It was Darwin, with his theory of the evolution of living forms, who upset this tidy appletart: or perhaps it would be more correct to say that Darwin's contemporaries, Thomas Henry Huxley and Ernst Haeckel, with their partisan pleadings were responsible. It was in 1859 that Darwin's *Origin of Species* appeared. Immediately there was a definite and uncompromising face-about in the scientific and then in the public mind.

Darwinism took Europe by storm. Deity was jettisoned. If living forms were evolved through gradual stages by means of Natural Selection, i. e., by pure chance, how could God have had anything to do with it? Obviously he could not. What place would he have in a nature "red in tooth and claw," where the rule of might was supreme? It was natural, then, that the very words, god, soul, spirit, should be peremptorily discarded from the scientific world; and the rent between religion and science, so skilfully patched by Paley and his followers, became an irreparable rift. Man, then, more than ever before became alien to his environment.

It is interesting to note in passing Prof. Wood Jones' assertion of his belief that there was sufficient in the theories of Darwin himself to have turned the tide of thought in a far happier direction. He quotes, and very justly, Darwin's comment in regard to his use of the phrase, the Survival of the Fittest: "I use the term in a large and metaphysical sense including the *dependence* of one being on another." Darwin was, as a matter of fact, far more speculative than dogmatic. Not so Huxley and Haeckel. They fanned the flame of materialism. By their eloquent and energetic lecturing they pressed upon a gullible public a picture of relentless competition in nature, of bloody strife, of ceaseless

struggle. One wonders if it may have been that a cycle of materialism was karmically due and its pendulum-like force could have swung almost any theory along with it.

Not only was no deity possible in the picture they presented. There was no place in the new set-up for design and purpose in life. "The search was no longer for beautiful adaptations, for harmonies and for purposeful meaning, but for misfits, maladjustments and disharmony, wrought by blind chaos." Even man, in the words of one writer, was but "a kind of miscarriage of an ape."

To say, as the author does, that there have been few signs of intellectual revolt against this soulless theory, and these only "on sentimental, metaphysical or theological grounds" would seem to relegate the work of the Theosophical Movement to some distant plateau of metaphysical speculation. Yet will it not one day be discovered that the thunder of H. P. Blavatsky's tremendous protest has reverberated in the minds and souls of many scientific thinkers? Her protest was not merely a literary explosion of strong feeling. She presented the noble principles of a grand philosophic science, a science of cosmic proportions which included the invisible *causal* factors that give meaning and unity to the varied phenomena of our physical world. Her teaching, far from being contradictory to modern research and discovery, is the very goal toward which the restless, eager, upward-looking scientist of today is inevitably tending. In fact, much that she taught in her monumental work, *The Secret Doctrine*, is now commonplace scientific knowledge. (2)

In this age of science anything approaching metaphysics has been for a long time suspect — only to be tolerated by courtesy and given no place in the categories of factual knowledge. And so it is with exemplary caution, but nevertheless with many a darting

forward along the forbidden way, that Prof. Wood Jones proceeds to develop the main theme of his book: a confession of his conviction that there has been enough discovered in the world about us — a world whose limits have been far extended by the aid of scientific invention — to prove the universe to be a cohering whole, "a series of harmonies in which living things play mutually dependent parts." And what is more important still, he is convinced that this view of the cosmos is what the world needs today to bring back ethical sanity into human life.

He speaks of "living things"; but what, he asks, is living, and what is non-living? How can we bridge the gap between organic and inorganic matter? The way in which he answers this question is a significant contribution to a progressive and enlightened view of the universe. He notes, for instance, the status of the virus, which, hanging in that shadowland of doubt between two worlds, is believed by some to be living and by others not to be living. (3) And he adduces other facts to show that "no-life" grades into "life" by imperceptible stages in such a remarkable way that he is convinced — he does not quite dare to say there is but the One Life, but at least that there is evidence of the unity of design in the whole: in the cosmos and therefore in human life.

Further, he frankly admits that, whereas we know a good deal about the modes and means of evolution, we do not know its *cause*. If, he says, "we are brave enough to make this confession, it leaves us free to speculate as to the possibility of evolution having occurred in the realm of the non-living." Here he brings forward the behavior of chemical substances and the striking resemblance between Mendeleeff's table of elements and Huxley's selected zoological types, showing that there is something akin to orders, families, genera and species in the mineral world. Then he takes up the matter of the similarity of structure between the atom and the solar system, and the evidence that the atom of matter is no

matter at all but only energy. And if one is not prepared to call this energy "life," at least it is "the only immortal thing we know."

Here the author confesses to a harking back to the "cosmic dream of pagan philosophers." For he finds the teaching of Democritus, that there is nothing but atoms (energy) and space, wholly conformable with modern theory. Even the fact that Democritus arrives at his idea by means of "pure thought and unsupported by any factual knowledge derived from actual ascertained scientific data," does not perturb him because, as he says, "there are times when the man who sets his faith solely upon facts hard won in the laboratory is in danger of missing something that maybe philosophers and poets, ignorant of scalpel and forceps, have already realized."

This is a generous admission for one trained in scientific thinking. And it contains more in it than probably even the author himself suspected. For the "pure thought" of the ancient philosopher was based, not on speculation, not even on what is modernly called a "hunch," but on what may be described as a *direct perception of truth*, a quality not vouchsafed the ordinary man but which, when present is surer than any scalpel or forceps, than any spectroscope or test-tube experiment — and far more scientific. It is a means of obtaining relatively infallible knowledge.

In her article, "The Beacon of the Unknown," (4) speaking of the true scientific basis of knowledge, H. P. Blavatsky says:

For let it be well understood, Theosophy has this in common with ordinary science, that it examines the reverse side of every apparent truth. It tests and analyses every fact put forward by physical science, looking only for the essence and the ultimate and the occult constitution in every cosmical or physical manifestation, whether in the domain of ethics, intellect, or matter. In a word, Theosophy

begins its researches where the materialists finish theirs. . . . Theosophy utterly rejects the testimony of the physical senses, if the latter have not spiritual and psychic perception as a basis. . . the evidence of reason on the terrestrial plane like that of our five senses must receive the imprimatur of the sixth and seventh senses of the divine ego before a fact can be accepted by the true occultist.

Finding, then, that there is unity of design in the whole cosmos, and noting purpose in so many of its parts, it is a natural step for the author to declare that it is difficult to rule out the idea of *purpose* also in the whole. And behind this purpose — dare he postulate a Cosmic Mind? If he dare he admits he is going back to Plato, only this time it must be added "guided by the hand of accepted scientific findings." Yes, he says, to some this suggestion will seem an "unwarranted impertinence" and will receive condemnation as harking back to the outworn theory (?) of teleology; but we have a writer here who is courageous enough to press forward toward an investigation of the *implications* of factual knowledge; and he believes that that undesirable thing, mysticism, only creeps in because there are gaps in that knowledge. This is just another way of phrasing that oft-repeated statement of the Theosophists that there is nothing supernatural in the cosmos: what we call supernatural merely indicates hiatuses in our knowledge of its workings and properties.

But it would not be fair, with a book so short, to discuss its every point and thus perhaps spoil for the reader his first impressions of the author's logical, vigorous, and thoroughly charming presentation. One feels that there are dreams the author shares with the ancient philosophers, with Lao-Tzu, with the Buddha, with Plato — dreams he can only hint at to his circumspect scientific confreres; but one also feels that these same dreams he

may be able to pass on to some of the young medical students whom he contacts daily, those fresh young minds who are ready to wrest from the universe any and all of its secrets, and who demand that they be given a philosophic science which will restore to them their faith in life through a belief in its intrinsic purposefulness and wholeness.

The Theosophical Forum

THE GREAT MOMENT — *Leoline L. Wright*

... in order to become a divine, fully conscious god — aye, even the highest — the Spiritual primeval INTELLIGENCES must pass through the human stage. And when we say human, this does not apply merely to our terrestrial humanity, but to mortals that inhabit any world, *i. e.*, to those Intelligences that have reached the appropriate equilibrium between matter and spirit, as *we* have now, since the middle point of the Fourth Root-Race of the Fourth Round was passed. Each Entity must have won for itself the right of becoming divine, through self-experience.
— *The Secret Doctrine*, I, 106

The above passage contains in brief compass the whole meaning of evolution as it applies to the human race. And it throws, does it not, a new emphasis upon ourselves. It illumines for us with a divine dignity this erring, bewildered, selfish and yet aspiring creature we call Man. And at the same time it gives us a new interest in ourselves and in this difficult life we are trying to live today.

If it were not for men and women — for us, in fact — there would be no gods. Wonderful thought! Something to lift up our hearts. Something to urge us to renewed efforts to be the kind of human beings from which gods can be developed. The daily task takes on a kind of humble splendor. The small conquests of self that make our halting steps on the path of Occultism are golden milestones on that invisible cosmic highway which all mankind are unconsciously, and some of us indeed consciously, pursuing.

Here too is a perfect definition of what it means to be human — "to have reached the appropriate equilibrium between matter

and spirit." This brings out a point which we do not perhaps often enough consider. It is the matter of *choice*. Do we choose here and now to impel the scales upward or downward? Are we alive to the fact that almost every moment of our lives is such a moment of choice?

Many of us may think of this moment of choice as something to be met only at the middle of the Fifth Round. Then human beings will reach the point when they are strong and pure enough to continue upward along the Ladder of Life, or must fail to make the grade for this chain manvantara. But in so thinking we forget that our power successfully to face the Great Choice will rest upon the innumerable small decisions which confront us *now*. It is the cumulative power of these daily conquests or failures which will be the deciding factor *then*. Tomorrow, today perhaps, we are thinking and saying and doing the kind of things that will have a vital influence in helping us to drop out of the picture when the supreme moment comes. Is not this a thought to carry always with us?

The Theosophical Forum

MAN, KNOW THYSELF — *Clifton Meek*

Judge Light's excellent letter on "Social Behavior" prompts me to express a few theosophical thoughts on the subject. "Why do people behave as they do?" he asks. I think the answer can be epitomized into the simple following statement: Man, in his present state, is but partially, and hence, imperfectly evolved.

Out of this arises the difficulties which so relentlessly pursue mankind, and which will continue to do so until we intelligently go about the task, as individual creators, of improving our spiritual, moral and ethical status. We are free agents, the creators of good or evil, as we will. When our thoughts and actions are not in accordance, but at variance with, the immutable laws of universal nature, which, for the sake of convenience and the conservation of mental energy on the part of the mass of mankind are called God, a reaction occurs as nature restores the equilibrium which has been upset, thus causing pain and suffering to mankind.

In Oriental religion and philosophy this is called Karman, or Karma. It is an action of nature as inevitable and impersonal as the burning of the hand which is foolishly put into the fire. There is individual, national, racial and world Karman; nature is a universal brotherhood, and the Karman of every entity is linked with that of every other entity, and when the collective evil Karman of groups becomes overwhelming, catastrophes such as war occur.

Someone has said that the proper study of mankind is man, yet it is probably the one study that men understand least. Judge Light strikes a vital keynote when he cites the injunction of ancient mystery schools — "Man, know thyself" — which was inscribed

above the entrance to one of the celebrated seats of learning of ancient Greece. Nature insists that every human soul must grow for itself, spiritually, morally and intellectually, make its own mistakes if necessary, and suffer the consequences, for only in that way can it evolve its potential possibilities. The great difficulty of course, lies in the fact, that at our present stage of evolution, which is a very materialistic one, too few have little or any interest in things of the spirit, or in developing their spiritual intuitions. They are content to drift along with the slow moving tide of evolution, satisfied with a "bread and circus" philosophy of life, learning the hard, slow way, reluctant to take their destiny in their own hands. Even many of those with spiritual aspirations are often under the self-imposed handicap of leaning too heavily on theological crutches instead of learning to walk on their own feet. The great truths regarding their own divine natures and their spiritual relationships with the larger pattern of life, as it was taught in the ancient mystery-schools, and as it still is in their present day counterpart, have been so thickly veiled with religious allegory, symbol and ritual, as to be practically lost to their view and understanding. Orthodox religion has attempted to cram divine intelligence into a "personality," making of God an exterior being rather than the central spiritual fire of man himself, thus necessitating an agent or intermediary through which, or whom, all spiritual traffic must be conducted. It is my belief, after years of observation and thought, that this purely human and materialistic concept has done more to retard the spiritual advancement of the race than any other single factor. Religious ceremonial, originally intended, and having its proper place as an aid and stimulus, has become a glittering distraction.

