Euripedes. In a Greek Anthology we find the following from the

pen of Krinagoras:

Go thou to Attica,
Fail not to see
Those great nights of Demeter,
Mystical, holy!
There thou shalt win thee a mind
That is carefree
Even while living
And when thou joinest
The major assembly
Light shalt thy heart be.
With hallowed hands,
With mind and tongue both pure and true,
Come, enter in, not cleansed by bath
But washed white in spirit,
For from wickedness the ocean wide
With all its floods can not the stain
Wash clean away.

From Euripedes:

Pass ye, and cleanse with the pure spray-rain
Your bodies, or ever you enter the fane
Set a watch on the door of your lips, be there
Nothing but good in the secret word
That ye murmur to them whose hearts be stirred
To seek to the shrine,
That they seek not in vain. — *Ion*, 96-101

To quote again from Krinagoras:

Come pure in heart, and touch the lustral wave
One drop sufficeth for the *sinless* mortal,
All else, e'en ocean's billows cannot lave

The mystic "Pagan" eucharist of the fifth century b.c. is thus described by Euripedes in his *Bacchae*:

In the God's high banquet, when
Gleams the grape-blood flashed to heaven
To all that liveth His wine he giveth,
Griefless, immaculate.
Yea, being God, the blood of Him is set
Before the Gods in sacrifice, that we
For his sake may be blest.
Then in us verily dwells
The God himself, and speaks the things to be,
The Lord of Many Voices,
Him of mortal mother born,
Him in whom man's heart rejoices,
First in Heaven's sovereignty.

A most interesting Orphic Confession of Faith, dating from the fifth century b.c, has been preserved from the lost "Cretan" of Euripedes:

In one pure stream
My days have run, the servant I,
Initiate of Idean Jove, I rove
Where midnight Zagreus roves,
I have endured his thunder-cry,
Fulfilled his red and bleeding feasts,
I am set free, and named by name
A Bakchos of the Mailed Priests.
Rob'd in pure white I have borne me clean
From man's low birth and confined clay,
And exiled from my life away
Touch of all meat where life hath been.

Further proof of the existence of the Eucharist in the Mysteries is

given in the explicit statements of the early Christian Fathers, in Justin Martyr (*Apologies*, c. Ivi), and in Tertullian (*De Praes.* cxi). But it is Apuleius who has given the most unreserved description of initiation in his *Metamorphoses*, from which we extract a brief selection:

The gates of the realms beneath, and the guardianship of life, are placed in the bands of the Goddess [Isis], and the initiation into her mysteries is celebrated as bearing a close resemblance to a voluntary death, with a precarious chance of recovery. — Book xi, 237

Hear, therefore, but believe what is the truth. I approached the confines of death, and having trod on the threshold of Proserpine, I returned therefrom being borne through all the elements. At midnight I saw the sun shining with its brilliant light; and I approached the presence of the Gods beneath, and the Gods of heaven, and stood near, and worshipped them. — Book xi, 239

Thomas Taylor records that Apuleius was initiated into the Mysteries of Isis at Corinth. He could never have written the above had it not been so, but he says later on that he had taken the initiation of Isis only and not those of the great God Osiris.

We have dealt almost exclusively with the Mysteries of Eleusis, mentioning but the diffusion of others in other lands and times. There is plenty of evidence, however, that they existed as widely spread in various parts, including ancient America, North and South. The North American Indians had them, as well as the Incas, Toltecs and Mayas. In the *Popol Vuh*, the saga of the Quiche Indians of Guatemala, we find a picture of the initiation-tests of two hero-gods on entrance to the native Hades.

There is confirmation of Initiation throughout the Christian

scriptures. The Book of *Job* is a masterly allegory of the initiation-trials. We have it also in the words of Jesus that the initiation-teachings were given to the multitudes in symbol and parable, and that the "chosen ones" alone had the keys. In *three* of the four Gospels we find almost these identical words:

It is given unto you to know the mysteries of the kingdom of heaven, but to them it is not given. . . . Therefore speak I to them in parables: because they seeing see not; and hearing they hear not, neither do they understand. —
Matthew, xiii, 11, 13

We cannot close this brief exposition of Initiation and the Mysteries in a better way than to quote from Thomas Taylor. Neo-Platonism was the direct successor (exoterically) of the Mysteries, after they were closed by Justinian, and Thomas Taylor of all modern scholars has most justly appreciated the *inner spirit* of the Mysteries. In his *Eleusinian and Bacchic Mysteries* he writes:

As to the philosophy, by whose assistance the Mysteries are developed, it is coeval with the universe itself; and, however its continuity may be broken by opposing systems, it will make its appearance at different periods of time, as long as the sun himself shall continue to illuminate the world. It has, indeed, and may hereafter, be violently assaulted by delusive opinions; but the opposition will be just as imbecile as that of the waves of the sea against a temple built on a rock, which majestically pours them back — "broken and vanquished, foaming to the main."

