NATURE STUDIES: VI — *H. Percy Leonard*

The Penal Colony: A Swiss Experiment

An interesting experiment has been carried on during the last forty years at Witzil on the borders of Lake Neuchatel. Two thousand acres of land, mostly peat soil, were purchased and were drained by prison-labor, and vast quantities of vegetables have been produced. Asparagus has been grown extensively in a sandy tract by the lake, and fertilized by the street-sweepings of Berne; astonishing results have been obtained.

The penal colony is not only self-supporting, but the initial cost of rendering the soil fit for cultivation has been fully covered, the necessary workshops and farm buildings have been erected, and rent, taxes, and interest on loans have been regularly paid to the State. Besides all this, enough money has been earned to provide wages for the workers. During the year 1927 about \$6,000 were paid out in this way.

Everything is done to help the men acquire fresh knowledge and to train their abilities, and in return many of them have placed their experience and skill at the disposal of the institution. To this hearty co-operation, the success of the experiment is largely due.

Released prisoners, unable to find work elsewhere, often return and are allowed to work at the same terms as any other free laborers. The director says that many men do very well if their lives are mapped out for them, but seem to be unable to fight the battle of life alone.

A royal commission from England paid a visit to Witzil twenty years ago and made a very favorable report, although the system has not as yet been adopted in that country. But it is evident that

the good impression has been germinating, for a prominent statesman has recently declared that, if he had his way, he would make a clean sweep of the existing English prison-system and establish in its place penal colonies after the Swiss model.

The following suggestions made by a noted Theosophical Leader, many years ago, are of interest in this connexion:

In the institution I would build there should be neither cells nor prison-bars. In the beginning, so as to be reasonable and meet the public needs, and not encourage in the wrong direction those who have fallen too far to realize their responsibility and feel the sense of honor, I should have a wall built somewhere. But it would be so far away that you could hardly see it. I would give them room to breathe; I would bring them into healing contact with Nature; they should have the curative influence of gardens to work in, and flowers.

I would give them helpful discipline, and not indulgence; I would give them strict and wholesome discipline, but not the sense of degrading durance. There should be every kind of shop in which to practice their trades; I would help each one of them to feel his own energy and live his own life; and I would educate them.

ESOTERIC MAN — *Sven Eek*

Projected against the panoramic background of everyday life, the stream of human beings floats along in its thousand gradations of the good, the bad, and the indifferent. As we watch, the fleeting glimpse vanishes; the vision is replaced by another, and another, in quick-changing succession. Occasionally our attention is irresistibly drawn to a face or a scene. Memory is prodding us, and we stretch out a hand in recognition of common experiences once lived through, or perhaps we instinctively recoil in antipathy. A moral might be drawn from this.

Since we must reap what we sow, we shall meet again and again those for whom we have felt deep love and hatred; they are our helpers and our obstructors. They are always our teachers. But don't we all prefer good-tempered and friendly teachers? Some may claim the opposite — and they are welcome to their pretended choice. But in any case, the people with whom we are now living will be with us again in future lives, although our respective positions may be reversed. Why not be far-sighted now — make friends, not enemies, for the future?

Animals act by the same instinct as man, but theirs is more unerring, more swift in its applications. They recognise friends and enemies by the stealthy tread approaching from afar: keen eyes, sharp ears, an uncanny power of smell, sift sound, sights, and smells and classify them as inimical or protective. When our intuition becomes as strong as the animal instinct, humanity will have taken a long stride. Man, as we now see him, is more often than not a curious mixture of the immortal Don Quixote and his Sancho Panza. But through the Don's vainglory and weaknesses there penetrates an odor of sanctity. He is on a journey which will

carry him far beyond the windmills.

Theosophy has something to say about this. It claims that behind the fantastic masks one often meets, there is a real man yearning for a nobler expression of life; the antics performed with such seriousness on the stage of life yet have a purpose in the progress of the world. In this very striving for happiness, so seemingly futile, may it not be that the hates and rivalries of men can be burnt away from their hearts, and that the devils' mask of the gory carnival of national wars and private feuds can be cast off to let us get a glimpse of the God who patiently is laying the foundations of a nobler world?

Is Theosophy justified in drawing an analogy between external man as we know him, and nations, creeds, and even the worlds of stars and cosmic galaxies? Whenever you have a chance, put these questions to your best friends. It might awaken dormant memories buried in the intuition of one who may have marched alongside of you in lives forgotten. Your karman has given you this opportunity of strengthening the little band of mystic students. The great religions of today can look back on a history of conquest and glory; they have clashed with weaker ones and emerged victorious by swords of steel, or by persuasion; but behind the scenes we might picture to ourselves the rather sad-faced gods in whose behalf the battle has been waged. Suppose they were to send their recognised messengers, Buddha, Jesus, Lao-Tse, Confucius, and others, to a conclave in order to effect an amicable settlement. Do you think such a conference would break up?

No, not very likely! Could you imagine them going back on their most solemn precepts: "Do unto one another what you want done to yourselves"; or, "Don't do to one another what you don't want done to yourselves."? Their various philosophies of life are identic

at the core, but garbed in raiments appropriate to the people they primarily came to teach. And perhaps they all belonged to the same Council of Peace who from time to time send out one of their number to set things aright after long periods of chaos and darkness.

The intuitive student might say that there is in the hearts of all of us one of the same Brotherhood whom we would venture to call "Esoteric Man."

The Theosophical Forum

CIVILIZATION BUILDED UPON THOUGHT — *G. de Purucker*

Thought is the motive power of men. It governs even emotion and can control it, and although sometimes thought is evoked by feeling, I think that on the higher planes they are one. The world we live in is a world of men, a world of thinkers and feelers; and if the world is bad, it is because men's thoughts and feelings have made it so. If human conditions are inharmonious, even diabolic at times, when brute force takes the place of reason and justice, it is because men's thoughts have made it so.

Ideas control actions. There you have the cause of the unrest in the world we live in, and its cure. If a man wants to reform himself, he does so by first of all changing his thought; he begins by feeling differently. There is no other way. It is the only lasting way, for it means a change of character. If you want to prevent a quarrel you have to begin your work before the quarrel threatens. If you try to interfere in a quarrel between two men, you are apt to hurt yourself, and you will have a quarrel of three. It is no way to stop a quarrel by going to the quarrelers and preaching. By so doing you have not touched these men where they are susceptible, you have not changed them, you have not appealed to their thought or their feelings. You have been trying mere palliatives.

Make them see that they are acting a bit worse than the beasts are when the beasts fight, because the beasts have not our reason and common sense. Make your appeal with ideas. Awaken thoughts in their minds. Put into their minds a new sequence of thought and feeling. Then they will begin to realize that you cannot settle a quarrel by brute force, for that simply means that the chap who has got the worst of it is going to bide his time to see if he can best

the other fellow by brute force. They will begin to see that you cannot stop wars by making wars to stop wars. It never has worked and never will, because it is an entirely wrong psychology, as well as foolish.

Do you know that all civilization is builded upon thought? And that if you want to change a civilization, you must change accepted thought, give a new thought. What is an invention? A thought. What is literature? Thought. What are philosophy, religion, science? Thought. What is the social structure under which we live? Thought. Every movement in the world today is builded upon thought: social, political, philosophic, religious, scientific, what not. Nine out of ten of these movements began in the mind of one man, and spread. You see in the pages of history the tremendous cataclysmic effects of thought. What was the Great War? Not only the result of thought, but thought itself. Men fighting because of ideas — thoughts. To avoid another war we must begin before the next one happens. We must begin by starting a new current of thought in the world.

These truths are so simple they pass over our heads and we do not take them in and digest them. It is ideas that shake the world. It is ideas that make the world. It is ideas that unmake men and the world of men. Consult the annals of history. Look at the amazing results that spring from movements which begin perhaps with a handful of earnest people. For years they may work and preach and labor apparently without result. Suddenly, for some remarkable reason, the idea catches and spreads like wild-fire. Sometimes ideas take hold of men in the most amazing way. What were the Crusades, when men left home and hearth and fireside and everything they held dear to go to fight the paynim, in a distant foreign and unknown land? These tens of thousands of men collected from all over Europe *for an idea*. Still more remarkable: what was this amazing and thought-arresting

idea which even caught the thoughts and imaginations of little children? Have you ever heard of the Children's Crusade? Out of Germany and what is now Belgium and Holland and France and Switzerland, down into the south of France and into Italy, suddenly children began to arise, boys and girls from toddling ones up to those of thirteen or fourteen years — they took to the roads and went by the scores of thousands till the highways were black with their marching feet. Hundreds of miles they went, dying by thousands on the way, and horribly treated by human monsters who batted on them. Nobody knows how this thought arose. Suddenly the children in the various countries took it into their heads: "We will go fight, we will go save the Holy Sepulcher." Fancy children talking like that! They got it from their parents, of course; but look at the psychology — a psychology that swept every home, took one or more children from every fireside. The mothers and fathers could not stop them. They would steal out by night. They would go by byways and devious pathways to the great highways, those bands of helpless children going south, going south! All for an idea, a thought!

What was the idea of the wonderful tarantella which is best described by the historians of Spain and Italy — Italy, perhaps particularly? Suddenly for no understandable reason, grown men and women got the idea that they must dance; and they began to dance, and danced on and on until they fell down unconscious, exhausted. They could not stop themselves from singing and dancing, singly and together — whole countrysides, whole districts of them. A psychology, a thought, an idea.

It is just such kind of insane psychology that rules the world of human thought today. Men and women have got the idea that it is impossible to prevent a second Great War. They really believe it. And that is one of the reasons why it will happen unless sanity resumes its sway over our minds. What makes and carries on any

war? Thought. What stops any war? Thought: a changing of the thoughts of men; for by changing their thoughts you change their hearts, you change their lives and therefore their civilizations. If a war comes, it is because men and women have brought it about by their thinking. Their thinking arouses their feeling. Their feeling arouses their jealousy and fear. Evil thought will be followed by similar thought. You cannot extinguish fire by fire. You cannot stop war by war. This is as simple as ABC. These are thoughts which fly unnoticed over our heads because we are so accustomed to them, and yet they are the secret of all good and all evil. A man's life is changed sublimely by his thoughts; so too can he go to "hell" or the gallows by his thinking. It is thought which makes the gentleman and the boor. It is thought which makes the courageous man or the coward. It is thought which produces forgiveness or carries on hate.

It was because these facts are such that the Theosophical Society was begun: to try to change the thoughts of men towards better and higher things; to arouse inspiring and benevolent ideas in the minds of individual men and women. Why don't we Theosophists go into the arena of politics? For the reason I have already pointed out. You cannot stop a fight between two by making it a fight of three. But you can stop men from acting worse than beasts by showing them that if they act in *this* way they will be acting like men, and if they act in *that* way they will be acting worse than beasts. If they act in *this* way they will be acting wisely and constructively; and if they act in *that* way they will be destroying each other.

Why don't we Theosophists all go out and take lunch-baskets around to the starving, and go to the bedsides of the people who are smitten with disease, and dying? Many of us do it and have done it. But our main work in life is to try to *do away* with poverty, rather than tinkering with the needs of the poor; and this

will gradually be accomplished by changing men's minds so that our civilization will be an enlightened one. That, among other noble objectives, is what we aspire towards. And there is no other work which is farther-reaching than that. It goes to the root of things, instead of only putting plaster and ointments on the surface of the festering wounds. And in a still higher field our work is to teach men and women what they as individuals have locked up within them: powers, capacities, faculties, which the average man and woman today does not suspect. Yet they are there; the titan intellects, the greatest men who have ever lived, have proved what the human mind is capable of; and every normal man has the same potencies within himself. It is part of the work of the Theosophical Society to re-arouse belief in these things, so that men will yearn to cultivate themselves from within outwards, to awaken what is within, and to become greater and grander. What a world we shall live in then! It is thought that will do it, and the feeling which follows upon thought. Then indeed will the Christ, crucified in us every day we live, ascend from the Crucifix, our own being, the body of each man, and enter into the brain of the man, and enlighten his life, and reform his conduct towards his fellows. Just that one thought alone, if you could get men to believe it and inwardly to know it, would bring about a universal "conversion," as the Christians say, a converting, a changing, a turning around, of our minds and hearts to the living Christ within, the living Buddha! It is as simple as that.

The Theosophical Forum

EDGAR ALLAN POE AS SEER — *H. T. Edge*

The object of this article is to show how many of the best-known teachings of Theosophy are to be found in Poe; an undertaking which seems to be by no means superfluous, judging by the prevalent ignorance of the fact. Misconceptions concerning Poe have prevented people from even reading his best writings; and even those who may have read them cannot be wholly exculpated from the charge of judging the value of ideas rather from preformed notions concerning their author than from an estimate of the intrinsic worth of the ideas.

To write a criticism of the man and his works in general is not our present purpose, and a few brief remarks must suffice as introduction to our main topic. To whomsoever the fault may be due, the fact remains that Poe was defamed by his literary executor, and that this false picture was accepted without examination by the writers in encyclopaedias and works on literature, who are not always so wise as their claims would suggest. Later, certain writers who possessed the ability to assess values by intrinsic merit, and to judge the author by his works rather than the other way round, succeeded in exposing the calumnies. No doubt some of these carried the reaction too far in the other direction; but at the present date it is easy for anyone to obtain a fair and balanced judgment concerning the life and character of Poe.

He was an over-sensitive and badly balanced temperament, a sad misfit in the world into which he was born. He suffered from misunderstanding, frustration, and continual poverty. Like a being deposited by a passing comet upon an unfamiliar globe, he lived in a realm strangely apart from ordinary human interests.

His intense and one-sided temperament carries him to great heights, and by inevitable reaction to morbid depths. His tales are all in this strange aloof world of his: he fails when he tries to introduce the usual components of a fictional narrative — human interest, dialog, etc. Some of these tales are beautiful, others morbid; all are chaste. His attempts at humor are distressing. It is in his prose writings rather than in his scanty verse that he justifies his title of poet.

Poe's almost invariable habit of writing in the first person has probably led some not very competent critics into the belief that many of his tales are autobiographical. But such a technique comes natural to a genius whose object is intensity and vividness. To write a tale in the third person is to give an outside view; the true artist thinks himself into that which he designs to portray, realizes the drama in his mind, identifies himself with the character. How much more vivid instead of "Mr. So-and-so came of a race noted for vigor of fancy, etc." — to write: "I am come of a race noted for vigor of fancy."

Psycho-analytic experts have dissected his character in a way that impresses you only so long as you fail to realize that any other complex character — yours or mine — could be dissected in precisely the same way and with the same results. We one and all have subtle motives which we suppress until we can find an opportunity of expressing them under some respectable disguise; Poe is a long way from being the only writer who has sought relief by expressing in imagination what he has failed to express in actual life.

There will be some who, having prejudged Poe in consequence of the misrepresentations, will either not read his best writings or will dismiss them as the lucid intervals of a dipsomaniac; which perhaps will seem to them a good reason for discounting

anything he has said, regardless of possible intrinsic merit. There will be also what we may call the supernaturalists, who regard manifestations of genius as due to some occult inspiration from a power behind the scenes, said power being in turn but the medium for a still higher power; and so on, so that the source continually recedes like the rainbow. This doctrine contravenes the idea that man contains within himself the potency of all knowledge, and this potency can be brought into actuality by his own efforts. Poe shows no sign of indebtedness to the Orient or to ancient Greece; and whether his intuitions were his own, or were breathed into him by somebody else, let each decide for himself.

In his prose poem *Eureka*, Poe shows the universe as proceeding from an original unity to multiplicity, and back from multiplicity to unity; the two tendencies being continually operative, their perpetual interaction causing the movement, the stress, the joy, or life; the close of a cycle of manifestation being marked by the final predominance of the unifying tendency. But this universe is only one of an infinite number of universes. These surely are Theosophical doctrines. Gravitation is the desire of separated particles to return to unity; they seek the center of spheres, not because these are centers, but because such is the shortest road towards unity. This general principle is worked out at great length and much detail in a consideration of the stellar universe and its mechanics. But it must not be thought that he leaves us with a dry mechanism or views the universe as a cold crystal. For him, all is life, down to the smallest atomic particle; the entire universe is sentient. In this he bears out his own contention that a *mere* mathematician cannot reason, but that a man must be a poet as well as a mathematician. See *The Purloined Letter*: "As poet *and* mathematician he would reason well; as mere mathematician he could not have reasoned at all." The following extract from the conclusion of *Eureka* will illustrate what we have

said:

There was an epoch in the Night of Time, when a still-existent Being existed — one of an absolutely infinite number of similar Beings that people the absolutely infinite domains of the absolutely infinite space. It was not and is not in the power of this Being — any more than it is in your own — to extend by actual increase, the joy of his Existence; but just as it *is* in your power to expand or to concentrate your pleasures (the absolute amount of happiness remaining always the same) so did and does a similar capability appertain to this Divine Being, who thus passes his Eternity in perpetual variation of Concentrated Self and almost Infinity Self-Diffusion. What you call the Universe is but his present expansive existence. He now feels his life through an infinity of imperfect pleasures — the partial and pain-intertangled pleasures of those inconceivably numerous things which you designate as his creatures, but which are really but infinite individualizations of Himself. All these creatures — *all* those which you term animate, as well as those to whom you deny life for no better reason than that you do not behold it in operation — all these creatures have, in a greater or less degree, a capacity for pleasure and for pain: — *but the general sum of their sensations is precisely that amount of Happiness which appertains by right to the Divine Being when concentrated within Himself.* These creatures are all, too, more or less conscious Intelligences; conscious, first, of a proper identity; conscious secondly, and by faint indeterminate glimpses, of an identity with the Divine Being of whom we speak — of an identity with God. Of the two classes of consciousness, fancy that the former will grow weaker, the latter stronger, during the long

succession of ages which must elapse before these myriads of individual Intelligences become blended — when the bright stars become blended — into One. Think that the sense of individual identity will be gradually merged in the general consciousness — that Man, for example, ceasing imperceptibly to feel himself Man, will at length attain that awfully triumphant epoch when he shall recognise his existence as that of Jehovah. In the meantime bear in mind that all is Life — Life — Life within Life — the less within the greater, and all within the *Spirit Divine*.

It is superfluous to point out the many ideas familiar to Theosophists which occur in this passage. In another passage he speaks of the "law of periodicity":

Are we not indeed more than justified in entertaining a belief — let us say rather in indulging a hope — that the processes we have here ventured to contemplate will be renewed forever, and forever, and forever; a novel Universe swelling into existence, and then subsiding into nothingness, at every throb of the Heart Divine?

We also note the familiar analogy between the Great Breath and the pulse of the heart. But as to this heart, he continues:

And now — this Heart Divine — what is it? *It is our own.*

This redeems the philosophy from all suspicion of being that of an external universe, a universe purely objective, omitting the subject, and therefore unreal and abstract. Such an external objective universe is familiar enough to scientific philosophy, and to many metaphysical systems. This cutting off of object from subject not only shuts out one half of reality but precludes a just comprehension of the remaining half.

Poe's criterion of truth is its beauty, its consistency, the conviction

which it brings to the mind, the response as of recognition which it evokes from the heart. He makes great fun of the inductive and deductive methods, which he dubs the method of creeping and the method of crawling. The pedants who rely on either of these methods do not care whether a truth is true; all they want to know is the method by which the alleged truth has been arrived at; if it has not been arrived at by their favorite method, it is not true. We are reminded of those earnest truth-seekers who are always demanding "proof — people who, to be logical, would have to deny their own existence. Here is a passage from *Mellonta Tauta* ('These things are of the future'):

Do you know that it is not more than a thousand years ago since the metaphysicians consented to relieve the people of the singular fancy that there existed but *two possible roads for the attainment of Truth!* Believe it if you can!

Then with his cumbrous humor he makes fun of the Aristotelians and the Baconians, who started from axioms and sensations respectively, or from noumena and phenomena. These notions operated to retard the progress of knowledge — which makes its advances almost invariably by intuitive bounds.

No man dared utter a truth for which he felt himself indebted to his *Soul* alone. It mattered not whether the truth was even *demonstrably* a truth, for the bullet-headed savants of the time regarded only *the road* by which he had attained it. They would not even *look* at the end. "Let us see the means," they cried, "the means!" If, upon investigation of the means, it was found to come under neither the category Aries (that is to say Ram) nor under the category Hog, why then the savants went no farther, but pronounced the "theorist" a fool, and would have nothing to do with him or his truth.

Is it not passing strange that, with their eternal prattling about *roads* to Truth, these bigoted people missed what we now so clearly perceive to be the great highway — that of Consistency? Does it not seem singular how they should have failed to deduce from the works of God the vital fact that a perfect consistency *must* be an absolute truth!

The problem of the origin of evil presents no difficulty to one who views the universe in this way; he sees that we have imposed sorrows upon ourselves for our own purposes. The passage quoted below also connects this thought with the idea of the unity of all souls in the one Oversoul:

No thinking being lives who, at some luminous point of his life of thought, has not felt himself lost amid the surges of futile efforts at understanding or believing that anything exists *greater than his own soul*. The utter impossibility of anyone's soul feeling itself inferior to another; the intense overwhelming dissatisfaction and rebellion at the thought: — these, with the omniprevalent aspirations at perfection are but the spiritual, coincident with the material, struggles towards the original Unity — are, to my mind at least, a species of proof far surpassing what Man terms demonstration, that no one soul is inferior to another — that nothing is, or can be, superior to any one soul — that each soul is, in part, its own God — its own Creator: — in a word, that God — the material *and* spiritual God — *now* exists solely in the diffused Matter and Spirit of the Universe; and that the regathering of this diffused Matter and Spirit will be but the reconstitution of the *purely* Spiritual and Individual God.

In this view, and in this view alone, we comprehend the riddles of Divine Injustice — or Inexorable Fate. In this

view alone the existence of Evil becomes intelligible; but in this view it becomes more — it becomes endurable. Our souls no longer rebel at a *Sorrow* which we ourselves have imposed upon ourselves, in furtherance of our own purposes — with a view — if even with a futile view — to the extension of our own *Joy*.

In a piece called *The Power of Words* our poet illustrates views familiar to Theosophists as to the power of vibration, especially of the spoken word. It is in the form of a colloquy between two beings liberated from earth-life, and we quote the concluding passage:

Agathos. — And while I thus spoke, did there not cross your mind some thought of the *physical power of words*? Is not every word an impulse on the air?

Oinos. — But why, *Agathos*, do you weep — and why, oh why do your wings droop as we hover above this fair star — • which is the greenest and yet most terrible of all we have encountered in our flight? Its brilliant flowers look like a fairy dream — but its fierce volcanoes like the passions of a turbulent heart.

Agathos. — They *are!* — they *are!* This wild star — it is now three centuries since, with clasped hands and with streaming eyes, at the feet of my beloved — I spoke it — with a few passionate sentences — into birth. Its brilliant flowers *are* the dearest of all unfulfilled dreams, and its raging volcanoes *are* the passions of the most turbulent and unhallowed of hearts.

The universal sentience of Nature is expressed in *The Island of the Fay*, from which we quote the following:

I love to regard the dark valleys, and the gray rocks, and

the waters that silently smile, and the forests that sigh in uneasy slumbers, and the proud watchful mountains that look down upon all, — I love to regard these as themselves but the colossal members of one vast animate and sentient whole — a whole whose form (that of the sphere) is the most perfect and most inclusive of all; whose path is among associate planets; whose meek handmaiden is the moon, whose mediate sovereign is the sun; whose life is eternity; whose thought is that of a God; whose enjoyment is knowledge; whose destinies are lost in immensity; whose cognizance of ourselves is akin with our own cognizance of the animalcula which infest the brain — a being which we in consequence regard as purely inanimate and material, much in the same manner as these animalcula must regard us.

As to the plurality of universes we find this in *Eureka*:

Have we any right to infer, let us rather say to imagine — an interminable succession of the "clusters of clusters," or of "Universes" more or less similar? . . . I myself feel impelled to *fancy* — without daring to call it more — that there *does* exist a limitless succession of Universes, more or less similar to that of which we have cognizance — to that of which *alone* we shall ever have cognizance — at the very least until the return of our own particular Universe into Unity. // such clusters of clusters exist, however — *and they do* — it is abundantly clear that, having had no part in our origin, they have no portion in our laws. They neither attract us nor we them. Their material, their spirit, is not ours — is not that which obtains in any part of our Universe. They could not impress our senses or our souls. Among them and among us — considering all, for the moment, collectively — there are no influences in common.

Each exists, apart and independently, *in the bosom of its proper and particular God.*

A few miscellaneous quotations:

Each law of Nature is dependent at all points upon all other laws, and all are but consequences of one primary exercise of the Divine Volition. — *Eureka*

The development of Repulsion (Electricity) must have commenced, of course, with the very earliest particular efforts at Unity, and must have proceeded constantly in the ratio of Coalescence — that is to say, *in that of Condensation*, or, again, of Heterogeneity. Thus the two Principles Proper, *Attraction* and *Repulsion* — the Material and the Spiritual — accompany each other, in the strictest fellowship, forever. Thus, *the Body and the Soul walk hand in hand.* — *Ibid.*

Space and Duration are one. — *Ibid.*

The incomprehensible connection between each particular individual in the moon with some particular individual on the earth — a connection analogous with, and depending upon, that of the orbs of the planet and the satellite, and by means of which the lives and destinies of the inhabitants of the one are interwoven with the lives and destinies of the inhabitants of the other. — *Adventure of Hans Pfaal*

Discarding now the two equivalent terms, "gravitation" and "electricity," let us adopt the more definite expressions, "*attraction*" and "*repulsion.*" The former is the body; the latter the soul: the one is the material, the other the spiritual, principle of the Universe. *No other principles exist. All phenomena are referable to one, or to the other, or to both combined. So rigorously is this the case — so*

thoroughly demonstrable is it that attraction and repulsion are the *sole* properties through which we perceive the Universe — in other words, by which Matter is manifested to Mind — that, for all merely argumentative purposes, we are fully justified in assuming that matter *exists* only as attraction and repulsion — that attraction and repulsion *are* matter. — *Eureka*

Poe's theory of aesthetics — if this is the right word to use — is defined, among other places, in the following passage:

Dividing the world of mind into its three most immediately obvious distinctions, we have the Pure Intellect, Taste, and the Moral Sense. I place Taste in the middle because it is just this position which in the mind it occupies. It holds intimate relations with either extreme; but from the Moral Sense is separated by so faint a difference that Aristotle has not hesitated to place some of its operations among the virtues themselves. Nevertheless we find the *offices* of the trio marked with a sufficient distinction. Just as the Intellect concerns itself with Truth, so Taste informs us of the Beautiful, while the Moral Sense is regardful of Duty. Of this latter, while Conscience teaches the obligation, and Reason the expediency, Taste contents herself with displaying the charms, waging war upon Vice solely because of her deformity, her disproportion, her animosity to the fitting, to the appropriate, to the harmonious, in a word, to Beauty. — *The Poetic Principle*

And in the *Philosophy of Composition* he designates Beauty as the province of the poem, excluding didacticism of every sort. He sees Wordsworth's defects through a lens, ignoring the merits; he waxes enthusiastic over Coleridge; he would have had no use for Ruskin's doctrine. He is however here merely explaining his

theory of art and composition, not laying down a rigid and exclusive dogma; and elsewhere, as we have seen, he gives abundant proof of his sense of the universal unity. The nameless goal presents itself under various forms to various minds — Truth, Goodness, Beauty, Harmony, Love; but "by whatever name they worship Me, it is I alone who inspire them with constancy in that devotion."

On the subject of death, so interesting to Theosophists, we find various places where he enunciates views on which Theosophists would look with approval. The *Colloquy of Monos and Una* is a dialog between two souls in the after-life, in which one of them describes his experiences of death. Though his consciousness and power of thought gradually die down, there is never a time when he is not sufficiently aware of existence to be able to remember it afterwards. He is dimly aware of the laying-out, the weeping, even the lowering into the tomb, nay even the tomb itself. And what is remarkable here is the fact that, when all else of sensory or conscious experience has faded out, there still remains the sense of — Time. Time, he says, is not a mental abstraction, it is a self-existent reality. It consists in a ceaseless rhythmic pulsation, so exact and inerrant that, as he lies on the bed of death, he is enabled by its means to detect the errors in the ticking of a watch. Time, then, is the ultimate essence of consciousness, the irreducible substratum; and this is surely an idea which might be found in *The Secret Doctrine*. And from this condition the consciousness slowly rebuilds itself by gradations similar to those whereby it had dwindled down. The same idea is found in *The Pit and the Pendulum*:

I had swooned; but still will not say that all of consciousness was lost. What of it there remained I will not attempt to define, or even to describe; yet all was not lost. In the deepest slumber — no! In delirium — no! In a swoon

— no! In death — no! even in the grave all *is not* lost. Else there is no immortality for man.

Poe's ideas of cosmogenesis will bear comparison with any system short of that of the Esoteric Philosophy. He of course finds it necessary, as is inevitable, to *assume* something as a starting-point; and he uses the terms God and Godhead without necessarily implying thereby the dogmatic errors which cause Theosophists to fight shy of them. His starting-point is one of which nothing can be predicated except in negative terms; and he quotes a French writer to the effect that, to understand God, one must himself *be* God. Assuming that this Being created out of nothing that universe which was to be his own self-expression — what did he first create? Assuming the creator as Spirit, what he first created was "Matter in its utmost conceivable state of — what? — of *Simplicity*. . . ."

Oneness, then, is all that I predicate of the originally created Matter; but I propose to show that this *Oneness is a principle abundantly sufficient to account for the constitution, the existing phenomena and the plainly inevitable annihilation of that least the material Universe.*

This last remark is summed up elsewhere in the words: "In the Original Unity of the First Thing lies the Secondary Cause of All Things, with the Germ of their Inevitable Annihilation."

The proving of this proposition occupies much space and can hardly be even summarized here. Unity is a condition which, in its very nature, implies multiplicity; a profound thought, worth reflecting on.

As to pre-existence, we find the following:

Herein was I born. But it is mere idleness to say that I had not lived before — that the soul has no previous existence.

You deny it? — let us not argue the matter. Convinced myself, I seek not to convince. There is, however, a remembrance of aerial forms — of spiritual and meaning eyes — of sounds musical yet sad; a remembrance which will not be excluded; a memory like a shadow — vague, variable, indefinite, unsteady; and like a shadow, too, in the impossibility of my getting rid of it while the sunlight of my reason shall exist. In that chamber was I born. Thus awaking from the long night of what seemed, but was not, nonentity. . . . — *Berenice*

Here for the present we conclude a somewhat diffuse and sketchy survey, and one which might easily have been carried to greater length. The writer has found it a congenial task to do his little towards rehabilitating a slandered reputation; and he hopes that his Theosophical readers will find themselves able to share his satisfaction. Poe, in his Preface to *Eureka*, has the following:

What I here propound is true: — therefore it cannot die: — or if by any means it be now trodden down so that it die, it will "rise again to the Life Everlasting."

The Theosophical Forum

A TIMELY WARNING — *Lydia Ross*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

An able physician has issued a timely warning against what he calls "fooling with the gear" of the physical body. He puts the idea into current phrases of our mechanistic era, now that Every-man-and-his-Wife is driving a car, or flying, or doing something with machinery. He hopes that by talking a common language, perhaps he can make it understood what he is driving at. His warning is disinterested enough, since this tampering with the human mechanism is bringing to his office a number of new models of cases, so to say — patients who come to him for repairs which will put them again into good running order. In spite of his best skill in the line of human service, however, he finds that in these cases there is one or another of the various "parts" of the organism which cannot be made to work as well as it did before; that is, before the owner had put it more or less out of alignment with the whole organism which, by the way, was assembled originally by expert Mother Nature herself.

In short, even with the amazing equipment of the up-to-date doctor's office — it has its gadgets galore like every other place — somehow the chemical and mechanical resources cannot cope with certain vague disturbances between the inner man and his body. These maladjustments appear to be beyond the known laws of physics, and to consider them in terms of metaphysics is regarded as so unscientific that — well, it just isn't done. However, the Ancients who began with universals and worked down to particular cases, considered the man *and* his body. They

called man the microcosm of the macrocosm, studied him as a natural part of the whole, and diagnosed him accordingly. They knew the inside history of mankind's Rounds and Races on our home-planet. Hence they realized that Nature, from the beginning of her aeons of experience, always adopted the best way of doing things that were to be done, which is the natural way. At first, she embodied infant humanity in forms and in materials which were in keeping with the substance and the conditions of the young earth — just as today we provide for, and handle our babies as babies and not as seasoned adults.

Now Nature has made countless changes in the body, both of man and of the earth; but she has never changed her primeval policy of doing the most suitable thing for the time, the place, the creatures, and the conditions concerned. At present, she builds for human bodies marvelous vehicles or instruments for us to live in and use during a lifetime of evolutionary experience and growth. By comparison, the best automobiles with their intricate combinations and interactions of wood, metal, oil, gas, water, spark, etc., are nothing beside the complex adjustment of the primeval elements of fire, air, water, earth, and psycho-magnetic and spiritual currents of the organism in and through which the Real Self operates constantly, awake and asleep. The crowning marvel of it all is the *balance* of co-ordinated interaction of all the parts and functions and dynamic forces which are naturally keyed to health.

Every organ and tissue has its own vibratory rate which is mathematically adjusted to play in rhythmic time and in tune with the natural purpose of the whole. Nature carries on all the physiological operations through the Sympathetic Nervous System, and leaves the self-conscious man with his free will, to voluntarily act well or ill through his Cerebro-Spinal Nervous System. She knows more than he does about his wonderful body,

and she does her part to keep it going naturally in spite of his careless abuse or thoughtless neglect of it. She lets him hurt himself, life after life, sometimes mortally, until he grows consciously wise enough through experience and suffering to realize that Mother Nature "knows best." At long last, he works with her and obeys the natural law. Meantime, we are what we are!

The heart is a living motor that, with tiny rests between beats, is guaranteed to keep going for a lifetime. Its strokes are adjusted to the varying rates of the incoming and outgoing air in the lungs; and both heart and lungs act and react with the functional chemistry, the emotional and muscular activity, and the quantity and quality of the nourishing intake and the outgoing waste of the whole organism. Moreover, the body is unique as a mechanism provided with a brain for the operation of the thinking Self. The circulating currents of air, of blood, of lymph, of nervous ether, which, together, play their parts, are symbolic of more rapid, powerful, and subtil currents of thought, feeling, emotion, and will which put every organ and every cell into the circuit of psycho-magnetic vital forces. Here is where *ethics* appear in the original scheme of things — not as a matter of mere belief, but as a balance-wheel in the natural blueprint of a Universe of law and order. That is to say, when the body, mind, and desires are working together with unselfish motives, the net result is marked progress along the lines of health, intelligence, balanced efficiency, and inner peace.

On the other hand — for we are dual creatures — when the mind and the selfish motives of personal desires are driving the brain and the whole human mechanism, we try to run regardless of the natural law of health and wholeness. We trade on Mother Nature's longtime patience in ever trying to keep us on the right road; and we imagine, because we fool ourselves and each other

so often, that we can outwit her and "get by." In fact, the average man and woman will treat the body with a lawless disregard of the reciprocal action of its many elements whose combination is calculated to make us human masterpieces of "scientific efficiency." No one thinks of treating an automobile or other machine as heedlessly as we often treat our body and expect it to give good service. When we begin to break the law of balanced action, at first it is not so noticeable. But presently, as we drive along, day after day, breaking the physiological law and incurring disability or disaster, Nature appears in the picture as a sort of cosmic traffic-officer, and gives us a ticket to report to the doctor. Or, at the worst, she stops our driving for this life-term, and our abused human machine is sent to the crematorium — with flowers.

At present, Science is working to liberate and harness the almost limitless forces locked up in the invisible atom. The failure, so far, to release more potent forces for use generally, while the nations are so war-minded, is our good fortune. In speaking of the scientific research in the atomic world, Dr. de Purucker, in *The Esoteric Tradition*, I, 464, adds:

few indeed realize, that the atoms of even our physical frames embody and therefore enclose truly terrific forces, which, because they are so amazingly balanced in more or less stable equilibrium, hold these bodies of ours in coherent and enduring form and shape. . . . reflect over the incomprehensibly stupendous play of forces, and balancing of them, that occurs at every instant and all the time, incessantly . . . under the gripping and infallibly directing control of the inner and invisible monadic entity, as we call our spiritual Self. What a wonder it all is! It is this amazingly powerful inner and invisible monadic being, controlling these immense forces of the etheric

realms of Nature, which molds us both astrally and physically — to say nothing for the moment of the still more subtil forces working in the psychologic and spiritual fields of our being — and which thus make us what we are physically. . . .

The above words are rich in meaning, for they hold logical reasons for the physical, mental, and moral injuries that follow from tampering with the wondrous balance of the cosmic and terrestrial forces which are naturally and safely adjusted for reciprocal work in the body. Every man is an integral part, a living atom, in a vast organism of the Home Universe in which he lives, and moves, and has his being. Each human creature is potentially a god and a demon, with power of choice to grow more united to his Spiritual Self, or, to become self-consciously allied with his animal nature. Note, that it is man's own higher nature, his Spiritual Self within, which is ever working silently and safely *with the natural laws* prevailing everywhere for the universal good. His puny brain-mind and selfish desires and personal will cannot prevail against the onward course of cosmic currents. These laws, or, more accurately, these "habits of Nature," in balancing the dual forces of attraction and repulsion, keep the poised planets steadily moving on schedule time in their orbits. Moreover, the celestial beings who rule the planets — themselves having evolved through the human stage in past aeons — also live and work in harmony with the habits of Nature.

The warning against "fooling with the gear" applies especially to an increasing number of rash Occidentals who have been led to practise certain postures, exercises, etc., under one or another pseudo-Occult "teacher," or self-styled "master," or cult practitioner. Various alluring advertisements of "Yoga training in acquiring psychic powers," in "how to get out in the astral body," and other appeals to the selfish personality, are taken at their

face value by many of the unwary. Too often, the tuition-fees are the least of the bitter price that is paid for taking the training.

The novice begins his practice of "control of the breath," and concentrates upon certain physiological nerve centers, in order to liberate forces which, normally, are adjusted to healthful outgo in functional use, or are conserved as resources of endurance. The effect of these methods of "sitting for Yoga" is a psycho-physiological disconnexion and a short-circuiting of vital forces which, if the practice continues, get beyond control and run riot through the man's being. The end-results of thus tampering with high-power forces through the lower plexuses, too often appear in some organic disease, mental disorder, moral perversion, or even in death — sometimes by suicide. These very real dangers are pointed out in all genuine Occult teachings; but they are not referred to in the published promises to teach whoever applies for lessons, the secret of "control over others," "how to achieve worldly success," etc., etc.

Yoga, which literally means "union" or "conjunction," is used in its dual aspect, as it is interpreted esoterically in the Raja-yoga, and exoterically in the Hatha-yoga systems of practice. Raja-yoga, meaning royal or kingly union, implies strict spiritual and intellectual discipline, combined with a love for all beings, as a means by which a chela or unselfish student may become aware of, and finally united with, his own spiritually divine Self. A real Teacher, who has been thus trained, can teach his students how to subordinate the physical senses and lower mind and desires to the control of the awakening higher mind and spiritual faculties and powers. This spiritual discipline and training is in contrast with the Hatha-yoga system, which ignores the higher nature and selfishly seeks to gain "powers" by meddling with the currents of Prana (the "breath of life") at the physical pole of man's being. *The Secret Doctrine*, in discussing Pranayama, or regulation of the

breath in Yoga practices, says:

This mode, however, without the previous acquisition of, or at least full understanding of the two higher senses, of which there are seven, as will be shown, pertains rather to the lower Yoga. The *Hatha* so called was and still is discountenanced by the Arhats. It is injurious to the health and alone can never develop into Raja Yoga. — I, 95

Thus the veiled teachings which are spread abroad, being without the key, are interpreted literally in physiological terms by the Hatha Yogis both in the Orient and in the Occident. The materialized counterfeit of spiritual truth is also used by the Tantrikas who, in some of their cults, have degenerated into degraded forms of Black Magic.

It cannot be stated too emphatically that no secret teachings of Occult truths entirely unveiled are ever given out publicly, in print or otherwise. Moreover, the sacred knowledge, to be gained by spiritual discipline and training, is held in trust by genuine Teachers and Masters, and only those who prove worthy to receive the teachings are given the key to them.

The Theosophical Forum

TWO FELLOW TRAVELLERS BREAK THEIR JOURNEY — H. F. Norman

"Travellers between life and death": is not this how serious minded people generally regard their passage through the world; as a "single" journey from a known, if imperfectly apprehended, life of numbered days and decades into an unknown, inapprehensible, timeless world elsewhere? The phrase I have placed as a heading to this article, presumes upon a wider outlook than this and is more befitting such brief notice as another fellow traveller can give of two notable members of the Theosophical Societies in England and Wales who have arrived at the halt we call death. For Kenneth Morris and Percy Leonard, with many differences of temperament and preoccupation each typical of his own nation, shared a common plan of travel, in their conception of an evolution of the Universal Self, through which each envisaged death as but marking one stage, a station at which he was temporarily breaking his journey. It was for each of them a needed break, as for a few nights" rest, in that continuous travel towards and within the country of the Spirit which each regarded as the fundamental fact in his journeying. To neither of these courageous and purposeful adventurers upon the highlands of spiritual dream was their grave a bourne from whence no traveller returns. On neither tomb may we inscribe: "I pass this way but once." Though in their meditation their vision sped towards the mystics" country "afar beyond the stars," they had contracted to return again to earth, "for labours yet unaccomplished."

The chasm between the illusions of time and the incertitudes of eternity was for neither an impassable barrier, nor could they imagine their passports to life, here or beyond, snatched from

them as they arrived at the alighting place. In their plan of travel they had it laid down that the "narrow stream" dividing the heavenly land from ours must be crossed and re-crossed many times, the events of birth and death symbolic of an alternating evolution and involution of being through which man fulfils himself that so his ever-becoming may bring him gradually closer to the maturities of a near-absolute. For such, as to Browning's "Paracelsus," "man is not man as yet." Through living he becomes, actuates himself, achieves, through dying those potentialities of the imagination we call the soul re-create themselves — and perhaps all real recreation is of that essence. This, or something like it was the route of life and death Kenneth Morris and Percy Leonard foresaw for themselves marked out upon the maps and road-books they studied and discussed. Death, then, was no more for these a "passing" than birth, not the end of a journey but a "break" in it, a break neither greatly to be desired, though travellers must have rest, nor at all to be evaded, were evasion possible. So ran their dream.

For Kenneth Morris, the poet, this charting of the ways of life and death was perhaps rather dream than doctrine. These excursions upon the hills of dream revived a sensitive, brooding and sometimes tried and bruised spirit, straining within a body inapt to sustain the spirit's soaring purpose. Was it rather more doctrine than dream to Percy Leonard, a mind which might seem to a casual acquaintance abstract and aloof but which quickly revealed affections alert in their response to the claims of living things upon his generosity? He was peculiarly sensitive to the unexpressed claims of young and ardent life, in child or beast, to the young children who clustered about him in his daily walks, and the birds and creatures who came to know his haunts and shyly visit him in room or city street. It seemed as if a clairvoyant insight led him beyond their animal forms, an instinct not

dissimilar, perhaps, from that clairaudient voice St. Peter once heard saying: "What God hath cleansed that call not thou common," beast life evoking from him not revulsion but sympathy. For, perceiving the future flower within the seed, the soul-to-become in the "mere" animal, and humanity itself blossoming within childhood, his heart was always open to friendship with innocent lowly life. If therefore that theosophical brotherhood he discoursed of to his friends or from the pulpit of the Bristol Unitarian Church was, in form, doctrinal, it was in substance plain loving kindness.

Kenneth Morris could discourse too and in two sorts, preaching a universal ethic of courage and hope to the distressed and dispossessed and exhaling an imaginative influence of tranquillity over the printed page. His early friend "M" (early and late, new found in 1929 when Kenneth returned from America to Ireland) used to tell friends that the *Return of Don Quixote* was the best English short story written in their generation and he (George Russell) knew better perhaps than any of our writers the heights and depths of worded dream. Those who seek a counterpoise to the clash and jar of the jazzing cymbals with which many contemporary writers of fiction make their resounding discords will find it in the cool, crystalline, unperturbed prose of *The Secret Mountain*. He would I think have ascribed its translucent quiet to influences imbibed in Point Loma, when he lived there, and probably to Katherine Tingley — influences whose remembered contacts animated him later in his unflagging and courageous activity for the Welsh Section of the Theosophical Society of which he was President. His spirituality of utterance owed much also to the Authorised Version of the New Testament, around which he and Percy Leonard found fruitful ground for friendly controversy. For Percy's more scientific mind found in modern translations a more "living"

speech for to-day than in the Tudor quaintness of King James's English; but Kenneth's ear rejoicing in the music of the old rhythms, listened to a golden harmony of beneficent sound and sense. And each found a renewal in these books of an antique wisdom, a re-invigoration of meanings from which each reunited a spirit too often despoiled of its native ease through the impoverishing ravages of an imperfect physique. Yet it is not for their handling of words or their addiction to doctrines that I would linger in a final brief meditation on these two high-minded men, so different, so similar; each realising his best self through a devotion, the same at root, to Universal Brotherhood, exercised, for the one, through simple men, those unemployed miners in Wales, for and among whom he lived and worked with consistent, compassionating fortitude; and, for the other, through and for children or wild life and who wrote to me during his final illness (he lived alone): "the fact that these dear children often ring my bell is a great encouragement to me." It is rather for qualities rooted within themselves, Kenneth's self-sacrifice, Percy's loving kindness; each making for itself appropriate contacts with other selves which it beheld as mirroring the One Self. This, and a responsiveness to beauty and a power of creating it, in Kenneth largely though not solely through imaginative writing, in Percy often through wise silences, or the simplest talk. These are the qualities which make them live again, with all their gentle courage, within the memory of other fellow travellers whom they have left behind, and who will remember wise utterances perhaps, but will best remember a spirit of manly gentleness incarnate within the hearts of these two who were so responsive to the demands of others' lives, lives less sensitive perhaps and more demanding than their own, and certainly less matured. For I think that best gift which each gave out of his enthusiasm for theosophical ideas was his own idealistic passion, a fragment of his own spirit, creative because searching after

hidden harmonies in life itself and revealing them to those quick enough to hear them.

The Theosophical Forum

WHAT IS AMERICAN INDIAN OCCULTISM? (1) — *Arthur C. Parker*

A great motto proclaims that there is no religion higher than truth, but many religions and many philosophies have declared themselves the sole repositories of truth and the only means of discovering it. A wise master was once asked, "What is truth?" and it does not appear that an answer was given.

Truth is certainly not a thing that men may wish into being. It is far more basic and transcends wishful thinking and the authority of those who have something to prove. Possibly we go too far in our thinking that ultimate truth is a thing that man can understand. Far too much must yet be learned before we can even approach that abstraction. Our minds can only reach out to certain truths that in the aggregate focus upon the ultimate. Let us see that we do this very thing. Destructive of this focus is the unproved statement not susceptible to experiment. Truths should be aligned as mathematical formulae that any man can prove who has the ability. That x multiplied by x is x^2 should not be accepted because a good man says so but because his pupil can demonstrate it. So the truths of religion and philosophy should similarly be tested. This makes for truth and shows that truths can be applied.

Many philosophies and many religions have fallen by the wayside and become curious relics because men forgot this and attempted to create belief by fiat. That a great leader said a strange thing may develop zealots who fight to testify, but the strange thing may only be fraud, hallucination, insanity. And because religion is something that is felt and believed and which stirs emotions it is a dangerous thing when promoted by the dishonest, the self-seeking and the deranged. Yet, how many this world has followed

who announced "I am God," "I am Elijah," or "I am the expected Messiah"? Credulity and false hope have plunged the world into intellectual darkness many times and all because men failed to exercise the power of analysis, reason, and experiment. What the world still needs but is unwilling to follow is the real apostle of truth. Truth appears too drab, too commonplace, too unemotional, but not to him who finds in truth a religion that lifts him toward divinity. To all others truths must be masked in symbols and in allegories that eventually are taken for the realities.

And then, there are words that deceive us. We take them literally and build straw men out of them. I recently heard a philosopher state that the world needed clear, penetrating thinking. Another man arose to say that it needed men of character and that thinking is futile. This second man did not define character nor did he say whether he meant good, bad, or indifferent character. The word was a straw man to him and he did not stop to consider that good character is the result of clear, penetrating thinking applied to life for constructive purposes.

Yet because men can only approach truths through formulae and symbol, as the mathematician does, the vast majority see only symbols and worship them as realities, not remembering that they stand for unseen things that can scarcely be expressed in any other way by finite mind.

It may seem trite or presumptuous, as the view may be, to discuss the need of cleaving to the line of truth when seeking to sense its import. It should be immediately seen, however, that any other way is fatal and leads to sophistry, to error in the wilderness of *isms*. It has been so when seeking to follow through unfamiliar subjects or those that seem veiled in mystery. Among these not one is more provocative of varied treatment than that of man's

origin, purpose, goal, death, and possible life or transformation after death. "Shall he live again?" is an aged question. "Does his soul evolve?" is another. "Does he ever again appear upon earth?" is still another.

Each of these questions has been answered in the manner that the asker has wished it to be. The desire has preceded the investigation and desire, oftentimes, has created assumptions. Many of these assumptions, declarations, initial premises, have been erroneous, though all that followed many have been logical deduction leading to strange ends.

It has often been thus with primitive people when their mysteries have been interpreted. It has been so with the numerous tribes of the American native. Often the proponent of a theory starts out by saying, "The Indians did thus and so, believed, knew and practised this and that." The initial error has been to say "the Indian." There is no "the Indian." There are many tribes of these people each of whom had divergent ideas. To say that the Indians believed in metempsychosis, for example, is saying too much. To say that some did is nearer correct.

Cyrus Field Willard in visiting the Onondagas in 1895 talked with Chief LaForte, who declared his belief in having lived before. He stated that he knew that he had lived at a former time and done certain things which he recounted. It is for us to analyse what lies back of that statement and discover whether other native Americans in that or other tribes had a similar belief. Heckewelder, (*Indian Nations*, 1876, p. 247) tells of his conversation with a person whom he calls, ". . . a very sensible Indian, much esteemed by all who knew him, even among the whites." Said Heckewelder, "He knew he had lived through two generations; that he had died twice and was born a third time, to then live out the then present race, after which he was to die and

never more come to this country again." Heckewelder goes on to relate that the man said he remembered the conversations of the people before he was born and could repeat correctly what they said.

The question is, did Heckewelder speak an untruth? Did the Indian? We should examine this question in the light of similar assertions elsewhere and determine whether this belief earnestly stated is common among the races of mankind. If it is, we must examine into the facts behind the assertion. Then if the belief is true because it is based upon experience we must seek to discover under what circumstances the student may arrive at sure knowledge of this belief. Is it a delusion or not or is it based upon demonstrable facts? If we hold to the Indian tribesmen we may pursue our inquiry and have many answers. Some believe, some do not, some do not know, some think it possibly so, others say the idea is absurd. We lose ourselves in a wilderness of opinions by this method. Our answer comes from such men as Willard and Heckewelder quote. They say they know and have had the experience and have it as a part of their consciousness. It is they who say, "I have lived before and I shall live again."

Beliefs like this point out that certain native Americans had knowledge, real or assumed, that others did not possess. Investigation along these lines points out also that many tribesmen had other beliefs asserted as fact. For example; they believed in many forms of occult power such as clairvoyance, thought transference, transformation, invisibility, levitation, wandering spirits, thought therapy and magical cures.

In certain instances groups conserved through their rites the means by which they believed these ends might be attained, but in other instances there were individual seers. There are today. All through the records of travelers and missionaries one finds

references to these seers and to their esoteric societies. There are accounts of their marvels in many places, and even the Jesuit Relations tell of matters that they attribute to the devil. Thomas Morton tells of the shaman who "made ice appear upon faire water in midsummer and cause the thunder to be heard when the sky was clear." (Quoted from Emerson, *Indian Myths*, 229)

Emerson describes the Mystic whom she calls the Jossakeed and mentions the Medas of the Mandans. Says she, "The Jossakeed was distinguished from the Meda by higher occult knowledge. . . . Though the Jossakeed was their prophet and their priest, it is of him the early missionary speaks with animosity, in affirming that he kept the . . . "devil for a sentinel." Both Catlin and Schoolcraft describe their power. Emerson again states, "Among the ancient Indians, according to the Shawnees, the Jossakeeds practised their art without feigning. They were true prophets. These prophets were members of the Medawin or Society of Medas."

Shongo the mystic of the Senecas often told the writer of this paper that he had learned to see invisible forms and to talk with them. By the rites of his cult he would reach out and through a "veil" and lay hold of unseen power which he believed he might apply to the healing of the ill. He came from a long line of mystics who lived along the Genesee when the whites came into the valley. Did he do this or was he deceived? He always anticipated this question and would tell how he could see what others could not. His "bundle of power" is now in possession of his son.

Among Shongo's people, the Senecas, there have been many mystics and seers and today there survive several societies that preserve the formulae of the mystic tradition. Many of the elder beliefs still linger, as those of transformation, sympathetic magic, talking with the dead, the propitiation of animal spirits, the potency of certain words, and the reading of thought. "I can send my thoughts afar and talk with my wife," said Cornplanter.

Shongo believed this likewise.

To know what lies behind such beliefs one must know these people and what their thought-life is. One cannot accost the ignorant Indian, the debauched or the half sophisticated, and discover much. It is the sincere man of sobriety and clean living who must be questioned, and then only by one in his confidence. In such a manner I have heard weird tales of happenings that the unsympathetic would doubt. I have heard theories of life and of super-life that sound strangely like some mystic doctrine of another world. I have been told that if all were blind one would reach out and discover strange things that only touch would reveal. "We are blind" said Shongo. "But those who have "the other eyes" can see something quite different and yet hard to describe." "We put too much down on paper" said Cornplanter. "It's good but it makes us think things stay still." I was making a diagram and had tried to indicate a point but he replied that a point never stays in the same place. It was not until years after that I heard of the Einstein theory and understood what he meant. Then I understood that my penciled point was but a chunk of graphite on the surface of paper. The real point had moved and I had indicated only something I could not see nor ever can. Then I further understood what Shongo had told me about the nature of the Universe. "It's all lines that whirl," he said. "They cross and re-cross, or, maybe, never touch. But where they touch things happen. They're big but some are small. They turn and touch and that's why things are." Was he speaking of the lines of creative force? I do not know for sure but think he was. This made me wonder just what the swirling universe is beyond my perceptions and whether or not Shongo's statement might not be a truer picture of reality than I realized. Motion, molecules, cosmic circles of energy, the electron here and then there, once matter then energy, change, and the circle returns. Lines cross lines, and

strike the spark that for the moment I call *I*. Then, whither?

My Indian friends of the Senecas have a cult that teaches the four great realities that reach out into what they call the "great peace." These are the Great Being, virtue, immortality and brotherhood. Upon this their ancient religion rests and even the new prophet taught the need of recognizing these. He proclaimed that his message was the Good Word. Properly defined these words seem like the foundation of good religion.

The real point in the beliefs of the various tribes of the American natives is that they were established to bring well-being to the group and to the individual. The individual wanted good fortune, good health, freedom from pain, power to accomplish, and an assured safety in the realm beyond life, or the ga-o-yah-gen-snon-geh, as the Seneca termed it. But beyond this he also wanted happiness and knowledge.

Thus all the religious practices and occult societies were devised to bring about welfare of one kind or another. To gain this there were certain invocations in certain tribes built up from vocables having no known meaning. This was a precaution based upon the philosophy held by some red men as to the potency of words. When a thing gets a name, some believed, it becomes an entity that may be improperly used. It will sometimes confuse thought and understanding. But if I simply say "ah-ah, O ah-ah" as a prayer and pour my heart's desire into the inchoate expression the Cosmic One will understand, and I shall be free from the accusation of having bossed my God around when he knows better than I do what is good for me. Thus the Piute goes to the mountain top and cries into space, uttering the groan of his heart but saying no word that man can understand. "Thus," said the Piute to M. R. Harrington, "a great something hears me; the mountains hear me, the forests, the rivers, and I have healing."

There is a great philosophy in this, for the moment we make words we limit truth. If I say God, I must define God, and I cannot. If I name a doctrine I must also define it and I bring about disputing. The idea of many red men is that the ultimate, whatever that may mean, is beyond words but not beyond the desire of man to find it. The addressing of great facts, the red man has said, is a matter of the heart and the heart has no tongue. Thus did he symbolically express it.

It was men like those we have mentioned who looked deeply into the great realities and who contemplated them. In their unspoiled state and uninfluenced by the "modern way" they built up a deeply spiritual understanding of the universe, an understanding that existed side by side with pitiful ignorance and superstition. It has always been thus in every age.

Without attempting to call these higher beliefs by any name or even to say that we have built up a case at all for the proof of occultism, I pause to ask whether or not any of these hopes, any of these experiences, any of these expressions, strike a common chord in the minds of those who have heard these words.

INVISIBLE PATHWAYS — *Lucius Bombyx*

There are certain facts which are familiar to all but which are not appreciated to the extent they merit, and which if understood would point to logical inferences of a more recondite nature than the simple facts themselves.

Familiar pathways are many and various. The use of hyperbole also in this connexion is frequent and often embodies great truths. Certain invisible pathways are known and used by means of electrical or magnetic conduction, but there are many others which can be sensed by abnormal persons, and more easily by the lower kingdoms.

For instance: dogs will follow the track of a man or certain animals by means of the scent left behind. This is so obvious that a corollary is or should be also quite obvious, viz., that the movement of anything leaves part of itself in the surroundings to whatever place it may go, and these atomic particles may be a pathway by and on which other entities may follow.

To illustrate further: We know that we give off heat every moment of our lives; heat is atomic, and therefore leaves *our* atoms wherever we may go. But heat is only one of our radiations.

The pioneer may blaze out a physical trail, but he also leaves a magnetic trail in realms other than the outer physical which may be followed by others quite unconsciously to themselves.

In tracing the history of new settlements it is frequently found that on the same spots there have been many previous settlements. In certain cases it is known that cities appear on the same sites after long intervals of desertion and reversion to

nature. London and Chicago are well-known cases, and these two cities seem to have been centers of human activity from the night of time, with recurrent intervals of what may be natural recuperative processes which are common to all things.

These thoughts suggest others of a similar nature but on another plane, or perhaps one should phrase it, in connexion with other planes. Just as there are numerous strata in physical matter so there are strata in mental advancement, and it is not illogical to assume that those entities who were responsible for the achievements of the past — such as the Cyclopean structures scattered all over the world, the Great Pyramid, Nagkon Wat, the Grammar of Panini, the astronomical calculations of the Atlanteans, etc., should have left pathways in the invisible realms of their passage from this earth to whatever place or state they now inhabit.

These ideas afford a logical and factual basis for much that has been accepted on faith and religious belief without any satisfactory explanation of the stages and steps involved. Much more can be inferred quite logically by anyone who will take the necessary trouble to explore this line of thought, and it will prove extremely useful and produce a conviction of the fundamental bases of Religion, Science, and Philosophy as applied to the whole cosmos. In fact it will be found that the whole cosmos is an inherent whole and unit, with interrelationships in and of all parts, functioning periodically on many planes during infinity in time and extension. The laws which apply to one atom or sun are seen to apply throughout, so that by a correct analogy one known fact can be traced correspondingly in every department.

To give another example: When there is a body of water on a high level and we desire to make use of it we create channels through which it can flow to the required objective. The force or pressure

at any point corresponds to the height of the body of water, and any leak or breakage in the channel will have an effect on the contiguous terrain according to the relative size of the break and the kind and size of the channel itself. Also, as long as the channels remain open, water will flow.

Now the above facts illustrate some very common occurrences in daily life, as the analogy holds good in several ways if we remember that the channels were the result of effort to connect with the water on a higher level.

Light to us is the product of unknown forces acting in our atmosphere. The stratosphere or the atmosphere which acts as a lens around our earth modifies and may alter entirely the quality or nature of the actual rays which the sun emits, but as our senses are the product of our earthly evolution and are the means of contacting consciously the environment in which we exist we can have little actual knowledge of what occurs and of the nature of anything outside our physical shell until we develop the appropriate means, e. g., senses appropriate to those other conditions — in other words, the proper channels.

There are oceans of other phases of life outside or within our own which only need channels in order that their flow may reach us or our world. Likewise in consciousness. We have the centers within ourselves by and through which many higher or more subtle and refined states of consciousness may be contacted if we adopt suitable methods of effort in reaching toward them. The knowledge that there are such is the first step. Our philosophy demonstrates logically that there must be and are realms without number beyond and within those with which we are acquainted, and it indicates the methods by which humanity can and will advance along the pathways of evolution by progressive and successive steps and stages.

Those who make especial efforts with the trend of evolution are the pioneers, and they leave pathways; or perhaps the better way of expressing the idea would be that the pathways are broadened and solidified more and more with each pioneer who passes along the way so that it is easier for others to follow in their footsteps.

There is a very vital corollary in this connexion, that of impersonality, and from two chief aspects. First, that the pioneer does not blaze the trail for specific individuals to follow. Secondly, that the greater part of our radiations of all kinds are of the same nature, viz., that they are unconscious to ourselves and therefore impersonal, and so correspond to the oceans of life and consciousness which radiate from superior beings in the solar system and the cosmos, which are not only pathways to inferior beings but are also the sustaining life-elements by which they live and have their being.

The above illustrations and ideas are an attempt to sketch some of the mechanics in natural evolution, and also to indicate the effects of the volitional and the impersonal processes of any entity.

Our philosophy supplies all needed data for a comprehensive understanding of ourselves and the universe, but we have to realize this each one for himself, and to make individual application of our knowledge in order to become more positive and volitional, while at the same time more permeable to those spiritual and divine essences which only need channels in order to flow unstintedly into and through our whole being.

The spheres of action both of individuality and impersonality are clearly indicated in the Theosophic philosophy. A correct attitude or polarization of the individual to the greater will have an impersonal influence on the lesser, though it will be stamped with

the qualitative impress of the entity radiating that influence. This dual aspect has been somewhat of a stumbling-block to many thinkers, but it can be overcome by a realization of the relationships of the various elements considered and of their particular spheres of action.

Egoity is limitation; only the Boundless is unlimited and absolutely impersonal.

The Theosophical Forum

ARE YOU A REAL THINKER? — *Leoline L. Wright*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

Manas, the Thinker" — what is the true meaning of this expression? What we call a brilliant thinker is one who draws original thoughts from the material of observation and experience. But these ideas, while of course stimulating to other men are not necessarily true. For the ordinary thinker, no matter how original or brilliant, is a good deal of a speculator. He has no authentic clue to the laws of that life about which he thinks.

A genuine occultist on the other hand is not in that sense a thinker. He does not speculate. He is a scientist who has the key. He works from known facts. He is a verifier, one who for the purposes of his own evolution in consciousness applies the keys he has been given by advanced Adepts in the Sacred Science. These keys he applies to his own life and thinking processes, and if he is sincere and selfless he will reach the correct conclusions. He is like a mathematician who works in experiences rather than with formulas and figures and who is thus able to arrive at relatively perfect solutions. And he does not do this by merely "thinking," but, so to say, by laboratory experiment and research, first within himself and then in the world about him.

A genuine spiritual Teacher usually gives his pupils to begin with a few key-facts and leaves the pupil to apply and verify them. But the pupil must not stop there. He must go on from such application and verification to new discoveries about himself and his environment reached by the further use of his keys. This is self-directed evolution. And not till he has reached a point where

he has more or less exhausted the range of discovery made possible by the use of the keys he holds is he given others. An interesting example of this method is seen in *The Mahatma Letters to A. P. Sinnett*, where, however, the two pupils were not true chelas and therefore the method in its full implications was not used.

In illustration of the above definition one who knows will not refer to H. P. Blavatsky as a great *thinker*. She was a great Adept who recorded for us the basic propositions, and their implications in almost every department of human activity, of the Archaic Wisdom-Science, with its traces and records in the ancient and modern world. Brilliant and powerful, intuitive and sublimely original, she was yet not an originator of ideas, as she herself was the first to insist in the "Proem" to her great work *The Secret Doctrine*. A grand example of her type of intellectual brilliance and originality is found in her definition of time. We quote this below as it is a striking illustration of her wonderful power of abstract imagination, one of the highest of the intellectual faculties.

(a) Time is only an illusion produced by the succession of our states of consciousness as we travel through eternal duration, and it does not exist where no consciousness exists in which the illusion can be produced; but "lies asleep." The present is only a mathematical line which divides that part of eternal duration which we call the future, from that part which we call the past. Nothing on earth has real duration, for nothing remains without change — or the same — for the billionth part of a second; and the sensation we have of the actuality of the division of "time" known as the present, comes from the blurring of that momentary glimpse, or succession of glimpses, of things that our senses give us, as those things pass from the

region of ideals which we call the future, to the region of memories which we name the past. In the same way we experience a sensation of duration in the case of the instantaneous electric spark, by reason of the blurred and continuing impression on the retina. . . . — *Op. cit.*, I, 37, *et seq.* (The whole magnificent passage should be read.)

In view of the above what then is meant by calling Manas a *Thinker*? Thought as we know it is kama-manasic, an activity of the brain-mind. If it is truly creative thought it employs the spiritual faculties of imagination and intuition. But when it does this it reaches, not original individual conclusions but ideas which are at best new statements of ancient and universal truths. As when the reader exclaims, "Just what I have always thought but never could put into words!" He will indeed express the grand old truths in a new way but the originality will lie in the manner of saying them and not in the truths themselves. The great poets and philosophers clothe the old universal ideas in the morning radiance of their genius and to us they come like divine revelations.

Does this not suggest to us what thought really is? At least it gives us an inkling of what the true intellectual activities of Manas are. Manas is a child of Buddhi. Mahat, the Universal Mind is an abstract name for the Buddhic "principle" of the Universe which becomes active through the great host of Manasaputras which are the source of Egoism anywhere in our Cosmos. But this host of Manasaputras — what is it really? It is an emanation of Adi-Buddhi, the Cosmic Soul. The manasic host is Adi-Buddhi in individualized self-realization — such individual self-realization being the primary object of evolution. And our Manas is an emanation of individuals in this manasaputric host.

So we see that thought, regarded as a function of Manas, must be

quite a different form of activity of consciousness from the speculative reasoning of the ordinary thinker. This suggestion seems to be confirmed by *The Voice of the Silence* which instructs that at the very beginning of the chela-path we must —

. . . seek out the Raja of the senses, the Thought-Producer,
he who awakes illusion.

The Mind is the great slayer of the Real.

Let the Disciple slay the Slayer. — *Fragment One*

Here we see that not only thought (as we know it) but mind itself is the enemy of the higher manasic activity. Again, in the same occult work we are told that in order to reach perfection —

. . . thou hast to feel thyself ALL THOUGHT and yet exile all thoughts from out thy mind. — *Op. cit., Fragment Three*

Here lies the key: Thought, as an attribute of the perfected man — Manas-Taijasi, the Bodhisattva — is not a psychological activity. It has nothing to do with what we call mind. It is the achievement of a state of being. Thought, in this sense — of a state of being — means oneness with Alaya, which is Adi-Buddhi, "the root or essence of Mahat. . . Cosmic Aether" (*The Esoteric Tradition*, 952). Thus Manas when active on its own plane breathes in and is permeated with the Soul of the Cosmos. There flow then through its being knowledge of things as they are, as Adi-Buddha (the individualization of Adi-Buddhi) is the Hierarch and source of all knowledge of things as they are in that hierarchy. Hence the "Thought" of Manas is knowledge, and in particular, self-realization of that knowledge.

PUSHKIN: HOMO UNIVERSALIS (1) — *Alexis Kall*

At the beginning of the nineteenth century, after long preparatory work following the darkness of the medieval ages, and after more or less successful attempts to build up friendly relations with the Occident, Russia, at last found itself enjoying an ingress of culture: Russian literature, art, drama and the sciences were established.

The most beautifully fragrant and valued flower that sprang from this newly formed culture was Alexander Pushkin. Handicapped by his inheritance of the dull, awkward style of Lomonossov and Derzhavin, Pushkin came forward with a live, flexible tongue, and the Russian language has hardly changed since his day.

Pushkin was the creator of literary Russian, without which there would be neither a Russian literature nor the great national writers, Tolstoy, Turgenev, Dostoyevsky, Chekhov and others.

No other Russian poet achieved his "music" of verse. In Pushkin's description of the battle of Poltava, we sense the turbulent, sharp staccato; in his love scenes we are charmed with the captivating beauty of the languid, expressive legato. This is music. The listener is rendered breathless by the elegance of its rhythm and the colorful harmony produced by the alternation of vowels and consonants, the skilful use of separate words and phrases, which, in their turn, contribute an effect of heavenly melody.

Such divine material was needed to inspire the Russian composers. The best Russian songs, called "romances," numbering over a hundred, were composed on Pushkin's verse; and the greatest operas, more than twenty in all, were inspired by his dramatic creations. Among them are such transcendent

masterpieces as *Ruslan and Ludmilla* by Glinka; *The Mermaid*, and *The Stone Guest* by Dragomyzhsky; *Boris Godunoff* by Mussorgsky; *Czar Saltan* and *The Golden Cockerel* by Rymsky-Korsakoff; *Eugene Onyegin* and *The Queen of Spades* by Tchaikovsky; *The Gypsies* by Rachmaninoff; and many others. Thus Pushkin entered history as the inspirer if not the creator of Russian music.

The types which Pushkin created are immortal. In *Eugene Onyegin* we find the tender, pathetic Tatiana, and Eugene himself, with his restless, early tired-out soul. There is Boris Godunoff, forever tormented by the rackings of his conscience; the conniving, cunning Shuysky; Peter the Great and the monarchial swing of his mighty nature, in *Poltava*; the ingenious brigand Pugatchov. All these convex types are as protuberant as the face of a newly-embossed medal. Having once become familiar with them it is impossible to forget. Who could obliterate from his memory the insane miller in *The Mermaid*; the jealous Aleko from *The Gypsies*; the envious Salieri; the Stingy Knight, and the passionate, fickle Don Juan?

Such types could be created only by the imagination of a poet endowed with exceptional dramatic genius. In fact Pushkin was not only a poet, but a great dramatist and the founder of Russia's contemporary theater. Had he written nothing but his *Boris Godunoff*, he might, for that alone, have been pronounced the "Shakespeare of Russia," because no one else but Shakespeare could coin these vivid types, analysed with such psychological finesse; and no one could portray them in such true historical perspective as did Pushkin in this superlative drama. The Russian theater, having succeeded in attaining its present high standard, owes its development to the poet who in this immortal creation laid its foundation.

Pushkin understood the peculiarities and beauty of the Russian

folk-language as no other writer of his age knew them. Not in vain did he spend years studying the quaint expressions from his old nurse (Arina Rodionovna, a peasant woman), and from the wafer-bakers who supplied the Moscow churches with their wares. No other poet was able to approach and understand the spirit and style of the Russian folk-lore, as Pushkin exhibited it in his poetic fables, *The Golden Cockerel*, *The Fisherman and the Little Fish*, and *The Czar Saltan*.

He did not confine himself to the folk-poetry of Great-Russia alone. He embraced in his creativeness all the nationalities which comprised the population of the vast Russian Empire: he paid tribute to Polish poetry with his poetic translations of Mitzkyevich; Ukraina, Crimea and Caucasus served him as locales for many magnificent dramatic and lyric poems; many poems were inspired by the beauty of Georgia and Armenia; and an entire cycle of songs was dedicated to the Western Slavs.

It was as though he had found a mystic key to the hidden secret place of Russia's poetry; using it to open the treasure coffers of the West-European poetry and folk-lore. He understood better than any other foreigner the poetic charm of Andre Chenier; and we find many of Pushkin's brilliant poems in French.

He wrote many splendid transcriptions of Byron, who, incidentally, played an important part in the psychological substratum of Pushkin's genius. We find Italian sonnets; also translations from the ancient Greek, in which the serene Hellenic spirit of Sappho and Anacreon blinds us with its brilliance. We also find among his creations transcriptions of Persian poets with all the ardor of Hafiz and the limitless wisdom of the Koran.

A typically Russian poet, Pushkin was at the same time a genuine literary cosmopolite. He is a son of world-wide humanity, "Homo Universalis," a man who gives one the impression of having

experienced, essayed and understood everything about him. In one breath he glorified great deeds of heroism, love, self-denial, and depicted the very basest sides of human nature, the depth of vice and vile passions. As a bard of love he has no equal in Russian literature. His lyre sang with equal magnificence of heroic, tender and domestic loves. He poetized the love of passion, the erotic ecstasy, with the boldness and candidness of the ancient Hellenes.

Even his laughter was Hellenic: the laughter of carefree, merry, sunny ancient Greece. His wit was one of the most prominent characteristic stamps of his genius, and was dreaded by his contemporaries. Woe to him who happened to become the target of his epigrams!

Pushkin lived in the darkest epoch of the Russian Empire. He labored in an atmosphere of flagrant oppression from a tyrannical power. Yet, exposing himself to persecution, abuse and banishment, he sang of liberty and ardently dreamed of the day when serfdom would exist no longer, and all men would be free and happy:

The people's love for me will flourish and endure
Because my golden lyre evoked their tender thought.
I dared, in ruthless age, oppression to abjure
And mercy for the downcast sought.

FOOTNOTE:

1. As this year marks the centenary of Alexander Pushkin's death, we are glad to include an article on the great Russian poet, by Dr. Alexis Kail, Co-founder and former Director of the National Conservatory of Music in St. Petersburg. — Eds. ([return to text](#))

TURNING THE PAGES OF "ISIS UNVEILED": I — *E. V. Savage*

The Master K. H. wrote to Mr. Sinnett in July, 1883: "You share with all beginners the tendency to draw too absolutely strong inferences from partly caught hints, and to dogmatize thereupon as though the last word had been spoken. You will correct this in due time." (M. L., p. 348)

H. P. B. proves in her first book, *Isis Unveiled*, that she is no beginner in Occultism, for nowhere throughout the book is there a touch of dogmatism; and far from creating the impression that she is giving "the last word" on her subject, she constantly reminds the reader that she is merely giving a hint here, opening a door a bit ajar there, or throwing out a suggestion for acceptance or rejection as it rings true or not in the ears of the reader. She does not seek to force her ideas on anyone, her watchword being, as stated in her Preface, "TRUTH, high-seated upon its rock of adamant, is alone eternal and supreme." (v) And further on (II, 126) she quotes from the book *Supernatural Religion*, which she says "carries conviction in its every line," the following:

"The only thing absolutely necessary for man is TRUTH, and to that, and that alone, must our moral consciousness adapt itself."

Exactly sixty years ago was *Isis Unveiled* written; yet we can find in its pages definite answers given or brilliant light thrown upon questions which are in the forefront of inquiring minds today, — such varied matters as

1. The Theosophical attitude towards Jesus and Christianity
2. The perplexing question of mediumship, and the

difference between a medium and a mediator or an adept

3. The *modus operandi* of Fire-walking

4. Whether animals have souls

5. Whether Buddha taught a doctrine of annihilation

6. The true meaning of so-called miracles

7. The esoteric interpretation of many of the Christian scriptures

In the present article I have selected and grouped together a few only of H. P. B.'s answers to these and other questions; and I have purposely not attempted to make my selections exhaustive, partly because it would make too lengthy an article, and partly because my aim in writing the article is to inspire others, particularly of the younger generation, to turn to the pages of *Isis* itself, and find the treasures hidden in it.

We spend a good deal of time and thought nowadays attempting to make our presentation of Theosophy simple; but when H. P. B. came and did her work, for several years the Theosophists of her day had nothing simpler than *Isis* to turn to. The title of the book, by the way, proves in itself the inaccuracy of those who maintain that H. P. B. based all her philosophy on Hindu teachings alone. In ancient days there was a temple in the Egyptian town of Sais, dedicated to the Goddess Isis, and over its portico was the following:

"Isis am I. All which ever was, is, or will be; and no human has ever lifted my veil. The fruit which I brought forth became the Sun." And Dr. de Purucker, commenting on this says: "It is to this Inscription to Isis, the Mystical Goddess of Nature, spiritual and material, the great life-giving energy, the fructifying and mother-influence in the Universe, surrounded by her veil of nature, i. e., all the phenomenal worlds and hierarchies of beings, that H. P. B. referred when she spoke of the Veil of Isis; and she wrote her first

book as she said in order to raise the veil of Isis, at least a little." It is interesting to note that when she started writing the book, she called it "The Veil of Isis," and the whole of the first volume had been written and printed when she found out that another book, obscure it is true, had already been published bearing that name. So she changed her title to "Isis Unveiled"; and I think it may be taken as a happy omen that after she had launched her work she found she was able to give the world more than just a glimpse behind the Veil.

The following gives us a further keynote to H. P. B.'s work. She says (II, 120):

It is not alone for the esoteric philosophy that we fight; nor for any modern system of moral philosophy, but for the inalienable right of private judgment, and especially for the ennobling idea of a future life of activity and accountability.

I will now copy, under their appropriate headings, quotations from *Isis* bearing on the various questions enumerated above; and they need little or no comment. In fact, I found that one did not improve on H. P. B. by trying either to paraphrase and condense, or enlarge and explain:

JESUS AND CHRISTIANITY.

To this day people — even some Theosophists who should know better — accuse H. P. B. of belittling Jesus and attacking Christianity. But read the following, which are only a few out of scores of passages in the book that show her fidelity to true Christianity. Whereas when H. P. B. began her work she had to attack vigorously the dogmas of the Christian Church which had a stranglehold upon people's minds at that time, nowadays when there is such a prevalence of the spirit of casting aside all religion,

Christians can well turn to H. P. B. to find one of the greatest champions of their true religion.

In like manner, when I endeavor to destroy the current heathenism, which has assumed the garb of Christianity, *I do not attack real religion.* — I. U., II, 81

There never was nor ever will be a truly philosophical mind, whether of Pagan, heathen, Jew, or Christian, but has followed the same path of thought. Gautama-Buddha is mirrored in the precepts of Christ; Paul and Philo Judaeus are faithful echoes of Plato; and Ammonius Saccas and Plotinus won their immortal fame by combining the teachings of all these grand masters of true philosophy. — II, 84

The religion which the primitive teaching of the early few apostles most resembled — a religion preached by Jesus himself — is the elder of these two, Buddhism. The latter as taught in its primitive purity, and carried to perfection by the last of the Buddhas, Gautama, based its moral ethics on three fundamental principles. It alleged that 1, every thing existing, exists from natural causes; 2, that virtue brings its own reward, and vice and sin their own punishment; and, 3, that the state of man in this world is probationary. We might add that on these three principles rested the universal foundation of every religious creed; God, and individual immortality for every man — if he could but win it. However puzzling the subsequent theological tenets; however seemingly incomprehensible the metaphysical abstractions which have convulsed the theology of every one of the great religions of mankind as soon as it was placed on a sure footing, the above is found to be the essence of every religious philosophy, with the exception of

later Christianity. It was that of Zoroaster, of Pythagoras, of Plato, of Jesus, and even of Moses, albeit the teachings of the Jewish law-giver have been so piously tampered with.
— II, 123-4

And whatever Moses is now believed to have been, we will demonstrate that he was an initiate. — II, 129

The motive of Jesus was evidently like that of Gautama-Buddha, to benefit humanity at large by producing a religious reform which should give it a religion of pure ethics; the true knowledge of God and nature having remained until then solely in the hands of the esoteric sects, and their adepts. — II, 133

These murderous expressions illustrate the spirit of Christianity till this day. But do they illustrate the teachings of Christ? By no means. — II, 250

All this points undeniably to the fact, that except a handful of self-styled Christians who subsequently won the day, all the civilized portion of the Pagans who knew of Jesus honored him as a philosopher, an *adept* whom they placed on the same level with Pythagoras and Apollonius. Whence such a veneration on their part for a man, were he simply, as represented by the Synoptics, a poor, unknown Jewish carpenter from Nazareth? As an incarnated God there is no single record of him on this earth capable of withstanding the critical examination of science; as one of the greatest reformers, an inveterate enemy of every theological dogmatism, a persecutor of bigotry, a teacher of one of the most sublime codes of ethics, Jesus is one of the grandest and most clearly-defined figures on the panorama of human history. His age may, with every day, be receding farther and farther back into the gloomy and hazy mists of

the past; and his theology — based on human fancy and supported by untenable dogmas may, nay, must with every day lose more of its unmerited prestige; alone the grand figure of the philosopher and moral reformer instead of growing paler will become with every century more pronounced and more clearly defined. It will reign supreme and universal only on that day when the whole of humanity recognizes but one father — the UNKNOWN ONE above — and one brother — the whole of mankind below. — II, 150-1

Alas, alas! How little has the divine seed, scattered broadcast by the hand of the meek Judean philosopher, thrived or brought forth fruit. He, who himself had shunned hypocrisy, warned against public prayer, showing such contempt for any useless exhibition of the same, could he but cast his sorrowful glance on the earth, from the regions of eternal bliss, would see that this seed fell neither on sterile rock nor by the way-side. Nay, it took deep root in the most prolific soil; one enriched even to plethora with lies and human gore! — II, 303

All this did Siddhartha six centuries before another reformer [Jesus], as noble and as loving, though less favored by opportunity, in another land. — II, 319

And these men — we will not say teach the doctrine of Jesus, for that would be to insult his memory, but — are *paid* to teach his doctrine! — II, 474

If we do not accept Jesus as God, we revere *him as a man*. — II, 530

Like Jesus, he [Gautama] felt dissatisfied with the dogmatic spirit of the religion of his country, the intolerance and

hypocrisy of the priesthood, their outward show of devotion, and their useless ceremonials and prayers. As Buddha broke violently through the traditional laws and rules of the Brahmans, so did Jesus declare war against the Pharisees, and the proud Sadducees. . . . Each aimed at a social as well as at a religious reform; and giving a death-blow to the old religions of his countries, each became the founder of a new one. — II, 339

There is quite enough in the four gospels to show what was the secret and most fervent hope of Jesus; the hope in which he began to teach, and in which he died. In his immense and unselfish love for humanity, he considers it unjust to deprive the many of the results of the knowledge acquired by the few. . . . unity of a spiritual God, whose temple is within each of us. . . . — II, 561

Do these not sound as though H. P. B. had the true understanding of the life and work of Jesus because she came from the same Brotherhood that sent him forth?

MEDIUMS, MEDIATORS, AND ADEPTS

This question is closely linked with the general subject of Spiritualism. About twenty-five years before H. P. B. began her public work the Spiritualists began their activities and naturally met with a great deal of opposition from the materialistic world of their day; but together with the truths that they had, some of them had wandered into many bypaths of error; so that although H. P. B.'s first endeavor was to vindicate the Spiritualists before the world, a good deal of her energy had to be expended in correcting their errors — for which she received no thanks from them.

We are far from believing that all the spirits that

communicate at circles are of the classes called "Elemental," and "Elementary." Many — especially among those who control the medium subjectively to speak, write, and otherwise act in various ways — are human, disembodied spirits. Whether the majority of such spirits are good or *bad*, largely depends on the private morality of the medium, much on the circle present, and a great deal on the intensity and object of their purpose. . . . But, in any case, human spirits can *never* materialize themselves in *propria persona*. — I, 67

We will now only again assert that no spirit claimed by the spiritualists to be human was ever proved to be such on sufficient testimony. The influence of the *disembodied* ones can be felt, and communicated *subjectively* by them to sensitives. They can produce *objective* manifestations, but they cannot produce *themselves* otherwise than as described above. They can control the body of a medium, and express their desires and ideas in various modes well known to spiritualists; but not *materialize* what is matterless and purely spiritual — their *divine essence*. — I, 68

The rest of this and the following page and a half are worth turning to for a clear explanation on the subject of materializations and attractions. It is too long to quote *in extenso* here.

The mesmerizer wills a thing, and if he is powerful enough, that thing is done. The medium, even if he had an honest purpose to succeed, may get no manifestations at all; the less he exercises his will, the better the phenomena: the more he feels anxious, the less he is likely to get anything; to mesmerize requires a positive nature, to be a medium a

perfectly passive one. This is the Alphabet of Spiritualism, and no medium is ignorant of it. — I, 109

About such men as Apollonius, Iamblichus, Plotinus, and Porphyry, there gathered this heavenly nimbus. It was evolved by the power of their own souls in close unison with their spirits; by the superhuman morality and sanctity of their lives, and aided by frequent interior ecstatic contemplation. Such holy men pure spiritual influences could approach. Radiating around an atmosphere of divine beneficence, they caused evil spirits to flee before them. Not only is it not possible for such to exist in their aura, but they cannot even remain in that of obsessed persons, if the thaumaturgist exercises his will, or even approaches them. This is MEDIATORSHIP, not *mediumship*. Such persons are temples in which dwells the spirit of the living God; but if the temple is defiled by the admission of an evil passion, thought or desire, the mediator falls into the sphere of sorcery. The door is opened; the pure spirits retire and the evil ones rush in. This is still mediatorship, evil as it is; the sorcerer, like the pure magician, forms his own aura and subjects to his will congenial inferior spirits .

But mediumship, as now understood and manifested, is a different thing. Circumstances, independent of his own volition, may, either at birth or subsequently, modify a person's aura, so that strange manifestations, physical or mental, diabolical or angelic, may take place. Such mediumship, as well as the above-mentioned mediatorship, has existed on earth since the first appearance here of living man. The former is the yielding of weak, mortal flesh to the control and suggestions of spirits and intelligences other than one's own immortal demon. It is literally *obsession* and *possession*; . . . This

mediumship, whether beneficent or maleficent, is always *passive*. Happy are the pure in heart, who repel unconsciously, by that very cleanness of their inner nature, the dark spirits of evil. For verily they have no other weapons of defense but that inborn goodness and purity. Mediumism, as practiced in our days, is a more undesirable gift than the robe of Nessus. — I, 487-8

Far from us be the thought of casting an unjust slur on physical mediums . . . heaven knows, as recent events have too well proved, whether the calling is one to be envied by any one! It is not mediums, real, *true*, and genuine mediums that we would ever blame, but their patrons, the spiritualists. — I, 488-9

It is erroneous to speak of a medium having *powers* developed. A passive medium has no power. He has a certain moral and physical condition which induces emanations, or an aura, in which his controlling intelligences can live, and by which they manifest themselves. He is only the vehicle through which *they* display their power. . . . The medium's moral state determines the kind of spirits that come; and the spirits that come reciprocally influence the medium, intellectually, physically, and morally. The perfection of his mediumship is in ratio to his passivity, and the danger he incurs is in equal degree. When he is fully "developed" — perfectly passive — his own astral spirit may be benumbed, and even crowded out of his body, which is then occupied by an elemental, or, what is worse, by a human fiend of the eighth sphere, who proceeds to use it as his own. But too often the cause of the most celebrated crime is to be sought in such possessions.

Physical mediumship depending upon passivity, its antidote suggests itself naturally; *let the medium cease being passive*. Spirits never control persons of positive character who are determined to resist all extraneous influences. The weak and feeble-minded whom they can make their victims they drive into vice. — I, 490

How dangerous may often become *untrained* mediumship, and how thoroughly it was understood and provided against by the ancient sages, is perfectly exemplified in the case of Socrates. The old Grecian philosopher was a "medium"; hence, he had never been initiated into the Mysteries; for such was the rigorous law. But he had his "familiar spirit" as they call it, his *daimonion*; and this invisible counsellor became the cause of his death. It is generally believed that if he was not initiated into the Mysteries it was because he himself neglected to become so. But the *Secret Records* teach us that it was because he could not be admitted to participate in the sacred rites, and precisely, as we state, on account of his mediumship. There was a law against the admission not only of such as were convicted of deliberate *witchcraft* [an interesting footnote here that is worth turning to — E. V. S.] but even of those who were known to have "a familiar spirit." The law was just and logical, because a genuine medium is more or less irresponsible; and the eccentricities of Socrates are thus accounted for in some degree. A medium must be *passive*; and if a firm believer in his "spirit-guide" he will allow himself to be ruled by the latter, not by the rules of the sanctuary. A *medium* of olden times, like the modern "medium" was subject to be *entranced* at the will and pleasure of the "power" which *controlled* him; therefore, he could not well have been entrusted with the awful secrets

of the final initiation, "never to be revealed under the penalty of death." The old sage, in unguarded moments of "spiritual inspiration," revealed that which he had never learned; and was therefore put to death as an atheist. — II, 117-8

The use of it [a mysterious science referred to in paragraph which precedes this one] is a longing toward our only true and real home — the after-life, and a desire to cling more closely to our parent spirit; abuse of it is sorcery, witchcraft, *black* magic. Between the two is placed natural "mediumship"; a soul clothed with imperfect matter, a ready agent for either the one or the other, and utterly dependent on its surroundings of life, constitutional heredity — physical as well as mental — and on the nature of the "spirits" it attracts around itself. A blessing or a curse, as fate will have it, unless the medium is purified of earthly dross. — II, 118

One of the ten fundamental propositions of the Oriental philosophy is:

6th. Mediumship is the opposite of adeptship; the medium is the passive instrument of foreign influences, the adept actively controls himself and all inferior potencies. — II, 588

The adept can control the sensations and alter the conditions of the physical and astral bodies of other persons not adepts; he can also govern and employ, as he chooses, the spirits of the elements. He cannot control the immortal spirit of any human being, living or dead, for all such spirits are alike sparks of the Divine Essence, and not subject to any foreign domination. — II, 590

But the seer-adept knows how to suspend the mechanical action of the brain. His visions will be as clear as truth itself, uncolored and undistorted, whereas, the clairvoyant, unable to control the vibrations of the astral waves, will perceive but more or less broken images through the medium of the brain. The seer can never take flickering shadows for realities, for his memory being as completely subjected to his will as the rest of the body, he receives impressions directly from his spirit. Between his subjective and objective selves there are no obstructive mediums. This is the real spiritual seership, in which, according to an expression of Plato, soul is raised above all inferior good. . . . — II, 591

. . . mediums are usually diseased, . . . The adepts of Eastern magic are uniformly in perfect mental and bodily health, and in fact the voluntary and independent production of phenomena is impossible to any others. . . . The adept retains perfect consciousness; shows no change of bodily temperature, or other sign of morbidity; requires no "conditions," but will do his feats anywhere and everywhere; and instead of being passive and in subjection to a foreign influence, rules the forces with iron will. But we have elsewhere shown that the medium and the adept are as opposed as the poles. We will only add here that the body, soul, and spirit of the adept are all conscious and working in harmony, and the body of the medium is an inert clod, and even his soul may be away in a dream while its habitation is occupied by another. — II, 595-6

"It requires no conjuration and ceremonies; circle-making and incensing are mere nonsense and juggling," says Paracelsus. The human spirit "is so great a thing that no man can express it; as God Himself is eternal and

unchangeable, so also is the mind of man. If we rightly understood its powers, nothing would be impossible to us on earth. The imagination is strengthened and developed through *faith in our will*. Faith must confirm the imagination, for faith establishes the will." — II, 597

The Theosophical Forum

ABOUT INITIATION — *H. N. Stokes*

I hold the perhaps very unorthodox opinion that no one can be made different by any ceremonial whatever from what he was ten minutes before it. Look at it in this way. A medical student, let us say, has studied the medical sciences for several years. From time to time he has to submit to examinations which, successfully passed, entitle him to continue his studies in the school he is attending and under the proper instructors. Finally he is given a parchment stating that he is an M. D. But he is not one whit different ten minutes after each examination than he was ten minutes before; nor is he in any way different ten minutes after his diploma is handed to him than he was ten minutes before. At no one moment has he been initiated into anything. You may, if you wish, call his successive examinations and his final graduation initiations, first, second, third, and so on. You may call the examiners initiators and the president of the college, who hands him his final diploma, the "Great Initiator," but it means nothing. At no one moment has he been initiated into anything — he has simply had a succession of labels stuck on him, and the sticking of these labels, as they do not in themselves accomplish anything, does not need to be accompanied with any sort of ceremonial whatsoever, and anything of the sort is just for show. A medical degree is doubtless of value, as it is required by the authorities before he is permitted to practise as a token that he has had sufficient training; it serves on his shingle or the wall of his office to tell what he is. But all that he is he has made himself, by study, aided by his instructors. But brush aside all these formalities and he would be just as good, or as bad, a doctor.

There is a certain parallelism between spiritual growth and growth in material knowledge, but with the difference that the

former, being more an inner process, depends more on the development of the inner faculties and less on something coming from without. It is conceded that at proper times suitable instruction must be given, but this is rather with the aim of calling out the powers latent within one. It is needless to go into this further here. What I want to emphasize is that initiation is a gradual process, just as is the acquirement of medical knowledge, and that it is not something which proceeds by fits and jumps. To speak of a person being an initiate of the first, second, third degree and so on means about as much as dividing students into sophomores, juniors, seniors and finally graduates. It is quite true that moments may come when there is a rather sudden "expansion of consciousness," when ideas before only dimly or not at all perceived suddenly flash on one, just as one may suddenly have the solution of a problem flash on him, while in other cases the process is a slow one. I don't pretend to offer an explanation of this, though I object to the popular idea that whenever one gets a new conception it is because some superior being has thrust it into his mind. I object to this explanation because it is no explanation at all, for one must at once ask, how did this superior and external being get it? I see no essential difference between conceiving some useful invention and conceiving a new sort of safe-cracking or financial swindling. There are people aplenty who long ago abandoned the idea of being "tempted by the devil" who still attribute each brilliant idea to some kind-hearted angel anxious to help along.

Be that as it may, the idea that initiation is something sudden, rather than a gradual growth brought about by "self-induced and self-devised efforts," that it is something conferred rather than made by oneself is so alluring that the subject has been the field of exploitation without end. Do you really suppose that those wise beings who know the hearts of men will indulge in such puerile

stunts as you find described in books on initiation? Do you think that they will put candidates through a course of interrogation and actually require a spoken oath just as if they were judges in a police court? I find the notion rather insulting. The perniciousness of this notion lies largely in the idea that an initiate is made from without rather than by his own efforts. Read the current literature on initiation. You will get the idea that as one progresses along the Path he finally comes to a closed door. This he cannot open himself; it has to be opened for him and he himself pushed or pulled through it by some sort of ceremonial supposed to stir up his spiritual bowels.

Make up your mind that "initiation" is a slow growth, brought about through your own efforts aided when necessary by higher instruction when you have already made the best use of what has been placed at your disposal, and have learned by the mistakes you will make. But pay no attention to the talk about being suddenly boosted by some external process, or perhaps by some surgical operation on your chakras, into a new and higher state.

The Theosophical Forum

MAN AFTER DEATH — *G. Cardinal Le Gros*

Let us begin this subject of Man after Death by remembering that he is a Divine being, an eternal pilgrim, now journeying Homeward through the labyrinths of matter, learning in pain and sorrow, and sometimes in joy, the truth about himself and the universe, learning to obey the "Law of laws" — Compassion, realizing that he must become a co-worker with Nature's supreme laws.

I do not think that this can be repeated too often: man is in his heart of hearts a God, a Divine Being. This is his Rock, against which nothing in the universe can prevail, because it implies his own eternal oneness with the Heart of the universe, his oneness with Harmony, Compassion, and the imperishable Life of all things.

We may live in suffering and misfortune: — "the Karmic progeny of all our former thoughts and deeds" — but always with us is the fearless, mighty Inner God, whose Peace we can share. He is ever-present. In the deepest darkness he abides with us. Even in death he lives with us. What illusions are the so-called securities of the world compared to him! The wheel turns, and they are gone, and we wander empty-handed; but indestructible and constant endures this Divinity in our hearts.

By impersonal love and forgiveness Man opens himself to the beneficent influences streaming from the Cosmic Heart, and thus steps into, partakes of, the Eternal Peace.

The Masters of Wisdom and Compassion are individuals who have become more at one with the Inner God than we, who have unfolded into vital manifestation the powers and faculties latent

in us all. They feel keenly the pulsing of the great Universal Heart. It was they who gave this wisdom we call Theosophy, a fragment of which will be considered in this paper.

The seven principles of man are seven aspects, expressions, reflexions, manifestations, of the consciousness-life-substance which is, in its totality, the Boundless. The man whom we know at present is but a reflexion — a sorry one — of his "only abiding principles" — Atman and Buddhi. He is a stream of consciousness flowing down from above, a radiance, a ray of Spirit-Mind, incarnated in matter, pulled this way and that by conflicting desires.

But here let us pause and think. These seven principles are not the last word regarding the teaching of man's constitution. According to the Esoteric Wisdom, there are, besides these seven principles, three more, belonging to the higher, unmanifested planes of Nature. And moreover, since the part contains everything that the whole has, each of these seven principles, considering man as a sevenfold being, is itself septenary.

But we will here consider man in his sevenfold division because this is relatively simple, and because it harmonizes with the septenary manifestations that we observe throughout all Nature.

The seven principles that go to make up the constitution of man are as follows: the physical body or Sthula-sarira, the astral, model-body or Linga-sarira, the life principle or Prana, the element of desire or Kama, mind or Manas, the Spiritual Soul or Buddhi, and Spirit or Atman.

The physical body is a gross, dense form, itself without moral responsibility as an entity, serving man as a vehicle or garment on the terrestrial plane.

The astral body is composed of substance more attenuated than

the physical, but still material. It is the pattern for the physical body, is formed before birth, and acts as a link of communication between the mind and physical body.

The life principle or Prana is physical vitality, drawn from the ocean of life for the specialized use of forms, after the disintegration of which it returns to the ocean of life.

The element of desire or Kama is the fourth principle, aspect, of the consciousness-life-substance. It is that in us which desires, moving into action the will. Without some kind of desire we should stagnate and cease to be. Desire is the driving power in life. It permeates the universe.

Mind or Manas is the thinking principle, a spark of the universal Mind, in the beginning un-self-conscious, which to obtain self-consciousness must undergo experience in matter. Manas is the link between the god and animal in man because it has two aspects: the first is the Higher Manas, aspiring upward to its source, which is Buddhi the Spiritual Soul. The second aspect is the mortal, Lower Manas, a ray from the Higher Manas, "working through the physical brain and senses." This lower part of Manas, informing the perishable quaternary: physical body, astral body, life, and desire, constitutes the terrestrial personality enduring from birth to death. This personality is the mask of the Higher Self. This Lower Manas is really a false consciousness, an entity that goes to pieces, disintegrates, after the passing of the body, giving up to its source only that of it which is worthy of survival, its pure, self-conscious, spiritual essence or aroma: the high dreams of beauty and harmony, the aspirations lofty and sublime. But if during incarnation on earth it was gross, materialistic, and a denier of soul and immortality, it will then have nothing in it to rise, after death, to the spiritual plane from which it came. In such a case there will be no Devachan for it, and

the Higher Nature will draw from it nothing at all.

Regarding the majestic themes of Buddhi and Atman, little can be said. However, in the *Bhagavad-Gita* we read the following which is helpful: "The senses and organs are esteemed great, but the thinking self is greater than they. The discriminating principle is greater than the thinking self, and that which is greater than the discriminating principle is He." He is Atman, the Supreme Spirit, the Divine Monad or Ego, the Inner God. The discriminating principle is Buddhi, the Spiritual Soul or Monad, the Inner Buddha. The thinking self is Manas or mind, the Reincarnating Ego, the Human Monad or Soul.

At death the physical body is deserted, and the life principle or Prana returns to the ocean of life from which it came. This reduces the number of man's principles from seven to five. They are: Atman, Buddhi, Manas, Kama, and the Linga-sarira or astral body. The entity man is now in the region of Kama-loka, or place of desire, a locality in and about the earth, in a vehicle or vesture called the Kama-rupa, or body of desire. Perhaps here we should consider what the Kama-rupa is. On earth during incarnation man's desires infill his being; they are not independent of him; indeed he is their master because he decides what desires to encourage and follow. But after death and the abandonment of the physical body, the desires coalesce with the astral body, forming the Kama-rupa, or body of desire.

This Kama-rupa is made up of all the lower desires and selfish impulses that the liberated soul leaves behind, and is therefore wholly bad, being an evil influence to living persons who unwisely permit themselves to become mentally negative, thus making possible the invasion of astral forces. A good man, after death, leaves behind him a relatively weak Kama-rupa which soon goes to pieces, and becomes no menace to the living. But a

bad man will leave a strong, coherent Kama-rupa which will hold together for a long time and cause untold trouble in the world. There is a great moral implication here, because the soul is always responsible for whatever evil its abandoned Kama-rupa may do, even if the soul be in Devachan.

The separation of the heaven-bound soul from the Kama-rupa is called the "second death," an event quite painless to the good man, but a period of great suffering for those who in life persistently identified themselves with the lower nature.

Devachan is not a place or location like Kama-loka, but a state of spiritual consciousness. And it is Karman — spiritual Karman — which leads the individual soul to Devachan. While on earth in the body man aspires to noble things, thinks sublime thoughts, and dreams lofty dreams, few of which can be realized here. But they have to come to fruition somewhere, because every cause must produce its effect. And that "somewhere" is Devachan.

Each man's Devachan is of his own making: it is his own spiritual creation: — an ideal world of happiness and peace wherein the tired soul takes rest and assimilates the purified aroma of mortal experience. Devachan is really a dream, but less of a dream than terrestrial life because it is closer to the Heart of Things.

Devachan is over when the spiritual causes which led the soul there are exhausted; and the soul is brought back to reincarnation on earth by causes, initiated in past lives, which require earthly conditions in which to manifest.

At the time of death the soul sees the complete panorama of the incarnation just ended, and before birth the conditions that will have to be faced in the coming life are revealed to its inner sight.

To summarize: Devachan is a spiritual state, the efflorescence of spiritual forces engendered by the individual during incarnation.

If there was in the life of a man much aspiration to the nobler side of things, hopes for the betterment of the world, efforts in the direction of the "Good, the True, the Beautiful," then the Devachan will be long, rich, and full. On the other hand, if he lived mostly for the material aspects of life, giving little attention to the Real, his Devachan will be brief and almost colorless. And in some cases, as mentioned before, there may be no Devachan at all.

Now it has been said that Atman and Buddhi are the "only abiding principles" in man; but although abiding, permanent, and imperishable, they are not changeless in an absolute sense. Everything is growing, evolving, changing: atoms and stones, worlds and men, universes and galaxies. The highest pinnacle of perfection that we can visualize is but one more horizon against the eternal skies. The farthest range of harmony and perfection attainable in this our present manvantara will be over-reached in our next manvantara; and so on forever, "sublime ultimate after sublime ultimate" attained and surpassed, in Boundless Infinity, which is our Home.

Much has been omitted in this study of Man after Death, and all that has been said is very fragmentary. We should not permit our minds to crystallize around any aspect of these teachings because they are always subject to enlargement, and as we evolve intellectually, morally, spiritually, we shall see and understand more than we do now. There is an old saying: "Stand ready to abandon all thou hast learned." And this is good advice to the Theosophist. Theosophy is the Eternal Truth of man and universe, but it has no final bourn, no absolute ultimate. How could it? Everything is growing, advancing, and as we follow the turning wheel of time, striving to realize more and more of our essential Divinity, we shall come into the possession of greater powers and faculties, and an ever-widening perception. We shall gradually

become more at home in our universe, more familiar with its sublime mysteries, more serviceable to our fellows.

When we are studying these magnificent teachings and appreciating them with our intellects, let us not forget, even for an instant, the Source of them, the Eternal Foundation from which they spring! Let us not close our hearts for one moment to the ever-abiding Spirit that moves in the Silence, bringing peace to our hearts and illumination to our minds. For this is the great thing: the Spirit behind it all, and the glorious vision that we see when we hold to this Spirit. The Spirit it is that must stir and motivate us in our Theosophical life. For Spirit is the Heart of it all, the Essence, the Light, the Power, and the Guide. With the Spirit and the Vision within and before us we shall follow the Ancient Path with certain feet. Indeed, there is no other way we can tread it, for the Path is the Spirit, and the Goal the Vision!

The aim of evolution is the bringing forth in man of his essential Divinity; that he may become it, that he may live and actually be the god that he is in his Inmost. The Messengers of the Great Ones have all brought one Message, which is: "Man, know Thyself. Know Thyself for what Thou truly art: A Divine Splendor, a Deathless God." Be this inner Glory, they have taught, and all that the boundless universe contains will be yours because you yourself will have awakened to the sublime realization that you are the universe, and the universe you! "As above so below."

The everlasting Divine Life flows through all things, holding all things in eternal keeping. The Divine Life is the same in one as it is in another. The self-same identic Essence that makes us brothers verily makes us ONE. For the whole human race is one grand unit, an organism electrified and driven by Compassion which is, as *The Voice of the Silence* states: "no attribute" but the Law of laws, — Eternal Harmony. We have only to open our

hearts and minds to this holy verity, and let the Power that moves behind and within all things stream in, and we shall be transformed, lifted to heights where we shall breathe the air of the gods.

The destiny of the human race is to become a race of gods. It is a wonderful, glorious picture that rises in the mind when we think of this: when we gaze on through the centuries at those grand days when all men will be as brothers, each self-forgetful, each living and striving for the good of the rest, with selfishness dead, and pity and compassion filling the heart. I think that one of the finest things that we can do is to hold steadfastly in our minds this picture of Tomorrow.

The Theosophical Forum

GOOD WILL IN THE COSMOS — *M. M. T.*

Thou dost preserve the stars from wrong
And the most ancient heavens, through Thee are fresh and
strong.

— Wordsworth: *Ode to Duty*

The wonders of the visible ocean of Space have been revealed by scientific observation and record — planets assembled in solar systems, solar systems in galaxies, myriads of them, and beyond these, super-galaxies composed of thousands of galaxies. Order and rhythm prevail in the movements and interrelations of these celestial bodies, indicating cosmic co-operation. Vast periods of time are needed to account for this majestic march of cosmic events. Contemplation of these wonders stimulates in a thinker the power to see in just proportion the affairs of any one small unit like our Earth. It also engenders profound conviction that in this ages-long weaving of the celestial pattern there is *Cosmic Good Will*.

For who can picture these vast systems without revering the power that holds these parts in place? What if they did *not* hold to their courses? What if great entities like these celestial bodies refused to be regulated in their movements? What prevents tragedies on a wholesale cosmic scale? What makes Space safe for the Celestial Commonwealth? The Theosophist answers, *Cosmic Purpose and Cosmic Good Will*.

We might ask concerning another wonder of the visible world. What has insured the evolutionary progress in form from the tiny amoeba to the complex, exquisite human body? Man, the Thinker, whose instrument on Earth that body is, man, who has reached his present development through no conscious effort of his own,

is making urgent inquiry as to what part he is consciously to play in these vast systems of worlds that he is able with his intellect to contemplate. Can he discover and emulate in his human associations on Earth the principles of co-operation, the laws of life, according to which order and safety in solar systems and galaxies are maintained during the aeons of time it takes for the cosmic purpose to be consummated?

Theosophy answers, Man is of the stuff of stars and suns, both in his outer and his inner nature. One Hierarchy of his progenitors, the Builders, have directed the evolution of form, body, vehicle, for Man the offspring of Divinity. Another Hierarchy, that of Compassion, has in charge the advance of the inner man, whose ancestry is akin to the invisible Beings who use for body the great celestial sun and star systems. They have in hand the guidance and direction of that part of human destiny still to be unfolded, when man, abandoning "uncharted freedom," will become conscious of and obedient to, that infinite duty, which the poet intuits as *Cosmic Protection and Good Will*.

The most precious gift offered to the human race is the knowledge of that glorious destiny. Every year a whispering of it is heard in the human heart. Even in an age when the most material longings are in the ascendant, this divine murmur prompts towards *giving*. It is always linked with legends of the birth of the Great Teachers of the world, who are of the Hierarchy of Compassion. And comes when the Sun, the symbol of inner light as well as the giver of warmth and visible sunshine, is reborn and enters its northward course. Theosophy adds that it is the time when the Hierarchy of Compassion is increased by successful candidates for Initiation into conscious co-operation with the Good Will in the Cosmos.

A yearly reminder only from above? Emerson reverently notes:

If the stars should appear one night in a thousand years, how would men believe and adore, and preserve for many generations the remembrance of the city of God that had been shown! But every night come out these envoys of beauty, and light the universe with their admonishing smile.

Nightly the stars look down with their message of assurance that we have our home in a friendly universe, that we too, like the Great Beings whose visible forms are those "diamonds in the sky," may become conscious collaborators in *Cosmic Purpose and Cosmic Good Will*.

The Theosophical Forum

THEOSOPHY CAN EXPLAIN — *L. L. W.*

New Worlds to Conquer

It can be confidently asserted, we think, that Theosophy is the only teaching in the world today that has all the answers. It can explain the past, account for the present, and lay down inspiring lines for the future. In this series of articles there has been so far an endeavor to outline what Theosophy explains about the past and the present. This has been done necessarily in but the most fragmentary manner though it is hoped that sufficient leads have been given for truly interested inquirers to follow.

In conclusion some picture should be drawn of what Theosophy explains about the future. There are two main classes of seekers whom we may consider here. (We need not discuss the great rank and file of those who are in such inner need that the message of Theosophy comes like manna from heaven.) These two classes comprise those who take a constructive and vital concern in the shaping of our modern world into a future that can assure some measure of happiness and progress to everyone.

There are first those who are working to bring about the kingdom of heaven upon earth. They represent the psychological trends of our time. They are such people as those behind the social research clinics which are springing up in our large cities. Then there is the second class which fortunately we have always with us — the winged ones, adventurers in the world of intellect and spirit. These are very few. They are the pioneers in the realm of ideas. They shape the molds of mind into which all other workers sooner or later pour their efforts whether they are conscious of it or not. These adventurers are they through whom the Cosmic Spirit-Soul, the *Welt-Geist*, sends its vitalizing currents into the

soul-life of the race. For both classes of pioneers Theosophy has a message and a promise. To the first group with their science of human relationships Theosophy contributes its teachings about the Spirit-Soul at the core of every being, making of that being a deathless part of the Cosmic Spirit-Soul from which it sprang. For the Cosmic Spirit-Soul is the Universal Self and Fount of everything in our Universe. Evolution is the unfolding within every being of the powers and faculties of its Spirit-Soul in progressive stages of self-expression. In this process the complex aspects of man's nature have been evolved, including his psychological apparatus and his physical body. This evolution is brought about through reïmbodiment in ever more highly evolved forms, checked and guided by Karman. Karman is due to the action of free will and the consequent reactions.

Out of these teachings there springs a creative psychology which, when applied in the laboratory of human research, will prove a master-key. The single teaching of the Buddhic principle in man contains in its application the very elixir of life. From this divine principle in our composition springs the electricity of impersonal love. Impersonal love is that all-embracing spiritual emotion from which alone regeneration in human nature and life can spring, once we have discovered the source of it in ourselves and are determined to cultivate it. Through Karman in many lives here on earth the human personality has entangled us in a thousand crippling bonds and tormenting miseries. The elixir of impersonal self-forgetting love will dissolve these bonds. It will transmute all suffering into the joyful power of helping others. This teaching is but one of the great truths in the spiritual alchemy of Theosophy which can create new combinations of undreamed of happiness and splendor in all the relations of daily living.

As to the second group, the star-aspiring adventurers, there is indeed little left in the physical world for their adventuring

spirits. Theosophy however will provide a spiritual quest — yes, even a physical one — that offers to the faithful seeker a magnificent fulfilment. In a brief article like this not much more than a clue can be given. The inquirer is therefore recommended to our literature, particularly to *The Esoteric Tradition* by G. de Purucker. In that book the author has brought together, from *The Secret Doctrine* and other authoritative sources, the teachings of the Archaic Science in regard to the Spirit-Soul of man and the Circulations of the Cosmos, describing the inner reaches of man's evolution during life and after death. And that nothing may be denied us, the subjects of Initiation and the Mystery-Schools and other fascinating leads are sufficiently treated. In bringing back to men these long-forgotten teachings, Theosophy has indeed revealed new and authentic worlds to be sought and conquered.

The Theosophical Forum

JUST WHAT DO WE MEAN BY CHRISTMAS? — *Axel E. Gibson*

Though in itself a symbol of ageless youth, Christmas, as an historical event, is the oldest of the world's holidays. It is older than religion, older than Christendom itself. It was recognised in pagan Rome where throngs of people on the 25th of December worshiped at the shrine of the God-child Adonis, while shouting in chorus: "Adonis has come; Adonis has returned to Earth!" But before that, the old Scandinavians were commemorating, at huge stone altars, the birth of their Tribal Savior — Thor; and before that, India had consecrated herself to the annual recognition of the same event, with Krishna as its Christ-child in the manger; and before that Egypt since time immemorial had in its ritual the Virgin-Mother, Isis, and Messiah-Child, Horus.

All these religious festivals, though separated by ages of time and hemispheres of distance, occurred at an identical period of the year. The time selected by them all was the Winter-solstice, when the Sun hovers between the shortest day and the longest night of the year. In other words, the signal for the Christmas celebration of all time was flashed by the Sun when from her annual retreat of darkness and cold she moved into the splendor of the new-born year with its promise of light, beauty, and power.

It is this fact of the Sun's primogeniture in all the world's Christmas births, that has given to this holiday its universal identity throughout the historic and prehistoric ages. From this Sun worship all our primitive religions have obtained their symbols of birth, light, beauty, and redemptive powers. In the light and life of the Sun is born the hope of the year — the spirit of its beauty, and the fruits of its service.

But if there be any power of Heaven that cares for the destinies of

this old Earth with its teeming humanities of sins and virtues, it certainly finds an opportunity at this time of general awakening to inspire mankind with impulses of new ideals, and new methods for their realization. Bathed in this light of our spiritual nature, our mind should be more responsive than at any other time of the year, to the admonitions from the deeper life. Now or never let us respond to the opportunities of human helpfulness, and charge every gift that leaves our hands with the spiritual values of peace and good-will to the children of Earth.

The Theosophical Forum

CHRISTMAS — *Raymond Tyberg*

Of all the festivals that we keep throughout the year, Christmas has the most secure hold upon our hearts and imaginations. We are not celebrating the birth of Jesus, though well we might and with deep reverence, for the story of his life, whether fact or myth, has sweetened the days and strengthened the spirit for countless millions of men. Nor are we rejoicing with the pagans at the return of the sun-god with his healing and creative powers, for though we admire the vigorous imaginative vision of the ancients, we do not see through their eyes, and their splendid truth fades for us into a weak figure of imitative fancy.

There is an innate power in men to refashion age-old customs to present purposes. Our Christmas means to us the periodic restoration of harmony in our human relationships. Some men spend the year dragging their feet through mud in pursuit of unleavened material pleasures; others seem to hang by their teeth to an evasive ideal of spiritual life. We follow our separate ways to personal or impersonal power and satisfaction. But at Christmas we call back our centrifugal energies from their non-human goals.

Then our feet press the good earth in the middle of the road, and for a short while we go along cheerfully together, taking pleasure in each other's company. Families are reunited. Giving gladdens us more than receiving, and sharing is felt to be an even greater blessing. Working with others to create a pleasure to be actively enjoyed in common is found to be an experience so delightful, that memory clings about it to the end of life. The mere turning of the year brings us round to the time when custom helps us to enjoy our essential being as individuals participating in an

infinitely varied relationship to other individuals.

We need not be entirely at the mercy of blind custom, fed as it is by the superstitions which cluster round dead forms of poetry. Christmas may be for us a yearly reminder that the final aim of philosophy and education should be mastery of the art of living together, the art of consciously producing harmonious cadences in the symphony of human life.

The Theosophical Forum

THEOSOPHY ANSWERS THE CHALLENGE — G. de Purucker

What does the Theosophical Society do for the world in a practical way? The answer is: It goes to the roots of the causes of the misery and of the suffering which exist among men. Can there then be anything more practical, more useful, than the work which the Theosophical Society is doing, has done, and will continue to do as long as it remain faithful to the traditions which we follow and which we love? Our work, expressively compressed into a nutshell, is to labor to change the hearts and minds of our fellow-men towards higher things, towards things of permanency.

All the world's suffering, all its misery, all its pain and sorrow, arise out of human ignorance, human weakness, and human failings, the latter being what the Churches with some rather vague justification call "human sin." Is there anything more practical and more useful than changing the hearts and minds of men through the entering into them of the forces of imagination and practical ideals? By this, misery can be changed to content and happiness; poverty shall be done away with and be replaced with the abundance of those who earn it under changed conditions; for men thus motivated from within will be moved by the inner impulses of a changed character. Change the hearts and minds of men by giving them a vision and by acquainting them with the magnificent power of a constructive imagination, and all the causes of suffering and misery will vanish. That then is our main *practical work*; that is our answer to the above challenge.

Soup-kitchens, philanthropic institutions, and others of their ilk, are all admirable in their way, and in their way do good work. They are, shall we say, backed by untold millions, backed by

human sympathy both active and passive, and by the support of those who are willing to give and who do give. But they are nevertheless palliatives: they do not cure the evil; they give but temporary surcease.

I would that every genuine Theosophist felt as keenly as some of us do the spirit of service to that sublime end which is imbodyed in the Latin phrase I dearly love: *Ego sum servus servorum Dei*: "I am the servant of the servants of God — of the Divine." When the idea imbodyed in this principle burns in the heart and sets it afire with its holy flame, then the "brain receives enlightenment in its turn and sees, indeed evokes, the methods, the way, the path, the means.

Let never, then, this challenge pass unanswered. Take it up immediately. Point out to all that the world's suffering and misery arise from the ill-doing, in its turn born from the ignorance and weakness, of our fellow-men — often, often, usually indeed, such ill-doing is not consciously done; for these things arise through ignorance, through lack of the inspiration and knowledge of the God-Wisdom which we have. Replace ignorance with knowledge; give light unto the dark places of the human heart and mind. Bring sympathy to the thoughts of men, and again all these causes of human wretchedness will vanish. War will disappear. We all know what war is. It is not in any sense wrong to defend one's country; but this is not war as commonly understood. It is the using of violence on a vast scale, from fear, misunderstanding, and often from selfishness, and the employment of some of our most brilliant minds in this cause, which we must do away with.

When we reach and uproot their causes, poverty will vanish and will be replaced with at least a competence for all; ignorance will vanish because proper education and sound knowledge based on ethical instincts will take its place. Human fellow-feeling will

replace the present sentiments of fear and of indifference. Now is it possible to find any work more practical, more useful, more humane, than this? The T. S., our beloved society, was founded to change the hearts and minds of men, I repeat it. Change these and you then change all else in human life.

And as regards politics: It is my conviction that if the T. S. officially ever became entangled in politics of any kind, its day then will have come, its day of doom, and justly so. Why? Because it is precisely politics, with its manifold ramifications of distorted emotions which rends men apart into opposing camps. The streets, the lecture-halls, the council-chambers, the chancelleries of the world, today are filled with political groups, each eager-voiced, each voicing its own supposed remedies for our ills: yet universal agreement is never reached, because the thoughts involved are of the brain-mind instead of issuing from man's higher nature. It is precisely politics that separates men, as I have said, placing them into opposite or opposing camps. "If a house be divided against itself, how may it stand and endure?"

We Theosophists have no objection whatsoever to anyone's holding any political opinion that he or she may please. Any Theosophist is entitled to hold any decent political opinion that he or she may please. But as an organization the Theosophical Society is not so. Why? For the reason just pointed out. When we descend to brain-mind theories, instead of finding union we find division, separation.

In my judgment there is but one thing, one common system of thought, rather of philosophy, on which all men can agree when they understand it. This is Theosophy, the God-Wisdom of the ancients, our God-Wisdom: that which is taught in the distant stars; that which is taught here on earth; that which is ageless, timeless, deathless; which can be proved to any sane, normal

mind today, at least in some of its aspects, by the latest discoveries of our most advanced modern scientific thinkers; that which the poets have caught glimpses of and which all the titan intellects of the past have known at least something of and which the greatest among them have taught.

Men have been separated into different political camps by varying political theories for heaven knows how many ages. Has politics ever yet healed the woes of the world? No, and it never will. I do believe that when men understand what Theosophy is and what it means, and what the work of the T. S. means, then politics will die, because all men will see its uselessness. I know that many men would look upon such a condition as a questionable advance. I believe, however, that their opinion is based largely upon lack of sufficiently deep and penetrative thought. The one fact that it is precisely politics which separates men proves its lack of essential spiritual and intellectual worth.

What does the T. S do in a practical way for mankind? I come back to the thought: It changes men's minds and hearts upwards and unifies them. When this is done all is done.

The Theosophical Forum

"THE SPLENDID HAZARD OF THE NEW" — *Marjorie M. Tyberg*

One whirl of the Earth on its axis brings us day and night; one circling round the Sun brings us the seasons; one swing of the Solar System, with the Earth in it, round that greater celestial body which is our Sun's Sun, undoubtedly has significant if as yet unknown effects upon all life in the Solar System. There is ever the return — and ever the new January 1st, 1938, and the year to follow it have never been lived before.

Today we have frequent reminders that the menacing conditions in the world are a recurrence of what happened in Europe before the fall of the Roman Empire. In the centuries since then, however, the human mind has wrought mightily and won control of many natural forces for the use of man. But can Humanity's present planetary experience be regarded as even nearing completion or fulfilment while the human heart has never fully uttered itself? And, with every New Year, springs a hope — even an intuitive certainty — that there may yet flow from the deeps of human nature a current bringing to the perplexed and bewildered world beauty, harmony, and peace.

In all beginnings, even of a year or a day, there is the hazard of the untried. Today the hazards loom large. We are becoming familiar with such expressions as "this age of fear," "more comfort, less faith," "civilized races seem to be losing the courage to live," "a state of scare," "collective nervous breakdown," as descriptive of the present time. For long in the West, while the Ancient Wisdom, knowledge of which practically eliminates the fear of death in the East, has been obscured, man has dreaded the unfamiliar future that he believed awaited him after death. He has striven to secure that future by saving his soul. Today, faced

with the power that threatens from his own achievements and inventions, man begins to wonder if he is going to be able to save his skin. At such a crisis man may find, however, that if he looks deep within himself, beyond his soul to its source, to that root of him which is one with the Heart of the Universe, he will find that impulse, that driving-power that brought both the Universe and himself to the present hour and will carry them toward that goal of life where Man's full conscious, creative activity finds expression in higher human associations of a nobility and harmony he now cannot even visualize.

For in that same Ancient Wisdom, which the world is discovering to have been not only Eastern but universal, so ancient that it antedates every historical crisis that is recorded or may be expected to recur, there is a teaching the very simplicity of which helps to keep it secret when men have ceased to recognise the deep truth in simple things. This is the doctrine of *Swabhava*, which means that every being in the Universe, from the tiniest to the greatest, is a "self-starter" so to speak; that the primal impulse that brought the Universe and all that is in it into manifestation and to the place where we all are now, is an impulse, a driving-power, that impels us all to unfold our individual characteristics in progressive steps, with a chance to continue in successive lives on Earth and in successive periods of universal manifestation; that there is that in us which lasts and lives and learns.

Now we should have to say that minerals and plants and trees have done pretty well. "A diamond is a chunk of coal which has stuck to its job." On the value of diamonds no comment is needed. A rose-bush gives us fragrance and beauty and there seems no end to the variety of perfected blooms that a horticulturist — a member of a hierarchy of more conscious beings than the rose-bush — can help the rose-bush to produce. An acorn grows into an oak, and the oak-tree stands firm to the winter wind, bared of

every leaf, without a whimper. Is man less than a tree or a rose-bush or a lump of coal? Is there in him a deficiency of resource, of still unexpressed individuality, so that he fears to hazard the growing-pains that hurt because the human race is bringing to birth a new era in which more of his enduring, creative individuality can manifest in new and better conditions on Earth?

The hazards of our day are the hazards of this bringing forth of the new. We've got it registered in our consciousness that a child who survives the dangers attending birth into a body can grow from infancy and youth to maturity; but owing to the incomplete picture which human beings have of the full opportunity for development of *all* their faculties and powers, they face an unfamiliar future that causes them to dread. The sorest need that humanity has, almost, is the need for new pictures of the life to be — on Earth, mind you. And the source-material for correct and heartening visualization of this future is abundantly and comprehensibly set forth in the Ancient Wisdom, Theosophy.

Moreover, with every opening cycle — morning, when, Theosophy reminds you, not only your body but that neglected inner nature of yours is refreshed; New Year, when the impulse toward expression in your life of those deep inner resources of conscious, creative power is reinforced from the Hierarchy of Beings who have climbed the Ladder of Life ahead of you; with *every* dawn there is fresh energy to be availed of. Man, searching within, with the knowledge of what is there, can learn to swing into step with the Great Companions, can storm those inner frontiers beyond which awaits a Light that can guide him past fear to fulfilment, to that full human experience won by those high hearts that crave "the Splendid Hazard of the New."

ORIENTAL STUDIES: I — *Judith Tyberg*

The Sacred Texts of the Gupta-Vidya: Where are they?

When we consider the vast treasure-of age-old truths that may be found in the ancient Oriental literature which has come down to us, we realize that there must have once been an esoteric fount of Truth open to a great number of the ancient peoples. If the Upanishads, "the mirror of eternal Wisdom," (S. D., II, 484) are exoteric works, there must have been some teaching of a still deeper and more esoteric nature given to the ancients. The question is often raised: Were there still more mystic writings known to the ancients? Some learned writers and students of ancient scriptures insist that there must have been "fragments of a primeval revelation, granted to the ancestors of the whole race of mankind . . . preserved in the temples of Greece and Italy." Eastern Initiates and Pandits have also proclaimed from time to time that their most sacred writings are not known to the West.

What has H. P. Blavatsky to say on this subject? As usual we find something helpful in her *Secret Doctrine*, this time in her Introductory (p. xxx):

While a prominent Cinghalese priest assured the writer [H. P. B.] that it was well known that the most important Buddhist tracts belonging to the sacred canon were stored away in *countries and places inaccessible to the European pundits*, the late Swami Dayanand Sarasvati, the greatest Sanskritist of his day in India, assured some members of the Theosophical Society of the same fact with regard to ancient Brahmanical works. When told that Professor Max Muller had declared to the audiences of his "Lectures" that the theory . . . "that *there was a primeval preternatural*

revelation granted to the fathers of the human race, finds but few supporters at present," — the holy and learned man laughed. His answer was suggestive. "If Mr. *Moksh Mooler*," as he pronounced the name, "were a Brahmin, and came with me, I might take him to a *gupta* cave (a secret crypt) near Okhee Math, in the Himalayas, where he would soon find out that what crossed the *Kalapani* (the black waters of the ocean) from India to Europe were only the *bits of rejected copies of some passages from our sacred books*. There was a "primeval revelation," and it still exists; nor will it ever be lost to the world, but will reappear; though the Mlechchhas will of course have to wait."

Of all the writings of old India that have come down to us, the Upanishads contain the most mystical and Theosophical teachings. H. P. Blavatsky says that it is in the Upanishads and the Vedanta that we have to look for the best corroboration of the occult teachings. She also tells us that the mystical doctrine of the Upanishads is "the only Veda of all thoughtful Hindus in the present day." (*Five Years of Theosophy*, p. 192)

Yet even these writings of the Upanishad have reached us in a despoiled condition. Why are they thus demolished? Who has done it? The following passage by H. P. Blavatsky (S. D., I, 269-272) gives answer.

After stating that what is given in *The Secret Doctrine* can be found in full nowhere else, she says:

It is not taught in any of the six Indian schools of philosophy, for it pertains to their synthesis — the seventh, which is the Occult doctrine. It is not traced on any crumbling papyrus of Egypt, nor is it any longer graven on Assyrian tile or granite wall. The Books of the *Vedanta* (the last word of human knowledge) give out but the

metaphysical aspect of this world-Cosmogony; and their priceless thesaurus, the *Upanishads* — *Upa-ni-shad* being a compound word meaning "the conquest of ignorance by the revelation of *secret, spiritual* knowledge" — require now the additional possession of a Master-key to enable the student to get at their full meaning. The reason for this I venture to state here as I learned it from a Master.

The name, "*Upanishads*," is usually translated "esoteric doctrine." These treatises form part of the *Sruti* or "revealed knowledge," *Revelation*, in short, and are generally attached to the *Brahmana* portion of the Vedas, as their third division. There are over 150 *Upanishads* enumerated by, and known to, Orientalists, who credit the oldest with being written *probably* about 600 years b. c; but of *genuine* texts there does not exist a fifth of the number. The *Upanishads* are to the Vedas what the Kabala is to the Jewish Bible. They treat of and expound the secret and mystic meaning of the Vedic texts. They speak of the origin of the Universe, the nature of Deity, and of Spirit and Soul, as also of the metaphysical connection of mind and matter. In a few words: They CONTAIN *the beginning and the end of all human knowledge, but they have now ceased to REVEAL it*, since the day of Buddha. If it were otherwise, the *Upanishads* could not be called *esoteric*, since they are now openly attached to the Sacred Brahmanical books, which have, in our present age, become accessible even to the *Mlechchhas* (*out-castes*) and the European Orientalists. One thing in them — and this in all the *Upanishads* — invariably and constantly points to their ancient origin, and proves (*a*) that they were written, in some of their portions, *before* the caste system became the tyrannical institution which it still is; and (*b*) that half of their

contents have been eliminated, while some of them were rewritten and abridged. "The great Teachers of the higher Knowledge and the Brahmans are continually represented as going to Kshatriya (military caste) kings to become their pupils." As Cowell pertinently remarks, the *Upanishads* "breathe an entirely different spirit" (from other Brahmanical writings), "a freedom of thought unknown in any earlier work except in the Rig Veda hymns themselves." The second fact is explained by a tradition recorded in one of the MSS. on Buddha's life. It says that the Upanishads were originally attached to their Brahmanas after the beginning of a reform, which led to the exclusiveness of the present caste system among the Brahmins, a few centuries after the invasion of India by the "twice-born." They were complete in those days, and were used for the instruction of the chelas who were preparing for their initiation.

This lasted so long as the Vedas and the Brahmanas remained in the sole and exclusive keeping of the temple-Brahmins — while no one else had the right to study or even read them outside of the *sacred* caste. Then came Gautama, the Prince of Kapilavastu. After *learning* the whole of the Brahmanical wisdom in the *Rahasya* or the *Upanishads*, and finding that the teachings differed little, if at all, from those of the "Teachers of Life" inhabiting the snowy ranges of the Himalaya, the Disciple of the Brahmins, feeling indignant because the sacred wisdom was thus withheld from all but the Brahmins, determined to save the whole world by popularizing it. Then it was that the Brahmins, seeing that their sacred knowledge and Occult wisdom was falling into the hands of the "*Mlechchhas*," abridged the texts of the Upanishads,

originally containing thrice the matter of the Vedas and the Brahmanas together, without altering, however, one word of the texts. They simply detached from the MSS. the most important portions containing the last word of the Mystery of Being. The key to the Brahmanical secret code remained henceforth with the initiates alone, and the Brahmins were thus in a position to publicly deny the correctness of Buddha's teaching by appealing to their *Upanishads*, silenced for ever on the chief questions. Such is the esoteric tradition beyond the Himalayas.

Sri Sankaracharya, the greatest Initiate living in the historical ages, wrote many a Bhashya on the *Upanishads*. But his original treatises, as there are reasons to suppose, have not yet fallen into the hands of the Philistines, for they are too jealously preserved in his *maths* (monasteries, *mathams*). And there are still weightier reasons to believe that the priceless Bhashyas (Commentaries) on the esoteric doctrine of the Brahmins, by their greatest expounder, will remain for ages yet a dead letter to most of the Hindus, except the *Smartava* Brahmins. This sect, founded by Sankaracharya, (which is still very powerful in Southern India) is now almost the only one to produce students who have preserved sufficient knowledge to comprehend the dead letter of the Bhashyas. The reason of this is that they alone, I am informed, have occasionally real Initiates at their head in their mathams, as for instance, in the "Sringagiri," in the Western Ghauts of Mysore. On the other hand, there is no sect in that desperately exclusive caste of the Brahmins, more exclusive than is the *Smartava*; and the reticence of its followers to say what they may know of the Occult sciences and the esoteric doctrine, is only equalled by their pride and learning.

Yet in these tattered remnants of the Upanishads there is great inspiration, and an inner experience for those who make their lofty teachings a part of their lives. The truths they contain have inspired many a great mind. Anquetil Duperron, the first European who read the Upanishads and translated them into Latin, said in his introduction:

Here, reader, is the key of India's sanctuary, somewhat rough with rust. Enter, if thou darest, if thou canst, with pure and clean heart, drawing near to the highest being, and merging in it. Let the outer senses rest; awaken the inner. Let thy body be as dead, and sunk in the ocean of wisdom and unwisdom. Know it — after Indian custom — as a divine law, that thou seest nothing but the Eternal; that nothing is, but the Eternal.

The wisdom of the Upanishads is truly the sacred relic of antiquity, and these truths are as old as the divinity of man, older even than our world. It is part of the virtue of these old mystery-teachings that they are quite inexhaustible; every advance in enlightenment gives us a new insight into their meaning. The sooner we make these truths actual in our lives, the sooner will the secret sanctuaries containing even profounder writings be opened once again. We must open these locked doors ourselves, but first we must earn our way to their divine treasures.

"The Self I cannot know, but I can *be* that Self."

— *Kena Upanishad*

The Theosophical Forum

MUSIC OF THE SPHERES (1) — *R. M. MacAlpin*

To most of us, "Music of the Spheres" means the study of the tone and pitch ratios of the planets, from the sun to the Zodiac, and of the stars. This is a good technical start; but when looked into more deeply the doctrine of the Music of the Spheres indicates, for the human musician, a noble place in the universal scheme.

Esotericists regard every atom in the universe as a vibrating sphere of slowly unfolding, or evolving, consciousness; Space in motion. Hence, the atoms bonded together to identify a material object or a perceptible force are vibrating in relative harmony. Flowers, grasses, and trees "sing" as they grow. The minerals, a kingdom in a deep lethargy on this plane, also have their long-wave "breathing" tone. The atoms in beasts and birds can express their collective symphony through vocal chords, while the atomic chorus that makes a body-vehicle for a man may have its voice directed by thought, feeling, desire, and will, toward environmental organization and control.

If we can accept the elements, Earth, Air, Water, Fire, and Ether, as conditions maintained by the harmonious activity of atomic entities, we have five more choirs of "cosmic musicians." Still more subtle is the music of the "kingdom" of thought-substance which man organizes into formative images.

Taking only these perceptible conditions and processes, we find ever-performing grand opera, symphony, oratorio, and dance Music of the Spheres. If we agree that eternal Space is at all times a great *fulness*, then our study is limited only by our own ability to wonder, to imagine, and to expand. Old myths, legends, and fairytales of heroes who have acquired the gift of "element-language," and have talked with stones, plants and birds as well

as with the sylphs, nymphs and gnomes of the air, water and earth, are based on forgotten depths of the Music of the Spheres.

Regarding this "element language," here is a pregnant message for the human musician. H. P. Blavatsky, in her profound book, *The Secret Doctrine*, quotes from an ancient treatise:

It is composed of *sounds*, not words; of sounds, numbers and figures. He who knows how to blend the three, will call forth the response of the superintending Power . . . sound being the most potent and effectual magic agent, and the first of the keys which open the door of communication between Mortals and the Immortals. — I, 464

All these observations indicate the study of the "intermingling hierarchies" that are the fulness of Space — but this is for the philosopher rather than for the musician. Carrying our theme into the human kingdom, we see, in a symphonic group, every member as a sphere of individualized thought, feeling, desire, and will, whose inherent nature causes him to be a musician — a transformer of sound from the subjective to the objective rates of vibration.

Three major influences draw these human spheres into the cosmic condition called a chorus or an orchestra. The most subjective of these is the call and need of humanity. Whether music be accepted as entertainment for the ear or as rhythm for the feet, matters not a great deal; either method is but an approach to the inner man who craves an occasional bath in, and as, the Music of the Spheres; the universal language wherein differences are harmonized into a rounded-out sense of well-being.

The designing intelligence is the composer of music, whom we may call the "point of departure" from the subjective to the

objective planes. His work deserves a special monograph on the subtle conditions and processes of the kingdom of thought-substance. The third, or operative influence, is the conductor of the group; he being the synthesis of all the intelligent "spheres" that vibrate according to his interpretation of the composer's design and of humanity's appreciation. Chief among the symphonic "body-building" influences are the music-teacher and the instrument maker.

Thus a chorus or an orchestra is seen to be a link between human consciousness and some of the most profoundly interesting mysteries of universal Being and Becoming. The composer whose musicianship is supported by some philosophic depth will probably transcribe basic themes from the Music of the Spheres, producing human music that outlives generations. The conductor who is himself a sphere of radiant thought-induction into which his performing spheres can gather in comfort and give of their best, is a great benefactor, whether or not humanity realizes it. He and his group become as a musical solar system — a "home" to the finer intuitive perceptions of the human heart.

Some recent experiments showed that an animal-trainer's voice, transmitted over a microphone to his beasts, exercised no command; but his personal appearance brought the beasts under his sphere of influence. Does not this support the idea that humans are spheres of radiant energy? Who knows what the symphony of whirling atoms in the spirit, mind, and body of a man may convey to the beast consciousness? What composer, listening for inspiration from his Muse, has heard the rhythm, melody, and harmony produced by our humanity, in its eternal process of "becoming"?

Perhaps some gifted composer will see possibilities in these paragraphs, and will strike out into more direct transcription of

the Music of the Spheres than we have had in modern times. Some wealthy patron of the fine arts should offer a substantial prize for the best symphonic interpretation of "Space, being and becoming a Universe."

On Being Human

Every part of a man's being should receive its due meed of cultural work. I do not believe that the human heart, the human hearts in the world, can be best reached by a man who has no heart himself. I do not believe that a man who does not understand the problems of his fellow human beings can help them. I believe that it is only when we are fully and truly human, and rise above our humanhood occasionally into the deeps of divinity welling up within us, that we do our best work, for that means that we understand the human hearts around us. Our heart then beats in sympathetic rhythm with the pain in others' hearts. We understand it. But believe me, we can rise above the pain into the peace and quiet, and thereby become efficient in help. — G. de Purucker

INFERIORITY COMPLEX

Psychoanalysts tell us that when a man is hugely arrogant, and treats his fellows with contempt, it is generally because lurking in his soul is a conviction that he is inferior to the run of humanity; that he must always be asserting himself outwardly as a kind of anodyne for the gnawing of that grief and shame within. The cure for such complexes, they say, is to lay bare the root of the trouble: a long and probably costly business. *The* cure, however, is much simpler and costs nothing. It is Theosophy: the study of Theosophy and the application of Theosophy in life.

All these complexes, and everything else that can trouble us, inhere in the personal self and the mysterious region that lies between it and the physical body. That region is broadly mapped out as consisting of the Astral Body, nearest to the physical and the model on which the latter is built; the Life-principle; and the Animal Soul, the seat of the passions and desires: these three form the vehicle of the Personal Self.

Now this bunch of four principles or elements, including the personal self and leaving out the physical body, is no Mahomet's coffin hanging in mid air unrooted and unattached. Although essentially unreal and illusory, it could not exist at all, or appear to exist except as the result of something Real. It is an appearance; but like every other appearance, it is caused by a Reality. The mirage you see in the desert is not there; but you would not see it there unless there were real lakes and forests somewhere for the desert atmosphere to reflect.

If you want to know what the personal self, the thing you call "I myself is, and how unreal it is, take the small-tooth comb of thought and examination to it, and try to find in that shifting

phantasmagoria of likes and dislikes, memories and anticipations, the Central Thing that is essentially your Self. A little of this practice will convince you that it is not to be found there: that the thing you thought was yourself, and a real entity, is very well symbolized by a mirage; or that it is something like the play of colored lights on a screen they sometimes show at a cinema: flashing and shifting and changing, and nothing there really: the screen is a blank really. But there is a cause for that illusion; and there is a cause in the Realms of Reality for this illusion we think to be ourselves.

We can get clues as to what that cause in the Realms of Reality is: first, in our power to think, to reason, to probe for the meaning of things and judge, by what we know, of the nature of what is beyond our present knowledge: when we do this, our minds take shape and order somewhat; they begin to become less unstable, less shifting, unreal and illusory. But a man, merely by taking thought, cannot really add a cubit to his inward stature; something greater than thought is needed to illumine it and bring it to life; and that greater thing is Impersonal Love. Entering upon the exercise of the power to give out this, which we do possess: it is part of the human make-up: we come into a region where all things, all beings, all the Universe, is One; into a place in ourselves which is utterly calm and stable and joyous; and this gives us an indication of the Reality of Things: it tells us where the Real Self is to be found; and that it is the Self of our Universe.

In the personal self are the delusions and complexes; but there are no delusions or complexes in the Real Self, nor in any of the degrees of our being that are above the personal. Begin to think, and you are out of the region of the complexes. But you cannot rest there; you are not safe there, but must go farther: it is not thought alone that can carry you into the Realm of Reality. To reach that, Love is the wings on which you must soar. Stop

regarding anybody as a nuisance, or as an inferior, or as an enemy; regard everyone as your most intimate self: your God-Self, that your whole business in life is to lure and coax and persuade and valiantly assist into manifestation. See in the personal self of the man who distresses you most, something to be revered and treated very tenderly, with inexhaustible kindness and patience; because that personal self is not what it seems to be, but verily the temple of the Holy Ghost, of the God-Self of yourself and the Universe. This practice takes you and keeps you out of the dominion of the complexes; it is the faith that makes you whole.

NATURE STUDIES: IX — *H. Percy Leonard*

Ancients, Moderns, and Posterity

"The Present is the Child of the Past; the Future, the begotten of the Present. And yet, O present moment! Knowest thou not that thou hast no parent, nor canst thou have a child; that thou art ever begetting but thyself? Before thou hast even begun to say "I am the progeny of the departed moment, the child of the past," thou hast become that past itself. Before thou utterest the last syllable, behold! thou art no more the Present but verily that Future. Thus, are the Past, the Present, and the Future, the ever-living trinity in one — the Mahamaya [Great Illusion] of the Absolute IS." — *The Secret Doctrine*, Vol. II, p. 446

Could we by putting on Carlyle's Time-annihilating hat transport ourselves to ancient Greece, we should find the citizens believing themselves to be modern. If we informed the first man we met that he was an "ancient" (provided that he understood our execrable Greek) he would stare at us with incredulous disdain. The Greeks of ancient times believed themselves to be upon the plow-point of advancing time and every bit as modern as we feel ourselves to be today. And it is just as hard for us to realize that we shall be regarded as "the ancients" by our remote posterity, who also will one day be "ancients."

The population of the world in the year 3000 is just as unsubstantial to ourselves as we should be to the contemporaries of Pericles; and yet — here we are. And here posterity will be, and each succeeding generation feels itself to be existing in the Living Present with a shadowy retrospect of "ancients" in its rear, and a

still more vague and unsubstantial posterity in prospect.

Could we induce our ancient friend to consider our existence at all, he would certainly relegate us to the dim, unlighted vistas of far-off futurity, as ghostly nonentities destined some day to be born; and yet — here we are.

The story of Marathon, to us an incident of ancient history, was to the citizen of that epoch, "news."

The relics of antiquity, the blackened loaves from bakers' shops in Pompeii, the amphorae, the tattered fragments of cloth from the mummy cases, were all as commonplace and modern to the men of ancient times as our utensils and fabrics are to us.

In a recent excavation of a Roman villa in England, some shelves were found on which were stored antique curios collected by the Roman occupant as relics of his ancients. Little did he dream that he who was so full of life, so eager in his quest for remnants of the past, was really an "ancient" himself, and that his familiar villa would be studied by us moderns as an interesting ruin of a past civilization.

As surely as we excavate the site of Troy, so future students of antiquity will search the buried ruins of Chicago, Paris, Rome, and New York, and speculate upon these modern times with all the interest we reserve for ancient Greece. "One generation passeth away and another cometh; but the earth abideth forever."

The days of old, these modern times and our remote posterity may seem to the Omniscient Eye as an eternal Now.

Could we emancipate ourselves from our absorbing interest in the transient trifles that concern our present, petty personalities, we too might share the calm of that eternal consciousness and sit as gods and watch the flitting pictures on the Screen of Time.

BIRDS OF PASSAGE — *Gertrude W. van Pelt*

It is this that we humans are. We come to Earth after dipping in the refreshing Waters of Lethe, build our nests and live our lives. Then, after dipping once more into those merciful waters, we pass into the realms which infallibly attract us, there to remain until again the call to our old haunts is imperative. But as we built our nests, we formed our ties, we incurred our debts, sometimes heavy ones.

As humans we have done this an uncountable number of times, and who knows in the webs of destiny which we have woven, how many hard knots we have tied, how many cruel seeds we have carelessly sown, covered, we may fancy, by the fair flowers which likewise we may have planted and nourished by the way. Perchance we have seen the cruel seeds sprout and blossom and darken the life of one we really loved, but whose clashing aura blinded us or rendered us careless until it was too late to destroy our evil blossom, and our human bird of passage passed on over his path of destiny, while we stayed behind and longed for another chance.

And who knows how many debts we have left behind us on our journeys; services we have accepted while forgetting the servers; how many times we have taken advantage of another's ignorance or helplessness and gone on our way hugging coveted treasures we had not earned.

And now, having passed once more through the Waters of Lethe, we are here again, traveling over some of the trails we have blazed in the past, meeting in secluded nooks, in open arenas, friends, enemies, or those who are neutral; those who attract and those who repel.

But who among this throng of wayfarers are those for whom we asked "another chance"? Who are those who in life's Ledger hold accounts against us? The subtle marking on their breasts may escape our sight, yet here they are again, crossing our road and passing into the distance, or walking beside us for long stretches on the Path; and the glorious opportunities are ours once more. They cannot reveal themselves, for neither do *they* see the markings on *our* breasts. Yet, at least, we can welcome all our fellow travelers in sympathy, filled with a longing to deal with them justly, generously, and understandingly, knowing that each traveler has his own temptations to meet, his own ignorance to blind him, his own danger of losing his way, and knowing too, that the subtle webs of destiny bind us all together.

The Theosophical Forum

EVOLUTION AND INVOLUTION — Dr. H. Groot (1)

Only a little time ago an important astronomical discovery was announced which accentuates anew in this special department of science the general truth of the teachings of the Old Wisdom-Religion. Perhaps it may be of interest to communicate some particulars about this discovery, as on the one hand the real significance of it can be appreciated only if viewed in connexion with those teachings; while on the other hand the newly discovered facts may be welcomed as distinct and, so to say, tangible examples of the teaching of evolution and involution, which in its rather abstract, general formulation perhaps might affect one as being somewhat abstruse and difficult to grasp. Lastly we shall see how the insight thus won may be connected by the law of analogy with other partly well-known, partly still problematic, scientific facts — and so may help us to get a clear vision of these facts while at the same time demonstrating how their very core is to be found in the eternal and everlasting cycle which the Spirit follows in Its perennial peregrination from involution to evolution and back again.

A short explanation of the astronomical discovery mentioned above may precede a discussion of those facts as seen from the standpoint of Theosophy.

Firstly, the following phenomenon demands our attention. From time to time suddenly a new star lights up the sky. In some cases the Nova — which is the technical term for the phenomenon — blazes out in a surprisingly great luminosity so as to be quite a spectacular object, but owing to their great distance from our solar system the greater part of the Novae become visible only to the photographic plate of the ever-watchful astronomer. As an

example can be mentioned the star which appeared on November 11th, 1572, in the constellation of Cassiopeia and surpassed Venus in brightness. It became visible even in broad daylight, such was its splendor. And again, to mention quite a recent case, another Nova appeared in December, 1934, in the constellation of Hercules, which became as bright as the third magnitude, i. e., was somewhat fainter than the brightest stars of the Great Dipper.

The term "Nova," i. e., "new star," in fact is misleading, for careful investigations have brought to light that in each case the Nova pre-existed as a faint star, which — mainly because of its faintness — had failed to attract attention before. We know, *e. g.*, from photographs of that portion of the sky where Nova Herculis appeared — and taken previous to its sudden outburst — that the Nova is identical with a faint star of the 14th magnitude, which in a few days" time became as much as 25,000 times brighter. Analogous numbers are stated in every case that has been investigated.

Now we do not know exactly as yet what happens, what cosmic catastrophe is going on in that distant world when the astronomers of our earth announce the discovery of another Nova; still it may be assumed safely that it is an occurrence of the first importance in the life of the star.

The further history of the Nova offers some points of interest as well. In most cases the brightness soon diminishes. At the end of some months the Nova has resumed its former faint luminosity. But it has been noticed that some time after the outburst there appears a disk of nebulous matter surrounding the image of the star, which has a tendency to continue to expand.

Before going into the significance of this last feature we will now go off at a tangent with an inquiry as to the classification of

nebulae.

In the main there are two species of nebulae; the spiral or extragalactic nebulae, which in fact are great stellar systems, like our own galaxy, in all kinds of evolutionary states; and the gaseous nebulae, which are imbedded in and form a portion of the galactic system. The latter nebulae may be subdivided into two groups: the irregular nebulae, like the great nebula in Orion, and the planetary nebulae. The reader is warned not to mix up these terms: when an astronomer speaks of a "planetary" nebula he does *not* mean a nebula which in the course of its evolution is destined to become a planet; the term only alludes to the disk-like appearance of this class of nebulae, which reminds one somewhat of the disk of a planet when viewed through a telescope.

The irregular nebulae have always been taken for the birthplaces of stars; by some evolutionary process the nebulous matter condensing into starlike conglomerations, which in the course of time will grow to become stars of the early spectral-types.

About the planetary nebulae there has been much discussion, but at present there is a general understanding that these objects are the outcome of the processes which had their beginning in the outburst of a Nova.

So while the irregular nebulae marked the beginning of the evolution of stars, the planetary nebulae closed their careers. By this interpretation — founded on the "one-way texture of becoming," as Sir A. S. Eddington puts it, which knows only of life beginning with birth and ending with death — of course an immeasurable gulf divides the irregular nebulae from the planetary ones. Now here comes the important discovery which has been made. At the Lick Observatory an irregular nebula, known as the "Crab'-nebula in the constellation of Taurus, has

been studied with the result that it has been found expanding at the rate of 1050 km/sec. This very unexpected fact leads us to speculate whether this rather *irregular* nebula might not have started as a planetary nebula formed by the outburst of a Nova, in which case the expansion should be a normal feature. By the rate of expansion it could be calculated that this outburst — if outburst there has been — must have occurred some 800 years ago, and as the distance of the nebula is "only" 4900 light-years it seemed very probable that the hypothetical Nova must have been a conspicuous object to the naked eye. So far so good; but *has* there been a Nova in that portion of the sky at the allotted time?

Indeed, there *has* been! The Chinese annals mention the appearance of a new star in the constellation of Taurus in the year 1054. So the rather hazardous hypothesis is fully confirmed.

But think of the significance of this fact. The gulf, gaping between irregular nebulae and planetary nebulae — or, if you like, between life and death — has been bridged! Although no details can be given as yet, we see before us an unbroken chain beginning with an irregular nebula, which condenses into stars; the stars follow an evolution which ends in the flaring up of a Nova; the Nova gives birth to a planetary nebula and this nebula changes back to an irregular nebula. Apart even from other considerations, one can see that here is made a discovery of the first importance for all cosmogonic speculations.

Now let us consider what the Old Wisdom has to tell us about these truly wondrous results that modern astronomy can boast of.

Of course, as Theosophists we could never accept the "one-way texture of becoming," nor do we agree that we should feel more content if "the universe should accomplish some great scheme of evolution and, having achieved whatever may be achieved, lapse

back into chaotic changelessness." We are told — and we are able time after time to state the truth of the tale in each particular instance — that the Kosmos is built on the principle of an endless interchange of evolutions and involutions. In order to catch the true meaning of this teaching as regards what is happening on an astronomical scale, it is well to recall to our minds the following passages of Dr. de Purucker's *Fundamentals of the Esoteric Philosophy*, where it says:

When the astronomer looks into the ethery spaces and sees those starry clouds, those nebulous masses, in some cases (though not in all, for these nebulae are not all the same, but in those which are) destined for the beginning of worlds, he sees there what has so far taken place in material manifestation of a hierarchy through the activity of the sub-seven degrees of the lowest or seventh principle of a divine entity or "god" informing an otherwise invisible life-center, informed by that god's vital essence, which is the fundamental life of that hierarchy, the fundamental impulse, or what men call the fundamental "law," the fundamental operation of its nature, the fundamental characteristic, the Swabhava. In such manner, then, the vital essence creates its own dwelling — a sun, a planet, which cycles down, as it were, into visible evolution. But mark: each Head of a hierarchy retains its own place, powers and nature; but its offspring thicken or condense; its offspring thus forming its garments on the several planes of being. . . .

When this thickening and grossening of the fabric (which takes place from each entity shooting forth from itself, emanating from itself other less entities, — "less" here meaning "inferior") reaches its lowest degree, then we have a sun and planets. Let us take our planet as an

instance. When such a planet has reached its lowest point of evolution driven by the karmic impulse inhering in it, which is at the middle point of its Fourth Round (which we on our planet have passed), then begins the reaction, the reversal of the kosmic operation, and the life-currents begin to withdraw inwards, . . . not leaving its "garments" behind altogether; but as they were sent forth, so are they now withdrawn inwards. This, then, is an outline of the process of the *evolution of spirit*, and the *involution of matter*; just as the processes of projection or casting forth were the *involution of spirit* and the *evolution of matter* on the downward or Shadowy Arc. Thus is the Kosmos built.

— pp. 348-9

If it is grasped what here is told in so few words, and our mind is turned back to the discovery which has been mentioned and which means a bridging of the gulf between irregular nebulae and planetary nebulae, it is easily understood that here we have an instance of the same process as was depicted for a planet, but now on a different scale. When an irregular nebula condenses into stars — or suns as they may be called with equal right — and the stars pass through the different stages indicated by their spectra, we must speak of the process of evolution of matter. But when of a sudden the star blazes out in a new light and gives birth to a planetary nebula, which in time changes into an irregular nebula, we see before us the process of involution of matter.

Now perhaps it may be thought that the cycle is finished, that once again the irregular nebula, which formed the outcome of the process of involution, will condense into stars and so on. But against so simplistic a view the New Science rebels as much as the Old Wisdom. Science argues, that such a process, although perhaps it might repeat itself several times, cannot go on for ever,

since during each round of necessity the so-called "entropy" of the system will augment till at last it has reached its maximum and then the process must end willy-nilly. We will not go into this argument, as it would require a very difficult and technical discussion; we only will say this much, that if the process really was as simple as this, science could score its point in maintaining that the cycle should be doomed to end before long. In a material universe submitted to purely mechanistic laws there seems to be no possible loophole for escaping what Svante Arrhenius has termed the *heat-death* — in this assertion science is absolutely right. But then, our universe is not a purely material world acted upon by blind forces which follow strictly mechanical laws. The New Science begins to have an inkling of this truth. The relativity principle of Einstein, the quantum-laws of Planck, the wave-mechanics of de Broglie, Heisenberg, and Schrodinger, and the principle of indeterminacy of Heisenberg are the first signs of the radical revolution of thought which is going on — and which will help Science to revert to the temporarily forgotten truths of the Old Wisdom. Only by voicing those old and immutable truths in the new language which nowadays is spoken, will Science succeed in elucidating the problems which otherwise must baffle it. Hesitatingly, Science is feeling its way. It stands at the beginning of this new path, and progress is made only haltingly. Still there is much which entitles us to keep our courage and to expect that in the end the New Science and the Old Wisdom will tread the same path hand in hand. But this as yet is only a vision of the future. Let us come back to the problem at hand.

We have seen that Science maintains the impossibility of an *everlasting* cycle: irregular nebulae — stars — Novae — planetary nebulae — irregular nebulae. The Old Wisdom corroborates this view, but from quite different motives. Where, according to the Science of today the process of involution of matter ends by the

forming of nebulous matter, or — if we rather stress the possibilities — "by the production of radiant energy, the Old Wisdom tells us, that this phase is by no means the end of the process of involution of matter and therefore of evolution of Spirit; and it adds (as we have seen in our quotation from the *Fundamentals*) that these processes are not governed by blind forces or purely mechanical laws, but by the activity of a divine principle, which reveals itself on the lower, material planes as forces and law, but which unfolds its true and sublime nature on the higher planes. Thus the involution manifesting itself in the formation of nebulous matter out of gross and condensed matter from the former, nearly "extinguished" stars, marks the beginning of the evolution of the divine principle, which had clothed itself in the garment of matter. This evolution does not end even if our gross sense-organs fail to see any further involution of *matter*, this having reached the phase called "radiant energy"; for what on our plane manifests itself as energy, reveals itself on a higher plane as a loftier form of matter, which can and will continue the involution, the first states of which we are witnessing on our plane. Indeed, this involution will continue its course until the accompanying evolution of the Spirit has reached its highest point, where the divine principle has wholly unfolded itself and by so doing has risen a step higher on the endless staircase which begins nowhere and always finds a step, nay, an infinity of steps higher than the one just reached. Then, and not earlier, the Spirit is prepared to descend again by the downward arc, leading to another involution and causing at the same time a new evolution of matter, first on the higher and loftier planes, but gradually condensing and thickening as lower and lower realms are reached — till at last new nebulae and new stars make their appearance, be it perhaps on a higher plane than the present one.

If we ponder on the vistas which are opened up to us by the Secret Doctrine in relation to the discovery that a planetary nebula may change back into an irregular nebula, we may get an inkling of the extensiveness of this Hidden Wisdom, compared to which even the most momentous discoveries of our present science — and some of them really *are* marvelous! — dwindle to rather stale matter-of-fact statements. But the full significance of these vistas will only impress us with all its force if we realize that what we have discerned on the plane of suns, stars, and nebulae, must, by the law of analogy, repeat itself with due adaptations on other planes as well. We shall set aside the fascinating consequences which confront our enthralled spiritual vision, and content ourselves with presenting a scheme of comparison between some noteworthy physical cycles — which show in a measure resemblance to the astronomical cycle, our starting-point — leaving it to the intuition of the reader to draw his own inferences.

The Theosophical Forum

THOUGHTS ON THE MYSTERIES — *Leoline L. Wright*

There are of course many more questions left unanswered by Science than the number it is able to answer. Here are a few of them — some old, some recent: What is life and where and how does it originate? We do not know. What is electricity? We do not know. What determines sex? We do not know.

Very well, then. The answers to these questions are — for Science — *mysteries*. But, as the answers must exist, they remain for Science occult or hidden knowledge. Some day (perhaps) Science may find those answers. Then such knowledge will pass from the occult into the field of the known. It will no longer be a "mystery."

In a Mystery-School the situation is reversed. The answers to all the at present unanswerable questions are well known. They make up, so to speak, the curriculum of a Mystery-School. The teaching of such answers to carefully selected pupils, and the eventual initiation of these pupils into wider fields of knowledge was covered by the ancient terms "Mystery-Teaching" and "Mystery-School." And they were called "Mysteries" because for the general public that was exactly what they were. It is of course self-evident to a Theosophist that there must be such schools or their equivalents in every range of being; for the only individual in our Universe for whom there are no longer any mysteries is the Cosmic Hierarchy.

Another point — one of such breath-taking urgency at the present time — the terrible misuse of the advance in our knowledge for progressive world-destruction. The only solution for this situation is the reappearance of the Mystery-School as a vital factor in shaping our civilization. Consider one of the basic axioms of this ancient institution — *Discipline precedes the Mysteries*. There you

have it, the remedy for the grisly suspense that hangs over us. A Mystery-School where the right discipline along ethical lines of self-mastery is given before any man is allowed to have knowledge of vital import to the safety of others. As it is, knowledge of any and every kind is now broadcast so that it can be used not only by good men but by any fiend who cares to appropriate it for the gratification of his appetites.

This carelessness in the safeguarding of creative knowledge is one of the most tragic failures of what we call modern civilization. We have appropriated the secrets of Nature — rifled her storehouses without first having paid the legitimate price in self-discipline. And already we are making forced payments on the account. Later, if we do not soon mend our ways, there will be compounded and pyramiding interest to be met. How? Perhaps in a similar way to that we learn of in *The Secret Doctrine*, by which the Atlanteans expiated their crimes against Nature. So that the anthropologists and palaeontologists of future ages may uncover but dim dust-heaps of what are now magnificent cities; may find the "Stone-Age Man" of the future roaming the once more engulfing forests — degenerate men whose ancestors were our moderns and progressives — savages in whom submerged memories may inspire to pottery and metal-smelting and weaving, with other "primitive" cultural and economic activities.

Can this happen? Why not? Time never stops turning its slow inevitable wheel. What has been is but too likely again to be. The marvelous rock-drawings of Altamira were the resurgence of such submerged memories in the souls of degenerate remnants of prehistoric Atlantis.

Is it any wonder that H. P. B. with the Masters behind her bent a great part of the energies of her last years in laying the foundations for a Mystery-School to rescue our civilization?

SCIENCE AND RESEARCH — C. J. RYAN

"Uncompromising physico-materialism is being driven to its last entrenchments. It sees its own ideal . . . vanishing like a mist before the light of awkward fact, and the daily discoveries made in the domain of invisible and intangible matter, whose veil is being more and more rent with every such new discovery." — *H. P. Blavatsky* in 1883

Involution and Evolution of Worlds

Some of the conclusions of modern physics have always seemed strange to Theosophists, who have felt that they would not stand against the pressure of new scientific researches. One of these conclusions is that while the universe had a beginning and will have an end, there is no reason to expect the revival of it or of a successor of like nature. Even Sir Arthur Eddington seems satisfied with this belief. No explanation is offered for the unique appearance of a universe which was never preceded by another of its kind and which will never be followed by a similar one. Does this strange conjecture betray a lingering theological bias derived from the old literal interpretation of the esoteric teachings of the book of *Genesis*, or is it merely the result of materialistic thinking? Physicists have offered us a rather dismal picture, mathematically endorsed, of the running down of the physical universe to a condition of 'heat-death' when nothing more will happen, but they do not give a solution of the problem of the counterpart, i. e., the winding up at the beginning of activity. Where did the 'heat-life' come from, and how, if we may coin the word? Did 'God' create it out of *nothing*? Few scientists care to speculate about such troublesome points as beginnings or perhaps endings, leaving them to theology and 'faith.'

Of late, however, a few daring spirits, including Eddington, have begun to speculate in a new way on the nature of things and are more than suspecting that the physical universe is not the whole of 'the' universe, but only one aspect of a greater whole. This promises to bring about drastic revision of many accepted theories. For instance Eddington, in common with other great scientists, is now looking to consciousness as the basis of all things — a purely Theosophical concept highly unpalatable in the West when H. P. Blavatsky brought it from the Orient. He says:

The symbolic nature of the entities of physics is generally recognised; and the scheme of physics is now formulated in such a way as to make it almost self-evident that it is a partial aspect of something wider. . . .

Recognising that the physical world is entirely abstract and without "actuality" apart from its linkings to consciousness, we restore consciousness to the fundamental position instead of representing it as an inessential complication occasionally found in the midst of inorganic nature at a late stage of evolutionary history. — *Nature of the Physical World*, pp. 331-2

How could the 'heat-death' affect the fundamental of the universe — consciousness!

According to the Ancient Wisdom of the East, however, while the *manifested universe*, available to our senses and our instruments, had a beginning and will undoubtedly come to an end, this end will only be a temporary condition during which its energies withdraw to other planes of activity until the time comes for another manifestation on the physical plane. Involution of forces, 'matter,' consciousness, etc., are as inevitable and periodic as evolution of the same. That is the sane, philosophic, and encouraging prospect discovered by the great minds of antiquity

and brought to the attention of the Western world by H. P. Blavatsky in *The Secret Doctrine*, which is at last being studied by leading scientists in the West. Furthermore, she shows that each succeeding evolutionary manifestation is higher than the last, and the distressing prospect feared by some scientists that such a world or universe would be a mere repetition of the preceding one in dreary monotony, is unwarranted. Nature preserves her memories, and profits by them, just as man does in his successive incarnations, though his limited brain may not be aware of former experiences. Something permanent within him is and does.

The article by the distinguished Dutch astronomer, Dr. H. Groot, published in this number of THE THEOSOPHICAL FORUM, treats of this subject, giving a valuable illustration of the process of involution and evolution so far as it can be followed on the physical plane as shown by the new discoveries in the 'Crab' Nebula in the constellation Taurus. A few years ago, our Theosophical contemporary *Lucijer de Lichtbrenger* (Holland) published some remarks by Dr. Groot on the running down of the universe and the possibility that such a process would absolutely forbid any cycles of manifestation and rest. Is the 'heat-death' or entropy fatal to any revival of a 'dead' universe? Does it destroy the possibility of an oscillating cycle, so to speak, between the extremes of manifestation and inactivity? In his *The Breath of the Universe*, Dr. Groot says that:

The primary laws of nature, i.e., the laws which order the particles which constitute the universe, answer that such a cycle is not an impossibility. While the law of entropy [heat-death] may seem to say that a cycle of that kind will not be realized because the probability is too small, we have calculated the possibilities of the occurrence of a succession of such cycles and find therefrom an extremely

small figure in their favor *but we do not find zero*. The possibility does exist, and if it exists at all that means certainty for our proposition, for while the possibility may be small Eternity is endless.

But one point must be kept in view. In an *ever-expanding* universe a cycle is quite out of the question. Only in an oscillating universe does the chance of a cycle exist. . . If the expansion, however, does not continue but is always followed by a contraction then also entropy will not continue to increase, because when matter is contracting entropy diminishes. We cannot say how much farther it will go. With every new breath perhaps a greater diminution of entropy would follow till a certain time . . . matter would be formed again, once more to condense into nebulae, to stars, and to galactic systems.

. . . We also find a beginning and an end of the universe, but relative this time, for behind every end a new beginning dawns, and every beginning is preceded by an end. Our metaphysical need for infinity is satisfied.

The Oldest Man

The famous 'Java Man' (*Pithecanthropus*), who divided the honors of the greatest antiquity with the 'Peking Man' and the 'Piltdown Man' in England, was recently degraded by Dr. Eugene Dubois, his discoverer, to the rank of the apes, but, by a turn of fortune's wheel, he has been allowed to resume his dignity as a man! A new specimen has been discovered in the bed of the Solo River, Java, and Dr. von Koenigswald, research associate of the Carnegie Institution, whose expedition to Java was mentioned in our January number, announces that while it possesses one trifling apelike feature it is not a "missing link" in any way but is "definitely proved to be human." Dr. Dubois's original specimen,

found in 1890, was extremely imperfect and lacked important parts which the new one contains. Moreover, the teeth which were found associated with his Pithecanthropus have turned out to have belonged to an extinct species of orang-utan, and the thigh bone is not his either.

By comparison with fossils of extinct animals found in the same stratum as the new Java Man, he appears to have lived about the middle of the Ice Age, not less than half-a-million years ago, according to the prevailing chronology, which, however may be extended in future though almost certainly not reduced. So it seems that the hypothetical 'anthropoid ancestor' of man (becoming more and more doubted by science) is still missing. Moreover, as Sir Arthur Keith points out, the characteristic features which differentiate the four or perhaps five present-day divisions of mankind existed in the earliest known fossil human ancestors, though not of course 'modernized.' No evidence of a primitive root-race from which the great races might have diverged has been found. Where is it to be sought? Must we look to the legendary Atlantis or even farther back for this? Scientists frown at such a heresy, but we are living in an age when what was considered incredible a few decades ago is now almost commonplace.

The Problem of Mercury's Atmosphere

Astronomers have waited for many years for the very unusual kind of transit of the planet Mercury across the sun which occurred on May 11, 1937. This transit just grazed the edge of the sun, as it were, and thereby offered the most favorable opportunity to determine if the planet has a deep atmosphere like that of Venus. When the latter planet transits the sun a brilliant ring of light is seen around it, caused by refraction in its atmosphere. Mercury, however, showed no trace of such a ring,

and it is therefore considered that it cannot have any atmosphere, but must resemble our moon in that respect.

We read in *The Secret Doctrine*, I, 165, that Mercury is just coming out of 'obscuration,' and, we may presume, preparing for the development of active life. H. P. Blavatsky suggests that the great heat on Mercury, caused by its nearness to the sun, would be favorable to life, but she indicates that it is not necessary to think such life would be like anything which is familiar to us. The technical reasons offered by physicists against the possibility of any kind of an atmosphere on such a small planet as Mercury are not necessarily final, but arguments on that subject are not suitable for presentation here. H. P. Blavatsky seems to think that some kind of an atmosphere exists on Mercury.

The Theosophical Forum

THE ANCIENT TRADITION OF THE OJIBWAY TRIBES 1. (1) — O. Macklin (Nowataye)

The chronology utilized in the historical accounts of the various Red Races of America is in the custody of the various secret organizations which are not only custodians but are repositories of secret knowledge, etc. These ancient accounts of history are of no immediate benefit or value to the general run of layman who is more concerned with the immediate and the now; but extremely interesting to the individual with an inquiring turn of mind.

The structural formations of these organizations are social and political in character and are open to both sexes with equal responsibility; merit alone being the qualifying principle. These organizations of the North are identical in structural formation along with the rituals, teachings, beliefs, etc., with the more ancient organizations to the south and southwest, showing common origin and relationship.

The following given dates represent great and important events having taken place in that period and era, and these accounts are preserved upon stone and stela engravures of hieroglyphical design, the calendar stone of the Aztecs being of later origin than that of Toltec, Mayan, and Mahvanuc in that order; Natyeanic being the ancestral origin of the Red Races of both Americas. Of all narrative portrayals upon stone and in manuscript forms, the stela form is the real authoritative portrayal, it being of priestcraft approval and design.

Had not over-zealous proponents of Christianity destroyed all manuscript forms of the Aztec Empire that fell into their hands 1517 a. d., posterity today would have enjoyed the full accounts of

three great previous civilizations which flourished in America in the last nine thousand five hundred years. In these teachings of ancient history and ancient ancestors it is not claimed the Red Races are of autochthonous origin but rather of migratory basis.

The ancient ancestors lived and had their being on seven great island continents situated where now the mighty Atlantic rolls. The first island sank and was submerged beneath the waves through volcanic and severe quake action and slowly but surely disintegrated the most south-westerly island continent of the great group. From its destruction all present chronological forms have their origin.

This south-westerly island population, the majority of whom escaped from the mighty cataclysm, migrated to the neighboring islands and to the mainland west of them, approximately the central Americas, and they became the ancestors of the central and south-American Red Races.

212 years later another great disaster overtook the mighty island continent empire. Two of the middle eastern portions also met a fate like that which overwhelmed the southwesterly island. Nearly all the inhabitants escaped to the eastward, approximately the northwestern portion of Africa, and it is recognised that the Azores are the remnants of the once mighty mountain tops of these two great islands that disappeared below the waves.

450 years later two more great islands were overwhelmed, two of the northeasterly group went down under volcanic and quake action. These disappeared within a moon's phase (seven days) and practically all the inhabitants perished with the exception of the few migrants who went eastward and who probably settled what is now known as Europe.

Seven centuries later from the last catastrophe, 1382 to be exact,

another visitation of destruction overtook a portion of this now decimated empire situated near the central portion of these island constituents. The greater number of these inhabitants perished due to the suddenness of the catastrophe, but a few were saved and these mingled on the sole remaining island continent. It is this last catastrophe which many believe to be the account of the lost continent of Atlantis.

It might be appropriate to mention here that this Island Empire comprising seven great islands, was highly civilized, whose inhabitants were perhaps the ancient ancestors of the high culture that developed on the Nile district, later to become known as Ancient Egypt.

This central portion that went down is said to have been the center of culture and these people were responsible for the great organizations in social structures, governments and political character that built these great islands into a mighty empire. Aristotle and others often mention an invasion into the Mediterranean area from this source and whether it be accepted as authentic or not, it gives added credence to the existing historical accounts of the pre-Mayan cultural empires which recorded upon stone many important occurrences and also in the more legendary accounts of many tribes.

In the year 2782 another recorded event was that of a celestial phenomenon; a disintegrating comet or meteor of exceeding large proportion collided with the earth from a southwesterly direction and it fell into three distinct and separate parts. The first fell in the towers of rock region, probably that of Flagstaff Arizona region, with devastating effects. Complete obliteration of life occurred upon plant and animal as well as human. The other two fell in the east coastal region, probably along the Carolinas coast line and affected the sole remaining island continent far distant

to the North, the last of the great seven. The inhabitants of its southern portion suffered greatly from this collision, whole communities were obliterated; it left them in mummified condition and laid waste a large area in cinders and ashes so great was the heat generated in the collision.

The next recorded event is the year 5515 when the last remaining island met its doom through volcanic and quake action, whose site today is known as the Grand Banks of Newfoundland: great numbers migrated to the West mainland down the coast to the delta of the Great River, Mother of Waters (Mississippi) then onward to old Mexico, then Naytye-yan-nook the seat of learning and center of all cultures. This catastrophe is still kept alive in legendary form in many secret organizations of the once mighty Ojibway nations from which all chronological calculations are based.

Many of these migrants remained in the neighborhood of the Laurentian and Appalachian plateaus, eventually to become ancient ancestors of the later fusion of various isolated clans and tribes from this long separation and migrations, only to become separate and distinct tribes or clans. The other factions continued on to the southwest by way of the coast route, and in this way many were for ever separated from their kin and became assimilated with other tribes and nations. Thus isolation evolved new amalgamation and new tongues; cultures still were alive, and many new horticultural additions were evolved in the separate regions.

The next important recorded event is the year 7590 when priestcraft rule became an established faction through the machinations of its more ambitious individuals. A powerful group insinuated themselves into responsible positions and through religious influences ousted the reins of government from vested

interests and became the ruling princes and actual despots. This powerful group was foreign in character, and, according to historical narratives had great virtues in the manipulations of the powers of the mind.

After these yellow priestcrafts had gained complete control of the pyramid temples they began absolute dictatorship and mastery of the nation's religious teachings and training and commenced to subjugate and maintain the masses in complete and profound ignorance through their superstitious beliefs, and taught the younger generations that might was right, all of which helped to foster prejudice and barbarism in the ranks of their followers.

Introduction of human sacrifices into the moon goddess rituals was made by these despots for their own degenerative ends. They caused the gathering of all the most beautiful young girls throughout the empire, ostensibly for temple services, and those refusing submission to these priests were later to become human sacrifices to the moon goddess, and many died rather than submit, and found oblivion in the dark abyss of the moon well.

These despots sought to extend their sinister powers and influences into the folds of the ancient secret societies in their organizations, placing within the ranks of the orders their neophytes. The neophytes who became enlightened did not return to the priestcraft but migrated with the members and teachers of these organizations northward, and so escaped the sure and certain persecution that would follow. In the attempted wresting of the secret knowledge from the custodians none of these great secrets ever fell into their unscrupulous hands.

Next recorded important occurrence is the year 7645. A celestial phenomenon in the 13th moon (March according to the Gregorian calendar system about the 10th day); a configuration of two great planets in the southeast by eastern sky in a double star of great

brilliance for nearly one moon phase or perhaps five days duration, produced variation upon the earth; earthquakes with violent storms accompanied this phenomenon, and it is said by the leading mentors of astronomy that this occurrence of configuration of two planets is unlikely again to happen except once in five million years.

The center of cultures at this period underwent great changes. Yellow priestcraft with its strange practices and teachings practically drove all level-headed people away from its center, and numerous migrations both to the north and south took place; pre-Mayans, known as the Nahuac cultural empire passed into the hands of the Mayans and it was during this period that these yellow despots assumed complete control eventually to pass out in a few short years. The pre-Mayan in the three or four centuries previous migrated mostly to the adjacent temperate zone of the north and their descendants spread eastward and to the north along the valley of the Mother of Rivers (Mississippi) there to establish cultures not so imposing as that of the ancient Nahuac peoples, nevertheless cultures of high order. They brought great varieties of horticultural and agricultural products and introduced them to the peoples then existing as descendants of the last island continent survivors to the eastward. Assimilation continued in many localities, their isolation tending to evolve new tongues and to all purposes new tribes. These peoples of all tribes evidently tried to emulate the sect of learning and center of cultures far to the south and southwest and established centers of civilization not so imposing nor on as grand a scale as their ancient ancestors to the south.

The last city to be built was called Ain-dye-yan probably situated in the most southwesterly portion of Nebraska of today and eventually abandoned approximately around the year 7300, wholesale migrations to the east having depleted this once

populous center of practically all master minds, leaving a few families which were assimilated later into the roving bands of tribes and to become ancestors of the peoples now living in that neighborhood. Climatical changes forced this migration to the east, and these are perhaps the ancestors of the mound builders, who in turn migrated southward from this district, now the New England States, and assumed leadership of the already decadent empire of the Nahuac to become the Toltec of the third great civilization which reared itself upon the ashes of the latest victim of decadency and decline.

The year 7678 began the actual decay and decline of the great Mayan empire. A mysterious malady attacked the population. Also a great and mighty Teacher was heralded in the Ojibway Tribes then known as the Council of the Thirteen Fires. The name suggests the significance of its own interpretation, that of Ee-yah-wah-taye meaning "Behold the Light" and immortalized in Longfellow's *Songs of Hiawatha*. This appearance of a great and mighty co-ordinator of tribal organizations and Teacher of moral ethics as well as spiritual enlightenment was timely. Once more tranquillity reigned within the ranks of the secret society organizations. Ee-yah-wah-taye saved the social structures of the Ojibway organizations from actual destruction, and also saved its religious beliefs from decadence.

During this period of 7678 to 7689 a mighty scourge attacked the Mayan population. The master metaphysicians after short deliberation and study attributed the scourge to the bite of a flying insect, literally called the flying death in insect form. Those males recovering from the mortal bite were effectually as sterile as if from surgical manipulation, whereas the females were immune from this deadly bite; therefore were all unbitten males rushed into seclusion within the pyramid temples and safeguarded against racial extinction. This flying menace

mysteriously disappeared in the latter date just as it appeared in the year 7678. Thus it is that the birthrate was completely at a standstill from twenty to forty years. Many large cities were manned practically by only aged males during that time. The yellow priests continued to hold office until the last part of the year 7730 when their rule came to an end, and the young virile nation from the north took possession and control of the decadent empire, and it is from this date that Toltec power assumed the beginning of its high civilization and cultural accomplishments. They established new cities within the hinterland and to the northern part of the original Nahuac and Mayan sites.

The next date of 8030 reports the actual end of priestcraft influence, a new belief and ritual ascendancy taking place of the foreign religion that had held sway for over four hundred years. No longer were human sacrifices practised. Ee-yah-wah-taye principles reached far southward and their benevolent influences were felt. All mankind had shaken off the sinister influences and teachings of the Yellow Priestcraft of might being right; prejudice and barbarism were discarded and once again Red Races were free from encroaching depredations and evil machinations from a foreign principal.

The Ojibway tribes around the blue waters (Great Lakes) now expanding in large numbers were able to carry on inter-tribal commerce and communication with the more southerly tribes and once again to re-establish communication with the parent secret organization of the ancients, who are our ancestors, and thus Ee-yah-wah-taye successfully accomplished his mission of good-will. The Council of Thirteen Fires continued to function; all Ojibway clans responded to the call of reunion every fourth year, each delegate representing a district in which this secret order functioned, thus assuring each division in these organizations of new discoveries in the field of physics or metaphysics. Up to the

year 8830 the majority of these conventions were held at the present location now known as the Sault Ste Marie district. Since then various places have been selected as meeting grounds.

The date of 8830 stands out in recorded history both upon stone and in ritual commemoration as the beginning of the end for the Red Races in the Americas. A strange race of mankind appeared upon the eastern coastal regions and it is reported as having a metallic body and head-gear of the same material, and so they were named the stoneheads (iron having no name other than ore-stone). They journeyed to the delta of the Mother of Rivers and returning the same way settled in the neighborhood of the New England States and were assimilated into the various families of the Red Races then inhabiting that portion of the coast.

The date of 8830 also records the fall of the Toltec empire into the hands of other virile races consisting, it is said, of those brilliant descendants of equally brilliant ancestors — who broke away from the yellow priestcraft rule and kept intact their great teachings and beliefs for over twelve hundred years and emerged into a decaying and declining civilization known as the Toltec Empire and rebuilt and restored in greater brilliance these three previous great civilizations into a still greater, now known as the Aztec civilization.

Aztec civilization and power flourished between the years 8630 to 8830. At the latter date priestcraft again ruled and revived the strange barbaric and sinister practices of the twelve centuries previous. Subjugation was complete and many migrated south and north to escape the horrible practice of human sacrifice to the moon goddess, and the plumed serpent rituals. The priests held sway until 9067 when the younger virile thinking males overthrew their dictatorship, and thus ended cruel diabolical practices. This date 9067 is also noted for a coincidental

astronomical phenomenon. A collision of the earth and a gigantic comet or meteor took place at the Daughter of the Mother of Rivers area (Rio Grande) that actually transcended the sun even in broad daylight for brilliance and its blinding, dazzling character. This devastating visitor appeared from the southwesterly portion of the heavens and produced quake-like action of earth, destroying life in all forms, though not being as great as its predecessor of 2782.

Cultural civilization of America thus had altered in three major dynasties, involving as many localities as the Nationals involved up to this date; Aztecan power ended with the subjugation and betrayal of Montamazumais in the year 9162 by Spanish invasion and subsequent Spanish Mexican rule.

The last recorded account upon stone is that of 9067. An astronomical phenomenon was recorded, coincidental with priestcraft rule and eviction from power. Ojibway historical accounts whether in mythological or legendary form identically narrate events that are recorded upon stone, stela, hieroglyphics, hammered gold-leaf, manuscripts and upon papyrus-like parchments which escaped destruction at the hands of the Spanish priestcraft in 9162 or, according to Gregorian calendar system, 1517 a. d.

In the narration of Ojibway traditions of historical account, these dates are utilized exclusively for the purpose of initiatory examinations in the higher degrees of the secret organization ramifications, and serve dual purposes in these initiatory rituals, proving diligence, alertness, retentive memory and sincerity of purpose in the embryo neophyte.

NOTE by C. J. Ryan

The extremely interesting references in the above article to

the terrific catastrophes caused by the fall of gigantic meteorites as recorded in Ojibway history of the last nine thousand years or so, give positive support to its authenticity. This could not have been considered seriously until quite recently, but the discovery that the famous Coon Butte or Coon Mountain near Winslow in northern Arizona, now called Meteor Crater, was really created by the impact of a gigantic meteorite or a small comet at some distant period absolutely confirms the historical record. Meteor Crater is more than three-quarters of a mile in diameter and about 600 feet deep, and the terrific impact of a body capable of producing such a prodigy must have destroyed every living being for an area of perhaps many thousands of square miles. Even the comparatively small meteorite (40,000 tons) that fell in the wilderness of Siberia on July 30, 1908, and which was felt a thousand miles away, did enormous destruction within a circle of fifty to sixty miles in diameter.

According to the Indian writer, Nowataye, one terrific meteoric fall happened 6960 years ago, and another, less serious, 615 years ago. A part of the first fell in the "Flagstaff region" in Arizona (which is not far from Meteor Crater) and its location might reasonably be included in that general term. Other parts, he says, "probably fell along the Carolinas coast line," which is exactly where many scientists think that several gigantic meteorites or small comets struck and produced certain unexplained geographical features, though there is no unanimous agreement on the point.

What guesses has science made as to the age of the Meteor Crater in Arizona? Some say it fell 650 years ago when (according to Dr. Douglas's tree-ring dating system) some

unknown catastrophe destroyed the civilization of that neighborhood, but there are difficulties in accepting such a recent date. A venerable cedar growing on the rim of the crater is estimated to be much older. From the evidence of volcanic ashes found in the central lake — which probably came from some neighboring volcano more than a thousand years ago, the Meteor Crater must be older than that, and various authorities have suggested that the great crash must have taken place somewhere between two thousand and seventy-five thousand years ago! This is not very satisfactory but it leaves no scientific reason to claim that the Ojibway record of 6960 years as mentioned is exaggerated. As this historical record indicates the northern Arizona region as the place of one of the falls, and circumstantially mentions the terrifically destructive heat — just what caused the greatest destruction lately in Siberia — and as northern Arizona is the locality of Meteor Crater, is it not probable that the date has been handed down as accurately as the other facts?

The second catastrophe which the Ojibway record mentions, happened 615 years ago or 9067 years after its first historical date, and was not so widespread as the first. As the record speaks of this having occurred in the "Rio Grande area" (rather a vague term), it does not seem likely that it refers to the Meteor Crater, for the latter is nearly two hundred miles west of the upper waters of the river. Besides, the time is too recent. Shall we find another but smaller Meteor Crater nearer the mouth of the Rio Grande which will support the record, or are there confirming traditions of a great meteoric fall still lingering in that neighborhood?

In 1931 twelve meteor craters were found in Central

Australia, ranging in diameter from thirty feet to 660 feet. The Henbury meteorite, as it is called, broke up into fragments before striking the earth, the larger ones causing these immense holes. Eight hundred pieces were picked up in the immediate neighborhood.

Science has a curious problem to solve in the fact that not a single meteorite, not even a decomposed one, has ever been found in the miles" deep sedimentary rocks of the earth's crust. Have they only begun to fall within recent years? Again, although millions are constantly falling toward the earth, and a certain number reach the surface, probably about four hundred every day, there is no authentic record of a human being having been killed by one. No person was hurt in the great Siberian fall, and the meteor craters were probably made by the nuclei of small comets.

The islands mentioned in the Ojibway record seem to be lingering remains of lands not far from the American coast, probably in the Antillean region, which began to break up at the time when Plato's small island, the last real relic of Atlantis, finally disappeared, about 11,000 years ago.

NATURE STUDIES: X — *H. Percy Leonard*

Seeing Beauty Everywhere

The man who cannot see the beauty in a moss-rose, a greyhound or a sunset all glorious with purple and gold, must be a man very much immersed in the life of sensation, but it requires a somewhat unusual development to obtain a thrill from a clod of common earth, a stagnant pool, or a toad that sits by its margin.

The awakening of William L. Lathrop to the beauty of Nature's less appreciated side is so interesting in this connexion that it will be profitable to relate it here.

As a young boy, he was returning one evening from his work, when he made a sudden halt in the road, startled by a ravishing glimpse of blue and yellow caught out of the corner of his eye. On the right, beyond the river, was an ordinary bank of mud, and mud he had always supposed was nothing but hideous slime. But there could be no mistake; the thrill of beauty had come from the mud-bank. He looked again and then he saw — the bank of yellow clay streaked with layers of the softest blue, and the blended tints were mirrored back by the glassy surface of the lazy stream.

"But how can mud be beautiful?" he asked himself. From this time he began to study the world around him with eyes that looked for beauty in the most unlikely places — and found it. He came in time to see more charm and interest in a battered old freighter, reddened with rust stains and chafed and dented by the tempest and the wear and tear of dogged toil, than in the freshly painted liner on her maiden voyage. It was the record of honest strife and service that beautified the old hulk, just as the wrinkled face of an

old man may sometimes reveal the soul of a hero, whose character and exploits are recorded in his habitual expression.

Since Nature's origin is divine, beauty must be discoverable in all things, but men's faculties are so dulled by sense-pleasures and so blinded by the prejudices of false education that for the most part we pass through life with eyes that never see the loveliness and glow of common things.

The Theosophical Forum

A DREAM — *Grace Frances Knoche*

Many years ago I had a dream which I shall now relate as it came to me, with no addition or subtraction of essential points. I do so with the hope that it may bring help to those others who at times may feel the erosion of despair.

It occurred one afternoon, when sick with discouragement and the sharp pain of loneliness, I lay down to rest, wondering why? why? why? The next thing I knew I found myself completely surrounded by water; in fact I was right in it, but I had no feeling of wetness, or inability to breathe. On and on I drifted in the blue water, without apparent reason, until suddenly I was startled by the projection of a sheer precipice of yellow sandstone directly in front of me. The waters had apparently receded, and I saw that the cliff dropped inimitably downwards into a cavern of blackness, and likewise loomed far upwards into the blue of the sky. Up and down I looked, wondering strangely what was going to happen. I knew I must do something, but what? I could attempt to scale the precipice with the hope of freedom, but this seemed quite impossible; or on the other hand, I could simply let myself fall and be lost in the bottomless cavern of black death. But choose I must. I did not want to die, yet in looking up it seemed that that was all that could possibly result, no matter what I did.

A few more seconds passed while I waited, letting time help me if it would. Suddenly something within me said: You can *try*.

It may be death. But better to die fighting than succumb without any effort. Even if you fail and fall headlong to certain death, at least you'll have done your best. So try I did, and for a while I made slow but steady headway with the assistance of niches that my desperate hands fought to grip.

After what seemed an eternity of struggle hope rose in my heart as I visioned the top and saw that with but one more effort I could hoist myself over. But as suddenly the scene shifted, and instead of the near release I had just glimpsed, I saw that the yellow sandstone had changed to hard black rock, clean-cut and glistening in its cruel outline, looming far above, and this time absolutely bereft of any helpful niche. To my horror, the blackness below took shape and alluring figures seemed beckoning me to come to them. Up and down, down and up, I looked, fascinated, yet with the clammy hand of fear freezing my heart, my blood congealed, and for a moment sheer terror gripped me — but no, I would not give myself to Death without a struggle. *I would fight.*

With all the strength of my soul I determined to make one more effort, and if I didn't succeed, all right, I didn't care. So calling upon every resource of spirit, soul, and body, I made one titanic effort — and lo! invisible arms seemed to lift my tired body, and I felt supported by a strength superior to any I had previously known. I was free, lying peacefully in the sand, and I felt the beauty and the subtil freedom of self-respect. I knew in my heart that no one could ever defeat me except myself.

From whence this help had come to me I did not then know; it was not until later when I had come in contact with the Theosophical philosophy as given to the world by H. P. Blavatsky, that I realized that back and behind and inspirer of all our life, was this strong companion, this Inner God within each human being, and that if the human part of us would rely upon this elder brother, despair and the torment of loneliness need never completely sub merge one. "Man is composite," said the Buddha to his disciples in his dying message. "Be lamps unto yourselves, and work out your own liberation."

THE FOURTH DIMENSION — *H. T. Edge*

Those people who try to imagine a four-dimensional world by drawing geometrical analogies between the properties of lines, surfaces, and solids, commit some egregious fallacies. Thus we hear of one-dimensional creatures, living in a one-dimensional world, meeting and being unable to pass one another. Why not? What physical obstacle is there to prevent their passing one another? A one-dimensional world is not physical; the physical world, the world of obstacles, is three-dimensional neither more nor less. These reasoners are mixing up physics with pure geometry. Pure geometry treats of abstract magnitudes, which are usually *represented* by diagrams on paper. These have no physical properties whatever; not even the geometrical solids. A geometrical cube is as abstract as a geometrical square; nobody ever handled a geometrical cube, though he may often have handled solid bodies having a cubical shape. In plane geometry, two-dimensional figures can pass freely through or over each other; there is nothing to prevent; lines can intersect without any splicing or gluing; no amount of superimposed squares will ever attain to any thickness, as would be the case with sheets of paper. The spatial dimensions, or rectangular co-ordinates, usually called length, breadth, and thickness, fill up physical space; no more of such dimensions exist. If one of these three dimensions is reduced to zero, the other two vanish also.