Such a system precludes the possibility of any further enlightenment or understanding on the part of man regarding the so-called mystery of life and his own being, discourages any

exploration into the strata of his own divine nature, and too often discourages the idea that he possesses such a nature.

Ages ago, before the race had sunk to the level of materialism we now know, but from which we will again emerge, the spiritual Titans and teachers of nascent humanity explored the primeval strata of man's being, and nature itself, preserving their knowledge and wisdom under the seal of the mystery schools while civilizations rose and fell, giving out from time to time as conditions warranted and the spiritual intuitions of men were able to receive and understand it, the primeval truth regarding man and nature.

It was in these basic teachings that the world's great exoteric religions had their origin, each revamping its teachings to suit the particular, but not too ethical requirements, of various theological systems.

Man's evolution pursues a parallel and concurrent development on three planes — spiritual, intellectual and physical. The ancient system was, and still is, a synthesis of religion, philosophy and science, in contradistinction to the absurd and unnatural modern system (?) of three separate and often contradictory schools of thought. Men speak of the conflict between science and religion. There can be no conflict between a religious truth and scientific fact. The contradictions lie in the dogmas and theories which men have presented under the guise of religion and science.

I cannot agree with my friend, however, that the answer to the problem of social behavior is to be found in the teachings of modern day psychiatry or psychology, for as these terms indicate, they deal merely with the psychic, or intermediate nature of man, and do not go to the spiritual roots of his being. Dabbling with the vital psychic forces of human nature, without an understanding of their relationship to the whole, can work incalculable harm.

Like many modern day cults which are based upon half truths they can be dangerous instruments in inexperienced hands.

TRANSACTIONS OF THE HEADQUARTERS LODGE — XXVII — G. de Purucker

Studies in "The Mahatma Letters"

The present article closes this series of studies by Dr de Purucker. It is in answer to the following question which has puzzled not only beginners but also many older students of Theosophy: "In *The Mahatma Letters*, pp 94-5, it is explained how the different Kingdoms gradually come on the Planetary Chain. first the Elementals, then the Mineral, the Vegetable, the Animal, and then the Human. It is also stated somewhere else that Man is the oldest of the Kingdoms on this earth, and the channel or vehicle through which the other Kingdoms came into being. How can you put these two statements together to satisfy the minds of beginners?" Other series of comment and teaching left by Dr de Purucker will be given in future issues of the FORUM.

THE BUILDING OF THE GLOBES

To ask for a brief answer to the whole complex subject of the evolution of the ten classes of Monads, and the development of the Planetary Chain — for this is what it amounts to — is to ask for a tremendous lot! The subject if properly treated would require one hundred books, each one devoted to one aspect.

Nevertheless, everything can be boiled down or generalized to a statement, and I will try to do it as follows: There are ten or even twelve classes of Monads, which means re embodying entities in different evolutionary grades; and evolution, remember, means growth from within outwards, not the Darwinian theory of

haphazard, chancy additions upon additions.

Now then: During the first Round, all the ten or twelve Kingdoms combine to build the globes of a chain, or rather rebuild them from their past imbediments. This is the first Round; and while of course there is distinct order amongst them in their work of doing this, it is extremely complicated. But get the main idea, that all the classes of monads, ten or twelve or seven, however you choose to count them, all co-operate during the First Round. It is like the picture of a wealthy man going to build a house. He and his architects and his contractors, and his foreman, all get together and lay the plans, and then they collect the workers and all the materials, and all co-operate together to build the house.

I hope I make my idea clear. Once the house is builded, then everything falls into regular order of day-to-day life, as soon as the owner and his family — and to carry on our analogy we will have to say the architects and contractors belonging to the family — all come in together and live in this huge house.

Beginning with the Second Round the different classes of Monads sort themselves out, because now the lines have been laid, the different houses or globes of the chain have been constructed in at least elementary fashion, and sorting themselves out the different classes of monads thereafter come in serially one after the other, each class following its own path of evolutionary karma or karmic evolution.

But it is always the more evolved which set the pace and give the plan and make the pathways for the least evolved to follow on after. Thus it is that man, not counting now the dhyana-chohanic monadic classes above the human, but counting only the human and the other six classes below the human — the human, I say, sets the pace and lays the pathways for the other monadic classes beneath the human; and thus it is that the human is really the

repository or evolutionary and originating storehouse of the other classes of monads seeking imbodiment, I mean those under the human monadic class; and this is the meaning of the statement which is very true, that from the beginning of the Second Round, continuing during the Third, and even up to the Fourth Round where now we are, the human monads or the human stock were the storehouse out of which the animals sprang during the Third Round, out of which the vegetables sprang during the Second Round, and out of which the minerals sprang even during the First Round, when they all were co-operating together. There is the whole thing on your thumb-nail, if you get it.

To recapitulate: During the First Round, when everything is still in the elementary stage, all the classes of monads co-operate to lay the foundations of the globes, and build them up to the point where the classes, beginning with the Second Round can, each class, follow its own line of evolution upon this groundwork laid by all the classes during the First Round.

The First Round therefore is like the embryonic stage in human birth in the womb of nature. The Second Round so to speak begins with the birth of the child, or the birth of the animal, or the birth of the plant or the seed; and thereafter each class of monads, or family or kingdom, having been separated out, follows its own special destiny along the lines laid down by the higher classes: the human for all classes beneath the human; the dhyan-chohantic monads or classes for all beneath them, including the human of course.

The seven classes or ten may be reckoned as follows: three classes of elementals or three kingdoms of elementals; the mineral class or kingdom; the vegetable class or kingdom; the animal class or kingdom; the human class or kingdom; and then above the

human, three dhyan-chohonic classes or kingdoms, of which the highest is, according to the rule just laid down, the chiefest and the main repository or originating storehouse or governing group of minds of all the lower classes.

Just as we humans follow in the footsteps of the dhyan-chohans who help us and from whom we sprang in a sense, so the animals and the vegetables and the minerals, each slowly follows in the footsteps of the kingdom above itself. Thus it is that the animal kingdom actually sprang mainly during the Third Round from the human stock, not according to the Darwinian sense; but the human stock threw off germs or monads — not human germs or monads, but animal germs or monads carried by the human as sleeping monads. But when these were thrown off, and no longer under the human control, then they formed a class of their own called the animal class of monads, and thereafter began to evolve each along its own line; and the specializations in evolution since the Third Round, which were repeated during this Fourth Round — these specializations have been enormous: such as the quadrupeds developing four legs, or the fishes developing fins, or the birds developing wings and legs; or again the whale, which is distinctly an animal mammal, and not a fish, taking to the water and looking like a fish; or a bat which is a mammal and not a bird, nevertheless taking to the air and looking like a bird. All these are what are called specializations, and they have greatly confused the evolutionist-scientists who cannot make head or tail out of the immensely complex problem because they have not the esoteric keys. Yet all these monads were originally thrown off as germs, life-germs, from the human kingdom; and once thrown off, no longer under human control, as stated above, they began to evolve on their own and to specialize.

Thus the highest class of dhyan-chohonic monads guides and helps the second or lower class of dhyan-chohonic monads. The

second or lower class of dhyan-chohanic monads guides or helps the third or still lower class of dhyan-chohanic monads. These last guide or help the human monads. The human monads guide and help the animal monads. The animal monads unconsciously guide and help the vegetable monads. The vegetable monads unconsciously guide and help the mineral monads; and these last help the three kingdoms of elemental monads, in the same order.

The Theosophical Forum

HYMN TO THE ORIGIN OF THE WORLD

FROM THE RIG-VEDA X, 129

There was indeed then, neither Being nor Non-Being;
Neither was there air nor even the heaven beyond.
What was concealing? Where was it? And in whose shelter?
Was it the spacial Waters Divine, a depth profound?

Nor had there come to be either death or deathlessness;
There was no perception either of night or of day.
Breathed without wind by its own self-power that Only One;
For indeed, other than That, was there nothing beyond.

In the beginning darkness was hidden by darkness;
An imperceptible surging, indeed, was this All.
That One, coming into being, was veiled by a void.
Through the might of a deep meditation was it born.

That Desire which first was pulsing throughout it so strong,
Was the primordial offspring of the Kosmic Mind.
Those gifted with insight, sacrificing with wisdom,
Found in their hearts the bond of Being in Non-Being.

Their splendor was diffused from one side to the other.
Was there a below, do you think? Or was there an above?
There were the producers; there also were the powers.
There was nature below; above, the intent divine.

Who is there who has truly known? Who will here proclaim –
Whence is this creation? Whence was it ever produced?
The gods came hither with its springing into being.
Who then can possibly know whence it has arisen?

This great creation, whence has it come into being?

Whether He founded it truly or founded it not,
Its Overseer who lives in the highest heaven,
He only knows it — or perchance even He knows it not.

— *Translated from the Sanskrit by Judith Tyberg*

The Theosophical Forum

ELEMENTALS — *H. T. Edge*

In the Theosophical teachings there is a sevenfold classification of the animate kingdoms of Nature into Human, Beast, Plant, Mineral, and three Elemental kingdoms. If we regard the scientific view of Nature as complete, we shall necessarily regard these Elementals as a kind of addition to Nature, a kind of detached beings hovering around and interfering. But a true man of science knows how incomplete is the explanation of Nature which science has been able to supply; how full of gaps it is; how many assumptions have to be made as groundwork for the superstructure of scientific theory. To such people the existence of Elementals will seem rather to fill an unoccupied space; these beings might even be regarded as a necessary hypothesis. The scientific formulas are devised for practical purposes, in which they are very efficient. But such formulations are built upon certain data — things which are said to be "given." In geometry, for instance, we must assume such things as space, extension, and enumerate a list of axioms and postulates; after which we may proceed logically with our theorems and problems. But no attempt is made to prove these assumptions (at least within the limits of the system for which they were assumed). So in physics we assume attraction, motion, and various other things, undefined, or perhaps mutually defined in terms of each other. A workable universe can be built on matter and motion, but these two all-important things have to be assumed and left unexplained. In a word, science shows us how the universe (the physical universe, at least) works, but cannot explain how this universe comes to be alive and intelligent — which it obviously is. Thus there is plenty of room for Elementals to fill this tremendous gap; and so far from being superfluous they are things we cannot

do without. (1) The movements seen in matter have to be accepted without explanation of their cause; but after that they can be studied and their consequences formulated. Take for instance the movements of the molecules in a gas. From these can be deduced general laws relating to diffusion and pressure. But there is no explanation of why the particles should move. Again, while we can calculate the laws of magnetic attraction, we find no explanation of the cause of that attraction; and the same with gravitation. Attempts to explain attraction by some theory of pressures in a hypothetical fluid (or ether) are illogical, since they seek to explain the postulates in terms of the propositions deduced therefrom. Such an attempt merely confronts us with the original problem over again. Thus science has been obliged to use words as counters, standing for unrealized values; and they sometimes forget the entirely provisional nature of these assumptions — a mistake much more often committed by uninstructed people who attribute to scientists more wisdom than the scientists themselves claim.

There is no final escape from the conclusion that living beings are responsible for Nature's activity; nor yet from the conclusion that all life implies intelligence in greater or less degree. Evasions of this conclusion are merely temporary. The electron cannot be analyzed into anything but a living entity; we may say that it obeys "laws," but it is simpler to endow it with a modicum of intelligence and purpose, however lowly and instinctive.