THE SHADOW OF A GHOST — *Allan J. Stover*

The following amusing incident was related by a civil engineer X of my acquaintance. Once, while on vacation in the Appalachians, he was studying the opposite slope through binoculars. To his surprise he noticed a geologist of the party slowly rolling a large glacial boulder downhill. After lowering the rock well over a hundred feet, he left the spot.

At camp that evening, the engineer asked his companion what in the world he was doing and received this astonishing reply:

"Oh! I was getting the rock down where it belonged. You see I found on checking on its position, that I had placed it too low in my report. Someone might discover the mistake, unless I changed its position."

There is still a lot of "rock rolling" going on, for with the swift movement of the present cycle, two developments are coming to the fore. First, there is a far greater measure of truth unfolding for those who can accept it. Second, there is a sharp reaction on the part of those who cannot adjust themselves to the ideology of the present era, and consequently fall back upon the religious and scientific dogma of their childhood.

Strange as it may seem, the average person is apt to resent anything which requires the readjusting of his ideas or exposes the pettiness of long established opinion. In all ages, the revelation of truth too often stirs resentment in the human heart, steeped as it is in the thoughts and dogmas of other men.

A good man who does not worship as you do, a saint outside the church, proof of a round world at a time it is popularly believed to be flat, or the stunning revelation of the Grand Canyon —

things such as these bring a conflict in the mind which, baffled, turns outward to deny or destroy the evidence if it can; and like the shadow of a ghost this refusal of truth clouds the mind of future generations long after the original argument is forgotten.

Let us go back to the middle of the seventeenth century. At this time three men, Colonel Wilford of England, Archbishop Seep of Munich, and Archbishop Ussher of Ireland were attempting to establish the age of the world and the date of Creation. While examining some old manuscripts they are said to have discovered the figures 4321 at the beginning of a number of them. Not knowing the significance of these figures in the racial Yugas of India and Babylonia they first attempted to interpret them in terms of solar years but did not succeed in making them fit the Biblical records. They next decided that the figures referred to lunar years and thought, by changing them to solar years, that they could obtain the exact time from the first day of creation to the birth of Christ.

Archbishop Ussher then adjusted the patriarchal and prophetic fragments to fit this chronology and in 1664 a.d. published his controversial "Annales Veritas et Novi Testamenti," giving his proposed chronology for both the Old and New Testaments; and setting the day of creation as: October 25, 4004 B.C. at 9:00 o'clock in the morning.

It is not known by whose authority these dates were placed on the margins of the Authorized Version of the Bible. The entire system proposed by Archbishop Ussher was long ago proven false, but the greater number of Bibles printed today still carry these misleading marginal notes. These notes which were never part of the Bible itself have, even when least suspected, obscured the vision of both religion and science.

Actually the figures 4 3 21, are the respective time periods of the

four racial Yugas. Of these, Krita-Yuga, the first and longest, contains four parts; the Treta-Yuga three parts; the Dwapara-Yuga two parts, and lastly the Kali-Yuga one part. The whole cycle amounts to 4,320,000 solar years, which is the average period of a Root Race of which there are seven in each Round, ours being the fifth.

These four Yugas were known to the Greeks and Romans as the Age of Gold, the Age of Silver, the Age of Bronze and the Age of Iron.

All racial cycles divide in these same proportions, for 4 3 2 1 is one of the key numbers of nature and was known to the Chaldean and Babylonian seers as well as to those of India.

According to this ancient tradition the solar system has already existed in its present imbodiment 155,520,000,000, of our years; and the earth itself in this fourth Round or cycle of activity is said to be 320,000,000 years from the beginning of sedimentation. It would be strange if the learned Hebrew students of the Qabalah were not familiar with this chronology and did not understand the Chaldean and Biblical creation myths in their esoteric sense. After all the Pentateuch was their own book.

Many centuries have passed since the darkness of the Middle Ages. A scientific era has succeeded the religious and has in its turn become philosophical. The dogma of the past, in its literalness has been forgotten; but its spirit, its ghost, still lingers as a strange reluctance on the part of many to accept the age of the earth, the immensity of the starry universe or the antiquity of man.

Perhaps worst of all is that fatal psychosis of the race which would deny those of another color equal rights in the brotherhood of man. These our inheritance from the past, united

with greed and unthinking waste of natural resources, are bringing the West to the brink of an abyss.

Many have wondered at the strange reaction the Grand Canyon produces upon tourists, especially those whose thoughts are clouded with dogma of a limiting nature. For others the first view of the Canyon is a soul-shaking experience, a revelation of reality. With some the Canyon can scarcely be said to exist for to them it is a narrow and shallow ditch; these often declare, their speech bristling with Biblical texts, that it is a delusion created to mislead men, a work of the devil. Yes, there are a goodly sprinkling of the latter.

Many of the remarks heard at the Canyon would scarcely be considered serious were it not for the near tragic cases of tourists wandering down the trail unattended. And their obvious inability to comprehend what lies before their eyes! How, for instance, are you going to answer the question of a well-dressed woman who asked, "Please tell me, does the Grand Canyon fill with snow in winter?"

It might be a good idea, if one were to check occasionally with nature and stand alone for a moment of self analysis — in silence, before the sea or the starry sky.