Whatever unit of measurement we may use for the linear dimensions, if one of the numbers denoting these dimensions is zero, the product is zero, and the volume is zero. If there are two-dimensional existences, they do not exist in physical space; their dimensions are not spatial.

We might speak of time as a one-dimensional magnitude (using the word "time" in one of its senses); but we do not regard this as a physical dimension, though in a diagram it may be convenient to represent it by a line. In science the word "dimension" is used in a wider and more general sense; we speak of the dimensions of units, which consist of space, mass, and time.

Any such dimension can be represented on a chart by a line and thus we obtain graphs, like those made by recording barometers, etc. Advanced science now speaks of time as a fourth dimension, but the four dimensions do not characterize physical objects but "events." Now an event may be a sufficiently real thing, but we can hardly talk about what would happen if two events met one another out walking. We cannot make our events have so many faces and so many edges, and so many angles, etc.

We can calculate an abstract mathematical construction with four dimensions, on the analogy of the cube, and say how many faces, edges, etc. it ought to have; but this is not the same thing as imagining an actual physical "tesseract" somewhere in space. We say it is not the same thing; but we do not say that such a thing as a four-dimensional being does not exist; we merely say it is not a physical being.

Some people who mix up pure geometry with physics seem to think that we can build up a line out of points, a surface out of lines, and a solid out of surfaces. This cannot be true in a physical sense; for the point has no magnitude and cannot build up anything. Moreover, unless we *begin* by presupposing three-dimensional physical space, we shall have nowhere to place our point, and it cannot be regarded as having position or distance in relation to other points. Such reasoners do what generally is done in arguments — they assume their conclusion; they assume physical space and then proceed to construct it. They should

begin at the other end and assume as a unit a point having dimension, an atom in fact; and then a line becomes a row of points, and so on.

But if we step beyond the physical plane, and use the word "dimension" in its general sense as "the degree of manifoldness of a magnitude," the case is different. We may evolve our universe out of points, lines, triangles, etc., always remembering that these are not physical distances or pieces of string. Points, lines, triangles, etc., are frequently mentioned in *The Secret Doctrine* in reference to existences on other planes — non-physical planes; in one passage there is a definite distinction made between "solids" and "solid bodies." The point, as a symbol, stands for a monad, a unitary center, a logos; the line is a motion or force, it has length; a triangle (or, more generally, a superficies) has shape, and shape represents quality or character; and so on, as we prefer to leave such interpretations to the fancy of the individual student, not being sure enough of our own personal dogmas. Analogy is a useful servant, but a bad master.

The Theosophical Forum

THE ENSOULING OF MAN — *G. de Purucker*

In the March FORUM I spoke of those Great Ones who are fully ensouled men, and also of the majority of men and women who are as yet soulless; and by this latter term I did not mean "lost souls." Now when you understand what "ensouling" is, you understand the meaning and substance of the chela-path. The chela is one who is ensouling himself. The Master is a fully ensouled man. The Buddha is a Master with the light of the Spirit illuminating his soul, one in whom the Spirit with its refulgent glory increases the already great splendor of the ensouled man.

The path of chelaship is a process of ensouling "soulless" people. Such "soulless" people fill our cities, our towns, our hamlets, our homes. Every one of us, in those moments when he is no longer a "soul" but lives only in the four lower principles of his being, is for the time soulless; that is the meaning of it: the human monad is no longer active in him. A lost soul, on the other hand, is one who no longer has even the possibility of reunion with the divine, the Spirit, the Buddha, the Christ, within himself. A lost soul drops to the Pit. When the great Syrian Sage, Jesus, said, "He who gives up his life for my sake" — for the sake of the Buddha, the Christ, within himself, within each one of us — "shall find his life," he meant that even in the most ordinary of us, feebly in the beginning, lives the Christ within, continuing to live as an inmost being; and that as time passes and the man draws nearer to the inmost center of his being, he becomes gradually ensouled, a leader; then a Buddha; and upon the Buddhas shines the light of eternity. It is as simple as that.

Soulless people are not wicked. They are just drifting, sleeping, unawakened. They live more or less in the four lower principles

of the constitution. But the chela is the man who begins by will and effort and thought and devotion and love for all that is, great and small, to ensoul himself; and he rises along the chela-path precisely in the ratio in which he ensouls himself ever more greatly.

I use the term "ensouling" because it is a simple term amenable to understanding. I have deliberately avoided using a term which might require lengthy explanatory comment. The desire is to suggest rather than to give an explicit teaching.

I will try to give you what to me at least seems to be a graphic illustration of what ensouling means. We human beings are composite entities. We have a divine and a spiritual and a human and a beastly side to us, as well as the wretched physical body which suffers so often unjustly because of the crimes committed upon it by our erratic, vagrant, wandering, passionate, lower human aspect: the lower emotional and mental principles in us. These four lower principles are the *human animal*. Pause a moment in thought. Being a *human animal* it is superior to the *beast-animal*, because throughout the former there is an instinct of humanity. Nevertheless this human animal, when the man lives as a man, should be ensouled by the humanity of the man. When a man lives solely in his four lower principles he is less than a true man. He merely vegetates. He exists. He has no chance for immortality, none whatsoever, because there is nothing immortal in the four lower principles of us. But the Human Monad, the vehicle of the Spiritual Monad, or to put it otherwise, the Human Soul, the vehicle of the Spiritual Soul, has a great chance for conscious immortality.

When a man lives in his Human Monad the four lower principles are ensouled. He is a full man then, consciously living and happily living in such fashion as to bring no bitter regrets. There

is the test. It does not mean a man who is perfect, or that the man has no temptations. Certainly not; because we are all human. The four-principled man succumbs to temptation usually because he is not ensouled by the humanity of himself. The humanity-part of ourselves, to use easily understood language, the Human Monad, *has more chance of conquering temptation than of succumbing to it*; and when I say temptation I do not mean passion only; I do not mean physical passion only; I mean all kinds of temptation.

Overweening ambition, only to be gratified at others" cost is one common vice today; selfishness in any of its manifold forms; egoism, a hydra-headed thing; uncontrolled anger — all these things are less than human, but are the lower human; less than the higher human, less than the truly human.

So then, ensouling means living those things which we intuitively and instinctively sense belong to the better part of us. That is all there is to it: living in the Human Soul instead of in the human animal soul: to speak technically, living in the Buddhi-Manas instead of in the Kama-Manas.

Our streets are packed with soulless beings in this sense, vacillating in character like the winds of heaven, without firmness of will, without even convictions, moral convictions especially, changeable as weather-cocks, pulled hither and yon by every passing gust of temptation of any kind. They are less than human. They are soulless — which does not mean that they have no soul; but it means that the soul within them is not operative; it is not active; it does not manifest itself. Look into the eyes of these people: there lacks the wonderful shine of the soul which, once seen, you will always recognise.

Every kindly act you do marks you as by that much ensouled, if it is an act which springs from the heart and not merely from the egoistic wish to show off. Every time you conquer a temptation,

which if yielded to you know perfectly well will debase you in your own eyes, even if your fellows do not know of your fall: every time you conquer it you live in the human soul, you are by so much ensouling yourself. Every time you *conquer* an impulse to do a selfish act, a deed with selfish thought for your own benefit, then you are by so much ensouling yourself.

We shall be fully human, fully ensouled, in the Fifth Round. At the present time we can be so by effort and aspiration. The vast majority of mankind are soulless in the technical sense that we understand. The soul is there but they won't live in it; they won't make it themselves. They prefer to live in the animal. And mark you, the animal does not only mean sex. That is only one side of it and a relatively unimportant side. The animal means the grasping, acquisitive, selfish, appetitive, indulgent, part of us, running after this and running after that, without stability of character, in other words without soul.

Set about ensouling yourself with the soul which is *yourself*; that is the chela-path. The man who succeeds in doing so is a chela. The path is the same for all men, yet distinctive for each individual. Find it.

The Theosophical Forum

EVOLVING WORLDS (1) — H. Oosterink

The subject which I have chosen and for which I ask your attention is "*Evolving Worlds*"; and when I speak of evolving worlds our thoughts go out to the mighty universe surrounding our planet, strewn with glorious solar systems and galaxies that are messengers of a sublime creation manifesting itself out of the womb of Mother Nature.

We are taught that out of the depths of Space the Great Breath breathes Itself out and draws Itself back again; that worlds come into manifestation and dissolve again; that hierarchies of evolving life are built up, and that the great mansion of the Spirit perfects itself in ever grander fashion.

Meditating on this, we perceive that an unimaginably sublime Consciousness labors uninterruptedly to manifest Itself. In this Consciousness we live, move, and have our being. We ourselves are It. For each entity, every being in the boundless Universe, is ever growing to that which is greater and loftier, and is destined to become the vehicle of an even more sublime consciousness such as that animating the Universe.

Every being is activated by the same creative force which molded the Universe; this creative force manifests itself in forms ever more suitable.

When I speak of evolving worlds I concentrate my thoughts not only on the boundless Universe; but before every being, each center of consciousness, however small, if once awakened to life, there lies spread out a future sublime beyond imagination. In ever grander fashion the Spirit builds Itself mansion after mansion; ever again and analogously in the same manner the

seeds of life germinate whether they carry within themselves a man, a plant, or a universe. Life is consciousness and progress is the fundamental law. Behind all the unreal and passing forms of manifestation stands BEING, which expresses Itself in these forms. One, truly, and yet that from which all proceeds and to which all returns. Therefore, life as we see it is but a performance of dancing shadows, passing and unreal as compared to that which IS.

There are a number of ways along which man aspires to approach this Mystery; science, philosophy, and religion try to elucidate some part of it, while all great Seers and Sages have taught mankind that within man himself there lies the faculty to enter into the core of things.

This means that man in his search retreats within himself, deepening his own consciousness, and by so doing blends it with the wisdom and beauty of a more powerful Consciousness of which he is a child. In other words, he learns to tread the inner path that leads to the distant gateway of perfection, guided by the radiant Light of the Spirit.

There are two great driving powers which stimulate man to action: the lower desire binding man by psycho-magnetic force to the lower manifestations of life, and the yearning of the higher mind, which guides him to loftier planes of consciousness. These two, it says in the *Bhagavad-Gita* — light and darkness — are the world's eternal ways. If man chooses to follow the dark side of Nature, he calls into being the sad experiences that are inevitably connected with it. If the homesickness of the soul makes him long for spiritual peace and beauty, he delivers himself from the psycho-magnetic attraction of life and grows in harmony with Nature.

An evolving world! Indeed every being in the boundless Universe

is such. In every being there lies a center, a central point, a pivot around which its consciousness extends and deepens itself. If we could observe this core, this central point, in the course of eternity that lies behind us, and could follow it throughout eternity spreading out before us, we then should realize the wonder of the course of Life. We human beings — and indeed all living beings — have a destiny exalted beyond thought or imagination, but a glorious descent as well.

Throughout eternity there exists an unbroken chain of Life. There is but one Life, divided into the many lives that we see around us. Curious thoughts arise in our minds when we ponder on the Theosophical teachings while beholding human life as it is lived in our present confused days. We see that ignorance is humanity's worst enemy. Man lacks vision, man lacks hope. For human life has no value unless it has a purpose. This is what lends significance, depth, and color to his existence, if man lives with a high ideal, an idea which governs his life, which lends him vision, to which he lifts his being, and which gives him the power to rise above himself. He needs an outlook on life occupying his mind day after day. If the millions of human beings on this earth did have such a view on life the world would offer a different outlook entirely. Men would act differently if they were guided from within, controlled by a loftier conception of life.

In these days we experience a revolution — not a revolution on the outward plane only, which is but a consequence, but a revolution in the way of thinking, of thought and opinions and the accompanying disharmony, lack of insight, the following of slogans instead of listening to the deeper truths, found and experienced in the silence only.

The swiftness with which the stream of life with its chaotic confusion of ideals — ideals of one day, not the lasting ones —

proceeds, makes us realize that we are approaching rapids which may lead to a catastrophe. Towering high above all this there stands, immutable as a rock in the surge, Theosophy, the Wisdom for which time does not exist. He who approaches and beholds this Wisdom of the ages, and the infinite beauty hidden in it, never will be able to forget the grand vision. In his heart there live peace and silence. He realizes man's sublime descent and destiny; he understands that our present days of commotion are but a phase in the evolutionary course of life.

In the *Bhagavad-Gita* Sanjaya says:

And as I again and again remember, O mighty king, this wonderful sacred dialog between Krishna and Arjuna, I am delighted again and again. — ch. xviii

And so it is, indeed, with him who approaches the wonderful teachings of Theosophy and calls to life the vision given by them. Ever again he experiences the joy caused by its spiritual beauty.

'Evolving Worlds' is a subject continuously offering ideas to ponder upon. Our thoughts are evolving worlds; each life-atom is one, the beings around us, we ourselves are; the heavens above us contain innumerable evolving worlds, the hierarchies of life are composed of them. Through all these lives runs the thread of the One Life — which weaves the fabric of the evolving worlds.

Friends, I do but give some thought-seeds grown in my moments of silence. Allow these thought-seeds to germinate in your silent moments, when you meditate on these thoughts. Theosophy gives us entrance into the Temple of Beauty within ourselves, and this being attained:

Behold! Thou hast become the Light, thou hast become the Sound, thou art thy Master and thy God. Thou art THYSELF, the object of thy search: the VOICE unbroken, that resounds

throughout eternities, exempt from change, from sin
exempt, the Seven Sounds in one, THE VOICE OF THE SILENCE.

The Theosophical Forum

THE SOLUTION ACCORDING TO ALDOUS HUXLEY — C. J. Ryan

A valued correspondent writes that he believes many people are repelled by the supposition that impersonality, so strongly advanced in Theosophy, is equivalent to the complete obliteration of diversities in character between human beings. He says rightly that people do not relish the prospect of a dreary uniformity in anything; no one will strive for a spiritual existence in which all would be cast in exactly the same mold, even if told that it would lead to Nirvana or a heaven of harps and crowns. Quoting Thoreau, "I want all men to be as different as possible," he suggests that harmony in diversity, similarity without identity, with the suppression of selfishness and egoism, is a higher ideal.

He is right, and if anyone imagines that the distorted view of impersonality he pictures is Theosophical, a little study of what the Theosophical leaders have written will quickly clear up the misunderstanding. The mistake may have arisen from misapprehension of Arnold's famous line about the dewdrop slipping into the shining sea, but more probably from a lack of understanding of the meaning of "non-attachment," the key to impersonality.

Dr. de Purucker's *Golden Precepts of Esotericism* contains a clear explanation of the meaning and importance of impersonality, and it is plainly stated that it is the only practical method of breaking down the obscuring veils between man and his inner Divinity. Impersonal love, forgetfulness of the selfish demands of the lower personality, are the ways to save humanity from sinking into an abyss from which it could only escape after passing through untold suffering. It is an individual problem. Our "civilization" is made by the thoughts and desires of individuals, and no

alleviation of the evils of this "iron age" is possible while efforts are directed merely to the change of conditions, and the change of hearts is ignored.

But light is breaking here and there through the darkness and evidence is increasing of the development of Theosophical principles of duty to humanity. While the majority in the churches still cling to the creeds which appeal to the pathetic craving for "personal salvation," intuitive minds are beginning to attract attention by proclaiming that nearly all the values accepted in the West for the re-ordering of the world are useless because they do not go to the root of the trouble. A prominent clergyman recently said from the pulpit: "Accepted standards are damning the world. Respectability has led us to the brink of destruction. The ordinary level of human ideals, thought and practice is a dead level. Jesus did not hesitate to demand that His followers be so much unlike the run of society that they be noticeably marked. "Do not even the others so?" is a question He often put to them."

Dr. Matthews, Dean of St. Paul's Cathedral, London, wrote lately, "Christians have not had the courage or the insight to draw the conclusions from their own principles. Jesus was indeed a revolutionary . . . but he had no faith in the efficacy of political or economic changes which were alleviations of conditions but not of people. In His view "as a man thinks, so he is." There is no real revolution which does not begin with a change of mind." Not only Jesus, but all the World-Teachers, held and taught the same age-old doctrine.

And now comes Mr. Aldous Huxley (one of the famous grandsons of Professor T. H. Huxley, the champion of Darwinism), who has aroused widespread interest by his new book, *Ends and Means*, a brilliant presentation of the true remedy of our ills. If Mr. Huxley

ever was a materialist he has quite abandoned that dreary creed. His eloquent words ring like the call to righteousness from one of the major prophets. His corrective is radical and, whether he knows it or not, it is purely Theosophical. He appeals for a thorough-going reform through spiritual self-discipline and a new outlook on the meaning of life. He insists upon the reality and validity of the mystical experience. Liberation from attachment to the desires of the lower side of our dual nature can be reached and the beatific vision obtained, but not without the strictest self-discipline. He shows that in the concept of union with the Divine Principle within there is no room for a personal, anthropomorphic God, and he believes that not only the great mystics and seers of antiquity accepted this, but that even the great Christian mystics did the same. (1) In the same connexion he writes:

Belief in a personal God has . . . led to that enormous over-valuation of the individual ego, which is so characteristic of Western popular philosophy. All the great religions have taught the necessity of transcending personality, but the Christians have made it particularly difficult for themselves to act upon this teaching. They have accompanied the injunction that men should lose their lives in order to save them by the assertion that God himself is a person and that personal values are the highest that we can know.

Mr. Huxley sets forth with clarity the true significance of impersonality or non-attachment, and shows that it is not a negative but a very positive quality. A few quotations illustrate the fundamental principles by which he would reform the world. They are indeed familiar to Theosophists, and they are true. But would they be listened to even today if it had not been for the sacrifice made by H. P. Blavatsky in bringing Theosophy to a

bitterly hostile world? Can we honorably accept and profit by the teachings while scornfully rejecting the teacher, as many have done? Mr. Huxley writes:

The ideal man is the non-attached man . . . non-attached to wealth, fame, social position. Non-attached even to science, art, speculation and philosophy. Yes, non-attached even to these. . . .

But such profound non-attachment does not mean running away to the jungle and living on roots and herbs. As W. Q. Judge said, the place of the true mystic is in the rough and tumble of the world, where his duty to humanity lies. Mr. Huxley sees this, for he says, further:

The practice of non-attachment entails all the virtues. It entails the practice of charity, for example; for there are no more fatal impediments than anger (even "righteous indignation") and cold-blooded malice to the identification of the self with the immanent and transcendent more-than-self. It entails the practice of courage, for fear is a painful and obsessive identification of the self with its body. . . . It entails the cultivation of intelligence, for insensitive stupidity is a main root of all the other vices. It entails the practice of generosity and disinterestedness, for avarice and the love of possessions constrain their victim to equate himself with mere things. . . . It imposes upon those who would practice it the adoption of an intensely practical attitude toward the world.

We are not reviewing *Ends and Means*, but only mentioning one of its leading features as an illustration of the spread of Theosophical ideas; there is much more in it with which we heartily agree. For instance, the author fully realizes that unless human nature is changed no amount of social improvement will

produce permanent reform; the defects of the personality will simply find new ways of expressing themselves. This change, as he sees, can only come by individual effort, *from within*. A slow process, perhaps, for most of us, but sure, and while it can be helped by a better social order there is no hope of overcoming the evils of our age by any form of violence, military or economic. Above all else, to obtain practical results, "the life of the spirit must be quickened." Speaking of the great snares, the love of Money, Power, Social Success, Mr. Huxley's remedy is non-attachment to these appeals to the lower nature, and a turning of the mind to higher ideals, and especially to the love of our neighbor and our duty to humanity. These will lead away from the limitations of "personality" toward the mystic union with the greater life "which passeth [ordinary] understanding."

If the intuitive minds who are approaching the Theosophical viewpoint about the cure for present discontents will study without prejudice the profound philosophic and scientific teaching of the Ancient Wisdom, they will find that their ethical views are not mere opinions, ideals, or hopes, but that they are rooted in the very fabric of the universe, as scientifically true as they are spiritually beautiful. The strength of Theosophy lies in its unification of religion, philosophy, and science.

1. H. P. Blavatsky, writing of the Great Ones who had succeeded in uniting themselves permanently with their inner Divinity, thereby becoming gods on earth, says there were others, such as Moses, Pythagoras, Plotinus, Confucius, etc., "and some Christian saints," who were so united at intervals, and have taken rank as demi-gods. See *Isis Unveiled*, II, 159. ([return to text](#))

ORIENTAL STUDIES: II — *G. de Purucker*

The Secret Doctrine of Gautama the Buddha (1)

The present study will be an attempt to elaborate the thesis that essential Buddhism, in common with the essential or fundamental teaching of all the other great world-religions or indeed world-philosophies, contains as its substance or core the identic Esoteric Tradition that is found universally elsewhere. It is no attempt at a complete and inclusive proof of the foregoing statement, because obviously the limits of this article would themselves be too small to embody a complete and formal statement of the facts. We shall here treat the matter more as a sketch and as an outline.

I

There are two ways of reaching Truth, two methods of penetrating into the arcana of the mysteries of the Universe, from its spiritual parts down to its physical; and these two ways or methods are, first, by means of Man's spiritual-intellectual nature itself which is rooted in the very substance of the spiritual world, and indeed is an integral part thereof. For any normal human being whose constitution has not been undermined by vice, nor weakened by some wasting disease, can, if he will lead the life proper thereto, come into sympathetic unity or oneness with spiritual Nature through his own inner being's cognising its essential unity with the Universe, and thus becoming the recipient, as a channel or canal, through which the higher energies of the Universe may flow and become manifest as thoughts, intuitions, intimations of truth, in the chela's or disciple's mind.

The other way or method is that of training and initiation, which is not different from the former method, but is the former method elaborated into systematic procedures; because such initiatory training and final success are but a quickening of or hastening over the evolutionary progress that all human beings undergo through the cycling ages. In other words, initiation is but quickened evolution.

These Great World-Teachers combine both these ways or methods during a brief period of lives on earth. Beginning as chelas or disciples of some teacher selected by each individual of them, with which teacher such chela finds intuitive and instinctive links of sympathy and understanding, he undergoes training, i. e., quickened evolution, under the watchful eye of the teacher chosen by him; and bending every energy and all the faculties of his being towards success, he passes from life to life through this brief period of reincarnations, advancing steadily higher in each such life, until finally he himself blossoms out as a Master, a Mahatman, in his turn now ready to carry his portion of the labor, pitiful, compassionate, of the Great Brotherhood. Then his turn comes to be sent forth among his fellow-men of less evolutionary degree of advancement, to become unto them a Teacher, a Guide, an Inspirer, delivering unto them in ideas and language appropriate to the age the new instalment of universal truth which it thus becomes his sublime destiny to give. Thus a new great Religion is founded, a new and possibly world-shaking Philosophy of Life is inaugurated; yet, mark it well, each and every one of this long line of Sages and Seers, each one of the World-Teachers, imbodyes in his new instalment of teaching the same fundamental verities, the identic truths, albeit delivered in new garments, which all his Predecessors had given, each one in his turn. It is thus that the Esoteric Tradition is carried on and renewed from age to age, and given to man in those periods of

spiritual and intellectual somnolence, which Plato called epochs of spiritual barrenness.

Such a one in the long line of Successors was Sakyamuni, the Buddha-Gautama. It is true that in his case, and because of a certain Mystery which it would be improper openly to set forth even by sketch in a published work, he was of a spiritual and intellectual stature exceeding many, possibly most, of those who had preceded him in the same World-Order in recorded human history; but even in his case the rule of successorship was the same as in that of all his Predecessors, and he but exemplifies, more brilliantly than most, the natural Law of Periodicity which governs the cyclical unveiling or revealing of the Esoteric Tradition to the human species.

II

Let us now turn to the more particular topic of our present study:

Buddham saranam gachchhami;
dharmam saranam gachchhami;
samgham saranam gachchhami:

"I take my refuge in the Buddha; I take my refuge in the Light of his teachings (or Law); I take my refuge in the company of the Holy Ones." This slight paraphrase of the Sanskrit three-stanzaed "Confession of Faith" so called, contains the substantial core of what the modern Buddhist, equally with the ancient Buddhist, considers to be the true Buddhist's outlook as a believer in the teachings of the Tathagata, i. e., he who came as his forerunners came, as his Predecessors came, in order to bring salvation into the world — salvation to gods and men, salvation to the greatest and to the humblest; and this "salvation," as the Lord Buddha taught, was not salvation from any outside power, not something entering into human minds and hearts from outside, and thus

"saving" them, as is the vain belief of so many Occidentals: but was an interior change, a true reformation, in the very spiritual, intellectual, and psychical, structure of the man himself. (2) For, as the mystical Buddhism of the North taught, and still teaches with fervid devotion: There is in every entity, not only in man but in the gods and in the beings beneath man, a threefold essence — or perhaps more accurately three interblending essences, nevertheless having a common identic substance, which they describe as, (a) a Celestial or Dhyani-Buddha; (b) a Bodhisattva, "son" of the Celestial or Dhyani-Buddha; and (c) a Manushya-Buddha or human Buddha; and it was in order to awaken this living threefold Buddhist consciousness in the constitution of every human being, that the Buddha taught his noble Law, his majestic Philosophy, which perhaps has held, during the course of its existence, more human minds in fealty and devotion than any other religio-philosophic system known to the human race.

III

Buddhism has always been greatly misunderstood in the Occident. It has at times been called a religion of pessimism, simply because Occidentals have not understood its profound intellectual reaches nor its proper placing of the values of the material side of life. In the Occidental view, to teach that a man is an impermanent composite of elements of varying ethereality, and that when he dies this composite is dissolved, and that its component parts then enter into their respective realms or kingdoms or spheres of Nature: all this signifies to the Occidental mind that such a doctrine teaches utter annihilation of the compounded entity *as an entity*; for, consciously or unconsciously, such Occidental critics ignore the unifying and binding root of being of every such entity which brings at periodical intervals this compound together again out of the identic life-atoms that composed it in former existences.

Occidental scholars so think, or they think that they so think, because they do not understand that this very "root," or element, or subtil bond — call it what you like — i. e., the individualizing energy which brought these samskaras (3) or compounds or composites together, is, when all is said and done in argument, a unifying and therefore individualizing *force*; and that this unifying or individualizing force, no matter what we may call it, remains after the dissolution of the compound, and likewise has its own cosmic reservoir or kingdom or realm to which it returns; nor do they understand that this unifying or individualizing force the Lord Gautama in his great wisdom called the "Buddha," the inner originant, for which an equivalent term in the Mahayana of Northern Asia is Dhyani-Buddha.

It is quite true that from certain Occidental philosophical standpoints, the teaching of Gautama the Buddha may formally be considered "pessimistic"; but only so if one judge it by Occidental philosophical standards alone, and ignore the intrinsic meaning of the Buddha himself; and is this either wise or fair? Ignoring a factor in a problem is not solving the problem properly. Can it, one asks, then be rightly done? How can we judge something which arose in the Orient and became the Law of the more civilized Oriental world for its own time-period, and successfully passed the examination of the keenest minds and the most astute intellects of ages, by the changing and therefore biased standards of Occidental scientific speculations, with a vague background of European philosophy, which speculations themselves are only some three hundred or more years old in their origin, and probably not more than seventy-five years old, or less, in their present form?

There was a time, not so long ago, when one teaching of the Buddha, that of the Nirvana, was considered by Occidental

scholars to mean that the Lord Gautama taught that annihilation, utter, complete, was the end of every living conscious being, when that being had attained unto the stage of inner growth where it entered into this nirvanic state; and they pointed, naturally enough, to the Sanskrit meaning of this compound word: (*nir*), "out" or "off," and (*vana*), the past participle passive of the root (*va*), "to blow": hence "to blow out." As they sagely and logically enough said: "Nirvana means "blown out," as a candle-flame is "blown out" by the breath!" Ay, so it does. But what is it that is "blown out"? What is it that ceases to exist? Is it the unifying spiritual force which brings this compound entity into being anew in a serial line of succession which has no known beginning, and which the Buddhist teaching itself shows to be *something* which reproduces itself in this series of illusory, because compounded, vehicles? This is impossible, because if this individualizing or unifying energy were "blown out," i. e., annihilated, it obviously could not continue to reproduce itself as the inspiriting energy of newly compounded bodies due to its own working. Therefore obviously enough what is blown out is the *samskaras*, the compounds, resulting from, i. e., born or produced by, the *karman* of the individual. This *karman*, therefore, and speaking with strict logical sequence of thought, which the doctrine embodies, is *the individual himself or itself*; because the Buddhist teaching is that what is reproduced is the *karman* of the preceding individual, i. e., that any composite entity changes from instant to instant, and that at each new instant, the change is the resultant or effect or consequence of the preceding instant of change. Thus, then, the individual is his own *karman* at any instant in time, because that *karman* is the totality of what he is himself. When a man's composite parts are "blown out," i. e., "enter Nirvana," i. e., are "extinguished," rendered extinct, as the just previously existing compound, then all the rest of the being, that deathless center of unifying and individualizing

spiritual force around which these composites or samskaras periodically gather — lives as a Buddha.

This is exactly and as far as it goes (because there is much more that might be said), the teaching of Esoteric Theosophy, of the Esoteric Tradition. All the evil and lower part of us must be wiped out, extinguished, "annihilated" if you like; in other words the karman that produced these illusory composites must be caused to cease; and new composites, nobler ones — *the products or effects or resultants of the preceding composites* — those henceforth joined to the Buddhic essence of the being, that spiritual force which is the inner Buddha, will then continue and on its own high plane live, because no longer controlled by the veils of the world of Maya, Illusion — the worlds of impermanent structural composites. The being thus become a Buddha because of its delivery from enshrouding veils, has now reached the state and condition of passing out of the impermanence of all manifested existence into the utter permanence of cosmic Reality.

The matter of the real meaning of the Nirvana has thus been elaborated, albeit in somewhat sketchy fashion, in order to show that the supposition of many Westerners that the teaching of the Nirvana is a pessimistic doctrine because meaning utter extinction into the abyss of non-entity, is baseless. Hence, far from being pessimistic, the doctrine of the Nirvana is one of extraordinary hope. The word "optimism" is not here used, because it is as subject to adverse critical comment as is its antonym "pessimism."

Far from being a religion of pessimism, when properly understood the religion of the Buddha is a religion — not of optimism indeed, but of wisdom. These words are used advisedly, because it is certain that unthinking optimism is as foolish in its way as is unthinking pessimism. Neither is wise, because each is

an extreme. The teaching of the Buddha was so wisely given by that Great Sage that it showed to men a pathway which went neither to the right — to one extreme — nor to the left — to the other extreme; but chose the Middle Way, the way of Truth, avoiding the falling into the extremes of either side. All extremes are unreal, no matter what they may be, because unphilosophical; and it is the great subtilty of the Tathagata's teaching which has rendered it so difficult for Occidentals to understand. One often reads essays printed in the Occident by Westerners who have become Buddhists; and one may admire them for the courage with which they work in their new field; but, with no wish to hurt anyone's feelings, it is difficult to avoid being grieved by their usual lack of understanding of what is after all the heart, the core, of the great Buddha's teaching. The letter indeed of the Buddhist scriptures has been grasped — more or less; but the spirit, i. e., the Buddha's "heart" is rarely or never understood. The Eye-Doctrine, in other words, is comprehended to a certain extent; but the Heart-Doctrine, the hid part, the esoteric part, is not seized, or only grasped intuitively and to a certain extent only at the rarest intervals.

IV

Ay, there *is* such a thing as esoteric Buddhism, (4) despite the denials of this fact by very eminent Occidental Buddhist scholars. After all, what value is there in following the more or less unconsciously biased deductions of our Occidental scholars in Buddhistic lore, who, taking merely the letter of that great religious and philosophical Law, translate, and, in combination with their own more or less biased reflexions, thereby render, as they think, the truth of the doctrine? What value, indeed, when studies with the background of illumination furnished by the teachings of the Esoteric Tradition show to the Theosophical student that there is verily an esoteric teaching or foundation of

both a philosophical and a religious character which the Buddha evidently must have taught to his Arhats, or disciples most favored for their spiritual and intellectual abilities to understand his meaning. When these skeptical Occidental scholars are asked: Did the Buddha have an Esoteric School, or does his Law contain an esoteric teaching? they almost invariably say Nay, and point with emphatic finger to a statement by the Buddha himself, which they believe proves their allegation that he himself denied it This statement is found in the teaching of the *Maha-Parinibbana-Sutta*, or the teaching of the "Great and Ultimate Nirvana"; which title we may perhaps otherwise render as meaning the "Great Passing " Before going on farther with the present argument, it may be useful to examine just what this supposedly conclusive statement of the Lord Buddha really was:

Now very soon after the Blessed One began to recover, when he had quite got rid of the sickness he went out from the monastery, and sat down behind the monastery on a seat spread out there And the venerable Ananda (5) went to the place where the Blessed One was, and saluted him, and took a seat respectfully on one side, and addressed the Blessed One, and said "I have beheld, Lord, how the Blessed One was in health, and I have beheld how the Blessed One had to suffer And though at the sight of the sickness of the Blessed One my body became weak as a creeper, and the horizon became dim to me, and my faculties were no longer clear, yet notwithstanding I took some little comfort from the thought that the Blessed One would not pass away from existence until at least he had left instructions as touching the order "

"What, then, Ananda? Does the order expect that of me? I have preached the truth without making any distinction between exoteric and esoteric doctrine for in respect of the

truths, Ananda, the Tathagata has no such thing as the closed fist of a teacher, who keeps some things back. Surely, Ananda, should there be any one who harbours the thought, 'It is I who will lead the brotherhood,' or, 'The order is dependent upon me,' it is he who should lay down instructions in any matter concerning the order. Now the Tathagata, Ananda, thinks not that it is he who should lead the brotherhood, or that the order is dependent upon him. Why then should he leave instructions in any matter concerning the order? I too, O Ananda, am now grown old, and full of years, my journey is drawing to its close, I have reached my sum of days, I am turning eighty years of age, and just as a worn out cart, Ananda, can only with much additional care be made to move along, so, methinks, the body of the Tathagata can only be kept going with much additional care. . . .

"Therefore, O Ananda, be ye lamps unto yourselves. Be ye a refuge to yourselves. Betake yourselves to no external refuge. Hold fast to the truth as a lamp. Hold fast as a refuge to the truth. . . ." (6)

— i. e., to the Celestial Buddha abiding in secret within every human heart, in the core or spiritual center of every human being, "the inner god".

Lest this citation be taken to mean that the Buddha taught no need of any teachers following him in his Brotherhood or Association, it is well to look even at the pragmatism of Buddhism of the South, and more particularly to consider that of the mystical School of the North, where there were during later ages millions of human beings who, without any exception whatsoever, as far as one recollects at the moment, followed the different schools, each one of them founded by a more or less great man whose

rights to teach were scarcely ever challenged, simply because of the greatness of these individual teachers each in his own especial line of pragmatism or of mystical Buddhism. In all these cases, whether of the South or of the North, the existence of legitimate successors of the Buddha following each other in century after century was universally recognised, although obviously none was ever considered to be equal to the great Master himself. His unique standing as Teacher is indeed one of the fundamental teachings of Buddhism, which states that Buddhas appear only at long intervals and in periods governed by cyclic time, thus re-echoing the Brahmanical teaching of a succession of Doctors of the Law which Krishna alludes to in the *Bhagavad-Gita* in the words: "Whenever there is a decline of righteousness in the world, etc., then I reproduce myself." (7)

This succession or serial line of teachers is technically called the Guru-parampara in Brahmanism. It is a good phrase or title for the Teachers coming in serial order, because it is both descriptive and exact. It has had of course varied and different meanings in different ages, but the substantial idea inherent in the thought is the same everywhere; and whether certain Buddhist scholars like to admit it or not, the fact remains that historical Buddhism shows to us teacher succeeding teacher in the annals of the great Buddhist faith: these teachers sometimes separated by fairly long periods of time, and in other cases of more mystical and restricted schools, teacher succeeding teacher when the predecessor dies and the successor assumes his office.

Even the simplest examination of the historical facts will show the student that minor sages and seers have sprung up from time to time in the Buddhism of history, such as Nagarjuna and Aryasamgha, founding schools, or taking them over from their predecessors; teaching, if you like, each one a new version of the Ancient Buddhist Wisdom, yet all faithful followers of the Lord

Buddha; and whatever their differences as individuals may have been, all these various schools look to the great Master as the fountain-head of their respective and more or less differing wisdoms.

It would be preposterous to attempt to aver that so enlightened a spirit, so profound an intellect, so wise and far-reaching a mind, as found in the Buddha, could have been ignorant of one of the elementary facts of human psychology in religious matters, to wit, that it was a foregone conclusion, human nature being what it is, that teachers would arise in the Order after his death; nor can one for an instant agree with those who would attempt to show that most, if not all, of these later teachers in Buddhist philosophy were more or less ambitious upstarts, craving personal prominence and seeking a personal following. This opinion, which seems to be so widespread in the Occident, as regards religious matters, discovers to public view what is really a deplorably pessimistic opinion of human nature. Indeed, the view of the present writer runs directly counter to this opinion, for he looks upon most, if not all, of the great men who succeeded the Buddha as heads of the different Buddhist Schools, as being genuine initiates, profound, thoughtful, and high-minded men, who, because of their own spiritual and intellectual and psychical degree of evolution, developed in their respective logical fields the teachings of the Buddha-Gautama dealing with different parts of the widely inclusive range of Buddhist philosophy.

To return to the quotation cited above: At first reading, it does indeed sound as if the Lord Buddha declared to his disciples that he had no esoteric doctrine, reserved of necessity for the more spiritually and intellectually advanced of his chelas or disciples. Is this, however, what he actually said? It most certainly is not. Ananda's plea was: "Leave us instructions, Lord, as to the conduct of the Order, before thou passest on"; and the Buddha refused,

saying: "I have told you all that is necessary for the conduct of the Order, and I have kept naught back. I am not like a teacher who tells you some things as to your own conduct and the conduct of the Brotherhood, and secretly hides other things in his "closed fist." I have told you all that is necessary for the conduct of the Order that will bring you success in the saving of man; but should there be anyone who arises in the Order and who points out what is required for its proper care and leading, then it is he who should lay down instructions in any such emergency concerning the Order. You will soon find out in such case whether he be a true teacher or a false; for the rules that I myself have given unto you are the fundamental rules for guidance and conduct both of yourselves and of the Order, and they are sufficient. I have spoken."

There is no small number of passages in the different Buddhist Scriptures of both the two great Schools, which, both by direct statement or by indirection in statement, declare plainly that the Buddha had not revealed, nor would he reveal, all the truths that he knew.

Two instances briefly designated should suffice in illustration, both of the Hinayana School. The first states that Sakyamuni took a handful of the leaves of the Sinsapa, and pointing to them, explained that just as this bunch of leaves in his hand, so few in number, were not all the leaves of the tree from which they were taken, just so in exactly similar fashion the truths that he himself as Teacher had announced were not by any means all that he knew. (8) The figure is both graphic and strong, and highly significant.

The other instance, also in a Scripture belonging to the Hinayana-system, is one in which the Great Teacher explains his refusal to describe whether a Buddha lives after death or not. (9) Both

illustrations are declarations of the fact of the reserve in teaching, and reticence in delivery thereof, which are so universally characteristic of the transmitters of the Esoteric Tradition.

FOOTNOTES:

1. By request THE FORUM reprints these important chapters on the Secret Doctrine of Gautama the Buddha, slightly condensed, from *The Esoteric Tradition*. They will appear in three installments.

[\(return to text\)](#)

2. This threefold Buddhist formula is likewise known under the title *Tri-ratna*, or "Three Gems"; or *Tri-saranam*, or "Three Refuges." As stated in the text of this chapter, this formula of devotion or allegiance, accepted by both the Northern and the Southern Schools of Buddhism, is universally taken, or nearly so, by the entire Buddhist world in a rather pragmatical or matter-of-fact manner, following the literal meaning of the words, to wit: "I take refuge in the Buddha; I take refuge in the Dharma or Law; I take refuge in the Company or Congregation" — the "Company" or "Congregation" thus signifying the Buddhist priesthood, or in a still larger sense, the entire body of professing and faithful Buddhists.

Yet this literal meaning, in the opinion of the present writer, is but an exoteric form of what was originally intended by the esoteric Initiates who drew up this formula or composed it. In other words, the formula suffered the same deterioration in meaning that has happened in all similar cases in all great religions: the words originally having a highly mystical and philosophical significance finally lose it and are accepted or taken at their mere face-meaning.

The original sense of this formula was extremely profound and beautiful, and conveyed a threefold teaching — or a teaching

referring to three aspects of the Esoteric Philosophy — somewhat as follows: The "Buddha" has reference to *Adi-Buddha*, which we may call the First or Unmanifest Logos, or Primeval Spirit in the Universe, manifesting throughout the Universe in a sublime Hierarchy of spiritual beings emanating from itself. These spiritual beings extend from the highest even to the human spheres, and frequently are called in the Esoteric Philosophy, the Hierarchy of Compassion, or sometimes the Sons of Light. It is the Hierarchy of Compassion, or the Sons of Light, composing it, and ranging from the Dhyani-Buddhas downwards through intermediate grades to the Manushya-Buddhas, which form the *Saingha* or Company, or Congregation, this being the Third of the Refuges. The Wisdom that is taught by them on the different planes of the Universe and to the different ranges of world-spheres, and mystically and traditionally handed down from the highest Dhyani-Buddhas to human disciples is the second Refuge, called in this formula, the *Dharma*.

We have thus, when this formula is properly understood, an outline, albeit briefly sketched, of the structural framework of all the teaching of the Wisdom of the Gods, today in its public delivery called Theosophy. In other words, and summarizing briefly, we have under the one term "Buddha" the entire line of spiritual beings, reaching from the Cosmic Spirit through all intermediate ranges of the Universe down to the Manushya-Buddhas or human Buddhas and their human disciples, who in their aggregate form the so-called "Congregation"; and all teaching the Divine Wisdom sprung forth in its origin from the highest gods themselves, and of which every Buddha on earth is an exponent.

Corresponding to the same threefold division of the "Buddhas," their "Law," and their "Hierarchy," we have the three forms of Vestures or Appearances in which this Hierarchy of Beings

express themselves, to wit: first and highest, the Dharmakaya, that of the highest cosmic spirits or Dhyani-Buddhas; second, the Sambhogakaya, the vestures, thus summarized, of the intermediate grades of spiritual beings in this Hierarchy; and finally, the Nirmanakayas, the vesture of those spiritual beings and Great Adepts who are closest to and therefore, *de facto*, are the Guardians of, mankind and all beings on Earth.

Corresponding with these three Vestures again, we have the third general division above alluded to: the Arupa-dhatu, or so-called "Formless" World or Worlds, the mystical abode of the Dhyani-Buddhas or Chohans, etc.; second, the Rupa-dhatu, or so-called Manifested or Form-World or Worlds, the abode of the beings living in the Sambhogakaya Vesture or condition; and third, the Kama-dhatu, or so-called "World of Desire," or Worlds wherein reside beings still heavily involved in the attractions and conditions of material existence.

The matter is so important in its immense bearing on the esoteric heart of the Buddha's teaching that it was felt both useful and needed to explain it, however briefly, in the present footnote, for those who can understand it. ([return to text](#))

3. Psycho-mental attributes forming a portion of the intermediate constitution of man. ([return to text](#))

4. With regard to the statement in the text above, that the great Hindu Reformer and Initiate, known to the world as Gautama the Buddha, had indeed a Secret Doctrine, or Esoteric Tradition, which he himself had received from and in initiation, and which he kept for those worthy and qualified to receive it among his own chelas or disciples, and quite outside of a conviction to that effect born in the minds of students who have given the matter sufficient study to understand it, the reader is referred to certain statements made by H. P. Blavatsky, the Great Theosophist, in her

The Secret Doctrine and elsewhere, pointing to the same fact. As an example, she writes in her *The Secret Doctrine*, "Introductory," Volume I, pages xx-xxi, as follows:

"Indeed, the secret portions of the "Dan" or "Jan-na" ('Dhyan') of Gautama's metaphysics — grand as they appear to one unacquainted with the tenets of the Wisdom Religion of antiquity — are but a very small portion of the whole. The Hindu Reformer limited his public teachings to the purely moral and physiological aspect of the Wisdom-Religion, to Ethics and MAN alone. Things "unseen and incorporeal," the mystery of Being outside our terrestrial sphere, the great Teacher left entirely untouched in his public lectures, reserving the hidden Truths for a select circle of his Arhats. The latter received their Initiation at the famous Saptaparna cave. . . .

"Thus the reader is asked to bear in mind the very important difference between *orthodox* Buddhism — i. e., the public teachings of Gautama the Buddha, and his esoteric *Budhism*. His Secret Doctrine, however, differed in no wise from that of the initiated Brahmins of his day. . . . His teachings, therefore, could not be different from their doctrines, for the whole Buddhist reform merely consisted in giving out a portion of that which had been kept secret from every man outside of the "enchanted" circle of Temple-Initiates and ascetics. Unable to teach *all* that had been imparted to him — owing to his pledges — though he taught a philosophy built upon the ground-work of the true esoteric knowledge, the Buddha gave to the world only its *outward* material body and kept its soul for his Elect. . . . Many Chinese scholars among Orientalists have heard of the "Soul Doctrine." None seem to have understood its real meaning and importance."

The Theosophical Forum

ALTRUISM — *G. de Purucker*

Human nature is so prone, when hearing about Altruism or reading about it, to imagine that it is something foreign to us, lugged into human life as a most desirable thing to follow, but, after all, highly impractical, and therefore impracticable — that it is not inherent in the characteristics of human beings to be altruistic naturally. In other words, they are all fascinated with the idea of isolated self-interest. Is not this virtually universal supposition of men utterly unfounded in Nature herself? For wherever we look, whatever we consider or study, we find that the individual working alone for itself is helpless; wherever we look in all the great kingdoms of the Universe, it is union of effort, co-operation in living combines — to use the slang of the street — which is not only what Nature herself is working to bring about and therefore which we find everywhere; but that anything that runs counter and contrary to this fundamental law of the Universe, which is unity in action, produces disharmony, strife, and what in our own bodies we call disease. Health is that condition of bodily structure where all parts work to a common end in what we may call friendship, in what we may call union.

Consider the stones: are they not combines, are they not unions of individuals composing, making, producing, a thing? No single atom of any of the chemical elements of which any stone is composed is the stone itself. How about the lovely flower? How about the bodies in which we live? How about a single man? Could he produce the great works that men have bent their genius to achieve, alone? What is civilization but the combined efforts of human beings to produce great and noble effects in human life — increasing comfort, dispelling danger, bringing about the productions of genius from the greater men which

redound to our own comfort and use. Show me a single instance where pure self-interest has produced anything. We find naught, if we consult Nature in all her kingdoms, but unity of workings brought about by multitudes of individuals co-operating to a common end. And what is that but Altruism? Altruism is the word we give to this fact when we see its ethical significance, and this significance is in no wise, nor in any great way nor in any small, different from what we see in the world physical. Altruism means the one working for the all — Nature's fundamental law in all her grand structures — and the all standing as the guard and shield and field of effort of the one. Think of the deep moral lesson, the deduction, to be drawn from this greatest of the universe's — not mysteries but verities; so common around us that usually we pass it by unseeing, with unseeing eye. Show me anything that can endure sole and alone for a single instant of time.

Two or more atoms uniting make a molecule; two or more molecules a larger production; and it is the countless multitudes of such unions which produce the universe. Any single entity essaying to follow the ignoble path of isolated self-interest sets its or his puny will against the force which keeps the stars in their courses, gives health to our bodies, brings about civilizations among men, and produces all the wonders that are around us.

There is a point of teaching in this connexion which it is very important to introduce into the world today, and that is Hope. You know the old story, the Greek story, about a certain very curious and inquisitive person who opened a box and all the evils in the world fled out, and there remained therein only Hope? Now I think this contains a great deal of truth which has a practical bearing on life's problems. As long as a man has hope he does not despair. Weak or strong, it matters not; if he has hope, something to look forward to, if his inner spirit, the spiritual being within him, teaches him something of hope, he not only will

never despair, but he will become a builder, a constructor, a worker *with the Universe*, because he will move forwards. And this is Altruism.

We are all children — to use the vernacular of the half-philosophical schools of the day — of the Universe, of its physical side and of its spiritual and divine side. This being so, there is in every human breast an undying font not only of inspiration, but likewise of growth, of hope, of wisdom, and of love. So that the world today, although apparently in a parlous condition, in a desperate state, still contains men and women enough in it to carry the evolutionary wave of progress over its present turmoil and strife; for the majority of mankind are essentially right in their instincts, especially the higher instincts.

Therefore, I do not see anything horribly hopeless about the world's condition today. I believe not only that there is ground for hope, but that the undying spark of spirituality, of wisdom and love of altruism, always living in the human heart, will carry the human race not only out of its present series of impasses, of difficulties, but into brighter days, which will be brighter because wiser and gentler. It is not the crises, when things crash or seem to crash: it is not the horrific noise of the thunder or the crash of its bolt, which govern the great functions of life, human and cosmic; but those slow, to us men, always quiet, unending, silent processes which build: build when we wake, build when we sleep, build all the time, and even in the human race carry it through folly after folly after folly into the future.

There is the ground of our hope; and it seems to me that all good men and true should rally to the defense of these primal, simple verities which every human heart can understand, adult or child. I believe it is about time that men and women began to look on the bright side of things, to see hope around us, to forget

themselves and their petty worries, and to live in the Infinite and in the Eternal. It is easy — a darned sight easier than making ourselves continuously sick with frets and worries! Within each one of us there is something divine to which we can cling, and which will carry us through!

Don't talk to me about Altruism being something foreign or exotic to us, unusual, impractical, and therefore impracticable; for it is the only thing which perpetually lives, the only thing which endures for aye. When any single element or part in a human body begins to run "on its own," we have disease. When any single element or part in any structural combine which helps to compose the world around us begins to run "on its own," i. e., what we call self-interest, there we see degeneration and decay.

Deduction and question: Which of the twain should we follow? — the pathway of the cosmic Intelligence bringing us health inner and outer, peace inner and outer, strength internal and external, by union inner and outer? Or the teaching of a tawdry and isolated self-interest which seeks its own to the prejudice of all?

Is it not high time that we as Theosophists should give to the world a few of the simple inner teachings of the God-Wisdom of the ancients? And will you show me one more sublime, more appealing to human intellect and to the dictates of human conscience, than that of Altruism, which puts us in intimate union with the throbbing of the Cosmic Heart, and which idea, if we can pass it over into the minds of men, will more than justify all the work that the Great Masters of Wisdom have been doing for mankind since time immemorial? Ethics above all!

Every century an attempt is being made to show the world that Occultism is no vain superstition. Once the door [is] permitted to be kept a little ajar, it will be opened wider with every new century. The times are ripe for a more

serious knowledge than hitherto permitted, though still very limited, so far. — *The Secret Doctrine*, I, xxxvii

The Theosophical Forum

AN OFT REPEATED QUESTION — *Torsten Karling*

Can I be a good Theosophist without penetrating into what you call "technical Theosophy"?"

If in answer to this question one gives the often quoted statement of H. P. Blavatsky: "Theosophist is who Theosophy does," it is obvious that this answer is not exhaustive, for it naturally must be followed by a new question: "What does "doing Theosophy" imply?"

It is to live the Theosophical life; to make brotherhood a living fact, to seek to fully understand the truth concerning the inner divine nature; to seek to understand the laws inherent in the universe: Karman, Reincarnation, Cycles, Evolution, and to adjust one's life according to this knowledge; to study one's own personality and its innate powers, and to live in harmony with what this study teaches.

Can we not quite easily picture to ourselves the person, who, by the law of compassion, has been placed in a modest position, which nevertheless gives enough for the daily existence? He never opens a book, never sinks into thought on one of life's problems, but he listens to the voice of his conscience and lives an honest man's life. His interests spin round in a very narrow circle, and should he one day against his will be led outside of this circle, he is dumb, ignorant, and non-understanding as an undeveloped child. Do we not actually find just this type or its equivalent in the most varying grades and conditions of society? Good, well-meaning, yes, even upright men with exceedingly narrow interests. Religiously they are satisfied with what they received during their school years and in preparation for their confirmation, if they have taken part in the latter. Religion offers

them no problems because it lies beyond their horizon. Scientifically they are at peace with theories that were popular in their youth, but which have long since been crowded out by new ones and on the whole have also been pretty thoroughly forgotten. According to their philosophy "the sun may rise in the east and set in the west," and the astronomers may occupy themselves with the truth that lies behind this obvious fact. Morally they follow the rule for "each man to do right" and in general "live, and let live."

Such as these are not bad people, but they contribute undeniably the very least imaginable to the development and upliftment of mankind.

Now is this type of person to be found among Theosophists? We neither can, nor wish to give an answer to this; but that spirit which seems to live behind the question at the beginning of this article is undoubtedly related to that spirit which holds such a great part of humanity back among the useless of the race.

There is a beautiful and expressive picture, and not least convincing, because it appeals to every man's own experience. For the child's first glimpses of consciousness, the whole world is its mother's embrace and the room in which it plays its first games. Gradually as its powers of observation and movement increase, its world-boundaries begin to broaden out. The world becomes bigger, the home larger. It becomes the city or the village. The first relatively long trip pushes the boundaries still farther out. How many have not experienced that wonderful feeling when crossing the boundaries of one's native country for the first time, of hearing foreign languages spoken, and yet still finding that the people all resemble each other to a large extent? Perhaps for the majority of people the experience stops there. This cannot be the case with a Theosophist. For him the earth is

certainly his home in the very narrowest sense, but he must know that it is only "one room" in a greater home which is made up of the whole planetary chain of which this globe is a part, and that this chain is but a part of the larger home, the solar system. And if he begins to investigate this home he will soon find still vaster regions which are also his home. Yes, in actual fact his spirit takes flight still farther, for he knows that in the inmost of his being he is Parabrahman, that which lies beyond all comprehension. But however incomprehensible this may be, he knows at least that there are no limits to the sphere of his consciousness if only the light of spiritual knowledge may burn from age to age with an ever clearer and brighter flame.

Listen to one of the many utterances in the *Bhagavad-Gita* on the liberating, all-conquering divine power of spiritual knowledge:

. . . the sacrifice through spiritual knowledge is superior to sacrifice made with material things; every action without exception is comprehended in spiritual knowledge. . . . Seek this wisdom by doing service, by strong search, by questions, and by humility; the wise who see the truth will communicate it unto thee, and knowing which thou shalt never again fall into error. . . . By this knowledge thou shalt see all things and creatures whatsoever in thyself and then in me. Even if thou wert the greatest of all sinners, thou shalt be able to cross over all sins in the bark of spiritual knowledge. As the natural fire, O Arjuna, reduceth fuel to ashes, so does the fire of knowledge reduce all actions to ashes. There is no purifier in this world to be compared to spiritual knowledge; and he who is perfected in devotion findeth spiritual knowledge springing up spontaneously in himself in the progress of time. — P. L. Edition, pp. 35-6

This persistent and untiring search is study, acquiring knowledge,

an eager search for truth, an even deeper penetration into the science of life, of inner and outer nature, of its laws or working methods, in one word the age-old wisdom, Theosophy.

If we believe that spiritual knowledge will voluntarily spring up from spiritual and intellectual laziness if only we occasionally devote ourselves to vague day-dreaming, which indeed finds material in undigested, or poorly understood Theosophical teachings, then we deceive ourselves. Truly here, if anywhere, do these words hold true: "The Kingdom of Heaven must be taken by storm." Step by step we must fight our way from the one small accretion of land to the next on the field of knowledge. Doubt, fear, and discouragement must be slain, yes, rooted out like weeds, so that they may not stifle the delicate shoot of sprouting knowledge.

Do not believe that this implies an uncritical reception of all that is offered us. The opposite is the truth. An uncritical attitude in study fosters uncertainty, undermines that firm confidence which is the consequence of independent, fundamental, and serious testing.

Do not confuse either this duty of investigating and testing in order to retain all that may be good with the skeptical attitude which is all too prevalent in the human race, which is continually under the terrible ban of a materialistic age, even though unconscious of it. "The man of doubtful mind hath no happiness either in this world or in the next or in any other. No actions bind that man who through spiritual discrimination hath renounced action and cut asunder all doubt by knowledge," says Krishna in close connexion with the above quotation.

Knowledge is of two kinds, though they in their inmost part may be one. It is partly, as Plato says, a reawakening of what we have known in ages gone by, partly a reflex on our human

consciousness of the relatively unlimited knowledge and wisdom which dwell in our higher Self. Neither of these forms can be confused with a mere intellectual or mentally collected supply of facts. These are valuable as building material, but the real knowledge comes from within, and it is this which is referred to in the words above, that the spiritual knowledge shall voluntarily sprout forth in that soul which in unceasing meditation seeks the highest being. Studies, if they are to lead to real knowledge are therefore an offer laid on the altar before this highest, the divine Self. Then they will bear fruit and that fruit is spiritual knowledge.

The Theosophical Forum

QUESTIONS AND ANSWERS

Can We Shorten Our Devachan?

Would it be possible for any of us to shorten our devachanic period?

G. de P. — Quite possible, if you have the will to do so. Any human being who is willing to renounce his rest, the utter peace and calm which is the thing most longed for by the tired human soul, and who trains himself to this renunciation, can shorten his devachan automatically. But it is only high chelas who can actually do without the devachan, because they have risen above the plane where the human ego requires and longs for rest.

I will just add this as a passing thought: in the far distant future, not only will all human egos on earth have passed beyond the need of the devachan after death, but they will have passed beyond the need for the present type of sleep for the body. What are now our gross physical bodies, in those days will have become practically bodies of condensed light, wonderful bodies, radiant, luminous. They won't need rest as our gross physical bodies now do.

But I would advise any devoted student to think carefully before trying to shorten the devachanic rest, because you may bring upon yourself complicate and possibly disastrous karmic consequences. It is something like a man who, because he has some very important work to do in view, deliberately goes without his sleep, or cuts it short, night after night after night. He can do it, but he can ruin his health that way too; and so in the end he really doesn't get what he is after.

The best way is to think to yourself: I hope that my devachan will

be only so long as absolutely needed for rest. I hope it won't be like sleeping in bed longer than one has to, merely because one likes to sleep and rest in bed. That attitude of mind is quite right and safe.

While you are on this subject, I think I recall reading in *The Mahatma Letters to A. P. Sinnett* that K. H. speaks somewhere of the periodic devachan that the adept can enter into, even during imbodiment.

G. de P. — Yes, but that is not the case of the high adepts, but of the high chelas who have not fully passed beyond the need of the devachan. Now there is an occult law well known to the adept, by which a man can shorten his devachan, by taking certain resting-periods, devachanic resting-periods if you wish, in a single imbodiment, set aside a certain number of weeks or months or even years in any one imbodiment for the purpose of going into a temporary but intensive devachan then and there.

That may be a very good way to do for a high chela. For instance, if he is given a work to do, he does his work it may be for several years, and he needs his devachanic rest before he will be called upon again. He profits by that time, let us say by going into the devachan more or less so, right then and there, and rests himself for a while. Then when he comes out of it, he is in the same body, and strong and inwardly recuperated and ready to go on again. But that of course is the case of chelas or adepts who still need the rest, or some devachanic rest.

This matter of the devachan is a very peculiar thing. I have met people, men and women, going about their ordinary vocations, who were actually living in a devachanic state. They were dreaming, they were lackadaisical. Perhaps you have all heard of that kind of folk, people who do not seem to care. They just go about in a sort of half-asleep state. They are not really living. They

are still in the devachan to a certain extent. They want to lie abed so long, so to speak, as children do sometimes. They have hardly come out of the devachanic state. They have come out of it enough to take a body, but their minds are still partly in the devachanic dream.

And I have met Theosophists too, whom I deeply revere, who have left the devachan to come into our Work before their devachan was really ended. They are like people who have waked from sleep before the body has had enough of it to rest it. They are high-strung, nervous, active, quick, that kind of people. These are two extremes which one meets in human life: those who are still in the devachan more or less, although still imbodyed — I do not mean completely in the devachan, but in a devachanic dreamy state and hence not fully at work, or awake to life's calls; and those who have not been in the devachan long enough; and I will say that some of this last class comprise a few of our best workers, and they are having a hard time of it, because they have to fight an inner psychological state of inner weariness which is almost impossible to describe unless you have been through it. They are usually not strong in body, high-strung, nervous individuals, but they are doing a grand work. They have given up a portion of their rest, semi-consciously as it were, in order quickly to take their part again in humanity's destiny.

Do We Ever Incarnate as Beasts?

In view of the teaching of Theosophy: "Once a man always a man," what would be the explanation of some of the Oriental teachings that speak of a man's coming back to earth as a tiger or an elephant, etc. — and also of the many traditions in western countries of a beast being possessed by a human spirit?

G. de P. — No human being ever incarnates as a beast. Let that

fact stand as unequivocal and without exception. And this is for the reason that there is absolutely a mental-psychical barrier preventing a human mind from entering a beast psycho-vital apparatus. Of course, this could be done by an act of magic, by some Black Magician, and hence have arisen the stories of werewolves, lycan-thropy, and so forth. But this act of black magic simply proves the general and invariable law: that no human being ever can, in the course of nature, incarnate as a beast.

On the other hand, when a sorcerer, or a man of continuously evil life, through many, many incarnations on a steady downward grade, grows less and less human until the rupture with the spiritual and human monad takes place, in which case there is no longer a man, but merely the lower quaternary with somewhat faint impressions or psychical shadowings of humanity in it — when this takes place, I say, the entity is no longer a human ego, but as it were an abandoned lower quaternary or human machine, virtually a human shell, which already is so degenerated that it is practically on the level of beasthood. But the humanity, the ego, the human being, of it has long since fled.

Such an abandoned vehicle is attracted to beast-bodies and even to plant-bodies, by the natural attraction of likes, at a still lower degree of descent and dissolution of the lower quaternary. Yet this is not, please note, the incarnation of a human being, because such a degenerated, disintegrated semi-annihilated human quaternary is no longer really human. An analogy is a human body enlivened by a human soul forming a man. When the body is laid aside at death, the man is gone, but there is the form of the man, the life-atoms of the man which disintegrate and pursue their way. The body is given to the dust, and many of the life-atoms even of such a true man which belonged to the body, incarnate in beasts because again of natural attraction of like to

like, of animal to animal, as has already been explained. I hope this is clear.

Be it noted, however, that such cases of degenerate human quaternaries, while fairly numerous in actual fact, are nevertheless actually quite rare or infrequent when compared with the immense number of beings forming humanity.

[See also *The Theosophist*, "Transmigration of the Life-Atoms," Vol. IV, Aug., 1883. This article will appear in *The Complete Works of H. P. Blavatsky*, Vol. V, shortly to be published. — Eds.]

What is Reality?

What is the present-day accepted definition of reality, in science, in philosophy, in the occult?

What is thought, and is thought as we know it real? Are ideation and mentation real?

What is the most practical method for freeing the individual of ideas that are not real?

To what extent can we make an illusion real by brooding over it? — S. K.

H. T. Edge: As this is one of the persistent problems of philosophy, it is not likely that there is any accepted definition; all one can do is to study books on philosophy and compare the numerous views; which the answerer cannot do any better than the questioner. But according to what I have gathered from the Theosophical teachings, the ultimate reality is the Boundless, the Ineffable, the Absolute, THAT, *Parabrahman*, the Causeless Cause, the Rootless Root, etc., as to which nothing can be predicated, which can be defined only in negative terms — by saying what it is *not*. But our concern with this is speculative rather than practical: in actual life we are not concerned with absolutes but

with relatives. If anything be postulated as real, then everything else becomes *maya*, appearance; and this contrast between the real and the apparent is everywhere found. Our path of enlightenment consists in a progressive awakening from illusions and achievement of states which are relatively real. Our normal waking consciousness is real by contrast with dream, hallucination, intoxication, or insanity. But our normal waking consciousness is unreal, a *maya*, an appearance, by contrast with a state of illumination or ecstasy. Thus the term "reality" has to be given a relative sense, and we progress by continually chasing reality. Reality cannot be even conceived by the ratiocinative mind; it must be experienced; and then it cannot be argued about or communicated to anyone else. "The Mind is the great Slayer of the Real. Let the Disciple slay the Slayer," as we are told in *The Voice of the Silence*.

Thought is a name given to a motley collection of mental processes, the analysis of which is a fruitful theme of disputation among philosophers. In it the real and the unreal (relatively speaking) are mixed up. Ideation and mentation are similar vague words, and the same remark applies to them. The work of freeing the mind from illusion is the task of the aspirant to knowledge, and there is no short cut, no sharply defined method. Each one finds his own way. The general rules, applicable to all aspirants, are found in books on the devotional side of Theosophy, not to mention the writings of mystics, Stoics, etc., in all ages. The chief rule is the practice of dispassion, detachment. It is our wayward desires and habits that bind us to illusions. The great "Heresy" to be overcome is the heresy of separateness, which makes us think that the satisfaction of our personal self is the goal of life; so the aspirant has to cultivate motives that are not acquisitive — such as pity, compassion, the desire to promote truth and harmony.

It is true that a person, by dwelling on illusory ideas, can give them a fictitious reality. He may dwell on imaginary grievances until he believes things that really are not so. This leads in extreme cases to insanity — believing your body is made of glass, or that you are Napoleon.

Fundamental Philosophy of the Vedas

I would like to have a few explanations concerning the fundamental philosophy of the Vedas (recapitulated in a few lines), which are to me among the different systems of religions the closest in scientific harmony with Theosophy and also with our modern science. — *B. B.*

J. T. — The philosophy of the Vedas covers a vast and extensive amount of the teachings of the Wisdom-Religion of old. Its most fundamental and mystical philosophical tenets are epitomized in the Upanishads. The philosophy and religious metaphysics of the Upanishads in their developed form is known as the Vedanta system of thought which was promulgated by Sankaracharya. "Tat twam asi," or "That, the Boundless, thou art," is the basic note. We might even say it is the tonic note with which all the other teachings harmonize. This renowned passage is truly the last word of wisdom in old India. The Upanishads are truly records of the teachings of the Masters of Wisdom, and they depict the inner spiritual initiations of a disciple on the Path. This Vedic lore also deals with the origin and evolution of worlds and beings, the constitution and character of manifested life, the work of the various divinities which keep the universe in running order, the relations between the spiritual and the material, the mysteries of the afterlife, and of the Divinity within every being.

Lost Souls and the Left-hand Path

Some time ago a visitor to one of our meetings remarked

that after all it matters very little if a human being took the left-hand path, for if one understood the working of Nature well, it would be seen that all would be well in the end.

This seems to us a distinctly wrong teaching and, as it is phrased here, not in accordance with H. P. B.'s teachings.

What is your opinion? — *Theosophical Study-class, The Hague*

Grace F. Knoche — A peculiar and immoral doctrine with no foundation of fact, and in direct opposition to the teachings of H. P. Blavatsky and the Masters. The Theosophical position in regard to the destiny of the soul of one who with set purpose follows the path of evil is definitely set forth in the body of doctrine connected with Soul-Loss. When a human being follows the course of soul-death life after life, all the finer energies born of his spirit atrophy, and the soul feeding alone on the exudations of low animalistic tendencies — — the instinct to have, to hold, to possess, at all costs — dies. The thread of divinity wears thin; and when the last aspiration has ceased, the rupture occurs, and the Monad throws off the impediments of the now dehumanized soul. The man has become a Lost Soul, with no further opportunity to attain immortality through union with the Monad, and but waits for Nature finally to dissipate the aggregate of evil propensities which still cohere in entitative form.

This process of disintegration is spoken of as one of indescribable torture. Imagine the suffering that is endured by this soul-shell as slowly but surely it descends into baser and more degenerate human forms, until it is fit only to enter the womb of a beast, finally taking imbodiment in the plant-kingdom. All the while, however, the memory of diviner fields of consciousness still remains impressed on the atoms of the disintegrating brain, so that continuously visions of better things irretrievably lost haunt, tantalize, in their faint but insistent beat upon the dying

consciousness, integrated enough to realize that it alone through wanton indulgence is the cause of its soul-death.

Furthermore, while it is true that the Monad, having already attained self-won immortality in manvantaras previous, is largely unaffected by the loss of a soul, and remains free from the stain and suffering, nevertheless, it receives a major set-back in its evolution. A whole manvantara of time more or less is lost while it must labor slowly and patiently to build again vehicles for self-unfoldment out of unawakened monadic centers. This takes ages upon ages, and aside from this appalling waste of time, the Monad suffers the humiliation of association with a host of entities far inferior to it in manvantaric experience, for the Monadic host to which it formerly belonged and which it no doubt loved, has swept far ahead into fields from which it is now debarred.

Mercifully, such a thing as a lost soul is an exceedingly rare occurrence, for complete soul-death cannot take place while there survives within the human heart *one pure aspiration towards spirit*. That alone if fanned by comradeship of other aspirations will in time be enough to bring the soul back to its own, a receiver and partaker of spiritual light.

THE DEATHLESS GERM — *H. T. Edge*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

We take as our text a remarkable passage from the writings of a man who would usually be classed as a type of the scientific materialism and skepticism as to things spiritual, characteristic of so much of the scientific thought of last century. Yet a devotion to the proclaimed scientific impartiality in the discovery of truth will inevitably lead to the truth, though our findings may often be vitiated by our prejudices.

In the article on Protozoa by the late Professor E. Ray Lankester, in the Ninth Edition of the *Encyclopaedia Britannica*, we read as follows:

Death. — It results from the constitution of the Protozoan body as a single cell and its method of multiplication by fission that death has no place as a natural recurrent phenomenon among these organisms. Among the Enterozoa certain cells are separated from the rest of the constituent units of the body as egg-cells and sperm-cells; these conjugate and continue to live, whilst the remaining cells, the mere carriers as it were of the immortal reproductive cells, die and disintegrate. There being no carrying cells which surround, feed, and nurse the reproductive cells of Protozoa, but the reproductive cell being itself and alone the individual Protozoon, there is nothing to die, nothing to be cast off by the reproductive cell when entering on a new career of fission. The bodies of the higher animals which die may from this point of view

be regarded as something temporary and non-essential, destined merely to carry for a time, to nurse, and to nourish the more important and deathless fission-products of the unicellular egg. Some of these fission-products of the new individual developed from an egg-cell — namely, the egg-cells and sperm-cells — are as immortal as the unicellular Protozoon.

Before commenting on the above, let us invite comparison with another quotation — this time from *The Esoteric Tradition*, p. 336:

It should also be remembered that the First Root-Race strictly speaking did not "die" at all, but each "generation" melted into its own progeny in the very beginning. . . . Towards the end of the First Root-Race and during the beginning of the Second Root-Race, when fission gave place to budding, the process was pretty much the same because "death" had not yet come upon the scene.

What Professor Lankester gives here are of course facts of observation; and his materialism does not come into play to destroy their effect. The student of Theosophy will recognise his remarks as being illustrative of Theosophical teachings as to evolution. Underlying the entire cycle of evolutionary changes is a central thread which is persistent throughout, constituting the true basis of immortality. The bodily structure is but a temporary creation, emerging from the central stem, living its life cycle and performing its functions, and then disappearing; while the main stem, undying, sends forth in due course another temporary structure. Such is biologically the history of animal beings of all degrees above the unicellular — physical man included. This, so far, does not necessarily imply reincarnation; it implies the immortality of a species — say the human species — a thing which nobody doubts; and it explains the persistence of ancestral

traits, cases of atavism, the preservation of the integrity of type. Probably this would be as far as the professor would go; for he would envision a universe in which a mysterious being called "Matter" lived and worked all these wonders. To him, consciousness is a manifestation of matter; to the Theosophist, matter is a manifestation of consciousness. This immortal germ, then, which persists throughout the endless generations, is verily the physical counterpart of that "thread-soul" or *sutratman* which is the unbroken chain that links together all the periodic manifestations which it throws out. There is no absolute death for man, so long as we regard this central life-stream as the real man. The only things which can die are compounds, and they die by decomposing into elements. They die as compounds, though the elements composing them live on and may enter into other compounds.

So far we have obtained but a sketchy summary of the principle involved; but, as regards man, its application will carry us into details and elaborations. It is not that man is composed merely of one immortal essence, and of perishable parts. He is composed of principles having relative degrees of immortality. We may learn about this from what we are taught by Theosophy respecting the various monads: the Divine Monad, the Spiritual, the Manasic, the Psychic, the Astral-Physical; each of which has a life-cycle appropriate to itself, and of greater duration as we ascend the scale. Again, we have the teachings as to the migration and return of the life-atoms; so that the complexity of the whole overleaps our powers of conception, utterly simple as the principle is.

And in what state is that unicellular being (plant or animal)? In it the thread soul is never interrupted by the throwing out of temporary vehicles; it lives always in its central essence. Is it in Nirvana? Extremes meet; lines run full circle; there is nothing high, nothing low, in a just view. We are fond of viewing the

universe as a long ladder up which we slowly climb from the mineral to the kingdoms above man; but how can we be sure which direction is up and which is down? This is said in all reverence and sincerity. The answer can be found by studying the Theosophical teachings. All motion is dual; cycles run right and left; simplicity begins and ends the scale; involution down means evolution up. The lowliest atom is the shrine of a God. And do not beings who have achieved heights in evolution "descend," in accordance with natural law, into simple imbodiments in what we classify as the lower kingdoms?

The Theosophical Forum

ORIENTAL STUDIES: III — G. de Purucker

THE SECRET DOCTRINE OF GAUTAMA THE BUDDHA (1)

V

Buddham saranam gachchhami;
dharmam saranam gachchhami;
samgham saranam gachchhami:

"I go to the Buddha as my refuge." "I go to the *Dharma* or the Law as my refuge." "I go to the Order of Holy Ones as my refuge."

This so-called 'Confession of Faith,' although undoubtedly accepted in the spirit as well as in the letter in Northern Asia, is perhaps especially the teaching comprising the substance of the scriptures of the Hinayana. The compound word Hinayana, descriptive of the spirit of Buddhism of Southern Asia, as contrasted with the Mahayana, descriptive of the Buddhism of the North of Asia, means the 'defective' vehicle, the 'inferior' or 'imperfect' vehicle, i. e., that part of the Lord Gautama's teaching which did not contain in explicit formulation the whole of the doctrine which he taught — a fact which itself declares the existence of another part not herein contained. The name itself declares the fact: (*hina*), i. e., defection, imperfection, incompleteness; and (*yana*), vehicle.

Now this statement of incompleteness or imperfection does not signify, as might readily be supposed from these words, inaccuracy, falsity, or error; the meaning of the compound *Hinayana* is that this system, virtually exclusively popular in Southern Asia, gives the formal intellectual teaching of the Buddha — or what has been called the 'Eye-Doctrine,' that which emanated from the Buddha's mind as a categorical framework of

his thought; the *Mahayana*, contrariwise, is stated to contain the more secret — as well as the outer or public — and therefore more difficult aspects of the Buddha-Gautama's teaching, and consequently has often been called the 'Heart-Doctrine.'

The teaching of the Buddha's heart, i. e., the esoteric Wisdom which he kept hid in his 'heart' and delivered solely to those ready to receive it, is, as just stated, called the Mahayana; and it runs back in its origin to a date at least equal in time to that of the beginning of the Hinayana, which, as stated above, is the body of teaching which he delivered openly, visible to the eye so to speak. Both systems, therefore, are truth, i. e., both the Hinayana and the Mahayana are true; but one must combine the teaching of the 'eye' with the teaching of the 'heart': one must combine the exoteric teaching of the Hinayana with the esoteric of the Mahayana — combine the North and the South, so to speak — if one desire to receive the full message of the Tathagata as he delivered it in its relative fulness to his chelas or disciples.

From which of these two systems have our Western Orientalists drawn the far greater part of the Buddhist material which they have subjected to the really conscientious and thorough examination and study which one gladly recognises they have given? Mostly, if not wholly, they have gathered this material out of the scriptures of the Hinayana, the 'defective' vehicle, a system held by some twenty millions of human beings more or less. Of the teachings of the Mahayana of the North and Center of Asia, the esoteric teachings, the 'heart' of the Buddha, they have intimate knowledge as yet of only a few scriptures. It is well known that a vast amount of Mahayana-material still awaits examination and study, but all this material is as yet more or less an unworked field of thought.

As examples of the Mahayana-material already studied, may be

mentioned the *Saddharma-Pundarika* as one; the *Lalita-Vistara* is another Northern Buddhistic work which has received some small attention from European Orientalists. There are a few other works belonging to the Northern School which have received passing but quite inadequate attention in Europe; and it is doubtful if more than this can be truthfully claimed.

Consequently, it certainly would seem that the opinion of Occidental scholars as to whether there is or is not an esoteric teaching which the Buddha taught or left behind him, is based almost solely upon their studies of the hitherto available scriptures of the Hinayana of the South, the 'defective,' 'imperfect,' because, as said, incomplete, vehicle or system. It is a strange thing indeed to suppose that the Buddha-Gautama is the sole historical instance of a Sage and Seer who was at the same time a religious and philosophical Preceptor, who has left behind him no teachings of a more recondite or secret character than those which he openly proclaimed in his wanderings over Indian mountain and plain. The exception would be so remarkable that it would require particular explanation.

Let us turn now for a few moments to another of the Sutras (2) or religio-philosophical scriptures, held in utmost reverence by something like 400 millions of human beings, all followers, more or less, of the Mahayana-teaching, which, mark you, is as much Buddhism, and genuinely 'orthodox' as is the Hinayana of the South; and the bulk of the testimony as to the value of the teaching certainly remains in the scriptures of the North. Remembering these 400 millions of the North as compared with the twenty millions more or less of the adherents of the Hinayana of the South, this is what is found in the scripture to be quoted from; and it is beyond doubt that many more similar passages could be found, with adequate study, of an even more emphatic tenor.

You are astonished, Kasyapa, that you cannot fathom the mystery expounded by the Tathagata. It is, Kasyapa, because the mystery expounded by the Tathagatas, the Arhats, etc. is difficult to be understood.

And on that occasion, the more fully to explain the same subject, the Lord uttered the following stanzas:

1. I am the Dharmaraja, born in the world as the destroyer of existence. (3)

Now it is the philosophical teaching of Buddhism, when this teaching is properly understood, that the entire world around us is impermanent, illusory, *mayavi*; but that all existences are founded upon and builded around something inner, secret, esoteric, hid, fundamental, which the Northern Schools, collected under the great Mahayana-teaching, call the Sunyata, i. e., the 'Void,' the Unmanifest as the Theosophist would say. To continue with this quotation from the *Saddharma-Pundarika*:

I declare the law to all beings after discriminating [examining] their dispositions.

A selective teaching, mark you!

2. Superior men of wise understanding guard the word, guard the mystery, and do not reveal it to living beings. (4)

Yet obviously, the Lord Buddha taught it and revealed it to living beings, to all who were prepared to hear and to understand it. It is pertinent here to ask: What is the meaning of these phrases embodying the expressions 'word,' 'guarding the mystery,' if the significance is not that of a teaching too difficult for the ordinary man to receive in its fulness, which is therefore kept only for those who, after discriminate examination, have been tested and found to be worthy and well qualified to receive it? Obviously, we

have here a distinct reference to a restraint in the delivery of the Secret Doctrine or Esoteric Tradition, which is not revealed indiscriminately to all and sundry because it is a 'mystery' which must be guarded; and yet 'superior men of wise understanding' have received this mystery, for they are enjoined not to deliver it nor to reveal it to 'living beings' unless, indeed, such be fit for the reception.

3. That science is difficult to be understood; the simple, if hearing it on a sudden, would be perplexed; they would in their ignorance fall out of the way and go astray. (5)

Mark you, did the Buddha teach in order to lead people astray? Is such the declaration of the body of Buddhist teaching, and is such an absurdity the burthen of Buddhist belief? Cannot one see the immediate and necessary deduction as just cited? There is, clearly, an inner Teaching which is given only to those who have been examined and found fit to receive it, and examined in order that they may not be led astray by receiving a teaching too comprehensive for them to grasp, and therefore certain to be misunderstood by them. One is well aware of the fact that the *Saddharma-Pundarika* is alleged by Western scholars to be the product of a later date, one of the works of a mystical school which became very popular in the North of Asia some centuries after the Buddha had passed on. This may very well be the fact, and it was to be expected; but the fact does not invalidate the main point that such teaching of restriction or of withholding could not have arisen nor have been so widely accepted, had there not been current throughout the Northern Buddhism the strong flow of esoteric thought and suggestion which it therefore becomes only proper to trace back doubtless even to the days of the Buddha himself and to his Arhats. Otherwise, the high probability is that any mere later invention or mere mystical speculations of a later date would have been found highly

unacceptable, and would have been peremptorily rejected, when the first attempts were made to promulgate them. The history of mystical thought in all other great systems shows clearly enough, and in every case that is remembered by the writer at the moment, that the esotericism of the respective founder of each of these great systems gradually faded out with the passage of time ensuing after his death, and its place was taken by mere orthodoxy, in which the traditional or written scriptures as received became sacrosanct, untouchable, and often clothed with an atmosphere of holiness which forbade any adding or substantial change. This is clearly shown, for instance, in the literature and mystical history of Christianity.

4. I speak according to their reach and faculty; by means of various meanings [i. e., by means of permutable meanings or parables] I accommodate my view (or the theory). (6)

Is this the supposititious 'closed fist' of the Great Teacher, Gautama the Buddha? When one recollects that the main or fundamental teachings of the Buddha were recognised in both the Northern and the Southern Schools, and that the very phrase 'closed fist' must have been current in both schools as one of the graphic expressions of the great Master himself, it is difficult to avoid the conclusion that the 'closed fist' argument, so often cited by European scholars as against the fact of an esoteric teaching in Buddhism, must be understood as it has been attempted in this present chapter to explain it, i. e., as referring solely to the government of the Order after the Buddha's passing; for indeed, the passage in which the 'closed fist' expression occurs, refers *solely* to matters of government in the Order after the Buddha's death. The words of this passage state this unequivocally, and it is merely distorting the scripture itself to read into it something that the scripture does not say.

All that the Lord Buddha taught was true in essentials, but he most certainly did not teach everything to all men. He taught all that was needed for the promulgation of the philosophic and religious doctrine which he delivered; identically so as concerns the government of the Order to prevail during his life-time and for its direction after his demise, and did not hold anything back in a 'closed fist'; and the 'closed fist' passage says nothing but that. Hence, the deductions drawn by Westerners from the 'closed fist' phrase, that the Lord Buddha had no esoteric teaching to deliver and he delivered none, and that no esoteric School or Body of disciples existed during and after his life-time, seem to be simply a preposterous inversion of the historical record; and in addition one must submit the entire history of the life-drama of the Lord Buddha as strong witness, testimony, to the contrary. The whole system of the Mahayana of the North as existing in its different varieties in all its various schools, such as that of Nagarjuna, of Aryasamgha, and of others, every one of them teaching an esoteric doctrine, every one of them hinting at a Wisdom which is not given to all and sundry, provides excellent and to every reasonable mind convincing proof that an esotericism or an Esoteric Doctrine, or Esoteric Tradition, existed in Buddhism from the earliest times, and by the logic of history and the well-known traits of human nature must be traced back to the great Founder himself.

If we are to take one Buddhist scripture of the South, the *Maha-Parinibbana-Sutta*, hereinbefore quoted from, as being the words of the Lord Buddha — and this one is perfectly willing to do with certain natural and necessary reservations depending upon the difficulties of accurate transmission and delivery through the centuries, and having due regard also to the literary formulation of his teachings in scriptural structure — then here on the other side, we have a Northern scripture alleging to be the equally

authentic words of the Master, which it seems unreasonable to set aside on grounds of theory or merely literary prejudice, this Northern work stating that the Doctrine is to be delivered with prudence and care, and not to all men, and that the Wise guard it and reveal it not, except, as the preceding sloka or verse says, with discriminating judgment to minds which differ in 'their disposition.' Indeed, and speaking generally, one knows not a single great religious philosophy or philosophical religion, which has not, or which has not had in its origins, an esoteric doctrine. The mere fact that such esoteric doctrine is not properly understood and perhaps even not recognised by all, and possibly again, forgotten in this or some other religion, argues nothing to the contrary, and is certainly not a proof that such esoteric School or Doctrine did not once exist therein.

The objections alleged against the existence, or possibility of the existence, of an esoteric School or body of doctrine in Buddhism, limp painfully because running directly counter to human psychology in such matters; and therefore objections of this character should be scrutinized with meticulous and jealous care. Nor should the religio-philosophical works presently existing in the world and alleging to give the teachings or doctrines of mystical or so-called esoteric or quasi-esoteric schools, be accepted at the face-value of their averments or statements; because virtually all such mystical works are written in veiled fashion, and when read, often repel by the unconscionable exaggerations and often apparently ridiculous distortions of natural fact which they occasionally if not frequently embody. Such luxuriance in statement and pageantry of metaphor themselves prove that these scriptures are written in the common and usual esoteric cipher, and can be properly construed and understood only by those who possess the keys thereto. It is clear enough that if a doctrine is intended to be esoteric, of necessity,

when delivered to the public, its teachings must be hid under veil and allegory; and it is absurd to take veils and allegories, parables or metaphors, tropes or figures of speech, as statements of plain, unvarnished, pragmatical fact. It seems indeed high time that our Western scholars should use ordinary sense in these matters, and if they do not understand and are repelled by the highly figurative language of Oriental or other mystical works, this is no reason for condemning these scriptures as not being what they are alleged to be, or themselves purport to be.

If our Occidental scholars, our European Orientalists — and the writer craves pardon if his language here seem a bit unkind — would use their human common sense and intuitions a little more, i. e., would allow them a freer play in their work and criticism, they would themselves see what the ordinary man who reads these scriptures easily sees for himself; and, furthermore, they would probably realize that taking one half of the scriptures of Buddhism, i. e., those of the Hinayana only, or very nearly 'only,' and drawing deductions from this one half, is not only inadequate and therefore imperfect study, but is likewise distinctly reprehensible work in scholarship. It is, as it were, taking the teaching of the Roman Catholic Church, or of the Church of Martin Luther, or of the Church founded by Calvin, and thereupon saying: Here, this is Christianity; it teaches so-and-so; and thus-and-thus; and although other phases of Christian thought may be found in other branches of the Christian Church General, nevertheless the phase of it that we have been studying seems to contain the most ancient ideas and therefore probably the most accurate presentation of the thought and will of the great Founder.

Now, such one-sided study is more or less precisely what too many of our Occidental Orientalists have done — and continue to do. The present writer states, without fear of any consequences

arising from contradiction, that there is and always has been as much esoteric teaching in Buddhism — i. e., that there is in fact an esoteric Buddhism, an Esoteric Tradition in it — as there was a very early esoteric or secret side under the Christian doctrinal scriptural tradition; there was as much esotericism in early Buddhism, and it still lives and flourishes in certain places, as there was esotericism in the religions and philosophies and the Mysteries of ancient Greece and of Rome and of Egypt and elsewhere; and that there is and always has been an equally esoteric or secret doctrine in Brahmanism.

VI

Probably the main reason for the widespread misunderstanding of the essential nature of Buddhistic teaching as first delivered to his Arhats or disciples by Gautama the Buddha, and leaving aside for the moment the later development of Buddhistic philosophy due to the labors of monkish philosophers and exegetes, or expounders, is the almost total lack on the part of Western scholars of the past to see that what the Buddha aimed at more than anything else was the bringing to men of a greater light, a larger hope, and a wider spiritual vision. The truth was that he threw open some of the hitherto fast-closed doors of Brahman philosophy, and instantly gained the opposition and ill-will of the larger part of the Brahmanas of his time. The objective of the great Teacher's Wisdom was the improving, or better still unfolding, of human intellectual faculty and spiritual power, as demonstrated by his insistence, emphatic, reiterated and unceasing, on what one may term the Doctrine of Becoming. In the eyes of the Buddha-Gautama, man is a Pilgrim, Child of the Universe, who at times is blinded by *Maha maya* or the Great Illusion of cosmic existence, and at such times therefore needs to be shown the Way or Law, called the *Dharma*, pointing to a realization of the fact that only by *becoming* rather than by mere

being could man become the Greater Man which he is in his essential constitution.

It is with genuine pleasure that one may point to a wider and deeper view of the Buddhistic philosophy than has hitherto prevailed in Western countries; and that such wider and therefore wiser visioning of the essential meaning of Buddhism is now coming to the fore, is proved by the very recent appearance of books treating the Buddha and his life-work and religion-philosophy from a more sympathetic viewpoint than has hitherto been customary in the West. Such a work, just off the press [1935] is the booklet entitled *Indian Religion and Survival* by Mrs. Rhys Davids. In her extremely interesting little work, this brilliant Buddhist scholar, so well known for her labors in the Pali scriptures and translations therefrom, writes as follows, in showing just what the Buddha had in mind in his work:

[The Buddha] sought to show each and every man a More which lay in his nature, his life, his destiny. This was, that to become, to grow spiritually was of the essence of his nature, as spirit or very-man; that to become 'in the right way' he had to exert will, choice; that in him moved and worked Deity in man's inner sense-of-right, of the 'ought,' known as *dharma*. (7)

Mrs. Rhys Davids is unquestionably right in the ascription to Buddhism of the substance of the great Teacher's message which she sees and briefly refers to in the extract just given. Yet the suggestion that the Buddha taught of a 'Deity' in the manner so commonly understood in the West, even by thus proclaiming the divine immanence, is to wander from what the entire testimony of the Buddhist thought so strongly avers; although indeed if Mrs. Rhys Davids means merely the implication that the 'Deity' here spoken of is the abstract or neuter *Divine* — as contrasted with

the masculine *God* — this being slightly if at all different from the essential abstract divinity of the Upanishads, then one can only question the propriety of the usage of the word Deity, and agree.

The main thing to note in all this is that the substantial burthen of the Great Teacher's Message, outside of many other important matters, was the emphasis placed upon his doctrine of Becoming, i. e., evolving, growing, unfolding, unwrapping what is within, by all entities whatsoever, man included, through and by means of that ineluctable and wonderful operation of the Universe which the Buddha in common with his predecessors called *Karman*: the doctrine of inescapable consequences for every thought, act, emotion, or feeling, undergone passively, or initiated actively, by every individual being or entity. It was precisely this union of willing and doing on the part of every entity which brought about its Ever-Becoming, in other words, its constant growth, or, mayhap, in minor stages its periods of retrogression, likewise instances of 'becoming.'

In this really sublime teaching one finds the philosophical structure of Buddhism both exoteric and, as Theosophists claim, esoteric. By his 'becoming,' i. e., by his progress from stage to stage in evolutionary changes which are continuous and uninterrupted, a man, among other beings, may raise himself as high as the highest gods, or may debase himself through his willing and doing to the low and dread levels of the beings in the so-called hells of which so much is found in Buddhistic literature.

In this teaching of *Becoming*, just as the same is found in esoteric Theosophy, in the Esoteric Tradition, we find both the reason and the rationale of the many statements both in Buddhism and indeed elsewhere that every man has it within his power, by appropriate spiritual, intellectual, psychical, and ethical willing and doing, himself in the course of ages to become a Buddha — a

doctrine which, as Mrs. Rhys Davids properly hints, is expressly taught in the Buddhism of Northern and Central Asia. As she truly says:

That not this Bodhisattva only, [the Buddha-Gautama in a former existence] but every man has it in him eventually to realize Buddhahood: this was brought to the front by Mahayana Buddhism. (8)

This is admirable; but it is to be regretted that this able and conscientious Pali scholar should labor under the impression that the Buddhism of Southern Asia should have "neglected to show it as equally applicable to every man."

The reason for Mrs. Rhys Davids' belief that this teaching is lacking in the Pali Scriptures seems to lie in the fact that it is not expressly stated as a doctrine; and yet to the present writer the Hinayana-system contains, both by numerous hints in the various scriptures which embody its teachings, and in rarer instances by direct allusion, the same doctrine of becoming and the same pointing to the results of such becoming that the Mahayana does, albeit in the latter system the doctrine is explicit and fairly well elaborated.

VII

It may be as well before passing on to refer once more to Mrs. Rhys Davids' clever and very readable little book if only in order to show that modern Western Buddhist Scholarship is veering markedly away from the Occidental and quasi-Christian prejudices and pre-conceptions that so strongly and injuriously colored the work of virtually all former Occidental Buddhist studies. She speaks at length of the doctrine of 'survival,' around which so much useless controversy has raged in the past as to whether Buddhism does or does not, did or did not, teach the

utter annihilation of the human compound at death. Most Western Buddhist scholars of former days, if not all of them, seem to have united in a common opinion to the effect that one proof of the so-called 'Pessimism' of Buddhism was the fact that it taught that with the dissolution of the human compound entity, i. e., at death, the entity vanished, disappeared utterly, was completely annihilated: this in the face of the iterated and reiterated statements of the Buddhist scriptures themselves, even of the Hinayana, that what survived dissolution of the compound entity was its Karman, i. e., the results, consequences, of what the compound entity itself was at the moment of dissolution. It would seem evident to the merest tyro in philosophical thought that the word Karman thus used must have a technical substantial significance, because it is obvious that results or consequences cannot survive the death of their originator, for the reason that if results or consequences do not inhere in some thing or in some entity — i. e., if they are not parts or portions of an entity — they have no existence in themselves. An 'act' cannot survive, nor can a 'consequence' survive, except in the modern Western scientific sense of impressions made on surrounding material, and this is not the meaning of the Buddha's teaching because the scriptures of both the Mahayana and the Hinayana are replete with instances of entities, 'compound aggregates,' which nevertheless after death and after a certain period of other existence in other worlds are reborn as men on earth.

The stories about the Buddha himself are both emphatic and luminous illustrations to the point, as exemplified in the famous Jataka-stories, meaning rebirth-stories. These 550 or more rebirth-stories describe the alleged repeated reincarnations or rebirths of the Buddha, and show him rising from lower stages to higher; and if the 'compound aggregate' is utterly annihilated at its death or dissolution, how, obviously, can such a non-existing

entity be reborn in an unending series of reappearances of such entity's intrinsic karman? Is it not obvious that Western Scholars have failed to grasp the subtlety and profound meaning of the Buddha's teaching? The riddle is solved — although indeed it is no riddle at all — by remembering the teaching of Theosophy, of the Esoteric Tradition, to the effect that man, equally with every other being or entity or thing, is his own karman: his karman is himself, for he himself is the results, the consequences, the fruitage, the production, of every preceding thought, feeling, emotion, or act in the virtually unending series of past rebirths, each such birth automatically reproducing itself as changed or modified by its own willing and doing — to wit, the consciousness acting upon the 'compound aggregate' thus producing karman, or modifications, or changes, in the substance of the man himself. Thus verily a man is his own karman; he is his own child, the offspring of what he formerly willed and made himself now to be; just as at present, in his actual compound constitution he is willing and making himself, through results or consequences produced upon his constitution, to be what in the future he will become. Just here, again, we see the tremendous force and philosophical power of the Buddha's doctrine of *Becoming*

Turning now to the promised citation from Mrs. Rhys Davids' booklet, she says:

That it was, in original Buddhism, a given man or woman who survives, who lives on, after death of the body, is always referred to as a truth to be accepted and understood. (9)

And again, wherein she culls a passage from one of the Jatakas:

'Now it may seem to you, Ananda, that at that time Jotipala was a different person, but you should not look upon it like that *I* at that time was Jotipala ' Could emphasis further go?

I say this, because later Buddhism came to deny the passing over of the identical person, came to deny there was any personal survivor. (10)

Now these citations from Mrs Rhys Davids certainly prove that something survives the dissolution of the compound aggregate, following Buddhist thought, when death comes upon this aggregate, but it should be pointed out that this is wholly admitted and emphatically stated in the Buddhist writings themselves, which employ no small emphasis in this ascription of continuity to the x-factor in the compound aggregate which has repeated existences or reincarnations on earth as well as in other worlds. The Buddhist scriptures, as has been stated above, declare that this x-factor is the karman of the entity; Mrs Rhys Davids seems to rebel at this abstract philosophical statement and believes that she finds in what she calls original Buddhism teaching to the effect that there is an actual person who survives physical dissolution or death. Just so, the present writer is wholly at one with her in this, but he is likewise wholly at one with the statement of the Buddhist scriptures themselves, for he has in preceding paragraphs shown with sufficient clarity although sketchily, he believes, that this surviving 'person' is the karmic entity or karman of the preceding entity which died and which thus survives.

What is a 'person,' after all, except a mask, a vehicle, a veil, composed of compounded or aggregate elements drawn from the surrounding nature through which works and lives the spiritual force alluded to in preceding paragraphs, and which, traced to its source, is seen to be the inner Buddha, the Dhyani-Buddha, the inner god? This, the Buddha himself taught, as so well outlined in the Maha-yana-system, man could again *become* by so living and striving as to bring it into karmic relationship or existence even here on earth

Mrs. Rhys Davids unfortunately seems to ascribe the teaching of the Pali Buddhist scriptures of the survival of the karman as the entity itself, to the monkish elucubrations of Buddhist anchorites who sought to flee from the world, and who thus craved utter annihilation of their essence in preference to its continued existence in conscious rebirths. The present writer is positive that Mrs Rhys Davids has here completely misunderstood the subtil philosophical sense of this entire matter; and he believes that Buddhist scholarship in the future will trace back the essential teaching on this matter of the Hinayana Pali scriptures to declarations of Buddha-Gautama himself. Time will show.

Yet one can only desire to render due meed of respect to this courageous student and scholar who, apparently alone, at the present time, is unafraid to face the current of misconception and prejudice which previous Western Buddhistic scholarship has so strongly set in movement.

The Theosophical Forum

QUESTIONS AND ANSWERS

The Permanent Individuality

Does Theosophy teach that we always retain our individuality in all states of consciousness?

G. de P. — Yes, it does indeed, provided that we use "individuality" in the technical Theosophical sense. Remember that the individuality is a very different thing from the personality. The individuality is the deathless part of us, the *individuum*, that which cannot be divided. Otherwise stated, it is the Monadic Essence, it is the Inner God, the spark of divinity within us, that spark of the Cosmic Fire of consciousness-life-substance which is our inmost essence. This in its root is Atman, the indivisible self, deathless, stainless, and in its own essence beginningless and endless; for it is of the very substance-consciousness of the Universe.

The personality is a vastly different thing, it is a reflexion merely of the individuality; the personality is like the moonshine, reflected light from the sun; and this personality is mortal always — and how fortunate it is that it is so! Fancy what it would be like, living in eternity in our present personalities: imperfect, undeveloped, feeble, inept, incapable of any great advancement, a poor understander, a very poor follower of noble things, incapable of receiving and retaining for any length of time the best that is in us.

Yet the personality is a wonderful instrument or vehicle through which the individuality works. I think we may say generally that the individuality is the spirit, and the personality is the mortal brain-mind of us, changing with each birth.

Thus it is clear why the individuality is the same, and that "we retain" it in all states of consciousness, for these various states of consciousness, in all their manifold and often bewildering phases and shifting qualities and attributes, when traced to their ultimate or original source, are light-stuff from the Atman. Consciousness contains many mysteries; and the real part of us is conscious even in those phases of consciousness wherein the personality is unconscious — a curious play upon words, yet containing a profound truth, and pointing to the same thought contained in the Sanskrit aphorism: *Atmanam atmand pasya*, "Know the self by the Self."

Mummies and Reimbodiment

I understand that the ego uses in each life the physical and other atoms it had previously. If this is the fact, in the case of embalming are new atoms furnished for the new body, or is reincarnation delayed by embalming?

S. H. W. — No, it cannot be said that reincarnation is delayed by embalming, though it is perfectly true that the atoms which formed the body of an individual in one life are used again to form the new one. How is this apparent contradiction explained? In two ways. First, H. P. Blavatsky tells us (see *Complete Works*, Vol. IV, p. 321) that "for 3000 years at least the "mummy," notwithstanding all the chemical preparations goes on throwing off, to the last, invisible atoms which from the hour of death re-entering the various *vortices* of being, go indeed "through every variety of organized life forms." " This shows that for whatever reason the Egyptians may have tried to imprison atoms by embalming, they were only partially successful.

Dr. de Purucker, in *The Esoteric Tradition* (consult Index) elaborates the teaching of the transmigration of life-atoms, and he further explains — and this is our second point — that no

entity at any one time holds within the circumscribing sphere of its physical and inner bodies all the atoms that "belong" to it; so that whatever might be done to the physical encasement, would not even begin to affect the vast hosts of life-atoms of ours that are transients in the bodies, inner and outer, of other beings.

A larger picture is obtained if reimpodiment is viewed from the standpoint of the Ego. This Ego is irresistibly drawn back from the Devachan into earth-life by causes it has itself generated. Its urge to reimpody is so strong that it would indeed take a mighty force to hold it back. And just as we, when we are impelled from inner urge to carry out some work, don't wait for perfect circumstances but go ahead with the tools and materials we can lay hands on, so does the Reimpodying Ego do likewise.

Building a physical body is perhaps the least of the work that the ego has to do in coming back into earth-life. And since embalming cannot touch the vehicles of the higher principles in man, the ego would not even be "inconvenienced," if we wish to believe that such a thing were possible, until the very last stages of preparations for earth-life.

All the above does not imply that mummification has no ill effects. There are Theosophical teachings in this connexion, but these do not enter into a consideration of the present subject.

Theosophy and Mental Healing

What is the attitude of the Theosophical Society towards mental healing, in its various forms, both physical and mental conditions?

Arthur A. Beale — I presume the questioner means "in relation to the treatment of physical as well as mental conditions." The Point Loma Theosophical Society does not have, as part of its regime, the practice of mental healing, though it expects its members to

develop a moral code of conduct and a mental attitude of control, kindness, courtesy, helpfulness, and compassion that will aid them to radiate good-will, beneficent peace and concord, and so be healing powers in themselves, without specific ceremonies.

It has as members many physicians who are open to practise the art of healing in any way they think best, without infringing the rights of others. In such practices they are entitled to make reasonable charges as members of a social system. At the same time it has always been an unwritten law that the teachings and practices of occult lore must be free and untrammelled by any charges of a financial nature. So it is recognised that charges for spiritual teachings or the application of occult knowledge for healing are impermissible.

There are many forms of so-called mental healing extant today, but such practices can generally be traced to psychological influences that can have no permanent or effective results. It is possible for instance to put into operation attitudes of mind that can and will relieve the patient from inconvenient suffering, and such are often called cures. These, however, may only be psychological tricks that dam back consequences which if allowed to operate at the proper cyclic times, would be beneficial or beneficent, though unwelcome to the personality. Paul said, "Be not deceived, God is not mocked, whatsoever a man soweth, that shall he also reap." The harvest can and may be delayed, but any amount of hoping, praying and cajolling will not prevent the harvest: the wise man will reap it at the harvest time. Therefore, a direct attempt to interfere with these consequences is fraught with harm to the patient. Yet the old invocation, "Cease to do evil and learn to do good!" is ever wise.

Many people suffer from ignorance or lack of knowledge; it is the duty of medical men to instruct their patients in laws of living

and natural obligations. The wise words of Dr. Wilson, the writer of an old-time text-book on health are pertinent: "Men and women cannot be made moral or well by acts of parliament, but by a wholesome co-operation in obedience to the laws of health." Anyone suffering from ill health should endeavor to seek the best assistance available to adjust his conditions, and it may be his desert to meet with one capable of giving immediate relief. That is a question of karmic desert but the one to give it must be wise enough to know how to execute it.

On the other hand it is admitted that certain servants of the Lodge of Adepts, that have a special work to do, may even be rescued from a pending disease or death by occult knowledge and power, but that is not for the personal gratification of the servant, but for the sake of a cause, and even then, the decision must rest with the servant. Such was the case of Madame Blavatsky.

Was Thomas Paine a Messenger?

Was the American Thomas Paine a Messenger of the Masters, or at least a conscious instrument which they used in the early days of American national independence? — *F. G.*

C. Q. W. — The Masters themselves seldom if ever enter directly into the world of human life and affairs, especially the political. They never countenance violence or bloodshed under any circumstances; but they know that there are cycles when violence is unavoidable, and then it is that they use the best possible instruments, who may or may not be conscious of the fact that they are instruments, to do whatever is possible to avoid the terrible things that usually happen at such a time; also to guide the stream of events into a channel that will make for a brighter future.

Paine, Franklin, Washington, Patrick Henry, and other American patriots were probably *unconscious* instruments of the Law. That is, in their incarnation as these famous characters, the personality did not remember except dimly the true status of the individuality. We are taught that this sometimes happens when an advanced soul is in need of some particular experience, or when there is a cycle of tremendous import occurring. The cycle of "America" was due to open at that particular time. The gods only know what would have been the result if many big souls had not incarnated to nurse the new "baby" through its birthing.

Tom Paine was an iconoclast, but not an atheist; in this he closely parallels Ingersoll. There were certain molds of mind that had to be broken, and Paine did good work. But neither of these men could be called Masters; nor, from an esoteric study of their writings and teachings could they be properly placed as conscious chelas or messengers. They had certain illumination, undoubtedly, regarding the Great Work, but it is doubtful if they had direct conscious connexions with the Lodge of the Masters.

Note the difference between the work of Paine and that of H. P. B. She was in direct communication with the Masters, and that in full consciousness. Her work was constructive; Paine's was on the whole destructive; although both types of work are at times necessary. The rubbish has to be cleared away before the Temple can be built. And even H. P. Blavatsky — great as she was — cannot be called a Master. This word "Master" has been so dragged in the dirt by psychics and pseudo-occultists that it is heartbreaking to those who really have a conception as to who and what the Masters are, and what they represent. Read anywhere in *The Mahatma Letters to A. P. Sinnett* and see if you think the type of men who wrote those letters would countenance the flappedoodle that so often today is carried on in the name of the "Masters'!

"The Word Made Flesh"

Does "the word made flesh" also mean the condensation of primordial substance into what we call matter? — G. C. L. G.

Lydia Ross — The answer to this very interesting question is Yes, with the proviso that such condensation is not directly into matter as we know it, but that it is progressively "stepped down" from plane to plane. H. P. B. speaks of primordial matter as " (Pradhana) being certainly synonymous with *Mulaprakriti* and Akasa, and the latter (sound) with the Verbum, the Word or the Logos" (*The Secret Doctrine*, I, 256). The agent which transmits what she calls "the Breath crystallized into the Word" is the personified electric vital power of our old friend, Fohat,

the transcendental binding Unity of all Cosmic Energies, on the unseen as on the manifested planes, the action of which resembles — on an immense scale — that of a living Force created by will, in those phenomena where the seemingly subjective acts on the seemingly objective and propels it to action. Fohat is not only the living Symbol and Container of that Force, but is looked upon by the Occultists as an Entity — the forces he acts upon being cosmic, human and terrestrial, and exercising their influence on all those planes respectively. On the earthly plane his influence is felt in the magnetic and active force generated by the strong desire of the magnetizer. On the Cosmic, it is present in the constructive power that carries out, in the formation of things — from the planetary system down to the glow-worm and simple daisy — the plan in the mind of nature, or in the Divine Thought, with regard to the development and growth of that special thing. He is, metaphysically, the objectivised thought of the gods;

the "Word made flesh," on a lower scale, and the messenger of Cosmic and human ideations: the active force in Universal Life. In his secondary aspect, Fohat is the Solar Energy, the electric vital fluid, and the preserving fourth principle, the animal Soul of Nature, so to say, or — Electricity. — *The Secret Doctrine*, I, 111

The Occultists recognise the power of Sound in their Mantras. H. P. B. gratefully tells of the Master's use of Sound to restore her worn-out body from impending death, on several occasions. The "text" of the above question touches on many aspects of her teachings on Hierarchies, Spirit and Matter, Will, Cosmic Mind, Vibration, etc.

The Theosophical Forum

SCIENCE AND RESEARCH — *C. J. Ryan*

Science and the Eastern Doctrine of Maya

The rapid advance of science toward concepts of the order of the universe hitherto unsuspected in the West has already led to a very near approach to the age-old teaching of the Vedanta expressed in the word Maya, commonly, though imperfectly, translated as "illusion," in contradistinction to "reality."

R. Potter, in *Science*, December 17, in a synopsis of a symposium on "Philosophical Concepts in Modern Physics" by four leading American physicists, explains that it is no longer possible to regard the atom as a kind of solar system in miniature. No mechanical model or picture can express its true nature. He says:

One needs a sharp mental adjustment to get over the idea that electrons and atoms and electric waves are real things that you can touch or see. Many people know that one can't see electrons, but familiarity with the term lends a sort of mental faith in their reality. These terms of modern physics are merely convenient — and often misleading — mental concepts which represent certain symbols in mathematical equations. The things that may seem real turn out to be merely "tools" of the mind just as a test-tube is a tool of the chemist. . . . And above all, don't put too much reliance on what you may think is your common sense.

Remember that common sense, like Einstein's theory, is relative.

But, as he points out, the *experiments* which are guided at every step by the abstractions and symbols are very practical. Even though we cannot make comprehensible "models" or mental pictures of the symbols the results are definite enough. For instance, recent researches into radio-activity and the production

of new elements, etc., have opened a most important field in the cure of disease. Through the study of the *relationships* of the atomic or electronic "symbols," unknown and mysterious though they be, are we learning something of what is actually happening in that aspect of the universe which is available to our senses.

While it is only a short time ago that mental pictures of the structure of the atom were regarded as valid, physicists (such as Dr. Dampier-Whetham in his *History of Science*, 1930) were even then expressing their belief that sooner or later the atomic models and any intelligible form of mechanistic explanation of matter would fail and that we should be left face to face with "Mystery"! And this has already come to pass.

Dr. Dorothy Turner, in her article in the *Aryan Path* for December on "The Ignorance of Science," explains the position of modern physics in regard to "matter" with great clearness, and supports the possibility that science is moving directly toward a purely mystical and spiritual interpretation of the cosmos. We quote a few of her concluding remarks:

Once it was possible to picture the nucleus of the atom as something "real," but nowadays we are left with hardly that much ground to stand on, for *we have had to abandon all our early notions of a substance*. Modern physics, in fact, leads to the conclusion that the atom nucleus is just a center from which radiations spread. Matter is interpreted in terms of wave motion, and if we ask how can there be motions without some substance to be put into motion, we are left with an unanswered question. . .

Science indeed is not concerned with any assertion as to realities. It deals with abstractions. Certain factors of experience are taken into account; while others, perhaps those most important to the inner life of man, are neglected. But now that we have shaken off

that old bugbear of "reality" it is probable that the aesthetic and moral values will no longer be regarded as factors of experience which can be neglected. It is even possible that men of science will turn from their tenuous world of abstractions to the mystic quest and through spiritual experience find riches never before dreamed of in their philosophy.

In one of H. P. Blavatsky's magnificent passages in *The Secret Doctrine* where she protests against materialistic physics in 1888, she points out that unless scientists face the problem of the divisibility of the atom (now, of course, established, but then considered incredible because it would lead to doubting the very existence of physical matter) they will find themselves in an impossible position. Yet the divisibility of the atom, carried to its logical conclusion — infinite divisibility — resolves matter into simple centers of force, and brings us face to face with its illusory nature, or the Oriental *Maya*. (*Maya*, does not mean illusion in the sense of seeing something that does not exist, but a misleading perception of reality.) H. P. Blavatsky says that the whole science of Occultism is based upon the divisibility of the atom, for it leads directly to the existence of something deeper than physical matter, of "substance" in states of tenuity "undreamt of by the most spiritually disposed chemists and physicists." Let our scientific readers compare pages 518-521, volume I of *The Secret Doctrine* with the latest speculations of modern physics and see for themselves how truly she spoke when she said that many of the teachings of the Ancient Wisdom would be rediscovered by the more intuitive minds of the twentieth century, and her statements vindicated.

According to Theosophy, man has indeed the power to penetrate the veil of *Maya*, and to get a true picture of things as they really are. To quote from G. de Purucker's *Occult Glossary*:

There is a deathless Reality behind, which forms the substratum or the Truth of things, out of which the phenomenal in all its myriad relative manifestations flows. And there is a Way, a Road, a Path, by which men may reach this Reality behind, because it is in man as his inmost Essence, and therefore primal origin. In each one is fundamentally this Reality which we are all in search of. Each one is the Path that leads to it, for it is the Heart of the Universe. — pp. 150-1

Photographing the Atom

Though we must regard the atom as only *appearing* to be a solid material body, whose nature is still a mystery, yet Sir William Bragg recently showed by means of X-Ray pictures that it is possible to take shadow-photographs which record the *arrangements* of the atoms in the molecules of crystals. He says: "even the distances between individual atoms in a crystal can be calculated accurately to within one per cent, from these pictures, and the dimensions of a unit "cell" in a crystal can be measured much more accurately." In this way it can be shown that the differences in arrangement of identical carbon atoms in the diamond, in graphite, and in coal, clearly explain their respective characteristics, such as hardness, softness, etc. The *cause* of such differences is of course as unknown to modern science as the real nature of the "substance" of which atoms are composed. Occult science denies that the tremendous forces which guide these identical atoms of carbon into such different patterns, and which hold them in place, are purely mechanical and blindly unconscious. But in order to penetrate deeply into the mystery of Causes, where only a very few can hope to succeed, methods other than those of physical science must be used, as the Mahatman K. H. states in his famous letter of encouragement for Professor Crookes (*The Mahatna Letters to A. P. Sinnett*, pp. 341-2), saying that the seekers for Truth must have in themselves "the

elements of success," elements that are not merely intellectual (*Mdnasic*), but spiritual (*Buddhic*), perhaps a surprising thing to tell a modern scientific researcher, at least in the nineteenth century.

Cosmic Rays and Evolution

The Swedish *Sydsvenska Dagbladet* publishes an article by Dr. Axel Corlin on this subject which supports the ancient belief in the interdependence of everything in the universe, a concept hinted at by Eddington when he says that the activity of the smallest electron on the earth affects even the distant galaxies. As Dr. Corlin says, the discovery that X-Rays can modify the heredity of plants and even of some higher forms of life, causing mutations, suggests that the far more powerful Cosmic Rays may produce similar effects and be the cause of tremendous changes in the evolution of terrestrial life-forms.

The Cosmic Rays become more numerous as we ascend into the higher regions of our atmosphere, and if they help to produce new species it would seem that in elevated plateaux or in mountainous regions we ought to find a greater variety of species than in low levels. Corlin points out that Hamshaw Thomas, an English scientist, made a study of the comparative abundance of both wild and cultivated species of plants in low and high altitudes in similar latitudes, and found that an increase in varieties actually takes place with increasing altitude. This is a good argument for the Cosmic Ray hypothesis.

Other researches, by the German scientists Krebs, Rajewski, and Zickler, have shown that plant mutations can be modified by protective arrangements which control the impact of the Cosmic Rays. Dr. Corlin believes that even if Cosmic Rays can affect only the lower forms of life, higher forms may well be affected by environmental changes produced by the modifications of the

others, with whom they are closely associated. He closes his article with the interesting suggestion that if Cosmic Rays really produce effective mutations: "the fundamental idea of ancient astrology returns in a modern guise; the distant stars *do* interfere with life on earth."

While there is much truth in this statement, we cannot agree that such a cause as the mere mechanical action of the Cosmic Rays can be responsible for the majestic and purposeful march of evolution on earth. The cause is far too insignificant to account for the effect; a conclusive argument which can be used against all the soul-denying evolutionary schemes of the mechanistic theorists.

Unexplained Change of Climate in Northern Europe

The weather provides a safe topic of conversation, but we are less interested in discussing climate because, as the schoolboy said, "It goes on all the time." But this is not quite correct, and we have an example of a surprising change in a comparatively short time in a recent report from Northern Europe. Dr. Kurt Tinnberg, Stockholm archaeologist, has recently found that only four thousand years ago the far northern territory of the Laps, well within the Arctic Circle, had a warm and genial climate as is shown by the discovery of unmistakable remains of grape-vines! We shall be grateful if some friend in Sweden will send us further information about this matter as it may be of importance in regard to certain Theosophical teachings about pre-historic conditions. Other researches, in more southerly parts of Europe have shown that twelve thousand years ago the inhabitants were sufficiently civilized to keep sheep, cows, and horses, and to make excellent leather. Above all, they had linen garments made of flax at that remote period! Is it merely a coincidence that these northern Europeans were using linen at the same time as the

Badarian settlers in the Fayum, Egypt, were making linen of a quality unsurpassed, in fact un-equaled, by the best that we can produce today, as Dr. Petrie and others have reported? The earliest remains of the Badarians, so far discovered, date back about fourteen thousand years from the present day, as proved by the rate of deposition of the Nile mud. (This date is referred to in *The Secret Doctrine*, II, 750.

The Theosophical Forum

LET'S LAUGH AT OURSELVES — *Leoline L. Wright*

Life so needs beauty and laughter," said Katherine Tingley once *a propos* of her presentation of *A Midsummer Night's Dream*. Let us lay this to heart and not be too solemn over our Theosophy. For Occultism deals with human nature and if you can find anything more comic than human nature, well, I ask you!

Take for example what one may easily regard as a sixth sense — our sense of superiority. It is the one sense that is developed to the nth degree in every mother's son of us — not forgetting the daughters. In fact I don't believe many people could endure themselves or the facts of human living for a single day without being able to lean on the prop of their own superiority — in some direction — over that part of the human race that they are obliged to contact.

A perfect example of the action of this sense occurs to me at the moment and naturally concerns the antics of my own Ego. I was young at the time, and afflicted with that peculiar hardness which belongs to the very young of all climes and eras (and is not by any means confined to the modern gosling). I was riding in one of those old-fashioned "street-cars" (trams, our English friends call them), where the seats ran longitudinally down each side of the vehicle and all the passengers sat facing one another. The car was well filled. Nearly opposite me sat an overemphasized member of my own sex crowned by — certainly not by anything that could truthfully be called a hat! No — she was sporting a millinery "confection," monstrous and unbelievable. Like most of us she was not designed to take liberties with the solar spectrum, nor would her middle-aged complexion tolerate this outrage. And that is just what I was thinking, gazing at her more in sorrow than in

anger, when I happened to catch her complacently roving eye. I had not time to shift my horrified eyes, but to my amazement she not only bridled, but smirked. It was as plain as lipstick that she believed me transfixed by envy!

So there both of us sat at gaze — ridiculous exclamation points to the delusion of our own superiority. And I have no doubt, if there is anyone reading this, that she/he is smiling at us both, tolerantly. If so, pause and corrugate the brow for a moment, dear Reader. For what is this toleration of yours after all but an infatuated sense of your own superiority to such absurdities?

I hope you're not old enough to remember the days when some wag divided the human race into "bromides" and "sulphites." Bromides were the people who always thought and acted exactly as they were expected to. Sulphites were — well, the rest of us. The newspapers made such a hilarious and protracted joke of it that people became decidedly sensitive. We were afraid, you see, that we might (quite absurdly of course!) be classed with the bromides. Finally some philanthropic wit published a statement that the best way to prove oneself a sulphite was to admit cheerfully that one was a confirmed bromide. And that ended the matter. So there it is. Whenever we find ourselves tolerating someone, let us realize that such toleration is preposterously intolerable. Only be sure we do realize it.

In other words, dear Companions on the Path, let us practise real brotherhood and avoid the secret, self-satisfied smirk. For true *Theosophical* laughter is directed always and only against ourselves. Is not this really one easy way by which each one of us can transmute his self-justifying nature into the chela's diamond heart? Before the new harvest, however, must come the breaking of the sods, the clearing and burning of the weeds, and the sowing of the new seed; and fields long neglected give a deal of trouble.

Hence the Theosophical thinker will remember that: "Before the soul can stand in the presence of the Masters its feet must be washed in the blood of the heart," and the world at large will learn by its bitter harvest that against stupidity even the gods fight in vain.

I DREAMED THAT I WAS DEAD — *Grace Frances Knoche*

I had another dream: Coming home late one evening, tired and completely "all in," I fell asleep and dreamed that I was dead, and my body was laid carefully in a coffin, at the head of which I (my human soul?) stood, and I wondered why everybody around was so concerned over the death of a body. There was wailing and a general emotional disturbance, which I found not only annoying but really absurd. One dear friend of mine, an old schoolteacher, came up to my body, and putting her arms around the lifeless form said: "Oh, my child, you shouldn't have died, it is a terrible misfortune to see one so young and full of the promise of bright fulfilment go like this." This attitude rather shocked me. I could not understand why this kind friend did not speak to *me* who was standing right there, but spoke only to that poor outstretched corpse.

All this, however, was incidental, for what actually was occupying my attention was my effort to break loose from my body. Something was holding me back, and I found myself desperately tugging at a cord which seemed to be coming from my left side, presumably my heart. I jerked and pulled, struggling hard to break this cord, but something somewhere just as steadily held it firm. I cannot describe the dark torture of those few brief moments. I wanted to die, yet I could not. *The cord would not break.* In unspeakable agony, still pulling hard for freedom, I again looked about me, and suddenly my eyes fixed themselves upon a figure standing looking at me. It was a man of tall stature, slight of build yet carrying a tremendous reserve strength in the well-controlled body. He looked and looked, right into my eyes, and without thought I grew still, the pain in my heart lessened, my mind began to see light, and I no longer tugged at the cord.

Recognising my friend of olden days, a loved Teacher, I knew what I should do. In a flash my decision was made, and with courage and an influx of quiet strength I slipped into my body head first, rose from the coffin, and walked straight to where my friend and Teacher was. No words were needed, he simply nodded and smiled, and at my salute of grateful recognition, said: "Good girl," and walked away. I knew then I had work to do and that he depended upon me to find my strength and use the gift of my life in his service.

A large percentage of persons dream vividly, and at times have what actually amount to "experiences," which lead them to investigate various cults of dream-interpretation. This can be a source of danger unless guided by the sanity of knowledge. The teachings of Theosophy, however, enable the student intelligently to study and thus interpret his dreams (if he wishes to take the time), and to receive help and sometimes a needed warning therefrom. An experience such as that sketched above is not uncommon with a certain type of student, and in the light of Theosophy it becomes interesting as illustrative of some of the teachings of the after-death state, to which we shall briefly point.

How unimportant is the body, and even in degree the human soul, for do we not see here that while the body lay as dead in the coffin, the soul was alive and in full consciousness, and that the soul likewise was controlled by a still higher consciousness? Furthermore, to indulge in wailing and uncontrolled emotion at death is seen to be not only stupid but actually disturbing to the departing soul who requires calm and quiet so that its release may be quick and peaceful. What is sleep and what is death? Perhaps we do not know how near we are to death every night when we so gladly lay ourselves down to rest. Do we not cast off the body night after night on some mysterious yet certain pilgrimage of the soul?

In my dream why could I not die? What was that cord that kept me bound to my body even against my will? What stronger destiny overruled the human? Man has a definite span of life, commensurate with his store of vitality, and until that is exhausted, he cannot really die. This should be a warning to those contemplating taking their life, either consciously or otherwise. You can kill the body, but not the soul, and one sees in the desperate struggle here to leave the body before the karmic hour had struck, that there was something stronger, firmer and more enduring than the body, or even the soul, and that until that store of inner vitality, until the karmic reservoir on all planes of the constitution, has spent itself, release of the soul cannot take place. Hence the struggle between the human desire of the soul to be free of suffering, and the stronger karman of the real ego overruling the human — *the cord did not break*.

In death, the "golden cord" of life is broken, leaving the body free to dissolve, and the soul to cleanse itself of the last life's stain, so that purified and strong it may come into the presence of the Inner Self — the Knower. In sleep, this cord is not broken but endures, permitting the safe return of the soul to the body after the night's pilgrimage. The Knower is our Spiritual Self, who has won immortality through mastery of humanhood in ages previous to the present, and who thus should act as the guide and helper of the young human soul. It was this Inner Knower who recognised the Teacher and showed the soul which was trying to escape that its duty was to re-enter the body and take up its destined work in life.

"There's a divinity that shapes our ends, rough hew them how we will." From karmic threads woven in the past along all lines of our constitution, from physical, astral-vital, mental-emotional, intellectual and spiritual, we are weaving a fabric of

consciousness whose pattern embodies past, present, and future. At times the pattern shows threads of great weakness, and again of unsuspected strengths. When through illness or great suffering the physical vitality is low and the soul balances between life and death, if the karman is favorable, this Spiritual Self, the Knower, can step in and with threads firm and new strengthen the fabric, and thus restore the lost vitality; or to change the metaphor, can enter in and recharge, as it were, the exhausted batteries of soul and body, so that for a few brief moments at least the soul casts off the "garments of darkness" for the "armor of light": a new strength is received, and the destiny of the soul is fulfilled according to the ancient karmic pattern.

NATURE STUDIES: XII — *H. Percy Leonard*

The Laugh of Doctor Johnson

When Boswell was looking over his diary in preparation for his famous *Life*, he came across a tantalizing entry on May 17, 1775, a day which he had passed in company with the sage: "Much laughing."

We must confess to a regret that the biographer omitted to enter the jokes that provoked that laughter. "It should seem," he writes, "he had that day been in a humor for jocularly and merriment, and upon such occasions, I never knew a man laugh more heartily." We may suppose that the high relish of a state so different from his habitual gloom, produced more than ordinary exercise of that distinguishing faculty of man, which has puzzled philosophers so much to explain. Johnson's laugh was as remarkable as any circumstance of his manner. It was a kind of good-humored growl. Tom Davis described it oddly enough: "He laughs like a rhinoceros."

Laughter is a great revealer of character. A clever scoundrel may succeed in disguising his motives under the camouflage of an assumed manner, but surprised into a burst of laughter, the real man stands forth self-confessed. Dr. Livingstone, the African explorer, used to say that he always felt he could trust a savage who had a hearty laugh. "No vicious fellow," he remarked on one occasion, "could laugh like that."

No one can be called a really successful laugher unless he is able to enjoy a joke against himself; and to do this he must be able, at any moment, to cut himself adrift from his center of personal consciousness, and, standing by, regard it as a thing apart.

True laughter, the genial laughter of the heart, implies sympathy and is never evoked by bodily suffering or an embarrassing situation which causes mental distress. The man who knows no other life but the cold glitter of his intellect may be moved to a sense of the ridiculous at the sight of other people's pain; but in those who have any development of soul-life, the appeal of the comic is drowned in the reflected suffering which they sympathetically feel.

The laughter of fools may be, as Solomon declares that it is, "As the crackling of thorns under a pot"; but the laughter of the wise, whose serious view of life does not necessarily make them solemn, is a perfect echo of those melodies with which the ether rang when "the morning stars sung together, and all the sons of God shouted for joy."

The Theosophical Forum

NO OTHER CUP WOULD DO — *H. Percy Leonard*

As I was buying stamps at the corner drug-store just now I overheard a bearded stranger telling about his Bill.

"He's the funniest kid," he was saying as I went in. "He has a cup with his name on it in gold lettering, and that's the only cup that he'll drink from. His milk is no good unless he gets it out of that special cup. I guess that we ought never to have humored him so far; but he's got so now that he carries it to picnics and parties, and if it got lost — "

I heard no more, but I could not get that foolish, fastidious child out of my mind because I knew that I had been a kind of Bill myself in days gone by.

Lionel was at school with me and we chummed up so well together that we were never happy except in each other's company. When first we met we were both deep in the same kind of trouble, and it was great to be able to talk to another fellow who could thoroughly understand. The link once formed, other points of contact developed and finally we knew each other like our own pockets, as the saying goes. There was sympathy, complete understanding, and a spirit of helpfulness — in fact the usual outfit of human virtues of which everybody has his share, but which I could never recognise in anyone but Lionel Lee. I was just like little Bill. I had to take the milk of human kindness out of my particular cup, or go without.

Well, crockery won't last forever, and one day this particular cup — -broke; and it seemed to me as though the world had come to an end. Lionel was dead — or what we call dead — and the body in which he had lived was put out of sight. And now, if I wanted

sympathy or a kind word, I had to go without, for Lionel was gone, and I lived a lonely man in a crowd of strangers.

It was years before I learned that the milk of human kindness might be found in other cups; but I discovered it at last. The man who limits himself to one particular cup, shuts himself off from a lot of pleasant refreshment along the way; and if that particular cup should happen to be smashed! — why he feels as if the bottom had fallen out of everything!

Chumship is well enough, but don't let it narrow your life. Why not be chummy with the human race? Humanity is, in its highest expression, a beautiful thing; and a true friend is more to be desired than much fine gold; but do not let us forget that every man is a portion of the human race, and that whatever you find in one, you may find in all if you know how to look for it.

Let us level up, not down! Let us not say: I will henceforth love my chum no more than the general mass of humanity. There is a better way. Whatever of good I find in my chum, I will set myself to discover in everyone I meet: and as I feel towards my chum I will try to feel towards every member of the human race.

Why not fall in love with humanity?

ORIENTAL STUDIES: IV — *G. de Purucker*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

The Secret Doctrine of Gautama the Buddha (1)

VIII

Turning now to a more particular examination of metaphysical and religio-philosophical ideas imbodyed in Buddhism, one would like to ask a very pertinent question: What indeed are the doctrines — some of the more important of them at least — that the Buddha-Gautama taught? Or again: What is the *fundamental* teaching of Buddhism? One will find this question constantly asked and answered by Occidental Orientalists; but the present writer has always wondered, in his study of Buddhism which has extended over some thirty years, why these really learned and scholarly men of the Occident, so earnest and devoted in their studies, so industrious indeed, invariably seem to hunt for, and to insist that Buddhism must have, one fundamental doctrine. To tell the truth, the present writer does not know what this *one* fundamental doctrine is. It is easy to know what many if not most European scholars have to say about it; but yet the writer of these lines has searched for thirty years more or less to find the "one fundamental doctrine" in Buddhism, and instead of one he has found a hundred or more.

What are some of these? The impermanence of all manifested existence or existences; that in consequence of the impermanence and illusory nature of all manifested beings and things, pain, suffering, sorrow, are native to all beings who live in this illusion,

or maya; yet there is a Way leading to the cessation of all this sorrow, of all this pain, and of all individual illusions about them; and this Way is eightfold in character. It is commonly called in Europe "the Noble Eightfold Path," based upon Four Fundamental Truths or Verities. What are, first, these Four Noble Truths:

- The noble truth about sorrow and pain;
- The noble truth about the cause of sorrow and pain;
- The noble truth about the cessation of sorrow and pain;
- The noble truth about the path that leads to this cessation.

These four truths may be somewhat paraphrased as follows:

1. Suffering and sorrow exist in all manifested beings.
2. There is a cause for the suffering and the sorrow that exist.
3. There is a way to render extinct the causes of the suffering and sorrow that exist.
4. There is a path, by following which the causes of the suffering and sorrow that exist are rendered extinct. This path consists in a continuous changing to betterment of the factors or samskaras of our consciousness. These factors are eight and comprise the Noble Eightfold Path.

The Noble Eightfold Path

1. Recognition of the truth of the preceding four verities.
2. Holding the objective to be attained clearly in the mind, holding it firm, with discrimination.
3. Right words, or controlled and governed speech at all times and in all places.
4. Controlled and governed action at all times and in all places.
5. Appropriate and honorable means of livelihood.
6. An inflexible will to achieve the objective visioned.

7. An eager intellect, always open for a greater truth, and ready to learn; and the cultivation of a strong and retentive memory.

8. An unveiled spiritual perception, combined with great care in thinking, which is the keynote of all the preceding items, and which expressed in other words means right meditation with a tranquil mind into which wisdom thus enters.

In addition to this "Noble Eightfold Path," based on the Four Verities, which those especially who follow the Hinayana love, and rightly love, there are the six, seven, or indeed ten, paramitas or Sublime Virtues studied and followed, let us hope, by the disciples of the Schools of the North — — they who believe that they have received and that they have developed the teaching of the Lord Buddha's heart, and who, likewise, accept at least in their principles the teachings of his brain, the "Eye-Doctrine" of the Hinayana.

What are these Paramitas? They are stated below, and given largely in the words of H. P. Blavatsky, as found in her noble little handbook *The Voice of the Silence*(2) Although a Theosophist first and foremost, she was likewise a formal Buddhist, having at one time when in Ceylon taken Pansil or the Five exoteric Vows; thus she was well qualified to speak about the doctrines of him whom she loved because she understood him far better than the rather stiff-minded European Orientalists, governed to a large extent as they have been by the psychological atmosphere of a now moribund anthropological science, combined with a mind more or less swayed by equally moribund Christian theology. These, then, are the famous Paramitas, the first seven given more or less in the words of H. P. Blavatsky:

1. The key of charity and immortal love.

2. Harmony in word and act, thus cutting at the roots of the making of future evil karma.
3. Patience, that naught can ruffle.
4. Indifference to pleasure and pain, by which illusion is conquered and truth is perceived.
5. Dauntless energy or fortitude, that finds its way to the supernal truth out of the mire of lies.
6. Spiritual meditation, a golden gate which once opened leads the chela or neophyte to the realm of eternal verity and ceaseless contemplation of it.
7. Wisdom combined with discriminating intelligence, which makes of a man a god, creating him a Bodhisattva, a son of the Dhyanis.

In addition to these Seven, the following three are also frequently mentioned in Buddhist literature; and they are of equal importance with the former, although they are here enumerated out of their usual order as they are commonly found in the exoteric books:

8. Proper method or discipline in following the Path.
9. The urgent wish to achieve success for the sake of being an impersonal beneficent energy in the world.
10. A continuous exercise of the intellect in study of self, of others, and incidentally of the great religious literatures and philosophies of the world.

Mind you, these ten are among the most widely accepted mystical teachings of the Northern School of Buddhism which is followed more or less faithfully by some 400 million human beings — at least let us hope so.

IX

It has often been said by those who understand but little, one

fears, of the essential teaching of the Tathagata, of Gautama the Buddha, that he taught that when a man dies, then *finis*, complete and utter, is his fate or destiny. The man is; he dies; he now is not! This is a monstrous perversion of the Buddha's own teaching. It has often been said by those who have studied but have misunderstood the Buddha-Gautama's teachings, that his doctrine was that there is no reincarnating or re embodying entity, as an entity; and yet the teachings of the Buddhist scriptures, both of South and of North, are filled with the stories of what it is popular to miscall the "metempsychosis" of individuals.

Take the Jataka-Tales, already alluded to, the birth-tales supposed by the multitude of unthinking to be stories of the former imbodiments of Sakyamuni himself, dealing with events that were said to have taken place in these past imbodiments of his on Earth — take these as instances; and one will find in these curiously interesting and sometimes profound tales, for they are largely mystical and metaphorical, that the existences of the Buddha began, as it were, in the very beginning of this present world-period, as one of the lowest and humblest of creatures, and that he slowly evolved through repetitive imbodiments developing and growing in each, until finally he attained Buddhahood as Sakyamuni.

Question: If there be no surviving entity, what was it that passed from birth to birth in those numerous stories, which, whatever one may think of them, proclaim the common acceptance by the multitude of Buddhists of there being some kind of x-factor in the complex of skandhas forming the human being which passes from life to life? Or how about the many instances in canonical Buddhist scriptures themselves, which place in the mouth of the Great Teacher himself observations, remarks, parables, references, to the preceding births of such or such other individuals? If Buddhism taught no such continuity through

repeated imbodiments of *something*, why all this allusion to reincarnating beings?

Buddhism teaches an evolution or development of this x-factor of consciousness and will slowly followed through many rebirths, through repeated imbodiments, bringing about constantly increasing faculty and power, until finally the entity whose evolving destiny is thus traced, becomes a man; and after becoming a man finally becomes a Bodhisattva — one filled with the spirit of the inner Buddha, or rather of the Buddhist principle, the Bodhi, the principle and fountain-head of utter wisdom. Furthermore, that taking the Buddha-Gautama as an example or illustration of such an evolving entity, in his last incarnation on earth, he was born the human Bodhisattva-Siddhartha, later called Sakyamuni, in the year 643 b. c, and that when he was eighty years of age, after having passed through manifold experiences and trials, and after he had gathered together and taught his disciples and had sent them abroad in order to proclaim the Good Law, he then entered the Nirvana, with an entering which left naught behind save his Dharma — the Law, i. e., the Truth that he taught.

Now, let one ask: What is it that thus passes from the humblest of beings through the many and varied *gatis* or "ways" of existence, through repeated and incessant rebirth, until that Something, that x-quantity, hereinbefore called the x-factor, becomes a Buddha? What is it, one asks? The scriptures of the South of Asia, of the Hinayana, will say that it was results, consequences, i. e., *karman*. Precisely! What then is this *karman*? The word itself means action, signifying results, consequences, effects. But is it thinkable that the noblest Sage of historic times, the titan-intellect of the human race, perhaps the loftiest spiritual genius of his kind known to the human species for scores of thousands of years past, taught that bare consequences, naked composites, sheer effects,

technically called *samskaras* or mere collections (one may properly ask, collections of what?) can and do pass in entitative fashion from life to life, recollect themselves — re-collect themselves after being time after time dispersed as atomic aggregates into the various realms of Nature from which they were originally drawn? The answer depends entirely upon the meaning that we give to this term *samskaras*, and to the term *skandhas*. If these are mere aggregates of atoms existing on the psycho-emotional as well as on the physical plane, and without any internal bond of spiritual-psychological union, thus voicing the merely and completely materialistic idea: then we must infer that this titan-intellect taught an impossibility, which the merest tyro in philosophical and scientific thought would reject with impatience as being words without meaning, thoughts without content, ideas void of sense or foundation. Or if, on the other hand, we understand, as we should understand, *samskaras* to mean psycho-magnetic and material aggregates of life-atoms attracted to each other because of their intrinsic magnetic vital power, and unified and governed by the repetitive action of the same spiritual and intellectual forces, previously described, which formerly held them in union as an aggregated vehicle, then indeed we have a reasonable and logical teaching consistent with what we know ourselves of the intricate and unitary yet compounded character of our constitution, and likewise thoroughly consistent not only with all the teaching of the Hindu philosophy of the day, but with all the remainder of the Buddha's own sublimely comprehensive and profound philosophy.

The following observations, therefore, give the undoubted meaning and inner content of the Gautama-Buddha's Doctrine; and it is likewise precisely the meaning and content of the "heart" of his teaching as found in the Mahayana-Schools of the North, and taught today by Theosophy. One may add that it is also the

meaning and content of the Hinayana-School, although in this last school the inner content is less easily uncovered, though seen to be as much a part of it when thus uncovered as it is an essential part of the great Mahayana-Systems.

While it is perfectly true that the lower parts, or inferior portions, of every entity, of a human being for instance, form a compound or "complex," and therefore are a compounded aggregate, and consequently because of this combination mortal and perishable as such compound, being what in Buddhism are called the *samskaras*, or the body of composites, nevertheless, there is *something* of a spiritual, intellectual, and psychological character, previously called the x-factor, around which this aggregated compound re-gathers or recollects itself at each new rebirth; and it is this *something* by which the compound is re-assembled and during life is held together as an entity, thus forming a man — or indeed any similar being. There is here no such teaching as that of the imperishable, immortal soul in the Christian sense, static through eternity in unchanging essential characteristics, as is obvious enough; and this deduction of no such imperishable immortal soul in the human being as drawn from the teachings of the Buddha himself, and as found in the many and various scriptures, is perfectly correct, for such a soul, to be immortal, must not and cannot essentially change, which likewise would mean that it cannot evolve or grow, because if it did so grow, so evolve — which means changing to something different and better — it then no longer is what it was before. It is something different because it is changed; and therefore, not being what it formerly was, it obviously cannot be "immortal" in the Christian sense. This is a subtil and profound thought which, once grasped, unveils the inner meaning of Sakyamuni's teaching in this respect, and one's sense of logical consistency is aroused to admiration by it.

Consequently this x-quantity, call it what you like, call it karman if you will — and if you understand the proper meaning of the word karman as signifying consequences, or results, of whatever kind, spiritual, intellectual, psychical, physical or what not, it is as good a word as any — is that vital-psychological *something* which insures the re-collecting of the *samskaras* together for the new life, thus reproducing the new man, as the fruitage or results of his past life. It all is simply a continuance in existence of this x-quantity in life after life by means of the karmic consequences or results of the life and of all the lives which have preceded any new appearance or imbodiment or incarnation of the peregrinating entity.

Let us try to illustrate this very mystical doctrine, so difficult for Occidentals to understand. Consider a child. The child is born from an infinitesimal and invisible human life-germ, and yet in a few years it grows to be a six-foot man. Now then, in order to become a six-foot man from the little child that it was, it must pass through many and differing stages of growth, of *evolution* which means development, unfolding. First it is the microscopic germ, developing into the embryo, then born as an infant, then growing into the lad, the lad changing into the young man, the young man becoming the man in the maturity and plenitude of his powers, and finally, the man after the maturity and plenitude of his powers enters upon the phase of senescence, decay, decrepitude and death. Now every one of these phases is a change from the preceding one, and is based and founded upon the preceding one. Each such new phase is the karman of the next preceding phase and all preceding phases. Yet the man is the same through all the changes, although the man himself changes because growing likewise.

The boy of six is not the boy of ten; the boy of ten is not the lad of fifteen; and the young man of twenty-five is not the man of forty;

and the man of forty is different from the man of fifty-five when he is at his prime — or should be; and the man of eighty, usually weak and tired, worn with toil and labor, soon going to his rest and peace for a while, is not the new-born child — yet the entity is the same from the beginning of the cyclic series unto its end; because there is an uninterrupted series of steps or stages of *change* signifying growth, which means development or evolution.

In this example, simple as it is, you have the key to the Buddhist thought. Precisely as it is with the birth and development and growth of a child into a human adult, so is it with the passage of the karman of an entity from body to body through the different life-stages of rebirth, through the different ages: the passing from low to high of that x-quantity which the Theosophists call "the reincarnating ego," and the mystical Buddhists speak of as the shining ray from the Buddha within, and which the Hinayana of the South, the defective vehicle, the exoteric teaching of the Lord Buddha, spoke of as the "karman" of the man growing continuously nobler, better, grander, greater, more evolved, until the man through these karmic changes or changings of karman finally becomes a Bodhisattva; the Bodhisattva then becomes a Buddha, finally entering the Nirvana.

It may as well be said here that this "something," this x-factor, is what in Theosophy is called the Monad which, imperishable in essence, and the fountain-head of all consciousness and will, passes from age to age throughout the Manvantara and reproduces itself by means of rays from its essence in the various reimpodiments or reincarnations which it thus brings about. In mystical Buddhism, especially of the North, this Monad is identic with the Dhyani-Buddha or inner spiritual "Buddha of Meditation" which is the heart or core of every reimpodimenting being. Just as in Esoteric Theosophy or the Esoteric Tradition each

and every monad is a droplet, or ray, to change the figure of speech, of and from the cosmic Maha-buddhi, just so in mystical Buddhism, every Dhyani-Buddha is a ray from Amitabha-Buddha, a form or manifestation of Alaya or the Cosmic Spirit.

When one hears that Buddhism teaches the final ending, signifying the thorough-going transmuting, wholly complete, of that intangible and vague entity which Christians miscall "soul," and which the Buddhists of the South call the "karman" of a man — the sum-total of all that a man is, all his feelings, thoughts, yearnings, energies, forces (in short everything that the man is, for everything is his karman), passing ever to greater and greater things — then it should be remembered that while this statement is true when properly understood, nevertheless the Northern School of Buddhism which is incomparably more mystical than that of the South, still retains, however imperfectly, the more explicit and lucid teaching emanating from the Buddha's "heart," to wit: That there is a ray from the celestial Buddha within the composite entity called man builded of the *samskaras*, and that it is the influence of this ray which first brought the *samskaras* together, which ray persists throughout the ages, and re-collects the same *samskaras* together anew, thus reproducing through repetitive imbodiments on Earth the same karmic entity who or which formerly existed. Try to understand the essential meaning of this karman-doctrine as taught by the great Master and as more or less faithfully imbodied in the Buddhist scriptures, and the fact will be grasped that the karman of the man *is the man himself*; and that just because the man himself is continually changing because continually growing, thus the karman of the man which is himself is obviously likewise continually changing for the better. The teaching of the South, of the Hinayana, is true, when it states that what remains of a man after his death is his karman, because as just shown this karman is the man himself.

It is, therefore, unquestionably true, that Sakyamuni taught the non-reality, the non-existence of a static, continuous, "soul" or minor self such as is taught in Christianity and in certain other religions or religious philosophies of similar type. This last fact, or rather averment, is true and admits of no contradiction; but instead of being, as it is so wrongly misunderstood to be, the mark of philosophical and religious imperfection, or as signifying a lack of penetrating sagacity into human psychology, it would be easy to show that precisely the contrary of this is the case; and that, indeed, this teaching of the Buddha, as more or less imbodyed in the scriptures of the Mahayana and Hinayana, and especially in the latter, is one of the greatest glories of the great Master's doctrine, and is, furthermore, most curiously and suggestively parallel with the best in modern scientific and philosophical speculation in the West.

There are one or two highly significant and pregnant passages in ancient Buddhist scriptural lore, the importance of which is consistently passed over because misunderstood. In the *Dhammapada*, dealing in general with the matter of the Self or the intrinsic selfhood of beings and entities around which the "compound aggregates" are builded as vehicles, we find the following very interesting and certainly highly suggestive thoughts:

The Self is the master of self — for who else could be its lord? With the self [the lower self, or "compound aggregate"] thoroughly controlled, the man finds a Master [or Guide] such as cannot elsewhere be found. (3)

Here is a pointed and emphatic statement of the existence in the human constitution of the governing, controlling, Root-Self which lives and manifests its transcendent powers in and through the lower self or "soul," the latter being naught but the "compound

aggregate" of elements, which is the man in his ordinary being. When it is remembered that the *Dhammapada* is one of the most authoritative and respected scriptures of the Hinayana or Southern School, one can appreciate the force of this statement, the more so as it is found in the cycle of scriptures of the Hinayana which far more than the Northern or Mahayana is always cited as the Buddhist School teaching the supposed, but wrongly supposed, nihilism so often brought against Buddhism in support of its being a pessimistic system without spiritual basis or import.

Here we have a direct reference to the emphatic existence of the essential *Atman* or fundamental Self, or Self-hood, in the human constitution.

One more instance, drawn this time from the Mahayana, and due to one who in Buddhism itself has always been recognised as being a Bodhisattva — Nagarjuna. This true mystic Sage and Initiate-Teacher, and one of the most devoted of the Buddha-Gautama's later followers who faithfully carried on the Esoteric Tradition, in his commentary on the Sutra or scripture of the famous Buddhist work *Prajna-Paramita*, states the following:

Sometimes the Tathagata [the Buddha] taught that the Atman verily exists, and yet at other times he taught that the Atman does not exist. (4)

Just so. Are we then to suppose that the Buddha-Gautama taught, and deliberately taught, contradictions in order to befuddle and to mystify his hearers? Hardly, for the idea is ludicrous. What has already been said about the compound constitution of man, through which the eternal Self or Atman, i. e., in this case the Dhyani-Buddha, works through its erring, wayward "lower self or vehicle, or "soul," should sufficiently explain that the various meanings of "self were as keenly recognised in ancient Buddhist

thought and by the great Master himself as they are recognised today. The meaning of the Buddha was obvious enough, that the Atman as the essential Self, or the Dhyani-Buddha in the human constitution, exists and evolves perennially, is ever-enduring; but that the "lower self or inferior selfhood of a man is merely the feeble reflexion of it, and is what the Europeans call "soul," and hence does not "exist" as an *enduring* entity. The same play, for this is what it really is, upon the word "self is distinctly perceptible in the citation from the *Dhammapada* just previously made where the Self as Master is the lord of the lower self as mere man. The present writer is well aware of the many passages in Buddhist scriptures concerning the non-existence of the Atman as the *human self* or soul — the doctrine of *Anatta*, in the Pali writings — and fully concurs, for the truth is obvious enough; but these passages cannot be considered alone and apart from other teachings distinctly stating the Atman is: constantly in the Mahayana, and in the Hinayana as in the above citation from the *Dhammapada*. In any case, the Atman is most certainly not the transitory and impermanent human "soul"; and it is thus that the Buddha's true thought and doctrine should be construed. It reconciles all the difficulties.

XI

He whom his followers and whom the West know under various titles, such as Gautama the Buddha, Sakyamuni or the Sakya-Sage, or by his personal name Siddhartha — which means "one who has achieved his objective" — was born in the Spring, at or about the time of the Spring-Equinox, in the waxing moon, and in the year 643 b. c., reckoning according to Christian chronology, in a North Indian town which is now thought to have been in the foothills of the Himalaya-mountains. His father was Suddhodana which our very pragmatical Occidentalists say means "pure rice," or "pure food," apparently forgetting that it is virtually impossible

that this could be the translation because it would be a violation of Sanskrit grammar, and the original of such translation would have to be spelled *Suddhaudana* — which it is not. The word means "pure water" or "pure flow," and is obviously in connexion with the fact that his mother was called Maya or Mayadevi, meaning Illusion, or Illusion the goddess, a mystic name referring to the Buddhist teaching itself that his origin was divine, from the Celestial Buddha, from whom *flowed* a pure ray of the spirit which, passing through the realms of Illusion the mother, mystically gave birth to the Buddha. Remember also that the name of his wife was Yasodhara, which can be translated as "holder of glory" or perhaps better "possessor of glory," pointing to the fact of his possession as the other "half of himself of spiritual qualities and powers through which and in connexion with which he lived and worked.

It is unnecessary here to relate anew the world-famed story of the Buddha's life, as it is so well known not only to scholars but to every student of the life of the great Master. Those who are even today so strangely and strongly fascinated by the various forms of the lower Indian Yoga, as this has been proclaimed abroad in Western lands by itinerant thinkers from the Indian Peninsula, and who imagine that the pathway to initiation and interior development is the mortification or, even worse, the mutilation of the physical frame, should take serious counsel of the fact that the Buddha, so the story of his life runs, after trying these various means of interior development through yoga, cast them all aside, renounced them as virtually useless for his sublime purpose. Iconography and pictorial art generally in Buddhism show the various phases of the different events in his life before he attained utter illumination or Buddhahood under the Bodhi-tree, so called in commemoration of this great Event; and the most informative of these representations are they which show the

Buddha in one of the various postures of spiritual meditation, interior re-collection; but equally significant are those which represent him in the pre-Buddha state as a veritable image of skin and bones, what the Germans call a *Hautskelet*. The pathway to the Temple of Wisdom and of interior illumination is not the pathway of mortification of the flesh, but the control of the will, the living of the life, combined with intellectual awakening — i. e., the path of interior development, and the becoming at one with the superior elements of the human constitution which are at one and the same time divine in their highest parts, spiritual in the next lower range, and intellectual in their third.

The term "Buddha" itself means awakened, from the verbal root *budh*, signifying "to observe," "to recover consciousness," and therefore, "to awaken" — i. e., a Buddha is one who is fully awake and active in all the parts or ranges of his septempartite constitution, and is therefore a full, complete, and relatively speaking a perfectly evolved human being.

The esoteric Theosophical teaching is here likewise passed over in relative slightness, which teaching contains the statement that the Buddha did indeed "die" to all human affairs at the age of eighty years, because then the higher parts of him entered the Nirvana, and no Nirvani can be called a living man if he has attained the seventh degree of this range of Nirvana as the Buddha did; yet the esoteric Theosophical teaching likewise states that in all the remainder of his constitution, in those parts of him beneath the range of the Dhyani-Buddha within him, he remained alive on Earth for twenty years more after this date, teaching his Arhats and chosen disciples in secret, giving to them the nobler "doctrines of the heart," as obviously he had publicly taught "the doctrines of his brain," i. e., the eye-doctrine; and that finally, in the hundredth year of his physical age, Gautama-Sakyamuni, the Buddha, cast his physical body aside and thereafter has lived in

the inner realms of being as a Nirmanakaya.

XII

One must say a little more about a phase of the Buddha's teaching which exoteric Buddhism, whether of North or South, does not openly tell of. There is a Wisdom, the Secret Wisdom of the Buddha-Gautama, his esoteric dharma — and the present writer does not hesitate to state this openly, and he ventures to say that it may be found, although more or less veiled, in the teaching of the books of the great Mahayana-School of Northern and Central Asia. Furthermore, this dharma, this Secret Wisdom, this Gupta-Vidya, can verily be taught. Among its doctrines, likewise found in the teaching of the Northern School, is the statement that every man is a manifestation on this earth of a Buddhist principle belonging to his constitution and manifesting in three degrees or phases: (a) as a Celestial or Dhyani-Buddha, (b) as a Dhyani-Bodhisattva, (c) as a Manushya-Buddha; and that all human faculties and powers are, like rays from a spiritual sun, derivatives from this wondrous interior compound Buddhist entity. It is the core of the core of all our being. Union with this "heart" of us is the aim of all initiation, for it is the union, the becoming at one, with the Buddhist-principle within us, the seat of abstract Bodhi; and when this union is achieved, then a man becomes a Buddha.

This is the fundamental thought, in the writer's considered opinion, of all the teaching of the Buddha-Gautama; and even the very last words which popular legend ascribes to the Master on his death-bed, "Seek out your own perfection," embody the same fundamental thought of the human being as an imperfect manifestation of the celestial or Dhyani-Buddha within himself — the man ever striving, consciously or unconsciously, to attain union with this divinity within. This is the yoga of Buddhism,

although one readily grants that we hear little of it; yet it is averred that it is likewise the real yoga, and the only yoga worth anything, in the various systems of Hindu yoga-teaching likewise.

We have in these thoughts, drawn from the recorded teachings of the Buddha himself, exactly the same sublime adhortation or injunction that all the great Sages and Seers of all the ages have taught, to wit, that the way to the unutterable Wisdom and Peace of the Divine is found within oneself. All the great spiritual and intellectual human Titans, whose vast minds have been the luminaries of the human race in all past times, were precisely they who had developed more or less of this Buddha-principle within themselves; and the value, philosophic, religious, and ethical, of this teaching lies in the fact that every human being may follow the same path that these great Masters have followed, because every human being has in his constitution the same identical cosmic elements that the Great Ones have.

Even the School of Southern Asia, the Hinayana, gives as the unquestioned teaching of the Tathagata that a man can attain union with Brahman, as is evidenced by a number of passages in the Pali scriptures. Now, what is the path by which this union may be achieved? In answer, consider the following citation from one of the "orthodox" scriptures of the Hinayana-School, and thus the reader will have the Buddhist scriptures' own words before him. This teaching of the Buddha-Gautama concerning the gaining of union with Brahma will be familiar to him as likewise being the teaching of orthodox Brahmanism. Thus, then, from the *Tevijja-Sutta*:

"That the Bhikkhu who is free . . . should after death, when the body is dissolved, become united with Brahma, who is the same — such a condition of things is every way possible!

"In sooth, . . . the Bhikkhu who is free from anger, free from malice, pure in mind, and master of himself should after death, when the body is dissolved, become united with Brahma, who is the same — such a condition of things is every way possible!" (5)

"For Brahma, I know, . . . and the world of Brahma, and the path which leadeth unto it. Yea, I know it even as one who has entered the Brahma world, and has been born within it!" (6)

"And he lets his mind pervade one quarter of the world with thoughts of Love, of pity, sympathy, and equanimity, and so the second, and so the third, and so the fourth. And thus the whole wide world, above, below, around, and everywhere, does he continue to pervade with heart of Love, with heart of pity, sympathy, and equanimity, far-reaching, grown great, and beyond measure.

"Verily this . . . is the way to a state of union with Brahma."
(7)

In what stronger words could a more emphatic and clear-cut statement be made than the above, of the fact that there is *something* of a spiritual-intellectual character which works through the compound aggregate of the skandhas that form the "mere man," and which spiritual substance or entity — called by the Theosophist the spiritual Monad — can and finally must attain union with the Cosmic Spirit here called Brahma, or, in other words, what the Esoteric Philosophy or the Esoteric Tradition frequently calls the Logos, in this instance the Third or so-called "Creative" Logos. We have here the essence or substance, in almost identic formulation, of the teaching of the Vedanta of India, that the essence or the substantial root of all beings and things, man therefore included, is the cosmic

Brahman or Cosmic Spirit, of which all beings and entities are the offsprings, and reunion with which is, in the long course of ages, finally inevitable; and that there exists a Way or Path by which such reunion may be attained, by which Way the aeons'-long evolutionary pilgrimage may be vastly shortened.

Now then, after the conclusive paragraphs just cited above from the *Tevijja-Sutta*, one of the standard scriptures of the Southern School of Buddhism, in which the x-quantity, that *Something*, is emphatically and plainly stated herein as being capable of attaining "a state of union with Brahma,," it becomes necessary to point with emphatic finger to one of the most pregnant and important teachings of the Great Master which shows that the Buddha-Gautama by no means considered such a state of union with Brahman as the ultimate or ending of the existence of the fortunate Jivanmukta or freed Monad. Indeed, his teaching ran directly contrary to such erroneous idea; for both implicitly and explicitly, as may be found in the scriptures of both the North and the South, there is the reiterated statement that even beyond the "world of Brahma," i. e., beyond Brahman, there are realms of consciousness and being still higher than this "world of Brahma," in which reside the roots, so to speak, of the Cosmic Tree and therefore the Root of every human being, the offspring of such mystical Cosmic Tree. What is this Mystic Root, this that is higher even than Brahma? It is the individualized Adi-Buddha, the Cosmic "Creative" Logos of Adi-Bodhi, or Alaya, the Cosmic Originant; for even a "world of Brahma" is a manifested world; and, therefore, however high it may be by comparison with our material world, is yet a relatively imperfect sphere of life and lives. In consequence, the teaching runs that higher even than Brahma there is something Else, the rootless Root, reaching back and within, cosmically speaking, into Parabrahmic Infinitude. One who is a Buddha, i. e., one who has become allied in his

inmost essence with the cosmic Bodhi, thus can enter not only the "world of Brahma," but pass out of it and above it and beyond it, yea, higher and higher still to those cosmic reaches of life-consciousness-substance towards which human imagination may aspire and indeed always does aspire, however feebly; but which, unless we are Buddhas in fact, i. e., more or less straitly in self-conscious union with the Dhyani-Buddha, the spiritual Monad within us, we cannot understand otherwise than to be an adumbration of ineffable Nature. These citations, and the more or less necessarily condensed arguments that have been drawn from them, and more especially and somewhat more widely from the general teaching of Esoteric Theosophy, the Esoteric Tradition, should prove to any really thoughtful and impartial mind that there was something more, and indeed vastly more, in the great Master's teaching than the sketchy scriptural records, and the all too often prejudiced and distorted outline of it drawn by the willing and sincere but unskilled hands of most European Orientalists. A Secret Doctrine, an Esoteric Wisdom, a prehistoric Esoteric Tradition, is seen to be a necessary component part — indeed the best part because the entire background — of the teaching of the Buddha; for towards such background every one of his public teachings points, and when considered collectively rather than distributively, when synthesized after analysis, the impartial student reaches the conclusion which seems to be irresistible, that such an Esoteric Doctrine or Tradition was in very truth the "heart" and foundation of the great Master's teaching and life-work.

MORE ABOUT HEALING — G. de Purucker

Being whole, and being healed or well — in other words, being whole and in health, or "wholth" — mean the same thing; the two words, health and wholeness, come from the same root.

"Thy knowledge hath made thee whole." *Pistis, πίστις*, translated "faith" — a word which has been so badly understood: it means the inner conviction of cosmic verities, knowledge of things unseen; and when a man knows, he needs no further proof. Proof is the bringing of conviction to the mind. When you have it, you look upon proof as superfluous.

When a man is whole, he is well, he is healed; and this more than anything else is the work of the Theosophical Society, spiritually, morally, and intellectually speaking: to make men whole, to make every one of the seven principles in the constitution of the normal human being active, so that there shall be a divine fire running through the man, through the spiritual and intellectual and psychical and astral and physical — and best of all for us humans, the moral, the child of the spiritual. Then we are whole, we are in health, for our whole being is in harmony.

Now then, is it not true that the work of the Theosophical Society is so to change the hearts and minds of men that their lives shall be changed, and therefore the lives of the peoples of the earth? What is this but healing at its roots instead of healing the symptoms? The god-wisdom goes to the very root of the disease, and cuts it; and the successful Theosophist is not he who can preach the most and say the most in the most fascinating way, but he who lives his Theosophy. "Theosophist is who Theosophy does."

You remember — I speak of the Christian New Testament because it is so familiar to all Westerners — you remember the accounts therein given of acts of healing done by the Avatara Jesus. You will find exactly similar tales in all the different religions or philosophies of the world, ancient and modern. Why, even among the Pagans in the Temples of Aesculapius there were patients who came and slept there for a night, and were healed, healed in the morning. The common report said: "healed by the God." The actual truth was: "healed by the conversion within," not the conversion of the brain-mind thoughts but the conversion of a life: a life turned upwards instead of turned downwards. And the grateful sufferers now healed of their troubles put up *ex voto* offerings on the walls of the temples of Aesculapius, with carven or engraven images of the part or parts cured: a head, a leg, an arm, a liver, a heart, or what not — an eye, an ear, a nose or mouth, as mute witnesses or testimonials: "I am healed." Why, of course, such things happen, have always happened, and everywhere. But this is the case of those who heal themselves by becoming whole — this one thing.

When we speak of the work of healers working upon others, that is different; and that healing which is done by the transference of vitality from a healthy clean body, from a man or woman with a healthy, clean mind, is good and right, and there is no harm in it. As the Christian New Testament has it, the Master Jesus said: "Virtue (the Greek word means strength or power) hath gone out of me." Virtue — the Greek word here is *dynamis*, δυναμις, and the word of the English translators, "virtue," while etymologically fairly correct as giving the same sense, in its modern connotation utterly fails to convey the notion of strength or power leaving Jesus, i. e., life-force, vitality. From this Greek word *dynamis*, we have the many words in modern European tongues, like "dynamic," "dynamo/ "dynamite." "Virtue hath gone out of me" —

the vitality, the sympathy, passed over, and the teacher felt the loss. A healer can only heal by giving of himself; and see how wonderfully the old truth applies even here: by giving of yourself to others.

Then another thought — and I speak of it because it is rather important in this connexion. I have heard it said by those whose hearts are harder than their heads: "Lo, behold, a Theosophist and ill, sick, ailing, wretched, cannot even do a full man's work in the world. His karman, let him work it out!" Of course, but you are not the person to tell any other person when the karman is worked out. Your duty is to help, and leave to nature the healing processes, and it is an awful cruelty to say of any other — Theosophist or not — that because he is ill and suffering, his sin has found him out. True, but it is not for us to sit in judgment. Let us again remember the words of the Master Jesus, after healing by transferring abundant spiritual vitality: Go thou and sin no more. For thy sin wrought thy disease upon thee.

Yes, and because we suffer now is no proof that in *this* life we have done the sin that has brought it upon us. It may have been ages in the past, and only in this life when the man or woman needs more than ever before the vitality and the strength and the health to go forwards, his sin hath found him out, and taken this form. Learn the moral in this, for your sin will find you out in this or in some later life; and better to have the disease out at once than to dam it back to come out in some future life when you would wish then that you had suffered from, had got rid of, the poison in the former life, and had done with it.

Yes, I for one — I speak for myself — but I for one had liefer die when the disease is coming out, if it cannot be healed, than to dam it back by black magic and store it up for some future day when I shall need every ounce of my power and strength and

health to achieve. It is not for us to judge another, and to say his sin hath found him out. We know it, but that is no way to help him. It is not encouraging, it is not kindly, it is not generous, and for all we know from our viewpoint it may not be true. Abstractly it is.

A chela does not become a chela because of his body. He becomes a chela because of the rapidly evolving inner man, the emotional, mental, and spiritual parts of him. The genius, an ordinary genius in human life, is not a genius because his body is spiritually evolved, a relatively perfect physical frame. As a matter of fact, look at the annals of history, and you will find the almost astounding fact that the majority of geniuses have been born in enfeebled bodies, often sickly ones, sometimes actually decrepit, cripples and what not. But the flaming fire of genius within, aye! — it was that which actually crippled the body, deprived it of the life-forces which would have builded it up, which were gathered up into the soul to feed the soul. Sometimes gross, robust physical health is actually a deterrent to inner growth because the physical forces of life are so strong, they act as a heavy veil around the soul.

The Theosophical Forum

THE UNDERSTANDING HEART — *Frances M. Dadd*

"What do you want from life?" is a question asked of its readers by a well-known Sydney journal. The answers are thought-inspired, and therefore thought-provoking. The Theosophist is inclined to agree with one contributor who prefers to ask: "What can you give to Life?" But in this succession of episodes which we call Life there is one thing I would ask for above all else, and that is an Understanding Heart; a willingness to concede to others their point of view, a readiness to admit that I was not the sole possessor of truth upon any subject, be it religious, scientific, philosophic, educational, or what not.

This would not mean in any sense a condoning of wrong or a divergence from principle: that would not have place in my desire. Simply would I wish to be truly generous, much more than tolerant, even anxious to see in another's point of view some element of truth which I, from my necessary incompleteness as a mere human unit, had missed, but an understanding of which might be equally necessary in the pursuit of Knowledge for the sake of the welfare of Humanity.

THE OCCULT NOVELS OF BULWER-LYTTON — *H. T. Edge*

These novels, especially *Zanoni*, are quoted by H. P. Blavatsky as expressing in beautiful and dramatic form the teachings which she herself was expounding; and this fact alone will be for Theosophists a testimonial to their merits, if such be wanted. But Theosophists of today probably do not realize how much Bulwer-Lytton's books meant to some Theosophists whose experience, like that of the present writer, dates back more than half a century, to a time when occult books were few and far between, and the atmosphere of satisfied scientific materialism reigned more unchallenged than it does today. *Zanoni* and *Mejnour* lived in the mind as almost solid realities, and the sublime passages in which their thoughts were expressed dwelt in memory as a daily companion.

To the conventional critic of some literary cyclopaedia these novels will be classed among the author's vagaries; and his microscope will be focussed on what to him will seem faults of construction and wanderings of an unruly fancy. Though we intend to confine ourselves mainly to the particular works in question, we can hardly criticize them without at the same time criticizing the author's novels in general. Let it be our first duty to protest against attempts to measure a genius with calipers; to dissect a grand living whole until all reality and significance is lost in a confusion of meaningless details; to censure an author for failing to do that which he never attempted to do; to overlook his purpose while concentrating only on the means by which he has achieved it. It can scarcely be doubted that so competent and versatile a writer as Bulwer-Lytton could easily, had he so desired, have written things that would fully satisfy the demands of conventional literary criticism; and it is also just possible that

he had other aims that seemed to him more worthy of his powers.

Those endowed with the sympathetic faculty of recognising greatness can see in the author a man of lofty imagination, imagination in the true sense, the imagination that lifts us to the heights of vision and insight; a man of rich and teeming nature, full of human sympathy, of vast experience of life, of wide culture and tireless industry — a genius in short. The writings of such a man are outpourings from a full heart; they come in no ruled and ordered array; they ride roughshod over the laws of formal logic; they come like flashes of many-colored light. Such is not only the way in which genius communicates its message, but such is also the way in which that message is received; for our lives are not ruled by formal logic. The human heart and mind is a phantasmagoria of changing scenes, thoughts and emotions chasing each other helter-skelter in a way which the prim brain-mind would consider very disorderly, but which obey a superior principle of order, beyond the capacity of that brain-mind to measure; and which consequently achieve the effect intended. The Hebraic Solomon, of mighty experience in life, pours forth his teeming heart in a succession of vivid pictures, now rising to the heights of faith and hope, now sinking to the depths of despair; and his songs find their echo in ordinary human hearts who find their own joys and sorrows so faithfully reflected. The finest poem may present a series of images that are inconsistent with each other if measured by rule and compass; but if we can drop the mathematical instruments we may perchance glimpse the total effect.

So it is easy enough to convict our author of looseness in construction, of discursiveness, of long digressions, sermonizing the reader, and many other such alleged faults. But be it understood that we are not satisfied with saying that he achieved his purpose *in spite of* these faults; for we think it nearer the truth

to say that he achieved his purpose *because of* these (alleged) faults. In Poe's poems we often feel how his genius was cramped by his elaborate theories of construction; and in many of Stevenson's works we realize that plain ordinary language would have suited the occasion better than the unusual words and over-choice phrasing which he so often employs. *The Strange Adventure of Dr. Jekyll and Mr. Hyde* may be full of inconsistencies and faulty analysis of the human constitution; but would it have been half so vivid and telling if the author had allowed his brain-mind to get to work on his vision instead of taking the advice of his wife to leave the vision as it was? Was Katherine Tingley's *Aroma of Athens* full of anachronisms and all sorts of features which the critics would condemn as faults? Likely enough, but little they care who were privileged to drink into their souls, to incorporate into their lives, the wondrous magic that was evoked — not in spite of, but (we insist) because of these alleged faults. And so, if *Zanoni* had been constructed by Act of Parliament it would scarcely have outlived the brief day in which it was first published, and we should not now be reading it for the hundredth time without a hint of satiety.

What may perhaps be considered another hall-mark of genius is the fact that Bulwer-Lytton was mercilessly attacked by the established powers for a bad influence on morals — the exact opposite of his intent, the exact opposite of the effect he actually produced. In his *Word to the Public*, published after the attacks on his *Lucretia, or Children of the Night*, he appeals to the public and to people of real intelligence, against these pygmies in high places.

As to the source of his truly wonderful portrayal of occult mysteries, we have always to bear in mind that every man has innate within him the faculties which can bring him into direct contact with the unseen. Next, he was a man of great erudition

and untiring industry, born into circumstances which gave him command of ample literary resources. One is tempted to surmise that the author's own personal experience of trial on the path must have had something to do with the matter; but in the absence of anything sufficiently definite on this subject, we must let it pass.

"Zanoni"

It will not be necessary to load our pages with extracts from books that are well known and easily accessible. In *Zanoni* it strikes us at once that there are only two adepts (ultimately only one) in the whole wide world, a world so multitudinous and varied in all its other denizens. We have no hierarchies, no orders, no degrees. This is indeed an anomaly, but serves its purpose in concentrating attention on the picture to be presented; to have attempted to cover too much ground would have shallowed and faded the result. Also, we are at liberty to take *Zanoni* as a type; though here again it might be objected that his association with such historical realities as Robespierre and the guillotine militates against this. But our previous remarks about consistency and inconsistency will save the situation here. We have in this work a number of different lessons shown in a vivid light. And what adepts they are! Mejnour has been described by H. P. Blavatsky herself as resembling a desiccated pansy between the leaves of a book of solemn poetry. *Zanoni*, it is true, is a sublime figure; yet his lonely isolation offers no enviable prospect, and is used in the story as a contrast to the healthy life of human love and companionship to which he eventually either attains or succumbs. Again, he has prolonged the exuberant vigor of youth by quaffing the elixir; which seems to make a sensualist, though a refined one, out of him.

Then there is the affair of his love match: it must be realized by

the student of Occultism that Zanoni, in order to win the glorious heights to which he is represented as having attained — in order to have overcome the dread guardian of the threshold — must once and for all have put himself beyond the possibility of falling prey to the particular temptations to which he yielded. This is not to underrate the power and holiness of a pure earthly personal love; but, however great and holy such a sentiment may be, it is still mortal, still earthy, and Zanoni has risen above all mortality and earthiness. Nay, does he not by his yielding lose the power of invoking the glorious Adonai, and find that his call is answered only by the dread specter? It would seem that, whatever initiation he may have passed, it was incomplete: there seems about him that which brings to mind the Pratyeka-Buddha, who enjoys bliss at the cost of severing himself from his kind. If so, then we may welcome the sacrifice which Zanoni makes, and see in it the willing sacrifice of the true Buddha, who forsakes his bliss in order to follow the dictates of his Heart. This is surely the lesson the author intends at this point.

The contrast between the loneliness of head-learning — the Eye Doctrine — and Heart-Wisdom is a favorite theme with Bulwer-Lytton, and often takes the form of a pre-occupied self-satisfied intellectual introvert, who falls prey to the attractions of a simple girl who is an incarnation of the qualities of the heart. We shall find this theme in the *Strange Story*, illustrated by the love of Fenwick and Lilian. We see it here again in Glyndon, oscillating between the lures of head and heart, too young to know what he wants and rashly plunging into everything to find out by the test of bitter experience.

In the experiences of Glyndon we have a most dramatic portrayal of what awaits him who through rash ambition forces himself into realms for which he is all unprepared. It may seem to some that the adepts unduly lured the aspirant to his doom; but, as

explained to him by Zanoni, it was the demand of Glyndon's own impetuous desire that prompted him to make a call such as no Master has the right to refuse. The Master may warn and point out the dangers, and if the call comes from the passions alone, he may refuse; but if he discerns a spark of genuine aspiration, he may not spurn it. Thus Glyndon goes through the fires of purification, due to the admixture of unworthy motives; and success awaits him in the future. In this drama we have an actual fluid elixir, and other physical means, employed by the two Adepts; and while it may suit some to regard these as merely symbolical, yet we must remember that analogy runs throughout nature. That actual fluid elixirs exist and are used cannot be denied, unless we are prepared to reject evidence as strong as what in other cases we are ready to accept. It may be that Adepts of a high order do not require, or do not resort to, such physical means; yet physical means are not in themselves to be despised. It is only when the physical *replaces* the spiritual that the opprobrium of black magic is applicable; to the pure all things are pure, and there seems no reason why a Master of White Magic should not avail himself of the bounties of Nature on all her planes.

The Dweller on the Threshold has passed into language: it is the great Lord of the Underworld, the ruler of the lower kingdom, the Satan that tempted the Christ with all the riches of earth. It lurks in the recesses of every human nature, harmless and beneficent so long as its power is not challenged; but once we make up our mind to scale the heights, we must either master it or succumb. Glyndon tears aside the veil while he is yet fresh from the fires of lust and filled with the pride of passion; and evokes — the dread presence. Once summoned, it cannot be dismissed; and we learn how he goes forth from his trial, his blood tingling with quenchless desires to attain, but doomed to perpetual

dissatisfaction. It is only when plunged in worldly pursuits that he is free from the presence; but let him for a moment aspire, even though it be in painting a picture, and the Dweller is by his side. Only one thing can lay it — unselfish love; but it is his sister, not himself, who by her sacrifice of life for him, evinces this love.

Contrasted with the Rajah of the Senses we have the glorious Augoeides, the Shining Form, the Manasaputra in man; and perhaps we may see in Adonai (though not clearly distinguished from the other) that Atman which, shining in all men, is universal, and particular to none.

We cannot but feel that Zanoni ultimately chooses right in abandoning his glorious isolation at the dictates of his heart. When he took his first initiation, far away in the past, he must have left an important part of his belongings behind, and had to come back a long way to fetch it. The object of his love makes but a poor figure, considered from a worldly standpoint; but the real bride was veiled from sight behind the earthy vestures; and the marriage is consummated, as alone it could be, beyond the tomb — in a region left vague, tenanted only by God and his angels and the souls of the blessed.

"A Strange Story"

In the *Strange Story* a different chord is struck; for instead of the romantic atmosphere of Zanoni, the setting is that of conventional upper-middle-class respectability. Not amid Italian moons and spouting volcanoes, not amid brigands and guillotines, does the occult manifest itself; it obtrudes itself upon the tea-table and flusters the prim old maid. At the very beginning we have a most important lesson: the effects of Karman, as concentrated by the curse of a dying man. The narrator and hero, thoughtless in his physical vigor and intellectual pride, so mercilessly attacks the beliefs of the poor old doctor who believes in hypnotism and

consults clairvoyants, that he brings about his death from the poverty due to the ruin of his practice and the mortification attendant upon the loss of repute. The curse is fulfilled in detail throughout the book. It is by the very magic whose existence he has denied that Fenwick is thwarted in ambition, success, reputation, and love; and brought well-nigh to the scaffold. But note well: his fault was not due to want of heart but to wrongness of head and to heedlessness. The Karman is therefore restricted in its sphere of action, and he ultimately wins through. Those who tend toward a too narrow and rigid interpretation of Karman may find a difficulty in analysing the situation that arises from the curse of the dying man; but Karman acts on all planes, and all men are inextricably interwoven with each other; so that the problem of tracing the complications of this universal law is one of infinite difficulty. Here again we have Bulwer's favorite theme of the contrast between cold intellectualism and sympathy; and illustrated in his favorite way — that of love between a man of intellectual pride and a woman who is all heart, a man with a complex and "logical" mind and a girl who sees with the intuitive eye of the heart. Those who have understood the teachings in *The Secret Doctrine* about the Divine Hermaphrodite will know that these two sides of human nature exist (or existed) in the so-called past as an undivided whole, which has become separated. May we not see — — did not the author see — in these attractions between the two representative types of mortal beings, an attempt to recombine the sundered fragments of the soul; ending so often, in earthly life, in anticlimax, and to be realized only in that land far away where alone ideals are found? Leaving aside the personal mask, we see that, in the idyll of Fenwick and Lilian, a victory is achieved, whose full meaning pertains not to this muddy vesture of decay.

As in Zanoni, we note the isolation of the magician (in this case a

black one) and the absence of anything like lodges and orders of adepts. But we may perhaps suppose these to be implied, while recognising that an artist is neither a photographer nor a map-maker, and that he necessarily and of intent eschews the vagueness of comprehension and of detail in order to present a vivid picture. We can hardly suppose that a novelist who should be scrupulously exact would be very interesting; so no fault can be found with this circumstance. Here however we have a new feature introduced in the contrast between the white magician, represented by Derval, and the hideous monstrosity Margrave; while the existence of a lodge is indicated by the fact that Derval is said to have obtained his wisdom and power from Oriental dervishes.

There can be nothing more graphic and at the same time accurate than the description of the three fires in the brain of the entranced Margrave, as seen by the also entranced Fenwick. The red fire of animal life; intertwining with it, the azure flame of the intellectual life; while sitting apart and enthroned is the silver spark of the essential spiritual being. Even for Theosophists, well-read as they may be in the teachings as to man's compound nature, this is well worth reading for the intense power with which the truths are brought before the eye and made real. And what could be more vivid than the portrayal of the loss of the soul; how, in the vision, the whole career of Margrave is compressed into an episode, which in the actual narrative spreads itself out in what we know as time. The red fire waxes lusty, and calling to its aid the azure flame, it wages war against the silver spark, until at last that spark, with many a tear and lamentation, forsakes its desecrated shrine, leaving that shrine to the devastation and destruction of the triumphant foe. We are reminded of Poe's "Haunted Palace," where the "Spirits moving musically to a lute's well tuned law," are replaced by "Vast forms

that move fantastically to a discordant melody . . . and laugh, but smile no more." Ah, pity that Manasaputric light, for it has failed, and must slowly and patiently build itself a new shrine; yet in the realms wherein it dwells, perchance even sorrow is a melody sublime. Far more is our pity due to the doomed rebel, who, in his attempt to carry captive his own immortal Soul, has eternally cut himself off from that Soul — the root of his existence. In Arabian tales some potentate builds himself a palace replete with all the riches that earth can furnish, and craves but one final boon — a roc's egg to suspend within the dome. The egg is found and suspended: the whole fabric instantly vanishes in ruin and nameless dust. Such likewise was the fate of those who strove to pierce the vault of heaven with their tower, and thereby brought down the celestial fire to their utter destruction.

The whole mystery of the man who loses his soul unfolds gradually and is not made clear until we have reached the last chapter. Beginning as the headstrong Louis Grayle, he falls foul of his comrades and starts a career of selfish ambition. In the East, when stricken to death by the fatal scourge, he is rescued by a holy dervish who administers the elixir. He murders the dervish to obtain the elixir. Wakes up, not knowing who he is, whence he came. Believes himself to be the natural son of Louis Grayle, whom he but dimly remembers and about whom he strives to get information. Takes the name of Margrave. As Margrave he evinces a curious double consciousness, working evil spells in his astral body, and knowing nothing about it in his waking life. The evil genius guides his acts, yet in the waking state he is only dimly conscious of it. This is brought out in the scene where Fenwick casts him into a trance with the magic wand and compels the disclosure.

This book is so replete with details of magic lore, pointing to a very extensive research by the author, and filled in by his

wonderful truth-seeing imagination, that we can only refer briefly to a few. Here again we have the elixir, as an actual fluid, and we have the magic wand, the circles with lamps burning a mystic spirit, the double triangle, and other appurtenances of ceremonial magic. In the hands of Margrave, these things may be considered orthodox; but Sir Philip uses some of them also.

Between the incredulous (or credulous) scientific skepticism of the unconverted Fenwick, and the occult truths brought out in this book, we have the ingenious brainy hair-splitting Faber, an intolerable old bore, whose theories are set up only to be knocked down; and whose discourses provide the reader with ample opportunity for skipping. Worthy of note is the utter contrast between the beautiful Margrave, whose radiant presence is a delight, and Stevenson's Hyde, who has an aura which gives everyone the horrors at first sight. But then Jekyll is also a detestable character, and the whole analysis is faulty — — which does not at all prevent the book from accomplishing its purpose.

"The Haunted and the Haunters"

The story called *The Haunted and the Haunters: or the House and the Brain* is most unfortunately nearly always found in its mutilated form, accompanied by a note which tells us that the author suppressed a part of it (when republished from its original form in *Blackwood*) for fear that it would interfere with the plot of his *Strange Story*. But the part suppressed is far and away the most important part. We are left with a very capital ghost story and with speculations that the phenomena are due to the distant workings of a black magician. But in the missing part the narrator actually meets this black magician. This being is unique; he is the only one of his kind in the whole world, so far as we can make out. And this is of course impossible. But again it is pertinent to say that the author's aim is to paint a vivid picture,

unencumbered by unnecessary details and elaboration. For those who have not read this latter part of the tale, it may be well to summarize its purport. The man (whose portrait, it may be remembered, is found in the hidden room in the haunted house), is a being endowed with immense force of will and a natural power of concentration and attraction towards the occult. But he is wholly without conscience, and is a sensualist. By means of his mighty will, and the secrets he has discovered, he can defeat death and prolong his life indefinitely. From time to time he arranges an apparent death, schemes the transfer of his enormous wealth, and reappears in a new age and a new guise. He is identified with several distinct characters in history. He throws the narrator into a trance, wherein the narrator obtains the power of supreme clairvoyance and reads to the magician his future: how he will yet live to play a part that will fill the world with amaze; but how in the far distant future he will be hunted down by all humanity and will perish amid polar snows, his titanic will subdued at last.

Such a man might exist; such a man as I have described I now see before me — Duke of ___, in the court of ___, dividing time between lust and brawl, alchemists and wizards; again, in the last century, charlatan and criminal, with name less noble, domiciled in the house at which you *gazed* today, and flying from the law you had outraged, none knew whither; traveler once more revisiting London with the same earthly passion which filled your heart when races now no more walked through yonder streets; outlaw from the school of all the nobler and diviner mysteries. Execrable image of life in death and death in life, I warn you back from the cities and homes of healthful men! back to the ruins of departed empires! back to the deserts of nature unredeemed!

This story is written with great power; it produced a great and lasting effect on the present writer, who first read it a few years before he heard of Theosophy. But it produced a weary conflict within him, because, the magician being so black, an antagonism arose between the ideals of power and knowledge on the one side and conscience on the other. This discord was happily resolved by the discovery that white magicians existed. If we wish to use this tale as a symbol, may we not say that such an evil entity as is here depicted forms a part of the make-up of most of us? On any theory which supposes that such elements of our compound nature can be isolated, and thus stand naked in all their good or evil qualities, as the case may be, we may contain within us such a being, seeking to master the possession of our instrument and tending towards the production of a Margrave or a Hyde.

The theory of hauntings propounded in this story represents the effects of a powerful mind, aided by application of occult means of a more or less physical nature, in vivifying the astral light, so that its preserved images of crime and misery clothe themselves in visible forms and enact mechanically a drama of events of the past. The struggle between the narrator and the overpowering evil will of the black magician is especially worthy of notice. Though every faculty of body and volition is crushed down, though he yields even to *fear*, yet he summons a courage that is above even that fear — pride, he calls it — rises to a plane whereon the sorcerer cannot act — and conquers.

The Theosophical Forum

SCIENCE AND RESEARCH — *C. J. Ryan*

Modern Science develops a Soul!

H. P. Blavatsky would rejoice at the recent development of higher scientific ideals and at the practical form they are taking. Dr. L. P. Jacks, the well-known philosopher, remarked in a recent broadcast that while in old days prophets overawed the people by crying: "Thus saith the Lord," in these days we get the same effect by: "Thus saith Science." Religion, which once gave hope and comfort has almost lost all its authority, and science, with its soulless doctrines and aloofness from the "humanities," has brought the world to the pass which we see before us. At last, however, we see the beginning of a greater hope. Science promises to become ensouled.

In 1936, at the Harvard Tercentenary, and later in England, great scientists declared that our collected knowledge should be directed by moral force, and at the recent meeting of the American Association for the Advancement of Science at Indianapolis, the sense of responsibility of scientists to society was emphasized. Dr. Conklin, in his retiring presidential address, challenged the Association to shift its center of gravity from the mere acquisition of knowledge for its own sake to science for the true benefit of mankind. Science has provided tools and unloosed powers which have been perverted into wrong channels. It has now to accept the responsibility of teaching man to use them wisely.

According to Dr. F. R. Moulton's Report of the Indianapolis meeting, in some respects the climax of the proceedings was the resolution passed by the council inviting the British Association for the Advancement of Science and others to co-operate in

making right instead of might the ruling power in human life. Speaking in the Temple at Point Loma a few weeks ago, Dr. G. de Purucker referred to the awakening of science to its responsibilities, and spoke of the remarkable phenomenon that is taking place before our eyes of a soulless body beginning to be ensouled. "Ideas rule the world," and one of the most important objects for which the Theosophical Society was started was to stem the tide of materialism for which science had been so largely responsible. He spoke of the tremendous advance toward Theosophy that would take place when our scientists, "the High Priests of Nature," envisage the fact that not merely Truth but Justice and Right constitute the framework of the universe, and are not mere "by-products." More than fifty years ago, in the heyday of materialistic science, one of the Masters of Wisdom wrote the famous letter to Mr. A. O. Hume criticizing the unsympathetic attitude of scientists in regard to the higher welfare of humanity. We can quote only one passage:

Exact experimental science has nothing to do with morality, virtue, philanthropy — therefore, can make no claim upon our help until it blends itself with metaphysics. Being but a cold classification of facts outside man, and existing before and after him, her domain of usefulness ceases for us at the outer boundary of these facts; and whatever the inferences and results for humanity from the materials acquired by her method, she little cares. — *The Occult World*

The new attitude of scientists is another sign, among many, of the influx of Theosophical ideas into the West which was started by the Eastern Sages at the propitious time.

Have Animals Souls?

Dr. Robert Broom, the distinguished South African biologist and

anthropologist whose advanced views (in the Theosophical sense) about Evolution have frequently been mentioned with appreciation in these pages, has just created a stir by publicly stating that man may well have more than one soul, and that even the animals and plants may not be destitute of souls of some kind. Such utterances coming from a scientist of his standing are of value in clearing the way for a wider understanding of human relationships and the underlying unity of all forms of life — universal brotherhood, in short — the basic principle of Theosophy. We quote a few significant passages from Dr. Broom's letter to *The Rand Daily Mail*, December 4, 1937:

When I first, in 1931, made the revolutionary statement that evolution is practically finished, I do not suppose that anyone agreed. Soon, however, Julian Huxley, on looking into the matter, had to admit that I seem to be right. . . .

The facts are beyond all question. Of course, there is room for considerable modification. Man may evolve into a Super-man, but he must remain physically a man. He may lose his little toes, he may lose his wisdom teeth, he may lose his lateral incisors, but he must remain a man. . . .

With regard to the soul question, there is room for greater differences of opinion. Sir Arthur Keith certainly differs from me. . . . But that does not prove that they are right and I am wrong.

"Evolutionist" [a correspondent] says, "If the Mind, or Soul, be the source of intelligence and not the brain, then, as they all have a certain amount of intelligence, it follows that animals, bees and ants also have souls."

Here I quite agree and am quite willing to give souls to all living things, even plants. The Amoeba (a primitive single-

celled animal) acts as if it were an intelligent being, and certain *foraminifera* make the most careful choice of sand particles and little calcareous plates to build up their houses. Further, all living cells act as if they were controlled by some intelligence. A skilful human builder, if given prepared materials, can build a house, but living cells can build much more skilfully, and they, further, make their own bricks and tiles and windows. . . .

Freud, Adler, and Jung have shown that man is a good deal more complex than was believed even fifty years ago. So complex is man that recently a famous American scientist, Alexis Carrel, has written a book, *Man the Unknown*. Not only does it appear that man has a soul, but it almost looks as if he has two souls — a conscious one and an unconscious, and possibly the unconscious soul controls all the cells of the body. . . .

We are still far from a solution, but I think we can say without any hesitation that the solution of the materialists of the Victorian era is quite unsatisfactory. — R. Broom, Transvaal Museum, Pretoria

It is not very long since H. P. Blavatsky was criticized for her "unscientific" teaching, derived from the Ancient Wisdom and her own knowledge, that man has a compound nature of several inter-blended "principles," which might, for want of a better English word, be called "souls."

Antiquity of the Domesticated Cat

It has always been understood that the Egyptians were the first to tame the cat, and that from Egypt the domestic cat spread to other countries, reaching China about a couple of thousand years ago, and England about A. D. 900. To the surprise of archaeologists,

foot-prints of a cat chased by a dog have just been found at Chanhudaro, one of the cities recently excavated in the Indus Valley, north-western India. The two animals scampered across the surface of a brick which was still soft, and by chance the impression has been preserved for our instruction. This Indus civilization is very ancient, having neared the end of a long career at least five thousand years ago. The revelation that a highly advanced culture existed in India at such distant times, which was made a few years ago, is one of the outstanding events in archaeological research. No one in the West dreamed of such a possibility yet here are the remains of cities with excellent drainage systems, well-built houses, statuary that is comparable with the Hellenistic Greek, a highly developed script, etc. When we say "no one imagined such a possibility" we must except H. P. Blavatsky, who frequently referred to the existence of a high civilization in India at a remote period and said that British archaeologists would discover it some day. In regard to the antiquity of the art of writing in ancient India, which may have been practised 12,000 years ago, she says, she cannot conceal her scorn of the philologists of her day (even Max Muller) who believed that it was unknown in Panini's time, only a few centuries b. c! How did she know so many historical and scientific facts, unsuspected or denied by the highest authorities in her day but now brought to light!

Now it appears that among other appurtenances of modern civilization the ancient inhabitants of the Indus Valley were possessed of the domestic pussy about four thousand years before it reached western Europe. (The savage and untamable *wild-cat* was, and is, widely distributed throughout the world.)

An apparently minor discovery like this is often of great significance in providing clues to unsolved mysteries, and we shall look forward to further discoveries of the antiquity of the

domesticated cat in other parts of the Orient.