It may be asked, Why do we not see the elementals? or alternatively, Do we see them? But after all it is merely the physical embodiment of beings that we see — that part of them which is correlated to our bodily senses. We cannot truly say that we see the animal or the plant, but only their physical encasement. As to the mineral kingdom, when scientists probe into its depths, they pass the confines of visibility. All that our

physical senses can show us of the elementals is comprised or summed up in the visible forms of the beings, animal, plant, or mineral, into which they enter as constituents. Can we see what science calls a "force"? Or is it not rather the *effects* of force that we see?

Many things, well known to experience, but usually scoffed at, or met with an indulgent laugh, as superstitions, are explained when we take elementals into account. Some people seem to have a touch which benefits plants; other people seem to kill the flowers they handle. Workers may have quarrels with their tools, find a particular tool more responsive than another tool, object to letting other hands use their tools. Our typewriter, our razor, what not? may seem to have a sympathy with their owner. Similar instances will occur to the mind of the reader. These elemental creatures must needs be amenable to the superior influence of the human mind and feeling. The generality of us blunder blindly among these beings, creating unknown confusion. But the adept may learn how to handle them, as men can learn how to handle other laws of Nature, without violating those laws. Thus are produced "phenomena," sometimes wrongly called miracles or interferences with the laws of Nature.

FOOTNOTE:

1. In *Isis Unveiled* we read that Professor Le Conte specifies four kingdoms of Nature: Animal Kingdom, Vegetable Kingdom, Mineral Kingdom, Elements (I, 329). The *Bhagavad-Gita* says: "For the accomplishment of every work five agents are necessary, as is declared. These are the substratum, the agent, the various sorts of organs, the various and distinct movements, and with these, as fifth, the presiding deities." (Chapter xviii). ([return to text](#))

OCCULTISM and the philosophy of the East, whether true absolutely, or relatively, are teachings coming to us from an immense antiquity: and since — whether in the writings and traditions of the East; in the numberless Fragments, and MSS. left to us by the Neo-Platonic Theosophists; in the life-observations of such philosophers as Porphyry and Iamblichus; in those of the medieval Theosophists and so on, *ad infinitum*; — since we find in all these, the same identical testimony as to the extremely various, and often dangerous nature of all those Genii, Demons, Gods, Lares, and "Elementaries," now all confused into one heap under the name of "Spirits"; we cannot fail to recognise in all this something "enduring the test of *universal experience*" and "coming unchanged" out of every possible form of observation and experience. — H. P. Blavatsky: "Thoughts on the Elementals," *Lucifer*, 1890.

The Theosophical Forum

MEDITATION AND TECHNICAL THEOSOPHY — *Leoline L. Wright*

Not all the work for Theosophy is done through our books and public speaking, as every Theosophist knows. The Theosophical Society is a body of thinkers. Should it not also be, more importantly, a body of *meditators* — people who carry in their minds and hearts as they go about their daily tasks the great ideas which are imbodyed in technical Theosophy? For it is these awakening truths which alone can form the basis of a new world order. Unless our world order is founded upon cosmic law how can it endure?

This daily meditation of hundreds of convinced people can be powerful above all human influences. Like an inundation of invisible rainbow light it can penetrate the hearts of discouraged men and women everywhere. It will arouse in them something new. It will invoke in their inmost souls such a vision of human possibilities as the world we live in has never known.

To consider only one of these great ideas which carry healing and constructive power — the existence of the Hierarchy of Compassion. How little the world in general suspects:

That its welfare is in the keeping, so far as humanity will make it possible, of a great organization of perfected beings;

That these beings are agents of beneficent cosmic law;

That the atoms of our stubborn brains are forever penetrated by the divine akaia;

That this akasa is the living essence of a celestial Hierarch — a sustaining nourishment and an abiding inspiration for our better natures;

That we have only to realize it, to live in it, to breathe it in mentally and spiritually to become gradually transmitted into godhood?

We can so fill the mental atmosphere of our unhappy world with these convictions, even if they be unconscious ones, that it will help to counteract in the most powerful way all those dark forces of hate and cruelty which threaten to overwhelm it.

And let us remember always those pregnant words of Katherine Tingley from *Theosophy: The Path of the Mystic*: "The forces of Light are already victorious." The confusion and misery that surround us are due in large measure, we are told, to the inevitable world catastrophes which always precede the dawn of a new cycle. So even here we can see a great promise which should spur us to united action.

There are many others of these grand cosmic themes for daily meditation. The works of G. de Purucker teem with their beauty and richness. In *Fundamentals of the Esoteric Philosophy* and *The Esoteric Tradition* we can find glimpses into the realms of cosmic grandeur which if dwelt upon faithfully can spread healing and peace abroad in the hearts of men.

Is it too much to say that each one of us can be a powerful and active agent of the Brotherhood of Compassion, a co-worker in the cosmic beneficence? For that is what we are if we will but persist throughout our waking lives in confident and devoted meditation upon any one of the magnificent and consoling truths of our sacred technical teachings.

DR. DE PURUCKER ANSWERS QUESTIONS

INACTION IN DEEDS OF MERCY

Question: To what extent should help and healing be rendered another suffering soul without interfering with the necessary experience of that soul? — the one who receives help?

G. de P. — It seems to me that your question takes it for granted that it is wrong to come to the aid of one who needs help because he is undergoing a karmic experience which he has brought upon himself, and therefore is learning a lesson that is needed! Now that idea of inaction in deeds of mercy is a false idea. In following a line of thought like that we become hard-hearted. We say, or we would say: "What does it matter to me? He is simply learning the experiences that he has brought upon himself. Let him learn them, and the sooner he has learned the lesson the better for him." Ah! but that is not the real teaching. The teaching is love and compassion, that it is our bounden duty to help each other, and that you cannot grow or evolve yourself without exercising the powers of love and compassion and wisdom that you have innate within you. Hatred gives them no exercise. Indifference gives them no exercise.

We never *interfere* with the karman of another when we help him. Never! We are simply making good karman for ourselves; and furthermore when we help a man it is obviously his karman to be helped by us. Actions in deeds of mercy do not change Nature's majestic forces of readjustment, because these forces are fundamentally based on harmony and sympathy, which are the very elements of what manifests in man as brotherly love. If you help your brother, it is obviously his karman to have you help

him. If the opportunity is offered to you, it is your karman and also his karman, that the help is proffered and given and received.

Remember that whatever is, is karman. Whatever is, is karmic consequences. It is a part of the chain of causation, one of the links in the chain of causation, that brought the timely help and the supporting hand. In either case, the man who refrains from giving help, or the man who rushes to aid, is acting karmically; and the one who refrains, brings upon himself the consequences of his selfish evil-doing; for inaction in a deed of mercy becomes an action in a deadly sin, because mercy is ethical, it is equitable, it is harmonious, it restores equilibrium, it makes for peace. Injustice and cruelty are inharmonious. They make for disharmony. New and bad karman is thereby made. Remember the law: Inaction in a deed of mercy becomes an action in a deadly sin.

DID JESUS "SUFFER"?

Question: When Jesus suffered, does it mean that he had violated some fundamental law?

G. de P. — No, I would not say that. You have touched upon a very esoteric topic of thought. If you only knew what we Theosophists have to say about the Avatara Jesus and his life and teaching, you would not have thought it necessary to ask me this question. In the first place — and I hope that I will not tread upon any sensitive corns here — we Theosophists don't believe that Jesus suffered in the manner that the legend relates. The story of Jesus as told in the Christian Gospels is a mystery-tale, a tale setting forth, with Jesus as the type-figure around which the mystic lessons were woven, certain experiences in the initiation-chambers.

Let me try to illustrate what I mean. One of the grades of initiation was called Theopathy, from two Greek words *theos*, "god," and *pathein* "to sorrow," "to suffer." It means the "suffering" or "bearing" of a god — not that it is a god which suffers, but an entity which suffers the entrance into himself of a divine influence. He supports the god in his being, he becomes the vehicle of the god and carries the god, resigns his own individual identity or character for the time being in order to become a manifestation, an Avatara so to say, of the god. He suffers the god to work through him. Thus did Jesus.

It is our teaching, furthermore, that Jesus called the Christ never was crucified, never suffered on the Cross, in the manner outlined in the legend. The entire story of Jesus as we have it in the Christian *New Testament* is a story of the Mysteries. An initiation-mythos was written around the exquisite figure of a great Sage and Seer called Jesus, the Avatara. Around the individuality of that great and noble Sage and Seer was woven a series of tales and legends portraying in mystical, and as it were, esoteric and secret, form, a part of what takes place in the initiation-chambers.

PLATO'S TEACHING OF TWO "SOULS"

Question: Would you be good enough to explain what Plato meant by the much disputed passage in the *Laws*, in which he refers to two world-souls, one the author of good, the other of evil. The passage is as follows:

"Athenian: And as the soul orders and inhabits all things that move, however moving, must we not say that she orders also the heavens?

"Clenias: Of course.

"Athenian: One soul or more? More than one — I will

answer for you; at any rate we must not suppose that there are less than two, one the author of good, the other of evil " — *Laws*, X, 896

G. de P. — May I point out, first, that in this passage the Athenian speaker not only refers to one soul, but refers to "one soul or more," and also goes on to say: "At any rate, we must not suppose that there are less than two, one the author of good, the other of evil." Taken in conjunction with the remainder of the Platonic philosophy and its constant reference to divine beings in the Universe, the explanation or answer becomes immediately clear enough: i. e., that there is a spiritual Universe as well as what we moderns call a material universe, the two of course working together and under the general governance or superiority of the World-Spirit which moves to and works for "good," while the other is that part of the world or universe composed of inferior or less evolved beings, which therefore by comparison with the superior World-Soul can be called collectively the author of imperfection, or what men today call "evil."

The Universe is a vast aggregate Hierarchy or Cosmic Family composed of beings in all grades or stages of evolution, from the Hierarch or topmost point of divinity of the Hierarchy, down to the most material beings composing the Hierarchy; and these latter are of course the least evolved of all the entities in the Hierarchy, and therefore form the material world. The Hierarch or spiritual entity of the Hierarchy is therefore the source of all law, order, love, peace, harmony, beauty, compassion, pity, and active intelligence in the Hierarchy; and all the inferior beings in this Hierarchy derive what they have of harmony and beauty and peace, etc., from their supreme Chief, the Hierarch.

Thus you see there are what Plato, in order to save words, very briefly calls two "souls" — one the author of good, and one the

author of evil; i. e., one the source of law and beauty and harmony, and the other the great material aspect of life, which, because it is material, is imperfectly evolved, and therefore can abstractly be called the "author of evil."

But now, mark you, any such Hierarchy is but one of countless multitudes of other similar Hierarchies alike unto it, scattered through the infinite fields of Boundless Being; so that, therefore, "World-Souls" are literally infinite in number. I point this last fact out with some particularity so that my answer will not seem to contain the "Supreme Personal God" idea.

This, therefore, is the real meaning of Plato in the passage which you quote, and which Christians find it extremely difficult to understand, because of their education and mental bias along Christian lines. Plato of course was a Polytheist, or a believer in a Universe filled full with divinities and beings less than divinity, forming a Cosmic Family, just as we Theosophists teach. In fact, Plato was a Theosophist. In my *Fundamentals of the Esoteric Philosophy*, this very side of our ancient Wisdom-Teaching is more or less carefully dealt with in various places, although I admit that these various places would require joining up by research.

The Theosophical Forum

A KNOWLEDGE OF UNIVERSAL LAWS — *Gertrude W. van Pelt*

"To diffuse among men a knowledge of the laws inherent in the Universe"

This has been the service of the gods during all time. At certain cyclic seasons especially their agents descend among men and scatter the seeds of truth, without which the people would perish. How else should men, mental babes in their beginnings, have gained a knowledge of the laws inherent in the Universe? This do the gods until enough seeds have rooted in many minds, after which they withdraw, leaving their children to grow in strength and spread still further the seeds already planted. Then, as the need or the hunger for more truth awakens on earth, again those Great Ones move among men or send their disciples to stimulate human sympathies, awaken the hearts of men, and scatter those precious seeds, by means of which all truly great civilizations have been born, and without which there is such confusion, disorder, and suffering. These laws are based on the all-inclusive fact that the Universe is, as its name implies, one vast being, of which all units — from gods down to men, to beasts and plants, through suns, planets, and the minerals which compose them — have a common origin and a common destiny; that every portion, down to the last atom is an essential part of the whole, sharing, and a necessary factor, in the common destiny.