The Minnesota Girl

In the dry bed of a lake in northern Minnesota the bones of a prehistoric girl were found a few years ago, and great discussion was aroused in regard to the time when she lived. The school that sees man as a very recent arrival in America declared that she must have been buried long after the silts in which the bones were found were deposited and would only be 500 or 1000 years old. The Geological Society of America was recently informed, however, that the bones were as old as the sediments, i. e., from 18,000 to 20,000 years old, and the controversy is probably closed in favor of those who are working for a great antiquity of man in America. The main objections to the theory that man in America was contemporary with man in the Old World lie in the fact that no undisputed remains of such enormous antiquity have yet been found, and that no anthropoid apes' remains have been found in America from which he could have descended! As the majority of scientists are abandoning the Darwinian idea that man came from any known anthropoid in favor of the theory that he came from a common root-stock of far greater antiquity, the establishment of considerable age for the Minnesota girl is of importance, though of course she is a mere child in comparison with the English "Piltdown Woman" and other Old World inhabitants who lived nearer a million years ago.

QUESTIONS AND ANSWERS

Buddhism and Theosophy

Could you give a little explanation of the difference between Theosophy and Buddhism as it is generally taught today amongst the masses?

G. de P. — That is a good question, and one I like, because if I were not a Theosophist, I most emphatically would have accepted the doctrines of the Lord Gautama, the Buddha, as the most humane, the most philosophic, the most generous, the most princely, not only in their attitude towards men, but in the effect they produce upon men.

The difference is that between the mother and a very lovely daughter. The sublime mother is Theosophy, the lovely daughter is Buddhism. I would say that even as Buddhism is practised today, some 2500 years after the passing of its great Founder, even today it is the most theosophical of all the religions existent, the most generous, the most tender in its understanding of human problems; and in its dealing with them, without a vestige of anything that is harsh, unkind, or colored by hatred in any form. It has no doctrine of arbitrary punishment. Its doctrine of retribution based on cosmic law or *karman*, is retribution infinitely just. The evil that ye do will live after you, and ye yourselves the doers of it will meet it one day, and until ye undo the evil that ye have wrought it will abide — wonderfully logical, satisfying, and comforting.

Just see how this takes hold of the human heart. The true Buddhist says of his injurer: "He has injured me terribly. I pity him. I desire no revenge. That would be but adding my might to

the evil that is wrought, for some day the evil that he wrought upon me will fall, helpless man, upon him, and in addition he will have the evil that that evil-doing wrought in his own character. A double evil. I, his victim in this life, will receive recompense, double the recompense of the wrong, the injury, done unto me, because I shall have retributive compensation for the wrong, and because I do not in my turn hit back at my injurer, I have the increments of strength of character thus growing out of the injury wrought upon me, which is a double good to myself, who have suffered. I have the recompense in my own soul, that I know how to be patient and strike not, hit not back."

Divinity breathes through that. It is the very heart of pity, of compassion. And that is pure Theosophy. In other words, Buddhism is but a lovely daughter of a still more lovely mother. Christianity is its daughter, Brahmanism is its daughter, Taoism, all the religions of India, Persia, China, Egypt, of ancient Europe, and of the Americas. They all sprang from this one source, our God-Wisdom, as we call it, kept in the Guardianship of the Mahatmans, greatly evolved men. But I think that Buddhism is the loveliest of the daughters, because the truest. Fidelity has crowned her. Justice has followed her footsteps.

The Purpose of the Pyramids

What was the real purpose of the building of the Pyramids?
— S. H. W.

H. T. E. — When speaking of the pyramids, reference is usually to those of Egypt and chiefly to the Great Pyramid of Cheops. All these Pyramids, whether in Egypt, Central America, or elsewhere, are records constructed for the preservation of sacred knowledge through the dark ages, to be available to posterity. The Mighty Ones perform their great works and leave everlasting monuments; under their supervision the great pyramids were

built, when Dhruva was at his lowest culmination and the Pleiades looked over his head. Pyramids are part of the various stone monuments erected by those Initiates who journeyed to many lands for that purpose.

In seeking to explain the meaning of these records we are faced with the difficulty of interpreting an ancient science into terms of modern ideas. The science of those days was a comprehensive whole, which has become decomposed into sundered fragments, which seem to us to be unrelated to each other. The single purpose in the minds of the builders seems to us like a number of different purposes, competing with one another in the minds of various antiquarians. Were the pyramids initiation chambers? Were they records of astronomical data, or of mathematical truths, or of standards of measurement? They were all of these, and perhaps they could not be any one without being the others also. When the candidate passed through the processes of initiation he enacted in his own person the selfsame processes which occur in Kosmos; hence the size, shape, and orientation of the passages and chambers signify at once Kosmic and human mysteries. A profound lore of numbers and measures and their relation to the Kosmic plan enabled or impelled their architects to build their records according to these forgotten mathematical principles. Many investigators have discovered fragments of this lore, but have not succeeded in reconstructing the whole out of the fragments. Each is prone to fix on his own particular fragment and worry it to death, often cooking his figures and running into extravagances, the while he censures his rivals for committing the selfsame fault. The angle between a side of the base and the slant height is in the neighborhood of $51^{\circ} 50'$, and within the limits of difference of only three minutes of arc we obtain three remarkable results: (1) the periphery of the base is 2π times the height; (2) the cosine of this angle is .618 . . . , the ratio

of the Divine Section; (3) the ratio of the slant height to a side of the base is that of the ten-month lunar year to the solar year. If a certain cubit is used as unit, the side of the base gives the number of days in the solar year. Certain of our measures, usually believed to be arbitrary and modern, are thought by some to be based on kosmic facts and to be preserved in the Great Pyramid. Ralston Skinner and Piazzzi Smyth are much quoted in *The Secret Doctrine* in reference to the symbology of names, numbers, and measures. That the decimal notation was used is shown by the fact that certain significant numbers are derived from each other by permutation of the digits, which would not hold good in any other scale or system of notation. The orientation shows the four cardinal points and symbolizes the four Elements.

As to the age of the Great Pyramid, it is hinted by H. P. Blavatsky to be at least three precessional cycles, which is about 78,000 years; the evidence for which is explained in *The Secret Doctrine*, II, 432.

Puzzles in Evolution

According to Biology the lower animals and plants are in some cases so much alike as to be separated only by an arbitrary classification. If evolving souls manifest first in plant forms, then in animal forms, we are forced to the conclusion that a one-celled animal houses a more evolved soul than an apple-tree or a redwood which contains many cells. — H. M.

L. G. P. — In your question you have pointed out certain similarities between some forms of plants and animals, especially those forms representative of the lowest grades of these two main classes of entities, or kingdoms. So far as I have been able to understand, we are not to think of evolving souls as passing from kingdom to kingdom as you might "cut across" from one highway

to another on a trip south. Think rather of each kingdom as existing for a purpose, i.e., in order to provide the means for a certain class of entity to pursue its pathway right through, and thus help to bring that kingdom to its fine flowering, let us say, before the time is ripe for the monads composing that kingdom to advance and form the basis for a higher kingdom. Such changes will not be made until the dawn of a new planetary manvantara. We should remember moreover that all of the forms, whether of the animal or the vegetable kingdom are on the physical plane, and that for a stream of entities to pass into, or form a kingdom, it must do so by a process of "precipitation" from astral forms into physical encasements. It is just those elementary forms of life in any kingdom that are closest to the "precipitation-point" that are so similar to one another. The same holds true regarding the human kingdom, but in this latter case, there are no visible remains which would instance the condition of mankind when he was cell-like, during the first Root-Race in this Round. Such records of the early condition of humanity are in the astral light, and are therefore unseen. Could you see them, you might well exclaim "How like a one-celled animal, or one-celled plant!" But you would realize that you had under observation a relic of long-forgotten humanity. Therefore, I would not consider your diagram with its arrows representing the progress of a monad from one grade of plant-evolution springing over to a corresponding grade in the beast-evolution, and then back again into the vegetable kingdom and so on, as being the correct one to use. Think rather of each kingdom as providing the means for its evolving members to work out fully and completely the destiny of that kingdom, which, obviously, is the bringing into activity all of the characteristics peculiar and appropriate to that kingdom, and which characteristics are still partially latent within those evolving monads that make up those great life-waves which we call the Kingdoms of Nature.

OUR TWO INVISIBLE COMPANIONS (1) — *Katherine Tingley*

These two forces: the physical dominated by the spiritual, the mind illuminated by treasures of truth and inspiration from the Higher Self, these two, working together, will bring about results that are unbelievable. Nor will it take all eternity to bring about these things. The very atoms of our body can be touched by the fire of divine life and brought into harmony with the mind and soul, controlled as the master musician controls his instrument, by the Higher Self.

For life is Light and Light is life, and the Christos-spirit is in everything in degree. Could we sit at the feet of the Law like little children, could we free our minds from misconceptions and learn from nature and listen to the Christos-voice within, oh what revelations would come to us! We should then be able to say, *This is immortal and that is mortal; this belongs to the animal nature of man, and that to the spiritual.* The power to do this is the power that we need, arousing us from the dead, so to speak, and bringing to us light and illumination.

From the time that a vow is taken the disciple has ever with him two forces: two invisible companions formed of his own essence, one evil, one divine; the secretion or objectivation of the opposite poles of his own self-consciousness, they represent his good and evil angels, the Augoeides and its counterpart, each seeking to absorb his being. One of these in the end must prevail over the other, and one or the other is strengthened by every act and thought of his life. They are his higher and lower potentialities passing slowly into potency, as the energies (both good and evil, note) . . . are awakened. . . .

Our problem is to transfer more and more of ourselves to the real

battle-field. That field is one that consists of the feelings and thoughts of men; therefore, by right feeling and thought is the battle maintained. Our strength lies in keeping positive; in holding a steady joy in our hearts; in a momentary meditation on all floating great ideas till we have seized them and made them ours; in a meditation with the imagination on the life of humanity in the future, and its grandeur; in dwelling on the conception of Brotherhood. . . .

Yet never can we reach that point of spiritual discernment until we have found within our own hearts something new: a larger sympathy for all that lives, and a broader, deeper, grander conception of human life and the superb laws that govern it.

I think each is a focalization to a point of all the good and all the evil elements to which we have given conscious life in the past. At each moment, as we consciously incline toward good or evil, one or the other feeds into and fills the mind. And it is obvious that the point of connexion with either is that failing or virtue to which we are most inclined. However small a point, it must, if encouraged, lead to and involve all the rest on that side of the stores of our nature and the universe. If this is true, it follows that to give our *conscious* volitional encouragement and backing to any fault or any failing, is *an immensely pregnant move downward*.

But if effort be continual, if no failures or falls discourage the aspirant and are always followed "by as many undaunted struggles upward," he has always the help and counsel of the divine "Daimon," the "Warrior"; and victory, however far away, is certain. For this is an unconquerable power, "eternal and sure," an actual presence and inspiration, if you will but recognise it, having faith and faith and faith.

The Theosophical Forum

ARE THE DEAD LIBERATED OR EARTH-BOUND? — *Orange I. Clark*

Now, as in the past, communication with the dead, or spirit-return, has engaged the attention of a great number of people; but in spite of the studies carried on for years by many investigators, including the Society for Psychical Research, very little progress has been made towards satisfactory explanations of the various phenomena so faithfully observed and recorded. Why is this? A study of a recent book, *Personality Survives Death*, (1) by Lady Florence Barrett, wife of the late Sir William Barrett of the Royal College of Science in Dublin, gives an opportunity of throwing the light of Theosophy upon some typical problems in spirit-return.

The book consists mainly of "communications purporting to be from the late Sir William Barrett," say the publishers, quoting Lady Barrett, who edits the book and who contributes a prefatory article as well as brief explanatory notes throughout. There is a foreword by Canon J. E. Campbell, D. D., a close friend of Sir William Barrett for many years, giving the history of Sir William's connexion with Psychical Research. (2) But of paramount interest in relation to our later study of the book is a paper by the then living Sir William Barrett himself on "The Deeper Issues of Psychical Research," reprinted from the *Contemporary Review* of February, 1918. It is characterized by the breadth of mind, brilliance of exposition, and high ethical power that would naturally be expected from an F. R. S. who was for forty years Professor of Physics in the Dublin Royal College of Science, who was an associate of such eminent scientists as Sir William Crookes and Sir Oliver Lodge, and whose scholarly researches in his own scientific field made him famous in the world of science.

With this word of introduction, it will be profitable now to take up the book itself in some detail. We might begin with citations from Sir William's paper above mentioned. He says (p. xxxv):

From the confused memories of their earthly life, which constitute the bulk of communications that purport to come from the discarnate, it may be that some of these messages also proceed from a sleeping or semiconscious dreaming state of the deceased person. If this be so, it would explain the common objection to the trivial and scrappy communications from the unseen, and that they are so often only fragmentary reminiscences of life on earth.

On page xxxvii we find Sir William referring to the "strong objection" of both the Christian and the Jewish Churches "to any attempt to lift even a corner of the veil that hides the unseen world from us," and he cites the Biblical prohibition of necromancy as one cause of this repugnance.

Psychical enquiry in early ages would . . . have produced a state of intellectual and moral confusion. Weariness and perplexity would have resulted, faith in the orderly government of the world would have been shaken, and the dictates of reason might have been supplanted by giving heed to an oracle.

Sir William remarks that these warnings are applicable today, and that

the ignorant and foolish . . . need to be warned off a region which may prove such a treacherous quicksand.

Theosophists may agree with the above statements of Sir William, but are not likely to agree with him fully when he goes on to say: "But contempt and condemnation of the whole subject are as

mischievous as credulity and lack of common sense," for they are convinced that it is better to leave psychic matters entirely alone than to attempt development of psychic powers without sufficient knowledge and proper guidance, or from any motives whatsoever except those which are wholly unselfish and altruistic.

Theosophy maintains that the phenomena so stoutly sworn to by the Spiritualists and others are in great measure genuine; it is the *explanations* and interpretations of such phenomena that are absent or misleading, showing the lack of understanding of inner worlds and their workings. Sir William in life showed clear perception when he said: "The psychical order, it is true, is not the spiritual order . . ." and urged the possibility that "the mind of the percipient [of psychic visions] may be laid open to psychical invasion of a lower order. The cases of "possession" narrated in the gospels, and known in all parts of the ancient and modern world, cannot, in every case, be explained away by hysteria or epilepsy, but are often, I believe, genuine instances of *telergy*, the influence of an extraneous spirit, whether incarnate or discarnate, on the organism of the sufferer." All true, according to the teachings of Theosophy. And, we are bound to say, in a book avowedly published to give evidences of the genuineness of phenomenal spiritistic communication the inclusion of the strong warnings against the dangers of this pursuit and the emphasis placed on the limits of its usefulness cannot be too highly commended. These dangers and limitations are, at least in part, known to most Spiritualists and deeply regretted by them.

After reading this able address by the living Sir William Barrett, one might wish, out of respect for him, to have been spared the recital of the messages purporting to have come from him in the discarnate state; but these spirit messages are in so many ways typical, and again, so many people are interested in psychic phenomena and in communicating with the departed, that we are

constrained to proceed — it being our strong hope that our comments will not wound the feelings of anyone.

Lady Barrett was already a believer in the possibility of "spirit-return," and she cherishes a fond hope that her testimony in regard to these communications from another world may be of some weight with others. In their intimate description of personal details known only to her, these messages gave what seemed to her conclusive evidence that they were actually from the gloriously liberated spirit of her deceased husband. She tries throughout the book to persuade the reader of this, and we cannot mistake her sincerity.

Like most of the spirit-messages that have come to our attention, these communications are chiefly of a trivial and personal nature; though there is also contained in many of them religious and philosophical matter echoing the highly ethical ideas so prominent in Sir William's writings during his life, and strongly believed in by his wife. But these lack the fresh creative drive of living thought, and bear the evidence of being simply automatisms the basis for which was set by the powerful thought-force of the thinker during life. They are of a somewhat feeble nature which compares unfavorably with the able writings of the brilliant scientific discoverer that Sir William Barrett really was. Is such a "come-down" in store for us after death?

Notwithstanding any claims to the contrary, we are forced to the Theosophical explanation that the higher part, the spiritual part, had passed on to other and higher realms, and only the disintegrating shell or vehicle remained in the astral light to be attracted by the strong thoughts of the living and temporarily galvanized into a more or less faithful semblance of living mental activity. Is it right even to try to force the dead back to earth and keep them earth-bound? — even though the entities (whatever

they are) themselves seek association with living humans. This thought, of the wrong done to the departed by trying to draw them back to earth, has not been given much attention by modern Spiritualists, though it was strongly held by the ancients.

Again, it is a matter of common experience that the spiritistic messages of the dead, spoken through mediums to the living, are often instead a return to the living recipient of his own thinking, unintentionally impressed upon or picked up by the "spirit" or the medium. Sir William's messages on healing to his living physician wife are evidently of this so familiar type. Throughout the body of the book we find intuitions — "hunches" — clairvoyance even, which are not uncommon faculties of the living, attributed to impressions received from the dead. This latter is a usual assumption among Spiritualists. This writer was taught that idea in early childhood but has never found any evidence or warrant for it save that the "spirits" claim the credit, as they also do for most of the good in human life. But this claim is belied by the character of the messages received from them. The considerable variety of genuine phenomena produced, and claimed as due to the departed, cannot be accounted for by any one such explanation, however gratifying that explanation may seem to certain of the bereaved, who evidently have not considered all of the implications. The subject-matter generally contained in "spirit messages" is easily explained by a little knowledge of the evidences and phenomena of thought-transference, clairvoyance at a distance, astral records, elementals, and the fading mental or other shell left behind in the "earth's sphere" by the ascending spiritual self. To some it would seem better that death should end all than that it should bring the liberated spirit of man down to the plane of trifling astral magic and earth-bound interests.

As already noted, the book in hand seems to recognise the weaknesses of spiritism and the dangers with which its pursuit is

fraught — weaknesses and dangers with which the discriminating investigator is confronted at every turn. Sir William, the deceased in this case, is made to say that spirits have great difficulty in communicating with earth — that in doing so they cannot bring all their intelligence with them. The explanation is necessitated by the disappointing character of his own messages. Again, there is the claim of the supposed Sir William that he has not infrequent personal interviews with God Himself. His frequent statements that he and other spirits are speedily progressing to higher and undefiled planes out of touch with the earth, cannot be reconciled with his still more constant theme, that he is hovering about his living wife and his former dwellings, and is approving this, that, and the other of her household arrangements and personal activities. What a superlative hell it would be, to remain impotent and unseen in our old haunts, yet reading every concealed thought of the living! Is there no rest for those who have passed on? — we are moved to ask.

The present writer is very far from wishing to deal with this subject in a spirit of severity, but he feels that because of the importance of the issues involved those issues should receive friendly discussion and some important facts should be sympathetically but clearly stated.

How much more comforting than the concept above set forth is the teaching of Theosophy: that after death we leave off the gross and unlovely qualities that as earthly human beings we all have, and enter upon a needed rest — a prolonged separation from the anxieties and burdens of this world — a rest which does not separate us from the spirit of those we love any more than sleep separates us from our loved companions.

After all, is it the earthly qualities that we love in our fellows? Or

is it the shining spirit with which, if we truly love, our own higher part is indissolubly linked? The best and only sure proof that we can have of any worthwhile survival after our earthly death is to be found in rising to and living in that higher, permanent, truly spiritual part of ourselves which knows no death. In other words: to live in the spiritual will be to know the ever-living spirit. Rising above that which dies one finds proofs of the continuance of spiritual life. Such proofs are open to us at all times.

FOOTNOTES:

1. *Personality Survives Death*. Messages from Sir William Barrett, Edited by his wife. Longmans, Green & Co., 1937. 204 pp. Pr. \$2.50. ([return to text](#))

2. In various places in the introductory matter, the book speaks in high praise of the English Society for Psychical Research, of which Sir William was one of the founders, and of which he and his wife and their associates were ardent members. Let us remark here that when that Society shall have definitely withdrawn its unprovable and disproven calumnies against H. P. Blavatsky contained in the old Hodgson Report (which is regretted by the Society's membership) Theosophists generally and countless others will have a higher respect for that Society's sense of fairness. QUESTIONS AND ANSWERS

The separation of the sexes

Please may I know what is really meant by the teaching about the separation of the sexes in an early Root-Race. Is this connected in any way with the idea of "twin-souls"?

G. de P. — As regards this question concerning the separation of human individuals into distinct sexes which took place more or less during the Third Root-Race: this separation of each individual was brought about by the natural course of early human evolution, and is founded on the dual nature of mind, of the manasic part in us. When mind entered into the previously "mindless" race, the dual character of mind immediately made itself felt throughout all the lower quaternary, and when I say "immediately," I mean dating from that time. Thus it was that the androgynous race of the time slowly drew apart into the separate individuals as they now exist, into man and woman in other words; and the animals and indeed some of the plants likewise followed suit because of the strong psychic impression made by the human race on the astral mold of our world.

Thus this separation was a purely natural affair, based fundamentally on what you can call the positive and negative sides of mind; or you can otherwise phrase it as being based on the bi-polar character of the manas within us. Thus sex is really very little higher than the lower parts of the manas, and consequently is not a spiritual thing at all, a mere passing phase in evolution. As the human race evolves and rises out of the lower mind into the higher, sex will disappear.

In connexion with this, let me utter a word of warning: the idea of

some rather sensuous people that the higher nature of human evolution is to be achieved by "the union of twin souls" is altogether wrong. The secret lies in the individual himself or herself, for in each individual there are the two poles. Thus it comes about that a human individual for two or three or more incarnations is a man or a woman; and as karma makes for adjustment in these things and prevents extremes, slowly such an individual begins to lean or have a bias towards the other half of mankind, as I have often explained, and when that reaches a certain point, then the man's incarnations become feminine, and the woman's incarnations, as above explained, become masculine. Thus it is that our destiny swings us from incarnations as a man to incarnations as a woman, then back to a man, then back to a woman; and this will last until sex disappears slowly and inevitably.

The twin-soul idea is a very dangerous one, and in fact fundamentally all wrong. What we must strive to do is to rise above sex in both thought and feeling, directing our efforts towards the spiritual within us, in which there is neither sex nor any of its attributes.

Dog-Dreams

Do animals at death pass into Kama-loka and Devachan before rebirth? When dogs sleep they appear to dream. Do they do so? — R. B.

L. R. — The answer to the second question is found in *The Transactions of the Blavatsky Lodge*, where the subject discussed was the difference between the dreams of men and those of animals. Mme. Blavatsky said:

The dream state is common not only to all men, but also to all animals, of course, from the highest mammalia to the smallest

birds, and even insects. Every being endowed with a physical brain, or organs approximating thereto, must dream. Every animal, large or small, has, more or less, physical senses; and though these senses are dulled during sleep, memory will still, so to say, act mechanically, reproducing past sensations. . . . Like the last embers of a dying fire, with its spasmodic flare and occasional flames, so acts the brain in falling asleep. . . . The instinctual mind finds expression through the cerebellum, and is also that of the animals. With man during sleep the functions of the cerebrum cease, and the cerebellum carries him on to the Astral plane.

It often happens that men are conscious enough in sleep to know that they are dreaming, which shows that a man can separate himself on the mind plane into two or more entities. When awake, he can reason about himself as a composite being; he can, so to say, stand aside and see himself go by. An intelligent animal can think, but the light of reason has not been developed in it, though it has a more unerring instinct to guide it than man has. The pet dog, asleep, and evidently dreaming, is physically unconscious; he has not yet evolved a conscious higher mind or spiritual sense to function in Devachan, either asleep or after death. Therefore, in his dreams he is conscious somewhere on an intermediate level of being in the astral realm, and the Kama-loka is just such a subjective state. Unlike man, he would not ever dream that he was dreaming; nor would he have the human lower mind's imagination which animates present desires with pictures of past and future indulgences. His horizon is limited to the present; he awakes quickly, easily, and fully, ready for physical action. Likewise, his sleep after death must be correspondingly brief, light, and uneventful, before he is instinctively drawn back to another round of incarnation. Earth-life being his present evolutionary field of progress, Mother

Nature provides for the most of his time to be spent here. If he is brought back to his old master — as may happen — he will know the latter instinctively, while the master will reason about the mutual feeling of an old bond of association. The animal "soul" is still on the descending arc of materializing spirit, as man was before his latent fires of mind were lighted by solar deities, in the Third Root-Race. The post-mortem condition of animals was discussed briefly in *The Theosophical Forum* for April, 1938.

Identical Twins

Can you treat the subject of identical twins in its various aspects and phases, and do so from the occult standpoint; also discuss the significance of identical destinies in identical twins?

H. T. E. — In answer to questions about the bearing of individual destiny on the question of identical twins, it may be pointed out that, even if it be true that such twins are born from one cell, it is also true that every cell contains a number of lesser constituents (nucleus, nucleole, genes, chromosomes, etc.) which biologists are now investigating. Also, the cell merely furnishes a vehicle for the incoming entity, and it would seem no more reasonable to suppose that two monads using the same vehicle would be exactly alike, than to suppose that two people living in the same house would be alike. The expression "identical destinies" is surely unwarranted by any facts; unless "identical destinies" merely means "similar."

O. I. C. — Scientists are making a considerable study of human identical twins. It is clearly established that they are not identical physically or mentally, though they are usually very similar in appearance and personal traits, at least superficially. Nor are any two plants or animals entirely identical, science avers.

We do not know that any scientist claims or even admits that in any case "identical" twins have "identical destinies." Sensational and evidently inaccurate accounts which have sometimes attracted wide attention in the popular press cannot be taken too seriously. Nevertheless, it seems quite reasonable that having the same heredity and environment and voluntarily cultivating the same characteristics, attitudes, and likes and dislikes, as twins often do, they should attract to themselves similar happenings. But this is voluntarily induced destiny, not predestination.

We all of us, in accordance with our karma, attract to ourselves the conditions, events, and even accidents which we call our destiny. The fact that persons incarnate in the same family shows clearly some similarity of their karma or some karmic relationship. Being born as "identical" twins would seem to show a still closer karmic similarity or affinity. It is well known that brothers and sisters sometimes experience remarkable similarity of events and even of life history. It seems natural that such similarities should occur more often in the case of "identical" twins. However, there are as yet no statistical data as to the frequency of the similarities of life events, though a considerable number of scientists studying heredity and evolution are painstakingly collecting data as to every detail of the case histories of human "identical" twins.

There have always been twins. If their life history were always or usually identical or nearly so, that fact would have been generally known long ago. There are no two things in the universe that are identical, and yet there are fundamental similarities running through all things. Individuals may have bodies and personal traits astonishingly similar, but their inner natures may be poles apart.

Truly the questioner is right in holding that the facts in this

matter (like all other facts in human life when rightly understood) give support to the Theosophical doctrines of Karman and Reincarnation. We choose our incarnations and life events by and because of our desires and attractions and needs, previously set up or chosen at the time. Heredity helps to provide the body but the incarnating ego helps to build it. There is no injustice or chance or fatalism. We have even chosen in the past and constantly do choose to share the karman and destiny of the human race and none of us would long stay dissociated from the human race if we had the chance to do so.

Individuals of inactive will may be carried along by heredity and circumstances and family and racial karman, but those of more active will can and do shape the present and the near future to at least a large degree, as we all know that we are doing in almost every thought and act of every day.

We are not completely bound by any outward circumstance. We attract to ourselves whatever we deserve, and when we have learned our lessons and work with the Higher Law our destiny will be good, because the inmost of every human being and of the universe is good.

The Development of Intuition

I once remarked that I would enjoy getting into certain lines of Theosophical work provided I knew more about Theosophy. A friend said to go right ahead and rely on the right answers to come as needed; that my intuition would work infallibly if only I used it. It seems to me that when a person has *naturally* evolved to the point where these powers are desirable or needed they will manifest themselves; I believe it is not the best thing for a person to try to force the development of any of the higher powers, among which is intuition. Would you care to elaborate on

this subject? — G. C.

Q. W. — *I think this is what your friend meant when he spoke of the answers coming, as it were, automatically. It is obviously almost impossible to remember all the details, as details. But it is possible to figure out a fairly correct solution if you work from universals to particulars, which is the Platonic way. Of course intuition is really the thing to be worked towards, but it is necessary to have a background of knowledge to build against. Regardless of how well developed the intuition may be, its expression is through the brain-mind. And it is the brain-mind that has to be trained to reflect and express truly that for which it is the channel. Intuition is to be developed, but not, I think, through any systematic set of exercises or anything like that. It will come through a close application of all the faculties to the subjects studied, and soon you will be putting two and two together and getting answers. The real teaching is given in hints, which the student must catch and follow up for himself, finding a contributory hint here, and a confirming hint there.*

Of course the development of intuition is karmic, that is, it is the result of precedent causes. I think one of the best means of development is trying to make our Theosophy a living power in our daily lives, together with a real study of the technical teachings.

The Theosophical Forum

THE INNER LIFE — *Mary O'Reilly*

As surely as you live, and indeed you will find it so, the one who believes in the outer life and has put his faith and trust in it, is still asleep: spiritual knowledge has not yet awakened in him. It is only in self-confidence, in reliance on the Inner Life that spiritual strength can be found.

Self-knowledge begins when a man, trying to hold his mind silent a few moments in aspiration, turns inward to what is holding it. When this holding can be to any degree accomplished, he may become conscious of his Greater Self, his immortality, his divinity.

Where you find unbroken gentleness, enduring patience, self-control, self-forgetfulness and deep and abounding sympathy, you can look there for wisdom. Seek the company of such a one, for there abides in his heart the steady flame of love. He has realized the divine within him.

PEACE OF MIND — J. H. J.

I wonder if you have ever noticed how the entry of some good-hearted man or woman into a room dispels a spiteful or disturbed atmosphere. It may be that such a person's love and understanding of other people and of their troubles have drawn around them forces which work for the good of other people and cast out the devils of evil thought whenever they encounter them. Who can say it is not so?

Can we not help to rid ourselves of evil influences in this and unseen worlds? If your trouble is nervousness, unaccountable fears, a constant undercurrent of anxiety, worry or a generally disturbed state of mind, just sit down and think of someone you know who takes everything calmly; or see yourself moving slowly beside a calm stream. Feel that you are lying on the green turf, listening to a lark singing in the clear summer sky. Think "Peace, harmony, love."

It is only when we try to calm our mind that we realise how undisciplined our thoughts really are, how they rush helter-skelter through our minds, skimming the surface and seldom making deep impressions. Contemplating peaceful things soon slows down the pace of the thought-machine and brings a wonderful feeling of calm.

SCIENCE AND RESEARCH — *C. J. Ryan*

Atlantis Again

Somehow, interest in the problem of a lost continent in the Atlantic Ocean does not die out although the subject is regarded by many scientists with disfavor. The interest has recently been increased by newspaper articles "featuring" Dr. C. S. Piggot's experiments in the Atlantic, which have recently been explained by Dr. W. H. Bradley of the U. S. Geological Survey. Dr. Piggot shot a hollow tube into the ocean floor in various places between Europe and America and brought up ten-foot long sections which have provided interesting information about conditions prevailing when the superficial layers were deposited. To quote from *Science*, December 3, 1937:

Dr. Bradley finds that in the sea floor there is definite evidence of four ice ages, which can not yet be definitely correlated with the ice ages on the continents, and of two periods of violent explosive volcanic action, one during the ice ages, and one after the most recent ice age. Changes in the earth's magnetism during the ice ages, as shown by the deep sea sediments collected by Dr. Piggot's sampler, were described by Dr. Fleming, who finds that considerable changes in the earth's magnetic field have occurred in rather recent geologic time. . . .

The cold periods and intervening warm conditions were shown by the remains of the microscopic marine algae called diatoms embedded in the superficial sediments of the ocean floor. Certain diatoms can live only in warm water, others in cold, and these tell-tale deposits contain both kinds in alternating layers. In this way the alternating periods of warm and cold Atlantic water

during perhaps a million years of modern geological history are unmistakably shown. Further research may reveal the actual correspondences between the temperatures of the Atlantic Ocean and the northern European and northern American continental lands during the fluctuations between genial warmth and intense cold in the Great Ice Age. Perhaps the exact length of the Glacial Period, so greatly disputed, may also be determined by the study of new and deeper sections taken from the bed of the Atlantic. A broad hint is given in *The Mahatma Letters to A. P. Sinnett* that many unexpected surprises would be revealed if the rocks buried beneath the oceans could be explored.

The comparatively recent change in the earth's magnetic field, mentioned by Dr. Fleming, may be a significant factor in determining great changes in the contours of the Atlantic.

Dr. Piggot's explorations in the Atlantic have led to statements in the newspapers that final confirmation has been found of the existence of the sunken continent. We have not seen any such claims on the part of the scientists. From their general attitude of disbelief in an Atlantis *inhabited by man, and geologically recent*, it would seem that Dr. Piggot's proofs that the ocean partook of the tremendous vicissitudes of temperature of the Glacial Period — profoundly interesting as they are — have little or nothing to do with the problem of Atlantis. When evidence is found by scientists themselves which they will accept as conclusive, the existence of a former civilization in the Atlantic will be widely heralded as the greatest sensation of the age, just as Dr. Rhine's successful experiments in telepathy and clairvoyance — a still more "unorthodox" line of research — have been accepted in unexpected scientific quarters and have broken down almost insuperable prejudice against the admission of positive facts.

Unfortunately the acceptance of the mass of evidence in favor of

sunken lands in the Atlantic has been seriously handicapped by the quantity of nonsensical and ill-supported arguments offered by enthusiasts and by charlatans. The array of facts and serious arguments presented by H. P. Blavatsky has been almost drowned by the raucous voices of such persons. Qualified Theosophists should study the subject in all its complexities and become acquainted with the crucial points, so as to be able effectively to appreciate and use the new discoveries which are being made in support of their position, and to expose the fallacies of the writers who have done so much harm by their errors.

One of the most impressive of these discoveries is that of the extraordinary depth of the enormous submarine valleys and steep canyons which stretch away from north America far out across the bed of the Atlantic Ocean. These valleys could not have been cut *when the region was submerged*, but were necessarily eroded when it was dry land. Has the land sunk under the ocean or have the waters risen and drowned it and its great valleys? The theory lately offered is that during the Glacial Age, when vast quantities of water were temporarily locked up in the shape of ice, the level of the sea was greatly lowered, perhaps for two thousand feet, and, as the ocean bed appeared above the waters and became dry land, rivers began to make their way down to the greatly reduced area of ocean, cutting gorges and valleys which have still remained. After many thousands of years the ice melted and the ocean gradually rose to its former height, drowning vast areas of land and, of course, the great submarine canyons.

There are many difficulties in accepting this explanation of the mystery but the most serious one is that the valleys descend far below the lowest level to which the ocean could have sunk by the abstraction of its water in the shape of ice. There was not enough ice. We are, therefore, reduced to the more reasonable explanation that great areas of land, including the valleys, have

actually sunk beneath the onrushing waters in some cataclysm which took place in comparatively recent times, geologically speaking. How far this collapse extended across the Atlantic cannot yet be stated, but the evidence of the submerged river valleys is strongly in favor of some kind of an Atlantis, now submerged. Even in this century unexplained changes have taken place in the south Atlantic, portions of the bed having risen more than two miles, and new islands having appeared near South America.

The Theosophical Forum

NATURE STUDIES: XIV — H. Percy Leonard

The Heresy of Separateness

"Although undivided, it appeareth as divided among men."
— *Bhagavad-Gita*, chapter xiii

The soul embodied in a human form is subject to the sway of the illusion of separateness and personality, and so powerful is the deception produced as to impose even upon those who have penetrated somewhat deeply into the study of their own natures. It is comparatively easy to conceive of universal life sleeping within the stone, dreaming in the plant, half waking in the animal, and reaching full self-consciousness in man; but to apply this theory as rule of practice in our daily life is quite another thing. This much at all events is plain, that in proportion as we dwell in thought among our bodily sensations and material things, so does the fallacy of separated life fasten its grip upon our minds; while in so far as we ignore the sense-impressions and allow the mind to wander forth and blend in sympathy with life expressed in other forms, do our confining walls expand and set us free.

A life of freedom from all selfish care, and that supreme, impersonal serenity which knows no ebb or flow, would seem to be of such transcendent worth as to attract all men in their pursuit, and yet we find that very few have entered on the quest. The vast majority are willing victims of the glamor of that pole of feeling, known as pleasure, and they spend their time and energies in a mad chase upon its trail. Time after time they find that every mounting pleasure is succeeded by its dull recoil, just as a swimmer is upborn upon a wave only to plunge the deeper in the trough behind; and yet so strongly does the charm allure that

till the winter of old age chills their desires, they lavish all their powers upon the hopeless chase.

According to some keen observers, pain as well as pleasure wields a fascinating power over deluded man and though the notion may at first be scouted as absurd, it is sufficiently arresting to challenge our inquiry. Everybody must have observed how the mind in leisure moments will drag the memory of a long-forgotten grievance from its hiding-place and will revel in the sense of injury and of morbid self-pity which the recollection affords. In fact it is only when the last bitter drop has been drained that the ancient sorrow is cast aside, and even then the mind is just as likely to select some other painful memory on which to brood as a pleasant one. The flattering compliment, the acrimonious attack; the rosier prospect we have ever seen, the worst of all the nameless terrors which have chilled our blood; our deepest loves, our most intense dislikings; both the pairs of opposites are conjured up and galvanized to life once more, for both are equally effective to focus our attention on the point of personality and to counteract that yearning for expansion that would set us free.

As prisoners long confined are said to cling with fond affection to their old familiar cells, so do we crouch within the personality and oscillate between the poles of pleasure and pain; we hide behind our prison walls and fear to venture forth and enter on the larger life that lies beyond. It is said that when the poet Wordsworth was a boy, he was sometimes so overwhelmed by a sense of vastness and expansion that as he walked to school he would reach out his hand and touch the nearest wall or tree, that from the shock of contact with material things he might recall to life his fading consciousness of personality. Most people who have wandered lonely among scenes of an unusual grandeur and sublimity must have had a similar experience, and the alacrity

with which they plunge into the social whirl on their return to common life is prompted by no other motive than to revive the line of demarcation of their own familiar egotism which had grown a little blurred by lack of contact with their fellow-men.

Some men on reaching this stage in their evolution are strong enough to grapple with their personality and by determined effort force it to take its proper place, that of a willing servant with no other aim than to subserve the interests of the soul in everything relating to its daily life among material things. For others less heroic there remains the method of self-conquest by a gradual subjugation. The personality is stunted by degrees and not permitted to appropriate such large supplies of mental substance and of vital force to foster its unbalanced and unnatural growth; for as the personality is made the subject of our constant thought so does it fatten and increase, while as we cease to feed it and engage the mind in wider fields, its independent life begins to weaken and its fierce, insistent self-assertion to decline.

Silence has always been commended by the sages as a specific agent to dissolve the crust in which we are confined; but silence from the Theosophic point of view means vastly more than to refrain from uttered speech, an exercise of little value if the mind is not restrained as well. Intense activity of mind may coexist with vocal silence, and the creative mental force may spend itself in weaving pictured webs of thought in which one's virtues and accomplishments stand out in brilliant contrast with the somber background of the failings of our fellow-man. But to control all exercise of thought, to still the vehemence of our desires, and by a steady effort of the will to rise into the outer quiet where all mental agitation dies — this is an enterprise to tax our loftiest powers. In the deep hush of that eternal silence the confining shell that rings us round disintegrates and vanishes away. There the harsh voice of criticism never comes to drive us back to

shelter in our fortress of defense. There no impinging wave of love or hate revives the sharpness of our boundary-line, and thus insensibly it melts away and sets the prisoner free, a pure, impersonal force in Nature that has found its way to liberty at last. The home from which we started and to which we must return is nothing other than the boundless Vast itself, the freedom of its ample spaces being gained by the mere breaking loose from the inclosing walls of personality in which we are confined.

ORIENTAL STUDIES: V — *Judith Tyberg*

Possibilities of the Kali-yuga

The Kali-yuga is an age "black with horrors," and yet it is a golden age of spiritual opportunity!

The evolutionary period of each one of the Seven Great Root-Races of our earth is divided into four divisions known as *Yugas* or Ages. The first of these *Yugas* is the *Satya-yuga* or Age of Truth, of Purity and Innocence, the age in which *Dharma* or Truth, which is often represented as a bull, stands on all its four feet. All forces of opposition and resistance are held in check by the action of *Sattva-guna*, the quality of Truth. Hence spirituality reigns supreme in this age which lasts 1,728,000 years.

The second *Yuga* is the *Treta-yuga*, the Age of three parts of Truth, the age in which the *Dharma*-bull loses one of its feet. Opposing material forces are stirred by the action of *Rajo-guna*, the quality of passion and activity. Hence spiritual powers experience a certain amount of frustration. This age lasts 1,296,000 years.

The third *Yuga* is the *Dwapara-yuga* or Age of two parts of Truth, the age in which the *Dharma*-bull loses two of its four feet. The *Rajo-guna* acting with *Tamo-guna*, the quality of darkness and illusion, brings about in this age the fatal quality of spiritual inertia and darkness and produces the corresponding decline in the manifestation of divine powers. This age lasts 864,000 years.

The fourth and last *Yuga* is the *Kali-yuga*, the Dark Age, sometimes called the Iron-Age, the age in which only one part of Truth prevails and the *Dharma*-bull with only one foot left has little power to act. *Tamo-guna* reigns supreme and darkness and materiality and ignorance and evil are rampant in the world. This

age lasts 432,000 years. *Adharma*, the God of Untruth, and all his relations: selfishness, deceit, arrogance, unrighteousness, trickery, greed, baseness, wrath, and injury hold sway over the hearts of men.

As each age succeeds the other its time period and its spiritual condition decline at the fixed ratio of 25 per-cent. Our Kali-yuga commenced at the death of *Krishna*, 3102 b. c. So mankind has now lived through 5,040 years of this dark age. A very discouraging aspect indeed! But, this is only one side of the picture. There is also a marvelous note of hope and stimulus to higher action, if one understands the law of the increasing power of spiritual effort which acts at the same time as the law of decreasing spirituality. These two laws work as harmoniously together as do the simultaneous laws of involution and evolution. If, during our *Kali-yuga*, spiritual energies are invoked from within, the results are most remarkable, for they produce far greater results and with greater speed than in any other *Yuga*.

The *Vishnu-Purana*, as well as other *Puranas*, tell us that what takes ten years to accomplish spiritually in *Satya-yuga*, takes six months to accomplish in *Treta-yuga*, one month in *Dwapara-yuga*, and only one day in *Kali-yuga*, our present age. So as the Yugas succeed one another the effect of spiritual effort increases and gains until in the *Kali-yuga* its results are truly miraculous in comparison. The pace of human evolution or involution is greatly accelerated in the *Kali-yuga* and its swift momentum enables a man to do more with his energies, either good or bad, in a shorter time than in any other age. What took 3600 days to bring about in the *Satya-yuga* takes only one day to accomplish in our present age. What encouragement for spiritual aspiration, for study, for being our highest, for seeking light from within when the time is so ripe and so productive!

True, there are some 416,000 more years of the Kali-yuga in which to continue our upward climbing! But we spend a greater part of that in the spiritual realms between earth lives; for the general rule is that a man spends a hundred times as many years in the invisible realms as he lives on the earth. It is only while we are here on earth, manifesting as a complete man, that we can win the conquests that release untold spiritual splendor. *Now*, is the magic word that will make nature help us to win our highest treasures. Nature is indeed bounteous in her gifts to those who work in harmony with her.

Not only is time more valuable in the *Kali-yuga*, but so is also the quality of spiritual endeavor. The *Vishnu-Purana* also states that that which is obtained in *Satya-yuga* by *Dhyana* or spiritual meditation on the Divinity within, is attained in *Treta-yuga* by *Yajna* or sacrifice to the Divinity within, and in *Dwapara-yuga* by *Archana* or honoring of the Divinity within, and in our *Kali-yuga* is accomplished by *Kirtana* or the repeating of the name of Divinity. If the mere power of the sound or mantra of a spiritual name by a true aspirant can bear in our present cycle the same fruit that only the highest spiritual meditation could produce in *Satya-yuga*, imagine what wonderful inner growth is possible now by practising spiritual meditation in our daily lives!

Dr. de Purucker tells us:

But the best form of meditation is the constant thought, yearning, aspiration, to be your best, to live your noblest, and to keep this thought with you by day and night. If the yearning to be one's best and to live one's noblest is derivative from the spirit of Compassion, welling up in the heart like a holy river of energy, it will lead one quickly to the Gates of Gold. — *Golden Precepts of Esotericism*, 136

And again:

Aspiration is real prayer; it is a constant raising of ourselves from day to day, trying each day to go a little higher towards the god within. This means harmony, inner harmony, peace. — *Op. cit.*,134

So even though the *Dharma*-bull stands on only one leg in our present *Kali-yuga* there is great spiritual hope for those who aspire.

The Theosophical Forum

NOTHING TOO MUCH — *H. T. Edge*

We often quote that maxim, used by several of the ancient Greek authors, *Μήδεν αγαν*, "not too much of anything, nothing in excess, moderation in all things"; but perhaps not always realizing sufficiently its import. The genius of our race is in an important respect the opposite of that of these ancient Greeks. Strenuousness is rather our cult, the philosophy of the utmost; and this we carry into everything we do, from manual labor to devotional aspirations. But the Greeks cherished the ideal of balance and eschewed the notion of excess in anything; some of their stories depict the retribution that comes on those who pursue one line of endeavor too strenuously. Proportion is the keynote of their art. Astrology books tell us that certain prominent occidental nations are under the fiery sign Aries, the Ram; and that the Chinese are ruled by its opposite, Libra or the Balance. Contrast our philosophies and religions with those of ancient China.

Yet even in speaking of the Tao philosophy, so deeply engrained is the racial genius above spoken of, that we are apt to try and translate the words of Lao-Tse and Chuang-Tse into terms more consonant with our own ideals, as though these philosophers were concealing their meaning under some guise of indirect speech. But there is no need to seek to evade these teachings, for they are what we find in ancient India and in many Theosophical books which we revere. They amount, philosophically speaking, to the finding of the true Self by progressive rejection of all that encumbers it; and, as regards action, they imply the finding of the real actor in man, by relegating to their proper place all the minor impulses to action, which are only the qualities of nature, as the *Bhagavad-Gita* tells us.

Indian philosophy runs to vast masses of detail, terms innumerable, categories, classifications, doctrines, schools; but the Chinese eschews every complication and avoids terminology and formal doctrine, all world-systems and theories of the constitution of man. There are many roads to truth, but all have the same goal.

Occidental people are afraid that if they abandon strenuousness they will fall into inertia. There are many tools in the workshop of life, and he would be a poor craftsman who should use one tool for all purposes. If we have neglected the balance wheel in our mechanism, at least a flywheel is not much good without power; and on the other hand an engine without any sort of governor runs amuck.

No doubt the remaining signs of the Zodiac, besides Aries and Libra as mentioned, denote various implements of necessary use and all contributory to a well-balanced outfit. Individuals may be divided into a classification on this basis, each showing the idiosyncrasy pertaining to the particular cosmic potency in question; and so with the seven symbolic planets.

If Karman is connected with any particular sign it must be that of the Balance, for it is the great adjuster of equilibrium.

No doubt it is wisely said that one should act according to his own nature, rather than seek to imitate the nature of another; and if the racial type to which we belong embodies a particular Genius, we probably do well to manifest that Genius. Let each do his own job. But, this much having been allowed, it may be interesting and helpful to consider the matter further.

The Brahmanical Lokas

Esoteric Brahmanism, as found more particularly in the *Bhagavata*-, *Skanda*-, *Vayu*-, and *Vishnu-Puranas*, divides the Earth into fourteen lokas or worlds: seven superior, rising above the Earth in a series specifically called lokas, and seven inferior worlds descending below the Earth called talas. From one standpoint, these are comparable to the heavens and hells of occidental thought; and while the Brahmanical teaching concerning the Lokas and Talas is probably accurate as far as it goes, nevertheless it stops far short of the extensive reach of the Theosophical doctrine as significantly pointed to by H. P. Blavatsky and G. de Purucker. (1)

Just what are these Lokas and Talas? How do they fit in with the general scheme of the Globes, Rounds, and Races? Are the words themselves significant, and what do they mean? These and similar questions are repeatedly asked by students, and it is in a sincere attempt to present a simple yet comprehensive outline of the main teaching that the following paragraphs are written.

The doctrine of the Lokas and Talas is comparatively difficult to grasp in its deeper significances at first contact, but it is one that can well bear thoughtful study, as a clear understanding of the teaching of the lokas, and their relation to man, to the globes, and indeed to any organism, will throw light on the whole fabric of the philosophy. In fact, the doctrine of the lokas is but another

way of describing the one fundamental process of evolutionary unfoldment: the descent of spirit through veils of matter, and its re-ascent by the conscious removal of these material vestures until self-conscious spirituality is attained.

Before summarizing briefly the Theosophical teaching of the Lokas, we give below the derivation and meaning of the Sanskrit words which have been adopted by us from Brahmanism as giving a suggestive picture of the gradations of evolving entities in their pilgrimage from spiritual to material, and material to spiritual, conditions.

LOKA is a word of obscure derivation having the general significance, however, of a vast space, a world, and in philosophy, any division of the Universe. Usually it is referable to the "seven or fourteen lokas" of the Puranas; the "seven regions of the blessed," ascending in degrees of spirituality from the earth to the highest loka, called Satya- or Brahma-loka.

TALA is a word of many and varied meanings, likewise of obscure derivation, but having the general significance of depth, lowness, inferiority of position, the underneath portion, a pit, chasm, etc., hence in philosophy, the nether pole or material aspect of a loka. In the Vishnu- and other Puranas, the talas are the seven regions descending from the earth to the lowest or seventh tala, called Patala, a word often used to describe all seven talas, the Patalas or Hells into which go after death the "entities who are accursed."

We give the specific meanings of the lokas in their usual order, commencing from the highest and most spiritual:

SATYA-LOKA: (sometimes Brahma-loka): *satya* — meaning "truth," "pure essence," "reality," hence *satya-loka* literally signifies "essence of reality-loka": the highest of the lokas, from whence there is no return to lower lokas, according to the Puranas;

corresponds in *one method* of Theosophical classification to the highest of the Unmanifest Globes on the first of the Unmanifest Cosmic Planes.

TAPAR-LOKA: *tapas* — meaning "heat," "warmth," "fire," hence by extension of philosophical application, the "fire of devotion and spiritual meditation"; the loka of the five fires (four fires at the four corners of the earth with the sun as the fifth) through which the devotee of pure and austere heart must pass successfully to gain entrance thereto, says Puranic legend; the second highest loka of the Ascending Arc, corresponding to the second highest of the Unmanifest Globes thereof, on the second Unmanifest Cosmic Plane.

JANAR-LOKA: *janar* — meaning "birth," hence the loka of spiritual birth or "second birth," where great souls have residence after death; the third highest loka, corresponding to the third and lowest of the Unmanifest Globes on the Ascending Arc.

These three upper lokas, corresponding to the three Unmanifest Planes in Theosophical nomenclature, are called in the *Vishnu-Purana* the "durable" lokas because manifesting more fully the lasting qualities of self-conscious spirit, in contradistinction to the three lower lokas, Bhur, Bhuvah, Svah (see below) which are termed the "transitory," because as yet not fully spiritualized, and therefore relatively mortal.

MAHAR-LOKA: *mahar* — meaning "great," "mighty," "splendorous," "glorious," hence the "great loka," said in *Vishnu-Purana* to be one krore of yojanas (about 90,000,000 miles) above the polar star, the region attained by those who survive the destruction of the three lower lokas; the midpoint or balance between the three upper lokas and the three lower lokas; corresponds to Globe G on the Ascending Arc on the first Manifest Cosmic Plane.

SVAR-LOKA: *svar* — meaning "heaven," hence "heaven-loka"; the space between the sun and the polar star, which *Vishnu-Purana* describes further as the region of the planets and the constellations; supposed likewise to be the after-death state of the virtuous; corresponds to Globe F of the Ascending Arc on the Second Manifest Cosmic Plane.

BHUVAR-LOKA: literally the "becoming or developing loka," from the verbal root *bhu* meaning "to become," "to be"; that world or sphere of being between Svar-loka and Bhur-loka, whose influence according to Puranic literature extends from the earth to the sun; corresponds to Globe E of the Ascending Arc, on the Third Manifest Cosmic Plane.

BHUR-LOKA: *bhur* — meaning "earth," hence the "earth-loka"; our planet Terra or Globe D on the Fourth and lowest Manifest Cosmic Plane, and likewise the lowest of the lokas.

It may or may not be significant that the Brahmanas before starting their daily meditations always pronounce the Vyahritis, which are OM, Bhur, Bhuvah, Svah — these are seen to be the names of the three lokas rising in succession from Bhur the earth — as though in an attempt to send their spiritual consciousness upwards along the stairway of the lokas. It is suggested by some that the Bhuvan-loka actually received its name from being placed in space and thought, between Bhur and Svah, Bhuvah apparently being a combination of the two sounds of the above-named lokas.

Following now with the talas in serial order:

ATALA: *a* + *tala*: *a* meaning not; *tala*, an inferior world, nether pole of a loka, hence *a-tala* literally signifies "not a tala," i. e., a condition of being of so ethereal-spiritual a character that it scarcely partakes of the quality of a tala; the highest tala, the

nether pole of Satya-loka on the highest of the Unmanifest Cosmic Planes.

VITALA: *vi + tala:* *vi* signifying "change" (among many other meanings), hence *vitala* is a condition of "matter" showing slight change from the first *tala* (*atala*); becoming more *tala*-like, though as yet relatively spiritual and ethereal in character; the matter-counterpart of Tapar-loka, corresponding to the Second Unmanifest Globe on the Descending Arc on the Second Unmanifest Cosmic Plane.

SUTALA: *su + tala:* *su* meaning "beautiful," "well," "graceful"; hence *su-tala* is the *tala* or world still beautiful and well-ordered, though descending in the scale and partaking more of *tala*-characteristics; the nether pole of Janar-loka, corresponding to the Third Unmanifest Globe on the Descending Arc, on the Third and lowest of the Unmanifest Cosmic Planes.

RASATALA: *rasa + tala:* *rasa* meaning taste, moisture, etc., where spirit is first conscious of the taste of material or manifested spheres; corresponds to Globe A on the Descending Arc on the First Manifested Cosmic Plane, the polar aspect of Mahar-loka or Globe G.

Talatala: *tala + atala:* literally "tala — not a tala': hence could be translated as signifying a condition of material being where the qualities of a *tala* are equally balanced with the qualities that are superior to a *tala*; corresponds to Globe B of the Descending Arc on the Second Manifest Cosmic Plane, the nether pole of Swar-loka or Globe F.

MAHATALA: *maha* — meaning "great," signifying "very much of *tala*," hence a sphere of being heavily weighted with *tala*-qualities; corresponds to Globe C on the Third Manifest Cosmic Plane; the matter-side of Bhuvan-loka or Globe E of the Ascending

Arc.

PATALA: thought to have been originally *pata* + *tala*, now contracted to *patala*: derivation somewhat obscure, though significance is seen by deriving it as follows: *pata* from verbal root *pat*, meaning "to fall," hence *pata* -f- *tala* is the tala where spirit has completely "fallen" from grace, so to speak; the lowest of the talas, nether pole of Bhur-loka, corresponding to Globe D on Lowest Cosmic Plane. Puranic literature often refers to Patala as the grossest of the Hells, as the earth in its lower regions is a hell to the spirit of man.

So much for the derivation and meaning of the Sanskrit terms used by us to describe these varying fields of spiritual and material activity. It must not be inferred that these Sanskrit words are significant in themselves, as any words which give the same idea as accurately and succinctly as these Sanskrit terms would be quite as suitable for our purpose, which is to show that the lokas and talas are *qualities of consciousness*, worlds of being, as densely populated with the appropriate inhabitants as our own, ranging in expression from spirit to matter, and from matter to spirit.

Theosophically speaking, lokas and talas may be described primarily as the spirit- and matter-aspects of an entity: whether that entity be a human, a dhyanichohan, a beast, planet, or globe. A loka is non-existent apart from its corresponding tala — loka-tala, tala-loka — the north and south poles of the same consciousness-center. We call it a loka if the entity is self-conscious, in degree at least, of spiritual backgrounds; a tala if still immersed in the veils of matter, unable to perceive or to reflect the spirit.

In other words, the lokas are the fields of action of entities on the Luminous or Ascending Arc, those rising in conscious spirituality

along the regular procession of evolutionary development: spirit predominating over matter in ever greater degree with each higher loka. Conversely, talas are the fields of action of entities on the Shadowy or Descending Arc, where spirit is shadowed by the heavy presence of matter, as the entities descending along the tala-scale become more weighted with tala-qualities: tala or matter predominating over spirit in ever larger measure until the lowest tala (Patala) is reached.

Thus entities who enter the natural procession along the Descending Arc, through globes A, B, C, etc., are under the dominance of tala-influence with loka-qualities recessive. Correspondingly, those entities who have started on the Ascending Arc are (or should be) under the dominance of loka-influence in proportion to the degree of *self*-consciousness attained, with tala-qualities recessive.

On the lowest loka-tala: Bhur-loka-Patala, Globe D, Fourth Manifest Plane, we find the Human host — ourselves — torn between an ancient heritage of tala-dominance so long experienced in the preceding globes on the Descending Arc, and the far more beautiful influence of loka-dominance of the Ascending Arc, which as yet has not succeeded in awakening us to awareness of spiritual values. He who lives with his spiritual and mental energy wilfully focused in the loka-centers of his constitution, is an enlightened character, a man of spiritual attainment; and the Puranas say that those beings who live in the Tapar-loka, the loka of spiritual meditation and devotion, are the Munis and Rishis, the great spiritual sages.

Conversely again, those entities who have already begun the ascent towards spiritual enlightenment, but who wilfully and with set purpose focus their mental and spiritual energy in the tala-centers, in time become the "spiritually wicked," the "Lost

Souls," conscious imbodiments of tala-hood, whose final destiny is Annihilation.

This last, however, does not refer to those entities who have not yet emerged from the natural procession down the Descending Arc, beings who are immersed in the tala-condition solely because they as yet have developed no reflective consciousness to mirror the loka-qualities of spirit. Nor does it refer to the Kingdoms below the human, such as the beast, plant, and mineral kingdoms, which are still asleep to loka-consciousness, and hence may be said to remain in an *impersonal* tala-condition of varying degree. Every loka is septenary (or duodenary) containing *in potentia* all the other six (or eleven) loka-qualities, "held there in seed," recessive, with only one loka- or tala-quality fully active at any specific moment. As man expands into manifestation from the atman of his constitution, each of his principles being held in seed in his atmic laya-center to come forth in serial progression as evolution advances, so a Planetary Chain, a sun, an atom, or a globe, follows an identic procedure. From the divine laya-center (or Satya-loka-Atala condition) come forth the various grades of lokic and talic consciousness, in seven streams of spiritual and material vitality, until Bhur-loka-Patala is reached, which loka-tala in the words of Dr. de Purucker:

contains them all relatively unrolled, and relatively unfolded, as a flower unfolds from the seed. Thus also does a man through evolution become perfect by bringing out what is within these principles. Complete man, spiritual man, will be living in spiritual Bhur-loka-Patala or Satya-loka-Atala, but as a cosmic plane." — THE THEOSOPHICAL FORUM, May, 1936, p. 342

Lokas and talas must not be thought of as the globes *per se*, but rather as conditions of matter (talas), or conditions of spirit

(lokas), created or produced by the hosts of entities themselves in their evolutionary march downwards and upwards. As each globe of a Planetary Chain, such as our Earth-chain, is built for the purpose of developing one of the seven lokas or talas, so the entities passing through and experiencing life in any specific loka or tala, thereby develop in such field of activity one of the seven principles in their constitution.

The question immediately arises: Where then do we as humans stand in loka-tala consciousness as regards the Globes, Rounds, Life-waves, and Cosmic Planes? To answer this is not as simple as it may appear, for as with all methods of systematizing universal operations, we must keep several different factors in our minds at one and the same time, being watchful never to mechanize spiritual conceptions by too great an insistence upon insignificant detail. First of all we must not consider the Rounds, Globes, Life-waves, and Planes, to be a rigid mechanical scaffolding around which one can build a perfect structure fit for all Kingdoms, and existing as such throughout eternity. Rather must we picture the Lokas, Rounds, Globes, etc., as *having no existence apart from living beings*, for all these are but variations on the one theme of evolutionary progression from the less to the greater.

In studying what H. P. Blavatsky and G. de Purucker have written on this question, we find that at one time the lokas are classified from a Sevenfold Manifest aspect, and at the very next moment, from the Twelfefold Unmanifest-Manifest aspect, which in itself indicates the extreme difficulty of making for oneself a perfectly outlined system of cosmic processes. In our mental inability, we take refuge in the realization that this is probably the last thing that either of them would want, for there is small doubt that such apparent confusion of methods is followed with definite intent for the purposes of (1) not divulging esoteric keys which too clear-cut arrangement would most obviously do; and (2) arousing in

the student the faculties of thoughtful cogitation and intuitive perception. Too complete a presentation of any problem in all its details would be premature, and tends to atrophy the intellectual-intuitional power.

We shall, however, attempt to define the position, stating the facts of the case as we understand them from our study of the books, and then leave the problem for each reader to ponder and draw his own conclusions. Firstly, to understand our loka-tala station, so to speak, we must clearly distinguish between (1) the *Earth as an entity*, with its seven Cosmic Planes on which are the 12 foci of consciousness called Globes; and (2) the *Human Host as a Life-wave* making its Rounds and Races on the Seven Manifest Globes on the four lower Cosmic Planes.

In the definitions of the lokas and talas given above it will be observed that the correspondences there given were judged from the Earth-standpoint alone, i. e., correlated to the twelvefold division of the Earth-Chain as it manifests in global expression on the Seven Cosmic Planes, with Satya-loka-Atala corresponding to the topmost globe; Bhur-loka-Patala at the bottom with Globe D; Globe A corresponding to the Rasatala-aspect, and opposite thereto Globe G having Mahar-loka dominant.

It appears customary in Theosophical works to consider the Human Life-wave in its relation to the lokas from the Sevenfold Manifest aspect only, i. e., from the four Manifest Cosmic Planes, commencing with Globe A having Satya-loka-Atala qualities dominant thereon, and ending with Globe G manifesting Bhur-loka-Patala. As H. P. Blavatsky wrote in an early letter to A. P. Sinnett:

So the first Round Humanity was Satya and Atala — the two spiritual opposites or poles of Spiritual Good and Spiritual Evil (matter). The second Round preserving all the

faculties and attributes of these got in addition — Tapas and Vitala, the third — Janas and Sutala, and the fourth or ours is all that besides — Mahar and Rasatala. Do you understand now? We are just at the middle point of Good and Evil equilibrated, so to say, in this Round. . . . With every Round Humanity went a step *down*, in the *Spiritual* Spirituality, and a step *higher* into Material Spirituality. It is a double centripetal and centrifugal motion, . . . But the 7 upper and 7 nether worlds, or Brahma-lokas, are worlds *within* and *in* our world and ourselves. — *The Letters of H. P. Blavatsky to A. P. Sinnett*, p. 255

Hence, as a *Human Life-wave* traversing the globes for the Fourth Round, we are manifesting Mahar-loka-Rasatala; but as we are in the Fifth Root-Race of this Fourth Round we likewise manifest a Swar-loka-Talatala sub-condition of the larger Round Mahar-loka-Rasatala. Furthermore, as Globe D is the fourth of the series of seven manifested globes, we again find expression in the Globe Mahar-loka-Rasatala. However, judging now from the Twelfefold standpoint of the Seven Cosmic Planes in relation to the *Earth Planetary Chain*, we immediately see that because Globe D, our Planet Terra, is stationed on the lowest of the Seven Cosmic Planes, we therefore must be strongly impressed with the Bhur-loka-Patala aspect of this lowest Plane of the Chain-Entity. One wonders what Ezekiel would have done with these fourteen lokas and sub-lokas. Perhaps he knew more than he revealed, and silently chuckled when he aphoristically remarked "wheels within wheels"!

We conclude therefore that at present we as humans are a combination of Bhur-loka-Patala, Mahar-loka-Rasatala, with a slight touch of Swar-loka-Talatala; and thus the question of stating in precise terms exactly where we stand in relation to the lokas and talas is seen to be far more complicated than at first

appears. To determine such, however, is of slight value to us at present and really of no great consequence. The important point to remember is that each loka-tala is septenary, and therefore has *in potentia*, or more or less *in actu*, all the other loka-tala qualities, depending upon the inner responsiveness of the entity. The human host, therefore, can consciously respond to the influences of the higher lokas if it will. In fact, we are so stationed at present on this Globe D that the Satya-loka-Atala on the highest Cosmic Plane is in direct line as it were with the Bhur-loka-Patala (actually the spiritual north pole of our Earth-Chain, with Globe D as the south pole thereof) and can send its streams of spiritual vitality down into our earth continuously, unimpeded in their influence upon us except by our ignorance and utter disregard of them.

This last thought leads us to perhaps the most significant and beautiful of the Theosophical teachings regarding the lokas and talas, and which also the Puranas hint at in stating that certain lokas have streams of influence extending to the sun, or from the sun to the polar star, Dhruva, with "its watchful eye upon it [the Imperishable Sacred Land], from the dawn to the close of the twilight of "a day" of the GREAT BREATH," according to an ancient Commentary quoted by H. P. Blavatsky in *The Secret Doctrine*, Volume II, page 6.

The significance of the above statements from the Puranas is not the specific extent of the influences of any particular loka or tala, but that they point to the esoteric truth that each loka or tala has its envelop of influence, its auric atmosphere, along which carriers of influence and radiation an entity can travel the circulations of the Cosmos, and can actually — provided he follows the rules of occult training carried over from life to life — come into self-conscious communication with other beings and globes and worlds.

It is precisely through the influences radiating from any particular sub-loka of our constitution and extending to identic sub-lokas in surrounding Nature, that we can understand and comprehend any thing; that we can sense love in the heart of another, beauty, sympathy, understanding; and in reverse order that we feel the onslaughts of hatred, pettiness, and the hundred evils of tala-consciousness. It explains the mechanism of thought-transference; of the mayavi-rupa, or thought-body, of the Adept; of the conscious reception of spiritual forces, and the wilful entering into spiritual realms for the refreshment and purifying of the soul.

The chela can slip into whatever loka he desires, and while in that particular loka can become at one with the identic loka of a globe, a sun, a star, or even an atom — or indeed, of another human being — and learn the secrets of all things. This is the rationale and explanation of the teaching that to fully understand a thing, one must become that thing. Conversely, as before hinted, a man who has undergone the discipline can set his consciousness in the talas, and follow the same procedure, but in this latter case, if he does so with the desire to become identified therewith because of a love for tala-influence, then he reverses his nature, he commits conscious black magic, sorcery, and if not stopped by the prompting of perhaps his already receding flame of spirit, he will *become at one* with the lowest tala, Patala, and find himself either a Lost Soul, or worse still, a Black Magician.

In this last teaching, we recognise the utter need of guarding our thoughts, of watching carefully our motives, and of ever seeking to identify our inmost yearning with the loka-qualities, which are the qualities of spirit, of love, beauty, and truth.

What a man loves, that he will become; or as Yaska in his *Nirukta*, X, 17, so perfectly phrased it:

*Yadyad rupam kamayate devata,
Tattad devata bhavati.*

"Whatever form a divine being longs for, that very form will that divine being become."

The Theosophical Forum

TELEPATHY — *H. T. Edge*

When people speak of telepathy or extrasensory perception, they view man as a being endowed with five distinct faculties, called the five senses; and they contemplate the possibility of his being also endowed with another faculty to be called the sixth sense. But there is another way of looking at the matter. What if man is a being sensitive to influences of all kinds, from everywhere, and that he has around him a shell of flesh which shields him from most of these influences, but leaves open just a few chinks, such as the eye, ear, or nose, through which perception may pass? And what if this shell is beginning to break down so that more perceptions can penetrate through other than the usual channels? Man may be living in a common thought atmosphere, as we live in a common atmosphere of air. It may be normal that we should perceive thoughts in other minds, and abnormal that we should not. The notion of a *transference* of thought would then be needless, for that notion is based on the supposition that our minds are apart; but where there is no gap there is no need to build a bridge. And then as to mechanism: mechanism does not carry us far in explaining our normal senses; it can explain how the vibration of the fork is transmitted to the ear drum and thence to the internal ear; but that is where we quit. And sight is an even worse case; for we have had to invent an ether to convey light to the eye; and there again is where we jump off.

So we need not be so much concerned if we fail to devise a mechanism for telepathy. It would seem that our ideas are somewhat confined by the familiar expression "the five senses," and that sensitive people have a great many other vague indefinable susceptibilities and awarenesses which they cannot group under any one of these five heads. Such people would not

be in a hurry to develop new susceptibilities; they would rather seek protection.

THE NEVER FAILING LIGHT OF HOPE — *H. Percy Leonard*

Hope has been defined as the wish for something desirable, combined with an expectation, however faint, of that wish being ultimately fulfilled. It is surely a matter for wonder and congratulation that we can so detach ourselves from our present circumstances as to be able to dwell in thought upon an object that is outside the range of our experience. The power to form a mental picture of a wished-for ideal is a divine faculty, and the first step in the act of creation. The mental mold must first be made, and at a later stage it is projected into "this too, too solid world" of physical matter and mechanical forces in which our daily, waking lives are passed.

But the great and glorious thing about Hope is the *expectation* of final satisfaction. The mere wish for a future good will help us little, and may indeed only add to our distress; but a positive expectation is like a raft in a tossing sea, that gives the shipwrecked mariner a firm support.

In a very real sense the man who has an expectation of a future good, already occupies the Promised Land he seeks; and while others have barely discerned it in the far-off distance, the man of hope is already a settler. The passport to this happy land is a firm conviction, gained from a study of general history, or derived from personal experience, that, "the Soul of things is sweet," and that a driving impulse towards a higher stage of progress lives in the heart of every atom on its upward way.

The government of this country spends a good deal of money, and employs a large staff of highly-trained workers in the study of something, which, from the standpoint of the practical man of affairs, is absolutely non-existent — tomorrow's weather. And, in

a somewhat similar way it may be said that the man in whom the light of hope is burning, and who believes in a golden future for humanity, lives already in that future, which, for the great mass of his fellows is an unsubstantial dream.

However dark the path we tread, the light of Hope can always shine and drive away the gloom; and this light is no mere will-o'-the-wisp, but a clear shining that has its source in the Central Sun of our Universe.

Once we become convinced that the Universe has a divine origin, and that its vastness is pervaded by intelligence and love, and life and will, Hope like a radiant dawn begins to shine.

The light of Universal Hope can never pale, and even when Pralaya, or the dusk of Cosmic night comes on, and Nature sinks into her periodic sleep, Hope still survives, and with unclouded vision can discern vistas of glory far ahead, for evolution never will attain a final goal.

The Theosophical Forum

SOME THOUGHTS ON COSMOLOGY — *H. Groot* (1)

In many respects astronomical cosmology seems to be at variance with the more philosophical prospects discovered by the great Sages of Antiquity and embodied in *The Secret Doctrine* by H. P. Blavatsky. Nor is this a new feature. In the *Phaedo* of Plato, Socrates declares himself unable to understand the science of his time. And not for want of effort, but on account of the *method* of science, which indicates as causes of the phenomena other phenomena, and never goes back to the first real, primary Cause, to what Socrates calls *Novç* (*Nous*), a term which may be translated by *Spirit*. He tells us how enthusiastically he entered on the study of the scientific work of Anaxagoras, after hearing the following sentence out of a book written by him: "*It is the Spirit which ordains and causes all that is,*" and how deeply disappointed he was to find Anaxagoras, just like all other scientists, explaining phenomena by phenomena.

"I soon gave up that wonderful hope, my friend," he says, "for, while proceeding and reading on, I realized that he had no use for the Spirit and did not indicate real causes for the ordaining of things — but airs and aethers and waters and a quantity of other foolish things."

Today Socrates' complaint might be repeated word for word when one reads a book on Cosmology. Often a writer, treating of ultimate causes, seems disposed to find them in the Spirit, but in his deductions he ever fails to go beyond attractions, repulsions, frictions, and movements of the ultimate particles of matter.

Now this is a very unsatisfactory state of being, especially so where scientific cosmology — notwithstanding the brave and assiduous endeavorings of its brightest minds — has failed to

obtain even a glimmering of *real* insight. Many are the cosmological theories, but not one of them embodies more than some very hypothetical triads, which after a little time have to be abandoned as untenable.

For a student of Theosophy it is not difficult to indicate where Science has turned the wrong way, inevitably leading up to the present state of ambiguity where bewildering metaphysical problems which cannot be answered by the authors crop up in scientific treatises which pride themselves on being purely scientific.

Cosmology treats of the origin of worlds, be it the solar system, the galaxy or the great superstructure of the spiral nebulae. In each instance it goes back to a state of *chaos* of the primordial matter. So does Science and even so does the Old Wisdom. But there is a huge difference in outlook between the two, which can be substantiated by what might be called the *slogan* of each. While the Old Wisdom agrees fully with the above-mentioned passage of Anaxagoras, saying: "It is the Spirit which ordains and causes all that is" Science adheres to the proud dictum of Immanuel Kant: "Gebet mir Materie, ich will Euch eine Welt daraus bauen," (Provide me with matter and I will build you a world).

In the perennial strife between the Spiritual and the materialistic views, Western Science has thus far supported the latter, much to its own disadvantage; for what right of existence has cosmology if it cannot satisfy our longing for philosophical insight into the course of evolution viewed from the standpoint of eternity? Cosmology is the science of eternity, not of temporary being, and as such it *has* to begin from Spirit and from nothing else. Cosmology, so we may say, treats of Kosmic Ideation, which draws forth the Universe out of the bosom of the Eternal Mother.

" 'The Mother sleeps, yet is ever breathing.' And every breath sends out into the plane of manifestation her Protean products, which, carried on by the wave of the efflux, are scattered by Fohat, and driven toward and beyond this or another planetary atmosphere," we read in *The Secret Doctrine* (I, 143) by H. P. Blavatsky.

To elucidate more clearly the difference between the reasonings of Science and the insight of the Old Wisdom, and possibly to give a hint as to how Science should alter its ways, the idea of primeval matter or chaos may be considered. Many would-be problems of scientific cosmology originate from the altered significance which rationalistic science attributes to the term "chaos." With the Ancients Chaos is not a state of *matter*, but "the Kosmic storehouse of all the latent or resting seeds of beings and things from former manvantaras," as Dr. G. de Purucker says in *Fundamentals of the Esoteric Philosophy* (page 316). Kosmos cannot rise out of Chaos without interference of the Gods, of the Demiourgos of Plato.

The scientific cosmology of Kant and modern writers also starts from a state of chaos, but here *chaos* means a state of helter-skelter of *matter*, and there is no place left for the interference of the Gods. Kosmos has to rise out of chaos by *blind* forces inherent in the nebulous matter, which latter should not be thought of as something metaphysical, as *pro-matter*, if it is permitted to coin this word, but simply as being composed out of the smallest particles — electrons and protons, etc., — of ordinary matter.

Of course it is the good right of Science to start from these premisses, but then it should stick to them and it should not endeavor to trace back to the origin of things and mix metaphysics with physics, as often and often it is found doing. Belot, a modern French cosmologist, is entirely right when he

claims that the idea of chaos as a starting-point is barren and full of inner contradictions in science. He is right, for chaos is essentially a metaphysical state of being, and modern science does not treat of metaphysical states but of plain physical facts. But he is only right as a scientist — as a present-day scientist, we may add — for it is to be hoped that before long the abyss now existing between philosophy and science — yea, and religion — will be bridged again as it was in the ancient times of which the Gupta-Vidya tells us. Then Science will once more discover the deep significance underlying the old Egyptian cosmology for instance, which now is treated contemptuously as merely a conglomeration of mythological stories, astronomical facts, astrological speculations, magical rites, and entangled superstitions. How wrong and presumptuous this attitude of Science is may well be illustrated by giving the merest outlines of this sublime cosmology, in fact by limiting ourselves to a short interpretation of the following exoteric teaching, which may be rendered in a nutshell thus: *Tem* has created Kosmos by *Ra* out of *Nuw* (*Nw*).

Who is *Tem*? The hieroglyph for the name *Tern* is a sledge, the oldest means of transport in Egypt. Ideographically "sledge" indicates *motion* and then metaphorically *cause of motion, life*. So *Tem* is cause of motion, spender of life. But the word *Tem* still has two more significations, to wit: *all* and *without form*.

Two hieroglyphs, which often stand as adjuncts to *Tem* may be translated by the words *great* and *grand*; grand by sublimity and great in number. They give two aspects of *Tem*: it is the sole, unmanifested Creator (formless cause of motion) of the manifested world and at the same time it *is* this world. *Tem* symbolises the ONE which becomes many and the many which ultimately *is* ONE — a fundamental representation which recurs in all ancient mythologies. *Tem* is the Hebrew God of Genesis, the

Ain Soph of the Kabbalah.

The process of creation commences by Tem drawing forth Nuw. Nuw is the personification of chaos, of disordered and undifferentiated *substance* in its two aspects of pro-matter and force. This is clearly depicted in the hieroglyph of the name Nuw, which consists of the sign for water (phonetically: *N*) on top of a spiral (phonetically *W*). Here water stands for pro-matter, while the spiral is the emblem for the kosmic forces inherent in matter. But just as we have to think of pro-matter as being intangible, not-concrete and without form, so likewise we must think of those forces as not yet manifested: they sleep *beneath* the superficies of the waters. This arrangement of the symbols indicates a state of non-activity, in accordance with the significance of Nuw, which is: the (relatively) absolute potentiality.

We have decisive proof of this interpretation being by no means only a play with symbols without intrinsic value, for there is another *hieroglyph*, with the significance of: *to exist actively*, which is formed by the exactly identical symbols . . . but now the spiral showing *above* the sign for water: force is awakened to activity by rising out of the water. The symbol now indicates clearly the *manifested* forces.

Tem, the Spirit, creates Kosmos out of Nuw (chaos). But how is this creation achieved? Is it by the "blind" forces contained in Nuw, as the cosmogony of Kant puts it? Not so. Tem influences Nuw manifested as *Tem-Ra*.

Again it is wonderful to analyse the term Ra. It can be expressed by two hieroglyphs, one of which is composed of the emblem for *mouth* and by an extended arm. This signifies: *action of the mouth*, and therefore *word, Logos*. The other is the symbol for *sun*, a circumference with a point in the center. This symbol, a very mystical one, by the way, has the significance of: *center of*

life, source of creative power. Here the sun stands for the visible symbol of the same power which is depicted in a more abstract form by the other hieroglyph.

The inner meaning of what at first sight only seems to be a rather quaint mythological tale, then comes to this: The highest, formless, unmanifested God or Consciousness — *Tem* — emanates out of its own being *Nuw*, or Substance, in its dual aspect of matter and force, and forms by means of *Ra*, or his Logos, the Kosmos, i. e., the whole of manifested things which come into being.

And so we have once more an instance as to how the Ancient cosmology teaches us the truth of the saying of Anaxagoras "that it is the Spirit which ordains and causes all that is," putting thereby Socrates in the right and materialistic science entirely in the wrong — in full accordance, moreover, with the teachings of the Old Wisdom as they are revealed to us by that masterpiece of insight-knowledge: *The Secret Doctrine* by H. P. Blavatsky and by the elucidation of those teachings by Dr. G. de Purucker, especially in his two sublime books: *Fundamentals of the Esoteric Philosophy* and *The Esoteric Tradition*.

The Theosophical Forum

HEALTH AND THE KARMAN OF ILL-HEALTH — *Reata Pedersen*

(From a Student's Note-Book)

The subject of Health in connexion with our teachings is one to which the Theosophists endeavoring to answer the question of inquirers should give thought. In the process of giving thought to it, let us ask ourselves certain very pertinent questions:

How much of the "wholeness" which is health, have we experienced?

Can we bear witness to any degree of "healing" which we feel has resulted from exercising the highest powers of each of our seven principles?

Do we think our karman can be modified in this present life, or do we think right living can affect only the future bodies the Reincarnating Ego will use?

The students of G. de P. have been reminded again, just lately, that the words *whole* and *health* have the same root, and we shall find in the dictionary the first definition of Whole, given thus:

"Being in a state of health and soundness; well; hence, healed."

Does it not seem then quite possible that by living in all the parts of ourselves, as the *chela* should live, we shall have the wholeness which is health?

We know that which is possible for one is possible for all. We know there are no isolated miracles and indeed that the seeming miracle is but the observance of the working of the universal operation, when that operation has not been interfered with by the action of another part of the universe. In other words, if we ourselves have not offered the obstruction the miracle of

harmony is observed, for we and the universe are indeed one.

In bearing witness to any degree of healing, it is meant only that from knowledge of such healing in ourselves, and evidence of it in others, we act as witnesses of the truth of the teaching that "self-directed evolution" is possible and that the result of it is to gain for manhood an approximation of godhood.

In bearing witness, it is not suggested that we say these things aloud, but only that we know them of ourselves. There may be opportunity, when with our teachers or our fellow students, to bring forward the knowledge we have gained, but an account of personal experiences cannot always be relied upon to help the inquirer. However, great help can be given to inquirers and fellow students alike by our certainty of the truth of our teachings. Also our voicing of the knowledge we have come into sometimes gives the teacher an opportunity to enlarge the explanations of these teachings as formerly given; for we understand, do we not, that until we are ready for them there are certain parts of the teachings that are touched upon very lightly? By our questions and sometimes halting accounts of what we have come to know, our teachers have evidence of our progress. We have been told we cannot form our questions without having the answers to them within our knowledge. It is then we are given certain ground upon which to stand, for in answering our questions the teacher cultivates the soil of our inward knowledge, that the plant of our growing knowledge may have no restriction in growth.

In seeking evidence of our spiritual growth, our enlightenment, let us not mistake the experiences common to all who have known what may be called a "Spiritual Awakening."

These experiences fall into two classes — Dreams and Hallucinations. It is the hallucinations which must be guarded

against, for, while we are able to attribute the dreams to unwise eating or overtired bodies, we are apt to say of the hallucinations that we experienced them with our eyes wide open. We see lights, or hear our names called, hear music different from any ever listened to, are "told" where things are we have lost, see a scene from a past life or have a fore-knowledge of a future event.

Even if these things could be proven true and not hallucinations, the way of health and wholeness does not lie here. Health is not necessarily manifest by what we may call a motor automatism, as when our bodies lose heaviness and feel light and untiring. Into all these things, hallucinations and motor automatisms, our personality enters. Our emotions, reactions to the emotions of others, the effect of beauty or ugliness upon our sensibilities enter, and health is not found through exercise of the personality of the student. Wholeness is oneness, and personality is separateness.

Orderly growth, but hastened growth, through aspiring action without the desire for "fruit" of such action — this is the way to health. Effort to absorb the teachings that we may have health as a result of our effort is not of much avail. Our main business is to "live the life" that we may broaden the path for those who follow after us. If we will attend to our business of living Theosophy we shall come to know a harmony with all the manifesting universe which will result in the manifestation of health in our various bodies.

When we speak of one body, and mean by that the physical alone, we are forgetting that life-atoms form bodies, or vehicles, for each of the seven principles of man's constitution. All these bodies must be sound, well, whole, healthful, *before* the life-atoms forming the physical body of man will manifest health. All these bodies must be saturated with the nature of Atma-Buddhi, for

man is rooted in his god-nature; he grows from it and can only bring forth flower from the seed of him, from the root of him, as does every other growing thing.

Health is virtue; it is an active quality or power. It is a transforming energy. With this energy, with this virtue, with this quality, the life-atoms heretofore unconsciously impressed by you and your way of life can be impressed with a radiance that is the infilling of them with the Central Kosmic Spiritual Fire. The atoms then are not just sparks of that central fire, but *become* the continuous manifesting flame of that fire. Each of them becomes wholly at one with its own essence.

Can we think that we impress these life-atoms that make up, in their aggregate, our physical bodies only in isolated spots? We say of our finger prints and the whorls on feet and hands that they are different from that of any other person. Well, certainly they are, but can we truly think of this impression of our self upon these few physical atoms as being the only impression we can make upon this private physical body of ours? Since we cannot, how then think that we do not impress the man we are, upon all the life-atoms which make up the several bodies of man?

If man, through anger, can release into his blood stream the substance from certain glands (adrenal), can we not think of him as releasing into his blood stream a substance which is called forth by calmness and gentleness? May it not be that same gland, or another, has dual substances to be used as the *nature of our living* calls upon it for use, for co-operation?

Living without strife and anger, living the grand way, living in the highest parts of each of our principles, despising not the lower nature, but raising it, which we can do by a noble giving of ourselves to the work of the Masters — surely this is possible to Theosophists.

Man has holy loves, aspirations, hope and vision. These belong to the spirit which is immortal and deathless and are transmitted through the intermediate nature, or human soul, which human beings ordinarily call "I," much as the sunlight streams through the pane of glass in the window. — *Golden Precepts of Esotericism*, pp. 78-9

Can we think of sunshine even through glass as not bringing light into a room? How then think of the things of the spirit as not light-bringing? Enlightened, we learn to give instead of to expect gifts. With our giving we grow into wholeness. With wholeness we have health. Yes even if our karman — our choice of action in other lives, and the reactions of our choice — has fashioned for us unhealthy bodies. By such *realized* virtue, we have BECOME the whole, and in that sense have neither modified nor changed karman, but have lived many incarnations in this life, expending in that living the accumulated karman. We are becoming the god, and to the extent of our unselfish living are the god.

The Theosophical Forum

RECOLLECTIONS OF A THEOSOPHICAL SPEAKER: I — *Leoline Leonard Wright*

Those Wonderful Early Days!

It was rather wonderful, as I look back on it — the confluence of my own youth with its hopeful idealism and aspirations with the magnificent promise and wide-flung activities of the youth of the T. S. I became an active worker, secretary of the Chicago Branch, not very long after I left High School. That was in 1891 about the time that the T. S. was reaching its sixteenth birthday. So that really, in this incarnation for both of us, I was the elder of the two.

Yet becoming a Theosophist had not been easy for me. Brought up as an Episcopalian with a particularly strong High Church complex, I at first found the idea of reincarnation irresistibly hateful. I couldn't get away from it and I couldn't "stick it," as the saying goes. In those days there was no "modernism" in the Christian Church. Either you swallowed everything — going one better than the whale (for you had to swallow him as well as Jonah) — or else you were a horrid atheist.

And then I met Mr. Judge. My mother and my brother were both ardent Theosophists, active members of the Chicago Branch. In those days the Branch was small and poor; so it met in our dining-room. And the scraps of discussion I heard when the door opened! Kama-rupas, and elementals, and Manasaputras — how heathen they sounded! Did I want to be a *heathen*? I did not!

Still, without being quite aware of it, I was being inevitably drawn within the beneficent magic of the Wisdom-Religion. And at that particular psychological moment Mr. Judge happened to come to

dinner. He was beginning at that time his long series of lecture-tours over the country and was often in Chicago, staying at the home of the new President of the Chicago Branch, George E. Wright. But that was the first time he had dined with us. If only I had the power of Kriyasakti and could evoke for you the occasional hours spent thus informally with W. Q. J.! To me, inexperienced and bewildered, sore-hearted and groping, that first meeting with him was like stepping from storm and sleet into a firelit room. I warmed first of all to his sparkling talk, the merry Irish twinkle in his gray eyes — or were they gray? (Have you ever noticed how the eyes change in a face that is constantly lit from within?) Unfortunately I do not remember after all these years much of what he said. I can recall only the pleasure of his genial and worthwhile conversation. As dinner-table talk it was the best of its kind. One thing, however, I do recollect. He learned that I was trying to train myself as a writer. After dinner he asked me with the kindest tact if I would please read carefully *The Ocean of Theosophy*, just published, and tell him how it impressed me as a piece of writing!

A few months later I was able to find my spiritual feet, so to say, and joined the T. S., not very long after H. P. B.'s death — my diploma was one of those still bearing her signature. I might so easily have seen her! But no one can go ahead of himself. Almost the first thing that happened after that was the annual convention of the T. S. held in the Palmer House at Chicago. It was for me a red-letter occasion. I remember amusing Mr. Judge when it was over, by exclaiming that I had enjoyed it more even than I did grand opera! (Could a young lady say more?) I recall vividly at this moment the high enthusiasm of those sessions, the very feel of their vigor and determination, as well as my sense of the discovery of new terrain. I hear again the speeches of George Ayers and Henry Turner Patterson — magic names to me, calling

out of the Silent Land in voices warm as sunshine.

Almost the next thing that happened was my meeting with Claude Falls Wright, "Ginger" as H. P. B. always called him because of his red hair and unquenchable "pep." In these days his work seems of the long ago. But at that time he was more ubiquitous and active than a swarming bee. Long a resident at H. P. B.'s London Headquarters, one of her personal secretaries, a member of her Inner Group and close beside her as she passed away, he brought to the American work his exceptional qualifications in the service of the work. He was a small wiry Irishman of real genius as a speaker and organizer. (I have heard it said that he started and encouraged and trained more Theosophical and platform speakers than any other single person.) He was one of the first of that group of field lecturers, including Burcham Harding, Abbott Clark, and others who covered the U. S. with a network of Theosophical lines with Mr. Judge as the "king-pin" so to speak at the strategic points. It was a time of almost incredible growth. One of these speakers would go to a certain city where Theosophy was beginning to be known and the ground had been prepared, give a few lectures with good newspaper publicity, and presto! the next evening a Branch of thirty or more members would spring to life! Of course it is to be remembered that it was the end of the century and the Lodge-force was pouring through the arteries of our world. It was during Mr. Wright's first visit to Chicago that he simply pushed me onto the lecture platform, where I found my principal work for Theosophy through several years.

It was about this time, 1892, that Annie Besant made her first lecture-tour in America. I heard her in Chicago. She came close to being the greatest woman orator of our times, I should think. Certainly I never heard any woman but Katherine Tingley who surpassed her. Annie Besant was beautiful. She had a "starry light

in her eyes," or so I described it in my Victorian idiom. And her eloquence, which was fiery and intense, had a core of scientific fact and accuracy that gave it the power of a projectile.

It is interesting to recall the fact that in those days there was only one Theosophical Society. It was the only medium by which Occultism in any form could reach the general public. There were no pseudo organizations to draw off the inquirer into profitless sidelines. And there was taught only H. P. B.'s Theosophy, however inadequately presented it doubtless often was by some of us, who were mere beginners in the study. Besides this the Society had much misunderstanding and ridicule, and even open contempt to meet, though the splendid and indefatigable work of Mr. Judge was gradually building up a more enlightened and common-sense attitude on the part of newspapers and the public generally.

The crown of Mr. Judge's work as organizer and speaker was reached perhaps in the distinguished place he was able to create for the T. S. in the World's Parliament of Religions at the World's Fair in Chicago in 1893. Some few vignettes from that colorful and inspiring scene will be later presented.

The Theosophical Forum

SCIENCE AND RESEARCH — *C. J. Ryan*

"Extra-Sensory Perception"

"E. S. P." Widespread interest has recently been aroused in telepathy and clairvoyance by the publication of Professor J. B. Rhine's researches at Duke University into those tabooed subjects. With a *very* few courageous exceptions scientists have always regarded them as beyond the pale of respectability and not to be mentioned in academic discussions under pain of ostracism. Dr. Rhine dubs those faculties "extra-sensory-perception," a name whose technical sound may have helped to attract more attention than the old-fashioned words for faculties perfectly well known from time immemorial. Anyway he has made a serious breach in the dense wall of arrogant denial, and it is so well defended that it can never be closed. The final surrender of the materialist garrison is visibly approaching, several of the superior officers such as Dr. Carrel, Professor Julian Huxley, Dr. Carl Jung, etc., having already accepted the inevitable.

Fortunately, Dr. Rhine has not tried to prove too much; his experiments are not sensational, though the implications are very far reaching as he suspects. He does not mention ghosts or the like, but he works on the line that an ounce of *fact* is worth a ton of *opinion* or rumor, even if the opinion may be reasonable and logical. Dr. Rhine set out to test the assumption of all the "regular" psychologists that nothing can enter the mind except through the sense-organs. By trying an immense number of experiments (corroborated by published reports from more than a dozen colleges in addition to his own from Duke University) in naming unseen cards under test conditions, he has apparently completely demonstrated that the psychologists were entirely wrong in their

assumption, and that on the contrary, the mind actually has access to knowledge in ways unsuspected by them — telepathically and clairvoyantly. Under the most severe tests, when the subject was separated from the cards by walls or opaque screens and the cards were sealed in opaque envelopes — even when blind subjects were tried — the average of success in the 142,825 cases was 5.8 hits in 25 calls, when the mean *chance* expectation is 5.0. The odds against such an excess over the average are so great that, as Dr. Rhine says, it would take 196 digits to write out the figure! Eminent mathematicians have examined the figures and found no flaw. With a few specially gifted subjects remarkably accurate results were obtained, but the most significant feature of the research is the successful average when tens of thousands of experiments were made with a large number of subjects chosen at random.

Although Dr. Rhine has stepped only a very little way out of the conventional ruts of psychology, he has already felt, "the inexorable shadow which follows all human innovations," to use the words of the Mahatman K. H. (*The Mahatma Letters to A. P. Sinnett*, p. 1) in regard to A. P. Sinnett's efforts to report H. P. Blavatsky's phenomena in 1881, and the unpreparedness of the public to accept them. Though more liberal views now prevail, largely owing to the work of Theosophists, Dr. Rhine's innovations have aroused ungenerous opposition, and he has been charged with commercialism and carelessness, if not worse, by various critics, some of whom, as he says "don't wish to believe." He has been able to rebut the accusations with ease and to show their unfairness. Yet, as in H. P. Blavatsky's case, though slanders may be completely demolished, prejudiced minds will continue to make them, and we fear — from the study of many similar cases — that Dr. Rhine will find his path in the Borderland of the Occult World a thornier one than he dreamed when he so

gaily entered it, especially if, as he hints in his latest book, *New Frontiers of the Mind*, he may try to penetrate more deeply into the latent powers in man. If he succeeds, as we may hope, another step will have been taken toward Theosophy, for, as H. P. Blavatsky says:

The whole issue of the quarrel between the profane and the esoteric sciences depends upon the belief in, and demonstration of, the existence of an astral body within the physical, the former independent of the latter. — The Secret Doctrine, II, 149

The astral has far more to do with the psychic faculties than the physical has.

How Long Can Seeds Remain Dormant?

The claim that Egyptian wheat has been grown after lying in tombs for several thousand years is denied by botanists. Recently a report was received from Sweden that ancient Egyptian peas had been grown, but confirmation is still to be obtained; and it is said that when the stones of a ruined Roman temple in France were removed, flowers came up which are quite unknown in that region. There is a similar story in Japan. However all this may be, the Department of Agriculture reports an authentic discovery in Costa Rica in the same line though not so sensational. Tobacco seeds of a kind that has not been grown there for more than sixty years have remained dormant in the earth under certain old houses. When the houses were destroyed by earthquakes or otherwise the seeds were exposed to sun and rain and began to grow. There seems to be no doubt of this case and it is surprising enough, but it will not help much in establishing the possibility of wheat remaining alive for thousands of years. Could the Egyptians have had some secret method of preserving the vitality in the mummy-wheat?

Order and Analogy in the Solar System

Astronomers have looked more or less frigidly on the curious gradation in the distances of the planets from the sun called Bode's Law, and yet it is impossible to ignore it altogether. It will be found in every text-book. One reason that it is suspect is that the regular progressive increase in distances from the sun fails when it comes to Neptune and Pluto, the outermost planets. This is not, however, surprising to students of *The Secret Doctrine*, for H. P. Blavatsky says that Neptune does not properly belong to the Solar System in the sense that the congenital planets belong, and so it may well disobey Bode's Law of planetary distances without vitiating the accuracy of that law in respect to the planets nearer the sun. The planets Jupiter and Saturn with their large number of satellites may be regarded as Solar Systems in miniature, and they follow a somewhat similar law of distances. In the case of the Saturnian System, however, there has been an awkward gap in the series. Mr. J. Miller, of the British Astronomical Society, suggests that a faint satellite reported by Professor W. H. Pickering in 1905, but not since confirmed, is the missing one. The difficulty of seeing or even photographing the fainter satellites is great, and considerable research will be necessary to prove the existence of a tenth satellite of Saturn if, as seems most probable, it exists. A complete exposition of the numerous analogies in the structure of the universe around us would take more time and space than we can afford at present, but it makes a marvelous picture of order and organic unity, and gives a new meaning to the famous "harmony of the spheres" of Pythagoras.

Meteorites

Dr. W. D. Urry, of the Massachusetts Institute of Technology, has been analysing meteorites by the radium degradation principle and has found that while many are less than 100,000 years old,

others are nearly three billion years old. This throws serious doubt upon the recent theory that meteorites are the remains of an exploded planet or small planets beyond the orbit of Mars. While some meteorites appear connected with comets, there are other possibilities. They may not belong to our system at all. Anyway, the problem is still unsolved. We believe that Dr. C. B. Lipman still holds to his belief that he has found simple bacterial forms of life in certain meteorites, but we still await any claim to the discovery of fossils in the stony meteorites.

Blood Relationship between American Indians and Arabs!

In the December, 1936, *THEOSOPHICAL FORUM*, we mentioned the four principal types of blood in the human race — O, A, B, and AB — and discussed the statement by Dr. P. B. Candela that American Indians, Basques, and Celts belong predominantly to group O. and that this discovery would open a vast field of research in regard to the history of mankind. Dr. W. M. Shanklin, of the American University of Beirut has now demonstrated that the purest-blooded Arabs in the Syrian desert, etc., have the same type of blood as America's pure-blood Indians. H. P. Blavatsky associated the North American Indians, the Basques, and the Guanches of the Canary Islands in one group, before the modern blood-groupings were discovered. (See *The Secret Doctrine* II, 740, 790.) South American Indians of the Amazon region and Patagonia belong to the Hindu type! Surely all this must have some important bearing upon the problem of Atlantis?

Mind and Brain

Can a man live and think rationally with a large part of his brain missing? It seems to be so, and, if so, may this not be an awkward fact for the materialists who declare that man is entirely dependent upon his brain, and that when it perishes he perishes too? Several instances have been given in these pages of almost

incredible cases of intelligence persisting after enormous areas of the brain were destroyed or had degenerated, and some new cases have just been reported. Although, according to statements made in May, 1937, at the American Psychiatric Association, the seat of intellect in right-handed persons lies in the left side of the brain, and it cannot be injured without serious interference with intellectual processes, we are now told that this general belief must be modified. Dr. D. O. Hebb recently described four cases to the American Psychological Association in which careful psychological examination has been made after large parts of the brain had been surgically removed. No ill effects were found, and in one case the patient had improved in intelligence. Two of the patients were of unusually high intellectual ability before and after the operation. It was proved that the removal of a large part of the dominant (left frontal lobe) thinking area of a right-handed man meant no loss of mentality.

Some psychologists have declared that man's future progress in intelligence depends upon a great increase in volume of the brain, but others think there is plenty of unused material still available for enormous advances. After all, is not the rate of progress dependent upon something very different from the structure of the brain mechanism? It is worth noting that psychiatrists are beginning to suspect that the cortex or outer surface of the brain is not so much concerned with thinking as formerly believed. The discovery of the rhythmical electric waves which beat through the gray matter of the cortex is proving a valuable addition to methods of research, and Dr. J. W. Papez, Cornell University professor of anatomy, suggests that the source of the waves is in the central portion of the brain, near the pituitary and pineal glands. Observations of the results of injuries to this area indicate it to be closely connected with the emotions and consciousness. If scientists could break through the

conventions, and impartially study the evidence for the existence of an astral or semi-material body and brain their researches would be greatly benefited. Perhaps they would discover that the brain is only the vehicle of consciousness and that still more subtil ones can function on this and other planes!

DHARMA: DOING ONE'S OWN JOB — J. M. Prentice

From the richness of the Sanskrit vocabulary we have appropriated to our own Theosophical use a word of inestimable value when rightly used. It is the word Dharma, and it is one of the paradoxes of English that the very finest translation is in French — *noblesse oblige*. From the days of chivalry comes the conception that *rank implies obligation*; and this is exactly what is meant by Dharma: that we are all of us born and reborn into the world of flesh with obligations, obligations that we are under to others and obligations which others are under to us.

Dharma can be variously translated according to the context — duty, truth, righteousness, conduct, and a dozen or so more. But the underlying sense is never absent — inherent duty, the duty to which and with which we are born. The *Bhagavad-Gita* is its text book, but its true, interior purport can only be grasped as one lives it in daily life. It is that duty which devolves upon us, taking into consideration our past Karman, our present circumstances, and our future evolution, so that in it as in all else are indissolubly linked past, present and future.

Rightly to appreciate our own duty and to perform it to the best of our ability is to enter into peace, because therein there can be no regrets. It is the difficulty of recognising what IS our duty that carries so many of us astray. Yet this is something that we alone are competent to do; no one else can finally decide for us, however willing they may be to assist. To do our own job, irrespective of the consequences, unmoved by the criticism or the congratulations of others or by the absence of either or both!

The *Bhagavad-Gita* is emphatic on the subject:

Better one's own Dharma without excellence than the Dharma of another well performed. Death in one's own Dharma is better; the Dharma of another is full of danger.
— ch. iii, verse 35

The inference is clear — every duty, every piece of work that can come to us, is of importance, no matter how menial it may seem, how lacking in importance; to do it to the best of our ability is to make progress. Even to die in the lowly discharge of our own Dharma is merit gained and Karman obliterated. To try and do the work of another means that we may do the thing badly, or should I say less well, and we may be debarring the rightful worker from his work. It may breed for us consequences that will outlast many lives, it may even carry us away from the strict line of our own progress. On the other hand when once our Dharma is revealed to us, especially from within, then we must continue as long as life shall last.

Dharma implies the fulfilment of all obligations, both family and national. Of these the family obligations are nearest; most pressing and easiest to slip on. Relationships between husband and wife, between parents and children, offer the perfect embodiment of Dharma, and no spiritual development can be gained at their expense. Sometimes the temptation to try and sidestep some family duty in order to devote more time or money to Theosophy becomes very subtle — but if reviewed in the light of Dharma it will be speedily resolved.

From another angle the *Bhagavad-Gita* gives us a clue:

. . . doing the Dharma imposed by one's own nature (the doer) incurs no sin. — ch. xviii, verse 47

Herein we are instructed that by doing our own Dharma righteously and well — that is, to the best of our ability — we

create no further ties, produce no fresh Karman, but work out the whole of the past. Only by this is a vicious cycle avoided and the way to liberation from bondage of birth and death made possible. Impersonal, selfless effort is included in the conception of Dharma, and of the results of this the pages of the *Bhagavad-Gita* bear ample witness. Theosophy was once defined to the writer as "doing the right thing in the right way at the right time for the right purpose and with the right motive." On similar lines Dharma might be defined as "getting right on with the job, and above all, minding one's own business."

The Theosophical Forum

QUESTIONS AND ANSWERS

The Status of the "Mahabharata" and the "Ramayana"

I am taking up the study of the Indian epics, the *Mahabharata* and the *Ramayana*, with my class, and would like to be able to tell them more about the correspondences of many of the characters with the various Cosmic Planes and Principles. It seems evident, for example, that the five Pandava princes in the *Mahabharata* have a special symbology, and also, in the *Ramayana*, Rama and Sita and their friends and enemies. Could you throw more light on the subject? — J. T.

G. de P. — Answering your questions about the relative places of the five Pandava princes, supposed to have correspondences with the Cosmic Planes, Elements, etc.: If I were you I would not bother my head about any such thing. Let us look at the situation exactly as it is. The *Ramayana* and the *Mahabharata* are the two great epic poems of India, just as the *Iliad* and the *Odyssey* were and still are the two great epic poems of Greece, or the Greater and the Less *Edda* we may call the two great epic poems of Scandinavia; and there are similar epics, one or two or three, belonging to other countries.

Now then, let us turn to and keep in mind the Indian epics only. These are not wholly and solely mystical or occult works. Let us keep that idea perfectly clear. No more so than is the Jewish Bible, no more so than are the *Iliad* and the *Odyssey*, etc. The *Mahabharata* and the *Ramayana* are fundamentally ancient Indian history and legend, with all the mists and glamor of antiquity veiling them, and they contain in addition a great many beautiful, truly mystical and occult, teachings; and a few really

splendid minor episodes, like the *Bhagavad-Gita*, and the *Anugita*, which have been interspersed in the epic-story, for this is according to Hindu tastes.

Thus, really, the *Ramayana*, for instance, is essentially the struggle of Rama against his enemies, mostly of the south, in Lanka, the Rakshasas, etc., which is but a modern Aryanized legendary version of the history of the struggle of the early Fifth Race in its Indian branch with the Aryanized Atlanteans of Lanka, an island-continent now sunken except its northern headland, which is Ceylon.

Similarly, the *Mahabharata*, as I remember it, is a legendary epic telling in poetic, and occasionally almost fairy-tale, style, the struggles of early Aryan settlements in India, Aryans themselves fighting amongst each other, and also fighting against the aboriginal, so called, inhabitants of the great peninsula.

Now, there you have in a thumb-nail sketch just what the *Mahabharata* and *Ramayana* are, and actually also just what the *Iliad* and the *Odyssey* are when applied to Greek legendary story or history. These great epics are part history, part legend, and part religious instruction. When I say religious, I mean philosophical, and mystical, and occult, also.

Now it is quite possible for a clever writer to extract from so generally glamorous and mystical a work as the *Mahabharata* or *Ramayana*, correspondences between the five Pandava princes on the one hand, or between Rama and Sita on the one hand, and something or somebody else on the other hand, correspondences perhaps with Cosmic Planes or Principles. In the early days of the T. S. this was a favorite pastime or relaxation of Theosophical writers. This finding of correspondences, however, could be applied with good reason to these episodes taken from the *Mahabharata* like the *Bhagavad-Gita*, or the *Anugita*, because

these episodes are not so much the historical part, or the legendary part, but are deliberately written, semi-occult, religio-philosophical treatises, interspersed here and there in the legendary, historical material, because this way of doing things is beloved of the Hindu mind.

Now I wonder if you get the picture. If I were you I would not bother my head about these things, and I would tell your class the plain reason why. It is something like trying to do the same thing with the Hebrew Testament, or the Christian New Testament. One who is clever in finding, or thinking he finds, occult correspondences, can find lots of correspondences, real or imaginary, between the patriarchs, for instance, of the Old Testament, and the Planes or Principles of Nature, or between Jesus and his disciples and the Planes or Principles of Nature. But such correspondences, while having some reason, are always shaky, and are pleasant rather as a pastime than actual, solid esoteric study.

Therefore I repeat, if I were you I would not bother my head about any such correspondences between the five Pandava princes and something in Nature; and you can get a picture of what I am here writing, and get this picture clear-cut in your mind, and then when you are asked questions from people who do not know what the *Mahabharata* and *Ramayana* are, you can just explain it to them, pointing out that not any one in any country of these great epics, whether of Asia or ancient Europe, or ancient America, is a thoroughly, or typically, exclusively occult treatise on esoteric correspondences, etc. But all of them are legendary history based on facts now lost in the night of time, but seen through the distorting glass of legend by much later writers who are correct in their facts, but like all legendary writers deliberately embroider their theme, and introduce perfectly sound, religious teaching, as in the *Bhagavad-Gita*, and

the *Anugita*, in the Hindu epic.

The Meaning of AUM

Will you explain the meaning of the passage in *The Voice of the Silence* (p. 8, Point Loma Ed. foot-note to AUM) — referring to Kala-Hansa: "The syllable A is considered to be its (the bird Hansa's) right wing, U, its left, M, its tail, and the Ardha-Matra (half metre) is said to be its head." It is the Ardha-Matra (half metre) which puzzles me. — *J. T.*

G. de P. — Here again you have picked out one of the less important things, which I dare say you realize yourself. Just as in all religions there is always a certain class who are seeing wonderful mystic meaning in this or that or some minor detail, which may be quite interesting and important in a small way, but it does not rank among the fundamental, or topnotch, or through-and-through important, things — such is the case with the simply reams of stuff that have been written not only by Hindus through centuries, but even by Europeans, about the so-called sacred syllable OM or AUM. It is simply amazing how this one word has exercised the ingenuity and mystical feelings of literally centuries and centuries of generations of Hindus belonging to almost all Schools.

The word is a sacred name on account of its vibrational quality, and used to be used in ceremonial magic, pronounced aloud, although in most secret privacy. And from this one fact, connected with which is the reverence that used to be paid to the Hebrew and Christian AMEN, arose all this vast literature of guessing and mystical and semi-mystical writing.

Now all this talk that H. P. B. has in *The Secret Doctrine*, *The Voice of the Silence*, and elsewhere, is merely a kind of appeal to those interested in this kind of thing, in order to attract them to her

really deep teachings. That is why she made so much of them.

However, now, here comes the point: Kala-Hansa, of course, is the Bird of Time, which means the bird of cycles, and the bird stands as a symbol for the Reincarnating Ego taking its flight across time and space, mostly time. The same can be applied to the Universes and the Cosmic Logos which in the Universe is, so to speak, the Reimbodying Ego.

Now then, of course today Hindus consider this word so sacred, whether OM or AUM, that they themselves rarely or never pronounce it above a whisper, and mostly merely pronounce it in the head as it were, without voicing it. So much for that point.

Thus AUM stands for the Kala-Hansa; and from this mystical thought, the mystical saying runs that A stands for one wing, the U stands for the other wing, and the M stands for its tail, and the Ardha-Matra, or short half-syllable, stands for its head. The Ardha-Matra really here does not mean a syllable, or a half-syllable rather, but that connexion between the sounds A U, and again between U M, which gives inner direction and one-pointedness to the whole pronunciation of the word, and for that reason is called its head, the head of a bird being the first part of it, and guiding its flight. I wonder if I make my meaning clear. The bird takes its flight on its wings, which support it. The tail serves as a guide to the direction, and the head leads the way. The Ardha-Matra then is the so-called half-syllable, lying in the sound between A U on the one hand, and U M on the other hand, and forming the middle of the body of the bird ending in the head. I wonder if I make this funny thought clear — and that is really all there is to it!

Now the mystics say in connexion with this word that it is the symbol, the Ardha-Matra, of the consciousness guiding the pronunciation; or, changing the figure of speech, the Ardha-Matra

or half-syllable is the consciousness guiding the karmic forward progress of the mystic flight of the Ego or Bird, as it is the consciousness which gives the tone to the pronunciation of the syllable. Thus a singer singing a song not merely changes from note to note, but it is just in that change between any two notes that there is a kind of consciousness-sound wherein the singer's ability to make an impression, what might be called his vitality, or his individuality, expresses itself. It is called a half-syllable because it is so short. And yet as it is the point where the consciousness enters in, shifting over from note to note, and therefore guiding the sound, it is called the head of the bird. I hope all this is clear. You will see that out of such a little thing has grown all this big literature about the Hindu sacred word.

The Word "Paramita"

Will you kindly point out the derivation of the word
Paramita? — G. R.

G. de P. — This is a Sanskrit word, and is a compound, formed of *param*, which means "the other shore," in the technical sense of this word, in the beautiful Buddhist way of speaking, which means the other shore, or over the river of life, instead of *this* shore which is the material existence where sorrow and pain and all the rest of it exist. Thus "the other shore" means attaining perfect enlightenment because one's consciousness has passed over all the illusions of the material world to the other shore of spiritual glory and peace and freedom and wisdom and love.

The other part of the compound *paramita* is *ita*, which comes from a Sanskrit verb meaning "to go," and is the past participle of this verb; and hence in English can be translated "gone": go, gone; and *ita* is this Sanskrit past participle, meaning "gone." Then this past participle is turned into a noun, and this makes it *ita*; and hence, as a noun, the meaning is, by paraphrasing it, "successful

going," or "successful reaching."

Thus the whole compound means "the successful reaching of the other shore."

Please note also — and this will make the matter a little clearer to you — *paramita* means "one who has successfully reached the other shore," whereas, as said above, *paramita* is the compound noun describing this, and therefore is to be translated as "the successful reaching of the other shore."

The Theosophical Forum

THE MYSTERY OF PAIN (1) — *A. Trevor Barker*

After more than six hundred years before the beginning of our Christian era the great Sage Sakyamuni, whom we know through our historical records as Gautama the Buddha, lived and died in ancient Hindusthan, and he taught the origin of suffering; he taught what is its root; he taught what is the annihilation of suffering, and what is the means whereby you could enter upon that annihilation, what he called the four noble Truths. Most of the Buddha's teaching and philosophy centers around the explanation of those four noble Truths, and of the eightfold Path which he explained as the means towards attaining the great end, the emancipation from suffering. Therefore right at the outset of our consideration of the subject, we have not only the great ideal of the Buddha himself, but we have the statement which must ever be of the most tremendous encouragement to all who strive upon the upward Path. We have that statement of his that emancipation from the suffering of human misery such as we know it can be achieved even in this life. More, he went still farther in saying that if a man would sincerely enter upon the noble eightfold way, and strive to put into practice, and to make a reality, the eight conditions of that Path, even for a comparatively short while, such a man would receive the fruits of merit of that deed, and thereby would begin to feel the results in his own life.

Now, many of us have heard over and over again the statement of those qualities demanded by the eightfold Path. We are familiar with the noble Truths, and like many things that we have heard so often, sometimes the significance is missed by us, and we do not apply it. The realisation of the practical application of those great teachings does not seem to enter into the very being of us. Tonight we want to examine for a while in the light of Theosophy

how we can apply the teaching of the Buddha to our own lives. We must remember that in the time of the Blessed One there was the Order, the holy company of the monks and ascetics, the Bhikkus, who followed in his footsteps; and of course his remarks were addressed largely to his disciples. Today in our own times it is amongst such Brotherhoods as Theosophical Societies that you will find those who are striving to tread that same eightfold Path. It is there that you will find that spiritual companionship that is so necessary as a support, as an encouragement, in all endeavor towards spiritual living.

Let us ask ourselves, therefore, first of all what change comes over the attitude of mind of one who has made a study and an application of Theosophical truth. How does it influence his attitude towards this mystery of human suffering? Well, friends, it is a very large question; but in the first place has it ever struck you how enormous is the amount of human misery that is caused by our attitude of mind to what we call God? Cast your mind back to your own childhood. Think of the amount of misery you suffered owing to the supposed wrath that you incurred of some Deity external to yourself, who was going to punish you. Now we Theosophists do not believe in that personal God of all the orthodox Churches. We do not believe in him because there is logically no room for him. If God, a being, was the omnipotent and omniscient creator and controller of this universe, then how are we to account for the presence of evil in our midst? We must of necessity hold him responsible for it if he is omnipotent, if he is all-wise, and if he is all-worthy. Therefore this is the first great idea that Theosophy gives to us as to the nature of Deity: In essence every man is a God. At the heart of his own being there is that living fire which exists at the heart of every created thing in this Universe.

Now whence, you may ask, are the laws of nature that obviously

exist around us? We discover their existence when we break them and reap the penalty of so doing! Are those laws the will of a Creator? What are they? Theosophy gives one a very helpful symbol, a helpful image, whereby we can begin to understand the relationship of man to nature. According to that ancient teaching there exists nowhere in the Universe a Being who consciously controls by means of the laws of nature other created beings — you and me, in other words. We are told by the ancient Teachers that we shall get an absolutely wrong idea, and one harmful to ourselves and to our spiritual growth and progress, if we imagine God as a being somewhere outside of us, who is controlling our destinies.

How can we think about it? How can we begin to understand the problem? Why, first, friends, by studying ourselves. What are we? Look at this body of ours. We see, if we examine the teachings of science that it itself is a vast universe; that it is composed of millions upon millions of tiny lives, atoms, molecules, and structures of living, vibrating matter pulsing with life; and the teaching of Theosophy comes along and says that each of these tiny lives is instinct with the same life that imbues your own consciousness as a Thinker; that each of those tiny lives in vast and age-long evolution proceeds to unfold, to unwrap, the forces inherent in the very being of it, inherent in the heart of it; until it passes through all the stages of progress up to and including the power of conscious and deliberate choice of action and thought; that each of those tiny lives will be raised up to the level of a conscious Thinker.

Just for a moment let us think of ourselves as bearing the same relation to the unknown Deity that those tiny lives of our own bodies bear to the consciousness of the personal man. Here is a great thought for us, because actually if you consider that relationship, you can see it is most unlikely that to those tiny lives

any complete consciousness is possible of the man who lives and uses the body which they compose and build up. All that they know is that there is a central will, a central force, and certain laws — call them laws of nature if you will — which work. Can they possibly have any conception of the God within who uses that body of flesh and blood as a means of locomotion, as a means of action, as a means of thought and feeling and service to other human beings? Not at all. Such an idea must be for them merely an inferential possibility, if they can think at all.

Now that is exactly our relation to the unknown Deity. His conscious power to control anything, anywhere, must be for us a mere inferential possibility, and therefore we rid ourselves once and for all of the bogey of a conscious Being controlling and directing our destinies, and we look for a grander, truer, more spiritual teaching which will enable us to realize ourselves in the sense and meaning of the ancient Delphic Oracle: "Man, know thyself." Man know yourself to be what you are in your innermost spiritual essence. That is our problem, and that ultimately must hold the meaning and explanation of suffering; for after all what is it that suffers? Man is not only a body. We know that the body suffers, but there is something more permanent, more real — the Eternal man transcending the body: the man that passes from body to body and life to life, and even from planet to planet, and world to world, and solar system to solar system, in the age-long pilgrimage upon which he is bound.

That brings us to the second thought that I want to put before you: that the change that takes place in a man when he studies Theosophy in regard to the problem of human suffering is tremendously influenced by the great doctrine of Reimbodiment, or Reincarnation. We do not believe that man has only one short life to live on this planet, because such an idea is an absolute denial of all justice. Do we not often see the sinner dying in his sin

and from our point of view never having received any adequate punishment — to use the term — for all the evil he has done? On the other hand, as we look about us and study ourselves, do we not ask: although the purpose of life is not only progress but perfection, how many of us reach perfection at the end of one short life? Obviously so few that it is not worth considering. Therefore when we hear for the first time that great doctrine of Reincarnation by which the eternal, inner, real man comes again into tabernacles of flesh to take up his life, take up his task where he left it off, then we get another key which will help us to understand human suffering.

And the third key that I want to put before you is that other doctrine, Karma, as they call it in the East: the doctrine by which that eternal man, that reincarnating entity, does represent every single result of every cause that he created during any one particular earth-life. We do not admit the possibility that man does actually endure suffering which is unmerited. *Unmerited from his point of view it may be*, yes, because we do not bring back to this life, as you know, a recollection of previous lives. Why is that? Simply because we have now a new brain, we have a new mechanism of consciousness, which has not received the impress and record of the previous lives that have been led; and therefore the man in his new body does not remember. But the real man remembers and sees the essential justice of his human experience.

Bearing these three main ideas in mind: the nature of the Deity, the law of Reincarnation, and the law of Karma, what would you teach a child about the idea of pain? It is a very fundamental question that. What would you teach a child? Well, perhaps it is not a question that is very easy to answer, but I think the first great lesson that any child should learn is to gain the habit and power of not identifying itself with discomfort, with pleasure, as a

matter of fact, or with pain. You will say perhaps that is a bit of a counsel of perfection for a tiny child, but it is not so: tiny children do respond in the most wonderful and impersonal way if you go the right way about it and teach them, to use the ancient Eastern simile, to regard pain for themselves with indifference; to be to themselves in regard to pain as the stone of the mango. At the same time inculcate the idea that, while they are hard and indifferent to the pain which comes to them they should be soft as the fruit in the pulp of the mango to every cry of pain and every cry of distress that they hear from another outside of themselves. You will find that even a tiny child will respond to that idea, and will learn the first great lesson: that for it pleasure and pain are equal and opposite; things to be experienced merely, but never to be identified with to the point of losing hold of the calm spirit within their own heart as a guiding light in their own lives.

Remember that directly pain or pleasure gains the power over us to distract our spiritual meditation, then it begins to represent evil for us; and therefore the earlier that we can get hold of the impersonal idea towards pain the better it is for us. Some people may think that it is not possible to apply this principle with a tiny child, but I will give you a little example because it shows you how the great teaching of Theosophy can be applied in life. Little children are always tumbling about, always hurting themselves, always bursting into tears, are they not? — as they learn to walk and so on. Well, what are you going to do about it? A tiny child will respond to the idea that he may have hurt that which he bumped up against, and in distracting the attention of the child to the consideration of the damage that he has done to his father's furniture, for instance, lo and behold! you find the child has forgotten all about the bump that he has received. And so with the Spirit of man: while his thought is turned ever and eternally away from himself he forgets the personal, as he forgets the

bumps and bruises and the unpleasantnesses of life; and he becomes detached from objects of sense, and his heart begins to enter on the Way of Peace. That after all is the meaning of all teaching, of all Theosophy.

Shall we be always subject to pain? In answer, you have the teaching of the Blessed Buddha, who won complete enlightenment in this life, and lived in imperishable and eternal bliss while walking the ways of men. He gave it as a promise to all who followed in his footsteps: that they should realise here and now, when they had gone through the necessary steps of purification, that life was no longer a mystery of pain; they would then experience right in the core of their own being the ineffable joy and bliss that actually are at the heart of all existence. Do not think that that is merely a figure of speech. I do not mean it so. If Theosophy means anything at all, it means just that profound realisation in the lives of individual Theosophists that they have an understanding, that they have a peace, that they have a joy in spiritual living which takes them in consciousness away — literally away — from all the unpleasantness of life, and turns it into one endless progression of lessons and experiences.

Think what the Theosophical conception really means! Probably a true understanding of the mystery of pain is not realised, and cannot be understood, until the age-old Path is entered and the man begins to take hold of his own lower nature, and studying it he begins to realise the blessing of pain. After all, all entry into new life is caused through pain or through death. Death of what? Why, the death of the lower elements of being. All growth and progress is a turning away of mind from that which has been, to that which is to be; and what does this mean? It means a parting from the habits of mind, and the states of being, and the modes of action, to which we are accustomed. It means that we are prepared, having seen the light, and something more and better,

to relinquish our old methods and old habits of mind and being. In that moment we die: the spiritual life is a constant dying, a constant death upon the cross of our material being. Is that a miserable thing? Is that an unhappy thing, as the Christian scriptures have rather taught us to believe? Not at all, because it simply means a giving up of the things that are not essential in our lives. We give up that which for the time being we think important, which we think has significance for us, because we realise that this giving up is in accordance with and in harmony with the higher law.

Then what happens? In a little while, after we have passed through the strangeness and the quietness that succeed an entry into a new state of being, we realise that the suffering that we have gone through has merely brought forth blossoms and buds of spiritual life in ourselves, and we realise that there is not one single experience of pain that we pass through in this small life of ours but has a peculiar significance to the man who is treading the noble eightfold Path. And I speak particularly to the one who is a spiritual aspirant — because the meaning of pain is missed, is passed by, by those who have not got the conscious spiritual guidance by which to direct their lives — that until you have learned to subordinate every single action in life to your inner spiritual purpose, you won't understand the meaning of the pain; but directly you have learned that lesson, then comes the realisation that those things in your life which have been the hardest, the most difficult to cope with, are the very things which have given you the power, the capacity, the knowledge, the sympathy, and most of all the understanding, with which to help your fellow pilgrims upon that same Spiritual Path that you yourself are beginning to tread. It is one of the deepest mysteries of the great subject of pain, how every experience of life tends towards the development of some faculty, some power, of the

inner Spiritual being, which will enable you to help some brother one step farther upon the Path.

Let us turn back for a moment with that thought in mind to the inner nature of man, because Theosophy has such a sublime teaching, and it is this: that the very progress of the inner nature of man towards perfection is dependent upon the effort of that inner man to raise first of all his own material being to the condition where that lower man is a fit tabernacle for the God that exists within; and as a further stage beyond that: progress of the inner man depends upon his identification with the God who broods over him and in his own heart. Now the progress of that inner God also depends — and here is one of the great teachings of Theosophy — the progress of that God depends upon its power, its effort, to raise the lower man, to raise the inner real man, to the conscious recognition of its oneness with that inner God. How does it come about? As that inner Spiritual being is always ready, if we turn the polarity of our minds upward to the inner Spiritual nature within us, that beam of light that exists there will grow stronger and stronger until it blazes as a lamp within the heart of that inner man; and he knows without any argument, without any reasoning or help from outside himself, *he knows* that his own next step on the Path of Spiritual progress will be a step towards truth; and he then can bring that light of knowledge that he has won to the knowledge of those who as yet tread the path in darkness. Is it not a sublime thought that as we ourselves — and we can all of us do it, friends, at any rate to some extent — as we look out from ourselves, and leaning down for a moment stoop to help someone who needs that help, in that moment the doors of the soul open, and the light of the inner man grows stronger and stronger; and so the inner God raises the inner man, and the inner man raises the outer man, and all three together work in the service of the one cause and the one life and the one light that

exist in the heart of all creation. Don't you see how it works? It is a wonderful idea.

In these times when the stress of economic life is so tremendous, we are forced to realise that men and women, by the very privations that they are forced to go through, enter into one of the classes of beings who begin to study spiritual truths, who begin to long for an explanation of the sufferings of material life; and so it is that during the times of adversity the spiritual life of men is actually quickened. During the times of tremendous prosperity all their attention is turned outwards in identification with the very things that will lead them away from the search that we are all really and truly, however misguidedly, engaged in pursuing.

One of the troubles that many people have to face is the loss of some individual with whom they have spent some part of their lives; the loss of some loved one who passes into the Great Beyond; and that for them brings about an anguish and suffering that is very real. Now Theosophy does work a great change in a man's life even in such a case as that. Why is this? Simply because the man who has learnt to tread the Spiritual Path within himself has found a Divine companion. He has found a Divine companion that he can never lose; and therefore, while he becomes more sensitive, more loving, more compassionate, and more sympathetic to the needs of those around him, the personal loss takes on an altogether different aspect, because he knows the laws of nature, he knows that the great rhythm of life that brought the loved one to him must inevitably take the same one away beyond into a further life, and he knows that that is not something to cause sorrow to anybody except the one who is left behind. He realises that it is only a personal and selfish idea, he renounces his personal sorrow like other things of the personal life. He gives it up because he knows that the loved one has gone to a region where there is no more sorrow, where he will enter

into a realm of Spiritual bliss and living which is beyond the mystery of pain altogether. He is free from the shackles of the flesh and all that it means until he returns once more into earth life.

What is the message of Theosophy to those whose business it is to minister to the sick? They indeed are brought constantly into this problem of pain in every moment of their lives. I think the answer would be this: that in all pain and all disease, although every individual receives naught but what he himself has sown, yet he is in need very often — and most of the time — much more of Spiritual comfort than of material assistance; and therefore the great idea that Theosophy would give to every physician of the body would be to see if you cannot light in the patient's mind and in his heart a faith, a conscious recognition, of the spiritual power that is lying dormant within his own nature. Think, if everybody, if every physician, were also a physician and healer of the soul — why, friends, the world would quickly be a different place. It is because in most cases physicians and others, do not know how to minister to the needs of the soul that the needs of the body become so very pressing.

Sometimes the question is asked: Are disease and pain a mere figment of our imagination? Will a change of mind, a change of thought, cure them? Is it my fault, can I cure them by merely taking thought? That is a big question, a very important one, because, as you know, there is a whole school — what shall I call it? — Scientists, Christian Scientists, Mental Psychologists, I do not know what you would like to call them — those who believe, and so teach, that there is no such thing as pain, that there is no such thing as evil. But turn to the record of the lives of the great Teachers that have been in past ages, and see what their attitude to the problem of pain and disease is. Did they say it did not exist? Not at all. On the contrary, every single case of suffering that any

one of the great Teachers came across invariably called forth their human pity and compassion, showing that they realised what it meant; and they gave a spiritual remedy, quickening the spiritual life in that individual so that he should learn how to heal himself.

What is the healing that Theosophy recognises and considers permissible? — because, friends, it is a fact and a very potent and spiritual fact, that a change of mind and heart of the individual does affect the physical and bodily health, and even his circumstances. It is a fact, but does that mean that where a man has got a serious physical disease, or even a simple ache or pain, he shall deliberately deny it in his mind and his consciousness, and tell himself that he has only got to go on thinking that way and it will disappear? Well now, it is a fact that probably if he goes about it strongly enough he may lose that particular ache or pain. It is not a very happy thing for him if he does, because he has merely deflected it for future use. He has forced it back into the mechanism of his own consciousness where it came from, and in the fulness of time it will work out again. It had its root in a thought, in a feeling, in some wrong action; and until it has worked itself out it cannot be got rid of. All the individual can do is to learn, simply as the Buddha taught, to give up the practice of evil, to enter the noble eightfold Path, and in so doing he ceases to create future causes of evil. That is why the *Bhagavad-Gita* states: "Even a man of very evil ways, once he is devoted to me, crossing over every evil in the bark of knowledge, will verily come to me." That is the truth. All we have to do is to consider that ray of spiritual light in ourselves, and faith in that connexion and aspiration are a tremendous force for good, not only in our own lives but in everything that we try to do for others.

The Theosophical Forum

A WONDER FROM THE PICTURED PAGE — *J. M. Floyd*

You may find the figures of Gog and Magog on the right-hand side, as you go uphill on a narrow winding street. They are just above a jeweler's, near the heart of the city of London, and well within the sound of Bow bells.

Every quarter of an hour little doors open, and these two robots emerge with hammers in their hands to strike upon a gong. It is quite a well known landmark to many Londoners, and oftentimes parents pause so that their children may watch the performance of Gog and Magog.

Such might have been the case with a friend of mine who, although he had been in the United States for thirty years, I knew had spent his childhood in London. So happening to come upon a picture evidently from a photographic reproduction of this scene, I took it to him, and covering the descriptive printed matter with my hand, asked him could he tell me what and where it was.

He looked at it for a moment and then with a smile said, "Why, bless me if that isn't old Gog and Magog on Cheapside in London!"
(1)

Granting there is nothing at all abnormal about this, still it was quite a feat of memory; so let us dwell upon it for a little, and let us ever so briefly, state the explanation given by material science, and also that handed down from time immemorial by the Wisdom Religion, so that each may exercise his divine endowment of choice.

Before the coming of H. P. Blavatsky, and before the coming of the Curies with their epoch-making discovery of radium, the physical scientists had only an indestructible permanent atom to base

their theories upon, and when they did mention it they attributed its formation to a chemical or electrical interaction of the molecules of brain matter, and more mysteriously still gave this as a cause without specializing any intelligent motivating agent behind the thought. Moreover this same physical science now tells us that the human body completely changes its physical constituents once in every seven years. If this be true, then my friend must have had four bodies, in which the physical matter was not composed of any of the previous molecules. It must indeed be obvious that the present body through which he recalls the scene cannot be the same, physically speaking, as the body of the child through which he received the impression. The question then arises how the thought image is transmitted through the ever renewed material. However, any attempt of the now passing materialistic science to account for thought processes can only tax our credulity to the breaking point and we are more than ever justified in adding our voices to the ever-swelling chorus which is simply saying that "It is not so."

Theosophy on the other hand stipulates the Thinker, as the agent back of all thought, and does not limit this agent's operations to the physical alone, but gives to it a vast range of expression, from the physical through ever more tenuous substance to the most spiritual.

Next to the physical in density is the Astral, which is the substance on which our physical bodies are molded, and you will notice that our bodily formation is preserved throughout in the ever changing physical stream.

Within this ethereal fabric there exists what modern occultists have so graphically described as the astral picture gallery, wherein all events and scenes of the past are reflected.

So when my friend looked back in years, and by the aid of a few

shadings on the surface of the printed page recalled the scene of childhood days from among countless pictures in this Astral gallery, it was something of a feat.

Let us never forget however that the greatest wonder of all is the Thinker, and that it was regarding this same Thinker the Master left with us his admonition, "Man, know thyself."

Is it not splendid then to have the assurances of those who are ahead of us on the Path that Theosophy will, can and does furnish the keys, to unlock the doors of knowledge on this our most sacred quest?

The Theosophical Forum

THERE IS NO DOOR — *G. Cardinal Le Gros*

I looked up into the clear blue dome of the sky and wondered if I could see there the face of the Buddha, the Christ. But a voice within me said: He is in your own heart. And I knew that this was true: that I, like every man, am the expression of this inner, secret glory, the child of a divine parent who lives in higher spheres, and that the great purpose of my life, and all my lives, is so to live that he may draw near to me, I to him, that my part in the scheme of eternal growth and progress shall be fulfilled.

Out of the heart of the divine universe pours forth a glory of hope and promise, wisdom and peace. Why should we not look to this, and aspire? We know that this is true: that the reality is within-above, not here in the objective prison-gloom of material life where empty dreams and frustration are. And should not our endeavor be to awaken the consciousness of all this in others? Is it right, is it proper, is it in harmony with the whole, that we should hug this truth to ourselves, and not share it with others? Perhaps one little word of ours, spoken from our hearts, will awaken in some other an awareness of the divine life.

One feels that from this central fountain of reality emanates all that is; that we and all beings, worlds and universes, are manifestations of the invisible. There can be no separation: we are one with this boundless ocean of emanation: one vast expression of an inner and infinite glory of birth and growth and awakening. The thought is at once overwhelming and peace-giving; it draws one out of himself and makes him one with a boundless self, identifies him with the grand, sweeping all-ness within, about, and yet beyond him. We say "beyond" but is there truly a "beyond" when we realize that even that which looms

afar, and which we in this moment cannot reach, is still our self?
— When we look inward to the Buddha in our hearts and realize that between us and all the glory and magnificence of the universe there is no door.

The Theosophical Forum

SMILING THROUGH — *H. Percy Leonard*

"It is all a contest of smiles if we know our business." — W. Q. Judge

Smiles are as varied and peculiar as the people who make them, and it is one of the wonders of life that "the lord of the body" is able to express so much of himself by the movement of a few simple muscles and the parting of the lips. You may have heard the most minute description of a man from his friends, but the smile with which he greets you at first meeting will be more revealing than all the reports put together.

With what an eager, searching gaze does a little child examine the face of a stranger! Can it be that faint and shadowy recollections of the smiles of lives of long ago are being used as standards by which to estimate the inner meaning of the new face now under inspection? A face that has no pretension to correct proportion, or fineness of complexion, may be transformed in the twinkling of an eye into a thing of beauty by the magical enchantment of a self-revealing smile. It reminds one of the limb of some rugged oak when it breaks into a mist of green under the fairy touch of returning spring.

It is quite impossible to produce a convincing smile unless the heart goes with it, but one may contrive a plausible substitute that will pass muster in a purely business interview with an unknown stranger, and it is often attempted with a reasonable degree of success; but at the best it is only a poor imitation, and at its worst it amounts to a facial contortion and a palpable fraud. True smiles are a social currency accepted all over the world, and will win a kind reception in the kraal of a Zulu or the palace of a king. Wherever men are found a smile will make its way. It is one

of the outward signs of the tragic fate of the anthropoid apes that though they may part their lips and show their teeth, they are incapable of a human smile. It is difficult to set down in so many words what a smile stands for. Goodwill, perhaps, and trust and sympathy and love. It implies an offer of help, and the pleasant assurance that one is not alone in the world — all these are fragments of a wealth of meaning that defies verbal expression, and yet it is broadcast to the world by every free, spontaneous smile, and finds its way to the heart of even a child.

Of two travelers setting out, the one with a well-filled purse and the other with a friendly smile, it is, to say the least, an open question whether the one with the smile would not travel more successfully.

It is related that after preaching the Wheel of the Good Law and the way of escape from rebirth, the Buddha rested by the bank of a lotus pool. But the crowd which had been listening to his words still lingered for more. Weary, but full of compassion for the multitude, he leaned over and, picking a lotus bloom, held it up before them. The vast sea of faces remained blank and unresponsive, but that of a young man was lit up by a radiant smile of understanding. A nod from the Teacher sealed the wordless compact and afterwards he joined "the mighty order of the Yellow Robe" —

That noble order of the Yellow Robe
Which to this day standeth to help the World.

The great Hebrew prophet looked forward to a final consummation when God shall wipe away all tears from our eyes, and may we not anticipate that on that happy day the grief-contorted faces of those who have survived "the great tribulation" will break into a universal smile? And thus the wheel will come full circle to the Dawn when it began and "the morning stars sang

together and all the sons of God shouted for joy."

The Theosophical Forum

HOW TO ATTAIN KNOWLEDGE — *H. T. Edge*

We all desire knowledge, and it is right that we should. The desire for knowledge is the divine spark that makes man more than beast. If it is quenched, the man is asleep — perhaps even dead. Some religious teaching has discouraged knowledge, and has made a false distinction between holiness and knowledge, as if the one excluded the other. Religious allegory has been perverted to suit this doctrine. The Serpent in the Garden of Eden — the wisest of all the animals — stands for the divine power which imparted to man the desire for knowledge and the power to know. He was called man's Tempter, because he gave man freedom of choice. The *Genesis* allegory tells of an early race of mankind which dwelt in a state of ignorant innocence and harmless bliss; this state is called the Garden of Eden, and its presiding deity is the "Lord God" of the narrative. But there comes the time when man has to awaken and move on; he is confronted by the Serpent, who arouses in him the slumbering intelligence, so that man becomes a responsible being, no longer an unintelligent follower of fixed routine. The Greek version of this story is found in the legend of Prometheus, who brings heavenly fire to man in defiance of the authority of Zeus. Lucifer, Phosphoros, Light-Bringer, are other names for man's divine instructors. Similar allegories are to be found in the sacred books of India and other cultures; and they all refer to that stage in human evolution when man acquired self-consciousness and free will.

This universal allegory has however been perverted, so that Lucifer, the Serpent, etc., are made into evil powers, seeking man's destruction, and ruling over a hierarchy of evil spirits in rebellion against God. This libel on human nature, this perversion

of history, is responsible for a world of trouble and perplexity. There is no antithesis between the desire for knowledge and the practice of virtue. The attempt to make such a separation drives the quest of knowledge into directions that are useless or harmful, and leaves religion dry and barren.

But knowledge cannot be the handmaiden of self-seeking, or it will but increase the descent into woe which self-seeking, if persisted in, must inevitably bring. The only real knowledge is self-knowledge. Knowledge does not consist in an accumulation of information or facts or theories; but in an opening of the vision. Moreover it is not knowledge till we have confirmed it by practice. Hence knowledge is inseparably united to conduct; if it does not influence our conduct, then it is only a half-hearted belief.

Earnest students of Theosophy may desire to know more, and may perhaps complain that they do not seem to progress. They may compare themselves or their opportunities unfavorably with other people and with the opportunities which they suppose the other people to enjoy. But particular circumstances can make no difference, if we view the matter aright; and all Theosophists, whatever their circumstances, stand on equal footing so far as circumstances are concerned — an equal footing as regards the ability to acquire real knowledge. For wisdom comes from purifying our faculties, "removing the covers of the soul," as W. Q. Judge puts it; and our eyes can be cleared by following the path of duty. The veils which we put up are of our own making, and by ourselves can be withdrawn..

Those who would win the truth must woo the truth. They must practise sincerity and truthfulness always, practise them *in secret*, be true to themselves in every thought and motive. Yet how many of us live in an atmosphere of falsification! Do we not often strive

to maintain our position when we know we are wrong, thus sacrificing the truth to a desire to save our face? Do we not make for ourselves excuses which we would not make for another, thus permitting self-love to blind our eye to justice? How can we expect to win truth if we flout her in this way? What right have we to complain? And how simple the remedy!

We should like to understand more about Karman. Karman may be the law of cause and effect philosophically, but on the moral plane, if it means anything, it means *justice*. Then, if we are to understand justice, we must practise justice, surely; and this, for our purpose, means much more than ordinary fair-dealing in the world of men. It means perfect justice and sincerity in our own private thoughts; we must never fool ourselves in the interests of self-love. The law of Karman is said to bristle with difficulties, and perhaps some of that may be because we *talk* about it too much; has it ever occurred to us to practise Karman?

There is a rule which says we must not be continually concerned with attempts to justify ourselves. It is a wise rule. This anxiety for self-justification springs from a desire to accentuate our personality as against other personalities; it emphasizes the feeling of separateness. But the feeling of separateness is the greatest obstacle to knowledge. How then can we attain knowledge if we are so constantly defeating our own purpose?

Criticism of other people is in exactly the same case. What could emphasize personality more than this setting up of our own notions and prejudices against those of others? This is understood easily enough if, instead of taking our own case, we consider the case of some other person who criticizes. We can realize that he is hardening his own prejudices and building a cactus hedge around his mind against the entry of new ideas.

Mental culture, self-culture, in various guises, forms the stock-in-

trade of many cults nowadays, which attract a numerous section of the public because they appeal to human wants. Some of these appeals are of a frankly acquisitive nature — the attainment of objects of desire of one sort or another. There can be no doubt that we have within us latent powers, not normally active, but which can be called forth, and which can be made to subserve our desires for gain, influence, or what not. But a Theosophist would regard this as simply feeding the enemy, for it increases the force of those very personal desires which he knows that he must allay if he is to attain his object of self-knowledge. Moreover personal gain of this sort is made at the expense of others, just as in the case of any other kind of pushing oneself to the front and pushing others back. Sometimes self-culture does not take this acquisitive aggressive form, but aims rather at tranquilizing the mind, reaching a state of calm imperturbability and inward blessedness. Here is another danger which the truth-seeker has to guard against; he desires not to be any kind of hermit, and the walls which we build to shut out discomforts may also shut us from sympathy with our fellow-beings.

Thus it is easy to explain the Theosophical idea of attaining knowledge, and to point out the obstacles which we ourselves create, and how they may be overcome. But in actual life mere precept is not enough, and to it must be added experience, often taking the form of sharp lessons. It is only thus that truths become vital and acquire for us a real meaning. If we try to define our motive for pursuing the Theosophical path, we are not likely to satisfy ourselves. We feel that such motives as can be defined in words are not adequate; we may fear to convict ourselves of hypocrisy. The motive is a sublime aspiration, felt from within, but taking many forms in its passage through the analysing mind. How many such aspirations are wasted for want of the means to make them fruitful! Theosophy gives these

means, and the desire to render them available to those who have them not must arise in the heart of a disciple who has truly understood the Theosophical teachings.

The Theosophical Forum

THE MYSTERY OF LIGHT — *J. W. A. Croiset van Uchelen*

The Third Logos, Mahat, becomes Manas in man, Manas being only Mahat individualized, as the Sun-rays are individualized in the bodies that absorb them. — *The Secret Doctrine*

In the older Theosophical magazines we come across articles dealing with the philosophy of sound, as well as of color. Meanwhile, our still limited knowledge on the subject of light and color has considerably increased.

Light and the Cosmic Fire Element enter into all ancient philosophies; for are we not the Flame-born sons of God, thrown off as sparks from the wheels of the Infinite? Yea, even the spiritual Sun behind the physical sun is one of these Flames, nor was its beginning greater than that of the Flame in the human soul.

The Holy Spirit is Fire. And the ever-burning lamp of the alchemists which burned for a thousand years, without fuel in the catacombs of Rome is but the symbol of the same spiritual fire within man himself which was carried by the Initiate in his wandering. (1)

All chemistry from which animal and plant life take their need for growth and development was deposited in the earth and water by the Sun. All life is sustained by the Sun through indirect absorption of sunlight in the body.

The so-called "primitive" races, in recognition of the God-sent powers of the Sun, offered their prayers to the rising and the setting Sun, the Solar Logos, as the millions of Mohammedans still do today when the call sounds from the minarets over the sands

of the desert.

The ancients, much of whose knowledge has been lost, fully understood the influence of light and its colors; and strange stories remain of temples on older continents where the light of stellar bodies, linked to sound-waves, was utilized for healing purposes, in connexion with astrological influences.

The Egyptians, like the Chaldaeans and the Persians, and the Kabbalists before them, made a special study of color and were well aware of its relationship to sound and number. The Greeks utilized light-energy, and Herodotus about 450 B.C., wrote a book on the value of sunlight for skin diseases. Aristotle, who also wrote on color, realized the influence of light in the formation of the green color of plants. Light, as a healing agent was employed, we read, by the Roman physician Celsus, and by Galen, the physician of Marcus Aurelius.

Thus we shall find that this ancient subject linked to the mysteries, and always more or less pertaining to the healing art and priestcraft, once combined, has never entirely been forgotten. From time to time throughout history, master minds have turned to the subject of light and color, until, in later centuries, materialistic science began its search for knowledge of its physical properties.

It was at the end of the Seventeenth Century that the discoveries of Newton gave a new impetus to this research and the basis of spectrum analysis was laid. Still the mystery unsolved rests in the unanswered question: What is light?

Sir Oliver Lodge was well aware of man's limited mind when he spoke of light as "the mysterious messenger." Light, says H. Schellen, in his *Spectrum Analysis*, is the "vibration of a substance." Professor Tyndall speaks of the "sensation of light."

Physicists defined it as "form caused by electro-magnetic vibrations," and so on. Dr. Pancoast defied them when he wrote: "A sensation could not cause the germ of a blade of grass to develop into a thing of beauty and utility; a vibration could not paint the rose, or shape and adjust its petals." He himself then speaks of light as a positive power, or force of nature, an actual and active manifestation of the creator, a vital energy that creates and destroys. That is to say, he distinguishes between the invisible energy of light and its visible representation, the light we see. (2) Today we vaguely speak of light as "a series of oscillatory frequencies perceptible to us by the senses."

Not only do we not know what light is (nor electricity, nor magnetism for that matter, although all these are believed to be different manifestations of the same cosmic force), but neither is the mystery of its projection understood. (Ignotum per ignotius!)

Three main theories have been propagated: Newton's emission theory, Huygens's undulatory wave theory (supplemented by what Pancoast calls the impulse and tension theory), and most recently Ghadiali's theory, depicting a gyratory spiral motion of photon emission, through the first ether medium. (Could the Ancient Wisdom perchance give us the clue? I hopefully ask a wiser student to attempt this.)

The emission theory holds that light is composed of minute particles of matter emitted by the radiant body; according to the undulatory wave theory, light is propagated by means of an all-pervading elastic medium — ether; but asked what this ether is, science failed to find the answer. It has to admit that the unsolved properties of such a medium could not be expressed in terms of units as used in matter; nor could it assume that so-called empty space has no physical properties, without upsetting the fundamental facts of mechanics. This medium might be of an

unknown character therefore, but it cannot be "nothing." As Einstein (who, by the way, considers that "the geometrical properties of space render the hypothetical ether unnecessary") wrote: "Matter is real . . . motion, space and also time are real forms. Every attempt to deny the physical reality of space collapses in the face of the law of inertia. For if acceleration is to be taken as real, then that space must also be real within which bodies are conceived as accelerated." (*New York Times*, February 3, 1929)

The question remains, does the one theory actually and of necessity exclude the other?

That light has solidity is borne out by the radiometer developed by Crookes (who also demonstrated the fluorescence and phosphorescence of matter), as well as by the phenomenon of refraction. For we know that when a light-beam strikes a prism, upon entering this heavier medium it bends toward the perpendicular by reduction of velocity, taking a second bend in opposite direction when it leaves the prism and enters a lighter medium.

Light, according to Ghadiali, starts as a circle with dual polarity, the third aspect being formed by its forward motion (which therefore becomes "a progressive spiral oscillatory motion"), and it is in this spiraling gyration that the root of the seven colors is to be found, because, as we are reminded philosophically, no exoteric circle can manifest which does not hold within itself the seven circles from the unmanifested plane. The Sun therefore does not shed light, but light is the converted energy sent forward, translated as light by our sensory organs, after it passes through impediments such as the atmosphere. Color, thus understood as "a divisional part of light," depends for its frequency on the position where the white light spiral is utilized;

or, in other words "the amount cut off in degrees from the circle (really spiral) of the white light determines the color."

Colors therefore cannot be filtered, as we filter a sediment out of water, for if this be true, he reasons, then a white light beam, after passing through a so-called yellow filter, should possess none of the other colors; so that when this yellow beam in turn is thrown on a green filter, it should either stay yellow or not pass at all. Experiment proves however that a new color is formed, combining both the yellow and the green, namely lemon.

It is the coloring matter in the glass, he holds, which determines the axial polarity of the full beam, twisting it around (as shown in Faraday's experiments on polarized light), a second so-called filter causing another corresponding twirl to take place, and so on, until the particles (photons) forming the emission are exhausted. (3)

Turning to the most recent discoveries in regard to light and color-energy, we find its application, again primarily in the healing art (apart from the commercial use of ultra-violet rays in a number of industries).

Strangely enough the first renewed impulse focussed the attention upon the invisible rays on either side of the spectrum — now being utilized in the form of diathermy, infra-red, ultra-violet, X-ray and radium radiations — rather than on the visible spectral rays themselves. Yet, could sound reasoning lead us to believe that the visible rays lack healing powers ascribed to the burning, ultra-spectral waves? Or, as Sir Oliver Lodge put it: "Would it be logical to have a sun visible to man and only those rays helpful which are not visible?" And so once more the attention came to be directed toward the healing power of the visible (color) rays of Light.

Often people speak, or think, of sunlight as "just light," forgetting that in this light the radiant spectral colors are contained — whatever theories may be involved — these being varied colors of diverse chemical potencies. And as is well known today, every color coincides with certain chemical elements in the body and has its purpose in the physical, mental, and emotional aspects of man. To state it otherwise, colors are certain definite oscillatory frequencies by which plant, animal, and man alike are sustained.

Not only is sunlight indispensable for the maintenance of life, but as Dr. Crile set forth in *The Phenomena of Life*, oxidation of compounds, stored in plants, causes the release in animals, including man, of solar-radiation in the form of electric and radiant energy.

Experiments in various universities of late have demonstrated — what has long since been known to color-therapists — that the different wave-lengths of visible light (colors to our eyes) differently affect the growth and behavior of plants; thus Dr. E. Karrer of the Smithsonian Institute found that the greatest growth in length was in plants illumined by the orange-red part of the spectrum; the lowest growth was observed in plants grown under the blue-green divisions of the light. Seedlings will bend towards the blue light and away from the red, and so on.

Light means life, and this relationship is a process of photosynthesis, whereby carbon-dioxide in the air is made into carbohydrates of plants which in turn provide food for man and beast. (4) Food, in other words, is bottled sunshine whereby the spectral rays are absorbed and re-radiated in proportion to, and in accordance with, the chemical constituents the foodstuffs contain. Yet the fact that the value of our food, digested, assimilated, built into tissues, etc., depends upon this disengagement of solar-energy (or color-rays) within the body,

may still be a new viewpoint to many.

Today's chemists are well aware of the fact that the green pigment of plant leaves, called chlorophyll, or concentrated sunshine, has been given to patients with high blood-pressure, anemic or digestive disorders, with beneficial results. As Professor Buergi of Berne expressed it: "The sunshine caught is passed on in the form of blood-life for the human being." And Dr. Schertz wrote: "This pigment appears to be Nature's laboratory for converting energy into matter." Now the direct treatment with color-rays produces the same beneficial results, but with greater specific precision, for the very reason that chlorophyll did not absorb any particular ray, but all colors of the spectrum; whereas in color-therapy the diminished energy is reinforced by the specific colors required!

That green light has a soothing effect on the eyes we all know, but why the blue ray will cure burns and relieve pain, for instance, is less known — this process being the result of the oxygenating character of the blue-ray emanation. This very fact also explains the results obtained with the injection of methylene blue (nothing but a blue dye) in cases of carbon monoxide poisoning. All elements have a predominant color-emanation (as revealed by the Fraunhofer lines), upon which their potency depends and through which they act upon the human body.

How much, furthermore, is it known that green radiant-energy, like chlorine, is a germicide? And here let us note a report by Drs. Chambers and Flodart, of the University of Pennsylvania, in the "Proceedings of the Society for Experimental Biology and Medicine," in which it is stated that high-pitched sounds oscillating at 8,900 vibrations per second are able to destroy streptococcus hemolyticus by blasting the germs. "So powerful is the vibration," the report goes on, "that it overcomes the cohesive

strength of water, tears the molecules apart and leaves vacuum spaces, or vacuoles, which look like bubbles." During the process light is also evolved. Now if oscillatory frequencies at 8,900 per second have this effect, what, one may well ask, must be the effect on germs, when bombarded with the green spectral ray, the oscillatory frequency of which is given as of over 584 trillion per second?

It should be remembered that in dealing with the human physical vehicle, we are dealing with an organism built up of chemical constituents. And all these elements have a certain wave-length of energy incorporated in them, which act as direct resonators, so to speak, for outside energy of the same wave-length when poured into them from the sun or an artificial source.

It is not difficult to see therefore how a disproportion of the body constituents, manifesting itself as disease, may be restored by administering the color-waves corresponding to the depressed elements (in other words, by reinforcing diminished energy); while on the other hand, in case of a surplus of an element, the antagonistic wave will reduce its activity by interference. The astonishing results obtained with these cold color ray treatments, in diseases of all kinds, are less astonishing when these principles are understood.

That only spectral colors of the proper oscillatory frequencies should be used to obtain a chemical action in harmony with natural processes and the energy emitted by the sun should be obvious. On the other hand, it must be clear that by mixing these rays with gases (often of a poisonous character, like carbon, or mercury vapors) the natural laws of color therapy are violated to the extent of nullifying the effect of the spectral rays and their potential chemical and vibratory action, as such. If we accept the rationale of diagnosis and treatment by electricity, radio waves,

etc., the value of the use of color-rays is self-evident, for whether vibrations, or oscillatory frequencies, are expressed as electricity, heat, light, color, sound, etc., it is now well known that these are all manifestations of the One Universal Energy, or Force, conducted, it is believed, through different media.

A demonstration of this inter-relationship, between heat and sound for instance, also was made at the University of Pennsylvania, when an egg was coagulated by audible sounds, while other experiments showed that by use of sound-vibrations ethyl acetate could be broken down to produce acetic acid, and starch to a slight extent was decomposed to produce glucose; etc.

In its pure form, color-therapy (by use of prismatic, or spectroscopically adjusted beams of colors) is a natural system of healing, akin to the forces of life — solar energy. And although as old as antiquity, it is only in recent years that the use of color in the field of the healing arts once more has come — to stay — to benefit a suffering humanity. (5)

That in color-therapy the physical body is affected through the direct influence the colors exercise upon the auric vehicle, thereby also bringing the forces of the vital vehicle into play, is a truth that perhaps only those whose minds are trained in Eastern philosophies can fully appreciate — and therefore it is seldom publicly mentioned.

Light and heat are atomic phenomena, more ethereal, infinitesimal, than crude chemical action. Medicine has combined solids into various chemical compounds; in color-therapy the more ethereal emanations of nature are combined and transmuted to meet the requirements of an organism becoming more finely attuned.

FOOTNOTE:

1. See M. P. Hall's *Initiates of the Flame*. ([return to text](#))

2. A view close to that held by Theosophical thinkers and corresponding to Ghadiali's theory where he speaks of colors as mathematically sub-divided parts of the circle of white light — the visible energy of the invisible cosmic energy. ([return to text](#))

3. The colors themselves seem to corroborate these views, for is it not true that colors are only apparent — according to the illumination of an object — and not inherent in a body? Hence if the illumination changes, the object is changed also. Photograph a many-colored butterfly through different color lenses and the resultant pictures show seemingly entirely different insects. This proves, Ghadiali holds, that it is the light that causes the appearance and not the spangles of the creatures themselves. A similar view is held by Prof. Haldane, who disillusions us about the "blue" of the sky! Illusion again — Maya. ([return to text](#))

4. Professor Dhar writes in his *The Chemical Action of Light*: "The phenomenon of carbon assimilation by plants, which makes life possible on this planet is fundamentally photo-chemical in action. Moreover it is this phenomenon which converts the radiant energy of the sun into potential energy. . . ." ([return to text](#))

5. This is not a mere form of speech, for in many instances treatments with these cold color-rays have brought relief, or produced a cure, after such cases had been given up as "hopeless," when failing to respond to "ordinary" treatment.

For those who doubt that we are entering a color-age, we copy a few headings showing the attention bestowed upon this subject in various fields:

"Guests at a party got sick because of Green and Red Lights."

"Piano plays Music in Color on White Disk." "Light beam stopped by whirling disk plays chords." "Cathode tubes color ads with

brilliant light." "Plants grow without soil in artificial garden with artificial sun." "Sunlight used to drive small motor." — And so on.

The Theosophical Forum

THE FABLE OF THE "MEMBERS" (1) — *A. E. Urquhart*

Aesop, the wise and witty Greek writer who lived more than two thousand years ago, told in one of his pointed little stories, of an alleged quarrel between the various members or parts of the body, as to which ranked first in importance, each in turn boasting ridiculously of its superiority over the others. The story, of course, was intended to carry a lesson to some of the great men of the day, who were even then, in their personal pride and vain-glory, engaging among themselves, in the dissensions which ultimately destroyed the unity of Greece, and brought down her splendid civilisation to the dust. Yet the story has a much wider application than the temporary one for which it was written, for it illustrates the truth taught in Theosophy, that neither man nor any other being in all Creation can live to itself alone, but that all existent things are bound together by underlying laws of unity and harmony, which cannot be broken except under penalty of disorder, suffering and unhappiness.

To understand this fact, we turn to the Theosophical explanation of the structure of life, which shows that the entire Universal economy is built or arranged as an organic unity, each part being not only an essential adjunct to every other part, but also an essential component of the whole. This law runs throughout all existence whether on the lowly scale of the atomic, physical structure of things, or on the higher phases of nature which we call consciousness and intelligence. Even in the structure and workings of the living human body, as Aesop so aptly discerned, this principle shows itself with striking clearness. Every tiny atom in the fabric of the body has its part to play in the well-being of the organ which contains it. Every organ likewise has its particular essential part to play in promoting the harmonious

functioning of the body as a whole. Thus every lower part, by the very nature of things, serves all that is greater than itself. The greater reciprocates by being the link which holds each lower part in harmonious association with its neighbours. Health is nothing more nor less than the efficient operation of this fundamental law of spontaneous, mutual interchange throughout the body. Disease exists only when the law is broken.

The purpose of Theosophy, we repeat, is to point out the existence of certain basic principles or laws which run through the whole fabric of life. If this is so, then we should be able to discover the above described principle repeated in other aspects of our lives. Surely we cannot fail to do so. Consider for instance the example chosen by Aesop. Do you not see, as clearly as Aesop saw, that the laws of organic unity apply as literally in the life of a nation, as in the physical constitution of its individual citizens? In terms of the nation, you and I are the "atoms." Our hometown or county, in which we accept the burdens of civic duty is the "organ" which we serve. The towns and counties, in their united aspect, make up the "body politic" of the nation. Reciprocally, the national organisation returns benefit to the towns and counties by instituting and controlling educational, legal, and other general services whose application is wider than that of any particular town or county. The civic authorities, in turn reciprocate to the citizens in terms of local services, and the preservation of peace, law and order within their own areas. Thus the organisation of a nation is good or bad according to how well or ill it expresses these basic principles of mutual service. Peace, freedom, happiness, progress (the "health" of a nation) exist where all parties high and low, shoulder ungrudgingly the full burdens of their respective positions. On the other hand, poverty, strife, crime and discontent are the disease of the body social, arising where mutual service and obligation have been ignored, and

personal greed, vainglory, and self-interest allowed to hold sway. It was the beginnings of such undisciplined individualism that Aesop sought to stamp out in the civilisation of his own time. He failed, and the glory of Greece died out in internal turmoil. Are not our nations today (and likewise that wider "nation" which is all humanity) suffering from exactly the same sort of trouble arising inevitably from unbridled self-seeking among all classes of the community?

The constitution of the family group expresses the same law of organic unity. So does the natural organisational system of a factory or a Theosophical Lodge, and a ship's crew, or a school. And in each case the penalties arising from undisciplined selfishness are the same, namely, chaos, deprivation, inefficiency, unhappiness. Remember also, that no organic unity of which we are "part" (and we are all part of many such in our complex lives) needs to claim *all* our lives, *all* our service, for itself — only such part as reasonably belongs within its particular scope. Thus undoubtedly a large part of our lives must be devoted — and should be devoted, gladly and willingly — to the wide variety of duties proper to our age and stations. Yet an important part and particularly the part *within ourselves*, should remain free for the development of our own individuality. It is, if you like, our wider duty to the whole Universal Organism, that we should maintain a free mind, free thoughts, and a courageous experimental attitude toward the deeper things of life. To such a man, life may be full of duties, but he can never be a slave, for he has that which is beyond the reach of tyranny — a free soul.

"MAN, KNOW THYSELF!" — *Arthur A. Beale*

What a mystery is man, what a miracle! Whether we stand silently in contemplation before the temple of the Delphic oracle, which bears the above injunction, or in awe before the Egyptian Sphinx — each making the same demand upon us — innately we know that there is a quest which man is destined to pursue. For that purpose we are here on earth, and each day, each life, brings us nearer the end of the trail. Each thought, each act, each success or failure, opens a new door, disclosing a new revelation for us.

The Human Kingdom brings an awakening of self-consciousness; but of what are we self-conscious? We might say, very little in the first stage; for as W. Q. Judge hints in *The Ocean of Theosophy*, the building of a memory is required before man becomes conscious of "personality." Man is born with a clean mental slate; he has no recollection of preceding events. Yet memory comes fast enough, impelled by experience in the Cycle of Necessity.

What is this memory but the subtle impress on our *personal* astral plane of the events of our life? For the requirements of sheer existence — the feeding on air and food — and the inrush of pranic forces or life-currents, bring once again the "children" of our past existence rushing back to us, even as steel filings rush to the magnet: each of our past offsprings comes home soaked with retributive memories of past deeds, good, bad, or indifferent. Step by step a new vehicle grows, called by psychologists the sub-conscious self, but perhaps better described as a psycho-mental apparatus. Each life we have to build this up from the start; but in no short time it acquires respectable dimensions and we begin to think, act, and judge.

It is in the tender years of life that direction, *outside* guidance,

and discipline are as essential as during the time when in the ancestral early Third Root-Race stage man required the overshadowing nurture of the gods. That is why the doctrine of free self-expression at this stage is so pernicious. Infants and children have very little to express other than the most primitive instincts of animal appetites, selfish cravings, and personal vanity, which if not curbed produce prigs and egoists, finally resulting in crooks and gangsters. This, then, is the time for parental care and love, and for the school-room; in fact for the guidance of maturer experience instilling self-restraint.

The child learns by imitation of wise example more than by unexplained precepts. How wise should be the child's preceptors! How little do we realize the import of wise training and discipline during our youth: perhaps we only realize it when much valuable time has been lost.

This, then, is the period of personal self-consciousness: it is the realization of the mighty "I am I" — my dignity, my strength, my possessions — all maya. or illusion, however. But in the fulness of time (if it ever comes; some never seem to come to it) a new self-consciousness arrives, an expanding consciousness of duty to others, as part of ourselves, and with it a consciousness of responsibility, of power, of humanity, of choice. This is the dawn of *individual* self-consciousness.

This new inflow of consciousness comes to man during the period between seven years and puberty: a time one might speak of as the incarnation of mind, or ego-consciousness; a time when the ego begins to take control; the moment of illumination when the mental ego teaches, urges, suffers, and inspires. But we as personalities have free choice. If we listen to the mystic presence, seek its aid, obey its precepts, submit to guidance, all is well: we blossom into human beings and are ensouled, conscious. If we

disregard it, seeking only the offal of personal gratification, then the impress of these delinquencies is made upon the very atoms of our being and they pass out as karmic residues, to abide the cyclic turning of the wheel: to come back to us for fresh assimilation.

So we come to see how memories stir up dreams, illuminated by imagination, forming pictures, and the whole built up into a fabric of human life forming the basis of morality and ethics. With ethics comes responsibility, involving and shaping emotions into concrete human attributes, inspiring trends, building up destiny. Some emotions are depressing, some akin to warnings, others bring freedom, peace, and beauty in their wake.

Hence the personality with the body and its systems of nerves, circulation, lymphatics, muscles, etc., all interblended, forms the battle-ground of this mighty array of opposing forces. Into it are poured karmic elements: lives, life-atoms, all the phases of the pranic currents trembling in the nerves, blood, lymph, and air-streams: food for the internal glands called endocrines. From the endocrines tiny units are weaved called hormones, which are instinct with personality. Into these streams is suffused another and higher stream of consciousness, through avenues provided from higher sources, at the invitation of our best aspirations. Our spiritual mind may color the life-streams, shaping and changing them into spiritual instinctive creative impulses. So in the fulness of time a new Mind is formed, a vehicle for a Bodhisattva.

HAS DEATH LOST ITS STING? — *Irene R. Ponsonby*

Is death losing its horror for the normal man and woman? An article entitled "Death Has No Terrors" by Lester H. Perry in *The Reader's Digest* for May, and a monograph "Why Death?" by the late Joseph P. Widney in *The Los Angeles Examiner* of July 7th, would seem to justify this opinion.

Mr. Perry presents the *verbatim* testimony of eminent physicians and of several who have been resuscitated to prove that: "The veil between the two worlds is but a cloud and one passes through it imperceptibly." "The dying person slips drowsily away much as we all, hundreds of times, have drifted into sleep." "Dying is as painless as falling asleep." ". . . we will face it without fear and without bitterness, without reluctance and without repining, without suffering, whether physical or mental; we shall find it, at the last, but a peaceful transition, an eternal change mercifully accomplished."

This is all absolutely true and has been promulgated by the Theosophical Society since the turn of the last century; for death — except that which occurs in accident and war, which brings special provisions of Nature's law of compassion into play — is no sudden, violently imposed, outward affliction, but the culminating apex of a more or less long period of inner self-dissociation and preparation for what to the weary, overtired, human soul is surely a joyous homecoming. We do not come to birth suddenly: physical and other processes precede our advent; so too, other preparations as well as physical ones, presage our passing from Earth. And the Earth-life whose keynote has been harmonious is followed by a serene and refreshing respite, whereas a life that has been dominated by conflict will give place

to states of strife until the intense impulses have worn themselves out — for "as a man thinks, so is he" throughout the eternal pageant of Life.

With the refulgent consummation of a fine life's effort surging through him, and the prescience upon him of a benediction yet to be, Joseph P. Widney, scholar, philosopher, educator and writer, paused awhile, five days before his death at the age of 97, to share with his fellows the harvest of a noble character, to add to the inspiring example of a grand old age his stimulating intuitions, so that men's minds might be directed toward the majesty of Being.

Dr. Widney voiced the ancient teachings of the ages when he said: "Everywhere in the universe we find the law of eternal growth. It seems to be the same in every department of the universe — material, intellectual, and spiritual — and the pleasures of heaven would lie in the thought: I, too, am a sharer in the development of the worlds about me." ". . . Without death the drama of life would be a failure" for "the purpose of that drama is the making of a man; not simply for time, but for eternity." "Life as we know it upon this plane is to be lived by successive births and consequent deaths; the soul progressing and developing in accordance with the fixed and unchanging Law spoken in the beginning." "Death is not a calamity! It is the greatest blessing to man that God has made."

These and many supplementary tenets are explained by Theosophy, which elaborates Dr. Widney's verities by stating that the change of death is partly due to a surfeit of life which assails the equilibrium of man's constitution. When the saturation point is reached, involution replaces evolution, assimilation follows absorption, until restored balance ushers the human soul into rebirth and further life-experiencing. In his present state of growth death is a necessity to the average human being who is

but partially ensouled. As evolution brings about fuller human ensoulment, the unity of man will become unassailable and Earth-life will be, what it is now for the adept, the highest and most complete state possible to the composite being. Then by means of processes of radiation and irradiation man will dispose of and assume his bodies much as the cells of the physical body are changed regularly during the course of a single Earth-span.

Surely this is the answer to Dr. Widney's question? "Shall man be stopped in his intellectual evolution by the limited range of the possibilities of further investigations in the universe about him, because of the material limitations of the body through which, in this life, he must work?"

The Theosophical Forum

SCIENCE AND RESEARCH — *C. J. Ryan*

Antiquity of Civilization in England

"We are at last, and only just in time, taking measures to preserve and protect the extraordinary stone monuments erected by our far-distant ancestors which serve to demonstrate their high degree of civilization and, perhaps, their knowledge of laws of nature of which we are now ignorant in spite of our scientific advances in the last few centuries. Stonehenge in Wiltshire, England, is now a National Monument, and far away in the South Seas, the Australian government has extended its protection to the so-called "Little Stonehenge" a similar but smaller structure, and other megalithic monuments, on the Triobrand Islands, west of Papua. Chile has declared Easter Island a National Park, and other nations are taking measures to protect their irreplaceable monuments of unknown antiquity.

The exact age of Stonehenge has long been a subject of bitter controversy, but recent excavations and researches indicate that it was probably erected somewhat less than two thousand years b. c. About twenty miles north of Stonehenge stands the far greater and more magnificent prehistoric monument at Avebury. Unfortunately, it has suffered far more from vandalism, but it is now being carefully excavated and restored. Within the enormous outer circle of stones two smaller circles were formerly enclosed and two avenues of gigantic monoliths led away from it. Dr. Stukely, the famous "antiquarian," wrote in 1772, when Avebury was still in moderate preservation, that it as far exceeded Stonehenge in grandeur as a cathedral does a parish church.

The desecration of this marvelous temple, the largest of its kind in

Europe, began in the Roman period and continued with increasing ferocity till the 18th century at least. Of the 300 enormous stones originally present only 16 were standing when the archaeologists began their work about five years ago. The rest had either been broken into small pieces and carried away or *buried in deep holes*, covered with soil and ploughed over! The buried stones are now being disinterred, repaired where broken, and set up again. They vary in height from 4 ft. 6 in., to 18 feet, and when all is finished about 120 of the original monoliths will be in their places and concrete markers will indicate the positions of the destroyed ones.

Studies of bones, pottery, and snail shells, discovered near the sockets of the stones of the Great Circle at Avebury, have satisfied the archaeologists that it is older than Stonehenge, dating from about 1900 b. c. or rather later. Some think it belonged to a period in which Egyptian influences penetrated Britain.

Students of *The Secret Doctrine* will recollect that it says that some of the British megalithic monuments are enormously ancient and that initiate priests traveled from Egypt in early predynastic days to England, *by dry land* across what is now the British Channel, to supervise the building of "menhirs and dolmens, of colossal zodiacs in stone," etc. According to the most reliable researches as reported by Dr. F. E. Zeuner, Lecturer on Geology at Freiburg University (*Discovery*, 1933) the Channel began to sink about 8000 years ago, the tremendous scour produced by the invasion of the sea quickly cutting back the hills on both sides until the present chalk cliffs were formed. Land communication between the British Isles and Egypt would have been easy before that date, and it is well established that as far back as fourteen thousand years ago parts at least of Lower Egypt were inhabited by an advanced race, the Badarian culture, capable of making excellent pottery and fine linen — not savages by any means.

Of course there is a considerable interval between 1900 b. c., the probable date of Avebury, and, say, 6000 b. c. and the question naturally arises: Is there any authentic information to indicate the existence of Great Circles older than Avebury? Till now, this could not be conclusively answered, but the recent excavations have brought to light the most remarkable fact that the Great Circle of Avebury cuts right across the site of an older and rather smaller one! How many thousands of years this outmoded one may have existed is not known, but its discovery confirms H. P. Blavatsky's claim of far greater antiquity for such monuments than the archaeologists were willing to admit in her time. Possibly it will also help to support the recent claim that an enormous Zodiac, about 4,000 years old, and many miles in diameter, can be traced in the terrain surrounding the ancient mystical and sacred Avalon, now Glastonbury, about forty miles from Stonehenge.

Evolution not Mechanistic

Three years ago we quoted the opinion of Dr. Frank R. Lillie, president of the National Academy of Sciences at Washington, that a living organism is not a mere congeries of physico-chemical reactions but is entirely unexplained by the "scientific method." Speaking at the June meeting of the American Association for the advancement of Science at Ottawa, Dr. Lillie went still farther, claiming that biologists can no longer accept the mechanistic view that life arose from crawling things in the sea up to man and the higher animals by physical and chemical causes, and that evolutionary theory is still in its infancy so far as explaining first causes is concerned. Living things possess *creative* activity and depart from mechanical routine, unlike physico-chemical analogies. These ideas are a striking sign of the times, especially as the assembled scientists accepted them without protest, though of course many of the "die-hards" still hold to the old-fashioned

view that physics and chemistry explain life and consciousness.

High Temperatures in the Stratosphere

Until lately there was every reason to believe that the warmest part of our atmosphere was that which is nearest to the surface of the earth. In proportion to the increase in distance from the surface the temperature was supposed to decline steadily until the intense cold of outer space was reached. For several years, however, researchers have found increasing evidence that after a certain distance of increasing cold — not less than 18 miles the atmosphere gradually becomes much hotter than it is at the surface of the earth, attaining a temperature of not less than 200 degrees and probably many times that temperature before it again cools down to extreme lows. This utterly unexpected discovery — apparently contrary to the "laws of nature" as formerly understood before the new atomic theories were presented — is specially interesting to students of Theosophy because the existence of this super-heated shell or layer of atmosphere high above the earth was definitely mentioned by the Mahatma K. H. in a letter to a correspondent written more than fifty years ago and published in 1923 in *The Mahatma Letters to A. P. Sinnett*. No scientist dreamed of such a possibility until quite recently. Such facts as these, recorded long before the revolutionary changes in modern physics, are unanswerable evidence for H. P. Blavatsky's *bona fides* and the profound knowledge of her Adept Teachers.

In view of the above, we draw special attention to the latest corroboration of the superheated region above the earth, just reported by Dr. B. Gutenberg of the California Institute of Technology, to the American Geophysical Union. He is one of the leaders in this research, and the matter is so important for students of Theosophy that we do not apologize for a lengthy

quotation from the *Los Angeles Times*, April, 28, 1937:

Washington, April 27 (AP) — Echoes from explosions of the Navy's big guns show the presence of a superheated layer of air in the atmosphere, Dr. B. Gutenberg of the California Institute of Technology declared today. . . . he said that with a new sound-detecting instrument the reverberations of guns fired at sea off the California coast had been heard and measured over a distance of about 100 miles. . . . It picked up direct sound waves from the guns and in addition picked up secondary waves which were "too late for normal sound waves on an average of about one and one-half minutes"; Dr. Gutenberg said.

He described these secondary sound waves as unquestionably reverberations from the stratosphere, echoed by a layer of superheated air. In this case, the heated air acted like the walls of a cave or a building in which distinct echoes are heard, he said. Dr. Gutenberg said that these results "leave no doubt" about the echo layer in the stratosphere. He added that "in all probability the temperature increases in the stratosphere with increasing height, beginning at a layer about eighteen miles above the earth's surface " At higher levels the *temperature continued to increase above the temperatures measured on the earth*, Dr. Gutenberg declared, until it eventually merges into the intense cold of interstellar space.

Prevision of Earthquakes by Animals

In *The Theosophical Path* for October, 1934, this subject was considered and many examples were given. It was mentioned that a Japanese scientist claimed that the sluggish catfish, when kept in tanks, showed unusual activity before a coming

earthquake, the longest time being about six hours in advance. Dr. Felix V. Santos, zoologist of the University of the Philippines, confirmed this in July, 1937, reporting that in advance of local shocks the catfish, "lowliest and laziest of fish, in the zoological laboratory manifest amazing excitement. Three of seven catfish kept there, before a recent shock was noted, jumped out of the tank and were found dead on the floor." The seismologists do not deny that animals, especially parrots, cats, dogs, and sometimes horses, show uneasiness for hours and even days before serious earthquakes, but they have given no serious study to the problem. Why? Is it possible that they subconsciously feel that it might open avenues of thought about obscure psychological forces in nature which are still regarded as unauthorised? The common "explanation" that faint sounds produced by minute earth movements, inaudible to us, excite animals to frenzy is absurdly weak, and does not cover the fact that *human beings* have felt great uneasiness hours before an earthquake without being able to give the slightest reason for their sense of impending danger. The writer knows personally a very striking case that occurred at Point Loma.

Analogy in Astronomy

Nowhere is the great natural law of analogy — one of the foundation stones in Theosophical philosophy — seen more clearly than in the heavens. The same general plan is repeated from small to great, allowing for the necessary modifications arising from special conditions. Everything is in more or less circular motion. The satellites, the planets, and the sun rotate on a central axis; the satellites revolve round their primaries, the planets round the sun; many suns revolve round other and greater suns; and even our great Galaxy of billions of suns is turning round a center whose secret is not yet revealed. Our Galaxy itself is believed to be moving amid the myriads of others

like it. In this connexion a new discovery of considerable interest has just been made at Harvard Observatory.

Within the confines of our Galaxy numerous relatively compact groups of stars exist, like swarms of bees. Some contain hundreds of stars, others tens of thousands and even more. In a large telescope some of these groups are absolutely breath-taking in their magnificence. Though they are isolated in space like islands their component stars are *relatively* near each other, though their actual distance apart is measured in "astronomical" yard-sticks.

The new discovery proves that the analogy mentioned above extends even to these "clusters," as the groups are technically called. A comparatively small cluster in Auriga has been found to be revolving round a neighboring cluster of much greater size! Instead, however, of its journey round the primary cluster taking about a month, as in the case of our moon and the earth, it requires about sixty million years. As the detection of such an apparently slow motion is extremely difficult, it may be a long time before other similar systems are found. An interesting problem now faces us: is our sun a member of a cluster of other solar systems revolving round some unknown but immensely powerful gravitational center? Perhaps we may find a clew to this puzzle in the Theosophical teachings?

The Theosophical Forum

ORIENTAL STUDIES: VII — *Abbott Clark*

BRAHMANISM

The object of all activities of the Theosophical Society is to promote the spirit and practice of brotherly love, mutual understanding, and kindness, and to revive and make active in modern life the spiritual truths underlying all religions, and thereby to elevate the lives and characters of men and women to the point where universal brotherhood would be the natural expression of their thought and feeling, and unbrotherliness would be unthinkable.

One step in the right direction is to study the common spiritual basis of all religions and thus to remove the religious bigotry and prejudice which cause so much misunderstanding and friction.

We are interested in the religious thought of ancient, not modern, India. The Theosophical Mahatmans are of the same order and class as the Vyasas and Rishis, Sages and Seers, who produced the Vedas, Upanishads, the *Bhagavad-Gita*, and other great Indian religious and spiritually philosophical literature. Being sensible as well as spiritual and intellectual men, they work with the tide of evolution, the crest of which is now in the West.

Theosophy and the Theosophical Movement is the name and form under which the Ancient Wisdom is now known. Theosophy is the Atma-Vidya. and the Brahma-Vidya, the Self knowledge and Divine knowledge of modern times, cast in language comprehensible to the modern mind (semi-scientific), answering modern needs and problems and shorn of Oriental obscurities. Theosophy is the Sruti or revealed word for the new race and the new age.

Brahmanism is a mystical, transcendental, religious philosophy. It is founded upon the oldest publicly known religious books — the Vedas, the dates of whose origin are lost in the mists of time. The Orientalists, great and learned European and American scholars, with the Western point of view, date them at from a few hundred to a thousand years b. c. Hindu scholars, who probably know their own religious traditions best, date the Vedas at nearer ten thousand years b. c., while occultists trace their origin to the Atlantean or the earliest Aryan times.

The authorship of the Vedas is credited to Vyasa; but there were many Vyasas, twenty-eight or more, each of whom composed one or more of the Vedic hymns or other religious literature — each in his respective era.

It is interesting to note how the Vyasas succeed each other. When a great Teacher comes in a declining cycle, as did Christ, there is little possibility of carrying on the successorship. The conditions do not favor or perhaps even allow it. But in a rising cycle, as now in the West, when the aspirations and the intelligence, the moral and spiritual elevation are sufficiently sustained, there are disciples trained and fitted to carry on and maintain the Work, and to continue the teaching in its purity. There have been many such eras.

As in Greece, Egypt, Persia, China, Ancient America, and Central Asia, so in India for countless centuries, there were Vyasas, Rishis, Sages, Initiates all, to expound and elaborate and even to improve the teachings.

The Vedas are four in number, the *Rig-Veda*, the oldest, on which the others are founded, the *Yajur-Veda*, the *Sama-Veda*, and the *Atharva-Veda*.

They were composed and taught and repeated orally for centuries

or millenniums before being written down and compiled in their present form by Veda-Vyasa on the shore of the sacred lake Manasa-Sarovara (variously spelled), in what is now western Tibet. This district and much of western-central Asia was once called India.

The *Rig-Veda* (Sanskrit *rich*, praise), or Veda of Praise, is composed of 1028 hymns and songs of praise to the gods.

The *Yajur-Veda* (Skt. *yaj*, sacrifice), or Veda of Sacrifice, is composed of selections from the *Rig-Veda*, variously selected and arranged for sacrificial rites and ceremonies. Sacrifices were and are offered to the gods for all sorts of purposes: as an act of devotion and worship, to obtain benefits and favors, for propitiatory purposes, and even for curses. For the simple daily worship, flowers or fruits are offered, for greater favors some special treasure or money or jewels. At some Siva temples, and to Kali or Durga, Siva's consorts, there are blood sacrifices of goats, sheep, chickens, or bullocks.

The *Sama-Veda*, or Veda of song, is composed of some 1549 mantras, ritualistic, ceremonial, and magical selections. These are in both prose and verse and are used for meditation — "inaudible muttering."

The *Atharva-Veda*, named after one of the teachers, is sometimes called the *Brahma-Veda*, because it describes the nature of Brahman and how man attains thereto. It is of much later date and more philosophical than the other three Vedas.

The songs and stories of the Vedas are often so childlike in their simplicity and beauty that they are mistaken by European Orientalists for fairy-stories of creation. Being unable to conceive of the inner worlds and their inhabitants, the Orientalists laboriously explain them as just "the primitive mind of man

glorifying the phenomena of nature." But hundreds of generations of Hindu Rishis, Seers and Sages, have considered them as our learned mathematicians do Einsteinian equations, and spent their lives in expounding and amplifying them.

Apparently the Vedas are nothing but mythological stories, but actually they contain an account of the conscious operations of the creative Gods and their hierarchies of helpers — the architects and builders of the cosmos and all the "construction crew" of intelligences, from elementals up.

All the universe is conceived of as spiritual and conscious and every operation and law of nature, inner and outer, visible and invisible, is described as the activity of gods and other more or less advanced beings, who acted as any intelligent beings might act under similar circumstances.

The gods of the early Vedic hymns are not the familiar gods, Brahma, Vishnu, and Siva. The trinity of gods in the Vedas are Agni, Vayu, and Surya — crudely translated as Fire, Wind or Air, and Sun. But the word Fire is used as the outward expression of an inner essence which is warmth and life, light and intelligence. The word Fire is used as by the Fire-Philosophers and even by the Christians when they say "For the Lord thy God is a consuming fire," (*Deut.*, iv, 24). Vayu is used as the Greek Pneuma, Breath, Spirit. The Vyasas conceived of the Sun, not as materialistic Science does, as a mere physical or electrical body in the sky, but as the outer robes or vehicle of the Solar Deities whose vital energies animated and electrified the solar system into a living organism and whose Intelligences guided the orderly processes which established and maintain the harmony within the System. The Ancients conceived the sun and other heavenly bodies as we do a man, i. e., not as a physical body alone, but as a congeries of energies guided by intelligence — the mind or intelligence being

the most important part.

A sample of the Vedic stories will be of interest to the student as showing the poetic beauty and imagery with which profound truths can be clothed. Those who have studied what happens to the composite nature of man after death as described in *The Secret Doctrine*, and *The Esoteric Tradition*, will appreciate and enjoy the following from the *Rig-Veda*, x, 16; it is addressed to the deceased:

Let thine eye go to the sun (Surya), thy breath to the wind (Vayu), to the earth or to the sky go with thy several parts, into the waters or into the plants, as best beseems. But this man's unborn part convey, assuming thy most auspicious forms, to the abode of the righteous.

Note the exquisitely beautiful reference to that part of the man that never was born. How many of us have ever asked ourselves what part of us was born and will die, and what part of us has neither beginning nor end and therefore never was born — in the meaning of this text? And how much of ourselves is qualified to go to heaven? Elsewhere in the philosophy it is stated that all of the man that belongs to the earth goes each part to its appropriate place and transmigrates or reimbodies itself there All that is of the nature of goodness, truth, and beauty goes to heaven, for, "Never to an evil place goeth one who doeth good." — *The Bhagavad-Gita*, ch vi.

At death Pushan, one of whose titles is "Lord of the Path," the Vedic Psychopomp, or shepherd of the souls of the dead, who knows all the paths of both earth and heaven, conducts the wayfarer, the soul, both to the abodes of bliss and again to earth

May Pushan guide thee hence, the wise, the universal shepherd Pushan knows all the abodes, he guides us safely,

carefully Pushan is born on both the paths, that of heaven and that of earth, and goes back and forth between both, knowing the way to the happiest abodes — *Rig-Veda*, x, 17

Unlike the Greek Psychopomp, who conducts the souls of the dead to a gloomy underworld, Pushan conducts them through the airways of the soul to regions of light and beauty

Again, from the *Rig-Veda*, x, 14, addressed to the deceased:

"Go forth, follow the ancient paths on which our Fathers went the two kings shalt thou behold, Varuna and Yama, (1) where they revel in bliss. There join Yama and the Fathers, where every wish is granted in the highest heaven, free from blemishes enter thy home there, with a new and shining body clothing thyself."

As I collate and understand certain Vedic texts At death, Pushan, the Vedic psychopomp or shepherd of the souls of the dead, who knows the way, takes "that part of the man that never was born" to the first heaven where he enjoys the fruits of his good works on earth to the full measure of his deserts; then to the second heaven where he enjoys a greater degree of felicity; then to the third, and to all the heavens, each in turn, in each of which he enjoys a greater and ever greater degree of supernal felicity; and finally to the portals of the sun, where he enters and abides with the gods — the solar divinities Finally, Pushan conducts him back to the earth by the same route, and a new child is born.

Out of, and founded upon, these Vedic Hymns has grown the most elaborate and most voluminous religious and philosophical literature in the world. During thousands of years hundreds of generations of Rishis have spent their lives in commenting upon, expounding and interpreting or adding to the Vedic stories. There are the Brahmanas, the Sastras, the Puranas, and the Upanishads,

not to mention other classes of literature. The dates of these works are unknown. The Hindu mind is timeless, attaches no importance to time, dates nothing. So, the Orientalists class this literature in the order of its quality — from the simple to the more complex and profound or perfect — as they see it. That is why it is ordinarily given in the order above mentioned.

The Brahmanas are a complex development of the Vedas. Two facts of historic human interest stand out in the course of this literary cycle: Two schools arose under opposite leaders, one called the Black School and the other the White School. The origin of the divergence was that a pupil turned against his Teacher and founded a School of his own and the resulting spirit of inharmony within it gave the body which he led the quality and name of "the Black School."

Great numbers of Sakhas or schools of interpretation of the Vedas arose — many hundreds in the interpretation of the *Sama-Veda* alone. Some accounts say there were between one and two thousand of these Sama-Vedic Sakhas with their clash of argument and opinion. Compare this with modern Christianity which can only boast of three or four hundred different sects.

Above the babel arose the voices of some of their greatest Rishis challenging the people to loyalty and faithfulness. "If a man gives up his own customs and performs others whether out of ignorance or covetousness, he will fall and be destroyed," they said. In a broader sense the Buddha said: "Respect the religion of other men; be true to your own."

The Sastras are constituted mainly of works on Law, though the word Sastra simply means book. It is applied to the body of books on Law — all kinds of law, divine and human, sacred and profane, ritualistic and domestic. In the Sastras group are also included a few books of other character.

The Puranas and the Upanishads constitute a distinct advance on all other Brahmanical literature, being profoundly philosophical and religious and occultly scientific. The Puranas are supposed to have been eighteen in number, although none, with the possible exception of the *Vishnu-Purana*, exists today in any approach to a perfect form.

The Upanishads are variously given as having been 108 or 150 in number. They are essays of lofty religious, philosophical, and metaphysical character which form the basis of the most enlightened faith of India. They explain the essential nature and spirit of the universe, and, like the Puranas, treat of the character and nature of the gods; of their bringing the manifested universe into being by the process of ideation and emanation; of the cyclic course of evolution of the universe and everything therein contained. The idea is that every manifested thing, visible and invisible, from elemental and atom to solar system, from men even to the gods themselves, all evolve, not by chance nor by blind mathematical or mechanistic law, but by inherent energy guided by intelligence; and the manner and details of this evolution are poetically, allegorically, or philosophically described.

The Rishis of this later and more advanced date distinctly pointed out that there are two Paths as trodden by men of different grades of evolutionary development, both of which should be known and understood: they are the Higher Path and the Lower Path, or the Slower Path. The latter is the path trodden by the great majority of men; by the good citizen who discharges his duties in the world and is bound by earthly attachments, as well as the man who is bound by devotion to the creeds and forms of religion, such as the ceremonies and sacrifices prescribed by the Vedas, or the dead letter of any religion. The followers of religion

take a long winding course of evolution. The Higher Path is the Chela Path, trodden by the strongest and noblest of men. It is a path of self-determined and rapid evolution, motivated by impersonal and all-pervading love and thoughtfulness for the welfare of others. It is the path of the inner light which leads to Self-knowledge, Atma-Vidya, and to Divine Wisdom, Brahma-Vidya.

The efflorescence of Brahmanical literature is called the Vedanta — which means the end or perfection of the Vedas, the highest form of Hindu thought.

There are three schools of the Vedanta: the Dwaita, or dualistic school; Adwaita, or the non-dualistic school; and the Visishta-adwaita, or modified non-dualistic school, which is somewhat between the other two. The Avatara, Sri Sankaracharya was the greatest expounder of the Adwaita school.

In the later Brahmanical literature the principal Vedic gods, Agni, Vayu, and Surya, are replaced by the more familiar trinity of gods, Brahma, Vishnu, and Siva. The word Brahma comes from the Sanskrit root *brih*, to expand. Brahma is the masculine supreme creative god of the universe. Vishnu, from the root *vish*, to pervade, is the all pervading and preserving principle of the cosmos. Siva is the god who destroys but to regenerate on a higher plane.

Philosophically speaking, Brahmanism, like the Esoteric Philosophy from which it sprang, is neither Monotheism nor Polytheism, Idealism nor Dualism, but contains and includes them all. In this philosophy Deity is both immanent and transcendent — Immanent because it pervades, animates and sustains the vast whole of the manifested universe; Transcendent because superior to and not dependent upon manifestation.

There is one fundamental divine principle and many manifestations; one Life, many lives; one Fire, many flames; one Thinker, many thoughts. The whole manifested universe is the thought and manifested thoughts of the hosts of Gods, an emanation of their essence, animated and sustained by the circulation of their life and vitality, and inspired and guided onward and upward by their wisdom.

In Brahmanism the creation, evolution, and dissolution of such universes follow each other in orderly, progressive succession, as day follows night. This progressive manifestation and dissolution of universes is poetically called "the days and nights of Brahma."

1. Varuna is the god of the Waters of Space, Akasa, Yama, the god of Death ([return to text](#))

The Theosophical Forum

THE T.S., A LIVING, GROWING ORGANISM — G. de Purucker

Even the most wonderful magician of words leaves his audiences cold unless he have in his mind, and send forth from his heart, something which is intrinsically grand and ever-perduring. Spiritual and intellectual grandeur is what we Theosophists, students of our God-Wisdom, long for: we long to embody in ever greater fulness the ancient Wisdom which we have received as our holiest possession, so that we may give it, as far as we may and unadulterate, to others who have hungered as we have hungered for it.

We of the Theosophical Society are not mere parrots, mere word-repeaters, repeating the grand thoughts of men long dead, or again, merely quoting from certain Theosophical books that we love and revere and that have been written by H. P. Blavatsky, the Envoy of the Masters of Wisdom. We are not mere parrots, I say; and in this we try to follow H. P. Blavatsky's instructions, trying to develop ourselves inwardly so that, as she pointed out in her wonderful *Key to Theosophy*, we shall become strong men and women, strong spiritually and intellectually, men and women of incorruptible character with independent ideas of our own, born of the Wisdom-Religion if you will, but nevertheless illumined with our own native genius as far as we can evoke and draw upon this last.

This is not egoism; it is in fact the exact opposite of egoism; and again, it is not putting oneself forward as an authority in spiritual things. When a man has reached the stage where he will accept truth wherever he finds it, and perhaps at whatever cost to himself, he has indeed grown inwardly, and then it becomes his duty to give of what he has gained to others who know still less

than he. Furthermore, and this is a most important thought, it is precisely because he himself, through his studies of Theosophy has grown at least somewhat inwardly, that he comes to appreciate the fact that there are other men who know as much as he does — aye, much more, mayhap. He then *understands*, and does not merely accept the verbal statement, that we are all students, but students in differing degrees of understanding. This means that we do not stand still, blindly satisfied with the noble work done by those Theosophists who have preceded us in time and work, although none more than we revere these our predecessors in the Cause. The Theosophical Society were a mere farce, an imposition on human hearts, if it were not based on the principle of essential progress, collectively and for the individual, implying that each individual each day goes a little farther forwards and upwards towards our common and sublime objective.

The Theosophical Society, please remember, is composed of all the Theosophists who unite to make it. There is no organization more worthy nor superior to the men who compose it; it is precisely the men who compose it who make it. The standing, spiritual and intellectual, of the Theosophical Society is gaged by the men and women who compose it, and it will be just as low or just as high as we individuals make it, because of what we are ourselves. To the degree that we as individuals follow with fidelity the grand and beautiful instructions which we have received, to the degree that we show in our own lives how much inner growth we have achieved — otherwise, what we ourselves have learned and have grown to, and having learned are prepared to pass on to others: to *this* degree will our Society be high or low, and will retrograde or march steadily forwards.

May the gods in high heaven ever prevent, through our efforts both collectively and individually, the Theosophical Society from

becoming a mere sect, depending upon a book or books, however grand this or these may be in themselves; may they prevent our pretending to live alone on the Word received from our predecessors; but may we continue to grow from within ourselves and become independent thinkers and workers steadily raising the level of ourselves and therefore of the Theosophical Society. Let our beloved Society continue for ever to be a living, growing organism through which pulses the inspiration of our blessed God-Wisdom. We can best render our homage of immense reverence and devotion to our Teachers, higher and lower, by striving to improve ourselves as individuals, as individuals to advance ourselves in all things great and good, and as individuals to become independent, strong characters. If we can do this, then we shall for ever be able to retain and to manifest to others those principles of conduct which have ever graced the lives of the noblest of our predecessors, and this likewise will insure that our Theosophical platform shall be ever free, growing, in all the best senses of the word, and therefore becoming ever more truly a nobler platform for the elaboration and dissemination of Theosophy to the world.

It is results that the world looks for, and not talk; for it is a mere truism to state once again that the world is weary of talk without action, of professions without their expressions in the lives of the professors. If the Theosophical Society is not to drift on some mere sandbank of thought, however noble that thought may be, and even based on our own Theosophical ideas, — if the Theosophical Society is to grow and to become for future ages what it was destined to be, it is in our hands to make it so by *ourselves* making ourselves ever truer exponents in our lives, and in our independent but ever loyal thinking, of the Wisdom-Tradition that we have received from our Masters.

"ENDS AND MEANS" — *Marjorie M. Tyberg*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

One of a generation living, as he expresses it "in the rather grisly morning-after of the success of science when it is apparent that what triumphant science has done hitherto is to improve the means for achieving unimproved ends or actually deteriorated ends," Mr. Huxley had accepted the conception of man and the universe presented by materialistic science and early fallen a victim to the doctrine of "meaninglessness." But his horror at the results of this hideous cast of thought, his sympathy for those whose minds became imprisoned in it, and his adventurous intellect and resolute will, impelled him to make strong search in near and distant fields of human experience and this led to the rediscovery of the eternal values that give purpose and meaning to life on Earth. From being a victim Mr. Huxley has become a victor: by his scientific survey of man as a spiritual as well as a physical and intellectual being, he has been able to administer to the poison-bite of materialistic science a traditional cure, namely, "the hair of the dog that bit you."

Ends And Means (1) is indeed a guide to moderns who would escape from the squirrel-cage which snapped shut upon their minds when they were caught by "meaninglessness," and which cut them off from the luminous areas of human consciousness where religious faith and human associations based upon eternal ethical principles give entrance to temples of inward peace and understanding of life's significance. Love and awareness Mr. Huxley found to be essential virtues, and love and awareness in

his own nature, with the poet's vision of beauty in hid places, have given him the power to throw a brilliant light on the thorny path men tread today. Theosophists who in the 1880's and 1890's were delivered from their agnosticism (the plunge into meaninglessness was reserved for another generation) by the teachings of the Ancient Wisdom concerning science, religion, and philosophy, as restored to the West by H. P. Blavatsky, are grateful to Mr. Huxley for his scientific attack on "the great dire heresy of separateness," for stating the case so clearly, and for suggesting some practical remedies for that unbrotherliness which one of the Theosophical Teachers, Katherine Tingley, has called "the insanity of the age."

In his search for the noblest ends that men have sought and the noblest means they have used to achieve them, Mr. Huxley scaled walls of national and continental ignorance and prejudice and came upon ideals based upon belief in a spiritual reality underlying the phenomenal world, and in a Self motivated by such a conception, that stands in strong contrast to the self-defensive, salvation-demanding, acquisitive motives familiar to us and even sanctioned by religion in the West. He points out how, in substituting a Deity with human attributes for a Universal Principle, a One, at the source of all life, and in failing to require harmony between Christian ideals and the dealings between man and man and nation and nation — in really doing what was tantamount to putting religion on a business basis — the Christian world has made a costly, if instructive, detour from the road of understanding of man and his destiny. The cleverness which devised means to gain ends themselves gradually vitiated by the means used to gain them, the neglect of the major virtues which open vision to spiritual reality, led to very different results from those effected for instance, by the teachings and practice of Buddhism, with its injunctions as to non-attachment in action and

employment of "the right means of livelihood." Ignorance or neglect of these very *practical* religious considerations brought the practical West to the present chapter of horrors with its "regression from charity," its "decline in men's regard for truth," — from monotheism and materialism to meaninglessness.

Reading this book one recalls Matthew Arnold's forebodings of one hundred years ago, about European civilization, and his wise and intuitive warnings, so far in advance of his century and so little heeded. Aldous Huxley enjoys the double distinction of being Matthew Arnold's grand-nephew and Thomas Huxley's grandson, and in him we have a critic with the advantage of training in the science of our time. Will this help his voice to reach home — or will it also pass unheeded?

Mr. Huxley's analysis of present-day problems merits attention for many reasons. His willingness to include a whole range of human experience generally ignored or denied by scientists, his *unwillingness* to baulk any facts however menacing they may be to prideful content or wilful irresponsibility, his vast research into subjects very superficially treated by the writers available to the general public, have prepared him to find hitherto unsuspected vulnerable places in institutions and methods now used with all the assurance of brain-mind cleverness unilluminated by the light of spirit. *Ends And Means* is a penetrating expose of such methods and practices and of the delusions they are fastening on the minds of men. Mr. Huxley's survey of government, education, war; his presentation of the scientific view of the bearing of sexuality upon the lasting creative energy of a race; his observations about the effect of popular addictions regarded as diversions; his challenge to literary artists to supply adequate ideals of conduct and character; should serve to correct unethical views of these matters. For some supposedly innocent practices and amusements cause and perpetuate the very evils

that appal us when they are multiplied into mass movements.

One of the most portentous passages in *Ends And Means* deals with the significance to our present civilization of the scientific findings concerning intra-specific competition, which is competition between members of the same species. Students of Theosophy are familiar with the teachings of the Ancient Wisdom as to man's evolution along physical, mental and emotional, and spiritual lines and also with the outline of his progress towards his ultimate high destiny on Earth given in H. P. Blavatsky's *The Secret Doctrine* in 1888. Theosophists accepted fifty years ago what scientists now assert: that the human species is the primitive stock and has had the power to resist the tendency to specialization to which certain other mammals succumbed; that the human species kept to the broad, general line of advance, and has thus been able to "make the grade" as Theosophists put it, to unfold the capacity for supremacy over less advanced species, to control environment so that man has now nothing to fear from competition with other species. The human stock, the oldest, is most advanced, say Theosophists, because it has "been to school" the longest, and because man is, to quote Dr. G. de Purucker's *Theosophy and Modern Science* (1930),

a better and higher expression through evolution of the indwelling mental and psychic forces than the lower creatures are.

And in his *Esoteric Tradition* (1935) Dr. de Purucker indicates the still higher "grade" which humanity must voluntarily make:

The human race, however, will "evolve" by "involving"; paradoxical as it may sound: evolve forth spirit, and involve matter.

Now comes Mr. Huxley to point out that what man *has* to fear is

intra-specific competition, that between man and man — *certainly the keynote and cornerstone of our whole system today.* Intra-specific competition, biologists state, is a line of evolution which is voluntary, based on no inner necessity. It is pursued by man either in ignorance or in defiance of, either of two inevitable consequences, one which bars the human species from unfolding further high capacities, and the other which actually leads to the extinction of the human race. Mr. Huxley notes also that

we are doing our best to adapt ourselves to modern conditions of intra-specific competition. . . . and to become dangerously specialized in killing our fellows.

A disastrous culmination of adherence to "the heresy of separateness" is thus a possibility which mankind must voluntarily avert by substituting co-operation for competition. As Mr. Huxley says:

Love and understanding are valuable even on the biological level Hatred, unawareness, stupidity and all that makes for an increase of separateness are the qualities that, as a matter of historical fact, have led either to the extinction of a species, or to its becoming a living fossil, incapable of making further biological progress.

Will the motive of self-preservation drive man to the realization of the unity and the spiritual reality underlying our life on Earth? Will man's necessity lead him to find in these an ethical basis upon which to build by non-separative, non-violent, really human methods of advance? Mr. Huxley clearly indicates that this deeper realization depends upon *individual* effort to become Self-conscious, to achieve more complete physical, intellectual, and spiritual awareness, to bring the "more than self" into actual function in a life of non-attachment to the results of action. This Self transcends the sub-personal self which many lives

demonstrate; transcends the merely personal self unlearned and unpractised in the inner inhibitions known to those more fully evolved in love and awareness; it is in touch with spiritual reality and can be a channel of illumination to the human mind and heart. Mr. Huxley, it will be seen, in his scientific survey of human history, includes the long-derided "path of the mystic"; and has reached the conviction that those who undergo the discipline of practising the major virtues and of identifying themselves with the "more than self," win direct knowledge of inner things hidden from others. And further: Large-scale social reform is not enough; "there must be suppression at the source, in the individual will." He says:

This super-personal level is reached only during the mystical experience. There is, however, a state of being, rarely attained, but described by the greatest mystical writers of East and West, in which it is possible for a man to have a kind of double consciousness — to be both a full-grown person, having a complete knowledge of, and control over, his sensations, emotions and thoughts, and also, and at the same time, a more than personal being, in continuous intuitive relation with the impersonal principle of reality.

The study of the "individual" in *Ends And Means* is a ringing challenge to Self-discovery. Most heartening also, is the view that those who have become "individuals," strong and skilled in love and awareness, can, in association with the like-minded and single-hearted among their fellows, rise to a level of group-consciousness above that reached by each alone; can thus help to form a hierarchy in advance of the general body of the human race, and act as a pull on the less evolved, in the direction of the non-separative-ness and the non-attachment in action which are the only true basis of — which, in fact, constitute — the

integrating principle the urgent need for which is felt and expressed in every department of human endeavor today. A saying of Jesus comes to mind: "Where two or three are gathered together in my name, there am I in the midst of them."

Ends And Means is a book that can bear periodical review: it will be long before what it contains can be sifted into the race-mind; there is in it food for generations that must acquire the power to dissociate the truth from dogma-encrusted traditions. But while Mr. Huxley reiterates the truth that "a metaphysic of the universe," a comprehensive "inner" for the outer that is yet to be, a frame-work of human destiny adequate for "more than self" to manifest in, is required; while he states again and again that man's view of his relation to the universe decides his views of right and wrong; his book falls short of being what it has been called by some critics, namely, "a bible for moderns" in not presenting more fully the cosmic setting for man as a spiritual being. Does Mr. Huxley perhaps realize that H. P. Blavatsky's *The Secret Doctrine* presents the needed cosmology in full, showing "the integrating principle" in operation? And may his next book perhaps comprehend the Ancient Science, the Ancient Wisdom of the Secret Doctrine, and treat it with the lucidity and charm that characterize his Inquiry into the Nature of Ideals and into the Methods Employed for their Realization in his *Ends And Means*?

MAKING MEN — *Raymond Rugland*

The gentle slope of the alpine meadow is broken by the forms of six tents. From here we see the dusty trail appearing as a connecting ribbon. Below the tents the clear water of the narrow creek eddies among the long slim water reeds and gurgles playfully, spilling over well-worn rocks. Here is a community and an environment suggesting an absorbing adventure on the wings of thought.

Not without a purpose has man invaded the backwoods of the Idaho Bitter Root Mountains. The camp below us is one of the many camps engaged in the work of white pine blister rust control. The vast stands of the Idaho white pine are the life-blood of the state's timber industry which is directly correlated with the people's prosperity. The blister rust, a fungal disease, has offered a serious menace to this timber resource, but the United States Forest Service has found, and is applying, an effective means of control. The fungus is easily controlled because of its inability to spread from tree to tree. Wild currant and gooseberry, known collectively by the generic name of ribes, serve as mid-hosts. By destroying the mid-host the disease cycle is broken and the white pine is saved to that extent. Yet, even with an army of workers, complete eradication of this disease may require many years. Each summer camps are set up and college forestry students are given the opportunity to work with experienced woodsmen from the nearby communities, acquiring practical experience in the forest and earning the expenses of further education.

Towering cedars, stately spruces, and the princely white pines are the progeny of the encircling hills. The wind-mangled snags offer a weird contrast to the harmonious beauty of the rest. Here is a

scene, representing an environment, different from anything I had known before. By coming to Idaho I exchanged the enlightening experience of college for the more sublime association with nature and her rugged offspring, those woodsmen, my fellow-workers.

Let us relax in the yielding duff of pine needles. We shall not become lonely in the depths of the forest. The forest is a community and its life is self-unfolding. To sit beside a trickle of water in the secret fastnesses of the tall trees is to be refreshed.

Were you surprised when the rock at your feet suddenly grew legs and splashed into the water to reappear as a frog on the other side? Can you read the story impressed in the soft earth of the creek banks? Had you noticed the clever camouflage of brush concealing the game trail to the creek? Search for the minute and you will find it. A cleverly concealed spider's web above is almost completed by its designer and builder. Your hand is disturbed by two curious ants who have mounted your fingers in challenge to your careless destruction. You completely blocked the entrance to a tiny ant hole by the mere shifting of your fingers. The forest is not a place of loneliness; it abounds in life and companionship.

In this mood, the inanimate is living. In the distance a deeply chiseled gorge reveals its own story. Red rock, gray rock, gold-bearing quartz, and slate, in layers and intermingling, are quiet reminders of a time when our Mother Earth was once a restless parent. Water, now splashing recklessly among scattered boulders, seems to be living its own adventure. Plunging down the slopes, the icy liquid is on its way to the lowlands. Here is refreshment for the water fern or perhaps a wandering elk. Lacking patience, it dashes to join other creeks far below; thence, to flow as one to the ocean far away.

The harmony of this quiet observation and meditation is soul-

satisfying. This is nature's gift, a lovely thing to share.

Such reflexion is temporarily diverted by a disrespectful disturbance from the direction of the tents. In solemn procession appear the mules of the pack train. The call of the packer is answered by many shouts, and men appear as if by magic. The men break from the circle of their gleeful comrades as their names are called for mail, each hoping that his name will be called next. Let our thoughts reach out to this group. I have come to know my fellow-workers well. The desire to know each one individually has brought an abiding reward. There is an inner beauty in all human nature. It is interesting to observe the inner beauty revealed by my tent-mates.

Have you noticed how large timbers are split with a steel wedge? The wedge is inserted in a crack, if one can be found, and splitting is made easier. Each divine quality of these men is a "crack" by which the "inner nature" can be laid bare by correct usage of the theosophic "wedge." Nature, not schools, has been the instructor of many of these men, yet, nature has been an excellent instructor. Truth, sincerity, perseverance, tolerance, courage, and sympathy are the qualities they have acquired from the forest and their hardy forebears. With matchless precision they can sharpen a saw, wield an ax, and build structures of hand-hewn timbers. No sacrifice is too great for the well-being of a friend. These men do not claim any "religion" but there is an intuitive reverence for natural law. In this melting-pot the college and the local boys have learned to respect each other; each type of personality has made an effort to understand the other. Practical woodcraft is exchanged for textbook information. In all respects it is an even exchange. The camp is blessed with fine human timber, yet the wedge has not been driven. These divine qualities are part of all of us; yet my comrades are not self-consciously aware of this. They have not learned to anchor their desires

permanently to the dictates of their "finer selves." The boys, when together, permit their childish desires to gain the upper hand. Hard-earned paychecks are squandered foolishly. Evenings are idled away with card games and the reading of cheap magazines. Conversation is usually boring, without intelligent aim. Is being "tough" the acme of perfection? To a few, it appears to be since they have supposed that they must reflect the attitude of their associates. It is an attitude which travels in a circle, a circle without a solid foundation.

If they can be interested in learning to "know themselves," they can acquire this foundation. Several of my mates, not so easily satisfied by the camp pastimes, have expressed their interest in my Theosophical correspondence work. These few with their intelligent questions are a pleasing contrast to the others with their insipid gossip. For these, real interest has followed curiosity. I am optimistic as I note a gradual change of attitude; the "tough personality" is being challenged by the "natural individual." This is the first acquaintance for these men with Reincarnation, Karma, and other such doctrines of Theosophy. Each inquirer is ready for the "wedge." I know that as my friends read the Theosophical pamphlets that I lend to them, they will absorb those great truths that harmonize with their preconceived intuitive knowledge. Within the canvas walls of this tiny city, I sense a gradual unfolding, a yearning, the kindling of an interest for the sacred truths and ethical obligations of life.

The Theosophical Forum

RECOLLECTIONS OF A THEOSOPHICAL SPEAKER: II — *Leoline Leonard Wright*

Vignettes from the World's Congress of Religions

The first peak of my experience in the Theosophical Movement in the closing years of last century was reached when we were privileged to entertain in our home several of the most distinguished delegates to the World's Congress of Religions held in Chicago in connexion with the World's Columbian Exposition in September of 1893. There were Mr. Judge himself with Mrs. Judge, Annie Besant, Gyanendra N. Chakravarti, delegate from the T. S. in India, Mrs. Isabel Cooper-Oakley, a pupil of H. P. B. and member of her Inner Group, Claude Falls Wright, and Mrs. Richmond Green, so well known later as a helper of Katherine Tingley. It seems incredible as I look back, how we were able to fit all these people comfortably, as we did, into our moderate-sized flat. I said at the time that it seemed as if we, the family, almost literally hung ourselves at night on hooks in the closets in order to enjoy what was for me then, and is today no less in recollection, a memorable and extraordinary galaxy of Theosophical personalities.

For it was indeed a galaxy, the company not being by any means restricted to our immediate guests. Visitors poured into the apartment during the few days that the delegates were with us. Well known representatives of the Press, friendly inquirers, local Theosophists, and many other foreign delegates, such as Herbert Burrows the prominent labor leader and an F. T. S., and the wealthy Henrietta Muller of Maidstone, England, whom I recall because she was my first experience of the irrepressible British spinster and for her innumerable necklaces of iridescent shells

and beads.

And the meals we served — at any and all hours! These people were mostly culinary bohemians and ready to eat anything served to them at any hour of the day or night. Often, after a crowded lunch-table had just been cleared, another batch of visitors would arrive lunchless. My beautiful and hospitable mother, never at a loss even on our none-too-large financial resources, was always equal to the occasion. In half an hour or so she would have thrown together another delicious meal, occasionally somewhat of a "scratch" repast, but what did those brainy and impromptu Theosophists care! They ate, drank gallons of tea and coffee, and spread themselves in gay conversation until it was time to pile into the streetcars (Mr. Ford was only just then trying out his laughable invention, and carriages were practically nil among Theosophists) for another session of the Congress. And I can assure you that it was all magnificently worth while.

Fortunately we had an intelligent and good-natured American girl for maid. She became during those crowded days a confirmed Theosophist. To see her serving, open-mouthed and goggle-eyed with awe over the stir and excitement of those endless *conversazione-meals*, is one of my droll and pleasant memories of that stirring time. Oddly enough, her name was Loma and she married later and went to California to live.

After all these years the sessions of the Congress, where once or twice (as Secretary of the Chicago Branch) I sat on the platform with my mother, or mingled in the dense jam of the great audiences, make something of a kaleidoscope of my recollections. A crowded, shifting, swirling *melange* of remarkable oratory, Orientals in strange brilliant garb, bursts of enthusiastic applause, British lady-delegates in more or less bizarre adaptations of Occultism to platform costume, and a sense of

something of mighty import taking place within and around us — this is the sort of picture that lingers with me today.

Two Orientals there present stand out in my recollections of the Congress. No one who saw him then could ever forget the noble and Christlike beauty of the noted Singhalese Buddhist and friend of H. P. B., Dharmapala. Tall and almost luminously ascetic, robed classically in spotless white, he was a lodestone to the throngs who swarmed into those meetings. Merely to look at him was a revelation of character and spiritual attainment.

Chakravarti was quite a startling contrast. A very tall, immensely fat man with tiny feet and a piping falsetto voice, he was quite definitely of this world. He was inordinately fond of thick beefsteaks and we found it difficult to realize that he was a Brahmin. Difficult that is until he began to pour forth in a flood of eloquence the marvelous expositions of Oriental philosophy which always transfixed his hearers both in public and private. He had a preference for our living-room which was hung in pale yellow silk, and here when at home he liked to sit cross-legged on a yellow silk divan and discuss the questions in Hindu and Theosophical philosophy with which we plied him. At such times we forgot for awhile our disillusion.

I have an amusing recollection of one of his very natural mistakes in the pronunciation of English, though he had a wonderful flow and classical perfection in the use of it. He talked a great deal about spiritual development, which he pronounced "spiritual devil-opment," with the accent on the devil. I have often thought since when wrestling with the cussedness of my own personality that the word "devil-opment" was not such a misnomer after all.

To all this inspiring incident Mr. Judge added the final touch when he came to my mother after it was all over and quietly insisted on her acceptance of a substantial contribution to the

unexpectedly heavy expenses which she had so gladly met. For it was one of his beautiful characteristics, so often touchingly appreciated by Mrs. Judge in her talks with my mother, that he was always unselfishly sympathetic and considerate of others both in the small and in the great.

I like to remember how much like the rest of us he appeared to be. H. P. B. always seems to me to make an almost stunning impression of grandeur. Her daring journeys to fabulous regions of the earth, her towering intellect and profound books, the phenomena with which she dazzled her contemporaries, these remove her in a sense from the atmosphere of our more intimate affection. But our beloved Judge looked and acted a good deal like the rest of us. Anyone passing him on the street would hardly have given him a second glance — unless Mr. Judge meant him to. For years he lived frugally over in Brooklyn and commuted to New York every day to earn a living for his family apparently just like any other struggling young lawyer. And his loss of a beloved child drew him very close to the human nature in us all.

Nevertheless he too could, when he chose to do so, dazzle and enthrall, as all who heard his several speeches at that Congress, and sometimes on his lecture-tours over the country, will never forget. I heard and saw him there, before that great, entranced audience, lifted out of his quiet unassuming daily self to a grandeur of inspiration and eloquence that put a climax on his own work and the work of Theosophy in that first remarkable Congress of the religions of the world.

THE FOUR SACRED SEASONS — *Alfred Spinks*

A LEGEND

Legend tells us that millions upon millions of years ago, before Man had assumed the form that he now has, when he still was clothed in a body of filmy, tenuous matter, more ethereal than material — and just before the time of his concretion, or descent into matter, there was held a great gathering of the Gods. They came from all over the Universe, for this was to be a very important occasion. Man was to be clothed in a physical garment. But — there was still a very important question to be decided upon. Yes, he was to be endowed with a body — a purely materially physical body it is true, with a head, a trunk, and limbs; and, a mind with which to think for himself, and through which he could function.

However, up to the time of this great gathering, no provision had been made as to where to place Man's Divinity. This was the reason for that great conclave, millions of years ago. *Man's Divinity. His Divine Self.*

Some wanted to place this Divinity in the center of the Earth, but after much deliberation, the wiser ones said: "No, Man with his new body, and his crafty brain will devise ways of digging down to the center of the earth to obtain it. Perhaps some will find it before others, before they are ready for it, before they know how to use it; and when they realize its power, they will undoubtedly abuse it, and use it for their own self-aggrandizement." Wise Ones! these Creators of Man and the Universe.

So that idea was abandoned.

Again they deliberated. This time someone else suggested placing

it in the middle of the ocean. Man cannot live in the water, and it will be safe from abuse until such time as he is ready to rightfully claim and use it. Again, the wiser ones shook their heads: "No, Man will, through this remarkable brain we have given him, develop ingenuity, and invent some kind of device to enable him to descend to the depths of the ocean, and find this Divinity."

Again the Gods foresaw trouble. "Sooner or later," they said, there would be wrangling among men as to whom this belonged to, and the temptation to use it for personal reasons might be too great for weak man, and he would be sure to abuse the powers he would gain therefrom. "No, we must find some other place."

Then the bright idea struck one of those assembled there, to place it high in the sky. "Man will not be endowed with wings and will not be able to reach up to it, until he is ready for it." Again the same objections arose. "Surely Man with this remarkable brain of his will soon find some means of flying into space, and in no time will he discover the powers of his Divinity within his grasp, and the temptation to misuse these powers will be too great. No, we must protect this physical MAN, whom we are fashioning this day."

After much discussion, and as many rejections as suggestions, one of the wiser ones, perhaps a little more experienced in these things than some of the others, rose up and said: "No, we will not place Man's Divinity in the center of the earth, nor will we place it in the middle of the ocean, nor will we leave it high in the skies. Instead, we will hide it *within Man himself; in the core of the core of his own inner self— his own Nature*. That will be the last place that it will occur to him to look for it, and when he finally does find it, it will be by only the most careful searching and digging, within his own inner nature. So carefully will it be hid, that it will only be by clearing away the dross and mire from his own Nature that it will be revealed to him; but once having found it, having

overcome all obstacles surrounding it, in his successful search for it, he will find himself a part of it, at one with it and the Universe, of which he is a part; and in the finding of it, he will come to the realization that he himself is now a God, and he will long to reach down and help others in their search for it."

But still the Gods were not satisfied! A long silence befell this mighty gathering, for they all knew the wisdom of the words just uttered. The great riddle had been created. But, it now remained for man to solve, and find.

So on that eventful morningtide of Man's descent into matter, the existence of this Divinity was made known unto him, and it was also made known unto him that in his search for it, he would go through many experiences, and come across many difficulties and problems, many of which would be difficult to surmount. It was also made known unto him that on periodic occasions he would be reminded through Nature of the existence of this Divinity, and that if he would help Nature, and work with her, she would make obeisance to him, and that thereby he would find a key; that from this key he would find that if Mankind would follow in Nature's footsteps, by all working together harmoniously as Nature does, the solution for finding his Divine Self would be thus unraveled. This key which would bind all mankind together he was told was "Love, and Brotherhood." With these two powerful weapons, and these weapons alone, would he succeed in his quest. But alas! if he heeded them not, great troubles would befall him, and many bitter experiences would he have to go through before he again found the key to his Divinity.

Now it was further decreed, that as regularly as the rise and fall of the Sun, Nature would periodically unite in one great effort to try and bring Man to a closer realization of, and in closer touch with, his higher, or diviner self. Then Nature would send forth

titanic spiritual forces to awaken in man a realization of his own spiritual Divinity.

The Gods knew that the only way for man to find this Divinity was to call to his aid the Spiritual forces which flow constantly throughout the Earth; and they also knew that due to natural causes, there are times when these forces flow with greater power, or it might be said, are more readily accessible than at other times. These are when the Earth is at the four critical points of the year — Mid-winter, Spring, Mid-summer, and Autumn. The Gods knew this, and therefore strove to keep secret the processes whereby these forces could be used for the finding of the Divinity within, save from those who had already discovered the secret, and applied it. They who had discovered it are those who stand ready to assist Man to find his Divine heritage in the beauty of Springtime; in the bloom of the Summer-time; in the mellowness of Autumn; and in the awe inspired by Winter; appealing to that part of Man which takes delight in things of beauty — for that part of Man is akin to the Universe, because derived from the Soul of Nature.

They were trying to appeal to that part of Man which sees beauty in a sunset, and is raised to a higher state of being; to that part of man which hears beautiful music, and is raised to a higher state of consciousness, those higher states of consciousness wherein he is closer to the higher part of his Nature, his higher Self. All these higher states of consciousness they placed within Man himself — his Divinity. But alas! they realized only too well that they could find expression in most cases only on very rare occasions. Why cannot man, they ask, try consciously to raise himself to this higher state all the time? To that Living Christ within him, born anew at every time when he surrenders to his Spiritual Self, to the God within? But alas! It was ordained that Man must help himself. He could be shown the way, but he must choose his own

path.

And so the work of these mighty Gods goes on, until all, from the lowest to the highest, from the humblest to the greatest, have raised themselves, and become at one with this Divinity.

And today they have again given to Man Theosophy as the means for helping him find this Divinity; and the Theosophical Society has, among its other objects, to restore to Man, self-consciousness of the knowledge that he can grow, evolve, advance, and bring forth what is within the inmost core of the core of him — his DIVINE SELF.

And at these periods whereof we speak, Nature is re-born into another state of being, and Man being a part of Nature also partakes of that re-birth. A re-birth of his own choosing; a re-birth into higher states of spirituality.

The Theosophical Forum

FIDELITY, AND THE FUTURE OF THE T. S. — *G. de Purucker*

Born in the womb of cyclical time, the Theosophical Movement made its reappearance in our modern world, and at its birth there presided the kindly and benignant Destinies in full accordance with the spiritual and intellectual Powers behind the scenes. Yet, even at the moment of its birth or new-coming there were "malignancies," as the astrologers would say, whose influences were destined later to show themselves in the sometimes rather tempestuous career of this Child of Destiny — a child destined to succeed, as H. P. B. so finely pointed out, despite the worst mistakes of Theosophists themselves.

I for one have sometimes thought that it is just these "malignant" aspects which presided at its birth in our modern world in New York in 1875, which will in the long run, because of lessons we can learn from their workings, in a strangely paradoxical way prove to be the steadying influence in the career of our beloved Theosophical work. It is from our mistakes that we learn and grow wiser, seeing how to avoid the errors of former days and to eschew the temptations and biases that former experiences have proved to be more or less disastrous when followed.

Breaking up into its different component or separate societies, the Theosophical Movement has nevertheless lived on, with its ups and downs, its successes and temporary failures, but always up to the present at least, holding in a general way faithfully to the Principles which characterize it and to the work which it is its fated destiny to perform. Each one of these different societies will succeed or fail, in my judgment, precisely in accordance with the degree of spirituality and intellectual penetration and selfless devotion which its members as individuals possess; or, lacking

these, any one of them will drift off, as H. P. B. pointed out, on to one or more sandbanks of thought and there decay and become another sad wreck in the cyclic history of Theosophical endeavor.

Let us pause a moment and look at these sandbanks, that we may more clearly understand just what they are. They are rarely if ever, indeed never, in my judgment, sandbanks formed of the thought of other movements contrary to our own, but always of the mental prejudices, biases, and intellectual and emotional waywardnesses which it is human nature so utterly to cherish. In other words, these sandbanks are the products of ourselves, of Theosophists, of whatever society we may belong to. We are caught and ensnared by our own weaknesses and our infidelity to the principles I have mentioned above, in which principles lie our only safety, our sheet anchor, as well as our assurance of future success.

Any society, for instance, which becomes merely a bibliolatrous sect, worshiping books, however grand they may be because of the teachings contained in them, is almost certainly destined to fall into the next error of judgment, which is the worshiping of dead Leaders; and this is one of the pitfalls, one of the commonest sandbanks, of organisational thought which our own beloved T. S. must at all costs avoid.

On the other hand, there is the equally strong tendency, human nature being what it is — and this is a danger as real as the former — to lack loyalty and to be deficient in truth towards the greathearted Theosophical Leaders and other Theosophical worthies who have preceded us and who have given their all, their lives and their substance it may be, to hand over to us the sacred charge which we now carry.

I would therefore most earnestly urge upon all our own beloved F. T. S. as individuals to see to it that each one, as I wrote years

ago, become a leader in Theosophical work and in Theosophical thinking; for it is obvious that with every F. T. S. a leader in the Theosophical Society we shall follow the safest course in securing that independence of the individual in spiritual and intellectual matters which, combined with utter fidelity to the teachings as given to us by the Masters and H. P. B. will keep the T. S. a strong, united Body of independently thinking and active Workers, each one a leader in the Theosophical work that he prefers most, and doing this self-chosen work with indifference to results, with the impersonal love of the work itself uppermost in his heart. These ideals if successfully followed and attained will make of the T. S. what it was destined to be and what it should be; and to these objectives we have pledged our lives. With malice towards none, with good will towards all, with determination to follow our own chosen pathway of work, we shall march steadily and constantly forwards, while the T. S. will continue in the uninterrupted and steady growth in membership and in influence which have characterized it now for years in the past.

"Orthodoxy in Theosophy is a thing neither possible nor desirable"; we do not want it in the T. S., but we do want to continue in the pathway of utter fidelity to the teachings and traditions received by us; for this is our unbreakable bond of union, and "in Union lies Strength."

The Theosophical Forum

THE UNCONQUERED SUN — *Helen Savage*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

It is the 31st of December, and, here in California, 4 o'clock in the afternoon. We have been listening to a short-wave radio program of merry-making from the B. B. C. in London. Suddenly the laughter and singing become fainter as Big Ben strikes the hour — twelve deep-toned bells, and with the last stroke the voice of the announcer says: "We wish you the old, old wish: A Happy and Prosperous New Year!" As we shut off the radio we realize that already the New Year has dawned for half the world; already the peoples of half the world have put away thoughts of the old year, whatever it was, whatever it might have been, and are looking to the unseen days ahead with hearts full of hope.

It is actually a wave of hope that moves steadily around the earth and encircles the globe, as that magic moment when the old year is dead and the new is born touches each longitude on the spinning earth. There is cumulative power in this surging wave — there must be; for the least enlightened must for the first early hours of the New Year feel, as a deep-rooted intuition, that somehow, somewhere, there is a means of finding spiritual security: that beauty and joy and love belong to the human race; and that perhaps the first intimations of a new wisdom in regard to living are waiting for them in the unspoiled days ahead.

We need not consider here the fact that as the days of the new year unfold and prove to be but the children of those that have gone before, too often this hope, this intuition of the fundamental Tightness in the Universe, dies. We shall note only that it has

lived, however briefly, and because of the quality of this hope we know that it is based upon a reality. It is a flash of light from a *real* world that seems to surround us but eludes us, and it fills us momentarily with conviction.

Is there a means by which we can step over the threshold and move familiarly in this realm where our inspired dreams become actualities? How can it be done? There is an ancient symbol which yet has never grown old, and within its manifold significances lies the answer to our question. It is the symbol of the Sun. This symbol contains within itself the secrets of man's unawakened powers. First, the Sun is a symbol of immortality. Even science conceives of its life as a virtual eternity, for we are told that in 150,000,000,000 years it will not lose even one per cent of its stupendous mass. And the Ancient Wisdom adds that the earth will know many deaths, but with each new imbodiment it will witness again the shining of the great luminary, which, during the long ages of the earth's obscuration, has known no night and no lessening of its vital power, for it is continuously replenished from the secret stores of its own inner being.

Further, in the Sun we see a symbol of generous giving of oneself. It is pouring forth its vital substance at the rate of 133,000,000,000,000 tons a day, according to science; and this, not merely in prodigal wastefulness through the vastness of the heavenly spaces, but in order to sustain and nourish all the planetary satellites of its kingdom, and for the maintenance of all beings that live therein. For the life of the planets is a part of the life of the Sun; it is one life pulsating through the entire system.

Then there is kingliness with its attendant attributes of benevolence and wisdom. And who, contemplating the orderly workings of cosmic law in the solar kingdom can deny that this mighty sovereign rules by divine right?

Beauty, also, is symbolized in the Sun. The pale radiance of the early dawn, the prismatic colors in the rainbow, the greens and golds and scarlets of trees and flowers, the flash and fire of jewels, the blue haze of far distant hills — all these are solar in origin. It is beauty stepped down to us who are incapable of beholding face to face the glorious veil of the Sun-God himself.

And here we have slipped unwittingly into the phraseology of the ancient "pagan" world. But in spite of what the scholars may say, the ancients were not mere children adoring a bright disc in the sky. There is nothing infantile in the ancient Vedic prayer:

Unveil, O Thou that givest sustenance to the Universe,
From Whom all things proceed, to Whom all must return,
That face of the True Sun, now hidden by a vase of golden
light,
That we may know the Truth, and do our whole duty
On our journey to Thy Sacred Seat.

The Egyptian Osiris, the Persian Ormazd, Surya and Mithras, Adonis and Apollo, the Scandinavian Baldur, Lugh of the Long Hand among the Celts, Tonac-atlcoatl (Serpent-Sun) god of the ancient Aztecs — under whatever name it may have appeared, it was a Divine Being whom the ancient peoples addressed. They recognised that the solar universe was governed over by a divine hierarch, the *spiritual* Sun, whose real being is veiled in a garment of light. He was to them the vortex of the divine-spiritual fire of the universe. Spiritually as well as physically he was the nourisher of all within his kingdom; and therefore, whatever might befall mankind, they knew that in their inner being they were secure as long as they allowed his beneficent rays to light them within.

For those who were students of the Mysteries, there was even a deeper significance to the Sun-symbol. They were taught that as

the source of the solar universe was a divinity to whom all the lesser planetary gods made obeisance, so the little universe of man had its own central sun, a ray of the solar deity; and to this central sun the purely human in man, an unawakened god indeed, should be a faithful servitor.

Why a servitor? Because we owe our very life to it. The Mysteries taught that this human self of ours has been built up through many ages by the Evolver within, the Sun-god within. Step by step, from unconscious elemental substance, through intermediate degrees of semi-conscious life to the time when the form was ready to contain the light of mind, the delicate process had taken place. Like the golden drop of honey that the bee must gather from a thousand flower-chalices, so the precious soul-fabric had been built from the essence of countless imbodiments. And with mind came power, and the ability to learn to serve with self-conscious understanding the sacrificing parent within, for it is by means of this soul of ours that our divinity may shine in the grosser worlds of substance. If the soul succeeds in becoming the perfect channel, pellucid to the shining of the solar light, it has the ineffable reward of itself being born in the spiritual world. Then the human being actually becomes a dweller among the gods even while he performs his appointed duties among men on earth. This rare phenomenon was announced mystically with the words: "The Sun has arisen! A Sun-God is born!"

It was also a fact of common knowledge among the ancients that the phenomena of the visible world are a symbol of and in fact delineate what is taking place behind the veil of outer things. Therefore to the enlightened among them, the cycle of the year, with its changing seasons, was a mystery-pageant enacted upon a cosmic stage, each episode of which depicted in symbolic form a spiritual verity. Thus when the time of the Winter Solstice came round, and the sun began again his journey to the northern

hemisphere, they saw more in it than merely a time for rejoicing because the world would be filled with warmth again, and the fields would again be green and fruitful; they read the symbol aright. Their hymns were to the True Sun, the Sol Invictus, the Unconquered Sun, whose steadfast shining throughout the aeons is a guarantee of the spiritual security in the Universe. It was a sign to them that because of the focus of certain solar forces it was a fruitful time for communion with the sun-god within.

Even candidates in the Less Mysteries knew that at this season "the trained and fully prepared neophyte might enter at least temporarily into the Heart of the Universe, into the Light of the World, and bring back with him an unimpaired memory of what the greatest of Adventures had taught him." And he returned surrounded with a nimbus or aureole. He was "clothed with the Sun." (1)

It is this fact that is the basis of all the traditions of the ancient peoples in which there was a correspondence between initiates, great kings and heroes, and the Sun. The Babylonian heroes, Nimrod and Gilgamesh both became sun-gods after undergoing a series of trials; Hercules, Theseus and Perseus of Greece were all born of a virgin and were sons of the Sun. Quetzalcoatl, god-hero of the Mexicans, was a sun-god. His name means "Feathered Serpent," a symbol with them, as among the Phoenicians and others, of certain solar attributes. Krishna is represented in the *Mahabarata* as born of Aditi, the bright Dawn-Goddess, who gives birth to the Sun. Mithras, a sun-god, was called "Giver of Glory" because he was supposed to bestow upon his successful suppliants in initiation the aureole or nimbus, as shown in many Mithraic monuments. In the Egyptian mysteries when the candidate for initiation awakens from his trance, it is said that the Hierophant-Initiators appeared "and the sacramental words were pronounced, ostensibly, to the Sun-Osiris, addressed in reality to

the Spirit Sun within, enlightening the newly-born man." (2)

The Christian Savior also must come under this enumeration of Sun-gods if we are to consider authentic the records of early Christianity. H. P. Blavatsky says (*Lucifer*, Dec. 1887), after quoting from Ralston Skinner certain interpretations of the Christos-myth as typifying the Sun:

For, as the same author shows further, John, Jesus and even Apollonius of Tyana were but epitomizers of the history of the Sun "under differences of aspect or conditions." The explanation, he says, "is simple enough, when it is considered that the name *Jesus*, and Apollonius, or Apollo, are alike names of the *Sun in the heavens*, and, necessarily, the history of the one, as to his travels through *the signs*, with the personifications of his sufferings, triumphs and miracles, could be but the *history of the other*, where there is a wide-spread, common method of describing those travels by personification."

The early Christians themselves obviously accepted this interpretation of their Christ-Sun as passing through the Twelve Zodiacal Signs — a symbol of the trials undergone by the initiate in the Mysteries — because there exist even today relics of this belief.

The representation of Jesus as the "Christ-Sun" and of his twelve disciples as representing the twelve Signs of the Zodiac, may be seen even today graven on the building-stones of not a few churches in central and southern European countries, . . . (3)

As the above brief illustrations show, in the minds of the ancients what happened in and to the Universe was inextricably interwoven with what happened to man. And rightly so. For man

apart from the Universe were indeed a lost creature. It is the present-day erroneous method of looking at our relationship to the universe which is responsible for the evidences in so many quarters of the sense of aimlessness, of drifting in an alien world. Yet the hope that we feel at times like the New Year, the sense that the confusion and apparently irreconcilable conflicting elements in the life of the peoples of the world, are all but a bad dream — such intuitions as these show that at times even the least of men are illumined by a ray from the sun-god of their own being.

Were there no systematized philosophy of life to guide men in their search for the Real, had there never appeared among men a single Teacher to proclaim the age-old secret, we should still have with us as a daily and yearly testimony the glorious Sun in the heavens, symbol of the Unconquered Sun within ourselves. To meditate upon the significance of this symbol, as H. P. Blavatsky urges us to do, is to have at least an introduction to the study of the Real Self and our relation to it. First, like our day-star, it is immortal; for though the earthly man is dissipated at death, there is no death for the Inner Sun, and with the disappearance of its earth-child it takes up its duties in other spheres, only to return again at the appointed hour to bring to birth again in another earth life, its yet undeveloped child.

Further, like the Sun in the heavens, it is the generous giver of itself, for its life is our life, and by its power alone do and can we grow. And as for benevolence and wisdom: it is from this source that springs our ability to know, to act wisely, to intuit the deepest aspects of the cosmic workings, to reach out in sympathy towards another fellow-being, to use discrimination, and restraint, and compassion.

And lastly, in the creation of all that is beautiful, we are stepping

down its beauty, we are allowing the beauty of the solar light to shine on earth. This is even more true when we have made of ourself a work of beauty. Beauty of character is the supreme tribute to the god-sun within. To the degree that this is attained, we are living in the sunlit world of the spirit and have shown that our hope of the New Year was not a mere dream.

FREE WILL — *H. T. Edge*

An absolutely free will would be action without a motive, or motion without a direction, which are inconceivable; so that free will means the power of choice within certain restrictions. And since voluntary action must have some motive, the exercise of free will means the predominance of one motive over another; as when we follow the call of duty in opposition to a desire. If man has the power of choice, what determines his choice, if it be not love, fear, desire for the good or the true, or some other incentive? As the essence of human nature is the Divine Monad, a spark of Cosmic Divinity, his Will or his Destiny (which are the same thing) must be to fulfil the laws of the Universal Harmony; and any other purpose is but a temporary aberration therefrom. Man's will is restricted by the natural laws of his environment, by other human wills, and ultimately by the eternal laws of the universe; he has greater freedom of movement than any of the beings below him in the scale of evolution. Man is free to do what is right, but not free to set up his personal will in persistent opposition to every other will.

The controversy as to free will and destiny, whereby fatalism is often inferred, is due to undefined terms, muddled logic, the attempt to apply analogies drawn from physical science to matters to which they are not applicable, and similar confusions. Any chain of cause and effect which is rigid within the limits of its own system, may yet be interfered with by some agency from outside the system; and this principle may be applied indefinitely, so that a being may achieve continually greater degrees of freedom. The plant is free relatively to the stone; the animal relatively to the plant; and man relatively to the animal; and man himself achieves various degrees of freedom according as he lifts

himself to higher planes. Yet in no case are the laws of Nature contravened; in no case is man's will uninfluenced by motive.

If our confused logic should lead us to the conclusion that free will is an illusion, we have but to try this as a working philosophy and see whither it leads us. It will be found to mean a surrender of ourselves to idleness and self-indulgence — that is, a subjection of our own will to other and hostile wills which are not subject to the same paralysis.

H. P. BLAVATSKY SPEAKS FOR HERSELF

Mahatmas and Chelas

A Mahatma is a personage, who, by special training and education, has evolved those higher faculties and has attained that spiritual knowledge, which ordinary humanity will acquire after passing through numberless series of re-incarnations during the process of cosmic evolution, provided, of course, that they do not go, in the meanwhile, against the purposes of Nature and thus bring on their own annihilation. This process of the self-evolution of the MAHATMA extends over a number of "incarnations," although, comparatively speaking, they are very few. Now, what is it that incarnates? The occult doctrine, so far as it is given out, shows that the first three principles die more or less with what is called the physical death. The fourth principle, together with the lower portions of the fifth, in which reside the animal propensities, has *Kama Loka* for its abode, where it suffers the throes of disintegration in proportion to the intensity of those lower desires; while it is the higher *Manas*, *the pure man*, which is associated with the sixth and the seventh principles, that goes into *Devachan* to enjoy there the effects of its good *Karma*, and then to be reincarnated as a higher individuality. Now, an entity, that is passing through the occult training in its successive births, gradually has less and less (in each incarnation) of that lower *Manas* until there arrives a time when its *whole Manas*, being of an entirely elevated character, is centred in the higher individuality, when such a person may be said to have become a MAHATMA. At the time of his physical death, all the lower four principles perish without any suffering, for these are, in fact, to him like a piece of wearing apparel which he puts on and off at will. The real MAHATMA is then not his physical body but that

higher *Manas* which is inseparably linked to the Atma and its vehicle (the 6th principle) — a union effected by him in a comparatively very short period by passing through the process of self-evolution laid down by the Occult Philosophy. When, therefore, people express a desire to "see a MAHATMA," they really do not seem to understand what it is they ask for. How can they, by their physical eyes, hope to see that which *transcends* that sight? Is it the body — a mere shell or mask — they crave or hunt after? And supposing they see the body of a MAHATMA, how can they know that behind that mask is concealed an exalted entity? By what standard are they to judge whether the *Maya* before them reflects the image of a true MAHATMA or not? And who will say that the physical is not a *Maya*? Higher things can be perceived only by a sense pertaining to those higher things. And whoever therefore wants to see the real MAHATMA, must use his *intellectual* sight. He must so elevate his *Manas* that its perception will be clear and all mists created by *Maya* must be dispelled. His vision will then be bright and he will see the MAHATMAS wherever he may be, for, being merged into the sixth and the seventh principles, which are ubiquitous and omnipresent, the MAHATMAS may be said to be everywhere. But, at the same time, just as we may be standing on a mountain top and have within our sight the whole plain, and yet not be cognisant of any particular tree or spot, because from that elevated position all below is nearly identical, and as our attention may be drawn to something which may be dissimilar to its surroundings — so in the same manner, although the whole of humanity is within the mental vision of the MAHATMAS, they cannot be expected to take special note of every human being, unless that being by his special acts draws their particular attention to himself. The highest interest of humanity, as a whole, is their special concern, for they have identified themselves with that Universal Soul which runs through Humanity, and he, who would draw their attention, must do so

through that Soul which pervades everywhere. This perception of the *Manas* may be called "faith" which should not be confounded with *blind belief*. "Blind faith" is an expression sometimes used to indicate belief without perception or understanding; while the true perception of the *Manas* is that enlightened belief, which is the real meaning of the word "faith." This belief should at the same time be accompanied by *knowledge*, *i. e.*, experience, for "true *knowledge* brings with it faith." Faith is the perception of the *Manas* (the fifth principle), while knowledge, in the true sense of the term, is the capacity of the Intellect, *i. e.*, it is spiritual perception. In short, the higher individuality of man, composed of his higher *Manas*, the sixth and the seventh principles, should work as a unity, and then only can it obtain "divine wisdom," for divine things can be sensed only by divine faculties. Thus the desire, which should prompt one to apply for *chelaship*, is to so far understand the operations of the Law of Cosmic Evolution as will enable him to work in harmonious accord with Nature, instead of going against its purposes through ignorance.— H. P. Blavatsky, *The Theosophist*, July, 1884, p. 233

The Theosophical Forum

MODERN SCIENCE AND THE MESSAGE OF H.P.BLAVATSKY — H. Groot

When you ask a scientific worker who never seriously studied Theosophy, what influence Theosophy had or still has upon the development and the ideas of modern science, he will tell you that science and Theosophy are incommensurable quantities which have nothing in common. And as a confirmation he will challenge you to find in scientific work even the slightest allusion to Theosophical statements or any reference at all to the Founder of the Theosophical Movement, H. P. Blavatsky.

When his attention is called to the fact that in the Theosophical literature many teachings are found treating of biological, anthropological, physical, chemical, and astronomical topics, showing a different outlook from the current scientific explanations, he will declare without flinching that these teachings are to be rejected if contrary to the conclusions of science. As a scientist — so he will say — he cannot and will not meddle with hazy, metaphysical, or mystical speculations. And so indeed it is. Exact science in general — not mentioning a small group of advanced workers — is very conservative. And in addition it is essentially anti-metaphysical. Since the seventeenth century its orientation has become more and more rationalistic and materialistic. It is not so long ago that it did not acknowledge a higher instance than the logical function of the brain and regarded it as its task to reduce the whole universe — life and consciousness included — to a fantastic dance of the atoms performed to the rhythm of the laws of chance. Hence it is obvious, that science — in advance and without further questioning — condemns to be unscientific everything and all that smacks of metaphysics or mysticism.

Meanwhile it is true and joyful that the last decennia indicate a change for the better in this exclusiveness. Facts, especially in the fields of biology and psychology, but also in those of physics, force the students of those particular sciences to search for other ways of explanation. Parapsychological phenomena, experiments in embryology, general biological problems, all lead to the postulation of causes that are no longer materialistically and perhaps even no longer logically explainable. Technical terms like "entelechy," "Ganzheit," "totality," speculations about "the pattern of causes" like those of Prof. Jordan (Holland), the enormous and almost morbid interest which parapsychology can boast of — all these demonstrate the change in the scientific way of thinking. It simply comes to this: that many an earnest thinker tries to escape out of the grip of the merely positivistic and materialistic interpretations, endeavoring to penetrate to a more fundamental insight than can be given by a purely logical analysis of facts.

It is of importance to mention in this connexion that today there are some logicians who consider the possibility of the simultaneous existence of different logics excluding one another. This, if anything, is an indication of the setting free of human thought from one-sided rationalism, which too long has tyrannized the Western world.

However, these are but skirmishes of the pioneers. The main force of scientists becomes distrustful whenever the term "metaphysics" crops up. As yet they do not wish to abandon the rationalistic way of thinking.

But how about the pioneers? They should find a kindred spirit in the Theosophical views, one might say.

No. They, too, reject all relation with Theosophy, although some of them proclaim purely Theosophical ideas.

Now this remarkable attitude of mind can be partly explained by the difference existing between the scientific way of thinking and the manner in which Theosophy offers its truths.

Notwithstanding the brave struggle they make against the supremacy of the logic of mental thinking, it certainly is not an easy task for scientific workers — trained as they are in their manner of thinking — to escape from this mental tyranny. It is difficult for them without a rational basis to accept what is given out as indisputable certainties of an Old Wisdom; the more so as it is claimed that these certainties — some of which only a short time ago after strained effort have been discovered by science — were known already during endless centuries. Wounded in its self-love, science asks unbelievably and distrustfully: "Why on earth have these acquisitions never been published?" — and points out "how very vaguely most of these so-called discoveries are worded when compared to the mathematical phrasing in which scientific discoveries are announced."

But it forgets one important thing. There is a fundamental difference in outlook between science and the Mystery Schools of all ages. While science grants access to all its discoveries to everybody who cares to look into them — without the slightest guarantee that they shall not misuse them — the Mystery Schools, on the other hand, prohibit the acquisition of knowledge to those who are unworthy of it and accept their pupils only after a long time of serious probation, during which their moral and ethical qualities are tried — before initiating them into a knowledge which should be held sacred.

Theosophy teaches that the knowledge and control of the forces of Nature by investigators who thereby pursue selfish aims, must of necessity lead to the most formidable disasters and calamities for humanity; and common sense doubtlessly would agree with this judgment immediately, were it not led astray by its passions

and desires. Consider for a moment our present-day world. What use did humanity make of the most excellent and inspiring discoveries of science? We see dreadnoughts, tanks, all sorts of gunnery, gas-masks, high-explosives, U-boats, aircraft armed with poison-bombs. Such is the bitter fruitage which man reaped from the tree of knowledge, after acquiring admittance to it through a misplaced faith of science in the good-will of its students.

Theosophy adds that there exists a still deeper knowledge relating to psychical and astral planes, which, were it likewise to become common property, would lead to black magic, compared to which the present misuse of the technical power over matter would fade away as the sigh of a child amidst a clamorous and riotous mob.

Here lie great dangers. In some particular instances science has approached to the discovery of keys granting entrance to psychical phenomena — which up to this day had been left almost unexplored. Some utterly unscrupulous individuals already put themselves at the disposal of crime committed by means of psychical powers — and are paid for it. It is high time for mankind to make a halt. If the intellectual flower of humanity does not in time awaken to the responsibilities which are inseparable from the possession of knowledge; if science continues publishing unreservedly its methods and its results, the Western world will perish by its untimely acquired and therefore malefically employed power. And not for the first time in history either. Theosophy tells us of the civilization of Atlantis, which — being incomparably more advanced than ours — yet was wiped out by the same causes.

It most emphatically has been the task of the Founder of the Theosophical Society, H. P. Blavatsky, to wake up our Western world — which in 1880 was fast asleep, dreaming its dream of rigid materialism — and to prepare it for the coming wave of

psychism which threatens to conquer the present world. To this effect she was permitted to give out to the world some fragments of the Old Wisdom, which from time immemorial was shielded and guarded safely by the greatest of the human race, the Elder Brothers or Mahatmans. It was their aim to wake up and stimulate a spiritual current which on the one hand would vanquish materialism and on the other hand avert the threatening psychic invasion with its unavoidable dangers.

Just consider the almost insurmountable difficulties before which H. P. Blavatsky was placed. She had to combat the scientific opinions and notions of her time. She was compelled to point out the inadequacy of the materialistic outlook. It was her task to convince the world at large of the truth of the words of Hamlet:

There are more things in heaven and earth, Horatio,
Than are dreamt of in your philosophy.

In order to achieve this, she had to wrestle with the insufficiency of the scientific explanations; she had to point out how very vulnerable even the most accredited theories of science were. Moreover, in order to convince an unbelieving, distrustful public of the reality of the psychical and astral world, she had to produce those "occult phenomena" which created so much sensation and in the end brought to her the infamous accusation of fraud. Add to all this her battle with the dogmatism of the Church — then we get a faint glimpse of the trials she had to endure; of the avid slander which tried to blot her name out of the annals of science and philosophy.

Man, although a God in his inmost being, often and again is overmastered by the personal emotions of his lower self. Instead of being great in the greatness of his essential nature, he tries to seem great by blowing up his smallness until it surrounds him like an armor of personal ambitions, personal views, personal

theories. Woe to him who crushes this armor. There is no appreciation for him; he will not even find justice. Wherever possible he is slandered and made the laughing-stock of those pygmy-brains who cannot recognise and understand real intellectual and spiritual grandeur. He may have prophesied the most wonderful future discoveries and scientific results — when his predictions have come true his name will not be mentioned. He is not to be talked about. And when his ideas have fertilized the soil for future discoveries, others will claim the credit without any protest being heard.

This was the case of H. P. Blavatsky. And this is the actual reason why her name is not to be found in scientific treatises, even if they affirm the truth of many of her statements. And these are the motives — often unknown to scientists themselves — that make even the pioneers shrink back from mentioning the name of H. P. Blavatsky and from supporting the Theosophical ideas.

Little by little, however, the atmosphere of suspicion clinging to the name of H. P. Blavatsky is clearing up. Voices make themselves heard emphasizing that a great number of the modern ideas of science are laid down in her books, especially in *The Secret Doctrine*.

It is our intention to discuss in a series of short articles in THE THEOSOPHICAL FORUM some of the problems of modern science in so far as they are of interest to the Theosophical reader. By drawing a comparison between the trend of modern thinking with the writings of H. P. Blavatsky and *The Mahatma Letters to A. P. Sinnett*, we shall be able to establish the fact that science is steadily growing distinctly metaphysical and mystical and is approaching daily to those teachings of the Old Wisdom of which she still denies the existence.

But apart from this general trend, we shall also see a gulf between

Modern Science and Old Wisdom, which can only be bridged when Science comes to a deeper understanding of her own profoundly important discovery: that force and matter — or on a higher plane, Spirit and Matter — are two complementary aspects of the One Substance, each material process being accompanied and amplified by a spiritual process.

The true meaning of the laws of Nature cannot be properly understood as long as a one-sided attention is given to naught but the material side of things. Only after curing itself from this cramped attention will Modern Science once more fully endorse the conclusions of the Old Wisdom.

The Theosophical Forum

ETHICS, THE LAW OF LAWS — ETERNAL HARMONY — *G. van Pelt*

The statement has been repeatedly made in our Theosophical literature that Ethics or Morals are not mere conventions, but that they rest on the eternal verities; are inherent in the life and fabric of the Universe. The laws governing them are as scientific as those governing mechanics, electricity, or any other of the so-called powers of nature, and the reaction against the violation of the principles of Ethics is as inevitable as the results of the application of a lighted match to gunpowder. There is absolutely no escaping this.

How could it be otherwise? The Universe in manifestation is a composite *unit*, for it has grown to be what it is, as a tree has grown to be such from a seedling. If it were not thus knit together, if there were not one purpose instead of divergent interests, one Law permeating its entire system, it would collapse or destroy itself. All that exists is part of it inevitably, and as it is an *organism*, every disturbance of its harmonious balance reacts upon the Whole as unerringly as a disorder in any part of the human body reacts upon the whole body, and then upon the mind controlling that body. For instance, suppose a poison has invaded some part of the human organism from an external source. *Instantly* the news is carried over the system, and its protectors, the white cells of the blood, rush to the scene of danger — automatically, we say in our ignorance, but really because the whole and the part are *one*. The disturbance is also flashed to the mind like lightning, because it is, in a larger sense, the same organism. Here the reaction can generally be met by initiating means to restore harmony, for surface disturbances are the least serious. But if this is not accomplished, the mind itself can become gravely involved. Reverse the process, however, and

follow the confusion that must result from a discordant mind, working on a far more plastic, subtle plane than that of the body, on a plane where forces are inevitably more closely interwoven and intermingled. Picture the effect of hate, envy, jealousy, the will to dominate for a selfish end, on other minds tuned to similar vibrations. Imagine the reaction which must follow there in addition to the certain effect, sooner or later, lower down, as currents normally and constantly flow from any mind to its body. It would be well for Theosophists to ponder over some statements in William Q. Judge's *Culture of Concentration*, as to the effect of anger on the ethereal body. But one does not have to be an occultist to know that hate breeds hate; that anger produces an atmosphere of storm; that selfishness eventually isolates itself — the poor mind, given over to this disease, finding itself at long last, hated, alone, and dreaded as a moral leper.

Fortunately, kind Nature generally forestalls these extremes by its reactions, so that gradually the unevolved human soul learns its lessons and obligations. To be sure, Theosophy teaches that these lessons may or may not follow in the same life which called them forth, but this in no wise interferes with the beneficent result. For whether the human part of a man remembers his sins or not, they have altered his character, which he has himself molded, and which he carries over from life to life, and it is that character which must bring upon itself sometime, somewhere, somehow, society's reaction.

GREAT SAGES AND THEIR PLACE IN THE COSMIC HIERARCHY — *Iverson L. Harris*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

Huxley the English biologist, once wrote in substance that there must be beings as far above man as man is above the black beetle. Kenneth Morris thus completes the same idea:

Below us are innumerable grades of consciousness: the infinitesimal electron is a world: amoeba and protozoon stand at the summit of aeons of evolution. Above us, must there not be grades as infinite? Who shall say where humanity ends, and Godhood begins? It is a Jacob's ladder is evolution.

The Great Sages are intermediate links in the endless chain of evolution between men and spiritual beings (to us, incorporeal) of whom all sacred literatures tell, but of whom few of us can have definite knowledge save to the degree that we raise ourselves in aspiration and consciousness towards their lofty estate. The Great Sages are the Fine Flowers of human evolution.

The most important single fact in the history of humanity is the existence of Great Sages and Seers, Spiritual Teachers. They have been the fashioners of most that is noblest and finest in the civilizations of the past and of the present: Krishna, Gautama the Buddha, Lao-Tzu, Confucius, Pythagoras, Plato, Quetzalcohuatl, Jesus the Christ — not to mention others of less renown though perhaps not always of less spiritual stature.

Why should we imagine that lofty spiritual beings ceased

incarnating on this earth thousands of years ago? Is it not obvious that what Nature has produced once, Nature can produce again? Discipleship did not end with the Last Supper, nor did the Spiritual Guardians of Humanity forget their task when the Great Syrian's divine efforts failed to avert the plunge of Mediterranean civilization down the Gadarene Slope.

Because the Buddha and the Christ lived and taught, because Lao-Tzu and Confucius revealed and labored, because Pythagoras and Plato penetrated behind the veils of the outward seeming into the inner worlds and brought back to mankind the truths there learned by them through experience and initiation, have we not ample evidence that such as these Great Ones can live and teach and reveal again?

Should such come among us, how may one recognise them? "By their fruits shall ye know them": by the doctrine that they teach, by the life that they live, by the compassion that they show, by the light that they shed about them: by these *insignia majestatis* shall you know the real spiritual Sage and Seer. But you cannot recognise him unless there is something akin to his spirit stirring within your own soul. If one is puffed up with egoism, soured with jealousy, blinded with self-righteousness, or "cribb'd, cabin'd, and confined" within the iron shell of his brain-mind prejudices and preconceptions, one would not recognise a spiritual Teacher though he spoke with the tongue of an angel and came with a direct mandate from the Great White Lodge itself.

Who can set bounds to the possibilities of man? Once inhale the upper air, being admitted to behold the absolute natures of justice and truth, and we learn that man has access to the entire mind of the Creator, is himself the Creator in the finite. This view, which admonishes me

where the sources of wisdom and power lie, and points to virtue as to

"The golden key
Which opes the palace of eternity,"

carries upon its face the highest certificate of truth,
because it animates me to create my own world through
the purification of my soul.

— Emerson: *Essay on Nature*

The Great Sages are the forerunners in the eternal pilgrimage which all of us are making. They blaze the trail for their less evolved fellow-men to travel. In this present stage of evolution here on earth man stands supreme over all the visible kingdoms of Nature below him. Yet the thinking man knows intuitively, as did Huxley, that there must be beings as far above man, as he is above the black beetle. It is these highly evolved men that the Esoteric Philosophy refers to as constituting the Great Brotherhood of the Masters, or the Mahatmans, or the Elder Brothers of the human race, who, in ages past, in former incarnations, occupied positions along the evolutionary pathway corresponding to our own at the present time; and we are destined in future ages, if we run the race successfully, in our turn to become Elder Brothers, Spiritual Leaders, Guides and Helpers, to those entities now trailing along behind us — in the human kingdom or the kingdoms below the human. This chain of beings evolving ever towards greater heights of spirituality, wisdom, and compassion, of whom the Great White Lodge is but one link, was called by the ancient Greeks the Golden Chain of Hermes, or the Hermetic Chain, and is generally known in Theosophical literature as the Hierarchy of Light or Compassion.

In chapter xxxi of *The Esoteric Tradition*, whose title as well as

much of whose contents we have borrowed in this present study, Dr. de Purucker gives the following tentative scale of stages or degrees of evolutionary development: (a) First Elemental Kingdom, (b) Second Elemental Kingdom, (c) Third Elemental Kingdom. 1. The Mineral Kingdom. 2. The Vegetable Kingdom. 3. The Beast Kingdom. 4. The Human Kingdom. 5. The Great Ones. 6. Quasi-Divine Beings or Lower Gods. 7. Gods. He thus summarizes their most salient characteristics:

. . . most important of these salient characteristics is the growth or rather progressive unfolding of individuality or individualized beings, as we ascend rung after rung or degree after degree of the Ladder of Life, that is perceptible even here on our Mother Earth. The relatively perfect unism of the rocks slowly passes into the growth of individuality which becomes faintly perceptible in the communism of the superior Kingdom of the plants; and as we leave the plant-world and follow the evolutionary picture as it ascends into the Beast-Kingdom, we notice the tendency towards individualization increasing steadily and even rapidly. When we reach the Human Kingdom which in the Esoteric Philosophy is considered a separate and entirely distinct kingdom from that of the Beasts, because of the typically human attributes which mark man so sharply off from the beasts, such as the moral sense, intellectual power, spirituality in its own ranges, etc., etc., we find that the rise towards individualization has resulted in the appearance of characteristically distinct Individuals, human beings, who, because of the spiritual and moral and intellectual faculties and attributes inherent in them, are at once distinct units in themselves, and yet equally distinct and self-conscious units in a social structure, which social structure is the more keenly and profoundly recognised in

proportion as the human individual is the more developed.
— pages 936-7

We can get some conception of this evolutionary Ladder of Life and the place of the great Spiritual Sages in the Cosmic Hierarchy, by comparing a diamond or a gold nugget with a Buddha or a Christ. The diamond may be said to be the most perfect imbodiment of a monad or evolving consciousness-life-center in the Mineral Kingdom. It is so perfect, not merely because it is beautiful and rare, but because it is closer to the high spiritual plane from which it started its great evolutionary journey in this period of manifestation as an unselfconscious god-spark. But beautiful and exquisite as the diamond is in its mineral imbodiment, how much more inspiring and potent for good is the "diamond-heart" of a Buddha, who has passed through all the lower kingdoms, become thoroughly individualized as a man, and then, by his own self-devised and self-induced efforts, merged his individual consciousness into the consciousness of the whole, deliberately chosen the path of compassion, and acquired thereby relative omniscience! As the diamond is to the piece of charcoal, though both are composed of identically the same chemical carbon, so is the Great Sage to the average man, though both are builded of the same principles.

What is a Great Sage? The achievement of a wondrous alchemy, whereby fallen star-dust is ensouled with human consciousness and kindness, wrought into a clear crystal of genuine worth in the crucible of experience and service, cut and polished into noble symmetry by education and thought — a precious jewel that shines by its own light in any setting. And then, through such jewels, as Emerson wrote:

From within, or from behind, a light shines through us upon things and makes us aware that we are nothing, but

the light is all.

Now, these great Sages have not blazed a trail for us and traveled so far ahead of us merely for our wonderment and to dazzle us by their great light, so that, instead of following in their footsteps we crawl like worms in the dust and worship them personally, thereby crucifying them after they have passed out of our sphere even more than too often, alas, we do while they are in our midst in the flesh. Does this mean, then, that we must not love and reverence the true Spiritual Teacher, however much like ourselves he may be in his merely human parts? Carlyle answers:

No sadder proof can be given by a man of his own littleness than disbelief in great men. . . . A man embraces truth with his eyes open, and because his eyes are open; does he need to shut them before he can love his Teacher of truth? He alone can love with a right gratitude and genuine loyalty of soul, the Hero-Teacher who has delivered him out of darkness into light.

Surely the Great Sages intended that we should follow along in their footsteps, becoming in our turn ever more and more like them, in degree sages and seers and guides to less progressed beings. This view, far from arousing egoism, is one of the most chastening thoughts that could possibly come to a sincere aspirant, because, using the Roentgen rays of utter candor in introspection, he realizes how far behind he lags in the evolutionary journey that is ahead of all of us.

How may we know whether we are following in the footsteps of the Great Ones or not? Here is a simple test: Do we fashion our lives by thought and will and aspiration, or do we merely react to the environing circumstances and people about us? Do we *think* or do we merely *react*? If the latter, we have gone only a little farther than the beasts. If, on the other hand, we consciously

direct our evolution along the paths pointed out by the Great Spiritual Sages and Seers, we may be sure that we are drawing constantly nearer and nearer to them.

Let us turn now to some of the signposts that they have left behind them to aid us in climbing to the sunlit heights from which they are ever beckoning us to "Come up higher"! We shall find that these sign-posts are universal in their application to life. They are as true for the American as they are for the Japanese, as true for the German and the Italian as they are for the Spaniard and the Russian. Though placed along life's eternal highway in some instances thousands of years ago, they are as true in their guidance today as they were when first erected — as constant as the Pole-Star, and the traveler who sets his course by their compass is sure to reach his goal in time. They overleap all the frontiers of nationality, race, creed, or epoch. They make a direct appeal to the Son of the Sun that every human being is in his highest part. They are, as Mohammed said about Allah, "nearer to thee than thy jugular vein."

Victor Hugo, in one of his most brilliant flashes of intuitive perception of truth, wrote:

We are as unwilling to submit to a leadership or dynasty of thought as to any other. This, however, is to misunderstand and to be frightened by a word when the thought is reassuring. The very law which requires that mankind should have *no owners*, requires that it should have *guides*. To be *enlightened* is the reverse of being *subjected*. The march forward requires a directing hand; to rebel against the pilot scarcely advances the ship; one does not see what would be gained by throwing Columbus overboard. The words "This way" never humiliated the man who was seeking the road. At night I accept the authority of the

torches.

At some future time, we hope to point to signposts left by the Great Spiritual Sages and Seers of the past; but here let us observe some of those erected for the guidance of the present Theosophical Movement by the Masters M. and K. H. in *The Mahatma Letters to A. P. Sinnett*. (We do not waste time discussing who wrote these Letters. It is their intrinsic worth which makes them worthy of a Master — not what ostrich-like men without vision refuse to recognise in them that disproves their authoritative Message).

The *Chiefs* want a "Brotherhood of Humanity," a real Universal Fraternity started; an institution which would make itself known throughout the world and arrest the attention of the highest minds. — p. 24

Does anyone imagine that the prime purpose of the founding of the modern Theosophical Movement was to develop and exploit our psychic powers, or even to give us intellectual knowledge or a wide scope for metaphysical speculation, and that service to our fellow-men was only a secondary consideration of the Real Founders? Then behold the signposts left by them in their own words:

. . . we might justly maintain that it is . . . "the business of "magic" to humanise our natures with compassion" for the whole mankind as all living beings, . . . For it is "Humanity" which is the great Orphan, the only disinherited one upon this earth, my friend. And it is the duty of every man who is capable of an unselfish impulse, to do something, however little, for its welfare. — p. 32

The term "Universal Brotherhood" is no idle phrase. Humanity in the mass has a paramount claim upon us, . . .

It is the only secure foundation for universal morality. If it be a dream, it is at least a noble one for mankind; and it is the aspiration of the *true adept*. — p. 17

Has anyone so fooled himself as to believe that he can travel far along the road of discipleship towards masterhood and yet cherish illwill in his heart towards a fellow human-being? The Master's finger points to the following signpost:

Beware then, of an uncharitable spirit, for it will rise up like a hungry wolf in your path, and devour the better qualities of your nature which have been springing into life. Broaden instead of narrowing your sympathies; try to identify yourself with your fellows, rather than to contract your circle of affinity. However caused . . . a crisis is here, and it is a time for the utmost practicable expansion of your moral power. It is not the moment for reproaches or vindictive recriminations, but for united struggle. — p. 367

Does anyone ask for the secret of happiness?

Happy the man who helps a helping hand. — p. 88

Do we believe that elaborate ritual and punctilious regard for form are the gates to masterhood?

. . . it is men not ceremony-masters, we seek, devotion, not mere observances. — p. 11

Do we perhaps feel that the ordinary duties of life and personal obligations already assumed disqualify us for treading the path of discipleship?

Does it seem to you a small thing that the past year has been spent only in your "family duties"? Nay, but what better cause for reward, what better discipline, than the daily and hourly performance of duty? Believe me my

"pupil," the man or woman who is placed by Karma in the midst of small plain duties and sacrifices and loving-kindnesses, will through these faithfully fulfilled rise to the larger measure of Duty, Sacrifice and Charity to all Humanity — what better path towards the enlightenment you are striving after than the daily conquest of Self, the perseverance in spite of want of visible psychic progress, the bearing of ill-fortune with that serene fortitude which turns it to spiritual advantage — since good and evil are not to be measured by events on the lower or physical plane. — p. 372

Or are we perhaps impatient to know deeper secrets of life's arcana than have yet been revealed to us?

"Many are the grains of incense destined for one and the same altar: one falls sooner into the fire, the other later — the difference of time is nothing," remarked a great man when he was refused admission and supreme initiation into the mysteries. — p. 17

Do we belong to the ranks of the Theosophical (?) defeatists or literalists or cyclic fatalists, who are sure that the Masters have deserted their own child, the Theosophical Movement, and will have nothing more to do with it in the West until the hands of the Cosmic Clock strike 1975?

Only those who have proved faithful to themselves and to Truth through everything, will be allowed further intercourse with us. — p. 264

Does not the above signpost contain the implicit promise, that those who *do* prove faithful to themselves and to Truth through everything, *shall* be allowed further intercourse with the Masters?

In *The Voice of the Silence*, H. P. Blavatsky tells us:

Help Nature and work on with her; and Nature will regard thee as one of her creators and make obeisance.

And the Sage of Concord, enlarging on the same theme, in his *Essay on Nature*, wrote:

In private places, among sordid objects, an act of truth or heroism seems at once to draw to itself the sky as its temple, the sun as its candle. Nature stretcheth out her arms to embrace man, only let his thoughts be of equal greatness. Willingly does she follow his steps with the rose and the violet, and bend her lines of grandeur and grace to the decoration of her darling child. Only let his thoughts be of equal scope, and the frame will suit the picture. A virtuous man is in unison with her works, and makes the central figure of the visible sphere. Homer, Pindar, Socrates, Phocion, associate themselves fitly in our memory with the geography and climate of Greece. The visible heavens and earth sympathize with Jesus. And in common life, whosoever has seen a person of powerful character and happy genius, will have remarked how easily he took all things along with him — the persons, the opinions, and the day, and Nature became ancillary to a man.

That is the place of Great Sages in the Cosmic Hierarchy.

The Theosophical Forum

BRIGHTER SKIES — Charles E. Ball

Is not God's Universe a Symbol of the Godlike: is not Immensity a Temple; is not Man's History and Men's History, a perpetual Evangel? Listen, and for organ music thou wilt ever, as of old, hear the Morning Stars sing together. — *Sartor Resartus*

Nature has her own clock, and in these early hours of her New Year it is a spiritual tonic to hear the little birds singing and to have a robin actually sit at one's feet in a London park and sing to you, so much do the citizens now love them. And on inner planes the occultist *knows* that the glacial epoch of hatred, ignorance, and cruelty is thawing and the *defeatism* of mind, an outcome of the suppression of spiritual knowledge, will be conquered. The symbol of this new state of affairs might well be the smiling Bodhisattva of the East, defined in *The Theosophical Glossary* as: "he, whose essence (*sattva*) has become intelligence (*bodhi*)," rather than the Crucified Jesus, with its concomitant associations of defeat, sacrifice misunderstood, persecution, and death, in the Churchianity sense.

The present state of world affairs is no surprise to the occult student. To deal with such conditions the Theosophical Society was founded and its members have prepared themselves ever since to profit by the opportunities it brings. Man has spiritually starved during the period inaugurated by Constantine, because he cannot live by material *bread* alone, being essentially an immortal being using temporary bodies for experience. The time having now arrived for the cream of the race to step forward, led consciously by its Race Guardians, along the BROTHERHOOD PATH, it is inevitable that the world interests who profit only by the Un-

brotherly Path marshal their forces to hinder the new spiritual regime. "Actions proceed from nature," and soldiers must fight, that's all.

The occult student takes care to exercise the greatest discretion in judging men and their actions at this time, for he knows that the Law is no respecter of persons, and the great forces of evolution flowing through men's minds will cause them to act in strange ways — to the advantage of all, where the individual is sufficiently evolved, often tortuously where the individual is hampered by his defective make-up. It is the business of the student to observe rather what influences men allow *to use them* — we fight against principalities and powers rather than poor misguided *persons*.

Theosophists recommend with knowledge for all those "who have a leaning towards the metaphysical" that guide to everyday life *The Voice of the Silence*, and the beautiful and extraordinary *Bhagavad-Gita*, translated so delightfully as *The Song Celestial* by Sir Edwin Arnold. Led by our scientists, we have dutifully given up our ideas of *solid matter*; led by our Teachers, we give up with pleasure our ideas of a solid, cast-iron world, passing by way of Shakespeare's "baseless fabric of a vision" to the occultist's "Divine thought in the Divine Mind," and Patanjali's dictum that: "the world exists for the sake of the soul's experience."

A world spoiled by the false intellectualism of past centuries of second-hand knowledge and college-information is invited by the Theosophical Society to learn from the sacred books of the highly evolved men of an earlier day. To learn once more the true nature of the Universe and Man, for the chaos of modern life speaks undeniably of the ignorance of these times and of oncoming destruction.

All great eras are inaugurated by great men and the great

enterprise represented by the occult movement is *always* guided by great Souls for none others are of it, or belong to it. Presently the world at large will come to realize that this world is no silly playground of human lusts and fancies but a stern learning department of one small part of the stupendous Cosmos.

The Theosophical Forum

SCIENCE AND RESEARCH — *C. J. Ryan*

Auroras, Sunspots, and Cycles of Unrest

The dispute that so frequently crops up about the association of curious sound-effects with displays of the polar Auroras in high latitudes ought surely to be settled at last by the report in favor of a connexion between the sounds and the streamers published in *Nature*, (London) May 28, 1938, by the Norwegian Professor Carl Stormer, the world's leading authority on auroras. This occurs in his article on the great aurora of January 25-6, 1938. It was apparently the most magnificent display of the Northern Lights seen since the great one that occurred on September 29, 1870, during the Franco-German war when widespread uneasiness prevailed in Europe. The 1938 aurora was seen over nearly the whole of Europe and northern Africa, causing great alarm, and in America it was recorded as far south as Florida. It was even visible at Point Loma in Southern California, a most unusual event.

The 1870 aurora took place during the great sunspot maximum of that period, a maximum which has not been equaled since, until today, when we are passing through a similar one. The connexion between auroras and great solar activity is fully established, and certain scientists have suggested that the outpouring of greater solar radiation during sunspot maxima may be responsible for financial depressions and serious unrest in human affairs. This would be accentuated during periods like the present and that of 1870-1, when the number of the spots and their size, and the brilliancy of the auroras are greatly increased. Some years ago, Professor Tchijevsky, the well-known Russian student of sunspots, brought evidence before the American Meteorological Association

that most of the sunspot cycles harmonized very closely with cycles of social agitation; and Dr. Harlan T. Stetson writes:

Actual measurements have shown that in general the ultra-violet light from the sun is much more potent during years when sunspots are most numerous . . . It is this stimulating effect of ultra-violet radiation which . . . when too strong, results in agitation . . . we would be led to believe that the affairs of mankind are much more intimately related to our cosmic surroundings than science has thus far been led to suppose.

On Tuesday, September 27, 1938, in the week of the great European crisis, an unusually brilliant aurora was studied by Professors H. Landsberg and H. Neuberg at Pennsylvania State College. Speaking of the biological effects of such auroras, the former said that in spite of the skepticism of many scientists "investigators have found that about one day after electric showers, such as Northern Lights, reach the earth the death rate from heart disease suddenly jumps and the number of suicides shows an increase."

Returning to the auroral sounds, which have been so often denied or explained away by critics who said they were scientifically impossible, Professor Stormer brings convincing evidence that during the magnificent display of the aurora as seen last January in Norway, curious sounds accompanied it, *rising and falling in accordance with the changes in brilliancy of the great colored streamers*. Two careful observers, some distance apart, recorded exactly the same effects.

The lower part of the aurora was about 60 miles from the earth's surface, but it reached to a height of 375 miles. At those great altitudes the air is so extremely rare that, as Professor Stormer points out, it seems impossible for the sounds to have come from

that region; they must have been aroused in lower and denser parts of the atmosphere in some unknown manner.

There are still many mysteries in connexion with sound. However this may be, the special point of interest to Theosophical students is that strange sounds are frequently, if not always, associated with polar auroras. *The Secret Doctrine* offers information on the subject, presented, however, in terminology not altogether familiar to western scientists, who little know what a wealth of hidden knowledge lies behind its oriental philosophico-scientific teachings. On page 204-5, vol. I, we read, in part:

"The Songs of Fohat and his Sons were *radiant* as the noon-tide Sun and the Moon combined;" . . . "The agitation of the *Fohatic* Forces at the two cold ends (North and South Poles) of the Earth which resulted in a multicolored radiance at night, have in them several of the properties of Akasa (Ether) *color* and sound as well." . . . "Sound is the characteristic of Akasa (Ether): it generates air, the property of which is Touch; which (by friction) becomes productive of Color and Light" . . . (*Vishnu Parana*)

Perhaps the above will be regarded as archaic nonsense, but it will be better comprehended, if the reader remembers the Aurora Borealis and Australis, both of which take place at the very centers of terrestrial electric and magnetic forces. The two poles are said to be the store-houses, the receptacles and liberators, at the same time, of Cosmic and terrestrial Vitality (Electricity); from the surplus of which the Earth, had it not been for these two natural "safety-valves," would have been rent to pieces long ago.

H. P. Blavatsky then speaks of the polar lights being accompanied by and productive of strong sounds. In occult science Sound takes

a far more significant place in the economy of nature than modern physics has yet suspected, though recent discoveries in sound have opened some new and surprising possibilities. On page 621, volume I, of *The Secret Doctrine* we read that when Professor W. Crookes's discovery of "radiant matter" (the first adumbration of the electronic nature of matter) shall have been further elucidated "present speculations" will be revolutionized, and that this will be closely associated with research into the nature of the aurora! This remarkable statement was made in 1888, but it is only lately that science has tried to build theories about the nature of the aurora based upon modern atomic physics, and has spoken of auroras being probably produced by streams of electrons or ions bombarding the earth from the sun and being attracted toward the poles!

Science and the Defence of H. P. Blavatsky

In the foregoing paragraphs reference is made to her knowledge of certain facts denied, doubted, or ignored by the learned in her day. She stood alone at first and offered scientific teachings about man and nature which had to fight their way through almost unsurmountable difficulties. Her statements were unwelcome to scientists, who in general agreed with the distinguished man who is reported by Professor William James, the psychologist, as saying: "All the fundamental conceptions of truth have been found by science, and the future has only the details of the picture to fill in"! Most of those "fundamentals" have been abandoned or greatly modified since 1895. The new schools of science, particularly the physicists, have caught up, as it were, with many of the fundamentals of the Ancient Wisdom brought to the West by H. P. Blavatsky and now speak of them as ascertained facts.

In this Department we propose to emphasize these teachings more strongly than hitherto, not only because of their interest but

because students of Theosophy whose duty it is to meet malicious and ignorant charges against the Founder of the Theosophical Movement in the nineteenth century and her position as the Messenger of the Masters of Wisdom should become well acquainted with them. A bold attack is said to be the best method of defence, and the straightforward presentation of her scientific statements and their modern corroborations has the advantage of avoiding any personal recriminations which tend to arouse opposition or refusal to listen. Once reasonable people recognise that behind the sometimes uncouth personality of the "Sphinx of the nineteenth century," as she was called, was hidden a profoundly wise and well-informed individual, as can be proved by the records of her teachings, the ridiculous "charges" of charlatanry fall to the ground by their own weight.

The Theosophical Forum

MODERN SCIENCE AND THE MESSAGE OF H. P. BLAVATSKY — *H. Groot*

Scientific conceptions regarding the structure and nature of matter have greatly changed in the last fifty years.

Without giving difficult technical explanations, the following may be said on this point:

The investigations of a large series of scientists, beginning with the names of Crookes, Rontgen, Becquerel and the Curies, and continuing in our time with Thomson, Lorentz, Einstein, Bohr, Schrodinger, Heisenberg and many others, have established the conviction that the smallest building-stones of our material Universe are not the hard, simple, indivisible atoms which, in the early and middle part of the nineteenth century, classical physics and chemistry thought they were.

The experiments of Crookes in 1879, the discovery of X-rays in 1895 and of radio-activity in 1896, were the first steps on the road which in our days has led to the insight that there is a close relation between "ordinary" matter, electricity, electro-magnetic radiation, and phenomena such as light, heat, gamma rays and radio waves.

It is already a considerable time ago that the atoms belied their name "indivisibilities." In agreement with one of those statements of H. P. B.'s which found hardly any acceptance when she wrote them down, Science has discovered that they consist of particles that can scarcely be called "material" in the ordinary sense of the word, and are much better described as more or less permanent electro-magnetic centers of force. Under certain conditions they behave as *discrete particles*, but in different circumstances they

resemble fields of vibration that are not sharply defined spatially.

In the light of these facts the contrast between "void space" and the space that is occupied by matter, which therefore is "full," becomes perfectly illusive.

Modern physics distinguishes between three types of "smallest particles." The *electron* has been known longest, and thus it is about this electron that we think we know most. However, it has been found that an electron is *not* a definite, small, sharply defined portion of space, to which accurate dimensions may be assigned. Each electron — each of these "smallest particles" — is in a true sense as large as the Universe, permeating it throughout! Strictly speaking, an electron cannot be said to be here or there at a given moment. It is here *and* there. At most we could say that it is somewhat more here than there — according to its nature as center of force. Let one who may think this a strange conception, just ask himself *where* an eddy is at a given moment. Figuratively speaking, an electron may be conceived of as an eddy, for an eddy also possesses a center of force — the middle point of the eddy — which, under certain conditions, may suggest, together with its immediate surroundings, a clearly recognisable "thing." And yet, if we try to establish the boundaries of this "thing," this eddy, we soon come to the conclusion that in reality the entire water surface in which this eddy is circling, forms part of it. The boundaries that made us assign "thing"-qualities to it, have proved illusory.

The foregoing is meant as an endeavor to understand the essentials of modern scientific conceptions, disregarding many as yet unsolved technical problems. What is of the utmost importance for us — and presumably also for the future development of scientific investigation — is that the fundamental difference between force and matter is disappearing. Force and

matter — on a higher plane: spirit and pro-matter — may be seen as two aspects of the one Substance. This result, to which the most advanced investigators, working along the strictly scientific lines of experiment and reasoning, have attained — although science has as yet not accepted the above theories completely and without prejudice — is a confirmation of what is taught by the Ancient Wisdom, part of which was written down by H. P. B. in 1888.

This assertion seems so improbable that we feel obliged to confirm it by a few references.

Never before has the accusation that has so often been brought against the authoress of *The Secret Doctrine*, namely that Theosophy is no more than a random collection of loose fragments taken from the most different sources and united to form a system that is unacceptable either scientifically, religiously, or philosophically — never before has it been so effectively rebutted as by the accumulation of evidence for the correctness and the progressiveness of the opinions which are embodied in her works and which have often proved to be far ahead of their times. We read:

From the standpoint of Materialism, which reduces the beginnings of all to *matter*, the Universe consists, in its fulness, of atoms and vacuity. — I, 518

This idea is combated by opponents showing that the answer to the question: "What is an atom?" — given by the scientists of that era — led to contradictions even in their own eyes.

After quoting a few statements the authoress continues:

This is sufficient to show how absurd are the simultaneous admissions of the non-divisibility and elasticity of the atom. The atom is elastic, *ergo*, the atom is divisible, and

must consist of particles, or of *sub*-atoms. And these *sub*-atoms? They are either non-elastic, and in such case they represent no dynamic importance, or, they are *elastic* also; and in that case, they, too, are subject to divisibility. And thus *ad infinitum*. But infinite divisibility of atoms resolves matter into simple centers of force, *i. e.*, precludes the possibility of conceiving matter as an *objective* substance.
— I, 519

Thus we see how H. P. B. in fact indicates that a consistent pursuance of the basic hypotheses of the materialistic atom-theory *must* lead to the conception of the so-called "smallest particle" as a center of force, and to which modern physics has indeed approached for that matter. But — and to these ideas she adds what even modern science is still lacking today, and which is the only way of conquering materialism — she proceeds:

Accept the explanations and teachings of Occultism, and, the blind inertia of physical Science being replaced by the *intelligent active* Powers behind the veil of matter, motion and inertia become subservient to those Powers. It is on the doctrine of the illusive nature of matter, and the infinite divisibility of the atom, that the whole science of Occultism is built. It opens limitless horizons to *substance* informed by the divine breath of its soul in every possible state of tenuity, states still undreamt of by the most spiritually disposed chemists and physicists. — I, 520

For, it is really very little progress that has been made when the material atoms volatilize into centers of force, so long as forces are still looked upon as blind activities of — *sit venia verbo* — immaterial matter, by which contradictory combination of words the scientific conceptions of the ether, or the "field of force" of modern physics, is perfectly illustrated.

No one will deny that a force (whether gravity, electricity, or any other force) which exists *outside* of the bodies and in open space — be it ether or vacuum — must be *something*, and not a pure *nothing*, when conceived apart from a mass? Otherwise it could hardly exist in one place with a *greater* and in another with reduced "intensity." — I, 511

What science urgently wants is a more spiritual conception of the idea "force." And it is this conception that we find in the Theosophical term "Fohat."

It is a perfect impossibility to give the full meaning of Fohat in such a short article as the present. However, in a few brief suggestions we hope to give the reader at least some insight into the difference which, in spite of all progress that has been made in the field of science, still exists between the ideas of the latter and those of the Ancient Wisdom.

Actually, Fohat is the Mediator, who "creates" the manifested Kosmos from the unmanifested chaos. (In this connexion the word "chaos" should again be given its original meaning of the quietude and potentiality of a non-manifested state, which it has lost in the language of scientific cosmogony.) Fohat is the Demiurgic aspect of the Word or the Logos of the *Gospel according to St. John*, Tem-Ra of the Egyptian cosmogony, Eros, of the Greek Triad: Chaos, Gaia, and Eros. Fohat is also in one sense identical with Siva. Fohat is the creative principle, which sustains and animates all creation throughout the world's lifetime. Fohat is one, but the forms in which it manifests — the Sons of Fohat — are many.

The Ancient Wisdom tells us that there is an intelligent Law behind all natural phenomena, all evolution. Immanent in each atom of the Kosmos is Life, is Consciousness, guided and directed

by Fohat. To use once more H. P. B.'s words:

Fohat, running along the seven principles of AKASA, acts upon manifested substance or the One Element, as declared above, and by differentiating it into various centers of Energy, sets in motion the law of Cosmic Evolution, which, in obedience to the Ideation of the Universal Mind, brings into existence all the various states of being in the manifested Solar System. — I, 110

The phenomena called electricity, light, sound, heat, attraction and magnetism in physics, are referred to by the Ancient Wisdom as Fohat and his Seven Sons.

The foregoing has, we hope, sufficiently elucidated the distinction between the "blind forces" of exact science and the spiritual principle, which the Occult Knowledge terms Fohat.

In spite of all that is drawing science and Theosophy together, their ways still diverge — science being the loser.

Rapprochement will not be possible until science has learned how to bring onto a higher plane *its own discovery that force and matter are mutually supplementing aspects*.

The true character of natural phenomena will not be understood so long as science continues to investigate material phenomena only — and even fields of force are still material. To each material process corresponds a spiritual activity, the soul, so to speak, of this process.

Not until the "spasm of concentration" on the material world has been overcome, will it be possible for science and the Ancient Wisdom to go hand in hand; only then will H. P. B.'s Message to science be understood.

H. P. BLAVATSKY SPEAKS FOR HERSELF

Magnetism (1)

Descartes, although a worshipper of matter, was one of the most devoted teachers of the magnetic doctrine and, in a certain sense, even of Alchemy. His system of physics was very much like that of other great philosophers. Space, which is infinite, is composed, or rather filled up with a fluid and elementary matter, and is the sole fountain of all life, enclosing all the celestial globes and keeping them in perpetual motion. The magnet-streams of Mesmer are disguised by him into the Cartesian vortices, and both rest on the same principle. . . .

Such also was the doctrine of Tenzel Wirdig. It may even be found expounded in his works, with far more clearness, logic, and vigor, than in those of other mystical authors who have treated of the same subject. In his famous treatise, *The New Spiritual Medicine*, he demonstrates, on the ground of the later-accepted fact of universal attraction and repulsion — now called "gravitation" — that the whole nature is *ensouled*. Wirdig calls this magnetic sympathy "the accordance of spirits." Everything is drawn to its like, and converges with natures congenial to itself. Out of this sympathy and antipathy arises a constant movement in the whole world, and in all its parts, and uninterrupted communion between heaven and earth, which produces universal harmony. Everything lives and perishes through magnetism; one thing affects another one, even at great distances, and its "congenitals" may be influenced to health and disease by the power of this sympathy, at any time, and notwithstanding the intervening space. . . .

Kepler, the forerunner of Newton in many great truths, even in

that of the universal "gravitation" which he very justly attributed to magnetic attraction, notwithstanding that he terms astrology "the insane daughter of a most wise mother" — Astronomy, shares the kabalistic belief that the spirits of the stars are so many "intelligences." *He firmly believes that each planet is the seat of an intelligent principle, and that they are all inhabited by spiritual beings, who exercise influences over other beings inhabiting more gross and material spheres than their own and especially our earth.* As Kepler's *spiritual* starry influences were superseded by the vortices of the more materialistic Descartes, . . . so the vortices of the latter and his astronomical doctrines may some day give place to the *intelligent* magnetic streams which are directed by the *Anima Mundi*.

. . . In 1643, there appeared among the mystics a monk, Father Kircher, who taught a complete philosophy of universal magnetism. His numerous works embrace many of the subjects merely hinted at by Paracelsus. His definition of magnetism is very original, for he contradicted Gilbert's theory that the earth was a great magnet. He asserted that although every particle of matter, and even the intangible invisible "powers" were magnetic, they did not themselves constitute a magnet. *There is but one big MAGNET in the universe, and from it proceeds the magnetization of everything existing.* This magnet is of course what the kabalists term the central Spiritual Sun, or God. The sun, moon, planets, and stars he affirmed are highly magnetic; but they have become so by induction from living in the universal magnetic fluid — the Spiritual light. — I, 206-9

Evidently Proclus does not advocate here simply a superstition, but science; for notwithstanding that it is occult, and unknown to our scholars, who deny its possibilities, magic is still a science. It is firmly and solely based on the mysterious affinities existing between organic and inorganic bodies, the visible productions of

the four kingdoms, and the invisible powers of the universe. That which science calls gravitation, the ancients and the mediaeval hermetists called magnetism, attraction, affinity. It is the universal law, which is understood by Plato and explained in *Timaeus* as the attraction of lesser bodies to larger ones, and of similar bodies to similar, the latter exhibiting a magnetic power rather than following the law of gravitation. The anti-Aristotelean formula that *gravity causes all bodies to descend with equal rapidity, without reference to their weight*, the difference being caused by some other *unknown* agency, would seem to point a great deal more forcibly to *magnetism* than to gravitation, the former attracting rather in virtue of the substance than of the weight. A thorough familiarity with the occult faculties of everything existing in nature, visible as well as invisible; their mutual relations, attractions, and repulsions; the cause of these, traced to the *spiritual* principle which pervades and animates all things; the ability to furnish the best conditions for this principle to manifest itself, in other words a profound and exhaustive knowledge of natural law — this *was* and *is* the basis of magic. — I, 244

If the reader will recall what is said by the learned authors of the *Unseen Universe*, as to the positive effect produced upon the universal ether by so small a cause as the evolution of thought in a single human brain, how reasonable will it not appear that the terrific impulses imparted to this common medium by the sweep of the myriad blazing orbs that are rushing through "the interstellar depths," should affect us and the earth upon which we live, in a powerful degree? If astronomers cannot explain to us the occult law by which the drifting particles of cosmic matter aggregate into worlds, and then take their places in the majestic procession which is ceaselessly moving around some central point of attraction, how can any one assume to say what mystic

influences may or may not be darting through space and affecting the issues of life upon this and other planets? Almost nothing is known of the laws of magnetism and the other imponderable agents; almost nothing of their effects upon our bodies and minds; even that which is known and moreover perfectly demonstrated, is attributed to chance, and curious *coincidences*.
— I, 273-4

. . . The Pythagoreans held that neither the sun nor the stars were the *sources* of light and heat, and that the former was but an agent; but the modern schools teach the contrary.

The same may be said respecting the Newtonian law of gravitation. Following strictly the Pythagorean doctrine, Plato held that gravitation was not merely a law of the magnetic attraction of lesser bodies to larger ones, but a magnetic repulsion of similars and attraction of dissimilars. "Things brought together," says he, "contrary to nature, are naturally at war, and repel one another." This cannot be taken to mean that repulsion occurs of necessity between bodies of dissimilar properties, but simply that when naturally antagonistic bodies are brought together they repel one another. The researches of Bart and Schweigger leave us in little or no doubt that the ancients were well acquainted with the mutual attractions of iron and the lodestone, as well as with the positive and negative properties of electricity, by whatever name they may have called it. The reciprocal magnetic relations of the planetary orbs, which are all magnets, was with them an accepted fact, and aerolites were not only called by them magnetic stones, but used in the Mysteries for purposes to which we now apply the magnet. When, therefore, Professor A. M. Mayer, of the Stevens Institute of Technology, in 1872, told the Yale Scientific Club that the earth is a great magnet, and that "on any sudden agitation of the sun's surface the magnetism of the earth receives a profound disturbance in its

equilibrium, causing fitful tremors in the magnets of our observatories, and producing those grand outbursts of the polar lights, whose lambent flames dance in rhythm to the quivering needle," he only restated, in good English, what was taught in good Doric untold centuries before the first Christian philosopher saw the light. . . .

. . . By the radiant light of the universal magnetic ocean, whose electric waves bind the cosmos together, and in their ceaseless motion penetrate every atom and molecule of the boundless creation, the disciples of mesmerism — howbeit insufficient their various experiments — intuitionally perceive the alpha and omega of the great mystery. Alone, the study of this agent, which is the divine breath, can unlock the secrets of psychology and physiology, of cosmical and spiritual phenomena. — I, 281-2

FOOTNOTE:

1. When H. P. Blavatsky published her first major work *Isis Unveiled* in 1879, it aroused almost universally unfavorable comment and criticism from the representatives of Science of that day; but during the intervening sixty years Science has rapidly approached the viewpoint of the Ancient Wisdom, and it will be interesting to note during the next decade to what extent they will be further willing to recognise certain occult keys she has given out, as instanced in this series. The above extracts are all taken from *Isis Unveiled*. — Eds. ([return to text](#))

QUESTIONS AND ANSWERS

Reactions to Novels and Films

I understand that thoughts, emotions, and desires, as well as actions, have a corresponding reaction upon one, called the Law of Karman, or the Law of Cause and Effect. Do the thoughts, emotions, and desires, engendered in one by the sympathetic experiences one has with the characters in novels, movies, etc., have the same reactions upon one, adding an unnecessary factor for still more Karman? — E. R. P.

G. F. K. — It all depends upon how we react. Taking extreme cases as illustrative: If we enjoy revelling in an emotional orgy over scenes of crime, hatred, or unregulated emotionalism, then we are adding an unnecessary karmic burden to our store of evil tendencies, not primarily because the movie or novel gave us the chance to indulge these unhealthy conditions of hysteria, but precisely because we allow ourselves to be swept away by astral currents, and for the time strengthened in our undeveloped and low biases of character. Another person can witness the same scenes, but because of the lack of psycho-magnetic attraction to these low currents of the Astral Light, he will be totally unaffected by them.

Conversely, if we experience the refining and uplifting feelings of pity, compassion, love and sympathy for the suffering of others, if we are raised interiorly through witnessing supreme sacrifice or selfless love, whether in fiction or on the screen, so that for the passing moments at least we actually undergo a benediction, then we are indeed adding to the store of harmonious reactions upon our psycho-mental apparatus, for by just such experiences do we

help to strengthen the upward tendencies of the soul.

All of us affect each other for good or ill. No thing, no being, no circumstance, can ever be completely outside of ourselves, hence every thought, emotion, and action, must leave its impress on the general thought-atmosphere with consequent effect upon us human beings in accordance with our individual evolution. Weak characters allow themselves to be swung to and fro without reservation, and become lost in the hopeless confusion of conflicting emotions. We do not need to be weak unsteady creatures, but can strive to direct our feelings, control our thought-processes, and thus learn to protect our own mental-emotional nature from the onslaughts of violent emotion of any kind. High aspiration put into practice through the intelligent application of knowledge is fool-proof insurance against the serpentine dominance of the Astral Light.

Mystery of the Growing Plant

What is there in the consciousness of a plant that gives it the impulse to grow towards the light and succeed, no matter what obstacles impede its progress? — *P. P.*

G. de P. — The consciousness of a plant, and indeed that of a beast, or even of a man, — and we may add, the almost latent consciousness of the mineral kingdom — is the spiritual, combining with the astral, fluid in the constitution of a plant, let us say, which possesses the undying instinct or hunger to move forwards and upwards; and it is this instinct for growth, or seeking the Light as we say, which is the pushing cause or the great urge behind all evolution to better and higher things.

Thus the plant-seed, if it happen to be caught in some awkward place where the light is difficult to obtain, will, as it grows, because of this monadic fluid urging it to grow and reach

upwards towards what it wants, twist and turn around a stone or up through pavement, until it pushes its first tiny green blade to the light. It is really a most beautiful thing to think of and to watch, and has been a puzzle for science for two hundred years or more.

Theosophy supplies the answer, as I have tried to state it. I have seen a stone pavement, and also an asphalt pavement, actually broken or burst by some tender little plant, which by its monadic instinct knew the light was on the other side of the stone or the asphalt above it; and instead of growing and growing and growing under the asphalt or stone until it came to the edge, and then poking its way into the light, it just pushes with its tender little blade- points between the particles of the pavement, and breaks them apart little by little, until finally, like the chick leaving the egg, pecking through the shell, it pokes its nose into the light of the world above. Is this clear? It is the monadic fluid, or vital-astral fluid — the same thing in its lower form — which is instinct with intuitive consciousness, which drives or impels the plant to do exactly the right thing to reach the light.

Man Not Descended from Ape

Theosophy teaches that man is *not* descended from the ape, as does the evolution theory of today, but on the contrary, that the ape is an offshoot of man and one of the higher animals in ages long past. Since there is a rigid bar to reproduction between different classes and kingdoms of Nature, how could this have been possible? — *W. G. S.*

L. G. P. — This question makes reference to a time, millions of years ago when early mankind united with the beasts and brought forth strange beings, half-man and half-beast, which originated the ape-stocks, and some of the higher monkeys. It is quite true that there is a natural bar prohibiting such an

unnatural union, but this bar is the result of the march of evolution, and did not hold at that time. In all likelihood, man was not the only creature (for creature he was in those times) who reproduced out of kind, but it is quite tenable that many of the species today on the Earth are the descendants of what might have once been monstrosities, hybrids from the union of a certain few prevailing stocks that had previously ruled the world. Referring once more to the anthropoid apes, they form what is called the "delayed" race. Half-men, as they are, they will not have to wait until the dawn of a new planetary life-cycle before entering the human kingdom, as will all the other beasts, but they will have the opportunity of becoming humans at the beginning of one of the minor cycles of this Earth's present life-cycle, and they will do so with a clean slate, as it were, with no load of past human karma. They will, of course be representative of man's most primitive state, for they will be mere children, evolutionally speaking.

Which T. S. Shall I Join?

"As to what you say about my joining the T. S., I see no reason at all why I should. . . . If I should join the T. S. because of what it has done and its sponsorship (in its inception by the Masters) THEN WHICH T. S. SHALL I JOIN?? Three in New York City! What about *them* going together and standing on the principle of fellowship and brotherhood that is supposed to be their one main tenet, instead of their scattering their forces as they do! There are two T. S. Lodges dividing the field at San Diego also. Yes, the question is a leading one: *which* shall one join to be loyal to some of the things given to the world in their period of unity? The Theosophists themselves have not been loyal to the principles on which their Society was founded — they have split on personality. If I were to

choose one of the several rival societies to join, I would have to do so on the basis of personality, for they all claim to be teaching the same philosophy; and therefore the differences must be based on personality." (Capitals and italics by questioner.)

H. T. Edge — The inquirer is a little exacting and impatient. The proposal that he should affiliate with brother Theosophists was doubtless kindly meant, but no one is expected to join a society if he prefers a solitary path. As to the imperfections alleged against Theosophists and their organizations, their existence may be frankly, if regretfully, conceded; but it is a pity to view them in so exaggerated a light as to become blinded to the vast preponderance of good that is to be weighed against them. Those who founded the Theosophical Society were fully aware of the very imperfect materials with which they would have to work; but this did not deter them. The little troubles of which the inquirer complains are microscopic in comparison with those which H. P. Blavatsky had to face; yet she did not flinch. Had she been content to criticize and stand aloof, where would be Theosophy today?

But, in spite of the many failings of men, she had faith enough in their better qualities; and the result has justified that faith. For when we consider what Theosophy has been able to achieve in the years that followed, we shall find sufficient proof that an effective majority of Theosophists have remained steadfast to their ideals and loyal to the lofty purposes of the work. All worthwhile movements of reform must needs be subject to drawbacks arising from the imperfect state of the world and the people that it comprises; and we should rather congratulate ourselves that, in the case of Theosophy as compared with other movements, such drawbacks have been so few.

Those who expect to join such a movement must expect to meet conditions which will test their patience and devotion; but these are qualities which Theosophy inculcates, and it is by opportunity for their exercise that they are developed. It is, however, always open for those who prefer the more peaceful life of a student to keep themselves free. The first requisite for a Theosophist is devotion to his ideals; not a merely ideal devotion that entails no sacrifice, but a devotion that will drive him triumphantly through any obstacles and discouragements that may beset his path.

The truth is worth fighting for, and nothing really worth having is to be had for the mere asking. We must not expect that things will be made too easy for us. If the inquirer has met with two or more societies, and is in doubt which to join, that is not a good reason for joining none. It would be wiser for him to try them all and make up his mind which of them will best enable him to pursue his ideal. A man must do his own thinking, make his own decisions.

Instead of complaining that the lofty ideal of brotherhood is not so fully realized as it ought to be, let us do what we can to make it better realized; and if we cannot help, at least let us refrain from contributing our mite to the universal habit of magnifying the faults of our fellows while overlooking their excellences.

"How Do You Know?"

How would you answer the question most frequently put to Theosophists who are trying to interest others: "How do you Theosophists know these things?" — *L. M. P.*

J. T. — Just as there are masters and adepts in the human arts and sciences, so are there masters and adepts in the science of life and the wisdom of the ages. These great men, who are known as Mahatmans, first inspired the founding of the Theosophical

Society in 1875 in order to awaken men once more to their glorious possibilities. They taught and trained the foundress, H. P. Blavatsky. These Flowers of the human race have developed their inner powers and hence have great vision and understanding of things as they are in their essences. Everything of any importance originates in the inner invisible worlds, therefore, if we are to understand the visible world we live in, which is merely the outer effect of inner causes, we must develop our higher powers and inner senses. This demands a higher training than is known to most men. Until we have undergone this spiritual disciplinary life which is necessary in order to attain wisdom at first hand we naturally look to the truths and teachings given to us by these Adepts of Wisdom. We know about these deeper truths of the universe because we have been taught by disciples of these Mahatmans.

The Theosophical Forum

TIME — *H. T. Edge*

Time is the destroyer of worlds; another time has for its nature to bring to pass. This latter, according as it is gross or minute, is called by two names — real and unreal. —
Surya Siddhanta

Here at least we get one clue to the mystery — that the word "time" stands for a good many different things. If there is confusion in discussions, surely the fact that the same word is being used in two or more different senses, without the discussers suspecting it, is reason enough for the confusion. To begin with, we habitually speak of time (1) as an extended magnitude, a sort of line reaching forward and backward; (2) as a motion along this line, a velocity. So that we speak of traveling through time; but (as Mr. J. W. Dunne points out) it takes time to travel anywhere, even through time. It takes time to travel through time. So here are two sorts of time already. Mr. Dunne, having thus got two terms of a series, proceeds to make it an infinite series, so he gets an indefinite number of sorts of time. This is his "serial time"; and, not satisfied with that, he gives us a serial universe.

Philosophy has discussed whether time is subjective or objective — whether it is an element of consciousness, or whether it is something existing in the world outside of consciousness. When we see a divergence like that, it is a good indication that both views are wrong and both right. And we find in a quotation from James Ward, which is given in Webster's Dictionary, that time and space belong neither to the subject alone apart from the object, nor to the object alone apart from the subject, but to experience as the duality of both. They are neither subjective forms psychologically or logically prior to experience, nor are

they objective realities independent of experience.

And in fact, subject and object are abstractions from reality; they constitute a distinction which we must make in order to define cognition. And that tyrant Time lies deeper in the mysteries of reality than such distinctions, so that neither a subjective nor an objective view can compass the whole of him.

The chief difficulty experienced in discussing the nature of time is that our very thought-processes are bound up in it. To view a thing properly it is necessary to stand outside of it. The essence of time (the kind of time now being spoken of) is succession; and when we think or reason, we are conscious of a *succession* of thoughts. Hence we cannot eliminate time so as to be able to take a detached view of it. To see time, we must stand outside time. That is, we must stop thinking. ("Mind is the slayer of the real: let the disciple slay the slayer.") And so we argue about the nature of time, using in our arguments such words as "now" and "then," which presuppose the very thing we are trying to deduce. It is clear that, to understand the time of our ordinary consciousness, we must step into another plane of consciousness; and if succession is an indispensable attribute of time, then we must get into a state of consciousness where there is no succession, no procession of things following one after another, but what has to be clumsily called "an eternal present" or an "eternal now."

The Secret Doctrine contrasts Time with Duration (a substitute word borrowed for want of a better), in the same way as phenomenon is contrasted with noumenon, or manifest with unmanifest, finite with infinite. There is an epoch (there again we have to use a question-begging word), "when" eternal Duration gives place to Time, which is no longer infinite but is measured and divided. The common conception of eternity as simply a very great deal of time is of course wrong. Eternity or Duration, is not

Time at all, whether much or little. What it is I do not know, and if I knew I could not tell. But if we cannot know what a thing is, it may help somewhat to know what it is not.

The present, as pointed out in *The Secret Doctrine*, if it is to be defined as the boundary between past and future, becomes thereby reduced to a mathematical point, and therefore has no dimension, and is in fact reduced to nothing at all. But what we call the present is a blurred impression of a number of such atomic present moments, bound together by memory and anticipation, much as the successive images in a motion picture, each of which is too brief to make an impression on the eye, are blurred into a visible image.

As just stated, the present, when analysed, becomes reduced to a dimensionless point, and therefore no object or event can be said to have any existence at all in the present; it has no duration, *The Secret Doctrine* says. Hence we realize the necessity of regarding time (that is, lapse of time or duration in time) as a necessary component in the specification of an object or an event. And thus we arrive at the four-dimensional space-time continuum, so dear to fourth dimensionalists and relativists. Our existence in any moment is only a cross-section of our total existence; and to represent our totality we must take in every moment from the beginning to the end of our existence. And the analogy of a solid figure passing through a plane is adduced. But having passed from three dimensions to four, is there a reason for stopping there, or may we go further? This method of reasoning is probably one way of referring to the various "time-series" of Dunne, the various "planes" of consciousness or of matter, the various "principles" in man and the kosmos, etc.

In thinking of infinity and eternity, we are apt to imagine them as very large; which is a good deal like imagining God to be simply a

very large man. But the characteristic of infinitude is that it is not bounded. We have instances familiar to experience. A circle is an infinite line, without boundaries or parts (if we place a point in it, we divide it into *one* part; before that, it had *no* parts). The surface of a sphere is a boundless plane, and it is an interesting effort of imagination to try to imagine oneself placed on the surface of a perfectly smooth and uniform sphere. One might wander indefinitely in any direction without ever coming anywhere and without being in the least aware that one was perhaps traversing the same ground over and over again. Yet this surface, though infinite in one sense, is not so in another; for it has a definite size as compared with other objects.

Mathematicians would say that it is "doubly infinite," and the circle "singly infinite." And so, applying this to time, we get the idea of various orders of infinitude; time may be singly infinite, doubly infinite, etc. This is quite an advance over the crude notion of jumping at once from finity to absolute infinity. Time, then, seems to have become a medley of relative velocities, and any difficulty we may have in defining it is due merely to impatience and the desire to arrive at consummate knowledge without passing through the requisite grades.

As our conceptions of time enlarge, as a result of study and contemplation, we may escape some of the horrors and lamentations which ordinarily attend the subject. We may banish the Nevermore and the Irrevocable and that time which, "like an ever-rolling stream, bears all its sons away." For, as has been shown, all things have an eternal existence independently of their brief flitting across the focus of what we call the present; so that the past may be said to live in more than a mere figurative sense. Again, we view time as cyclic, so that the ever-rolling stream will some day bear all its sons back again. The able novelist, after portraying the events of a life and the evolution of a character, is

perforce obliged to ring down the curtain, as the hand of death renders everything abortive and turns the whole drama into a useless farce. How different is the Theosophical view of a life and a character!

In this impatient age we are too apt to forget how mighty an agent, how useful a tool, is mere time. We want something that will clean in five minutes or five seconds; when pure water will do a better job if only given time. And if I can move one end of a piano one inch, I can move the whole piano any required distance: it is only a question of time. Get time on your side!

The Theosophical Forum

IS AETHER SPIRIT OR MATTER? (1) — G. de Purucker

15th June, 1938

Prof. C. J. Ryan Lomaland

Dear Charles:

Thanks for your note. I sent you the clipping not from any occult reason, but simply I thought you would be interested in seeing what the newspapers had to say. I think this much can safely be said at any time from these newspaper reports, which just as you so truly say are horribly confusing, because the poor newspaper reporters probably have but the vaguest rudiments of scientific training, and often are writing about things they do not understand.

I think this can be safely said, to wit: that whatever the new discovery about Ether may be, or be supposed to be:

a) some discovery has been made which proves that an Ether of some kind exists, probably not the old scientific idea of Cosmic Ether, about which I will have something to say in an instant; and
b) that the tendency of science today is away from Einstein's former idea that an Ether according to the general theory of relativity really is not needed. In this Einstein is quite wrong. It arose from the fact that the mathematical chopper gives you back just what you put into it. It is correct reasoning upon premisses laid down, and if these premisses are wrong or partly wrong, the deductions will be logical and correct in logic, but wrong or partly wrong in fact. Mathematics never proves anything if the premisses are imaginary or uncertain.

Now here is the main point of all I want to say to you or any other Theosophist. When these scientists talk about an Ether, our

Theosophists constantly confuse our theosophical idea of a Cosmic Ether, or many Cosmic Ethers, with what the scientists mean. And the scientific view of an Ether has ranged all the way from a kind of gas very dense and elastic perhaps, but still physical matter in a gaseous form, to something slightly more subtil but still quite physical stuff; and naturally the scientists wonder why such a Cosmic Ether if it exists does not affect the movement of planets, suns, comets, and other bodies, through it. But this is not our idea of a Cosmic Ether. Our idea of a Cosmic Ether is physical prakriti or matter in its first or second or even third or possibly fourth states, counting downwards from the highest. When we Theosophists speak of an Ether we never mean physical stuff, however tenuous, and emphatically never mean a gas, such as the laboratory understands the term. Therefore scientists have been quite right in refusing to admit the existence of a mere Ether of gas, however tenuous. But they have been quite wrong in refusing to admit an immaterial Ether, immaterial here meaning something which is not matter in the physical sense, but nevertheless distinctly substance in our theosophical and philosophical sense; and yet not spirit, for spirit is infinitely more tenuous and etherealized so to speak.

Einstein's relativity is a theory and a helpful one. His fundamental idea of the relativity of nature in its various functionings and departments is sound archaic philosophy; but some of his premisses in his mathematical reasonings are utterly unacceptable to us, and therefore, as I have said, we cannot accept most of his mathematical reasonings, not because his mathematics are wrong, but because his premisses are only partly right or wrong. I hope this is clear. Nevertheless, when I speak of our theosophical Cosmic Ether, I do not mean a mere unsubstantiality, something which has no substance, which is not stuff. I mean just the contrary. It is at once, physically speaking,

almost spiritually tenuous, and yet it is a prakriti on our own Cosmic Plane, but in physical prakriti's highest forms there, and it is certainly far too gross to be called spirit. Therefore it is matter in our theosophical sense. But it is not matter as the scientists understand it. For when they say matter, they mean things which are solid, liquid, or gaseous, in other words what we call the grossest, even sub-astral matter of physical space. And the Ether of space, or the Ethers of space, are far more tenuous and ethereal than such scientific conception as they have had it. The Cosmic Ether does not affect the motion of bodies through it, because the bodies are grossly physical and the Cosmic Ether, while matter of the lowest prakritic cosmic plane, is immensely more tenuous than physical matter.

You might as well say that heat or light will prevent the bodies moving through cosmic space, because of pressure. It is true that they will, but in an exceedingly slight degree, practically too slight to be observed. Already scientists know about the pressure of sunlight, for instance.

I hope all this is clear. It ought to have all been understood when H. P. B. wrote her *The Secret Doctrine*. But during all these years our theosophical scientists have confused our idea of Cosmic Ethers with the very gross scientific ideas of Cosmic Ethers.

Yours in haste,

(Sgd.) G. de P.

AT HOME IN THE UNIVERSE (1) — *Linda Barlow*

When the great Prince Siddhartha of India had attained to Buddhahood, and returned to the cities to teach the common people, he used to begin by pointing out the universal overwhelming fact of Sorrow. This obvious truth arrested their attention, so that they listened eagerly while the Master went on to tell them the cause of their pain, and its cure.

To-day, 2500 years after the passing of the gentle Prince, we still live familiarly with sorrow, brought upon ourselves by what he called desire, and what our modern teachers sometimes call "the heresy of separateness"; for to desire anything implies a real or imagined separateness from that thing; and every evil in the universe may be traced to man's continual and pitiful conviction that he is separate from that universe, and that all its forces are arrayed against him. And just as fear, in an animal, causes physical contraction, an automatic preparation for fight or flight, so the fear, in man, of a supposedly hostile universe, causes a spiritual contraction, a density, which makes it almost impossible for his own inner light to shine through.

So is formed a vicious circle, of fear prolonging ignorance, and ignorance causing fear; ignorance of that law which is the basis of Theosophy and the supreme fact of the universe — the Law of Unity. Life is one. And since we are taught that there is no such thing as a particle of dead matter, and that everything that exists, whether seen or unseen, is a vibrating mass of myriads of lives, it follows that man, being one with a living universe, is about as reasonable in his fear as a drop of ocean spray would be if it feared to fall back into the sea.

"What a piece of work is a man! . . . in action how like an angel!

in apprehension how like a god! the beauty of the world! the paragon of animals!".

Shakespeare might have added that man is of all beings the completest representative of the All. He is, in fact, the universe in miniature. Standing at the middle point of the path of evolution, he may claim kinship with every phase of existence, material or ethereal, each having its counterpart in his own sevenfold constitution. The beasts below him lack the thinking principle. The gods above him have no further need for the physical body. But man is god, thinker and animal in one — a spark of the Divine, enwrapped in layer upon layer of consciousness epitomising in successive stages the entire plan of the universe.

In the Stanzas of Dzyan we are told how the spirits of the sun, moon and earth combined to produce the form of man; how every kingdom of nature contributed its share; and how, at length, when the vehicle was ready, the gods themselves leaned down and added of their own immortal essence — the crowning endowment of Mind.

How indissolubly linked is this son of the gods with the universe that produced him, may be seen for example in the action of the cyclic law, to which he is subject in common with every other form of life.

The circling of the planets, the procession of the seasons, the rise and fall of civilizations, the tides of the sea, express a rhythm which is equally apparent in the life of man, in his breathing, in his sleeping and waking, his working and resting, his successive incarnations upon earth.

And if his composite and complicated nature makes of him a sort of battleground, and causes trials and difficulties, it should also, when even a little understood, give him joy as a vessel of eternal

truth, dignity as an incarnate god, serenity as a child-soul of the great soul of the universe, and compassion as an elder brother of less evolved men and of beasts.

The beginning of an understanding of himself will lead to the realization of the folly of fear; to the expansion of mind and spirit until they embrace the whole of humanity, so that he will regard personal misfortune no longer as something hostile, but as an opportunity to lift at least a small part of the vast accumulation of Karmic debt forever from the shoulders of men. That which the world calls good fortune, he will see as something neither to be courted nor shunned, but to be shared and passed on to his brothers; even as their kindness to him, their help in trouble, is a thing not necessarily to be repaid to the giver, but to be passed on again to those who need it. He will feel an added tenderness for friends who for untold ages have trod the pilgrim's path beside him; and a new and kindlier interest in enemies, whom he himself has caused as it were to haunt him, but whose innermost light is identical with his own.

He will look upon his present fleeting personality as a guise, a mask, a medium for earthly experience; upon the span of life as one short chapter in a breathlessly exciting tale; upon the sun, the moon, the stars, the earth with its mountains and molehills, its birds and its beasts and its rivers and every speck of dust and blade of grass upon it, as his own, his companions, his greater and lesser brothers, his fellow-pilgrims, all subject to the one vast and ultimately friendly Law, all striving, toiling, gradually evolving towards the perfect beauty, the perfect harmony, the perfect peace. He will cherish this perfection, which, though seen dimly and afar, yet abides eternally and mysteriously at the heart of him; and he will know himself to be forever unassailable and indestructible, depending only for his guidance on that inner divinity which the followers of the gentle Siddhartha proclaim to

this day:

"I take my refuge in the Buddha."

"I unify myself with the god within me."

ANSWERS TO QUESTIONERS — William Q. Judge

[Under the above title Mr. Judge in 1887-8 conducted a column in his magazine *The Path* where he answered questions from Theosophists and inquirers under the penname Zadok. Beginning with this issue of the FORUM these questions and answers are being reprinted in response to many requests. Eds.]

Is celibacy necessary to the highest spiritual life and attainment. Is this your idea of true occultism?

By no single way is the highest spiritual life attained. The highest Adept and the true occult student, have at some time been wedded to woman. The highest attainment is never reached until a man has passed through this experience. Under certain conditions and at a certain time celibacy is a great aid, but if the student is wedded then it is his *duty* to continue in that condition, and instead of proving a barrier it will be an assistance to his progress if he rightly comprehends its significance. All the lessons which are taught the true occult student are given in daily life and through nature's laws. The celibate loses some of these lessons — lessons which he must inevitably learn — because he violates a great law of nature. The result of celibacy is that the student works by intellect alone. It is necessary for true occult work that the heart be used also. One of the greater of the "mysteries" can never be learned by the celibate, for he never stands hand in hand with God a controller of a creative force.

Is a purely vegetable diet indispensable to a high and serene spiritual life?

One might eat grass, grain and turnips, a million years, but that of

itself would not produce a high or serene spiritual life. All these things are aids, not necessities.

If the physical condition is such that animal food can be dispensed with, or without disturbing other people and neglecting the labor given, then it is wise to do away with it. The physical is thereby purified, making it less gross, material and animal like. But "one man's meat is another man's poison." Use that which seems the wisest to you. "It is not that which goeth into the mouth but that which cometh out that defileth a man." The right thought, the proper motive, the true Will have more to do with true Occultism than any exterior acts and practices.

Am I the result of a series of existences or a series of coexistences?

That which is known as you is the result of one continuous existence of an entity. Your present body and your soul (or the personality) are the results of a series of existences. Your Karma is a result of coexistence. The individuality, or spirit, is the cause of the soul and personality, or what is called "you." You are the manifestation of an entity and are the result of many appearances of that entity upon this stage of action in various personalities.

May one journey along the Path without being able to see into the Astral Light, or without recognizing anything extraordinary?

One may journey an entire life time on "The Path" and not see into the Astral Light *consciously*. All men see into it, for all who dream are looking there, the body being asleep and not receptive.

One may journey a long distance and not see, for all do not work in the same manner. Some may hear "ages before they see," or may feel a long time before either seeing or hearing. The tool most efficient at a certain period is the one used.

We may journey the entire way without recognizing anything extraordinary or encountering phenomena. The most extraordinary things are found in the most ordinary, and are overlooked because of their seeming familiarity. When the understanding is directed to the natural, one finds the supra-natural or supra-human things.

All questions are vital so long as they remain unsolved but all will be answered. It requires patience in ourselves, for many times the answers do not come until years after the question has been propounded. If I can be of further use to you please consider me at your service.

What is the true Will?

Is it a faculty of the soul?

How is it one with the Divine Will and how may we make our will at one with the Divine? Is it something which now we know not, or may we perceive its germ in our own Will, or is it an instinctive movement of the soul?

The will as known to man is that force which he exerts for the accomplishment of his aims — he uses it blindly and ignorantly — and self is always the one for which he uses it. It is used as a brute force. As ordinarily used it has little tendency to lift the personality farther than the attainment of material results. It has for its source, the lower elements of the soul. The true will is a concentrated force working steadily yet gently, dominating both soul and person, having its source in the spirit and highest elements of the soul. It is never used for the gratification of self, is inspired by the highest of motives, is never interposed to violate a law, but works in harmony with the unseen as well as the seen. It is manifested through the human will for things visible.

(2.) It is more than a faculty of the soul, for it is the soul at work. The spirit is unmanifest except through the soul. The soul

manifesting the spirit is the true will. The human will is the lowest form of this manifestation.

(3.) As the true will is the manifestation of the spirit through the soul, it must be at one with the divine, inasmuch as the spirit is the divine in man. It is the God in man, a portion of the all-pervading. Asserting itself through the soul, the true will is brought forth and in truth we say, "It is the will of God." We may make our finite wills at one with the divine by elevating our aim, using it for good or in the search for God, in striving to find how to use it in harmony with the laws of God. By proper use in the right direction the human will becomes purified, elevated, and being exerted only in conformity with our highest ideal, eventually becomes at one with the highest in man.

In our ordinary material state we know only the human will. Through the human will we reach the divine will. We become aware of the true will through the ordinary will just as we become aware of the soul through the body. It is not instinctive of the soul. The soul is father of the human will — the spirit is father of the true will.

ISOSTASY PROVES ASSERTIONS OF H. P. B. — *Cyrus Field Willard*

The reference by Professor C. J. Ryan in March 1938 THEOSOPHICAL FORUM to the "heat-death" theory of the old scientists has brought to the mind of the writer that the heat-death theory from the continuous cooling of the earth which would finally render the earth uninhabitable, as enunciated by Lord Kelvin, has finally met its death. Like many others of the materialistic theories of former scientists, in this swift-moving world with the many discoveries of our present age, just as H. P. B. predicted they would be, they show that this Russian genius knew what she was talking about, fifty years ago. This reversal of materialistic concepts was hastened by the discovery of radium by the Polish woman Mme. Curie and by "Isostasy" (equal status), both of which are now recognised as facts by men of science. Isostasy is dependent also on the discovery of the radio-activity of the rocks of the earth. These two fundamentals of the surface of the earth are presented by John Joly, SC. D., F. R. S., Fellow of Trinity College, Dublin, in his great book of recent date entitled *The Surface History of the Earth*, Oxford Clarendon Press, 1930. These elements include the transgression of the seas on the continents and the retrogression of those seas taking place after many millions of years when the rising of the mountain ranges built mainly of the sediments collected in the depths of the former continental waters. In his story of the accumulation of heat from the radio-active rocks and its periodical dissipation, this scientist says our old world "possesses the gift of rejuvenation." It is a great temptation to quote from him at length, when he speaks of "thermal Cycles." This radio-active heat melted the internal rocks and formed a molten substratum on which the continents float, and on which the moon has a tidal effect or influence. Seismology

enables us to infer that the continental rocks extend downwards some 30 to 40 kilometers (about 18 to 25 miles). Samples of basaltic rock which have reached the surface were found to be in every case radio-active, which insures the generation of heat. Here we have to take into account the great fact of Isostasy. This means that the continents which are floating in the semi-viscous understratum of basaltic material which extends far down beneath the basaltic rocks, themselves are continually generating heat which has no direct means of escape. The sub-continental basalts grow ever hotter until they melt. As they melt they expand a little and so lose density, and accordingly the floating continents sink a little. As the continents sink relatively to the floor of the ocean, the waters must flow over their lower levels. As a consequence tensions develop in the continents and mountains are formed and volcanic eruptions occur over large areas. When the condition of fluidity creeps upward beneath the ocean floor, the accumulated heat begins to leak into the ocean, and tidal phenomena in the fluid substratum occur. With the escape of heat the continents revert to their former state, while the earth's radius goes back to its former dimensions, with attendant mountain-building and buckling of the ocean floor. Then comes a repetition of this "stately history," as Joly says.

This description of the manner in which our Mother Earth becomes wrinkled and has her face lifted is most interesting to a geologist and especially to one who is a theosophist and has read *The Secret Doctrine*. It explains how the subterranean fires may have destroyed the Atlanteans and proves the derided statements of H. P. Blavatsky, as to the great age of the earth. This heat from the radio-active rock has an important contribution from the potassium, everywhere present in the rocks. The geologist can point to five great Revolutions, the geological record of which covers, so Joly says, many hundreds of millions of years. This

statement from such a competent geologist as Professor Joly is acknowledged to be, amply confirms all H. P. Blavatsky's assertions as to the age of our Mother Earth, and more.

It also proves the possibility, as she asserted, of initiates traveling dry-shod from Egypt to England *before* some depression allowed the ocean to rush in and form the Strait of Dover.

Note by C. J. Ryan

Dr. Joly's theory, quoted above by Mr. Cyrus Willard, has been very fully discussed for many years, but it has held its own in principle as the most probable cause of the great cyclic changes for which no satisfactory explanation could be found until the radioactivity of the rocks was recently discovered. Professor W. W. Watts, in his Presidential Address to the British Association in 1935 devoted great attention to Dr. Joly's theory. With certain modifications in detail which do not affect the main principle, he strongly supported it. Geology recognises at least four or five great "Revolutions" within the available record of hundreds of millions of years, and suspects more. In this connexion, it is important to remember that, according to the Theosophical teachings, while it is true that the ordinary physical and mechanical forces such as radio-activity, heat, denudation, etc., are operative in these Revolutions on the earth's surface there are other and hidden causes behind them, unknown to modern science. H. P. Blavatsky says:

Therefore, it is absolutely *false*, and but an additional demonstration of the great conceit of our age, to assert . . . that all the great geologic changes and terrible convulsions have been produced *by ordinary and known physical forces*. For these forces were but the tools and final means for the accomplishment of certain purposes, acting periodically, and apparently mechanically, through an inward impulse

mixed up with, but beyond their material nature. There is a purpose in every important act of Nature, whose acts are all cyclic and periodical. But spiritual Forces having been usually confused with the purely physical, the former are denied by, and therefore have to remain unknown to Science, because left unexamined. — *The Secret Doctrine*, I, 640

In all Nature there exists the Basic Unity behind the apparent diversity, and we cannot separate the Divine Cosmic Consciousness from its material manifestation or we fall into the "heresy of separateness," the only heresy recognised by Theosophy.

The Theosophical Forum

THE SIX GREAT SCHOOLS OF THE ANCIENTS — *G. de Purucker*

For those who are especially interested in the different Schools of Hindu philosophy, and in order to give a more correct delineation of the main principles of these Schools, the following lines may be found helpful.

There are six "Darsanas" or Schools recognised as being correct exponents of Hindu philosophical thought, and all these six *Darsanas* — a Sanskrit word literally meaning "Visions" — may be divided into three pairs. The six Darsanas or Visions or Schools are, respectively, the *Nyaya* founded by Gotama; the *Vaisesika* founded by Kanada; the *Sankhya* founded by Kapila; the *Yoga* founded by Patanjali; and the Less and the Greater *Vedanta* founded by Vyasa; and of the Vedanta, the most important school of the Greater, the Adwaita, was due to the teaching of the Hindu Avatara Sankaracharya. This, the *Adwaita-Vedanta*, is probably the most widely diffused philosophical School in India at the present time.

Now these six Darsanas, called in Sanskrit the *Shad-darsanas*, to the Occultist, contain, all of them, truth, and indeed esoteric truth in no small degree; but again to the Occultist each one is but a single "Vision" or "Branch" of the all-unifying Master-School, which — whether recognised or not — is the Esoteric Philosophy, which thus is the Mother of them all and the container of the master-keys by which each and all of the other six may be correctly understood and properly elucidated.

These six "Visions" or Schools may be divided into three pairs, each couple being paired because of similarity in systemic formulation and philosophical outlook; so that the six great systems of Hindu philosophy are thus logically reducible to three,

corresponding to the Arambha, the Parinama, and the Vivarta, respectively. These pairs are as follows: (a) the Nyaya and Vaiseshika, which one may perhaps briefly call the Atomistic School, corresponding again with the Arambha; (b) the Sankhya and Yoga, which because of their characteristic philosophical principles and system may be called the school of philosophy dealing with emanational evolution combined with practice in aspiration and self-training. This second pair corresponds with the Parinama; (c) the Less and the Greater Vedanta, which, especially the Greater Vedanta, may be called the Idealistic School of Hindu religio-philosophy, and correspond with the Vivarta-vada.

From still another standpoint the above-mentioned philosophical pairs may respectively be compared with the three operations of the human spirit and mind which are known in the Occident under the names of Science, Philosophy, Religion — not of course any one sectarian religious faith, but Religion *per se*. The Arambha is to be classified with the scientific outlook; the Parinama with the philosophical vision; and the third pair, classified with Vivarta, is comparable with the religious manner of visioning truth.

All these three couples, as stated above, are, each one, considered to be more or less imperfect from the standpoint of the Esoteric Philosophy, because each is incomplete. The Esoteric Philosophy unifies all three couples (or all six Darsanas) into one grand comprehensive System — the Esoteric Philosophy itself — which contains and explicates or explains the substance of all.

To recapitulate: the Arambha is that view of the Universe and of the origins of things, which, qualified as being scientific, envisions the Universe as proceeding forth as a "new" production of already pre-existent Cosmic Intelligence and pre-existent

"points" of individuality or what the Esoteric Philosophy would term "Monads" as being a more correct term than "atoms." Although such newly produced Universe, from this viewpoint, is recognised as being the karmic resultant or consequence of a preceding Universe, the former "self of the present, nevertheless emphasis in this line of thought is laid upon *beginnings*, upon the Universe as a "new" production, very much as even Occidental science construes the Universe to be.

The Parinama, while having many points of contact with the Arambha point of view, nevertheless lays emphasis upon the fact of the coming forth of the Universe into being, with all it contains, as a production by powers and entities and substances "unrolling from within," and thus bringing the Universe into existence by a species of emanational or evolutionary conversion or unfolding.

The Vivarta-system, finally, penetrates still more deeply into the womb of the Cosmic Mystery and fixes its attention upon the unending duration of the Divine Essence, which it considers as producing "appearances" of itself through modifications of itself, or portions thereof, brought about by emanational evolution from within, these modifications or "portions" being the Cosmic Maha-maya — or Cosmic Illusion. The technical name for these "appearances" is nama-rupa, a Sanskrit compound literally meaning: "name-form," otherwise understood as *nama* equaling "idea" or "ideas" or "concepts," and *rupa* equaling "objectivization" or "images" or "forms" in which these ideas manifest themselves. Hence it is that in the Vivarta-system the entire objective Universe, visible and invisible, is considered to be illusory because merely a collective modification, or series of modifications, of the productive Divine Essence, which last always remains Itself, yet produces "appearances" of itself, or shows forth itself by way of ideas or concepts and through objectivization by unfolding procession, i. e., emanational

evolution.

The above may seem to be rather high metaphysics, but it seems needful to embody these facts for the benefit of those whose minds ask for scientific or philosophic or religious particularizations and comparisons.

The Theosophical Forum

MODERN SCIENCE AND THE MESSAGE OF H. P. BLAVATSKY — H. Groot

III

In 1907 a book was published, entitled *Two New Worlds*, which made serious, sober workers in the field of natural science rub their eyes incredulously.

The author, an Irishman, Fournier d'Albe, had already made important scientific-technical investigations, *inter alia* into the properties of that strange, photo-sensitive metal, selenium.

But the remarkable fact is that in the first part of his book he makes a profound study of what he calls the "infra-world," that is, the world in which atoms and electrons take the place of solar systems and planets. In the second part of his book he attempts to visualize the difference in proportions, considering our earth as an electron, our solar system as an atom of a "supra world." Fantasy? No doubt; but fantasy based on thorough knowledge. His views and calculations are partly founded on the results of scientific investigations into the structure of matter, partly guided by an excellent understanding of the laws of analogy, which he applied with masterly skill. Fantasy? Yes, but fantasy largely due to a keen intuition of that which cannot be grasped with mere knowledge of facts, and which is virtually veiled by the latter — and certainly not with the knowledge of scientific facts, which, naturally, is incomplete knowledge.

Thus, if we must at present revise Fournier d'Albe's results, it is because of our growing knowledge of the structure of matter.

Fournier d'Albe's intuitive basic idea is that there are various interpenetrating worlds, the denizens of one being yet utterly

incognisant of the existence of other similar worlds, also inhabited by living beings, only on a scale many million times larger or smaller than their own; this really Theosophical conception holds equally well at present as when Fournier d'Albe surprised and amused the world by the "fantasies" referred to above.

To what issues did mathematics and analogy lead Fournier d'Albe? This may be made clear with reference to a few points discussed in his book.

First of all he showed what relation the units of length, time, force, and density of the infra-world bear to those applicable to our own world, arriving at the following conclusions.

In the infra-world the unit of length, like that of time, is 10^{22} times smaller than that of the "ordinary" world. The unit of force is even 10^{33} times smaller, the unit of density 10^{11} times *larger* than our own. A few examples will illustrate the immense significance of these seemingly simple facts.

Before proceeding any further, however, we would direct attention to the following observations.

Fournier d'Albe is convinced that each of the millions of infra-worlds of which the minutest speck of dust, or the smallest bacterium of our earth, is built up, is a world which, in outline, resembles our own. On this point he says:

No life remotely resembling our own is possible on any scale intermediate between us and the infra-world But if the main thesis of this essay is true, and *the infra-world is a habitable universe not essentially different from our own*, then there is no valid argument, either in physiology or psychology, to show the impossibility of our having been

inhabitants of the infra-world previous to our birth into this world. A life of "seventy years" into the infra-world might be crowded with events, and yet it would add but an altogether inappreciable fraction to our earthly span of life. The facts of embryology are far from being accounted for, and the phenomena of ontogenetic development are so obscure that a reasonable hypothesis like the above can only tend towards their elucidation. It certainly removes the difficulty experienced in conceiving the boundless possibilities of life as being contained in an invisibly small germ.

In the latter part of this reasoning the unit of time plays an important role. Let us, for a better understanding, try to realize how long the "70 years" of the infra-world would appear to us. A simple calculation shows that the 2×10^9 (1) seconds of the infra-world (which practically form the seventy years in question) last shorter than a fifth of a billionth (Am. trillionth) part of a second in our world. A single wink of the eye takes longer in the infra-world than terrestrial geology accepts for the formation of the earth's crust. And yet, the infra-creatures live their lives, are born, grow and die, without any knowledge of the — in our eyes — tearing pace of their world.

Also infra-astronomy exists!

It will have taken the astronomers of the infra-world (i. e. an electron revolving about, say, an oxygen nucleus) many centuries to discover the laws in accordance with which the planets of this solar system — the remaining electrons of the atom — travel round their sun. If their attempts have finally been successful, they will have discovered . . . Kepler's laws, while their perturbation theory — though it may be different from ours in some respects — will also use the methods which the earth

astronomers constantly apply.

Also the following example, which has been literally taken from Fournier d'Albe, may be useful to gain some understanding of the difference in time-scale. It shows how differently identical facts are interpreted by a terrestrial observer and an astronomer of the infra-world who lives on the planet "Talav" of the solar system "Grear." This solar system — an atom — consists, in addition to its sun and "Talav," of two other planets — electrons — called "Secunda" and "Tertia." A fourth electron has just joined this atom, but it is expelled from the system under the influence of ultra-violet radiation — a process which occurs countless times in every gas that is acted upon by ultra-violet light, and which process takes an unimaginably short period of time.

These events are described in the astronomical reports of the "Talav" observatory as follows:

"From the Records of the Talav Observatory" Year 5280, July 1. — This year's conjunction of Prima, Secunda, and Tertia is looked forward to with considerable interest. Tertia will certainly be lost to our system if she undergoes any additional outward perturbation.

Oct. 5. — Last night's observations show that the conjunction has not expelled Tertia. She is therefore safe for another 72 years, unless something extraordinary happens.

Year 5283, Feb. 5. — An unknown comet has been sighted in the orbital plane of Secunda. Approaching with a speed of 10^8 cm. per second, and will pass Grear at half Talav's distance. Will probably join our system.

March 1. — New comet turns out to be a planet of the size and mass of Talav, and same charge. Has joined our

system, and will have an orbit of great eccentricity, extending considerably beyond that of Tertia.

Year 5285, March 15. — New planet is approaching apo-Grean, but is showing decided perturbations, which are shared by all other planets. These are cosmic and periodic. Period estimated at three months.

April 4. — New planet's orbit has become parabolic under influence of cosmic perturbations, and the planet will be lost to our system. (*Terrestrial Note.* — The above entries represent a case of ionisation by ultra-violet light.)

However interesting these speculations of Fournier d'Albe's may be, it is not to be denied that at the present moment they are no longer in perfect agreement with our scientific knowledge about the structure of matter. Although his reasonings and calculations have by no means become obsolete, present-day knowledge of facts — in so far as scientific facts exist — is different from what was known in 1907. Then, atoms and electrons were not yet the immaterial wave-structures which they may nowadays be conceived of without a risk of conflict with established facts.

However, this implies that even if the basis of Fournier d'Albe's reasonings (viz., his insight into the power of analogy) remains valid, his conceptions will nevertheless have to be modified so that his original ideas will hardly be recognised. His central idea, however, the one basis of his investigation, holds true *now* as well as it did *then*. Summarizing we may perhaps formulate this basis as follows: the great is repeated in the small. An atom is a solar system, just as we may look upon a solar system as an atom of gigantic dimensions. These ideas, it need scarcely be said, are purely Theosophical, and that is just why we want to reflect on them again, asking ourselves to what conceptions the Hermetic fundamental idea "as above, so below" may lead if it is applied in

Fournier d'Albe's manner to what we at present know about the building stones of matter: the atoms. This is of particular importance since our Theosophical literature concerning these comparisons is still based on Bohr's model, although this model has long been superseded by the modern conceptions of matter-waves and the quantum-theory. The atom is no longer a system with a nucleus about which revolve spatially well defined electrons, nor is it off-hand comparable any longer with a material sun round which material planets are moving. It is this too — from a *particular* point of view — but it is much more, and this seems quite worthy of attention, because it may make for clarity of profound Theosophical doctrines. Moreover, such speculations might have a fructifying effect on the opinion of science about certain astronomical problems.

On the whole, scientists do not care for speculations such as Fournier d'Albe's. The reason again lies in the conflict between science — always searching for facts and their mutual relations — and philosophy — constantly attempting to penetrate behind the facts and undergo their realization, and this, we hold, should be the primary object of each investigation, and especially in the field of natural science.

However, we are not concerned here with the question whether or not science cares for the above speculation, but whether it disagrees with the findings of modern science; for if *this* should prove to be the case, science would rightly point to the field of perhaps attractive, but deceptive fantasies.

Now, the far-reaching analogy between a solar system and an atom cannot in a single detail be contradicted scientifically. Indeed, it is remarkable how, after first having exercised a fructifying influence on Bohr's conception of the atom — present-day astronomy itself shows a tendency to consult the atom-

physicist and wants to be informed on certain details regarding the solar system which are puzzling it.

A case in point is the article by St. Mohorovicic, entitled: "Ein neues Gesetz für die Entfernungen im Sonnensystem," which was published recently in the classical journal of astronomy: *Astronomische Nachrichten*, where the author says: "Our law, which probably indicates the most stable orbits, also applies to the atom-theory. Consequently, quite new conceptions will have to be introduced in theoretical astronomy, as has already been the case in the atom-theory."

It is easy to understand why in this article the atom-theory is taken as an example, for this theory treats of the regularity that is detectable in the distances between the various planets and the sun, and which greatly resemble the succession of the so-called "stable" orbits of the electrons round a nucleus. As these latter may be satisfactorily explained by the modern quantum theory as a result of the interference of matter-waves, it is obvious that the astronomer is looking for similar explanations of the succession of the planets' orbits. He may find them, if, reasoning along the same lines as Fournier d'Albe and Theosophy, he will look upon the solar system as a kind of atom on a gigantic scale, although he should bear in mind that analogy is not quite the same as *identity*. The solar system *differs* from the atom in many details. The laws that hold true for the atom cannot off-hand be applied to the solar system, but have to be formulated anew according to the prevailing conditions, though on the basis of the same principle. Thus also in astronomy the fundamental principle of the law of gravitation leads to quite different laws according as it is applied to the movements in a system consisting of the sun and a number of planets, or to the movements of a planet that is subject to the attraction of a binary star. The key of analogy is capable of opening many doors, but the entrant will perceive that there is a

variety of rooms behind these doors, and that, to be able to live there, he will have to adapt himself to the prevailing conditions — which will often require his utmost exertions.

There does exist an analogy between a solar system and an atom. No scientific investigator can reasonably deny it in the light of our modern conceptions about the structure of the atom. For the analogy is so evident that the study of Bohr's model was facilitated by the fact that a large number of mathematical problems which presented themselves, proved to be closely related to problems astronomers had encountered in the perturbation-theory. As to the formal resemblance between the two systems — and science, especially mathematics, is silent where non-formality is concerned — not a single well-founded objection can possibly be raised to making an attempt to ascertain in how far the speculations of a Fournier d'Albe may be adapted to our present knowledge of facts.

In the following pages we shall try to give an outline of the consequences to which speculations as mentioned above may lead.

However, since a line of thought is something dynamic, and as such always of greater importance than any result obtained, which is therefore static, we shall especially try to explain in detail the trend of thought pursued, and hardly pay any attention to the provisional results found by this method.

This involves a difficulty, namely the unfeasibility of indulging in technical-mathematical speculations, while it is nevertheless just the short, symbolic notation of higher mathematics which is capable of throwing a vivid light on the scientific foundations of theoretical physics, for on this science our investigations are based as far as actual facts are concerned. This difficulty cannot be overcome. The best thing we can do is to steer between the

Charybdis of these far-reaching theoretical speculations and the Scylla of superficial popularization.

First of all, we have to state more clearly the difference between Bohr's atom and the atom as conceived of in wave-mechanics.

In 1913 Bohr enunciated the idea that an atom is a solar system in miniature, consisting of a "nucleus" with a positive electric charge — the sun — about which particles with a negative electric charge — electrons — are revolving in circular or elliptical orbits. The electrons move under the influence of the electrostatic forces of the atomic system, and these movements are perfectly analogous to those of the planets of classical astronomy, which, *inter alia*, appears from the fact that, to a first approximation, Kepler's laws are also applicable to the atom. However, Bohr's hypothesis made it necessary to accept an atomic model that was quite different from all that theoretical astronomy tells us about the proportions of a solar system. For, Newton's law of gravitation, which in theoretical astronomy governs all the movements in a planetary system, does not in any way impose limitations on the magnitude of a planet's orbit about the sun. Nor does this law in the least interfere with the possibility of a certain planet following its course between the orbits of Venus and the Earth. However, it does not apply — according to Bohr — to the miniature solar system of the nucleus with its electrons. Here, the electrons are only capable of moving in orbits of sharply defined dimensions, each electron having the choice between a number of orbits of different lengths, but it cannot remain revolving in an intermediate orbit. If an electron is thrown out of its course somehow (by collision, release or absorption of energy) it cannot possibly change over to another differing but slightly from its previous orbit. Causes, which were quite obscure to Bohr — but which at any rate do not flow from the law of gravitation — compel the electron to take one of the other so-called "stable"

orbits. The transition from one orbit to another takes place in such an infinitesimally short period of time that Bohr speaks of a "jump."

Bohr's new and daring hypothesis may therefore be summarized as follows: Sometimes the electron "jumps" — compelled by external causes — from one stable orbit to another. This jump (and this is the second new feature of Bohr's atomic model) involves the release or absorption of light by the atom, the characteristics of the light (color, wave-length) only depending on the jump in question.

The longer we reflect on this model, the more questions arise. What made Bohr introduce conditions that are not accepted in classical physics? What remains of the resemblance between the solar system and the atom, where the electron-planets are obliged to follow accurately prescribed courses, with the only possibility of "jumping" from one orbit to another? What is the analogy between the orbits of the planets and the stable orbits of the electrons? Is there something analogous to the "jump," something comparable with the emission or absorption of light during the jump?

It looks as if the beautiful analogy which first attracted us so much was a very superficial one, and that the scientific thinker — *just on the strength of Bohr's atomic model* — has to reject all speculations such as Fournier d'Albe's.

It indeed seems to be so — but is it true?

We would first of all state that Bohr's model has led to such great triumphs for theoretical as well as experimental physics and that it proved so capable of correlating such a large number of seemingly quite allied facts, that it must be largely based on reality.

However, as Bohr did not understand the proper background of his hypothesis — and could only point to their confirmations — it is clear that his model need by no means embody the whole truth.

In the years following 1913, investigators tried to penetrate deeper and deeper into the essence of Bohr's representation. Men like de Broglie, Schrodinger, Heisenberg, Dirac, and others, obtained very elucidating results in this respect. Bohr's atom proved to be only a very rough picture of the much more complicated *events* that together form what we call an *atom of matter*.

The greatest progress that our knowledge about the structure of matter has made is, philosophically speaking, the fact that science has come to the conclusion that matter has to be described in terms that do no longer indicate any material property. Science begins to understand that the essentials of matter can only be approximated by the de-materialization of matter.

It is true, the Theosophical standpoint that spirit and matter are two aspects of one and the same "substance" (i. e., "that which stands firm") has not yet been altogether accepted. Science has but just started to leave its materialistic line of thought for a more spiritual one. But: *la verite est en marche*.

At this juncture it may be justly asked to what results the above investigations have given rise. In agreement with the more or less materialistic basic tendencies predominating in modern science, two directions have been followed, both of which lead to the same mathematical basic equation. This equation, as far as we are able to see it at present, governs all the problems of atom-physics; technically it is called "wave-equation." However, the opinions about the interpretation of this equation vary considerably. One group of scientists adhere to the existence of the smallest particles of which matter is said to be built up. But if

this is true, they will have to give up the notion of *causality* as applicable to the behavior of these smallest particles. The natural laws are then no longer causal laws, but statistical laws of *probability*.

The other view, which at present has perhaps fewer adherents in the scientific world, definitely breaks with the conception of smallest particles as realities. It considers the separate particles, electrons, nuclei, or whatever they may be called, as more or less an illusion of the underlying reality. However, this reality itself cannot be understood in terms of time and space, for it transcends them altogether. Reality is one and indivisible, and its manifestations may be conceived of as a vast, universal vibration-process. If we direct our attention to definite, local areas — such as we may observe in the individual waves in looking at the sea — the causal laws operate with respect to the actions of these several parts among themselves. But as soon as we want to delimit a particular area more sharply, it becomes blurred and no longer possesses any well-defined boundaries, any more than a sea-wave is an isolated thing. However, this does by no means interfere with the notion of *causality*, which, strictly speaking, is applicable only to the actions of entities sharply separated by time and space, but rather expands it to universal *interaction*. Everything is related to everything else, because the entire multiplicity that we perceive with the senses or postulate with our mind behind the objects observed, is but an illusion of what is in reality One Whole. This thought, although science does not express it, is the basis of the "wave-structure" of matter. This is a purely Theosophical conception, for it is but the modern way of expressing that the world in which we live is a world of maya.

As said before, the two opinions about the significance of the wave-equation are still contending for priority. Direct observation — which is the only criterion acknowledged by

science — has so far not been able to find anything that might turn the scale. But as soon as we reject the scientific line of thought and inquire after the *sense* of what has been found, then, at least as far as the Theosophist is concerned, there need be no doubt which of the two viewpoints approaches the occult truth more closely.

As we are, moreover, perfectly justified scientifically in considering matter as a wave-structure, we shall now return to the investigation in question, and try to find out whether a modification of Bohr's atom in accordance with the wave-theory, will clear up the difficulties mentioned above.

In view of the limited space available, we shall not enter into details on this point, but nevertheless we would establish the following fact: all the difficulties which Bohr's peculiar conceptions present disappear completely, while the points that attracted us in the above atomic model remain unchanged. For, so long as we continue to focus our attention on a small area, which, for convenience, might be called an atom, we indeed see something which, in outline, corresponds perfectly to Bohr's model: a "nucleus" surrounded by "stable" orbits in which an "electron" moves in the manner described above (in accordance with Kepler's laws, etc.). But this picture suggests itself only so long as we do not look attentively. As soon as we direct our attention to the electron, say, to find out its actual size, or to ascertain where it is at a given moment, then it resolves itself into what, for lack of a better expression, is frequently called a "wave-packet." It is not sharply defined spatially. It cannot be considered as an isolated part distinct from the other electrons and the nucleus. The atom, which seemed to consist of discrete components — the nucleus, the electron, the stable orbits, etc. — appears to be one indivisible unit, which cannot be split up into its constituents except artificially.

It is not possible to explain these results in more detail or make them acceptable. Nor is this necessary, for any more elaborate treatise on wave-mechanics or atom-structure will inform the reader of these technical questions as fully as he likes — if he wants to take the trouble to indulge in scientific investigations. For us, the principal question is: Is our solar system still comparable with an atom if we accept the views about the structure of matter and in particular those about the structure of the atom based on the wave-theory developed by de Broglie; or have Fournier d'Albe's speculations to be rejected altogether as being unfounded and not in agreement with actual facts?

Let us not give our answer too rashly. What are the facts that have to be considered?

First there is the atomic model of wave-mechanics, which shows us a solar system in which Kepler's laws hold good, but in which we have also to reckon with the existence of "stable" orbits, the "jumps" of electrons, and the radiation-phenomena to which they give rise. In addition, we know at present that this picture was founded on superficial observations. We also know that things are different in reality, that the sphere of action of each of these electrons extends through the whole atom; yes, in the last analysis, there are no isolated electrons, but only the one reality, which, as an atom, was separated from a still vaster reality beyond it, with which it forms one whole, just as the electron is *one* with the reality we have called "Atom."

The same line of thought has to be followed in regard to the solar system. There, we see the sun about which the planets travel in their orbits in accordance with the laws of gravitation, of which Kepler's laws are special cases.

Do stable orbits exist?

The majority of astronomers will be inclined to answer this question in the negative — and yet: there is the "law" of Bode and Titius, pointing to a remarkable grouping which is so strikingly regular that "fortuity" seems out of the question — although science has so far not quite succeeded in finding an "explanation" for this regularity; yes, even the correct mathematical expression for regularity is still a moot point.

Nor of *this* subject shall we give the technical details; suffice it to say that probably *not* all the orbits which are conceivable on the basis of the law of gravitation really exist — on the contrary, it is only very definite orbits that seem to be available for the planets. This inference permits the assumption that the atom possesses stable orbits, although finality has not by any means been reached in this matter; however, the orbits of *different* planets should not be confused with the *different orbits* in which *one and the same electron* may revolve.

"But," the opponents of the Fournier d'Albe theory will no doubt put forward, "even if we should admit the possibility of the existence of "stable" orbits in a planetary system, even then the fact remains that we have never yet observed a "jump" from one orbit to another." Quite true, of course. But the argument is not a sound one, since these opponents probably lose sight of the difference in time-scale. The "jump" of an electron takes an almost incomputably short time, we wrote — certainly, but measured with *our* standards! If we should describe this event in the language of the Talav astronomers, the word "jump" would not suggest itself at all. We should learn that, owing to a certain cosmic disturbance which it either would be or would not be possible to specify any further, the orbit of a particular planet slowly shifted altogether over a period of many thousands of centuries. And as to the chance of such an event occurring, it should be borne in mind that between every two "jumps" of the

same electron, milliards of "electron centuries" elapse; and when a new "jump" begins to take place, even the remembrance of the preceding "jump" will therefore have been obliterated.

The same consideration might be applied to our solar system if we should like to maintain the analogy in question. Not a single argument based on actual facts is capable of contradicting the *possibility* of the existence of "stable" orbits and "jumps" in our planetary system. Nor can we point to events that argue *for* this assumption. However, as facts are lacking and Fournier d'Albe's views seem plausible, it is *permissible* to adopt them and to posit a far-reaching analogy between the atom and the solar system — as this is in perfect agreement with the Gupta-Vidya.

But if we do this seriously, we have to go a considerable step further. For then we can no longer look upon the sun and the planets as spatially limited and isolated bodies. Just as the electron as an isolated particle proved to be an illusion, we shall have to give up the idea of the planets and the sun being separate units.

On the face of it, this seems to be an unrealizable demand. But if we reflect on it and make ourselves familiar with the idea, the truth begins to dawn upon us with the conviction that such a view is perfectly tenable.

Our opinion about the limitation and separateness of each several planet is in the last analysis based on our deep-rooted materialistic views, which make a fundamental difference between "matter" and the "force" exerted by that "matter." But it is just the most recent atomic theories that are beginning to doubt the validity of such a distinction. Matter and force — on a higher plane: *pro-matter and spirit* — are aspects of the one Substance. This novel truth — which has been known to the Keepers of the holy Occult Wisdom or Gupta-Vidya from time immemorial, but

which became lost for the bulk of humanity — cannot be repeated too often. The discoveries of science will prove the correctness of the Old Wisdom at the same rate as science will succeed in understanding the profound meaning of the latter.

As already said before: In the light of wave-mechanics there is no essential difference between an electron and the field of force of that electron. But does not exactly the same apply to a planet? Also a planet makes itself felt far beyond its immediate vicinity by the action it exercises, surrounded as it is by its own field of gravitation, by an electric and a magnetic field. If we pay attention to its sphere of action and identify the planet with it — as we dissolved an electron into a system of interpenetrating waves interfering with each other — then each planet occupies the whole space of the solar system, and a planetary system can no longer be considered as a unit made up of the sun and a number of relatively small, delimited orbs traveling about the sun, but as a complex conglomerate of interpenetrating spheres, which are moving in and through each other and interacting most intimately.

Thus, the old idea that the different planets influence each other, which the modern pseudo-science of astrology has taken from the true Astrology of the Ancients, also called the Science of the Gods, regains its true significance. And in this connexion it should be especially noted that the interaction of the planets is not restricted to the physically perceptible actions of gravitation or magnetic and electrical influence, but that this action and penetration also include astral and spiritual influences — which science has so far remained utterly ignorant of.

This far-reaching conclusion suggests itself at once if we revise Fournier d'Albe's speculations and bring them into line with the modern scientific conception about the structure of the atom.

Is it saying too much to maintain that modern science perfectly agrees with the teachings of the Old Wisdom, thus confirming H. P. Blavatsky's Message?

FOOTNOTE:

1. The reader need not look askance at this probably queer notation. We chose it to be able to write in a simple form otherwise inconveniently large and unmanageably long figures. For instance, 10^9 (read: ten to the ninth power). ([return to text](#))

The Theosophical Forum

HARMONY IN WORD AND ACT — *G. van Pelt*

The key to one of the seven portals this is, the key which leads to the land of bliss, "to the other shore" where the vision is clear in a land of reality, and the nightmare of separateness, the ever-gnawing hunger for peace, the crazy confusion of values, is seen in the distance dissolving like some foul miasma.

If only as the New Year opens before us with its influx of fresh life from the inexhaustible Cosmic source — if only the people of our little Earth could realize that this key is within their grasp, nay more, that it is already theirs to use, that almost by the wave of a fairy wand they could find themselves upon a shore of clear vision. And if they could only discover that this needs but a change of viewpoint!

This key, which for so many is hidden, was well known in the Golden Age, and we ourselves, who lived in those days, painted many a picture in words to be handed down as a beacon light to hold the vision for the days when we must pass through the valleys of matter in order to gain power and strength. One of these pictures was that of the Asvattha Tree, the Tree of Life, rooted above in the unknown depths of Being, whose branches and branchlets grow until they fill all Space. It is a picture which tells of the unity of all life, of the actual *fact* that our Universe is one Being, of which we are all a part, that it is indeed a *living Organism*, every unit as responsive to every other as are the cells of our body to its other cells, all working to a common end, so bound together that Space, as we have conceived it, is annihilated; that Time upon which we have counted to wipe out causes, is but the eternal Now. But alas! in these valleys of Matter, we have lost the knowledge of ancient days. It is not now so clear

to all that every force in this Organism is but the transmutation of the same force, whether called love of the atoms, brotherhood, co-operation, or compassion; that there must be a reaction everywhere when the eternal majesty of the law of harmony is broken on any plane — more and more intense the higher the plane. Loss of this knowledge has brought us to the Crossways. Our western civilization is a sorry object lesson of a people who do not *know* that there is a scientific, a moral, and a spiritual basis for ethics.

But the ignorant and childish notion that action and reaction exist only on the plane which can be perceived by the physical senses is passing. We see everywhere evidence that the flooding of the thought atmosphere with the ancient teachings of the Wisdom Religion is producing results, and happily for our race it will be borne in upon its consciousness that literally "as ye sow, so shall ye reap." - — These will less and less become empty words. With human reason harnessed to intuition we shall attain some of the results for which the Theosophical Movement is striving.

Above, within, at the source of all energy and life, is the compassionate power which keeps the cosmic harmony, the stars in their appointed orbits, the atoms at their appointed tasks. Should this be withdrawn for an instant — the Universe would crumble.

The Theosophical Forum

INTRODUCTION TO ELECTROMAGNETIC SOLAR SYSTEM — *Cornelius O'Connor*

Nothing in the history of science is more remarkable than the fundamental influence exerted by the teachings of Pythagoras in mathematics, astronomy and physics. To the great discoveries in those fields, perhaps now may be added a solution of the baffling mystery of electromagnetism.

It has been found that the regularity of planetary intervals which has attracted many astronomers since Kepler's time can be attributed to the action of electromagnetic waves radiated by the sun. This discovery conforms with the original ideas of Johann Kepler, a modern disciple of Pythagoras. Kepler believed the physical basis of his laws was identified with magnetism, which he conceived to be a form of vortical motion.

ELECTROMAGNETIC SOLAR SYSTEM

Through a simple formula it can be shown that planetary distance intervals closely follow a common series of wave frequencies. The numbers derived through the formula are:

36 66 93 140 483 885 1780 2850 3800
Mercury Venus Earth Mars Jupiter Saturn Uranus Neptune Pluto

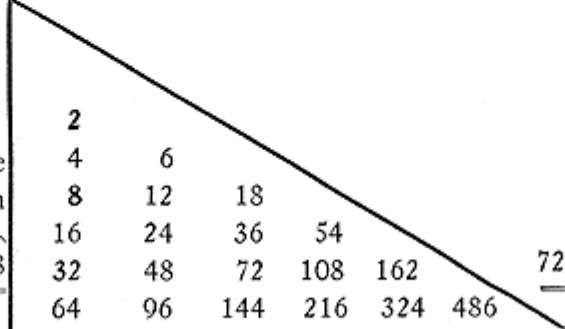

The formula is:

$$\frac{\text{Velocity of light} \times \text{planetary distance in sun radii} \times 1 \text{ sec.}}{\text{Radius of the sun}}$$

E. g. Earth:

$$\frac{186,000 \text{ miles}}{1 \text{ second}} \times \frac{216 \times 1 \text{ second}}{432,000 \text{ miles}} = 93$$

Wave frequency series:

				2													
			Half	Take									Take	Twice			
			Mean	Mean									Mean	Mean			
					16	24	36	54									
			28.4 & 42.8		32	48	72	108	162				729 & 1093				
Numbers:	7.9	11.9	17.7	35.5	64	96	144	216	324	486			910	1820	2730	4096	
Planets:					Mercury	Venus	Earth	Mars	Vesta	Ptd.	Jupiter		Saturn	Uranus	Neptune	Pluto	
Sq. roots:	2.8	3.5	4.2	5.95	8	9.8	12	14.7	18	22			30				
Orb. Vel.	Pluto	Neptune	Uranus	Saturn	Jupiter	Ptd.	Vesta	Mars	Earth	Venus	Mercury						

The tabulated numbers extended right and left with ratio 3:2 are as planetary mean distances from sun; square roots of the numbers taken in reverse order are as orbital velocities. It will be seen that the serial numbers are paired, i. e., products of pairs are constant: numbers for Mercury and Saturn; Venus and Jupiter; Earth and planetoid; Mars and Vesta. Orbits of Uranus, Neptune and Pluto would pair with possible orbits between Mercury and the Sun.

That corresponding planetary numbers are derived through a formula involving the velocity of light as shown above, leads to the inference that planetary distances and motions are regulated by electromagnetic waves radiated by the sun. This inference is supported by the fact that a related series of numbers shows direct correspondence between the velocity of light and the cube roots of planetary periodic times (in seconds).

P.time numbers 192 256 324 384 486 576 729 972 1380 1728 2048
Planets: Merc. Venus Earth Mars Ves. ptd. Jup. Sat. Uran. Nep. Pluto

Cu. rts. of per time: 197 268 316 390 480 ... 722 975 1383 1735 2000

The serial numbers are paired, i. e., products of pairs are constant:

Mercury & Saturn; (192 X 972)	Venus & Jupiter; (256 X 729)	Earth & planetoid; (324 X 576)	Mars & Vesta (384 X 486)
----------------------------------	---------------------------------	-----------------------------------	-----------------------------

The constant product is 186,624, which when multiplied by appropriate length/time units (1 m.p.s. or 1.6km./s.) equals the velocity of light.

From the foregoing figures the conclusion may be drawn that the frequencies of the solar electromagnetic waves are as the cube roots of the periodic times; these frequencies and the velocity of light determine wave-lengths. ($c/t_{1/3} = \lambda$)

The initial amplitude of the waves would be as the radius of the sun and the electromagnetic intensity (equivalent to gravitational mass) would be as the square of the amplitude.

The space between Mars and Jupiter would correspond to a region of wave interference, directly affecting the orbits of Mercury and Saturn and contributing to orbital ellipticities.

Similar wave elements can be computed for all planet-satellite systems.

The planetary numbers are also related to the characteristic line spectra of all atoms.

The planetary numbers:

64 96 144 216 324 486

are as the actual vibrational frequencies of:

C G D A E B

on a diatonic scale.

Truly, there is "Music of the Spheres."

The identification of solar system motions with electromagnet-ism is a reminder of the "Central Fire" of Pythagoras.

Solar system bodies often have been compared to giant electromagnets and planetary orbits are comparable to the concentric rings which surround wires carrying electricity familiar to all students of physics.

Thus the sun may be conceived as a great stabilized electromagnetic vortex radiating a continuous succession of spinning ring-waves in which the planets move in obedience to Kepler's laws. The planets would be similar but smaller vortices and the chemical elements would be similar structures on an atomic scale.

Electromagnetism might be defined generally as vortical motion in a Space Plenum. Positive and negative effects would be due to differences in the direction of rotation.

The spiral form and simple numerical relations seem to be characteristic of all natural phenomena from celestial galaxies to atoms. The Pythagorean right-triangle represents the projection of a spiral; Mendeleef's octaves in the chemical table and the helical arrangement of atomic progression shown by de Chancour-tois and Stoney and Mendel's biological laws all illustrate the principle. The progression of genera and species in biology is analagous to the progression of the chemical elements. Leaf formations are universally spiral and the blood stream follows a spiral circuit. And all have a rhythm in harmony with the "Music of the Spheres."

Genung has shown that creative thought follows a spiral law. There are curious traces of this in the history of human beliefs. The vortical nature of electromagnetic motion may be compared to a fiery serpent pursuing its tail. The swastika might be interpreted as a symbol of rotation. Intuitively we perceive the significance of the symbols but a Pythagoras is required to interpret them for us.

The doctrine of Love which eventually will lead us to a real brotherhood of men, was voiced by great spiritual leaders, including Lao-Tse, Gautama, and Jesus, as well as Pythagoras. Through their beautiful teachings we hope to achieve some day a social state on earth worthy of the sublime harmonies of the Universe now so vaguely apprehended.

Note by C. J. Ryan

Mr. O'Connor's article with its mathematical demonstrations of the orderly relations between the velocity of light (an electro-magnetic phenomenon), the *radius* of the sun (the distance of the center of the sun from its surface), and the distance of the planets from the center of the solar system, is extremely interesting to students of *The Secret Doctrine* for many reasons. It is another demonstration that the universe is not a helter-skelter combination of objects thrown together by blind chance, but that there is Mind working in an intelligent way behind the visible manifestations, or, as Sir James Jeans says, the universe is nearer to a great thought than to a great machine.

Mr. O'Connor refers to Pythagoras and his modern disciple, Kepler, with justified admiration; but those great men looked more deeply into the causes of the exquisitely beautiful adjustments of celestial motions than most of our modern physicists. Dr. Max Planck is one of the few who boldly declares the ancient doctrine that consciousness is fundamental, and that matter is derivative from consciousness. Without this vital factor astronomy is a body without a soul.

Kepler, whose three "Laws" of motion have long been accepted as fundamentals, realized that the "harmony of the spheres" was controlled by Cosmic Intelligence in the ether of space, the "Holy Ghost" as he called it. He accepted the ancient belief in an "Angelus Rector," a spiritual conscious entity conducting each planet, and he understood how the Pythagoreans could believe that all the globes disseminated through space were rational Intelligences or Spiritual Powers which may be regarded as Divinities. Even in these prosaic days one leading astronomer has dared to suggest that every star may well be the seat or vehicle of a sublime Being whose conscious life-history transcends our highest conceptions as greatly as his span of years — millions or billions — exceeds that of a human incarnation!

In the 15th century Gilbert of Colchester made his great discoveries in magnetism which must have been known to Kepler, who declared that the sun was a powerful center of magnetism (now scientifically demonstrated). Kepler worked out a curious relationship between the Platonic solids and the orbits of five of the seven "Sacred Planets," naturally omitting the sun and the moon (and of course the outer planets, which were not known in his day).

It is curious that the work of Copernicus and Kepler, which was founded on a mystical basis derived from Plato and Pythagoras and ultimately from Oriental teaching, should have led through Galileo, Newton, and the French Encyclopaedists of the 18th century, and the modern Germans, to a purely mechanistic philosophy of nature and life! Fortunately, Relativity and the new atomic theories bid fair to liberate science from the crude materialism of the 19th century and to open the way to a more spiritual outlook. Speaking of the materialism that was so general at the time she brought Theosophy to the West H. P. Blavatsky says:

It is only with the theories of such men of learning as Kepler, Kant, Oersted and Sir W Herschel, who believed in a Spiritual world, that Occult Cosmogony might treat, and attempt a satisfactory compromise. — *The Secret Doctrine* I, 589

She shows that Space is a substantial "living entity," the real world, while ours is an "artificial" one.

Space is studded with countless phenomenal universes, systems, and mirage-like worlds; a Unity, bottomless at its depths, illusive (*maydvi*) on its surface. The Ancient Wisdom — Theosophy — has always taught that the real universe is a complex of forces indeed, but not of blind, unintelligent forces. Theosophy is an objective idealism. Students would benefit by a careful perusal of the magnificent philosophic passages in *The Secret Doctrine*, Vol. I, page 615.

In Mr. O'Connor's presentation we see that a perfectly adjusted rhythm is back of the solar system, a true "harmony of the spheres," corroborating the Pythagorean teaching that a marvelous system of mathematical combinations lies hidden behind the physical appearance. Plato, a Pythagorean, expressed the same idea when he said that God geometrizes. But these mathematical concepts were far from being mechanistic, for it was the *gods* and their intelligent guidance that were expressed geometrically or numerically in the theogony of the heavenly host.

Pythagoras associated the numerical arrangement of the planets with the harmonic intervals between musical sounds which he is credited with discovering, though "revealing" would probably be a more correct term. Mr. O'Connor carries the analogy into the world of electro-magnetism which perhaps may be called "sound" or vibration on another plane. "Sound," according to the Oriental philosophy, is the great creative power, the Logos, the Word. H. P. Blavatsky devotes many pages to this important topic, and modern science is beginning to study the extraordinary powers of *inaudible* sounds of high pitch.

It is exceedingly difficult to explain to those who have been trained in the mechanistic schools of the West what is meant by intelligent, creative forces as understood by Oriental philosophers. The subject is so important that H. P. Blavatsky and the Masters of Wisdom devoted many pages of *The Secret Doctrine* to its elucidation. A few modern scientist-philosophers, such as Dr. Gustaf Stromberg of Mount Wilson Observatory in his *The Soul of the Universe*, etc., and perhaps Sir Oliver Lodge, have approached very nearly to the Oriental position. Dr. Stromberg's hypothesis of an "immaterial" fine-structure in space through which the Cosmic Consciousness can express itself intelligently in atomic, electronic, or perhaps still finer forms of matter is a close approach to H. P. Blavatsky's "real world," the *substantial* (not material) "living entity, Space." For the benefit of those readers who have no copy of *The Secret Doctrine* at hand we will quote a comprehensive passage from Vol. I, page 493:

The Occultist sees in the manifestation of every force in Nature, the action of the quality, or the special characteristic of its noumenon; which *noumenon* is a distinct and intelligent Individuality *on the other side of the manifested mechanical Universe*. Now the Occultist does not

deny — on the contrary he will support the claim — that light, heat, electricity and so on are *affections* (not properties or qualities) of matter. To put it more clearly: matter is the condition — the necessary basis or vehicle, a *sine qua non* — for the manifestation of these forces, or agents, on this plane.

In regard to Mr. O'Connor's demonstration of the electro-magnetic vortex theory of the solar system, the following quotation from *Scientists are Human* by David Lindsay Watson, just published by Watts and Co., London, will interest our readers as illustrating the trend toward entirely new views in regard to the forces of nature, which is exactly what H. P. Blavatsky said would occur before the 20th century was very old. Mr. Watson seems to agree with the principle advanced by Mr. O'Connor:

The orthodox gravitational theory of the sun, the mathematics of which is impeccable, will probably go into the discard for this reason. . . [the lack of sufficient imagination being used by scientists in not giving due consideration to all sides of a problem before starting to work it out] . . . The recent theory of Ross Gunn, on the contrary, suggests that the stability of the sun and the configuration of the solar system can be adequately explained only if previously-ignored electro-magnetical forces are taken into account — not gravitational forces alone. The accepted theories have hypnotised the scientific world by the elegance of their mathematics, and this elegance has retarded the realization that electro-magnetic forces are crucial to the problem. — page 99

Dr. Ross Gunn is a member of the Naval Research Laboratory at Washington. In 1933 he criticized the estimates of the solar temperature in view of his observations of the magnetic conditions of the sun's atmosphere and the corona. He claimed that electro-magnetism and suchlike forces have a major part to play in solar phenomena. Since then moving pictures of the solar prominences have revealed phenomena, hitherto unseen, which are said strongly to suggest the activity of electro-magnetic forces.

Mr. O'Connor's reference to vortical and spiral motions in Cosmic and atomic phenomena is particularly interesting in view of the importance attached to them in the Esoteric Philosophy. While the vortical movement is one of the oldest conceptions of Greek philosophy it is really an echo of the far older archaic wisdom, wherein it is found in the Tibetan teaching about "Fohat," the dynamic energy of Cosmic Ideation. H. P. Blavatsky defines Fohat as the intelligent guiding power in all manifestation, the "Thought Divine" transmitted and manifested through the "Dhyana Chohans," the Architects of the visible world, the mysterious link between Mind and Matter, the animating principle electrifying, as it were, every atom into life. Christian theology called such Intelligences Archangels,

Seraphs, and the like. She says Fohat is the key to Occultism and that it unriddles many mysteries of the Egyptian, Chaldaean and Indian religious philosophies. Quoting from the archaic Stanzas of Dzyan, on which *The Secret Doctrine* is based, she writes in regard to the "circular and spiral" action of Fohat:

FOHAT TRACES SPIRAL LINES TO UNITE THE SIX TO THE SEVENTH [the inner to the outer]. . . .

HOW DOES FOHAT BUILD THEM? [the worlds]. . . HE MAKES BALLS OF FIRE, RUNS THROUGH THEM AND ROUND THEM, INFUSING LIFE THEREINTO; THEN SETS THEM INTO MOTION, SOME ONE, SOME THE OTHER WAY. THEY ARE COLD — HE MAKES THEM HOT. THEY ARE DRY — HE MAKES THEM MOIST.

THEY SHINE — HE FANS AND COOLS THEM.

THUS ACTS FOHAT FROM ONE *Twilight* TO THE OTHER DURING SEVEN ETERNITIES. — *The Secret Doctrine*, I, 118, 144

The cycles of evolution, of involution, of reincarnation and other forms of reimpodiment, are also connected with the activity of Fohat in "running circular errands," a quaint though expressive archaic expression of the Stanzas of Dzyan.

THEOSOPHY AN OBJECTIVE IDEALISM — *Abbott Clark*

Among philosophies, Theosophy is an Objective Idealism an Idealism because it recognises the fundamental Reality as spiritual and teaches that all manifestation, spiritual as well as physical, inner as well as outer, is guided by Divine Ideation. Yet it is not a pure Idealism, because it acknowledges the objective world to have a relative or transitory reality — for to beings in a manifested world objective things are very real while they last.

The Universe is one living, throbbing, vibrating whole: Divine in origin, essential nature, and destiny. From the One Divine Reality all manifestation proceeds as an emanational unfolding. From plane to plane, from world to world, and from loka to loka, the process is a condensation from Spirit into matter, from reality to illusion, on the descending arc, until matter predominates over spirit and the beings enmeshed in the material spheres suffer the limitations of matter with its "pairs of opposites" — including intense oscillations from pleasure to pain, from joy to sorrow. The material worlds are the "hell" worlds, and the more material the state the lower the hell.

On the returning or ascending arc the process is reversed. From the lowest material sphere to the highest spiritual worlds is a succession of awakenings. From state to state, from plane to plane or world, the transition can be likened to a series of initiations or awakenings from a lower to a higher state, from ignorance and illusion to a greater and ever greater realization of Truth and Reality. There is an ever-growing expansion of consciousness, a quickening of perception, and an increase in intelligence. There is a greater development of Individuality, a greater nobility of character, a larger sympathy and more universal love. There is an

ever-increasing degree of the power and freedom of the Will, as man rises above the plane of contention, antagonism and hate, into love and peace, into harmony and co-operation with the universal Divine Order. During the long process of evolution the man, or Monad, passes from the purity and innocence of ignorance to a greater purity of enlightenment and wisdom, from the status of an elemental workman to that of a cosmic creative Architect.

As the objective and the subjective become one, the ideal becomes the Real, the Maya is resolved, the consciousness attains Truth and Reality.

The Theosophical Forum

TIME, DURATION, AND THE ETERNAL NOW (1) — G. de Purucker

The main thing to remember about Time is this: that it exists, but *is not* in the absolute sense. That which *is* in the absolute sense is Duration. What is the distinction between Time and Duration? Time like all things in manifestation is relative and is divisible. Time has past, has present, has future, and these three are distinct each from the other twain. Duration has no divisibility. It has no past, it has no future, and consequently there is no distinctive time present. But there is what we in our feeble language call an Eternal Now. Oh, how difficult it is to describe this, and yet it is so simple to catch the thought.

For instance, the Romans lived and suffered and joyed and died and strutted their little ways upon the stage of life in their time, as Shakespeare said. But they are now gone. That is ended. Yet in Duration those Romans are just as much alive now as they were then, for all exists in an Eternal Now. Similarly with us of the present; and we look to the future as something that is coming. Time in our consciousness has an effect of distance, which it has because our minds are relative. But in Duration that future is here now.

For instance, if my mind, if my thought, if my consciousness, were now at the present instant functioning in Duration, I would not see things, such as the Romans of the past, dead, gone forever — then ourselves here now, and something unknown to come in the future. But functioning in Duration all things would be present in my consciousness with me now: What we call Past, what we call the Future, what we call the Present, would be with me now, and not only those things, but all the Now of infinite Space, and endless, frontierless Duration.

Time exists most emphatically, it is an illusion, a maya, which merely means we find it very difficult to understand it and do not understand it exactly as it should be understood; but that is not time's fault, that is our fault. Our understanding is too weak to grasp it as it is, as it exists. Therefore, we call it a maya to us. In English we say an illusion. Yes, but illusion does not mean something that does not exist. If it did not exist, obviously it would not be an illusion. It means something which deludes our understanding, an illusion or a delusion to us.

Now you know Newton, as they now try to point out, had an idea that Time was an absolute entity, like Space, and Matter; and that Time as an absolute entity was in actual movement, flowing was the word, flowing out from the past into the present into the future. The scientific philosophers of today have rejected that idea. They say it is all very well to look upon past, present, and future, as easy, convenient ways of doing our daily tasks, of understanding the life around us; but it is an unreal thing. Time is not an absolute entity. You ask then, what is the absolute entity? They will say it is the space-time continuum — about which there is a lot of truth, for they have at last welded together in one thing, Space and what we call Time; and both of these are what we call Duration. For Duration is Space, and all its manifestations are Time, in Time, of Time.

Many illustrations have already been given this evening by the different speakers to show us how Time is illusory to our understanding. When you are happy, time passes quickly. When you are a child, time passes very quickly, or terribly slowly, depending upon the mood of the child. As you grow older, time just flows by, or drags, depending upon your mood. Therefore what is Time itself? It is the functioning of consciousness, in the present case our human consciousness, and our human consciousness is an attribute of what we call the space-time

continuum of Cosmic Infinitude.

Now I wonder if you are much wiser after all this philosophical discussion! I can tell you this though. There is a way of becoming conscious of Duration *per se* — when the consciousness seems to be taken right out of Time. It is something you cannot describe. You have to be it for the time being to understand it. And yet I wonder how many of you have not had this experience, where at the instant between dreaming and waking, or just before falling asleep, or perhaps during a fainting-fit or just before or after it, when all the attributes of Time suddenly have vanished, and you are conscious only of utter immensity, utter reality, and timelessness, and everything has vanished that is comprehensible to the brain-mind; very understandable, however, by the intuition. And this raised to the *n*th degree, i. e., into the pure unadulterate consciousness of the spirit within, where all wisdom and knowledge and vision are, is what the Hindu yogins mean when they talk about sambuddhi-samadhi, or simply samadhi sometimes. And when the consciousness is fixed in this state that I have just touched, the Buddhists call it Nirvana. Do you want to know why? Nirvana means "blown out." Do you know why? Because of just what I have described. All the lower attributes of the personal ego have sunken into latency, have gone, or have been surmounted. Your consciousness is for the time co-extensive with the Universe. Therein there is no consciousness of the movements and changes of things combined with the psychological interplay of attributes, with these together producing division or sense of time; the procession of events has passed out of the picture, for the consciousness has risen above these events of manifestation, and you are now in timeless Duration.

As a mere illustration of how illusory time is — and please remember that such an illusion does not mean that it is

nonexistent, for if it were non-existent there would be no argument about it — I would recall to those of you who have had dreams, vivid or vague, how curiously time and its phenomena seem to change in these dreams. It is a well-known fact of psychology that in dreams, or even under the influence of some drug, the events of a life-time seem to be condensed within a few moments; or contrariwise, what would in waking, feeling life take but a few moments, can in these sub- or super-normal states be so stretched out as to cover years. It is the same consciousness which experiences these extraordinary visionings, and thus "Time" in any of these states or in the normal Jagrata or waking-state seems to the experiencing consciousness just as "real" as any other of its experiences in and with Time.

These facts lead the reflective mind almost instantly to see that it is the experiencing consciousness which really is the time-maker, weaving this making out of the stuff of timeless Duration, which in a true sense is identical with the essence of Consciousness itself. Many a drowning but later resuscitated man has had all the events of his lifetime pass in a rapid panoramic vision before his consciousness; the whole procession of events which originally took years to experience now flash before the mind's eye in a few moments of clock-time, and yet the experiencing consciousness is cognisant of no incongruity or unconsciousness about all this.

Time, therefore, when compared with Duration, is something like extension when compared with Space. Time is a phenomenon of Duration, just as extension is a phenomenon of Space, and in both cases Duration and Space are realities or noumena, and Time and extensions are the phenomena or illusions, in other words, the maya, in each case.

Remember also that there are collective mayas, such as we human beings ordinarily experience as when all human beings

on earth have the same time-consciousness of day or night, or a group of men and women will have the same consciousness of an hour passed in a theater, or on a picnic, or in a train, or a week at sea, etc., etc.

FALSE TIME AND REAL TIME — *H. T. Edge*

Dr. J. W. Dunne has written a new book, *The New Immortality* (1) which is a continuation of his previous books, *An Experiment with Time*, and *The Serial Universe*, reviewed in our numbers for May and November, 1938. But it is much briefer and in more popular form, and the author must be congratulated for having made things as clear to the ordinary understanding as it is possible to make such a subject. But of course it will be necessary that the book should be studied through, since we cannot condense what is already a condensation.

It will be remembered that Mr. Dunne in his previous books speaks of an indefinite number of different orders of time, moving relatively to one another; but here, for simplicity's sake and as a first step, he limits himself to two, which he calls false time and real time. The false time, that which we wrongly call time, he represents as the traveling of a point of attention along the field of the real time. The present-moment view which we have of a thing is an abstraction from reality. The reality is four-dimensional, and we are to conceive ourselves as three-dimensional beings traveling through this four-dimensional world. Here we may appositely quote from *The Secret Doctrine*:

Time is only an illusion produced by the succession of our states of consciousness as we travel through eternal duration. (I, 37)

What we call time therefore is a sort of spatial dimension, or, since it represents a velocity, the term "vector" may be more applicable. Past and future events exist in the real time, but we classify them as past and future according as we have left them behind or not yet arrived at them. This view of the world has a

notable bearing on the philosophy of materialism, as shown in the following quotation:

If you mistake the hybrid thing of which I am speaking for real time, you will come inevitably to the conclusion that everything in the universe is transient and rushing to destruction. In real time the exact contrary is the case. Everything which has established its existence *remains in existence*. A rose which has bloomed once blooms for ever. As for Man, he is not accorded distinctive treatment; he merely remains with the rest.

This is the basis of the new immortality. This immortality is not a condition upon which we enter suddenly at death, as not having been in it before. It is a condition which exists now, but which we have overlooked. It is quite in accordance with the beliefs of Theosophists that immortality should be thus regarded.

The mistakes made by physicists, according to Mr. Dunne (more fully explained in his *Serial Universe*) are largely due to their having confused the false time with the real, confused the abstraction with the reality from which it was abstracted. How many vexed problems can be cleared up by correcting this mistake is a matter too deep to go into here, but we understand that it has already profoundly impressed some competent scientific and philosophic thinkers.

One is glad to notice that Mr. Dunne complains of the absurdity of requiring people to *prove* the postulates which they have *assumed* for the purposes of an argument.

To demand that a writer on problems which are based upon the acceptance of space and time as elementary indefinables shall begin by denning either term, is to demand that he shall abandon these as terms, discover

something more fundamental than either, and proceed to discuss a different problem.

This logical error is one of the most fertile sources of futile logomachy.

The first part of the book is devoted to "The two Nows," which is a way of naming the two sorts of time; one is a moving ever-changing now; the other is a fixed and unchanging now. Birth and death, says the author, are not episodes; they are states; they are there permanently in the real Now. We are three-dimensional beings with a four-dimensional outlook. We have at least two selves, one of which is the owner of the other. This is implied in the term "myself."

A good deal is said about the dream state. When we fall asleep, our senses cease to act, and our moving point of attention is no longer chained to its direct line; hence it becomes free to wander over the vast range of experiences, past, present, and future. But, not being accustomed to such a state of affairs, we stumble about and mix things up, so that events separated by lapses of time are seen together. If it be objected that this is a state of illusion, Mr. Dunne asks us wherein is this state more illusory than the waking state; and further reminds us that, in thinking of a dream, we are comparing a present experience with a mere memory — an unfair comparison; we should rather compare our memories of dreams with our *memories* of waking experience.

There is one place where the author says what will remind Theosophists of certain after-death states which are described as subjective or illusory. When liberated from the tyranny of the present moment, either by dream or in some other way, we can hold apparent communion with our loved ones. And, what seems best of all, these loved ones are far more agreeable than they were in life, for they respond to our every wish. But here comes

the hitch: the reason they are so facile and complacent is that *we have made them to order*. And further, though we seem to be with our friend, yet our friend is not with us; he is enjoying a little paradise of his own. When we meet on earth, the attention of both parties is focussed on the same instant of pseudo-time, and there is a true meeting. But in this other state —

You may hear again the spoken words, you may receive and give the same caresses. But the attention of that other may not be there. In that case there is no *meeting*.