The gods, through their agents, control the higher kingdoms, all of which serve every other, but men must learn to guide themselves and consciously climb the ladder of life. Every normal man feels this relationship in some way, as is evidenced by natural human sympathy, self-sacrifice, or even the recognition that self-interest lies in the direction of service to others. One quite callous to the

needs or suffering of his fellow-men is sub-human. And even without a mental comprehension of the laws inherent in the Universe, this awakening of the higher human nature has given us some most inspiring examples during all ages, of men whose influence has warmed the hearts of thousands and aroused to service many who might otherwise have slept in the lonely chains of selfishness. Yet if also the mind is awakened and has a clear vision of basic truths; if, for instance, the races of men could clearly perceive that Brotherhood is a *fact* in nature, that all men are inescapably tied together, that it is as disastrous for one body to rise against another as it would be for two organs in a human body to work at cross purposes; if this were realized but imperfectly, could such conditions as now exist in our world ever have been born? There would still be attractions and repulsions as exist in the atoms, but there would also be a desire for justice and well-being for all in their various spheres. What the heart knows would be plain to the mind and explain *why* a denial of this fact in thought and action is so disastrous, so fraught with confusion and pain.

An understanding of these laws is brought to earth by men more highly evolved than are our present races; men whose teachings, if understood and followed would bring order out of chaos, and it thus becomes the primal duty of those who have had the privilege to hear and, at least, partially understand these teachings, to become the channels, as best they can, in their various capacities, to help "to diffuse among men a knowledge of the laws inherent in the Universe."

In our very complicated social structure, men inevitably follow the pattern of nature and group themselves to accomplish their purposes, gradually feeling and finding their way to enlightenment. There is room and necessity for all, intellectual and mechanical workers, philanthropists, and statesmen.

Practical philanthropy is the duty of all, but, as an organization, it must be the absorbing and sacred duty of those who have been taught the basic unity of all life, to do their full part toward charging the atmosphere with thoughts based on the facts of being, and thus in making them a conscious factor in human life.

This is the answer of the Theosophical Movement to those who ask why Theosophists do not devote their whole energies in these days of agony, to relief of physical suffering. Thought seeds must be planted in time for the new harvest. For it is *ideas* that rule the world.

The Theosophical Forum

HOW EASTER BECAME A CHRISTIAN FESTIVAL — *G. de Purucker*

What is Easter, this age-old festival-time? To us Theosophists it is one of the four main Holy Seasons of the year. We recognise Easter as a very holy time indeed. The word Easter is not only used in English but is in use in other languages. It was taken over originally from the Anglo-Saxons and was adopted by the English folk. In other countries they used a word derived from the Greek, or rather through the Greek from the ancient Hebrew. The Greek was *πάσχος*, and the Hebrew *pesahh*, meaning "to step over," "to jump over," and hence "to pass over"; from the ancient Jewish Biblical story that when the Lord God led the children of Israel out of Bondage in Egypt, on the night before they began their journey, the exterminating Angel of Jehovah passed over Egypt slaying all of the first-born of the Egyptians, and skipping over, passing over, the houses of the Jews, because they had been instructed by Jehovah to put a smear of the blood of a lamb on the door. A quaint old tale, and it was accepted, as it happens by most Jews and Christians literally, and is very calculated indeed to induce disrespect if not contempt for what ought to be a truly beautiful and holy tale.

The Passover was adopted by the Christians from the Jews. The Christians, while adopting this Jewish festival celebrated by the Jews at a certain date, did not like to have it exactly as the Jews had it. Being Christians and borrowing a great deal from the Jews, they liked to have things a little their own way, these new Christians; so they changed the date somewhat. They accepted, took over, the Jewish Passover Festival, but gave it Christian coloring and a Christian twist. Thus the Jews celebrated their Passover on the 14th day or the full moon day of their month *Nisan*, originally called *Abib*, when Spring begins to come to

fruitful earth, when the buds and the trees begin to burgeon. Abib and Nisan meant the first month of Spring so to speak — Spring meant the beginning.

Now the Jews, as I stated, celebrated their Passover on the full moon day of the month of Nisan, that is, 14 days after the new moon. So did the Christians. But they wanted a distinction from the day the Jews had it; and perhaps from ignorance, perhaps from other reasons, and after disputes lasting for centuries — and very bitter indeed in the second, third and fourth centuries — they finally decided upon this rule: Easter, the time of the Resurrection of our Lord Jesus Christ shall hereafter fall upon the first Sunday following the full moon after the Spring Equinox. Note the entrance of an archaic cosmic thought there. First find the spring equinox, then find the first full moon after that, then find the first Sunday after the full moon, and that is Easter. But the original Jewish way and Pagan way was to celebrate their whole festival of Passover on the full moon day of the Spring, of Abib or Nisan.

I call your attention to this: Easter is not a local festival, or rather a Christian festival alone. It is a festival of cosmic significance, depending upon the seasons and mainly upon the date upon which the Spring Equinox falls. There is the key to the original holy festival. It had not anything to do whatsoever with Jesus Christ. But they chose it as the date of his so-called resurrection for an excellent reason. They knew something of what took place in the adytum of the sanctuary. They knew something about the four sacred seasons of the year, which, as the great Pagan philosopher Plato pointed out, make a cross in nature, the two solstices opposite each other, the two equinoxes opposite each other; the so-called Greek cross; and during all initiations the candidate was laid upon this cruciform couch or bed, a bed in the form of a cross, and there he passed his trance.

Now then, this lying down, this beginning of the torture, of the trial, of the test, of the struggle, was on the new moon day in every one of the four sacred seasons. The beginning was always at the new moon time; and when the new moon coincided with the equinox or solstice, it was considered, and indeed was, especially holy.

Do you know that there is a Christian fact, known by a few, ignored by most of the Christian clergy, and it is that Passion Sunday, considered to be the beginning of the Passion or agony of their Lord Jesus, is the 14th day before Easter?

Why did Jesus as a type, this holy Teacher, Avatara, become connected with the lamb, as undoubtedly connected with the teaching concerning the Zodiac? For this reason: that the Christians in every way wanted to connect their Teacher with the promised Messiah of the Jews. They could only succeed in doing so, with even a coloring of truth, by adopting the old Jewish stories. The Jews celebrated their Passover by eating a meal of lamb killed and baked in an oven on the day of their Passover. They were making a ritual, a ceremonial, as all the other ancient nations did, caught by the esoteric wisdom of what were in Nature herself cosmic laws and cosmic events.

In the above I have given out a few hints as to why we Theosophists look upon Easter as one of the four Holy Days of the year.

Good Will in the Cosmos

Man, the Thinker . . . is making urgent inquiry as to what part he is consciously to play in the vast systems of worlds that he is able with his intellect to contemplate. Can he discover and emulate in

his human associations on Earth the principles of co-operation, the laws of life, according to which order and safety in solar systems and galaxies are maintained during the aeons of time it takes for the cosmic purpose to be consummated?

Theosophy answers, Man is of the stuff of stars and suns, both in his outer and his inner nature. One Hierarchy of his progenitors, the Builders, have directed the evolution of form, body, vehicle, for Man the offspring of Divinity. Another Hierarchy, that of Compassion, has in charge the advance of the inner man, whose ancestry is akin to the invisible Beings who use for body the great celestial sun and star systems. They have in hand the guidance and direction of that part of human destiny still to be unfolded, when man, abandoning "uncharted freedom," will become conscious of and obedient to, that infinite duty, which the poets intuit.

The most precious gift offered to the human race is the knowledge of that glorious destiny. Nightly the stars look down with their message of assurance that we have our home in a friendly universe, that we too, like the Great Beings whose visible forms are those "diamonds in the sky," may become conscious collaborators in *Cosmic Purpose and Cosmic Good Will*. — M. M. Tyberg

The Theosophical Forum

THE CHANGING SCENE IN THE THEOSOPHICAL SOCIETY — E. V. Savage

A careful study or reading of *The Mahatma Letters to A. P. Sinnett*, and its companion Volume, *The H. P. B. Letters*, using Margaret Conger's valuable chronology as a guide to the sequence of the Letters, makes the Theosophical student realize that a great debt of gratitude is owed to Mrs. Conger for the illumination brought to these Letters by her work of arranging them in the two books in chronological order. It enables the student to get a much clearer picture of the unfolding scene in those early days of the starting of the Theosophical Movement, which form a background making much that has happened since more understandable.

In those days the Masters had to start "from scratch" as it were, as regards calling upon trained workers for their Cause. As they themselves tell us in one of their Letters:

After nearly a century of fruitless search, our chiefs had to avail themselves of the only opportunity to send out a European *body* upon European soil to serve as a connecting link between that country and our own. — *The Mahatma Letters*, p. 203

Bringing H. P. B. into acquaintance and association with Colonel H. S. Olcott, they then had to begin seeking among those whose minds were turned towards occultism for fit material from which to start the Theosophical Movement and to spread its doctrines.

The reading of these Letters shows how, among the many contacted, A. P. Sinnett and A. O. Hume, especially the former, stood out for a time as among the most active and intelligent

workers, who received, principally through the channel afforded by H. P. B., more or less direct communication with the Masters. As the picture revealed by the Letters unfolds, one's sympathy and understanding for the position of these two men and other Theosophists of that time, become greater; and far from judging them harshly for their mistakes and failures, one inevitably puts oneself in their place, realizing first of all that anyone who is brought within the radius of the brightness of superior men, such as the Masters, will almost certainly have his faults and shortcomings brought almost painfully into the focus of public view. This is a fact often not understood by those who have not themselves gone through the experience of close association with a Teacher, and they are thereby sometimes led to harsh and unfair judgments. Each student, too, is naturally tested not where his strength lies, but where his weakest point is, and "one man's strength may be another's weakness."

As a matter of fact, the Theosophical world and all readers of *The Mahatma Letters* should be grateful to Sinnett and Hume for being just what they were, uninitiated but sincere and aspiring students. If they had been of the status of H. P. B., for instance, they would not have needed to contact the Masters through correspondence, and we would never have had these Letters. Their failures and problems then, are our failures and problems now, fitted into changing circumstances; and as each new difficulty comes along, we can apply the lessons there given to our own lives and characters.

But the outstanding lesson of these Letters is, I think, the following:

1. Two conditions must be in existence when teaching is to be given: there must be a Teacher prepared and trained to give; and there must be students who are ready and efficient recipients of

what the Teacher gives. Though it is an occult law that to a spiritual Teacher the giving out of knowledge is death, it would be far worse for the Teacher were he unable to fulfil his mission of giving out his teaching because of lack of students to receive.

2. There was a great lack in those days, even among the best of those associated with H. P. B. and the Masters, of trained students of Occultism, people who knew what it means in their individual lives to subordinate their own ambitions and desires, even when these were worthy and unselfish, to the greater good of the Cause for which they were working. They failed to realize their place in the larger scheme, that they were merely parts of a greater whole; they had absolutely no knowledge of what discipleship means, what following a Teacher or Leader means. (This is evidenced in several instances where direct, frank, but kindly letters from Master M. were looked upon by Sinnett as severe criticism and resented by him.)

(It is interesting, by the way, to note, in view of how much we have heard about the superiority and fitness of the Oriental over Western students for appreciating these things, that some of the Oriental chelas apparently gave fully as much trouble in those early days as any of the Occidentals.)