This may sound discouraging, but there is a remedy, a sure and safe one. It is the old medicine — *escape from self*.

To avoid or to escape from that, you must be willing to surrender some of your sovereignty. You must be prepared to build to please others. Where there is unselfish love there must be obviously the required measure of agreement. Then you will meet very fully that other whom you seek. You will encounter once again that difference in outlook and desire which makes that other other than you. You two will *do things together*. Your solo will cease and become part of a duet.

And elsewhere we read that "God is the escape from Self. . . . He is Love. But he is not a distributor of rewards for "virtues" and of punishments for "iniquities." "

But the author does not see why we should not reach these conclusions by way of mathematics; nor did Pythagoras. Perhaps it is a fault of our times to consider mathematics in a derogatory or a jocular sense.

We regard these books of Mr. Dunne's as part of a movement now going on, by which we are escaping from what might be called a one-plane view of the universe. The universe as conceived by

science has been a picture correlative with the physical senses. But this is only a partial picture, a cross-section of the universe, as some might call it. It has been found insufficient to explain the facts of experience. Science has found it necessary to go beyond it; and we have now so much evidence of supernormal faculties that it is no longer possible to explain it away. We have to admit that, if our physical senses can become inactive, our mind may thereby be enabled to function in another way, to contact the universe through other channels, and thus to make for itself a new picture of the universe, a new form of objectivity. This, in Theosophical language, would be called planes of consciousness and planes of objectivity corresponding thereto. Mr. Dunne's method of approach is original and highly suggestive. He has put his finger on a common logical error regarding "time," which many must have felt without being able to analyse; he has shown, as others have done before him, how science has been giving a fictitious reality to abstractions.

The Theosophical Forum

ANSWERS TO QUESTIONERS — *William Q. Judge*

[Under the above title Mr. Judge in 1887-8 conducted a column in his magazine *The Path* where under the pen-name Zadok he answered questions from Theosophists and inquirers. Beginning with the February issue of THE FORUM these questions and answers are being reprinted in response to many requests. — Eds.]

Is it well to cultivate the intellect at the expense of the heart? Do we not pay too much attention to intellectual progress, and in so doing allow the Heart-Mind to wander where it may?

It is not wise to cultivate either at the expense of the other. Each alone will end at the same place — The Threshold. Both are excellent means for the manifestation of that which is higher than either, when cultivated to their highest in unison. Both are useless after a certain point, except as tools for truth. Metaphysics, logic and emotion all end at a dead wall.

Do not the words and teachings of Jesus, taken in their esoteric sense, point one {the} way to the Theosophic Path?

Taken in the sense he intended the people to take them, they lead to *the way*. Taken in the sense in which he desired his Disciples to receive them, they are teachings upon *the way*. Taken in their esoteric sense — as he knew them — they *are the way*. Were the wisdom of Egypt and India to-day blotted out from both the seen and unseen worlds — the true seeker would find in his teachings, *when rightly studied*, all the teachings of Isis and Buddha. As he received his instruction from Egypt, heired from India, it is more than probable that esoterically his teachings are identical with both.

Will the Devachanic period form an interruption to work for

humanity in the case of one devoted to this during earth life? Is Devachan then a rejuvenating, strengthening period necessary for us while in the bonds of flesh, and is the Elixir of Life the only escape from this egoistic period? May an answer be given to this?

As the Devachanic period is a result of work for humanity — the true and pure devachanic state being only thus obtained — it should form no interruption to such work. It only does become such when the soul is selfish enough to prefer Devachan to a continuance of work for other men, and even then to a certain extent the soul continues its work. There is rest in Devachan, but not idleness. As this state is frequently entered and passed through while yet in the body, it should be an aid, not a hindrance, to true work. In truth it is a state of reward, but in that state no rewards are received. There is no state up to Nirvana that can be an obstacle to work for humanity for those who are devoted to that work. The Elixir of Life is the only means by which we can pass beyond both Devachan and the thoughts of it; the Magnum Opus is the only thing that entitles us to it.

Are the Astral and the lowest plane of mental life synonymous terms?

They are not. The impulses for all mental life originate beyond the Astral. The outer man with his mind interprets these as he conceives they should be. The lowest as well as the highest mental life may receive knowledge from the Astral, but it is not the Astral. All that all forms of mental life produce is indelibly impressed upon the Astral.

Is the "rising above the Astral" in effect rising above the stings and approbation of public opinion?

For us, there is no public opinion. We know neither sting nor approbation. Rising above public opinion is merely rising above

the material. Until men forget the material, they cannot rise above self. Until they forget self, they can not rise above the Astral: All things that please as well as those that distress men are in and through the Astral. Rise above both.

Whence come the visions seen just before dropping to sleep? They are uncontrollable — Sometimes unpleasant, and have increased since childhood, and since beginning the study of Occultism?

When we enter that condition called sleep, we open wide the doors and windows of the body or this house we live in, and the soul goes forth as a bird freed from its cage. In partial unconsciousness or falling into sleep, the body has, to a great extent, ceased to act, but the brain is still sensitive or receptive to the pictures or impressions of the Astral. Of the lower principles the Astral is the last to cease action either in sleep or death. The brain is its instrument. In the partial somnolent condition, the pictures of the Astral are conveyed to the brain; through that the outer man realizes and beholds the visions. If he were fully asleep these visions would be dreams. Precisely, as dreams, they may be either pleasant or the reverse. Like dreams they are uncontrollable by the ordinary every day mortal. The Occultist being master of himself beholds only that which he desires, either in vision, or dream, or neither. As one makes himself more sensitive to impressions from the Astral when and after he begins the study of occultism, visions and dreams will increase in frequency for a time.

A most perplexed individual is writing to you. I have been for three years endeavoring to study Theosophy. I have heard lectures, have read an immense amount of literature devoted to that cult, from the sages of old down to the Sinnetts, Olcotts, and Blavatskys of the present day. I have conned the Yoga Philosophy and I read THE PATH. Light on the Path aids me not, nor does Bhagavad-Gita, and why?

Because I am yet without the first steps towards practice. (Surely Theosophy — like other sciences — must have SOMETHING practical about it?) Guide me with your friendly hints. Imagine me alone in a room. How to commence? Show me the first step upon the practical ladder! All I have heard and read seemeth to me so elaborately unintelligible that I lay it aside and beg you to instruct me in my Theosophical ABC. Astral Light! Is it a figurative light, i. e. Revelation? or is it a light, as electricity — the Heavens — coal — gives light? If abstraction (into insensibility) is necessary, can you instruct me upon Hypnotism (self mesmerism)! "A shining object" is advised to stare at! A mirror is a shining object, for instance. But of what avail to stare at a mirror and see reflected ugliness!

You say that for three years you have been endeavoring to *study* Theosophy. Such being the case, you will meet with but little success. Divine Wisdom can not be a subject for *study*, but it may be an object of *search*. With the love for this same wisdom uppermost in our hearts, we ask you if it would not be wiser to lay aside the *study* of so called Theosophy and study yourself. Knowing yourself you know all men, the worlds seen and occult, and find Theo-Sophia. One cannot absorb Theosophy as a sponge does water, to be expelled at the slightest touch. Our conception of Theosophy is apt to be based upon the idea that it is an especial line of teaching — a larger, wider, and greater doctrine than others perhaps, but still a doctrine, and therefore limited. We must bear in mind that the true Theosophist belongs to no cult or sect, yet belongs to each and all; that he can find the true object of his search equally as well in the Hebrew bible as in the Yoga philosophy, in the New Testament equally as well as in the Bhagavad-Gita.

You say you have "conned the Yoga philosophy." This is not enough; merely to "con" it is not to know it. It is in fact a most practical system (if you refer to that of Patanjali), and one that

will meet all requirements you have in the way of difficulty; for it is one of the most difficult. It is not possible for you to judge its merits without practice: and it gives full directions. If for three years you study and practice it — aye for one year — you will find that you need no other. In these matters there is no child's play nor the usual English and American method of mere booklearning, — we must absorb and work into the practice and the theory laid down, for they are not written merely for the *intellect* but for the whole spiritual nature. There must be within the man something which he already knows, that leaps up and out when he scans the books of wisdom; a thing already existing, which only takes an added life or confirmation from books. True Theosophy has all that is practical, but many forget this: there is no greater system of practice than that required by it.

Desire wisdom; love all men; do your duty; forget yourself; let each thought and act of your life have for its aim the finding of divine wisdom; strive to apply that wisdom for the good of other men. If you search in every direction, Light must come to you. Let the place in which you now are be the lonely room you speak of, and seek to find in everything the meaning. Strive to know what they are, and by what governed or caused. This is the first step. Live your life with this ever before you. Purify your thoughts as well as your body. Reason all you can, feel all with your heart you may, and when intellect and heart fail you, seek for something higher. This is the A. B. C; it is enough for the present.

It is not Theosophy that is a science, but its application. It is not a "cult," for it covers and includes all.

The Astral Light is an actuality. It is not revelation, but a means through which that which causes revelation acts. Electricity, the heavens, all lower fires, are but the shadows of the Astral Light, just as the Astral Light is but the darkness of the Ineffable Light.

Abstraction into insensibility is not intended. If it had been so intended, it would be unnecessary for us to be in these bodies. If you can forget yourself sufficiently — forget that you exist as a human body, you will not need to stare at a mirror; but so long as you realize, when staring into a glass, whether you be pretty or ugly, you can not reach Celestial sensibility or terrestrial insensibility.

Hypnotism is the controlling of other personalities. Under this you would be but a puppet for the thoughts of another. Your outer self had better become a puppet for your own thought.

We seek to make the body alive, not to kill it.

The Theosophical Forum

THE MEANING OF EASTER

Try to keep in your thought the essential meaning of Easter as the time of rebirth, regeneration, resurrection. No man or woman, pagan so called, or non-pagan, non-Christian or Christian, can understand the meaning of Easter, the Great Day as the ancients called it, and the symbolic mythos of the risen Christ in all its beauty, who has not himself, at least to some extent, undergone within himself the resurrection.

Easter is an appeal to men to change their lives upwards, to bring out the Inner Buddha, the Christ glory, from within. When a man can do this he is great whether he is known or unknown, high placed in social station or a humble peasant. He is then a living example of an imbodyed divinity, a Christ-like man, as the Christians say, an imbodyed Buddha as they say in the far Orient.

That is the teaching of Easter. Let us resurrect ourselves from the tomb each year.

— *From a talk given by G. de P. in the Temple, Point Loma, April 17, 1938*

WHEN THE SLEEPER AWAKES — *Marjorie M. Tyberg*

Resolve to be thyself; and know, that he

Who finds himself, loses his misery.

— Matthew Arnold

Every year is enacted the ancient marvel: that part of life which has withdrawn to the invisible, returns, and tree and plant burst out in leaf and blossom. Every morning this ancient marvel is performed when the Self which withdrew to its invisible bourne returns to resume physical body and waking life. With every child that is born there is the marvel of an infinitesimal seed coming to manifest as infant, youth, and man. But what is that which is awake throughout the whole cycle? What is the Unseen which produces the visible, the bodily? Are we, the day-selves, asleep, who know it not? Truly, the Great Awakening for us will be when we know ourselves as the Self who put forth Spirit, Soul, and Body, and abides, watching and waiting for the sleeper bound in the palace of form to awaken to the day of Self-consciousness.

That Self has in the past won power to send forth rays of Itself, seeds of humanity on a planet as it begins its cycle of life, to come to flower in godhood. For planets, too, have their periods of rest and withdrawal, followed by return to material form and physical activity. The Moon died, but its seeds of life remained in space and with a planetary dawn these awoke, we among them, and began our day on our new Earth-home. Humanity is the Earth-child, human from the first, in "structural intent," even as the human embryo is recognised to be.

There is co-operation in the Universe. The Sun, Moon, Stars, and Planets, combined to build Humanity, and when a form befitting

had been prepared, latent mind was awakened by superior hierarchies of beings, the young Humanity's Guardians. Science and history have told us of the evolution of form and something of what mind has done for man; but they have not yet told, and evidently cannot tell us what happens when the cycle of destiny turns upward, and latent *divinity* has its turn to hold sway.

This does not look likely at present, does it? When fourteen of the known civilizations have gone down, and almost all the conditions that prevailed when they fell are just about what we read accounts of in the daily newspapers; when fear, nerve-racking uncertainty, distrust of human destiny, are expressed generally, the future looks black indeed. But all this crumbling is but making way for the new that is to be born. The poet Lowell was wise when he wrote in "The Cathedral," "Change is the mask that all continuance wears." The Spirit and Divinity in man are waiting to take command and direct the activities of the New Day.

This is to take place on Earth: Humanity is stationed on Earth at present. There will be no escape to a brighter star, to a heavenly home of eternal bliss. The ancients tell us that death is a stairway reaching to the stars; but with every rebirth we step down and back to Earth, to be human here, even as the violet will be a violet next spring, and not an astronomer. Sleep may be a quick ascent to the stars, but there is as quick a descent, and we wake where sleep overtook us the night before. All this is familiar to us but full of meaning not yet realized by us.

What is not familiar to us is the program for Humanity's New Day on Earth, that Day when the Divinity within each of us, that Self of Union and Will, shall, on the luminous upper arc of our destiny, express itself in the relations and institutions of life on Earth.

The attributes of this Divine Self are Peace, Power, Beauty, Truth,

and Wisdom. They dwell in that Inmost Self, which even the most modern thinkers are now bidding us seek. How would it help us if that Self, which has won consciousness of divinity and knowledge of the cosmic pattern of life in long ages of planetary, solar, and starry experience, were in command, were encouraged, invoked to pour down through the purified channel of mind and feeling its wisdom and light? Let us picture it.

If you knew that you are, in your inmost, and that I am, in my inmost, a divine being waiting to manifest, and I too knew that you and I are, in our inmost, divine beings, would there not be a spiritual rock of ages on which we could stand, a common ground of divine origin, of hope and interest and purpose, firm enough to support us in working out our destiny as individuals?

As individuals it must be; individuals so much our whole selves that we can rejoice in the diversity of mankind, inevitable because there is in each of us an essential characteristic, a creative individual waiting to manifest fully. Picture us as so truly ourselves that we want others to be themselves, to enjoy what they can add to the tapestry of life. For, not unison but harmony is the highest ideal, and only conscious individuals can unite to produce the cosmic harmony that is to be. The less developed do not unite, they merge, and we have herd-consciousness and the chance for mob-psychology to be used in exploiting the less evolved entities. Harmony is never born from herd-consciousness. If the performers cannot play their own instruments there is no music.

We must learn to differ without dividing. Why not believe in new and happy combinations and associations of individuals aware of their powers and possibilities? And do you believe that if human minds actuated by selfish desire for possessive power and material advantage over their fellows can devise means that

threaten wholesale destruction of the human race — do you believe that human minds illumined by light from the Divine Self cannot conceive some godlike, friendly, convincing way of dissolving human differences? It is unworthy, it is unholy, to hold so limited a view of human possibilities.

What makes man human is the power to control, to restrain harmful, separative feelings, thoughts, speech, and acts. What strife will be avoided when this power of inhibition, when spiritual will, is used, *not* to build these barriers of misunderstanding and bitterness. The exercise of this power liberates a new sense of proportion, a fresh glimpse of realms of activity under our own control that exhilarates, that brings spiritual humor, and a rich and harmless zest to life.

It is said, too, that the joy, the calm, the peace and certainty, of the true mystic, may be the common religious experience of humanity in the future — that inner reconcilment, that stilling of the transitory, doubting self by the enduring divine inner Self, which has blest those of whatever religion who have sounded the depths of their own natures. It is said too that the realms of beauty and meaning and power to which artists, poets, musicians, and inventors have occasional access, may become the common field of vision of Humanity in the bright future. What boundless possibilities for the operation of invisible, integrating, non-violent influences in that meeting-place where Spiritual Power, Love, Truth, Beauty, and Harmony abide.

The gift of Theosophy to Beauty is the cosmic framework that reveals man a child of Divinity, fostered and guided by Spiritual and Divine Hierarchies of Sun and Stars, who watch over Earth and us. The Cosmic Myth — myriad forms of which have nurtured art and literature and religions in all ages — lifts all conceptions of life and truth and beauty — and duty — to higher

levels of cooperation, consciousness, and creative realization. It is this Truth which, once apprehended, will form the basis for world-unity, for the new social imagination, for purer art, greater poetry, wiser living, power to call upon resources of inward attainment in the regulation of human affairs. In this Awakening to the Self we may be laggards; or, we may be adventurers in cosmic ideas, leaders in the conquest of the spiritual frontiers within, and Self-Discoverers in this cyclic dawn of a New Day for Humanity.

The Theosophical Forum

H. P. BLAVATSKY SPEAKS FOR HERSELF

Paracelsus — the Most Wondrous Intellect of his Age

As the dawn of physical science broke into a glaring day-light, the spiritual sciences merged deeper and deeper into night, and in their turn they were denied. So, now, these greatest masters in psychology are looked upon as "ignorant and superstitious ancestors"; as mountebanks and jugglers, because, forsooth, the sun of modern learning shines to-day so bright, it has become an axiom that the philosophers and men of science of the olden time knew nothing, and lived in a night of superstition. But their traducers forget that the sun of to-day will seem dark by comparison with the luminary of to-morrow, whether justly or not; and as the men of our century think their ancestors ignorant, so will perhaps their descendants count them for *know-nothings*. The world moves in cycles. The coming races will be but the reproductions of races long bygone; as we, perhaps, are the images of those who lived a hundred centuries ago. The time will come when those who now in public slander the hermetists, but ponder in secret their dust-covered volumes; who plagiarize their ideas, assimilate and give them out as their own — will receive their dues. "Who," honestly exclaims Pfaff — "what man has ever taken more comprehensive views of nature than Paracelsus? He was the bold creator of chemical medicines; the founder of courageous parties; victorious in controversy, belonging to those spirits who have created amongst us a new mode of thinking on the natural existence of things. What he scattered through his writings on the philosopher's stone, on pigmies and spirits of the mines; on signs, on homunculi, and the elixir of life, and which are employed by many to lower his estimation, cannot extinguish our grateful remembrance of his general works, nor our

admiration of his free, bold exertions, and his noble, intellectual life."

More than one pathologist, chemist, homoeopathist, and magnetist has quenched his thirst for knowledge in the books of Paracelsus. Frederick Hufeland got his theoretical doctrines on infection from this mediaeval "quack," as Sprengel delights in calling one who was immeasurably higher than himself. Hemman, who endeavors to vindicate this great philosopher, and nobly tries to redress his slandered memory, speaks of him as the "*greatest* chemist of his time." So do Professor Molitor, and Dr. Ennemoser, the eminent German psychologist. According to their criticisms on the labors of this Hermetist, Paracelsus is the most "wondrous intellect of his age," a "noble genius." — *Isis Unveiled*, Vol. I, pp. 51-2

"The will," says Van Helmont, "is the first of all powers. For through the will of the Creator all things were made and put in motion. . . . The will is the property of all spiritual beings, and displays itself in them the more actively the more they are freed from matter." And Paracelsus, "the divine," as he was called, adds in the same strain: "*Faith* must confirm the imagination, for faith establishes the *will*. . . . Determined will is the beginning of all magical operations. . . . Because men do not perfectly imagine and believe the result, is that the arts are uncertain, while they might be perfectly certain." — *Isis Unveiled*, Vol. I, p. 57

Christopher Columbus discovered America, and Americus Vesputius reaped the glory and usurped his dues. Theophrastus Paracelsus re-discovered the occult properties of the magnet — "the bone of Horus" which, twelve centuries before his time, had played such an important part in the theurgic mysteries — and he very naturally became the founder of the school of magnetism and of mediaeval magico-theurgy. But Mesmer, who lived nearly

three hundred years after him, and as a disciple of his school brought the magnetic wonders before the public, reaped the glory that was due to the fire-philosopher, while the great master died in a hospital!

So goes the world: new discoveries, evolving from old sciences; new men — the same old nature! — *Isis Unveiled*, Vol. I, pp. 71-2

And now to the doctrine of Paracelsus. His incomprehensible, though lively style must be read like the biblio-rolls of Ezekiel, "*within and without.*" The peril of propounding heterodox theories was great in those days; the Church was powerful, and sorcerers were burnt by the dozens. For this reason, we find Paracelsus, Agrippa, and Eugenius Philalethes as notable for their pious declarations as they were famous for their achievements in alchemy and magic. The full views of Paracelsus on the occult properties of the magnet are explained partially in his famous book, *Archidaxarum*, in which he describes the wonderful tincture, a medicine extracted from the magnet and called *Magisterium Magnetis*, and partially in the *De Ente Dei*, and *De Ente Astrorum*, Lib. I. But the explanations are all given in a diction unintelligible to the profane. "Every peasant sees," said he, "that a magnet will attract iron, but a wise man must inquire for himself. . . . I have discovered that the magnet, besides this visible power, that of attracting iron, possesses another *and concealed* power."

He demonstrates further that in man lies hidden a "*sidereal* force," which is that emanation from the stars and celestial bodies of which the spiritual form of man — the astral spirit — is composed. This identity of essence, which we may term the spirit of cometary matter, always stands in direct relation with the stars from which it was drawn, and thus there exists a mutual attraction between the two, both being magnets. The identical

composition of the earth and all other planetary bodies and man's terrestrial body was a fundamental idea in his philosophy. "The body comes from the elements, the [astral] spirit from the stars. . . . Man eats and drinks of the elements, for the sustenance of his blood and flesh; from the stars are the intellect and thoughts sustained in his spirit." *The spectroscope has made good his theory as to the identical composition of man and stars; the physicists now lecture to their classes upon the magnetic attractions of the sun and planets.*

Of the substances known to compose the body of man, there have been discovered in the stars already, hydrogen, sodium, calcium, magnesium and iron. In all the stars observed, numbering many hundreds, hydrogen was found, except in two. Now, if we recollect how they have deprecated Paracelsus and his theory of man and the stars being composed of like substances; how ridiculed he was by astronomers and physicists, for his ideas of chemical affinity and attraction between the two; and then realize that the spectroscope has vindicated one of his assertions at least, is it so absurd to prophesy that in time all the rest of his theories will be substantiated?

And now, a very natural question is suggested. How did Paracelsus come to learn anything of the composition of the stars, when, till a very recent period — till the discovery of the spectroscope in fact — the constituents of the heavenly bodies were utterly unknown to our learned academies? And even now, notwithstanding tele-spectroscope and other very important modern improvements, except a few elements and a hypothetical chromosphere, everything is yet a mystery for them in the stars. Could Paracelsus have been so sure of the nature of the starry host, unless he had means of which science knows nothing? Yet knowing nothing she will not even hear pronounced the very names of these means, which are — hermetic philosophy and

alchemy.

We must bear in mind, moreover, that *Paracelsus was the discoverer of hydrogen, and knew well all its properties and composition* long before any of the orthodox academicians ever thought of it; that he had studied astrology and astronomy, as all the fire-philosophers did; and that, if he did assert that man is in a direct affinity with the stars, he knew well what he asserted. — *Isis Unveiled*, Vol. I, pp. 167-9

The unity of the universe was asserted by Paracelsus, who says that "the human body is possessed of primeval stuff (or cosmic matter); the spectroscope has proved the assertion by showing that the same chemical elements which exist upon earth and in the sun, are also found in all the stars. The spectroscope does more: it shows that all the stars are *suns*, similar in constitution to our own; and as we are told by Professor Mayer, that the magnetic condition of the earth changes with every variation upon the sun's surface, and it is said to be "in subjection to *emanations* from the sun," the stars being suns must also give off emanations which affect us in proportionate degrees.

"In our dreams," says Paracelsus, "we are like the plants, which have also the elementary and vital body, but possess not the spirit. In our sleep the astral body is free and can, by the elasticity of its nature, either hover round in proximity with its sleeping vehicle, or soar higher to hold converse with its starry parents, or even communicate with its brothers at great distances. Dreams of a prophetic character, prescience, and present wants, are the faculties of the astral spirit. To our elementary and grosser body, these gifts are not imparted, for at death it descends into the bosom of the earth and is reunited to the physical elements, while the several spirits return to the stars. The animals," he adds, "have also their presentiments, for they too have an astral body."

— *Isis Unveiled*, Vol. I, pp. 169-70

. . . although there have been alchemists before the days of Paracelsus, he was the first who had passed through the true initiation, that last ceremony which conferred on the adept the power of travelling toward the "burning bush" over the holy ground, and to "burn the golden calf in the fire, grind it to powder, and strow it upon the water." — *Isis Unveiled*, Vol. II, p. 349

. . . Paracelsus, the alchemists, and other mystics, meant by *mercurius vitae*, the living spirit of silver, the *aura* of silver, not the *argent vive*; and this *aura* is certainly not the mercury known to our physicians and druggists. There can be no doubt that the imputation that Paracelsus introduced mercury into medical practice is utterly incorrect. No mercury, whether prepared by a mediaeval fire-philosopher or a modern self-styled physician, can or ever did restore the body to perfect health. Only an unmitigated charlatan ever will use such a drug. And it is the opinion of many that it is just with the wicked intention of presenting Paracelsus in the eyes of posterity as a *quack*, that his enemies have invented such a preposterous lie. — *Isis Unveiled*, Vol. II, p. 621

But TRUTH, however distasteful to the generally blind majorities, has always had her champions, ready to die for her, and it is not the Occultists who will protest against its adoption by Science under whatever new name. But, until absolutely forced on the notice and acceptance of Scientists, many an Occult truth will be tabooed, as the phenomena of the Spiritualists and other psychic manifestations were, to be finally appropriated by its ex-traducers without the least acknowledgment or thanks. Nitrogen has added considerably to chemical knowledge, but its discoverer, Paracelsus, is to this day called a "quack." — *The*

Secret Doctrine, I, p. 297

Had Dr. Richardson studied all the secret works of Paracelsus, he would not have been obliged to confess so often — "we do not know" . . . "it is not known to us" . . . etc., etc. — *The Secret Doctrine*, I, p. 532

We, who unfortunately have learned at our personal expense how easily malevolent insinuations and calumny take root, can never be brought to believe that the great Paracelsus was a drunkard. There is a "mystery," and we fondly hope it will be explained some day. No great man's reputation was ever yet allowed to rest undisturbed. — *The Complete Works of H. P. Blavatsky*, Vol. IV, p. 177

For centuries the selection of Chelas — outside the hereditary group within the *gon-pa* (temple) — has been made by the Himalayan Mahatmas themselves from among the class — in Tibet, a considerable one as to number — of natural mystics. The only exceptions have been in the cases of Western men like Fludd, Thomas Vaughan, Paracelsus, Pico di Mirandolo, Count St. Germain, etc., whose temperamental affinity to this celestial science more or less forced the distant Adepts to come into personal relations with them, and enabled them to *get* such small (or large) proportion of the whole truth as was possible under their social surroundings. — *The Complete Works of H. P. Blavatsky*, Vol. IV, pp. 354-5

THE CHELA AND HIS GURU (1) — *Peter Flach*

"Thou canst not travel on the Path before thou hast become that Path itself."

We find these words in *The Voice of the Silence*, and they embody the gist of chelaship. We must live the life, and live it truly, before we can really receive, or as our present Leader so clearly puts it:

You cannot receive anything from without before it is already within, awakened, aroused. Seek ye first the divine within yourself, cultivate it, evoke it, awake it, and just in proportion as you do this, you will receive from without, because you give from within. You cannot receive anything from without, until there is something within you to receive.

Hence we see that discipleship consists first and foremost in doing. How can the Teacher and Guru lead and teach us unless we bring forth those qualities slumbering within which can raise us to those high levels where we can reach him? The Kingdom of Heaven must be taken by force. Mere goody-goodness and irreproachable life is not enough. The chela must swim against the stream. He must work, work uphill. Will, irresistible, indomitable, can alone carry him upward. Only one who toils hard can ascend a mountain-peak.

But here, as everywhere, we have to try to use our common sense. The mountaineer who ascends too fast in order to reach the summit can very easily, especially when he reaches the high altitudes, overstrain himself and entirely wreck his endeavor. I think the same can also happen in chelaship. In his enthusiasm and will to reach the high and wonderful planes of chelaship, the

chela must carefully see that he does not draw upon himself more than his powers can withstand, and must also guard each step, or he may, like a mountaineer who does not probe the rock he is stepping upon, find himself plunging down a precipice. The narrow path of a chela is by no means easy going. The chela is exposed to all temptations. He must show his fitness to what he aspires at every corner, he must show that he has more of the spirit in him than of matter. He may fall, but he can also recover the lost ground if he has determination enough.

What is it that makes the climbing hard? What prevents the godlike qualities blossoming forth? It is the veils enshrouding the personal self, the concentration of thought and ideas around the individual personal, egotistic center. Living the life, or becoming the Path itself, is therefore a drawing away from the personal self, and a widening interest and love in all that is, or, to put it in other words: a right comprehension of the meaning of Universal Brotherhood, the Spiritual Brotherhood of all Beings; the fact that all beings are linked together, not merely by the bond of emotional thought and feeling, but by the very fabric of the Universe itself. The more this fact is realized and put into practical operation, the more are the veils preventing the inner light to shine forth, torn away. Thus we see the wonderful paradox: the more we are working and living impersonally to help other beings, without an egoistical motive, the more we in reality gain for ourselves.

There are as many ways of developing the slumbering qualities and organs in us as there are persons. It is here we need the help of the guru. The clear-seeing guru alone can say what is good for each, taking into consideration his individual constitution, temper, mode of life, habit, character, etc.

The relationship between the chela and his guru is an extremely

sacred one. The guru is the giver of the inner Light and giver of the inner Life. Or as H. P. B. states in the "Book of Discipline":

To the earnest disciple the Teacher takes the place of Father and Mother, for, whereas they gave him his body and its faculties, its life and causal form, the Teacher shows him how to develop the inner faculties for the acquisition of the Eternal Wisdom.

But the chela must walk each step himself. The guru can only show him the way, guide him and help him to develop the latent spiritual potencies in his mind and heart. He himself must be the vehicle of the inner Light, must gain it. How do we best help a small child when it is growing up to find its bearings in life? Not by solving its small problems or shouldering all its difficulties but by helping and guiding so that it learns from experience. Thus it grows strong. It is the same in chelaship. The chela himself must walk each step.

The sacred relationship between the chela and his guru is based upon the highest virtues: Loyalty to the Teacher, Devotion to the Teacher and the complete fulfilling of all Duties to the Teacher. Why? Because the Teacher is the giver of inner Light and inner Life. Because the Teacher is taking upon himself a large responsibility and the Karmic consequences of his doing. In no way is the relationship of the chela toward the guru one of mental servitude or mental subservience. Emphatically, no! It lies on a high and sacred level. Nature permits no slavery in life. The guru's great purpose in leading and guiding the chela is *not* the development of the chela's slumbering faculties and powers, *only*, but to bring forth a new co-worker with Mother Nature, a new member of the Great White Lodge, working and striving to help humanity. Thus he guides and leads in wisdom and love but never is his effort bent to enslave the will of the chela. In fact, the

Masters look upon no mortal failing as so great in defect of right as that of bowing the conscience in mental servitude to the dictates of another. Their main purpose is to bring forth strong men, free-willing men, fit to co-operate in their great work for humanity.

Let us compare ourselves with small children, or those below us in scale of civilization. In so many ways our doings are inscrutable to them. The Masters are still higher above us than we are above the small children, and this is the reason we have such difficulties in understanding them. They live on a higher plane and look upon things from an entirely different standpoint.

In order to make it possible for the guru to lead and guide, the chela must cleanse his brain from any feeling for anything worldly, from hatred, anger, avarice, or passions. The guru then will be able to impress upon the chela's brain, and this is often the first mode adopted by the guru to lead the chela. It may often be done without the chela's knowing anything about it. What is the object of the training supervised and led by the guru? It is to bring forth and cultivate the chela's latent inner qualities and powers. It is to teach him that within him are the keys to wisdom, great wisdom beyond human description. Nothing really can come from without, every thing is within waiting to blossom forth. Within is the Path, and this Path is Himself — his Spiritual Self, his Divine Self, that part which is the root of his being. It is also the heart of the Universe. So when he has found his greater Self, his Spiritual Self, the Inner God, then he has not only found the Path which leads to the heart of the Universe, but he has found himself and it to be One.

When the inner eye is opened he shall have spiritual clairvoyance and the spiritual ability to see and to see aright; and in seeing to know that his seeing is truth.

I will conclude now with some words by William Quan Judge:

Friends, the struggle for the eternal is not in the daring deed nor yet in hundreds of them. It is the calm, unbroken forgetfulness of the lower self for all time. Begin it now on your present plane. You have within you that same guide that the Masters possess. By obeying it they have become what they are.

The Theosophical Forum

AWARENESS IN THE MOMENT AND THE DAY — A. Trevor Barker

All the great Teachers have laid stress upon the importance, not of envisaging an enormous period of time before you to do the difficult things of the spiritual life, but to pay attention to the little passing moments, the minutes and hours of each day. Therefore they taught: Fill the day full; watch over it, guide it; regard each single day as if it were the last day that you knew you were going to live. It has a wonderful effect upon the inner spiritual life, if we live each single moment with that awareness, that watchfulness, which has the feeling in it that after all we would not wish to leave an inharmonious impression upon those with whom we are associated, if at the close of the day we were leaving them not to return. It is an idea that is worth remembering and bringing to bear in every single moment and every single hour of the day.

WHAT IS THEOSOPHY? (1) — G. de Purucker

*Mr. President, Madame Chairman, Ladies and Gentlemen —
Friends, Companions, Brothers:*

This is the first time I have had the pleasure of addressing a Danish audience, and I have heard that Theosophy in your country is not unknown, that already you know something about it, and that is exceedingly good; but I venture to say that when minds come into an approach of the study of the god-wisdom which we call Theosophy, there is always something new to learn, something to get that will give comfort to the heart, more light to the mind.

If I were to ask you as individuals: "What is Theosophy, please?", do you think that anyone in this auditorium could give me a comprehensive answer? Could you tell me where it comes from, what it is, what its purposes and objectives are, and what we Theosophists are trying to do? I do not think so. And it is along these lines of thought that I will make my brief address to you tonight.

Now then, in the first place, Theosophy is a word which of course comes from the Greek, *he theosophia* to which we Theosophists love to add the adjective *ourania*, the divine god-wisdom of the universe. This is no revelation granted unto men by an extra-cosmic power whom men in reverence call God; but is wisdom concerning the Universe, its structure, its nature, its characteristics, its laws, its origin and its destiny, originally given unto the first human beings on this earth by divine entities coming unto infant humanity from other spheres in order to instruct these human children of the universe in the laws of right doing, right thinking, and therefore right and beautiful destiny.

Theosophy is not so much the wisdom of God, as it has been translated sometimes, as divine wisdom, god-wisdom, invented by no man, given to us by spiritual beings, and of which god-wisdom every great seer and sage in ancient times has been the voice to his age. These great men, Buddhas or Avatars or Christs, call them by what name we will or may, have been some of these sages and seers who have spoken to the children of men in language that they could easily understand, giving to them a divine philosophy of life, telling them what life is, explaining it, pointing out what the Universe is, pointing out likewise that we men and women are children of this wondrous universe which surrounds us, and therefore that there is no separation between all that is and us human beings.

You see what this means? It means that we are given ethics, morals, an ethical system based on the very divine heart of the universe, which as I have said in the West men with reverence call "God," but of which all the ancient sages and seers spoke, not in terms of names, but as the ancient sages of Hindusthan described it, simply *THAT* — *TAT*. So high a reverence had they for this divine heart of things, this divine heart of harmony, of infinite love and compassion, of cosmic intelligence, that they gave it no descriptive name such as men give to *things*, but simply said *THAT*. From *THAT* we come, back to *THAT* we go. We come out from *IT* again and are reborn as men to learn new lessons in life, to undo the mistakes of the past, to strengthen our characters; and thus as the ages go by, and we reincarnate time after time, we grow in wisdom and strength and character, our hearts expanding with love for all that is, and for our fellow-men, and our minds enlarging with what we learn — the knowledge that is stored within what men in the West call the Soul, but which we Theosophists prefer to call the Reincarnating Ego — two names for the same thing if you will.

Now when a man feels and knows, because of a philosophy of life which satisfies his intellect and purifies his heart, that he and his brother men and the Universe around us are all parts of one cosmic organic entity, an organism, a living being, which we call the Universe, then he has a basis for ethics which is scientific, philosophic, purely religious, that is, religion per se, not any one religion changed by men, modified by men, however good, but the Religion of the human spirit which seeks its home with divinity — therefore, the religion of intuition, of the human divine spark, which makes us all that is best in us. You see also that this gives us a firm basis for philosophy, for we start from a unity which the mind can understand, and the heart with its tender instincts can grasp. The truth that man and all Being are one, one in essence, apparently separated only in bodies: this is ethics; for instantly we see that when a man injures his brother, he injures himself likewise, for he injures the cosmic harmony, the cosmic unity. We see likewise in this wonderful verity, the fundamental unity of all beings and things, and that men are but inseparable portions of the infinite universe: a true basis for scientific thinking, for here we start from a fundamental postulate that all sane men must accept; for if man is different from the universe, then will someone please explain how it is that he is subject to its laws, and formed of the stuff of the universe? Any other postulate is impossible. Whatever is in the universe is in the man, in me, in you. Conversely, whatever is in the man is in the Universe. I have thought, I have conscience, I have intuition, I have feeling. Because they are here in the part, shall the whole have them not? Do you get it? The fact that the part has these, proves that the universe has them; for show me something which does not contain what a part of it contains? That is foolishness.

Deduction from this wondrous teaching of Theosophy: It means that the Universe is conscious, conscious of course in infinite and

varying degrees, but conscious; for from that consciousness of the universe we draw our consciousness. The whole gives to the parts. Because the man has consciousness, the ethical sense, therefore the universe is ethical, has what we men call consciousness. Is it possible that the part should have something which the All, the Whole, has not? Of course not.

These are some of the simplest teachings of Theosophy, given to us as I have already stated by spiritual beings ages and ages ago, given to the first human thinkers on our globe by spiritual beings from other spheres; and out of this primeval revelation of truth to men, were born as the ages passed, out of the Schools of the Mysteries, the different great philosophies and religions of the world — each one founded by some great sage and seer, like Jesus the Christ, Gautama the Buddha, Lao-tse in China, Krishna the Avatara, Sankaracharya the Avatara, and similar great ones in other lands, in other times. Each one spoke from the wisdom of the esoteric sanctuary, that great School of Wisdom of the Mysteries which exists today and has its branches in certain of the countries of the world.

The greatest one of these Schools is at present in a little known district of Asia, and we Theosophists in reverence refer to it as Sambhala, which is a Sanskrit name. There still beats the sacred heart of all mankind, so to speak, for there still live (and they teach their chosen pupils or chelas) the noblest spiritual intellects that the human race has ever known. We call them Masters of Wisdom, men of Christ-like life, of Buddha-like life, of Buddha- and Christ-like wisdom. They have their pupils, and from time to time one of these pupils is sent forth into the world as an envoy to teach men once again the age-old doctrine of the god-wisdom, of the *theosophia ourania*, the divine, the starry wisdom of the gods.

Such an envoy was H. P. Blavatsky, and the teaching which she

brought came directly from that Sanctuary, the Holy of Holies, the Sanctum Sanctorum of the human race which we Theosophists call Sambhala; and the message which she brought she called Theosophy. It is not new. It is as old as man. As I have told you, it was given to the earliest men by these spiritual beings from other spheres. In different ages it is called by different names. But the names are simply tickets placed over the Reality. The Wisdom is one, merely the terms by which it is given to men in different ages change.

Furthermore, and this I think is a very important point, dear friends: If you care to study, if you are really interested, in finding out that the statements that I have made to you tonight are true statements, then investigate for yourselves. Study, study the ancient religious and philosophical books of the world, from all countries; and beneath and behind the words and the terms, look for the body of ideas, the essential teachings. You will find them identical everywhere. That is Theosophy as taught today, as taught a million years ago in the past, as will be taught a million years in the future, as it is taught on planets other than our own circling around our own sun, as it is taught on the planets whirling in their orbits around other suns in cosmic space in the galaxy. Why? Because truth is truth, and what is true on our planet Terra is true on Jupiter and Venus, on Stella Polaris, on Canopus and Sirius, anywhere. That is Theosophy.

Now, in the Theosophical Society, dear friends, we have no dogmas, we have no creeds. We have a marvelous system of wisdom-teaching, the wisdom of the gods, Theosophy. But at this fountain of wisdom, from these doctrines, every Theosophical student takes what he or she can assimilate, can understand, is capable of receiving. Some men can receive some, other men can receive more. Other men can receive still more. Thus we have no dogmas. We have no creeds. We have no set forms of belief. Yet, I

do think — and I speak with reverence for the good people in the West who call themselves Christians — that there is no more religious man on earth than the true Theosophist. I think there is no more truly scientific thinker on earth than the Theosophist. I think there is no more philosophical mind on earth than that of the Theosophist. And you see the reason why. We have no creeds, we have no dogmas, our consciences are free as the winds of heaven. We are searchers for truth, hungering for it, and we have found where we may find it. And we have learned this wonderful truth: that before a man can take the wisdom of the gods, he has to train his life to be ethical, moral.

To me it is one of the saddest things in the world that the West has lost the ethical sense, very largely — I do not mean entirely, but very largely — and the reason is obvious also. Science has destroyed the religion of former days, so that today the Christian religionist must believe almost against the convictions of his mind, and therefore his nature is rent in twain, and that must mean suffering. And on the other hand, our science, wonderful as it is, is expanding and growing greater and grander every day, so that today scientific men are actually becoming Theosophists. Yet does science offer us anything upon which we can lean, rest, and feel assured that upon this ground we stand in permanence? No, for it changes from day to day, from year to year, and this is its basis. The scientists say that the greatest thing about scientific research is that it is growing; and it is so, and that is very fine. But can you find the truths of the Universe in something which is not even a system of thought, but is merely a growing and expanding understanding of the physical world around us? Obviously not. It does not teach us ethics. It does not satisfy that strong, tender religious instinct of the human heart, that man is the same as the cosmic spirit. It does not fully satisfy the inquiries of a man's mind; because as soon as we begin to study scientific doctrine, the

first thing we find is that it is continually changing, so that what was scientific dogma to our fathers, today is discarded. What is scientific truth today, five years from now will be past scientific history, old scientific books no longer studied. We shall have advanced beyond that! Do you see? And the consequence: religion today teaches an ethic of words, but gives you no proof that ethics are based on the universe itself. Science gives us no foundation for morals, for it does not understand them. Morals, the scientists say, are not within their sphere.

Philosophy? Philosophy in the West is but an infant, striving and struggling to attain a greater light, but an infant; and all the philosophical speculations of Western philosophy are but gropings, blind gropings, after light. Pathetic!

So, with our god-wisdom, having no creeds and no dogmas, in addition to being searchers for truth, philaletheians, we are likewise philanthropists in the Greek sense of this word, lovers of our fellowmen, lovers of the universe around us, seeing a wondrous mystery in a flower, sensing a religious doctrine in a star, looking into the eye of a fellow human being, seeing heaven there, or, it may be, a hell!

What are the objectives of the Theosophical Society? First of all I should think to give unto men these wondrous doctrines of our god-wisdom. Next, to keep alive in men their spiritual intuitions. Note these words: their spiritual intuitions — something which the West has forgotten the existence of, just as it has forgotten the sanctions of ethics; and just as the West thinks that ethics are mere conventions keeping us out of the police courts and out of jails, so the West today thinks that the intuitions of the human soul are too dangerous, too vague, to trust to. Theosophy tells you on the contrary that there is a way of cultivating the intuition of the human soul, so that it becomes a powerful factor in our lives,

so that by cultivating this intuition, this intuitive perception of truth, this inner vision, we gain wisdom ourselves. We do not have to go to the books of other men, we do not have to go and learn from others. We sense our oneness with divinity; and although we have Masters and Teachers and revere these, no Theosophist accepts any doctrine which is contrary to his conscience, and yet withal our god-wisdom likewise teaches us to revere the lives and teachings of the greatest spiritual intellects that the world has known, for we recognize as well as are taught that these have derived from wisdom, from divinity. Hence the teachings and the great books of these wise men of the past — as will be the case in the future — are wonderful torches of light to guide us on our pathway. Thus we revere the wisdom of the past, but realize that the understanding of it must come from the development of our own powers and faculties within.

The Theosophical Forum

THE CYCLE OF INITIATION — *Abbott Clark*

The Cycle of Initiation was the crowning glory of the work of the ancient Mystery Schools. It was not a ritual formulated by the brain-mind of man. It was instituted by wise Sages and Seers, highly developed spiritual men, in an effort to co-ordinate the initiate with the forces of nature, especially the higher spiritual forces. We all believe in the inseparability of Man and Nature, but the process of initiation has to make that unity a living dynamic reality, so that through that unity the initiate becomes a master of Nature and her forces.

The Sages have chosen the seasons of the year when the cosmic and solar forces favor this the consummation of the most sublime achievement of human evolution. The object of initiation, if successfully accomplished, is to raise man to the stature, nature, and dignity of conscious godhood.

The ancient Mystery Schools were not founded by primitive men magnifying the glories and mysteries of nature, as is described in the encyclopaedias and other learned and labored books on the subject. Quite the contrary. The Mystery Schools were founded by great spiritually and intellectually enlightened men for the purpose of retaining and preserving the instruction given to them by great spiritual and intellectual beings commonly called the gods, who descended on earth to inaugurate and give the primal impulse to the intellectual and spiritual evolution of mankind. The Mystery Schools were essentially and fundamentally ethical and moral. In them were stored, as an Ark of Safety, the teaching of the gods as to the origin, nature, mode of operation, and destiny of the macrocosm and the microcosm, man and his limitless self, the universe.

The Mystery Schools, especially the central one, were designed as an Ark of Safety in which the wisdom of the gods could be preserved and carried on from generation to generation of initiates, from age to age, through cycles of spiritual light and of materialistic darkness, to the present, and will continue onward to the end of human time, when man shall have fully achieved his evolution on earth and graduated from humanhood to conscious godhood. From time to time as cyclic law permitted and human intellect searched for truth, and eager, aspiring human hearts demanded spiritual light and help, Messengers were sent from the Lodge of Light to supply the wants and fulfil the needs of the time. Thus were founded the great religions and philosophies which have raised mankind to such degrees of civilization as the different ages have attained. The greatest of these Teachers were the religious and spiritual ones, called by men in their love and gratitude "Saviors". At the evening twilight of descending cycles all is done that can be done to sustain mankind through the dark ages. At the dawn of rising cycles — as at present in the West — more teaching is given out by the Lodge, and provision is made that Mystery Schools or College-Temples, Theosophical Universities, or some form of permanent esoteric bodies suited to the times, are formed, and in them it is provided that a succession of Teachers shall carry on the light from generation to generation, clarifying and amplifying the teachings, and giving out all that the intelligence and character of the age can understand and assimilate.

Into these Esoteric Schools were attracted the intelligentsia of the youth of the age, though the elders were not excluded, and there they received definite teachings on the science of the soul and of the inner causal worlds far more definite, complete and accurate, than modern technical science. They had a system of education that educes and unfolds the entire intellectual, moral, and

spiritual nature into full flower. A system more complete and efficient than has entered into the imagination of any modern educator or the best practice of any college or university. The esoteric discipline produced men with self-knowledge and self-control, and Christlike thoughtfulness for others.

There were many of these branch Mystery Schools, each suited to its time and place, and all radiating from the Central Lodge of the Brotherhood of Compassion. From them came thousands of the best citizens, men of talent, of genius, statesmen, and leaders, and teachers. The branch centers, Mystical Schools, College-Temples, Theosophical Universities all, were the life-giving heart and center of the civilization in which they lived. Sometimes these civilizations were sustained, through rising and falling periods, for countless thousands of years, and attained heights unimagined by us.

It is the noble destiny and sublime privilege and responsibility of the Theosophical Society to revive the knowledge of these lost mysteries of antiquity, and establish these centers of spiritual light and learning in the west where they will be the radiating heart and center of a new order of the ages, of a higher civilization in the occidental world. The Theosophical University is the first of these College-Temples. It is, and is to be, the radiant esoteric center of the occidental world.

For dynamic reasons the Cycle of Initiation coincided with the solstices and the equinoxes. The cycle begins with the Winter Solstice, December 21-22, when the sun reaches the southernmost point of his journey, and turning northward — is reborn as the saying goes. The exact moment of this last Solstice, the astronomers tell us, was December 22nd, 4:14 a. m. at Point Loma, 7:14 Eastern Standard Time, 1938.

Then follows the initiation at the Spring Equinox; then the

Summer Solstice; and the Autumnal Equinox. Each initiation has relation to and is in co-ordination with the cosmic forces of the season. The Winter Solstice is the season of the greatest of the initiations — when the Christs and Buddhas are born — spiritually born. Christmas is celebrated on the 24-25 of December through a shift in the calendar.

A few words about what initiation really means is important because there are those who make a pretense of selling secrets of initiation, and also because so much nonsense has been written on the subject. The process is one of accelerated evolution. In a sense it is terrible, because the slow work of ages is focalized and concentrated into three or fourteen days. The "tragedy" is depicted in many religions, mystery-tales, and hero stories, such as the Labors of Hercules, the Descent of Orpheus into the Underworld, the Crucifixion of Christ, and the trial of the Buddha under the Bo-tree.

In the Near East at the time of the beginning of the Christian Era, the initiate was laid upon a cruciform couch, though any comfortable couch would do, and was plunged into the "sleep of siloam," a deep spiritual trance, in which the soul, the thinker, the individual man himself, was freed from the chains of the body and the attractions of the earth. He first went into the underworld where he met all his own bad Karma congealed into objective form and focalized upon him in all its force and quality, and he had to face and overcome and dissipate it. Next he had to meet and overcome all the elemental forces of nature — forces that are natural and all right in their own sphere, but so far beneath the highly evolved individuality of man that they are evil and inimical to him. This "battle" is variously described, as in the Temptation of Jesus by the devil, and Gautama under the Bo-tree — a struggle from which the triumphant Siddhartha rose as the divinely illuminated Buddha. Having become master of himself

within, and of the elemental forces of nature without, he right there begins to practice his powers as a member of the Brotherhood of Compassion by ministering to the denizens of these nether spheres, "preaching to the spirits in prison." (1)

Now, master of himself, of the Underworld, and of Nature, his free spirit wings its way through the air-ways of the soul, along the "circulations of the Cosmos," to the Inner Worlds, the spiritual or causal worlds, to the "many mansions in my Father's house," or certain of the Sacred Planets, where he gains first-hand knowledge by actual experience, by becoming for a time a denizen of these Inner Spheres. In daily life man can aspire or pray or appeal for help to his Higher Self, to the powers within or above him; but in initiation the initiate can have no outside help. It is he himself, as a man, that is being tested; it is he himself that must have developed and become strong in his own inherent godlike qualities. He must now and henceforward be the captain of his own soul. Furthermore he must know what to do and where to go through the air-ways of the soul. For this he must have had a Teacher to impart to him definite technical knowledge during the period of his novitiate. He must now through his own definite knowledge and inherent power be his own pilot; he can have no benevolent hand of god or Master extended to him. No kindly Mercury or Pushan can act as psychopomp, shepherd of the souls of the dead, to guide him as the Monad has during sleep and death.

Having accomplished his journey through certain Sacred Planets he goes to the Sun, where he fully unfolds the solar qualities which we all have, and for a time he becomes a Sun-god, one of the Solar Logoi. Then he returns to earth by the same pathway through which he went, and rises from the "tomb" or couch or "cross" as a full Initiate, a Master of Life and Death, osirified, a Son of the Sun. He rises resplendent, radiant, with the light of

Divinity. No words are needed to tell who he is; his condition is self-evident by his presence. To put it into words, his condition is well described by the Cry of Jesus Christ on the Cross, rightly translated: O God, my God within me, how Thou dost fill me with glory!

The Theosophical Forum

ANSWERS TO QUESTIONERS — *William Q. Judge*

[Under the above title Mr. Judge in 1887-8 conducted a column in his magazine *The Path* where under the pen-name Zadok he answered questions from Theosophists and inquirers. Beginning with the February issue of THE FORUM these questions and answers are being reprinted in response to many requests. — Eds.]

Suppose persons have reason to believe they have found the beginning of the Way, and then find they do not care to investigate the mysteries of Occultism; that they are content to remain without knowledge on these subjects, though they found Truth through Theosophy, and that they are happy because they feel that whatever God orders in their lives must be right, whether it is pleasure or pain.

Suppose also that such persons, though having put themselves in a spiritually receptive condition, feel no weight of Karma, though willing to suffer to whatever extent is needed from it. Do you not think such persons may be deceiving themselves in thinking they are Theosophists, when they have lived many weeks in this condition? Do you think it harder for women to attain spirituality than men? and if so, still should they not strive all the more to obtain it? I know we should not avoid anything merely because it is irksome or uninteresting.

Do not Theosophists allow themselves to feel happy if happiness comes to them without their desiring it? Also why do Theosophists wish to avoid feeling pain or pleasure, if God orders the circumstances which produce them, after we have subjected our will to His? Please answer in your next issue of THE PATH.

Men attach an erroneous meaning to Occultism. If one has found

the beginning of *the Way* he has found some of the mysteries of Occultism, for none find *the Way* until they find something of the unseen. It is impossible for one to put himself in a spiritually receptive condition without "*investigation*" of or being under the sway of Occultism or Occult conditions; and it is through these same conditions that he knows that pain and pleasure are one and all wise. Karma does not always manifest itself as suffering, by any means; it is quite as likely to produce joy as sorrow, and Karma is not always weighty. Such persons of whom you speak may be trying to become Theosophists, but are not Theosophists. A seeker for Divine wisdom seeks in all directions and refuses none.

2. It is as hard for man as for woman to enter the mysteries. Man works through the intellect, woman through the emotions or heart. Both are equally useless after a time, and of the two the heart is the better tool. But woman becomes engrossed or overcome by her emotions, and passes no farther. The greatest Teachers have been those who have had most of the womanly in their natures. It is more difficult to master the body as a woman than as a man. This can be answered only partially in print.

3. The *True* Theosophist allows himself, or *is taught* to feel, both pain and pleasure, happiness and sorrow, for he knows them all to be wise. Men long for and desire; they fight for happiness and do not find it. We have given to us peace, which is far beyond happiness. Happiness is of this world and is a mockery of the True; yet as all other men we feel it, for we feel all things, for in all these things lie the lessons to be learned as men. I dare not speak for other men, but were I to wish to avoid either pleasure or pain, knowing them to be God's will, then would I utterly fail. Once having subjected *my* will — my human will — to His, then I avoid nothing that *is* His will.

1. *Why, since the Deity chose of His own divine will to make the descent into matter, or — as some put it — by this process alone came to Him a realizing sense of His being, in the manifestation through and by matter, why should this be considered a "fall," or, indeed, AN EVIL AT ALL, since, being the work and choice of the Deity, it must necessarily have been both wisdom and goodness which dictated the "descent"; and as Theosophy teaches the inner light and indwelling Emanuel (God with us) to be ever present in all forms of life, wherein consists the evil of this divine descent, and why must this EXPERIENCE be necessarily associated with evil at all?*

2. *I met an F. T. S. the other day who believes he has arrived at "Saintship" and cannot therefore err. He cannot bear the slightest contradiction, believing that he has arrived at such a state of "enlightenment" that he is infallible, whereas we less gifted mortals feel that he often makes grave mistakes. Of course this assumption is untenable in this case, but are sainthood and consequent infallibility likely to result from the humdrum every-day life of an ordinary nineteenth century man?*

For the Deity there is no fall. He can not fall. In the so-called descent into matter, He must manifest *through* something. Never does the Ineffable stand unveiled before mortal man. When the All Wise deemed it good to manifest Himself as individualities, He did so through the soul. After creating the human man with the soul that all things possess, "He breathed into his nostrils and man became a *living* soul," or the Deity manifested Himself through the soul in the man. Nothing below man is immortal. Man is not immortal; his soul is not immortal; but the breath of God, which is God's life or God himself, *is forever*. Man was to have lived as the angels, "for they also were made"; but, although by the grosser elements of matter or nature, by its lusts and desires, its seductive beauties and deceptive pleasures, realized most fully through the senses of the human body, the *soul* was

drawn *down* instead of upward, into *ignorance of the true* instead of toward the wisdom of God, holding and binding thus the spirit in the meshes of the grossest part of nature, and so *fell*. God did not fall, — the spirit; nor did man as the human man; but the soul, being a free agent, did so, causing the spirit to be limited, and entailing pain and anguish upon the human man. Man with the Divine manifest in him was to know only the good, or wisdom; but, not content, he must eat of the *tree of the KNOWLEDGE* of good and evil, or the misapplication of the good, and *fell* into ignorance. There can be no greater evil than losing the wisdom of a God for the ignorance of a man. Herein consists the only evil of the *fall* after the descent into matter.

2. How do you know that he makes grave mistakes? I may not say that anyone errs or makes mistakes, other than my own self. Neither you or I may say another is saint or devil from our own standpoint of what makes either. Both you and I have been taught, however, that one who has arrived at the state of "Saintship" never lays claim to it or to "enlightenment."

Saintship and a certain measure of infallibility will result from humdrum every-day life in the nineteenth century, and in no other way, if rightly comprehended. Otherwise one would not be here at all, or would have lived in some other time, before time was. To become a saint one must know what sinners are and what sin is. The best way to arrive at this knowledge is through the nineteenth century or the time in which we live, through life and all it tells us. Believing that one cannot err and in one's infallibility is however not a characteristic of saintship.

ENCOURAGEMENT ON THE PATH — *G. de Purucker*

No human being is without trouble of some kind, and let us remember that it is the sorrows and the troubles of life which are our true friends — friends because they strengthen our character, they give us a feeling of sympathy with those who suffer and are in pain; and also they enable us, by the strength of the moral fiber that they build in to us, to carry our own burdens with a lighter and a more joyous heart; so that in time, when the suffering has wrought its magical work upon us, the suffering no longer seems to us to be suffering, but we see it with quiet and luminous eyes, and a glad heart, as being the mysterious working of the very gods.

It is through suffering and yearning for light that we advance; and, when the light comes, then also come the great peace and the great wisdom, and our hearts are at rest.

So keep these thoughts in mind when your troubles come upon you, and try to cultivate beautiful calm, sweet inner peace, and a love for your fellows; and you will discover that these bring happiness and success in all things worth while.

Remember that the karman of suffering is never eternal, and is usually short, although it may seem long at the time; and once this karman has worked itself out, exhausted itself, then it ends, and gives birth to a new and better cycle. — G. de P. (extract from a letter to one in time of sorrow).

Now, I will try to answer your question regarding your lack of time to make a regular study of our deeper Theosophical teachings. I know just what your situation is, and I know how you long to devote more time to getting a knowledge of technical

Theosophy. This indeed is very, very, very important; but, on the other hand, may I not point out to you that even greater and even nobler than having a knowledge of technical Theosophy is the devoting of one's life to our Masters' Cause, and this is what you are doing. This latter makes a karman even nobler than the spending of one's life in study of technical Theosophy, although that is important too.

Your situation reminds me of that of some chelas whose hearts yearn to pass more time in technical study of the Wisdom of the gods, but who are called upon by our Superiors to sacrifice their wish and to go forth into the world as messengers and envoys in order to give to others what they have already acquired. Don't you see that your case is somewhat like that of these chelas I speak of, who, in giving up their own heart's wish for more light, are growing spiritually, and actually gaining more interiorly than they would gain if they neglected a duty laid upon them by our Teachers?

Therefore take comfort in this thought. You are progressing spiritually and intellectually. You are also growing morally because you are living a noble life in service to our sacred Cause, giving all you can without thought of reward; and the Masters ask no more than this even from their highest disciples.

Therefore, do not feel sad, and do not be discouraged. You have asked for my frank opinion, and for my advice, and I am now giving these to you; and I tell you again that you are growing spiritually and intellectually faster in what you are now doing than you would if you sat down somewhere alone in luxurious ease and devoted your life to study for yourself alone. Remember that the chela's path begins in self-sacrifice for the world, and ends in self-sacrifice for the world — if indeed there be an ending, which is not the case. It is thus that the great Masters of Wisdom

and Compassion and Peace are evolved. It is thus that the Buddhas are developed.

Nevertheless, technical study is very, very important, and I am so glad that you speak of this so frequently, because it shows that you have the exactly right view. But I know too that you are gaining a great deal of technical knowledge just by throwing yourself so whole-heartedly into the Theosophical work. You are absorbing it without perhaps realizing it. You are imbibing it from the Theosophical atmosphere; and all that I have read that you have written shows me that you are gaining a great deal of the technical *understanding*. It is an actual truth of white magic, that a man learns more by self-forgetful service in our Cause, than he does by thinking only of his own advancement and devoting his whole time to merely personal development. The latter, after all, and in the last analysis, is selfish, and closes the doors of both heart and mind to the entrance of the spiritual light; and therefore, although the desire for self-progress is *de facto* a noble one, yet when it is followed selfishly, the selfish desire actually prevents the attainment of the objective which such a man longs for. You have nothing to fear in this respect. Your life of beautiful service in our sacred Cause is placing you in a position spiritually and intellectually where you are really learning more, as I have said, perhaps without realizing it now, than you could in any other wise. I am well satisfied with your work. — G. de P. (extracts from a letter to a student who, in his devoted service, found but little time for Theosophical study).

The Theosophical Forum

H. P. BLAVATSKY SPEAKS FOR HERSELF

Occult Standing of Great Men (1)

ÆSCHYLUS

The latter writers [Cicero and Clemens Alexandrinus] are the only ones who attribute the fact that Æschylus was charged by the Athenians with sacrilege and condemned to be stoned to death, to its true cause. They say that having been himself uninitiated, Æschylus had profaned the Mysteries by exposing them in his trilogies on a public stage. (2) But he would have incurred the same condemnation had he been initiated — which must have been the case, as otherwise he must, like Socrates, have had a *daimon* to reveal to him the secret and sacred allegorical drama of initiation. At all events, it is not the "father of the Greek tragedy" who invented the prophecy of Prometheus; for he only repeated in dramatic form that which was revealed by the priests during the MYSTERIA of the Sabasia. . . .

The translators of the drama wonder how Æschylus could become guilty of such "discrepancy between the character of Zeus as portrayed in the "Prometheus Bound" and that depicted in the remaining dramas". (*Mrs. A. Swanwick.*) This is just because Æschylus, like Shakespeare, was and will ever remain the intellectual "Sphinx" of the ages. — *S. D.* II, 419

LEIBNITZ

It is well known that Leibnitz came several times very near the truth, but defined monadic evolution incorrectly, which is not to be wondered at, since he was not an INITIATE, nor even a Mystic, only a very intuitional philosopher. Yet no psycho-physicist ever came nearer than he has to the esoteric general outline of

evolution. This evolution — viewed from its several standpoints — *i. e.*, as the *universal* and the *individualized* Monad; and the chief aspects of the Evolving Energy, after differentiation — the purely Spiritual, the Intellectual, the Psychic and the Physical — may be thus formulated as an invariable law; a descent of Spirit into Matter, equivalent to an ascent in physical evolution; a re-ascent from the depths of materiality towards its *status quo ante*, with a corresponding dissipation of concrete form and substance up to the LAYA state, or what Science calls "the zero-point," and beyond. — *S. D. I*, 619-20

THOMAS TAYLOR

One of the very few commentators on old Greek and Latin authors, who have given their just dues to the ancients for their mental development, is Thomas Taylor. In his translation of Iamblichus' *Life of Pythagoras*, we find him remarking as follows: "Since Pythagoras, as Iamblichus informs us, was initiated in all the Mysteries of Byblus and Tyre, in the sacred operations of the Syrians, and in the Mysteries of the Phoenicians, and also that he spent two and twenty years in the adyta of the temples in Egypt, associated with the magians in Babylon, and was instructed by them in their venerable knowledge, it is not at all wonderful that he was skilled in magic, or theurgy, and was therefore able to perform things which surpass merely human power, and which appear to be perfectly incredible to the vulgar." — *Isis*, I, 284

... we will recur to the untiring labors of that honest and brave defender of the ancient faith, Thomas Taylor, and his works.

However much dogmatic Greek scholarship may have found to say against his "mistranslations," his memory must be dear to every true Platonist, who seeks rather to learn the inner thought of the great philosopher than enjoy the mere external mechanism of his writings. Better classical translators may have rendered us,

in more correct phraseology, Plato's *words*, but Taylor shows us Plato's *meaning*, and this is more than can be said of Zeller, Jowett, and their predecessors. Yet, as writes Professor A. Wilder, "Taylor's works have met with favor at the hands of men capable of profound and recondite thinking; and it must be conceded that he was endowed with a superior qualification — that of an intuitive perception of the interior meaning of the subjects which he considered. Others may have known more Greek, but he knew more Plato." — *Isis*, II, 109

JACOB BOEHME

Thus Newton, whose profound mind read easily between the lines, and fathomed the spiritual thought of the great Seer in its mystic rendering, owes his great discovery to Jacob Boehme, the nursling of the genii (Nirmanakayas) who watched over and guided him, of whom the author of the article in question so truly remarks, that "every new scientific discovery goes to prove *his profound and intuitive insight into the most secret workings of nature.*" — *S. D.* I, 494

This number [seven] is closely connected with the moon, whose occult influence is ever manifesting itself in septenary periods. It is the moon which is the guide of the occult side of terrestrial nature, while the Sun is the regulator and factor of manifested life; and this truth was ever evident to the Seers and the adepts. Jacob Boehme, by insisting on the fundamental doctrine of the seven properties of everlasting mother Nature, proved himself thereby a great Occultist. — *S. D.* II 595

PLATO

The danger was this: Doctrines such as the planetary chain, or the seven races, at once give the clue to the seven-fold nature of man, for each principle is correlated to a plane, a planet, and a race;

and the human principles are, on every plane, correlated to seven-fold occult forces — those of the higher planes being of tremendous power. So that any septenary division at once gives a clue to tremendous occult powers, the abuse of which would cause incalculable evil to humanity. A clue, which is, perhaps, no clue to the present generation — especially the Westerns — protected as they are by their very blindness and ignorant materialistic disbelief in the occult; but a clue which would nevertheless, have been very real in the early centuries of the Christian era, to people fully convinced of the reality of occultism, and entering a cycle of degradation, which made them rife for abuse of occult powers and sorcery of the worst description.

The documents were concealed, it is true, but the knowledge itself and its actual existence had never been made a secret of by the Hierophants of the Temple, wherein MYSTERIES have ever been made a discipline and stimulus to virtue. This is very old news, and was repeatedly made known by the great adepts, from Pythagoras and Plato down to the Neoplatonists. — S. D. I, xxxv

Plato and his school never understood the Deity otherwise, many epithets of his applied to the "God over all" (ὁ ἐπίπασι θεός) notwithstanding. Plato having been initiated, could not believe in a personal God — a gigantic Shadow of Man. His epithets of "monarch" and "Law-giver of the Universe" bear an abstract meaning well understood by every Occultist, who, no less than any Christian, believes in the One Law that governs the Universe, recognizing it at the same time as immutable. . . . Is it Plato, the greatest pupil of the archaic Sages, a sage himself, for whom there was but a single object of attainment in this life — REAL KNOWLEDGE — who would have ever believed in a deity that curses and damns men for ever, on the slightest provocation? Not he, who considered only those to be genuine philosophers and students of truth who possessed the knowledge of the *really existing* in

opposition to mere seeming; of the *always* existing in opposition to the transitory; and of that which exists *permanently* in opposition to that which waxes, wanes, and is developed and destroyed alternately. — S. D. II, 554-5

PROF. W. CROOKES

Here is an example: Prof. W. Crookes' latest discovery of what he has named *protyle*. In the "Notes on the Bhagavat Gita", by one of the best metaphysicians and Vedantic scholars in India [T. Subba Row] the lecturer, referring cautiously to "things occult" in that great Indian esoteric work, makes a remark as suggestive as it is strictly correct. ". . . Into the details of the evolution of the solar system itself," he says, "*it is not necessary for me to enter*. You may gather some idea *as to the way* in which the various elements start into existence from these THREE *principles into which MULAPRAKRITI is differentiated* (the Pythagorean triangle), by examining the lecture delivered by Professor Crookes a short time ago upon the so-called elements of modern chemistry. This lecture will give you some idea of the way in which these Elements spring from *Vishwanara*, the most objective of these three principles, which seems to stand in the place of the *protyle* mentioned in that lecture. *Except in a few particulars*, this lecture seems to give the outlines of the theory of physical evolution on the plane of *Vishwanara*, and is, so far as I know, *the nearest approach made by modern investigators* TO THE REAL OCCULT THEORY *on the subject*."

These words will be re-echoed and approved by every Eastern Occultist. . . . Since then, there has been another lecture delivered, as remarkable as the first one, on the "Genesis of the Elements," and also a third one. Here we have almost a corroboration of the teachings of Esoteric philosophy concerning the mode of primeval evolution. It is, indeed, as *near an approach*, made by a

great scholar and specialist in chemistry, to the Secret Doctrine, as could be made apart from the application of the monads and atoms to the dogmas of pure transcendental metaphysics, and their connection and correlation with "Gods and intelligent Conscious Monads. — *S.D.* I, 620-1

. . . The revolution produced in old chemistry by Avogadro was the first page in the Volume of *New Chemistry*. Mr. Crookes has now turned the second page, and is boldly pointing to *what may be the last*. For once *protyle* accepted and recognized — as *invisible Ether was, both being logical and scientific necessities* — Chemistry will have virtually ceased to live: it will reappear in its reincarnation as *New Alchemy*, or METACHEMISTRY. The discoverer of radiant matter will have vindicated in time the Archaic Aryan works on Occultism and even the Vedas and Puranas. — *S. D.* I, 622-3

Science may, of course, if it so pleases her, call electricity a force. Only by grouping it together with light and heat, to which the name of force is decidedly refused, she has either to plead guilty of inconsistency, or to tacitly admit that it is a "species of matter." But whether electricity has weight or not, no true scientist is prepared to show that there is no matter so light as to be beyond weighing with our present instruments. And this brings us directly to the latest discovery, one of the grandest in science, I mean Mr. Crookes' "radiant matter" or — as it is now called THE FOURTH STATE OF MATTER. — *The Complete Works of H. P. B.*, Vol. IV, p. 93

SWEDENBORG

Swedenborg, following the mystical doctrines of the Hermetic philosophers, devoted a number of volumes to the elucidation of the "internal sense" of *Genesis*. Swedenborg was undoubtedly a "natural-born magician," a seer; he was *not* an *adept*. Thus,

however closely he may have followed the apparent method of interpretation used by the alchemists and mystic writers, he partially failed; the more so, that the model chosen by him in this method was one who, albeit a great alchemist, was no more of an adept than the Swedish seer himself, in the fullest sense of the word. Eugenius Philalethes had never attained "the highest pyrotechny," to use the diction of the mystic philosophers. But, although both have missed the whole truth in its details, Swedenborg has virtually given the same interpretation of the first chapter of *Genesis* as the Hermetic philosophers. The seer, as well as the initiates, notwithstanding their veiled phraseology, clearly show that the first chapters of *Genesis* relate to the *regeneration*, or a new birth of man, not to the creation of our universe and its crown work — MAN. — *Isis Unveiled*, I, 306

FOOTNOTES:

1. Scattered throughout H. P. Blavatsky's writings are illuminating hints for the student on the occult standing of great or famous men down the ages. Such hints are an aid in correctly estimating the works of these men when studying or reading them. The present collection does not pretend to be at all exhaustive even as regards the few names given here, taken almost at random (hundreds of others might be found), but are merely an indication of how one's efforts are richly rewarded if one searches for such information in H. P. B.'s Works. — Eds. ([return to text](#))

2. Herodotus and Pausanias supposed that the cause of the condemnation was that Æschylus, adopting the theogony of the Egyptians, made Diana, the daughter of Ceres, and not of Latona. . . . But Æschylus *was* initiated. ([return to text](#))

SILENCE — H. T. Edge

"The things which are supposed to have made life easier, such as the telegraph, telephone, typewriter, motor-car, lift, and so on, have really made it vastly more strenuous."

So says "Artifex" in the *Manchester Guardian Weekly*, and goes on to say that prayer and silence are needed. The more labor-saving devices we invent, the more we labor. Make a man's work easier, and instead of resting he does more work. If he can go anywhere in as many hours as it used to take days, he does not save the hours, but travels farther. Give him a shorthand typist, and he writes ten times as many letters. Comforts and luxuries become necessities, so that we become more dependent on circumstances and apparatus. We invent so many new cures, drugs, and treatments, that nothing can keep pace with them — except indeed the innumerable diseases that are invented every day. Our ancestors may not have had the cures, but at all events they did not have the complaints.

We are chasing our tail, and the faster we go, the farther we *have* to go. The thing is not merely accidental or temporary; there is a wrong principle behind it. We are like a machine without a governor, and will go on accelerating until the wheels fly apart. We are like a constitution that is being consumed by phthisis, with every function running full blast and the central vitality wasting away.

And in our very efforts to cure this disease we use the same wrong principle over again; we try to cure the disease by more of the thing that causes it, as a man might try to overcome the effects of drink by more drink. The process will end in a cataclysm unless we can adopt an entirely different principle. It

will not be adopted until we are driven to it by sheer necessity; but it will help much to have it ready when the time comes. We are living in an atmosphere of constant stimulation, living in externals, living in sensory experience. Silence and solitude are unbearable to one living in such an atmosphere. A man spends his life strenuously in doing and achieving; and when he gets old and can strive no more, and finds he has gotten nowhere, he turns on the gas because he cannot stand being alone with himself; and leaves a note to save his face.

The silence! Cultivate the silence, love it. Learn to know the fullness of the seeming void and you will realize the voidness of the seeming full. Theosophy teaches a man not to be afraid of himself, not to try and run away from himself, but to know himself. This does not mean that we must become hermits:

Both action and inaction may find room in thee; thy body agitated, thy mind tranquil, thy Soul as limpid as a mountain lake. — *The Voice of the Silence*

The Theosophical Forum

THE APPLICATION OF THEOSOPHICAL THEORIES (1) — *William Q. Judge*

The mistake is being made by a great many persons, among them being Theosophists, of applying several of the doctrines current in Theosophical literature, to only one or two phases of a question or to only one thing at a time, limiting rules which have universal application to a few cases, when in fact all those doctrines which have been current in the East for so long a time should be universally applied. For instance, take the law of Karma. Some people say, "yes we believe in that," but they only apply it to human beings. They consider it only in its relation to their own acts or to the acts of all men. Sometimes they fail to see that it has its effect not only on themselves and their fellows, but as well on the greatest Mahatmas. Those great Beings are not exempt from it; in fact they are, so to say, more bound by it than we are. Although they are said to be *above Karma*, this is only to be taken to mean that, having escaped from the wheel of Samsara (which means the wheel of life and death, or rebirths), and in that sense are above Karma, at the same time we will find them often unable to act in a given case. Why? If they have transcended Karma, how can it be possible that in any instance they may not break the law, or perform certain acts which to us seem to be proper at just that juncture? Why can they not, say in the case of a chela who has worked for them and for the cause, for years with the most exalted unselfishness, interfere and save him from suddenly falling or being overwhelmed by horrible misfortune; or interfere to help or to direct a movement? It is because they have become part of the great law of Karma itself. It would be impossible for them to lift a finger.

Again, we know that at a certain period of progress, far above this

sublunary world, the adept reaches a point when he may, if he so chooses, formulate a wish that he might be one of the *Devas*, one of that bright host of beings of whose pleasure, glory and power we can have no idea. The mere formulation of the wish is enough. At that moment he becomes one of the *Devas*. He then for a period of time in its extent incalculable, enjoys that condition — then what? Then he has to begin again low down in the scale, in a mode and for a purpose which it would be useless to detail here, because it could not be understood, and also because I am not able to put it in any language with which I am conversant. In this, then, is not this particular adept who thus fell, subject to the law of Karma?

There is in the Hindoo books a pretty story which illustrates this. A certain man heard that every day a most beautiful woman rose up out of the sea, and combed her hair. He resolved that he would go to see her. He went, and she rose up as usual. He sprang into the sea *behind her*, and with her went down to her abode. There he lived with her for a vast length of time. One day she said she had to go away and stated that he must not touch a picture which was on the wall, and then departed. In a few days, fired by curiosity, he went to look at the picture; saw that it was an enameled one of a most ravishingly beautiful person, and he put out his hand to touch it. At that moment the foot of the figure suddenly enlarged, flew out from the frame, and sent him back to the scenes of earth, where he met with only sorrow and trouble.

The law of Karma must be applied to everything. Nothing is exempt from it. It rules the vital molecule from plant up to Brahma himself. Apply it then to the vegetable, animal and human kingdom alike.

Another law is that of Reincarnation. This is not to be confined only to the souls and bodies of men. Why not use it for every

branch of nature to which it may be applicable? Not only are we, men and women, reincarnated, but also every molecule of which our bodies are composed. In what way, then, can we connect this rule with all of our thoughts? Does it apply there? It seems to me that it does, and with as much force as anywhere. Each thought is of definite length. It does not last for over what we may call an instant, but the time of its duration is in fact much shorter. It springs into life and then it dies; but it is at once reborn in the form of another thought. And thus the process goes on from moment to moment, from hour to hour, from day to day. And each one of these reincarnated thoughts lives its life, some good, some bad, some so terrible in their nature that if we could see them we would shrink back in affright. Further than that, a number of these thoughts form themselves into a certain idea, and it dies to be reincarnated in its time. Thus on rolls this vast flood. Will it overwhelm us? It may; it often does. Let us then make our thoughts pure. Our thoughts are the matrix, the mine, the fountain, the source of all that we are and of all that we may be.

The Theosophical Forum

RECOLLECTIONS OF A THEOSOPHICAL SPEAKER: III — *Leoline Leonard Wright*

How easily we accept privileges and allow the fine edge of our appreciation to be dulled by the daily use of them! As I look back over my experiences in the Theosophical Society I realize keenly now in the retrospect the extraordinary good fortune which has marked my Theosophical experience, especially in association with the Leaders. Claude Wright knew H. P. B. intimately, and though I never met her he brought her before me in frequent anecdotes and pictures — her spiritual depth and greatness, her charm and intellectual fascination. My slight but beautiful association with Mr. Judge is one of the treasures of a lifetime. And to Katherine Tingley I owe a debt which I trust I may have opportunity actively to repay through many future incarnations.

One of the greatest events in the history of the T. S. was the Ninth Annual Convention of the American Section T. S. held in Boston on April 28 and 29, 1895. I attended this convention as a delegate from the Chicago Branch, and the spirit of that great occasion still speaks in the present.

At that convention the American Section T. S. reconstituted itself "The Theosophical Society in America". At the same time it took what proved a great forward step when it not only elected William Q. Judge President for life but also gave him the power to appoint his successor. In looking back we realize that this wise and significant action saved our part of the Theosophical Movement many mistakes and dissensions and held us free from confusing entanglements. Say what you please, the life-course of the Theosophical Society under our four Leaders has been one of happy and uninterrupted fulfilment of Theosophical and Occult

promise.

The picture that stands out most vividly in my memory of those two days is of Mr. Judge sitting before us tranquilly on the platform — so frail, yet with a quiet and confident power. How soon (had we but known it) he was to leave us! It was the last time I saw him. And the realization of all that he was so unjustly and cruelly made to suffer is one of the few shadows over those happy and fruitful early days.

Yet behind all shadows there is light. The fervor of enthusiasm which brought the T. S. in America into being and launched it upon its indomitable way was born then of our loyalty to what W. Q. J. stood for. It is good to remember the swelling wave of vindication and trust that must in that hour have lifted his tired heart. His was indeed a perfect example of the Chela-life.

There was one slight incident during the convention which gave me intense personal satisfaction, as it linked me — even if with but an infinitesimal link — to the historical march of the proceedings. I registered two votes as delegate from the Chicago Branch for the new T. S. in America. One of those votes was immediately challenged by Alexander Fullerton, who asserted that the second vote was mine by proxy for another delegate who had been unable at the last moment to come. And, said this positive gentleman, her vote would most certainly have been cast against the motion then before the convention.

Now I had just graduated from a class in Parliamentary Law brilliantly conducted by Mrs. Caroline Ober in Chicago. So I was able to silence this objector by reminding him that a delegate can vote a proxy in any way he sees fit, providing the absent delegate has given him no instructions. And my co-delegate when asking me to act as her proxy, having failed to instruct me in any way, I felt justified in following my own judgment in the matter. So my

two votes for the T. S. in America were recorded. And, as the saying goes, that was distinctly that.

When I went to Boston to attend the convention I had hoped to remain in the East, perhaps to go to New York to work. But as it happened there was a place ready and apparently waiting for someone like me at the Boston Headquarters at 24 Mt. Vernon Street. Miss Marguerite Guild had been for a long time in charge of the Headquarters Bookstore and Information Bureau, which was open every day to the public. But she lived far away in Cambridge, was the busy President of the large Cambridge Branch, and having as well many personal calls upon her time, it was imperative to relieve her. I happened to be free of ties, with a small income, and had had some experience in Branch work. Consequently I was invited to take daily charge of the bookstore and I need hardly say was glad to be in a position to accept the offer.

There followed a year of happy work with many amusing and vital experiences in the lecture field, helping to organize the picturesque Brotherhood Suppers, and other events which I shall try to describe in a later instalment. It is many years since I was then in Boston. I hope, whatever changes have taken place, the literal modern spirit has passed by my dear Mt. Vernon Street. The big Headquarters there has long since been sold, having proved something of a white elephant, though with much of the fortuitous distinction which belongs to that sacred animal. For the house itself had been the residence of an aristocratic Boston family. Its neighborhood, in the hinterland of Beacon Street, basked in the authentic New England atmosphere. This old-world charm was like an antique wine to a young lady from the sprawling artlessness of the Middle West. My explorations were of endless fascination. Opposite No. 24 lived Thomas Bailey Aldrich, and a few well known painters had houses in the

vicinity. I was always chancing across quiet old courts with their ancient houses withdrawn into a green privacy, or high, old-fashioned brick walls behind which historical mansions disdained public admiration. And there were old streets that turned upon themselves like the Egyptian Labyrinth. All this had a beauty for me which was as fresh as the Light of the Ancient Wisdom breaking into my young world.

My room at the Headquarters was a tiny one up four heartbreaking flights of stairs. But it looked right into the sunrise across the bay and to me was a truly romantic eyrie. The house at that time was crowded with Theosophical residents, some of whom you will remember for their outstanding work in the T. S. I hope to introduce a few of them to you in my next chapter.

The Theosophical Forum

ANSWERS TO QUESTIONERS — *William Q. Judge*

[Under the above title Mr. Judge in 1887-8 conducted a column in his magazine *The Path* where under the pen-name Zadok he answered questions from Theosophists and inquirers. Beginning with the February issue of THE FORUM these questions and answers are being reprinted in response to many requests. — Eds.]

"There are two ways to ascend and descend, the direct and indirect." (1) What are these ways?

The thistle down is blown hither and thither with every breath of wind: The arrow speeds straight to the mark from the powerful bow.

The indirect way is that of the thistle down; the Astral going out when the body is asleep, does so in a diffused condition — a passive state — with no adequate force to control it or master unseen forces. It floats at the mercy of every current in the Astral, gleaning here and there as a butterfly but taking the good and bad indiscriminately. It may reach high spheres, but is more likely to remain in those nearest to the physical. This way is traveled by all when asleep, and there dreams are made. It is the passive state where desire is the ruler, and is sometimes traveled in the waking conscious state, but is uncontrollable and unreliable.

The direct way is that of the arrow from the bow. The Astral speeds directly to the sphere which holds the knowledge it is to receive. It does so in obedience to an irresistible force — the Will; Will in accordance with divine law. It is concrete going and returning in obedience to this force, bringing little with it from intermediate spheres other than that for which it is seeking. This

occurs in dreamless slumber and the knowledge acquired is not communicated in a dream. This way is travelled in the conscious state for it is the way of the student of the Occult. Unless the man's thought and motive are pure, he is incapable of using the true will, and his Astral goes where other wills or forces drive it. It pauses when other forces interfere — learns from the place it happens to be in, and brings back a horrible jumble sometimes.

Where do these ways lead?

One way leads to Theosophia — Illumination — when travelled awake or asleep.

The other to consideration of self — ordinary living with its erroneous conceptions — as an Occult way, to love of phenomena and spiritism.

They lead to spheres within the astral, for the astral body passes not beyond astral limits. Only when the soul is freed from the astral and material bodies does it pass to higher spheres. These ways lead to planets, stars and other worlds, for all these may be within the astral of this globe.

Apollonius is said to have worn a mantle of wool to aid in insulating himself from the astral currents. Has wool in itself any such property as is seemingly ascribed to it? The question has this value, perhaps, whether the occult laws which govern the merely physical regulation of the toiler toward adept-ship, may not be of great value from a sanitary point of view and form, if properly understood, a useful medical creed.

Wool in itself has no especial occult power. It is a non-absorbent to the exhalations of the human body; it is lighter, cooler in hot and warmer in cold weather than any other fabric. The late discoveries of a German scientist prove it the best of all materials from a sanitary point of view. It is a conductor of electricity and

other unseen forces. Apollonius, as well as other occult students, knew its value and uses. Being a student of nature's laws he was well aware of nature's requirements. Upon the knowledge gained by occult students touching the human body are founded the schools of medicine. Bathing is essential, a woolen dress where permissible, as little animal food as possible, a sparing diet at best — a high ideal — an exalted motive and strong will, a total forgetting of self otherwise, and neither elementals or human beings will oppress one.

"A great deal depends on purity of thought and motive." (2) Please explain what should be the actuating motive in developing psychic capacities.

The desire to find God, the desire to know one's self, our possibilities and capabilities, that we may be of true use to the world, these are the motives. The thought should be unselfish, undisturbed by material affairs — free from wonder seeking curiosity, concentrated, and in entire accord with the motive, the search for God.

What steps must I take to open the heart so as to exercise the Will for governing the Astral body?

There is but one way to open the heart. That is by living the life. It is a simple matter to govern the will, but this is not the true will. The governing of the Astral body is the smallest of the tasks of the true will. The will should be used to obtain wisdom, and when so used it will control the Astral body without effort. We should exert psychic powers only to benefit others, never to free ourselves from the disagreeable. Let your aim be to find God; your motive, to know yourself for the sake of Theo Sophia and humanity: your desire, to help humanity, and the true Will will be developed, the heart opened and you will not only control the Astral body but all in the Astral. You must seek beyond the Astral

for powers, but it is not wise to desire the acquisition of powers. Let your aim be beyond that, and the powers will grow of themselves. If the strong-willed or sick depress you, seek to aid each in some way, forget that you are depressed, *forget your self*, and they will not affect you. The life of the Occult student is full of sorrow, anguish and depressing influences. These go to make him a student in the Occult. A portion of his training is to become aware of these only in so far as they affect others. As to their affecting his own personality, he does not know they exist. If you desire to help humanity, then you possess the true motive. If you use your will in this cause, wisdom, peace and all the powers will be given.

During sleep I have a feeling that I can fly by an intense act of will. I then float in dream over the ground, my body seeming rigid. The force exhausts, then I have to descend. What is your explanation of this?

It is part of the effort of your inner man to demonstrate to your outer self the existence and action of unrecognised and unfamiliar forces, which every man has in him the latent power to use. Dreamless slumber is better.

In Theosophical books I find occult or magical phenomena referred to. I am disposed to reject these and consider their publication of a very questionable character in light of matter for the improvement of intelligent seekers after truth. Still I do not deny them, and hold myself open for conviction in any direction.

Why then bother yourself with the phenomena of your dream state? The dream of flying is as much a phenomenon as any other that Theosophical literature contains. The proper attitude for true Theosophists is not to be ready or anxious to bring conviction as to any phenomena to inquirers. Hence we cannot enter into proofs. We know personally that phenomena of a most

extraordinary character have taken place, and are still occurring; we also agree with you that the constant publication of accounts of phenomena is unwise. Still it must sometimes be done, as some minds have to advance through the aid of these things.

We also know that the Masters who are behind the Theosophical Society have, in writing, condemned the thirst for phenomena made so often degrading, and stated that the Society ought to progress through its moral worth. One phenomenon can be seen by but a limited number of people, some of whom even will always doubt, and each one hearing of it afterwards will want a repetition for himself. Further than that, it would be certain to bring on a thirst for mere sight-seeing, resulting in a total forgetfulness of spirit. But, on the other hand, there are laws that cannot be guessed at without phenomena. And in each human being is a complete universe in which daily occur phenomena that should be studied. This is the proper realm for each student to investigate, for therein — and nowhere else — is placed the gate through which each one must advance.

(This concludes the series of "Answers to Questioners" appearing in *The Path*. In the issue of July, 1888, appears the following statement: "A change of circumstances having made it necessary for Zadok to remove to another sphere of action, no more answers to queries will appear from his pen." — Eds)

FOOTNOTES:

1. The questioner is here quoting a part of what Mr. Judge says in *The Path*, October, 1887, in answer to a question about things remembered from the sleeping-state. Mr. Judge's words are as follows: "We go away in deep dreamless sleep to other spheres and states, where we get ideas and so forth, and the way back is through many different states, all having their denizens and obstructions. Besides that, there are two ways to ascend and

descend: the direct and the indirect." — Eds. ([return to text](#))

2. Mr. Judge's words from *The Path*, October, 1887, are: "We must be patient, because it takes time to find out how to walk, and much time is spent in getting hold of clues. A great deal depends on purity of thought and motive, and breadth of view." ([return to text](#))

The Theosophical Forum

THOUGHTS ON SPECIALIZATION — *Arthur A. Beale*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

In contemplating the vast subject of specialization, one marvels at its range of application, its overwhelming influence in the evolution of the ingredients and population of the cosmos, and one almost despairs of capturing its subtil meaning, just as when listening to a masterly rendition of a musical orchestra: the cry is then wrung from one's soul — "How manifold are thy works, O Lord!"

Specialization might be described as a law or habit of Nature, affecting all evolving creatures on the downward arc of evolution — into matter — leading them into deflections from the spiritual standard of perfection, whilst striving for perfection on the material plane, in their execution of free will.

Cosmic evolution seems to be a process of unfolding a stream or mass of consciousness in the crude material (in a similar way to the unwinding of an enormous roll of carpet, or tides of the sea), and then by some magic power rolling it up in the assimilated form, and so producing relative perfection, in "a web of destiny," as H. P. Blavatsky so beautifully phrases it.

Visitors to a modern zoo can see samples of evolution in the "crude," in the mean propensities of ordinary men and women (as we meet them on the streets) minus the mental control, masquerading in animal forms. These propensities give trends which affect the shapes of animals as well as their character, so much so that they have become maxims: as cunning as a fox, as

mischievous as a monkey, as fearless as a lion, as rapacious as a wolf, as intelligent as a horse, as stupid as an ass, as pigheaded as a hog.

We see an approach to perfection in the assimilation of traits in the glorious personality of a saint, or an adept, illustrating the process of involution on the upward arc of the evolutionary ladder.

Our Teachers tell us that human evolution represents a straight, vertical, pristine, and primitive stock, phylum, or current, through which are evolved all creatures, because at the heart of man exists the monadic essence which contains all potentialities. But because all creatures have free will, in their blind attempts to reach perfection they acquire independent trends, specializations; and so they build up their essential characteristic or swabhava, by the action of karma, in their evolution, through countless reimpodiments in various groups of hierarchies. Yet ultimately, by the working of all these, all come back into the human stream and finally reach perfection.

Now this same trend works not only on the evolution of forms, so varied in our non-human mammals, but in man's higher evolution the same trend leads man in society far from his destiny in countless back currents in the stream of life.

Theosophy is, as it were, the central, clean, pure, primitive, fundamental, and universal doctrine. Any society, sect, movement, cause, or cult, which commences to pervert the Ancient Wisdom-teachings by adulteration with brain-mind concepts, and proceeds to adopt such personal standards, thereby introduces a trend of specialization ultimately leading to a cul-de-sac and deterioration.

The history of our Root-Race is punctuated with such crippled

children of the supreme universal doctrine. At every Messianic Cycle (i. e., when the sun enters a new zodiacal sign) efforts are made by the Trustees of Humanity, to flood the human consciousness with a stream of pure doctrine: such an effort was that of the Christian Era. Primitive Christianity involved a doctrine which was *pari passu* identified with the Theosophical doctrine, until it fell into the hands of a sect which found the impersonal teachings inconvenient to their objectives.

At one of the historical Councils held at Constantinople, an edict was drawn up in which the essential fundamental cosmic principles of Reincarnation, Hierarchies, the Essential Divinity of Man, the Spiritual Nature of Heavenly Bodies, the Heliocentric System — all of which were taught by the Christian Father and Neo-Platonist, Origen — were declared heretical. The result of this edict led to a form of specialization which in time destroyed the primitive characteristics of the teachings. These degenerate trends marked the features of a descending arc of evolution and inaugurated that period of occidental history described as the Dark Ages.

A similar transmutation, perchance in a less acute form, marked other previous attempts of regeneration: these in time descended into personal cults, whilst maintaining recognisable basic principles, although encumbered with dogmas. Thus they passed on to posterity as sects or religions. All have the characteristic of sidetracking the primitive, universal, fundamental, central doctrines in various forms of crystallization or specialization. These trends are traceable in Brahmanism, Buddhism, the Egyptian cults, Mithraism, Parseeism, Judaism, and others.

In order to restore harmony, as before stated, special baptisms of truth come to the world. This is indicated in the profound pronouncement made by Krishna in the *Bhagavad-Gita*: "And

thus I incarnate from age to age for the preservation of the just, the destruction of the wicked, and the establishment of righteousness." (ch. iv) These periods seem to the writer to correspond by analogy to those cosmic cycles when the mammals must again pass through the human primitive stock: thereby they are assisted in purifying themselves and ultimately they become restored to the human family.

In order to prevent a recurrence of such degeneration and specialization after the restoration of the primitive, true doctrine (and such an effort was that of Theosophy, brought by H. P. Blavatsky at the close of the nineteenth century, when the Sun entered the zodiacal sign of Aquarius, in the precession of the equinoxes), it is the sacred trust of all Theosophists to prevent the desecration of the ancient teachings from side-tracking processes. Let us therefore beware of all those adventitious and insidious attempts to seduce us into espousing causes, teachings, and doctrines with eccentric illusions of the truth. "Take heed that no man deceive you. For many shall come in my name, saying, I am Christ; and shall deceive many. . . . Then if any man shall say unto you, Lo, here is Christ, or there; believe it not." — *Matt.*, xxiv, 4, 5, 23 And it was Paul who said: "Let him that thinketh he standeth take heed lest he fall." — *1 Cor.*, x, 12 The same law in regard to specialization seems to operate in other circles as well. For instance, one wonders, whether or not the trend in the medical profession to espouse some specialty is not itself a decadent trend. One is impressed with the fact that Egypt, in its period of decadence, was full of specialists, as the historian Herodotus, tells us. Is there not a danger in this specialization? For it often runs into decimals, instead of using simple numbers: every specialty having lesser gamuts of specialties, which logically implies contraction into infinitesimals, and consequent relative annihilation.

The natural healthy duty should be to retain the broad fundamentals of health: to maintain the working of all the organs as harmonious as possible, to restore the deficiencies in the system, to use natural processes and Nature's primitive methods to acquire "Mens sana in corpore sano" (a sound mind in a sound body).

Is it not true that no one can *cure* any one else? For it is Nature that cures — if we give her a chance: the wise physician guides the functions into the simple, pure pathways of health and peace, restores broken laws, restrains abuses, acts wisely, justly; and so remains at peace.

A GREAT loss of esoteric and mystical truth in the Occident . . . has been the supposed separate existence of the individual human being from the Divinity which infills the Universe. How is this possible! Nothing is so near as Divinity, nothing is so intimate, nothing is so familiar; for the Kosmic Divinity is that Kosmic Consciousness, that Kosmic Life, frontierless and indivisible, which fills everything and throughout boundless duration infills everything, and of which everything and every being is an offspring — not only human beings, but every other entity and thing in boundless Space. — *The Esoteric Tradition*, I, 208-9

[*The Theosophical Forum*](#)

SCIENCE AND RESEARCH — *C. J. Ryan*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

Shall We Delete the "Difficult" Teachings?

A Theosophical writer recently brought up a point in regard to the relationship between Theosophy and Science which deserves consideration. It may be summarized as follows: Is it not better to concentrate on rules for present guidance in affairs of life than to speculate on or propound scientifically questionable hypotheses which may only deter serious inquirers? The same writer doubts that particles of matter can be refined or modified by passing through living bodies, or that the same atoms which helped to form a human body can return to the same Ego when reincarnated, and so forth. It would seem, however, that these ideas are not mere speculations by ordinary students but that they were advanced by H. P. Blavatsky and reiterated by her successors. They were first stated in *The Theosophist*, August, 1883, in her article "Transmigration of the Life-Atoms." Dr. de Purucker discusses it in his *Fundamentals of the Esoteric Philosophy* and *The Esoteric Tradition*. These ideas are undoubtedly new to modern western thinkers, and there are many more of an equally "disturbing" nature which have been given out by H. P. Blavatsky. Some — nay many — of her most revolutionary teachings have been confirmed by modern science since her death, utterly improbable as it seemed in the nineteenth century, the heyday of materialism.

Are we then justified in suppressing such teachings, teachings which are not the invention of over-enthusiastic and

irresponsible camp-followers, groundless speculations, but are essential parts of the broad scheme brought to the West by the Founder of Theosophy? Are we to abandon our posts in fear of some scientific Mrs. Grundy, especially in view of the certainty of further discoveries in support of the rest of the more "difficult" teachings of Theosophy which approach the domain of modern science? Reasonable prudence in presentation must be used, of course, and, above all, the would-be exponent must be sure he has not misunderstood the teachings. There is nothing in Theosophy that could give a greater shock to the mind than was suffered by the recent introduction of such amazing concepts as "curved space," the "expansion of the universe," or the "Lorenz contraction."

The Theosophical Movement exists for the object of giving ideas, and the Society was established for that purpose. Its ideas are the basis for the "rules for guidance in the affairs of life" which are so all-important, but the ideas must be known before the world will accept the rules. Otherwise the rules are mere dogmatism. Theosophists, when sincere, can justly claim to be philanthropists — lovers of humanity — and will naturally take every opportunity that comes their way to relieve distress by practical help, as H. P. Blavatsky says "by individual effort, not collective." She herself set an example when she could. But she made it plain that the work of the Theosophical Movement is more far-reaching than any other humanitarian activity, for it goes to the root of suffering. It deals with causes rather than effects. Some well-meaning Theosophists have tried to include within the scope of the Society Social Reform, Charitable and other activities which were not emphasized by its Founder as parts of its *specific* work. The Society was not established for such purposes, but for a work that no ordinary philanthropic society can do. H. P. Blavatsky gave five clear and positive instructions to Theosophists in her

authoritative *Key to Theosophy*. Briefly stated, they are:

To study and comprehend the doctrines in order to teach them to others; to spread interest in Theosophy and remove misconceptions; to circulate the literature; to defend the Society from unjust aspersions; and, "most important of all," to become examples of the Theosophical life.

But never does she even suggest that Theosophists *as individuals* should not do any acts of charity or support any charitable work they have a mind to. She writes in *The Voice of the Silence*:

"Inaction in a deed of mercy becomes an action in a deadly sin."

In regard to the widespread presentation of the more difficult teachings of Theosophy in our literature, which, some say, may deter serious inquirers, we must remember that pioneers of progress are seeking for new ideas, new lines of effort, just as chemists and engineers are striving to find new combinations and devices, and they are well aware that modern science in its present condition is not yet equal to the onerous task of leading us out of the wilderness of spiritual darkness. There is no reason why it may not rise to that exalted position, but today it has deliberately limited its field of research, leaving vast and important regions to — shall we say? — the poets and the philosophers. And also science is not too steady in its saddle. For instance, Sir James Jeans, the famous astronomer, is reported as saying to the Edinburgh Astronomical Society on October 8, 1938:

He "confessed," too, that to him it was still very open to question as to whether space was finite or infinite, whether it was curved or flat, whether the so-called constants of nature changed in value or stood still — if, indeed, any of these questions had any meaning! — *News-Chronicle*, London

The more "difficult" teachings of Theosophy, such as the doctrine of the life-atoms, the globe-chain, man's evolution as a spiritual being, and so forth, not to speak of the information in regard to astral or psychic subjects, may indeed be "questionable" to many scientists, but may not the bold utterance of such unusual ideas be effective in suggesting a higher order of research to independent and original thinkers among scientists, such, for example, as Dr. Rhine of Duke University, Professor Julian Huxley, and others who have already ventured into the "forbidden land" of telepathic investigation? The Theosophical Society is not angling for membership at the expense of truth; its object is to spread ideas as widely as possible so that those who are "ready" can find the help they need. William Q. Judge says in *Letters That Have Helped Me*: "Each one who really comes into it [Theosophy] does so because it is only "an extension of previous beliefs." Those who have no such background may be expected to regard some of its doctrines as "questionable," but closer inspection may modify their views. Why should they not have the chance of learning that they exist?

This applies even to the existence of gross psychical phenomena. Quite recently, for instance, outbreaks of abnormal "poltergeist" phenomena — violent disturbances such as moving of heavy furniture, alarming noises, etc. — have aroused attention from intelligent persons in America and England, but as they bring entirely "incredible" factors into the accepted schemes of physics and psychology the majority of scientists will simply ignore them. Yet every well-established account of this kind adds weight to the mass of evidence for the "Borderland" between the visible and the invisible planes. It leads to important logical conclusions which help to break down obstinate prejudices. Until two or three hundred years ago such phenomena were universally accepted by learned and unlearned as part of nature, but with the

development of mechanistic science with its concentration on the laws of the visible and material they ceased to be respectable. Perhaps this is not surprising because, unfortunately, those in the West who courageously defended their reality had no rational or philosophical explanation to offer, but the case is different now. The universe of hard atomic matter has given place to a "mysterious universe" of "mind-stuff" and curious ideas of "probability" are being advanced. The way is visibly opening for the understanding of the basic principles of the occult structure of the Kosmos brought to the West by H. P. Blavatsky.

Dr. Robert Broom's Remarkable Discovery of a New Anthropoid Ape

South Africa is the present center of interest in regard to research for the ancestors of man. An entirely unexpected family of anthropoid apes has lately been discovered by South African scientists. At least three individuals have been found which are more human than any other living or fossilized apes, and the latest specimen, discovered by Dr. Robert Broom, F. R. S., a few months ago and named *Paranthropus Robustus* (popularly known as the Kromdraai Ape from the place where it was found), is of special importance. It has been widely hailed by the journalists as "the Missing Link" and the unscientific reader might easily be misled into thinking that a real link (or links) has been found, ancestral to man, which directly connects the earliest true human races with the apes. This is not so, for the newly-discovered South African anthropoids flourished long after the Piltdown, Peking, and other true men appeared. *Paranthropus* possesses certain distinctively human characteristics, especially in the teeth, but, as Dr. Broom makes very clear, it is "too late to have been the direct ancestor of man." It is, like the other anthropoids, a distant relative, and probably lived between two and three hundred thousand years ago, during the Middle Pleistocene period. The

earliest true men whose remains have been discovered are far earlier than that. The South African anthropoids, especially *Paranthropus*, are only "links" in the sense that in certain anatomical structures they resemble man more closely than any other apes.

Sir Arthur Keith, the great English authority on anthropology, says that the discovery of *Paranthropus*, "an ape with human teeth" *who existed at a far more recent date than that of very ancient man*, is

perhaps the last thing I ever expected. All my landmarks have gone. . . . Indeed, had these remains been found in strata of older geological date, experts would certainly have agreed that at last the anthropoid stage of man's ancestry had certainly been found [!]

But the fact remains that ape-men of the desired type *preceding* true man have not been found. The mystery of human origin still remains for anthropologists to learn. Many varieties of anthropoids have been found — a new one was unearthed in Europe the other day — but "the series of progressive types from ape to man" is as conspicuous for its absence as it was in H. P. Blavatsky's day.

The Ancient Wisdom explains the appearance of the anthropoids as

not the product of natural evolution but an *accident*, a cross-breed between an animal being, or form, and man . . . "a transformation of species most directly connected with that of the human family — a *hybrid branch engrafted on their own stock before the final perfection of the latter*" — or man. — *The Secret Doctrine*, II, 262

The student who wishes to follow this subject more fully will find

it explained in *The Secret Doctrine*, II, 262-3, 678, 689, etc. On page 652, H. P. Blavatsky severely criticizes the materialistic biologist, Haeckel, for his sneers at the suggestion that spiritual causes could possibly be called upon to explain the origin of the human race, which he considered was the result of "simple mechanical causes, from physical and chemical forces." In this connexion it is interesting to notice that Dr. Broom, in his description of the latest discoveries does not agree with the materialistic position, although he still holds that man must have originated in some way from the lower kingdoms, even though a very great increase in the brain (perhaps 100 per cent) would be necessary. He writes in *The Forum*, Johannesburg, September 5, 1938:

The occasional occurrence of microcephalic idiots among men suggests that the rapid and great growth of the human brain may have been the result of a mutation or a series of mutations, but if so it seems to me such mutations must have been deliberately brought about by some spiritual guiding power and could not have been the result of blind chance.

The student will find an interesting reference to Dr. Broom's position in *The Esoteric Tradition*, I, 322, where the author discusses the causes of the inner urge behind the evolution of form — the psychical yearning of the lower kingdoms to become human.

The Theosophical Forum

THE URGE THAT MUST BE SATISFIED — *Lester A. Todd*

When a human being reaches that state of evolution where the material experiences of life no longer satisfy him, it is a natural working of his sub-conscious Ego to create such a tremendous urge within him that it must of necessity find an outlet in the thoughts and actions that dominate his personality. He becomes a Pilgrim, mentally wandering here and there, seeking that certain something which will satisfy this urge within him. He may try this or that, and may almost despair of the hope of finding what he subconsciously seeks so earnestly. There may be among those that read these lines just such a person. To him let me say that we who have also groped about in the darkness of materialism, prodded by the spiritual urge within us, and who have finally found our way on to the true path of Life, welcome this possible opportunity of assisting you, our fellow-man, to find that which you may be seeking.

So, as briefly and simply as I can, in every-day language, I will tell you a little, a very little, about Theosophy. The operations of human consciousness are threefold and are designated by men as Religion, Philosophy, and Science. These three are not fundamentally different things, but may be likened to the three sides of an equilateral triangle; three views of looking at Truth. An attempted separation of Religion, Philosophy, and Science is unnatural, so the Theosophist uses their unified vision to proclaim the hidden facts of Being. We may then define Theosophy as a Scientific Religion, a Religious Science, and a Philosophy of Nature — the Oneness of Man with the Universe. We are taught that there is One Infinite Life without beginning or end. Everything is alive. There is no such thing as 'Dead Matter' existing in Nature. The manifestation of Life in dualities of Spirit

and Matter descends in cycles of Activity and Repose, whether applied to Cosmic, Solar World Periods, or to such common alternations as Sleeping and Waking, with which we are all familiar. Man on Earth is a 'Life-Atom' of the Divine, immersed in matter, a Pilgrim seeking his way back to the Source.

You have probably been taught from an orthodox source that you have a Soul; you know you have a Body, because you can see it. Theosophy teaches us that each one of us is a Soul, and that our body is nothing but the vehicle of our present evolution in this particular incarnation or life. You may Liken your body to a house in which dwells the real man, the Inner Man, the man with the wee small voice, which is sometimes called Conscience.

Theosophy teaches that the real nature of Man is sevenfold, classified as:

First — SPIRIT, the highest part of man, which gives to him, and indeed to every other Entity or thing, its sentient consciousness of Selfhood.

Second — SPIRITUAL SOUL, which gives to Man Spiritual Consciousness, and is the Vehicle of Spirit.

Third — HUMAN SOUL, the center of Ego-consciousness in Man, Mind, the essentially human element.

Fourth — OUR PASSIONS AND DESIRES, the driving or impelling force within us.

Fifth — VITALITY OR Life principle.

Sixth — ASTRAL BODY, the Model or Pattern or framework around which the physical body is builded.

Seventh — PHYSICAL BODY, the House, Man's carrier, and no more an essential part of him than are the clothes in which his body is garmented.

Now that I have told you briefly of the seven principles of Man, let us consider the very ancient and worldwide doctrine of

Reincarnation, or Reimbodiment in flesh. It is the doctrine that man lives many times on earth as a human being, the conditions of each incarnation being the natural result of the causes set in motion in former lives. Think of the hope that is given us by our belief in Reincarnation: We get another chance to make up for all the frustrations of this life, the inequalities, the unfinished business, the failures — all necessary experiences and part of our evolution. Does Reincarnation not answer the "Why did this have to happen?" that we hear so often. Does it not explain and give logic to accidents and deaths of little children and babies and men and women cut down at the very threshold of their careers?

Reincarnation is a magnificent prospect; it makes of Man a God, and gives to every part of Nature the possibility of rising in the scale or on the Ladder of Life. What is the Universe for, and for what final purpose is Man, the immortal thinker, here in evolution? It is all for the experience and evolution of the soul, for the purpose of raising the entire mass of manifested matter up to the stature, nature and dignity of conscious god-hood. The only way physical and spiritual evolution can be carried on is by Reincarnation.

You ask "Why do we not remember our former lives?" Because memory is a product of the physical brain and perishes with the body. The soul does remember its past experiences and in the too seldom flashes of intuition or 'hunch' we have the answer and the possibilities.

Reincarnation, the natural method by which the soul evolves, logically implies that we experience the results of our thoughts and actions in past lives. These experiences, the adjustment of causes to effects, are the manifestation of the Law of Karman. Karmic Law is unerring, it is the natural Law of Justice, which wisely, intelligently, and equitably adjusts each effect to its cause. It is in no sense fatalism or chance, which have no place in

Theosophy. With this knowledge of Karmic Law we have the comforting thought that our destiny is in our own hands. We not only can control such destiny, but we must do so. Bear in mind that every action, every thought that you have, is a force sent out from within you, that later on — no matter how much later — comes back to you as an effect, and the effect must produce equilibrium or harmony with its cause. Each one is therefore his own karman, and whatever happens to us is the natural harvest of former plantings. This principle is beautifully expressed by our Leader, in his *Golden Precepts of Esotericism*, wherein he says:

Sow an act, and you will reap a habit. Sow a habit, and you will reap a destiny, because habits build character. This is the sequence: an act, a habit, a character, and a destiny. You are the creator of yourself. What you make yourself to be now, you will be in the future. What you are now, is precisely what you have made yourself to be in the past. What you sow, you shall reap.

Our evolution goes on and on according to the Law of Cycles, not like a train on a straight track, but rather along a spiral path, ever returning toward a past circuit of our experience, but always bounding the curve in another, broader sweep. There are cycles within cycles. We are familiar with the alternations of day and night, life and death, sleeping and waking, the ebb and flow of the tides, the four Seasons. Nature continually repeats itself and so do all manifestations of Nature including ourselves.

This simple exposition of the Theosophic teachings of the Seven Principles of Man, of Reincarnation, Karman, and Cyclic Law, may awaken in your consciousness the knowledge that you are not the helpless mortal that you may have thought you were, to cringe in fear of a divine wrath that might be visited on you because of your human frailties. Not at all. You are a definite part

of the Divinity of all Nature. Below you in varying states of evolution are the Elementals, the Mineral Kingdom, the Vegetable Kingdom, and the Animals. Above you are the Mahatmans, those perfect men, relatively speaking, whom Theosophists call Teachers, Elder Brothers, Masters, Sages, and Seers. They are the Guardians of the Race, and of the Records of past ages, portions of which they give out from time to time, when the world is ready to receive them, as fragments of a now long forgotten Wisdom.

You are one class of 'young Gods' incarnated in bodies of flesh at the present stage of your own particular evolutionary journey. The human stage of evolution is about half way between the undeveloped life-atom and the fully developed Kosmic Spirit or God.

Recognise your Divinity, and with such recognition realize your responsibilities to all Nature. Begin within you, to acquire that inherent sense of Universal Brotherhood, not in the sense of sentimental unity or political or social co-operation, but in the Spiritual Brotherhood of all Beings. Begin with your thoughts. Thoughts are powerful energies and each one is an embryo of your future karma. That is the thought I would like to leave with you.

If these few simple Theosophical truths are understood and accepted by you, limitless possibilities of action within yourselves will be opened up, and by the very impetus of your own efforts you will go forward, unafraid, and with dignity, to your inescapable destiny.

TIME AND THE CHILD — *Jalie Neville Shore*

Time is only an illusion produced by the succession of our states of consciousness as we travel through eternal duration, and it does not exist where no consciousness exists in which the illusion can be produced; but "lies asleep." " This is an explanation of Time given in *The Secret Doctrine* (Vol. I, 37) which continues: "The present is only a mathematical line which divides that part of eternal duration which we call the future, from that part which we call the past. Nothing on earth has real duration, for nothing remains without change — or the same — for a billionth part of a second. . . ."

The use of the word "human," H. P. Blavatsky wrote in the same volume (page 106) applies "to those Intelligences that have reached the appropriate equilibrium between matter-and spirit. . . ." These two definitions of time and the human have become to the Theosophist axiomatic. It is only when he hears time being discussed as something dependent upon a clock that stops or connected with a six-hour-a-week law, and the human being defined as primarily a physical organism dependent upon external forces for his culture that the Theosophist is ever aware that anyone can and does think differently about these two fundamental terms. This happens rather frequently.

What occurs less frequently and is therefore the more startling is the presentation of a thesis in refreshing agreement with Theosophical concepts by men of science and responsibility who have not studied the Secret Wisdom but who apparently from the depths of their own being have drawn out aspects of the Truth and with conviction have presented them to the world. This has been the case of Dr. E. Graham Howe, medical psychologist of

England, who wrote *War Dance* a few years ago and who has recently collected a series of lectures he gave to the educators in England into a little book which he has called *Time and the Child*.
(1)

The caption beneath the title reads "A Study of Morality and Reality," which suggests a great deal about the book — and the author, who is remembered especially for having written *War Dance* and *I and Me*. *Time and the Child* is in fact a recasting of Dr. Howe's book *Morality and Reality*, and, I believe, has a more happily chosen title. "Time," the author proves, is a fluid, eternal, Ever-Present Now; and the "Child" (the word child symbolizes adults and pre-adults alike) is that embodiment of consciousness which is never static but moves from hour to hour in an ebb and flow of comprehension of and adjustment to interior and exterior circumstances surrounding it. It is the intelligent bridging of the subjective and the objective, the "I-Am" (no weird concepts are suggested) and the surrounding reality; in short, the child and his environment which embraces his spiritual, mental, emotional, and physical equipment that the author of *Time and the Child* concerns himself with.

Man is the mediator between two worlds: the material and the spiritual, Dr. Howe believes. He must live in both, cannot run from either, must accept both since they are both contained in him. "He is the bridge between the two, to touch both sides of his opposites with love." He has two main objectives: to see more light and as a creative artist to bring fire from heaven to earth to make more things that "matter by their movement." This is man's balance: more light to see by and more capacity to make and use and enjoy things but not to hold them *fixed*.

Holding things fixed, hanging on to them, whether they are ideas or material treasures, constitutes man's greatest mistake causing

him his greatest pain. Fear, Dr. Howe sets forth, originates in the inability to accept "Reality "which is defined as "not what ought to be" but what "simply is, and being what it is, it moves and is *Becoming*." It is both yes and no and pleasure and pain. It is not a matter of personal law or personal convenience, but a matter of fact. Basing a pretty straight-thinking argument on that statement, Dr. Howe presents an excellent discussion of discipline and punishment which is utterly lacking in any namby-pamby suggestions of a moot question. People are too often "kind" with lack of wisdom. This is not facing "Reality," and he deplores the fact that there is no law that punishes moral burglars and murderers. Society is not so much interested in the protection of beings as in the safeguarding of fixtures. We need courageous adults in order to have courageous children, and rebellion against Truth is not so courageous or virtuous as facing it. This the author makes quite clear and also that until we learn what true sublimation is we shall be like a tin can tied to a dog's tail, "tied to something we can't control."

The purpose of morality is both a convenience and a convention. If it is good it bows to Truth. If it is a "fixer" it does not measure up to Truth, for Truth and Reality are always moving in Time. Morality is likely the "imposition of somebody else's will by big battalions," and it is the imposition of the adult will on the child's that Dr. Howe protests against vigorously and effectively. An adult should be an interpreter, an adjuster, a bridge, not a Will-Inflicter. The age, Dr. Howe analyses, is one of morality, arguing good and evil, etc., but not one particularly interested in Truth. Two currents he pictures as running strong: one (regression) which is material progress, destructive of opposition and authoritative supremacy, and the other, the one that "seeks to dissolve the problem of opposites by accepting both; it is finding unity and wholeness through deeper insight into the meaning of

our common brotherhood. For this principle of universal oneness, love is the key."

The capacity to suffer (in the sense of accepting as well as feeling pain) is the criterion of love, as well as of life. Love is the warmth and light that lets things grow. It can work miracles without ever knowing clearly how it is done. It does not have anything to do with like and dislike. Instinct is something to be watched very carefully and never to be relied upon; while intuition is the source of information which convinces one because it is true. Intuition is illumination, while instinct is self-protective. (Thus we have the Theosophist's intuition of direct perception.)

These are some of Dr. Howe's thoughtful and stimulating declarations. The reader will also enjoy his study of words (words like: educate, holiness, sacrifice, renounce, disease) and his original diagrams. The diagram called "Incarnation" is especially interesting to Theosophists. In it the little figure (man) is seen coming from the "Ideal Spiral" down through the "Border Line" into the point of the "Real-Me-Now" of the "Material-Space-temporal (our time) Real Earth."

Dr. Howe is a man who has learned a great deal and who has the ability to give much. He expresses himself with charm, simplicity, and sincerity. He has a good time in his thinking — moving on, not crystallized in one idea, not grooved in one concept. *Time and the Child* exemplifies the author's own definition of growth "which is not a matter of form, it is movement of the spirit, of the hidden life within, of the meaning of the whole but not of any particular part."

H. P. BLAVATSKY SPEAKS FOR HERSELF

Esoteric Wisdom in the Bible (1)

Nevertheless, however disfigured for Rabbinical purposes is the original *Elohistic* version by Ezra, however repulsive at times even the *esoteric* meaning in the Hebrew scrolls, which is far more so than its outward *veil* or *cloaking* may be — once the *Jehovistic* portions are eliminated, the Mosaic Books are found full of purely occult and priceless knowledge, especially in the first six chapters.

Read by the aid of the Kabala one finds a matchless temple of occult truths, a well of deeply concealed beauty hidden under a structure, the *visible* architecture of which, its apparent symmetry notwithstanding, is unable to stand the criticism of cold reason, or to reveal its age, for it belongs to all the ages. There is more wisdom concealed under the exoteric *fables* of Puranas and Bible than in all the exoteric *facts* and science in the literature of the world, and more OCCULT true Science, than there is of exact knowledge in all the academies. Or, in plainer and stronger language, there is as much esoteric wisdom in some portions of the *exoteric* Puranas and Pentateuch, as there is of nonsense and of designed childish fancy in it, when read only in the dead-letter murderous interpretations of great dogmatic religions, and especially of sects.

Let anyone read the first verses of chapter i of *Genesis* and reflect upon them. There "God" commands to *another* "god", *who does his bidding* — even in the *cautious* English Protestant translation of James the First's authorised edition. — *The Secret Doctrine*, I, 335-

The "fall of *man*" was no fall, *for he was irresponsible*. But "Creation" having been invented on the dualistic system as the "prerogative of God alone," the legitimate *attribute* patented by theology in the name of an *infinite* deity of their own making, this power had to be regarded as "Satanic," and as an usurpation of divine rights. Thus, the foregoing, in the light of such narrow views, must naturally be considered as a terrible slander on man, "created in the image of God," a still more dreadful blasphemy in the face of the dead-letter dogma. . . . The *esoteric* interpretation of the Bible, however, sufficiently refutes this slanderous invention of theology; . . .

The old doctrine about the true meaning of the "Fallen Angels", in its anthropological and evolutionary sense, is contained in the Kabala, and explains the Bible. It is found pre-eminent in *Genesis* when the latter is read in a spirit of research for truth, with no eye to dogma, and in no mood of preconception. . . . But what is, in reality, the "Book of Enoch" itself, from which the author of *Revelation* and even the St. John of the Fourth Gospel have so profusely quoted? (*e. g.*, verse 8 in chapter 10, about all who have come before Jesus, being "thieves and robbers.") Simply a *Book of Initiation*, giving out in allegory and cautious phraseology the programme of certain archaic mysteries performed in the *inner* temples. . . .

The "Serpent" fallen from on high, "*deorsum fluens*," was credited with the possession of the Keys of the Empire of the Dead, to that day, when Jesus saw it "falling like lightning from heaven" (*Luke* x. 17, 18), the Roman Catholic interpretation of *cadebat ut fulgur* to the contrary, notwithstanding; and it means indeed that even "the devils are subject" to the *Logos* — who is WISDOM, but who, as the opponent of ignorance, is Satan or Lucifer at the same time. This remark refers to divine Wisdom falling like lightning on, and quickening the intellects of those who fight the devils of

ignorance and superstition. Up to the time when Wisdom, in the shape of the incarnating Spirits of MAHAT, descended from on high to animate and call the Third Race to real conscious life, humanity — if it can be so called in its animal, senseless state — was of course doomed to *moral* as well as to physical death. The *Angels fallen into generation* are referred to metaphorically as *Serpents* and *Dragons of Wisdom*. On the other hand, regarded in the light of the Logos, the Christian Saviour, like Krishna, whether as man or logos, may be said to have saved those who believed in the secret teachings from "eternal death," to have conquered the Kingdom of Darkness, or Hell, as every Initiate does. This in the human, terrestrial form of the Initiates, and also because the *logos* is Christos, that principle of our inner nature which develops in us into the Spiritual Ego — the Higher-Self — being formed of the indissoluble union of *Buddhi* (the sixth) and the spiritual efflorescence of *Manas*, the fifth principle. — *Op. cit.*, II, 228-31

. . . Thus the remark made by the great Initiate [in *Luke*, x, 18] — one that referred allegorically to the ray of Enlightenment and reason, *falling like lightning* from on high into the hearts and *minds* of the converts to that old wisdom-religion then presented in a new form by the wise Galilean Adept (2) — was distorted out of recognition (as was his own personality), and made to fit in with one of the most cruel as the most pernicious of all theological dogmas. — *Op. cit.*, II, 231

The Book of Enoch, in short, is a *resume*, a compound of the main features of the History of the Third, Fourth and Fifth Races; a very few prophecies from the present age of the world; a long retrospective, introspective and prophetic summary of universal and quite *historical* events — geological, ethnological, astronomical, and psychic — with a touch of theogony out of the antediluvian records. The Book of this mysterious personage is

referred to and quoted copiously in the *Pistis Sophia*, and also in the *Zohar* and its most ancient Midrashim. Origen and Clement of Alexandria held it in the highest esteem. . . . From the XVIIIth to the Lth chapter, the Visions of Enoch are all descriptive of the Mysteries of Initiation, one of which is the Burning Valley of the "Fallen Angels." — *Op. cit.*, II, 535

[Solomon] Whose 700 wives and 300 concubines, by the bye, are merely the personations of man's attributes, feelings, passions and his various occult powers: the Kabalistic numbers 7 and 3 showing it plainly. Solomon himself, moreover, being, simply, the emblem of SOL — the "Solar Initiate" or the Christ-Sun, is a variant of the Indian "Vikarttana" (the Sun) shorn of his beams by Viswakarma, his Hierophant-Initiator, who thus shears the Chrestoscandidate for initiation of his golden radiance and crowns him with a dark, blackened aureole — the "crown of thorns." (See the "Secret Doctrine" for full explanation.) Solomon was never a living man. As described in *Kings*, his life and works are an allegory on the trials and glory of Initiation. — *Lucifer*, Nov. 1888

According to the Kabalists, the three Kings or Magi were white, black, and brown. The White presented gold, the symbol of Life, and Light. The Black presented myrrh, the symbol of Death and Night; and the Brown presented the frankincense, the symbol of Divinity and of the dogma which reconciles the antagonistic duads of the Universe. — *The Complete Works of H. P. Blavatsky*, IV, 120

It is a fact worthy of remark, that so long as the initiate kept silent "on what he knew," he was perfectly safe. So was it in days of old, and so it is now. As soon as the Christian God, emanating forth from *Silence*, manifested himself as the *Word* or Logos, the latter became the cause of his death. The serpent is the symbol of wisdom and eloquence, but it is likewise the symbol of

destruction. "To dare, to know, to will, *and be silent*," are the cardinal axioms of the kabalist. Like Apollo and other gods, Jesus is killed by his *Logos*; he rises again, kills him in his turn, and becomes his master. Can it be that this old symbol has, like the rest of ancient philosophical conceptions, more than one allegorical and never-suspected meaning? The coincidences are too strange to be results of mere chance. — *Isis Unveiled*, II, 510

. . . The "Man" of chapter i. [the book of *Genesis*] is radically different from the "Adam" of chapter ii., for the former was created "male and female" — that is, bi-sexed — and in the image of God; while the latter, according to verse seven, was formed of the dust of the ground, and became "a living soul," after the Lord God "breathed into his nostrils the breath of life." Moreover, *this Adam* was a male being, and in verse twenty we are told that "there was not found a helpmeet for him." The Adonai, being pure spiritual entities, had no sex, or rather had both sexes united in themselves, like their Creator; and the ancients understood this so well that they represented many of their deities as of dual sex. The Biblical student must either accept this interpretation, or make the passages in the two chapters alluded to absurdly contradict each other. . . . Not only are these two races of beings thus clearly indicated in *Genesis*, but even a third and a fourth one are ushered before the reader in chapter iv., where the "sons of God" and the race of "giants" are spoken of. — *Op. cit.*, I, 303

There is one more important emblem connected with the sloughing of the serpent's skin, which, so far as we are aware, has never been heretofore noticed by our symbolists. As the reptile upon casting his coat becomes freed from a casing of gross matter, which cramped a body grown too large for it, and resumes its existence with renewed activity, so *man, by casting off the gross material body, enters upon the next stage of his existence with enlarged powers and quickened vitality*. Inversely, the

Chaldean Kabalists tell us that primeval man, who, contrary to the Darwinian theory was purer, wiser, and far more spiritual, as shown by the myths of the Scandinavian Bur, the Hindu Dejotas, and the Mosaic "sons of God," — in short, of a far higher nature than the man of the present Adamic race, became *despiritualized* or tainted with matter, and then, for the first time, was given the *fleshly body*, which is typified in *Genesis* in that profoundly significant verse: "Unto Adam also and to his wife did the Lord God *make coats of skin*, and clothed them." Unless the commentators would make of the First Cause a *celestial tailor*, what else can the apparently absurd words mean, but that the spiritual man had reached, through the progress of involution, to that point where matter, predominating over and conquering spirit, had transformed him into the physical man, or the second Adam, of the second chapter of *Genesis*? . . .

. . . While some Kabalists, and even archaeologists say that "Adam, Enoch, and Noah might, in outward appearance, be different men, but they were really the selfsame divine person." Others explain that between Adam and Noah there intervened several cycles. That is to say, that every one of the antediluvian patriarchs stood as the representative of a race which had its place in a succession of cycles; and each of which races was less spiritual than its predecessor. Thus Noah, though a good man, could not have borne comparison with his ancestor, Enoch, who "walked with God and did not die." Hence the allegorical interpretation which makes Noah have this coat of skin by inheritance from the second Adam and Enoch, but not wear it himself, for if otherwise, Ham could not have stolen it. . . . The coat of skin worn by Cush "in secret," — *i. e.*, when his spiritual nature began to be tainted by the material — is placed on Nimrod, the most powerful and strongest of physical men on this side of the flood — the last remnant of the antediluvian giants. — *Op. cit.*, I, 149-50

The exoteric plan of the *Bible* was made to answer also to four ages. Thus, they reckon the Golden Age from Adam to Abraham; the silver, from Abraham to David; copper, from David to the Captivity; thenceforward, the iron. But the secret computation is quite different, and does not vary at all from the zodiacal calculations of the Brahmans. We are in the Iron Age, or Kali-Yug, but it began with Noah, the mythical ancestor of our race. — *Op. cit.*, II, 443

The animals shut up in the ark are the human passions. They typify certain ordeals of initiation, and the mysteries which were instituted among many nations in commemoration of this allegory. (3) — *Op. cit.*, II, 447

FOOTNOTES:

1. As in other instances of this series, only a very few of the many, many allusions to the occult significance of the Bible and its various books have been chosen. The extracts here given are merely an indication to the student of what can be found. Many people unfortunately have the impression that H. P. B. cast aspersions on the Bible and Christianity, whereas if one really reads what she says, one finds that she illuminates the Biblical teachings, and gives them great dignity. — Eds. ([return to text](#))

2. To make it plainer, any one who reads that passage in *Luke*, will see that the remark follows the report of the *seventy*, who rejoice that "even the devils (the spirit of controversy and reasoning, or the opposing power, since Satan means simply "adversary" or *opponent*) are subject unto us through thy name." (*Luke* x 17) Now, "thy name" means the name of Christos, or Logos, or the spirit of true divine wisdom, as distinct from the spirit of intellectual or mere materialistic reasoning — the HIGHER SELF in short. And when Jesus remarks to this that he has "beheld Satan as lightning fall from heaven," it is a mere statement of his

clairvoyant powers, notifying them that he already knew it, and a reference to the incarnation of the divine ray (the gods or angels) which *falls into generation*. For not all men, by any means, benefit by that incarnation, and with some the power remains latent and dead during the whole life. Truly "No man knoweth who the Son is, but the Father; and who the Father is, but the Son" as added by Jesus then and there (*Ibid* x, 22) — the Church "of Christ" less than any one else. The Initiates alone understood the secret meaning of the term "Father and the Son," and knew that it referred to Spirit and Soul on the Earth. For the teachings of Christ were *occult* teachings, which could only be explained at the *initiation*. They were never intended for the masses, for Jesus forbade the twelve to go to the Gentiles and the Samaritans (*Matt.* x. 8), and repeated to his disciples that the "mysteries of Heaven" were for them alone, not for the multitudes (*Mark iv. II*). — *Ibid.*, II, 231 ([return to text](#))

3. The "animals" referred to by H. P. B. here in connexion with Noah and the Ark, refer not to the allegory of the Cosmic Noah and the Cosmic Ark, but to that phase of the Arkite theory or story in connexion with Man alone. If the student is interested in other branches or aspects of the story of Noah and the Ark, consult H. P. B.'s writings on the subject, not only in *Isis Unveiled*, but in *The Secret Doctrine*. — Eds. ([return to text](#))

SUPERCONDUCTIVITY — *Raymond Rugland*

A crackling spark leaps and twists between two copper terminals. A flash of dynamic power blazes a zigzag path, and an aggregate embodiment of countless millions of souls of the electronic world surges from one column to the other. The power of a Genie, the mystery of a flame, is electricity! Whirling magnets and rotors bring light, power, and heat into our homes; a tiny copper strand leads the way for the electrons to follow. In nature is revealed this vast collection of infinitesimal electrical entities throughout the width and breadth of our entire objective existence. Are not heat, motion, friction, and light witnesses to the constant presence of magnetism and electricity? Because our minds are bound by our physical restrictions and we cannot measure the infinite smallness of each electron, are we justified in assigning it to a place of insignificance? Consciousness is all-permeant and is limitless in its expression whether in the macrocosm or the microcosm. The Theosophist regards the atom as a tiny solar system, protons being the atomic sun, and electrons, the atomic planets. Not inert particles, but ensouled individualities rooted in an eternal Monad — these are the electrons which the Theosophist fits into the Universal Scheme. Does atomic or molecular consciousness merit the real consideration of the scientific researcher? One electrical phenomenon is of special interest in consideration of ensouled planet electrons.

Superconductivity, as an electrical phenomenon, has baffled the physicists for almost twenty years. In vain they seek a physical means of explanation but each time the true answer eludes their grasp. Superconductivity refers to the behavior of an electric current passing through a metallic conductor at low temperatures. Only in recent times have conditions been

perfected so as to enable the physicist to work experimentally with temperatures as low as minus 270 degrees Centigrade. In chemical research, atoms warp and twist under the direction of researchers as they subject different substances to the uncanny effect of sub-zero temperatures. These infinitesimal particles are not found to be as inert and irresponsive as was presumed or entirely in harmony with the theories that had been framed beforehand.

Every pure metallic conductor offers a resistance to the movement of the current through it and for different temperatures, other things being equal, we find that as the temperature of the conductor is raised, the resistance becomes greater with a uniform constancy. The atoms of positive electricity — the protons — are relatively heavy, and are, as a rule, immobile; atoms of negative electricity — the electrons — are much lighter than the protons, and in every body some are free to move. A current in a wire is merely a stream of these electrons and the battery or dynamo "pushing" the current through the wire acts as an electron pump. As the temperature of the conductor rises, the atoms composing the conductor speed up in their natural motion as do the electrons flowing as an electrical stream, and the result is that there is a continual bombarding of atoms and electrons so that the motion of the electric current is impeded by constant jostling of atomic neighbors. According to this explanation, as the temperature of the conductor lowers, the atoms should gradually slow down and offer less resistance to the electric current. To within a certain limit this is true. It was found that at a temperature a few degrees above absolute zero (minus 273° Centigrade) the resistance of certain metals vanished completely and without warning. A current started in an endless conductor would continue to flow for hours without any resistance and with its intensity undiminished without the aid of

any outside electromotive force or battery. It seemed that the electrons appear to know the location of the moving atoms and to avoid colliding with any of them, although such collisions would be frequent at a slightly higher temperature. Such a discovery violated the expected calculations of the scientists and once again left them with a phenomenon for which they had no explanation. Here is a case wherein atomic and molecular behavior seems to have acted from some impulse within the nature of these microcosmic entities rather than from some external material or physical factor. For science, remains the renewed search for the hidden potencies and powers of the micro-organisms. Theosophy mirrors the Plan of the Universe to reflect in the electron. Lo! — A planet of some microcosmic sun, an entity like our own Earth, linked in a vast Scheme of evolving Conscious Infinitude.

The Theosophical Forum

UNIVERSAL BROTHERHOOD — *Alan Shurlock*

Universal Brotherhood is a Theosophist's way of saying that all things in Nature are akin, from the dust under our feet to the farthest star in the sky. The phrase "Universal Brotherhood" is not new or startling, although its true meaning is not often used. It has been the theme of poets and philosophers, the ideal of statesmen and patriots. Scientific research even shows that all matter may be resolved into its primary division of atoms, so that everything in this physical world is related and akin to everything else.

Many persons, however, examining the racial and religious differences of human beings, find that Universal Brotherhood is only a platitude or possibly a consummation devoutly to be wished, as far as mankind is concerned. But a Theosophist understanding that everything physical and mental is only a reflexion of the Divinity that is the source of all things, states positively that Universal Brotherhood is a fact in nature. Wars, sorrow, and confusion among mankind are proofs in themselves of this fact. We are all bound together with the golden cord that comes from the heart of the universe, and what affects the smallest part affects the whole. The poet Francis Thompson expresses our belief very beautifully, when he says:

All things by immortal power
Near or far
Hiddenly
To each other linked are,
That thou canst not stir a flower
Without troubling of a star.

Once we have an understanding of the fundamental laws of the

universe, the belief in Universal Brotherhood becomes a real thing and part of our daily living. Stated simply, these laws are:

The Law of Hierarchies; the Law of Balance; the Law of Cycles. The Law of Hierarchies may be explained as the division of all nature into groups or kingdoms, one above the other, without end. All kingdoms are alike in one particular: they are all groups of living beings in some form or another, coming into being as expressions of the universal life force that shows itself in the myriad shapes and patterns that fill the world with beauty. Each kingdom is related to and dependent upon the one below for its existence. At the same time it is gradually reaching up or evolving towards the kingdom above.

We see this relationship in the mineral, vegetable, and animal kingdoms. Trees and plants have their roots in the soil from which they draw their life-sap. Animals, in turn, depend on grass, vegetables, and fruit for their existence. Mankind, having an animal body, is likewise dependent on the kingdoms below, but having developed mind and will-power, is evolving towards the kingdom of the gods above. Why should this be thought a stretch of the imagination? We cannot truly conceive ourselves, in our present state, as being the ultimate, the finest product of the universe. Is it not reasonable, then, to assume that there are higher beings who have evolved beyond man's state, even though our physical eyes cannot see them? And so Theosophists say that these beings, call them gods, archangels, Mahatmas, Super-Men, as you will, do exist; and that though our bodies are chained to the physical kingdoms below, our spiritual selves are reaching up to the state of godhood above us. And beyond the gods stretch even higher realms of consciousness, without end; all related and a part of the grand whole.

As we study the universe and its operations we begin to see that

there is nothing hit-or-miss about the way it is run. The sun rises daily; the flowers bloom and die and are reborn year after year; the stars move in their appointed courses in spite of our wars, quarrels, and ignoble confusion. Why does the universe run so grandly and why don't we live in an equally grand manner?

Here is where the second law comes into effect — the law called by Theosophists Karman. Interpreted, this means the Law of Cause and Effect, attraction and repulsion; or better still, the Law of Balance. This law keeps the universe running so beautifully year after year. As the result of our own actions it operates to bring us war or peace, happiness or misery; and thus we become the judges, juries, and policemen of ourselves.

A cold-blooded fatalistic belief, you say? Not at all. A complete understanding of this law can be had only by considering it together with the third universal law, the Law of Cycles. This last law may be explained as the belief and realization that everything in nature progresses upwards in a spiral path, that is, a series of circles each one higher than the other. Another side of this law is the fact that all manifestation is dual — the well known pairs of opposites that Plato and other philosophers have written about. A study of nature and our own lives gives us many examples: day and night, winter and summer, and the familiar daily routine of sleeping and awakening. Each day is a miniature life; our whole life, a series of days in which we learnt life's lessons, or flunked them; we do noble or ignoble deeds; we help others or live in a selfish world of our own. But no life, no matter how well lived, can be complete in itself. There is always so much more to learn and to do and to undo, even for the brightest of us. So, in harmony with this law of cycles Theosophists believe in reïmbodiment: the return to earth again and again to take up our progress where we left off, after a period of rest; just as every day we go to work, refreshed after the night's rest, to pick up the

incompleted thread of the previous day's business.

With this cyclic law in mind, the Law of Balance becomes logical and not fatalistic. We return in another life to reap here the benefits of our previous helpful actions, or to straighten out the injustices we have done before. And thus, from life to life, we gradually progress upwards.

An explanation should be given here of what is meant by "we" in this paper. As stated before, Theosophists believe that there is Divinity behind all physical matter, including ourselves. Our real selves are composed of finer and more spiritual grades of consciousness than our physical bodies, which in turn are lit up by the pure spark which is a part of the Divine Whole. This spiritual part of ourselves, sometimes called the soul, reincarnates again and again until it has learned all that can be learned through materialization into physical matter. This process, in turn, gradually spiritualizes the physical matter with which our soul comes into contact while residing in our bodies, so that this physical matter will evolve in time into a spiritual being.

How is this done? Consider the makeup of our physical bodies. Forming the flesh, bone, and blood are tiny atoms, each of which has a spiritual counterpart. These atoms enter our system through the food we eat, and during their stay with us they become colored with the thoughts, magnetism, and individuality of ourselves. As we progress upward by spiritual enlightenment we in turn impart a touch of our growth to these atoms, so that they are lifted up by their contact with us. This is just one example of what is meant by a Theosophist when he states that everything in nature is dependent and related to the rest.

Having considered and interpreted Universal Brotherhood through the fundamental laws of the universe, let us see how it affects the progress of mankind. In a previous paragraph

concerning the Law of Balance the suggestion was made that man seems to be an inharmonious unit in a seemingly harmonious whole. The apparent discrepancy is explained by the fact that human beings are endowed with the power to discriminate. Man is more than a mere animal, because man has the power of Mind, the ability to choose between good and evil. Until men learn how to use this power for the good of their brothers, instead of their harm, there will be discord, wars, and suffering.

Theosophy gives us the key to understand ourselves; the power to end all strife and sorrow. What is it? To live to benefit mankind. The same thought can be found in all religions. The Eastern scriptures say: By loss of self alone can Self be found, which is a beautiful, concise way of saying that by overthrowing our personal, selfish nature we shall find the real, the spiritual part of our being. And this can be done only by living to help others. It is the sacrifice of the personal self that gives us advancement., The greatest paradox of the universe is that through self-sacrifice, devotion to others, and practice of altruism we gain infinitely more than we give up. The very virtues and qualities we possess that endear us to our fellow-men were obtained only by self-sacrifices on our part sometime or another in our various existences.

Jesus was asked: "Teacher, what is the great injunction in the Law?" He replied: "Thou shalt love the Lord God thy God, in all thy heart and in all thy soul, and in all thy consciousness. This is the prime and great injunction. And the second is like unto it: Thou shalt *love thy neighbor as thyself*. In these two injunctions hang all the Law and all the prophets."

The spirit of brotherhood, properly understood, may be found throughout nature, even in the mineral, vegetable, and animal kingdoms. It has been said that nature is ruthless, "red in tooth

and claw." Could it not be better stated that the Monads or life-entities back of each kingdom understand that by sacrificing themselves as food for the kingdom above they are undergoing spiritual development by coming in contact with a higher-developed form of consciousness? Mankind, the top kingdom in material development, makes his material sacrifice by devoting himself to the advancement of his brothers. Thus is the principle of Brotherhood carried out everywhere in the universe.

When we understand the operation of the laws of Karma and Reincarnation the true meaning of brotherhood becomes very clear. Every action, kind or unkind, helpful or harmful to our fellow-beings becomes a force we have created that will help or hinder us in our own evolution. "For every flower of love and charity we plant in our neighbor's garden, a loathsome weed will disappear from our own." A thief can steal only from himself. The energy created by such an action remains long after the act has been forgotten, until it is balanced by an act of restitution, perhaps in a future existence. A nation robs and plunders other nations, as Spain did the Incas of Peru and the Aztecs of Mexico. Today Spain is undergoing war and destruction.

Does anyone doubt that the condition of Europe today is not the result of past European thoughts, words, and misdeeds? I think it is quite reasonable to say that there would not have been dictators in Europe today had a magnanimous peace treaty been drafted after the World War. The karmic results of the failure of all the nations to live harmoniously with each other are only too clear. We, as citizens of these nations, are all somewhat to blame. If our individual lives are not unselfish and harmonious, we cannot expect our national actions to be any different. If we Theosophists had worked harder before the world war to create a current of unselfish thoughts and actions perhaps the results might have been different today.

I think the gist of this discussion may be condensed into the simple quotation learned in my childhood: "Helping and sharing is what Brotherhood means." Everything in nature has one hand fastened to the kingdom below and the other touching the hand of the kingdom above. We can only progress by helping those below us, thereby making it possible for those above us to help us.

For those considering Universal Brotherhood from a practical viewpoint the following reasons are cited to show that this idea is not only ethically and philosophically correct, but full of common sense as well:

1. Because everything in nature is related and dependent on everything else; we cannot progress upward without helping those below. Consequently, by helping those below, we make it possible for those above to give us a helping hand.
2. We are responsible for our thoughts, words, and deeds. Therefore every selfish entry in the Karmic ledger only retards our progress, while every unselfish thought and act helps us to evolve, and consequently helps also, because we are all related and interdependent, the evolution of the universe.
3. The law of rebirth shows that selfishness, snobbishness, and isolation, whether done individually, in groups, or by a nation, are futile and illusory. Such actions cause similar reactions to be produced, and react against those who originated these acts. There is no racial group, or individual superiority, as spiritually we are all One, and souls incarnate into different racial bodies only for experience and progress.

QUESTIONS AND ANSWERS

How Old Is the Aryan Race?

In your article on "The Cradleland of Our Race," in *THE THEOSOPHICAL FORUM*, June, 1937, the birth of the Aryan stock from Atlantean tribes is given as 7- to 8,000,000 years ago (p. 410). On page 413, it is stated twice that it is 4- or 5,000,000 years since the original germinal condition of the Fifth Root-Race, though as a race *sui generis* it is about 1,000,000 years old. What puzzles me is the difference between the 7- or 8,000,000 and the 4- or 5,000,000 years as the age of what I supposed was the same Race. Does the larger number refer to that hint in *The Secret Doctrine* that the Aryans could trace their descent back to Lemuria-Atlantis? — *L. R.*

G. de P. — In dealing with time-periods in a general article it naturally is difficult to find English words to give the exact picture the writer desires to paint. Hence, on reading your note I see how my words could have been misunderstood; yet I do think a careful reading of the article in *THE FORUM* compared with the diagram I gave in *Fundamentals* on page 251, of how a race is born from, or originates in, the middle period of the parent race, will show what I had in mind. I will now try to explain.

Every Race, Root-Race I mean, great stock-Race, takes its origin, its beginnings, its genesis, i. e. its birth as a differentiated, that is different, stock from its parent at about the middle point of that parent's age or time-period. This we can properly call the birth of the new race, likening it to the birth of a child. This in the case of the Aryan Race was between four and five million years ago. The Atlantean Root-Race has lasted altogether from its birth to its

present time some eight million years, that is from its germinal period to its now dying out scattered remnants of savages. So we can truly say the Atlantean Race, including its germinal period all down the ages to its now scattered savage remnants, is about eight million years old; but our own Aryan Race so called, is only four million plus years old from its birth, born at the half-period of the Atlantean Race, say four or five million years ago.

On the other hand, when we consider that a Race before *it* is born, i. e. before it becomes a distinctly differentiated Race from its parents, must have had its germinal growth, slowly through the ages differentiating from its parent, we see that we can trace the germinal period of a Race, such as our Aryan Race, back almost to the beginnings of the Atlantean Race. So that our own Aryan Race from its germ-period to the present day is about seven million years old.

Of course, the characteristics of a Race in its germ-period are so closely alike to its parent-stock, that in the case you submit, the germ-period of the Aryans really showed them as scarcely differentiated from the Atlanteans. Yet these germs grew through the ages, and after three million years or so, at about the middle period of Atlantis, became the distinctly differentiated Aryan Race.

Thus take the case of a human being: the average human being is born as a baby, not in the infancy of its parents, but when its parents have attained let us say their majority, roughly at about middle age or somewhat before. Yet the germ of a child when it exists in its parent's body can be said to be so like the parent's body, even the parent's body in its early youth, that it is scarcely differentiated from the parent. This analogy is a feeble one, but it will express what I am trying to say with regard to the Races. I hope this is clear. It is what I had in mind when writing the

article.

To recapitulate: (a) our Aryan Race from its germinal beginnings in early Atlantis is about seven million years old, although this is not a proper way to count it. It is merely rounding out the picture. These germs in Atlantis slowly through the ages of Atlantean heyday became more and more differentiated into a Race apart, and this occurred at about the middle period of Atlantis, and this was the real birth or beginning in that sense of the Aryan Race.

(b) Yet so slowly does nature work in these things, that our own Aryan Race was quite Atlanteanesque, so to speak, until about 1,000,000 years ago when it very definitely in all respects shook off the Atlantean characteristics, and became a true Race *sui generis*. Our own Aryan Race is now in its kali-yuga, beginning it, and the new Sixth Root-Race is already around us in millions of scattered individuals, beginning feebly to differentiate into the Sixth Root-Race qualities; and in some three hundred thousand years from now, while we Aryans are ending our kali-yuga, the Sixth Root-Race will be said to be definitely born as the Sixth Root-Race, but will remain Aryanesque for millions of years yet, until our own Aryan Race is represented only by degenerate remnants; at which time the new Sixth Root-Race will be becoming typically a race *sui generis* itself. I hope all this is clear.

Animals and the Law of Karman

I can understand the Law of Karman, cause and effect, as related to free-willed, responsible man, but I do not understand how or when innocent and irresponsible animals brought upon themselves karman of suffering through the cruelty of man: vivisection practices, etc. As Mother Nature allows of much pain and suffering in bringing up her children, is there not some other law at work aside from the Law of Karman — i. e., the Law of

Justice? — E. S. P.

O. I. C. — There is no entity in the Universe but has or has had in the past some degree of free will or the power of choice. *Are animals innocent, or are they rapacious?*

Animals are without the human sense of moral responsibility, but those who have had the most to do with them would be about the last, I think, to regard them as wholly innocent. Animals have made *karman* in the past, and are reaping it and making it now. They are not wholly irresponsible. The spark of divinity which is in the animal has chosen that imbodiment to work out its evolution and to purge itself of unlovely qualities. In other words, every creature obtains that imbodiment and way of life to which its own desires, relative perfections or imperfections, and state of evolution draw it. There is no *outside* law or god or chance that can put and keep creatures in an imbodiment and way of life wholly contrary to their own nature.

Why are there rapacious and thieving animals? Because in the long past their desires and choosings have led them to that character and form. Animals are animalistic because somehow, somewhere along the path of evolution they have chosen to be so. They are in the process of developing conscience, the beginnings of conscience, else they would not be on the way toward becoming human. No creature in the Universe is wholly without higher guidance. Animals do not perfectly follow the highest guidance that they have. Anyone sufficiently familiar with them knows that they do inflict unnecessary cruelty on each other. Hence they do make bad *karman* — physical *karman*, which is the kind of *karman* that animals make, suffer, and enjoy.

We cannot judge animals as a whole by our pets, which have become unnatural. The behavior of the natural animals seldom indicates prolonged suffering and seldom if ever indicates mental

anguish. This is because they are not self-consciously living on the mental plane. Even their physical sufferings cannot be as keen as those of humans, who add the force of imagination and horror to theirs. Animals appear to die easily as a rule. We are told that they reincarnate quickly, and certainly they reincarnate easily as compared with humans. But woe to the human who causes them unnecessary suffering!

Karman, true justice, includes all other laws. It certainly includes, nay, *is* in the long run, mercy and progress. We all know well that not all suffering is truly bad karman. Seen from the largest viewpoint suffering is corrective and purifying. Every creature must experience "unmerited" suffering and joy (we must not forget the undeserved joys!) from the acts of others, but karman is just, and such experiences are fully compensated for soon or in the more distant future, though our so limited perceptions may not see the compensation. Also, those who bring suffering or joy to others will be suitably compensated. H. P. Blavatsky has said that animals will be recompensed for the sufferings (vivisection, etc.) caused to them by human beings.

When we experience "unmerited" suffering we learn, whether we will or not, what a terrible thing it is to inflict unnecessary suffering on others, which in obvious or subtil ways we are doing constantly. If thus we learn, do not the animals also learn? By all right and reason and intuition we must recognize that deep within *every* creature there is that which learns from the consequences — karman — of its own imperfections, and thus improvement takes place.

Why Do Children Suffer?

Why do children have to suffer, as they cannot understand or feel any responsibility for wrongs done in former lives?

— W. F.

J. E. C. — Have you stopped to consider what would happen to a child if it could not suffer? Suffering is not just a punishment. As a matter of fact I do not think it is punishment at all from the true standpoint. Suffering is Nature's method of teaching us. If we put our hand in the fire it is burned. If we eat the wrong food we have the "tummy-ache," etc. If it were not for Nature's kindly warnings our bodies would be destroyed in no time. I think all of the suffering of a child is disciplinary and that some of it can be said to be due to karmic consequences of previous lives, except as far as the environment is concerned, and even there it is for the best good of the child or incarnating entity from the ultimate standpoint. Yet it should be added that this teaching in no wise excuses us for inflicting suffering on children, or anyone else, for that matter, or for refusing to alleviate suffering where we can and may. *H. P. B.* points out that if we take it upon ourselves to inflict suffering, under cover of "meting out Justice," we are simply setting ourselves up as superior to a great Cosmic Law, the Law of Karman — which is, after all, the Law of Compassion.

In the Dim Evolutionary Past

There was a certain time long ago, when we used to be animals; and long before that, when these animals emerged from one cell organisms (according to Darwin).

What was before that? — *W. F.*

J. E. C. — This question is based on a partial misconception which it would take too much time and space to go into at the present writing, for it involves the whole of the difference between the Theosophical idea of evolution and the Darwinian concept. However, we can overlook that fact for the time being to get at the real heart of the question, which is: What was the condition of evolving entities before they started their period of evolution in this Hierarchy or field of consciousness? Perhaps this can best be

answered by taking the analogy of successive lives upon earth. The body of a man starts as a single germ cell from which the embryo gradually develops until it is finally ready to leave the womb, after which it becomes a separate organism and continues its growth and development through all the phases of physical life. Meanwhile the reincarnating ego has gradually learned to control the physical instrument through which it gains experience and knowledge of this hierarchy. Previous to that it had passed through a semi-spiritual condition known as Devachan, and previous to that it had passed through another life in another body.

Now this same process occurred on a greater scale in the experience of the same monadic entity that is now working in this life through the physical body. In another hierarchy the monad went through life after life until it had gained all possible experience in that hierarchy. Then it went into Nirvana, which might for brevity be called a greater Devachan, and emerged from that into its present hierarchy, working up from point to point, starting on the lowest rung of the ladder, the simplest manifestation of life in the hierarchy. In any single earth life the analogy is completed through the repeated incarnation of the monadic ray when it awakens from sleep each morning, followed by the repetition of the opposite condition, discarnation, when the consciousness leaves the body at night.

On the "Origin of the Mammals"

I understand from *The Esoteric Tradition* that the animals were formed or arose from man in the manner therein described, i. e., during the Lemurian period when man was more or less of a "jelly-bag" physically. Am I correct in supposing that the urge or thought sent out when these forms took place determined the nature or kind of animal

produced or resulting? If this is so where did the thought or urge giving that "nature or kind" come from since at that time man had not yet come in contact with the Manas-principle or Mind of an individual nature? — *H. W. F.*

G. Barborka — Replying to the first question: "Am I correct in supposing that the urge or thought sent out . . . determined the nature or kind of animal . . ." the answer is, No, for the reason which the questioner supplies, i. e., the Manas-principle was not yet functioning *consciously* in the humanity of that far-distant period. Enlarging upon the answer: there are three important points that should be borne in mind when considering this subject of the off-throwings from early humanity: (1) the humanity of that far-distant epoch (the *early* Third Root-Race) was entirely different from that of the present time; and although described as more or less of a jelly-bag — which implies a loosely cohering entity — nevertheless parts or portions could easily detach themselves from the mass; (2) the "animals" that arose from the off-throwings were solely *mammalian* in type; (3) the various parts forming the "body" of early humanity were not under the "dominant urge" which stamped such parts as fitting solely to the status of the human frame. The reason why any part of the human body *today* cannot give rise to a group-vehicle which in time would result in an "animal" is because the parts composing the human body are stamped so strongly with the "human quality" that any separated aggregate cannot start "making something" on its own. In other words, the life-atoms so sloughed off from a human body today (as for instance in an amputated limb) simply pursue their peregrinations in their proper terrain or field. Nor can an amputated limb be replaced by another such limb "growing forth" from the human frame today. It may be suggested that the particular urge or trend given to the early off-throwings depended upon the original position that such

off-cast portion had in relation to the frame of early humanity.

It should also be remembered that the first mammals were not *animals with bones*, but "ethereal proto-organisms, just as man was." It was during the Third Root-Race that "the boneless animals grew and changed: they became animals with bones, their chhayas became solid also." (*The Secret Doctrine*, Volume II, page 183)

BLAVATSKY'S INSTRUCTION TO A NEOPHYTE (1)

The following was received from Madame Blavatsky, by Thomas H. Evans, deceased, of Washington, D. C, and sent by him to us for publication in *THE OCCULT WORD*:

"I am always delighted to be brought into relation with a new seeker after truth, and only wish I had hours enough in the day to take each by the hand and lead him the long journey through that ends at the door of Esoteric Wisdom. But it has been decreed, from time immemorial, that each one must be his own sufficient pilot and body-guard so far as visible things are concerned. The 'Kingdom of Heaven,' which I need not tell you is but the dominion of man's immortal spirit over the inner force of the Universe, must be taken by violence. I am sorry to be compelled to tell you, that the prize of Wisdom and Power must be won through danger, trial, temptation, the allurements of sense and all the besetments of this world of matter which they counterpoise, hence antagonist of spirit. Broad, smooth and flower-sprinkled is the way to the world's rewards; narrow, hard, sorrow beset the path to the Temple of Truth.

Do not take the above, pray, for literary flourishes, or an attempt to throw a mysterious coloring over our correspondence. What I say is simple and naked truth. As I read your letter, it appears to me that you have reason for encouragement. Your aspirations are warm and proper, your reading in the right direction, and I see in your poetry that the *Inner-man* has more to do with it than the mere physical brains of the writer. You need to keep on and never turn a glance backward. Your greatest need you have yourself stated; it is *Will-Power*. There never was either Adept of White Magic, or Sorcerer of the Goethic Art without that. Magic is

impossible without it.

. . . To help those who need it is the object of all my life and my most sacred duty. Pray lay aside all ideas of conventionality as regards sex and acquaintance. The *true* Occult is sexless — or rather androgynous. He lives in the Spirit, he merely exists in the fleshy capsule that covers him, indifferent whether it be called man or woman by those who only see it externally."

The Theosophical Forum

NATURE, AS TRAPPER — M. G. Gowsell

Man, the human animal, is said to be the child of earth, the progeny of the *Anima Mundi*, or world soul: call it Mother Nature if you like. And this is true, as far as this limited portion of his composite make-up is concerned. But, in the grand scale of evolution, man's position is a wide stride in advance of that of Mother Nature. She is acutely conscious that man is her superior. Moreover she is jealous, in fear that man may so advance as to outstrip and leave her in the lurch, without his help, which she needs and which she feels to be her due.

In order therefore to slow him down, to circumvent, to deter, delay and to detain him, she resorts to artifice and stratagem and sets numerous traps. They are all nearby, attractively baited, placed to advantage and within easy reach. Every one of man's shortcomings and limitations is an instance in point. Egoity, ambition, laziness, greed, desire, personality, likes and dislikes and criticism; these are all traps designed and set by Nature for the purpose of holding man back. Some of the traps are very comfortable, so much so that it is difficult to realize that one has been caught. They are also very large, so extensive in fact that whole nations at a time may fall into a trap. Others are so constructed that failing to grip and hold they may so stun as to render the victim partially or wholly insensible. The subtlest of the devices are so designed as to take away or prevent man from acquiring vision. And thus bereft he can hardly hope to escape the larger pitfalls. It might be added that there is no closed season for Nature in this field as trapper. Nor are there any game wardens. In that respect she has a perfectly free hand. There is a modicum of humor in this grim affair. But we have been told by all the world Sages just where the traps are and what they are

and how to avoid them.

The Theosophical Forum

ATLANTIS — ROMANCE OR REALITY? — *C. J. Ryan*

It seems that popular interest in the possibility of discovering lands once inhabited by civilized man but now lying beneath the deep seas, has not diminished. Even the scientific journals mention it now and then, though without much enthusiasm. A writer in *Science News Letter* recently queried whether "Telegraph Ridge," the undersea mountain range in the middle of the Atlantic, could be remains of the lost Atlantis of Plato or merely the submerged backbone of an acknowledged geological continent 300,000,000 years old. He left the problem unsolved.

Mr. James Bramwell's *Lost Atlantis* (1) is the latest book on this thorny subject and he has made a praiseworthy effort to approach it without prejudice. Up to the time of writing, he is not a believer, though he cannot help being fascinated by the romance of the glittering vision which rises when the word Atlantis is mentioned. He feels that the significance of the legend for us lies in its appeal as "a classic example of spiritual adventure, an imaginative interpretation of facts in the light of some higher reality, the nature of which depends on subjective experience." It is "an escape from the dust and rattle of machine-governed existence" for those who have lost faith in so-called progress. "It may, however, be of great importance if its actuality is ever established," which he greatly doubts. After examining a quantity of geological and other scientific evidence he concludes that our present knowledge is not sufficient to settle the question. He finds very little in favor of the Atlantean hypothesis as presented by the average exponent in modern books and popular magazines, but the teachings of H. P. Blavatsky's Theosophy is not discussed.

Although he cannot be called a supporter of Atlantis, in the small compass of 288 pages he has condensed a mass of information and argument of great importance for those who would know exactly how the problem appears to the skeptical historian and the scientist. These facts and controversial points should be familiar to Theosophical students who wish to write or speak on Atlantis and to be prepared to meet critical and informed inquirers.

The Introduction describes the efforts to establish Societies for Atlantean research, and their difficulties. The various more or less cranky books and theories that have been offered in recent years are considered, and also the references to Atlantis by Plato, Homer, Diodorus, Theopompus and other classical writers, and the suggested Cretan associations.

Then comes a long discussion on the scientific search for Atlantis, in which are critically analysed the arguments and evidences offered by Mr. Lewis Spence whom the author recognises as the most responsible and able pleader for Atlantis of our day; as we have always maintained, while not admitting all his points. Mr. Bramwell then touches on the Celtic legends of St. Brendan's Isle, etc.; and Lyonesse; and some of the geological evidence for comparatively recent submersions of land under the North Atlantic. The latter point deserves special attention from students who seek something tangible in favor of a "scientific" Atlantis. Mr. Bramwell admits that it is so important that further discoveries may compel a complete reconsideration of the whole subject.

Modern exploration has shown that extensive areas of land lying under comparatively shallow water extend for a great distance from the shores of the Atlantic (and elsewhere). The abysmal depths are much further out. The probability that these slightly submerged regions were once above the waters has been made

almost a certainty by the discovery of numerous wide valleys and immense gorges or canyons, thousands of feet deep spreading out from the shores. The submarine extension of the Hudson River has been measured 130 miles south-east of Sandy Hook.

Submarine activities, such as currents, earth-movements, etc., fail to explain them. It is widely held by geologists that they were eroded by ordinary rivers when the continental "shelves" were dryland. How long ago was this? Quite recently, late Tertiary fossils were dredged up from the cliffs of the Georges Bank Canyons showing that the Tertiary continental shelf had been cut through by rivers *since* the Tertiary period, and therefore great tracts of the Atlantic area were dry land in the Quaternary. Geological dates are very vague and subject to modification, but Mr. Bramwell suggests the moderate date of 500,000 years ago in this connexion. Anyway, it would be well within the human period, even if that figure were doubled or more.

Whether this tremendous change of level was brought about by the sinking of the continental shelves in many parts of the world or by a tremendous lowering and then raising of the *sea* itself, amounting possibly to 8,000 feet, is the scientific problem awaiting solution. The chief objection to such a world-wide uprising of the sea is that it would be a catastrophe of incredible magnitude! But would it not explain the world-wide traditions of Deluges and destruction of whole civilizations?

The interest in Atlantis is shown by the fact that the bibliography of publications up to 1926 includes 1700 items. But few are in English, a reason given by Mr. Bramwell for writing his comprehensive volume, which indeed needs no excuse. Ignatius Donnelly's popular book on Atlantis, a pioneer which attracted much attention to the subject nearly sixty years ago, though rather out-of-date and no longer an authority, is given adequate attention, but as Mr. Lewis Spence's scholarly contribution to the

literature in favor of Atlantis demands serious consideration, more than thirty pages are devoted to it. In regard to other writers, whose zeal has exceeded their discretion, to put it mildly, Mr. Bramwell's analysis is devastating though not discourteous, though in regard to one outstanding example of pure folly he rightly remarks that such productions — widely read by the uninformed — have caused thoughtful critics to express "the notion that everybody who is interested in the subject must be tainted with lunacy or charlatanism."

One unhappy case is that of a relative of the celebrated Schliemann, discoverer of Troy, who published a sensational story in 1912 of alleged Atlantean discoveries at Troy, by Schliemann held secret under oath! Being associated with an honored name it attracted scientific attention, but it turned out to be merely the fabric of a dream which one authority calls "an essay in mystification." Mr. Lewis Spence effectually disposed of it, and Mr. Bramwell says it is a "curious gem of Atlantean aberration." We mention this because an ill-informed writer in an otherwise well-edited Theosophical magazine recently quoted it as strong confirmation of Atlantis. "Save me from my friends!"

The last chapters of *Lost Atlantis* treat of Atlantis in occult and other literature and poetry, including the writings of Cosmas Indicopleustes, sixth century Byzantine geographer, Jean Bailly, French astronomer, William Blake, John Masefield and others; an interesting study.

Mr. Bramwell describes eight of the main hypotheses of recent years offered in solution of the Atlantean problem. Atlantis has been located in America, in three different parts of Africa, the Indian Ocean (where sunken lands have actually been found), submerged territory between Ireland and Brittany, "Tartessos" or Tarshish in Spain, and an island in the Atlantic. He reasonably

singles out the latter for fullest consideration.

In deference to prevailing views about the comparatively recent development of man from barbarism, and to Plato's date of the final destruction of *his* Atlantis, nearly all the theories assume that the great continent in the Atlantic flourished only a comparatively few thousand years ago. But if we place the great Atlantis (or a fancied "Mu" in the Pacific) more recently than hundreds of thousands, nay perhaps millions, of years ago, we run into insurmountable practical difficulties, and it is largely for this reason that the critics make light of Atlantis. For instance, if, as many proponents of Atlantis assume, the great continent acted as a land bridge between the Old and the New Worlds within five, ten or twenty thousand years, or even rather more, no explanation covers the well-known objections that the cultivated plants and domestic animals (excepting the dog, which probably came from Asia *via* Bering Strait) are entirely different on the two sides of the ocean, that the wheel was unknown in America, etc. If, however, the breaking of the land bridge finally took place, as H. P. Blavatsky indicates, almost a million years ago, it is easily seen that these difficulties are not insurmountable. Though certain islands remained above water, apparently in remote places, after the general submergence, they also perished a very long time ago.

Great areas of land did not plunge into the ocean in a few years or even a few millenniums, nor did a new continent immediately pop up in another ocean to replace it, as some seem to imagine from a literal reading of semi-allegorical stories like Noah's Deluge and others. Theosophy agrees with geology that the major progressive changes are gradual, although minor cataclysms no doubt occur at critical times. There is good reason to believe that the great land-masses of the world have kept their places for many millions of years, yet enormous changes have undoubtedly

taken place which would justify the traditions of submerged territories. The earth is not uniformly dense, and according to the new theories developed by Dr. Joly and improved by other geologists the great continental areas are actually "floating," as it were, on denser material. By the cumulative action of radio-activity the underlying mass becomes at times hotter and lighter by expansion, and the upper strata sink until the balance is restored. After very long periods of time the basic material cools again and the balance is again restored by the rising of the upper and lighter parts. The process is repeated at long intervals producing alternating cyclic changes in the geographical contours. Other factors, volcanic, seismic, and perhaps axial would still further modify the areas of land and water, until the map of the earth would no longer be recognisable.

The author rightly says that for Theosophists and Occult Students in general the former existence of a very ancient race of men, culturally advanced in certain localities such as "Atlantis" (a very wide-embracing term), is essential to the understanding of the major cycles of human incarnation. When science lifts the veil of mysterious Nature a little higher and has become dissatisfied with mechanistic interpretations of life, the reason for an "Atlantean" stage will become plain. The terrestrial evolution of form and intelligence is only the external sign of the activity and involution of spirit and step after step, each a little different from the last, has to be taken to fulfil the needed cyclic experiences of the soul. Objection is made that a truly civilized humanity living at a time when Darwinians believe only apes or ape-men existed does not agree with Plato's picturesque story of his relatively modern Atlantis of about 9500 b. c. Quite so, but H. P. Blavatsky tells us the reason why Plato put the case in that disguise. The true story of the ancient civilization was part of the Mystery Teachings and Plato being an Initiate could not reveal the whole

truth. By skilfully combining fact and fiction and by deliberately confusing the Atlantis of Tertiary or post-Tertiary age with a small island (Poseidonis) known to the Egyptians which sank about the date mentioned by Plato he was able to give all that was permitted at that time.

We notice a short quotation from H. P. Blavatsky in this book but the author shows no evidence of having studied her illuminating remarks about lost continents, and unfortunately spends many pages criticizing writings, claimed to be derived from "astral clairvoyance," by Scott-Elliott and other pseudo-theosophical authors, most of which are fantastic and, as Mr. Bramwell says, "could have been concocted without any recourse to psychic powers, by commonsense induction, flagrant disregard of historical data and a fertile imagination stimulated by fairly wide reading." (2)

In contrast to the flamboyant misconstructions of some of these enthusiasts the sober and restrained treatment of the subject by H. P. Blavatsky is conspicuous. The broad outline is described, but in regard to detail little is given except hints and suggestive quotations from archaic records which serve to point the way for future research.

From the nature of the case it is not easy to find tangible evidence, though oceanographic research has lately become a promising field, owing to the new instrumental methods in use. How little evidence of our civilization will remain after a million years even if no great geological changes take place! Until lately we knew nothing of Troy, Crete, Pompeii, Mayan and Pre-Incan America, the archaic civilization of the cities on the Indus river, and others; yet these are, comparatively speaking, but of yesterday.

Tradition, in the shape of world-wide myths and allegories, is the

most likely method by which knowledge of a Lost World would survive. When properly interpreted these indicate a specific Atlantean culture which takes its place in the magnificent scheme of human evolution with its major and minor cycles of rise and fall, but always advancing on the whole.

The story of Noah's Deluge is the most familiar tradition of a world-wide destruction following wrong living, but it is only one of many similar flood stories from Mediterranean lands, the Near East, India, China, America, Ireland and other places. H. P. Blavatsky pays special attention to these ancient legends and gives many reasons in demonstration of the remarkable way the folk-memory has preserved the knowledge of Atlantis in so many distant localities. Mr. Bramwell remarks that Theosophists and other occult students "care nothing for scientific discussions" but trust entirely to astral investigation and evidence. We beg to differ, and can refer him to his own quotation from H. P. Blavatsky where she says that certain thoughtful students "have their secret records in which are preserved the fruits of the long line of recluses whose successors they are." (p. 193) Those records are preserved in temple crypts and subterranean libraries and are tangible enough. It is claimed that the "long line" reaches back to Atlantean times. H. P. Blavatsky says that if the Alexandrian Library had not been dispersed we should have ample documentary evidence for the Atlantean tradition.

The contradictory nature of the astral reports published by various alleged clairvoyants — some of which Mr. Bramwell reprints and discredits — about Atlantis does not inspire confidence. The case is different in regard to the true Adepts who were behind H. P. Blavatsky. Having been trained by severe self-discipline under the direction of qualified Teachers they can penetrate to high spiritual planes where mistakes in vision are impossible, yet they are careful to preserve the tangible records

brought down from past ages.

We believe that the author of this interesting volume would find it profitable to study the illuminating teachings of *The Secret Doctrine* on human evolution and the Atlantean Cycle with the same fairmindedness that he shows in the analysis of the material discussed in his book. He might find, that "the Lost Atlantis may yet be recovered from the depths of the ocean which engulfed it."

The Theosophical Forum

ABOUT THESE "HORMONES" — *H. T. Edge*

What are "hormones"? Some mysterious and marvelous agent in our body, that we hear about. According to an eminent man of science, the well-being of our body depends on the influence of these things — these chemicals or whatever they are. They are found in certain glands, which pour them into the blood and thus produce various effects on our body and our health. But here comes the serious difficulty: for the same man, in the same article, says that the body *manufactures* these hormones. Now is not this very like saying that an engine manufactures its own steam, or that a dynamo is driven by the current which it generates? We are reminded of a joke in an old number of the London *Punch*. A rustic is contemplating the newly-erected telegraph wires, and asks, "What be they postes for"? The answer is, "Why to hold up the wires, of course." "Then what be the wires for"? "Why to hold up the postes, certainly, Jarge." It is what the logicians call a "vicious circle."

The same thing was found in physics. What is a "force"? Force is what moves matter; also, force is generated by matter in motion. Obviously there are two kinds of force: one which sets matter in motion, and one which is generated when matter moves. The latter is the kind that engineers use; the former is a subject of speculation.

Again, the same difficulty as regards "life." Does life drive the body, or does the body make life? Is life the cause or the effect of our activity? Or are there two kinds of life, one driving the body and the other generated by the body?

We know for a fact that our thoughts and emotions influence the production of hormones in our body. So then, our thoughts

produce hormones, and hormones drive the body; and this is understandable; the hormones may be an intermediate link between mind and body. People have speculated endlessly on how mind can act on matter, and have never been able to imagine a connecting link between them. But as long as we begin by imagining mind and matter to be separate, we shall never be able to explain how the one acts on the other. The fact is they are *not separate*; mind and matter is an artificial distinction which we have made for convenience, but the distinction is not real. The only real thing in nature is *spirit-matter, life*. The most recent science has discovered that matter, when deeply probed, vanishes into nothing but radiating centers of energy or fire or electricity. Our thought is a form of energy, which transmutes itself into one form after another and finally manifests itself as physical or bodily energy. Also, it is equally true to say that our thoughts are a form of matter, which becomes denser until it is manifested as the matter of our body. Thus the thoughts and the hormones and the bodily functions and tissues form a continuous chain.

There are action and interaction between mind and body; each influences the other. By injecting hormones into the blood with a syringe, you can produce various effects on the body and hence on the mind. But however useful this may be in emergencies, it is not to be commended as a way of living. Thought comes first. Let us rule our thoughts by our will, and the hormones will take care of themselves.

BUDDHI-MAGIC — *Leoline L. Wright*

Many students look upon the Higher Triad as a mysterious and almost unknowable terrain. Much is written about the personality, about kamic human nature, and the astral body. But how little we find, except in the scattered hints of our Teachers, to give us any definite picture of the Higher Triad and its vital relation to daily living.

If, however, we bring together from various sources even a few of these many hints a more definite outline begins to shape itself. We suddenly find ourselves standing at the frontier of a new country. It is a region whose hidden valleys and shadowy foothills lead the vision to the uplands of morning and the pinnacled splendor of the Mystic Mountains of the East.

Now whence and what is our Buddhist principle? We are told that we derive our seven principles from the seven great principles of the Cosmos. This of course does not mean that we are like seven passive cups into which are poured a portion of each of the Cosmic Principles themselves.

A closer study of *The Secret Doctrine* and *Fundamentals of the Esoteric Philosophy* leads us to see the Universe as a close-knit organism made up of seven ranges of beings. These seven ranges of beings are the seven principles of the Cosmos. Each of these ranges has its own particular kind of life-atoms. The life-atoms of the highest are so far beyond our understanding that we cannot even conceive of what they are. But we know a good deal about the life-atoms of the lowest of the seven because they are the informing entities behind our own and the Earth's physical atoms. And those other inconceivably high spiritual life-atoms cluster together, much as physical atoms do, to form the bodies,

or more accurately the vehicles, which clothe each of the three highest principles of the Cosmos.

But we are studying only our Buddhic principle and its derivations. So let us confine ourselves as far as possible to the Buddhic hierarchy of our Universe. At the heart of this hierarchy dwells the Primordial or Adi-Buddhi, from which all the other Buddhic beings of that hierarchy stem. At the beginning of a Cosmic period of evolution when the moment comes for the appearance or emanation of the second Cosmic principle all these Buddhic essences or beings are thrown off by the central or Adi-Buddhi. They form its vehicles, its spiritual, psychological, and substance-vehicles with each its own organism of corresponding life-atoms.

From certain of the highest of these almost inconceivably high Buddhic entities proceeds in due course the emanation of Mahat, the so-called Universal Mind. But Mahat is no abstraction. Mahat is itself a great range or hierarchy, the sum of all Manasic or egoic entities in the Universe. These are all solar gods, of various ranges of intelligence and power. And each in similar fashion is clad in its appropriate vehicle of solar life-atoms.

It is from some of the lower ranges of these Buddhic and Manasic solar energies that man derives his Buddhi-Manas. That, again, does not mean that these Buddhic and Manasic essences of ours are poured into us by higher beings. It means that my Buddhi and your Buddhi are as it were life-atoms belonging to the vehicles of certain ranges of these Buddhic and Manasic solar gods. It is I believe in this sense that we are, as Dr. de Purucker has told us, "bone of the bone and flesh of the flesh" of the Universe.

Thus we see whence we derive our spiritual heredity. *We are* divine. In our innermost we are life-atoms of the gods. The Inner God at the apex and center of our consciousness is a living part,

an emanation, a life-atom, of the Solar Hierarchy. But *we* are not yet that Inner God. We are still but human souls. But the human soul is the vehicle on this earth of that Inner God. We can even so think and live that the psychological life-atoms which form the apparatus of the human soul may be transmuted into the solar essence. And even our physical atoms may be made as if transparent to the light of the divinity within. It is all a matter of the right kind of emotional and thought vibrations, as we have often been told by our Teachers.

Just here it is interesting to bring together a fact established by science with a fact stated on page 50 of *Fundamentals of the Esoteric Philosophy*. We are told by science that the sun is made of radiant matter and that the life of its every atom consists in spending itself in the radiation of solar energy. In the passage referred to from *Fundamentals of the Esoteric Philosophy* it is stated that the sun is "physical matter in its sixth state" — that is, in its Buddhic state. The nucleus of the Sun, "a particle or a solar atom of primal matter-stuff, or spirit-stuff, is matter in the seventh state counting upwards . . ."

Thus the Sun in its activity is essentially Buddhic — giving itself ceaselessly for all the beings in its solar hierarchy in the spiritual and magnetic energies which keep its dependent ranges of beings in balance and health.

This is the foundation of all Buddhi-magic, this essential activity and law of sacrifice of our Father-Sun. And if we would know the spiritual Sun within ourselves we must learn to practise for ourselves this same magic. It begins with impersonal love; with, "the calm, unbroken forgetfulness of the lower self for all time," as W. Q. Judge expressed it. It will mean never doing or saying anything, or feeling or thinking anything at the expense of others. It means no criticism, no cankering hard feelings or corroding

resentments. It implies first the desire and then the power to give without measure and to expect for one's self nothing.

And what does this magic develop in us in place of the fugitive rewards of ordinary personal life? First of all, peace of heart. Such peace that once a man has glimpsed it he will never again be satisfied until he has entered permanently into the heart of that blessed impersonal silence. For that man will be healed of all fevers, the swelled head of praise and the bitter pain of resented criticism and personal injuries. Fear will depart from him, for his spiritual possessions are himself and cannot be taken from him. No loss will be possible to him. For he will realize himself consciously united to all he loves and will never know the sorrow of ordinary personal bereavement. And the only failure that can afflict him and the only suffering he can truly feel will be the failures and the sufferings of that humanity to whose welfare he has dedicated himself.

The Theosophical Forum

"I AIN" VERY MUCH, BUT I'SE ALL I GOT" — Irene R. Ponsonby

This simple statement made by Noah to De Lawd in *Green Pastures* expresses several of the verities of universal being. What actually are we? and what part of ourselves can we claim as our own?

We are vast treasuries of eternity. Out of the spheres ethereal in nebula and comet, by attraction and repulsion weaning from the fulness of space our contacts, we have come. Air, water, and earth, have equipped us: we have shared the vigil of elemental, mineral, vegetable, and beast; and now, as man, we presage the infinite scope and sublimity of an endless future stirring within us. We are signets of eternity: we are children of the Universe — and we are human beings.

Truly, we are not what we ought to be. We are only that part of ourselves which is ensouled. We are intellectual and spiritual or moral, or moral and intellectual or spiritual, when we should be the three as one — the perfect Man. However, if what we are be true to the vision of our ideal at all times, that much reaches towards Godhood, and some day will lead us through manhood to divinity and onward. Our yearning aspirations speed our flight.

Yet all we can have and all we need lies within us. Our aspirations act as magnets in quickening our own universal contact-centers, whereupon all the forces of life rush in to exhilarate, to build, and to test every step in this process of ensouling. The result of this mystical alchemy is what we possess: a solar system *in potentia* is what we are!

We have known immeasurable heights, but vicariously, so to speak. During our sojourn on Earth we plumb the depths so that

the human being, becoming universally ensouled, may win the heights by his own effort and right. And what then? To quote Mary Brent Woodside:

"Who has known heights must bear forevermore
An incommunicable thing
That hurts his heart, as if a wing
Beat at the portal challenging
And yet — lured by the gleam his vision wore —
Who once has trodden stars seeks peace no more.

The Theosophical Forum

THE CAUSES OF UNHAPPINESS AND THE MEANS OF HAPPINESS

— *Pundit L. Ram Sahijpal*

Flesh is earthly, and spiritually void and weak, whilst Soul in its higher nature is heavenly, and spiritually rich and strong. The latter is bipolar; in its lower nature it lives in the former, the flesh, and its contact with the fleshly part of man imparts to it the material tendencies and idiosyncrasies, and renders it stupefied and blind to the realities beyond matter as long as and whenever its life in matter persists. In its blindness, alas! the Lower Soul sees reality nowhere else but where it lives, knows no other reality but what its physical consciousness enables it to perceive, and if a ray of Buddhic Splendor does manage to penetrate through the thick veils of matter, it fails to take root therein because the physical affords no suitable soil for a spiritual seed. Even if a glimmer of light inculcates a certain truth it cannot bring it into practice because it is at present of flesh and spiritually weak.

Sometimes man laments and is breaking his heart crying because some beloved one of his has recently passed on to the other side of life on earth. Though his experience tells him and he knows well that his cries cannot bring his deceased friend back to earth, nor could they be recommended for the well-being of his own body and soul, yet he cries and is miserable and unhappy. Why? Public opinion in general, no doubt, would maintain that his love for his late colleague is the cause of his sorrow. But is it, indeed, his love alone, or is it his spiritual weakness, which is the author of his unhappiness? It is a question as to which of the two is making him sad. It is rather a subtle point. Ponder! Reflect! If it is love which is the cause of his sadness, it is the personal one — of physical nature. Love, of course, is a divine principle in whatever

form or grade it may be exhibited. It creates, it preserves, and it destroys. Love makes one mourn as well as rejoice. It is the cause of pain as well as of bliss. In fact, no two atoms could have been brought together; no earth could have been developed nor any beings to inhabit it; the manifestation of "Divine Self would have been but a dream unrealized, without the vestures that Love knits; and, indeed, the possibility of evolution would have been but a phantasy of mind, but for Love! Love is "All" and Love is "Naught" — it is both the manifested and the un-manifested. Love is the Essence Unknowable. It is the slayer and the slain. But the fact remains that there is love and Love. The former is personal, belongs to personality, and is born of the manifested, hence temporary: "This is my father and I love him. But as neither he is, nor I am, here on earth for ever, and our relation dissolves as the breath leaves the body, therefore this my love is not eternal but mayavi."

On the other hand there is Love which is impersonal, pertains to Individuality, and is Universal and deathless — eternal: "All are sparks of the same deathless Divinity, and I am one of them, hence all are my eternal brothers in whichever forms and colors they may be existing and wherever they may be; and I love all that is. This is Eternal Love." The former, the personal love, doubtless has its due place. It is by no means to be totally ill-regarded but on the contrary it is known to play a most prominent part in the building and upkeep of manifestations, since personality is the most efficient weapon in the hand of Individuality to self-express itself; but when the personal and the love pertaining to it overdo and choke, as it were, Individuality and the love impersonal, the spiritual situation of the Divine Soul is ingressively threatened, and the Higher Ego is laid open to the possibility of losing its way. The vital fact, that is the heart of the Ancient Wisdom herein, is that the Divine Spark — each one of us

— leaving its Divine Home, peregrinating from sphere to sphere downwards in the course of the evolution of matter, going through the chain of re-embodiments at each realm or plane on its way earthwards, inhabiting grosser and grosser environments, and wearing the self-produced and self-made "coats of skin one after the other, has been tainted and impregnated with the propensities and temperaments of the lower matter, and "That" which is divine in its origin, has Its Higher Swabhava sunk into the lap of matter, and now thinks, acts, and loves earthly and hence limitedly — materially and personally — in its best. Worldly love always and in each and every case has a certain amount of selfishness, however insignificant and unsuspected it may be. And this amount of worldliness is the root of man's weakness and tends to tie him to earth. The spiritually wise love selflessly, impersonally, and hence spiritually. Their love is celestial and divine. The man possessing it is a really prosperous and strong man. He can be a real help to all who come in touch with him. The ancient Rishis lifted countless souls out of the coil of the snake of illusion, and put their feet on the path of Gods — the right-hand path — that leads to Heaven. Remember that one may be a family-man, a householder, and yet a Rishi at the same time. To become an initiate it is not necessary to leave all and take to the woods for contemplation. In fact that would be an act of cowardice. Brave man is he who feeds his dependents and wins victory over his carnal self, and develops inwardly, living among men. He loves his people, but wisely and unattachedly.

Lest the remarks concerning the personal love should be misunderstood, it is to be stated clearly once again that it, even as it is, is utterly indispensable to spirit. The latter could not enter into physical life without the material love because it is the love for earth-life that brings the spiritual Soul to earth again after death; soul could not learn what earth can teach because it is only

by becoming earthly that it can make mistakes and it is by its mistakes that it learns. In fact the earth could not be kept as it is — a fit and proper habitat for its creatures, the infant Gods — because man would not be interested in worldly affairs without love; and, indeed, the door of earth would have been closed on the face of the reincarnating Ego without earthly love because there would have been nothing to unite two persons together to develop a physical body for it. It is verily the most subtle scheme of Mother Nature that she has trapped man into the net of worldly love. In her deepest wisdom she has it that the "Divine Spark" — the Un-self-conscious God-Spark at its outset — must descend into the grossest states of matter, then ascend to the highest spheres or states, and finally become fully Self-Conscious God. And she achieves her mission through the instrumentality of illusion, illusory love, "Maya." All these remarks about the lower love are true to the letter, but they fail to obscure the truth that man under its overwhelming sway has dozed off into a spiritual torpor, has forgotten his divine origin, ceased to recognise that the higher realms of life are his real abodes, and has become a living and talking doll of clay. Should no savior either in the form of man or but a holy thought, come to his rescue by putting a bend in his headlong dropping into the darker and darker caves and coves of this ever-tempting and misleading material, sensual and illusory love, he would lose his only real possession, the "Jewel in the Lotus," his higher Ego. As a divine being he is immortal, painless, harmless, and harmonious, but as a creature of earth he is subject to decay, sorrow, and other aches hereof. Perverted by the timely allurements of this Canopus of ours and caught in the whirl of "Maya," the spiritual man has lost his light in this dark dome of matter. He is groping, but knows not what he has lost that he is looking for. He is crying but he hardly knows "why." He is cognisant of the fact that the dead cannot be restored to life, and also it can be explained to him that the vibrations set

up by the love-saturated mournings issuing forth from the mourner's heart may revivify and quicken the sympathetic cord between him and the deceased before the latter reaches "Devachan" — Swarga Puri — and that such awakening tends to impede the reincarnating "Ego" from cleansing itself of its mortal Coats, delays their disintegration, and thus it is no aid to the "Spiritual Soul" in following Its Sublime Journey towards and through "Swarga-Lokas." Thus he could be solicited and informed that his lamentations and cries are a great detriment to the well-being of his departed friend, and prove to be an act of unkindness on his part rather than love. But, alas! yet he cries. Should we take his cries as the manifestations of his love for the departed? Or should we call it his lack of spiritual attainment? Think! Reflect! and Know! We, poor humans! hardly know at times what we do. We often hurt with our love-taps those whom we love most, unconsciously to ourselves. When the matter is weighed up unbiasedly and according to the Ancient Wisdom, it is not so much of a love as of a sheer spiritual weakness, which, indeed, is the cause of his unhappiness. He lives in flesh, enjoys physical consciousness, and in consequence is weak and unprepared to face the higher and unfamiliar operations of man's real nature. No doubt, there are very few whose hearts do not shrivel at the loss of their best companions, and the writer is quite conscious of that fact, but the matter when truly understood stands as given in the statements hereinbefore made. The extent of grief on the death of a friend is in exact proportion with the insufficiency of higher understanding and spiritual power. This lack is the child, as it were, of the physical consciousness; and it is only the Blessed Ones who have control over this weakness and do not shed tears on the death of their beloved ones. The secret of their reserve and ability lies in their wisdom, their vision, and their spiritual will-power that enables them to act wisely. They can see (1) the nature of their worldly relations as compared with

their real — the inner — relation with all that lives, (2) what the "Real Love" is, (3) where it lies, and (4) how to gratify it.

Underneath the garb of flesh each soul is an independent entity on the path of evolution. One, as a child of Spirit, is as good as any other. It is the worldly agency through whom he receives his physical body, and who nominates, as it were, his earthly relatives on earth, with whom he has no concern whatsoever after he discards his body. When the body is gone the relations are gone: "this is my so-and-so, and that is my so-and-so," are no more. In fact, Ego is neither masculine nor feminine but neutral before it enters into the embryo. And when death supervenes, it is neutral again. It ought to be quite clear that even our senses are but earthly and hence unreal. Note well the fickleness of the worldly relations and equipments. Of course the karmic ties play their parts again when the Ego returns to earth after Swarga-basa — Devachanic life. One looks upon someone as his son, his father, his mother, or as any other relative on earth, but this is but a "Mayavic look." In reality all are the leaves, as it were, of the same tree of "life," or the rays of the same "Spiritual Sun." The entities and their embodiments, and their names, are but the colors, forms, and names of the same Ishwar — Reality — underlying them all. It is impersonal; it is Eternal. May be that it is an atom, or a man, a God, a star, or a Universe, all are but the manifestations of, and united together by, the same one thread, the "One Essence." Beings are like the beads of a rosary, and that subtle tie is but the thread running through the hearts of them all. One may fly to the tip of the North Pole or to the highest region of the Galaxy, our Home Universe — -he cannot, even if he may wish to, fall out of it. "It" is the "Sutratman," the Bond of "One Universal Brotherhood." This is eternal, Impersonal, and the only real relation that one must take to his heart and love all that lives. Doing so he is an impersonal lover; being that, he becomes a co-

worker with Nature and she begins to confide in him and teaches him all he can learn; and in time he becomes a Master, a Buddha, a "Jivanmukta," immortal — and a Savior of Men. He grieves not, he flutters not like a bird in a trap, he is still like the calm sea, and his vision is as clear as the blue sky. Take from here, O reader, the key to open the gate that leads to happiness inexhaustible, "Ananda." "The Blessed Ones" possess it and never fill their eyes with tears when their earthly relatives have left earth for heaven. To them man never dies but only changes his dwelling.