During this testing and sifting process, as one by one, in spite of much magnificent work done, various students failed in a basic understanding of what the Masters were working for, and of what may be summed up by the word "chelaship," the scene gradually changed. The Mother Society naturally broke up into its various Sections; all immediate contact between the Masters and individual members was withdrawn; and through the years, ever since the passing of H. P. B., students have been given a chance, instead of working more or less independently as it were, to learn the lesson of working in close association with others towards a

common goal, and have been shown, as Dr. de Purucker more than once pointed out, that the Theosophical Society was started primarily for bringing to the world again a restatement of the truths of the Ancient Wisdom, and only secondarily for aiding the individual development and evolution of students.

Another lesson which had to be learned was that however great one's devotion to the Teacher might be, greater still should be one's devotion and dedication to the Cause. Why was it that many who gave devotion and allegiance to H. P. B. drifted away after her death, lost interest in her Work, and in many cases threw over their belief in Theosophy for more "attractive" roads? This is not necessarily meant as a criticism of such people. They often afterwards led lives of unselfishness and service; but as regards the Cause which the Teacher to whom they had given allegiance represented, it seemed no longer to exist for them.

Of course where a student can identify absolutely his Teacher with the Cause (and all true Teachers are so identified), so much the better for him and for his own future progress; but it is often difficult to keep one's love for and devotion to a Teacher so impersonal and lofty that the withdrawal of the physical presence of the Teacher does not alter the student's work at all. Often it is as though with the passing of the Teacher, a prop on which the student unconsciously was leaning, also was withdrawn.

One aspect of the situation that a reading of these Letters brings forcibly to the mind, is the heavy load carried by the Teacher, and above him, by the Masters. They have to reap to the full *all* the karmic results, both good and bad, put in motion by their starting such work as the Theosophical Movement, and this is well illustrated in a letter from H. P. B. to Mr. Sinnett in the *H. P. B. Letters* where she is pointing out the consequences of the many mistakes made. She says:

. . . . it is Mahatma K. H.'s *Karma*. If you have never given a thought to what may be His suffering during the *human* intervals of His Mahatmaship — then you have something yet to learn. "You were warned" — says His Chohan — and He answers — "I was." Still He says He is glad He is yet no Mejnour, no dried up plant, and that had He to suffer over and over again — He would still do the same for He knows that real good for humanity has come out from all this suffering. . . . — *Letters From H. P. Blavatsky to A. P. Sinnett*

At the present day we can look back over a period of some seventy years, a period full of interest, with much progress made, with many failures recorded, and many changes in the Theosophic scene. We can ask ourselves how many are now trained students, with a relative appreciation of what chelaship means, seeing in its true proportion their place in the vast scheme, with an appreciation of the Teachers which is not marred by the personal element, and above all with a knowledge of what it means to follow unwaveringly the Representative of the Masters among us?

I believe there are thousands who have profited by the lessons of the past. And now the question is, Is there a further lesson to be learned? Does a time come in the student's development when, after learning how to follow a Leader, he must learn to stand on his own feet, alone, discerning for himself the Path that has been pointed out for him for so long? As the Masters have said:

The sun of Theosophy must shine for all, not for a part. There is more of this movement than you have yet had an inkling of, and the work of the T. S. is linked in with similar work that is secretly going on in all parts of the world. —
The Mahatma Letters, p. 271

And elsewhere K. H. says:

You see then, that we have weightier matters than small societies to think about; yet, the T. S. must not be neglected.

— *Op. cit.*, p. 11

Has perhaps a time come when some of this weightier work the Masters have in charge demands all the trained occultists that they can summon to their aid from the outer scene? And that the enduring work of protection of Humanity by the Guardian Wall is going on behind the scenes perhaps with increased vigor in these perilous times?

But through all the years that have passed, and those that are to follow, during the times when the Master by one means or another contacted individual students; during the time when the different Societies in the Theosophical Movement were working more or less as integral units, with a Representative of the Masters among them; and now while perhaps the digesting and fruition time needs not the personal presence of a Teacher: of one thing we may be certain: The Movement which the Masters started will not be deserted by Them, for their Work is still alive and flourishing; and as H. P. B. said: "Well — keep courage and go on. If we remain *ten* persons in the Society united strongly — it *cannot* die. . . ."

The Theosophical Forum

REINCARNATION: A FORGOTTEN CHRISTIAN TEACHING (1) — S. H. Frank

When H. P. Blavatsky started the Theosophical Society in 1875 the doctrine of Reincarnation was so little known in the West that the idea that we come back to earth for rebirth was laughed at. Today many thinking people accept it, while many others at least do not reject it. However, the great majority of orthodox Christians have no idea that during the early centuries of the Christian era it was a doctrine held by many devoted Christians, including some of the greatest Christian Fathers.

Doubtless one of the reasons why present-day Christians have no suspicion that it was an early teaching in their Church is that in the New Testament there is little direct reference to it. It is not specifically taught. So the doubter may well ask, "How is it that a doctrine of such importance should be referred to at best in an incidental way instead of being dealt with explicitly?" It is a fair question, but instead of being a poser the answer is quite simple. In *Matthew*, xv, 24, we read, "I am not sent but unto the lost sheep of the house of Israel." Reincarnation was the general belief of the Jews at the time that Jesus came to them; it was the accepted belief of the Pharisees, by far the largest and most influential sect. So if Jesus considered his mission to be to influence Israel, what need to specialize on a teaching already believed in by them, any more than argue to convince them of the existence of a God in whom they already believed?

Further, Reincarnation was a common belief among the peoples in the surrounding countries. It was believed in by the Manicheans, who were not Christians but whose teachings had great influence with the followers of Christ; by the Gnostics, and

by a Christian sect significantly known as the Pre-Existants. Origen and Clement of Alexandria, two of the most respected Christian Fathers of the First Century, plainly taught it. Josephus in the First Century speaks of it as the belief of the influential Pharisees. Philo Judaeus, a Platonizing Jew and contemporary of Josephus, taught Reincarnation.

So, if in the early days of the Church the doctrine was so well known, and if it has since disappeared, on whom properly rests the burden of proof — on those followers of Jesus (including his own disciples) who believed in Reincarnation; or on those followers who centuries later have forgotten what their predecessors believed in?

But how could so important a teaching be so almost completely forgotten? The answer is *to be found* in an historical fact which likewise has been forgotten: namely, that at the Council of Constantinople held 553 a. d. it was anathematized. So it was forgotten under compulsion.

In *Psalms*, Ixxxii, 5-6-7, we read:

They know not, neither will they understand; they walk on in darkness: all the foundations of the earth are out of course. I have said, Ye are gods; and all of you children of the most High. But ye shall die like men.

Here we are told that we are gods, that we all are *Children of the Most High*, but that we shall die like men. The fact that *as men* we die cannot take away the imperishableness of godhood. Gods are supposed to have eternal life, so if we are gods, then, logically we must have lived before, and no matter how often we may die as men, we should continue to be eternal. The same is repeated in *Isaiah*, xli, 23, "That we may know that ye are gods."

Then in *John*, x, 34, Jesus himself endorses it thus:

Jesus answered them, Is it not written in your law, "I said Ye are gods?"

As subsequent verses indicate, his object in reminding the Jews that according to their own scriptures they were gods, was to answer the charge of blasphemy levelled against him by the Pharisees for saying: "I call myself the Son of God." This is interesting in view of the fact that the present-day orthodox teaching is that Jesus was the *only* Son of God.

Solomon must have believed in pre-existence, for in *Proverbs*, viii, 22-31, we read:

The Lord possessed me in the beginning of his way . . .
when he prepared the heavens I was there . . . rejoicing in
the habitable part of his earth; and my delights were with
the sons of men.

He must have pre-existed to have been there when the Lord prepared the heavens, and he speaks of delights with the sons of men before being born as Solomon.

In *Matthew*, xi, 14, we read:

And if ye will receive it, this [John the Baptist] is Elias,
which was for to come.

This clearly enough is a declaration that John the Baptist was the reincarnation of Elias.

In *Matthew*, xvii, 12-13, we read:

But I say unto you, that Elias is come already and they
knew him not, but have done unto him whatsoever they
listed. . . . Then the disciples understood that he spake unto
them of John the Baptist.

Here Jesus specifically recognises the doctrine of reincarnation, his question, in effect, being, "Whom do they think I am the reincarnation of?"

The same incident is repeated in *Matthew*, xvi, 13-14, as follows:

When Jesus came into the coasts of Caesarea Philippi, he asked his disciples, saying, Whom do men say that I the Son of man am? And they said, Some say that thou art John the Baptist; some, Elias; and others, Jeremias, or one of the prophets.

Supposedly the same question was asked on two different occasions. The second involves a point of additional interest in that he calls himself the *Son of man* instead of the Son of God. This harmonizes with Solomon, who after declaring that he was with the Lord at the beginning of Creation, likewise became a "Son of man."

In passing it is worth noting that while the orthodox Christian believes that everything in the Bible is the *word of God*, and hence that everything is to be taken literally without question, here we have one inconsistency: that the same Matthew is translated in one place as rendering "Elijah" and "Jeremiah," while in another, "Elias" and "Jeremias."

In *John*, ix, 1-2-3, we read:

And as Jesus passed by, he saw a man which was blind from his birth. And his disciples asked him, saying, Master, who did sin, this man, or his parents, that he was born blind? Jesus answered, neither hath this man sinned, nor his parents: but that the works of God should be made manifest in him.

From this it seems clear that the disciples must have believed in

Reincarnation, else how could they have asked whether the man had been *born blind for sins of his own*? And although Jesus in his reply says nothing bearing upon Reincarnation, why, if he disapproved, did he not express surprise that his disciples should imagine such a thing as that a person who never lived before could have committed sin before being born? Would he allow his disciples to hold to a mistaken belief of such importance without a word of correction?

The present writer once quoted this text to a devout Christian to support the contention that Reincarnation was a forgotten Christian teaching. The Christian in reply made the point that Jesus did not commit himself in any way. That is true, but if we read a little farther we learn that after Jesus had rubbed the eyes of the man and restored his sight, the disciples spread the news of the wonder abroad, but the Pharisees when they heard of it refused to believe it, declaring that no man who refused to accept the Sabbath could perform a miracle. From this it can be inferred that Jesus performed the wonder for the express purpose of making an impression on the skeptical Pharisees, and that what he meant by his answer was that in this particular case the man had been born blind in order in later years to serve as an instrument for the furtherance of the work of Jesus.

In *Mark*, vi, 14-15-16, we read:

And King Herod heard of him; and he said, That John the Baptist was risen from the dead, . . . Others said, That it is Elias. And others said, That it is a prophet, or as one of the prophets. But when Herod heard thereof, he said, It is John, whom I beheaded; he is risen from the dead.

This confirms that there must have been a common belief that John the Baptist was the reincarnation of some previous teacher, and that King Herod was among those who were believers in

Reincarnation. And bear in mind that a King would not be likely to go on record as believing in Reincarnation if it were a doctrine so strange that he might make himself ridiculous by confessing a belief in it.

In *Revelation*, iii, 12, we read:

Him that overcometh will I make a pillar in the temple of my God, and he shall go no more out.

From the viewpoint that Heaven is eternal the foregoing can have no meaning, but from the standpoint of Reincarnation the meaning logically is that the soul that has become perfect does not have to continue to revolve on the wheel of rebirth. The Hindu *Bhagavad-Gita* expresses the same idea and clearly links it with freedom from rebirth.

In the foregoing paragraphs an endeavor has been made to establish that Christianity had its beginnings in surroundings where prevailed a belief in Reincarnation, and extracts given from the Old and New Testaments evidence that the teaching, at least by implication, is to be found there.

Reincarnation was taught by Pythagoras, Empedocles, Plato and Virgil, and was the keynote of the Platonic philosophy. It was believed in by the Persian Magi, and in Egypt, in Greece, by the ancient Peruvians, ancient Mexicans, the Arabs, Gauls, Druids and Celts.

Among modern philosophers, writers, poets, etc., who have taught Reincarnation directly or indirectly are: Dr. Henry More, Kant, Schelling, Leibnitz, Schopenhauer, Bruno, Lessing, Goethe, Flammarion, Emerson, Whittier, Bayard Taylor, Whitman, Wordsworth, Tennyson, Browning, Schiller and Milton.