Love as conceived by the world of men in general is the product of materialized Swabhava. It lies on the surface of things as a rule. But the real love lies in the inmost core of man's heart. And this fact is another main cause of the indifferent attitude of the wise ones towards the deceased. Now listen to this: "Man is at a farther distance from another when on earth than when he is dead, even though they both live in the same family." Reflect! and Reflect! It is another deep point. During the earthly life the real man is imprisoned in the physical body and enchained by the fetters of material pursuits and temptations, but after death he is free from all such shackles and is, considering the case of the average man, in Devachan or Swarga as we call it in India. Devachan, of course, refers to a certain locality too, but, technically speaking, it is the name of a state of consciousness. Now, a man living on earth can, if he be trained, launch himself into the Devachanic state of Consciousness — Sushupti — which is the third state of Consciousness in the core of man's "heart and mind," and can thus bring himself closer to his departed friend now than when the latter was in earthly life, although Nature allows no one to disturb a Devachani or "Swarga-basi." Nor do the Wise indulge in such acts, but they rejoice in the fact, which is a solemn and sublime truth, that their beloved one is resting in the inmost core of their heart. "He is here but we must not disturb

him," say they to themselves, and rejoice in the nearness of their friend who is in blissful repose in the third state of their mind. Remember that even if one is not trained to this high state, still his deceased friend is there in the inmost of his heart. And the untrained minds could surely solve the problem of their sorrow and be happy like those who are trained, but only if the former could believe in this truth! But, alas! how few can even believe in such subtle but grand truths. On earth one could never be nearer to anyone than when in Devachan because the human mind in the former case — one can almost say — is never concentrated in one state of Consciousness — not even for a full minute; secondly, it is most rare that two minds can adequately be in one and the same state of consciousness simultaneously on earth. Whereas Sushupti-State may be enjoyed by more than one mind at one time more or less because "That World" is more harmonious, void of disturbance, and more calm than "this one." Here is another key to wipe the tears from the mourner's eyes: "My beloved one sleepeth in the inmost core of my heart but I must not disturb him," must he say to himself, and keep happy on the loss of his deceased beloved ones.

II

One by one the cogs of the ever running wheel of life keep falling behind. Every hour the clock chimes tells one who has ears to hear, "another hour is cut off from your life on earth" — a mystic warning, indeed! Time is never off its wings and is always fleeting. Tomorrow is more anxious to come than today. Days pass into months, and months into years. Three score and ten mortal years that on the average make up man's longevity, bid farewell like a flash of lightning. Everything is on the continuous whirl of change, and man of yesterday is not man of today; as the years go into the womb of the past, the time-worn body begins to look like a weather-worn rock. Time comes when the old "vahan"

must be changed for a new one because it is no longer a suitable vehicle for the conveyance of the soul within, and the latter also needs rest after life-long hard work. Then comes what the people call "death" but what the "Great Ones" call the merciful "act" of Mother Nature. In the past, at times, he had been unhappy and shedding tears when his beloved ones had passed away, but, this time, he has no words to express his grief because he himself is going. Alas! he cannot do otherwise. He had been living on earth as if it were his only habitat, and had forgotten his real "Home" where he is now going — a fact which even at this moment he may or may not believe in. He had been spending his years in equipping himself with weapons to conquer the riches of this world as if they were the only possessions worth having and real — in fact, an humble "Sadhan" might have often appeared to him but a time wastrel. Hunting and horse-races, cinema-scenes and theaters, and many a low hobby, and pleasure-grounds, let alone his worldly friends, none of whom would now change place with him, had been claiming and receiving his fullest attention as if they were the only springs emitting elixir of life for him. But now finding them all to be nothing but a mirage of the desert and a sheer waste of time, and seeing none around him who could and would accompany him and whom he could call really his own, he feels lost to both the worlds. Should one wonder that he is upset and unhappy? The causes of his unhappiness are too subtle and probably too many to be recorded here, but the main fact which is of the utmost importance, is that during the earthly period he had led the life of attachment and had bedded himself body and soul in the inmost recesses of material environments. He had fastened himself so tightly to earth and its things that now at the time of break he inevitably feels it painful. This break is a severe jerk and a sudden shock; and he has nothing to balance it with. In the esoteric sense he is a bankrupt. He sees now that the riches he had accumulated, the friends he had made, and the thoughts that

he had been cherishing, are all of no help to him, hence are valueless. He cannot carry them with him, hence they are not his real possessions. He realizes what a waste of time and energy it all was. He had seldom been interested in the veiled side of life and had never, perhaps, garnered the invisible holy crops in the depository of his inner Soul; hence he has nothing with which to mitigate the blow of this shock. The intensity of his bewilderment depends upon the balance between his spiritual and material behaviors during the life just lived as well as the one carried forward previously. If he had only thought during his life as the sages think: "our life on earth is but a few days" wonder, another chance given to redeem the past, to learn lessons, and to go higher and higher, to learn more and more on the evolutionary ladder of our Eternal Life," he would have halfway loosened the knot of personality that ties him to earth. If he had only worded as the Blessed Ones word: "Kindly and serenely, lest the voice of the "Silence" should pass unheard and the inmost God ignored," he would have now a guide with him to show him the path. Oh! but if he had done what the gods do: "minding all but ignoring themselves and living in the midst yet above it all — unattachment"; he would then have entirely robbed death of its sting and would have passed on as the heroes do, with a smile of glory on his face, happy here and hereafter as well. O Reader! Draw aroma from these lines, inhale it, and inspire your soul to aspire. Here is the key to unlock the mystic cabin of Bliss.

Again, is this the only life that man has ever lived or shall ever live? Emphatically No; but on the contrary he has lived millions of lives before and shall live countless more besides his present one — "the chain of Chaurasi" — before he attains to Jivan-mukti, Nirvana. And every time that he lived, he probably had a family and friends whom he had to leave, and he shall have to do likewise in the future reincarnations. If this is his eternal mode of

conduct, why should he worry and break his heart about his present family situation? He ought to have adapted himself to such separation and be always ready to meet it. But, alas! he neglects the serious side of his eternal life and finds it strange and irksome when he has to face it. Really, an awakened mind is a great guard against the hot winds of time, and a real help to those to whom it belongs.

Birth is death and death is birth. In other words, birth on earth is the death of Spirit in the Swarga-Iokas, and the death on earth is the rebirth of Spirit in Its native realms, the Swarga-lokas. Birth and death are two aspects of the being of the same entity, who as it were, is playing the part of two actors on two different stages, the spiritual and the physical. On the former he plays the part of a god and on the latter that of a man. When one part is being played the other part is in obscuration, or resting. Rest and work, or work and then rest, are two alternate intervals of his eternal life. But for this procedure he would have gone hopelessly fatigued and blunted, and his progress, or spiritual income, would have receded rather than proceeded. Hence if he only knew what death means to him, he would have taken it as his best friend and not as his enemy. In the distant future when mankind shall be more spiritual than it is today, the approach of death shall no longer be a dread to it but a sublime anticipation and hope of a period of blissful rest brought about by the merciful law of Mother Nature.

What has been said above about the causes of unhappiness and the means of happiness at the time of death, is by no means all that can be said. In fact, there are some means of happiness that are more practical and substantial than those hitherto written. Here is one which is of a more esoteric nature than an exoteric one. Let a student study a sacred and devotional book, such as *Bhagavad-Gita*, or *Golden Precepts of Esotericism* by G. de

Purucker, the two books known to the writer to be most suitable. Let him dwell upon what he has read. It will be cleansing his mind all the time while he is reflecting. Let him also study some deep philosophical book written by a real spiritual teacher, such as *Fundamentals of the Esoteric Philosophy* by G. de Purucker, or *The Ocean of Theosophy* by W. Q. Judge; these are to be recommended for a new student. Let him dwell upon what he has read in the philosophical book. The former study tends to carry the mind towards God within and the latter educates him in deep thinking and thus leads him inward. Both the studies shall purify and feed the mind of the student with right food. If he brings his knowledge thus acquired into practice and builds his character thereby, a time will come when he becomes what is called "Ready," and Gurudeva shall appear to him. If he is found fit and worthy to be taken on, the latter shall accept him as his Chela. If successful in Chelaship and again ready to rise higher in the future, he shall be raised still higher.

Let it be understood that the men who have attained to Chelaship, Mastership, etc., are only those recipients of spiritual attainments who have become co-workers with Nature. Their postmortem career is quite different from that of the average humanity. At the time of leaving this earthly life they know to a great extent what is their position then and thereafter. The approach of death cannot and does not annoy them because they know that it only means living and working on earth in a subtle body instead of the physical one. After they have died their families and friends may think that they are no more, but as far as they themselves are concerned they are quite conscious where they are and what they are doing, even though known to be dead. In fact, they might be visiting those whom they had left behind if there be a call for them. They live and work consciously to themselves on behalf of Nature wherever they are. Dying is only a little more difficult

process for them than taking their garments off before going to bed. Where is then the horror of death? Nowhere, if man would do only what he ought to do. The dread of death is but the bogy of a child, and only those who are spiritually young fear it.

If a student, or a striver, dies before reaching the recognised stages of spiritual unfoldment — Chelaship, Adeptship, etc. — and before he has developed to be a co-worker with Nature, his death is no different from the average mankind, but his cleansing period in the Kama-loka becomes considerably shorter, and his entry into the (Swarga-Dham) Swarga-Lokas is quicker and most blissful.

III

Points connected with man's departure from this earth are rather serious and of the gravest importance, hence they have been emphasized in the previous pages by affording them the first place in the limited scope of this article. Nevertheless, there are besides death other things that often, nay, mostly, during one's life on earth do crucify him on the cross of fiery ordeals, tribulations, diseases and heartaches. Man, who in manifestation is speeding through life's sunshines and shadows, happinesses and unhappinesses, is too often seen with his head bowed on his knees. Probably he is out of work, cannot provide himself and his family with daily bread, fit raiment, and a shelter over their heads; and however he tries to get on he fails and consequently he is unhappy. If unemployment is not the cause of his being tormented, probably some mental or physical disease is making prey of him. If he is in good health and regularly at his work, perhaps some of his youngsters or his wife is going through some kind of agony and that is the cause of his being unhappy. In short, there is something somewhere that concerns him and is at present out of order which is making him miserable. O Brother in

pain and despair, listen to this! No matter what kind of suffering, mental or physical, how intense, and of how long a period, it may be; and, on the other hand, no matter of what kind, how blissful, and of what duration, may the happy circumstances be; all are the results of the Karmic accounts opened by man, consciously or unconsciously to himself, between himself and Nature in the past. They are the fruits of the seeds sown by him in the field of the invisible world. They are the effects of the causes that he had set into motion by his thoughts, words, and acts, in this life or in those that preceded it. There is not a sigh nor a smile which is not either the fruition of past conduct or a new account opened. The effects of the past lie within and without the fabric of man awaiting an opportunity to befall. When time is ripe for them they bring forth their ill or favorable influences, whichever the case may be, upon him. When he is suffering either through poverty or through mental or physical ailments the effects are being exhausted, or, as the theologians would say, "his past sins are being washed away," not through a vicarious atonement as the latter maintain it, but through his own efforts and inflictions. It is only through self-directed activity and by bearing discomposure, mortifications, and distresses of whatever kind, that man gets the remission of his mistakes. The cleansing away of the past sins, the remission of one's past mistakes, and the exhaustion of the effects of one's past misbehavior, are but different manners of expression to explain the same one truth, but, in reality, none of them exposes the matter adequately.

The fact is that what is called "Karma" is in a way the solidified matter, or, in other words, the karmic effects are the concreted thoughts that once upon a time in the past were cherished and were forces or ethereal matter then, but now they are concreted matters and compose man's sevenfold constitution, of which the only visible part is his physical body. When something comes on

the scene the atoms or the solidified thoughts are melted, as it were, retransformed into an ethereal state and their influence upon him is that they bring a change in his condition either for the better or for the worse. However, whatever kind of change or influence they may play upon him, it is of secondary importance; but the main point to be emphasized is that after the period of bitterness, calamity, or suffering, or the pains of narrow circumstances, one must be sure that certain of the past misthoughts or misdeeds that were waiting for an opportunity to burst upon him, are dead and buried, and he need not be afraid of them any longer, because they are dissolved, exhausted, remitted, forgiven, and are no more. He is a new man again — a sinless man as far as those sins are concerned. Hence, elucidating the matter of "bad Karma or the ill Karmic effects" philosophically and satisfactorily, they are the concentrated and concreted ill-ethereal matters manifesting themselves as various kinds of diseases and bad happenings or a certain kind of poverty. And when the unhealthy situation is abolished it means that the ill-past, or certain poisonous atoms bedded in man's fabric or his body, are smoked out or burnt out, and the man is put on his right feet again.

That being so, is there nothing at all which is most beautiful and helpful even in man's suffering? If he be told and somehow made to believe that his present low waters are but the cleansing stuff and the means of the atonements of his past errors, and that they are only transitory, would he not feel a lofty promise of hope and a glimmer, however dim, of the silver lining mysteriously surging upwards beneath the glooms of his heart? And at the termination of his stormy days if he be told again: "Your past sins are forgiven, go ye and sin no more," would he not feel that his Savior had spoken to him? O Reader! Man's sufferings, of whatever kind, are his saviors, teachers, and the means of his spiritual evolution.

Blessed are they who suffer! And really happy are they alone who in their palmy days are careful! The Sun of prosperity does not shine always. Nothing is forever. Poor days are in store for those who drink too much of the delicious cup proffered by their present happy privileges! Happy times are the times during which shiploads of new sins are most likely to be created and taken on if care be not taken, and thus they tend to be the cause of future calamities. Hence, O Martyrs, take cheer! and Midases, beware!

Cases have been known where men are enjoying the best of health, have well-established positions, and all and everything belonging to them is going pretty well and smoothly, yet they are miserable and can by no means be called the happiest, because Mr. So-and-So has larger banking accounts, rides in cars, and smokes costly cigars, and they have less of such privileges and consequently they are discontented and unhappy. Probably, even if such things were provided for them, they would feel no better after a short time and would want to be still richer. If all the treasures and every pie of this vale of "Maya" be melted into one mass and given to them they would still be found wanting and unhappy. Their unhappiness is no less than that of a man who cannot afford to have for himself and his family even the daily necessities of life. In fact, in the majority of cases the poor and the down-trodden are found to be happier, of higher moral courage and spiritual strength than the mighty rich. What is the cause of the latter's unhappiness? Discontentment, greed, and the perversion, or the materialization, or the unnaturalization, of the Higher Mind into becoming the lower mind. Take away every pie that they have, give them the life of the poor, and oblige them to be contented with a morsel of rice, or what the humble humanity are destined to eat; then, after a certain period of time, their minds, once duped by the material tendencies, but now having

nothing to be duped by, will come to their natural setting — contented and happier — and that would be the rejuvenation of their higher part. This point belongs to the higher psychology and is illustrated herein by focusing the remarks on the rich among mankind as to what should be done for their recovery, if they are really gone down in their spiritual nature. The writer has no bias against the rich, in fact he is proud of them in a way, because in many ways they are a great support of the poor. Nevertheless, glory be to those who are contented!

The Theosophical Forum

QUESTIONS AND ANSWERS

On foretelling the future

J. B. Priestley says the Past, Present and Future are co-existent different vibrations existing at the same time in the same place, but our minds are capable of vibrating to only the Present because the Past has had some material effect on our mind and changed it, that is why we remember it. In other words, it has become part of us. The Future has not become part of us and so we cannot understand it except by noticing what the Past did to the Present, the Present did to the Future. He also says there is no Present really, but that it is just our perception of the unevolved in this plane (although it is evolved on another), the unevolved becoming the evolved.

Some of this seems curious to me. I can understand the clairvoyant going back into the past and seeing it as H. P. B. did, because it has happened and left a record. But how can the Clairvoyant go into the future and see that? If one has a super mind one can foretell the future as long as it is the extension of the Present. I mean that one can deduce what will happen, if all the facts are known, just as a builder can foretell the future of a house he is building. But to see the future on this method would need a mind larger than all the libraries in the world and an exact machine to give all knowledge its true ratio of importance, and a knowledge of how much and how fast Karma was going to be unrolled. Algebraical equations with 4 variables are hard enough, but an equation with an infinite number of variables, combined in an infinite number of ways is much too hard

for even the most advanced combination of Manas and Buddhi. So I still don't know how one can foresee the future. — J. P. U.

G. de P. — The matter of "seeing the future," etc., seems awfully difficult to answer, and indeed it is in a way, and is downright difficult to one who has not had any training in Theosophy. But here is the answer:

In occult philosophy, the past, the present, and the future, blend together in eternity, or what is called the ETERNAL NOW, for Eternity has neither past, present, nor future, it being an ETERNAL NOW. Eternity, furthermore, is the fundamental — or as we might say, eternity and infinity are the two sides of the same ultimate Reality, the fundamental, the ALL.

What the spiritual Seer does is to rise from this plane on which past, present, and future seem so positive and real to us, into as it were the ranges of his own spiritual being which bathe so to speak in the Eternal Now; and in this way the past is unrolled before his eyes, and the present is seen to be but a continuation of it into what we call the future, and both are glimpsed as an eternal drama whose keynote is Now. Thus likewise should karman be viewed, the karmic past, the karmic present, the karmic future; and in this way we avoid falling into the error of fatalism on the one hand, and on the other hand into the equally great error of karmic indeterminance.

As an illustration, from another angle: an atom in my body contains electrons, any atom does. On these electrons let us say there are inhabitants, living their own tiny lives, but at an enormous rate of speed compared with our time. Thus a whole cosmic solar system so to speak, of atomic size, can come into being, live its innumerable aeons, and vanish many thousand times in one of our human seconds. In other words, one of our

human seconds compared with electronic time, is almost "eternally" long.

Now, imagine an inhabitant on such an electron, living at its tremendous rate of speed which to us humans would seem incomparably quicker than a lightning flash. Yet to the electronic inhabitant, long years would be going by. To him there would be a future which we, with our slower time, would not appreciate except as a now. Thus the electronic inhabitant, because of his intense tempo, immense speed, would be undergoing his past, present, and future; whereas we, with our far more majestic time, with its slow rhythmic pulses, would scarcely realize it except by intellectual thought. To us it would be just simply now.

In exactly the same way, the gods, whose time-tempo is incomparably stately and to us humans what we would call slow, look upon *our* past, present, and future, which to us seem so real, as scarcely differentiated, because our time by comparison with theirs is so rapid. We have next week, next year, a billion years from now, but these are our tiny little human years. To one of the higher gods, the entire manvantara of our solar system would be scarcely a billionth part of that one god's seconds in that god's time. So in our solar system we would be looking forward into millions of years ahead, and looking back into millions of years of the past; whereas the god's consciousness would scarcely be aware of the entire life-period of the solar system as other than a tiny fraction of an instant.

Do you see now how it is possible to read the future? The Seer, the spiritual Seer, not the pretentious and half-baked clairvoyant, but the spiritual Seer, simply raises his consciousness into another tempo, into another higher plane, in which past, present, and future are visible to its vision as a Now. This of course requires initiatory training. But every adept is trained, depending upon his

grade in the hierarchy, trained in some degree at least.

Now another thing: never forget that free will exists for every monad great or small in infinity. So that the tiny electronic inhabitant, just like the human on our big globe: each one has his own portion, so to speak, of free will, that is if we can divide free will up into portions that way! Really, free will is the amount of spiritual vitality and intellect that the evolving individual has been able to grasp through inner growth. Thus free will can be greatly increased, but it exists even in the tiniest atom, although of course on the scale of those spheres. Therefore, no matter what the time-ratio is, no matter whether one can foresee the future in large or in small, the entity having his portion of free will can always change his future course by that free will, which does not mean acting contrary to the future, because this would be impossible, but modifying his own conduct with regard to the future, so that he can do, or refrain from doing, in proportion as his free will is strong or weak.

Unconsciousness at Moment of Death

Does the sleep that is spoken of in *Occult Glossary*, page 86, sometimes last till it is joined by the immortal part of the intermediate duad? — S. H. C.

I. R. P. — The query is based on a statement made in discussing the Kama-rupa: the word sleep is not used. The condition into which the "*personal* entity" is plunged at the moment of physical death is here called "a merciful stupor of unconsciousness," a state that varies in length according to the quality of the individual experiencing the processes of "death." A similar condition exists in the physical body in most cases of natural death during the last days, or hours, before the heart ceases to beat and the brain to register the panoramic vision. After the Second Death the "stupor of unconsciousness" merges into the

dream and/or deep sleep of Devachan. These are states of relative consciousness enjoyed by the cognising *personal* entity. States and conditions have no existence apart from the entities or beings suffering or enjoying them.

The Center of the Earth

Is it known what is in the center of the Earth? – C. C. C.

C. J. Ryan — It is definitely known that the interior of the earth from about 2000 miles from the surface is far heavier than the outer parts, and that as far as we can penetrate it increases in heat. Calculations make it almost certain that the central part, about 4000 miles in depth, is heated to a temperature of many thousand degrees. This core is composed apparently of the heavier metals, and if it were not for the immense pressure of the outer layers would be melted into a liquid state by the heat. Owing to the pressure, however, it is supposed to be extremely dense and perhaps viscous, a curious combination. Most of our information about the interior of the earth is derived from the study of the vibrations which pass through it that are produced by earthquakes, but there are other sources of knowledge. Scientific opinion is not unanimous on the subject of the condition of the central core, but Dr. Imamura of Japan, a high authority, states the case very clearly as follows:

The earth's core, supposedly composed of iron and nickel, may (be solid and yet have some liquid properties, like a wax candle, hard and brittle enough to break when struck with a hammer, but able to "flow" gradually under long-continued pressure. Pressure at the center is supposed to be about 22,000 tons to the square inch, and heat may increase at somewhere near the same rate, although scientists differ about this. Under tremendous pressure and heat, materials at the earth's core *may behave in ways not understood at the surface.*

The words we have italicized are interesting because of a curious problem in regard to the existence of great heat within the earth. While the earth seems to be a magnetic body with north and south magnetic poles, etc., and largely composed of iron, a magnetic metal, it is well known that iron loses its magnetism when heated! Dr. Francis Bitter, a high authority, recently wrote:

The magnetization of the Earth's core, however, is not included [in these theories of terrestrial magnetism] and the theories in their present form do not account for its existence at the high temperatures of the Earth's interior.
— *Introduction to Ferromagnetism*

The sun is also believed to be intensely hot yet it is also a magnetic sphere. *The Secret Doctrine* speaks of cosmic material "forming the globe we live in around its *nucleus of intelligent primeval substance.*" (I, 609)

Krishna and the Left-hand Path

On page 32 of the *Bhagavad-Gita*, it says: ". . . but whatever the path taken by mankind, that path is mine." How interpret this, in view of the left-hand path? — C. C. C.

G. F. K. — Krishna here stands for the Unknowable Divinity within all beings, remembering which man learns in time to distinguish the thing known from the Knower, to perceive Reality in maya. In the heart of every man reposes in spiritual sublimity the Krishna-spark of eternity. All paths taken by men therefore, though vastly divergent in character and advancement, belong to Krishna by virtue of identic origin. Let us regard ourselves as radii of a circle whose circumference is infinite and whose center is the pointless point of Spirit. No radius occupies the identic position, either in space or time, that a brother-radius does, yet no one will deny identity of origin to all radii. As soon as a radius is

projected, differentiation sets in, the path of radius-A becomes distinct from the path of radius-B, two viewpoints arise, and disharmony, antagonism, and isolation, occur. This difference is not real, but apparent, and arises solely from judging appearances as reality, from viewing matters of origin from the *circumference-standpoint* alone, instead of from the Krishna- or center- point of view.

In the boundless circle of infinite productions, a circumference may be described at any point: the nearer to the center-point a circumference is described, the more closely bound are the separate radii, the more identic in spacial and temporal position, and the easier for each radius to comprehend and apprehend his unity with his brother-radius, his identity in divinity. The farther from the source a circumference is described, the longer the radii, and hence the more divergent become the tip-ends of such radii. Separateness thus appears the natural mode of life, and identity in divinity an absurdity.

The pursuance of the path outward may lead us to completely forget our source in Spirit, may tempt us to rupture the link between center and radius-tip, but Krishna in his manifold aspects of Divine power latent in the heart of all beings and things, is long-suffering and compassionately watchful.

"Whatever the path taken by mankind, that path is mine" — as long as there remains one tiny spark of divine fervor, that man's path actively belongs to Krishna. No matter how foolishly one may misunderstand one's relationship to man and god, how blatantly one may pray to this deity or to that pitri, if one is faithful to one's convictions, firm in resolve, unflagging in concentration of effort toward the supreme source, then such undaunted aspiration belongs to the Krishna-path. For Krishna is not bothered about labels, titles, or names. Devotion to truth, loyalty to one's intuition, fidelity to honor and troth, sealed with

insistent longing to serve others — these things mark *activity* of the Krishna-fire in the heart.

"How interpret this, in view of the left-hand path"? The path toward Krishna is twofold: with recognition of values, the aspirant can travel the path of his radius inward, knowing that at least he is returning home after long and weary sojourn in the morass of ignorance; or secondly, he can follow the path inward with a heart unsteady in spiritual resolve, unpurged of cruel motive, and with unclean desire for control of spiritual force that he may become great, that mighty can be his power over others, that the strength of the infinite can flow through his veins for his own self-glory and consequent evil work. Let him follow this path, and it will lead to Krishna, but in what manner, with what result: with *death, horror, destruction of soul*.

Listen to the words of Arjuna in the eleventh chapter of the "Gita" wherein he describes Krishna in his manifold forms: to those of spiritual attainment Krishna shows himself glorious as the Sun in action, gentle as the Moon in repose, but to the sons of matter, Arjuna sees armies of evil forces "impetuously precipitating themselves into thy [Krishna's] mouths; . . . As troops of insects carried away *by strong impulse find death in the fire*, even so do these beings with swelling force pour into thy mouths for *their own destruction*." (itals. ours)

The reward of evil is no spiritual boon, but death of the soul in the fire of divinity.

Lipikas and Their Records

A short time ago I got rather a shock when I understood (I hope wrongly) from G. de P. on *Lipika* in the *Occult Glossary* that everything we will do or will say has been recorded. If anyone attacked me on this point I could not

distinguish it from fatalism or predestination. I would be most thankful to know that I have misunderstood. — J. P. U.

L. G. P. — What is actually said is that the lipikas record all that was, all that is, and all that ever will be. I take that to mean that this recording has always been going on, is going on at the present time, and will continue to go on forever. I do not take it in the sense that all that lies in the future has already been recorded, for it can be recorded only after it has happened. There is a point, however, that might be brought forward, and that is that nothing ever happens without a cause, and so, though an effect is still in the future, it lies even now within the cause. It is much like the winding of your watch. The energy you put into the spring will take time to expend itself, and while the hours and minutes are still in the future, the energy is present in the watch-spring. That there is no fatalism in this, may be shown by the fact that I may drop my watch immediately after winding it, and it will thereafter cease to run.

The Theosophical Forum

THE GREAT QUEST — *Abbott Clark*

Many of the greatest problems in human life, science and religion do not answer. Let us take up one problem which we will call "The Great Quest." I do not mean alone the quest to escape from pain and suffering, that is included, but especially the unrest and discontent which come to the most prosperous and successful — often in the very hour of triumph. When men realize, as some time they must do, that all the world is empty and all desires vain, they ask, "Why, O why, all this longing, desire and discontent? Why do disappointment and despair haunt men from the cradle to the grave — if for too long they have been content?"

The answer is simple — if we only knew it.

Man is essentially a spiritual being. His heart seeks, yearns, for spiritual light and life. He inwardly realizes that the whole material world is the outer garment of Spirit. It is a shell, a husk. Man's heart can never be satisfied with husks. Let him crack the nut of life. Seek within for the kernel. Reject the husks, yet treat them respectfully, for they may be very useful in their place, if wisely and properly used.

The Great Quest is the search for Reality, for the heart of things, for the kernel of the nut. The spiritual nature of man demands a spiritual life. It will never, for long, be satisfied with less.

Matter and spirit are not distinct and separate entities. They are One. Spirit is the eternal, divine life that shines through matter, on which matter rests, of which matter is the lowest plane, state or degree — the dregs. We live in spirit as the great earth does in the free and fluid ether, which penetrates and sustains it and us; yet we see it not, though we are of it, bathed in it, and penetrated

by it.

When a man realizes his own Divinity and recognizes in all around him the same divinity, the eternal Beauty shining through, he fastens his attention, his interest, on That. All his life undergoes a change for the better. Illusions and burdens fall away from him. Hope springs eternally in his breast and he feels that that hope is being, to a degree, eternally realized. The hope grows perennially and its realization grows along with it.

When a man's Higher nature awakens, pessimism, ennui, depression, discouragement, despair and even the blues, are gone forever. He may suffer, but having discovered the source of his being, he no longer says that Life is just one difficulty after another. True, it may be. But difficulties are no excuse for dejection. Difficulties are the spice of life to the strong man. Overcoming them is the athletic training by which strength of character is developed. Without difficulties our wills would atrophy. We should welcome them. They are more useful than pleasures. Pleasures teach us nothing, it is said. Some seek pleasures as an end in themselves, but pleasures overindulged in, bring reactions and satiety. The wise accept pleasures as the dusty traveler accepts the wayside inn, or the refreshing spring and shady grove — temporary refreshments.

When a man has found his own Soul he has found within himself a Place of Peace and of exhaustless energy that is infinitely more than pleasure. Within the heart of man is a Place of Peace where love and joy abide forever.

These are not negative virtues, but strong and positive qualities that cannot be irritated by any disturbance or overcome by any difficulty.

All this is not an idle dream, or just a beautiful picture. It is what

evolution has in store for every evolving entity. It is a Hope, a Promise, and a Possibility, which every questing soul strives for and eventually will attain.

The Theosophical Forum

WHERE THE MASTERS WORK — *G. de Purucker*

Do the Masters help, inspire others than Theosophists, than the T. S.? Well you know, I should be awfully ashamed of any Theosophist who could not answer that question instantly. Of course they do! Why, it is one of our ABC thoughts, teachings, that the Masters aid and help and inspire anywhere where there is an open door to their entrance, in other words, where the soul is not surrounded with impassable frontiers, keeping the light out, the help away. Why of course! And if the Masters' influence were not felt in other organizations than the T. S., as indeed it may be felt, it would be in this case because they had lost touch, had enclosed themselves with the impassable barriers of the frontiers of thought and feelings. The truth is that the Masters work *anywhere* where the doors are opened to their entrance, and where the conditions propitious for their work exist.

Just take one thought which has been one of the dreams of my life from childhood. If the Christian Church or Churches could go back to the *original* teachings of their great Master, to really primitive Christianity, the blessed Masters would be working through them as one of the greatest channels in the West today to help men. And if they don't so work therein, it would be because the help is barred out by frontiers of thought and feeling.

And the T. S. — as I have often pointed out, it will depend upon us, Brothers and Friends, us members of the Theosophical Society, whether the Masters continue to work through it as an instrument as now they are doing, or abandon it. They will never abandon us as long as we keep our hearts and minds open; but if we begin to put frontiers around our consciousness, *we* do the work of exclusion, not they. The gods go to, said the old Greeks,

the gods visit, the houses of those who open doors to them. Think what that means. Why not try to entertain divine and divinely human guests? You can do it.

The whole trouble with us and with civilization is that we build these frontiers around us. They are not placed there by Nature. They are builded by ourselves, frontiers of exclusion in thought, in feeling, in tradition, in everything. And what happens to the man who shuts himself up in a cell and lives there? Who loses? The world, or the foolish man? Such a cell is a frontier of consciousness. And the man (or the civilization) is great precisely in proportion as he can throw aside, break through, the barriers, the frontiers, with which habit and custom and he himself have surrounded himself, and move out to ever loftier houses of consciousness, ever receding frontiers of consciousness.

What makes a religion successful? The building around itself of frontiers of thought, frontiers, barriers of exclusion? Why of course not. The answer is obvious. Destroy the barriers, the door is open to all.

The Theosophical Forum

MODERN SCIENCE AND THE MESSAGE OF H. P. BLAVATSKY — *H. Groot*

In our previous discussions about the results obtained by modern science, we repeatedly pointed to the fact that these results are as many corroborations of the statements made by the Old Wisdom — at least as far as the material world is concerned.

In many cases the agreement referred to is of very recent date. When the Old Wisdom's views on scientific subjects were promulgated by H. P. Blavatsky, they were nearly all of them in flat contradiction of the then current conceptions and theories, yes, even with what then passed for "proved facts." This should put us on our guard when we see that some of these statements do even now seem irreconcilable with modern scientific opinions. One who closely watches the rapid progress of modern science and the great changes that our views have undergone, will be rash if he concludes that the present "facts" of science are not contestable. A statement that differs from what modern Science considers as true need certainly not be rejected *a priori* — history may prove the contrary. We would request the reader to bear this thought in mind when he reads the following reflexions on the contrast which seems as yet to exist between what modern astrophysics and the Ancient Wisdom tell us about the condition of the sun.

Let us first ask the solar-physicists. They tell us that the temperatures of the outer layers of the sun have for a long time been a moot point. The estimates, based on the interpretation of the observed distribution of energy over the colors of the solar spectrum, varied between 5000 and 7000°. This is not so strange as it may seem, since the determination of the temperature from

the spectrum is based on laws that hold good for a radiant body that has the *same* temperature throughout. This is not the case with the sun. It sends us rays which come from layers of very different depths — thus from layers which will have highly different temperatures. As a consequence, such a calculation cannot be anything but a rough average for the outer layers. In the more accurate methods that are used nowadays these conditions can be taken into account, and the results of more recent determinations are therefore in good agreement with each other.

Meanwhile, the direct measurements apply only to the outermost layers of the sun, to those parts of which H. P. Blavatsky says:

. . . externally is spread its robe (atmosphere, chromosphere, etc.) the nature of which is not matter, whether solid, liquid, or gaseous, such as you are acquainted with, but vital electricity, condensed and made visible.

For the knowledge of the temperatures of the deeper layers astrophysics has to rely entirely on theoretical considerations. All of them agree that the temperature increases to enormously high values from the outside to the center, although — according to the conception which is formed about the condition of the matter in the inside of the sun — opinions differ considerably as to the extent to which this increase takes place.

The temperature prevailing in the center of the sun is estimated at 20,000,000° C. Another more radical theory even speaks of 40 billion degrees!

Before asking ourselves how such results are to be interpreted, we shall consult our Theosophical literature, which also contains a few passages dealing with the temperature and the condition of

solar matter. First, there is a passage from *Isis Unveiled*:

. . . the materialists, who will some day find that . . . the sun has no more heat in it than the moon or the space crowding hosts of sparkling stars.

Next, we read in "Some Inquiries suggested by Mr. Sinnett's Esoteric Buddhism" in *The Theosophist*, Vol. IV, 1883:

The "Adepts," who are thus forced to demolish before they can reconstruct, deny most emphatically (a) that the sun is in combustion, in any ordinary sense of the word; or (b) that he is incandescent, or even burning though he is glowing; . . .

The Secret Doctrine says:

Foremost of all, they [the astronomers] would have to repudiate the ideas on the Sun's *solidity* and *incandescence*; the Sun is "glowing" most undeniably but not burning . . .

And to add a quotation from a book written in our modern era, we would refer to the following passage from *Fundamentals of the Esoteric Philosophy* by Dr. G. de Purucker:

The so-called "solar flames" are not flames. The sun is not burning; it is not in combustion; it is not hot; what we see is the aura of the sun, the sixth sub-element or sub-principle of the first or lowest Prakriti. That aura therefore is the sun's material buddhic aura, and looked at from the scientific standpoint it is a globe of kosmic forces.

Was it saying too much when we stated that the conceptions of the Ancient Wisdom differ as yet considerably from those of astro-physics?

If these were the only remarks that could be made on this point,

they might be considered of relatively little importance. Moreover, they would be out of place in a series of articles whose purpose it is to show how modern science step by step affirms the correctness of H. P. B.'s statements, which formerly sounded so absurd.

However, it seems to us that in spite of all difference of opinion, the views of science about the internal structure of the sun are noticeably approaching the above conception of the Old Wisdom.

Let us return to the statements of astro-physics on the temperature prevailing in the center of the sun. How are they to be understood? As wild fantasies, devoid of any sound basis? As unaccounted-for numerical results obtained by elaborating uncontrollable theoretical reflexions?

By no means! The internal structure of the sun and" stars is a well-defined scientific problem, which is tackled with all exactitude that modern science is capable of displaying. Nearly all relevant reasonings are based on extensive empiric knowledge obtained and checked in the laboratory. However, there is one factor that cannot be controlled directly: *the condition of the matter in the inside of the sun*. And this is a factor of paramount importance! Each different conception that is formed about this condition leads to a different "model" of sun or star. Thus, we know Eddington's model, Jeans's model, Milne's model, to give some of the most familiar. To a first approximation they all differ from each other in the conception about the nature of the matter composing the inside of the sun. And this factor is of prime importance also according to the Ancient Wisdom. In *The Mahatma Letters to A. P. Sinnett* we read:

We know that the *invisible* Sun is composed of *that* which has neither name, nor can it be compared to anything known to your science — on earth; and that its "reflection"

[the visible sun] contains still less of anything like "gases," mineral matter, or *fire*, though even we when treating of it in your civilized tongue are compelled to use such expressions as "vapour" and "magnetic matter."

In *The Secret Doctrine* we read:

The Solar substance is immaterial. In the sense, of course, of matter existing in states unknown to Science.

And elsewhere in *The Secret Doctrine* we find this very suggestive key:

The whole issue of the quarrel between the profane and esoteric sciences depends upon the belief in and demonstration of, the existence of an astral body within the physical.

These statements, too, had a queer ring in a time when science only knew three conditions of matter, viz. solid, liquid and gaseous, while not so very long ago Crookes discovered a fourth state, namely his "radiant matter" (our cathode rays). But now, looking back upon its old — at present obsolete! — conceptions, science can unconditionally adopt the following words from *The Mahatma Letters to A. P. Sinnett*:

Verily, when your astronomers speaking of *sun-matter*, term those lights and flames as "clouds of vapour" and "gases unknown to science" — (rather!) — chased by mighty whirlwinds and cyclones — whereas we know it to be simply magnetic matter in its usual state of activity — we feel inclined to smile at the expressions. . . .

It is also important to note what the Masters said with reference to Crookes's discovery:

If Mr. Crookes would penetrate Arcana beyond the

corridors the tools of modern science have already excavated, let him . . . TRY. He tried and found the radiometer; tried again, and found Radiant matter; he may try again and find the "Kama-rupa" of matter — its *fifth* state. But to find its *Manas* he would have to pledge himself stronger to secrecy than he seems inclined to.

Crookes did not discover the "fifth state," to which reference is made in the above passage. This discovery was reserved for modern science, which identified this fifth state in the form of *photons*.

What are "photons"?

Let us ask Jeans. In his book *The New Background of Science* he tells us that photons are particles of — energy! Photons are not "ordinary" matter; they are not "atoms of electricity" such as electrons — no, they are "atoms of energy," particles that have lost all materiality. But yet they possess the qualities of inertia, i. e. they have a certain *mass*. "Like all other forms of energy," Jeans writes,

photons possess the property of inertia or mass. For this reason they exert pressure on anything they strike, here again behaving like shot from a gun. A regiment of men could be mown down by a sufficiently strong light just as surely as by the stream of shot from a machine gun.

Now although we may not like this latter picture, yet it shows clearly that photons have to be considered as particles, which, in spite of their "immateriality," consist of matter in a state that is one of the degrees with which we are familiar. Jeans, too, points frankly to this resemblance in the following really intuitive passage:

Indeed it is easy to imagine beings in intergalactic space,

where matter is rare, endowed with electric senses in place of our material senses, who would regard photons as the primary constituent of reality, and matter as something outside the general course of nature.

May not we see these photons as the fifth state of matter? The "kama-rupa" of matter, as the Master called it?

Why "kama-rupa"? Would not this mean that this 5th degree of matter is "immaterial" in the sense that it belongs to the lower *astral* conditions? Then, the 6th and 7th states, which are as yet unknown to science, would belong to successively higher astral planes. And this is in perfect agreement with the above remark that Crookes would not easily succeed in discovering the *Manas* of matter. Matter in its 6th state is called here "Manas," i. e. it is considered as belonging to the higher astral planes.

What relation does all this bear to the interior of the sun?

A very important one! Let us remember what H. P. B. has said about the solar matter in the quotation given on the second page of this article.

According to modern physics the interior of the sun consists largely of photons, that is, of matter in its 5th state. Eddington's calculations are the most moderate; according to him a quadrillion (Eng.; septillion, Am.) (10^{24} !) atoms, about twice as many electrons, and 20,000 trillion (Eng.; quintillion, Am.) protons are packed together in *one cubic centimeter* of his "model."

In the case of Milne's "model," the interior of the sun must almost exclusively consist of photons — and have a temperature of a few billion (Eng.; trillion, Am.) degrees!

It really looks as though science is inclining to the statements

which we read in *The Mahatma Letters to A. P. Sinnett*:

The Sun is neither a *solid* nor a *liquid*, nor yet a gaseous glow; but a gigantic ball of electro-magnetic Forces, the store-house of universal *life* and *motion*, from which the latter pulsate in all directions, feeding the smallest atom as the greatest genius with the same material unto the end of the Maha Yug.

However, this does not alter the fact that the modern theories about the structure of the sun and the conditions of its interior, based as they are on the knowledge of only *five* states of matter, *cannot* possibly be in line with the teachings of the Ancient Wisdom. For, the latter assures us that the sun — or what we look upon as the sun — consists of matter in its 6th and 7th states.

The assumption of sun-physics that fantastically high temperatures prevail in the center of the sun is based on the attempts that are being made to construct a model consisting of matter in the states known to science, which must therefore be in agreement with what spectroscope and camera tell us. Such a model is very informative. Has not it proved possible to "explain" many observed properties by means of models that use no other states of matter but the gaseous, such as Emden's model? But, of course, there remain many questions which the imperfect model fails to answer. Moreover, the model will often lead to results — especially where the conditions in the interior of the sun are concerned, which are incapable of direct control — that can be obtained only by *calculation*. These lose their value or are thoroughly modified as soon as the model is improved upon.

If we bear all this in mind, we come to the conclusion that the great differences between the statements of the Ancient Wisdom and those of sun-physics *may* lie in the fact that science has so far known but five different degrees of matter, whereas the Ancient

Wisdom assures us that there exist two others which are of paramount importance especially with regard to the nature and the essence of the sun. Thus, even the statement that the sun is *not hot*, might be confirmed if science should discover the properties of *matter in its 6th and 7th states*, and should modify its notion of "temperature" somewhat more than it has already done, by introducing "radiation temperatures." (This latter subject will be further discussed in a subsequent article.)

For one who is not familiar with these two states of matter, it is as impossible to develop a perfectly correct theory about the structure of the sun, as to evolve a psychology of man on the strength of what anatomy teaches us about the human body — without reckoning with the fact that he is a *spiritual* being. Writes Dr. G. de Purucker in his *Fundamentals of the Esoteric Philosophy*:

Suppose that we go a step farther and say that the visible sun which we see is matter in its 6th state of ethereality, and that what is behind that tremendously brilliant veil or reflexion is an atom, so to say, an infinitesimal part of mother-substance, matter in its 7th state. It is easy to follow this thought. The sun is a mass of force; as even the medieval philosophers said: "Brother, when a man tells you that he has seen the sun, laugh at him. He has not. The sun is invisible. The true sun, the origin and center of these high forces, is on higher planes. . . ."

Not a single modern sun-physicist will probably agree with this statement. That is impossible. So long as science has not come to the conclusion that the 6th and 7th states of matter exist quite as well as cathode rays and photons — which latter two states of matter have not been known to it so very long — science will be incapable of drawing up its theories otherwise than it does. It must go its own way in the investigation of what our senses

perceive as "the sun."

This investigation, which advanced science step by step in the past, will continue to advance it in the future, and compel it to reconsider its theories, and, as it were, to transcend itself more and more. If science goes on in this way, it must one day meet with phenomena which will induce it to extend its conceptions of matter to new conditions; conditions of which science is at present incapable of conceiving. Who knows but the problem of the origin of the solar energy, about which volumes have been written, but which has not yet been satisfactorily solved by modern atom-physics, may prove the sign-post pointing to the discovery of that unimaginably small nucleus of matter in its 7th state, which — says the Ancient Wisdom — is the real source of the stupendous phenomenon which we see as the visible sun! It is also possible that the study of those fantastic "eruptions," known as "protuberances," will cause science to take a new course, leading to the realization that other, quite different forces from radiation-pressure, are resident in the sun.

Anyhow, science has to pursue its own way. A way that often displays all the windings that characterize a path which leads to the top of a steep mountain — but yet a path that leads upwards.

However, the Ancient Wisdom teaches that there is yet *another* road — the road of spiritual perfection, which is and has been followed by all the great Teachers and Adepts of all times.

This road leads to a Knowledge that is not based on logical reasoning about experimental data, but on the mystical realization of the unbreakable Unity of the Universe. The Knower and the Object of Knowing are in reality One. This mystical cognition permits of *knowing* — not by intellectual comprehension, but by *experiencing*, by *becoming* — that which one strives to understand.

It is this mystical Knowledge that enables the Masters to make such positive statements about the real nature of the sun and the character of the natural phenomena. This Knowledge, which is essentially *experiencing the Unity of the whole Universe*, and therefore *Universal Love*, slumbers in each one of us. If our love is truly Universal — *Universal* — we shall obtain Universal Knowledge. However, it is unfortunately but very seldom that this Universal Love manifests itself in us, and our mystical Knowledge is therefore proportionately limited.

That is why the men of our times search and investigate along the road of science — which we cannot as yet dispense with. As said the Apostle Paul,

For we know in part, and we prophesy in part. But when that which is perfect is come, then that which is in part shall be done away. . . . For now we see through a glass, darkly; but then face to face: now I know in part; but then shall I know even as also I am known. — *1 Cor.*, xiii, 10, 12

One day, however, we too shall obtain Universal Knowledge, and that according as the God within us will be freed from the shackles which keep Him imprisoned in this illusory world of ignorance.

The Theosophical Forum

THE DWELLER OF THE THRESHOLD (1) — *Eusebio Urban*

Has such a being any existence? Has any one ever seen it? Are there many or several, and has it any sex?

Such are the questions asked by nearly all students who read theosophical books. Some of those who all their life believed in fairies in secret and in the old tales of giants, have proceeded to test the question by calling upon the horrid shade to appear and freeze their blood with the awful eyes that Bulwer Lytton has made so famous in his "Zanoni." But the Dweller is not to be wooed in such a way, and has not appeared at all, but by absolute silence leads the invoker to at last scout the idea altogether.

But this same inquirer then studies theosophical books with diligence, and enters after a time on the attempt to find out his own inner nature. All this while the Dweller has waited, and, indeed, we may say, in complete ignorance as yet of the neophyte's existence. When the study has proceeded far enough to wake up long dormant senses and tendencies, the Dweller begins to feel that such a person as this student is at work. Certain influences are then felt, but not always with clearness, and at first never ascribed to the agency of what had long ago been relegated to the lumber-room of exploded superstitions. The study goes still farther and yet farther, until the awful Thing has revealed itself; and when that happens, it is not a superstition nor is it disbelieved. It can then never be gotten rid of, but will stay as a constant menace until it is triumphed over *and left behind*.

When Glyndon was left by Mejnour in the old castle in Italy, he found two vases which he had received directions not to open. But disobeying these he took out the stoppers, and at once the room was filled with intoxication, and soon the awful, loathsome

creature appeared whose blazing eyes shone with malignant glare and penetrated to Glyndon's soul with a rush of horror such as he had never known.

In this story Lytton desired to show that the opening of the vases is like the approach of an enquirer to the secret recesses of his own nature. He opens the receptacles, and at first is full of joy and a sort of intoxication due to the new solutions offered for every problem in life and to the dimly seen vistas of power and advancement that open before him. If the vases *are kept open long enough*, the Dweller of the Threshold surely appears, and no man is exempt from the sight. Goodness is not sufficient to prevent its appearance, because even the good man who finds a muddy place in the way to his destination must of necessity pass through it to reach the end.

We must ask next, *WHAT* is the Dweller? It is the combined evil influence that is the result of the wicked thoughts and acts of the age in which any one may live, and it assumes to each student a definite shape at each appearance, being always either of one sort or changing each time. So that with one it may be as Bulwer Lytton pictured it, or with another only a dread horror, or even of any other sort of shape. It is specialized for each student and given its form by the tendencies and natural physical and psychical combinations that belong to his family and nation.

Where, then, does it dwell? is the very natural inquiry which will follow. It dwells in its own plane, and that may be understood in this manner.

Around each person are planes or zones, beginning with spirit and running down to gross matter. These zones extend, within their lateral boundaries, all around the being. That is to say, if we figure ourselves as being in the centre of a sphere, we will find that there is no way of escaping or skipping any one zone,

because it extends in every direction until we pass its lateral boundary.

When the student has at last gotten hold of a real aspiration and some glimmer of the blazing goal of truth where Masters stand, and has also aroused the determination to know and to be, the whole bent of his nature, day and night, is to reach out beyond the limitations that hitherto had fettered his soul. No sooner he begin thus to step a little forward, than he reaches the zone just beyond mere bodily and mental sensations. At first the minor dwellers of the threshold are aroused, and they in temptation, in bewilderment, in doubt or confusion, assail him. He only feels the effect, for they do not reveal themselves as shapes. But persistence in the work takes the inner man farther along, and with that progress comes a realization to the outer mind of the experiences met, until at last he has waked up the whole force of the evil power that naturally is arrayed against the good end he has set before him. Then the Dweller takes what form it may. That it does take some definite shape or impress itself with palpable horror is a fact testified to by many students.

One of these related to me that he saw it as an enormous slug with evil eyes whose malignancy could not be described. As he retreated — that is, grew fearful —, it seemed joyful and portentous, and when retreat was complete it was not. Then he fell further back in thought and action, having occasionally moments of determination to retrieve his lost ground. Whenever these came to him, the dreadful slug again appeared, only to leave him when he had given up again his aspirations. And he knew that he was only making the fight, if ever he should take it up again, all the harder.

Another says that he has seen the Dweller concentrated in the apparent form of a dark and sinister-looking man, whose slightest

motions, whose merest glance, expressed the intention and ability to destroy the student's reason, and only the strongest effort of will and faith could dispel the evil influence. And the same student at other times has felt it as a vague, yet terrible, horror that seemed to enwrap him in its folds. Before this he has retreated for the time to prepare himself by strong self-study to be pure and brave for the next attack.

These things are not the same as the temptations of Saint Anthony. In his case he seems to have induced an hysterical erotic condition, in which the unvanquished secret thoughts of his own heart found visible appearance. The Dweller of the Threshold is not the product of the brain, but is an influence found in a plane that is extraneous to the student, but in which his success or failure will be due to his own purity. It is not a thing to be dreaded by mere dilettante theosophists, and no earnest one who feels himself absolutely called to work persistently to the highest planes of development for the good of humanity, and not for his own, need fear aught that heaven or hell holds.

THE GREATNESS OF THE SMALL — *H. T. Edge*

I am watching an airplane gliding through the sky. It is very big, yet it is too far off for me to see what makes it move. But I know that the motive power and the skill of movement are all due to a man who must be sitting there, though at the distance he is reduced to such a speck that I cannot see him. Very well; the man moves the plane; but now what moves the man? It is his brain, comes the answer; and that brain is smaller than the man himself. And the power of the brain lies hid in some minute cerebral center, and the power of that center again lies hid in the ultra-microscopic particles that compose it. The smaller a thing is, the more potent it is. It is always the speck that does it, the atom lies at the root of matter, and the electron lies at the root of the atom. The potency of a medicine is all in an infinitesimal proportion of some one ingredient; all the rest is merely padding, vehicle. It is Gideon's band. For the instruction of those who do not know, and the reminding of those who have forgotten, we may recall that Gideon was to fight the Midianites. He had 32,000 men, but the Lord said this was too many; and the number was successively reduced to 300, and the victory thereby secured. Is there not a saying of Lao-Tse that the wise man deals with things when they are small? The point, the atom, is the basis of anything, and is the right handle by which to lay hold of it. In our efforts at reform we labor on details, leaving untouched the principles, like one who cuts off weeds instead of uprooting them. But we are told to seek the root of evil in ourself and tear it out. Who knows but any day he may discover in himself some error of principle, and by correcting it transform his whole life?

THE RELATION OF THE FINITE AND THE INFINITE (1) — G. de Purucker

Question: What is the relation between the infinite mind and the finite mind according to Theosophy? The trouble is if you say the finite mind is a part of the infinite mind, you must also ascribe to the infinite mind the vices of the finite. But if you say it is not a part of the infinite mind, then the infinite cannot be infinite.

Answer: The gentleman has asked a question which has been debated in all ages, among all races of men. It is the same problem which has vexed and harassed theologians, for it is obvious from the standpoint of theology, if God is infinite, and is nevertheless a creator, then everything that infinity creates must be infinite; but we see ourselves surrounded by an infinitude of finite things. How comes this? This is the same problem in theology that you, my dear sir, have spoken of as existing in philosophy. Now I don't know anything that can answer this question except the god-wisdom which today we call Theosophy, and you will understand it is not so easy to answer, because one must be trained in esoteric thought before complete conviction comes of the full adequacy of the answer. Yet I will try to state the facts in simple language.

I have always looked upon the idea that the infinite is an actor as utterly wrong, for infinitude cannot be an actor, because an actor is a limited entity. Infinitude does not act as a being, for a being is a limited entity. We can only say therefore that infinity is action per se, life per se, not *a* life; that is limitation, that is finity. You take me as a man, you as a man: a celestial body like the sun or a planet or a beast, a plant, what not, any limited entity: this limited entity, a finite being, in its physical expression lives and moves

and has its existence in infinitude; it cannot be outside of it because infinitude has no frontiers, no boundaries, and no beyond. Therefore, that finite entity somewhere, somehow, in some part of it, has its roots in infinity, infinity washes it through, so to speak, as the sea washes through all that its waves encompass, although of course infinity is a frontierless sea, so to speak.

Thus I, as a man, have my roots in the Divine, that Divine surrounds me everywhere, and permeates me throughout, in all my parts, in all my being. I cannot ever leave it. Therefore am I a child of it. Yet here am I, a man, in a weak, small, limited, physical body, with a weak, small, physical, limited brain as compared with the gods, a weak, small life, with a heart as we say, an ethical instinct, and what not. Yet I am a man. I have divine thoughts, I feel my unity with all that is. How? Why? Oh, that is the problem.

I will now hint at what esoteric Theosophy says on this point. There is an infinity of finites, a strange paradox. In other words, these entities or beings which we call finite are infinite in number. I wonder if you catch that point. Thus the atoms of boundless space are bound by no frontiers, each one is a finite entity, and yet they exist in infinite numbers. We can conceive no end because if our thought once says, there infinity ends, this is a limitation of the Infinitude which has produced finites here, and we say, with perfect justice, why should, how could, infinity limit itself in any way? This thought is repellant, we cannot accept it. It is the infinite whispering of Infinitude within me which enables my consciousness to catch this thread of understanding; this limited brain finds difficulty in holding within its small bounds an infinite idea. But I get an intuition, something within whispers, that is so. That is the Infinitude breathing through me, washing through me.

Thus, there is an infinitude of finite entities, gathered together in distinct aggregated masses, whatever they may be: men, planets, suns, stars, stones, or what not — call them atoms, because all these things are formed of atoms, or things smaller than atoms like electrons and protons, etc., etc. Indeed, all cosmic phenomena in the great or in the small follow the same general cosmic rule or pattern; and these are the phenomena of the universe as contrasted with the hid noumena or secret causes.

Now, we see thus that Occidental philosophy has made a capital mistake, a capital error, in its philosophical researches in saying that infinity is around us, but that the finite is *radically* or *essentially* different from it. Strange paradox! Just because the finities are limitless, infinite numerically, therefore collectively as an infinitude they are a part of Infinitude, indeed, in a sense the garments of Infinity. They are it. In other words, we must change our outlook on the universe before we can understand why the infinite breathes in time as it does, in what we men call boundless space. There is a manner in which even a human thought is infinite because it is one of an infinite number of thoughts, energies, living in the heart of nature, and never able to leave infinitude.

If you catch this very subtil, difficult thought, you will have precisely what the esoteric philosophy teaches, as also, for instance, the Vedanta, the Advaita-Vedanta of India. What does it as well as the sage of the Vedas teach its disciples? This: *Tat twam asi*. That, the Boundless, thou art. Because if That, thou, are different, then the thou is outside infinity, which is absurd, and infinity immediately becomes finite because there is something beyond it, which means that it is bounded, therefore limited, therefore non-infinite. Therefore that limited entity, that finity in this wondrous way is washed through with infinity, because in its heart, in its essence, it is of the substance of infinity.

Now turning to theology, this is just the reason why we Theosophists cannot accept Christian theology, although we accept the teachings of the Avatara Jesus. We look upon him as one of the greatest of Theosophists; but the theology of Christianity was built up by smaller men later in time who had lost the secret of the teachings of their great Master. And when Christian theology says that God is a creator, that "He" created the world out of nothing at a certain time in infinity, we say that is impossible, that limits "God." Infinity is no creator, it is not a maker, not a demiurge, to use the philosophical term, demiourgos of the Greeks; just as the sage of the Vedas, as the Adwaita-Vedanta of India and as the Esoteric Philosophy say, it is THAT. We give to it no concrete name, for such a name implies limitation. We simply say it is nameless, THAT. "THAT" is not a title, it is not a name; it is just an attempt of the human mind not to label Infinity, or to give it a name, or to put a ticket on it, but just to use this term *That* as a means of reference in conversation.

And lastly, the Esoteric Philosophy teaches therefore, following these lines of subtil thinking, that even what we call the physical universe is infinite because composed of an infinite number of units, finities, strange paradox! And it is so from eternity — never had a beginning, never will have an ending. Because infinity has no beginning, has no ending. Infinity does not create and produce these finities. Therefore they are always from infinite past to infinite future, and are parts of Infinitude. Strange philosophical paradox. Marvelous intuitions of the archaic sages!

I sometimes think that while it is noble of us to investigate these recondite and difficult thoughts, because they raise us to higher levels of thinking and enlarge our minds, I sometimes think that I must agree with the ancient sage who said that the answer, the real answer, the most real answer, to such problems is found

in the Silence. Oh, how true that is. It is words that mislead us, words which entangle us and lead our thoughts astray. And yet we must use words to communicate with each other. If this gentleman is a professor or teacher in one of the Universities I sympathize with him, because I know the difficulty he has in giving thought so subtil sometimes to other minds. And yet he does so, teachers do so, because they know there is something in the learners, in the pupils, which can grasp at least an intuition of reality.

Friends, I trust you will forgive me if I speak with perfect frankness about your branch of teaching. I sometimes think that Western philosophy has lived under great disadvantages. It has suffered under a heavy handicap, and it is this, that Western philosophical thought has not had a real opportunity to develop and free itself from theological dogmatism. Of course, I know this perhaps is a ticklish subject to touch upon, but yet it is one of outstanding importance for the freedom of human thought. Philosophy in the Orient has not been laboring for thousands of years under this handicap. The thoughts of Oriental philosophers and of the archaic Mystery Schools have had the freedom to grow and to develop; and I will now show you just what I mean.

In the Esoteric wisdom, as likewise in the philosophical and religious thought of the Orient — a direct descendant and child of Occultism, of Theosophy — the Infinite or Boundless or That is not good, nor is it bad. These are human limitations, and can apply only by contrasts to limited beings. It is a man or an angel or a god or a deva who is good or bad. A spirit of Good and a spirit of Evil? This is a blind intuition which Christian theology has had. What actually is, is that in the bosom of Infinity, out of it as from an eternal womb, come pouring forth hierarchies of lives, of monads as Leibniz would say, all spiritual beings in various grades and degrees of what we today call evolutionary

unfoldment; so that for instance we have the highest of the highest of the highest gods, and beneath them the highest of the highest, and beneath them the highest, and then the gods, and then the Dhyani-Chohans, and then beings below them, until we reach us men, and then beings below us men on other ranges of hierarchies of entities, like the beasts and the plants and the elementals, all marching upward on their evolutionary way, higher and higher. Indeed, it is in this world in which we live that we find good and evil, and we see how beautiful good is, for it is harmony and love and peace and progress and development, evolution, expanding, in growth. And we likewise see what evil is, restriction, constriction, suffering, pain, inadequacies, ignorance, in other words imperfection in development often involving retrogressions or going downwards towards larger imperfections, until the lesson is learned by habit, and the entity begins the upward march. This is what the evil man does. He is going downwards and backwards for the time being, for the duration of his evil doing. So it is in the manifested things of the universe that we find beautiful good and the best, and horrid evil and the worst. This entire series of thoughts involving the productions of the hosts of hierarchies of finite beings and things was called in ancient philosophy the doctrine of Emanations, which Christian theology has condemned and scorned and mocked at, and which Western philosophy has never had a chance to understand because its teachers have been crippled. They have not been truly free, for they have not had the chance that the philosophers of the Orient have. I know. I have been through it.

So we cannot say that the Infinite is good, because that is a limited term belonging solely to beings of emanated hierarchies; and when in the lower grades of these, we find them with less of the divine light. Then, as the Gnostics said — one School of ancient philosophy in early Christian times — they live in

darkness, they are limited, they cannot see clearly, and that is evil, what we call evil, limitation.

So it is all wrong to talk about Infinitude as being good, because if Infinitude is good, how are we going to explain evil in the world? And there is lots of it! No, good and evil belong to the vast range of hierarchies existing in Infinity, coming forth into manifestation in one great Life-wave in some part of the Universe, living their times, advancing and progressing; and when they have reached the culmination or highest point of their growth in that time-period, then returning into the bosom of the Divine for rest, at some future time to come forth again on higher planes, in loftier spheres: a process that we see in Nature all around us, like the tree coming forth in the spring, bringing forth its leaves and shedding them in the autumn; just as we see men, for instance, re embody, part in the divine world and part in the physical, life after life, up and down the swing of the pendulum which is Nature's law. We see it around us. There is the great book which we should study: Nature, the things that are. And when I say Nature, I don't mean physical nature alone, but all nature in the esoteric sense, in the theosophical sense, the nature of the divine, the nature of the spiritual, the nature of the intellectual worlds, the nature of the physical worlds, the nature of the worlds beneath the physical. Who can, who dare, set bounds to the life in Infinity and of it?

I think in conclusion, Mr. Chairman, in regard to this question, that the esoteric philosophy, more than anything else I know, fills the heart with reverence, reverence for truth.

The gist of the answer to the question asked is, therefore, the following: Every unit of the limitless number of finite beings, or of things living in and of infinitude, every such unit, I say, is in its highest, in its essence or fundamental substance, an identity with

the substance of Infinitude; but these points of infinite substance or monadic centers in their several expressions as cosmic phenomena are, or become, or appear, or show themselves forth, as the finite units spoken of in the question. Thus, every unit is in its essential substance of the very stuff of Infinity, but all in their manifestations or emanated expressions are, or become, the discrete or "separated" units in their countless armies or hierarchies.

FOOTNOTE:

The Theosophical Forum

QUESTIONS AND ANSWERS

The Relationship of Chela and Guru

Miss Olive Hicks — My question is encouraged by Dr. Barker's lecture this morning, and I would like to ask this: I have understood from Mr. Flach's lecture that the Guru takes on himself the karma of the chela. Why and how is this possible; and if possible, is this not taking away the chela's free will and karma; and so if the chela is deprived of his karma would it not make his karma still harder?

A. Trevor Barker — This question of the Guru's being said to take upon himself the karma of his pupil can possibly give rise to a wrong conception. I believe the true understanding of this point is simply this, that when a Teacher begins to transfer to the consciousness of the pupil some of the occult truths of Nature, he becomes responsible if the pupil should make a wrong use of that knowledge to his own detriment and to the detriment of humanity in general. It is in that sense that a Teacher takes upon himself a very heavy responsibility indeed, and that is why such rigorous testing and training is demanded before it is thought safe for the Mahatma to make the close bonds between pupil and Teacher. It is not that he takes upon himself all the ordinary karma of the pupil; but on the contrary, if you look in *The Mahatma Letters*, (1) it says that if we all had scavengers to go behind us and clear up the ill effects of our rashness or presumption, the path of chelaship would be altogether too easy. They only help their chelas when the chelas are entirely innocent of the causes which landed them into difficulty. If by any chance any of us get into the situation where we could misuse knowledge that had been transferred to us, then we also have a very heavy

responsibility and we don't lose any of that responsibility.

Dr. Siren — It seems to me that the question of gurus and chelas also may be considered as a relative one; sometimes the chelas may have to act as teachers, i. e. gurus, though not of the same degree as the further developed gurus. You who are speaking here are no doubt "gurus" for a number of less instructed people. It all depends on how you use the word "guru." You are at least teaching; you are opening a certain path for them, and you are giving them quite definite instructions regarding that path. Of course it is a preparatory stage; but nevertheless it is a stage on the path. I should think that you are, consciously or unconsciously, in the position of gurus in so far as you are awakening the higher side of these people's individual natures; a view that may throw some light on the relation between teachers and pupils. If the higher side of your nature is awakened, you will sooner or later become a kind of guru. It seems from one point of view a question of using words properly, and from another point of view a question of gradual evolution. I don't know whether Mr. Barker or anyone else would care, to go into it more in detail. My main contention would thus be, that as soon as the higher part, the spiritual or leading part, in the nature of an individual is awakened or aroused to conscious activity by the influence of another being, that other being is in the position of a guru in relation to his follower. Is that right?

A. T. Barker — I think that this is a rather thorny subject in some ways, because as Dr. Siren has very truly pointed out, a great deal depends on how you use this word "guru." There is one sense in which I can agree with him very easily, and that is the sense in which Mr. Judge described the Guruparampara-chain, that chain which even includes our school-teachers, who in this sense are part of the golden chain of teachers from whom we receive something. Now, if you want to understand it in that way, then

anybody from whom you learn anything is in a position of a guru, the idea being that we should always treat such teachers with respect, so that we may learn from them in the best way. But I think I heard the statement (and the questioner was looking rather hard at me!) that anybody who is engaged in Theosophical work and who perhaps may be only the chairman of a study-class, is in the relationship of a guru. Well, now, except in the case that has just been mentioned, the Guruparampara-chain, there seems to me to be danger in this idea. If we people who are at best what H. P. B. called pupil-teachers, those having no right to dogmatize, adopt the role of guru, then many troubles can arise in the Theosophical Movement. There are a lot of these gurus loose in the world. I think it should be clearly understood that Theosophical lecturers, whether National Presidents or otherwise, are simply transmitters of information to the best of their spiritual ability; but they do not take the position of guru. That position is reserved, and very properly so, to the Leader of the Society who takes upon himself the role of Teacher, and declares that he has been authorized to teach. The rest of us who are not so authorized, but in whom the spiritual light has penetrated to some extent the lower darkness, can also help in our own spheres and become transmitters of light to others. But there is a disease called "guru-fever," and it is a very difficult complaint to cure.

The Theosophical Forum

THIS PERSONALITY — *Arthur A. Beale*

This personality of ours — this orphan, this lonely pilgrim of the desert, this transient tramp of the ocean of life, the hope and despair of sages, the nursling of the gods, this prodigal of high mind, this tragedy which by courtesy we call a man — let us look to it. O mystery of mysteries, that comes like a meteor from the spaces of Space, flickers with a turmoil of feckless lights and shades, stirring up strife with countless flashes and clashes of its own irresponsible will for one small moment of Eternity which it calls its life, hoping eternally but daring sporadically, dreaming of conquests and glories yet feeling its impotence to accomplish, then too often despairing of all things it passes out, breaks on the rocks and shatters into ten million sparks and is gone!

What of it? Is this all? Is there no other side? Some pessimists say, No! "Like a snowflake on the river, a moment here, then gone for ever!" And to all appearances so it would seem. If this were all, however, then the Cosmos and especially that part which concerns us is a horrible joke; but if it is a joke then there must be a joker, and he is one who lacks judgment, compassion, or meaning.

On to this arena, however, come visions. These countless personalities feel internal urges, pictures of mighty potentialities, urges to do, to accomplish, to evolve, to create, to help, to prosper, even to sacrifice for others; a response to beauty, even an appreciation of wisdom, an innate consciousness of some sort of immortality, as evidenced in recent discoveries by the respect of the earliest remnants of prehistoric man for the disposal of the dead.

Whence comes to the personality, which is per se of the earth

earthy and mortal and which has no evidence of immortality, whence comes this mystic touch, this almost pathetic craving for knowledge, for some certainty of capacities, potentialities and powers? There is but one logical issue, namely, an illumination from some Source outside our personalities. This Source is flamingly conscious of immortality, indeed lives and has its being in immortality, and which, we affirm, is intimately related to our personalities.

Part of the tragedy of life — which has been described as a Vale of Tears — is, that we as personalities are largely mortal, yet have a modicum of immortal visions and aspirations: we are mostly conscious of our insatiable appetites for gratification of the senses of the body, and yet we have dreams of glory just outside our reach. Thus we live, being capable of all sorts of mean tricks on one another, of insinuations, of unjust accusations, of vaunted boasts of our own superiority, of competitions in good appearances and intellectual superiority, of converting our own superior aspirations into cunning traps which lead to graft; furthermore downing our competitors even to obliterating their existence if necessary should they stand in the way of our objectives.

Such then is one vision of the world of personalities in which we live, a sort of pandemonium which is periodically pulled up when one of the community "passes out" and we who are left are reminded that this too is our destiny in the fulness of time.

A collective expression of the evil side of personality is a nation of patriots run by megalomaniacs. Again we see the weary cycle of selfish ambitions, grandiose expressions of strength and superiority, intoxicated aspirations of imaginary gains, in fact an exhibition of running amuck, which in an individual would be met by incarceration, if possible, or put to death if necessary for

general protection. These are all pictures of the general attitude or trend of personality when left to itself: vanity, self-glorification, egotism, greed, ambition, callousness, self-gratification, self-indulgence, self-pity, and plenty of other facets more or less disgraceful to a finer nature, and if indulged in inordinately leading either to insanity or destruction.

Yet these are the assets which form the raw material from which we have to weave the fine human attributes which constitute human beings at their best. They are in fact the evolved sub-human or animal desires and propensities, sharpened by the human intellect, without the refining and controlling psychology of spiritual egoic illumination, in fact the incipient stage of what Theosophists call the Kama-Manas, or the lower mind.

Redemption comes when, by the action of free will and the pressure of karmic discomfort, the shallow satisfaction of such antics leads to the revolt so graphically described in the biblical parable of the prodigal son. In that moment the conscience awakes; then arise visions of another life and the hope of escape. From then on comes the intermittent zig-zag progress — of efforts upwards and slumps backward: man becomes two-minded, he sees the vision but he fails to capture it, and so the struggle persists. He develops the two selves, the redeemer and the sinner, the Dr. Jekyll and Mr. Hyde: between stands the human ego, Janus-faced. St. Paul described this stage when he cried:

For that which I do, I allow not: for what I would that do I not; but what I hate, that do I. — *Rom.*, vii, 15

And he goes on to say that it is not he that wishes to do these evil things "but sin that dwelleth in me." "Who shall deliver me?"

I thank God through Jesus Christ our Lord, so then with the mind I myself serve the law of God; but with the flesh the

law of sin. — *Rom.*, vii, 25

To put these ideas into Theosophical language: the personality left to itself is impotent to accomplish any beneficent purpose without the help of the Christ-influence. What is this Christ-influence, or Christos, but our own spiritual mind or Higher Self?

Thus we realize the two minds in man: one seeking only the personal gratification of appetites and things of the body, which is its vehicle; the other not so concerned, giving us inspirations of beauty, beneficence, and benevolence, urging us to right action and harmony with Nature's holy laws, to aspirations of peace and concord, to visions of high ideals. The one is the producer of diseases; the other is the great physician.

So our personalities are introduced to our spiritual father, who called us into existence, arranged for our incarnation, gave us birth by breathing into us the breath of his own life, in extreme sacrifice for us. We are his son: by our action we bless and enrich him or give him untold sorrow and distress; it is to us that he has to look for experiences and evolution, for we are the vehicle for contacting matter. This matter can itself be redeemed and raised, or condemned to pain and retrogression, bearing upon its surface the marks or impressions of our misdeeds, transgressions, or misjudgments.

This is part of the tragedy of life, for having endowed us with enough of itself to justify our right to choice — in the exhibition of our free will — the "father ego" has to stand by and watch our antics and our efforts to achieve, ever ready to help if we ask. But the choice is ours, and through our conscience it impels, but never compels.

So through our mind we waver and seek help alternately: periodically from time to time we indulge our corporal appetites

till we feel the surfeit *ad nauseam* and then revolt against our ways. Again we experience that thrill of finer endeavor, and realize that the father is always there, waiting, waiting, for the call to help; but the call must come from us as personalities. The prodigal returns, with the joy and peace experienced, again to fall away into the old transgressions; until we gain the power and strength to resist the old temptations of the flesh, urged on by the "pricks" of karmic retributions and the discomfort of ignoring the urges and warnings that always come at critical moments of temptations, or thereabouts.

So if we rise we can shorten the deflections, make the resolutions stronger, till the blessed time comes when we no longer fall away, feeling only the urge to noble deeds, and no longer go back: then the rejoicing "over one sinner that repenteth"! This does not happen in a day, or perchance a lifetime, but necessitates many. Yet in the fulness of time the personality can say, "I and my father are one." In that glad time the personality has become an individuality, a new spiritual mind: an Arhan is born.

Such is man's destiny if all goes well, but oh the pitfalls that occur! Yet we may "rise on stepping-stones of our dead selves to higher things." As Tennyson says:

Our little systems have their day;
They have their day and cease to be:
They are but broken lights of thee,
And thou, O Lord, art more than they.

Some day the lights will be reabsorbed!

H. P. BLAVATSKY SPEAKS FOR HERSELF

Jesus As a Man (1)

We leave it to every impartial mind to judge whether Jesus is not more honoured by the Theosophists, who see in him, or the ideal he embodies, a perfect adept (the highest of his epoch), a mortal being far above uninitiated humanity, than he is by the Christians who have created out of him an imperfect solar-god, a saviour and Avatar, no better, and in more than one detail lower, than some of the Avatars who preceded him. No Theosophist, of those who ever gave a thought to Christianity — for our "heathen" members, of course, do not care one snap of their finger whether Christ and Paul lived or not — ever denied the existence of the Apostle who is an historical personage. Some of us, a few learned Christian mystics among our British Theosophists included, deny but the *Gospel* Jesus — who is *not* an historical personage — "Zero" and *padris* notwithstanding, — but believe in an *ideal* Christ. Others are inclined to see the real Jesus in the adept mentioned in the oldest Talmudic as well as some Christian books, and known as Jeshu Ben Panthera. — *The Complete Works of H. P. Blavatsky*, IV, 193 (2)

In days of old the "mediators" of humanity were men like Christna, Gautama Buddha, Jesus, Paul, Apollonius of Tyana, Plotinus, Porphyry, and the like of them. They were Adepts, Philosophers — men who, by struggling their whole lives in purity, study, and self-sacrifice, through trials, privations and self-discipline, attained divine illumination and seemingly superhuman powers. — *The Complete Works of H. P. Blavatsky*, I, 184

"The air is full of souls," states Philo, "*they descend to be tied to*

mortal bodies, being desirous to live in them." (*De Gigant.*, 222 C; *De Somnus*, p. 455).

Which shows that the Essenes believed in re-birth and many reincarnations on Earth, as Jesus himself did, a fact we can prove from the New Testament itself. — *The Secret Doctrine*, II, 111

The motive of Jesus was evidently like that of Gautama-Buddha, to benefit humanity at large by producing a religious reform which should give it a religion of pure ethics; the true knowledge of God and nature having remained until then solely in the hands of the esoteric sects, and their adepts. — *Isis Unveiled*, II, 133

All this points undeniably to the fact, that except a handful of self-styled Christians who subsequently won the day, all the civilized portion of the Pagans who knew of Jesus honored him as a philosopher, an *adept* whom they placed on the same level with Pythagoras and Apollonius. Whence such a veneration on their part for a man, were he simply, as represented by the Synoptics, a poor, unknown Jewish carpenter from Nazareth? As an incarnated God there is no single record of him on this earth capable of withstanding the critical examination of science; as one of the greatest reformers, an inveterate enemy of every theological dogmatism, a persecutor of bigotry, a teacher of one of the most sublime codes of ethics, Jesus is one of the grandest and most clearly-defined figures on the panorama of human history. His age may, with every day, be receding farther and farther back into the gloomy and hazy mists of the past; and his theology — based on human fancy and supported by untenable dogmas may, nay, must with every day lose more of its unmerited prestige; alone the grand figure of the philosopher and moral reformer instead of growing paler will become with every century more pronounced and more clearly defined. It will reign supreme and universal only on that day when the whole of humanity

recognizes but one father — the UNKNOWN ONE above — and one brother — the whole of mankind below. — *Isis Unveiled*, II, 150-1

Alas, alas! How little has the divine seed, scattered broadcast by the hand of the meek Judean philosopher, thrived or brought forth fruit. He, who himself had shunned hypocrisy, warned against public prayer, showing such contempt for any useless exhibition of the same, could he but cast his sorrowful glance on the earth, from the regions of eternal bliss, would see that this seed fell neither on sterile rock nor by the way-side. Nay, it took deep root in the most prolific soil; one enriched even to plethora with lies and human gore! — *Isis Unveiled*, II, 303

All this did Siddhartha six centuries before another reformer, as noble and as loving, though less favored by opportunity, in another land. If both, aware of the great danger of furnishing an uncultivated populace with the double-edged weapon of *knowledge which gives power*, left the innermost corner of the sanctuary in the profoundest shade, who, that is acquainted with human nature, can blame them for it? But while one was actuated by prudence, the other was forced into such a course. Gautama left the esoteric and most dangerous portion of the "secret knowledge" untouched, and lived to the ripe old age of eighty, with the certainty of having taught the essential truths, and having converted to them one-third of the world; Jesus promised his disciples the knowledge which confers upon man the power of *producing far greater miracles than he ever did himself*, and he died, leaving but a few faithful men, only half way to knowledge, to struggle with the world to which they could impart but what they *half-knew* themselves. Later their followers disfigured truth still more than they themselves had done. — *Isis Unveiled*, II, 319

While the mythical birth and life of Jesus are a faithful copy of those of the Brahmanical Christna, his historical character of a

religious reformer in Palestine is the true type of Buddha in India. In more than one respect their great resemblance in philanthropic and spiritual aspirations, as well as external circumstances is truly striking. Though the son of a king, while Jesus was but a carpenter, Buddha was not of the high Brahmanical caste by birth. Like Jesus, he felt dissatisfied with the dogmatic spirit of the religion of his country, the intolerance and hypocrisy of the priesthood, their outward show of devotion, and their useless ceremonials and prayers. As Buddha broke violently through the traditional laws and rules of the Brahmans, so did Jesus declare war against the Pharisees, and the proud Sadducees. What the Nazarene did as a consequence of his humble birth and position, Buddha did as a voluntary penance. He travelled about as a beggar; and — again like Jesus — later in life he sought by preference the companionship of publicans and sinners. Each aimed at a social as well as a religious reform; and giving a death-blow to the old religions of his countries, each became the founder of a new one. — *Isis Unveiled*, II, 339

The "Life of Jesus" by Strauss, which Renan calls "*un livre, commode, exact, spirituel et consciencieux*" (a handy, exact, witty and conscientious book), rude and iconoclastic as it is, is nevertheless in many ways preferable to the "Vie de Jesus," of the French author. Laying aside the intrinsic and historical value of the two works — with which we have nothing to do, we now simply point to Renan's distorted outline-sketch of Jesus. We cannot think what led Renan into such an erroneous delineation of character. Few of those who, while rejecting the divinity of the Nazarene prophet, still believe that he is no myth, can read the work without experiencing an uneasy, and even angry feeling at such a psychological mutilation. He makes of Jesus a sort of sentimental ninny, a theatrical simpleton, enamored of his own poetical divagations and speeches, wanting every one to adore

him, and finally caught in the snares of his enemies. Such was not Jesus, the Jewish philanthropist, the adept and mystic of a school now forgotten by the Christians and the Church — if it ever was known to her; the hero, who preferred even to risk death, rather than withhold some truths which he believed would benefit humanity. We prefer Strauss who openly names him an impostor and a pretender, occasionally calling in doubt his very existence; but who at least spares him that ridiculous color of sentimentalism in which Renan paints him. — *Isis Unveiled*, II, 340-1 (Footnote)

Like Buddha and Jesus, Apollonius was the uncompromising enemy of all outward show of piety, all display of useless religious ceremonies and hypocrisy. If, like the Christian Saviour, the sage of Tyana had by preference sought the companionship of the poor and humble; and if instead of dying comfortably, at over one hundred years of age, he had been a voluntary martyr, proclaiming divine Truth from a cross, his blood might have proved as efficacious for the subsequent dissemination of spiritual doctrines as that of the Christian Messiah. — *Isis Unveiled*, II, 341-2

Let it not be imagined that we bring this reproach to any who revere Jesus as God. Whatever the faith, if the worshipper be but sincere, it should be respected in his presence. If we do not accept Jesus as God, we revere *him as a man*. Such a feeling honors him more than if we were to attribute to him the powers and personality of the Supreme, and credit him at the same time with having played a useless comedy with mankind, as, after all, his mission proves scarcely less than a complete failure; 2,000 years have passed, and Christians do not reckon one-fifth part of the population of the globe, nor is Christianity likely to progress any better in the future. No, we aim but at strict justice, leaving all personality aside. We question those who, adoring neither Jesus,

Pythagoras, nor Apollonius, yet recite the idle gossip of their contemporaries; those who in their books either maintain a prudent silence, or speak of "our Saviour" and "our Lord," as though they believed any more in the made-up theological Christ, than in the fabulous Fo of China. — *Isis Unveiled*, II, 530

There is quite enough in the four gospels to show what was the secret and most fervent hope of Jesus; the hope in which he began to teach, and in which he died. In his immense and unselfish love for humanity, he considers it unjust to deprive the many of the results of the knowledge acquired by the few. This result he accordingly preaches — the unity of a spiritual God, whose temple is within each of us, and in whom we live as He lives in us — in spirit. — *Isis Unveiled*, II, 561

Apollonius, a contemporary of Jesus of Nazareth, was, like him, an enthusiastic founder of a new spiritual school. Perhaps less metaphysical and more practical than Jesus, less tender and perfect in his nature, he nevertheless inculcated the same quintessence of spirituality, and the same high moral truths. His great mistake was to confine them too closely to the higher classes of society. While to the poor and the humble Jesus preached "Peace on earth and good will to men," Apollonius was the friend of kings, and moved with the aristocracy. He was born among the latter," and himself a man of wealth, while the "Son of man," representing the people, "had not where to lay his head;" nevertheless, the two "miracle-workers" exhibited striking similarity of purpose. — *Isis Unveiled*, II, 341

FOOTNOTES:

1. The entire article, entitled *A Word with the Theosophists*, makes very interesting reading and goes into detail concerning the historical evidence of the life of Jesus. — Eds. ([return to text](#))

2. From these extracts from the writings of the main founder of the Theosophical Society, the reader will gather what is the Theosophical attitude towards the great Christian Teacher *as a man*, and the fact of his actual existence. Note particularly the distinction between Jesus as a man, and the Christ- or Christos-spirit in every man. — Eds. ([return to text](#))

The Theosophical Forum

THE CAUSES OF UNHAPPINESS AND THE MEANS OF HAPPINESS

— *Pundit L. Ram Sahijpal*

IV

Why does Spirit suffer pain? Because it has body in which it lives. And body it must have or else it cannot manifest itself and least could it stand naked, as it were, without a cover in the wan and pallid, hence inappropriate, environments of our earth. Who gave it body? and why should it suffer from it? Body is its own Creation, though Mother Earth helped it in creating it; and it must suffer from it because it, the body, is its (Spirit's) concreted "Karman": Spirit has an inherent urge to self-express itself. Its urge sets up activity within it. The latter, propelled by the urge sends forth out of itself a bit of spiritual substance, or an emanation of a certain amount of spiritual force or energy. No sooner does the emanation issue forth than the elementals surrounding it make its vehicle and it develops to be a thought. The swabhava of the spiritual self colors it and directs it to follow a certain line of action. It, the emanated thought, acts upon the surrounding environments to which its swabhava leads it, and the environments react upon it. During this interaction there is a transference of substances between the aggressing and the aggressed parties, and in consequence the fabric of the former, the thought-self, is more or less coarsened in exact accordance with the nature of its action. Such actions and reactions continue resulting each time in a change and a thicker materialization of the thought-substance, and in time, the thought-self, that was spiritual or ethereal matter at the time of its coming into being, gets concreted, develops as its vehicle a life-atom, and then atoms which are employed in building and strengthening and concreting the body of their spiritual parent. These atoms are

Spirit's concreated "Karman" because the latter is their parent, their Creator. These atoms are produced by the Spirit all the time. A certain number of them make one molecule and a certain number of molecules make one cell. Our teachers of science tell us that twenty-six trillions of cells make one human body. Thus it is, and it ought to be quite clear from the above that the body, in which Spirit lives, is its own creation; and that it must suffer from it because it is entirely Spirit's own concreated "Karman."

Is Karma then the real cause of man's sufferings? Not quite so, because there would have been no karma had there been no desire to act. Is desire the ultimate cause of pains then? Not quite so, because there would have been no desire, as it is, but for "Swabhavic Egotism," self-exaltation. The latter, the Swabhavic Egotism, the element of self-importance, the Selfness, is due to the want of right discrimination, avidya, the thought and feeling of "I am I" instead of "I am." Hence the latter, "avidya," is the cause of all the sufferings. But because it is rooted in some other cause which is the ultimate one, it may be called the sub-main cause of Man's sufferings. This sub-main cause is planted in the Spiritual Self's urge to self-expression or self-manifestation necessary to learn more and to climb higher on the endless ladder of "Spirit's Eternal Life." Had there been nothing more for the Spirit to learn, it would have no longer the urge to self-express Itself, because its urge in its origin is the impress of the next step higher "Sutratman."

Yes, there is always something more to learn, and the entirety of wisdom is the Consciousness per se only. But the latter, like the boundless sea in which waves rise and fall but which is not their originator, cannot be called the cause of the urge of the Spirit. "It" is the Rootless Root, the Causeless Cause, and the observer but not the participator. The Consciousness per se is never the Cause although the Spirit rises to manifestation and falls back into IT.

But the point is that the evolutionary process or course of Spiritual unfoldment is endless, the spirit is never perfect per se, but to become more perfect It urges each time, and Its urge develops the whole of the manifestation to win the goal, the next step of spiritual Wisdom, at the end of it. Had the Spirit been perfect per se or had It nothing more to learn, there would have been no urge in it to Self-express itself, and, in fact, it would have been called spirit no more but Consciousness per se, to which "Time" and "Space" have no meaning. Hence, the imperfection, or, using the technical term, Avidya, on the part of Spirit is the ultimate Cause of all Its manifestations, in which the sub-cause of man's sufferings, his "avidya," is planted. Avidya is eternal, of endless number of grades, and bipolar. Where there is Avidya, the darkness, there is wisdom, the light also. They are two eternal twin sisters. And the fact is that to attain to the latter the former must be suffered each time. Without sufferings, bitter circumstances, sorrows, pains, and aches, "Avidya" cannot be overcome and Wisdom cannot be attained. Spirit must suffer to learn more, so must man suffer to know more. Hence why complain when in the clutches of ill-Karma? It is for man's good that he is suffering. The black clouds are pregnant with sweet waters to irrigate the dry land, Darkness is condensed light, and our tortures and torments are our friends in disguise, for they reduce to ashes our sins and throw light on our path leading to the god-world and the immortal gods. Come, O Sadhu! smile inwardly when you are in the hem of calamity, learn what it can teach you, and sin no more.

V

The bud of rose is covered with thorns, and to the ignorant eyes it seems to be dangerous for the tender petals of the coming rose to rise among them. But when the time of their rising comes, thorns

and thistles yield back leaving the central plane empty for the rose to land. Strange are thy ways, O Nature! how thou changest adverse hearts to be conformable companions! The very thorns that were looked upon as enemies are now the best friends of the rose, not only affording a room to stand, but defending their king, the rose, against the foreign forces, the fingers of the pluckers. That philosopher was very wise who said, "Every discord is a harmony not understood." To these physical, ignorant eyes appearance is everything. They smile or they frown at things for their forms and colors, and very often begin condemning or rewarding them, but they know not that "Reality" is hidden within, nor do they care to look behind the veil. May be that man is, worldly speaking, in bad circumstances, and if he is the victim of "avidya" he is miserable and unhappy because he cannot see into the heart of things; but if he is wise he will rejoice amidst his present ills and be happy, because, being wise, he will know that his misfortunes are the results of his past mistakes and that his going through them means to him his salvation. Yes, the wise smile but the foolish frown when dark times have overshadowed them. O physically conscious man, worry not! It is only your short-sightedness that makes you fret. You are not ignored. There is an Eye which is always watching over you. You are like a babe playing in the yard, and that I is your invisible Mother always keeping you under her watch. All is well with you. Do not be discomposed by the hot winds of your low times. They are only like those thorns that after all were the best friends of the rose. There is not an atom in this universe, not to speak of the bigger entities, that is not under the shadow of that "Mighty Wing," the "Higher Self," the "Universal Self," which is all-pervading, all-knowing, and all-powerful. Some call it Father and some call it God; call it by what name you will, but "It" is there watching each and every move that you are making. It is Truth, It is Love, It is Light, and It is Life and all; All are in "Him" and He is in all.

Verily, there is nothing else, but He alone is: these appearances, He, You, and I, are only His manifestations; and if one may look within, he would, no doubt, find "Him" there — He and He alone is there, the same One, in each heart.

Man does not know that he is a divine being, an infant god, a divine prince, whose futurity has it for him that some day he shall develop to be as boundless as his Father, "The Universal Self," in which he at present lives, moves, and has his being. If he only knew what he is in his essence — the Boundless — if he only knew that he is a born divine prince, and that no one in the whole of the Universe can deprive him of his princely birthright, and if he could only realize the High Descent to which he belongs, he would, indeed, feel dignified, cheat no more, kill no more, subject himself to low life no more, fear no more, worry no more, and would do what the gods do — forgive, forbear, love and let live. In the womb of the future we are already photographed as gods. Divinity is ours and we are "IT" in the inmost core of our heart. Let us aspire, O dear reader! towards moral health, the upliftment of the fallen, and the life that Gods live, "eat to live, live to learn, learn to teach and help others, and do so with no reward in view."

VI

(a) There is no such thing as "Beginning per se," nor is "End per se" anything but moonshine, even though beginnings and ends are incalculable — a strange paradox! Out of the "Invisible Boundless" things arise in their serial times, exist for a time, short or long, and die adding more events to their endless past. Strictly speaking, the forms vanish but their impressions survive, and what at last becomes of them are the entities themselves, modified as they stand at any time. One of such multimyriads of cases is "Man," who is his own Karman, the sum-total or rather the modification and the stamp of his bygone endless eternities.

His past has merged into his present, and his present is the cradle of his future that lies in its latency therein. Hence he is his past, present, and future. If he knew that he is all this — the Almighty in miniature (would to Immortal Gods that he did!) — he would never let his ill-present harass him but rather stand on his divine dignity as calm and grave as the "Mount Everest," challenge misery by not minding it, and be but a mere observer of it and happy amidst the raging fires of his own self-created "Suttee." That is the right kind of stuff to countervail miseries: or else the more one is crying the more he is made to cry. Encouragement and a lion-like heart are needed to face the music of one's self-made Karman.

(b) Loads of Karman are on man's back and loads besides in front of him, and in the middle stands his self, the inmost Center and the present "Now." If he could realise that his present "Now" — the modified self at any time under Karmic effects — is eternal and that it would always hold something for him that he would have to suffer from known or unknown to the world, he would learn to love it and live it happily. Then his present, however ill, would become quite natural to him and hence no longer a misery but something as usual.

(c) Casting off his shoulders the loads of his past he can have no future. Cognising them as his enemies he would only increase the resistance, add more fuel to the fire as it were, and thus intensify the acuteness and strength of their bites. But giving them a most hearty welcome he rises above them; and by making the best of them and learning what they can teach he creates his beautiful future out of the ashes of the ill-past. Consequently, if misfortunes have called upon one's door he should welcome them with his hands stretched to embrace them to his heart. Such hospitality would prove itself as a cool and still water mountain tarn to absorb the heat of misfortune's hot steels, and emasculate them of

their venom.

(d) The annals of his past eternities are replete with his mistakes and their consequential bitter fruits that he had to taste of to their very uttermost. The present one is another like them. Neither did they last forever, nor will this one forever be. Why worry?

(e) The pages of his soul are but an endless series of modifications. The present ordeal, however baneful, shall modify and improve it still more: and he shall rise higher at its end and be come wiser and happier than ever he was before. Why worry? His misery is a friend in disguise.

(f) Time-periods last only for so long and pass away. The present one is no exception and it shall pass away too. Why worry? He must look ahead and be happy! His bad times are only temporary and his own creation, but he is the "Spirit Eternal" and the parent. He must be fatherly and soar above them.

(g) The world is full of variety in its countless phases. Among men some are rich and some are poor, some in raptures of delight and some in tears of sadness, and even amongst the latter some are worse off than others. If one's lot be among the humble and the lowly he must look towards those who are even humbler and lowlier than himself, and be contented and happy in being even as he is. And, furthermore, if he be sympathetic, kind, and serviceable to those who are below him, and if his sympathy, kindness, and service be impersonal and not selfish in any way, there will ooze out of his mental soil a spring of joy that will not only be everlasting but probably the foundation of his future becoming a "World Savior" also.

VII

The causes of unhappiness and the means of happiness can by no

means be said to have been given in their entirety in this paper, but the space intended to be devoted, is coming to its close. In conclusion a sovereign remedy to tone the toneless minds and their vahans — bodies — is explained and given in the following two paragraphs before the last and concluding one is given. Here it is: Holy thoughts — the thoughts of "Universal Brotherhood," Compassion for all that lives, Forgiveness, Self-forgetfulness in service, and Impersonal Love — are constitutionally, each, composed of the divine substances of the highest ranges of vibration and harmony. Each one is a spiritual matter, a matter which is superheated, as it were, and made conscious. It is most extensively vibrant but superlatively harmonious, hence extremely forceful and heating, yet extremely tranquil and cooling. From its very nature, or swabhava, it unnerves and dispatches the lower and venomous matters but unifies and gives life to the higher and life-giving matters. In connexion with a human mind which is, like a seam of coal with its occluded gases, congested with the Lower Kama-manas-stuff, the divine substance of a higher or holy thought simply burns, or rather boils, to nothing the dross that has choked the pores of the mental gauze, as it were. No doubt such lofty thoughts are too holy to enter such impure and sickly environments as those of an impure mind, but when man's "will" demands their presence therein they cannot disobey such command. The demanding will itself paves the way for them and they enter. To bring real happiness into his life man must fill his mind with lofty, compassionate, impersonally loving and helpful thoughts, cherish them, nurse them, dwell upon them, and make his mind their home. Such divine thoughts when loved and lived, purge the mind of all its paralytic contents, cleanse it, ventilate it, purify it, feed it with the nectar of Gods, thus strengthen it, rejuvenate it, and make it really happy. Simultaneously to its working in the mind the spiritual matter filters, radiates and percolates throughout the

lower parts of his seven-fold constitution. Wherever it goes it works on the same lines as in the case of mind but in varying degrees of effectiveness, and overhauls and resuscitates health and happiness everywhere in him. A sound mind in a sound body is like a happy bird in a clean cage. O dear Reader! it sings divine songs and exhibits heaven on earth; and do not wonder if it may penetrate through the veil and find itself treading the holy ground where his wondrous Master lives. Indeed, where holy thoughts reside, there the hand of divinity is felt at work, and the earthly pains and glooms are extirpated and washed away from the mental field to return no more. Let man take care of his thoughts, his words and acts will take care of themselves. Such a man whose thoughts, words, and acts, are godly, is a god among men. He is surrounded by a heavenly and spiritual atmosphere; and like a sweet-scented rose, which is not only gay and glorious for itself but inspires and gives pleasure to all who come near it also, he is holy and happy and blesses all with mirth and spiritual food who come to him.

Divine thoughts, cherished and nursed, are a rare panacea to cure mental and physical ailments, but that is not all which is most beautiful about them. They are the rarest foundation-stones of man's grand future — Godhood. The fact of the matter is that the more one dwells upon a divine thought the more points concerning it descend from the "Divine Self within him into his mind. The achievement of each new subtle point means to him another step traversed towards the inmost core of his holy "thought-self." The deeper one digs into its veins the greater and the subtler volumes of the Akasic substance surround him; and there is not much to wonder at if he should altogether disappear from the physical eyes of the world. The more enwrapped he is in the divine substance, the more he is dead to the outer world and the more quickened to the reality of the core of this holy thought

and that of his own. Now he feels that there is a strange similarity between the two realities and that each one is pointing, or rather vibrating, towards the same mystic "North" — the heart of the Universe — like two magnetic needles pointing towards the same magnetic north. This strange similarity of vibration develops a strange love — words fail to express it — between the two selves. This love brings them still more heart to heart with one another, and it enables him to see and enables the holy thought to disclose that both are one in essence but the former has so far been playing the part of a student, a searcher for truth, and the latter that of a teacher, a Gurudeva. Then, indeed, the thinking self distinctly sees that the divine thought, the subject of his meditation, is not a mere thought, a passing whim of every-day life, but that it is a part of his own self, that it is a divine ray, of which the top end is rooted in the "Divine Heart" and the lower end into his own, that it is a school in itself to raise the thinker out of the "Mayavi-net," and that it is a path that leads to the heart of his "Wondrous Being," then to his another "Wondrous Being," then to his another "Wondrous Being," and then to his "Parent Wondrous Being" whose feet the Galaxy is in kiss with.

Sojourning inwards yet outwards and backwards, yet forward towards the heart of the Universe and along the long hollow core, as it were — the invisible Central thread which is insulated and girded with the Akasic thread — the sojourner, the meditating self, lands at last at the heart of its Inmost Self, the Universal Self, and becomes it. Then the thinker is a man no more but a fully developed Self-conscious God, a Buddha, a Jivan-Mukta, who is completely relieved from the chain of births and deaths, whom pains and so-called pleasures, heats and colds, forms and colors, and the rest of the earthly pairs of opposites have no hold upon, but whose heart is melted with compassion and whose last mission is to serve, to teach, and thus to uplift the rest of mankind to his own spiritual level. This is what a holy thought can and will

do for you, O brother reader! See the sublime fruit it can bear — the freedom from the chain of "Chaurasi," the "Bliss," the "Ananda," that can only a Lord of meditation enjoy. Can any earthly sample of happiness beat it? None. One can never lay enough of emphasis upon the fact that the Spiritually rich thoughts — the thoughts of Universal Brotherhood, Compassion, forgiveness, self-forgetfulness in Service, and impersonal love — are each a golden ray of the "Father Sun," through the hollow, or rather sunyatic, archway of which one can, if he may dare, climb from the Foster Mother our earth, to the "Father Sun."

All holy thoughts are different paths yet all are one because they open out into each other. Taking any one of them one takes all of them automatically, as it were. To save oneself from being swept away from the direct path and pulled into the mayavi ones of this tempting world purity of mind is the key. To develop purity in the mind serene, kind, and holy thoughts are indispensable. Even the latter are less effective — nay, even they may mislead — without a trained guidance. Hence the Gurudeva is indispensable. But even the Gurudeva is helpless without the real devotion and heartfelt love of the disciple for him. O, yes, brother sojourner! the seeker of bliss and beatitude! if you would, indeed, be happy, learn to love and to forgive! because love is at the root of everything. My Gurudeva tells me that "Love is the Cement of the Universe."

PEACE BE WITH YOU.

The Theosophical Forum

RECOLLECTIONS OF A THEOSOPHICAL SPEAKER: IV — *Leoline Leonard Wright*

This modern world gives most of us very little time for genuine social reunion. The telephone, automobile, and airplane, though they eat up distance like magic, have also destroyed, paradoxically, much of human closeness. I venture to say that in being within such easy reach of one another we are actually farther apart than we have ever been before.

But in the times which these recollections are trying to recreate for a moment it was not so. In 1895 the auto was a rarity. Moving pictures, today's ubiquitous diversion, were unknown. If people got together they had to make a real effort to do so and had fewer excuses to do something else. Nevertheless they came together for mutual enjoyment far oftener than is customary nowadays. This was well illustrated in the T. S. The *Conversazione*, an idea which Claude Wright brought from the London Headquarters and helped to establish in all the Branches, became a quite "fashionable" feature of Branch activity.

One of the pleasantest pictures which comes before me of my Theosophical life in Boston was the evening dinner-table at 24 Mt. Vernon Street. The house was a spacious one and sheltered a large and genial Theosophical family. It also held the meeting-hall of the Boston Branch with its library, and public sales and reading room. The dining-room was in the basement and at six o'clock everyone in the house gathered around a long table which could seat about twenty people at a pinch. And there were never any vacant places. Besides the twelve or fourteen members living in the house there were always paying guests who dropped in unannounced and were made cordially welcome. And here I must

say a word for Louis Wade and his wife who were in charge of Headquarters. He was a man of odd and brilliant intellect and a highly original character. It was Louis Wade who made possible the series of little volumes called *Studies in Occultism*, the reprints of six of H. P. Blavatsky's most delightful articles, still in brisk demand by our students. It was Louis Wade who initiated and conducted the "Theosophical News" which later published letters and news items from Katherine Tingley's first great "Crusade Around the World." His wife, Minnie Hazleton Wade, was one of the most devoted Theosophists I have ever known, a tiny and charming bit of motherly femininity. They are both gone now, but the record of their fine and devoted work lives in my mind as clearly as if engraved in light.

One thing impressed me then and seems not in the least trivial but a matter of real significance. And that is that nowhere, in my wanderings over the world and my life in many cities both American and foreign, have I enjoyed better conversation than at that dinner table. Theosophists are always intensely individual. Most of us have come into Theosophy through human trial and intense inner experience. We have been seekers through the religious and intellectual highways and byways of the world. As a consequence we are as a body of people decidedly worth while.

One particular evening stands out in my memory. Louis Wade with his witty cordiality was at the head of the table, and Minnie Wade, with their little son David beside her, was at the foot. Present were Mr. J. Emory Clapp and his wife (their first baby was the dearest of our household), Mr. and Mrs. Will W. Harmon with their little boy, and Miss Marie Pyffer, Lodge Librarian, a delightful Swiss girl now known as Mrs. Schoolcraft. Also there were fascinating Madame Olivia Petersen and her husband Dr. H. C. Petersen, a Norwegian physician who had no use for Theosophy but was always the genial dinner partner on my left,

Gertrude Lyford, and myself. All of these were permanent guests. Robert Crosbie had dropped in that evening with Cyrus Field Willard, the well-known journalist and devoted F. T. S. and Mrs. Herron, who brought a touch of illustrious Boston society to our board. I even remember the dinner, which was frugal but delicious — Mrs. Wade had a genius for that difficult combination.

The talk on this particular evening had veered to H. P. B. and her wonderful powers. Knowing Dr. Petersen's materialistic bias I made some jesting remark to him about his incredulity towards all this testimony. To my surprise he told me that he had met H. P. B. — had been present with his wife at meetings of the Blavatsky Lodge in London at which H. P. B. presided. He went on to say most emphatically that he had felt the greatest admiration for her.

"Why, Miss Leonard," he said, "some of the greatest savants in London were at those meetings and she could more than hold her own with them all, I can assure you."

This struck me as being a truly genuine and impressive tribute, coming spontaneously as it did from a somewhat egotistical and entirely skeptical materialist.

There was a small band of lecturers which covered the field around Boston. This comprised the Branches at Cambridge, Maiden, and Somerville. There were George Ayers, President of Maiden, Robert Crosbie, at that time President of the Boston Branch, Marguerite Guild, Cambridge President, Arthur Conger, then a student at Harvard, and others. One of the picturesque and popular activities at that time was the open-air lectures on Boston Common started by Thomas Seele, assisted by J. Emory Clapp and other speakers. One is tempted to wonder why a few activities of this popular kind could not be used to advantage today. A real

difficulty at present is that there are literally millions of people who have never heard of Theosophy, especially of the younger generation. And of those who have, a large number associate it with the weird movements that have unfortunately been tacked on to some divisions of the Theosophical Society.

I have always thought it would be quite a good idea to send out in the summertime a small motor-bus or even one or two private autos carrying a few tried Theosophical speakers. This expedition could visit country towns, giving open-air talks on Reincarnation, Karman, Death, Perfectibility of Man, and other popular aspects of Theosophy. Literature could be sold too. Even if we never gained a member, the *real message* of Theosophy could be carried to places which we are now unable to reach. Many people would then at least know what Theosophy stands for. I believe this plan would bear active consideration.

I must not close without referring to Arthur Conger's Sunday morning classes on the Bible at Mt. Vernon Street, which were well attended and greatly enjoyed. Owing to the fact that I was soon added to the list of public speakers and had to lecture every Sunday night I was unable to my great regret to attend these classes.

I am often amazed when I look back and recall the excellent work that was done by this little band of speakers — most of them young, all of them untrained and inexperienced. Yet each had immense enthusiasm and devotion, and the membership grew steadily. That I was very inexperienced myself was laughably proved to me when I met Miss Helen Morton years later in Lomaland. She had just arrived and we were all surrounding her at a reception given in her honor. She had been a member of the Somerville Branch and very kindly reminded me that the last time she had met me I had delivered a public lecture in

Somerville. My curiosity was aroused and I said, "But of course you wouldn't remember the subject I spoke on?"

"Indeed I do," she replied. "It was "The Three Vestures," and a very good lecture it was." How we all gasped with incredulity and laughed at the absurdity of such a subject. *The Three Vestures?! (See *The Voice of the Silence*, Fragment III.)* A subject that might daunt the self-confidence of a seasoned chela! Yet in spite of the fact that we younger speakers were often too highbrow and startling, there can be no doubt that we somehow got away with it.

The Editors" warning lying heavy on my mind, I must reserve an account of our celebrated Brotherhood Suppers for a later instalment.

The Theosophical Forum

H. P. BLAVATSKY SPEAKS FOR HERSELF

The Esoteric Philosophy on Dreams (1)

Q What are the "principles" which are active during dreams?

A The "principles" active during ordinary dreams — which ought to be distinguished from real dreams, and called idle visions — are *Kama*, the seat of the personal Ego and of desire awakened into chaotic activity by the slumbering reminiscences of the lower Manas.

Q What is the "lower Manas"?

A. It is usually called the animal soul (the *Nephesh* of the Hebrew Kabalists). It is the ray which emanates from the Higher Manas or permanent Ego, and is that "principle" which forms the human mind — in animals instinct, for animals also dream (2). The combined action of *Kama* and the "animal soul," however, are purely mechanical. It is instinct, not reason, which is active in them. During the sleep of the body they receive and send out mechanically electric shocks to and from various nerve-centres. The brain is hardly impressed by them, and memory stores them, of course, without order or sequence. On waking these impressions gradually fade out, as does every fleeting shadow that has no basic or substantial reality underlying it. The retentive faculty of the brain, however, may register and preserve them if they are only impressed strongly enough. But, as a rule, our memory registers only the fugitive and distorted impressions which the brain receives at the moment of awakening. This aspect of "dreams" however, has been sufficiently observed and is described correctly enough in modern physiological and biological works, as such human dreams do not differ much from

those of the animals. That which is entirely *terra incognita* for Science is the real dreams and experiences of the higher Ego, which are also called dreams, but ought not to be so termed, or else the term for the other sleeping "visions" changed.

Q How do these differ?

A The nature and functions of real dreams cannot be understood unless we admit the existence of an immortal Ego in mortal man, independent of the physical body, for the subject becomes quite unintelligible unless we believe — that which is a fact — that during sleep there remains only an animated form of clay, whose powers of independent thinking are utterly paralyzed.

But if we admit the existence of a higher or permanent *Ego* in us — which Ego must not be confused with what we call the "Higher Self," we can comprehend that what we often regard as dreams, generally accepted as idle fancies, are, in truth, stray pages torn out from the life and experiences of the *inner* man, and the dim recollection of which at the moment of awakening becomes more or less distorted by our physical memory. The latter catches mechanically a few impressions of the thoughts, facts witnessed, and deeds performed by the *inner* man during its hours of complete freedom. For our *Ego* lives its own separate life within its prison of clay whenever it becomes free from the trammels of matter, *i e*, during the sleep of the physical man. This Ego it is which is the actor, the real man, the true human self. But the physical man cannot feel or be conscious during dreams; for the personality, the outer man, with its brain and thinking apparatus, are paralyzed more or less completely.

We might well compare the real Ego to a prisoner, and the physical personality to the gaoler of his prison. If the gaoler falls asleep, the prisoner escapes, or, at least, passes outside the walls of his prison. The gaoler is half asleep, and looks nodding all the

time out of a window, through which he can catch only occasional glimpses of his prisoner, as he would a kind of shadow moving in front of it. But what can he perceive, and what can he know of the real actions, and especially the thoughts, of his charge?

Q. Do not the thoughts of the one impress themselves upon the other?

A. Not during sleep, at all events; for the real Ego does not think as his evanescent and temporary personality does. During the waking hours the thoughts and Voice of the Higher Ego do or do not reach his gaoler — the physical man, for they are the *Voice of his Conscience*, but during his sleep they are absolutely the "Voice in the desert." In the thoughts of the *real* man, or the immortal "Individuality," the pictures and visions of the Past and Future are as the Present; nor are his thoughts like ours, subjective pictures in our cerebration, but living acts and deeds, present actualities. They are realities, even as they were when speech expressed in sounds did not exist; when thoughts were things, and men did not need to express them in speeches; for they instantly realised themselves in action by the power of *Kriya-Sakti*, that mysterious power which transforms instantaneously ideas into visible forms, and these were as objective to the "man" of the early *third* Race as objects of sight are now to us.

Q. How, then, does Esoteric Philosophy account for the transmission of even a few fragments of those thoughts of the Ego to our physical memory which it sometimes retains?

A. All such are reflected on the brain of the sleeper, like outside shadows on the canvas walls of a tent, which the occupier sees as he wakes. Then the man thinks that he has dreamed all that, and feels as though *he* had lived through something, while in reality it is the *thought-actions* of the true Ego which he has dimly perceived. As he becomes fully awake, his recollections become

with every minute more distorted, and mingle with the images projected from the physical brain, under the action of the stimulus which causes the sleeper to awaken. These recollections, by the power of association, set in motion various trains of ideas.

Q. It is difficult to see how the Ego can be acting during the night things which have taken place long ago. Was it not stated that dreams are not subjective?

A. How can they be subjective when the dream state is itself for us, and on our plane, at any rate, a subjective one? To the dreamer (the Ego), on his own plane, the things on that plane are as objective to him as our acts are to us.

Q. What are the senses which act in dreams?

A. The senses of the sleeper receive occasional shocks, and are awakened into mechanical action; what he hears and sees are, as has been said, a distorted reflection of the thoughts of the Ego. The latter is highly spiritual, and is linked very closely with the higher principles, Buddhi and Atma. These higher principles are entirely inactive on our plane, and the higher Ego (*Manas*) itself is more or less dormant during the waking of the physical man. This is especially the case with persons of very materialistic mind. So dormant are the Spiritual faculties, because the Ego is so trammelled by matter, that *It* can hardly give all its attention to the man's actions, even should the latter commit sins for which that Ego — when reunited with its *lower* *Manas* — will have to suffer conjointly in the future. It is, as I said, the impressions projected into the physical man by this Ego which constitute what we call "conscience"; and in proportion as the Personality, the lower Soul (or *Manas*), unites itself to its higher consciousness, or EGO, does the action of the latter upon the life of mortal man become more marked.

Q. This Ego, then, is the "Higher Ego"?

A. Yes; it is the higher Manas illuminated by Buddhi; the principle of self-consciousness, the "I-am-I," in short. It is the Karana-Sarira, the immortal man, which passes from one incarnation to another.

Q. Is the "register" or "tablet of memory" for the true dream-state different from that of waking life?

A. Since dreams are in reality the actions of the Ego during physical sleep, they are, of course, recorded on their own plane and produce their appropriate effects on this one. But it must be always remembered that dreams in general, and as we know them, are simply our waking and hazy recollections of these facts.

It often happens, indeed, that we have no recollection of having dreamt at all, but later in the day the remembrance of the dream will suddenly flash upon us. Of this there are many causes. It is analogous to what sometimes happens to every one of us. Often a sensation, a smell, even a casual noise, or a sound, brings instantaneously to our mind long-forgotten events, scenes and persons. Something of what was seen, done, or thought by the "night-performer," the Ego, impressed itself at that time on the physical brain, but was not brought into the conscious, waking memory, owing to some physical condition or obstacle. This impression is registered on the brain in its appropriate cell or nerve centre, but owing to some accidental circumstance it "hangs fire," so to say, till something gives it the needed impulse. Then the brain slips it off immediately into the conscious memory of the waking man; for as soon as the conditions required are supplied, that particular centre starts forthwith into activity, and does the work which it had to do, but was hindered at the time from completing.

Q. How does this process take place?

A. There is a sort of conscious telegraphic communication going on incessantly, day and night, between the physical brain and the inner man. The brain is such a complex thing, both physically and metaphysically, that it is like a tree whose bark you can remove layer by layer, each layer being different from all the others, and each having its own special work, function, and properties.

Q. What distinguishes the "dreaming" memory and imagination from those of waking consciousness?

A. During sleep the physical memory and imagination are of course passive, because the dreamer is asleep: his brain is asleep, his memory is asleep, all his functions are dormant and at rest. It is only when they are stimulated, as I told you, that they are aroused. Thus the consciousness of the sleeper is not active, but passive. The inner man, however, the real Ego, acts independently during the sleep of the body; but it is doubtful if any of us — unless thoroughly acquainted with the physiology of occultism — could understand the nature of its action.

Q. What relation have the Astral Light and Akasa to memory?

A. The former is the "tablet of the memory" of the animal man, the latter of the spiritual Ego. The "dreams" of the Ego, as much as the acts of the physical man, are all recorded, since both are actions based on causes and producing results. Our "dreams," being simply the waking state and actions of the true Self, must be, of course, recorded somewhere. Read "Karmic Visions" in *Lucifer*, and note the description of the real Ego, sitting as a spectator of the life of the hero, and perhaps something will strike you.

Q. What, in reality, is the Astral Light?

A. As the Esoteric Philosophy teaches us, the *Astral Light* is simply the dregs of *Akasa* or the Universal Ideation in its metaphysical

sense. Though invisible, it is yet, so to speak, the phosphorescent radiation of the latter, and is the medium between it and man's thought-faculties. It is these which pollute the Astral Light, and make it what it is — the storehouse of all human and especially psychic iniquities. In its primordial genesis, the astral light as a radiation is quite pure, though the lower it descends approaching our terrestrial sphere, the more it differentiates, and becomes as a result impure in its very constitution. But man helps considerably to this pollution, and gives it back its essence far worse than when he received it.

Q. Can you explain to us how it is related to man, and its action in dream-life?

A. Differentiation in the physical world is infinite. Universal ideation — or *Mahat*, if you like it — sends its homogeneous radiation into the heterogeneous world, and this reaches the human or *personal* minds through the Astral Light.

Q. But do not our minds receive their illuminations direct from the Higher Manas through the Lower? And is not the former the pure emanation of divine Ideation — the "Manasa-Putras," which incarnated in men?

A. They are. Individual *Manasa-Putras* or the Kumaras are the direct radiations of the divine Ideation — "individual" in the sense of later differentiation, owing to numberless incarnations. In sum they are the collective aggregation of that Ideation, become on our plane, or from our point of view, *Mahat*, as the Dhyān Chohans are in their aggregate the WORD or "Logos" in the formation of the World. Were the Personalities (Lower Manas or the *physical* minds) to be inspired and illumined solely by their higher *alter Egos* there would be little sin in this world. But they are not; and getting entangled in the meshes of the Astral Light, they separate themselves more and more from their parent Egos.

Read and study what Eliphas Levi says of the Astral Light, which he calls Satan and the Great Serpent. The Astral Light has been taken too literally to mean some sort of a second blue sky. This imaginary space, however, on which are impressed the countless images of all that ever was, is, and will be, is but a too sad reality. It becomes in, and for, man — if at all psychic — and who is not? — a tempting Demon, his "evil angel," and the in-spirer of all our worst deeds. It acts on the will of even the sleeping man, through visions impressed upon his slumbering brain (which visions must not be confused with the "dreams"), and these germs bear their fruit when he awakes.

Q. What is the part played by Will in dreams?

A. The will of the outer man, our volition, is of course dormant and inactive during dreams; but a certain bent can be given to the slumbering will during its inactivity, and certain after-results developed by the mutual inter-action — produced almost mechanically — through union between two or more "principles" into one, so that they will act in perfect harmony, without any friction or a single false note, when awake. But this is one of the dodges of "black magic," and when used for good purposes belongs to the training of an Occultist. One must be far advanced on the "path" to have a will which can act consciously during his physical sleep, or act on the will of another person during the sleep of the latter, *e. g.*, to control his dreams, and thus control his actions when awake.

Q. We are taught that a man can unite all his "principles" into one — what does this mean?

A. When an adept succeeds in doing this he is a *Jivanmukta*: he is no more of this earth virtually, and becomes a Nirvanee, who can go into *Samadhi* at will. Adepts are generally classed by the number of "principles" they have under their perfect control, for

that which we call will has its seat in the higher Ego, and the latter, when it is rid of its sin-laden personality, is divine and pure.

Q. What part does Karma play in dreams? In India they say that every man receives the reward or punishment of all his acts, both in the waking and the dream state.

A. If they say so, it is because they have preserved in all their purity and remembered the traditions of their forefathers. They know that the Self is the *real* Ego, and that it lives and acts, though on a different plane. The external life is a "dream" to this Ego, while the inner life, or the life on what we call the dream plane, is the real life for it. And so the Hindus (the profane, of course) say that Karma is generous, and rewards the real man in dreams as well as it does the false personality in physical life.

Q. What is the difference, "karmically," between the two?

A. The physical animal man is as little responsible as a dog or a mouse. For the bodily form all is over with the death of the body. But the real SELF, that which emanated its own shadow, or the lower thinking personality, that enacted and pulled the wires during the life of the physical automaton, will have to suffer conjointly with its *factotum and alter ego* in its next incarnation.

Q. But the two, the higher and the lower, Manas are one, are they not?

A. They are, and yet they are not — and that is the great mystery. The Higher Manas or Ego is essentially divine, and therefore pure; no stain can pollute it, as no punishment can reach it, *per se*, the more so since it is innocent of, and takes no part in, the deliberate transactions of its Lower Ego. Yet by the very fact that, though dual and during life the Higher is distinct from the Lower, "the Father and Son" *are one*, and because that in reuniting with the

parent Ego, the Lower Soul fastens upon and impresses upon it all its bad as well as good actions — both have to suffer, the Higher Ego, though innocent and without blemish, has to bear the punishment of the misdeeds committed by the *lower* Self together with it in their future incarnation. The whole doctrine of atonement is built upon this old esoteric tenet; for the Higher Ego is the antitype of that which is on this earth the type, namely, the personality. It is, for those who understand it, the old Vedic story of Visvakarman over again, practically demonstrated.

Visvakarman, the all-seeing Father-God, who is beyond the comprehension of mortals, ends, as son of Bhuvana, the holy Spirit, by *sacrificing himself to himself*, to save the worlds. The mystic name of the "Higher Ego" is, in the Indian philosophy, *Kshetrajna*, or "embodied Spirit," that which knows or informs *kshetra*, "the body." Etymologize the name, and you will find in it the term *aja*, "first-born," and also the "lamb." All this is very suggestive, and volumes might be written upon the pregenetic and postgenetic development of type and antitype — of *Christ-Kshetrajna*, the "God-Man," the First-born, symbolized as the "lamb." The *Secret Doctrine* shows that the Manasa-Putras or incarnating Egos have taken upon themselves, voluntarily and knowingly, the burden of all the future sins of their future personalities. Thence it is easy to see that it is neither Mr. A. nor Mr. B., nor any of the personalities that periodically clothe the Self-Sacrificing Ego, which are the real Sufferers, but verily the innocent *Christos* within us. Hence the mystic Hindus say that the Eternal Self, or the Ego (the one in three and three in one), is the "Charioteer" or driver; the personalities are the temporary and evanescent passengers; while the horses are the animal passions of man. It is, then, true to say that when we remain deaf to the Voice of our Conscience, we crucify the *Christos* within us. But let us return to dreams.

Q. Are so-called prophetic dreams a sign that the dreamer has strong clairvoyant faculties?

A. It may be said, in the case of persons who have truly prophetic dreams, that it is because their physical brains and memory are in closer relation and sympathy with their "Higher Ego" than in the generality of men. The Ego-Self has more facilities for impressing upon the physical shell and memory that which is of importance to such persons than it has in the case of other less gifted persons. Remember that the only God man comes in contact with is his own God, called Spirit, Soul and Mind, or Consciousness, and these three are one.

But there are weeds that must be destroyed in order that a plant may grow. We must die, said St. Paul, that we may live again. It is through destruction that we may improve, and the three powers, the preserving, the creating and the destroying, are only so many aspects of the divine spark within man.

(To be continued)

FOOTNOTES:

1. As this material on the subject of Dreams is not easily available to students of H P B 's writings and as the subject is not dealt with anywhere else in Theosophical literature in such fulness, the Editors feel that it is appropriate to include it in this series. It is reprinted from *The Transactions of the Blavatsky Lodge*, originally issued as a booklet in 1889, and students will be interested to note that these Transactions were compiled from shorthand notes taken of H P B 's own words and are therefore those of Esoteric Philosophy as given by H P B herself. This series of Questions and Answers on Dreams will appear in this and the following issue of THE FORUM, and will then be available as a pamphlet from Theosophical University Press, Point Loma, California Price 10c.

— Eds. ([return to text](#))

2. The word dream means really "to slumber" — the latter function being called in Russian "*dreamat* " — Ed [H P B] ([return to text](#))

The Theosophical Forum

ETERNAL LIFE — *G. Cardinal Le Gros*

The fields and hillsides throb with life
That is my own! The winds, the sky
Become myself, — no more apart;
And everywhere an answering cry
Rings out! The harmonies of Spring
Are woven in the azure air;
And life is song! and life is joy!
And faith to hold, and faith to share.

Do you ever think of the far reaches of space and let your heart go out to them, give back the aspiring part of you to the boundless silence of beauty and mystery out of which you came? It is true: the Reality that we seek is there, — the golden, beginningless past, the richness of all eternities, all that was and is.

It speaks to us not only from the skies. In the flower and the leaf it answers us. In all nature shines the sacred wisdom, beats the wondrous heart of eternal life. Its promise and its peace are woven in the dawn, and its soft tranquillity falls upon the gardens of the setting sun. All nature lives in a constant rejoicing, in at-one-ment with the harmony of Spirit.

Shall we not choose the pathway leading homeward, the way of quietude and love, where breathes a balm to heal all wounds and banish all distress? It is there: the path for everyone to follow, the path of service, of self-forgetfulness, of the finding of the Self, the path to a greater and greater awareness of the eternal life, of that Compassion which is the light of suns, the poetry of cloud and wave, the beating of each human heart.

FALL AND REDEMPTION — *H. T. Edge*

This is a universal doctrine; none can be more solidly based; the wise and experienced of all ages have agreed to regard the drama of life as a descent from the divine to the earthly and a reascent from the earthly to the divine. And this applies not only to man but to every living creature in the universe and to the universe itself. Great thinkers, seeking for the roots of all things, have found nothing more fundamental than the Great Breath, eternal motion, the principle of alternation; they have seen the cosmic process as the self-realization of an ineffable spirit, the self-manifestation of a supreme Being. The One becomes the Many; the Many return to the One. Outbreathing and inbreathing follow each other in endless succession; and this is a universal law, applicable alike to the smallest as to the greatest.

Man is a spark of the Divine Fire, which has descended on earth and is working amid the manifold toils of material life, like leaven in the mass, and thereby accomplishing a work of regeneration. The primal unity which was Man has been shattered into fragments and has to be reassembled. Christian mystics have thus interpreted their religion, but in many forms of Christianity the true meaning has been lost. The Fall of man has been represented as a great calamity, inspired by the spirit of evil. Man is supposed to become corrupt in nature through the sin of his first ancestor, and to require the intercession of a Savior for his salvation. But the real doctrine is that the Divine Spark, which is the real man, descended to earth for the purpose of fulfilling his destiny and accomplishing his evolution. The Serpent that tempted him in the garden was no evil spirit, but a divine teacher, who instructed him, awakened in him the sleeping fire of intellect, so that he became endowed with free will and the power of conscious

choice. It resulted in his being banished from the state of passive bliss (figured as the Garden of Eden) in which he had been living. In brief, we have in the early chapters of *Genesis* an account (much mutilated it is true) of the early history of mankind, and of the passage of man from an undeveloped and unawakened being to a self-conscious and responsible one. The Devil is said in theology to be a Fallen Angel, a rebel against God, and cast out of heaven, so that he becomes henceforth the head of a host of fallen angels who war continually against God and man. But these Fallen Angels were spirits of light, who descended from heaven in order to bring light and life to earth. The same allegory is found in the story of Prometheus, who so compassionated man that he stole fire from heaven and brought it down to earth. The very name Lucifer, which theology uses as the name of an evil spirit, means "light-bringer."

Man is no helpless sinner, born in hereditary corruption. He is a divine pilgrim, on his way to regain that which he has lost. His Savior is the divinity within him, his own real Self. It was by his own choice that he strayed; it is by his own will that he must be saved. How otherwise could he be a responsible being? Jesus Christ was a great and inspired Teacher, who had solved the mysteries of life for himself, and came to show the way to other men. There have been many such. He was not *the* Christ, but *a* Christ; and any man may become a Christ. For the Christ is the divinity in man, which is said to have sacrificed itself by being born in the flesh in order that it might raise the flesh. This teaching will be found in Paul's epistles.

Consider now how this principle of descent and reascent applies to the doctrine of evolution. We are told about the ascent of man from the lowliest beginnings through many stages; but there could be no ascent unless there had previously been a descent. Spirit descends into matter, and matter is thereby evolved into

more and more perfect forms for the expression of spirit. A seed may produce a tree; but the essence of the future tree must have entered into the seed. The tree produces the seed, and the seed reproduces the tree. If man is from the lower creation, what was it that entered into matter to give it the power to evolve into such wonderful forms? Can we evade the question by saying that it was a power inherent in matter itself? That would be making matter the equivalent of Almighty God.

It is sad to see how wrong religious teachings have affected the whole thought of the world. The great novelists give us masterly pictures of human lives, portrayed with consummate skill and insight; yet the whole drama is brought to nought by death, which is represented as a final end; and one wonders what is the use of life at all if it is all to end in nothing. But as death is the end of life, so life is the end of death. Birth and death are recurrent events in a long life-drama, and each man's appearance on earth is but one scene in a drama. It is only a knowledge of this truth that can make sense out of the drama of human life. Death and rebirth, descent and reascent, fall and redemption, are the world's eternal ways.

The Theosophical Forum

SEEING ROUND THE CORNER — *Grace Frances Knoche*

"If I could only see round the corner; if I could know for certain there is a road; get a glimpse of the future so that I could know how to act now." Alas! how often this cry of despair escapes from the soul in its human blindness. But perhaps if we were vouchsafed a vision, could we stand it? How many of us would not be blinded or turned to stone in our desire for illegal gain! Let us draw the veil from the past and study conditions: Suppose we had known to a detail all the horror and pain that was in store; suppose we had visioned that corner after corner would reveal yet more doors of loneliness and pain; until finally, after perhaps years of agonizing stupidity the soul would have so rebelled at its ignorance and desire, that it would break free, and once again climb slowly the steps of inner self-respect to beauty and freedom. Suppose all this had been revealed in cruel detail? Could we have stood the sight? Would we have had the courage to meet karmic consequences with even the small measure of innate decency that we did? Perhaps; but very likely we would have so cringed, so quailed, before the unflinching fire of purgation, that instead of remembering that it was our own self which ended our misery, we might have cursed others and thrown our lot in with downward currents, thus delaying for even a longer period the awakening fire of understanding and consequent freedom.

No; Nature is far kindlier in her methods than man. In the merciful withholding of her dark secrets, she blinds not, but gradually restores light to the stricken soul. As time turns the pages of destiny and we observe the lives of our brothers, we see victory born of defeat, and we marvel at her understanding. Had they known the pain; had they known the sorrow; had they foreseen the poverty to come, or the near destruction of their

life's work — perhaps ultimate success would not have come; possibly more pain, born of weakness and cowardice, would have resulted, until the soul had learned bravely to take the karma of its past.

"If only we had known," how gratefully we would have tendered love and care instead of injury and indifference; how we would have sacrificed pettiness for generosity; selfishness for understanding. Possibly. The fact remains, however, that we were willing, though doubtless in partial ignorance, to walk roughshod over others' rights and feelings, showing that we needed badly to suffer the lesson of remorse. We had yet to learn, through the pain of awakening *too late*, how warming are the springs of forethought for others, how beautiful the silent sympathy for a comrade in travail, how worthy the determination to serve rather than receive.

In the *heart* lie the issues of life; the brain can be educated, trained, and polished; but progress in spiritual things is made only when the heart understands. No argument is stronger than unsatisfied desire springing from an unilluminated heart; likewise no edifice of thought is superior to courageous sympathy born of the understanding heart. The ways of Nature are kindly: she does not argue with a man about his weakness; she leads him to meet the issue of his folly through trials of the heart: gently she guides him through the valleys of pain, sorrow, and restraint. Then the heart stirs: sympathy, compassion, generosity of soul take birth. Instead of the conflict of tragedy, the man's life becomes a benediction of peace and intelligent harmony. A new corner is rounded, a corner leading to light, strength, and peace.

In our present stage of evolution, when selfishness, ignorance, and avarice, are the marks of "civilization," it is a blessing that the future is hid from our view. Just imagine an unkindly man

knowing the pitfalls ahead for a brother: what a subject for the cruelty of watchfulness; for the horror of premeditated taunts by the scheming and unprincipled. Furthermore, what of the folly of our knowing the successes ahead for ourselves: would we not become mere laggards, or worse, arrogant fools?

We should not worry, therefore, about rounding corners; rather should we endeavor to hold tight through the difficult places to all that is decent, upright, and generous. We should remember that *there is always a road round the corner*, despite the blanket of fog and mist. Perhaps a friend will come and bring courage and peace through friendship; maybe a new thought will find entrance into the heart bringing light in its train; perhaps a timely shock will open our eyes to beauties that in our selfish hugging of our sorrow we had shrunk from glimpsing, afraid to release our pain.

The future can be divined, at least in broad outline; but it is our protection that we can discern of it but a vague glimmering of events to come. The man of strong and selfless action alone can stand the brilliance of complete knowledge. His future is a road of light: what was once the way of loneliness becomes the pathway of solitude, what was pain becomes sensitive appreciation through sympathy, what was despair becomes knowledge of truth made living through service. Earthly experience is revealed as a passing event in the historic unfolding of the soul.

TO INVESTIGATE THE POWERS INNATE IN MAN — A. Bonset

It looks so simple, this fifth Object of the T. S.: "To investigate the powers innate in man"; and yet, if we duly reflect upon the meaning of these words, a picture is woven before our mind's eye, so beautiful, so vast, that it moves our heart of hearts. Being Theosophists, and having the Theosophical books at our disposal, we can perhaps better understand the grand unity of the Universe, which we human beings are a part of, and with which our inmost nature connects us. It is just for this reason that everything is contained in us that the Cosmos contains, every force, every energy, every power. Hence all this is within our reach, but it does not mean that we are able to employ these powers and forces at present, for many of them are latent, and it depends solely upon our own evolution whether or not we shall discover these powers and allow them to affect us.

How can we better develop ourselves than by trying to understand our Higher Self more and more. Was not the injunction "Know thyself," which all Great Ones left to humanity, meant as a stimulus for men to develop the powers innate in them?

These simple words "Know Thyself," do not they strike us as if they were the key to solve a great mystery? And while striving for self-knowledge, we enter the Path that will lead us to all-embracing Love, to infinite compassion for all that is and lives.

We can make progress on that Path only if we drop our personality and become altogether impersonal. Develop the spiritual, divine forces and powers in us by becoming unselfish, self-forgetful, selfless; learn to forgive; love, love impersonally — this is constantly impressed upon us.

We all who stand at the beginning of the Path, have not we understood that these simple words: "Love impersonally and forgive," comprise the whole occult training? This training involves the incessant practice of the moral powers that we feel within us. All these powers are of a spiritual nature, they are Cosmic. They are present in anyone and will remain there forever.

Consider a child at school: he has to pass from one form to another in order that his sleeping intellect shall be developed, while it is essential that he should in the first place be taught the requisite knowledge, and secondly that, by means of his will, diligence and studiousness, he himself should assimilate this knowledge; and these very rules apply to the non-intellectual knowledge, the spiritual, Divine Wisdom, where adults are concerned. Just as children are taught simple subjects for the development of their intellects, similarly do we adults study the Theosophical teachings, teachings that have been preserved from time immemorial, truths that have always been known, although in times of spiritual decline it was only aspiring souls that were acquainted with them, men, who even in those dark ages, were searchers for Truth, and who received Wisdom in the ancient Mystery-Schools.

We, as fellows of the T. S., are able to receive this Wisdom and its doctrines: the Teachers place them at our disposal, but we ourselves must show the diligence, the studiousness and the wish to acquire this Divine Wisdom, these spiritual Truths.

If we reflect upon these teachings and are actually impersonal and loving in our thoughts and actions, we cannot help experiencing a certain feeling of bliss, a feeling of what I should like to call "extension of consciousness." And with extension of consciousness coincides an advance on the Path; veils fall off that

prevented us from having a clear view into all these realms which, it is true, are open to us, and within our reach, but which remain hidden to us until we have made such progress on the Path that we can draw these veils aside.

Is not it a curious fact that all these powers are innate in any one of us, and that yet so few people are aware of them? Is not there an enormously vast field of activity lying before us?

For is it not through the Theosophical teachings that we became conscious, got the first glimpses at any rate, which made us understand who and what man really is? Was it not the Theosophical teachings which, from the moment that they took hold of us, led us to realms of consciousness which we had never dreamed to enter? And did not we give up ourselves to serve our fellow-men, to serve the Great Law, which teaches us to live in a selfless way, for the benefit of mankind?

As soon as a man begins to discover what great powers he possesses, and opens his soul to this endless wisdom, he enters the path that leads to true development; and mysteries, formerly concealed, are revealed to him. The attempt to develop these powers, which have been given to us in embryo, should in fact be the basis of all growth.

We must strive, with all the energy, power, and will we possess, to penetrate into our inmost nature, to turn to the Spiritual, Divine Light, which is present in anyone, to the Light that is the source of all that makes life worth living, and which can render it noble and grand. It is in this way that we can become Seers, and are allowed to look into the very Heart of Things.

And that these forces, mentioned in the fifth Object of the T. S., have nothing mysterious about them, may be demonstrated by what one of the Masters said to a chela: "You have a great love for

the power of magic, but the greatest magic is the power of Love!"

Let us ever keep before us the last words of the Message H. P. B. sent to the American Convention in 1891, and which still hold good at the present moment:

"In your hands, brothers, is placed in trust the welfare of the coming century; and great as is the trust, so great is also the responsibility."

The Theosophical Forum

MODERN SCIENCE AND THE MESSAGE OF H. P. BLAVATSKY — *H. Groot*

VI

No conception is more widely acknowledged and more extensively applied in all fields of natural science than that of *periodicity*.

If we ask the mathematician about the essence of periodicity, he will draw a waving line thus:

"This line," he says, "depicts the nature of each periodic phenomenon. It is the graphical representation of the process under consideration; a certain magnitude regularly grows, reaches a maximum, decreases, passes through a minimum and starts growing again. In many, and actually in the majority of cases, the line representing periodicity looks more complicated than the above one, but however involved it may seem, it can invariably be reduced to this simple line."

More or less pronounced periodicities are met with everywhere. Biology knows them just as well as medical science. They form one of the basic tenets of that field of astronomy which studies the orbital movements of the celestial bodies. Meteorology has placed on its program the investigation of the long-time periodicities of climatic conditions. In its investigation of

vulcanism, seismology and the rhythmical movements of the earth's surface, geology also acknowledges the existence of periodic phenomena. The theoretical developments of modern physics and chemistry are inconceivable without the two conceptions: vibrations and waves — and what are they but periodicities?

The Theosophical reader is by no means surprised at this state of affairs — on the contrary; for he knows the doctrine of cycles, which tells him that *any* phenomena on the material as well as on the non-material plane, both in the manifested and the non-manifested universe, are subject to cyclic, i. e. periodical changes. He even goes a step farther and applies the conception of cycles or periodicity also to cases where science is unable to distinguish any periodicity at all: viz. to the phenomena of birth and death — irrespective of whether we are concerned with the birth and death of a human being, a universe or an atom. He does so because Theosophy shows him that life itself is one infinite, cyclical process. Birth and death are not the absolute beginning and end which they are thought to be by those who allow themselves to be dazzled by material illusions. No, birth and death are only transition-stages marking the beginning and end of a given period — the points where the curve in our figure (see above) intersects the time axis, nothing more. And just as these points — (of which there are a countless number) — are not essentially different from all other points on the curve, we see birth and death exclusively as the ever recurring transitions which characterize the periodicity of the process we call Life, but which may also be termed growth of consciousness.

Moreover, Theosophy couples the doctrine of evolution with that of cycles. Infinite, unvarying, periodic repetition would mean a vacuous terror to every thoughtful man. A doctrine that would lead to such conceptions arouses fierce intellectual opposition.

It is undoubtedly considerations of this kind which made scientists such as de Sitter and Eddington avowed adversaries of the idea of a universe that renews itself cyclically. In *New Pathways in Science* Eddington formulates his objections to such a conception as follows:

I find no difficulty in accepting the consequences of the present scientific theory as regards the future — the heat death of the universe. It may be billions of years hence, but slowly and inexorably the sands are running out. I feel no instinctive shrinking from this conclusion. From a moral standpoint the conception of a cyclic universe, continually running down and continually rejuvenating itself, seems to me wholly retrograde. Must Sisyphus for ever roll his stone up the hill only for it to roll down again every time it approaches the top? That was a description of Hell.

We quite agree with this view. Indeed, the teaching of a universe that rejuvenates itself cyclically is to be rejected as amoral unless each rejuvenation means at the same time a step forward. If Sisyphus has rolled his stone to the top of the mountain, the stone falls down again — but. . . along a different side of the mountain. He has to roll his stone upwards again, but up the next mountain, which may be steeper, but which will certainly be higher than the previous one; and the view from this top will therefore be vaster, grander, and more imposing — well worth the new journey.

It is just *this* thought which Theosophy brings us by pointing to the doctrine of evolution in connexion with that of cycles. Universes, men, and atoms proceed along the cyclic road of evolution, urged by the activity of Karman; in doing so they unfold their swabhava and realize their inner being more and more, i. e. consciousness, divine consciousness, kosmic consciousness.

Only thus can the teaching of unlimited periodicity be accepted, and only thus does it make life significant. All other conceptions lead to absolute pessimism — such as may be found in the works of Nietzsche, who defended the view that the worlds eternally repeated themselves in the same way.

What other view is left to us if we do not accept cyclic evolution and reject the endless repetition of the same cycle as meaningless and amoral?

In one of his former works, *The Nature of the Physical World*, Eddington replies to this question as follows:

I am no Phoenix worshipper. This is a topic on which science is silent, and all that one can say is prejudice. But since prejudice in favour of a never-ending cycle of rebirth of matter and worlds is often vocal, I may perhaps give voice to the opposite prejudice. I would feel more content that the universe should accomplish some great scheme of evolution and, having achieved whatever may be achieved, lapse back into chaotic changelessness, than that its purpose should be banalised by continual repetition. I am an Evolutionist, not a Multiplicationist. It seems rather stupid to keep doing the same thing over and over again.

According to this view birth and death, or beginning and end, are looked upon as *absolute*. In general, such is still the attitude of natural science. In physics it is found as the abstract formulation of the "second law" of thermodynamics, also called the law of increasing entropy. We shall not attempt to explain this law in physical terms. Popularly speaking, it is the so-called "heat-death" of the universe. It may be advisable to elucidate this latter expression. The term "heat-death" was first used by the Swedish physicist Svante Arrhenius. He pointed out that with each

conversion taking place in the universe part of the available energy is converted into heat, which as such is lost for further conversions. In the long run, it is reasoned, all the available energy will have been converted into heat, evenly distributed over the universe. Then, the natural process will stop. The unceasing activity which now characterizes the universe will have come to a standstill. Changes will no longer take place. The universe has died its "heat-death," from which resurrection is impossible.

As said above, science bases this gloomy prospect on the second law of thermodynamics. According to this law the heat-death of the universe is unavoidable. "It may be billions of years hence, but slowly and inexorably the sands are running out" — were Eddington's words quoted above.

Various investigators have repeatedly tried to oppose this deduction and to contest the second law of thermodynamics. However, it proved to be an unequal fight, for this law is considered the most fundamental of all natural laws. The attempts to disprove this law of entropy and the search for a *perpetuum mobile*, are considered as so many intellectual dissipations, and everyone knows that to find a *perpetuum mobile* is regarded as such an utter impossibility that the Academie Franchise have for many years refused to entertain any relevant inventions!

However, a remarkable point in this connexion is that thermodynamics, even in its classical form, frankly admits that neither the *perpetuum mobile*, nor a process that would disobey the law of entropy, is an *impossibility*. It is only — improbable, very improbable. In fact it is so improbable that nobody dwells on the possibility of it, so rich in zeros is the number that indicates the degree of improbability!

Moreover, the calculation of the degree of improbability is largely dependent on various factors which may change — and which *de facto are changing* — if different views on the fundamental conceptions in the natural world-philosophy will gain ground. We are living in a transition-period as far as physics goes. And we already saw ideas, which up to recently seemed unassailable, undergo many modifications. One example from many: When H. P. B. taught that matter is but crystallized light — this statement may be found, for instance, in *The Secret Doctrine* — scornful laughter was heard in the ranks of the physicists of that time. What? Matter is said to be light? Indeed, more absolute contrasts than those between unwieldy, heavy, tangible, and inert matter, and non-material, unseizable, and even invisible light were inconceivable! Now what considerable changes has this scientific view undergone.

In a book that was by no means intended to be popular, (1) the well-known French physicist Jean Perrin, who is responsible for several outstanding discoveries relating to the structure of the atom, writes, *inter alia*: "Des lors qu'on sait que des photons, c'est-à-dire de la Lumiere, peuvent se materialiser . . ." (From the moment that we know that photons, i. e. light, may *materialize* . . .). A few pages farther on there is a section bearing the heading: "Transformation de matiere en energie," (Conversion of matter into energy). There he discusses the experiments made by Joliot and Thibaut, both of whom succeeded in demonstrating irrefutably the dematerialization of matter into light of short wave-length.

Are not these results the most convincing corroboration of the truths of the Ancient Wisdom, decried as foolish, and on account of which H. P. B. was persecuted and derided?

This single example may suffice to illustrate the enormous change

which has taken place in the world of physical thinking, which is largely due to Einstein's relativity-theory. The limits of an article such as ours, however, do not permit of a detailed discussion of this matter. Moreover, we should have to give highly technical explanations. But we must direct attention to one fact in connexion with the subject under consideration:

thermodynamics, too, has undergone a thorough change. We would quote the following passage from one of the modern handbooks, viz. *Relativity, Thermodynamics and Cosmology* (1934), by Richard C. Tolman, a recognised authority in this very difficult field:

At the very least it would seem wisest if we no longer dogmatically assert that the principles of thermodynamics necessarily require a universe which was created at a finite time in the past and which is fated for stagnation and death in the future.

Here, the inevitability of the heat-death is emphatically rejected by Tolman's investigations. What might be possible according to classical ideas, but what had at any rate to be considered highly improbable, is placed in a quite different light by the results of modern scientific investigations.

In the foregoing we do by no means want to assert that modern thermodynamics has settled the matter, for this is certainly not the case. But we did want to explain how modern physics begins to approach to the ancient teachings also in this respect — i.e. the possibility of the cyclical rejuvenation of a universe. It is realized more and more clearly that absolute starting- and end-points are non-existent. Each end is a new beginning; each beginning issues from a — provisional-end.

Very interesting in this connexion is an article by Dr. Jac. van Essen, published in the Dutch daily *De Telegraaf*. It was entitled:

"The new science of Old Age." Dr. van Essen does not go so far as to show birth and death as relative beginnings and ends in a physiological process of unlimited cyclical continuity. He only discusses the first curve, lying above the time-axis, of the line drawn in our figure. The starting-point he calls birth, then follows the rise, adolescence; next a very flat maximum, adulthood; thereupon a decrease, old age, and finally the end, death. If we regard the curves above the time-axis as belonging to the material plane, and if those lying below this axis may be regarded as belonging to non-material planes, it will be clear that Dr. van Essen does not see the possibility of the line discussed by him continuing *below* the time-axis to rise *above* it again in course of time. His view is in perfect agreement with the present medical and biological ideas which are still largely tied to materialistic notions. Nevertheless, this article is interesting because on some points it is suggestive of a distinct struggle with a new conception regarding the problem of old age. According to Dr. van Essen a man grows old because his life-processes gradually retard. This retardation is not considered an effect, but the *cause* of the diseases and infirmities of old age. After he has come to this conclusion Dr. van Essen clearly realizes that this cannot be an isolated phenomenon, but that he has touched upon a kosmic reality. He draws the following final conclusion, which we quote verbatim below:

Finally, we might apply the above principle much more extensively, for also kosmic phenomena are no doubt subject to the law controlling birth, adolescence, adulthood, and death. By condensation, nebulae give birth to solar systems, which shoot through space at a tremendous speed, emitting an excess of energy. After a certain lapse of time the motion of the system slackens, and the amount of emitted energy decreases. The unit cools

down into planets and moons, which finally decompose owing to the continued decline of its strength.

It is no use saying that we have been talking metaphorical language. It is the living reality of creation, reflected in the most different natural phenomena. Whereas formerly poets and thinkers could only make suppositions, we base ourselves on tenets that are quite reliable from a scientific point of view. Thus the new science of seneology (the science of old age) comprises much more than could be expected at first. In a limited sense, old age is only a problem of life, but in a wider sense it is a world-problem comprising the secret of the Being of all things, and modern science will disclose it with the utmost exertion.

Indeed, so it is! Old age is actually a world-problem. It can be solved only if science stops concentrating on the curve of the phenomena occurring on the visible, material plane that lies above the time-axis. This secret cannot be understood unless also the curve on the non-material plane is considered, unless the universal periodicity of *all* life processes is recognised and accepted.

Modern science is on the point of discovering the universal scope of periodicities, which it may notice everywhere on the manifested plane. As soon as it begins to direct its attention to events taking place on the non-material plane, the full significance of periodicities will be revealed to it.

The time is coming, and is perhaps nearer than science may presume, when the message of H. P. Blavatsky, that of the Ancient Wisdom, will find a response in the modern scientific world. In regard to the universally occurring periodicities this message says the following:

Worlds, men, and atoms accomplish infinite cycles; they reside in turn on the manifested and on the non-manifested plane. Evolution alternating with involution. But these continuous changes involve a steady progress to ever higher perfection. No beginning, no end; ever wider, ever grander, ever more stupendous perspectives — thus the Ancient Wisdom shows us the future of atoms, men, solar systems, and universes.

The Theosophical Forum

H. P. BLAVATSKY SPEAKS FOR HERSELF

The Esoteric Philosophy on Dreams

Q. Do Adepts dream?

A. No advanced Adept dreams. An adept is one who has obtained mastery over his four lower principles, including his body, and does not, therefore, let flesh have its own way. He simply paralyzes his lower Self during Sleep, and becomes perfectly free. A dream, as we understand it, is an illusion. Shall an adept, then, dream when he has rid himself of every other illusion? In his sleep he simply lives on another and more real plane.

Q. Are there people who have never dreamed?

A. There is no such man in the world so far as I am aware. All dream more or less; only with most, dreams vanish suddenly upon waking. This depends on the more or less receptive condition of the brain ganglia. Unspiritual men, and those who do not exercise their imaginative faculties, or those whom manual labour has exhausted, so that the ganglia do not act even mechanically during rest, dream rarely, if ever, with any coherence.

Q. What is the difference between the dreams of men and those of beasts?

A. The dream state is common not only to all men, but also to all animals, of course, from the highest mammalia to the smallest birds, and even insects. Every being endowed with a physical brain, or organs approximating thereto, must dream. Every animal, large or small, has, more or less, physical senses; and though these senses are dulled during sleep, memory will still, so

to say, act mechanically, reproducing past sensations. That dogs and horses and cattle dream we all know, and so also do canaries, but such dreams are, I think, merely physiological. Like the last embers of a dying fire, with its spasmodic flare and occasional flames, so acts the brain in falling asleep. Dreams are not, as Dryden says, "interludes which fancy makes," for such can only refer to physiological dreams provoked by indigestion, or some idea or event which has impressed itself upon the active brain during waking hours.

Q. What, then, is the process of going to sleep?

A. This is partially explained by Physiology. It is said by Occultism to be the periodical and regulated exhaustion of the nervous centres, and especially of the sensory ganglia of the brain, which refuse to act any longer on this plane, and, if they would not become unfit for work, are compelled to recuperate their strength on another plane or *Upadhi*. First comes the *Svapna*, or dreaming state, and this leads to that of *Shushupti*. Now it must be remembered that our senses are all dual, and act according to the plane of consciousness on which the thinking entity energises. Physical sleep affords the greatest facility for its action on the various planes; at the same time it is a necessity, in order that the senses may recuperate and obtain a new lease of life for the *Jagrata*, or waking state, from the *Svapna* and *Shushupti*.

According to *Raj Yoga*, *Turya* is the highest state. As a man exhausted by one state of the life fluid seeks another; as, for example, when exhausted by the hot air he refreshes himself with cool water; so sleep is the shady nook in the sunlit valley of life. Sleep is a sign that waking life has become too strong for the physical organism, and that the force of the life current must be broken by changing the waking for the sleeping state. Ask a good clairvoyant to describe the aura of a person just refreshed by sleep, and that of another just before going to sleep. The former

will be seen bathed in rhythmical vibrations of life currents — golden, blue, and rosy; these are the electrical waves of Life. The latter is, as it were, in a mist of intense golden-orange hue, composed of atoms whirling with an almost incredible spasmodic rapidity, showing that the person begins to be too strongly saturated with Life; the life essence is too strong for his physical organs, and he must seek relief in the shadowy side of that essence, which side is the dream element, or physical sleep, one of the states of consciousness.

Q. But what is a dream?

A. That depends on the meaning of the term. You may "dream," or, as we say, sleep visions, awake or asleep. If the Astral Light is collected in a cup or metal vessel by will-power, and the eyes fixed on some point in it with a strong will to see, a waking vision or "dream" is the result, if the person is at all sensitive. The reflections in the Astral Light are seen better with closed eyes, and, in sleep, still more distinctly. From a lucid state, vision becomes trans-lucid; from normal organic consciousness it rises to a transcendental state of consciousness.

Q. To what causes are dreams chiefly due? A. There are many kinds of dreams, as we all know. Leaving the "digestion dream" aside, there are brain dreams and memory dreams, mechanical and conscious visions. Dreams of warning and premonition require the active co-operation of the inner Ego. They are also often due to the conscious or unconscious co-operation of the brains of two living persons, or of their two Egos.

Q. What is it that dreams, then?

A. Generally the physical brain of the personal Ego, the seat of memory, radiating and throwing off sparks like the dying embers of a fire. The memory of the Sleeper is like an Æolian seven-

stringed harp; and his state of mind may be compared to the wind that sweeps over the chords. The corresponding string of the harp will respond to that one of the seven states of mental activity in which the sleeper was before falling asleep. If it is a gentle breeze the harp will be affected but little; if a hurricane, the vibrations will be proportionately powerful. If the personal Ego is in touch with its higher principles and the veils of the higher planes are drawn aside, all is well; if on the contrary it is of a materialistic animal nature, there will be probably no dreams; or if the memory by chance catch the breath of a "wind" from a higher plane, seeing that it will be impressed through the sensory ganglia of the cerebellum, and not by the direct agency of the spiritual Ego, it will receive pictures and sounds so distorted and inharmonious that even a Devachanic vision would appear a nightmare or grotesque caricature. Therefore there is no simple answer to the question "What is it that dreams," for it depends entirely on each individual what principle will be the chief motor in dreams, and whether they will be remembered or forgotten.

Q. Is the apparent objectivity in a dream really objective or subjective?

A. If it is admitted to be apparent, then of course it is subjective. The question should rather be, to whom or what are the pictures or representations in dreams either objective or subjective? To the physical man, the *dreamer*, all he sees with his eyes shut, and in or through his mind, is of course subjective. But to the *Seer* within the physical dreamer, that Seer himself being subjective to our material senses, all he sees is as objective as he is himself to himself and to others like himself. Materialists will probably laugh, and say that we make of a man a whole family of entities, but this is not so. Occultism teaches that physical man is one, but the thinking man septenary, thinking, acting, feeling, and living on seven different states of being or planes of consciousness, and

that for all these states and planes the permanent Ego (not the false personality) has a distinct set of senses.

Q. Can these different senses be distinguished?

A. Not unless you are an Adept or highly-trained Chela, thoroughly acquainted with these different states. Sciences, such as biology, physiology, and even psychology (of the Maudsley, Bain, and Herbert Spencer schools), do not touch on this subject. Science teaches us about the phenomena of volition, sensation, intellect, and instinct, and says that these are all manifested through the nervous centres, the most important of which is our brain. She will speak of the peculiar agent or substance through which these phenomena take place as the vascular and fibrous tissues, and explain their relation to one another, dividing the ganglionic centres into motor, sensory and sympathetic, but will never breathe one word of the mysterious agency of intellect itself, or of the mind and its functions.

Now, it frequently happens that we are conscious and know that we are dreaming; this is a very good proof that man is a multiple being on the thought plane; so that not only is the Ego, or thinking man, Proteus, a multiform, ever-changing entity, but he is also, so to speak, capable of separating himself on the mind or dream plane into two or more entities; and on the plane of illusion which follows us to the threshold of Nirvana, he is like Ain-Soph talking to Ain-Soph, holding a dialogue with himself and speaking through, about, and to himself. And this is the mystery of the inscrutable Deity in the *Zohar*, as in the Hindu philosophies; it is the same in the Kabbala, Puranas, Vedantic metaphysics, or even in the so-called Christian mystery of the Godhead and Trinity. Man is the microcosm of the macrocosm; the god on earth is built on the pattern of the god in nature. But the universal consciousness of the real Ego transcends a millionfold the self-

consciousness of the personal or false Ego.

Q. Is that which is termed "unconscious cerebration" during sleep a mechanical process of the physical brain, or is it a conscious operation of the Ego, the result of which only is impressed on the ordinary consciousness?

A. It is the latter; for is it possible to remember in our conscious state what took place while our brain worked unconsciously? This is apparently a contradiction in terms.

Q. How does it happen that persons who have never seen mountains in nature often see them distinctly in sleep, and are able to note their features?

A. Most probably because they have seen pictures of mountains; otherwise it is somebody or something in us which has previously seen them.

Q. What is the cause of that experience in dreams in which the dreamer seems to be ever striving after something, but never attaining it?

A. It is because the physical self and its memory are shut out of the possibility of knowing what the real Ego does. The dreamer only catches faint glimpses of the doings of the Ego, whose actions produce the so-called dream on the physical man, but is unable to follow it consecutively. A delirious patient, on recovery, bears the same relation to the nurse who watched and tended him in his illness as the physical man to his real Ego. The Ego acts as consciously within and without him as the nurse acts in tending and watching over the sick man. But neither the patient after leaving his sick bed, nor the dreamer on awaking, will be able to remember anything except in snatches and glimpses.

Q. How does sleep differ from death?

A. There is an analogy certainly, but a very great difference between the two. In sleep there is a connection, weak though it may be, between the lower and higher mind of man, and the latter is more or less reflected into the former, however much its rays may be distorted. But once the body is dead, the body of illusion, *Mayavi Rupa*, becomes *Kama Rupa*, or the animal soul, and is left to its own devices. Therefore, there is as much difference between the spook and man as there is between a gross material, animal but sober mortal, and a man incapably drunk and unable to distinguish the most prominent surroundings; between a person shut up in a perfectly dark room and one in a room lighted, however imperfectly, by some light or other.

The lower principles are like wild beasts, and the higher *Manas* is the rational man who tames or subdues them more or less successfully. But once the animal gets free from the master who held it in subjection; no sooner has it ceased to hear his voice and see him than it starts off again to the jungle and its ancient den. It takes, however, some time for an animal to return to its original and natural state, but these lower principles or "spook" return instantly, and no sooner has the higher Triad entered the Devachanic state than the lower Duad rebecomes that which it was from the beginning, a principle endued with purely animal instinct, made happier still by the great change.

Q. What is the condition of the Linga Sarira, or plastic body, during dreams?

A. The condition of the Plastic form is to sleep with its body, unless projected by some powerful desire generated in the higher *Manas*. In dreams it plays no active part, but on the contrary is entirely passive, being the involuntarily half-sleepy witness of the experiences through which the higher principles are passing.

Q. Under what circumstances is this wraith seen?

A. Sometimes, in cases of illness or very strong passion on the part of the person seen or the person who sees; the possibility is mutual. A sick person especially just before death, is very likely to see in dream, or vision, those whom he loves and is continually thinking of, and so also is a person awake, but intensely thinking of a person who is asleep at the time.

Q. Can a Magician summon such a dreaming entity and have intercourse with it?

A. In black Magic it is no rare thing to evoke the "spirit" of a sleeping person; the sorcerer may then learn from the apparition any secret he chooses, and the sleeper be quite ignorant of what is occurring. Under such circumstances that which appears is the *Mayavi rupa*; but there is always a danger that the memory of the living man will preserve the recollections of the evocation and remember it as a vivid dream. If it is not, however, at a great distance, the Double or *Linga Sarira* may be evoked, but this can neither speak nor give information, and there is always the possibility of the sleeper being killed through this forced separation. Many sudden deaths in sleep have thus occurred, and the world been no wiser.

Q. Can there be any connection between a dreamer and an entity in "Kama Loka"?

A. The dreamer of an entity in *Kama Loka* would probably bring upon himself a nightmare, or would run the risk of becoming "possessed" by the "spook" so attracted, if he happened to be a medium, or one who had made himself so passive during his waking hours that even his higher Self is now unable to protect him. This is why the mediumistic state of passivity is so dangerous, and in time renders the Higher Self entirely helpless

to aid or even warn the sleeping or entranced person. Passivity paralyzes the connection between the lower and higher principles. It is very rare to find instances of mediums who, while remaining passive *at will*, for the purpose of communicating with some higher Intelligence, some *exterraneous* spirit (not disembodied), will yet preserve sufficiently their personal will so as not to break off all connection with the higher Self.

Q. Can a dreamer be "en rapport" with an entity in Devachan?

A. The only possible means of communicating with Devachanees is during sleep by a dream or vision, or in trance state. No Devachanee can descend into our plane; it is for us — or rather our *inner Self* — to ascend to his.

Q. What is the state of mind of a drunkard during sleep?

A. It is no real sleep, but a heavy stupor; no physical rest, but worse than sleeplessness, and kills the drunkard as quickly. During such stupor, as also during the waking drunken state, everything turns and whirls round in the brain, producing in the imagination and fancy horrid and grotesque shapes in continual motion and convolutions.

Q. What is the cause of nightmare, and how is it that the dreams of persons suffering from advanced consumption are often pleasant?

A. The cause of the former is simply physiological. A nightmare arises from oppression and difficulty in breathing; and difficulty in breathing will always create such a feeling of oppression and produce a sensation of impending calamity. In the second case, dreams become pleasant because the consumptive grows daily severed from his material body, and more clairvoyant in proportion. As death approaches, the body wastes away and ceases to be an impediment or barrier between the brain of the physical man and his Higher Self.

Q. Is it a good thing to cultivate dreaming?

A. It is by cultivating the power of what is called "dreaming" that clairvoyance is developed.

Q. Are there any means of interpreting dreams — for instance, the interpretations given in dream-books?

A. None but the clairvoyant faculty and the spiritual intuition of the "interpreter." Every dreaming Ego differs from every other, as our physical bodies do. If everything in the universe has seven keys to its symbolism on the physical plane, how many keys may it not have on higher planes?

Q. Is there any way in which dreams may be classified?

A. We may roughly divide also dreams into seven classes, and subdivide these in turn. Thus, we would divide them into: —

1. Prophetic dreams. These are impressed on our memory by the Higher Self, and are generally plain and clear: either a voice heard or the coming event foreseen.

2. Allegorical dreams, or hazy glimpses of realities caught by the brain and distorted by our fancy. These are generally only half true.

3. Dreams sent by adepts, good or bad, by mesmerisers, or by the thoughts of very powerful minds bent on making us do their will.

4. Retrospective; dreams of events belonging to past incarnations.

5. Warning dreams for others who are unable to be impressed themselves.

6. Confused dreams, the causes of which have been

discussed above.

7. Dreams which are mere fancies and chaotic pictures, owing to digestion, some mental trouble, or such-like external cause.

The Theosophical Forum

ATTRACTION AND REPULSION — *Lydia Ross*

If Science — with a capital S — should come out boldly with the pronouncement that "love does make the world go round," that *would* be "news." The Man-in-the-street would be faced with a new issue: Has Science gone sentimental or super-sensible? Such a departure from accepted concepts of Mother Nature's operation of our globe, would certainly be a change of front 4-plus. Modern Science has worked steadily for several decades to free its own tangible realm of verifiable facts from the intangible elements of the personal equation. The realm of physics has become the field of causes which, in turn, are also the standard of realities. The mind, emotions, insight, imaginations, and all such elements of unstable play have been catalogued among the *effects* of material forces, and, at most, have been granted a psycho-physiological rating.

However, there are rare ultra-modern scientists who, having followed matter to its "singular points" of ethereality, believe that the secret of life must be found within man himself, rather than in the laboratory. For instance, note Eddington's "discovery" that when we look into our own nature, we find that the physical universe fails to be "co-extensive with our experience of reality." Jeans, in turn, concludes that the controlling power of the universe has something "in common with our own individual minds."

Scientists, in dealing with the atom — — which is a grade of astral substance with condensed energy — have reached the borderland of refined material where it merges into the next or lower level of ethereal substance. This emergence is as simple, as natural, and as scientific as where H₂O emerges from its heavier state of water

to expand into steam, and then manifest its energy as ethereal gas. Always, it is the One Life which finds fitting expression for its varied phases on all planes from the divine to the physical. The interplay of spirit and matter — or force and substance — is a universal law in the career of sun and planets as it is in that of human beings. Man's mind and emotions and aspirations are not by-products of his brain and functioning organs, but are essential elements of his composition, and are of greater dynamic force than are the forces of his body.

The Ancients did not divorce man from Nature, in their majestic science of Life. They saw him as the microcosm of the macrocosm. Evidently, man evolves, or revolves, through recurring cycles of daily, yearly, and lifetime experience of both inner and outer kinds. Inwardly, he is poised at some angle between his invisible aspirations and his lower desires, impelled into motion by the counter attractions of his better and his baser self. Likewise the revolving globe he lives on is an entity not poised quite upright itself as it turns around in its cycles of experience. It, too, is held in space by invisible attraction and repulsion, the dual forces of "gravitation." The globe, being a magnet, is responsive to the spiritual forces of the sun and to the material forces of the solar system. The sun draws the earth onward with the power of life and light and progressive well-being, and brings it and the solar family into new regions of space by overcoming the backward pull. The spiritual attraction felt by the earth for the sun is, in essence, what pure human love is, writ large — an enduring impersonal romance of fidelity and charm, on the inner plane of the sidereal kingdom.

Human love manifests at all levels of man's composite nature. From intensely selfish phases at the lowest level, it ascends the scale in ever greater degree to the plane where the impersonal mental nature merges into the spiritual nature. Here, in its higher

ranges where it has free play, it is an irresistible force. It is not to be located in the research laboratory by analytical or synthetical methods. Nevertheless, the present chaotic state of a so-called civilized world without Brotherhood is convincing negative evidence of its vital existence.

Some one has said that the "heart has reasons which reason never knows." That explains some positive evidence of the coordinating and evolutionary force of love which appeared in *The Science News Letter* of May 13, 1939. We read that Dr. Harold M. Skeels, Psychologist of Iowa Board of Control of State Institutions, and Dr. Harold B. Dye, Supt. of the Institute for Feeble-Minded Children at Glenwood, Iowa, had a significant experience. Thirteen feeble-minded children from the orphanage were placed in the care of *feeble-minded young women* with the oversight of a house matron. As a result, some of these children made a gain of forty points in IQ, and all but one of them are *now rated normal in intelligence*. The doctors attribute the gain to a wealth of play materials, space and supervision for play, *varied experience*, and *much love and affection*. In the orphanage where they came from, twelve other children rated normal mostly, were found drifting back toward feeble-mindedness. This condition was ascribed to overcrowded cottages where there was enough medical and physical care, but the children were "mentally emaciated for want of adult affection and stimulation."

The *News* item did not state the gains of the backward young foster mothers who were given the care of something alive that appealed to the latent power in their hungry hearts and dormant minds. That, naturally, would enter into the reckoning of cause and effect. Altogether, the striking results have been regarded as a challenge to revise orphanage methods generally. Not the least significant part of the case is the doctors' recognition of the unique force of loving-kindness to turn the dim world of these

little ones into a childhood's natural day of warmth and light. A medical psychology with so humanistic a "vision" of the needs of the whole nature argues for a scientific rating of "super-sensible" in its IQ. Dr. G. de Purucker's slogan rings true in the realms of Nature and in that of human nature: "Love is the cement of the Universe."

DOES THE LAW OF CYCLES IMPLY PREDESTINATION? — H. T. Edge

Some people may have asked themselves this question, wondering how, if all manifestation runs according to calculable cycles, there can be any possibility of independent action or any power of originating events. But this comes largely from taking a too rigid and mechanical view of the law of cycles, as if the universe were a sort of clock with cogs and pinions. In the universe the cogs and pinions are living beings endowed with spontaneity in varying degrees according to their evolutionary status. That the course of events does run in cycles is matter of observation; it is also matter of observation that such cycles do not rigidly confine our actions. The cycles of day and year come round unfaillingly and may be predicted with confidence for an indefinite future. Are we constrained by them? Well, we have to sow our grain at the right season and put on our woolens in the winter — unless indeed we choose to do otherwise, which is not wise. Why do we so often boggle over difficulties in the teachings as to cosmic laws, when we can find the solution within the limits of common experience? As the small, so is the great. As to freewill, if it means liberty to do what we want, we shall find that it is necessary to take into account the wants of other beings, two-legged or otherwise. If we intend to be a law unto ourself, we may get away with it for awhile, but a day of reckoning will surely come.

The great seers have been able to discover what are the laws of cosmic evolution for the manvantara we are in. These laws are inherent in the nature of the great Being who is manifesting Itself, and they unfold themselves in an inevitable course, according to a calculable plan of cycles. We, being essential parts of that great

Being — of that Universe — play the several roles allotted to us, thus fulfilling our own sublime destiny and purpose, which is far greater than anything we may presume to call by the name of freewill — or freewont.

"OUR GALAXY, A SUPER-BRAIN" — C. Q. W.

Among the many fanciful stories published under the general classification of "scientific fiction" one is occasionally found to contain an amazing thought from the ancient wisdom. Such is a very short story printed in the current number (June, 1939) of *Science Fiction*.

The plot is trite — the invention of a receiver which picks up thought currents, with disastrous results to the inventor. But the finale of the story is noteworthy.

"A colossal brain, somewhere in space, and I'm listening to it It's power and intelligence — vast beyond belief. A super-brain, talking by thought to other super brains somewhere — ."

"Cosmic rays? Then cosmic rays are really the thought-waves of the super-brain? But they can't be — it's been proved that cosmic rays emanate from the stars of our galaxy."

"They do! But the stars are only atoms in larger space, and in that larger space the star-atoms could combine to form living matter, thinking matter, couldn't they?"

"Our galaxy, a mass of star-atoms gathered together into living, thinking matter — our galaxy is the super-brain!"

With the above, compare the following, quoted by H P Blavatsky (*The Secret Doctrine*, II, 541) from an ancient Commentary. "*The sun is the heart of the Solar World (System) and its brain is hidden behind the (visible) Sun.*"

Everywhere — in science, in the pulpit, in the theater, in fiction — the Ancient Wisdom is once more coming into its own Soon the world will be compelled to recognise this priceless heritage, the

corner-stone of religion, science, and philosophy, so long rejected.

The Theosophical Forum

THE LONG VIEW OF EVOLUTION — *Ira B. Crane*

Inability to take the long view has resulted in many a business failure. Anyone who has lived through a real-estate boom in a new town has seen business concerns come to birth like mushrooms, and like mushrooms, from unsoundness interiorly, wither into doubtfulness, and suddenly disappear. These failures have usually profited more in a few months than did the enduring firms in the same length of time, because the latter knew when they were mortgaging their own future, and chose to forego quick profit rather than to lose the respect and trust of a client.

In the school of life the soul stands to gain or to lose by our reaction to our experiences; were it only the personality, we should never have to learn to take the long view. This is why Theosophists are, to some critics, surprisingly inactive in using will power to meet that most popular of all demands today: "How shall I get rid of my ailments, mental and physical? Where shall I find a cure?" If the cry were, "Tell me the cause of my disease in a story that will satisfy my mind, my intellect, and my heart, so that I may gladly lay down my personal burdens, and forget myself, and take up the cause of humanity and sin no more," what a different appeal, and what a different treatment would be called forth!

This question was put to me by a friend, who had rejoiced with many in their relief, by faith cures, from suffering, but whose enthusiasm was now cooling because she had found that a certain smugness since the cure seemed to make further inquiry into the wisdom of the ages not only impossible and unnecessary, but an offense against their new discovery.

My reply to her question was prepared in my mind, for I had a very close relative who had become more separate and egotistical since her cure. I said: "What I deplore is the lack of interest they take in the long view ahead of them. How much unnecessary karma they could save themselves by thinking about evolution, instead of thinking about heaven. Because of this they do not think it worth while to settle down to mental training or to strict moral discipline. It is exactly this settling down to the idea of lives of opportunity ahead and time for intellectual and spiritual development, attained through service, that brings peace, so that the mind can be stilled. The soul then expands, revealing a background of culture and poise from stored-up experience. How interesting to Theosophists is the distinction between culture and civilization that is made by the Reverend H. E. Fosdick of New York. He shows that culture is what we are; civilization is what we use — and are not getting anywhere with.

I went on to unburden my mind: "The habit of taking the long view brings a state of self-forgetfulness, and this is the best cure for mental and physical ills. It leaves no place for the popular urgency to get results — not, of course, that illness should be neglected. But it is a fact that to take up the service of humanity as one's life work, feeling sure that one's own evolution will look after itself, is a preventive. Educators in all lines seek to discover the prevention, while, of course, with the knowledge they have gained they try to cure or alleviate suffering. Many diseases are hangovers from a former life and are fortunately working their way out. By those who do not understand this, disease is often forced back, postponed, and this brings about an emotional change in the patient that is mistaken for a change of heart. A little knowledge is not enough to fit one to teach. A true Teacher shows a man how to become human. Teach a man to save himself by knowing his sevenfold constitution and the reaction of nature

upon him, and he will prefer to treat his ills philosophically and kindly, and be happy in doing it. His vision of the long road before him will help him to forget his lower nature until it has to back off the stage and disappear."

"Virtue is then the norm, the sane state. It is a more subtle process than becoming converted or substituting virtues — for what could be more misleading than the spiritual pride of consciously having virtues? It is just this that prevents the "becoming as little children." Here only can culture of the soul begin. The student now begins to think of the soul-life, rather than the one life of the personality. It was Irving Babbitt, the Harvard humanist, who warned against the "will to power" being used by those who do not understand the process of change that takes place by living the life of decorum, or the middle way. How different, he said, was the "will to affection" that must be born in a man before he can be of service to humanity. This "will to affection" is the child of much discipline, as Theosophists face it, and is not by any means a prize for converts one and all." My friend sighed, "In contrast with the present-day anxiety to get rid of things, with the relatively little inspiration following the supposed clearance, one's mind turns to its early inspirations such as the plea made by Jeremy Taylor for the "passive graces" of patience, meekness, and charity; and to Milton's attitude towards his own blindness, and the gifts of the soul that it bestowed upon him: ". . . if the choice were necessary, I would, Sir, prefer my blindness to yours." These churchmen understood how soul-culture was attained."

"Yes," I agreed, "Since we began this discussion I see two reasons why a true Teacher is more than ever needed after people have become aroused from their spiritual sleep. A Teacher would never cure a man suddenly and advise him to go into meditation. He would show him how to go about to weaken his passions, so that his aggressively trained nature would not beset him and

work against him; thus causing an emotional turmoil equal to leading a man into a jungle and leaving him there — a state that makes the finding of the true Path in this life a precarious one, and often leaves the heart more crystallized."

"Another case," I continued, "is the man who has through certain religious striving gained unity with his divine soul. What does it profit him if the conundrum of his human soul is unfathomed? This latter is the soul that he is evolving. A Teacher, in this case, would probably not encourage the mystic in him, but would awaken his rational and philosophical nature, so that balance and understanding of his sevenfold constitution would result. The desire for tasting the ripe fruit immediately, and the consequent suffering, would diminish to its rightful place in his evolutionary journey."

"This does seem an unusually difficult age to work one's own way through," my friend replied. "It is an age when the three aspects of human consciousness are awakened. We demand a Teacher who can lift the veil and show the long view. The student sees then that even the Masters are still humbly striving better to know themselves, rather than to get more out of the universe. His new vision would then allow him to take Jesus seriously when he said that man could hope to do greater things than he himself had done. It is possible with evolution. The seeing eye and the hearing ear now have something to see and to hear, on the guided upward journey of the pilgrim."

"I know," she continued, "that some people come to birth with this atmosphere of true culture that nothing but evolution makes possible. They make great progress with such a background; others, who have done too much substituting within themselves of one thing for another of more personal value, have the habits of impatience and doubt so instilled that they lull themselves in

blind faith and a smile. Surely nothing but the soul-qualities will count as energies when certain types of reincarnating egos are being chosen for the leading races of the future."

The Theosophical Forum

THE HIERARCHICAL SYSTEM OF THE T. S. — *G. de Purucker*

What is meant by the phrase: the hierarchical system of the Theosophical Society?

Most people seem to think it means this: that the system of government in the T. S. is a great big boss at the top, delegating authority to smaller bosses but yet big ones who are the Presidents of the National Sections; and these, passing down the hierarchical system of authority, delegating their bossism to still smaller bosses, who are the Presidents of the Lodges, in other words that the hierarchical system of the T. S. is but a delegated system of bosses; and that is absolutely false and wrong — mischievous.

What we mean when we say the hierarchical system of government in the T. S. is simply the following: As in all else, we endeavor to copy our Brothers of the stars, of nature, in our case the gods who govern and inspire nature. Their system of government, if you will examine it, is not a system of bosses or autocrats or dictators in nature, for you won't see that anywhere. *But* a single body-corporate, a universe, a solar system; our own T. S., infilled with one life, having at its head a head; but every individual unit or limb of the body-corporate as free and independent in its own sphere as the top head in his, and maybe more so. Because under the hierarchical system of government of the spirit, the higher you go along the ladder upwards, the more the chief or head becomes the servant. It is the gods who serve the most, who are the servers of all below; so that as I, as the present Leader, have often said, quoting a Christian saying, *Ego sum servus servorum Dei*: I am the servant of the servants of the Divine.

The higher your soul is raised in understanding, the higher your hierarchical rung, the more universal you become, the more comprehensive — you take in more. The lower you are in the evolutionary development, the less you understand the universality of things, and the more you want to gather in to yourself: constriction. The I comes uppermost. There is no autocrat, there is no despot, there is no worshiper of force, so fanatic as precisely he whose ideas are the least universal, the least spiritual; for spirituality means universality. The biggest boss in nature is precisely he who is not big enough to take others into his life. Do you catch it? Bossism means the imbodiment of selfishness: "I" and "my way."

The government of the T. S. is this: Every National Section is autonomous under the provisions of the Constitution of the T. S. This means it runs its own affairs as it will, well or badly. The Leader never interferes with the internal affairs of a National Section. Should he be asked for help, for advice, for counsel, he gives it instantly; but always with the reminder: Remember, Companions, you will never learn what responsibility is, you will never learn how to stand on your own feet, and do your own job like men, until you are willing to do it. I have refused a thousand times, I should think, to give advice which would have had the effect of making people look upon the Leader as a kind of Delphic Oracle, to whom they could come expecting him to bear the burden of all their own internal difficulties, solve all their problems, and do their thinking. I said: No! This guaranteeing under the Constitution of the individual freedom of the various units of the T. S. is my side of the problem and my duty and my happiness.

Another side of the picture is that throwing these dear people back upon themselves, they become men. They begin to think, begin to work. They thus feel their own responsibilities. And do

you know, that is some of the finest training you can give to a good man, to put responsibility on his shoulders. Tell him to go do it. Then he does something, then he becomes an achiever instead of a dreamer or a leaner.

Similarly, within a National Section every Lodge is autonomous under the provisos of the Constitution of the T. S., and the By-laws of the Section. In other words, every Lodge in the T. S., in subordination to the Constitution and its national by-laws, can do exactly as it pleases, run its own affairs without interference from anyone. If the members of a Lodge make a hash of it, so much the worse. Then they are in hot water! But they learn from it.

Now, where is your system of bossism in all this? It is just the opposite. This system is based upon the inherent elements so dear to the human heart; the inherent, the fundamental, elements of human psychology and spirituality. Our fundamental law is a freedom of conscience, freedom of speech, and freedom of action, and courtesy towards others, and brotherly love. The Leader's job is not only to keep the peace, but to see that these laws of freedom are held inviolate. These are glorious and beautiful ideas and ideals, the tradition of the heart of mankind. Freedom is fearless, slavery is always an abject hatred; and there is no slavery like that of selfishness, inability to see that the other man has just as many inherent rights in freedom and in duty as you have, no more, no less. He is a human being, your brother. He has the same right to think and feel in liberty of conscience; and as long as he conducts himself as a man and a gentleman should, in the T. S., there is no power that will gainsay him.

This hierarchical plan is based on nature. Look at the Solar System. The sun infills his kingdom with light and with life, and all within that kingdom are held subordinate to these common principles. But every planet follows its own path, spins on its own

axis, produces its own inhabitants, has its own individuality, breeds its own productions: one common life, one common ideal, all in indissoluble unity, yet freedom under the law or constitution. That is the T. S. Authority is delegated from the Leader to the National Presidents, from them to the Lodge Presidents and officials, to see that these simple principles of our Constitution be carried out.

Any member of the T. S. of course has a full right of appeal to his Lodge President or to his National Secretary or President, or even direct to the Leader, if he think he does not get adequate justice; but actually, while this right exists, it is more or less academic. In the ordinary course, so dearly are these principles cherished, that the right of appeal is exercised, if ever, with extremest rarity; for all our members realize that the most straightforward and honorable way, if an injustice should ever occur, is to lodge an appeal with the immediate official superior, who thereupon transmits the appeal, if he himself cannot determine it, a step farther along, etc.

Hierarchical? Yes, because we live in an indissoluble unity of ideas, and ideals, and in one common life, in one common inspiration, in one common love and one common code of brotherly law. Not written, this code, but engraved in our hearts by our Theosophical traditions and teachers. And one fundamental law written, but likewise living in our hearts: the Constitution of the T. S. Show me any bossism in this system, the big boss at the top, delegating to smaller bosses and then to smaller ones still, the authority to rule more or less arbitrarily — for that is what real bossism is; and any man who says to any other man, "You should believe as I do," is a tyrant, and in his heart has no conception of the blessings of liberty, freedom. There is not an atom of such bossism in the T. S., not an atom; and the Presidents of our National Sections and the Lodge Presidents

are coming more and more to understand all this, for they have always loved it. The more they can give of brotherly love and understanding and helpfulness to other Theosophists, the closer they will come to the spiritual life to which we incline our hearts in reverence.

The Theosophical Forum

"REINCARNATION FOR EVERYMAN" (1) — H. T. Edge

The truths of Theosophy, brought to us by H. P. Blavatsky seventy years ago, have gradually infiltrated the world of thought until today we find Reincarnation and Karma the subject of essays and novels by well-known popular authors. This means that those doctrines will reach a public larger in numbers and different in kind than could be reached by the usual channels of propaganda: it is only a minority who go in search of truths; a majority wait until it is brought to their doors; moreover they will attend to teachings which reach them in this way, whereas prejudice and habit might have left them long unaware of the existence of the teachings if conveyed through the medium of societies and cults.

Any doctrine, in thus passing from its source through successive strata, undergoes modifications in accordance with laws of evolution. It becomes less abstract and universal, more particularized and adapted to conditions. Its technical terms are translated into familiar equivalents. It is an interesting question to consider the phenomena of such an evolution. It is not feasible to regard the process as wholly one of gain or of loss.

Conservation and change are inseparable components of growth; an excess of either is disastrous — hide-bound dogmatism on the one hand, unrestrained license and promiscuity on the other. It may be supposed that H. P. Blavatsky neither expected nor wished to force upon the world a hard-and-fast ready-made creed, like some desk-made constitution palmed off upon a nation striving to rebuild after a revolution. What she anticipated was a leavening of thought along the lines she laid down. And is not this what we are witnessing? There are certain things which must be kept intact, not because they are dogmatic creeds, but because they are universal truths; and it is the duty of Theosophists, while

watching the spread of their ideals in the world, to preserve inviolable the source whence the stream has flowed, and to balance the claims of permanence and flexibility.

We have seen the noble truths of Reincarnation and Karman take many strange forms in the hands of some; for the husbandman had scattered his seeds generously, fall where they might. But no such charge can be brought against the present writer, who dwells on a high plane of thought and feeling. He is the author of *World-Birth*, *We Do Not Die*, and several novels; he has a wide public, and his little book will serve as an admirable introduction of his subject to those for whom it is untrodden ground. In short, we may regard it as a popular Theosophical manual. We are taken over ground familiar to Theosophists: the definition of reincarnation, the testimony in favor of it, the internal evidences of its truth, answers to the usual objections, and so forth. The author writes as a Christian, but, it must be conceded, a very liberal one, since he includes reincarnation as a part. God is for him the supreme ruler of the universe.

While admitting the compound nature of man, he prefers to limit himself chiefly to a tripartite division into body, soul, and spirit, or (as might be said) the lower, intermediate, and higher nature. In this we think he is wise, considering the end in view; as is also his refusal to be drawn into the discussion of origins and questions of infinitude. His inclination to present life under the aspect of love and beauty may prove a useful antidote to anyone who tends to represent the universe in a too cold and abstract guise. In speaking of the justice of Karman, he does not view that justice as the decree of an emotionless lawgiver, but as a manifestation of universal Love; which reminds us of Portia. Love is for him the universal law and spirit of all things; it is also the goal of human endeavor, after ages of successive rebirths shall have cleaned away the dross of self-seeking. Jesus is for him what

we should call a *Nirmanakaya*, no longer necessitated to reincarnate, but accepting birth out of compassion for those yet on the way. And here we may point out that he represents the discarnate soul as having the choice whether or not to reincarnate, though he qualifies this by the statement that, nevertheless, that soul must sooner or later elect to visit earth again for purposes of its own necessary experience. Theosophists say that the soul is drawn back to earth by *trishna*, the thirst for physical life, which cannot be resisted but by those who through long experience have succeeded in overcoming that thirst.

On this question of love, however, the author expresses some views with which most Theosophists will hesitate to concur. For instance we read the following:

We are passing from a materialist to a spiritual view of life and death, with Man and his partner, Woman, realizing, not only by faith but by demonstration, that they are immortal spirits, (p. 7)

Again and again we drop the thread of our love-story, but to pick it up either here or "Over There," which is the home of the "twin soul." I say it with all seriousness. The "twin soul" is fact. We do so return over and over again to earth to meet her or him whom we have loved — and lost but to find again, (p. 95)

Difficulty in discussing this question arises from the fact that it so readily lends itself to the raising of false issues. Theosophists, in stating their case, may be charged with a lack of appreciation of the power of love between the sexes, or with some temperamental or physical coldness, or lack of experience, or cynicism due to disillusionment, and so forth. This however is by no means the case; the kind of people thus indicated would not find themselves at home in the ranks of a society calling for

energy and enthusiasm, depth of feeling and a fully developed nature. If fault is to be found with this writer, it is surely not with his ideals, of whose elevation we have such abundant proof, but with his manner of expressing some of them. What means purity and nobility for him will mean something quite different for others of a different mental caliber; and the experience of many Theosophists has taught them what such a term as "twin soul" may be made to stand for.

We would observe that what the author himself says about reincarnation scarcely bears out the idea that sex pertains to the reincarnating entity. Is it not rather, conformably to the author's own expositions, one of those qualities which belong to the temporary and changing embodiments? Human love between the sexes derives its power and sublimity from its being a manifestation of that cosmic and impersonal love of which the author speaks so finely; but from its mixture with earthy and passional elements it also derives that alloy which notoriously and proverbially makes it as fruitful of gall as of honey. Love between the sexes is truly a redeemer, opening for man the gates that lead him beyond selfishness and acquisitiveness; and the vicissitudes of feeling which it engenders are man's teachers. But many a soul, while still on earth, has passed beyond to regions where love, undisturbed by passion, unlimited by personality, has revealed its sublimer mysteries. Much more so, then, when the liberated Soul, no longer snared in the illusions of earth-life, rests in that land where they neither marry nor are given in marriage.

This writer dwells on psychic survival, spiritualistic phenomena, and similar matters, usually passed by or disparaged by Theosophical writers. But we must remember that he is not a Theosophical writer, but one who writes for the world he lives in. And it may be added that, while it is incumbent on Theosophists to draw clearly the distinction between psychic and spiritual, they

would do so to better effect if they had a more intimate knowledge of what is actually going on in the world. To dismiss a matter lightly with a few vague and general statements will not satisfy people who want an explanation of real experiences.

One finds in this book, as elsewhere in advocacy, the attempt to prop a good case with bad arguments, and the use of arguments which neutralize each other. Thus, while the frequent mention of reincarnation by writers of all ages is adduced in support of a universal belief in reincarnation, yet when it comes to the silence of the Old Testament writers on the subject, that very silence is adduced in support of the same thesis. They were silent because reincarnation was so well known that it was needless to mention it. Again, it is stated that —

They also forget that their objections do not make reincarnation any the less a fact! Nature shows a magnificent indifference to human revolt!

That is, the *argumentum ad hominem*, the appeal to feeling, is rejected on logical grounds; yet it would be difficult to show that this same appeal to feeling is nowhere used throughout this book as an argument in favor of the case. But we are all guilty of this; and in a world where people are moved by their feelings, it is legitimate to use rhetoric as well as logic.

The question of reincarnation and heredity presents no difficulty, for the teachings as to Karman and Reincarnation are seen to be complementary to the scientific findings. The adducing of physical resemblance and habits between Elijah and John as evidences of reincarnation involves the assumption that successive incarnations have such resemblances; whereas from what is said elsewhere we might infer differences. According to Theosophy there may even be a difference of sex. There is a good deal in this book as to cases which are regarded as direct proof of

reincarnation, the memory of past lives, recognitions, etc. This is a question fraught with grave danger of delusion, and such mental impressions may be explained otherwise than by reincarnation. The author makes a quotation often made by Theosophists — "In my Father's house are many mansions" — which he interprets as meaning that many different experiences await us in the course of our incarnations. He believes that there is no permanent and unchanging heaven or hell; that inspiration and genius are memory — the familiar Platonic doctrine; that Karma is not fatalism, as it does not preclude the action of will and freedom of choice; that "good" and "bad" are epithets often ignorantly applied to our fate; that the physical differences between planes of matter are differences of vibration rather than of density; that after death we pass to a world which we have prepared for ourselves by our own desires, good or bad, refined or coarse; that the personality is a temporary and limited affair, circumscribing the true individuality; and many other ideas familiar to Theosophists.

But we must close, with the regret that space has allowed us to quote only one of the passages we had marked:

I, who believe in no dogma, belong to no Church, shall hope to prove, that every man and woman of us all, from prince to peasant, from queen to kitchen-maid, gets a second chance. Not one second chance, but hundreds. That all of us are on a path which leads through eternity as inevitably to the stars as that the stars themselves hang high above us to beckon us on the road. And, finally, that, life after life, death is but the dying into new life, more abundant, more comprehensive.

H. P. BLAVATSKY SPEAKS FOR HERSELF

H. P. B.'s "Grand Manner" (1)

The signal-fires of the olden times, which, lighted and extinguished by turns upon one hill-top after another, conveyed intelligence along a whole stretch of country, so we see a long line of "wise" men from the beginning of history down to our own times communicating the word of wisdom to their direct successors. Passing from seer to seer, the "Word" flashes out like lightning, and while carrying off the initiator from human sight forever, brings the new initiate into view. Meanwhile, whole nations murder each other in the name of another "Word" an empty substitute accepted literally by each, and misinterpreted by all! — *Isis Unveiled*, II, 571

We would that all who have a voice in the education of the masses should first know and then *teach* that the safest guides to human happiness and enlightenment are those writings which have descended to us from the remotest antiquity; and that nobler spiritual aspirations and a higher average morality prevail in the countries where the people take their precepts as the rule of their lives. We would have all to realize that magical, *i. e.*, spiritual powers exist in every man, and those few to practice them who feel called to teach, and are ready to pay the price of discipline and self-conquest which their development exacts.

Many men have arisen who had glimpses of the truth, and fancied they had it all. Such have failed to achieve the good they might have done and sought to do, because vanity has made them thrust their personality into such undue prominence as to interpose it between their believers and the *whole* truth that lay behind. The world needs no sectarian church, whether of

Buddha, Jesus, Mahomet, Swedenborg, Calvin, or any other. There being but ONE Truth, man requires but one church — the Temple of God within us, walled in by matter but penetrable by any one who can find the way; *the pure in heart see God.* — *Isis Unveiled*, II, 635

As the white ray of light is decomposed by the prism into the various colors of the solar spectrum, so the beam of divine truth, in passing through the three-sided prism of man's nature, has been broken up into vari-colored fragments called RELIGIONS. And, as the rays of the spectrum, by imperceptible shadings, merge into each other, so the great theologies that have appeared at different degrees of divergence from the original source, have been connected by minor schisms, schools, and off-shoots from the one side or the other. Combined, their aggregate represents one eternal truth; separate, they are but shades of human error and the signs of imperfection.