Henry Ford has stated in the public press that he has been a

believer in Reincarnation since his 26th year. It is a coincidence that Thomas A. Edison, who was a great friend of Ford, joined the Theosophical Society in the days of W. Q. Judge, although never active as a member.

Reincarnation in one form or another is believed in today by about 750,000,000 Asiatics.

In his Memoirs of Napoleon, Prince Talleyrand records that one day the Emperor was pacing back and forth before his tent and was overheard muttering, "I am Charlemagne, I am Charlemagne."

Whether or not he knew of the doctrine or believed in it, Mozart logically should have lived before, for he was able to compose difficult music when 8 years of age.

Still more logically Blind Tom must have pre-existed, for, born of ignorant negro parents, he could play the piano the first time he touched one, and instantly could play any tune upon hearing it whistled or played a single time.

Even from the standpoint of materialistic science Reincarnation may logically be deduced. According to science the body undergoes a complete change in a period of seven years; that is to say, that at the age of 14 there is not in the body a single atom that was there when the person was 7 years old. A man 49 years old, for example, has changed bodies seven times, and yet remained the same individual during those changes. This at least establishes an enduring individuality, and adding to that enduring individuality the fact that many historical persons have at an early age possessed talents which they could not have inherited from their parents, and which they had no opportunity in this life to develop prior to the time of manifesting those talents, we have pre-existence as the only logical explanation.

Another support is the testimony of many who while in the state of drowning have seen pass before them a photographic review of apparently all the incidents of their life up to that moment. This while not necessarily a proof of pre-existence, at least again supports the idea that man has a permanent individuality, distinct from the changing body.

A further support along this line is that when the body goes to sleep at night the individuality may in a dream go to the stars — a thing the physical body surely could not do — and when morning comes the individuality which has been absent all night returns to physical consciousness and begins where it left off the night before, sleep having had no effect of making a break in identity.

And without Reincarnation how could we ever reap what we sow?

The *Bhagavad-Gita*, the pearl of the Scriptures of India, says: "As the lord of this mortal frame experiences therein infancy, youth and old age, so in future incarnations will it meet the same." And again: "As a man throweth away old garments and putteth on new, even so the dweller in the body, having quitted its old mortal frames, entereth into others which are new." And again: "Death is certain to all things which are born, and rebirth to all mortals."

1. Indebtedness for considerable of the data contained in this article is acknowledged to the excellent work by E. D. Walker, *Reincarnation: a Study of Forgotten Truth*. This book was originally published about 1883, eight years after the founding of the Theosophical Society by H. P. Blavatsky, and it is still one of the valuable books listed in Theosophical University Press catalog for which there is still a constant demand. ([return to text](#))

PREDESTINATION — *G. de Purucker*

Do Theosophists have any doctrine similar to the Christian theological doctrine of predestination? Do we say as the Calvinist Christians, and as many Romanist theologians believe in their hearts, that the Divine foreknew everything before it came into being, and predestinated all and each and every thing before it happened? My answer is this:

The Divine Ideation of the Monas Monadum, of the Monad of Monads, let us say the Hierarch of our Solar System, or if you wish the Hierarch of our galaxy: the Divine Ideation foresaw, foreknew, knew before, knew ahead, the ways of the working of karman for the Manvantara to begin, to unfold. But this was the knowledge not of an extra-cosmic God creating things and stamping upon these entities and things an irrevocable decree of fate, but merely the forevision of divinity of what the multitudes of monads forming the hierarchies within that universe would, each individual in its own measure of free will, do in the manvantara beginning to unroll. In the same way, perhaps as a parent or as a Master, might do: the parent for its little child, knowing the child's character, will say: I must watch out for this, this tendency or bias. Or as a Master may say of his disciple, I see in him this leaning. I will be more watchful and helpful in that direction.

The Divine Ideation saw all that would happen; all that was present in the Divine Mind, all that would happen during the forthcoming Manvantara, all that its children would do, how every one of those children would act according to its free will, and according to the divine urge or karman which it itself had effected in the preceding cosmic manvantara. In fact, Divine

Ideation has not merely foreknowledge of macrocosmic and microcosmic events to be unfolded in accordance with that very Divine Ideation itself, which is the supreme law of the universe to come into being; but that Divine Ideation was (is), as it were, the very Architect's Plan (1) of the future universe to be, and of all in it up to the end of that universe; albeit each monad of the multitudes to spring into activity when manvantara opens, being in its essence a part of the Divine Life, and therefore an instrument of the Divine Ideation, acts according to its own inmost impulses, in the last analysis, through all the evolutionary pilgrimage in the University of Life. Hence drawing its own free will from the Divine life, its own proportion thereof (and when all is said, acting in accordance with the Divine Ideation, because acting contrary to it is impossible) we see therefore that there is no fatalism in this, and no predestined fate, i. e., the mandate of a power superior to the evolving Hosts of Monads. Each monad, in other words, acts out its own destiny in accordance with its own inmost swabhava or character; but nevertheless must obey the Architectural Plan of the Divine Ideation itself. Being, however, a spark of the Divine Life of which the Divine Ideation itself is but a manifestation, we have a picture, immensely grandiose and sublime, of all monads actually becoming co-operators in the divine plan, and acting contrary thereto only at their cost in suffering and misery. There is absolutely in this no blind destiny, no infallible Kismet, no inescapable Fate. Do you follow?

All monads when a manvantara ends, end as it were with a trial balance. As the Mohammedans phrase it rather poetically, a man's destiny is written in the Book of Destiny. His future is written in the Book by his own previous lives. And the Divine Ideation knew all this because that Divine Ideation — what is it? — is the All-comprehending Hierarch, of whom we are sparks.

Thus we teach no predestination in the Christian theological

sense, but we most emphatically teach destiny which each man is weaving for himself by his intelligence, and his will, from life to life, aye — from year to year, from day to day, with every thought, with every feeling, registering itself not only in his character and changing it, but in the Astral Light where molds are left, photographs are made.

As a spider weaves its web, so does a man weave around himself his own web of destiny. Often and often we human beings suffer for things for which we ourselves are not fully responsible. Think! Are you, am I, responsible for the wars that take place throughout the whole world? In one sense we are, as being part of the human race. Our thoughts in the past have helped to build up the astral molds in the Astral Light, but as individuals none of us made the bold strokes that lead nations into war. Yet these wars react on us, react on the unhappy peoples today living in fear and sadness. It was their karma themselves. They wove it in past lives to be in the midst of things. But as individuals not one of them is wholly responsible. This sounds subtil; it is really simple if we follow it. A war, so closely is mankind knitted together, in any part of the world affects the whole world today. Prices rise, expenses rise, foods, luxuries are perhaps beyond the means of the majority or are prohibited. Positions are lost, anxiety, fear, rule everywhere. Did I do it, because I suffer from it? No; did my Karma put me here by my own acts? Yes, and hence to some extent I am responsible. There are a great many things happening to us that we ourselves as men living in our quaternary — the lower part of us, the earth-child, the human soul — are not fully karmically responsible for. Yet there is a part of us that is responsible, and this is the Dhyana-Chohan within us, the Reincarnating Ego. So there is no essential injustice in this.

In other words, I will try to phrase it in this way. The spiritual part of us is wholly responsible for all that happens to us, for

everything that happens to us, for it is the Reimbodying Ego, and has lived thousands of lives; but this human ego, this earth-child, the ordinary human soul, is not responsible for many things that the spiritual ego makes it suffer; and therefore so far as it is concerned undergoes unmerited suffering. Strange paradox! I call the attention of readers to H. P. B.'s own words on this matter of unmerited suffering which will be found in her *The Key to Theosophy*, original edition, republished at Point Loma in 1939, on pages 161-162 — especially perhaps page 162. It is in these two pages that H. P. B. in her incomparable style points out that while the Reincarnating Ego is responsible for all that happens to a man, good, bad and indifferent, the earth-child or the merely reimbodied man, often undergoes what to him is unmerited suffering; but as H. P. B. points out on page 162, at the moment of death for a short moment the *personal* man becomes one with the spiritual *individuality*, sees and understands himself as he is, unadorned by flattery or self-deception.

He reads his life, remaining as a spectator looking down into the arena he is quitting; he feels and knows the justice of all the suffering that has overtaken him.

Thus, while the personal man, the earth-child, the lower quaternary, does indeed undergo unmerited sufferings in this life, for causes sown in previous lives, and thus gets its recompense in the bliss of devachan, yet the Reincarnating Ego or the true Actor in Life's drama, *is* responsible because the carrier of karman; and thus when the *personal* man is united at the moment of death with the reincarnating spiritual ego, even the personal man then sees the perfect justice of all that has happened — suffering unmerited by the man of this life, but karmically the consequence of the actions of the ego in past lives.

So you see, one part of us is responsible for what the lower

innocent part is not responsible for. And it is this lower part of us that after death gets its recompense in the Devachan for all the unmerited sufferings and sadnesses and sorrows and hurts that it has had, or experienced, in life; in other words, the things that it itself in that life had not willingly brought about, but were brought upon it because the Reincarnating Ego unlike its child, the lower man, is responsible.

No wonder the Masters tell us that one of the greatest things in human life is the cultivation of the spirit of compassion, of pity, of sympathy, sympathy for the souls of men. When we have it we rise out of our earth-child soul still higher. And if I dared I would even go this far, although it is not a teaching that I should mention in public here, but I can hint at it. The spiritual part of us sometimes leads us into sorrow and suffering and trouble for our own good. It itself becomes responsible. So I say to you, Companions, do not be so ready to blame others, do not be so ready to say, Oh, it is his karman! Precisely that is just your chance to give a helping hand. Inactive in a deed of mercy, you become active in a cardinal sin, as H. P. B. so nobly declares. And you will be held to account. And this lesson does not mean doing things blindly and rushing around in a wild emotion of compassion. It means using your brains. There are plenty of crooks in the world, and they are making a terrible karman in the world. But when one does know that someone needs the helping hand, it is a criminal act if we withhold it, and we shall suffer karmic retribution for our inaction. Think what it means to us when we in desperate need feel the warm clasp of a helping hand. The courage that flows back to us, the feeling that we are not alone in the world; that there is at least one person who has given us a kindly thought. One touch of the divine heals and strengthens the whole world.

So in answer to the question, Does Theosophy teach

Predestination? The answer is an emphatic negative. No. But we do indeed teach destiny, which every man weaves for himself, around himself, and from which there is no escape, for it is the fruiting of the seeds sown by our own volition or choice. We do teach the doctrine, sublime and grand, as already stated, of man's free will, relatively so at least, dependent upon his evolutionary status, and of the inescapable Destiny that dogs the footsteps of the evil-doer, and showers blessings upon the doer of good. The one, retribution, is as inescapable as the other, compensation for the good that we have sown.

It is a marvelous thought to reflect that the Divine Ideation at the opening of the manvantara has, as it were, a Plan of all the future time of that manvantara, predestinating nothing, reprobating nothing, but, as the Silent Watcher sees it in his glorious wisdom, what its children in that Manvantara will unroll from themselves: the destiny woven in the past. It is very largely in order to carry out the Plan immanent in the Divine Ideation that the Avatars of the gods from time to time come amongst us to direct our vision towards the Laws of Being, and in doing so to guide as well as comfort and aid us human pilgrims.

The above article on Predestination, and the first article on Easter, are both transcriptions of comments by Dr. de Pumcker at public meetings, neither of which had been corrected by him.

FOOTNOTE:

1. "Plan" in the sense that the Great Breath which will build the universe is guided and controlled in all its structural or building-activity by the ideal outline contained in the Cosmic Ideation. This Divine or Cosmic Ideation, philosophically speaking, is at once the Past, the Present, and the Future, in the sense of an Eternal now. The futurity of the universe, as well of course as its past, is therefore present in the Divine Ideation, and unrolls itself at the

beginning of a manvantara along the lines of karman, guided by the Lipikas working under the ideal compulsion of the Cosmic Ideation. This last of course containing all futurity, by the fact contains everything that ever shall be in the universe presently to come into being, from the beat of a mosquito's wing to the coming of the pralaya of a Solar System. Thus while our destiny is indeed written for us not only in the stars, but likewise in the Cosmic Mind, seeing past, present, and future; yet every monad being a child of that Cosmic Mind, a portion of its own essence, has its corresponding portion of free will, and uses it. The misuse thereof instantly awakens the retributive action of karman; the co-operative use thereof instantly awakens the compensatory blessings of karman. "Help Nature and work on with her; and Nature will regard thee as one of her creators and make obeisance." — *The Voice of the Silence*, p. 14, orig. ed.

Thus while there is destiny, there is no fate, for every monad at its heart contains its portion as its own of the divine Will and Intelligence, and is free to use these as it pleases. ([return to text](#))

The Theosophical Forum

WE ARE SEVEN — *Hannah Berman*

One of the fundamental propositions of the Theosophical teachings is the oneness of all things, large and small. That is to say, the identity of all, the similarity of character and function, and the fact that each and all have a common origin and a common destiny.

To understand the natural and fundamental workings of a universe seems a tremendously difficult thing; but if this fundamental proposition is used in the understanding, the whole plan works itself out before the eyes as simply and beautifully as a country landscape unfolds itself to the traveler who looks down into a valley from the top of a mountain side.

"In order *to* become the knower of ALL SELF, thou hast first of SELF to be the knower." This quotation from *The Voice of the Silence* furnishes the clue to the riddle. Man himself is a composite being; the universe, of which he is a part, is likewise composite. If we can arrive at some understanding of what composes man, then we will be on the highroad to a comprehension of all things greater and smaller than man.

Theosophy postulates the Seven Principles, dividing them into a higher triad and a lower quaternary: pure spirit, spiritual soul, and human soul for the former, and animal soul, vitality, astral body, and physical body, composing the latter.

Our passions, desires and material and selfish yearnings all of course reside in our lower principles. We do not have to be magicians to see these different principles at work in man. We know instinctively when his spiritual self or principles are in control and working through him, and when they are overlaid

and crushed almost out of existence. We know, too, very easily when his animal self is superimposed and has taken possession, and so on. The value of this knowledge is this: that it gives us an understanding and sympathy and a hope, a tremendous hope. The understanding lies in the knowledge that however badly an individual behaves, there is somewhere in his makeup something better, that given suitable conditions might be stimulated into life; and the understanding comes from the fact that in all of us lie the potentialities for good and ill, for spiritual and unselfish actions, and also for the display of passion, desire, greed, lust and so on.

Now, to refer again to our fundamental proposition. If these principles exist in individuals as individuals, then we can look for their counterpart in society, that is to say in man as a family — the human family. We can readily trace the seven principles in humanity if we can look upon humanity as a giant individual or entity.

The best and noblest ideals that are the expressions of different peoples, never mind what race or nationality, can be regarded as the spiritual and divine principles working their way through. The lower principles manifest themselves in those classes of society which typify the clever people (purely brainy people), and those in whom greed for power and for money and possessions are the most vital characteristics; also those in whom lust and passion and cruelty and selfishness hold their sway; and then lowest in this scale come those who are held in total bondage by material things and whose higher selves are almost obliterated.

There is this to be considered: that while man himself as an individual (multiplied some millions of times) possesses these principles, all portrayed and manifesting themselves so completely, then just so long will society, all society, share these characteristics and manifest them in this way.

In *Letters that Have Helped Me*, W. Q. Judge says:

I am not separate from anything. . . . I am my friends, . . . I am my enemies; . . . I am the poor and the wicked; I am the ignorant. . . . All this in my nation. But there are many nations, . . . I feel and I am them all, with what they hold of superstition or of wisdom or evil. All, all is myself.

And so it is that the cumulative aggregated different principles manifesting themselves in individuals, form these powerful forces which we see actually working through different sections of peoples. To put it crudely and to take a specific example: Why have we always with us a criminal community? The answer according to the Theosophical teachings is that while we each, as individuals, have any tendency, however small, towards greed, selfishness, intolerance, jealousy, etc., then we are bound to find this tendency working itself out *per se* and as an evil force in society — that is to say, in a portion of the community in whom these principles happen to be predominant.

But this is what we must remember and take to heart: that it is just an extension of ourselves, and we each and all are partly to blame, and are responsible for it. Not until we have eradicated these tendencies from our own natures will these undesirable conditions vanish from our midst. We can all help, providing we banish selfishness and intolerance and fear from our makeup. The true lesson to be learned is that we must first put "our own house in order," and the rest will surely and inevitably follow.

Let us aim at perfection and we may get a glimpse of the real joy of spiritual life, and say with Thoreau:

The true harvest of my daily life is somewhat as intangible and indescribable as the tints of morning or evening. It is a little Stardust caught, a segment of the rainbow, which I

have clutched.

The Theosophical Forum

BROADCASTS FROM SHANGHAI: X

This series of Theosophical radio broadcasts from Shanghai, China, was given over station XQHB during 1941 by Miss Inga Sjostedt and Miss Elsa-Brita Bergqvist. The first nine of these appeared in 1942 in the *FORUM*, and we now continue the series. The present one by Inga Sjostedt deals with the very important subject of the after-death states.

Good evening, everybody:

We have spoken a good deal about the different phases of life, personal and impersonal, and in order to complete the teaching it is necessary to describe also that state of life which we call Death.

Materialists of all denominations say boldly that there is no such thing as life after death. They say that such a belief is unscientific, because science has not yet produced for public inspection the atoms and molecules of an immortal soul. They say also, more or less, that we human beings are physical machines, held together by the principle of life, presumably, and that when we die this machine breaks up and disintegrates into its component physical elements. Now, during life this physical machine transmits thoughts and emotions, acts, and impulses, ideas that sometimes shake the world: and we *must* ask ourselves, Where do all these invisible energies, mental, psychical and spiritual, go when we die? It is not enough to say that they die with the body. Nothing in the universe can ever be lost; all things go *somewhere*. The body, for instance, disintegrates after death, but it does not vanish. It only changes. Therefore our thoughts, feelings, passions, dreams, ideals, intellectual inspiration, must also go somewhere. They cannot vanish into nothing, and logic itself thus points to a

survival of the invisible man after death.

Then we have the belief which is based on blind, unreasoning faith, which is that the soul goes into a state of eternal, changeless bliss, or eternal, changeless misery after death. If we look at any living entity, however small or immense, we see at once that the outstanding thing about Life is the principle of movement or motion — and therefore change.

How, then, when all the world is continually changing every second of time, can we suppose that an entity after death can remain in a perpetual state that never changes throughout eternity? A heaven of this kind would be both depressing and monotonous. However good and virtuous a man may be, he nevertheless knows that he is a long way from perfection, and if we died today and were transferred to a region of perpetual bliss, our natural instinct would be to perfect ourselves, to learn more of the conditions there, and to evolve our capacities, to grow spiritually. Therefore, the teaching about a final heaven or hell is not logical or satisfying to thoughtful minds.

And now let us contrast the two beliefs I have briefly outlined with the teaching of the Esoteric Wisdom. First of all, we should not really speak of life and death as two opposites. It would be more correct to say that *birth* and *death* are the two phases of life, two natural events which take place *in* life. We should no more shrink with horror when we speak of death than we do when we speak of a birth. Death, according to the occultists, is the birth of the soul into spiritual regions, and is therefore a beautiful and inspiring adventure for the ego which has lived a decent and unselfish life on earth.

According to the Archaic Wisdom death is to the physical life what sleep is to the waking state. Death is a perfect sleep: sleep an imperfect death. Our dreams, when we are asleep, are colored by

the thoughts, emotions, memories and actions of our waking life; and our death-state is identically colored by our state of consciousness as it had been during life. Nothing comes from without ourselves — only from within, from the depths of our individual consciousness. If our waking life is full of anxieties, unsolved problems, acts and thoughts that are unworthy of our better selves, our dreams are troubled, unhappy, and sometimes frightful. If our waking existence is peaceful and harmonious, unselfish and courageous, our dreams are beautiful and peaceful. The science of psychoanalysis, although it deals only with the lower mind, knows very well that a man's dreams reveal his inner life. On a bigger scale, it is the same with life and death. As we live, so must our state after death be. The evil man suffers when he dies, because of all his unsatisfied passions, his selfishness, and meanness; the average man suffers a little at first, until he has exhausted the evil in his nature, and then experiences just such happy dreams as his earth-life has merited. The noble, unselfish and truly great man leads an after-death existence which is as sublime and beautiful as his own consciousness can comprehend. The average man could not enjoy a truly noble heaven-state as it would be completely beyond him; nor could the evil man. It would be like taking an uneducated man to a library of poetical and philosophical books, or to a concert of classical music, or to a picture gallery of famous paintings. He would not appreciate these things, because such appreciation would not be in him.

According to the Theosophical teachings the after-death experiences of a man are really different states of consciousness, dreams, if you like, and not realities; but just as the dreams we dream at night seem utterly real to us, so do these dreams after death seem completely real to the dreamer. We build up a "heaven-state" in which we see and are together with the people

we loved most on earth, and realize our frustrated aspirations and ideals, but they are only real to our own imagination, for the people we imagine we are with, may not be dead at the time when we are, and therefore cannot be with us.

When a man dies he first of all discards the lowest of his vehicles, the physical body. He is then a complete man, with all his good and bad impulses, habits and characteristics, minus the physical envelope. He then proceeds to exhaust the lower emotional and mental energy which he has acquired during life. It is a process of discarding, of purification, and it is this ancient mystical teaching which has given rise to the Roman Catholic teaching of Purgatory — an intermediate state between heaven and hell. This state is not a pleasant one, as it means the free expression of all one's lower instincts, selfish impulses and weaknesses of character. When the energy of this lower personality is exhausted then there occurs the so-called "second death," when the ego frees itself from its lower personality, discards it like an old unwanted garment, and then, purified and spiritual, enters the state of felicity, or heaven as a Christian would say. This state is the dream-world of the happy ego, where all the highest and noblest impulses and aspirations, the unselfish love, compassion and impersonal ideals of the former man, find expression. All that the ego wanted in life and could not attain, is realized at last — but, as said before, this "heaven" is spun out of the ego's own consciousness and is merely a state, not a locality in space.

Some modern spiritualists believe that a departed ego can watch over those it left behind on earth, but Theosophy says that this is contradictory to proved fact, as the seers and adepts of all ages have testified after personal experience. Just as, when we dream, we are not conscious of our waking life, in the same way we cannot be conscious of earth-life when we are dead. Among other things, it would be a veritable hell for a watching spirit to see

those it loved on earth going through experiences of suffering and misery, and making human mistakes with unfortunate consequences.

That which the spiritualists suppose to be the soul of their "dear departed" is only the discarded lower mental and emotional shell of the ego after the Second Death. It is an automaton, a psychic gramophone record of thoughts and feelings and memories of the dead man. The real ego is enjoying its spiritual rest and is totally unconscious of the earth. Or it sometimes happens that the spirit of an evil and earth-bound man, which cannot rise above the pull of the earth, drifts into a seance-room and finds vicarious life through the medium and the sitters. No pure human spirit will descend from its heaven-world. It very rarely happens that a pure and spiritual medium rises to the sphere of the departed soul.

Unfortunately it sometimes happens that a man is so evil and materialistic that he has not accumulated a store of spiritual experiences when he dies. Such a man spends his after-death state in the region nearest to the earth, that which corresponds to the purgatory of Christianity, and after an unhappy and intensely restless existence there, he is reborn much more quickly than a spiritually developed ego. He has only himself to blame. Heaven and hell are within us, and it is only natural attraction which draws us to the one or the other state.

The average ego, after its state of felicity in its imaginary heaven, which lasts sometimes for thousands of years; after exhausting its store of ideal and beautiful spiritual energy, is automatically attracted to the earth again. It passes through all the different planes of being, gradually reassembling its different characteristics, mental, psychical and even physical, and, strengthened and refreshed, it is reborn on earth, where it continues to weave its web of destiny in the circumstances best

suited to its tendencies and urges. An old soul has come back to earth in a new body.