For the purposes of a philosophical analysis, we need not take account of the enormities which have blackened the record of many of the world's religions. True faith is the embodiment of divine charity; those who minister at its altars, are but human. As we turn the blood-stained pages of ecclesiastical history, we find that, whoever may have been the hero, and whatever costumes the actors may have worn, the plot of the tragedy has ever been the same. But the Eternal Night was in and behind it all, and we pass from what we see to that which is invisible to the eye of sense. Our fervent wish has been to show true souls how they may lift aside the curtain, and, in the brightness of that Night made Day, look with undazzled gaze upon the UNVEILED TRUTH. — *Isis Unveiled*, II, 640

FOOTNOTE:

1. H. P. Blavatsky was a Russian, and in Russia was accepted as

one of the literary geniuses of the country. What is perhaps not so well recognized is her high standing as a stylist in English; even in this language her accomplishments are outstanding, her power of literary expression often lifting one to magnificent heights of inspiration. Her great work was to teach, to give anew to the world the Ancient Wisdom-Religion. She was not concerned merely with style or literary form. Yet one cannot fail to recognize and to acknowledge the literary genius that burned behind her words. As witness of this we give a few extracts from her earliest work *Isis Unveiled*, taken from the last seventy-five pages. Throughout her voluminous writings students may without much effort find similar paragraphs written in "the Grand Manner." — Eds. ([return to text](#))

QUESTIONS AND ANSWERS

On Initiation

Do we in initiation, or in the growth in purity through long years or ages of effort before initiation, drop or get rid of the influence of such evil planets as the earth, or the moon, or Saturn, or do we skip any of them?

A. B. C. — The initiate certainly has to overcome and eliminate from his nature all "evil" influences whatsoever, but he does not skip anything. Every element in Nature, the earth, the moon, Mars and Saturn, and every other planet, principle, or element in Nature, has its correspondence in man and its rightful place and use, both in man and in the Cosmos. What the long training and final purification of the Initiate does is to completely purify all influences and put them to rightful and beneficent use, each in its proper place.

Initiation has to take place here on this earth, not in some distant point in space. Initiation is the ennobling, exaltation and perfection of Manhood. Negative virtue does not accomplish this. It takes loving thoughtfulness for others, knowledge, wisdom and power to become an Initiate. The Initiate becomes a man-god radiating divine beneficence to all that lives. And his locus is here on earth.

Does initiation mean the killing of personality with all its evil passions, and is this done by renouncing the world?

A. B. C. — The personality is not killed. "The secret is transmutation, not murder," nor emasculation. No natural, inherent, principle or energy of the personality is destroyed. They are all purified and transmuted into higher more spiritual forms.

Evil ceases by being replaced by good. The disciple does not leave the world. He renounces all selfish attachment thereto, without leaving or neglecting his duties therein. He lives in the world but not of it. He reverses the usual motives and lives not to get and have and hold, but to give and love and serve. The personality is not killed. It is made the temple of a living god.

Destroyer or Preserver?

In *The Ocean of Theosophy*, page 50, when explaining the action of the hosts of minute lives that go to make up the human body it is stated that it is the Life Energy that kills. I understand this because I realize that it is the successful resistance set up by the human body against Prana and Jiva which makes life possible and that death ensues when the battle becomes unequal and the "Destroyers" win.

What I do not understand is: If it is life-energy that kills why is it that this same life-energy in sleep rebuilds the body? — P. H.

L. G. P. — I think that we can best understand the action of life in relation to the human body by giving the illustration of a storage battery. Chemical action within the battery causes an electrical potential to be set up between the lead plates of the battery. But the battery must be charged with an electric current, and this process of charging the battery is analagous to the process of sleep. The flow of the electric current from the battery during its use is what runs it down and breaks down the potential between the plates, and this is analagous to the fatigue of the body after a day of activity. With the storage battery, it is electricity that does the work of charging up the battery and of running it down, the difference being that in the one case the electricity is supplied from the battery itself, and flows in a certain direction, and in the other, for charging the battery, electric current flowing in the

opposite direction is sent *into* it, thus restoring the potential. Now, during the normal life of the battery, the materials of which it is composed are able to stand the wear and tear of the charging and the use, but in time their molecular structure breaks down, and the battery is worn out, and refuses to take a charge. Thus, you see, it is the electricity, the life of the battery, that wears it out. Similarly, with the body of man, it is the life, taken in and expended that, flowing through the body, works its final destruction.

Anger and its Effect

Suppose a person wrote a letter to a newspaper anonymously, and its publication aroused the anger of a large group, would the vibrations of anger from this group reach and affect the writer of the letter? — W. G. S.

G. F. K. — The currents of the Astral Light on which all thoughts, feelings, and actions are projected, are not hampered by anonymity. We are inescapably interdependent, and in the plane of thought and feeling strongly affect each other continuously. Every time a man thinks, feels, or acts, he is leaving an indelible impression on his own astral body, and *pari passu* on the community Astral Light — the plastic reservoir of thought-deposits for earth and men — whose deceitful and turbulent currents sweep through the hearts and minds of men uninterruptedly. Hence, the anger of a large group of people would leave a correspondingly stronger impression on the general astral storehouse, creating a whirlpool of angry heat-waves which would find no difficulty in reaching the anonymous writer.

Would the writer be affected? That depends entirely upon himself. If he is even moderately sensitive, he is bound to perceive the barrage of distorted feeling hurled against him, but

whether he would be *affected* would be conditioned solely by his character and interior development. No man needs to be affected by anything unless he is in sympathy with it. We are all human, however, and naturally are highly sensitive to the anger or praise of others, especially perhaps when we feel that our sincere efforts have been misunderstood. It may be, however, that we need to learn the gentler method of winning the support of good people through love rather than anger.

Those strong in wisdom, while momentarily feeling hurt perhaps at the stupidity of others, will not be greatly affected by the anger or malice, but will continue to fight for right even against the opposition of the whole world. Through long years of purification and self-discipline they have built up that tenuous barrier of self-protection which instantly repels and dispels disturbed astral currents, and which leaves them free to act in harmony with the inner forces instead of against them.

Past Lives and Memory

In remembering our past lives, do we remember the good and bad parts of each life, or just the former? You know when we enter Devachan, we take only the higher attributes or aspirations with us after each death. The mean, low, ignoble qualities we discard at death. — E L. T. S.

C. J. Ryan — Fortunately for us, under normal conditions very few persons remember the incidents of their past lives. It would be an unbearable burden. The Masters say that it is no pleasure for them to look into their past or that of others, and that they only do so when duty makes it necessary. To face the record of past deeds and misdeeds may be one of the trials of initiation. For ordinary humans one serious danger in trying to force the way into the astral region where Nature's record-book is kept is that it

tends to exaggerate our sense of personal egoism, already too dominant. Everything being recorded there, a fully developed clairvoyance such as that of an Adept would naturally perceive both the good and the bad; a photographic plate has no choice. In *The Key to Theosophy*, H. P. Blavatsky says that at the time of death every man sees the whole of the past life in its minutest details and realizes the justice of karman. At birth we have a similar experience extending even a little way into prevision of the future, owing to the perception of the causes we have sown in the past and must soon reap. A great panorama of the past lives is also unrolled at the close of the Round, and this is repeated "collectively" we are told, at the end of the planetary Manvantara. The case is different in Devachan, when a selection is made, a natural process takes place during which the grosser materials are filtered out and fall into abeyance for the time being.

The Theosophical Forum

WAYS OF LIGHT AND DARKNESS — *Lydia Ross*

Where the *Gita* says that "light and darkness are the world's eternal ways," it refers to mankind's choice of two opposite pathways. On one, humanity travels toward the spiritual light; on the other, men wander largely in spiritual darkness. The individual, in turn, feels the conflicting impulses of his own dual nature. At times, he feels the urge of aspiration to reclaim his spiritual birthright; often he loiters along the human levels of a thinking animal. He does not "know himself as a being destined to go forward at his own pace. The majority do not rise very high or sink very low. They have certain ideals — not too high. They are shocked by low crime and degradation which are accounted for as phases of, or due to, "human nature." The cases of unselfish service and wise nobility are not so labelled. Yet man's dual human mind acts with his spiritual impulses and desires as well as with his selfish emotions and plans. It is really his higher human nature acting when he does his best — his animal self would not do as well, and his wholly spiritual self would do even better.

Is it not logical to suppose that very exceptional men would so far evolve their higher nature as to overtop even the best of the majority? They would live in the "light," no longer confused by the shadows of selfishness and prejudice. Their horizon would be large enough to show an undercurrent of Purpose beneath the changing ripples of events. In short, they would be Masters of Life, what are called Mahatmans, or great souls. They would be supernormal compared with the majority, but never supernatural. Self-directed evolution is more natural in a human being than is stagnant existence.

Why thinking people can question the existence of the Masters who sent H. P. Blavatsky to found the Theosophical Society, is hard to understand. Is it because the thought-world has been so long confined to the "miserable sinner" estimate of the "sons of God," that it cannot imagine the reality of a super-type? Not that we recognize the taint of this old theological half-truth in our thinking, or that we believe that the world is but 6,000 years old. But the shadow of such pious fictions still darkens our understanding of our present knowledge. The Ancients had a perspective in their view of man and his planet that showed a basic Purpose running through the history of the individual, the Race, and the Globe itself.

H. P. Blavatsky's story of herself as a Messenger from the Great White Lodge of Masters stands on its entire consistency with all the facts in the case. She and her work can be measured by no standard but that of a spiritual Warrior fighting against powers of darkness. She was chosen to bring "light from the East" at the end of the nineteenth century, as others had been sent regularly for several hundred years previously. It is significant of high hope for humanity now struggling through a transition period, that her hard-won victories in the eternal contest of light and darkness carried the Movement over into the present century. Not only did the outer work of the Lodge carry over for the first time, but it is growing steadily in numbers and influence, while all the world's affairs are stricken with uncertainty.

H. P. Blavatsky's work was to throw light on the problems of her day, as other Messengers did in their times. She revealed the inner meaning of Christian teachings which theology had misinterpreted. She foretold startling scientific facts which have since been rediscovered. She showed her knowledge and control of finer forces within man. She consciously produced greater phenomena than were appearing through entranced mediums in

her day. She explained the rationale of these things which were not spiritual, but evidence of the astral realm of a finer grade of matter. These were timely topics; but her reasoning fell on deaf ears among the Scientists and Spiritualists.

Of the Messengers sent to Europe in the last quarter of the eighteenth century, we read:

Mesmer . . . was an initiated member of the Brotherhoods of the *Fratres Lucis* and of Lukshoor (or Luxor), or the Egyptian Branch of the latter. It was the Council of "Luxor" which selected him — according to the orders of the "Great Brotherhood" — to act in the XVIIIth century as their usual pioneer, sent in the last quarter of every century to enlighten a small portion of the Western nations in occult lore. It was St. Germain who supervised the development of events in this case; and later Cagliostro was commissioned to help, but having made a series of mistakes, more or less fatal, he was *recalled*. Of these three men who were at first regarded as quacks, Mesmer is already vindicated. The justification of the two others will follow in the next century. Mesmer founded the "Order of Universal Harmony" in 1783, in which presumably only animal magnetism was taught, but which in reality expounded the tenets of Hippocrates, the methods of the ancient *Asclepieia*, the Temples of Healing, and many other occult sciences. — *Theosophical Glossary*

In the work of these three Messengers, each showed supernormal knowledge and the power to handle hidden forces of mind and matter. They showed the many who were then selfishly seeking the elixir of life and the transmutation of metals, that the real secret was not in the laboratory but in man himself. They worked unselfishly to heal the sick and to help the poor. As friends,

confidants and advisers of Kings and the highest and mightiest in many lands, they forewarned those in power of political intrigues and of the impending upheaval of the French Revolution. Of course, their biographies are many.

One biography, written in 1934, by Margaret Goldsmith, gives a detailed picture of Mesmer, based on an extensive bibliography dating from his time up to the present. The book shows painstaking research, and it presents the course of the man's career carefully. He is presented as a nature-loving youth with no intimates, fond of music always; in college, he greedily read physics, mathematics, astronomy, and especially Paracelsus. Graduated, he did casual tutoring, studied law briefly, and then medicine seriously, and began to practise as a physician. He was tall, dignified, kindly but impersonal and aloof, devoted to his patients, especially the poor, indifferent to fame, personal ambition, and money; was calm and tolerant even with his jealous enemies and slanderers; he was a tireless worker with a one-pointed desire to prove the reality of his work that the world might benefit thereby. Having done his work, he retired, feeling that the world was not ready for the light of truth which he held.

We question the author's conclusion that Mesmer could not make the dogmatic scientists understand the action of the magnetic fluid because the subject was not clear in his mind. How could he define what he knew was an imponderable fluid to prejudiced men who could not imagine matter not subject to the laws of physics? A hundred years later, H. P. Blavatsky found the foremost scientific minds equally closed to more light upon subjects in their own lines. She spoke to deaf ears of the electronic nature of matter, of the divisible atom, etc., ancient teachings which Science has since rediscovered. No doubt Mesmer was understood when he spoke of the deeper mysteries to those who had "ears to hear" in his "Order of Universal

Harmony." That part of his work was the giving of "meat to strong men" who were united in those dark days to stand firm as champions of the unfading light.

The Messengers are not free to tell all they know. Moreover, in spite of their unselfish lives and work, the opposing forces of darkness fight to keep the masses ignorant of the truth. Yet in every age there are the "few" who recognise and support the Teacher. To such as these the Avatara Jesus told of the "mysteries of the kingdom of heaven." Our author, sketching methods of healing, speaks — not irreverently — of Jesus as "intuitively one of the greatest psychologists," and proceeds to analyse his curative methods of "suggestion," faith, laying on of hands, the hypnotic effect of his presence, etc. With remarkable insight and rare common sense, she says, "He intuitively used methods which, nowadays, young medical practitioners are taught cut-and-dried in their textbooks." (page 12)

We question the author's interpretation of the work of Jesus. His cures, far from being a "step in the direction of modern psychotherapy," were leagues ahead of our cut-and-dried psychologists who reckon without the soul. Statistics, show that only a small fraction of them even believe in post-mortem survival. Again, instead of a "hypnotic" benumbing of the sick man's will, the very "presence" of Jesus aroused vibrations in others who largely cured themselves by faith in the natural reality of wholeness. They saw it imbodyed in Him who was "the way, the truth, and the life."

It is historically false to say that H. P. Blavatsky was ever "a member of the Spiritualistic Church," or that "her theosophical doctrines sprang from her earlier belief in Spiritualism." (page 254-5.) She was not a member of the Spiritualist organization, nor ever accepted their belief in the return of disimbodyed "spirits."

She defended them from wholesale charges of fraud, seeing in their phenomena the scientific evidence of a finer grade of substance, while meantime warning all of the dangers of negative mediumship. She understood the laws of the astral realm which interpenetrates the physical universe. Its substance is not more intangible than those radio wave-lengths that encircle the world with the speed of light. She got her occult training from the Masters who also directed her practical experience of traveling into all the corners of the globe before she began to teach Theosophy. She owed nothing to any, or all of the movements of her day. She understood them better than did their advocates who were but dimly responding to the cyclic revival of the Ancient Light of which she was the conscious Witness.

The Theosophical Movement has come down the ages, a Plan too vast to be measured in the uncertain light of our bewildered modern civilization. Nevertheless, the thread of Purpose can be seen if one reads between the lines of history and research, spelling out the larger truth in its own universal language.

The Theosophical Forum

THE NEW KNOWLEDGE — *M. G. Gowsell*

A age of dawn. Cock crows to cock from zone to zone across the darkened leagues, thrilling the multitudes that wait in tense unrest. The phoenix of that universal, long-debated lore of olden time is rising on the wing, to take the sovereign morn renewed, redight, refulgent in its pristine power to stir the heart of man. Behold the flickering shafts of light that grow, as man makes effort to attain — to re-attain his lost prestige and favor of the stars. The scroll, invisible to eyes of flesh, wherein the record of his ancient past is writ, unrolls, revealing to the inner eye old glories once achieved and then, alas, forgot. The mind of man knows not of this. But mind is not the man. 'Tis but his tool. The man who was and is and evermore shall be is here, at work, wherever he may have been a hundred thousand years ago. Here, now, today, we, onetime denizens of fabled lands from out the silent night of time, recapitulate and body forth once more the bygone things that were on land and sea and almost native to the air. Transition. Dawntide big with promise, transcendently beyond belief. Marvels, revelations concerning every realm of man's composite being, become the order of the day. No one is surprised. Wherefore should one be? These things return again. They are our own. Swift our strides, say we with pride, yet understanding not. Yet too unaware that this our rapid march is but a summing up, a repetition, a rehearsal and a brief review of what had long since seen the sun. Meanwhile the scroll, that all-recording blueprint of the past and of the soul, continues to unroll. The age of fable and the age of fact are intertwined. Tradition speaks. Step by step we run our recapitulation of a civilization allotted to a time when Titans wrought amid the roar of war on Chaos in her waning prime, wherein the self-same we

strove mightily for centuries to then achieve what now may be again in days, because it had been once. Even now, as we proceed apace on outer lines and swiftly win material skill, the reassembled phoenix hovers nigh. Our newborn knowledge of terrestrial worth is but a paltry detail of the plan. The coming knowledge is of MAN.

The Theosophical Forum

KNOWLEDGE WITHIN YOUR REACH — *H. T. Edge*

Our path in life is mostly determined by what we call chance or accident. But if laws of cause and effect are universal, there can be no such thing as chance or accident. True, we may use such words for convenience, to denote events whose cause we cannot trace; but chance in the real sense of the word would mean an effect without a cause, which is impossible by the hypothesis.

Hence we must accept the conclusion that even the most casual events come under the general law of causation; and we dare not take refuge in the argument that, because we cannot explain a thing, therefore it does not exist.

If I toss a coin to decide which of two things to do, it is usually said that I am leaving the decision to chance. But what can this mean? What is it that determines whether the coin will show heads or tails? The same with cards and many other such things. Divination is based on this. Those who practised divination knew that the fall of the cards, etc., was not due to mere chance, but that it was governed by law.

There is a whole universe of unexplored territory here waiting investigation. We do not discern the connexion between events: events seem to us like physical atoms, separated from one another by empty space. Yet we know the atoms can act on one another, so our idea of the empty space must be wrong.

Scientific discovery is continually extending the range of our knowledge respecting the connexions between things: the connexion between sanitation and epidemic disease, between mental habits and insanity, between what goes on on the sun and what goes on on the earth, between what the moon does and

what the fishes do, and so on. And where or why should we set a limit? The possible cannot be made to end just at the point where our knowledge at any given date leaves off. Astrologers know the connexion between planetary positions and terrestrial events, between a natal figure and a character. What is an omen but an indication which someone has been able to read, and based on one of these invisible and unexplored connexions?

It has been said of modern science that it is after all but a very narrow selection of subjects for investigation, affording at every point clues that lead off in every direction, but the vast majority of which are ignored because they would conduct the investigator off the beaten track. It is not very likely that the science of the ancients would follow the selfsame beaten track. They probably followed up other clues and discovered things in Nature of which we have not obtained so much as a glimpse. For what is Nature to us but just so much of the world as we are able to see? How very much more there may be that we cannot see. There may be other planes, but before we begin soaring to them, why not learn a little more about the one we are on? All this seems to show that knowledge has not much to do with book-learning, and that it is the height of folly to pay fees to someone who offers to teach us, and that the gates of infinite knowledge lie open to anyone who can find in himself the keys to unlock them.

The Theosophical Forum

**THE VISIBLE, THE UNREAL: THE INVISIBLE, THE REAL (1) — B.
*Finkernagel***

Theosophy is a formulated teaching of Spiritual Realities. It is the truth about Nature and Man, explaining the operations of Nature, as they have been perceived by the piercing vision of Supermen — great Initiates and Seers. These Supermen have sent their consciousness behind the veils of Nature, contacting Truth at first hand. They formulated in human thought and speech what they had perceived. These formulations have been re-tested by every succeeding generation of seers throughout all time, leading invariably to the same conclusions.

Theosophy teaches that this Earth is the coarsest outer garment or crust of more ethereal, invisible, and causal worlds or planes, which this physical Earth enshrouds. Analogically we find that the physical body of man is also the densest enshrouding veil or garment of more ethereal principles within. In these inner principles there reside faculties and powers which in the course of long evolutionary time-periods will unfold and shine forth in the waking life of man. They do not now manifest in us, because our present coarse mode of thinking and acting, does not provide the necessary congenial soil. Generally, human life is too selfish and petty; it lacks the breadth of self-sacrificing love. Mankind is too deeply absorbed in purely physical life, which silences effectually the "Voice of the Spirit," for it cannot be heard amidst the insatiable clamorings of the life of sense. It is much the same as though the seed of a lovely flower is swept into a hard, barren, and dry crevice of unyielding rock where the conditions for the sprouting of seeds are lacking. While these conditions last, a flower will remain nothing more than a latent potential energy. Man provides the necessary conditions for the sprouting of his

latent spiritual faculties when he begins to realize the spiritual basis of his being, and regulates his thinking and acting in harmony therewith. Selfishnesses in any form are effectual barriers preventing the manifestation of spiritual energies in man. These can only become manifest in the measure that we become impersonal and universal in thought and action.

Our Universe is one vast organized unit of Life and Consciousness. All the countless entities, high or low, composing it are its children, for all of them at their core enshrine a spark of its Ultimate Essence, linking all into one vast interacting and inseparable Unit. This Spark is the Root, linking them all to the Central Flame — the Supreme Intelligence of the Cosmos. The man who realizes this basic fact of life is filled with deep compassion and pity when he perceives how greatly this basic truth is violated by all men, more or less, for most people are altogether oblivious of this truth, continuing life after life, to pay little heed to their responsibilities and duties to others, living for themselves almost exclusively. For the benefit of the few who do realize this fact, the following rule of life, will be found to be an excellent spiritual practice: Whenever the impulse is felt to concentrate upon personal ambitions and desires we should instantly remind ourselves that we have resolved to become impersonal and universal, and then to reflect to what extent we might be able to cleanse the selfish impulse of its personal elements. Every time we engage in selfish thoughts or actions we are forging another strong link with the personal side of life which we have decided to transcend.

The materially inclined person will of course regard these remarks with disdain, believing them to have no firmer basis than fantastic and man-made ethics. Yes, they are ethics indeed; but be it emphatically understood that ethics are not exotic and man-made empty sentiments, however much some ethics may

have become disfigured by the crude thoughts of man. True ethics are based on the great facts and laws of life, upon impersonal and universal Love, upon self-sacrifice, harmony, and peace, all of which are the very breath and essence of Cosmic Being. It is these very qualities which make our Cosmos one all-embracing Unit, in which perfect Harmony and Love reign supreme. Ethics are based on Nature herself.

The reason some people look upon these sublime themes as being impracticable fads is because of a decided material outlook upon life. These people regard the existence of finer, and to us invisible, principles within the physical Earth, and within the physical body of man, as impossible because they have no idea whatever of the immense amount of knowledge that can be had in regard to their existence. They are greatly influenced by the attitude of science in regard to all such subjects. Up to about a decade or two ago the scientific attitude in this respect was one of unqualified negation. But since then a very remarkable change has come over the minds of most of our foremost scientific thinkers due to scientific research into the constitution of matter. The discovery of Radioactivity has opened to these men a most enthralling field for the intense study of the constitution of the physical atom. It is some of these extraordinary discoveries which have revolutionized to a very great extent the scientific concepts in regard to the constitution of the Universe and its relation to consciousness. There are but few of the rank and file of materially thinking people who are conversant with the present day attitude of science in regard to this subject. We will, therefore, briefly review the position. But before doing so it should be mentioned that scientists today are divided into two sections, one being composed of those men who are so deeply impressed with modern scientific discoveries in regard to the constitution of matter that they have deliberately broken through some of the

barriers which orthodox science in the past had set up against metaphysics (a decade or two ago it was considered a violation of the maxims of science for the scientific mind to pass in its reasoning beyond the borderline into Metaphysics!) whereas the other section of our scientists is composed of those men who strictly confine their reasoning within the artificially constructed borderline separating physics from metaphysics.

Many of our most eminent men of science have declared that the latest scientific discoveries force them to assume that the Universe is not moved by blind force, as declared by the old school of science, for this blind force they can neither explain nor account for; but that Intelligence and Design are at the back of all manifestation. They now say that physical matter is an illusion, and that it has no actual existence at all because it consists mainly of what, for the want of a better term, we might call "holes in space." The impression of solidity is given to physical substance by hosts upon hosts of infinitely minute groups of still smaller entities which compose the atom and which they have called electrons. They say that these electrons are whirling with the inconceivable speed of several thousand miles per second around an inconceivably minute center, which they call a proton; and these enormous movements are confined within an area so infinitesimally small that the mind is incapable of conceiving it. They also say that the relative distances of these whirling electrons around their center, and their respective volume and orbits, seem to follow what astronomers call Bode's Law, which they say determines the orbits of our planets around our sun. Scientists, therefore, have likened the atom and the electrons to a solar system. They further say that all physical matter is crystallized thought-energy or consciousness. This implies that our physical Earth is an effect and the product of the conscious activity of countless entities at all stages of evolution, all of which

compose our universe. We are also forced to assume, analogically, that man's physical body, and its characteristics, are the result of his thoughts, feelings, and emotions, which reproduce on the outside of us what each one is in his inner nature and being.

These statements, coming from our most eminent men of science, should make the materially inclined person reflect, for they most definitely point to the existence of subtler human principles than this outer dense physical body, as well as to subtler planes or worlds than this dense physical Earth. The most liberal of our scientific men seem to have arrived at a point in their thinking where they are willing to pass into the forbidden territory of metaphysics. The moral courage behind this attitude is most laudable, for it shows that these men will follow truth wherever it may point. They refuse to be tied to artificial restrictions imposed upon them by orthodox science. It should be self-evident that this is the only proper attitude which scientists should hold, for as Science is looking for Truth, they cannot afford to have a fence set around their reasoning, beyond which they are not allowed to go.

Human life in all its departments seems to pass through transformations and birth-pains in the effort to bring to light something better than we now have. This applies equally to the social, economic, and religious life, as it does to the scientific.

One of the greatest of lessons which our humanity must learn from the existing welter of confusion and wretchedness prevailing everywhere, is the lesson of the solidarity of man — of Universal Brotherhood. It is only when mankind realizes that our Universe is not merely an agglomeration of unrelated and separate centers of life, but one vast, inter-related, and interacting Unit, and that nothing whatsoever stands separate and alone, that the concept of Universal Brotherhood can become the

true basis for human thought and action. The keynote of human life today is separateness and selfishness, and not unity. Is it any wonder then that individuals as well as nations are in perpetual warfare with one another, mutual distrust, and fear, and selfishness being the motives which govern our human thoughts and actions? It is the absence of the ideal of Unity and Brotherhood which has transformed our world into an armed camp, fitted with the most hellish devices for fiendish wholesale slaughter, cruelty, and destruction; and if this frightful Bubble of War, now hanging over us should burst, it will involve the whole of the human race in a struggle which will destroy in quick time all the noblest achievements of many centuries of constructive endeavor, as well as bringing indescribable horrors upon mankind. It is this horror which is haunting men in their dreams, and which is the curse of their waking life. The only sure cure of this moral degradation is a return to sanity and the recognition of the Universal Brotherhood of man.

Through a long false thinking and acting the poison of selfishness has eaten into the hearts and minds of mankind in greater or lesser degree. One, therefore, does find at times this poison in evidence in the most unexpected places. The writer just now has in mind a particular kind of person, to be found even among some classes of Theosophists, who will strenuously denounce the need of spiritual teachers, maintaining that all men have within themselves all that is necessary for their spiritual growth. Now although this statement is quite true in some respects, it is only one half of the truth, for it fails to take into account many other factors that are involved. It fails to consider all the manifold forces and energies, spiritual, intellectual, moral, psychic, and physical, all of which are interacting during the physical life of any man, and all of which have their proper place in life. The fact is also overlooked that as Spirit becomes more

deeply involved in matter it becomes also more and more limited in its powers of manifestation on the material planes of life, and it will remain so limited until the lower principles succeed in attuning themselves to the keynote of the higher ensouling life. Spirit on its own planes of the Cosmos is as free as it wills to soar to the greatest heights of its own element. But when Spirit becomes clothed with a mental, psychic, and physical principle, it is so deeply buried in matter, that it must wait till its lower clothing has adjusted itself to its ensouling life, and not till then is Spirit enabled to shed its radiance into its lower vestures and their respective planes of matter. When this adjustment is left entirely to the exceedingly slow cosmic evolutionary urge, and to the spasmodic and ill-advised ignorant efforts of an uninformed brain-mind, spiritual growth is exceedingly slow, requiring immense time-periods for any appreciable growth. But this time factor can be enormously quickened by wisely directed effort and proper understanding of all the conditions, which can only be acquired by means of the invaluable assistance of a true spiritual teacher. The supply of such teachers is always assured by Nature's own wise laws, which demand that the "greater must ever give and sacrifice himself to the needs of the lesser." It is an occult law that every aspiring human soul must be devoted in selfless service to the whole of mankind without any thought for its personal self. The desire of impersonal service must arise spontaneously in the human heart, making compassion and self-sacrificing service its natural aim. It is only in the measure that the spiritually aspiring human soul is learning to live for others that the spiritual faculties latent in man can become manifest. This is, as a matter of fact, the supreme reason why we incarnate in human bodies.

You have all probably heard of the Mystery-Schools of Antiquity. What were they? Were they engineered by a designing

priesthood? Most surely they were not. They were Mystery-Schools originated by great Initiates and Supermen, in which was taught the most sublime knowledge which man is capable of knowing and assimilating. At one time a portion of this wisdom was more or less known and understood by all. But during the last two thousand years of spiritual decline these Mystery-Schools have disappeared from the outer life of man, and this Ancient Wisdom has been no longer openly taught. As a result the great mass of mankind has entirely forgotten that it has ever existed. About sixty years ago these Supermen started the Theosophical Society through their Messenger, H. P. Blavatsky, in order to proclaim once more these ancient forgotten truths.

These Supermen are members of a Great Spiritual Brotherhood, which is sometimes spoken of as the Great White Lodge of Adepts, which includes in its ranks the humblest neophyte who has pledged himself to the selfless service of mankind. The neophyte here spoken of is a member of such a Mystery-School where he is being taught some of those deeper aspects of life. But the experience of many ages has taught that this sacred knowledge must not be given out indiscriminately to all who may come along. Before any person can be admitted to any such School he must prove by his own life and conduct that he can be safely entrusted with these sacred truths. Surely no one would ever dream of giving a box of matches to a little child to play with, and then lock it up in a room where it is surrounded with open barrels of gunpowder.

A neophyte then is a man who has been admitted to such a Mystery-School, where he is being taught some of the great spiritual facts of life, which by well-directed and self-devised efforts will hasten his spiritual unfoldment. In these efforts, impersonality and universality must wholly supersede personality and egoity, which means that the individual must

learn to identify himself with the whole of mankind, and live for it instead of for his personal self. Such a man has surely stepped out from among the great herd of men, and although he is still living in the world, he is no longer of it, and although he is still using his brain-mind for his physical expression, his consciousness is habitually focussed in his spiritual mind, where unity, service, self-sacrifice, and universal compassion, are the normal expression of the consciousness.

These Supermen have always their envoys in the world of men. But the question might arise, How can anyone be sure that any man is truly such an envoy? There are various ways by means of which such assurance may be gained. Here is one way, which is open and within the reach of all. Find out the kind of life such a man is leading. Study his teachings and the effect they have upon you and upon others. Do they inspire pure and unselfish thoughts, leading you to become more unselfish? Is he consistent throughout? If his teaching has such an ennobling effect, then all doubts ought to be set at rest, and we ought to feel that here is a man whom we can fully trust. But this does not mean that we must accept blindly all he says. We should always discriminate, and if we fail to understand some aspects of his teaching, this part is not yet for us. More likely than not, sooner or later we will find that it is true. But by refusing to accept what we did not understand, we were but exercising our divine prerogative of free will and choice. We will learn to know truth in course of time at sight. But on the other hand, if we find that his teaching appeals to us and synchronizes with all we have so far found to be true, then let us accept it gladly, and devote ourselves wholeheartedly to passing it on to others also. By so doing, compassion, ineffable peace, harmony, and love will abide within us, for by trying to live for, and to serve, others we are ever touching something in our innermost which nothing less than

that can ever reach.

QUESTIONS AND ANSWERS

Centers of Ancient Mystery Teachings

Could you name for us the centers where Mystery-Schools existed in ancient times?

G. de P. — The mistake of all scholars and mystics is to put too much emphasis upon *places* as Mystery-Schools. And this is why comparatively little is said about localities and places of Mystery-Schools in occult literature — ours, for instance.

From time immemorial there have been Schools of the Mysteries, some more or less publicly known like those of Eleusis and Samothrace in Greece, others thought to exist, whispered about, but not known to the multitude. These Schools of the Mysteries were formed always of two aspects, the exoteric and the esoteric. Those schools which emphasized more strongly the exoteric aspect — which was a noble work in its way because it attracted the attention of the populace and raised their eyes to higher things — were such places as the Greek Eleusis and Samothrace, Abydos and Thebes in Egypt, Ephesus in Asia Minor.

Eleusis and Samothrace were almost wholly devoted to the Mysteries, and hence they are so often spoken of, and have become wrongly looked upon as the type of Mystery-Schools elsewhere in the world. This is not so. Most of these Mystery-Schools were attached as secret bodies to the main temples of different countries. In other words, every *great* temple had its private or secret Mystery-School which was unknown to the multitude or partially known. And this applies to all ancient countries. This does not mean that every ancient temple had a Mystery-School, for that is not true. It was only the main centers

of religious teaching that were the places where the secret Mystery-Schools existed — not always, but usually so. Now this it seems to me is quite clear, and I hope you will understand it.

Sometimes the Mystery-Schools, as above said, were attached to the greatest of the temples; but the greater Schools of the Mysteries were those which paid no attention to buildings of any kind, mainly for the reason that buildings would at once attract attention and draw public notice, which is the very thing that these more secret, more esoteric Schools tried to avoid. Thus sometimes, when the temples were mere seats of exoteric ritual, the Mystery-Schools were held apart in secret, conducting their gatherings, meetings, initiations, initiatory rites, usually in caves carefully prepared and hid from common knowledge, occasionally even under the open sky as the Druids did among the oaks in their semi-primeval forests in Britain and in Brittany; and even in a few cases having no permanent or set location; but the Initiates receiving word where to meet from time to time, and to carry on their initiatory functions.

The location of these places was most carefully hid from everyone's knowledge, except that of the Initiates. Thus as regards Druidism and Mithraism and Judaism, as instances, the secret Mystery-Schools were often carried on in these underground or subterranean chambers; or even as in the case of the former two, in the midst of a forest — such, for instance, as Stonehenge in England, Carnac in Brittany, various places for Mithraism in the Roman Empire, and various places in Judaea, etc.

In India, certain ones of the great cave-temples like Karli, and one or two mentioned by H. P. B., were Mystery-Centers. There were equivalent ones in Ceylon and the south of India. Memphis, Abydos, Thebes, Abu-Simbel, and Karnak in Egypt, were Mystery-

Centers. Sippar in Assyria, Ecbatana in Media, Babylon and Ur and Lagash were also others. But it would be a mistake to say that all the different countries which had places of exoteric worship were all likewise centers of esoteric initiations, for they were not.

Is it true that there are Mystery-Schools similar to those of the Ancients functioning today? — and if so, where are they, and why are they not better known?

G. de P. — People like concrete facts, but there is just a danger in giving concrete facts. Dynamite is a concrete fact, whereas we can *talk* about explosions with safety.

If I were to tell openly where some of the Mystery-Schools are situated, these places would be pestered and overrun, not so much now, because it might take years for people to grow to believe, but in future time. For example, the Mystery-Centers today in Tibet are largely held in secret places in the mountains, but there is a Mystery-School right in Shigatse, and I don't care to specify the place, for obvious reasons!

Just as in the past, the same general system of both exoteric and esoteric aspects of teaching the Occultism of the ages, in other words, the *same system of Mystery-Schools exists even today*. Only today, the exoteric form has been largely replaced by the different activities of the Theosophical Movement which itself is exoteric as a Movement.

The esoteric groups of Mystery-Schools are perhaps more numerous today than they have been for thousands of years, but they are more secretly conducted and more carefully hid.

You ask where these secret centers exist. My answer is, generally speaking, one in every great country; although as a matter of fact, "great" refers not to frontiers or the rolling leagues of land, but to influence. Thus a little country like the Netherlands might be the

center of a secret Mystery-School whose ramifications and influence would extend over half of Europe — "great" in the sense of being at peace and quiet, etc. Yet as a matter of fact, every single National unit of the globe, has its own secret spiritual protectors, who as a body form a true esoteric center. We can call these the Occult Guardians of a people. Thus Britain has hers, Germany has hers, Russia has hers, likewise so with Switzerland, France, Italy, Spain, Portugal, China, India, Japan, the United States, Mexico, Canada, Brazil, etc., etc., etc.

There is still a third aspect of this question which is much more complicated than the man in the street might think. There are actually groups whose sole business is forming occult centers of Initiation, preparation of students for esoteric work in the world, and for the safeguarding of priceless treasures, the heirlooms of the human race, treasures both intellectual and material. The chief of such groups lives in what Theosophists call Sambhala. It is the center of the Occult Brotherhood of Tibet, called of Tibet merely because that happens to be at the present time the land chosen by them as the most easily guarded. There is another branch brotherhood, affiliated with the Chief Brotherhood of Tibet in Syria, still another one in Egypt, still another one in South America. There is one in Mexico and there is one in the United States. There is likewise one in Europe.

All these smaller groups are affiliates or subordinate to the mother-group of the Occult Hierarchy in Sambhala. Please understand that Sambhala is just the old Sanskrit name given to this occult center from almost immemorial time. The word Sambhala itself has no occult significance, I mean in the numerological sense or anything like that. It might just as readily have been called the Brahma Vidya, Asrama, or by some similar name, but the ancients called it Sambhala, and we merely perpetuate the same old name.

Do not confuse these occult centers just last spoken of with the National Guardians previously mentioned. These National Guardians never interfere in politics. One might almost say that their attempt is to undo the evil wrought by national and international political combines and activities. The National Guardians supervise the spiritual and intellectual welfare of the people over whom they watch, as far as karma and the natural intuitive faculties of the various peoples allow it to be done, but they never interfere in politics. They never make wars or revolutions or anything of that kind. Their work is purely spiritual, moral, intellectual, and wholly benevolent, and indeed universal, and is a silent guide to the intuitive minds of the different races. All these National Guardians are as it were envoys or deputies of one or other of the occult centers mentioned above.

The Theosophical Forum

SCIENCE AND RESEARCH — *C. J. Ryan*

Science and the Life-Atoms

No one who follows the trend of modern thought can fail to recognise that the fundamental principles of Theosophy are rapidly affecting the mental atmosphere around us, precisely as H. P. Blavatsky said would happen in the twentieth century. She worked for the future. We see this process in the scientific, religious, and educational worlds, though credit is too rarely given to the fount and origin, or the Messenger whose self-sacrifice opened the way. An interesting illustration of this occurs in *The Hibbert Journal* for July in an article by Sir Richard Tute entitled "Indications that the Universe is Alive," in which purely Theosophical conclusions are reached by "orthodox" scientific means. The author shows no indication of having studied technical Theosophical teachings, but makes use of the modern theories of Time and Space and the new atomic physics to present his intuitive reasonings. From this vantage ground he points out "a direction in which modern science has supplied a metaphysic of the universe which admits of belief in both religion and morality"!

The basis of this "metaphysic" is that everything in the universe, including the electron, "has to be treated as if it were a vital entity — as if it were alive." From this living "vibrant," as he calls it, he leads us to the combinations we call atoms, units which also act with some evidence of having living intelligence of a sort. Then come molecules and crystals of increasing complexity.

The carbon compounds, when associated in "organic" forms, move a step farther, and show greater evidences of life in their capacity of nutrition and reproduction. The protoplasmic cells,

themselves complicated life-units with a certain range of choice and will, enter into higher combinations as tissues and organs, which themselves are controlled by the higher organisms of which they are components. In all these stages we have what Sir Richard boldly calls "an ascending series of personalities which interlock with each other and which present an ascending scale of complexity."

This of course is the Theosophical principle of hierarchies set forth in scientific form, though few scientists would use the word "personalities." But the author is well able to defend his claim that the activities of "organic" and even so-called "inorganic" units of all classes are only possible if they are living entities with some measure of intelligence, purpose, and foreknowledge.

Space will not permit a recapitulation of his reasoning, but it is based on the philosophy of Monads advanced by the great Leibniz, adapted to the findings of modern science. Leibniz's view is, to quote from the *Encyclopaedia Britannica*:

In his famous work, the *Monadology*, he [Leibniz] elaborated the theory that reality consists of an infinite number of individual forces or agents, psychic in nature, which he termed "monads." These individual minds or spirits exhibit every degree of mental development and complexity, from that of beings even higher than man (the angels) right down to that of psychic entities of so low an order that Leibniz described their being as a *mens momentanea*, or a mere flash of conscious awareness. In the hierarchy of mind a complete continuity from one level of development to another was postulated. Leibniz conceived each monad as reflecting within itself the rest of the universe from its own particular standpoint.

Students are aware of the importance H. P. Blavatsky attached to

the Leibniz monadic theory. On page 623 of *The Secret Doctrine*, Vol. I, she compares it with the Ancient Wisdom, quoting from the Sanskrit. The Divine Mind "Hidden in a veil of thin darkness, formed *mirrors of the atoms* of the world, and *cast reflection from its own face on every atom*. . . ." In succeeding pages she shows high appreciation of Leibniz, and in the second volume, on pages 672 and 673, she returns to the subject. In Dr. de Purucker's *Fundamentals of the Esoteric Philosophy* he carries this important subject still farther.

Sir Richard Tute carries his argument into the spaces of space, to the distant suns, and criticizes the popular idea that life and personality must be confined to a few planets like ours — if there are any — and that the universe is mostly a great waste of unconscious matter. He believes that the "vibrants" may show increasing complexity as they do on earth, and yet be capable of existing under conditions which would be instantly fatal to men.

Like the cells, they may have no organs that we can recognise as such. Like the cells, the universe will be to them wholly different from what it appears to us. They may be exceeding active and intelligent entities, but busied about matters of which we can form no picture and can have no comprehension.

This is excellent Theosophy.

In a most penetrating analysis of Time-Space, in which he makes a difficult subject unusually clear, he explains how a proper appreciation of it shows that an absolute beginning or end of any system, such as the Monads, is impossible; and he remarks that:

A personality which suddenly found itself free from all associations with the body and its functions would experience a continuum in which it would be conscious if

itself and of its value in the great scheme of things. It would not be conscious of any passage of time. There would be no beginning to which it could look back, and no ending to which it could look forward.

This idea is plainly stated by the Master K. H. in *The Mahatma Letters to A. P. Sinnett*.

Sir Richard concludes by pointing out that the philosophy of Monads with all that it implies, especially that which is now called the Space-Time continuum or in other words the world of Reality, was well known in ancient Greece to Plato and Parmenides and others, and to the Hindus in the doctrine of *maya*. He speaks of these "penetrating glimpses into reality" as intuitions or revelations, and rejoices that:

The wonderful thing about the present age of knowledge is that science is establishing the necessity for recognising that the ancient intuitions, of which we have been speaking, are also scientific statements.

But it was more than mere "intuitions" that made Buddha say, with the authority of one who knew, that "To the eye of flesh, plants and trees appear to be gross matter, but to the eye of a Buddha they are composed of *minute spiritual particles*."

The Hibbert Journal is taken in all good libraries, and we strongly recommend defenders of Theosophy against current mechanistic views to read Sir Richard Tute's informative article which contains many valuable ideas in addition to the few we have mentioned.

The Problem of the Ether of Space

We are frequently asked what is the position of scientists in regard to the Ether, which according to *The Secret Doctrine*, has a

very real existence and a most important place in nature.

It is fundamental in Theosophy that the Ether is a very subtil (to us) substance, the grossest form of Akasa, the fifth Cosmic Principle. Ether is the Astral Light. Akasa is not *matter* in any form which we can conceive, as can be supposed from H. P. Blavatsky's statement that it corresponds with the *Manas* or mind principle in man, and that *Manas* actually proceeds from it.

When the famous Chemist, Sir Richard Crookes, was in communication with the Mahatma K. H. in 1883, the latter advised A. P. Sinnett that if Crookes wanted to discover the "*Manasic*" state of matter, a far higher condition than his "radiant matter," "he would have to pledge himself stronger to secrecy than he seems inclined to," i. e., to enter the Mystery Schools.

Present day science is still uncertain as to the existence of an Ether. While some authorities assert its existence, others repudiate it, and prefer to speak of "Space" and its properties. It seems to be largely a question of definition and terms. Sir Arthur Eddington points out that it cannot be of the nature of a *gas*, however attenuated. This is important and leaves plenty of room for the Theosophical claim that it is on a more subtil plane than the physical. Sir Oliver Lodge is a supporter of the ether, for which he considers he has sufficient evidence, presumably meaning mediumistic phenomena, which, of course, are largely concerned with the Astral Light.

The famous "Michelson-Morley experiment," in 1887, gave no evidence of the luminiferous ether and is still held as authoritative. But other experimenters, especially the distinguished Dr. Dayton C. Miller of the Case School of Applied Science, Cleveland, believe that it was not final and that recent experiments indicate that the earth is actually drifting through an ether which can affect the instruments employed. In the August

Scientific American the subject of Dr. Miller's laborious experiments is considered and the writer says that "To this day these results have never been explained away," and that "Thus far, anyway, science does not know whether there is an ether or not," though "Preponderance of evidence seems against it at present." In regard to Dr. Miller's attitude on the subject we read: "He says calmly that the details of his work are now in the record, and that the future will prove them true or prove them wrong. In this he resembles Professor Einstein who, when told of Professor Miller's findings, calmly said that if they were finally verified the theory of relativity would automatically disappear. This is science."

The Theosophical Forum

FREEDOM OF THOUGHT AND SPEECH IN THE T.S. – *G. de Purucker*

"Keep the teaching unadulterated and pure for the future" Oh, how those words ring in my heart; for it is what I want too; and yet I feel impelled and compelled to call your attention to a very serious danger here. Agreeing absolutely with the principle of the thing, I must call attention to the danger, and it is this: In striving to retain the purity of the teachings of our blessed God-Wisdom, let us never drop into the dogmatic attitude, which will spell the death of free conscience, free thought, free speech, sane and legitimate freedom of all kinds, in the T. S. By all means retain the purity of the teaching, it is the grandest thing we can do; but never refuse to a man his right to speak, and speak freely, even if you know what he says is not true, or distorted. The principle of freedom is so precious, it must never be forgotten. It was just there that the primitive Christians stumbled and became in time a dogmatic sectarian church: Desiring to keep the teachings of their Avatara-Master pure, unadulterated, simple and glorious as he gave them, they laid down certain dogmatic rules, credos, tests, somewhat like the fourteen points, twelve points, sixteen points, etc., etc., that we have heard of recently in Theosophical matters — a sure way to start a creed; and so anxious were people thereafter that all Christians should conform to these as it were codified laws of belief, the codification of belief, that they utterly forgot the inherent right of the human soul to think and think freely. Thereafter you have the Christian dogmatic church, and immediately they began to wax strong. Why? Because they all had one simple form of belief, and exoteric united force behind that belief.

But what do you lose when you get unity and force and nothing

else? You lose everything of greatest value. Force is only good or even decent if it is the force of the spirit, which means no imposition of will upon any other mind: the force of conscience, the force of truth, the force of abstract right, the force of justice. That is the only force that is excusable in human affairs. Any other force is from hell.

So let us therefore never allow the establishing within our own ranks of a dogmatic testing (which is but a creed) of other men's understanding of what we all, including these other men, hold so dear. It may be quite possibly true that these other individuals are brilliant, it may be even intuitive; and we can be grateful for the results of their studies and meditations; but to establish any form of testing by which others should believe, is to work a mischief that at all costs we should avoid.

The Theosophical Forum

LITTLE MAN AND HIS BIG UNIVERSE — *H. T. Edge*

When we consider the vastness and complexity which astronomers have revealed to us with regard to the starry heavens, we must often have been struck by the want of proportion between this particular view of the universe and the views which we take as regards other matters. Here we deal with distances utterly beyond the conception of the most soaring imagination, and with time periods on a corresponding scale of immensity. Nor is it only in the starry heavens that we see such vastness and infinite variety. In the stratigraphical scale of geology we find the same immeasurable extent both of time and space; in reviewing the animate kingdoms of Nature the same infinite variety and complexity confronts us. Everywhere we explore, it is the same.

Yet, in comparison with this, how feeble, how small-scale, how timorous, are our theories and speculations on such topics as the origin of man and the creation of worlds! That in a universe of such illimitable range and such viewless perspective, man should have appeared at an epoch which by comparison we may fitly describe as yesterday — this balks our sense of proportion. Again, consider the microscopic scale of our daily round, compared with the vast size and duration of the visible universe. But yet again, it is with our own mind that we conceive this vastness; and how great and how small is man! Great enough to comprehend his own littleness, small enough to marvel at this greatness. Verily this which we know as ourself cannot be but a minute fraction of our real self. Have we not then a greater self, whose range of experience is commensurate with the vastness of this universe whose outer shell we can contemplate with our eyes? Many people have asked themselves this question, glimpsing what must

be the truth; yet such a speculation is after all but a first crude guess, a leaping at one bound from the finite to the infinite. Nature is far more complex than that; it is too simple to say that man has just a mortal and an immortal part, and no degrees or stages between. Man is a slowly evolving creature. There are many planes of nature, many universes interblended with each other; and man has many stages of conscious existence, corresponding with all these various planes in the universe, so that he is capable of living consciously in many states. There is more than one "heaven"; there are many heavens — many mansions in my Father's house.

People may talk about being practical and living in the world in which we find ourselves; but, as said, we have reached a stage where our intellectual speculations have outsoared our ordinary life, and an adjustment between the two is due. It is not too much to say that we are living in a state of infancy, with most of our possibilities undeveloped, and in ignorance of what we really are. And people, so fond of hypnotizing themselves to sleep with a catchword, will say that human nature is always the same. This either amounts to saying that things which don't change don't change, or to saying that we cannot grow. Human passions may remain the same, but that does not prevent us from mastering them. And after all what is human nature? We cannot dogmatize on this until we have explored its possibilities.

Our ordinary daily consciousness is limited to earth; but there are actually within us faculties which extend beyond the earth, and whose home is in the greater systems of which the earth is but a part. But those higher faculties are for the most part latent; they are not present to our awareness. Yet it is within the power of any man to enter on that mysterious path of self-evolution by which the light of his inner selves can be focused upon the screen of his conscious awareness, so that he will thereby attain a larger

consciousness and transcend the limits of the ordinary personal earthbound life. Though humanity as a whole evolves slowly and will not, as a whole, attain such stages for a long while, yet individuals can and do outstrip other individuals belonging to the same human family. On earth today, and constituting part of our present mankind, are men who have attained these heights in previous cycles of evolution, and who are here now for the purpose of acting as torchbearers to those who are to follow them. And also, the mankind of this earth includes people in many different stages of evolution; even in a great modern city are grouped together people wearing the same clothes, and yet differing vastly in the stage of evolution which they have reached. Such is the complexity of Nature. Who then can say where he himself stands, or where his fellow man stands?

The idea of familiarizing the world with these ideas can hardly be overestimated, because the world has been kept back for so long by ideas that discourage progress, whether they be religious dogmas or scientific dogmas tending to give man a paltry view of his own nature and powers. When we have once vividly realized the *possibility* of attainment, we have already taken a long first step to an ultimate realization of the *actuality*. For our mind has made a call upon the light within, and a ray can be shot down which will at once begin its clarifying work on our minds and our lives.

Physically speaking, man is very small, the universe very great; but true greatness is not measured by physical proportions.

DENY NOTHING - AFFIRM ALL — *Christmas Humphreys*

To deny anything is to state: "I am not that." This affirmation expresses a duality in the thinker's consciousness between himself and that, whatever that may be, yet this assumption is the gravest error known to Eastern thought, the Heresy of Separateness.

The wise man learns to deny nothing and to affirm, by unconditional acceptance, all. To say, in terms or inferentially, "This is not that," though relatively reasonable, is basically untrue. At the heart of things is a Reality beyond description, for it is beyond the reach of the intellect. "We know that it is Unity, an all-embracing Wholeness from which nothing is left outside." It follows that "all duality is falsely imagined," yet so long as the mind confines itself to intellectual reasoning, it is bound by the limitations of dualistic thought. All that we know of anything is that it is not this and it is not that. We gain experience in terms of opposites, and because we know of the qualities of largeness, hardness, heaviness and heat we can describe a thing by saying that it is small and soft and light and cold. Of the countless pairs of opposites used by the mind to acquire experience one is the self and the not-self, and modern psychology concerns itself, beyond all else, with this duality. This mental process is a convenient, and for the first stage on the Path the only, way in which Man can acquire experience, but the time comes when the growing mind must realize that it is but a convention of consciousness, and therefore without ultimate validity. *Sabbe sankhara anatta*; there is no Self in man or in any compounded thing which is not part of a greater Unity. The sense of separateness is the Great Illusion, and the father of all selfishness. To deny anything is to attempt to expel it from the circle

of consciousness, but that which is not admitted does not thereby die. The aspects of that Unity which self denies live on, and later prowl, like hungry wolves, on the firelight's edge of consciousness. Nothing denied can be understood, and these unformulated facts breed fear. A patient of Professor Jung has ably voiced a great discovery: "I always thought that when we accept things they overpower us in one way or another. Now this is not true at all, and it is only by accepting things that one can define an attitude towards them." It is the refusal to accept things, and the delusion that because they are unaccepted they are no longer there, that wraps the thinker closer in the lesser self of his own building and leads, when carried to excess, to schizophrenia, a splitting of the mind which is rightly called in-sanity. The causes may be various, but their basis is a thrusting or keeping out of consciousness of parts of the self ashamed of, or for other reasons undesired. Unwilling, to the point of frenzy, to admit that things are what they are, whether of thought or circumstance, the deluded patient builds a barrier between the self admitted and the self denied, and retires into a world of phantasy. The motive for this partitioning is the will to escape from the unacceptable aspects of the mind, and there is an amazing range of this escape technique. In the same way, when circumstances, the "larger self" are more than the mind has strength to face, the individual either creates for himself a world of daydreams where he need but accept the creatures and conditions of his own imagining, or else finds in material phantasies the alternatives to hard "reality." Some for this purpose use the stories of the screen or those in novels, and for countless minds these mass-produced alternatives to life's "realities" become as necessary as the drink or drugs with which a different temperament tries to create oblivion.

In the same way many a man, who accepted life as he found it until middle-age, retires as soon as funds permit to indulge the

phantasies which seemed to him, while still at work, so infinitely preferable. Yet when he does retire he often finds his leisure strangely sterile, and cannot believe, as his health and vigor leave him, that whereas his work, however material, was at least carried out "with all the whole soul's will," the life of retirement is a life of illusion in which, unless other interests demanding his whole vigor are adopted speedily, the strain between fact and phantasy will tear the self in two. Of the same type, but more violent because unexpected, are the mental splittings created by those who run from a threatened danger to their lives. The European crisis of September 1938 produced a remarkable crop of temporary schizophrenia. Some people shut themselves up in their daily occupations and refused to face the proximity of war, even refusing to read the news of its approach; others, who could not face the horrors of a war they thought was imminent, fled to the depths of the country, not as they claimed, to protect their bodies but to save intact their minds. Many of both these types, when the crisis was safely over, were physically ill; such was the visible working out of the mental strain created by the mind's denial.

Some men escape from the world of men for life. Of those who retire to monasteries, therein to exclude themselves from the world, many are no doubt genuinely seeking the self-realization which they do not think can be found in the distractions of daily life, but others desire to escape from worldly problems which they found insoluble. Yet no man can run away from life and find it. Only in possession of all his principles, and with the experience gained in each, can a man achieve self-realization in its perfect form. Just as the mind must face each aspect of its existence and know them as its own, so must the body face its own temptations and problems among those of its fellow men. True, from time to time we all need rest and re-creation, and for the mind to retire

within itself in silent self-communion is as necessary as sleep to the physical vehicle, but not in the mountain fastness of this spiritual calm will the battle be won. As soon as the warrior is rested he must return to the battlefield, renewed in his sense of wholeness with his highest principles, to fight anew. More than this is refusal to accept reality, and the cause of the flight is fear. We run from that which we fear, and not from that we despise. If we have no fear of life, why should we strive to leave it? We deny then, that which we fear to accept as true, in ignorance of the ultimate affirmation, "I am That." From this deluded habit of the mind has sprung the wealth of poetry wherein the fearful, trembling soul flees from the call of the Beloved. It was denial, born of fear and ignorance, which caused the timorous soul in Thompson's *Hound of Heaven* to fly from its own immensity.

I fled Him, down the nights and down the days;
I fled Him down the arches of the years;
I fled Him down the labyrinthine ways
Of my own mind. . . .
From those strong Feet that followed, followed after.

And the voice of the Whole spoke to the trembling part:

All which I took from thee I did but take,
Not for thy harms,
But just that thou might'st seek it in My arms.

He who denies the littlest part of Life denies the all, and thereby denies his spiritual parentage. It is a popular belief that ostriches, on seeing an enemy, hide their heads in the sand, and imagine that, being themselves unable to see, they therefore cannot be seen. We do the same with our sins and blunders, and the problems we have set ourselves but cannot solve. And yet when Karma, the dispassionate principle of cause-effect, presents the reckoning for our deeds of ignorance, some part of our foolish

mind perceives the enemy, and knows it for what it is, and when the rest of consciousness deliberately thrusts this knowledge in the sand and pretends to itself that, having seen no enemy, there is no enemy to be faced, the conflict arising in the mind from this self-deceit leaves little energy for fighting the common foe. The refusal to admit that the enemy exists is caused by fear, and fear is the child of selfishness or ignorance. As selfishness itself is caused by ignorance of the fact that life is indivisible, it may be said that ignorance is the basis of all fear. We deny, therefore, because we fear to admit, and we fear to admit because we know not the nature of that which seeks admittance — that it is but part of ourselves.

To accept is the first step on the way to affirm. Acceptance may be reluctant, and is apt to be negative, whereas to affirm is a cheerful admission that the accepted fact is an integral part of the self affirming. Yet to affirm is not the same as to approve. We may affirm an action and yet be ashamed of it, but so long as we readily admit responsibility for the act affirmed, however despicable, the self retains its integrity, and can still move forward as a whole to better things. A sense of discrimination is a vital factor in applying the moral sense to experience, for the value of a fact, as distinct from its nature, is something added by the mind. Thus, to admit the nature of one's past life is to face a fact; to decide that it has been "good" or "ill" is valuation added to experience. One may either approve or deplore the facts admitted, and the function of valuation, which approves or deplores, pertains to the life side of the mind. As such, it is beyond the reach of ancient or modern psychology, for facts are forms, but value, or meaning is life. Matter and spirit are ultimately one, but in manifestation they are antitheses, and life, like the winds of heaven, dies in a lecture room. It follows that optimism and pessimism are alike unhealthy forms of phantasy, for the one

undervalues and the other overrates experience. The wise man therefore values honestly, and accepts experience at the value found.

Those who have studied Evans-Wentz' *Tibetan Yoga and Secret Doctrines* will find in the "Precepts of the Gurus" much of the material now being re-discovered by the Western science of psychology. Among these Precepts there is a section on the Ten Things not to be Avoided. These include "Ideas, being the radiance of the mind," "Obscuring Passions, being the means of reminding one of Divine Wisdom," and "Affluence, being the manure and water for spiritual growth," this no doubt being added to curb the desire for asceticism as a way to enlightenment. Then come "Illness and Tribulations, being teachers of piety," "Enemies and Misfortunes, being the means of inclining one to a religious career," and finally, "the Thought of helping others," however limited one's abilities to help may be. A strange companionship, yet representative of the vast variety of human experience, all of which must finally be accepted and affirmed. Debts, of every kind, for example, must be at once admitted and faithfully discharged. Cause and effect are equal and opposite, not merely in the laboratory but in the mind, and every effect returns to the point of its causation for the adjustment of the balance which the act or thought disturbed. Cause and effect are as the two sides of a coin, save that, owing to the illusion of time, our consciousness is only able to cognise them separately. The wise man knows that by the deliberate use of this law of Karma he may inevitably "acquire merit" for him self in lives to come by performing deeds of which the effect is happiness. Yet it is far more important in the great quest for enlightenment to pay off at once and willingly the debts of error, for nature demands exorbitant interest on all bills overdue. As Dr. Jung points out: "the veil of Maya cannot be lifted by a mere decision of reason,

but demands the most thorough-going and wearisome preparation consisting in the right payment of all debts to life." Even the payment of money debts is important in the growth of character, for money is the blood of the body corporate, and to deprive the bloodstream of its due is to injure the larger self in which, and by the grace of which, the body lives. Still more important are the debts of mind, all undertakings, vows and promises, however rashly made. Even if the making of the debt be later regretted, yet it was made, and must be honored utterly, accompanied, maybe, with a resolve to be more careful about debt-creation in the days to come. All possessions are apt to create fetters in the mind. Wherefore the wise man pays his debts, and more, unstintingly. There was a Man of Nazareth who said: "If any man will sue thee at the law and take away thy coat, let him have thy cloak also, and whosoever shall compel thee to go a mile, go with him twain. Give to him that asketh of thee, and from him that would borrow turn not away." When all is said and done, life is a process of the soul's deliverance, and "What is a man profited if he shall gain the whole world and lose his own soul?" Debts are fetters; wherefore break them. For love give love, and love for hate, for in the words of the All-Compassionate, "Hatred ceaseth not by hatred, hatred ceaseth but by love." Refuse no application lightly, and never refuse a claim. That which claims is a part of yourself in greater need, and the need that waits your filling is your own.

An appointment is a debt of honor. He who incurred the debt should pay it punctually; else should it not have been made. He who in life keeps faith with life will not fear to keep faith with death. "I have a rendezvous with death," wrote Alan Seeger, in the trenches a few weeks before he died.

And I to my pledged word am true,
I shall not fail that rendezvous.

To affirm is to liberate; to refuse is to be bound. Wherefore refuse all fetters and be free. Above all, learn to accept responsibility when offered. What right have you to refuse? An offer is made. Affirm it promptly, and the powers of the mind will grow to the newborn need. To refuse to accept responsibility is to ignore the hand outstretched from the rock above you. Grasp the hand and climb. The grounds for refusal are fear, or else false modesty, a compound, usually, of laziness and self-deceit. An offer of responsibility is an opportunity earned by past endeavor. The opportunity is nature's payment of a debt incurred. Refuse it, and the payment has none the less been made by the debtor, while the creditor has let the opportunity go by.

Duties are the debts we owe, and rights the payments due to us. Yet the wise man is so occupied with the due performance of all duty that he has no time to claim his rights. A man inherits at the threshold of each life the debts of all his past, but this, his Karma, is more than can be handled in one life. Such portion of the debt as can be liquidated in the life to come is the Dharma of that life, his duty, which, if faithfully performed, will leave him stronger to perform the duty of such further lives as must be lived ere the last of his fetters falls at the threshold of Enlightenment. Much follows from an understanding of this doctrine, and a great content. No man is given a burden heavier than his strength will bear; conversely, all experience offered and all debts presented on whatever plane are due for payment when presented, and every debtor has, if he only knows it, the wherewithal to pay. It may be that his mental and physical make-up and his field of circumstance seem to offer a painfully limited scope for such repayment, but the digestion of all Karma is effected by the right attitude of mind, and the will to affirm will itself dissolve the problems of the daily round.

Deny nothing; affirm all. Life is, and we are part of it. Wherefore run to meet it with open hands and heart. The Christian mystic calls this attitude a surrender of the will to God. Geraldine Coster calls it "sitting loose to life," and Jung translates the Tao-ist doctrine of *wu-wei* as learning "to let things happen," which he describes as "a real art of which few people know anything.

Consciousness is forever interfering, helping, correcting, and negating, and never leaving the simple growth of the psychic processes in peace. "Nor is the average mind content to leave other people's growth in peace, yet tolerance in its noblest sense is far more than conceding an opinion or a course of conduct with which one does not agree." In the infinite complexity of inner growth almost anything is right for someone at some time and in some circumstances. Where is the man who claims to judge what is right and wrong for another according to *his* needs?

Whatever is, is right, for someone. True tolerance is a form of charity, not in the Christian sense, which, as Keyserling points out, "means wishing to do good; in the Buddhist sense it means wanting to let everyone come into his own at his own level," which implies in turn a "sympathetic understanding for the positive qualities of every condition," affirming them as right for that individual. He is a brave man who can realize that all that is is right, yet so it is in the eyes of THAT, the eternal Namelessness.

The doctrine of acceptance is beyond the reach of justice as conceived by man. The wise man learns to accept all blame, though he be blameless, and suffering he knows he has not earned. Yet it is harder still for some to accept an offer of assistance, for pride is the last of the fetters to fall at the threshold of deliverance. It may be more blessed to give than to receive; it is certainly much easier. There is a difficult technique to learn in charity, both in finding a way of giving without condescension

and in learning to ask and to receive in such a way that love is thereby strengthened, and not made forfeit to the gift.

Life is the greatest of all givers; meet life with open hands. All that it has is yours of right for the taking, and none shall take it from you unless you strive to keep it for yourself alone. Life denies nothing, and offers all. There's beauty in the world, and silence, and love that laughs at hate. There's wisdom, too, that calls to folly and makes folly wise. These wait the mind's acceptance, and the open heart that, taking all life in its keeping, makes its owner say, as Thoreau said: "I know that the enterprise is worthy. I know that things work well. I have heard no bad news."

The Theosophical Forum

THEOSOPHISTS ATTENTION! — *Vera Berg von Linde*

In these days when cruelty, insanity, ignorance and even misdirected idealism like a dark and dangerous thunderstorm sweep over poor Europe, one is almost inclined to think: Of what use is it *to* work for sublime purposes, for peace upon earth, for universal Brotherhood? Of what use trying to evolve forth the Buddhi-Atman within men?

For aeons we have been the most merciless, the most greedy creatures on Planet Terra. Verily, there is enough in the world for each nation, but not for the greediness of each nation. Do we humans really possess possibilities to transform our plain and selfish shape into a compassionate, divine being? Or is it our destiny as matter-heavy creatures always to follow the voice of lower self?

Let us just study ourself and examine: (1) from where we came; (2) whither we go; (3) and how far we have advanced. The archaic Wisdom teaches that we once as un-self-conscious god-sparks emanated from the Divine in order to make a pilgrimage through the matter-side of the universe, thus getting a deeper, greater knowledge about the worlds there inherent.

The archaic Wisdom teaches further that we through self-evolution, self-experience through an ever expanding consciousness finally shall be able to get rid of the strong attraction of these worlds, and again turn to our spiritual home. How far have we advanced towards this sublime goal? Dante says: half-way I stood in gloomy wood with losing steps, and could not gaze on the real path.

This is extremely characteristic of the individual today: a child of

heaven, a child of earth is he standing partly in heaven, partly on earth. His body belongs to earth, but his intellect is able to think as keenly as the greatest intellects on earth, and he has a soul with flaming love and compassion enough to warm and enlighten the whole universe. Likewise is he the carrier of a Divine Self in which dwell all the divine qualities of the universe. Nevertheless is he rather losing his way towards his divine destiny.

Can we human beings turn to the right again? Certainly, because every one of us has a yearning after beauty, harmony, and peace. In every human heart there is a longing to understand the universe in its multitudes of manifestations, a longing to ascend above the dull, daily life; in other words, to get a wider, brighter view of universal, eternal values. He who begins to feel at one with his Higher Self, recognises even the Divine outside himself, becomes aware of Him everywhere. Thus the spiritual seeing, the spiritual perceiving, individual understands that other human beings too have a spiritual longing, a spiritual aim. And he discovers even that there have existed men who manifested their Divine Self to such a degree that they verily can be regarded as the noble Leaders and Saviors of humanity. Last but not least this wonderful fact convinces us against all intellectual subtleties and arguments that our most refined aspirations are based upon truth.

The glorious predecessors of humanity are living testimony that it certainly is of use to work for sublime purposes, for peace upon earth and for evolving forth the divine principle within each human being. But how did these noble Masters reach so high a standard? Were they the lucky favorites of Mother Nature, or did an almighty, personal God create them such, or have they become what they are through self-effort, self-discipline, through a powerful self-directed will to reach this lofty goal? We believe in the last thought. We believe that man through the ages receives

just what he creates for himself — not more, not less — and if he once accepts this fundamental truth with mind and heart, then he will turn towards the spiritual sun and let universal responsibility control his future acts and deeds. What a glorious hope for seeking, groping souls to know that these Great Saviors have existed, still exist and in the future will even appear upon earth, and that they evolve forth their mastership, not by chance, but through raising their consciousness from their animal-being into their spiritual Self.

What they have done every one of us can do, and shall every one of us sooner or later do, because it is the sole pathway home to the Divine again. We individuals are what we act and nothing else. And here we see the real, the terrible reason why we are already in the rigid claws of a new error. We ourselves created the causes for this state of violence, and every one of us is held responsible for what is going on now. We cannot blame one single person or one single nation. Were it as uncomplicated as that, a new war never could happen. For that reason we ought never to side with or against one or another of the fighting forces, but instead, in every noble manner, try to check that current of hatred which already flows forth from the personal human being; each such rivulet will when time is ripe well out into a new source for coming wars. We must even prevent our fellow-men from growing accustomed to the terrific war-deeds. If we in an indifferent manner begin to accept the evil doing, if we look upon the terrors on the battlefields with a more and more blunt insensibility, then we can pity ourselves more than the combatants, because this is synonymous with losing our soul, our only link with the Divine.

Friends, let us with love and compassion fight for that peace, harmony, and spiritual evolution which men with weapons in hand never can bring about. Violence is for the weak and faint-

hearted. Non-violence for the fearless and daring. The spiritual occultist can give his life in defense of others, but never, under any circumstances, take the life of his nearest brother: a human being.

Let us equip all our possibilities and capacities spiritual and otherwise, and through multifold connected efforts try to find an enduring way out of this meaningless, debasing insanity. It is a fact that if a minority can establish a storm of violence, then a minority can even sing this storm into quiet and repose. Heaven itself helps those who possess sufficient conviction and will-power to fight for and collaborate with the White Brotherhood. But mind you, this requires other means in times of darkness and bewilderment than in happy days of peaceful lodge-work.

Please, Theosophists, make a proposal, and we shall indeed follow the spiritually wisest.

The Theosophical Forum

THE GOLDEN MOMENT — *Inga Sjostedt*

When, in past aeons, the gods helped and inspired the newly-born humanity, one of the younger gods — he of the smile that was almost too human — looked down from his garden of meditation and was aware of a growing heaviness in his heart. And the heaviness was sadness, for he saw with pity that men were unhappy creatures, bewildered and lost among their self-made sorrows in a world made fair by the gods. And the young god thought profoundly for an eternity, and out of that thought created a gift for mankind: and the gift was the Golden Moment. How shall I describe that Golden Moment? It was like the dawn sweeping through the chambers of the night, but more swift, more sudden, lasting but a heart-beat and then fading, quicker than thought. Had it been otherwise men might have known things too holy for their mortal perception. And the marvelous power of the Golden Moment lay in its ability to raise men one step nearer to the gods.

The young god sacrificed the joys of meditation for the sake of observing the effect of his gift on mankind. And he watched the destiny of one who was no worse and no better than most men. The Man lived through the days, intent on his desires — as all men are wont to do, except those who have learned to look higher and love more widely.

He followed a path leading to the future, the unknown; and the god watched him in silence. Suddenly, from some hidden recess, there came a cry of anguish and helplessness. He looked uncertainly in the direction from which the sound had come and saw a morass, dark and loathsome, with green treachery covering its surface, and knew that the cry had come from the other side.

Irresolute he stood, not knowing what to do, and then the Golden Moment pierced the heavy skies and poured radiance over him, suffusing heaven and earth. The god waited, breathless, and then the Man lowered his head in shame and walked on quickly, unwilling to face hidden danger, and the Golden Moment, like a bird of flame, took wing and returned to its home-sphere, unacknowledged.

The Man continued to follow the pathway of his destiny, and an Enemy came towards him, holding aloft a weapon. A combat ensued, and the Man overcame his Enemy and stood above him, his weapon raised to strike the other who lay helpless upon the ground.

"Spare me," said his Enemy. "My life is life to many around my hearth."

And the Golden Moment rent the night-blackness and illumined the earth, with stars and music in its trail - — but the music was not for mortal ears and only the gods heard it.

"Why should I spare you?" said the Man. "Are you not my enemy?"

And he brought down his weapon and killed his foe. And the Golden Moment faded, gathering its glory about it and stilling its music.

Then said the young god sorrowfully to himself:

"Of what avail is my gift to mankind? Blind eyes, deaf ears, cold hearts will never know the hidden, unfathomable wonder of my labor and my sacrifice!"

But as he looked down darkly on the earth a young soul looked up and met his gaze and smiled in recognition. Greatly the god rejoiced.

"They are my own," he said; "I had forgotten that the immortality of youth was infused into all humanity, even though it may become tarnished with the sophistry of age. Let the Golden Moment remain, that all whose hearts retain a vestige of their divine heritage may make use of it!"

And to this day the gift of the young god lies within the reach of all men. Only, how many have listened to the voice of the eternal youth within them?

The Theosophical Forum

OUR PROMISES — *M. G. Gowsell*

First and foremost of all human obligations is the one that lies nearest to hand. And it may well be owing to its immediate proximity, its too nearness perhaps, that it so often goes unrecognised, or is altogether obscured and hence denied fulfilment. The truth about duties, whatever they may be, might be viewed as one of those fundamental verities which are so recondite and yet so amazingly simple when once understood. Or, looked at in another light, as just another of the numerous prickly facts, let us say, which we have been so wont to kick against.

Obligations, like the word duty, convey to many a decidedly unsavory tang. And to such it might be news indeed were they to be told on good authority that the universe in which we live is absolutely dependent upon what amounts to just that. For there is, must of necessity be, the closest of links, bonds, intimate relationships and covenantal responsibilities, running through, knitting together and permeating every department, function, and operation of what we humans have agreed to call Nature. This applies in and all through her manifold activities, whether mundane, solar, or cosmic; it matters not which, for all is essentially One.

And now after this somewhat rambling preamble, it were well perhaps to expatiate a little upon the matter of promises, engagements — obligations of whatsoever kind. Looking at our mundane affairs today, one can readily relate much of the widespread misery to the effects of broken promises. The defaults pertain to our social, financial, commercial, and political life, all of which are intimately connected with and have had much to do in bringing about the present state of world affairs. We have all

been witnesses to faithless, pie-crust promises between individuals, and the same stamp of engagements between nations; abrogations right and left, social, political, and economic, wherever and whenever self-interest and expediency have got the upper hand. Can one any longer wonder at the world's trepidation and unrest.

At this point it might be pertinent to inquire as to just what part if any the average citizen of good intent may have had in the more major defaults that are causing us so much pain and suffering. For no man lives unto himself alone. We are not concerned at the moment with the brutality *in excelsis* that stalks abroad here and there the world over. That is another story. What we are endeavoring to do in a few words is to trace back to its primal fount, this harvest, this ripple of effect, and to ascertain the cause: "for this effect, defective, comes by cause."

But, one might ask, what have you and I had to do with all this grief? A great deal, in my humble opinion. Suppose we hold the mirror up to ourselves for a minute and see whether we may not have had some responsibility in the matter. There may be a much closer personal responsibility in this than would first appear, for we are all rather myopic when it comes to self-scrutiny.

Honest, indeed, is that man or woman who would rather die than forego a promise once made, an obligation once undertaken. How many of us have the power, the discrimination, the reflective judgment, to refuse to make a promise, *even to ourselves*, so long as there remained a doubt as to whether such might be successfully acted upon. These little dealings with ourselves: that is what we are trying to get at. It is in the small intimate defaults, gaps, abrogations and venial shortcomings, "whereof the execution did cry out against the non-performance," that we may glimpse the source, the small beginnings, of this river of

insincerity that has become more or less endemic, if not pandemic. We should remember that there can be no great and no small in the divine economy, nor in any other economy in nature. Great and small are but human concepts. So that the smallest, most trivial of formulated intentions, promises, let us say, made to one's self and allowed to go by default, have but laid the foundation for more insincerity, each a step from the venial toward the venal.

No, it would be better far to make good any promise thus made, no matter how seemingly trivial, and no matter if its execution should entail personal inconvenience, suffering even, or material loss. To do otherwise would be to forego some valuable lessons. The gain would be found to far, far outweigh any sort of loss. Moreover there would be none of that intimate, disconcerting, loss of face, that carking aftermath, which is bound to follow upon a breach of faith. One is reminded of the words put into the mouth of one of Shakespeare's characters, when he was made to say: "This above all, to thine own self be true; and it must follow, as the night the day, thou canst not then be false to any man."

PLANTS OF ETERNITY — *Elsie Gray*

On the eve of his departure, Stanley Ransom was telling a few friends how one small event had set the course of his undertaking. He was a thoroughly trained and dynamic young man, about to engage in his first important commission for the American people.

"I came in with the century," he said. "I was fourteen years old when the war broke out in Europe. My oldest brother enlisted in the Canadian army and left at once. Later when America went in, I'd still have gone willingly enough, because I was not yet thoroughly disillusioned about the glory of war. But at that early age when my brother went, (and he never came back," he said in a subdued tone, and pausing as if to pay homage in his thought) "I was frantic to add years to my age or inches to *my* stature, somehow, anyhow, so I could go too.

"My old great-grandfather was living with us then, and this incident I have mentioned happened not long before he died. He was very old. To me he seemed like a man from another planet. His long white hair and patriarchal beard gave him an exotic appearance and all his thought and speech and action were foreign to our modern ways. I used to like to get him talking in order to argue with him, although I always came off defeated. He would go just so far, then turn away mumbling through his gums, stamp his cane on the floor, and relapse into silent thoughtfulness. It was a vivid agitated thoughtfulness, for he would lean forward in his easy chair, peering steadily into the fire for long moments. Finally shaking his head in discouragement he would fall asleep. He liked long evenings of talk about old times. He would often narrate in the most lucid and

connected fashion stories of bygone days, of the Civil War, and of his experiences as Judge of the District Court, when he went from county to county on horseback to make his appointments.

"It was one evening when mother and father were out late that the thing happened. We were sitting by the evening fire, which grandfather must have until summer was blazing hot. The sinking of the *Lusitania* had been filling the news for some time, and President Wilson's notes to Berlin, and all that. I was more than usually unconsolated for not being old enough to go to war. My father had for years prophesied a war that would engage all Europe and he had many times said it would profoundly affect the United States; so I felt authoritative when I affirmed that no living man could afford not to have a hand in this war, and more to that effect. 'Making the world safe for Democracy' had not yet come into vogue.

"My grandfather turned on me savagely. The light from the fire made high lights in his blazing eyes. 'Boy,' he thundered, 'you don't know what you are talking about. War — war — when did war ever cause anything to live?'

"I had lost the thread of my argument. We sat very still for several minutes, grandfather pommeling the head of his cane with his cupped hand. Then he rose from his chair with great effort, but majestically. 'Come,' he demanded. 'Get your lantern and come.'

"I lighted the lantern very much in awe and followed him into the late spring night.

"I used to like to make a garden. I think I must have done it several successive seasons. This event caused me to remember my garden of that year. It was all in tender young plants. I had never seen the neat rows by lantern light, and it gave me a thrill nothing short of magic.

" 'Here are your beans,' grandfather pronounced, his voice vibrating with emotion. 'Here is the best plant in the row. Pull it up.'

"Pull it up! I didn't understand. 'Why,' I protested, 'it hasn't had any beans on it yet.'

" 'Pull it up,' grandfather repeated sternly.

"I obeyed, and I can feel right now how it tore my flesh as the white roots came out of the earth.

"He took the plant in his hand. He was tender now. He touched it gently. 'War has descended on this living plant. It will never have any beans now.' He pinched it slowly into bits as if he feared I might replant it and so invalidate this graphic example of his convictions. He turned and trod heavily ahead of the lantern.

"We were both in bed when father and mother came home. And I don't remember that I ever had another long talk with grandfather.

"But that object lesson has affected the whole course of my life. Because from it I have studied sociology, economics, and law, political science, history, and all the great religions. I have been trying to find out why the adult world of apparently enlightened intelligence continues to condone the outrage of war.

"During the twenties I coasted mostly on the smooth-going of inflated times. I know I never thought as far as to conclude that grandfather had been wrong without the sick feeling at the bottom of my subconscious mind that he was entirely right and that something else was wrong, terribly, terribly wrong. But mostly I did not think as far as a conclusion. I was too busy.

"But when things began to go to the bad it took me the briefest possible time to switch back to that moment in the lantern-lit

garden and my beloved bean plant in grandfather's trembling palm. "When I learned at the age of thirty-five that grandfather had left his very small fortune to me, that he had planned I should not receive it or even know of it until that mature age, I at last realized that the incident of the bean plant had had a deep meaning for both grandfather and me. He had learned something by means of living to a very old age. No mortal, he knew, had ever passed on his hard won knowledge to another by wish or word of his own. But somehow he must cause me to become the heir of what he had in his mind. He had already set his heart on me as a likely medium. There remained for him to place upon my life the indelible stamp that would give him assurance. What he did that night he did with premeditation. Some dramatic moment was his only recourse. There was not a single request or recommendation embodied in his will.

"And grandfather was right. Grandfather still lives in my boyhood garden. I used the money he left me to transmute the degrees I had acquired into usable material of co-ordinated thought and first-hand knowledge. I am starting out now to discover where the gleam of that lantern leads me. The most prized bit of equipment I take with me is the light I see in the old man's eyes. It speaks plainly a very profound truth.

"It is that peace and the great glory of a great nation are tender plants that must be planted and watered and tended with great love in order to bear fruit. I know that intelligence put to this purpose can produce miracles without limit. Think of what a Burbank in the beautiful garden of our enlightened posterity will produce in the way of flowering humanity."

Stanley paused and looked inquiringly at each of us listeners. "There will be Burbanks," he said conclusively. "I shall be the great grandfather of at least one of them."

The company broke up almost immediately after Stanley left. It was as if the electric current had been switched off. We needed to think, not talk.

THE FLAME OF INTELLECT – *Leoline L. Wright*

As one candle-flame will light many others while remaining itself undiminished, so was man's mentality mystically enkindled by our more advanced divine Brothers. Symbolically we can regard the prepared animal-physical vehicle of man as the candle, and this aggregated host of higher Beings as a great Spiritual Flame. Descending to earth, this host of divine Beings who had once been men brought *mystically* to the waiting vehicles the flame of Divine Mind. The latent faculties of the animal-man were kindled into the first feeble spark of intellect.

— *Reincarnation, A Lost Chord in Modern Thought*

MAN'S ESSENTIAL NATURE — *L. Ram Sahijpal*

Man's present earth life is not for ever, and his earthly belongings and affairs which engage him day and night, and which are, no doubt, quite necessary to him to a certain extent, are not his everlastingly after all. It would indeed be worth his while to dedicate some of his time, however little, frequently and periodically to the study of the spiritual side of his being.

One of the many virtuous things pertaining to his eternal life and one the study of which should interest him, is his "Essential Nature." At present he knows very little of "who he is," and the realization of his real nature that will come to him in time if he perseveres with self-study and self-discipline will indeed be his real and eternal possession and companion, for it is a high mark in man's spiritual unfoldment, that follows strictly according to occult laws the promotion of the spiritual fabric of his soul.

Religions teach that man is the child of God, the Father, the Spirit, who is omnipotent, omniscient, and omnipresent. Certainly, then, if man is the child of God he must be an infant-god; and if God, the Spirit, is omnipresent, God must be present not only everywhere in the heavens above but also everywhere on earth; the very environment in which man stands or exists must be pervaded by God, and the very space that his body fills must be permeated too. Yes, God, the subtle Spiritual-self pervades the heart of every atom and organ of man's constitution.

Whilst the fact remains that the "Divine Self" is everywhere in and around man, the greatest importance is to be attached to the Holy Presence in his heart-mind organ alone, because it, the latter, is the originant of the whole of his earthly constitution and no part of man is so directly, entirely, and continuously

connected with his life-activities on earth as is his mind. In fact it is the real or inner man who controls, during life on earth, the whole of the movements of the physical or outer man. Theosophy, the Ancient Wisdom, which is a synthesis of religion, science, and philosophy, teaches that the outer man is rooted in the inner man, the intermediate self, the mind; and this latter in turn is rooted in the spiritual background of the "Divine Presence" — the "Universal Divine Self" that pervades the inmost core of man's heart-mind organ. Thus in its profoundest wisdom it promulgates that the fundamental nature of man is divine, or that man is a divine being in his "Essential Nature."

Man is a divine prince even though he knows it not, and in his heart there is "Heaven," in which his God, the Father, resides. This is literally true if the terms "Heaven" and "God" be interpreted esoterically, but though these terms are familiar to all, their inmost significance escapes many. O brother man! why not search out the Truth! Let us see what Theosophy can tell us about these mystic terms. In the heart-core of the human mind there is an invisible mystic Center, made of very highly ethereal substance and lit with dark light. Because of its invisibility, the height of its ethereal attributes, and the sacred significance of its being the maker and ruler, as explained previously, of the physical man, a part of earth, hence earth, this mystic center is maintained to stand above the latter, and is called by esotericists of all ages, by the mystic name "Heaven," meaning the invisible ethereal center, the causal realm whence the man of clay has sprung. The dark light within this center, the "Heaven" in man, is the invisible presence of the Universal Divine-consciousness-essence. Because it, the latter, lights, or inspires and stimulates, the heart-mind, "Heaven," to action, it is called God, the supreme maker and ruler of man, the child; and because it permeates that center it is called "God in Heaven." So, there it is, O dear reader,

that "God" who is known to be in "Heaven," and in the search for whom man looks skyward, lies in the inmost core of his own heart and mind, because the latter is indeed that "Heaven" in the case of man. It would certainly have been the right step taken by him if he had looked heartward to commune with his "Maker." Furthermore, prayers, if heart-felt and sincere are, no doubt, a good means to evoke the Holy Spirit within the heart for Communion, but the *practical* life of pure thoughts, kind and helpful words, and the holy deeds of Universal love and compassion for all that lives, win very rapidly, if not instantaneously and automatically, the Holy Communion of Divine Self.

Such is, in brief, the sacred teaching of Theosophy, the Wisdom of the Gods, concerning the "Essential Nature" of man and the basic rules of moral conduct to reach this sublime state.

The Theosophical Forum

THEOSOPHISTS AND PRAYER – *G. de Purucker*

Pray not to the gods, for hearing they may not act; for the gods themselves are held within the bonds of cosmic law from which they may not vary. Our prayers spring from our ignorance and weakness: ignorance of our own most real needs, and weakness because we want others to do things for us that we lack courage or will to begin to do for ourselves.

I pity those poor hearts who in their simplicity think that by praying to Almighty God their prayers will be answered. Just think it over. What is the reason that so many people like to pray? They really know by experience that their prayers are unanswered. But this is why they like to pray: because it brings peace, because it brings a sense of throwing their burdens upon some other; likewise because it strengthens the ineradicable feeling of the human heart that there are spiritual powers of enormous — what may I say? — enormous constant activity in the world, and that by thinking towards these beings, we come in touch with them.

Yes, it is thus far true. And were every prayer a yearning to come into closer contact with these spiritual powers, it would be beautiful. But change the picture: Two armies meet for mutual slaughter, destruction, each side sending petitions to Almighty God for victory for its own army. Don't you see something horribly blasphemous in this, an utter lack of understanding of the divine character of the governance of the Universe?

It is the petitionary prayer that Theosophists disbelieve in: the asking God Almighty for physical and other benefits which the petitioner is either too lazy or too indifferent to his duties to endeavor to secure for himself. Such prayers are often downright

immoral, secretly or even openly; as when one prays to God Almighty for selfish advantages over one's fellows.

But oh, how the human heart longs for compassion, for sympathy, for beauty, for the understanding handclasp of someone else; and we realize from our studies and our intuitions, we keenly realize the living reality of great spiritual powers in the universe, surrounding us constantly, and our infinitely faithful allies and helpers when we strive to raise ourselves spiritually and intellectually towards them. Thus we Theosophists have something oh so much more beautiful and noble than prayers to non-hearing divinities. We have something incomparably closer to our human hearts and souls, something wondrously beautiful, gentle, compassionate, always listening, always helping: the Brotherhood of Compassion and Wisdom. This Brotherhood extends upwards from us men in an unbroken chain to the chelas and the Masters, and on to the very heights of the ethery spaces. I know not how high the Hierarchy runs, certainly as high as the highest peaks of our own Galaxy; and it is along this stairway that the chela, the disciple, climbs up, up, up forever more. And marvelous tale of occult meaning, he climbs most fast, most quickly, whose hand of compassion is extended backwards in help to those behind himself. Isn't that a strange marvel?

It is these Helpers of humanity, the Masters and their chelas, and those above the Masters, who extend to us constantly the help of their always pitiful hearts, their strength, marvelous as it is, yet given to us freely. And they are very wise in their giving, for the help they give is rarely known. "Let not thy left hand know what thy right hand doeth." I could tell you some of the things that the Helpers do for men, unseen, unknown, even by the recipients of their compassionate bounty and benevolence: lives saved in many a way, disasters prevented in many a way; those disasters which cannot be prevented, because invoked by man's own

egoism and evil-doing, softened so that their asperities and harshnesses hurt men less. Things like these are done constantly, and we men know little or naught of it. We simply see the results. This is why this Hierarchy of Compassion is called the Guardian Wall around men.

The selfish and lazy who make no efforts to regenerate their own lives do not climb the stairway leading to the Hierarchy of Compassion. Paradoxically, it is those asking the most who as a rule give the least. What gift is greater than a man's heart, than *himself*? Show me something nobler than that, something more practical, something that will bring about results more quickly. Why, do you know what is the matter with the world today? Men are distracted because of their own weaknesses; they have not will-power even to pursue a single path for a week at a time, or a month, still less a year. Their wills are asleep, their minds are weakened from lack of exercise and from depending upon help from without, their spirit within them has no chance to spread its wings and soar.

To say that Theosophists disbelieve in prayer is a misunderstanding of the Theosophical attitude. But most prayer, unfortunately, is petitionary, disguised or open, and prayer in this sense weakens the character. If I were the Christian God Almighty, I would say to the one who prays thus: "Son, you have the truth enshrined in your own heart. You have been taught it. Get upon your feet and *be*." The most beautiful prayer is aspiration transmuted into action. Then you have the real man, the real woman. No Theosophists through the ages have ever objected to prayer if it consist in inner aspiration, the will towards self-regeneration to spiritual things, and the transmuting of this inner attitude of the soul into positive action on earth. Where you have this prayer-inaction then the whole life becomes filled with the prayer of the Avatara Jesus: "Not my will, but thine

be done!"

The Theosophical Forum

HOW ARE WE REBORN? — *L. Gordon Plummer*

The case for rebirth has been elaborated from time to time by Theosophical writers, and it has been pointed out clearly that the teaching of Reincarnation is one which appeals to every thinking man and woman. Who of us that has ideals and a love for humanity does not welcome the prospect of returning to take up the work we love? And who of us supposes that it is possible to accomplish all that we would like to in the short span of one earth-life? And who can fail to note the response to the challenge of the times, when the world hungers as never before for the facts concerning life and death? This response is Theosophical teaching. In this article the effort will be made to elaborate the "How" of rebirth.

By way of preface, we should point out that a clear understanding of the nature of the universe about us is imperative. The first step cannot be achieved until we recognise that the universe is a living organism — *alive* in every respect. For, were the universe a dead conglomeration of matter, it would be unable to support life anywhere, and we know that life is all about us on this earth at least. We must see all things as manifestations of life under varying conditions. We cannot see life, we see but its manifestations. This is only another way of saying that we live in a universe of phenomena, a universe of effects. It is impossible, however, to separate a cause from an effect, or vice versa, so that where we have a universe of effects (our visible, physical universe), there must be a universe of causes. This establishes a dual Cosmos, and eliminates at a stroke the old idea of a special creation. The idea of an extra-cosmic God is untenable. For if God is the cause of all that is, how can He be separated from the effects of his work? If we must hold to the idea of God, let us think

of him as Cosmic Life, or the Universe of Causes.

Man is a child of Nature, and as such, he must resemble his parent. And as the Universe is twofold in the sense that in one aspect it is a universe of cause, and in the other, a universe of effect, it follows that man in his turn is a being of cause and effect. This brings to mind the now well-known teaching of Karman, or the Law of Cause and Effect. When we say that each man is his own karman, we may interpret this in two manners. First as the twofold being just referred to, the outer phenomenal man of effects, and the inner man of causes, and secondly, in the sense that at any given moment a man is the sum-total, or the result, or the effect, of all that he has been in the past, and at the same time, he is the cause of all that he is destined to be in the future. Thus, he is his own cause and effect — his own karman.

Now, there is a ceaseless interplay going on between the Causal and the Phenomenal universes, and it might be stated in a very crude way that life and death are merely the transfer of the man from one universe to the other. In life, the man is in the phenomenal universe, and in death, he has returned to the subjective universe of causes, only to reissue at some future time, and enter once more the arena of earth-life. But there is a great deal more to it than that. In the first place, we must set aside the idea that life and death are opposites. The opposite of death is birth, and both are gateways in Life, one leading into and the other out of our phenomenal universe. But Life is eternal and all permeant, and we must endeavor to understand just what entrance into a universe of Causes implies. To do so, we must consider the relation between the subjective and the objective in Nature.

When we speak of things subjective, we are prone to consider them as being somewhat fanciful and unreal. If we hear of a man

having had some horrible subjective experience, we are apt to pass it lightly by, and say, "Poor fellow, but it might have been much worse, and he will soon get over it," little realizing that an inner experience can change a whole life. Again, when we speak of subjective worlds, we think of them as worlds of fancy only, as though they were there in a sense, but quite unreal. When the facts are understood, we realize however, that the subjective, or causal universe is the real universe, without which there would be no physical universe at all. We can illustrate this best perhaps, by considering a book. What is a book? Is it the binding, or the type, or the pages, or even the words on the pages? These indeed make the volume, the object, but the real book is the subject matter of the volume, the message that is being given out. It may be in the form of information, or it may be a story, but whatever it is, the subject-matter of the book is the only justification for the book having been published at all. Without it the book would be a meaningless jumble of words. The real book consists of the ideas that are couched in words, and imbodyed in the bound volume. So true is this that were all the books in the world destroyed, knowledge would live on, and there would always be the possibility for new books. Thus it is with this subjective universe. The causes arising out of the subjective universe are seen on the physical plane as our environment, and circumstances, and this physical world exists only because there is a continual outpouring of energy from the inner planes, resulting in outer phenomena. In like manner, man is a continual outpouring of energy from the inner reaches of his being. And this thought leads us to the main theme, the constitution of man as an integral part of the universe.

In the first place, we know that we are much more than a mere body, a mere bundle of senses. We have minds, we have inspirations and aspirations, we have desires and emotions, and we will ignore at the outset the idea that these are the results of

ferments going on in the brain cells. Let us rather reach upwards and inwards in thought toward a true understanding of ourselves, commencing with the body — only because it is the most obvious part of our makeup.

One of the first things that comes to our notice when we study physiology is that there is a marked resemblance between all human bodies, not only in respect to general characteristics, but even in particulars, so that a surgeon, finding a certain bone or muscle in one human body, knows that he will find a corresponding bone or muscle in every human body. This suggests at once that the body is built around a certain pattern or plan, to which all human bodies conform. This pattern is called by the Theosophist the astral body, or double, and is in itself a very complex thing. For it grows, as does the physical body, which, in point of fact, grows only because it keeps pace with the astral pattern, following slavishly all changes occurring therein. All of the five senses are in reality situated in the astral body, and function in the physical only through the appropriate organs. Furthermore, diseases which rack the body and mind originate in the astral body, and this is why it is so dangerous to "dam them back" by the applications of psychological treatment, as in Christian Science, or Psychoanalysis. For the disharmonies brought about in the astral body, resulting from inharmonious thoughts in the mind, must find their outlet through the body, and if they are not led out naturally and as easily as possible, they will accumulate in the astral pattern until the stress becomes so great that they cannot be held back any longer, and the man will suffer a hundredfold. This is only natural, because it conforms to the law of human affairs here on Earth.

The Astral Light, which is the source of the materials of which the astral body is formed, is the great storehouse of men's thoughts and passions, and wars do not commence on the battlefield. They

originate in men's thoughts, and every thought of selfishness and avarice and hatred adds to the stress and strain, until finally the forces break through, and war results. The only way to cure these things is to reconstruct the thought-life of humanity by right education. As a man thinketh so is he.

The physical body is built around the model or pattern body, and is sustained as long as life lasts, or as long as there is vitality. This establishes another factor in the makeup of man, for these three, Vitality, the Astral Pattern, and the Physical Body, are intimately corporealized, building what Paul the Initiate called *Body*, when he divided man's nature into three — Body, Soul, and Spirit. Now, this triune entity, the vital-astral-physical portion of the man, is in reality the playground (or it may be, the battlefield) of man's life, and is in itself neither good nor evil, being but an instrument, built by the man for his use while here on Earth. It has the power to act as an entity, being endowed with a life of its own, and knows what it wants. It manifests the will to live, the desire for sensation; and just here, we have a fourth factor, or principle in the constitution of man — Desire.

Of course, the word desire is a very general term, and works under many aspects. It can be the almost automatic desire for life, or the instinct of self-preservation, or it can be the more deliberate desire to possess. Again it may take the form of the desire to be, rather than to have, and this may be ambition pure and simple, or it may be the natural expression of the evolutionary urge to grow. Again, desire in its highest form is aspiration, as being a self-conscious and deliberate choice of becoming a servant of the higher Law for the benefit of humanity. But however it may appear, it stands behind the will to live, and is the motivating power not in man alone, but throughout Nature. But Desire cannot function at its best unless it is guided by the Mind, a fifth factor in the constitution of man and that which

places him evolutionarily above the beasts. It is in the mind that arises the feeling of "I am I." But the mind is not to be thought of as the apex of man's development, for intellect is not necessarily intelligence. Intellect is a technique of the mind, whereas intelligence is a quality of the Spirit. Without the warming influence of spiritual intelligence, a man may be a brute, a cold, heartless intellect ruling a clever personality and body, a menace to society. The heartlight of the spirit is a direct emanation of the Divine within man, his Inner God.

As it helps sometimes to bring home more forcibly to our minds the import of these teachings if they are placed before us in diagrammatical form, we shall now tabulate them as far as they have been enumerated, but shall do so with the warning that a tabulation or a diagram is not a picture of a thing, but merely the setting forth, in a clearer way perhaps, of the principles involved in the life of a man, or whatever else we may be studying at the time.

Divinity ————— The Inner God
Spiritual Intelligence — The Higher Self
Mind ————— The Higher Self / The Lower Self
Desire ————— The Lower Self
Vitality
Astral Pattern
Physical Body

It may be well to point out that it is the union of the mind with the spiritual intelligence which forms what in Theosophical parlance is called the Higher Self, the seat of all the finer qualities of the man, and the source of true understanding, for all knowledge is locked up within the heart of man, and education in spiritual matters is merely a bringing to the mind the things that are really his, and the process of learning is in reality a process of

recognition. The Higher Self is the Teacher within, and is the Highest Teacher a man can have. All true teachers point the way toward a recognition of the Teacher within, for having once found him, an "outer" teacher is no longer necessary. The Higher Self becomes a reality to us when we realize that we can become one with its consciousness which is compassion, pure selfless joy, spiritual understanding, and utter peace. The Lower Self, on the contrary, is the union between the mind and the Desire principle, and is the source of disharmony, because its life is essentially selfish, and it is a natural law that to work for self is to court disappointment. The mind, which is the focus of consciousness of the man is torn between these opposing forces, drawn upward into the realms of spiritual feeling at times, and pulled down again into the irritating atmosphere of selfishness. And this is no metaphor — it is actual Theosophical Teaching as it has been given us by our Teachers.

And it is just here that we have the basis for ethics. When we are taught that if we wish the highest experiences possible for us to have in Death, we must live rightly, it is simply because we have to ally ourselves with one or the other of the forces above and below us. If we ally ourselves with the Spirit within, we naturally rise with it to its own wonderful home to which it returns after the death of the body; and there is no effort to do so, because our nature is akin to its own, we are a part of it. If, on the other hand, we choose to ally ourselves with the personal, selfish side of our natures, we breathe the heavy atmosphere of the Lower Self which cannot arise to those supernal heights to which the Soul belongs, and so we are held back in the dross and slime of the astral world until we are able after much labor to free ourselves, and this is always a painful process. What it all amounts to is that we can do most of our dying here on Earth, and leap forward and upward when released from the body. This, however, is the

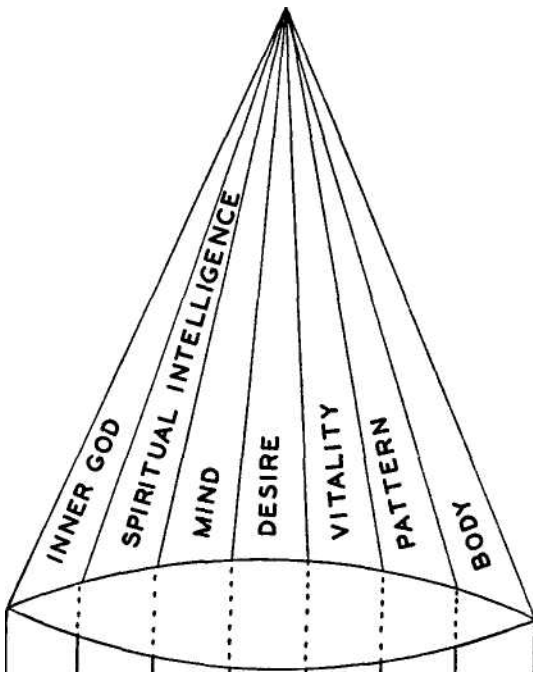

reward of a life well lived; a life of devotion to a noble work, a life spent in service to others.

It is our intention to be a little more explicit as to the actual processes involved in the passage in and out of earth-life, and in doing so we must point out that death is essentially returning everything we have to Nature, and Life on Earth is essentially borrowing from Nature the materials we need for the building of the very complex vehicles that go to make up our bodies and personalities. What is the real man? He cannot be at once the thing that he is and the thing that he possesses. He possesses and uses his body, his mind; he speaks even of his spirit, as though implying possession, and his Divinity, as though he manifests through even that. He is, after all, a spark of That, the Boundless, higher in essence than all of the component parts of his constitution, not even excepting his Divinity. The real man, the spark of consciousness, functions through the human constitution as a whole, and any one of the seven principles in particular. At the present time it is natural for the stream of consciousness to flow through the mind-portion of the constitution with greater force than through any other principle, and evolution will in time work a change in him so that he will naturally focus his energies in and through the Spiritual portion of his being, and finally through the Divinity. This spark of That is deathless, and never loses contact with the Boundless, but it comes and goes, gathering materials on its way to the Earth from the planes of consciousness of which the universe is composed, and on the return journey to the Heart of things, it returns to Nature the materials which it had formerly gathered together for the purposes of manifested life.

Each one of our principles has a cosmic source. This is easy to understand in the case of the body which we know is built of the materials of the earth, the food we eat, the air we breathe, and so on. The mind of man is derived from the Cosmic Mind, the Spirit

of man is one with the higher realms where the gods abide, and the Divinity within man sprung from Cosmic Deity. Let us think then of the Spark of the Boundless which is to manifest as a man, as acting like a lens with which we can focus the rays of the sun, forming a true image of the sun, and which is composed of sunlight throughout. The rays of light are in no wise different from the light coming from the sun, for it is the same light, bent so as to form an image. And just as the light from the sun is sevenfold, consisting as it does of the seven colors, so is the light forming the image sevenfold, and may be broken into the seven spectral colors. The following diagram will help us to realize that every one of the seven principles of Man has a Cosmic origin. The earth is the cosmic origin of the body, the astral plane is the cosmic origin of the astral pattern. And the human vitality is simply a part of Cosmic Electricity, which manifests in so many ways. Some of the manifestations of Cosmic Electricity are: life, light, gravitation, electricity, magnetism, all instances of this one force acting on various planes. Then Desire is awakened in us, because everywhere there is the cosmic urge to become. It is this urge which brought the worlds into being, so that they, like man himself, are streams of cosmic energy flowing into this plane from other, invisible planes of life. The mind of man then came from Cosmic Mind, or rather, we should say, the mind stuff in which we clothe our ideas, sending them forth as thoughts, is the same as that of which the Cosmic Mind is composed. Then the spiritual intelligence is in reality an embryo god, and its natural home is the god-world, toward which it journeys during the after-death state, carrying us with it, if we are of the stuff that can rise with it to those supernal realms. And lastly, the Divinity within man is a spark of the Cosmic Deity — in no sense of the word "God" as a personalized entity, but the exhaustless fountain of all that is: but one remove from That.

We may see in our diagram that imbodyed life is like the light passing through the lens, and that man is therefore but a focused image of the universe. His principles bear somewhat the same relation to the Cosmic planes, from which they were derived, that lights bear to Light, beings to Being, sounds to Sound, thoughts to Thought, and so on. None of them could exist for a moment without their cosmic counterparts, for on them they rely for sustenance and maintenance. So Death is somewhat like passing back through the lens, each of the principles becoming one with its source. And rebirth is a new focusing of the image.

How fortunate for us if we can so ally ourselves with the spiritual and the Divine within ourselves that we can enter the unutterable glory which companionship with the Gods alone can bring. And it depends upon ourselves entirely. We make of ourselves exactly what we are. We are just where we belong. There is no such thing as being out of place in the universe, for wherever we are, we belong; we have placed ourselves there; and the secret of mounting the ladder of Cosmic Being is to mount the ladder

within, whose rungs are the human principles herein dealt with. When we learn how consciously to focus all our energies in the God Within, then it is easy to learn to know the inner worlds, because the Inner God has its natural home in those inner worlds, and it is merely a matter of "going home" whenever the call comes to do so. That is why Theosophy is so practical. Is it not worth a little study?

The Theosophical Forum

SYMPATHY WITH NATURE — *H. T. Edge*

What may be called the scientific age began (roughly) somewhere about the time of Francis Bacon, and has been characterized by a view which looked upon man as a being living in a world of dead matter and mechanical forces entirely external to himself.

Whereas in other times this sharp separation between man and his world did not exist, but man was regarded as being part of nature, and nature was regarded as being alive, sentient, responsive. This view was regarded by the scientific age as superstitious, supernatural, poetic, sentimental.

We are now showing signs of a return to the older view.

Whatever people's theories may be, their actual experience has never failed to give support to the older view. Certain people have a natural sympathy with certain objects, certain kinds of materials: it may be with plants and trees, it may be with wood or metal; or with fluids or chemicals or electricity or dry goods, or what not. These people are able to handle their materials and to evoke sympathetic response therefrom, where other people fail to do so. Such sympathies can be indicated by astrologers in the horoscope. Again, we find that we establish a sympathy or mutual understanding or friendship with our own tools — typewriter, razor, pen — and are reluctant to lend them for use by strange hands. We may be ashamed to speak of these things, and may treat the matter jocularly — the perversity of inanimate objects, and so forth; but nevertheless we are guided by them.

If it is the animal kingdom that is spoken of, then no one has any doubt that the animals respond sympathetically, so that one man may be able to handle dogs, horses, etc., and another not.

Descending a degree we come to the plant kingdom. Some people

can make anything grow anywhere; some people seem to have a deadly influence on plants. In the mineral kingdom, the world of so-called inanimate matter, the responsiveness there is even less, but still there is response; the question is one of degree, and there is nowhere that we can draw a sharp line.

Theosophists speak of elementals, without having particularly clear-cut ideas of what they mean. These are beings with a certain limited amount of intelligence, which operate in nature and are essential for the workings of things. They fit in very well in the gap left by the scientific explanation of the universe; for science measures the operations of forces but does not know the origin of the forces.

In this view, the material world ceases to be so much dead matter outside of ourselves, and becomes a member of the great family of living beings. We can get into sympathetic relation with it. There can be no doubt that, by living with a wrong idea of nature, we have thereby shut ourselves out from much knowledge; but it follows that, once we have begun to entertain a juster view, we shall enter a path that will reveal to us things we did not see before.

The Theosophical Forum

THEOSOPHICAL ENCYCLOPEDIA GLOSSARY

[Some years ago THE THEOSOPHICAL FORUM mentioned that preparations were under way for the publication of an Encyclopedic Glossary of Theosophical Terms. Our readers will be glad to know that this work has been steadily going forward during the ensuing years and is now nearing completion. The material, which will probably fill several volumes, covers the whole exoteric field of ancient and modern Occultism and Theosophy, including mythology, anthropology, cosmogony, symbolism, the ancient Mysteries and allied subjects, and will prove to be an exhaustive mine of philosophical, religious, and scientific information. The work of writing and compilation has been carried on by a group of students at the General Offices. Dr. de Purucker has then carefully checked the definitions and in many cases added new and valuable material.

It is too early to state when this Encyclopedic Glossary will be published, but the FORUM Editors have obtained permission to share with readers of our magazine extracts from this forthcoming work. No effort has here been made to follow any special sequence of arrangement, but random pages have been purposely chosen. — Eds.]

ESSENES

Described by Josephus as one of three principal sects among Jews about the middle of the second century b. c, and later. The name is probably a derivative from the Hebrew (*asa*) to heal; the title Healer being often found as equivalent to Savior or Teacher. (Cf. *Therapeutae*.) They were a Jewish Theosophical Society of a kind, rather exclusive, and adhering to Jewish tradition in some

respects, though regarded as heretical in others. They had an organization peculiar to themselves; their cardinal principles were active benevolence and self-discipline. They had an esoteric school guarded by secrecy, and accessible through novitiate and degrees. It seems likely that they were originally diffused, but later compelled by troublous times to segregate themselves. Josephus, describing the rule of a community, gives us a picture of a tranquil life, divided between practical avocations, assemblies, and ritual observances. Their teachings were in some respects quite Theosophical. They had received at least portions of the Secret Doctrine from some one or other of the then existing foci, and were doing their best, aided by Jewish tenacity, to keep alive the true Gnosis and its realization in practical life, in an age of general dissolution.

AURA

Greek and Latin, originally meaning a "breeze" or "air." A subtil invisible essence or fluid emanating from and surrounding beings, both those we call animate and those usually classed as inanimate. To the eyes of clairvoyants the human aura appears as a halo of light, variously colored according to the temperament or momentary psychic and mental condition of the individual. Since everything in the universe is a center of living energies of one kind or another, it must necessarily be surrounded by what science would call a field of force, representing its radiations into the surrounding space and upon all objects within its sphere of influence. The question whether such influence is visible or invisible, subtil or gross, depends upon the viewpoint from which it is considered, and must be regarded in a relative sense. The human being is of a composite nature, and his aura will, therefore, be composite, including astral-vital emanations, psycho-mental, and spiritual, and any of these may be perceptible according to the plane on which the perceiver is able to function.

But the aura, even though not commonly visible to our eyes, is nevertheless perceptible by the effects which it produces upon those subtil senses which we all possess in addition to the conventional five. By the auras of persons we are affected, both consciously and unconsciously, and thus is explained the influence which people exercise on each other. Such influence may be conscious or not; and, if conscious, or non-conscious, may be exerted beneficently or with evil intent and effect. Those able to discern the aura may be enabled to estimate the character and disposition of another. Animals are in some ways far more sensitive to auras than we.

Auras also emanate from so-called inorganic substances; we have a familiar example in magnetic substances, and the subject has been investigated in connexion with different bodies by Reichenbach and others, whose researches show that these emanations are bipolar as is ordinary magnetism. In general, an aura may be considered as the sphere of influence of a center of energy, consisting not merely of the space but of that which occupies it, namely as electricity, magnetism, or force-substance (for want of a better name). The phenomena of animal magnetism, investigated by Mesmer, illustrate this; for his magnetic fluid was a reality and not merely an effect on the imagination of his patients. The aura which thus pours forth from the living center of energy or the individual is a subtil invisible essence or fluid emanating from such center. It is in actuality a psychic-mental effluvium, and in its higher parts is a direct manifestation of the akasic portion of the auric egg surrounding every individual.

SAMÂDHI

"A compound word formed of *sam*, meaning "with" or "together"; *â*, meaning "towards"; and the verbal root *dhâ*, signifying "to place," or "to bring"; hence *Samâdhi*, meaning "to direct towards,"

generally meaning, therefore, to combine the faculties of the mind with a direction towards an object. Hence, intense contemplation or profound meditation, with the consciousness directed to the spiritual. It is the highest form of self-possession, in the sense of collecting all the faculties of the constitution towards reaching union or quasi-union, long or short in time as the case may be, with the divine-spiritual. One who possesses and is accustomed to use this power has complete, absolute, control over all his faculties, and is, therefore, said to be, as above hinted, "completely *self-possessed*." It is the highest state of Yoga — or "Union."

"*Samâdhi*, therefore, is a compound word of exceedingly mystical and profound significance implying the complete abstraction of the percipient consciousness from all worldly, or exterior, or even mental concerns or attributes, and its absorption into, or perhaps better, its becoming the pure unadulterate, undilute super-consciousness of the god within. In other words, *Samâdhi* is self-conscious union with the Spiritual Monad of the human constitution. *Samâdhi* is the eighth or final stage of genuine occult Yoga, and can be attained at any time by the initiate without conscious recourse to the other phases or practices of Yoga enumerated in Oriental works, and which other and inferior practices are often misleading, in some cases distinctly injurious, and at the best mere props or aids in the attaining of complete mental abstraction from worldly concerns. . . .

"It may be observed, and should be carefully taken note of by the student, that when the initiate has attained *Samâdhi* he becomes practically omniscient for the Solar Universe in which he dwells, because his consciousness is functioning at the time in the spiritual-causal worlds. All knowledge is then to him like an open page because he is self-consciously conscious, to use a rather awkward phrase, of Nature's inner and spiritual realms, the

reason being that his consciousness has become kosmic in its reaches." (*Occult Glossary*, 156-8)

Bodhi or "Enlightenment" is likewise the name of a particular state of Samâdhi, during which the subject reaches the culmination of spiritual knowledge. Samâdhi is septenary; its highest stage or degree is called Turîya. Samadhi is the highest state on earth that can be reached while in the body. To attain beyond this, the Initiate must have become a Nirmânakâya.

CATACOMBS

Subterranean caverns and galleries, of which some of the most celebrated are those extensive systems beneath buildings, in and around Rome and elsewhere. These were constructed for sepulture, but such was not the original purpose of many in other parts of the world, though many of these also were later used for burial and hence contain bones. The original purpose of this latter class was for them to be used as secret temples for the enactment of initiatory rites. Says *The Secret Doctrine*, II, 379: "There were numerous catacombs in Egypt and Chaldea, some of them of a very vast extent. The most renowned of them were the subterranean crypts of Memphis and Thebes. The former, beginning on the western side of the Nile, extended towards the Libyan desert, and were known as the *Serpent's* catacombs, or passages. It was there that were performed the sacred mysteries of the *kuklos anankes*, the "Unavoidable Cycle," more generally known as "the circle of necessity"; the inexorable doom imposed upon every soul after the bodily death, and when it has been judged in the Amenthian region."

"SOUNDING BRASS" — *Martyn A. Witter*

"Though I speak with the tongues of men and angels, and have not charity, I am become as sounding brass, or a tinkling cymbal."

A great scholar may be able to deliver a very learned lecture upon Parabrahman and Brahma and yet if that scholar has not developed a genuine love for all men his words are as sounding brass. There is something that speaks through a man in a powerful language that leaves words and logic far behind, and that is the real nature of the man who speaks.

It is one thing to have an intellectual grasp of our starry science and another thing to have an intuitive grasp. The intellect compares while the intuition realizes. The latter can come only in proportion as one places the good of mankind above one's own good, and as one rises above the capability of sending out thoughts tinged with shaded animosity and cynicism. One may agree in an intellectual manner with the whole of the ethical doctrines implied in *The Voice of the Silence* and yet daily and even hourly send forth thoughts of shaded animosity toward those who disagree with him. This may be done without any feeling of inner conflict or the injustice of it all. It is the pursuance of the horrible doctrine that the end justifies the means. When such a doctrine is followed even unknowingly, the result is invariably disastrous in that the means soon displace the original end.

Intellect without a guiding light can be ruthless in manipulating ethics to fit its purposes. It can be blind to all other lights but its own. However, again intellect can, if galvanized into action by the Buddhic principle, be a useful instrument and a continual source

of inspiration to others.

It is the duty of all Theosophists to put intellect in its place and to realize that what matters is not theory but Brotherhood. It is only by attaining proficiency in the science of sciences — ETHICS — that one can travel the path of the Gods. While the Theosophical Movement is not meant to be a nursery for adepts, yet if it is to take the first step towards bettering the conditions of humanity it must have inherent in its actual deeds the cohesive force of toleration for differences brought about by intellectual bigotry. This cohesive force must be strong enough to hold the Theosophical Movement together for practical co-operation among its component elements. Otherwise it will become mired through lack of recognition of the limitations of its own creations which have had their birth largely through the intellect. If the Theosophical Movement does not attain cohesiveness, its voice will be as sounding brass to the world though our teachings are those of the Gods.

"If thou would'st not be slain by them, then must thou harmless make thy own creations, the children of thy thoughts, unseen, impalpable, that swarm round humankind, the progeny and heirs to man and his terrestrial spoils."

The Theosophical Forum

QUESTIONS AND ANSWERS

Complexities of the Karman of Disease

Since disease is of a specific nature, such as blindness, paralysis, cancer, etc., is it known to Theosophists what type of ill-doing, or misdeeds, or "bad karma" would be responsible for each of these specified diseases? — *C. C. C.*

L. R. — As the available Theosophical literature does not make a differential diagnosis of the various diseases and give their occult causes, the "Theosophists" can hardly presume to do so. Any disease concerns a man's karman, past and present, as well as his physical, mental, psychic, and moral condition, his relation to other persons, his financial affairs, his habits, his temperament, his astrological position, the cycles which timed all the factors, etc. — no two cases alike. Evidently, the Lipikas are the only ones who can read the record. To come down to cases, however, the literature speaks of the many Westerners who today are seeking to gain "psychic powers," etc., by Hatha-Yoga methods of abnormal regulation of the breath and certain postures. The motive is usually one of some phase of self-interest, often at the expense of others' welfare. The result is a disturbance of the delicate balance of the dynamic forces which regulate and harmonize the various functions of the whole body. This tampering with the vital breath and nerve force brings about a disorder which gets out of control, and too often ends in tuberculosis or insanity. Again, consider the general mental and physical high tension of modern life, unrelieved by time and place of inner calm and moral peace for the real man within the body. Naturally, the trillions of body cells vibrate with the quality of the conscious man, and they may run riot at some point to pile

up in a purposeless, functionless cancerous tumor. Or the fine-grained cells of heart and brain may degenerate for lack of the finer and nobler impulses which are the normal tonic of civilized tissues. These facts are more evident to a layman under an honest self-analysis than they are under the expert's microscope or in the laboratory test-tube. Meantime, these generalities do not explain so complex a problem as the karma of an individual case, of which we must "judge not."

Conscious Electricity

In the Table of Contents of Vol. I of *The Secret Doctrine* (original edition), as a sub-title under "Stanza 3, the Awakening of Kosmos," is the following: "Conscious Electricity: Fohat . . . [page] 85." Turning to p. 85, this phrase also appears as the page-heading. I do not find, however, the phrase "conscious electricity" in the text either on page 85 or elsewhere in *The Secret Doctrine*. Is it to be understood, therefore, that the usage of the phrase "conscious electricity" in the Table of Contents and as page-heading is incorrect?

J. H. Fussell — By no means, for while the actual phrase "conscious electricity" is not employed in the text, the idea is plainly there, namely, that electricity is conscious. For instance, in the following (*S. D.*, I, p. 85): "Some faint idea of the nature of Fohat may be gathered from the appellation "Cosmic Electricity" sometimes applied to it; but to the commonly known property of electricity must, in this case, be added others, namely, intelligence." How can intelligence be conceived as apart from consciousness? If intelligence be predicated of electricity, so also must consciousness be predicated. Hence the employment of the phrase "conscious electricity" in the Table of Contents, and as a page head-line is entirely correct. Not only is this a teaching of the

Secret Doctrine of Antiquity but our modern scientists are beginning to recognise that "consciousness is the fundamental of the universe." For instance:

Professor Max Planck: I regard consciousness as fundamental. I regard matter as derivative from consciousness. We cannot get behind consciousness. Everything that we talk about, everything that we regard as existing, postulates consciousness.

Sir James Jeans: I regard matter as derivative from consciousness, not consciousness from the material universe.

Thus the teaching of the Ancient Wisdom, not only as expounded by H. P. B. in *The Secret Doctrine* and by the Masters, but according to the greatest of our modern scientists, is that there is nothing in the Universe which does not have, or rather is not an expression of, consciousness. Thus whether we regard electricity as a force, or otherwise, it is a phase or manifestation of consciousness, and the employment of the phrase "conscious electricity" in *The Secret Doctrine* (Vol. I), in the Table of Contents, and as a head-line (I, 85) is entirely correct.

Common Sense in Study of the Bhagavad-Gita

I know I am bombarding you with questions, but when I cannot find an answer myself what is to be done? The allegory of physical combat on which the *Bhagavad-Gita* is based is hard enough to deal with, and I fear the pacifists will never agree that one could take one's brother's life whilst yet loving him, but I know what G. de P. has said about that, so I will not bother you about that, though I may mention that in a missionary tale I looked into that part of the Gita was used against the Hindus. But what I am

puzzled about is where it goes on to say: "Mankind will speak ill of thee," etc. Now my own common sense tells me, and the Masters have said, that it is our own conscience that should be listened to (which of course we should be always trying to purify) and not what mankind will say about us. So I shall be very thankful for some light on this subject. — C. C. C.

H. T. Edge — The two statements are of course inconsistent, but one must not judge of a poem as if it were a treatise. The *Bhagavad-Gita* is an episode in the great Indian epic the *Mahabharata*, and conveys its teaching rather by a series of vivid pictures than by formal instruction. In it the allegorical and direct forms alternate and are mixed up. We find the same in *The Pilgrim's Progress*, where the allegorical characters, who represent human characteristics, nevertheless often preach like a nonconformist minister of Bunyan's day; and where one of the characters dies by martyrdom without crossing the river of death. W. Q. Judge, in the Introduction to his version of the Gita, refuses to give a commentary, saying that each student must interpret for himself. The bows and arrows, chariots and conches, should not be mixed up with the exposition of the Yoga doctrine, with which Krishna follows his exposition of the Sankhya. So long as we can glean from this valuable scripture the lessons which will be useful to us, we need not vex ourselves with trying to reduce all the imagery to an exact formula.

Initiation of an Avatara

Why did Jesus, being a perfect physical body with the loaned part (psychological intermediate part) of a Master of Wisdom and overshadowed by the Atmic Ray, have to undergo a cycle of Initiation? Was he not beyond undergoing ritual ceremonies?

L. Gordon Plummer — In the first place, we must remember that this particular combination of perfect physical body, loaned psychological apparatus of a Master of Wisdom, and the Atmic Ray, which in this case is a Divinity, a God waiting and ready to manifest here on Earth, is what Dr. de Purucker calls a feat of white magic. The combination of that particular physical body with that particular psychological apparatus of that particular Master of Wisdom, and that particular waiting Divinity is a thing that had never taken place before, and will never take place again, though there have been many Avatars before Jesus' time, and there will be many in the future. Thus, these three parts of the Avatars Jesus had to learn to work together, they had to become amalgamated, we might say, into one being. This could be done only by means of the cycle of Initiation. Furthermore, we must not think of Initiation as ritual ceremony. Ceremony may play a part in some initiations, but only as an aid to the real work being done. Initiation is a conscious expansion of the intellectual and spiritual nature of the neophyte, so that he understands by firsthand experience just what goes on in the inner planes of being, and inasmuch as this waiting Divinity comes from the inner planes of being, the only way the link can be established, first between the perfect physical body and the loaned psychological apparatus, is by the potential Avatars extending his consciousness to those inner planes. Then the second and greater link must be made with the waiting Divinity, and this does not happen until the man has reached maturity. And this can only be accomplished by making use of the forces at work during the highest of the Initiations known to man. So we see that these Initiations are not a matter of mere tests, but are an actual necessity, as the Avatars could not become such without them.

WAY OF LIVING (1) — H. D. Roderick

In *The Theosophical Path* for January 1919, appealing for sanity and just settlement by negotiation of international disputes, Katherine Tingley wrote among other things passages some of which are extracted below:

The New Way must be the way of Knowledge, of Unselfishness, of Love, of Justice, and of making the principles of Theosophy absolutely pure and strong in our lives. We may preach for eternity, we may have the greatest educational systems, the greatest writers, artists, poets, we may have everything to inspire us to right action, but if we have not begun to build *within ourselves* and to feel the necessity of finding something more within ourselves than we have had in the past; unless we can become something greater and grander than ordinary men and women, and know that we are something more than merely intellectual, mere flesh and blood, we are on the Wrong Path. We must reach a point where we can feel the power of the Soul and use it for the betterment of our nation — of all nations. There must be perpetual peace. We must constantly and persistently work for it: if we do not we shall retrograde, and in a few years we shall have A WAR OF NATIONS MORE TERRIBLE THAN EVER KNOWN.

Now, twenty years after this great-hearted, great-souled Leader of the Theosophical Society delivered her message and warning to the whole world, we stand before a Frankenstein of our own making. Verily, and alas, has the voice of Theosophy been as one in a wilderness.

Many are they who have listened and who have been

intellectually entertained; few are they indeed who have consistently endeavoured to make Theosophy a living power in life. We must take our share of the responsibility therefore, for have we done that which we were asked to do? K. T. says: —

Turn to the right Path! This is my pleading: "Find yourselves! Those who have not Theosophy, seek it; those who have it, cling to it, love it — hold to its teachings and make it a living power, not only in your own lives but in the lives of all your fellow-men. The storms and trials and sorrows that we now see raging in human life are indications of the passing away of the old order of things. All that we have to do is to seize our opportunities, TO DO FAITHFULLY OUR DUTIES AS THEY LIE BEFORE US, ingrain in the very atmosphere in which we live the finer vibrations of the Higher Law, study and work, love and serve. Bid the Christos Spirit come forth and enter upon the noble work NOW — for the woes of humanity are great."

Our woes come upon us because we are ignorant of, or indifferent to, spiritual things; we live in mental states, most of our lives, no wider than a parish square, and gull ourselves into believing we are the only people who matter or have ever mattered, and that the great white Universe exists 'just for us,' 'just for ME,' perhaps: 'I' dominate all things, or if 'I' don't 'I' shall soon get the other fellow's possessions!

"The Kingdom of God is *within* you." "The Spirit dwelleth within." So declares the New Testament. So have declared the Buddha Gautama and all Teachers of men of spiritual standing; yet even so men will gull themselves that Divinity is something hypothetical outside themselves. Maybe it is convenient to believe that way; saves one bothering about it possibly. But there it is: man obviously is a composite entity, a child of Spirit and Matter;

or shall we say: Man is a soul, immortal in its higher consciousness, mortal in its bodies or lower consciousness, and in between 'higher' and 'lower' are mutations of both qualities: Can't you see this truth yourselves? Beauty and beast in every heart. Some men live wholly in the beast consciousness, bending mind in order to be a worse beast: such a one is selfishness personified. The other type, who live in the immortal part, are wholly Selfless, pure unselfishness, the beneficent ones of history (or otherwise), men who leave behind them an aeon of blessings, Love, and Laws of Compassion. The Higher Self builds; the lower self more often destroys all that sane men hold sacred.

Now then — have not we men all these things in our consciousness: i. e. have we not all the propensity to do good and evil? What then will ye? The only reason; the sole reason why people convince themselves they are worms and incurable sinners is because they have never tried (perhaps) evoking from within them any other ideas. God is a word which comes from the word of ancient usage — Goode — meaning 'The Good,' and if you tell me that man has no good in him, meaning no Godness, then I pray you have another look at yourself within; and if another look tells you that God is something entirely apart and separate from you, then be sure such a one has the craze of domination — cure him!

SANTAYANA AND THE KEY TO INTERPRETATION — *H. T. Edge*

A foreword by Irwin Edman explains the purpose of this book, (1) which is to present an interpretation of the views of this versatile and many-sided philosopher. Santayana has covered so many aspects of contemporary culture — theory of knowledge, aesthetics, metaphysics, literary criticism, etc. — that it is natural to seek an essential unity underlying and uniting the diversity, a jewel behind the many facets presented to the eye. Such an interpretation will be valuable to many whose acquaintance with Santayana is less comprehensive, and also it will serve to vindicate him against misunderstandings arising from partial acquaintance with his writings. Another reason given for this interpretation is, however, more open to question; it is expressed in the following words:

To Santayana himself there does not seem to be any essential conflict between his Greek morality and his Buddhist-Christian detachment. But a philosopher does not always know himself best and it is a merit of an interpreter at once responsible and imaginative to elicit what is sometimes hidden from the philosopher himself, and from many unwary readers.

The above refers to the fact that in Santayana's philosophy we find two contrasted viewpoints, which to him do not seem to conflict essentially, but which the interpreter finds irreconcilable. These are what may be called the naturalistic or worldly view, and the mystic, transcendental, detached, or other-worldly view. For, says Dr. Munitz in his concluding summary:

[The Philosophy] exhibits two points of view that allow each one to criticize the other: the one being worldly,

naturalistic, humanistic, Aristotelian; the other otherworldly, supernatural, dualistic, Platonic. Yet no ultimate synthesis or mixture such as Santayana evidently seeks is possible.

Now it may surely be argued that Santayana felt the truth of the adage that harmony results from the equilibrium of contraries, and that he felt himself under no necessity for attempting to reduce all his various points of view to a single formula. The truth must be whole and single; yet the ratiocinative function of our understanding is unable to present it as a unity, and can present it only as a series of pictures. But the ratiocinative faculty is not the whole of our understanding, and a unity which cannot be visualized may nevertheless be *felt* — seen with the inner eye, if the expression be preferred. A true picture can only be given by presenting both aspects; the emphasizing of one to the exclusion of the other will result in a lopsided and partial view. A true philosopher, having presented one side of the picture, will inevitably feel impelled to present the other side; and cannot be content to stay fixed at any position.

It should be pointed out here that the word "moral" and its derivatives "designates an interest in the conditions and ideals of human activity, rather than in preachment." Moral philosophy in this sense is declared by Santayana to be his chosen subject. The author divides his book into three sections under the headings: Naturalism and Dualism, The Life of Reason, The Spiritual Life. The problem of the relation of man and of his spirit to the universe, declared by Santayana to be the chief problem of philosophy, brings up the question of where man ends and the universe begins, and what is the difference between man and his spirit. If there is no essential difference between man and the universe, then the problem of understanding man's relation to the universe becomes reducible to the Delphic maxim, "Man,

know *thymself*." In other words, there is nothing else to know. If man is essentially a unity, how can we distinguish his spirit from himself? However we feel that the philosopher must have realized this himself, and we need not cavil over distinctions which it is necessary to make for particular purposes.

The following quotation will be welcome to Theosophists:

What we call life, mind, spirit, are simply the forms, or in Santayana's language, the tropes that substance assumes when it reaches certain degrees of complexity. The difference between what Santayana calls the psyche and the spirit are differences in the level of organization and function that we find in living beings.

And more to the same effect, which defines the Theosophical teaching of the unity of Life through diversity in its manifestations.

Under the heading of naturalism, the inadequacy of science is duly recognised, its very accuracy being obtained by means of strict limitation and exclusion. What is said about Christianity will also interest us; for, whatever that religion may have been originally, or may be now in the minds of its best representatives, it cannot be denied that Christianity as a historical fact has been characterized by a lamentable dualism. We read:

Santayana, in reviewing the point of view indigenous to Christianity, remarks that according to that view "all history was henceforth essentially nothing but the conflict between these two cities [the city of God and the city of Satan]; two moralities, one natural, the other supernatural; two philosophies, one rational, the other revealed; two beauties, one corporeal, the other spiritual; two glories, one temporal, the other eternal; two institutions, one the world,

the other the Church. These, whatever their momentary alliances or compromises, were radically opposed and fundamentally alien to one another."

The more one reads the earnest and intelligent searchings of philosophers, the more is one impressed by the need for that master-key of interpretation, the Secret Doctrine of antiquity. No doubt an appeal to this may be classed as an appeal to tradition and authority; but it must be borne in mind that tradition and authority are as much a concomitant of our faith as are our intellect, our moral sense, or any other concomitants enumerated by philosophy; and that it is only when pushed to extremes that any one of them becomes questionable. Moreover the authority claimed by Theosophists is not to be accepted unquestioningly; it is verifiable, partly by the evidences of its uniformity and invariability afforded by an examination of the religious and philosophical lore of all times and lands; and partly by the inner faculties of the student himself, which may be awakened to a direct perception. It is this ancient and universal philosophy alone which is sufficiently broadly based and comprehensive to reconcile all seeming contradictions and reveal the fundamental unity underlying all.

The Theosophical Forum

THE YOGA OF THEOSOPHY – *G. de Purucker*

Theosophists use the word Yoga as a convenient word, but we do not use it so much in order to express our Theosophical discipline. Why? Because in the West the word has come to signify one or other of the five different Hindu Schools of Yoga; whereas the Theosophical yogic discipline includes the best in them all, and tops them with a nobler, a sixth.

Now, what are these five Indian Yoga Schools? They are these, beginning with the simplest and lowest: Hatha-yoga, the yoga of physiological psychical training, dealing almost wholly with the body and the lower mind. Next, Karma-yoga, from the word "karman," action. Third, Bhakti-yoga, the yoga of love and devotion. Fourth, Jñâna-yoga, the yoga of wisdom or knowledge, of study. Fifth, Raja-yoga, the yoga of *self-devised* effort to attain union with the god within, the yoga of discipline, such as the kings of the Kshatriya or Warrior Caste were supposed to exemplify as the leaders of their states; and the sixth, which we Theosophists add, is the Brahma-yoga, the yoga of the spirit, practically including the other five.

It is a sheer absurdity, taking human psychology and nature into account, to think that India is the only land that has ever known what Yoga is; yoga here meaning discipline, training, in order to attain self-conscious *union* with the god within, with the Inner Buddha, or the immanent Christ — call it by what name you like.

Take Karma-yoga: something of this form of discipline has been known for centuries in the Christian Church, as "salvation by works." It is a well-known training in the Christian discipline. Or Bhakti-yoga: something of this form of discipline has been known for centuries in the Christian Church as "salvation by devotion,"

or "love," "self-dedication": exactly the same things that the Hindu means by these words, and that the Theosophist means, and which arose spontaneously in the heart of Christendom, as they arose spontaneously in the heart of Hindusthan, or in any other country. Then again there was the training of the Stoics — these and others are all different kinds of yoga. They did not call these trainings by the word "yoga." That is a Sanskrit term pertaining to, belonging to, Hindusthan; but the disciplines were known. The Christians called them salvation by this, salvation by that. The Hindus said union by this discipline, union by that discipline, etc.

The Theosophical occult discipline comprehends them all, because these different types of training or union correspond with the five main types of human minds or psychology, some men finding salvation in work, using the Christian term; others in love or devotion; others in theology or high thought. Why, even Christendom, in the monasteries especially, has known in the past a kind of Hatha-yoga in their physiological training — their flagellations, whippings, the wearing of sackcloth, and other practices of mortification and self-denial; in order, as they expressed it, to control and subordinate the lower passions and the body. These are typical examples of hatha-yoga of the lowest kind. However, when a man has the fortunate type of mind which will lead him into the training of the inner life, these other things follow sanely, automatically, if at all.

It is so with us Theosophists. Our training surpasses these different yogas. We do not have to bother with breathings and postures, flagellations and tortures. We know that to do our duty, we must work reverently, dedicate ourselves to duty, to effort, in the simplest things. We know that this is karma-yoga. We know that we must control the body from within, as well as our psychical impulses and our emotions, and keep the body clean and healthy, so that it be a fit instrument of the human spirit, and

of the human soul. That is the real Hatha-yoga. We likewise know that to do our duty by ourselves and our fellow-men and by the glorious Movement to which we have dedicated ourselves, we must learn to give ourselves in devotion, in utter love, to the sublime objective — and this is Bhakti-yoga. We know that in order to understand life around us and our fellow-men, and our own selves, and the glorious truths of the laws of nature upon which nature herself is builded, we must study the sublime god-wisdom intellectually — Jñâna-yoga. We likewise know that to practice all these lower yogas we must arouse the feeling of love for self-discipline, finding marvelous joy in the fact that we can control ourselves, that we are men, striving to be masters of ourselves, and not slaves. We do not need to think twice about that idea. Look at the man who can control himself, and look at the man who cannot control himself: master and slave.

Yoga when properly understood is what we might call the moral, spiritual, intellectual, psychical, and the occult training that the Theosophist has, if he is worthy of the name Theosophist. Of course if he merely accepts the philosophy because it appeals to him, because he thinks it is logical and fine, and that nothing has yet overthrown it, he is simply what Pythagoras and the great men of his School would merely call *akousmatikoi*, "hearers," "listeners." This stage is indeed something, much, but lacks greatly of the higher degrees of understanding and development.

And the final yoga, the sixth, Brahma-yoga, is the one that most Theosophical chelas, disciples, aim for. It means taking all the best in the lower forms of yoga that we have just spoken of, unifying them into one as it were, carrying them all up and nailing them as it were to the Spirit within. The thought, the emotions, the wish, are fixed like the flag nailed to the mast. It cannot be hauled down: Brahma-yoga, union with Brahman, the Spirit; the Âtman.

I would like to point out one thing more: How is it that these particular forms of yoga exist always in India? All yoga in India is discipline, as stated, methods of training; and these arise mainly in the key-thought contained in what the Hindus called the greatest, grandest, most comprehensive verse in all the Vedas, in, 62, 10, of the *Rig-Veda* called the Gayatri, or often the Savitri. This the Hindu recites upon rising in the morning, after he makes his ablutions, before he sleeps at night. Occidental Orientalists do not understand why the Hindus so reverently regard these two Sanskrit lines in the *Rig-Veda*. But the reason is that the *Rig-Veda* is the chiefest of the Vedas; and, said the Hindus, within these two lines, are the heart of *Rig-Veda*. In Sanskrit they run thus:

Tat savitur varenyam bhargo devasya dhimahi,
Dhiyo yo nah prachodayat.

And they mean this (I will give a close translation, only slightly paraphrased, so that you will get the heart of the great Rig-Vedic verse out of which sprang all Hindu philosophy, and all Hindu yoga.):

"That lofty inner soul of the god's sun, may it unite the thoughts of us, its offspring, and urge us into that union, the union of the lower with the superior, of the individual with the spirit of man, with divinity." When this union or yoga is won, achieved, then we have those grand cases of god-men, or men-gods: Jesus the Avatâra, Krishna, Buddha-Gautama and all the other Buddhas; even Apollonius of Tyana — there have been hundreds. When this union is less complete, we have the great Teachers, less great than those just spoken of, but great.

Out of this one phrase, this one yoga, as the Sanskrit word is, of the *Rig-Veda*, sprang all the philosophy and religion and occult science of archaic India, all the systems of training by which men

have sought to ally that divine solar spark with themselves, to become in individualized union with the cosmic Spirit — first with Father Sun, and then with the Spirit Universal. For so reverent were these ancients, that nought in them was divorced from divinity. Every atom, every stone, every animal, every man, every deva or god, whatever it be, high or low or intermediate, was a child of the cosmic heart of Being, and could by degrees rise higher and higher into the self-conscious union, yoga with THAT. And when this glorious consummation is achieved, then you have a man-god, a god-man.

These thoughts are not anything particularly unique in Hindusthan. On the contrary, they are commonplaces of archaic and modern Theosophy. They were commonplaces actually of the Stoics, of the Platonists, and of other schools of Greece and Rome. They have been known from immemorial time in Egypt and Persia. Read the ancient writings of these folks.

Yoga therefore, is training, discipline, by which that holiest of all human possibilities may be achieved: growth from manhood, expansion out of manhood, into godhood, divinity, which in our highest we already are. We simply become our highest selves. That is yoga achieved. I and my Father are one. Any Christ says the same. Any Buddha makes the same declaration. When you understand the profound wisdom behind it, there is nought of egoism in it. It is the spirit speaking through the lips of devotion in man.

FRONTIERS OF THE SOUL — *Claire Turner Wesner*

What intriguing connotations and thoughts the word frontier brings to our minds: heroes, romance, adventure, trials, deprivations, conquering, and very often, death. These are the very things the soul of each one of us is meeting every day; these are the things that the soul of our modern civilization, the world today is facing; trials, sacrifice, war, adventure, conquering, failing and often death. But the root of these conditions today is not in the geographical frontier but the frontier of our own being, our own soul, each and every one of us.

Civilization has conquered the geographical frontiers of the world; it has circled the globe, it has conquered both the north and south poles, there is no more new land to explore, to find, to claim.

To this Western World, the frontier has a definite meaning in the growth and development of America since its discovery in 1492. But looking through the pages of history we see civilizations and races surging and changing from one part of the globe to another. We see nations rise, flourish, decline, and fade out of existence to be replaced by other nations, on some other portion of the globe. But never in the recorded history of the world has civilization flourished on the five continents as it does today. True, there are large areas of the earth which are comparatively unknown, but speaking broadly we find the stir and congestion of modern life everywhere; and where it does not exist, the strong world powers are trying to gain admittance by force. In America — North and South — Europe, Asia, Africa to a less degree, there is the congestion of modern living, socially, politically, economically, and religiously.

Each nation or race is not suffering only from its own particular problems, for the world is so closely woven together with commerce and radio that what any one portion thinks and feels is reacted on the whole. Nations are no longer isolated but are forced to live, or perhaps die, together. There is no escape. We are forced at last to face ourselves, to look within our own souls, the souls of each one of us as individuals, the soul of the nations, the soul of the world. This is where we shall find the solution of our congestion and turmoil; this is where we shall find the guidance for right living, of morals and ethics; this is where our frontier now lies, not a geographical location but the frontier of the soul.

And now just what do we mean by the word frontier? The dictionary defines it as the extreme part of a country, the border, an unsettled region. But a definition which appeals to me greatly and is really more applicable to our subject is one given by Norman Foerster in the introduction to his book *American Poetry and Prose*. Speaking of the development of Colonial literature he says:

And of the forces which grew from an interaction of the others, no influence has been more important than that peculiar state of mind (and it is a state of mind rather than a geographical line) which we call the frontier.

This is a point I want to stress. The frontier is a state of mind. It is this state of mind which has found outward expression in the expansion of a geographical location; we might say it has been the means of releasing our mental, emotional, and spiritual energies. And this is just why we find the conditions we do on any frontier — war, hate, license, bravado, fear, dangers of the unknown. It is the result of energies being used which we know nothing of or do not control. And yet how can we grow unless we enter new fields of endeavor? And every new field, every

unknown condition we enter is a new frontier for experience. As Mr. Foerster tells us farther on in his book just mentioned, " — no historian, whether literary, cultural, political, or economic, could well neglect to consider the influence of the frontier." And why? Because it is the turning-point into a new cycle.

Today humanity is entering a new cycle — it has come to a turning-point. Not only is the old order of living fast breaking down but men and women as individuals are reaching a new point, a new stage of evolutionary development. It is this change in the hearts and minds of men, of the individuals as units of the whole, which is reflected in world-conditions. In the *New York Times*, March 5, 1939, H. G. Wells is quoted as follows:

We are in the darkness before the dawn of a vast educational thrust. In the near tomorrow a collective human intelligence will be appearing and organizing itself in a collective human will.

Yet men and women do not know why this change is taking place in their hearts and minds because they do not know or understand themselves. Never was there greater need for religion and philosophy than there is today. As individuals our souls need guidance. Just as the old frontiersmen needed their scouts and guides to point and direct the way, so do we as souls need scouts and guides to point and direct the way through our ignorance and confusion. This is just what the technical teachings of Theosophy can do for us. It is the modern Theosophical Movement which can guide humanity and it is the Masters of Wisdom and Compassion behind the Theosophical Movement who are trying to guide our souls in the right direction, if we will but heed them.

Any experience which is new, strange, and unfamiliar to us is a new frontier for our soul, and these frontiers are many. In our growth through life from birth to childhood, to adulthood, old

age, and death, the expansion of our consciousness constantly brings us new experiences: the growth of the soul through aeons of evolutionary development brings us even greater experiences: when individuals try to contact the invisible or astral realms by clairvoyance, clairaudience, telepathy and so forth, new frontiers of experience, and most dangerous ones too, are contacted: death and the processes of disimbodiment take the soul through new but more or less familiar frontiers: but perhaps the greatest frontier which the soul can cross and conquer is that of initiation, because it is through initiation that the soul consciously contacts the different spheres of the Universe. Success means glory, failure means death.

These are the points I want to touch upon, to point out the real necessity and value of becoming familiar with the technical teachings of Theosophy and to show how practical these teachings are.

Evolution to the Theosophist means growth, an unfolding of the inner faculties, a development from within outwards. The outward manifested form is only the result of inner growth and as our inner and higher faculties evolve and develop, the outward form changes to meet its needs. So we can see at once that evolution occurs on all planes of our being, physical, psychical, mental, and spiritual. All life is changing, growing, evolving; there is no such thing as immobility in nature. Such a condition would mean stagnation and death. All the various kingdoms of nature, plant, mineral, animal, are evolving. Each kingdom is but the outward expression of an inner Intelligence which finds the particular kingdom in which it is manifest the most suitable vehicle for its present development. The vehicle is not the important consideration, but this inner Intelligence, or Guiding Force, which is the heart, the center of every composite and manifest entity.

Man then, as we know him today, will not always be a man. By inner growth, by the expansion of his soul, he will become something greater, first a master of life, a god-man, and then a god. To make this point clear it may be well to show how this Intelligence or Divinity unfolds its powers through the various kingdoms of nature.

First of all this evolutionary principle expresses itself as motion, the pulsating motion of space, often spoken of by Theosophists as the Great Breath. From motion came attraction. This attraction caused concretion and we have the kingdom of imbodiment. But imbodiment is not sufficient, a definite form is needed and we note this Inner Intelligence, this Guiding Power, manifesting as individualized shapes and we have the mineral or crystal kingdom. Here we see growth not only by accretion, as in crystals, but a growth which is in the direction of a definite form. Then in the next higher kingdom, the vegetable kingdom, we have not only definite form, but motion. With the plant kingdom we can see the physical motion of growth, adaptation to climatic conditions, the flowering and dying with the seasons. Next with the animal kingdom we see this Inner Intelligence not only in motion but motion controlled by desire and intention. As the flowers love the sun, the animals love their young — they show emotion and feeling. Then with us, the human kingdom, we have not only controlled and conscious motion but the power to control motion outside ourselves. The Inner Intelligence is now expressing itself directly in man who has the power of free will and choice. But is this the end of outer expression and manifestation? No. Man will someday evolve to the next higher kingdom — the god kingdom — which not only controls motion outside and beyond itself but can actually and consciously, by the power of choice and free will, BECOME that which is outside himself. Such powers are expressed in degree even by the chela passing

through initiation, who must place his consciousness into the various kingdoms of nature and actually become those kingdoms not only below him but up and beyond him to the planets and stars of the Universe.

With this brief outline we can see the inner unfoldment of the soul of nature expressing itself first as motion, then attraction, then individualization, then organization, then motion controlled by desire, then the power of free will and choice and the control of motion outside and beyond the individual, and then the power to actually become that which is outside and beyond the individual manifestation. From this we can get a slight adumbration of what is ahead for the human soul — what new and vast frontiers there are for it to explore. Instead of the physical or geographical boundaries, we have the universe for our frontier.

Now, to come home a little more closely let us consider those fields of experience which are not quite so abstract. Here I refer to the practices of contacting the invisible or astral worlds through the medium of hypnotism, clairvoyance, clairaudience, telepathy, or some other form of psychism. I dare say, almost everyone has either had some such experience himself or has personally known of some one who has had. That such astral realms exist is a fact taught by Theosophy and it is something which is constantly being studied and investigated by modern scientific research. We must remember that man's evolutionary progress is very slow and that our faculties unfold themselves gradually over a period of many lives. We do not gain any special or unusual powers or become highly intelligent or spiritual all at once; these are processes of gradual unfoldment from within outwards. Also we must remember that Man is a composite being — he is not matter, or emotion, or intelligence, or spirit, *per se*, but is a wondrous and mysterious combination of all of these

faculties or qualities. And to understand just what happens when we contact the astral realms we should know something of man's composite being.

To begin with there is the lower, or material part of our nature which is transitory; it is not permanent but disintegrates at physical death. This lower part is composed of the physical body, the astral body, which is only slightly more ethereal than the physical, the desires and emotions, and the lower mind. From this we can readily see that any demonstrations of the astral or psychic faculties have to do with the lower part of our being, and that it is not true intelligence or spirit. It is not the true soul of our being. The true soul of man is the higher part of his consciousness — his higher intelligence or mind plus his spiritual and divine nature. It is this part, this higher part, which is conditionally immortal and lives from life to life. This is the real soul of man, which is growing and evolving through the use of the lower faculties.

Many and varied are the modern schools of psychic practice and research. There are the mediums and sensitives who consciously contact the astral realm of this lower nature. They see visions of spooks or receive messages from the invisible worlds. The astral world is really very gross, as said before, it is only slightly more ethereal than the physical. The so-called spooks and elementals which inhabit it are the reliquiae of departed souls. They are nothing more than the grossest passional and degraded substance of nature. Such spooks and elementals are in the process of disintegration. They have been severed from the higher spiritual planes of life. This is the lowest, material portion of the constitution, which is dropped and left behind by the real soul of man who has been freed from earth by death. Contacting such an atmosphere has a very bad effect on anyone. Here is a strange unknown land full of horror, decay, and danger; and yet, through

ignorance, we dare to let the consciousness of our soul be carried into such a frontier without knowledge and without guidance.

Then there are the hypnotists, and those who practice telepathy or thought-transference. Such persons contact the lower mind only, the mind of the lower nature; but it is probable that much scientific progress has been made in the study of telepathy within the past few years. Yet the investigation of telepathic power, or as science calls it, extra-sensory perception, is from a purely mechanical basis. How much better it would be to develop our functions of inspiration and intuition. These are the qualities of the real man. Where telepathy can carry us only into the borderland of our soul-frontier, inspiration and intuition can expand our souls to cosmic reaches. It is by the expression of inspiration and intuition that the greatest works of art, literature, music, science, and philosophy have come to us, and not through the powers of thought-transference.

Then there are the psychologists who are perhaps making the most scientific and balanced progress in the study of the human being and his possibilities. They consider not only the lower mind and the emotional nature but the more advanced consider man as an evolving soul. Of course there are many schools of psychology, each studying man's composite make-up from different aspects, and naturally some are nearer the truth and more progressive than others. Yet they are all trying to adjust man to his surroundings and his mode of living. There are modern psychologists who are sincerely endeavoring to help man to understand himself. They are breaking down old barriers by declaring that man is potentially a self-reliant individual and not a helpless non-entity, drifting haphazardly on the sea of life. Here I would like to quote a paragraph from the book, *The Re-Discovery of Man* by Dr. Henry C Link, Director of the Psychological Service Center in New York City. He says:

Man is still the potential creator rather than the victim of his creations. He is a creature of free will and untold possibilities, not the slave of environment. His capabilities are limited not so much by heredity or poverty as by his own vision of himself.

And this is just what Theosophy declares — man is limited by his own vision of himself. Yet the modern psychologist has not a comprehensive view of man's nature and destiny. None of these schools of thought or psychic research study or consider the complete man. This is what men and women need more than anything, a knowledge of their own nature, from the physical to the most divine essence at the heart of their being. Humanity is suffering from too much emotion and too much brain-mind — its soul needs the guidance of the spiritual nature. It needs the true vision of itself which can only come through the development of the higher intellectual and spiritual faculties, expressing themselves in the control of our thoughts, feelings, and emotions.

Broadly speaking then, we can say that man is dual: he has a higher and a lower nature with the soul fluctuating between the two. As the early pioneers had to conquer the dangers of the Western frontier, so do we, our souls, have to conquer the dangers and pitfalls of our lower nature, conquer our lower passions and desires and avoid the dangers of abnormal psychic practices. We must awake to our responsibilities toward each other, help each other along, become something more than animated matter. We must conquer present conditions before we can go on to new and larger frontiers. It takes strong characters to explore new fields.

Such strong characters are always with us, guiding and helping humanity. Such are the great mystics, poets, and philosophers. But greater still are those real frontiersmen of humanity, the

spiritual leaders of the ages, some greater than others, but all pointing to the same goal, trying to awaken our own spiritual nature that our soul may rise and become at one with it. The Masters behind the Theosophical Movement today are such spiritual leaders and teachers, guiding and helping us in the right direction, if we will but heed them. These Masters are the spiritual frontiersmen of humanity, and the teachings they have given us, the teachings of the Ancient Wisdom, known today as Theosophy, are the guide-posts pointing the way.

By following the guidance Theosophy can give us and the guidance of our own higher natures, we can be led out of the maze of our present world-turmoil. Evolution of the soul is really frontier-less — there is no end. From men we become god-men, then gods, and on up the ladder of life, finally becoming freed souls, souls freed from matter, cosmic beings. Such are the frontiers of the soul. A poem by Walt Whitman beautifully expresses this very thought:

A noiseless patient spider,
I mark'd where on a little promontory it stood isolated,
Mark'd how to explore the vacant vast surrounding,
It launched forth filament, filament, filament, out of itself,
Ever unreeling them, ever tirelessly speeding them.
And you O my soul where you stand,
Surrounded, detached, in measureless oceans of space,
Ceaselessly musing, venturing, throwing, seeking the
spheres to connect them,
Till the bridge you will need be form'd, till the ductile
anchor hold,
Till the gossamer thread you fling catch somewhere, O my
soul.

GNOSTICISM — P. A. Malpas

(Extract from a letter)

Dear Friend: You ask what I think of your programme of study, including a discussion on Gnosticism. I think it fine, but here in a small country village miles from anywhere, I have no books at all, so can only give some general hints from memory, as accurately as I can.

In the first centuries of the current era there were many groups and societies in the Mediterranean countries and the Near East which combined some special symbolical religious system with secret teachings. They can be called Mystery-Schools. Some were kabbalistic; some were more or less degenerated mystery-systems; some are more properly called gnostic. Strictly translated, the Greek word gnostic means "one who knows." In India the word Buddhist means one who has wisdom. A Jain means probably much the same thing as a Gnostic, etymologically speaking. The Jains are said to have been the early teachers of Gautama the Buddha. In Latin the word scientist should mean "one who knows" but as our modern official scientists of the West have scrupulously cut themselves off from all that cannot be weighed in a balance or examined in a test-tube they labour under serious limitations. Fortunately, since the advent of Madame Blavatsky official science has been forced to recognise inner unseen worlds and is now so far advanced as to realize that the outer phenomenal world is nothing in comparison therewith. By a "coincidence" the first breaches in the wall were made by such men as Sir William Crookes in H. P. B.'s time. Now we have progressed much farther. Soon the word science will mean what it ought to mean, knowledge on all available planes.

The Mandaeans (oddly enough once called "Christians of St. John the Baptist" — although he was never a Christian) are similarly "people who know." Also the word *pistis* in the gospels means (higher manasic?) knowledge, but has curiously enough been crystallized into the English conception "faith," which is not knowledge at all. I am of opinion that the very first pre-church Christianity was also "Gnosticism" and not faith at all with its adepts, if any. At any rate the historic "Founder of Christianity" was "one who knew." Even in the gospels of a far later date he is made to say of political (?) opponents, "You hold fast the keys of the Gnosis and prevent those who wish to enter in from doing so." (The word gnosis is translated in English "knowledge" thereby completely missing the point.) In *Timothy* we also read a warning against science or knowledge falsely so called — and the word is really the gnosis. This must have been written after the time when "Christianity" had so far lost all knowledge (as opposed to "faith") that "Gnosticism" was regarded as a deadly enemy.

Some of the leaders of the Gnostic schools were renowned — Basilides, the god-taught, Marcion, Valentinus. In *The Secret Doctrine* it is pointed out that the leaders of these Gnostic schools were initiates in the mysteries.

To me, Marcion is specially interesting. He was the son of a Black Sea shipowner in Sinope or Trebizond, I think. He was rich. He brought £1500 with him into the Church and that was a great sum in those days. They wanted to make him head of the Church at Rome — Pope as we should say. But there was a difficulty — they wanted him in exchange for their support to obey their political orders, so to say. He refused and left the church. They made the best of it and declared virtuously that they had thrown him out as a heretic, with his money. So passed the last one in the church at that time who really knew anything. It is true such folk as Origen also knew a little but the case was different. Faith with the

passing of Gnosticism took the place of knowledge. Actually one or two Gnostic societies survived until recent centuries in Europe, but persecution finally annihilated them — they were at last only shadows of what Gnosticism had once been.

It was this Marcion who about the year 135 a. d. cut out about one-third of the *Gospel of Luke* as we have it, reducing it to the proportions it had possibly about the year 110. He cut out among other things the childhood stories and the political anti-Herodian and other additions. If he was actually the writer or re-editor of *Luke*, he could very well do this — but it is quite possible that even Marcion's *Luke* was a greatly expanded gospel of earlier date than 110 a. d., this earlier gospel occupying perhaps only a few pages of a lodge-ritual. He seems to have been one of the two main writers or editors of *Acts* also.

Marcion's interpretation of the Christos saga is ingenious and very interesting. His gnostic Christ is not a historical man (the *historical* Jesus was added later), but the type of the higher man in all men, we might say perhaps the Buddhi-Manas in Sanskrit technology. I suppose this is a good example of a paradox. "Jesus" was a historical man or Avatara, but the original gospel does not seem to have referred to a historical Christ or Jesus at all. Only later was he put in as a type of the generality therein described. So when one man says, "The Christ of the Gospel is not historical," and another says "Jesus was indeed a historical character," both may be perfectly right. The paradox lies in the absence of the connecting links explaining precisely what each statement means. There are many such paradoxes.

Later, when the church had forgotten what had once been known, and had therefore ceased to be Gnostic, that church fought a bitter fight against the "Gnostics" as if they were some terrible species of heretics.

About fifty years after the drama of Marcion another little drama took the stage. About 180 a. d. we hear of curious doings at Lyons in Gaul. The "bishop" there, Irenaeus, quarreled with the "Gnostics" — quite likely his own lodge from which he might have demitted. It looks as if Irenaeus published the *Gospel of John* at this time — a gospel quite distinct from the other three. At any rate, *John* appeared about now, and it might have previously been the private ritual of some lodge and by no means so old as the synoptics.

Irenaeus seems to betray an odd situation. The Gnostics forced him into a corner by saying that "Jesus" in the gospels had such a short time for his mission that he could not found and train a body of disciples to form a church in say eighteen months or three years. The taunt was so obviously true that Irenaeus is forced to say that Jesus preached for twenty years and died at the age of fifty-two, or thereabouts (I think I have the numbers approximately correct).

Very well. Then are we to suppose that Irenaeus knew perfectly well that the gospel story is pure allegory and that the historical Jesus is quite "another story"? It looks like it. Certainly the Jewish *Talmud* "Lives of Jesus" do suggest that he was active until his fifty-second year — but this was the *historical* Jesus, not the gospel Christ (or Jesus as he was before he died and became a Christ). If this is the solution then here we have a very interesting confirmation of the idea of the original gospel as a lodge-ritual, but not as history. The seemingly historical dates and names can be explained in another way — Tiberius, Herod, Pilate, etc.

What has all this to do with us? A great deal. Because Madame Blavatsky, the founder of the Theosophical Society in our age, and the real bringer of Theosophy to our modern world once more (acting as agent for others still greater than herself), was a

"Gnostic" in the true sense of the word — she knew — and it was her business to wake in us the faculty of knowing, or at least the faculty of recognising that such is possible, plus an effort to attain it. So in a minor sense we are also Gnostics, or should be. We are against no churches, but we do help churches to regain the life they once had and to get rid of the accumulated rubbish (often political) of the ages which has overlaid their gospel. If they have only faith and not pistis, which is perhaps *spiritual knowledge*, that is their business, and if some few of them resent the fact that we seek knowledge rather than (blind) faith, we must be patient and wait until they see more light. If we claim that some of us have more light, more intuition, than others, and that some of us have experience confirming the possibility of its attainment, that is all the more reason for us to be kindly and to meet resentment with calm reserve — for time heals all things. Was there ever an age in the world's history when people had not to be given time to accustom themselves to more light when they were fortunate to get it?

The Theosophical Forum

THEOSOPHICAL ENCYCLOPEDIA GLOSSARY

[Some years ago THE THEOSOPHICAL FORUM mentioned that preparations were under way for the publication of an Encyclopedic Glossary of Theosophical Terms. Our readers will be glad to know that this work has been steadily going forward during the ensuing years and is now nearing completion. The material, which will probably fill several volumes, covers the whole exoteric field of ancient and modern Occultism and Theosophy, including mythology, anthropology, cosmogony, symbolism, the ancient Mysteries and allied subjects, and will prove to be an exhaustive mine of philosophical, religious, and scientific information. The work of writing and compilation has been carried on by a group of students at the General Offices. Dr. de Purucker has then carefully checked the definitions and in many cases added new and valuable material.

It is too early to state when this Encyclopedic Glossary will be published, but the FORUM Editors have obtained permission to share with readers of our magazine extracts from this forthcoming work. No effort has here been made to follow any special sequence of arrangement, but random pages have been purposely chosen. — Eds.]

EQUINOX

The two annual epochs when the equator and ecliptic cut each other, occurring (since 1900) about March 21 and September 23, when the days and nights are equal to each other in length — hence the name "equal night." The position of this intersection or node, on the ecliptic, at the Vernal Equinox in the northern hemisphere, is called the first degree of Aries in the ecliptic

zodiac. But this point shifts continuously, having a retrograde motion around the ecliptic occupying 25,920 years. (In astronomical tables, the annual recession is given as 50.2", which, if uniform, would give 25,868 years; but to calculate the period in this way, it would be necessary to know the mean value of the recession during the entire period.)

This period is very important in Occultism, because every astronomical cycle is indicative of cycles in both cosmic and human history. In accordance with the Signs of the Zodiac it is divided into twelve parts, each of 2160 years, called in Occultism the "Messianic Cycle" and marking the coming of a World-Savior. The starting-point of this cycle is not publicly known, but it is possible to place it with fair accuracy by means of the data which occult history furnishes. The starting-point is said in Hindu astronomy to have been the star Revatî, which star, however, seems to have disappeared. The recession of the equinoxes from Pisces into Aquarius is stated to occur somewhere about the present age, and to mark a new spiritual dispensation.

In *The Secret Doctrine* (II, 330) a cycle is mentioned which is obtained by compounding the precessional cycle with the cycle of the apsidal revolution; this, according to the astronomical figures quoted, gives a cycle of 21,128 years, which is probably 21,160 years; but the exact period cannot be calculated by modern astronomers unless we know the mean annual recession of the equinoxes as referred to the apsides.

The two equinoctial epochs of each year are highly important in Occultism, as they indicate conditions favorable to certain operations, initiations, and ceremonies. These times were the ones often chosen as being favored for the celebration of the ancient Mysteries and the initiation of candidates; although it may as well be said here that the two solstices, falling respectively

in December and June, are equally important in their way and for the same reasons; but the teaching concerning these matters is not such as can be unveiled in a published work.

NÂGA

(*Sanskrit*) A word meaning "serpent." The serpent has ever been used in the symbolology of Occultism as the symbol of Immortality and Wisdom, of renewed births, of secret Knowledge and, when the tail is held in the mouth, as a symbol of Eternity. The Nagas or "Serpents of Wisdom" are, therefore, full Initiates. "In the Secret Doctrine, the first *Nagas* — beings wiser than Serpents — are the "Sons of Will and Yoga," born before the complete separation of the sexes, "matured in the man-bearing eggs produced by the power (Kriyasakti) of the holy sages" of the early Third Race." (S. D. II, 181) These First Nâgas were the human Adept-originals, who were, later, symbolized by the terms "serpents" and "dragons." "These "originals" — called to this day in China "the Dragons of Wisdom" — were the first disciples of the Dhyanis, who were their instructors; in short, the primitive adepts of the Third Race, and later, of the Fourth and Fifth Races. The name became universal, and no sane man before the Christian era would ever have confounded the man and the symbol." (S. D. II, 210)

The early Mexican word Nagual, now meaning sorcerer and medicine-man, is akin in its meaning to the Sanskrit word Nâga; for "Some of the descendants of the primitive Nagas, the Serpents of Wisdom, peopled America, when its continent arose during the palmy days of the great Atlantis, (America being the *Pâtâla* or Antipodes of Jambu-Dwipa, not of Bharata-Varsha)." (S. D. II, 182) The Hebrew equivalent of Nâga is Nâhhâsh also meaning "magic," "enchantment"; thus showing the same connexion of ideas.

One of the Masters, in a letter to A. P. Sinnett, also uses the word

Nâga as being equivalent to the Ananta-śesha, the seven-headed endless serpent of Vishnu, and speaks of it as "the great dragon eternity biting with its *active* head its *passive* tail, from the emanations of which spring worlds, beings and things. . . . Now think: the *Nag* awakes. He heaves a heavy breath and the latter is sent like an electric shock all along the wire encircling *Space*." (*The Mahatma Letters to A. P. Sinnett*, p. 73)

SARPA

(*Sanskrit*) "Serpent." The serpent has ever been used in symbological Occultism as signifying Wisdom, Immortality, therefore renewed birth, and secret knowledge. Hence *Sarpa* is a mystical term applied to an initiate. (See *Nâga*, another Sanskrit word of similar meaning and of identic application.)

"There is a notable difference *esoterically* between the words *Sarpa* and *Naga*, though they are both used indiscriminately. *Sarpa* (serpent) is from the root *Srip*, *serpo* — to creep; and they are called "Ahi," from Ha, to abandon. "The *sarpa* was produced from Brahma's hair, which, owing to his fright at beholding the *Yakshas*, whom he had created horrible to behold, fell off from the head, each hair becoming a serpent. They are called *Sarpa* from their creeping, and *A hi* because they had deserted the head" (Wilson). But the *Nagas*, their serpent's tail notwithstanding, do not creep, but manage to walk, run and fight in the allegories." (S. D. II, 181-2)

The difference between these two Sanskrit terms *Sarpa* and *Naga* may be briefly set forth in the following observations: *Sarpa* was the original Sanskrit term signifying a snake or serpent; whereas *Naga*, although possibly originally likewise signifying a snake or serpent — which it does consistently throughout the range of Sanskrit literature — nevertheless early became identified in mystical thought with initiates because of their power of casting

off human physical body after human physical body almost at will. Both terms therefore signify serpent or snake: the wriggling reptile was well known, and both later were used almost indiscriminately likewise to signify initiates. Nevertheless, because of habit or use, *Naga* is the more common term for a full initiate, *Sarpa* in this sense being of less frequent usage.

The point is that *Sarpa* is from the verbal root *srip* meaning "to wriggle," "to creep," "to crawl" — a meaning which it has not lost in any period of Sanskrit literature. Now initiates do not wriggle or creep or crawl. Hence *Nâga* is the better word for an initiate, despite the fact that through ignorance *Sarpa* has frequently been employed as the synonym of *Naga*.

Besides the facts given above, it must be remembered that just as the forces of Nature are in themselves neutral, and become "good" or "bad" as they are used by individuals, similarly so is a symbol usable in a good sense or a bad sense. This is shown in the use of these two Sanskrit words *Nâgas* and *Sarpas*. The Brothers of Light are properly called *Nâgas*, and the Brothers of Darkness are more properly called *Sarpas*, from the verbal root *srip*, meaning "to wriggle," hence to insinuate, to creep in by stealth and deceive. Both the Brothers of Light and the Brothers of Darkness are focuses of power, of subtilty, of wisdom, and of knowledge; in the one case rightly and nobly applied, and in the other case wrongly applied. The former are the *Nâgas*, the Serpents of Light: subtil, wise, and with power to cast off the garment or vehicle when the body has grown old and to assume another at will. The others, the latter, are more strictly the *Sarpas*, the Serpents of Darkness, insinuating, worldly wise, selfishly shrewd, deceitful, venomous, and dangerous; and yet possessing the same powers, but in less degree, and using them wrongly, thus deceiving human hearts and succeeding in their work often by lies and misrepresentations. Nevertheless, precisely because

the two words Nâgas and Sarpas are used almost indiscriminately, the student should be careful to remember this fact when, in reading, either of these two words falls under his eye. Either may apply both to the Servants of Light or to the Servants of Darkness.

SCIENCE AND RESEARCH — *C. J. Ryan*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

Antiquity of Civilization in America

In regard to the spread of civilization throughout the world since the Old Stone Age, two rival theories exist. One is that of the Convergents, who believe that similar cultures arose independently in remote places by the natural working of the human mind; the other school, the Diffusionists, argue that customs, inventions, etc., were gradually diffused from some original center, probably Central Asia, or perhaps Egypt, and ultimately reached America. We are not taking part in the discussion at this moment, but only refer to it to draw attention to a new archaeological discovery which indicates an immensely greater antiquity for the Maya civilization in America than has hitherto been allowed, or perhaps even suspected. Our information is derived from an article by Dr. W. D. Lighthall in the *Journal of the Royal Astronomical Society of Canada* for January on "The Diffusion of Culture Controversy."

The discovery was made by Robert Henseling, a German astronomer, as the result of his studies made in 1935 of the dates carved on early Mayan monuments at Naranjo in Yucatan, Mexico. It is well known that the Mayan astronomers had a predilection for exact reckonings, and, as he says: "All [researchers] agree that, regarding the motions in time of the heavenly bodies, the Maya priest-astronomers were very much better informed than those of any other old civilization; especially as to the methods of correcting errors of neglect of day-fractions

of periods by insertion or omission of whole-daytime values." Their treatment of the leap-year problem was even more exact than the equation employed by us in the Gregorian calendar.

In brief, it seems that he discovered a "commencing or zero date" when many astronomical events converged, "a year of wonders," which the Mayans adopted as a natural starting-point for their time reckoning. This zero-epoch occurred as far back as b. c. 3373, almost exactly 3000 years before the earliest existing Maya monument whose age is known. This planetary "convergence" is mainly due to a rare synodic phase of the revolutions of the planets Saturn, Jupiter, and Mercury, and the data given include the subtil difference made by the precession of the equinoxes! As a convincing tribute to the reality and importance of the zero-date R. Henseling shows that it practically coincides with the Chinese starting-point of measurements along the ecliptic which dominates in ancient Chinese astronomy. He says, "On zero-day the sun and Saturn stood at this point in the heavens."

Dr. Lighthall, who appears to favor the Diffusion Theory, says: *"Henseling thus shows the original unity of the Maya system with the Chinese, and by so doing he mathematically decides the famous diffusion-of-culture controversy* in favor of those who class the Maya with the original archaic civilization." He also refers to the importance of the conjunctions of Jupiter and Saturn, but we cannot go into the matter further at present. It is perhaps worthy of note that modern astrologers allege that such conjunctions — separated by about twenty years — have proved very significant in United States history. The next occurs in 1941. Dr. Lighthall suggests that the zero date of b. c. 3373 is associated with the beginning of the First Dynasty of Egypt, but a comparison of the wide differences of opinion by Egyptologists about early Egyptian chronology — amounting in some cases to nearly two thousand years — warns us to go very slowly in such comparisons. The

Egyptians did not date their monuments by any fixed point in time as the Mayas seem to have done.

Scientists Reconsider Evolutionary Theories

Many biologists are beginning to doubt the truth of mechanistic theories of evolution. A correspondent kindly sends us the following extract from *The Lancet*, the leading British Medical journal, which relates to the difficulty in believing that reaction to environment explains the appearance of new forms of life:

But more profound puzzles confront the "Anatomist," and he poses the recurrent problem of the persistence in many groups of animals of primitive generalized types. If changing environments demand the evolution of more complex animals to meet the new needs, how is it that these have survived through aeons of time, apparently completely meeting the requirements without significant structural change, basic forms upon which all the higher developments of the group are founded? As examples of these "immortal" forms which have not developed their potentialities he gives the shark, the giant salamander, the tuatara lizard [with the third eye], the ostrich, and, following Bolls's thesis of infantilization, he would regard man as the permanent baby amongst mammals, emphasizing that lack of structural specialization which is man's saving grace.

In regard to the point referred to by the *Lancet* writer, the Theosophist refuses to accept the view that environment is the primary cause of the evolution of new complexities, and it is encouraging to know that the mechanistic evolutionists are being forced by their own studies to reconsider their position. According to the Ancient Wisdom, evolution is not haphazard, or the mechanical result of a reaction to environment, but is an

orderly process of unfoldment of what is already latent in each creature or group. Environment has a minor place, no doubt. Some animals come to the end of their potentialities of specialization sooner than others and are then affected by the "Law of Retardation" mentioned in *The Secret Doctrine*. They remain stationary, or practically so, but if the environment is unendurable, they die out and their monads seek other forms.

The expression used in the above quotation "man is the permanent baby (1) amongst mammals" has a deeper implication than the writer may suspect. It is true that by not specializing in *physical* development man's body has not become lopsided or sidetracked and therefore unfit to be the instrument of the soul. His specializing is spiritual and intellectual and it permits unlimited progress. Man even in his bodily structure is very ancient, and is only "infantile" in the fact that he has remained practically unchanged for millions of years in form. In his inner and divine nature, however, man is immeasurably older and was the originator of the basic types of the mammals which gradually appeared on earth in orderly and lawful evolution by a process yet unrecognised by science. Spiritual "Man" is a repertory of archetypal forms. This may seem curious to those who are unacquainted with Theosophy, but we cannot further discuss the subject in these brief notes. A clear explanation will be found in Dr. G. de Purucker's *The Esoteric Tradition*, chapter x.

FOOTNOTE:

1. Called by H. P. Blavatsky a "persistent type of life" (Huxley's term). See *The Secret Doctrine*, I, 256, where she explains the importance to the Occult Philosophy of man being one of these persistent types. — C. J. R. ([return to text](#))

THE UNINITIATED SEER AND THE TRUE ADEPT – *H. P. Blavatsky*

The difficulty of distinguishing between the creations of the seer's brain and spectral or spiritual phenomena really external to himself, appears to be the cause of the confusion into which untrained, uninitiated observers fall when natural mediumistic gifts enable them to cross the threshold of the world of spirit and awake to a perception of the wonders hanging like an *aura* around the physical planet. From Socrates to Swedenborg, from Swedenborg to the latest clairvoyant, no *uninitiated* seer ever saw quite correctly. But whatever confusing influences have been brought to bear on natural seers of past times, none have been beset with the artificial bewilderments that operate to cloud the faculties of the modern spiritualistic medium. A great mass of prepossessions occupy his mind at starting; every observation he makes, is twisted into the mould of an elaborate predetermined theory, and every picture presented to his finer senses is distorted to suit the expectations of his fancy and coloured to the complexion of a previously formulated creed. The spiritualist may honestly believe himself a seeker after truth, but the spiritualist, who is himself in any degree a medium, is fascinated by the creations of his faith and borne away on an induced current into a phantas-magorial world peopled with his own imaginings. Their apparent reality confirms the conjectures from which they spring, and all suggestions which claim a reconsideration of their character seem almost a blasphemy to their eager devotee. But to the student of occult philosophy there is a grander beauty in the consistent teaching of adeptship, than in the startling excitement of mediumistic revelation, while over it all there shines, for him, the solemn light of absolute truthfulness. Mediumship may afford sudden glimpses of

unsuspected wonder — as bits of a strange landscape may be momentarily revealed by lightning, but the science of adeptship casts the steady light of day upon the whole scene.

— *The Complete Works of H. P. Blavatsky*, Vol. III, pp. 119-120

The Theosophical Forum

SIGNPOSTS — A. E. Court

What is it that we can most readily do "to change the hearts and minds" of mankind with a view to bringing nearer to fruition an active expression of Universal Brotherhood in the world?

Just as a journey of a thousand miles begins with one step, that step nearest the traveler, just so does every accomplishment have its beginning. The seeker after Truth, contrary to the average belief, does not make his discovery in the fields of exploration about him, in books and experiments, but within himself. And just so can we attain to that Divine goal which is set before us, by beginning with that which is closest to us, ourselves.

Our journey is taking us to a land of Brotherhood. What was it that directed *us* to the way? It was the bright light of Compassion and Love displayed by one of our fellow-men whose path we crossed. He was literally a "Signpost," an animated expression of a "changed heart and mind," silently pointing to our own inherent possibilities and the way toward their attainment. It follows naturally, therefore, that our first duty lies with ourselves: the unfolding from within of the Divine essence of Brotherhood in order that it may be seen by our daily associates and act as a stimulus toward the changing of other hearts and minds.

Nature works its wonders in the silence, and so we, even though busily engaged in routine affairs, can be ever silently and surely lighting the pathway around us. The more "Veils of Illusion" we destroy in our nature, the brighter will our light shine, and eventually we will become a "Signpost" to men, more brilliant, more attractive, more vitally potent with significance and influence than anything we might otherwise do to attain our goal.

THE UNDERSTANDING HEART – *G. de Purucker*

Reverence is a godlike quality. I have a notion that the gods revere where we wonder only, and I think that the adult reveres where the child merely wonders. To me reverence is a mark of advancement in evolution; and the irreverent person is to me by so much short of wit, for it is vastly easier to criticize and to make fun, than it is to understand and in understanding discover reverence. It is difficult to understand, and I know myself that reverence grows apace in him who has the understanding heart.

I wish all of us had the understanding heart. I foresee that had we it, the most difficult points of philosophy would become easy to us all. For I have discovered one very interesting thing in my own life; that when I am vexed, troubled, anxious, worried with a problem, I never receive help from the brain, but always from the heart. The head seems all too often to increase the burden, because it is full of imaginations and often vacuous problems; but the heart understands, for there is a higher intellect in the heart than in the head. Or, if I might so phrase it, and I think correctly enough, there is more intellectual power in the heart-life than there is heart-life in thought.

It is small wonder, I believe, that the ancients used to place the focus of man's ordinary attention in the head; but his real intellect, his understanding, his intuition, his spiritual capacities, his sense of ethical responsibilities, in the heart.

Thus the Egyptians in their hieroglyphic representations, never showed the weighing of the brain or the head. They weighed the heart against the light feather of Truth. It was the heart that was weighed; and it is a curious thing that in the ancient Occultism, which still is the only true and best, it is the heart that is supposed

to contain the higher parts of the human being. These thoughts are rather new to the Occident because we retain but something only of the ancient ideal wisdom; although even in the Occident today we have retained the truth that love abides in the heart and not in the head.

So mark you, just along this line of thought: If you are doubtful whether someone loves you, watch that person, and if you find that person governed merely by prudential reasonings: is it wise? shall I gain? what will be thought of me? you can be fairly certain that that person's affection for you is not deep. There is a wisdom of the heart which is instinctive and instant, immediate and unquestioning, and it is far greater a protection to the innocent and to the sincere than is the always broken-up and merely prudential thinking of the head. You think it over.

I think that the greatest gift the gods can give to any of us is the understanding heart. It is eternally forgiving, it is full of charity, it is pitiful, it thinks of others before itself. It is wise, wise with the wisdom of the ages — for it is the breathing within us of the god-wisdom.

And remember, the heart is not the emotions. Oh, just there so many stumble on the path constantly. For the emotions are all too often connected with the head, as you will find, and perhaps have found; but the heart knows, and the heart is always hoping against hope that truth will be understood, that others will understand and help. The emotions are full of hot fire, of jealousy, suspicion, resentment. They have no vision, the emotions. So when we speak of the understanding heart, we never mean the emotions in which some people live and boast that it is a rich life. It is a poor life, a thin and a hungry, for the emotions are satisfied never. They are like the pisachas of ancient India, described by the visionaries thusly: beings of immense (or

small) body, consumed with immense thirst or hunger, and with but a pin-size mouth, so small that a pin might not enter in; and they starve, and they thirst, and are not ever satisfied. This is figurative of the emotions; and it is a strange thing that it is just these pisachas which are the astral imbodyed kama-rupic emotions of dead men, built up during life on earth by those who have lived in the psychic nature, the brain-mind, and the emotions.

The heart is the center of the spiritual-intellectual fluids which in conjunction with the manasic akasa filling the skull and permeating the brain, make the complete man, and the perfect man when they are fully harmonized and unified. Oh, pray the gods to give an understanding heart, and make that prayer real in your lives by yourselves opening the way for the gods that give it. Then your lives will be full of guidance, full of reverence, and rich with peace. All blessings will be yours.

The Theosophical Forum

THEOSOPHICAL PONDERINGS — *Vera Berg von Linde*

Like a spectrum we human beings catch the white light of verity and reality, and through us it refracts into different colored religions, philosophies, and sciences.

It is the same white light which illuminated the ancient religions in China, India, and Egypt, and it is the same white light which illuminates, for instance, Christianity and the occidental magnificent sciences.

Thus every nation on Earth possesses a part of the universal wisdom; because where spiritual purity prevails the white light radiates through human minds with unabated strength.

It is the genuine invocation which opens the soul to the divine currents in the cosmos, and not a certain system or formula.

The ways towards the Divine are many, and what is suitable for one person, won't do for another, yea, might perhaps be his mental ruin.

It is a sublime fact that whatever path a human being enters upon he will, if he faithfully struggles onward, sooner or later reach the meeting of the ways where all various theories blend into divine wisdom and harmony. And this we ought to carry in our minds, because it gives to us an objective and a tolerant attitude.

A difficult point for non-theosophists to see in the same way that we do, is the doctrine of Reincarnation. This is rather curious, because simple logic obliges us to admit that what once had a beginning must have an end, that what is deathless must always be deathless, that eternity must exist on both sides of the present now, and thus the present now can only be a dot in the eternal.

Our philosophy teaches us that our divine Self is deathless and eternal, that it once emigrated from celestial abodes to material worlds and in the course of its pilgrimage it has touched Mother Earth, where it has made for itself a human vehicle. According to this teaching our divine Self is deathless and has existed, shall exist in eternity on both sides of the actual moment; whereas our personal self and our human body have a beginning and an end; they are limited in time.

Goethe expresses the idea of reincarnation in the following beautiful manner: the human soul is like water, from heaven it comes, to heaven it returns, but again it must revert in permanent fluctuation.

The doctrine of Reincarnation solves many problems and shows us justice, where before we could see only the destructive working of seeming injustice.

If we in this present episode of our existence could but survey some of our preceding incarnations and catch a glimpse of the self-generated causes which created our destiny of today, then our loud complaints of unfairness would indeed cease.

Those conditions of life which we now in our blindness call too hard, too disastrous, would perhaps in the light of reincarnation show themselves as consistent effects of previous blunders. We should then understand that we are the architects of our own future, and that we never have met, never shall meet, anything we cannot in one way or another trace back to acts and deeds we ourselves committed.

If we and those about us regard ourselves as petty and insignificant individuals, it is indeed a comfort to know that this present earth-life is like a single schoolday in proportion to our age-long pilgrimage through the spaces of Cosmos; but this

school-day is given to us that we may learn patience, toleration, and a profound understanding of the conditions under which we and our fellow-men exist.

With our veiled conception and our superficial comprehension of the universal drama, we ought not to condemn each other.

Likewise, with our lack of spiritual intuition we really don't know who it is we have beside us in our home and in our place of business. The one we refuse to help now, helped us perhaps in a preceding incarnation, or will help us in one to come.

Many people maintain that it would be much better for us if we could remember at least our last preceding incarnation.

But surely it is more merciful as it is. Is it not obliviousness of our past lives which may make it possible for us to work in harmony with one who perhaps in the past was our mortal enemy? It is even easier for us in this earth-life to strive onward ethically, if we do not remember the crimes and evils whose effects possibly stick to us from archaic ages. Even a momentary glimpse of those past evils would probably paralyze us and weigh us towards earth, so that we should hardly manage to live.

When in the future we shall have reached the shore of divine wisdom and so strengthened our souls that we can behold our incarnations in a mighty and logical line of evolution, then our wondering eyes will be unveiled and we shall see just how our steps have been guided from darkness and isolation towards light and spiritual union.

Guided, yes — but by whom? By ourself, by our own Karma, states the theosophical teaching.

An Indian philosopher, Ramacharaka, explains it thus:

We are not punished *for* our misdeeds but *through* them,

we are not rewarded *for* our good acts but *by means* of them. Thus punishment and reward will come from our true inner being, and our character is the summation of our desires. The desires are the propelling force in our Karman, and through our Karman our incarnations are directed.

After years of experiences people mostly declare that they really do not have the slightest desire for a new earth-life, and if nevertheless they are reborn, it certainly is against their dearest wishes.

Of course these people are sincere, but if we examine their mental state we discover that as a rule they are not tired of earth-life *per se*, but rather of their own little individual earth-life. A long series of bright illusions have been shattered, and they are bored to death by their grey identical days of activity — or worse, lack of activity. But they admit, that if life had turned out so-and-so instead of so-and-so, then indeed they could have been happy.

Give these dear souls youth, health, beauty, success, and scarcely one of them will hesitate to begin turning a new wheel of earth-entanglements.

In these days we are experiencing a frightful effort at readjustment among the nations, a readjustment the sorrow and pain of which cannot be expressed in words, and yet in the light of Karman we are assured that not one of all the countless, desperate human beings in these nations has suffered or shall suffer in vain.

We Theosophists believe that thoughts are living entities in their own sphere, and that they have a disposition to manifest in our physical world with an intensity in proportion to the strength or violence with which we send them forth.

Through thousands of years humanity has despatched envious, malicious, hateful thoughts into our immense store-house of thinking. Sooner or later these thoughts must manifest upon our own stage of daily life not only as individual crimes, but even as collective crimes like revolutions and wars, which in this way may react upon the individual originator.

It is our egoism, social jealousy, antagonism against other persons, nations, races, which have created the terrible condition of poor Europe.

Really not one of us would have been born in time to suffer one or two wars, had we not in one way or another carried wood to this gigantic fire. War and murder will again and again give birth to new wars and new murders.

How dare we, who cannot even see the true meaning of one short earth-life, hurry fellow-men by force into the holy dominions of majestic death?

How dare we extinguish a human life and cut short its natural line of evolution, thereby interfering with its future destiny?

Don't we realize how we fetter ourselves to the being we kill, fetter ourselves with karmic chains so strong that nothing, nothing but the grandest love and transcendent justice will be able to restore the violently dislocated divine harmony?

Blessed be the day when we, instead of killing a fellow-man in self-defense, can say from a pure and sincere heart: Forgive me, my brother, that I neglected to share with you my wisdom, so that now through your ignorance you will be guilty of my death.

Remember that the law of the ascending arc is often contrary to the law of the descending arc.

Blessed be the day when in the darkness of the Kali-yuga we

succeed in manifesting what our Masters have shown us: that human eyes are made to reflect the light of our spirit, that the human voice is made to reconcile, console and guide, that human hands are made to transform into acts and deeds the purest feelings of our heart, the profoundest thoughts of our brain, that actual peace on planet Terra begins within the individual, and flowing therefrom can be a reality among collective humanity, and that it is only through unselfish living that we shall be able to raise ourselves and others from the coarse state of *Homo primigenius*, via man, towards the full-grown superman.

And lastly: it is at such holy hours as that of sunrise that we fully understand that not even the noblest of our Masters, Saints, and Seers are the appropriate objects of holy worship. For not by devious ways shall we approach That, which is nearer to us than our own heart and mind, That, which is the kernel in every entity in space.

Only in the most sacred part of our inner being shall we keep an altar of gratitude to the wondrous Creator of Cosmos — and there in profound reverence, seclusion and silence, through sublime invocation try to recover the golden thread of love and compassion which that Wondrous Being in its boundless unselfishness has extended from itself to every lesser being in its gigantic kingdom; so that we, however great, however humble, can always find the way along this thread of glory back to that, the Beyond, of which we are an eternal, inseparable, and essentially divine counterpart.

IS THERE AN "UNCONSCIOUS? (1) — Alan W. Watts

When we say that the chief contribution of modern psychology to human knowledge is the concept of the unconscious mind, we have to be careful of our terms. For the idea of the Unconscious does not belong by any means to all modern psychology, and those schools to which it does belong have somewhat different views on the subject. The concept is associated principally with the names of Freud, Jung and Adler, but there is no one name which covers their three schools. Freud's system is psycho-analysis; Jung's is analytical psychology; Adler's is individual psychology. There is no real reason, however, why they should not all be called psycho-analysis, because if, as is frequently done, we group them under the name "modern psychology" we thereby group them with such important systems as Gestalt Psychology in which the concept of the Unconscious plays no part. Popularly it is believed that psycho-analysis teaches that man has *an* unconscious mind; this is not strictly true, for the Unconscious is not to be understood as an entity or mental organism having definite location and identity. There is no actual division between the Unconscious and the rest of the human organism, for it bears somewhat the same relation to the mind as the glands, liver, kidneys, etc., bear to the body: they are integral parts of the body, but we are not ordinarily conscious of them. The only difference is that the Unconscious has no specific boundaries. It consists rather of the *condition* of being unaware of certain desires, impulses, tendencies, reactions and phantasies in our mental and emotional make-up. It has its physical parallel in the condition of being unaware of various bodily organs and processes.

There appears, however, to be little or no mention of the Unconscious in the world's religious, mystical and occult

philosophy. Indeed, to many students of these matters the idea is distasteful, and Freud, the father of psycho-analysis, has never been forgiven for regarding religion as a neurosis. In fact, the majority of religious people, whether of orthodox or heterodox persuasion, regard psycho-analysis in all its forms as an upstart science whose avowed object is to "debunk" all the noble impulses of humanity by ascribing them to repressed sexuality. Much of the contempt in which psycho-analysis is held is well deserved, but this should not blind us to a certain amount of gold among the dross. The trouble with this new science is not so much psycho-analysis as psycho-analysts. We might mention the professor in charge of a certain well-known clinic who devotes his life to the study of ink-blots. The patient is made to drop a blot of ink on a piece of paper and is suddenly asked what he thinks it looks like. Being rather puzzled and humorous the patient usually grins and says something like, "Oh, it might be an elephant with warts," whereat the professor assumes a far-away expression and murmurs, "Very significant. *Most* interesting. An elephant, yes. With warts. Exceedingly interesting." This case is not unusual, for the strange ways of psycho-analysts and psychiatrists would fill many volumes. I have heard fully qualified M. D.s discuss the case of a small boy whose propensity to bed-wetting was undoubtedly due to his unconscious identification of himself with Jupiter Pluvius. Still more significant are the gatherings of doctors and patients for summer schools where people take you by the hand, look into your eyes and ask you whether you are an extravert or an introvert. Indeed, such forms of psychology have swiftly acquired all the symptoms of crank religions. But just as there are half-wits and charlatans as well as true students in mysticism and occultism, psychology also has its heights and depths, both as to its ideas and its practitioners. There are, too, the same internal conflicts, the same personal idolatry, but one could hardly expect otherwise and the mutual contempt of religion and psychology is

but "the pot calling the kettle black."

In spite of all, however, psycho-analysis has a definite and valuable contribution for students of religion *in our time*. I say "in our time" because psycho-analysis is essentially a modern remedy for a modern ill; it exists for that period in human history for which the Unconscious is a problem, and a problem it has been since man began to imagine that all his difficulties of soul and circumstance could be solved by the unaided power of human reason. The ancient paths of mysticism and occultism resolved the problem of the Unconscious from the very beginning, even before it became a problem, for their first requirement was that man should *know himself*. Whereat he very quickly found that the huge, brute forces of Nature had their counterparts in his soul, that his being was not a simple unit but a pantheon of gods and demons. In fact, all the deities of the ancient theologies were known to the initiated as the inhabitants not of Olympus but of the human soul. They were not mere products of man's imagination any more than his heart, lungs and stomach are products of his imagination. On the contrary, they were very real forces belonging both to Nature, the macrocosm, and man, the microcosm. Occultism was thus the art of living with one's gods and demons, and you had to know how to deal with them in yourself before you could deal with them in the universe. The ancients understood the laws which man must follow in order to live with them, how by love the gods would become your friends and the demons your servants. In every initiation rite it was necessary to pass through that valley of the shadow where the neophyte comes face to face with the "Dweller on the Threshold" and all the most terrible powers of the psyche. But the rite could only be successful if he faced them with love, recognising them as manifestations of the same Divinity which was his own true Self. By this love he broke their spell and became a true initiate.

But man became over rational and forgot the gods and demons, relegating them to the realm of outworn superstitions. He looked for them in the skies and found only infinite spaces, dead rocks and orbs of burning gas. He looked for them in thunder and wind and found only unintelligent forces of atmosphere. He looked for them in woods and caverns and found only scuttling animals, creaking branches, shadows and draughts. He thought that the gods were dead, but in fact they became much more alive and dangerous because they were able to work unrecognised. For whereas the old occultists began with the principle "know thyself," the rationalists began with "rule thyself." They chose what they considered to be a reasonable pattern of character and strove to impose it on their lives without any preliminary exploration. They forgot that it is impossible for man to behave like a sage until he has first come to terms with his inner pantheon; as a result he could only achieve a poor imitation of the sage's behavior because he had not done the necessary groundwork. For this reason the rationalist, puritanic mind is a veneer about a muck-heap, an attempt to copy greatness by wearing its clothes.

But when psychologists began to have the idea of the Unconscious this was simply man's fumbling rediscovery of the lost gods and demons. Naturally experienced occultists of both East and West were inclined to smile, for to them this New Force called the Unconscious had never existed as such. And when people started talking about the Unconscious as if it were just a repository of repressed sexuality, the occultists laughed outright, knowing that it contained far more powerful divinities than Libido, who was just a little imp dancing upon the surface. It must have seemed funnier still to hear the Unconscious discussed as if it were a sort of individual with secret, dark designs and an unfortunate habit of wanting and thinking in direct opposition to the conscious. For

the Unconscious is not an individual; it is simply that about himself which man does not know. As such it is a purely relative term, because some people know more about themselves than others. Symbolically it may be represented as an individual, for in dreams the unknown aspect of men presents itself as a woman and *vice versa* with women. But actually when it is said that the Unconscious does this or that, it means that certain particular aspects of your internal universe are on the move without your conscious knowledge.

The concept of the Unconscious is nevertheless important to *modern* students of religion and occultism in that it is a reminder of the forgotten gods and of the place where they are to be found. Too many would-be mystics and occultists try to follow the rationalist technique of imposing a discipline upon themselves without first understanding the nature of the thing to be disciplined. You have to come to terms with the gods before you can ignore them, and those who jump straight from ordinary ways of living into the complex disciplines of occultism are inviting trouble. For until those terms have been made, the gods rule us although we have a way of persuading ourselves that their often unreasonable dictates are our own free and considered choice. Thus imitation of the sage is often a device put up by the demons for our own destruction, for modern man simply does not realise that until he has been through the valley of the shadow his life is not his own. Until he looks within himself, seeks out his hidden pantheon and overcomes it by love (or what psychologists call "acceptance"), he remains its unwitting tool. In all the old philosophies — Yoga, Buddhism, the Greek Mysteries, the Egyptian Mysteries — this exploring of the unknown self was the essential first step and now the same thing is attempted by the psycho-analyst, using a different technique and terminology. That there are failures and mistakes is only to be expected, for here

are men trying to work out the divine science on their own with little recourse to the experience of the ages, though to this there are a few notable exceptions. And though students of religion may be offended when religion is ascribed to repressed sexuality, it must be remembered that in many cases this may actually be true and that psychologists have had insufficient opportunities to study that comparatively rare phenomenon the genuine mystic or occultist. For what would such a person want with psycho-analysis? The warning to the beginner, however, still stands, for unless you really know yourself how can you say that your apparently noble aspirations are what they seem to be? Thoughts are often wolves in sheep's clothing.

Then is the first step on the path a visit to a psycho-analyst? Unfortunately the matter is not quite so easy. If you can find a *competent* analyst, perhaps, but the profession of analyst attracts many who need their own medicine more than any of their patients. The reason is that psycho-analysis has not yet had sufficient profundity of experience to judge its own results, to institute a hierarchy of "initiates" who can be trusted to say who is and is not fit to take up the profession. There is another alternative, though the professional analyst usually regards it with horror: that is to analyse yourself. It needs care and a pair of feet planted firmly on the earth, but if due regard is paid to the rules it can be done. You can follow the age-old techniques of meditation and you will often be safer in your own hands than in those of an analyst. Of course it is risky, but in these days so many people expect a "safe" way to wisdom. The way to wisdom is, however, a great deal less "safe" than the way to making a fortune; it is perhaps the riskiest and most worthwhile thing in the world, but you should not start out on it unless you are prepared to break your neck.

The Theosophical Forum

A UNIVERSAL SOURCE OF KNOWLEDGE — H. I. Barborka

A universal source of Knowledge has always existed, and always will exist throughout eternity. Man has made divisions of a unity, and so we have religion, science, philosophy, art, and literature; but all these in reality are parts or portions of a unity of knowledge which Theosophy calls the Ancient Wisdom.

The great minds of the present day, the men of science, the advanced thinkers of religion, the philosophers, artists, and men of letters are all drawing consciously or unconsciously on this universal source of knowledge. They are aided in their efforts by those whose duty it is to help and aid human endeavor, to inspire and enlighten the searching mind, the hungry heart, the aspiring soul. Such helpers are they who have advanced farther than their fellows in evolutionary development, and who have willingly offered themselves in whole-hearted service, life after life, for the benefit of humanity: they can draw consciously upon this source of wisdom and thereby benefit their fellow-men.

The scientists are no longer mere researchers into the material realms of knowledge, but are touching higher reaches of thought, and as they progress along these lines, they will find that religion, science, philosophy are aspects of one Truth. The day will come when the great minds of the world will unite in a Brotherhood of earnest-hearted men and women, working together for the common good of mankind. Already great minds of the present day voice statements embodying the thought of a unity of knowledge. Dr. Arthur H. Compton, Nobel prize-winner in physics, expresses it in these words, as quoted in the *Pasadena Star-News* of January 6, 1940:

I would like to stress the fact that there is no real conflict

between science and religion. Many people have the mistaken idea that science is purely abstract investigation, utterly removed from the affairs of every-day life. Yet science in its laboratories, in its study of the stars, in its theories and laws, has but one objective: an understanding of the world that will add value to life.

Further, the words of Sir Richard Gregory, Bart., in a lecture delivered at the General Section of the American Association for the Advancement of Science, at Richmond, Virginia, December 29, 1938, bear out the same idea:

It is through the acceptance of the idea of evolution in the spirit as well as in the body of man that the partition which formerly separated religion and science is being dissolved.

He realizes that science must join hands with religion for the common good of man; he urges that the scientists take an active part in solving the serious problems that their contributions to natural knowledge have created, and that they must help to assist in the establishment of a harmonious social order out of the "welter of human conflict into which the world has been thrown through the release of uncontrolled sources of industrial production and of lethal weapons." He concludes his address with the following words:

It is in the light of service to these high ideals that science, without which we can not live, and religion, without which most people see no meaning in life, can find a field in which both can work together for the highest human destiny. — Quoted in *Science*, Feb. 24, 1939

SUNSHINE AFTER RAIN — I. R. P

The world in sunshine after rain symbolizes for us many of life's deepest mysteries; the vision of a soul's dedicated choice perceived in the depth of a young child's eyes, the vow in perpetuity which brings to us the Avataras and Bodhisattvas, the moment of decision, after great perplexity and soul searching we have all experienced, the nobility of character that results directly from suffering. All these contacts with the Heart of Things live for us in sunshine after rain.

It symbolizes the inherent co-operation existing between the highest forces and the lowest material spheres, a state towards which the wilful human soul gropes as the goal of its endeavor. It admonishes us: showing us that were we as receptive as thirsty leaf and soil, as poised and regal psychologically as tree and blossom, as trusting and abstemious as bird and beast, as quick to respond to cosmic rhythm as sea and sky, we, as self-conscious beings, would know this harmony an hundredfold enhanced.

For sunshine after rain mystically proclaims the consummated unity of spirit and matter in manifestation on Earth, the blending of energising potencies and material substances in evolution through involution, in Reimbodiment: thus is the Universal Law fulfilled.

ART AND THEOSOPHY — *Charlotte Braun*

We do not make an attempt to define Art, rather do we agree with Plotinus when he said, "Art deals with things forever beyond human definition." Theosophists, however, approach Art from a very interesting point of view. There are certain basic principles which form the foundation of great art; they are really standards whereby we unconsciously judge a work of art. The background of these principles forms what we might term the philosophy of Art and are the grounds upon which Art and Theosophy so beautifully meet. These principles are: Unity, Harmony, Order, Equilibrium or Proportion, Symmetry, Rhythm, and Love.

These are all Kosmic, Universal laws which govern all things in the Universe from galaxies to the individual stars and planets which compose the galaxy; from man to the atoms which build man's body. Everyone sees these laws at work in the heavens at night. They are beautifully exemplified by the stars and groups of stars as they follow their own orbits and circulate among each other in perfect order, as they travel with a rhythmic movement along those paths which form well balanced and proportioned, symmetrical patterns. These paths and patterns of the stars complete the vast unified whole. The secret of good composition, that of unity and yet diversity, of repetition and yet variety, is also perfectly exemplified as that living, breathing, thinking being behind the universe actually manifests itself in a unified diversity. All the myriads of lives visible and invisible, great and small which build the universe, exist in one perfect unity yet each one is unlike any other, each one possessing different characteristics. The whole panorama is held together by the all-encompassing cohesive power of impersonal love.

It should not seem far-fetched to find a relation between the stars and Art, for truly beauty was born with the heavens and the earth; and as Emerson, the lofty-minded Sage of Concord, said, "The creation of beauty is Art." So it is then, that the work of art which embodies these universal principles and laws must be true art; for these are the lasting, the real, the vital things in life.

The study of these laws brings us a clear understanding of the basis of ethics and morals; they form the foundation of another art, that of living. This is a very important teaching of Theosophy. In our occidental, western way, we sometimes let ourselves make the mistake of believing ethics to be conventions invented by man. However, Theosophy teaches that which all keen observers of Nature's ways have found, that ethics is based upon the primordial laws of the Universe itself.

It is really quite a wonderful thought, that the qualities of the Universe which are the basic principles of Art, are also identical with the basis of ethics and should then be the living, guiding power in the life of a great man, a great *artist*. A truly great man is he to whom the teaching that he is linked to every other entity by the divine life at the root of his own being, is not a mere theory, but a vital actuality. No man has even guessed his own greatness until he has realized his unity with all other entities in the Universe. Furthermore, a great man is he who has learned to live in harmony with his fellow men; he who has become at peace with himself and he who strives to maintain equilibrium and balance in his life, to walk the middle way. In the devotional book, *The Bhagavad-Gita*, it is written, "Those who thus preserve an equal mind gain heaven even in this life, for the Supreme is free from sin and is equal-minded." Such a state is really most natural and normal, and one which we may all attain if we can only learn to keep the rhythm of our lives in tune with the vibration of these simple laws which are as inevitable as the

movement of the sea.

The great poet, whether he be a painter, musician, architect, sculptor, or dancer — for they are all poets at heart — when he makes these universal truths a part of his life, reflects them in his art. He feels so keenly the reality, the trueness, the beauty of the ways of the universe, that his art flows forth spontaneously from his heart. Perhaps it is this very spontaneity to which the Taoists of China refer when they speak of the Wu Wei. A student of Lao-Tse's teachings on this subject, Henri Borell, interprets them in this way: "The Poet sings because he sings, which is the same reason that the ocean roars and the small bird sings." But there is still another secret possessed by great leaders in Art in all ages, this is an impersonal unattachment to results. The great ones bring forth their song spontaneously from their hearts and let it stand as it is, while the smaller man tries to bend his art to conform to styles and trends. No creation can be greater than its creator.

With the ever more exciting discoveries being made of the Art of the Ancients, one can hardly avoid asking the question, "What, after all, is the origin of Art?" Theosophy, the Ancient Wisdom, gives a truly inspiring answer to this question. *The origin of Art was with the gods.* It is recorded that at the time that man was awakening to a realization of his own possibilities and dignity, that is, at the time when the light of mind had just been awakened in man, some 18,000,000 years ago, the arts and sciences of civilization and the Wisdom-Religion were taught him by wondrously wise beings who came to live for a while among men on earth.

These gods, these titan beings, had themselves at one time been men. They had unwrapped and unfolded from material meshes those godlike universal qualities which are latent in the hearts of

all men, thus becoming one with the most beautiful things in nature, becoming gods. Dr. de Purucker has said, "Every human being, whether having evolved to the point of expressing it yet or not, is the *vehicle* of a *divine being*, of an inner God; and furthermore every human being has within him the capability of being a sage, a seer, a genius, a spiritual leader."

The teachings taught by the Gods at this early date have been kept alive, guarded and protected ever since and have been the inspiration behind all the ancient civilizations of man. There have been times in man's history when a large majority of the people made this God-taught knowledge a part of their everyday lives and therefore their art naturally reached a very high peak. This might well be the explanation for a strange situation one finds at the dawn of the recorded history of all the great ancient civilizations. In China, Egypt, India, even Greece, as far back as can be traced, one finds a perfected language, the characteristics of each nation already manifested in their dress and physical aspect. This alone indicates a far, far more ancient civilization than the modern world recognizes. Then there is their art which we call primitive, but which is often pure, simple, and plainly symbolic of universal truths.

One cannot but feel that the artists who fashioned such relics as the old bronzes of ancient China were wise in the ways of the Universe. The older these bronzes are the more perfect is their proportion. It is very interesting, therefore, to note what H. P. Blavatsky said in *The Secret Doctrine* in regard to proportion. "All the rules of proportion were taught anciently at initiations, and there is deep esoteric significance hidden in every rule and law of proportion." When Madame Blavatsky speaks of *initiations* she undoubtedly refers to the Mystery-Schools of old. The Mystery-Schools were groups of devoted students who studied the mysteries of the Universe, the truths concerning man and his

relation to the Universe, thus keeping alive the fire of truth kindled so long ago and at the same time forming a definite source of spiritual inspiration; forming the actual foundation of the culture of old.

It is really fascinating to find wonderful cosmic truths wrapped in the old legends we all know so well and to find many different interpretations of the symbolic art of these ancients. Indeed many believe, and it is not an impossibility, that some of the old epic poems of the ancients were based on actual episodes in history; that such beautiful and highly symbolic stories as the Iliad and the Odyssey were, at least in part, the experiences of men and women such as ourselves. S. C. Kaines Smith, an authority on all matters Grecian, beautifully expressed this very thought in reference to the Homeric poems. He wrote: "Of one thing we may be confident — that the greatest poem in the history of the world is not based upon "such stuff as dreams are made on," but that through the swinging cadence of its lines there runs the echo of reality — that the cup of Nestor, the shield of Achilles, the riding-gear of Odysseus, the splendor of the palace of Agamemnon, of Menelaus, of Alcinous in far Phaecia, are memories of things seen, of things inherited from the mighty dead. . . ."

Of course we cannot agree that the poems of Homer are the greatest in the world, for the epic poems, *The Book of the Dead* of Egypt, and the *Ramayana* and the *Mahabharata* of India cannot be overlooked.

The art of the ancients is not only symbolic but it often complies perfectly with all the principles of great art. For example there is the architecture and sculpture of Egypt, so grand and sweeping in proportion. One of the most wonderful and truly inspiring pieces of sculpture ever carved is the seated figure of King Khephren of the IVth Dynasty, the date of which is believed to be 2800 b. c.

There is an atmosphere of most sacred serenity and infinite peace about this majestic work, carved from a slab of dark green diorite. The hawk at the back of the head indicates spiritual aspiration; it implies that he was in search of that same godlike goal of goals which was reached, which was realized, by Gautama the Buddha of India when he attained enlightenment under the Bodhi tree. One finds, therefore, this same atmosphere of infinite peace and compassion surrounding so many of the millions of statues of the Buddha which fill the temples of the Orient.

In China the art of painting reached an unparalleled height of refinement and spirituality because painting was the expression of the artist's highest, most lofty thoughts. The painting of the Chinese is great painting at its best. Especially is this true of the painting of the Tang period, sixth century a.d. At this time a large majority of the people possessed great knowledge of the universe and all things in it. But most important is the fact that they made practical use of their knowledge; they made the universal basis of ethics a necessary part of their lives, so that a glorious spiritual wave swept through the land. This wave had a most mystical and sacred source in the Tientai Monastery in the mountains of Cheh-kiang, where one hundred and thirty years before the Golden Age an esoteric school had been founded by Chih-i, the Teacher. To this spiritual nucleus came both peasants and nobles, students and artists, to give themselves and their lives to unselfish service to humanity. After one hundred and thirty years the Tientai Theosophy bore its beautiful fruit: the spirituality of the lives of the people was reflected in their art. The Chinese art was carried to the greatest height it, or perhaps any art, ever attained

The same beautiful story unfolds itself in the history of Greece, where the Mysteries were taught at Eleusis and Samothrace. But in the sixth century a.d. the Mystery-Schools in the Western world were closed by Justinian, and since then there has been no art in

the Occident in which we find a general, sweeping, cosmic significance. There has been great art, however, which has been produced wherever the individual artist breaks through to the universality in his own nature and grasps intuitively many of the most divine thoughts. Every Theosophist would agree with the Italian artist of the Renaissance, Michelangelo, when he said, "Nothing makes the soul so pure, so religious, as the endeavor to create something perfect. God is perfect. Whoever strives for perfection strives for something God-like."

The Theosophical Forum

THEOSOPHICAL ENCYCLOPEDIA GLOSSARY

[Some years ago THE THEOSOPHICAL FORUM mentioned that preparations were under way for the publication of an Encyclopedic Glossary of Theosophical Terms. Our readers will be glad to know that this work has been steadily going forward during the ensuing years and is now nearing completion. The material, which will probably fill several volumes, covers the whole exoteric field of ancient and modern Occultism and Theosophy, including mythology, anthropology, cosmogony, symbolism, the ancient Mysteries and allied subjects, and will prove to be an exhaustive mine of philosophical, religious, and scientific information. The work of writing and compilation has been carried on by a group of students at the General Offices Dr. de Purucker has then carefully checked the definitions and in many cases added new and valuable material.

It is too early to state when this Encyclopedic Glossary will be published, but the FORUM Editors have obtained permission to share with readers of our magazine extracts from this forthcoming work. No effort has here been made to follow any special sequence of arrangement, but random pages have been purposely chosen. — Eds.]

KUNDALINĪ: KUNDALINĪ-ŚAKTI

(*Sanskrit*) One of the mystic and recondite powers in the human constitution. The essential meaning of the word is "circular" or "spiral." "*Kundalini* is called the 'Serpentine' or the *annular* power on account of its spiral-like working or progress in the body of the ascetic developing the power in himself. It is an electric fiery occult or *Fohatic* power, the great pristine force, which underlies

all the organic and inorganic matter." (*The Voice of the Silence*, 77-8) "The 'Power' and the 'World-mother' are names given to *Kundalini* — one of the mystic 'Yogi powers.' It is *Buddhi* considered as an active instead of a passive principle (which it is generally, when regarded only as the vehicle, or casket of the Supreme Spirit ATMA). It is an electro-spiritual force, a creative power which when aroused into action can as easily kill as it can create." (*The Voice of the Silence*, 76-7)

Kundalinî-śakti is "Literally the power or force which moves in a serpentine or curved path. It is the universal life-principle which everywhere manifests itself in Nature. This force includes in itself the two great forces of attraction and repulsion. Electricity and magnetism are but manifestations of it. This is the power or force which brings about that 'continuous adjustment of *internal relations to external relations*' which is the essence of life according to Herbert Spencer, and that 'continuous adjustment of *external relations to internal relations*' which is the basis of transmigration of souls or punarjanmam (re-birth) according to the doctrines of the ancient Hindu philosophers.

"A Yogi must thoroughly subjugate this power or force before he can attain moksham. This force is, in fact, the great serpent of the Bible." (*Five Years of Theosophy*, 111)

"Kundalinî-śakti is derivative of one of the elemental forces of Nature. It works in and through, in the case of man, his Auric Egg, and expresses itself in continuous action in many of the most familiar phenomena of existence even when man himself is unconscious of it. In its higher aspect Kundalinî is a power or force following winding or circular pathways carrying or conveying thought and force originating in the Higher Triad. Abstractly in the case of man it is of course one of the fundamental energies or qualities of the Prânas. Unskilled or

unwise attempts to interfere with its normal working in the human body may readily result in insanity or malignant or enfeebling disease." (*Occult Glossary*, 92-3)

ANTHESTERIA

(*Greek*) "Flower-festival," from *anthos*, "a flower"; celebrated in the month of Anthesterion in early Spring, as a part of the Dionysiac Mysteries. "At the mysteries of the Anthesteria . . . after the usual baptism of purification by water, the *Mystae* were made to pass through to another door (gate), and one particularly for that purpose, which was called "the gate of Dionysus," and that of "the purified: " (*Isis Unveiled*, II, 245-6)

These were the Less Mysteries, preliminary and complementary to those held in the month of Boedromion (September) in Eleusis. Modern scholars, seeing the analogy between climatic seasons and the stages of initiation, but beginning at the wrong end, have supposed that the festival celebrated primarily the advent of Spring, and that the rites were "symbolic" of this. Older and wiser heads knew that the initiations were the main events, and that they were held at times when Nature harmonized with the purpose in view.

The attention of the student is called to the fact that the name "Eleusis" where the Greater Mysteries were held in Greece signifies "Advent" or "Coming"; and the adjective from the name of this town or "Eleusinia" signified or meant "the things that are to come." The meaning of all this is that in the Mysteries the initiates or neophytes were taught of the secrets of the Universe and of man; and included in these Mysteries was the teaching concerning what was to happen in the future depending upon the history of the various Root-Races of mankind succeeding one another, and the passage of the seven or ten classes of monads from the seven or twelve Globes of the Planetary Chain. The

teaching however was much more largely symbolic and allegorical than matters of fact delivered in plain language, as is more or less done in the teachings of Theosophy today.

CADUCEUS

(*Latin*) A herald's staff; specially, the wand of Mercury, God of Wisdom, son of Apollo-Python, one with Thoth and Hermes. It consists of a rod (or tree) with two serpents wound in opposite directions round it, their tails meeting below, and their heads approaching each other above. At the top of the rod is a knob in the Greek version, a serpent's head in the earlier Egyptian form, from which spring a pair of wings. The Caduceus signifies the dual aspect of Wisdom by its twin serpents, Agathodaimon and Kakodaimon, "good" and "evil" in a relative sense, spirit and matter, etc. The emblem of the evolution of gods and atoms is shown by the two forces, positive and negative, spirit and matter, ascending and descending and meeting in several places denoting planes. An esoteric commentary quoted in *The Secret Doctrine*, I, 549 says: "The trunk of the ASVATTHA (the tree of Life and Being, the ROD of the caduceus) grows from and descends at every Beginning (every new manvantara) from the two dark wings of the Swan (HANSA) of Life. The two Serpents, the ever-living and its illusion (Spirit and matter) whose two heads grow from the one head between the wings, descend along the trunk, interlaced in close embrace. The two tails join on earth (the manifested Universe) into one, and this is the great illusion, O Lanoo!"

Mercury in his character of Psychopomp or conductor of souls uses it to conduct them to Hades, and to recall the dead to life. Like other symbols, it has been bedeviled by theology and degraded by unclean fancy. The physiological significance of the rod or tree with twined serpents on right and left and two wings above, needs no comment.

The Caduceus, like every one of the other great symbols or symbolic images of antiquity and of whatever nation, can be read or interpreted from several different standpoints. There is, for instance, a cosmic or astronomical significance, as well as a spiritual one, likewise an ethical one and indeed a physiological one. The significance changes with the application of the symbol to different things. The Caduceus likewise is one of the most revealing and mysterious of the symbols connected with the esoteric portion of Theosophy; for it is directly connected in its symbology with the Globes of the Planetary Chain and the circulations of the beings or Waves of Life on these globes, as well as with the human septenary or denary constitution and the mysterious events that happen to man after death. Just here we see the significance of the ancient Greek mythological stories making Mercury the Psycho-pomp or Psychagog or "conductor of souls" after death to the various inner spheres of the Universe; such as the Elysian Plains or the Meads of Asphodel.

OM

(*Sanskrit*) "OM" is a word considered very holy in the Brahmanical literature. It is a syllable of invocation, and its general usage as elucidated in the literature treating of it — which is rather voluminous, for this word "Om" has attained to almost divinity — is that it should never be uttered aloud, or in the presence of an outsider, a foreigner, or a non-Initiate, but it should be uttered in the silence of one's heart, in the intimacy of one's inner closet. We also have reason to believe, however, that it was uttered and uttered aloud in a monotone by the disciples in the presence of their Teacher. This word is always placed at the beginning of any scripture that is considered of unusual sanctity.

"The teaching is, that prolonging the uttering of this word, both of the O and the M, with the mouth closed, it re-echoes in and

arouses vibration in the skull, and affects, *if the aspirations be pure*, the different nervous centers of the body for great good.

"The Brahmanas say that it is an unholy thing to utter this word in any place which is unholy." (*Fundamentals of the Esoteric Philosophy*, 14, IS)

William Q. Judge states that OM "represents the constant undercurrent of meditation, which ought to be carried on by every man, even while engaged in the necessary duties of this life" (*The Path*, I, 7). "OM is the bow, the Self is the arrow, Brahman is called its aim." (*Mandukya-Upanishad*, II, Kh. 2)

The virtue or spiritual and magical properties attributed to this word arise out of the purity and devotion of the one uttering it.

The Theosophical Forum

THE FORCES OF THE UNIVERSE — *G. de Purucker*

To thoroughly comprehend the idea underlying every ancient cosmology necessitates the study, in a comparative analysis, of all the great religions of antiquity; as it is only by this method that the root idea will be made plain. Exact science — could the latter soar so high, while tracing the operations of nature to their ultimate and original sources — would call this idea the hierarchy of Forces. The original, transcendental and philosophical conception was one. But as systems began to reflect with every age more and more the idiosyncracies of nations; and as the latter, after separating, settled into distinct groups, each evolving along its own national or tribal groove, the main idea gradually became veiled with the overgrowth of human fancy. While in some countries the Forces, or rather the intelligent Powers of nature, received divine honours they were hardly entitled to, in others — as now in Europe and the *civilized* lands — the very thought of any such Force being endowed with intelligence seems absurd, and is proclaimed *unscientific*. . . . — *The Secret Doctrine*, I, 424

I wonder how many of us really know what we mean when we speak of the "Forces of the Universe." You will be sure to be wrong if you think that by using the term "Forces of the Universe," we mean to signify the so-called scientific energies of the world. We do not. Why? Because the energies of science are soulless, without life, without intelligence, working haphazard, fortuitously, which means by chance; and how on earth these big-brained men can reconcile harmony, symmetry, mathematical perfection, in the Universe, with chance, is something utterly beyond me to attempt to explain! I do not think they have thought

about it.

When we speak of "Forces of the Universe," we mean living beings, as much alive as we humans are alive. Just as any one of you is a living being, a composite entity, with an inner life, with a spirit, a soul, and all your inner faculties working through a physical vehicle or sheath; just exactly so is there a supreme divinity, a hierarch, who is the informing principles of our Galaxy or Home-Universe. But he or it is only one of a host of others informing other similar galaxies in frontierless infinitude. The gods are infinite in number; and we are embryo-gods. If you want to understand the Universe, try to understand yourself, because you copy the Universe. The Universe repeats itself in every one of its atoms, which means in every one of its composite elements, in every one of its building bricks.

Just as man is informed by the divinity within or above him — both; so is the Universe informed by the divinity within or above it — both. And just as man is more than one, as he is a whole host of entities, all deriving their essence and being from his inmost heart of hearts, his divine Monad; just exactly so are all the Forces of the Universe derived from the cosmic divine Entity.

Take my body as an instance. It is alive, as your bodies are. It is alive because it is formed of living things, living cells. In the first place, these cells are formed of aggregates of atoms, which if they were dead would produce a dead aggregate; but the fact that they produce a living aggregate is a proof that they themselves live, are alive. The atoms, therefore, are alive, and they are alive because the building-bricks composing them are alive: the electrons and protons.

Now, that is what we mean when we speak of the Forces of the Universe. In the last analysis we mean gods, living gods which express themselves in the manner that we have some conception

of when we look at the starry sky, or look at the sun in the daytime, or consider the world around us, and all the actions that take place there, the growing plants and beasts and rocks. They are all alive.

What is an earthquake? Something that happens fortuitously, by chance? To believe that is simply symptomatic either of intellectual laziness, or lack of intellectual penetration. I don't believe there is a single chance action in Infinity. I cannot reconcile chance with law, because chance means the negation of law, and law means order, symmetry, harmony, mathematical relations. The Universe is alive because it is infilled with living things, with gods. The physical universe is the body of the god, as my body is the body of me. The idea has nothing to do whatsoever with the modern scientific theory of energies. Scientists are now even discarding the term "forces." It is too mysterious, too superstitious.

The way to handle these scientific thinkers is to pin them down to facts. Don't let your minds be led away by talk. Demand an explanation of why you are a living being. Don't be satisfied with talk about chemical action and reaction. It does not mean anything. Show me any chemical compound that man can make in the laboratory that moves and thinks and feels! And here we are, living and moving and thinking and feeling, demonstrating that everything we do, that every thought we think, that every feeling we have, is consciousness. This is so much so that the greater scientific thinkers today are talking about consciousness as being the fundamental essence of the Universe, coming at last to admit it. What does that mean? That these so-called energies that they keep in one compartment of their brains are simply examples of what they keep in the other water-tight compartment of their brains — consciousness, consciousnesses.

The very fact that the Universe is formed of aggregates of individuals is a proof of Polytheism, which means simply that the Universe is infilled with gods; and any Universe has at its head a supreme Divinity; as man, a microcosm or small universe, has at its head his own divine Hierarch, his essential, fundamental Self. But any such universe is only one among an infinitude of others. That is what we mean by the Forces of the Universe. I call them gods, because gods they are. When the sun rises tomorrow morning, look at Father-Sun, and remember that that brilliant divinity is a living being, the source of your own being in one sense, and that you are in your essence equally great, because both are manifestations of an indwelling divinity, the spirit of boundless infinity, the essence of boundless infinity, expressing a portion of itself in that sun, in those stars, in the planets, and all the entities that infill space, high, low, intermediate.

The only reason that science has been misled from seeing the truth in the past has been the fact that men were miseducated in religion for hundreds of years, fed not on truth — although the Christian religion is founded on truth — but on men's ideas about truth, theologians' ideas as to Reality. Then when men began to think and began to investigate the Universe around us, they found that those ideas could not be harmonized with what they found to be the facts of the Universe. So they lost confidence in all religious thought. They did not know of any other religious philosophies or philosophical religions that they had any respect for. And instead of thinking for themselves, each man following his own intuition, the spirit of the living god within his breast, they said: "That will introduce all kinds of anarchy into scientific thought. Cling to the only things we know to be facts, the facts of the physical universe." Because they could not find a soul within living flesh (and in fact they did not know what they were looking for), they said: "Man is but an animate mechanism." But what is

an animate mechanism, a living machine? Explain it. Those are mere words.

We are living in the life-sphere, the fohatic sphere, the prank sphere, of the divinity of our solar system, which divinity is the fountain-head of all the Christs and Buddhas that the human race from time to time brings forth. All movements of the world that we see around us: the earthquakes, the meteorological phenomena, rains, lightning, moving of clouds, thunder-storms, hail-storms, sunny, bright days, and over-clouded days — all are movements of the vital essence of the planetary spirit working in and with the cooperation of the solar spirit or divinity, as that solar spirit or divinity moves within the life-sphere of an entity still greater, the galactic divinity, which in its turn moves within the life-sphere of a divinity still vaster — all precisely as the living cells which make a man's body live and move and have their being within his body, which is the vehicle of the holy presence which his spirit is, the god, the hierarch, of his constitution. It is a wonderful thought, and fills man's mind with reverence for the symmetry and harmony and majesty and beauty of the Universe. It makes him reverent, it makes him respect his fellow-men; for what the human race has brought forth in the matter of great men once, it will reproduce many times.

Remember that on every occasion when you see the action of a natural force, you are seeing the automatic workings of the vitality of our own particular Planetary, or it may be Solar, Divinity. The only reason we cannot connect it with the human emotions and human thoughts that are familiar to us, is because its action is on a cosmic scale, so far beyond our understanding that we can only see, as it were, a small portion of it. The small portion of the web or pattern of our minds cannot take in the rest, and therefore we see what we think is purely mechanical action.

I will illustrate this: An entity living on an electron, helping to form one of the atoms of my body, would have no understanding or conception of my raising my hand, or of a movement of my leg, and even less of my intent when I speak; nevertheless all the interrelated forces giving my body life affect every molecule, every atom, every electron, in my body, destroy millions of them, bring millions of them into birth. In precisely the same way the gods, the Forces of Nature, have a range of action so vast and an intellect so far-reaching, and a vitality whose sweep is so all-inclusive, and a time-period — there is the key — so immense, that our understandings cannot take it in; and we search, as the scientists have done, looking for *human* consciousness in the movements of the planets and the suns, looking for *human* actions or causes, like human functions, in earthquakes and thunder-storms and the lightning-bolt. The scale is too vast, just as the scale of my speaking, my walking, the raising of my hand, is too vast for an inhabitant on an electron of one of the atoms of my body to comprehend. It perceives it, if at all vaguely, as an affection of matter.

As the great Greek Pythagoras said of the Music of the Spheres, the planets chiming and choiring together in celestial harmony as they circle around the sun: the march is too great for human ear to take it in, because the human ear has been builded by evolution to take in only a very short range of sound; and to right and to left of that range is virtual infinitude. The vibrations on either side, our ears are utterly incognisant of; and the same with our organ of sight. How small a fraction of the rays which produce vision in our optics, how small a fraction of the entire range of vibration, are we conscious of through the eye!

To illustrate again the vast range in which the Universe is builded: There are certain stars in which matter, and therefore the consequent play of energies and forces, is so tremendously

dense, that it is a million times denser than anything we can produce or find in our laboratories. And in either direction also, in the fields of cosmic space, there are nebulae so tenuous and ethereal, that they are a million times less dense, in other words a million times more tenuous, than the most tenuous stuff that we can know or produce in our physical laboratories. A million times a million makes a trillion — a million millions; and we have one trillionth of this scale which we can investigate in our chemical laboratories — physical matter, gas, etc. Think of it, one in a trillion! Enormous density on one hand, tremendous tenuity, ethereality on the other hand. And matter as we know it on this earth in all its forms occupies just a tiny fraction; and that is our entire range of investigation.

Now then: that is what I mean by a scale so vast that our human minds cannot take it in. The intellect cognises that these extremes exist. Very good. Then let your thought go out into those extremes. Remember that they are as much a portion of the Universe as is this little bit which we can test in the laboratory. Remember that we know of only one portion in a trillion; and then be modest! Outside of anything else, it has always seemed an amazing thing to me that it has only recently come to be recognised that man is an integral part of the Universe in which he lives and moves and has his being, and from which he derives everything that he is. Theologians and scientists and philosophers alike have always in some inexplicable way based their intellectual researches on the utterly preposterous foundation that man was something essentially different from the Universe; and this false concept runs throughout all the terms of our thought: subject, object.

This is an example of the Great Heresy, because it misleads you at every turn — the disjoining of or ungearing of yourself in your thought and feeling from the Universe in which you live, of which

you are a component, inseparable part. Man cannot ever know an object if that object is essentially different from himself. There cannot be any union. He can only know what he himself is or becomes. True knowledge, true wisdom, comes when, to use the ridiculous phrase of Occidental philosophy (though the deduction drawn is true): "the subject becomes identified with the object," and finds itself to be not twain but one.

The Theosophical Forum

QUESTIONS AND ANSWERS

Except for a "Mystery"

On page 96 of *The Mahatma Letters* one reads that the Lord Buddha would not have appeared in our epoch but for a mystery. What is the mystery referred to? — H. T.

Helen Harris — In answering the above it is taken for granted that the questioner has read what the Master K. H. says in regard to this subject on page 117 of *The Mahatma Letters to A. P. Sinnett*, as well as on page 96. Therefore it will not be necessary to repeat any of the facts given in those passages.

When the Master K. H. made the statement that the Lord Buddha, a Sixth Round man, would not have appeared on earth when he did except for a "mystery," it was the Master's way of stating that there are times in human history and in the evolution of individuals when in order to bring about or to accomplish a certain work, the Gods "bend down" so to speak, and with the help of Nature open the way for an event that might be said from our standpoint to be "outside" the regular order of Nature's operations, but would nevertheless be in accordance with cyclic law. As an instance of this, we are taught that the appearance of an Avatara is brought about by an act of "white magic." The Master K. H. might have used the term "white magic" instead of the word "mystery," meaning that certain things had been brought about in accordance with laws unfamiliar to man at present, and therefore a "mystery" to us.

We may imagine that such a one as the Lord Buddha, who by his own great knowledge and spirituality ran far ahead into the higher spheres of our chain — so high as to have broken through

into the realm or kingdom of the Dhyani-Chohans — had in so doing become subject to the laws that govern the beings existing in those higher realms, which laws would so transcend our understanding as to be a "mystery" to us. However, even though the Lord Buddha had attained by his own efforts this high state, he was nevertheless, karmically and compassionately linked with the Humanity of this earth, for he had become one of the highest channels for our Great Race for the forces coming to us from the spiritual heart of our planet. The ways of the gods (Dhyani-Chohans) are as "mysterious" to us as are our mental processes to the kingdom below man. For one who lives self-consciously in the sacred presence of his own inner god, Nature's doors are opened wide to that which would be denied to others until the right time arrive in the distant future.

Summarizing the above, and condensing it into a single sentence, the "mystery" mentioned was, in simple language, that Gautama the Buddha attained his high grade or degree in order to work amongst us because of successfully passing one of the three highest initiations possible to men on this globe; and he was helped to do it. This is the "mystery" referred to in *The Mahatma Letters*.

What Is Memory?

What is Memory? It is evidently something that can be purified. (See *The Mahatma Letters to A P Sinnett*, p.105) —

W F C

I. R P — Memory may be defined as our individual mental awareness of the indelible record filed in our inner constitution, a record which continuously impresses itself like a watermark on every one of our own life-atoms; hence our dominant characteristics.

H. P. Blavatsky in *The Key to Theosophy* and W. Q. Judge in *The Ocean of Theosophy* and *The Theosophical Forum* give us much valuable information. Thus we learn that memory "is one of the rational faculties" and because the physical brain is its instrument it depends "entirely on the more or less healthy and normal functioning" of that organ and is therefore limited to a single lifetime at best. In addition there is a complete record "preserved in the inner man" which should properly be called "reminiscence, *the memory of the soul.*"

The "purified memory" of *The Mahatma Letters to A P Sinnett* refers to the consciousness of Devachan, because as stated: "no sensual, material or unholy recollection" can adhere to the Ego entering that state. It retains only the reflexion of the ethereal and abstract attributes or skandhas after the Second Death in Kama-loka. W. Q. Judge uses the analogy of a photograph to show us how the Devachanic consciousness is but a rose-tinted print while Manas, the negative, holds the original and complete impression, and the lower aspects adhere to the Kama-rupa.

Since Manas is not yet fully evolved in humanity, or, in other words, man has not become ensouled by Manas, we can understand how true education, because it releases the latent potentialities within, trains memory, and evolution in the sense of an ever deepening universality leads man first to a state of conscious reminiscence, and later, at the close of this Manvantara, to Omniscience.

The Augoeides and the Causal Body

Is the Augoeides the causal body? May we know something more about this. Said one of the Masters of H.P.B.: "Eternal and immortal is her Augoeides" — E. S. W.

G. A. Barborka — As this question deals with two terms, let us first

examine their definitions.

Causal Body: This term is somewhat of a misnomer, as "body" implies a vehicle, and whereas spiritual states at times make use of a vehicle in order to produce an appearance — as in the case of an Adept when he appears in his Mayavi-rupa — it is an illusory vehicle (as the literal meaning of the Sanskrit term indicates). In her definition of "Causal Body" in *The Theosophical Glossary*, H. P. Blavatsky states:

This "body," which is no body either objective or subjective, but *Buddhi*, the Spiritual Soul, is so called because it is the direct cause of the *Sushupti* condition, leading to the *Turya* state, the highest state of *Samadhi*. It is called *Karanopadhi*, "the basis of the Cause," by the Taraka Raja Yogis, and in the Vedanta system it corresponds to both the *Vignanamaya* and *Anandamaya Kosha*, the latter coming next to Atma, and therefore being the vehicle of the universal Spirit. *Buddhi* alone could not be called a "Causal Body," but becomes so in conjunction with *Manas*, the incarnating Entity or Ego. (p. 74)

Thus we may say that the Causal Body would be equivalent to *Buddhi-Manas*.

The term *Augoeides* was made familiar by Bulwer Lytton in *Zanoni*. In a footnote he writes that it is "a word favoured by the mystical Platonists," and quotes an extract from Marcus Antoninus in Greek, which is translated as "the sphere of the soul is luminous, when nothing external has contact with the soul itself; but when lit by its own light, it sees the truth of all things and the truth centred in itself." *Augoeides* is a compound of two Greek words: *auge*, bright, light, with a subsidiary meaning of sheen, gleam; *eidos*, form.

Paracelsus also uses the term: he is describing man's constitution and says that "three spirits live and actuate" him, the third "is the *Divine spirit (Augoeides)*" (quoted in *Isis Unveiled*, I, 212). H. P. Blavatsky uses the term in her first work also in the above sense, and in referring to an Adept and his initiation she says that

He recognized his God and felt the great Being within himself. The "Atman," the Self, — This "Self," which the Greek philosophers called *Augoeides*, the "Shining One," . . . showed his full power to him who could recognize the "*still small voice.*" (*Isis Unveiled*, II, 317-8)

Thus it would seem that the term is equivalent to the Inner God — or Atma-Buddhi — while the Causal Body (as above stated) is Buddhi-Manas.

The phrase quoted in the question, "Eternal and immortal is her *Augoeides*," is from a letter to Col. Olcott from the Master Serapis, and the context refers to an initiation which H. P. B. was undergoing at the time. The term would be applicable to any initiate.

Are There "Astral Helpers"?

When an entity has passed on to the astral plane, can it be helped by one on earth? — F. L.

C. Q. W. — It is assumed that the questioner means "Can we who are still on earth help those who have passed through what we call death?" Let us remember that "sleep and death are brothers." How can we help our loved ones when they are sleeping, resting, in their bed-chamber?

Simply by quietly leaving them alone.

Under Nature's compassionate law our loved ones who have passed away are preparing to enter higher spheres of life. The

psycho-magnetic ties with this world must be loosed, and any attempt by a living person to "help" or communicate with the dead only strengthens the psychic and astral bonds which hold the departed "earthbound."

Thoughts of impersonal, unselfish love are always a help and a blessing to any soul, wherever it may be sojourning in Nature's realms. The love that brought two souls together in this life will do so in future lives; let us not do anything to interrupt this beautiful relationship.

A Line of Zoroasters

There are several references to a series of Zoroasters, some of the statements giving thirteen as the correct number, others twelve or fourteen. Could you tell us how many Zoroasters there really were?

G. de P. — The number of Zoroasters who have appeared from time to time is confusing, so long as we consider, and wrongly consider, these Zoroasters to be reimpodiments of one single ego, instead of different egos imbodying what we may interpret from the occult records as the "Zoroaster-spirit." The truth of the matter is that in the scheme and terminology of Zoroastrianism, every Root-Race and sub-race, and minor race of the latter, has its own Zoroaster or Zoroasters. The term Zoroaster means in Zoroastrianism, very much what the term Buddha does in Buddhism, or Avatara does in Brahmanism. Thus there were great Zoroasters, and less Zoroasters — the qualificatory adjective depending upon the work done by each Zoroaster, and the sphere of things. Hence we can speak of the Zoroasters as being thirteen in number from one standpoint, or fourteen from another, or like the Manus in Brahmanism, or like the Buddhas in Buddhism, we can multiply each of these by seven again, or even fourteen if we take in every little branchlet race with its guiding Zoroaster-spirit.

THE IMMORTAL HUMAN RACE — *S. H. Wylde*

Immortal? Who doubts it? A few despairing souls dare to breathe the thought that if we keep on as we are going, mankind may actually destroy itself and leave the world a vast and mutilated graveyard. But most of us don't believe this.

Anne Douglas Sedgwick wrote in one of her letters, "That terrible human race, intent, as everywhere nowadays, in sawing off the branch they sit on!" But even she only imagined a bad tumble. There would always be the good solid earth beneath the branch to catch us.

It is true that some say our children's children may never know the comforts of "civilization" that we have known; that they may be born into a sterner world, a simpler one, one where the problems will be those of building again from rock-bottom; where there will be no place — and no inclination — for the million excrescences that we now find essential to living. Not the motor car but the plough, they say, may again be the symbol of our activity. Who knows? All this may come to pass. But something rebels within us when we hear it said that the human race will destroy itself.

We admit, yes, that civilization will crumble, old cultures be forgotten; that war may continue to decimate the nations; that famine, flood and earthquake will take their toll of human life (of human bodies) in the future as they have done in the past. But the human race itself? *It cannot die!*

Is there any basis in fact for our faith in our racial immortality? Or does it merely mean that we are not willing to face the worst? Let us examine our beliefs and see if we are justified in our faith.

If human souls are created, generation after generation, by a Deity, what guarantee have we that the supply may not suddenly be cut off? How can we be sure that such a Deity may not find a better and more grateful planet to populate? Why need we even expect to wait for a final reckoning on the Day of Judgment? Surely the Divine Plan is not bound by our expectations! Or if, on the other hand, we believe that man is merely a highly organized mechanism that somehow stumbled upon something called 'life', what is to prevent the mechanism failing on a major scale to reproduce itself, as has happened to smaller human groups in the past where the women have become sterile and the race simply died out? Why should we stake everything on the infallibility of a machine?

Or perhaps we have never quite bothered as to what man is or how he gets here: whether he is a soul or just a machine: and yet our fellow men mean something real to us. We take, let us say, a vital interest in what they do, think and say. We perhaps even instinctively feel that in harming them we should be harming ourselves.

Here we have the three main classes into which most intelligent men of the West can be naturally grouped; and not among the members of any one of these three classes do we find a logical basis for a belief in the immortality of the human race. Yet, however we may have explained ourselves to ourselves — or failed to do so; however irrational or inadequate our viewpoint as to the status of the human race, we still cling to the belief — more than that: we take it for granted, that the human race will continue into the future, no matter how fearfully and persistently we seem bent on our own destruction.

We are willing to sacrifice much in order that those coming after may enjoy. It never occurs to us to think there may be no more

coming after. We labor in the scientific laboratory in perfect faith that generation after generation will follow along our lines of research and investigation, discovering secrets of nature that are still dreams for us. We never doubt that there will be those following us to carry on the traditions of the human race. How can we explain this inherent, this undying faith?

There is only one answer; and it is as near to us as is the beating of our own heart. But many do not know this; only their faith speaks for them. *We* are the answer to our own question. The immortality of the human race is bound up with the immortality of the individuals of the race.

Let us expand this thought with a teaching from the Ancient Wisdom. At a very remote period in the past, a vast group or association of spiritual beings, linked together from immemorial time by the close bonds of a common origin, a common objective, and a common type of development, came to live upon this earth. We are that mighty host, the great Human Family. Our hierarchy is made up of a definite number of individuals. Not all of this hierarchy are present here at one and the same time, however, because our earth-existence represents only a small arc of our circle of life. We are in constant circulation from the invisible worlds into our visible one and out again; and probably those on earth at any one time represent but a hundredth part of the complete group.

Like the flocks of wild geese that follow with one will the airways of the earth, north to south and south to north with the changing seasons, this host of human egos enters and leaves the earth again and again in continuous wheelings. But with us there is one unbroken circle of beings. Each child that is born, each soul that passes the doorway of so-called death, marks the forward motion of the slowly turning wheel of life.

We prepare the fields of earth-life for incoming egos who must cope with the results of our mistakes. We sow seeds of war, disintegration, economic instability, even anarchy, and our brother-selves whom we bring into life as our children, must carry on. But does it all end here? Do we escape to a happier and better realm (or are we perhaps "snuffed out'?) leaving a broken world behind? No. As surely as we have been on earth once we shall turn earthward again; and so finely adjusted is the equilibrium of Nature, that we shall find the world we return to strangely like the one we left behind. History repeats itself because we repeat ourselves.

Does the historian ever guess, when he points out the parallels between our problems, our fads, our amusements, our arts, our economic systems, and those of past periods in Greece, Rome, Egypt, India, Babylon — does he guess that what he has stumbled upon are the records of a group of beings who hanker after the pursuits that so absorbed them here on earth, and being unable to stay away from the scenes of their former activities, keep returning to take up again their unfinished work? "The same old human nature!" laughs the historian. Yes indeed, because it is the same egos returning again and again, making the same mistakes, showing the same heroisms, moved by the same ethical principles, whether taught by a Confucius, a Buddha, or a Christ; loving and striving, scheming and sacrificing, always in the same old way. — Yet not quite the same either; for slowly out of the confused meaninglessness of it all; out of the tantalizing half-meanings that disturb our consciousness and will not let us forget, there gradually emerges an understanding of the purpose of our repetitive earth-existences. Through fluctuating cycles of ascent and descent our sight is gradually clearing; and even in these days, amid the bewildering confusions of conflicting wills, there are those who can cast their inner eye along the crests of

centuries and see the immortal human race at last triumphant in the conquest of — itself.

When we issued forth from that great Mystery, that ineffable Splendor, which some peoples have given name to and others have left nameless, we had no knowledge of our differences, only of our oneness; when we entered earth-life we grew to recognise our differences and forgot our unity. We have been developing here as Individuals, and each such Individual has marked out the boundaries of his own little circle of consciousness. Yet as we follow our natures deep to their source we find the little circles merging into the One again; and it is this great circle of unity that we could not break even if we would.

Our common destiny is to be again — consciously where before it was unconscious — this circle of unity. And because the destiny of each one of us is bound up with the whole, we cannot perform an act, much less think a thought, without affecting to some degree every unit of that whole. Beneath the clash of race hatreds, with an urge more potent than our greed for power, our passion for supremacy, our egotisms and our separative and destructive conflicts, there works a common will, the will of our own spiritual selves who know not the heresy of separateness. This will is working towards a mighty destiny for the human race, the realization of an actual spiritual Brotherhood operative upon earth.

The immortal nature of man is bound to win in the end because it has the weight of a cosmic principle behind it — that of Universal Brotherhood, the essential unity of all life with the One Life. With this thought in mind let the unpopular idealist of today, wherever he may be, take heart. Let each act of sympathy and consideration for others, every manifestation of courage or endurance, every proof that comes to his attention that human

beings can still exemplify the principles of justice, understanding and compassion — let all of these be registered in his mind and heart as unmistakable signs that the immortal spirit of man is at work. That which is immortal can never be overwhelmed in the long cycle.

The Theosophical Forum

THEOSOPHICAL ENCYCLOPEDIA GLOSSARY

[Some years ago THE THEOSOPHICAL FORUM mentioned that preparations were under way for the publication of an Encyclopedic Glossary of Theosophical Terms. Our readers will be glad to know that this work has been steadily going forward during the ensuing years and is now nearing completion. The material, which will probably fill several volumes, covers the whole exoteric field of ancient and modern Occultism and Theosophy, including mythology, anthropology, cosmogony, symbolism, the ancient Mysteries and allied subjects, and will prove to be an exhaustive mine of philosophical, religious, and scientific information. The work of writing and compilation has been carried on by a group of students at the General Offices. Dr de Purucker has then carefully checked the definitions and in many cases added new and valuable material.

It is too early to state when this Encyclopedic Glossary will be published, but the FORUM Editors have obtained permission to share with readers of our magazine extracts from this forthcoming work. No effort has here been made to follow any special sequence of arrangement, but random pages have been purposely chosen. — Eds.]

CARDINAL POINTS

This may refer either to the four chief points of the compass, north, east, south, west, or to the four chief zodiacal constellations which have descended to us from antiquity as then being Aries, Cancer, Libra, and Capricornus, corresponding respectively thereto. From one important viewpoint it is of course true that due to the precession of the equinoxes the four cardinal zodiacal

constellations shift as the ages pass. These four points are connected with the four arms of the equal-armed cross or with the swastika, as also with the cube, the cube has six faces, which answer to the four points with zenith and nadir added. Sometimes the points are eight, and include northeast, etc. In the Scandinavian mythology we have the cow Audhumla, the great Mother, Astral Light, or cosmic soul, from whom flow four streams of "milk", in the Bible, the four rivers of Eden. In the *Zohar* it is said that the three primordial elements and the four cardinal points and all the forces of nature form the Voice of the Will, which Voice is the manifested Logos. The Dodonaean Zeus includes in himself the four elements and the four cardinal points. Brahma is likewise four-faced. The pyramid is the triangle repeated on the four cardinal points, and symbolizes, among other things, the phenomenal merging into the noumenal.

The four cardinal points are presided over, or are the manifestations of, four cosmic genii, cosmic dragons, or cosmic Maharajas, or hidden "dragons of wisdom," or celestial Nagas. In the Egyptian temples and in the Jewish these points were represented by the four colors of the curtain hung before the Adytum, and also by the square Jewish tabernacle; but the symbol has been grossly materialized, and the points themselves have been honored instead of the celestial powers they merely represent. See *Ezekiel*, chapter i, about the four living creatures with the four faces. The general idea of the four cardinal points is that at a certain stage of manifestation the three become four, in this case the number of matter; and the subject has to be considered in connexion with the general subject of the quaternary, and with other groups of four.

AQUARIUS

(*Latin*) Meaning "pertaining to water," and, as a substantive,

applied to the eleventh sign of the Zodiac. One of the four "fixed" signs, represents the Man or Angel among the Maharajas of the four quarters — Man, Bull, Eagle, Lion. In astrology it is one of the triplicity of "airy" signs. In *The Secret Doctrine*, II, 785, speaking of submerged continents and allied subjects, H. P. Blavatsky equates Aquarius with Ganymede. Among the twelve sons of Jacob, who became the founders of the twelve tribes, he is Reuben, described as "unstable as water," or (in the Vulgate) "rushing as water." In *The Secret Doctrine*, II, 353, he is Rimmon, god of storms and rain. Subba Rao, in his article on the Zodiac, reprinted from *The Theosophist* in *Five Years of Theosophy*, translates its Hindu name Kumbha into the numerical equivalent of 14, for the 14 lokas. Baily, quoted in *The Secret Doctrine*, I, 661 *et seq.*, calculates that in the year 3102 b. c. the origin of the Hindu Zodiac was in the sixth degree of Aquarius (which H. P. Blavatsky twice gives as Libra, which may or may not be intentional). It is stated that in 1898 the equinoctial point passed from Pisces to Aquarius of the stellar ('movable') zodiac, thus initiating a new Messianic cycle succeeding that of the Fish-man (Jesus). The Gnostic sun-god is depicted as a man covered with breasts, having a fish on his head and a sea-monster at his feet; which plainly indicates the group of three signs, Pisces, Aquarius, and Capricorn, and points to a fourfold division of the Zodiac, the Egyptian Bull Apis being the one which preceded Aquarius.

This is no place for modern and medieval astrology, or any kind of exoteric astrology; and, in the absence of more specific information in the works of Theosophical Leaders, it will be best to leave the interpretation of that most valuable of books, the Zodiac, to the intuition of students, rather than presume to present ideas which must necessarily be more or less personal to the writer.

ASTROLOGY

The universal analogy enables us to find a key to occult mysteries by studying the nature and motions of the celestial orbs, which radiate manifold influence upon events, and indicate positions in the geography of time. It is thus that the adept, in proportion to his skill, can interpret the past and estimate what is to come; by means of this key — among many others — he can define the interrelations of things and arrive at an understanding of the structure of macrocosm and microcosm, which are spread out alike in time as in space. The word therefore embraces a science of vast scope, permitting of studies which range from the sublime to the trivial, from the most spacious to the most confined. The records of the past show genuine astrology — very different from the quasi-art which passes under the same name today — as a branch of the Sacred Mysteries. It is so today, but no longer with popular acclaim. In a future whereof the past is prophetic the Sacred Mysteries and their handmaid genuine astrology will once more claim recognition and wide respect.

The tattered remnant which in our day clings to the honored name of astrology is an impaired legacy from Greece and Rome through the medieval art, elaborated by the somewhat miscellaneous and speculative industry of modern students; and that same medieval astrology was itself no more, as just said, than a decayed scion of the ancient stock. Modern astrology is too often cultivated in a spirit which binds us to our personality or caters to frivolous curiosity; yet the sublime truths, thus unworthily bedizened, beckon the serious-minded to worthier aims and wider vision. To the merest tyro it soon becomes evident that the planets cause or indicate character and events; what use he will make of this knowledge depends on the motives with which he seeks it. Anxiety about personal fate, the desire for influence and notoriety, the need for earning bread, or even knowledge for its own sake — such motives will qualify his attainments in

proportion to the scope of the sphere to which he limits himself. The wise Zoroaster bids us to let alone the stars in their courses: "They were not made for thee," he says. This was addressed to the merely curious and self-seeking.

It may help us if we remember that the heavenly bodies are in essence Gods, and that the influence they shed is the aura which likewise emanates from all living beings. The Seven Sacred Planets are correlated with the septenate in cosmos and in man; by learning the natures of these planets we find one key to an understanding of the natures of their correspondences. By their motions they measure cycles, determine epochs. Every being, if we reckon his life-cycle, is an event; his nature, his destiny, is shown if we know and can define the epoch of his birth. The knowledge that blesses is the meed of service to lofty aims. To apply it to the arts of mere divination or the quest of selfish gain and illusory fame, were to degrade the Mysteries and banish the goddess Truth, with but a hem of her garment in our profane grasp. The student of this branch of the Esoteric Philosophy should always bear in mind the ancient dictum of the wiser ones even among the later astrologers: to wit, "*Stettae agunt, non cogunt*," signifying: The stars impel, but do not compel.

CASTOR AND POLLUX

These two brothers of Greek mythology were also known as the Dioscuri. By one account Castor and Pollux (Polydeuces) were sons of Leda and Tyndareus king of Lacedaemon, hence brothers of Helen. Otherwise they were sons of Leda and Zeus, with their sister, Helen, born from an egg. Again Leda is represented as giving birth to Helen and Pollux by Zeus, and to Castor by Tyndareus, so that the two former were immortal, the last mortal. Various exploits are related of them, in one of which Castor is slain. Pollux, from affection, beseeches Zeus to allow him to die

also; but this cannot be because he is immortal. But Zeus permits Castor to share his brother's immortality on condition that each of them descends on alternate days to Hades, spending the other days in Olympus. Still another account tells how Zeus rewarded their fraternal devotion by placing them together among the stars as Gemini. They received divine honors both in Greece and Rome, according to legend appearing at times and assisting humans in war or in maritime danger.

The several variants of the myth are due to different applications of a complex symbol. When the seven great Cosmic Gods are enumerated as only two, two Kabiri, these were Castor and Pollux esoterically, and Jupiter and Bacchus exoterically; and personify the terrestrial poles, also the duality seen in the contrast between the terrestrial poles and the celestial poles, and between physical and spiritual man. As twin sons of Tyndareus they stand for day and night; but when Zeus is their common father and they are egg-born, the myth is theogonic, Leda being one of those cosmic birds, such as the swan, the goose, or the Kalahansa, which lay "golden" eggs. Again, when one is of immortal, the other of mortal descent, the dual nature of man is signified, as also the Third Race when animal man becomes a quasi god-man with an animal body. The "egg-born" Third Race has its first half largely mortal, having little that is able consciously to survive, and its latter half partially immortal because informed by Mind enlightened by Spirit. In this sublime legend is summed up the whole relation between our immortal Self and its mortal counterpart, together with those truths which are hidden under such misunderstood words as "redemption" and "sacrifice" and "vicarious atonement." It is love that binds the heavenly brother to his mortal counterpart, making him prefer death to separation. Whether, in following the impulse of his own being, he thereby sacrificed himself, is a question of interpretation; as is also the question

whether Zeus, in rendering his mortal brother immortal, was conferring a reward for a meritorious deed or was merely fulfilling the divine karmic law of love. Albeit the higher could not do without the lower; and the two by their mutual devotion invoke a power which Zeus himself cannot ignore.

The significance of the zodiacal sign Gemini will call for special notice under that head. It is dual and succeeds Taurus which is called the One: twin rays from the Logos, destined to form the heavens above and the earth below; dual forces in man summed up, to be signified in detail in later chapters of the zodiacal Book.

The Theosophical Forum

LIGHT THE WAY FOR THE "LOST" — *Raymond Rugland*

Look deep within your soul and bring forth that vast Love that you have kindled for mankind, and let it manifest. With the zeal that you seek the spiritually stronger for guidance and inspiration, look for the weaker — find them in the slums, the gambling halls, the prisons; look for the others led astray, and be not surprised if your search takes you within the austere gates of universities. Know that there is but one Way — the way of the chela. With the growth of your own soul, your love has reached out to embrace all, and call them "brothers."

Remember well those days when you groped for the Light in Darkness, when you were a "lost" pilgrim as are the struggling souls that you see about you. Justify your love for them by attempting to see once again the world as they now see it through *their* eyes. If the divine teachings surge within you, seeking expression and a chance to manifest themselves in helping others, then, remember to be honest with yourself first. Be so honest that you can weep again those tears of remorse that were shed as you stood on the threshold of a "new life," as you tasted the bitter-sweetness of shame and salvation. Were not those tears so stingingly bitter that they brought you, for the first time, face to face with your greater compassionate Self? Be glad that you rose from the mire of selfishness and temptations, if only to help those that you left behind. Recall the time when your whole existence was centered in a world of selfish ambitions and desires, when there was seemingly absence of the Light that you are now beginning to see. No being is so far removed from the Light of Reality that he cannot begin to see its feeble glow from whatever rung of the Ladder he may be standing on now. If you are to be a teacher, you must first know your pupil.

It would be difficult to *prove* that Night is coming to one who had never witnessed Night following Day; he would be content to live only in the Day that he knew. Do you remember when you prided yourself on your scepticism, when you lent a deaf ear to the man who could rationalize but who could not demonstrate the truth of his arguments? You looked "outward," but failed to look "inward." Perhaps vainly you totaled your limited and scattered "facts" of life, your "common-sense" valuations, yet you feared to step into the "unknown" to which those "facts" pointed, clinging desperately to your few straws of materialistic knowledge. You found that only in the greater Wisdom from Within did those scattered "facts" begin to take shape and conformity in the Mosaic Pattern of Truth. Who was that friend, that author — what spark was it that lit the wick of the mighty intuition which welded your scattered remnants of wisdom and understanding, binding them into a Becoming Whole, consistent with yourself and yet greater than yourself? No power outside of yourself led you to the Path to Reality. Knowing yourself in the light of your experience, realize that the others you would help must come the same Way.

Knowing this, then look at the world through the eyes of the man that you are trying to help. You must know each one of the "lost" as he knows himself, and armed with wisdom and compassion inspired by the Wisdom-Religion and the lives of great Teachers, realize that you can help him to find his inner self, possible because you are inspiring him to unfold his way and leading him to the conscious realization of the link between his human soul and his higher Ego. Realize that the "lost" soul is justified in being "lost" — both as a result of the limited experience that it has had, but more so because of the experience that it has not had. You can carry the torch of occult wisdom and inspiration wherever you go, its rays illuminating the Path and leading the pilgrim soul of the "lost" one to the field of new knowledge and experience. Just

as the child knows its parent, so does the feeble light of the undeveloped intuition recognise the Parent Light from which it springs. The Light must be brought to the man so that he will be induced to follow the Path where its rays illumine. Bring the Light into the gutter if it be required, knowing that even in the fog of unholy places its dimmed rays can yet light the Way for the "lost."

The Theosophical Forum

THE THOUGHTS OF MEN — *Martyn Witter*

The thinking self of every individual is linked inseparably — with the accumulated thoughts of the past. This unwritten library is awaiting whoever wishes to draw from it. Like attracts like and as a man is so will he draw unto himself.

There may be some who regard a few of their thoughts as being original. From this point it is an easy step to the feeling of personal ownership and dogmatic protection of some of the fruits of the mind. However, such conceptions of originality exist only through the lack of knowledge of the past that leads to the present. One does not need to investigate far into the past to find cycles of ideas, having systematic patterns, recurring time and time again in human history. But there is not just endless repetition, but instead spiral progression. This progression comes from within the moral-intuitive side of man, the ideas being but effects. It is needless to say that though ideas may be effects they are living entities and react upon man their creator. In fact they are the material used by man in the continual process of bringing forth his swabhava. But there is a fallacy in the intimation that all that man is now or ever will be is contained in the process of projecting the past upon the future. This is determinism. While it is true that when the first thrill vibrated throughout the Universe at the beginning of this particular manvantara a certain potential was formed containing in germ all the patterns of thought possible to be realized during this particular manvantara, this is not determinism. Man and the kingdoms above are not passive instruments bound down to an inescapable chain of causation. Instead man is an active focus of interblended forces. His goal is to realize that which he is at the present unable to grasp.

Beyond the field of manifested thought, which is the common property of at least those who are active and not passive beings, lies the field of, as yet, unrealized thought — Universal Ideation. It is the most advanced of humanity — adepts — who are the pioneers in contacting this field of Universal Ideation. It is they who feed humanity, allowing certain esoteric thoughts at cyclic times to pass into the thinking realm of men. It is these adepts who have the claim to originality if this fallacious term were to be used. When the veil of Isis is lifted, a manifestation of ideas occurs upon the sphere which influences those who are fit receptacles thereof. This is perhaps precisely the reason why esoteric truths are no longer esoteric upon being given out. That which becomes manifest becomes active, and there are some secrets of nature, we are told, which would wreak havoc upon humanity if made active before the moral natures of men were ready. It is needless to say that all realization is accomplished by penetrating within one's self, for therein lies the heart of the Universe.

In this connexion, let me quote from *The Mahatma Letters to A. P. Sinnett*. This quotation illustrates the degree to which humanity depends upon the Guardians for the transformation of Esoteric (Ideational) to universal realization (exoterical):

for it is we who were the divers and the pioneers and the men of science have but to reap where we have sown. It is our mission to plunge and bring the pearls of Truth to the surface; theirs — to clean them and set them into scientific jewels. — p. 51

But even thoughts manifesting upon the mental world are not captured for a song. On page 279 of the *Letters* we have the following:

On close observation you will find that it was never the

intention of the Occultists really to conceal what they had been writing from earnest determined students, but rather to lock up their information for safety-sake, in a secure safe-box, the key to which is — intuition.

The Theosophical Forum

WHO IS RESPONSIBLE? — *E. J. Dadd*

What are we to think about these problems of pain, disharmony in human affairs and in the kingdoms below the human? And even worse, in a sense: what of the instability and unreliability of the very earth upon which we must live? We cannot migrate to another planet — which indeed might be worse for all we know. No; here, according to reliable observation, we must live again and again, and have lived before and before, involved in the destiny of the earth and all its creatures, until — until — what?

There is a confusion within us. We feel we are superior to this sorry mess in human affairs; we feel that the imperfection shown throughout nature is not the best that might be. And when the very earth opens beneath our feet we feel indeed let down.

Shall we go on questioning eternally? It would be good to remember that other ages and other peoples have pondered this problem; and good to note also that intelligent co-operation is as much called for in the world of mind and soul as in the world of commerce. We have found help in the Theosophy that came from the East through H. P. Blavatsky. Western philosophy is outgrowing its once postulated Creator, all-powerful, all-knowing, all-good; and a devil who strives to undo all that the creator fashions. But we find it necessary to be charitable to this creator in so many other ways that we still must continue to question and wonder.

We might do better to forbear to postulate and have the dissatisfaction of not being able to make the facts fit the theory. Actually we are superior to the creator whom we have created, and our immense displeasure with so much of the life on our planet arises from the plain fact of our superiority to much of our

surroundings — which we did not "create." Why not be scientific in our religion and deal with facts as we find them?

The pesky fly, which we find it so necessary to swat for reasons of cleanliness, is an aviator so much better than anything human that we must suppose the existence of intelligences needed to produce and maintain the supply of such wonderfully complex machines. These "creators" are superior to us in that respect — though they may not be so always. The same thing applies to nature throughout. She is superior to us in the matter of suchlike construction.

These intelligent supervisors of nature do their work in a way that calls forth our respect and wondering admiration. But are we not part of nature, and standing side by side with them in the general plan? Have we not a spiritual work to do which many of them are not fitted to perform? Their part may be to build and train the forms: ours to build and train the mental, moral, and spiritual egos within the forms.

Why postulate one god as being responsible for it all? Better to observe armies of gods, each working according to ability and probably with a sense of duty in so working. Our duty as "human" gods is to organize and improve life wherever we contact it. And since there is an observable element in our human affairs which works in the opposite direction, we ourselves are evidently both god and devil.

Is there then nothing to which we can look up with adoration, with speechless devotion? Yes, yes, indeed there is. Deep within our own hearts it lives; and from that divine source flows forth the urge to recognise our responsibility together with innumerable others in a mighty scheme of evolution, ever moving from imperfection to stages higher and relatively more perfect. As we help others and assist all life so shall we realize

ever more keenly that divine Presence within us, our own Inner God.

That God of us is himself, itself, fulfilling a duty in a wider sweep of evolving nature than we are aware of. It is futile to try to fix responsibility upon any one being for the general state of nature as we see it. Better to get busy and do our part to improve human life. We might find as we make some progress that the lower side of nature had been reflecting our imperfections, and that we would have to shoulder a good deal of responsibility ourselves.

The Theosophical Forum

THE ILLS OF THE SOUL — *Stanley Zueek*

In these days of countless panaceas for the ills of body, soul, and spirit, it is interesting to note how the ancients dealt with the problem of healing the diseases of the soul. Iamblichus, in his *Life of Pythagoras*, tells us that Pythagoras considered such conditions as sorrow, rage, fear, pride, and kindred passions, as diseases of the soul, and employed sound to heal the latter, playing certain combinations of melodies upon the lyre or even using the voice alone for the purpose. Pythagoras also employed music when his disciples were retiring, using another series of melodies to liberate them from the cares and distractions of the day and bring about peaceful sleep and pleasing and prophetic dreams. Upon arising, still another combination of sound and songs was used by him to free the disciples from the torpor and heaviness of sleep and prepare them for the day ahead. Plutarch, in his essay, *On Isis and Osiris*, also makes mention of this fact about the Pythagoreans and adds that the Egyptians followed a like practice but used instead certain types of incense to obtain similar results night and morning.

As for himself, however, Pythagoras did not use the lyre or the voice to produce a harmonious condition within himself, but listened instead to the music of the spheres through his inner spiritual hearing, and it was these harmonies of the spheres thus heard by him which he later transferred to the voice and lyre and presented to his disciples for their benefit. We are told further that he also employed select verses from Homer and Hesiod for the purpose of correcting the soul. Says Iamblichus: "After this manner, therefore, Pythagoras through music produced the most beneficial correction of human manners and lives."

It would seem from this, therefore, that, as herbs and simples, and various medicines are used to heal the physical body of its ills, the soul, being of a more tenuous substance than is the body, requires, therefore, a more tenuous healing agent, such as sound and music as used by Pythagoras.

In this connexion, another thought occurs in regard to the relation between a Teacher and his disciples. The soul of a Master or of a true Teacher, being so much more highly evolved than that of his disciples, produces, consequently, a much more glorious symphony of sound than do the souls of his pupils, so that the very presence of a Teacher, without even a word being spoken, evokes or strikes similar, but heretofore latent, vibrations within the souls of his disciples, much as the striking of a gong or bell evokes an instant response from all objects of a sympathetic pitch in the vicinity.

Thus, even in the silence, the soul grows and is benefited in the presence of a genuine Teacher, which brings to mind that Shakespeare uttered a great truth indeed when he wrote:

There's not the smallest orb which thou behold'st
But in his motion like an angel sings,
Still quiring to the young-ey'd cherubims
Such harmony is in immortal souls,
But whilst this muddy vesture of decay
Doth grossly close it in, we cannot hear it
— *The Merchant of Venice*

And further,

The man that hath no music in himself,
Nor is not mov'd with concord of sweet sounds,
Is fit for treasons, stratagems and spoils;
The motions of his spirit are dull as night

And his affections dark as Erebus
Let no such man be trusted — *Op at.*

The Theosophical Forum

"THOSE THINGS WHICH MAKE FOR PEACE" — *Lawrence Merkel*

War is a purely human phenomenon. . . . Man is unique in organizing the mass murder of his own species." Those words were written by Mr. Aldous Huxley.

In considering the serious crisis which we are all in the midst of today, one cannot but feel heartsick, at times even overwhelmed. There are many causes for the madness called war — library shelves are piled high with books written on the subject and there are perhaps as many solutions to the problem as there are solvers. However, in arriving at some conclusions we shall attempt to face facts without sidestepping, without painting a picture with pretty platitudes.

It is time that we admitted that no real peace will ever be achieved alone by the disarmament conference, the gentlemen's agreement, or the treaty written on stiff parchment with handsome gold seals and red ribbons. Even Mr. Clarence Streit's very laudable plan of a union of the democracies must be accepted only provisionally because it is really putting the cart before the horse. In the last analysis, before any permanent peace can come to man, man must change. And he must change fundamentally: his sense of values, his blurred view of life, and his ideas and ideals must be altered entirely. After all, a city or a state or a nation is but the sum of its individuals, so let us start our solution of the problem with the first equation first.

It is our purpose in this article to try to outline, as simply as possible, a few of the basic teachings of Theosophy, and in so doing we shall attempt to indicate how the *application* of these timeless truths by each individual must necessarily be the initial step toward real peace.

One wonders what instant effect it would have upon those who seek to settle their differences by conflict were they to realize that this life is but one of many, that we come back again and again to learn and to gain experience, that we resume where we have left off in the cyclic journeyings of the soul. Knowing of reincarnation and believing it, wouldn't they see the utter stupidity of using brute force to crush the lives of others? For the barren meaninglessness of the one-life idea, the long view of existence with its opportunities and responsibilities would be substituted. It was Schopenhauer who once defined Europe as "that part of the world which is haunted by the incredible delusion that man was created out of nothing and that his present birth is his first entry into life."

Again one wonders what instant effect it would have upon those who seek to settle their differences by conflict were they to realize that what we sow, we reap — no questions asked. Wouldn't the war-makers have reason to hesitate, to "think fast, think deep"? For every misdeed, we have to pay, for every violation of nature's harmonies, we suffer — if not in this life then in the next. Ultimately the scales are balanced. We don't break the rules in themselves, we break ourselves *against* the rules. And if the real inciters of war only knew of this basic law of nature which Theosophy calls Karman, wouldn't they have something to replace an insane conception of justice? And wouldn't the inventors prostituting their genius to an end that may ultimately destroy a civilization have cause to hide themselves from themselves, if they could? "God is not mocked." "With what measure ye mete, it shall be measured to you."

Now it is this teaching of Karman which focuses a blinding light on the fallacy that might makes right. The use of force is rarely, if ever, justifiable. It is a basic axiom that violence breeds nothing

but violence. Let true ideals act as the only persuasive power against selfishness and greed. David Swing put it beautifully when he wrote that "In noble ideals there is something aggressive. They are not aggressive like an army with gun and spear, but aggressive like the sun which coaxes a June out of winter."

Once more one wonders what instant effect it would have upon those who seek to settle their differences by conflict were they to realize that man is far more than just a physical body, that he is really a composite entity of which the physical body is merely the carrier or vehicle for experience on earth. That man, to use the simpler division, is a synthesis of body, soul and spirit, and that the spirit in each of us, in essence, is identical. It is this that links us through and through. And it is these teachings that must finally make enemies forget their enmity, and make them realize that when *one* violates nature's harmonies, *all* are affected. Then too, don't these teachings serve to quiet the anxieties of those whose duty places them among the combatants? Loss of physical life doesn't seem so ghastly or futile when we come to see that the soul-spirit is deathless, and that true love can never be destroyed by gas or gun.

And finally one wonders what instant effect it would have upon those who seek to settle their differences by conflict were they to realize that brotherhood among beings is fact, not fiction; that their implanted hatred of their enemies is a farce foisted upon them against their higher and truer instincts. There must be many unreported friendly rendezvous among those on opposing sides. Here we see the innate feeling of brotherhood living in spite of the heel of hypnotizing propaganda. It cannot be reiterated too often that we are all portions of a grand unity. H. P. Blavatsky full well knew what she was emphasizing when she insisted in *The Key to Theosophy* that

universal Unity and Causation; Human Solidarity; the Law of Karma; Reincarnation . . . are the four links of the golden chain which should bind humanity into one family, one universal Brotherhood.

While the world today surely needs the teachings of the Ancient Wisdom, the world of tomorrow will be searching them out with an eagerness that comes only to those who have been burned in the fire of experience. And when this present futile outburst is a thing of the past, then more will want to listen to the age-old truths that must serve as the only basis for peace among men. Nevertheless, there is a great deal that all of us can do right now for Peace.

We might as well acknowledge the fact that we must share the blame for what is going on at present. If we had nothing to do with causing it, we should not be in the world today. War is simply the result of the lower animal nature in man getting the upper hand, magnified, of course, to enormous and horrible proportions.

Back in the fifteenth century a little book called *The Imitation of Christ* was written, and its author was reputed to have been the Christian mystic, Thomas à Kempis. We turn to this remarkable work to extract a sentence which is extremely significant. It is this: "All men desire peace, but few desire those things which make for peace." The final words are of extreme importance: "but few desire those things which make for peace." And what, after all, are those things? An inner harmony with its spiritual vigor, a consideration for the feelings of others in our every thought and act, a kindly word substituted for a rash one, a careful control of the temper and the emotions, and the cure of a chronic condition of "I" trouble with an eager willingness to work for others. These are the things which become manifest by *living* Theosophy, these

are the "things which make for peace."

The Theosophical Forum

THE USE WE GIVE TO WORDS — *P. A. Malpas*

It is remarkable that just at this time when so much emphasis is being laid upon accuracy of words in our studies and statements, words are being used and abused in the world as never before. With some people, so long as you can find a suitable word to excuse or cover anything bad, it becomes tolerable, if not actually good. Murder is the taking of human life and is justly abhorred by all decent people. Call it execution, elimination, removal, liquidation, "mercy killing," euthanasia, abortion, and for some unexplainable reason it becomes accepted as much less than murder, while in reality remaining what it was before.

Some people worship words; to them "Mesopotamia" has a blessed ring about it. David's "vigorous Saxon" in the Bible has a meaning all its own, regardless of the intention of the oriental original. It is even possible that some words acquire, so to say, an artificial life and force.

There is more even than that in the matter. There have been times and places where words have been used intentionally with two meanings, one for enlightenment and one for concealment. This is the case with many words in the Bible, which is an oriental collection of writings set in a Western frame. This gives any one expositor an opportunity to claim that his meaning is right and all others wrong, much to the confusion of the masses. For a time it seems that he has as much right as anyone else to claim authority. But we live in times of strange discoveries and even the exoteric world, learned and unlearned, begins to suspect if not to discern that there are methods of verification which are for them *terra incognita*. There was a time when it seemed impossible to analyse the substances of the sun. Then came spectrum analysis and the

miracle seemed easy. The age of the earth appeared to be incalculable. Radio-activity was discovered and scientists positively assert that here is an accurate time-clock by which to judge. Actually they know nothing of radio-inhalation and radio-exhalation, so to say, and they will have someday to revise their conclusions, but at any rate, it is a new method. Quite likely someday someone will find the key to the film-cupboard where nature has stored every incident, every thought, since the world began, and later the way to pick out any given picture instead of a nightmare order of scenes, or the chaos of so-called "clairvoyance," and then we shall have another scientific miracle of test and verification.

So it is with even such a simple thing as the "Bible," if anyone really wants to know what it all means and not what it seems to mean. It may be found that all these writings are private ritual writings of secret societies of mystical bent, and that the history of each and all has been carefully preserved by bodies of scientists or mystics who have an interest in so doing. Perhaps even some of the societies who produced them may still exist in quiet and privacy, undesirous of the turmoil of the outer world of dogma and doctrine.

Someday it will be found that many "authorities" are painfully inaccurate, such for instance as some of the Greek and Roman historians. We have been laughed at by learned men for suggesting that perhaps after all Alexander never conquered India and never even entered India proper, but there are just as good historians as the Greek who declare that it is so.

So we need have no qualms in pointing out that there are worlds unconquered in the words of even the gospels. The gospels are stories of the chrestos-pilgrim, "Everyman," who struggles and fights his way forward through the gates of initiation-death-birth

until he becomes a Christos. Later an actual historical figure who had won through was set in this ideal frame, and so we have the historical "Christ." But what a terrible confusion has been caused for the exoteric student by this jumble of terms. It might well be the case, on the other hand, that any member of that secret school who used this symbolism should say, "Well, it is no concern of theirs. Why did they interfere and steal our property? They deserve never to know that there *is* a key to it. That they should demand the key is outrageous. We did well to use the words cautiously."

Look at Paul, also a member of some school of the mystics — one of the Tanaim, in fact. He spent his whole life, according to the records, in preaching the anastasis, the "resurrection." What a world of perplexity has grown up round his cautious use of the word! There are more meanings than one in his watchword, but if we say that "resurrection" of the physical body hardly enters the picture even as the merest shadow, we shall probably be right. He taught reincarnation; he taught the resurrection from materiality to spirituality, but the dead-letter of modern western material "resurrection" is an absurdity with him, unless he was willing that outsiders should purposely mislead themselves, not having the training to understand the teaching without doing more harm than good.

The teaching of "Peter" seems to have been what we call faith — *pistis*. It seems unfair to deride serious scholars, but really what many have made of this seems to justify the little child's definition of faith, "It's when you believe something which isn't true!" Actually the technical mystical meaning of the word as used by the mystical societies means something quite different, gloriously different. It might almost be defined as "soul-knowledge" as opposed to "brain-knowledge," which latter, by the way, is often a hindrance to true soul-knowledge.

Of the meanings of the word *Jesus* in the mystical societies of the near Orient we need not now speak. But an interesting volume might be written on the subject.

Only — is it not strange that all these key-words of the gospels and the New Testament should be so very wide of their mystical meaning when translated into "Saxon"?

If any seriously wish to know more of what these words and others do really mean, there is enough material in H. P. Blavatsky's works for months of study.

The Theosophical Forum

WHAT IS "LIFE"? — *H. T. Edge*

Materialistic philosophy starts by supposing that things are dead, and then has to invent a life-principle to explain how they come to be alive. But what this life-principle is, and where it came from, they cannot tell us. Ultramaterialistic science declared that the whole universe is made of inert particles of physical matter; and to account for the activities of these particles, it postulated something called "energy." Matter and energy were the twin uncreated and indestructible rudiments of all things. But if this energy is not material, what is it? Science did not allow of anything non-material in the universe. And so the "energy" of science is defined as a function of matter in motion; — energy and force are made out to be effects occurring in matter, not the causes of motion in matter.

It is little wonder that such an illogical theory did not satisfy some minds; and so there arose a school of Vitalists. Vitalism is the theory that the phenomena of organic life cannot be explained by the properties of physical matter alone, and that consequently they must be due to some vital principle of a non-physical nature. Attempts to define such a principle have been vague and various. If it is spirit, what can spirit be, apart from matter? Or how can spirit act on matter? Perhaps the vital principle is another kind of matter — an aether, a fluid. But the difficulty encountered by the vitalists is not peculiar to the so-called organic kingdoms of nature; it is fundamental in the entire materialistic philosophy. It has long been known to intelligent reasoners that there can be no such thing as an inert particle of matter; nor can there be such a thing as an immaterial force. And both these truths have now been proved by actual observation. The universe consists of living beings, whose activities, expressed collectively, may be called

"life." The term "matter" has been applied to the static aspect of this life; the terms "force" and "energy," to the dynamic aspect. And why should a distinction be drawn between "organic" and "inorganic" beings? Why should animals and plants be called alive, and minerals dead? If the vitalists require a vital principle for plants and animals, they should require it equally for the mineral kingdom. But, as said, there is no need to postulate such a principle in either case. The dead matter and the force of materialistic science are highly metaphysical abstractions. The minute analysis to which we are now able to subject physical matter has revealed no such thing as inert material particles. What is revealed is a living something, that cannot be called force or matter, and yet is both; a something that may be called streams of electrons, electric charges in motion, light, electricity, etc. What is this but the universal Prana, in its physical manifestation? For this Prana is not a disembodied spirit but a stream or ocean of life-atoms, that is living beings.

The Theosophical Forum

SCIENCE AND RESEARCH — C. J. Ryan

Time-Space and the Mystic Experience

In the January *Hibbert Journal*, Sir Richard Tute (whose previous article on Time-Space and Consciousness was strongly recommended to our readers in THE THEOSOPHICAL FORUM for December, 1939) carries his argument farther in support of the spiritual importance of the modern scientific concept of Space-Time. He shows that while it does not resemble the ordinary conditions of living in our "three-dimensional universe" it is far greater and more inclusive. He considers that the ultimate constituents of the universe are *lives* (1) "personalities," living in Space-Time and projecting themselves under certain conditions into ordinary Time and Space. He approaches Dr. Strömberg's argument regarding the "fine-structure of space" from another angle.

Working on this line Sir Richard Tute relates these "personalities" with the scientific concept of Space-Time, which he shows is similar to the *direct experience* familiar to the great Mystics. Science then is trying to establish the existence of a state in which survival of the human soul not only can, but *must* take place, and is thus rendering true religion a great service, though unconsciously! Space-Time is, of course, very different from "ordinary" space or time, but it is precisely the state which is called the Mystic experience, perhaps *samâdhi* in India; "ecstasy"; the illumination mentioned by Plotinus; the "third heaven" known to St. Paul, etc. It is infinitely more real than the three dimensional world in which we think we live but which is only one aspect of something that includes "many mansions." Students should realize that H. P. Blavatsky gives much teaching in regard

to Time-Space in *The Secret Doctrine* which illuminates the whole subject, especially in the second volume on pages 382 and 612. She shows how different aspects of Time and Space are contained in Oriental writings in allegories of the doings of gods, heroes, etc. Many surprises are awaiting Western scholars in a more enlightened age than this, and the time is coming when it will be fully recognized that H. P. Blavatsky's admiration and reverence for the scientific knowledge as well as spiritual wisdom of the ancients was not exaggerated in the least. It is the glorious task of the Theosophical Movement to hasten this prospect for the benefit of humanity.

In regard to the illusion of Time caused by our limitations, the Mahatma K. H., speaking of the links between "men — the temporarily isolated fragments of the universal soul — and the cosmic soul," says: I feel even irritated at having to use these three clumsy words — past, present and future. Miserable concepts of the objective phases of the subjective whole, they are about as ill adapted for the purpose as an axe for fine carving. — *The Mahatma Letters to A. P. Sinnett*, p. 29

"Signs and Portents in the Heavens"

During the winter months the evening sky has presented a very unusual appearance which has attracted wide attention and which will not recur for many years. On February 29 the spectacle was specially interesting. All the planets were above the horizon soon after sunset, and the brightest ones, Mercury, Jupiter, Venus, Saturn and Mars were lined up in a row across the western sky in the above order. Uranus, Pluto and Neptune came next but few people saw them as they need optical aid to become visible. In striking contrast to this brilliant planetary display, the morning sky was denuded of planets.

Interesting and beautiful as it was, this alinement was not claimed to have any special significance. Next year, however, a planetary position, or, more correctly, a series of planetary conjunctions, will occur which are regarded with considerable anxiety by astrologers. The phenomenon will not be so spectacular as the recent display, in fact the most remarkable conjunction will not be visible at all because the sun will be in the way. Behind the sun and in the line of sight from the earth the planets Mercury, Venus, Jupiter, Saturn, and Uranus will be situated; the moon will be in the same line but on the opposite side of the earth and therefore visible in its full phase.

This remarkable alinement takes place on May 11, 1941, and a similar one is said not to have occurred for about five thousand years. According to the astrologers it is particularly threatening because it takes place in the sign of Taurus, a "fixed sign." In addition to this striking aspect, a number of other interesting conjunctions take place in Taurus from 1940 to 1943. On three occasions, August 8, October 20, 1940, and February 15, 1941, Jupiter will be in conjunction with Saturn, and Uranus will be twice in conjunction with Mars and once with Saturn.

Astrology tells us that the stars do not *compel* but merely *impel*. In at least one recent sensational and widely proclaimed prediction — the misfortunes and final loss of the liner *Queen Mary* within five years of launching — the stars certainly did not use much impulsion, for that ship has had no serious troubles and at time of writing is safe in New York harbor though the five years are well past! The element of uncertainty in such predictions is *very* great, although it can hardly be denied that a striking success is occasionally attained. It would be interesting to study the heavens at the dates of launching of, say, 10,000 ships, astrologically considered and to compare the horoscopes with the actual fate of each ship after a reasonable period of time. Has this ever been

attempted on a large scale? Such an experiment, if successful in showing a real connexion between the two, would be a powerful weapon to use against the scientific skeptics!

We are responsible only for presenting the main facts about the unusual celestial events mentioned above. Such highly significant phenomena (according to the astrologers) are so exceedingly rare that they seem worth recording "without prejudice," as the lawyers say, in these pages. Bailly, the celebrated French astronomer of the eighteenth century, who considered that Hindu astronomy was the parent of that of the Egyptians, Greeks, etc., calculated that the Hindu record of another remarkable conjunction of planets at the exact opening of the epoch of Kali-Yuga, the Black Age (3102 b. c), was correct. On that date, Jupiter and Mercury were in perfect conjunction, Mars and Saturn, quite close. The first 5000 years of Kali-Yuga ended in a. d. 1898.

It is curious that the beginning of Kali-Yuga, according to the Hindus, was so close to the "commencing or zero date" (3373 b. c.) of the Maya astronomical calculations, which practically coincides with the Chinese starting-point of ecliptic measurements mentioned in *THE THEOSOPHICAL FORUM* for March, 1940.

FOOTNOTES:

1. The Buddha said: "To the eye of flesh, plants and trees appear to be gross matter, but to the eye of a Buddha they are composed of minute spiritual particles. Grass, trees, countries, the earth itself, all these shall enter into enlightenment." ([return to text](#))

SOWING AND REAPING — G. R. Tawson

"Verily I say unto you that as a man soweth that shall he also reap."

This is one of the very ancient teachings of Theosophy handed down from remote times long before our so-called Christian era, and still taught in all religions. It is preached to us from the pulpits of our Christian churches in most serious and impressive tones. But the Christian churches of all shades of opinion and belief, although accepting this teaching, cannot or will not accept the teaching of Reincarnation, with the consequent result of canceling or annulling the teaching that we reap what we sow, in other words denying natural justice, which they indorse and teach.

Now let us see what is the practical result of teaching the one and denying the other, viz., Reincarnation. We are given to understand by the orthodox Christian that for every child that is born God creates a brand-new soul, that it comes into existence for the first time and has had no previous existence whatsoever, the consequence being that when it is born into this world, then, from the moment it draws its first breath it comes into conditions of circumstance and environment, of health or disease, poverty or wealth, and in every way, with which it is utterly unrelated, and is perforce compelled to accept conditions with which it has had no part whatsoever in the making. In other words it is compelled to reap what it has *not* sown or done anything to merit, whether pleasant or unpleasant; which is absolute injustice since it has not earned or merited any of these conditions: a complete martyrdom without rhyme or reason, and wholly unjust.

Now let us see what happens when it comes to die after perhaps a

long lifetime of activity along various lines, enterprises, schemes, unfinished plans, good and perhaps evil acts, the consequences of which it has not yet experienced. It dies, and, since reincarnation is not admitted by the orthodox believers, then in such case it is prevented from reaping the results of what it has sown, which is also unjust. *And so at birth it is compelled to reap what it has not sown, and at death it is prevented from reaping what it has sown.* What then in such case becomes of the sowing-and-reaping teaching?

It is quite possible here that the pious and devout Christian might say that all these things will be readjusted after death, and that when fully so done the soul will then, if it has been a believer in Jesus Christ, go to Heaven and abide there for ever and ever. This to the more philosophically minded appears to be incomplete and unsatisfactory, and for the following reason. If there is to be readjustment made after death and when completed the soul goes to, let us say, Heaven, the question arises as to how long it will remain there; for it is distinctly stated in the Bible that *Heaven is not a permanent state* — "Heaven and Earth shall pass away" — and so assuming that it goes to heaven and that heaven lasts for a certain length of time, then, when that time is fully completed and the Heaven state comes to an end, where does it go next?! An awkward question which the orthodox Christian will find hard to answer, except in the usual evasion: Ah! these things are beyond man's limited understanding. We must wait God's good pleasure to reveal to us those things which we are not capable of understanding!! — And this notwithstanding that the Bible says: "With all thy getting get understanding"; that it is the most priceless treasure of greatest value.

And so let us endeavor to get an understanding of this question of "Where next?" Here we would call attention to a law known as periodicity, a well-known law evident in all things with which we

are familiar, and consisting of a duality of Action and Rest — "Action and Rest alternating and operating everywhere and in every thing. Nothing can exist without this perpetual Action and Rest. All motion, all growth, all progress are possible only by the alternation of action and rest. Evolution would be impossible without it — day and night; waking and sleeping; sowing and reaping. There is no death. It is but the moment of transition from waking to sleeping. All things grow and evolve in this way from atoms to worlds. Planetary systems, universes, all come forth, evolve, and return to rest to come forth again with added growth and experience; and so also with man. When Heaven, or the state of rest, like sleep, comes to an end, the soul awakens once more and returns to the prior field of action and goes on where it left off. In this way we grow, we learn, and evolve higher and ever higher and reach towards grander and more sublime heights.

Thus we may say that sowing and reaping, waking and sleeping, are the eternal law of life. Without reincarnation there could be no existence whatsoever.

With all thy getting get understanding! The only cure for the world's troubles is to be found in true thinking, true teaching, and action based on true understanding.

There is no religion higher than Truth. "Light for the mind, love for the heart, understanding for the intellect."

The Theosophical Forum

THE USE WE GIVE TO WORDS — *P. A. Malpas*

The very earliest church was in fact a secret society, as were its successors. Following the methods of such societies, they used words with two meanings, or even more than two. If the secrets were betrayed, then the public were little wiser than before. If the entered apprentice (*idiot* was the technical Greek term, the ignorant one, shall we say) thought he knew enough to betray the ritual to outsiders (technically "pro-fanes," those outside the temple), he was likely to find that he really knew nothing and that the secrets given him were mere blinks. The mystic teachers were not fools.

For instance, one of the passwords of the lodges or churches was *Amen*, with the almost childlike explanation that it means "So be it." This translation means very little indeed, but there are other explanations. Another password was *Maranatha* — "the Lord cometh," or "the Lord is come." Apprentices, companions and doubtless many a "master," thought this meant that some physical Jesus was coming at any moment to turn the world into a sort of glorified court-house with themselves as lawyers and judges. That was one of the symbolisms used in certain lodges. Some, we are told, even went so far as to sell their houses and camp in the streets in anticipation of the coming. Pious English people have done something very near that within our lifetime. These good people had simply no idea of what the word meant in its mystical meaning or meanings, and the outside profanes simply thought they were mad.

The Old Testament and the New, and for that matter many another mystical treatise or ritual-script, are full of words which have technical or disguised meanings.

Jesus says, "Suffer the little children to come unto me, for of such is the kingdom of heaven." Many good-hearted souls have taken this saying in the ordinary literal sense, and if they have acted up to it, they will have their reward. It is good. But "little children" in the technical lodge language simply means "initiates," like the Brahmin "twice-born," or even the word "chela," unimaginatively translated by some, "a brat." And of course the "kingdom of heaven" is made up of initiates — and not of lawyers and judges judging all the other inhabitants of the globe who do not happen to belong to one particular sect.

We have said that "faith" as translated in the Gospels is not faith at all in the dictionary sense. Learned professors and rabbins might discuss the word for ages, but in that way they would never know more about it than a plow-boy who actually possesses a grain of it freed from intellectualism.

A very interesting code-word is that of the "city." H. P. Blavatsky in her *Secret Doctrine* (1) with her usual modesty, is delighted to find that one of the most learned Masons in Europe has explained that this is a mystery word for a religion, or an *esoteric worship* or mysteries. A city temple is an occult system, but the words can be varied as required. If she had said it first — what arguments! But as Ragon said it — who shall discuss?

The "Father" has more meanings than one, and a distinctly technical meaning in the lodge or church.

The Gospels are full of double meanings, even puns, especially *John*. The very word "Evangelium" has been suspected by one of the most learned mystics in Europe to have a rather surprising secret meaning.

The delicate play on words in the simile of asking *bread* and being given a *stone* is very ingenious. Jesus is born in Bethlehem, the

"House of Bread." That is, he is the type of the central figure in the Bread-mysteries, and "our daily bread" is one of the most sacred prayers in the ritual, although in some gospels it is asked in a rather different formula, such as, "give us this day our *future* bread." Opposed to this is the unwelcome substitute — a stone. And one of the Greek words for stone is "Peter." As a Hebrew word *Peter* is something else, but that is not mentioned in the Gospels. Some rather surprising sayings or doings of Jesus are really not what they seem to mean, the mistake being due to our scholars' ignorance of the mystic meaning of words.

The sea, the mountain, the heavens, wine (fancy a mystic drinking alcohol!), fishes, fishermen, the cross, the crown of acacia, the temple, the pearl, marriage, the garments — all these and many, many other words are technical terms of various mysteries. Their everyday meaning is often beautiful, and there is no harm in following that meaning, if good. But it is folly to say that the meaning we choose to give them, or the mere dictionary meaning, is the only one, or even the real one.

Paul is simply the Latin word for "the little one," the little child in the mystical sense. His real name was quite different. He was an initiate — a "little one" in that sense.

A small dictionary could be written of such words, but *cui bono* — to what purpose? What is wanted is not so much the technical meaning of words, but a knowledge of what they stand for. We have spoken of new methods of test and proof and research. Has it never occurred to any of the thousands of theological dogmatists that there is indeed such an infallible method to settle all their arguments? Let a man or a child tread the path of discipleship ever so lightly and he will be beyond the dead-letter of all the dictionaries ever published. He will know.

Someday in the distant future we may picture to ourselves the

world full of "people who know" — gnostics — who may or may not know the *words*, but the *thing* they will know, because they have been through it by experience. Then will the world again be of "one lip" and the Tower of Babel, the Mouth of God, will be the temple of all humanity.

The Theosophical Forum

THE SYMBOLIC GEOGRAPHY OF THE ANCIENTS — *L. Whellams and I. M. Oderberg*

It will be apparent to all students of the Ancient Wisdom that in olden times one of the systems of teaching something of the Mysteries was the use of symbolic geography. As an example, in the account of the adventures of Horus of Edfu in the Egyptian religious ritual, (1) we have one instance of this system; for here is a dramatized story of the soul's descent in involution and ascent therefrom in evolution in the final return to its Source, wherein the great god Horus typifies the soul; and the country of Egypt, its towns, and the river Nile, typify the field of activity of that soul, and the Sutratman.

In reading the story of the Winged Disc, or the history of the Horus of Behudtet, we can see a picture of the mystical history of the land of Egypt, with the works of its gods and heroes, emblematic of the aspects and qualities of the soul, in conflict with Typhon-Set, or materiality, upon the arena or field of life (Kshetra, field or body in the Indian philosophy, cf. Kurukshetra in the *Bha-gavad-Gita*). (2)

This story of Horus can be interpreted as the emblematic or symbolic history of the true initiation of the Horus (or Christ) spark within himself. (3)

As Paul Brunton truly says:

We may understand, therefore, the real purport of ancient religions when we understand that their heroes also typify the human soul, and that their adventures typify the experience of that soul in its quest of the heavenly kingdom. Osiris therefore becomes a figure of the divine

element in man, and a symbolic history of that element — its descent into material worlds and its reascent towards spiritual consciousness.

It is well worth rereading the story of Horus, keeping before one a picture of the country of Egypt. One should view this map facing the South, which was the position assumed by the Egyptian initiate, and then we see the Delta as a triangle with point uppermost, suspended from a thread, the Nile. Imagine the far South as the higher planes, with the Atmic ray falling downwards through the Buddhic, Manasic, etc., planes to the Delta in the North, which can be looked upon as the lower planes. Take the Lower Egypt as the plane of the lower mind or kama-manas, the "place of thick darkness," and the South land, or *Upper* Egypt, as the higher mental plane, or the buddhi-manas, the "country of light," and the Nile as the sutratman or stream of life from above bringing life, light and vitality to the soul, mind, and body. (4)

Keeping this picture in mind one can see how the adventures of Horus in each particular locality symbolize and conform with the ideas of soul development which we have given to us in Theosophy today.

We read how Horus, the soul, offspring of Osiris, Atman, and the "goddess of wisdom" Isis, or his buddhic aspect, his sister-wife, sailed down the river, bade farewell temporarily to his father, and does battle with Typhon-Set; and how, continuing the work commenced by Ra, he is assisted and sustained by Isis, and finally vanquishes the opposing force, Typhon-Set.

The whole of the details in the legend should be studied carefully, the place-names, the localities, whether on the hills or the water, the very weapons used: all these convey to the student of symbolism absolute conviction that here is true wisdom-teaching of the ancients.

"Heliopolis plays a great part in the religious inscriptions and also holds an important place in the mythological geography, which is by no means the same as the terrestrial, for there is also a mythological Egypt with its cities and sanctuaries. Of this Celestial country On is the capital, the outstanding city. It is consequently a mistake if we always interpret a geographical name occurring in a religious text in the sense that it bears in a terrestrial map of the country. We often find, for instance, Osiris named as being the god of Dadon, the city of Busiris in the Delta; and it is there inferred that Osiris was a divinity of Lower Egypt. But if we consult the *Book of the Dead*, we shall find that Dadon does not at all answer to a city in the Delta, but to a region in the East where Osiris is to be born and receive the breath of life, and where he is represented as the rising sun. Elsewhere Dadon is equivalent to the East, as Abydos is to the West." So says Naville in his book *The Old Egyptian Faith*.

In this aspect it is also instructive to read Homer's *Iliad* and *Odyssey*, and the gospel story of Christ-Jesus where the scene of his labors, in this symbolic light, becomes the mental plane, with Jesus the personality aspect and Christ the Individuality aspect of the soul. Compare also the descent into Egypt and the phrase "out of Egypt have I called my Son." Another example is of course the story of the wars in the *Mahabharata*, and the story of Arjuna in the *Bhagavad-Gita*.

These old myths were well known to the people at large, and formed the background of the exoteric religions of Egypt and elsewhere; yet, as we are told in *Fundamentals of the Esoteric Philosophy*:

if you examine the literature, the symbology of the ancient literatures, philosophies, and sciences, with the understanding given to us by our own esoteric teachings,

you will find that while the symbolism is exoteric because it has been published, it still remains esoteric because it is unexplained, its meaning is still hid.

Summing up, in the words of Blackden in *The Ritual of the Mysteries of the Judgment of the Soul*:

It is suggested that one of the methods by which the Ancient Priesthood strove to educate the people to a certain participation in the Mysteries was a system of Symbolic Geography, wherein the whole country was made to symbolise the Lodge, and the mountains, cities, and rivers, wherever locally possible, represented by their names the parts and furniture of the Lodge; the country's Mystic History was thus made emblematic of the true Initiation of the Soul.

And we are told that the mystic mason states that "the Lodge is Man."

The recent publication of *The Glastonbury Zodiac* excited no little interest and curiosity. While there is some justification for the conservative restraint towards the avenues of thought which it opens before us, the view that the Druids in England also used Symbolic Geography as a means of teaching the Celtic people is given further support by the fact that although the Road known as Watling Street is of Roman origin, the name Watling is derived from Wate, a starry divinity, and there is no little evidence that the Milky Way also was a "Watling Street." Does not this suggest an earlier road, the earthly symbol of the Milky Way (as we now call the vast group of millions of suns forming our galactic — or home — universe)? There are very good reasons for linking the two, and strange fields for speculation open out when we consider the derivation of the word Arthur, from Arturus, from Arcturus, associated with the Constellation of the Great Bear.

Indeed, Arthur itself, in some quarters, is translated as "Wondrous or Great Bear."

But we must leave this field, and close with two interesting quotations. From a sixteenth century poem by Gawain Douglas:

Arthurys hous, and Hyades betaikning rane,
Watlingstrete, the Home and the Charlewane,
The fiers Orion with his goldin glave.

In the following two lines by Scott, "Arthur" is used for the whole constellation of Ursa Major:

Arthur's slow wain his course doth roll,
In utter darkness, round the Pole.

FOOTNOTES:

1. This is also known as the "Winged Disc Myth," and its similarity with the purpose and underlying meanings of the *Bhagavad-Gita* will be readily noted by all students making the comparison. ([return to text](#))

2. In Plutarch's essay *On Isis and Osiris*, xi, he says: "When, therefore, you shall hear the fables the Egyptians tell about the gods — their wanderings, cutting to pieces, and many such-like mishaps, you ought to bear in mind what has been above stated (that is, that the Egyptians, and certain of the Greeks after them, wrapped their teachings in a symbolical, mysterious, and enigmatical style), and not to suppose that any of them happened or was done in the manner related."

It is interesting, too, to remember what Dr. de Purucker says of Sambhala in his *Occult Glossary*, that it (Sambhala) "is a Sanskrit place-name of highly *mystical* significance." ([return to text](#))

3. *It should be remembered that Horus, as the other Egyptian gods*

also, was a symbol with a wide range of meaning. ([return to text](#))

4. Incidentally, those interested in the Great Pyramid will note that this

ancient house of illumination stands on the West Bank of the Nile right on the dividing line of these upper and lower planes: the Neophyte enters from the North, or kama-manas regions, receives illumination and enters the buddhi-manas regions, takes a step to the left, the East in this case, and follows the stream upwards to its source. The Theosophical Forum

"FREEDOM OF THE SPIRIT" — *Irene R. Ponsonby*

Readers who appreciated his article 'Is There an Unconscious?' in THE THEOSOPHICAL FORUM for April, 1940, will welcome this book, *The Meaning of Happiness* (1) by Alan W. Watts.

Periods of transition, of regeneration, such as the present cycle, test the fiber of human integrity. It is not remarkable, therefore, that psychological unrest and conflict work mental and physical havoc in the lives of an increasing number of men and women every year. And each year new efforts arise to combat the evil. For the most part, Psychology has man sitting on the fence besieged by the importunity of such terms as 'the two moralities,' 'neuroses,' and 'reflexes,' the 'acceptance of or escape from life,' while he tries to figure out just what he can or cannot tolerate in his life.

Why are so many of these movements which seek to eradicate the general misery failures in their own field of action? Because only those whose teachings are based on a recognition of universal law touch the hearts of men and heal the conflict. And all the time evolution takes care of the demons: the gods share man's association with divinity by invitation only — Man can redeem the whole by wholeheartedly identifying himself with the things he is proud and happy to cherish; the rest is best ignored.

This problem is not a new one nor is it unique to the West, though the above expressions are typical of the attitude and approach of Occidental thought. For ages the spiritual energies of the universe have delved into the material sphere and worked for the evolution of its manifestation. Now the tide of life has turned; involution of matter has begun, and in the consequent evolution of spirit, unification and universality become the keynotes of

progress. That composite entities should be opposed one to another is inevitable, but conflict of self within the composites themselves points to inherent weakness of fiber. Has the product of self-consciousness, the human soul, become so matter-enthralled in the realms of the descending arc that even egoity is jeopardized?

The East promulgated a solution of this problem ages before the advent of Western civilization. The seven stages of Yoga and Gautama's Four Verities and Noble Eightfold Path are but three of the least misunderstood doctrines of Hinduism and Buddhism treating of self-conquest. Due partly to this misunderstanding, but especially to the fact that the esoteric keys are unknown to the West, these great tenets have scarcely benefitted the average man. Will the teachings of Eastern and Western Psychology taken together be more successful? Will they point to a primitive and universal source of Religion?

The Meaning of Happiness is a stimulative study of the quest for freedom of the spirit in modern Psychology and the Wisdom of the East. Replete with fine material, the book "does not name a single thing one can *do* in order to be happy," but in living words "quite clear to the 'man-in-the-street' but utterly obscure to the philosopher" it reviews in seven chapters the pertinent aspects of ancient and modern thought as introductory to the central theme and final chapter, 'The Love of Life'. Believing that the simplest truths have to stand on their heads, as in a paradox, before we recognise them, the author shows us the fundamental simplicities of life as in a mirror, and phrased with originality of perspective and color — a setting in which the depth and glow of the grand tenets of Religion are enhanced. Here are a few ideas which set the reader's thought vibrating.

. . . if our eyes cannot see themselves, how much less can

that something which looks through the eyes see itself. (p. xxiii)

The beauty of life is not in any of its stages but in the whole movement from birth to death, p. 53)

Centuries of civilization have orphaned us from nature both in and around us. (pp. 65-6)

The modern Westerner is apt to make a God of his ego rather than an ego of his God. (p. 74)

. . . the free man is so filled with gratitude to life for the freedom to be all of himself *that he joyfully renounces it*. This is where true freedom guards itself against abuse, (p. 195).

The heresy of separateness and man's relation to the Universe are effectively discussed from many angles; so are the nature of the ego and the principle of duality. There are interesting comparisons between ancient and modern Psychology, in the course of which the several schools of the latter and their exponents receive just appraisal. In this context the author states:

In the West psychology is a new science; in the East it is very ancient, and in fact it is not correct to speak of Oriental *philosophy* at all, for in no sense is it philosophy as we understand it. Essentially it is neither speculative nor academic; it is experimental and practical, and is much closer to psychology than philosophy. (p. xv)

The Religions of the East postulate a composite universe and man, at least fivefold and more generally sevenfold in constitution, and they define for each of these centers or egos its particular sphere of consciousness. Therefore, while aptly describing the applicability of the Eastern teachings to *human* needs, Psychology

seems too limiting a term for so comprehensive a system of Cosmology.

Some of Alan Watts's comments on Christianity are so arresting that they merit further elaboration; however he maintains:

Christianity is our traditional faith; it is in our blood and bones. Therefore it is possible and very desirable that the wisdom of Asia and the psychology of the unconscious will bring its treasures to light again and interpret them in a way that will give us an altogether new zest for it.

And then he explains that Christian symbolism had no real meaning for him until he had studied the religions of the East, though he considers that the result would have been much the same had he read "Eckhart, Augustine, a. Kempis, Berdyaev and others of their caliber instead of the sages of India and China." (p. 137)

Be that as it may, it is the phrase 'traditional faith' that intrigues this reviewer. Humanity today is the ward of the ages, having expressed their racial and religious impress life after life through the cycles. Yet the individual is cognisant of inherent leaning towards one or another of such impresses. True, the die of our present cast is welded by Christianity — into its sphere we have been drawn by karmic attraction — but can the earlier and possibly stronger impressions of the past be entirely ignored? Surely the impact of such past experiences penetrates deeper than blood and bones. We prefer to believe that a heritage of the Wisdom-Religion of the ages stirs in the hearts of men of many varied creeds and some day they will claim this as their 'traditional faith.'

Here a necessary distinction should be drawn between Religion and religions, between those great movements that embody a

cyclic impetus toward racial evolution and the numerous lesser efforts of a religio-philosophical or psychological character which arise as sincere but not always wise response on the part of earnest individuals to existing conditions. The former are causal in origin and effect; the latter are the product of transition, and seldom outlive the age that bred them. The persons of the great founders and the universality of the doctrines of the former point undeviatingly to a College of Sages and Seers, to a Mother-Source of Truth; whereas the diffusiveness of the latter contributes to their undoing.

Had this distinction been recognised by the author of *The Meaning of Happiness, bona fide* Theosophy, as the modern expression of "the essence of all Religion" and "the most serious movement of the age" would have received its due in this otherwise fine survey. In addition some aspects obscure in Alan Watts's interpretation of the sublime teachings of the East would have been revealed to add their power to the beauty of this book. Verily, "the freedoms of the spirit are not attained by violence of the will but by an infinite patience of the imagination."

The Theosophical Forum

THE ESSENCE OF H. P. B.'s MESSAGE — *G. de Purucker*

We speak of rendering homage. There are various ways of so doing. There is the homage of words, and there is the homage of the heart which leads to emulation. The homage of words is good when the heart is behind it; but the homage imitating grand action is finer and higher still.

I think the best homage we can render to our beloved H. P. B., outside of the words with which we express our deep gratitude, is by copying her, copying her life and her work for mankind: being as like unto the example she gave to us as it is possible for us to be. She indeed said the same in regard to her relation to her own Teachers: They teach, I follow. My Message is not my own, but of those who sent me.

In the Theosophical world since our beloved H. P. B.'s passing there has been no small amount of talk about the successors of H. P. B.; and all this has seemed to me to be so perfectly trivial, a trifling with words and with the most sacred instincts and impulses of the human heart. For every true Theosophist is a successor of H. P. B. and should be glad of it and proud of it. We are all successors of H. P. B., every one of us without exception whatsoever. And the least is often the greatest amongst us. I do believe that every true Theosophist should essay to be a Theosophical leader and be proud of the title, and aspire to take his place in the foremost ranks of our teachers, of our lecturers, of our workers, of the exemplars of the Theosophical life. Here is a case where it is not conceit or arrogance but the impulse of a loving and grateful heart to come to the front and serve, and dedicate one's service to the Cause which our Teachers have served and which they still serve. What is grander than this?

Actually it is the abdication, the rejection, of the low and the personal. It is the forgetting of the personal and the sinking of the self into the immensely greater Self of the Universe. When we forget ourselves, then something supremely grand is born in us; for the spiritual then, of which we humans are such feeble examples, has a chance to come forth in us, to speak and to work in and through us, because then it begins to find its channel in and through the human heart and mind.

It has always seemed to me that H. P. B.'s great work was to ensoul men — words which are profound and very meaningful; to give men and women a philosophy-religion-science which should so mightily persuade both mind and heart that they would come to realize that the Universe itself is alive and conscious, and that we, her children, perforce and from that fact, are alive and conscious also, and are co-eternal, coeval with the Universe, from which we come, in which we live, and into the spiritual parts of which we shall again return.

When you get this simple thought in your heads and in your hearts so that it amounts to a conviction within, you are already becoming re-ensouled. The soul, nay rather, the spirit within you, is beginning to take command of you, and from that moment your lives will be changed. New and grand vistas will open to your vision, vistas which your intellect and your intuition will show you are realities, and you will begin to govern your life in accordance with the living, naming thoughts that will thereafter make their shrine in your hearts. You will begin then really to live. You will no longer be what Pythagoras called "the living dead" — those alive in their bodies and relatively unconscious in their souls. You will then actually be embodied souls.

This to me has always been one of the loftiest and most beautiful parts of H. P. B.'s work that she came to inaugurate: to ensoul men

so that they might live anew with the vision glorious and with eternal hope.

No man will act against the dominating impulse within him. Let him change that dominating impulse from self-seeking interests to altruistic service for all, and life will take on a grandeur that up to that moment he had never seen or understood. Such a man is becoming truly ensouled. He sees the reason for his life. He sees the reason for the universe around him. He sees the reason for his own thoughts. He understands causal relations and effectual consequences. He sees vast and utterly grandiose visions opening before his mind's eye; and he knows that all he has to do in order to attain still greater vistas, and to be of greater service, is to put the strength of his intellect in these intuitions and lofty feelings, center his power of action upon them and thus grow in ever enlarging stages of inner grandeur and inner understanding. His life will then have changed because the man will have changed. He will have been awakened. And he will then so rule his life and co-ordinate it to the life of the Universe around him and to the lives of his fellow human beings, that what we Theosophists call Universal Brotherhood will be his first instinct and the controlling impulse in both his thought and action. What magic! This to me is the essence of the message of H. P. B.

The Theosophical Forum

"NOT WITHOUT DUST AND HEAT" — J. M. Prentice

In the cleaning out of a pigeonhole in my office, a spot long undisturbed, a piece of paper was dislodged which, on examination, revealed a series of quotations that had been written down long ago by one of my predecessors. Reading them over, a sense of kinship was revealed; I wondered what military officer it was who had been thinking thoughts curiously like my own. Some unconscious Theosophist, perchance, aiming at the expression of a philosophy, dimly sensed, as through a glass darkly.

The first quotation I recognised at sight. It was from Shelley's *Prometheus Unbound* and it must have comforted many thousands in the years that have passed since the genius of the poet took fire in the contemplation of a myth that is one of the treasures of the Race.

To suffer woes which hope thinks infinite;
To forgive wrongs darker than death or night;
To defy power, which seems omnipotent;
To love and bear; to hope till Hope creates
From its own wreck the thing it contemplates. . . .

Perhaps in some crisis in his life the one who had transcribed the lines so carefully had found comfort in learning "to love and bear," which is the key that unlocks the portal to all spiritual greatness. To love and bear up under all circumstances is to grow — it is the message of every World Teacher and is re-echoed by the genius of every generation.

The next quotation, put down some time later, by the color of the ink and the style of writing, suggests that the writer had found

himself confronted by some momentous problem which could only be solved *by action*. It was vaguely familiar and was tracked down to Milton's *Areopagitica* — that superb plea for the freedom of the press and the right to express opinions freely and at length. Many people go through a whole life without being called upon to exercise their own wills and arrive at their own decisions. Such negative lives cannot but provide a negative Devachan — conventional lives that are never tested by any real temptations nor tried in the fires of adversity. Evidently it was not so with my predecessor — in the face of some Kurukshetra he had noted down Milton's words and drew from them (one is permitted to hope) the breath of the spirit that enabled him to perform his duty, without fear and without reproach, even unto death.

I cannot praise a fugitive and cloistered virtue, unexercised and un-breathed, that never sallies out and sees her adversary, but slinks out of the race, where that immortal garland is to be run for, not without dust and heat. . . .

Let us hope that he won his garland in whatever arena he strove in. Truly those great prizes of the spirit, which far surpass the victories of civil or military life, are not achieved without effort that tries one to the very limit of strength, "not without dust and heat."

The next quotation was in Latin and was construed slowly and painfully because in the years wherein the paper was reposing in its forgotten pigeonhole this scribe was engaged in work in which mere scholarship had little place. The writing had something of Cicero about it — maybe some reader will recognise it in one of the letters written to Atticus.

Longumque illud tempus, quum non ero, magis me movet quam hoc exiguum.

In our English tongue it loses (in my effort at translation anyhow) something of its classic charm, but the dream of the future is as true today as when it was written in Rome and copied down by one who perhaps made the Great Sacrifice in one of the battles of more than twenty years ago:

I care more for that long age which I shall never see than for the little of Time that I hold. It is the old, old problem of Time and Eternity — yet not the Eternity of the church, the long age which, without the teaching of Reincarnation, stretches bleakly ahead as far as they who contemplate are concerned, and which only a sublimely impersonal mind can regard as being something in which one can have no interest save that which is inspired by a desire to serve the well-being of the Race. If only Cicero (if he *is* our author), and my unknown friend could have realized that they and we are part of that long age and so can never escape from participation in it, because we are in ourselves timeless and of the Spirit.

Across the years we can greet the writer of these quotations and hope that he has gone to the Peace with duty done, with Dharma accomplished, inspired by the words of those who were perhaps the Theosophists of their periods. For Theosophy is the sum-total of that teaching that so often breaks through language and escapes, as far as mere words are concerned, but which takes root in human hearts and inspires men and women to do their duty under all circumstances, whether it be in the glare of the public places, or obscurely in the unlighted corners of the great world.

The Theosophical Forum

THE THEOSOPHIST'S BOOK SHELF — *Chas. E. Ball*

We can heartily agree with the late G. K. Chesterton who remarked in one of his humorous books that most things suffered from having been over praised, and gave a ridiculous list — including drink, love-making, and lawn-tennis! We might add reading, for unless directed to some end well defined, reading is but a specious trifling of the mind. The great point for us is that a right course of study and reading, of history particularly, gives that foundation of character and judgment which provides criteria for an understanding of life, men, and women. The present generation, generally speaking, are literally rudderless. The old good authors are rediscovered now and again by real lovers of literature and recommended to the hoi polloi, but to what avail?

As occult students we must try to catch that errant modern mind, awake as it is to the *ephemerally* important, and switch it on to what is *eternally* important. Times and circumstances will help us, for if Westerners go on much further on present lines, they will have spent so much on armor that nothing will remain to defend, as the eighteenth century cynic warned. It would seem that a principle of co-ordination is wanting. The poor drowning waifs of civilization seize on any loose floating spar or overturned boat near them. As we have the priceless wireless today which enables thousands of shipwrecked ones to be saved, so, likewise have we the *knowledge* of Occultism in the persons of thousands of its practising students, and the "Still small Voice" is reaching and will reach *some* of the drowning ones.

But a great army of men and women, real and human — because of their "soul-knowledge" — is required to lead and guide those

minds which are opening towards the LIGHT of THEIR OWN SOULS but who may still go astray for lack of a pilot.

There is, of course, much palaver today about a New Age and a juster world, and it is time for a prior consideration of the *ideal* men and women who are to build it. Otherwise we may literally jump out of our hitherto-organized barbarism into a new and more fantastic dis-organized devilry. Surely, this is only common sense?

One outstanding and most noticeable point in the biographies of men who have moved the world in the past centuries is that they so often had excellent mothers!

In the oldest scriptures honor was always given to the female sex as to the male sex, and *Manu* has a verse to the effect that where women are treated with kindness and honor there the gods are favorable. Alternatively it augurs no good for a country "where women rule," meaning obviously something like we have in Europe today.

Now, in this connexion of women, fathers, family life, etc., which is at the basis of all society, the works of Katherine Tingley are priceless, and the ideas inculcated will have to be grasped by the modern "psychology" monger if he wishes to see through the mephitic fog of animalism masquerading as sex-knowledge and beauty, the value of which is obvious by the women's faces in any "civilized" city.

For the modern person trying to get an understanding of life there are many books which contain a stream of thought leading to the Theosophical Ocean, for today one must lead the newspaper-snippet reader along easily. His mind is debilitated by thrillers and ideologies enough to stupefy an Atlantean, and he had better bathe first of all in such limpid water as the good

Emerson's writings and the other New England Transcendentalists, for simplicity and an honest child-like outlook are absolutely necessary if one is to co-ordinate one's nature and feel the true rhythms of the "Dance of Siva."

Works on Buddhism are beautiful and fascinating too because of their smack of the ancient, blunt and definite statement of the foundation facts of human existence. Newspapers might with advantage reproduce that Buddhist picture of the world in the grip of the Demon of Desire, and print some selections from the *Life of Milarepa*, for instance. The lives of the Saints are nearly as fascinating as the lives of scoundrels surely, once one has the proper key — that's the point — to what the would-be Saint is trying for.

The *Life of St. Francis of Assisi* is truly romantic, and his and other saints' lives prove them to have been *happy*, something which the fool worldling is always chasing after and never catches.

One great value of some study of Buddhism is its tendency to eliminate from a student's mind "cast iron" ways of viewing things; and the modern interest in the Zen school displays this (see Alan W. Watts's *The Legacy of Asia*). The molds of mind of the twentieth century, though fractured irremediably, have to be further treated in order to bring out that Cosmic framework of Things behind the phenomenalism which is all that modern man, even though an *exact* scientist, sees. A splendid book on the doctrine of Buddha is: *Sermons of a Buddhist Abbot: Addresses on Religious Subjects* by the Rt. Rev. Soyen Shaku, Translated from the Japanese by Daisetz Tietaro Suzuki (the apostle of Zen).

In its own wonderful way Buddhism shows that there is no orthodoxy in these matters. Each human being as he advances in the understanding of his own divine nature becomes his own teacher:

What one with such a heart wills is what makes the bird sing and the flower smile, what has raised the mountain and makes the water flow. He is hungry and the universe wishes to eat; he is asleep and all the world hibernates. This sounds extraordinary, but the enlightened understand it perfectly well. — *Sermons of a Buddhist Abbot*

One of the first books a young student of Theosophy should tackle is H. P. Blavatsky's *The Key to Theosophy*, as by doing so he will save much trouble for himself and others by seeing the answers to the jejune questions all inquirers pelt one with. *The Ocean of Theosophy* and the other books of W. Q. Judge, and most important that book, par excellence, for continual reading by mystics, H. P. B.'s *The Voice of the Silence*, should all be required reading. There follow in due course the stupendous *Secret Doctrine*, following the most interesting and readable *Isis Unveiled*, and the fascinating volumes of the present Leader, Dr. G. de Purucker.

As the study of these vast subjects proceeds the student will realize the value of his background of culture. It is a sort of vise to his passport, for many good men have died and become books, and their works do contain some of the syllables which go to spell the great secret.

The Theosophical Forum

THEOSOPHICAL ENCYCLOPEDIA GLOSSARY

[Some years ago THE THEOSOPHICAL FORUM mentioned that preparations were under way for the publication of an Encyclopedic Glossary of Theosophical Terms. Our readers will be glad to know that this work has been steadily going forward during the ensuing years and is now nearing completion. The material, which will probably fill several volumes, covers the whole exoteric field of ancient and modern Occultism and Theosophy, including mythology, anthropology, cosmogony, symbolism, the ancient Mysteries and allied subjects, and will prove to be an exhaustive mine of philosophical, religious, and scientific information. The work of writing and compilation has been carried on by a group of students at the General Offices. Dr. de Purucker has then carefully checked the definitions and in many cases added new and valuable material.

It is too early to state when this Encyclopedic Glossary will be published, but the FORUM Editors have obtained permission to share with readers of our magazine extracts from this forthcoming work. No effort has here been made to follow any special sequence of arrangement, but random pages have been purposely chosen. — Eds.]

DUGPAS

(*Tibetan*) Adherents of the Buddhist religion of Tibet, previous to the reform by Tson-kha-pa in the fourteenth century, following sorcery and other more or less Tantrik practices, which latter are, nevertheless, entirely foreign to the pure teachings of Buddhism. In Theosophical literature the term "Dugpa" has been used as a synonym for "Brother of the Shadow" — especially in *The*

Mahatma Letters to A. P. Sinnett.

The word is a compound: *Dug*, meaning "Thunder-Dragon," and the suffix *pa*, meaning "inhabitant," "man," or "son." Modern Orientalists have distinguished between the Dugpas and the Bons, as for instance the noted Theosophical Oriental scholar Dr. Evans-Wentz, who writes: "As Dr. Waddell has very wisely emphasized, "much confusion has been caused in European books by misusing the name Dug-pa, employing it as a synonym for the Red Cap Sect, which properly is the Ñingma' (*The Buddhism of Tibet*).

Furthermore, to assume, as certain non-Tibetan critics of Padma Sambhava seem to assume, that all Red Caps are Dug-pas, is equally erroneous." (*Milarepa*, p. 13) The Thunder-Dragon School "consists of three branches: the Lower Dug-pa; the Middle and Southern Dug-pa (now the Established Church of Bhutan); and the Upper Dug-pa." (Ibid.)

It should be noted that the Dugpas are usually found in the frontiers and on the border lands of Tibet, as for instance in Bhutan, Sikkhim, etc. Most European Orientalists having little or no acquaintance with conditions in the interior of Tibet make the mistake of applying to conditions all over the Tibetan provinces what they find among the religiously and philosophically degenerate sects that they meet with on the Tibetan frontiers.

FAKIR

(*Arabic*) A Mohammedan religious mendicant. The word is derived from *faqir*, meaning "poor" in Arabic, and should be strictly applied only to Mohammedans, but the term has come to be used loosely to apply to any mendicant devotee or yogin in India. This was the case when using the word in *Isis Unveiled*, but H. P. B. herself later called attention to the fact that "only *Mussulman* ascetics are entitled" to the word *fakir* (*Theosophical Glossary*, p. 118).

"M. D'hosson in his celebrated work on the Ottoman empire traces the origin of the Faquirs to the time of Mohammed in the following manner: In the first year of the Hegira, forty-five citizens of Mecca joined themselves to many others from Medina. They took an oath of fidelity to the doctrines of their Prophet, and formed a sect or fraternity, the object of which was to establish among themselves a community of property, and to perform every day certain religious practices in a spirit of penitence and mortification. To distinguish themselves from other Mohammedans, they took the name of Sufis. This name, which later was attributed to the most zealous partizans of Islam, is the same still in use to indicate any Mussulman who retires from the world to study, to lead a life of pious contemplation, and to follow the most painful exercises of an exaggerated devotion. To the name of Sufi they added also that of Faquir, because their maxim was to renounce the goods of the earth, and to live in an entire abnegation of all worldly enjoyments, following thereby the words of the Prophet: "Poverty is my pride." Following their example, Abu Bakr and Ali established, even during the lifetime of the Prophet and under his own eyes, religious orders, over which each presided, with Zikrs or peculiar religious exercises, established by them separately, and a vow taken by each of the voluntary disciples forming them." (Quoted from an article by Bjerregaard, in *The Path*, I, 203-4)

According to T. P. Hughes, there are five principal orders of Fakirs in North India: the *Naqshbandia*, the *Qadiria*, the *Chishtia*, the *Jalalia*, the *Sarwardia* — all being *ba-Shara* Fakirs (Ibid.), i. e., "with the law" — those who govern their conduct according to the principles of Islam.

A synonymous term for a religious mendicant in Persia is *Dervish*. Fakirs should not be confounded with the Sannyasins or true

Yogins of India.

DWELLER ON THE THRESHOLD

This is a term coined by Bulwer Lytton in his romantic story, *Zanoni*, wherein he represents under this phrase a malevolent entity of awful and terrifying aspect waiting to menace and to tempt the aspirant to Occultism. There is no such individual malevolent entity in reality, but the author, by means of this vivid portrayal, has expressed the well-known mystical fact that when one has taken a stand to overcome a certain weakness in one's nature, or be it even a habit, such resolution seems to array all the opposing forces against the aspirant. Thus, it may readily be understood that when one seeks to enter the domain of the "occult," a similar experience awaits the candidate: but the forces or energies thus aroused are of one's own making, and they must be met and conquered by their originator before progress may be successfully made. This has been well expressed by the well-known Hindu Theosophist and philosopher Subba Row. After commenting upon Bulwer Lytton's "Dweller on the Threshold," he says: "But nevertheless there is a Dweller on the Threshold, whose influence on the mental plane is far more trying than any physical terror can be. The real Dweller on the Threshold is formed of the despair and despondency of the neophyte, who is called upon to give up all his old affections for kindred, parents and children, as well as his aspirations for objects of worldly ambition, which have perhaps been his associates for many incarnations. When called upon to give up these things, the neophyte feels a kind of blank, before he realises his higher possibilities. . . ." (*The Theosophist*, VII, 284)

Yet, to one who rushes heedlessly into the psychic world, there are dangers fully as menacing as Lytton's Dweller on the Threshold, for in *The Mahatma Letters to A. P. Sinnett*, on page 42,

the Master K. H. outlines certain experiences undergone by the medium, Stainton Moses, which were far worse than Glyndon's in Lytton's *Zanoni*.

Generally speaking, because of their menacing and forbidding aspects, the term Dweller on the Threshold might be applied to some of the denizens of the Kama-loka, although specific Theosophical terms are available for every class of entities in that domain. This term, however, has a technical meaning, signifying past kama-lokic or astral remnants of a former incarnation which haunt the new imbodiment of the Reincarnating Ego. In other and clearer words, a man of strongly material impulse and desires and who gives way to them, thus forms for himself a kama-rupa, which, when the man dies, can even persist without undergoing complete dissolution until the quick return of such materially-minded human soul to reincarnation, when the kama-rupa is then and there strongly attracted to the man thus reimbodied and haunts him as an evil genius, continually instilling by automatic psycho-magnetic action thoughts and impulses of evil and temptations and suggestions of fear and terror — all of which the man himself was responsible for in his last life.

There is even such a "Dweller" for globes of a Planetary Chain in the cases of such Planetary Chain being of strongly material characteristic. In fact our own Moon is such a Dweller to the Earth, the reason being that our Planetary Chain is by no means a spiritual one. All Planetary Chains in the Solar System probably have or have had their Moons, in fact must have had each one its Moon, because such Moon was its cosmic parent, but not in all have such Moon-Dwellers lasted long after the Planetary Chain undergoes imbodiment anew.

EPILEPSY

A disorder recognised in antiquity as an "obsession" or

"possession" by an Elementary which ousts — at least temporarily — the astral-vital soul from the physical body and for the time being assumes control of the bodily mechanism. The mind thereby loses direct connexion with its physical vehicle and unconsciousness results. This true diagnosis has filtered down the ages in the so-called superstitions of the epileptic being possessed of a "devil." The attacks begin with sudden onset of muscular rigidity in tonic spasm, and, with unconsciousness, the person drops to the floor, if standing, hence the popular term of "falling sickness." Next follows the clonic stage of tumultuous spasms contorting the whole body in unnatural, unseemly, attitudes and motions. These typical attacks of *grand mal* (as the French call it, or "great sickness"), usually end in a sleep from which the victim awakens dulled, confused, and exhausted. Less severe cases are seen in many various degrees up to the transient forms of *petit mal*, or "small sickness," and the psychic equivalent types of continued unrest and disturbance which indicate that the astral body of the sufferer is at such times more or less affected by astral influences. "Jacksonian epilepsy," due to tumors or other mechanical pressure on motor areas of the brain, while having many of the classical symptoms, has a more tangible cause than the typical idiopathic cases.

The Theosophical teaching about the Elementaries — those kamic astral entities whose intense desires draw them to neurotic, mediumistic, and negatively sensitive natures — gives the key to the injurious, purposeless explosions of force in the man who has been dissociated from his body and brain. Of the various "aurae" of bizarre sensations or emotions which usher in many typical attacks, one of the most common is the sudden look of fear or even terror with which the sufferer stares fixedly as if held in thrall by some gruesome astral sight. The frequent hallucinations of sight, sound, smell, etc., are, as a rule, of the same low morbid

quality which the alcohol-addict senses in *delirium tremens*. The epileptic, naturally, is very susceptible to alcohols which, in themselves, strengthen the kamic influence. H. P. Blavatsky says in *The Key to Theosophy* (page 195) that epileptic fits are "the first and strongest symptom of genuine mediumship," and cites several outstanding examples.

Modern medicine, after all its searching analyses of the body, reports that some cases of "essential" or "idiopathic" epilepsy at times are normal individuals between attacks, and also that many autopsies reveal no organic disease to account for such marked disorder. The psychiatrists agree that the basic cause is not yet known. Of course, the predisposing neurotic constitution which succumbs to extreme fright, anxiety, or debauchery, is a karmic heritage from the afflicted one's past life when he cultivated abnormal psychic conditions and thus weakened his spiritual will.

The Theosophical Forum

DR. GUSTAF STROMBERG AND THE INVISIBLE STRUCTURE OF THE LIVING UNIVERSE — C. J. Ryan

In THE THEOSOPHICAL FORUM of May, 1939, a review-article was printed of the Swedish edition of Dr. Gustaf Stromberg's *Universums Själ*, a brilliant study of the rational nature of the Cosmos, the relationship between mind and matter, and the meaning and nature of human life and death. This book has now appeared in English under the title *The Soul of the Universe* (1) with a few additional passages of much significance, and it is with great pleasure that we take the opportunity of making some further remarks in appreciation of a purely scientific work which in so many respects supports the fundamental principles of Theosophy.

Dr. Stromberg, born in Gothenburg, Sweden, has been a member of the Staff at Mount Wilson Observatory since 1916, and is distinguished for his investigations in regard to the movements and luminosities of the stars and the structure of the universe, but his interests have included other scientific fields. As Dr. Walter S. Adams, Director of Mount Wilson Observatory, writes in the Preface:

In days of extreme specialization in science the appearance of a well-considered book which brings together many of the facts and conceptions of different branches of physical and biological science and discusses them from a unified and philosophical point is exceedingly welcome. Very often the specialist immersed in his own field of research has a very limited outlook and but little interest in the broader aspects of science or in its applications to human life and behavior.

How often has the complaint stated in the last sentence been put forward in Theosophical literature! To be able to meet criticism intelligently and to present Theosophy to science-minded persons, students should have a general even if only a modest knowledge of the main lines on which science is moving — we may add, moving on the whole in the direction of the Ancient Wisdom. Dr. Stromberg, in his support of his argument, presents an array of facts of recent science which in themselves make his book highly interesting and instructive apart from the main thesis, though of course it is the latter which is the distinctive feature of the book. Here we find the mature thought of a scientist fully informed in the latest trends of modern research, who, by applying the principles of Relativity and the Quantum Theory to the field of biology and the relationship between mind and matter, has discovered, in his own words, "that the individual memory is probably indestructible and that the essence of all living elements is probably immortal. The study leads to the inevitable conclusion that there exists a World Soul or God."

Dr. Stromberg started on his adventure in search of the Soul of the Universe in high spirits, as he says, and his studies led him through familiar things such as trains and pendulums, vitamins and radio, plants and animals, up to the brain and the mind, and finally to the sublimities of Cosmic Space which he finds to be a Fulness, a Plenum, and not a Blank, but the Origin and inner World of Life. He found our familiar world of what we call space and time, the training-school of souls, to be different from the more real "world" of life and consciousness. There are elements, both material and what we must call "immaterial" for want of a better word, which connect these "worlds" and provide a rational foundation for the existence of the soul and its survival after "death." Finally he found that the power of the human will is great but that there is also a Cosmic Will and that man has

developed an organ that is sensitive to the voice of a Cosmic Conscience, and that there are inspired men who have intuitively come in contact with the World Soul.

Dr. Stromberg begins by clarifying our ideas about Space, showing that it is not just "an empty place to put things in" as we may have thought, but that it has an objective reality, properties, and definite rules for its activities. The illustrations he gives of this are very striking. Time and clocks come next and we are painlessly introduced to *Space-Time* which, he says, "seems to quiver with something which is akin to *Life* and *Consciousness*." This, of course, is in perfect harmony with the Theosophical teaching that no single point in the Universe is devoid of life and consciousness of some kind. We then learn something about Matter, a very mysterious substance, which leads to Gravitational and Electrical Fields and the nature of the atom, about which Dr. Stromberg has much to tell of special interest.

Then comes the most important factor in the argument, the so-called "*immaterial wave-structure*" in the Cosmos, the nature of which the most advanced physicists are now beginning to study. That is one moiety of the duality in physical nature, an invisible but an indispensable side, the "wave-aspect," the other being the "particle-aspect." The latter is controlled and organized by the immaterial waves. Dr. Stromberg says:

. . . we shall regard the two aspects as belonging to two different "worlds," which we designate by the terms *material* and *immaterial*. An electron will be regarded as belonging to the material world; electrical fields, radio waves and pilot waves will be regarded as belonging to the immaterial world. . . . An atom consists of *particles*, neutrons, positrons, electrons (perhaps also photons and neutrinos), which are cemented together into a unit by an

immaterial wave-structure with certain space and time properties.

To illustrate the guidance or control by the "immaterial structure" and its "pilot" waves the author calls upon the development of the living cell, a most elaborate process and an unexplained "miracle" to Biology. He shows that material, physical, or even electric forces fail to explain these mysterious processes, but that "a *living* immaterial structure or wave system" *can* do so. Biologists have vaguely called the power which inspires the visible marshaling of the particles of the developing cell, an "organizing field," but Dr. Stromberg adopts the term *genie*, a word which, he says, "suggests a relation with genes" but "also suggests a wisdom far beyond our comprehension." He speaks of many grades or hierarchies of genies, and the Supreme "Genie" may be called the Soul of the World or of the Cosmos, the Wellspring of all sensations, ideas, thoughts, and aspirations. The immaterial wave-structure of space greatly helps to solve the problem of memory, and therefore of survival after death. The matter in our brains is constantly being replaced, yet memories are accumulated and preserved during a long lifetime. Even long-forgotten events may suddenly flash into vivid consciousness when some inner contact is made. How could this be unless an immaterial living structure existed, in which memory inheres independent of the physical atoms? Furthermore, why should not this immaterial structure be carried on without impairment after death, regardless of the dissolution of the physical structure? Dr. Stromberg devotes many pages to the logical working out of these points, and feels satisfied that we have here a well-supported position from which the existence of the soul is scientifically demonstrable.

The extraordinary process of development of the embryo, the transformation of the caterpillar into the butterfly — incomprehensible from the purely mechanistic standpoint — the

virus problem, etc., provide him with reasons for his immaterial "genies," or "gene-spirits," governing entities of a *unitary* character which cannot be annihilated. The reader will find this part of the argument intensely interesting but limitation of space will not allow us to follow it here.

In regard to what we commonly call the soul, a developing "genie," to adopt Dr. Stromberg's quaint though expressive term, his researches indicate that "A soul is indestructible and immortal. As an individual it has a beginning, but seemingly no end"; and he cites some strong evidence in favor of reincarnation. Possibly the words just quoted "as an *individual* it has a beginning" may allow for previous incarnations of the same soul-genie (Theosophists would say "monad," with Leibniz) which would not be the same *individual* (personality, we should say)? But we cannot see how anything (like a soul) that is *immortal*, i. e., transcending mortal or temporal conditions, can have a beginning. Its "vehicles" or manifestations — incarnations — can and must have beginnings and endings according to periodic law so widely manifested throughout nature. Dr. Stromberg certainly seems to agree that a genuine reincarnation takes place in cell division through the action of the "living immaterial wave system" which forms the link between the succession of cells. He quotes, with evident approval, the strange case of Shanti Devi in India in 1936 where that girl gave very strong evidence of possessing the memory of her last (and very recent) incarnation.

Denying that the human soul has developed from an animal soul, Dr. Stromberg claims that "the capacity of abstract thinking probably requires a soul of a higher type," but he offers a hypothesis, shocking indeed to materialists, that "potential human souls with all their capabilities of development may well have been transmitted to the germ plasm of some anthropoid ape living at a certain time on the earth." This is practically the

opinion of Wallace, Darwin's contemporary and friendly rival, who saw the insuperable difficulties in tracing the human soul to animals and decided that a more advanced spirit must have descended and illuminated the anthropoid, making it into Man. With the ape removed from the picture and replaced by an *unevolved human*, this is almost the ancient teaching of the descent of the Manasaputras, the "sons of God," or spiritual mind-principle, into nascent humanity in the Third Great Race, one of the leading doctrines of Theosophy.

The latter part of the book is devoted to problems of the mind and the soul, for Dr. Stromberg, like Theosophy, makes a distinction between them. In regard to the mind, he writes, "the memory of an individual is written in indelible script in space and time, it has become an eternal part of a Cosmos in development." Can it be revived or brought into visibility in some way from the invisible wave-structure of space in which it is enmeshed? This leads to an argument which uses certain psychic phenomena such as telepathy and apparitions in evidence. Dr. Stromberg suggests that in the former case intense mental agitation activates the "genes for telepathic transmission," and, as would be expected, no limitation in space-time seems to exist. Apparitions often correspond to the mental activities of someone who has died, and are usually connected with definite places where some tragic event has occurred. At times they can be activated into conscious form, and, like ordinary memories, they often diminish in intensity and frequency of activation with the passage of time. All this strongly suggests properties in the Astral Light or the Akasa, well known by occultists, ancient and modern.

Dr. Stromberg illustrates the activation of memories by the notable case of Messrs. Brook-Farrar and G. A. Smith who recently took moving pictures of a temple in the jungles of Ceylon. The whole party saw a Tamil girl dancing on the steps and they

immediately focussed their cameras on the picturesque scene *which was clearly visible in the finders*. After the pictures were taken the girl was no longer to be seen, and the villagers would give no information about her. On developing the films nothing appeared but the temple; the dancing girl had not registered on the films!

The author regards the soul as no mere combination of mental qualities, but as a *non-divisible*, rational entity, *like the Cosmos*. It gives unity to the mental complex; it is not a set of memories but the possessor of a particular group of memories. It perceives, feels, wills, thinks, and remembers. It has contact points which interact with certain nerve centers in the brain, but in itself it is essentially *unitary*.

"The potential souls come originally from the World Soul," and Dr. Stromberg thinks that individuals with quite new faculties may appear on earth as the result of new "genies and genes" entering and modifying their constitution. If these were transmitted through the action of the germ plasm a new race would be produced. Furthermore, intense desire and great mental exertion might not only call down these powers, but open channels to a realm beyond time and space. "In our own mind lies the creative power that can open the gates to this unfathomable domain in Cosmos." Surely this is what the great Seers and Sages of the Ages have succeeded in doing, and they have left the simple and beautiful instructions for us to follow which are the only means of attainment, but which the selfish world scorns as "my grandmother's sermon."

In this brief and very incomplete outline of an inspiring record of intensive research and original thinking based on strictly scientific data we have had regretfully to omit many important points. In nearly every main principle Dr. Stromberg's

conclusions are in line with the Ancient Wisdom, now called Theosophy, and in none do we find serious differences. It is intensely interesting to see how some of the more intuitive modern thinkers are presenting ideas which they have obtained by the aid of research with modern instruments of precision but which were known to the Seers and Sages of civilizations now lost in the mists of antiquity. Great scientists are even now talking of *Cosmic Mind* and *Cosmic Love*, revoicing the teachings of the ancients as if they themselves were coming back to teach them under modern conditions. Students of Theosophy do not forget that H. P. Blavatsky said that it was only in the nineteenth century that its teachings would be rejected *a priori*:

For in the twentieth century of our era scholars will begin to recognise that the Secret Doctrine has neither been invented nor exaggerated, but, on the contrary, simply outlined. . . . — *The Secret Doctrine*, I, p. xxxviii

It is only in the XXth century that portions, if not the whole, of the present work will be vindicated. — *The Secret Doctrine*, II, 442

Dr. Stromberg dedicates this volume to Professor John Elof Boodin, Professor of Philosophy at the University of California, Los Angeles, the distinguished scholar whose highly Theosophical ideas are quoted at length by Dr. G. de Purucker in his *The Esoteric Tradition*.

THE WORK OF THE GREATEST SCIENTISTS — A. Trevor Barker

Should we not be making a mistake if we were to run away with the idea that the work of a great scientist is something which is non-creative and, in a sense, material, because it is Manasic? I have never read myself in any department of Theosophical teaching that Manas *per se* is either negative or non-creative; but I have a further suggestion to make and that is, that the work of the greatest scientists is something more even than Manasic, because it has a quality of universality that is an example to religious and even Theosophical movements; for a truth that is won by the effort of a scientist is immediately made available for all humanity. Now that is one of the Buddhic aspects of human consciousness working. It is something beyond even the Manasic. It is an aspect of Buddhi, active as direct cognition, and then proving the high nature and exercise of that faculty by its immediate availability in the universal service of all men.

**H. P. B., THE LIGHT-BRINGER OF THE TWENTIETH CENTURY (1) —
*J. M. Prentice***

Just forty-nine years ago yesterday H. P. Blavatsky laid down her physical body and entered into a period of rest. H. P. B. was one of the outstanding personalities of the nineteenth century. Professor H. Corson, who was professor of literature at one of the American Universities, called her the greatest individual that he had contacted; and many others have paid tribute to the magnificence and the opulence, one might say, of her character and personality.

Around the world during the last twenty-four hours a wave of loving remembrance and commemoration has flowed steadily. Somewhere in America it will terminate within the next few hours, and for another year there will be opportunity for all those who love the name of H. P. B. to continue quietly in the work that she inaugurated.

I would like to stress tonight the fact that H. P. B. can be described in three different ways, or as the expression of three different capacities: the woman of noble birth, born in Russia, she was first and foremost a great artist — not only a great musician but a very great artist in the use of words, and in at least three of the world's languages. She was an artist in the masterly delineation of character such as marked her description of the Nilgiri tribes in India. She produced a volume which represented the "thriller" type of short story at its very finest. So you have got the woman who was an artist in every sense of the word. She was also an outstanding pianist at one period of her career; her love of music remained with her right to the time of her death.

Her noble birth as well as her high physical courage enabled her

to meet every class of society and wherever she went there were attracted to her those who were able to appreciate the greatness of soul and the stupendous talent that she possessed. That is the first, as it were the outer, H. P. B.

And she was not only a great artist. Her physical characteristics as well as her great courage enabled her at certain periods of her career to don male attire and do physical battle for the righting of physical wrongs. She served as a soldier in the Italian army that helped to free Italy. She served under Garibaldi as one of those that helped to bring freedom into certain of the Papal States. That still belongs to the outer aspect of H. P. B.

Then a little later we find her as the H. P. B. possessed of powers that were far beyond the normal powers of men and women, the H. P. B. of phenomena, who was able to duplicate all those extraordinary happenings that had been associated with medium-ship in the world of spiritism. But, as she was careful to explain, these wonders were performed of and at her own volition and not as the operations of any discarnate entity: by her own use of the power she possessed over the forces of nature. These phenomena were sometimes regarded by some people as fraudulent; but the most careful examination into them — an examination which has extended into our own day — has never been able to provide a shadow of proof that any of these things were brought about by apparently mechanical means or by actual fraud.

During this period she was in America, in India, and on the continent of Europe, and always these extraordinary happenings, which, mind you, were under the control of her will at all times, attracted those who were interested in the study of curious phenomena.

And there is the third and the deeper side of this amazing and

remarkable woman, which endears her to so many people and which will keep her name ever green in the history of modern Teachers: that is that she was the presenter to the world of Theosophy in its modern guise.

Her written words are open to all those who care to study them. You will find that there is no chapter of religion, philosophy, or science that she did not illuminate by the greatness of her knowledge. And yet of this knowledge she claimed nothing for herself, but insisted and emphasized that she was but the servant of those Great Men whose existence has been acknowledged in all ages — those possessors of super-human, super-physical powers, who have tried and tested for themselves this age-old, universal philosophy, and who chose her to be their representative in the outer world in the nineteenth century.

At the very commencement of her greatest of all books — *The Secret Doctrine* — you will find a little quotation from the French writer Montaigne, in which, quoting this French writer, she says that those things she had brought together were like a nosegay. All that she claimed to have provided was the string that tied them together. But she claimed nothing further; above all, she did not claim that she was the originator of the teachings. Yet she brought them home not only to the hearts and minds of students of her own day, but to ever widening circles of thinking people during the years since she herself finished her physical work and went into the Peace.

The Theosophical teaching represents the greatest philosophical system the world has ever seen. That is a very great claim to make but it is one that can be substantiated, because there is practically no department of philosophy that has not been illumined by the light that she brought. It was an illumination that touched the physical world as well as the mind and soul. She

brought together isolated facts; she gave hints of new discoveries in the world of science and the world of the mind; so that she antedated and preceded most of the great discoveries that have taken place in the last fifty years.

Beyond all that, it was the priceless teaching of the spirit in man that she revealed — a teaching that had been largely forgotten — and of the composite nature of man's being. It is true that she challenged many of the religious conceptions of the world and particularly of Christian theology of the period in which she lived; but her reverence for those who were true disciples of any of the world's great religions, was always forthcoming. Never did she offer the slightest challenge to any teaching that was universally true; but only those things which belonged to the present or to the immediate past. Her teaching constantly epitomized St. Paul's words: "The things which are seen are temporal; the things which are unseen are eternal." She was forever seeking to draw men's minds and hearts and aspirations to those things which are of the eternal.

And so, in addition to influencing a great many of those associated with her, she also provided a repository of teaching in her books, and those books cover every aspect of the universal philosophy which she presented. I have already mentioned *The Secret Doctrine*, which is a veritable treasure-house of information, an encyclopaedia in which are set forth a spiritual cosmogony and an anthropology which will be recognised for its universal application in ages yet to come.

She was so great a transmitter of Eastern thought that she gave to us *The Voice of the Silence* — three priceless little Buddhist scriptures or sermons which she claimed she had learned in the period of her own probation.

A literary artist and spiritual Teacher combined, in the very last

years of her life when from day to day she was almost on the very verge of physical dissolution, she gave us *The Key to Theosophy*, which is still in its way one of the very finest textbooks we can ever refer to. Any statement ever made, pertaining to Theosophical teaching, which does not dovetail with *The Secret Doctrine* and *The Key to Theosophy*, should be unhesitatingly laid aside as something to be tried and tested but not accepted merely because it is labeled "Theosophical."

During her last years she made her greatest efforts for the uplifting of men and women. She was a great exponent of esotericism, the inner meaning of life, of the divine in man and in nature, of the divine principle in the heart of the heart of man. This was perhaps her greatest, most universal teaching.

Of the priceless treasure of these teachings she gave unstintingly; but behind and beyond all other things she sounded the keynote of the century and of the age that was just then coming into being — the keynote of universal brotherhood. Living as we are now in the shadow of war, we realize how desperate is the need on the part of humanity to recognise that fundamental, basic principle of universal brotherhood. Because without it there is nothing else that will serve to satisfy man's physical and mental needs and provide him with the leisure that will enable him to cultivate the things of the spirit.

It is my private belief that H. P. B. visualized a great deal of what was ahead for humanity. Again and again she stressed the fact that unless we could develop this conception of universal brotherhood, based of course on the principle of the unity in man, it would be impossible to get through this present century without some tragic conflict. So you see she set the keynote for the years that are to be. I myself have very strongly the feeling that she was the beginner, the forerunner, of a more spacious and

more gracious mode of life in which there will be more co-operation between men and women. I like to think of her as being regarded, from the viewpoint of a thousand years hence, as a sort of woman Buddha, setting the keynote of a new Age in which, amongst other things, the influence of women, the feminine aspect of Humanity, was to be stressed. Future generations will learn to know and to respect and love the likeness of the Teacher who so profoundly influenced the period in which she lived, and she will be to them an inspiration to build for the magnificence and the splendor of the future. In her teachings can be discerned "the shape of things to come."

There is no cause for feeling any sorrow at her passing. Her work for the time being was accomplished. She had laid the foundation of a superstructure which was yet to be built. She knew it would take some time to change the level of the thoughts of men. I like to think of her as the artist who outlined a magnificent painting just in the very barest outline, stupendous in conception and grandiose in design. It was for those who were to come after her to fill in all the details, to provide the color, to add the glow to that superb outline. If we can do that, if we can direct our aspirations along the same line that she inaugurated, if we can show our gratitude and reverence for her by following the path that she presented before our feet, then indeed her work will not have been in vain.

Her last words as she was dying in London forty-nine years ago were: "Keep the link unbroken, so that my last incarnation shall not have been in vain." To achieve this each year we must consecrate ourselves anew, and pledge ourselves with unflinching loyalty to keep that link unbroken by standing four-square in alignment with the teaching that she gave, by living the life that she indicated, and by making as widely known as possible the spiritual birthright that is part of her message. I sincerely hope it

will be to each one of us an inspiration to rededicate ourselves to the work which she founded — which she started, after all, only sixty-five years ago. And yet in that period round and round the world has gone the ringing challenge of her voice and of her words; and all those who have really partaken of the teaching she gave have found a new interest in life, a new inspiration in living, a new philosophy upon which to base their daily thoughts, an inner spiritual wealth that goes on into the future. Above all there is an interior peace that comes to us as we begin to realize that only those are Theosophists who endeavor to live Theosophy. Life takes on a new color, a new splendor, and there comes to each and every one of us a new and greater love of humanity, a new desire to serve and to work.

It is a wonderful inspiration that is to be found in the life of H. P. B., the lightbringer of the twentieth century. In spreading her teaching peace will come to us, for the spiritual side of things upon which she taught us to rely, is full of peace.

The Theosophical Forum

KARMAN: PLEASANT AND UNPLEASANT (1) — *G. de Purucker*

The title of this brief note on Karman well represents, I believe, the manner in which people, Theosophists or otherwise, who are acquainted with our majestic doctrine of karman, look upon it: in other words that karman is something which in itself is pleasant to us or unpleasant to us; and of course as a matter of psychological fact the viewpoint is natural, because we all feel when karman impinges upon us that its blows are hard and unpleasant, or gentle and soothing or what we call pleasant.

Yet is it not rather the truth that karman in all its actions, inner and outer, general or particular, is considered by us to be "pleasant" or "unpleasant" because of our own reactions and attitude towards what destiny lays upon us?

In other words, I am trying to say that the laws of Nature, of which karman is one of the most recondite, the most mysterious, and indeed the most comforting, are all of them absolutely impersonal, and in them there is neither variation or variability nor any shadow of turning.

It is just in this perfect reliance on the fundamental justice in universal Nature herself, that we find or discover or uncover happiness, peace of mind, and far more important than these, our indomitable resolves so to conform to Nature's spiritual harmonies that our lives shall be lived in accordance therewith, and that thus we may become co-operators with Nature, intelligent companions with her; and when we advance into grander human spheres of activity able to become such willing collaborators with Nature's plans, that we take our places by the sides of the Masters, and the Gods of the Hierarchy of Light, who have become in their various evolutionary degrees instruments,

conscious and willing, of the lipikas.

Now these lipikas are extremely mysterious and occult entities in Universal Nature's structural harmonies, and indeed in the carpentry of the Cosmos itself. Little has been openly or rather publicly said of the lipikas, either by the Masters or by H. P. B., or by other Theosophical Leaders; and yet the place they occupy in the Universe is clear enough. They are in fact Dhyani-Chohans of the very highest rank in the Arupa-Worlds so called, and indeed because they are as it were the first channels or vehicles through which cosmic ideation manifests itself or flows, they become thereby the highest and most powerful instruments of karman originating from seeds held within the structure of cosmic ideation itself. Thus they are called the Agents of Karman; and furthermore, because they not only distribute Cosmic Ideas downwards to lower hierarchies, but as it were carry karmic results upwards in order to deposit them so to speak in the treasury of cosmic ideation itself, they are, and mainly for the latter reason, called the Scribes of Karman or Recorders of Karman, etc.

Essentially karman therefore is but a name we give to the operations or to the processes of the universal cosmic harmony seeking readjustments, moral and otherwise, that is to say cosmic equilibriums throughout the Universal Structure.

From the foregoing we may easily, if we wish, deduce the highly important and significant fact that what we call our karman, and whether we qualify it as pleasant or unpleasant, is actually results of manifold types or characters coming to us out of the past from what we and others around us, hierarchically speaking, have thought and felt and done in that past; and that in a precisely similar way our future karman and that of those around us, hierarchically speaking, will be what we are now, through our

thoughts and feelings and actions, building as our future destiny.

Thus, as H. P. B. so magnificently points out, it is not karman which arbitrarily compensates or punishes us in what we call the rewards or retributions of destiny; but it is we ourselves and those around us, hierarchically speaking, who have made ourselves in the past what now we are, and who are now making ourselves to be what we shall in future become; and it is merely our present reactions to karmic destiny or circumstance which makes us qualify karman as pleasant or unpleasant. As a final thought, let me say plainly to my beloved Companions everywhere, that I have proved one thing, and proved it to the hilt, in connexion with karman, and it is that just as often as not, the karmic strokes of destiny that we call unpleasant or perhaps harsh, often turn out to be very blessings of the gods as it were coming to us in the guise and habiliments which for the nonce we regard with distaste, and it may be often with fear. After all, it is but a truism to say that too much prosperity, too much happiness, can weaken the fiber of the best of us; but that when we find ourselves obliged to struggle or are driven to take action, often perhaps against our wish, we develop thereby not only will-power but intellectual and moral fiber because of the innate faculties and latent powers called forth and given exercise.

Karman in whatever guise it come is a blessing, and let us never forget it. — G. de P.

ADRIFT IN THE ASTRAL LIGHT — *Helen Savage*

Above all things men desire security. But security means different things to different people. It is to every man the assured permanence of those things which he values most. To many, to most perhaps, it is written in terms of family or fortune. For a scholar his precious books are a symbol of it. The wise man seeks for it only in the freedom of his soul.

But is it possible to find any kind of security in an age whose very characteristic is its unpredictable quality? Not through possessions truly, nor in power, nor in position. Not even in the knowledge that friends and family are around one. Not to any outward thing can we look.

Recognising this, men are asking: What about the soul? Is it secure? This is the very question that Nature intends man to ask of himself. If he is not interested, she will contrive ways to force him to look inwards. She will strip the outward life of its glamour and of its security, so that he will begin to explore within, where the springs of life arise.

Yet, turning from the outer things, he finds at first that he is living, inwardly, in a subtle realm far more shifting and unreliable than the world of objects. He is within his own thought-and-feeling world whose labyrinthine ways are uncharted, whose resources are totally unknown to him, into whose depths and whose heights his consciousness plunges in a confused mingling of terrors and delights. He seems to be floating in a great sea of impalpable substance-energy, composed, he finds, not only of his own thoughts and feelings, but those of other men also, all mingling confusedly in a common reservoir of multifarious energies.

He has, in fact, begun to discover for himself, what the initiated seers of all ages have known and taught to their disciples, and which Theosophy is again calling attention to today, namely, that we, as invisible albeit substantial beings, are constantly washed around by, that we indeed live in, a great sea of ethereal substance sometimes called the Astral Light. It is the invisible medium by which thought speeds from mind to mind; the magic agent that unites us in an intercommunication far more swift and complete than does the radio.

Thus no man thinks unto himself alone. No impulse, whether of hate or love, dies in the mind that gave it birth. Once born, such energies go forth to become the common property of the race, to be picked up — who knows where or by whom — modified, added to, intensified, sent on again along the astral currents in a ceaseless round of action.

Unenlightened man is truly adrift in this astral sea. Through ignorance, and because of untrained powers, he becomes a victim of the very things he has himself created. He is tossed hither and yon. Every astral eddy threatens to engulf him. The mob hysterias of this age, as of others, the swift effects of evil propaganda, the political frenzies, the alarming spread of nervous and mental disease, the general instability both moral and mental, can be accounted for by the fact of the action of the Astral Light upon will-less souls or those souls whose wills are misdirected.

All this is reflected in the individual. He finds himself, even against his own reason and better instincts, at times like the present, indulging perhaps in bitter hatreds or corrosive criticisms, in sudden unaccountable uprisings of temper, in fits of depression that hold him as in a vise. He finds his powers of concentration lessening, his usual clear-thinking blurred; his purpose swayed now this way, now that.

In halcyon days he is not alarmed into an attitude of questioning and inquiry into the causes of psychological instability. But a time like the present so exaggerates the evil influences that play upon the weak human soul, that it serves as a vivid object lesson, and he again questions: Is there, then, no security for the human soul? Must it forever drift, a victim to elemental forces?

It is just here that Theosophy is ready with the answer, for it says — what every Savior of man has said — that there is at the center of man's being the impregnable stronghold of the true Self. Like a noble castle rising mightily from a storm-tossed sea, this inner sanctuary stands unscathed amid the swirling astral currents. It is no mere tower of escape for the timid soul, but the home of the true Self whose light shines above and beyond the troubled astral waves. Every Teacher has said: Find this true Self, by will and imagination, by devotion and courage; hold fast to It, become one with It. When this has been achieved, even in a small degree, then one finds that spiritual security which is our rightful heritage as human beings, and upon which all outward security if it is to be genuine must be built.

The Theosophical Forum

MAN'S INJUSTICE TO HIMSELF — *Marjorie M. Tyberg*

Look east, look west, at present, in the Old World, and those who respect the gift of Life find horrifying confirmation of man's inhumanity to man, of his ruthless use of skill acquired and now used to destroy the human bodies, which are man's instrument in carrying out his destiny on Earth. And what darkens the outlook and deepens the despair and anguish and havoc wrought is man's failure as yet, through ignorance or denial, to make full avail of all the resources of his nature in meeting this terrible crisis. Therein lies man's injustice to himself.

But the very violence and anguish will serve to shatter some of the barriers between man's everyday self and his enduring Shining Self, which, all unrecognised is the source of every noble and compassionate impulse of his character. We may hope that man will yet realize his high destiny and do what only man can do, what the human race will have to do — keep open the channel for the Forces of Light to enter and fill men's minds with the vision of the New Age, with knowledge of the building that can be begun *now* for a time when the physical and mental power will at last be directed by the Shining Self, rather than from an intermediate self largely influenced by craving for domination. The thoughts and pictures imaginatively created now will later be released as human institutions expressive of man's spiritual characteristics. Daily resort to man's inner seat of spiritual might, the center from which come the highest creative impulses, brings the only feeling of security and of triumph for the right to be gained at present. It is a source of understanding, of strength, of calm.

And strangely enough, the effort to ascend this pillar of light to

man's inmost self, where all are One, is, according to the teachings of the Ancient Wisdom, Theosophy, blessed with greater success in Kali-yuga — does any one doubt that we are living in the Black Age given that name? — than at any other time. In Kali-yuga the high gods more readily descend to help mankind to begin building for the New Age. This is man's opportunity to qualify to co-operate consciously with the Hierarchy of Builders, whose work becomes visible when the old forms have perished — as we see them perishing at present. Hosts of souls responsive to these higher beings will work under their direction.

We have witnessed man's triumph over the natural forces, we have seen his conquest of them for his own use; we have seen the triumph of man in the invention and direction of these forces with fiendish skill; and have yet to see the triumphant use of man's spiritual faculties, which it is man's destiny to unfold, not in any heaven, but on Earth. There is that which can be done to help — at any time, at any place, namely, the recollection of, the momentary spring to, the reality of the enduring Shining Self — rising to which in thought and aspiration man learns that he finds the Shining Self which is common to all that lives.

To those whom destiny has not drawn into the clash and din of actual conflict, who are not dying in the bombed cities, who are not fleeing, fear-stricken, with the homeless, there is an urgent call, a challenge to make an end of man's injustice to himself, to use the spiritual will which works on the plane where things to be have their birth, to ascend the arc to meet, to invite, the descending celestial influences, to widen the sphere of light above the clouds of war, to make a channel free of all enmity and hate, glowing with love and trust and compassion.

How to do this? By resolute recollection, by frequent meditation

— the ascent is made more readily with every effort, and demands no sacrifice of duty. The Gods await. Let the answer to their call be "I unify myself with the god within me."

ARE THEY DEAD? — *H. I. Barborka*

Where are they? Those bright spirits who with such a gallant gesture gave and are giving the rich gift of their lives, renouncing all hope of the things men hold dear, to make a better and happier world for us, and for the future? Are they dead? No indeed! Death is not an end. Life is continuous. There is a pulsing rhythm in life which manifests as an outpouring of energy and activity, followed by a withdrawal of energy: a time of recuperation and rest.

Man's life on earth is such a period of activity, while death is a time of rest in a large way, as sleep is in the small. It is so natural to go to sleep tired and to wake in the morning refreshed. That is all that death is. Men, at the end of their life here on earth, lay aside the physical body, their vehicle of expression on earth, and fall asleep and dream, then wake to a new life with a new body, invigorated and rested.

Death, so called, is the end of one "day-life" here, and then the tired souls rest in the heaven-world, passing their time between earth-lives in dreams of utter bliss. No sorrow can touch them there. They dream happy, wonderful dreams which they have made for themselves while here on earth, for life after death "is an idealized and subjective continuation of earth-life."

Those who have passed on are not conscious of having left earth-life. They imagine themselves surrounded by those they loved on earth, living out in perfect and unalloyed bliss and happiness all their unfulfilled spiritual hopes and longings, all the unsatisfied yearnings of heart and mind, and assimilating the experiences of the life just passed. Sleeping the perfect sleep in the heaven-world (Devachan) they rest and dream, until the time comes for them to

return to earth in order to continue their unfinished tasks here, to work out in justice the effects of causes set in motion in other lives, drawn back also by the powerfully attractive force of love to those places and to the people whom they loved in former lives. Are they dead? No, they are sleeping, dreaming, resting in a state of unutterable bliss. There is no death, only endless life. Men pass from sphere to sphere, from periods of activity to periods of rest, but everywhere there is always continuity of life and consciousness.

Yes, Shelley, we say with you,

How wonderful is Death —
Death, and his brother Sleep!

Rest for the weary travelers on life's long pilgrimage, until with the dawn of another "day-life" they are called back to earth, their home, to commence a new life, to be reunited in love with hearts they loved in former lives, with their hearts singing in the sunshine of a new day.

The Theosophical Forum

WANTED! TODAY! — *Iverson L. Harris*

First: Men and women with courage and vision based on unshakable faith in the ultimate triumph of spirituality and brotherhood over cynicism and hatred.

Second: Men and women who know that in our higher parts we are all one, whether we will or whether we nill, and that when we injure one, we injure all, and that we ourselves — all of us — must sooner or later reap the consequences of any infringement on our own part of the law of Universal Brotherhood.

Third: Men and women who refuse to allow propaganda of hatred from any source at any time about anything whatsoever to blind their vision as regards the essential truths of life which they readily recognise when their inner eyes are undimmed by fear, or falsehood, or emotional disturbance, or unreasonable partisanship.

Fourth: Men and women who are capable of taking a long-range view of human history and evolution, and while responding as best they can to the immediate calls of duty lose not sight of the distant goal towards which the Enlightened Ones of the ages have pointed.

Fifth: Men and women who have evolved from within themselves, aided by outward experience and the spiritual legacy left them by their predecessors on the Path, an adequate philosophy of life that permits them to remain calm and clear-sighted in the midst of turmoil and confusion.

Sixth: Men and women who know that *thought* is not only free but potent, and that no matter what the exigencies of a world in travail may demand of any of us outwardly and temporarily,

there still remains to us, in the words of Browning, "that inmost center within us all, where truth abides in fulness."

Seventh: Men and women who can rise in thought above the clashes of classes, of parties, of nations, of races, or of ideologies, and fight the battle of the gods with the weapons of the gods: wisdom, vision, and almighty love.

Eighth: Men and women who recognise that on this, our planet Terra, races and nations must inevitably follow the universal course of birth, growth, maturity, age, and death, and who, therefore, lend their enlightened efforts as regards nations and races and systems of thought quite as much as in regard to every precious individual of the race, towards making

The *birth* loving and welcome;

The *growth* strong and purposeful;

The *maturity* fruitful and illuminated;

The *old age* wise and compassionate;

And the *death*, peaceful and transfiguring like a sunset.

Ninth: Men and women who realize that the real growth and lasting progress of the race takes place through *evolution* rather than through *revolution*; and that just as the human individual body evolves by growth from cell to cell, so does the body politic grow by evolution of every individual "cell" in that social structure; hence the way to establish a healthy body politic is for each individual to take command of the little world which he regards as his own — himself — and by self-directed evolution spread his beneficent influence among those with whom karman has surrounded him. When we have established peace and normal growth *within* ourselves and *among* our immediate fellows, we may then hope for peace and normal growth in the larger social or national or racial groups to which we belong. This is something which everyone of us *can* begin to do, right here and

now.

Tenth, and finally: Most urgently wanted *today* are real

SANSKRIT THEOSOPHICAL TERMS AND THEIR MEANINGS

Sanskrit Terms from *Fundamentals of the Esoteric Philosophy*

LOKA-ASPECTS	TALA-ASPECTS				
Spiritual world	Material world		Satya-loka	1	Atala
Light side	Night side		Tapar-loka	2	Vitala
High	Low		Janar-loka	3	Sutala
Positive	Negative		Mahar-loka	4	Rasâtala
Luminous Arc	Shadowy Arc		Svar-loka	5	Talâtala
Zenith	Nadir		Bhuvar-loka	6	Mahâtala
			Bhûr-loka	7	Pâtâla

The Ancient Wisdom teachings divide the Universe into seven great Planes or worlds of beings, each of which is bi-polarized into a Loka and a Tala. These pairs of Lokas and Talas are as inseparable as the two sides of a coin. They represent those two universally contrasting forces of nature which are expressed by good and evil, high and low, spirit and matter, etc. The word Loka means "a vast space," "a world," and is applied to a spiritual sphere. The seven Lokas are called in Hindu writings the "seven regions of the blessed" or the "seven heavens." The word Tala means "lower part," "base," and is applied to a material place or region. The seven Talas have been called the "seven Hells" or the "seven inferior places."

Each couple of Loka and Tala represents a cosmic plane, or rather a sphere ranging from its loka or spiritual parts to its tala or physical parts. The highest and most spiritual and inmost of the lokas and talas produces the next lower or next outer loka and tala, which in its turn contains within itself the qualities of its parent and of the lokas and talas beneath or without it as well as its own dominant characteristic qualities. So on down to the lowest or outermost loka and tala. Therefore we see that each loka and tala is sevenfold, and contains aspects of all the other lokas and talas within it or without it.

These lokas and talas represent different stages in evolutionary unfoldment. All evolution may be described as a series of spirals. Beings, in order to evolve, come forth from the Great All, the Divine Source, and then descend along a series of spheres, each more material than the preceding, and on each of these they build for themselves bodies in which to live. When they reach the lowest point of the descent, the most material sphere, they then proceed upwards to unfold consciously the spiritual and inner beauty latent and wrapped within their bodies of different degrees of physical texture. As they

advance upwards they cast aside their garments gradually, the most material first, and become more and more divine in manifested virtue and power, until they reach once more the highest, the Divine Source, but not in the same condition as that in which they last sprang forth from it, but on a higher level, wiser, grander, and more universal. There they rest for a while until the urge to become greater brings them once more into manifestation. The coming forth into manifestation, the putting on of garments, each one more material as the descent continues, is another way of saying that a man, or any other being, passes through the tala-side of the seven great divisions of the Universe. The conscious return to the Divine Source, the unfolding of the divine qualities and the casting off of the material forms of different grades, is another way of saying that a man, or any other being, is passing through the loka-side of the seven great divisions of the Universe. Hence Theo-sophy teaches that as a human Life-Wave comes into being on this Earth it passes around or through the twelve Globes of the Earth's Planetary Chain which are distributed over the seven Great Cosmic Spheres or planes. There is one such Globe on the highest and lowest planes, and two such Globes on each of the planes between. (See accompanying diagram.) Hence as the Human Race appears, it passes from Globe D" to C to B" to A to B to C to D on its Descending Arc into matter, and as it does this, on each Globe it builds for itself bodies appropriate to the sphere through which it passes. This descent through the globes is actually a passing through the seven Talas of the Universe. Then from the midpoint of the cycle of time passed on Globe D the Human Race ascends upwards, passing from Globe D to E to F to G to F" to E" to D'. This ascent through the globes is actually a passing through the lokas. This same tala-descent and loka-ascent may be applied analogically to anything that evolves, from atom to universe.

Rûpa

The five Globes on the three Inner Spheres may be called B', C', D', E', F', as in opposite diagram.

The diagram to the left shows these lokas and talas and the Globes of the Planetary Chain in planes one above the other. This diagram, though useful in showing corresponding aspects in several hierarchies, can be misleading. The circular diagram above is more nearly correct. But these circles representing the lokas and talas must not be considered as flat geometric planes, but as spheres with a common center lying one within another. The inmost, which is the most spiritual and ethereal, penetrates all the other spheres, and goes far out beyond them all, whereas the outermost Loka-Tala, though permeated by the influences and atmospheres of all the other lokas and talas, does not itself reach beyond its own atmosphere.

We thus see by observing the circular diagram that every one of the lokas and talas is sevenfold and that though each pair is permeated by the six others, it has its own essential and dominant characteristic. This demonstrates the truth that at any moment, right here on earth in the Bhurloka-

Patala in which we at present live we may penetrate the depths and inner spiritual parts of ourselves and our sphere and commune with our higher Selves and our Spiritual Guardians. We must become fully conscious in all the lokas and talas and sub-lokas and sub-talas before we truly know the Universe and ourselves.

The *unconscious descent through the talas*, into matter, is the *first* and necessary process of evolution, a process which prepares the way for the *second* and most important half of the evolutionary journey, that of the *conscious ascent through the lokas*, the self-directed unfoldment of the lofty inner qualities and powers. The Human Race is *now* in this *second stage* of development, because it long ago reached Globe D, the nadir of the descent. Therefore the different bodies, physical, astral, mental, and spiritual, with which we have clothed ourselves in our descent, should now be kept pure in order that they may be used as sacred instruments on that self-directed spiritual journey upwards. The *first descent through the talas* is not evil, is not against nature's laws; but a *second* and *conscious descent through the talas*, brought about by the choosing of that which is low and the self-willing identification with matter and its limiting and selfish attributes, is evil, for it is against nature's laws. This latter is the Downward Path to annihilation, the path of a Lost Soul or of a Brother of the Shadow.

So we may say that the tala-side of nature has its two poles, its two contrasting aspects, the good — that which enables beings to build forms on their descent into existence; and the evil — that of self-identification with the base and selfish side of nature. Likewise the lokas have this dual aspect, which is demonstrated in the Path of the Buddhas of Compassion and the Path of the Pratyeka-Buddhas. (See Lesson II.)

Though these lokas and talas may be depicted as states of consciousness or conditions of beings they are also actual localities in which different classes of beings, high, intermediate, and low, live. The particular meaning of each set of loka and tala beginning with the highest is as follows:

Satya-loka is the "world of truth and reality," the realm in which live divine beings and Nirvanins. It is the highest state of consciousness possible to a human being, the loftiest Samadhi. Its atmosphere extends into regions far beyond our ken, out into the fields of infinitude. Its nether pole, *Atala*, is the first suggestion of a place, the first *something* of existence. It is called *a-tala*, "not-a-place," because it is of such spiritual-ethereal matter that it can scarcely be considered a place. A Lost Soul or one who follows the Downward Path, suffers final annihilation in Atala.

Tapar-loka is the "world of spiritual meditation and devotion," the realm in which live the Spiritual

Guardians of our Universe, the state in which the Christos or the Buddhic Splendor manifests itself in its fulness. Its atmosphere, though not as far-reaching as Satya-loka, extends beyond our ken. Its nether pole, *Vitala*, is that spiritual-ethereal place in which there is a change (*vi*) towards matter, therefore it is a "better place for matter." It is in Vitala that the one who self-consciously following the Downward Path breaks the final link with his Higher Nature.

Janar-loka is the "world of spiritual birth," the realm in which dwell the Kumaras, Agnishwattas, and Manasaputras, the state in which the Higher Manas of man becomes the complete master of the lower principles. Its atmosphere extends to the reaches of our Galaxy. Its nether pole *Sutala* is a "good place," that is, a place that is good (*su*) for matter. In Sutala a human being who has selfconsciously followed the Downward Path has brought his mind into the condition of an absolute slave to his lower desires.

Mahar-loka is the "great world," whose field of influence extends to the limits of our Solar System. It is the realm in which live the different classes of Devas who are intimately connected with the mind and the senses. In this loka a man's brain-mind is no longer deluded by Maya, but is concerned with compassionate service to all. The nether pole, *Rasatala*, is the "place of taste," that place in which one can perceive with one of the organs of sense. A human being whose brain-mind is wholly concerned with things of the senses and the objective world is immersed in Rasatala.

Svar-loka is the "heaven world" wherein the human being enjoys the after-death state of Devachan. It is the state in which a human being unfolds his higher aspirations. It is the abode of the higher Elementals, and its atmosphere extends to the pole star. Its nether pole is *Talatala*. This word is a compound of *tala-atala*, meaning "a place not a place" and implying that this place is more of a tala than those above it but is not yet a fully substantial tala. A man who centers his mind and energies in the gratification of his senses is in Talatala.

Bhuvar-loka is the "world of becoming," the region of the Astral Light which extends to the Sun, and the abode of the lower Nature-spirits. A man who has attained to this Ioka has become aware of his inner and higher nature and hence has become more impersonal, and therefore more unselfish, more spiritual. The nether pole of Bhuvar-loka is *Mahdtala*, the "great place/ the abode of man's astral shadow. When a man performs deeds which are selfish and unkind and impure he is in Mahatala.

Bhur-loka is the "earth sphere" in which our planet Terra or Globe D exists. It is the abode of human beings who are thoughtful and good, but not necessarily spiritually awakened. Bhur-loka's nether pole is Patala or the "nethermost tala" or the region beneath us, the Underworld. The derivation of Patala is

obscure, but it may be a contracted form of *pata* — sunk or fallen, and *tala*. Patala is the dwelling-place of man's physical body and personal self, of animals, and of Nature-spirits such as the gnomes. Instinctual selfishness, self-preservation, gratification of the senses, and the helpless innocence of childhood are characteristic marks of one who is in Patala. Patala is often used for our word "Hell."

Such are the ranges of the Human Spirit: from the darkest regions of Patala to the loftiest and divinest regions of truth — Satya-loka!

Arupa Rupa is body or form. Arupa, a compound of a — not, Rupa and *rupa* — body, is applied to something without form or body. The three highest of the Lokas and Talas and the five higher Globes of the Planetary Chain are called Arupa, not because they have no material form, but because to our physical senses they would appear as formless. The four lower Lokas and Talas and the seven lower Globes are called Rupa worlds and Globes because their bodies are of a substantial nature more like unto our own.

Tattva Mahabhuta The word *Tattva* means the "reality" or "that-ness" (*tat-tva*) of a thing. The seven Tattvas are the Principles or Essences of the Cosmos, the conscious and directing forces, the sources of the manifested Elements or rudimentary stuffs of the Cosmos, which last are known as the Maha-bhutas or the "Great has-beens." These great Elements are not the earth, air, water, and fire we perceive here; these latter are but presentiments of these great Maha-bhutas. The two highest of these Tattvas and Bhutas are not as yet recognised by humans, but will be in future ages. Taijasa and Apas are the adjectival forms of *tejas* — fire, and *apas* — water.

Like the Lokas and Talas, each Tattva and Bhuta gives birth to the Tattva and Bhuta below it and retains a portion of all the other tattvas and bhutas within it and yet manifests its own dominant characteristic. Each Tattva has a corresponding Bhuta of the same name. Below are the seven Tattvas with their meaning:

Âdi-tattva	Original Principle or THE ONE
Anupapâdaka-tattva	Parentless Principle or The Spiritual
Âkâśa-tattva	Aether Principle
Taijasa or Tejas-tattva	Fire Principle
Vâyu-tattva	Air Principle
Âpas or Apas-tattva	Water Principle
Prithivî-tattva	Earth Principle

Not only do the seven Lokas and Talas have their correspondences with the seven Tattvas and Bhutas and with the twelve Globes of the Planetary Chain, but they likewise correspond to the seven principles in man (see Lesson I), and also to the development of the seven senses, as shown in the large diagram. Just as two of the Cosmic Elements are as yet unknown to us, so are two of the senses. Intuition, a harbinger of the sense of Spiritual Understanding, is just beginning to be recognised. As the ages roll by and the Sixth Race men appear, this spiritual sense will become more and more evident. In order to explain the planets and Constellations of the Zodiac, as given in the large diagram, I quote from Dr. de Purucker's *Fundamentals of the Esoteric Philosophy*, page 488:

There is a strict and close correspondence between each of the seven Sacred Planets and one of the globes of our Earth-Chain, respectively; and between each one of the globes and one of the constellations of the Zodiac — one of the Houses of the Circle of Life, as the Greeks called it. But while it is true that the Seven Sacred Planets of the ancients, Saturn, Jupiter, Mars, the Sun (as a substitute for a secret planet), Venus, Mercury, and the Moon (as a substitute for another secret planet), do actually build and oversee our Planetary Chain as a whole (one of the Sacred Planets respectively to one of the Globes), nevertheless while the influences of the other six of the Seven Sacred Planets are at work therein also, yet the one predominating power over each globe comes from its especial sacred Planet. Likewise, under the particular oversight, or overseeing, of one of the constellations of the Zodiac, that is to say of the predominating Genius or Rector of that constellation of the Zodiac, nevertheless each one of the other eleven constellations is also at work in each of the twelve globes of the Chain. There can be no separation of forces, for everything works together in Nature towards a common end — which is one of the noblest proofs we have of our doctrine of Universal Brotherhood.

Below are the Sanskrit and English names of the seven Sacred Planets and the twelve Constellations of the Zodiac:

CONSTELLATIONS OF ZODIAC

Mesha	♈	The Ram
Ṛishaba	♉	The Bull
Mithuna	♊	The Twins
Karkaṭaka	♋	The Crab
Siṃha	♌	The Lion
Kanyâ	♍	The Virgin
Tulâ	♎	The Scales
Vṛiśchika	♏	The Scorpion
Dhanus	♐	The Archer
Makara	♑	The Sea-Goat
Kumbha	♒	The Watering Man
Mîna	♓	The Fish

THE SEVEN SACRED PLANETS

Śani	♄	Saturn
Bṛihaspati	♃	Jupiter
Aṅgâraka	♂	Mars
Sûrya	☉	Sun
Uśanas-Śukra	♀	Venus
Budha	☿	Mercury
Soma	☾	Moon

WITHIN THE MIND AND HEART — *Allan Stover*

Never in historical times has there been such world-wide unrest, distress and uncertainty, or despair as to the future, as there is at present. Wherever located, all feel the strain in some degree. Many have found relief in doing something for those unfortunates in every country who are despairing. Others are busy in some duty. There are many ways in which those who are able can give material aid to others.

But on the other hand one hears such questions as, What does it all mean? What will become of us? Has there ever been such a time before?

The student of Theosophy knows that in times such as the present the thoughts we permit ourselves to think are as important as the things we do. He knows that however and wherever situated each one contacts within his own nature the same conditions that are distressing the world. Within the mind and within the heart of each one arise thoughts and impulses coming from that ocean of thought, the astral light, in which — emotionally — we live.

If we admit a thought of hatred, fear, suspicion or worse into our minds, give it added impulse and send it forth, we are adding to the total quantity of such horrors in the world. We are becoming responsible for our part of it: responsible for the acts which result from such thinking.

If, on the other hand, we refuse to admit unworthy thoughts and impulses we are reducing, transmuting, the total of such things in the world, and by just so much are making the world a better place to live in.

It is the lack of right thought in the nations of today which is

largely responsible for the present confusion.

The Theosophical Forum

TECHNICAL THEOSOPHY — *G. de Purucker*

I want to point out the extreme need of disseminating technical Theosophical teachings in the outside world of men and women; and by "outside world", I mean those who are not privileged to study together as we do. That is the only sense in which I use the word "outside". There are millions whose place, spiritually and intellectually, is here amongst us. But we have not succeeded in giving them the chance yet; we have not yet been able, with our teachings, to reach their imaginations, their hunger for more light, for more truth. Their lives are already founded in ethics and they are ethically inclined, they have the ethics of the magnificent religions and philosophies in the world, and they have the instincts of decency in the human heart. What they need is the technical Theosophy to show them *How* and *Why* and *What* — something that can be achieved only by giving them and making them to love the *study* of our technical Theosophical doctrines.

Why do the Avatars come amongst us? To help us who to them are spirits in chains of matter, to raise ourselves out of the condition in which are those whom Pythagoras called the "Living Dead", into at least genuinely good men and women whose lives are good because they are *ensouled*, in other words who have a conception of spirituality and who love it, and loving it follow it.

Faint indeed must be the whisperings of the spirit within you if a picture like this does not arouse something within you as it did in me when first as a child or boy I was taught it again in this life, in this embodiment. Then it was that I first dedicated my life to Theosophy.

What is the burthen of all the teachings of all our great godlike men? Feed the hungry, give drink to the thirsty, clothe the naked,

comfort the heavy-laden. Do you think this means merely material benefits? It means aid and feed the naked and suffering and hungry *souls* of men — as well as their bodies; and if we can arouse by our Theosophical work, working under the mandate that we have received, sufficient enthusiasm along these lines, sufficient to change the thoughts and hearts of men, all the material wants of all mankind will be taken care of because men will no longer allow their fellow human beings to suffer the material wants.

All these latter things are needed, but they sink into utter insignificance compared with the majestic drama of the human soul swinging between spirit and matter, between Divinity and Avichi. And often, too much of the good things of life, too much concentration of thought and mind, too much devotion unto the material things, are dangerous because they concentrate the attention on and attachment to material things alone, and there is danger in this.

Notice that neither the Buddha nor Jesus the Avatara, nor Krishna, went around establishing soup-kitchens and charitable organizations and hospitals and things like these, great and beautiful though these often are. They were feeding and raising the hungry souls of men; they were ministering to the intellectual wants of their fellowmen; they were clothing their spiritual nakedness with the sheaths of consciousness, the garments of truth, knowing that when they did these things, a multitude thus ensouled would attend to the material wants of our fellow human beings.

Not that I decry soup-kitchens and things like that! Sometimes they are very needed; but when I hear people ask me: "Well, you Theosophists talk about loving your fellowmen, and you believe in Universal Brotherhood. Why don't you establish soup-kitchens,

and do philanthropic work among the poor and visit hospitals?" Our answer is obvious: We have done it, and we are doing it as much as we can as individuals, and will do much more of it when we get the millions upon millions of the wealth of the churches, or the philanthropic organizations. But what we are doing is cutting at the root which brings these physical material wants, needs, lacks, into being. In other words we work mainly to change men's minds and hearts. What produces the poverty amongst us, and the illnesses, the un-tended material wants, the exactions on the poor and the weak who are the least able to respond to exactions? Human cruelty, human selfishness, human weaknesses, human thoughtlessness, the lack of an active warm beating heart feeling the woes of the world. Correct these, and you cut at the roots of all the material evils of mankind. That is what the Great Ones of the earth have always done, they cut at the root of the evil, knowing that when they get the multitudes together in a common ideal, if the multitudes are faithful these other things will be attended to.

Now, don't go to extremes. The next time you hear the cry for food, physical food, or the cry for a cup of water, don't say: "No, I am doing Master's work on a higher plane. Go elsewhere to him or her, he or she will attend to your wants." Take what comes in your daily work, and set the example of universal pity and helpfulness; but remember that these noble philanthropic material things will automatically come about if we first take care of the greater things.

It is really a terrible situation. The materialization of our age has become frenzied, so frenzied that there are millions of men and women in the world of today who have no patience with things of the spirit. They are utter materialists; they think there is no good in anything except what will benefit the human body. That is wrong and distorted, and as evil-working a state of mind as is the

mind of those frenetic spiritualists in the other sense of the word, who want to be up in the clouds all the time, and will not even give a cup of cold water to a man whose body is thirsting. There are such.