The Theosophical Forum

HEALING AND DISEASE — *Reata V. H. Pedersen*

A Thought from a Student's Notebook

Over a period of twelve years the writer has followed a thought through several phases of development until it has at last become, for her, a manifested, and continually manifesting, truth about Theosophy. The thought in its incipency was in the form of a question: Can the knowledge gained through the study of Theosophy bring about the healing of physical ills?

We, who are students of the Wisdom-Religion, have been told by all our teachers down through the ages that we are able to form a question *because the answer is known to us*. We form the question from out our experiences, from out our knowledge — the experience and knowledge gained in other incarnations as well as in this one. We form the questions from the truths that we have builded into ourselves; we demand of ourselves the answers.

Our present teacher has advised us to brood over the thoughts and questions and ideas which stir our minds as we study the deeper teachings. We find that in the bibles — the scriptures of the Egyptians, of the Christians — the self-same teaching is given. "Ponder these things in your hearts" said the Teacher, Jesus, "that ye may know them of yourselves."

It is only at the end of twelve years of study that the writer offers to others the answer to the question she put to herself shortly after becoming a member of the student groups at Point Loma. The question cannot have occurred to her alone. The answer from her heart-mind and the experiences of the last several years noted by her brain-mind may be of service to companion-students. For, of herself, the writer has come to know that

physical healing may be one of the fruits of the Tree of Knowledge.

Let it not be thought, however, that a *cure* is promised, or that the writer is advocating the refusal to use medicines when prescribed by a qualified physician, or suggesting the denial of the existence of pain, or the blinding of oneself to such conditions as broken bones and wounds. Above all do not read into any sentence written here the meaning that cure or palliation can be experienced in a given time or, indeed, that these can be secured at all *if cure or palliation alone is sought*. On the contrary to embrace Theosophy, to study the Wisdom-Religion for personal gain, is to deny oneself the power to understand what one studies; it is to make it impossible to *be* a Theosophist in the full meaning of that word.

No; cure or palliation comes about not as a goal to be reached but as a natural growth from the seeds of study, from the growing of implanted thought, from the maturing of the seedling-idea, as any fruit comes *naturally* to ripened glory from seed or planting or seedling-tree. *Cure of physical ills is a definite growth in knowledge when growth alone is the goal sought*.

Put on the armor of the gods — that is the course to follow. And think you that we can fit that armor and remain as we are? *Dwell with the gods* — that is the course to follow. And think you that we can pull the Gods to our plane of consciousness and thus dwell with them? Work to show forth impersonal love of the being who suffers the physical ill wrenching at our hearts. Work to free mankind from the downward pull of coarse ideas and uncontrolled action. Work without ceasing to follow the small old path, and turn ever and always to help others along the Way.

Give of yourself; stop the idle word; hush the bitter whisper; see your suffering, your sorrow, as the knife that frees the juices from

the imprisoning skin of the fruit, as the heel of those who, in the wine-press, free the wine from the purpling grape.

It would be quite possible for the writer to show the inter-relation between The Way and the welfare of the Wayfarer, for in her notebook there could have been set down a number of names and the apparent healings resulting from the loving interest shown by herself and other students toward the ailing friend. But the writer has never understood the teachings of Theosophy to mean that one should prate of benefits received but only that one should be happy in the knowledge that the teachings bring enlightenment on all planes of consciousness. As the Teacher Jesus bade: Go thou, and tell no one. That seems the course to follow in this matter.

It is not the intention of this student to class Theosophy as a cure-all for *dis-ease*, nor to class those students who together with herself have sought knowledge of this matter, as having Power to bring about healing. Rather the object of the writer is to hearten those who aspire to the Kingdom That Is Within by offering them yet one more key to still another Mansion in The Father's House.

The Theosophical Forum

DR. DE PURUCKER ANSWERS QUESTIONS

THE "TEMPTATION" OF JESUS

I thought that it was only before we had entirely learnt something that we had to struggle with ourselves about it, but that when we, in previous lives, had quite overcome some special temptation, this temptation never occurred to us again, and we did not even get the idea of its possibility. I thought this was the way by which we have to win the different virtues one by one. Will you please explain why Christ should have felt any temptation to be relieved from his great task. Why should he have said, "Remove this cup from me," and have to pray in anguish in order to be victorious over temptation? I think that he should by then have got over this stage. — G. S.

G. de P. — This question takes it for granted that the legend told of Jesus in the New Testament of the Christians is an actual history. It is *not*; the "Gospel" story is merely an idealized fiction, written by Christian mystics in imitation of esoteric mysteries of the "Pagans," showing the initiation trials and tests of the candidate for initiation; and it is not very well done, there being much error and many mistakes in the "Gospels."

A man called Jesus — the Hebrew name being Jeshua or Joshua — really lived, who was a great and good man; also an initiate into the secret doctrine of his period; and around him, after his death grew up many legends and tales, which were woven in later days — say a century after his death — into the so-called "Gospels."

Yes, the questioner is right in saying that once we have fully conquered a temptation, we are safe from future attacks of it, but

only provided we are *watchful and on guard eternally*.

LOOKING WITHIN

You continually advise us to look within. In what way does the Theosophical "looking within" compare with the psychologists' introspection? — H. G. N.

G. de P. — It seems to me that the psychologists have seized a part of a truth; but the teaching of Theosophic introspection goes far beyond that. Too often the introspection, if I may use this word, of modern psychology is a pondering and a brooding upon the vagrant and flitting thoughts of the lower brain-mind, upon one's wishes and hopes and petty loves and hates — a morbid self-examination of the lower parts and faculties of us; and I think that it is very unwholesome. There is altogether too much of that.

What we need to do is to *free* ourselves from the lower part of us, to lift our eyes to the spiritual Olympus, to rise out of the murk and the mire and the mud and the dirt, to strike the shackles from our limbs and to wing our ways into the inner states of the spirit. Does modern psychology tell us that we must devote ourselves to the inspirations of almighty wisdom, and of impersonal spiritual love? Never! It does not know enough; but it thinks it knows quite enough to teach what are in many cases downright perversions of reality. Some aspects of modern psychology will tell us that if a naughty child does certain naughty things, it is because of an unexpressed sex-complex! I think that the instilling of ideas like this into the mind of any innocent child is a moral crime, because it is a suggesting to a child to do what perhaps never occurred to it to do. It is monstrous.

But teach a child to be self-forgetful, to introspect in the higher way, to examine its motives, to look carefully into its yearnings and to rule them, and you will help it and guide its feet. This is the

psychology of the archaic school, which is ours, which is Theosophy. Psychology really means what the word itself actually says: the study of the *soul* of man, instead of the study, as it is in modern psychological schools, mostly patterned after the doctrines of Freud of Vienna, a study of the physiological-mental reactions of the body.

Children are responsive to thoughts put into their minds, and the only right way of bringing up a child is to surround it with the thoughts and influences, and if you can the environment, of harmony and beauty and peace and love, teaching it lessons of kindness and self-forgetfulness, instead of teaching it to concentrate all its thoughts upon the beastly impulses of the animal man; and this latter is what most, if not all, of the modern psychological schools actually succeed in doing.

QABBALISTIC AND THEOSOPHIC PRINCIPLES

I notice in Chapter Two of *Fundamentals of the Esoteric Philosophy*, that man is divided into four parts: (a) Neshamah, (b) Ruahh, (3) Nefesh, and (4) Guf. Over all these four principles, there is the Ineffable, the Boundless, called En Soph. Would the author of *Fundamentals* kindly give me his opinion about the correspondences or the differences between these four principles and the Qabbalistic triad consisting of the three highest Sephiroth: (a) Khether (the Crown), (b) Chochmah (Wisdom), and (c) Binah (Intellect) — all emanations of En Soph, the Boundless. — K. F. G.

G. de P. — This thoughtful question contains profound suggestions; and the mere fact that the questioner seeks for correspondences or differences between the Qabbalistic Quaternary as given in *Fundamentals*, and the Qabbalistic highest Cosmic Triad of Sephiroth, shows that he himself has actually

answered his own question, but probably is not fully aware of it.

The four human principles as given by me in *Fundamentals*, are reflexions or "projections," as it were, of all the nine Sephiroth of the Qabbalistic Cosmic Tree of Life; and the differences in manner of enumerating or of expressing the Cosmic Principles and the human principles depend upon the fact that the human principles are reflexions or "projections" as above said, of the Cosmic Sephiroth. The three highest Sephiroth, as given, and properly given, in the question, are the originals or correspondences of what in man in the Theosophical philosophy are called Atman, Buddhi, Manas; Khether corresponds to Atman, Chochmah corresponds to Buddhi, and Binah corresponds to Manas.

In another sense, Neshamah corresponds to the Divine Monad, Atma-Buddhi; Ruahh corresponds to the Spiritual Monad, Buddhi-Manas; and Nefesh corresponds to the Human-Astral Monad, or Kama-Manas-Prana. Guf is in either case, whether cosmic or human, the mere vehicle of all the other higher principles, and in the case of man corresponds to the physical-astral body.

All the Cosmic Sephiroth are born from the bosom of En Suf, or the Boundless, and hang as it were like a pendant therefrom; very much as the three highest principles in man, Atman, Buddhi, Manas, are born from the bosom of the Boundless, and are eternally therein, hanging like a pendant therefrom; the lower four principles of man hanging like a second pendant from these higher, just as the lower six Sephiroth hang as a pendant from the three highest Sephiroth.

We thus see that the correspondences are very close, when properly understood, as I have endeavored briefly to outline them in the preceding paragraphs.

THE DESTINY OF THE ANIMAL KINGDOM

Re the animal kingdom: Many species are dying out today. Some day — the life-wave having moved on to Globe E — Globe D will have merely *sishtas* left on it. Will there be any animals in the Fifth Round? Many students are mixed up on this; so am I. If there will be animals in the Fifth Round, will that mean the animal kingdom as we know it today (but more highly developed), or only some of the highest species? — R. E.

G. de P. — When a life-wave, any life-wave: human, animal, vegetable, mineral, elemental, or *dhyān-chohanic*: moves from our Globe D on to Globe E, it leaves *sishtas* behind on this Globe D. What are these *sishtas*? They are waiting for the same life-wave which will have passed through the globes on the ascending arc, to come down the globes on the descending arc in Round Five; and when they reach Globe D, our earth, these *sishtas* will begin to increase in number because of the incoming monads from the life-wave, and the same life-wave — in the case of your question the animal life-wave with its subordinate life-waves or orders and varieties and genera, etc. — will begin to tend to expand. Consequently there will be animals in the next round.

But here is a very interesting point: the animals will tend steadily to pass into Nirvanic rest, I mean their monads will from now to the end of our chain-manvantara. Every round will show fewer animals, the reason being that as time goes on and as the steps up the ascending arc are passed one by one, fewer and fewer animals will be able to make the grade upwards. The calls of matter will be too strong. Thus at the end of the fifth round on Globe D the *sishtas* of such animal life-waves will be much fewer than in the preceding round on this globe, because the monads will be entering their Nirvana for the reasons above stated.

Otherwise stated, the individuals of those animal life-waves will have largely died out from this plane because the monads will have gone into Nirvana; and during the sixth round the animals, although much more progressed than now they are, will be extremely few; and before the sixth round is ended will have died out entirely, with the exception of the anthropoid apes and possibly some of the higher monkeys. The anthropoid apes will have become then no longer anthropoid apes really, although their more evolved bodies will still continue, but they will be very, very low humans in quasi-anthropoid bodies, nevertheless humans of low grade. During the seventh round even these will have disappeared, but their monads during the next chain manvantara will be low humans in appropriate bodies then.

Thus generally speaking, animal monads tend more and more on the upward arc to go into Nirvana. Their bodies, there being no monads to incarnate, will tend to die out; and towards the end of the fifth round there will be very few animals, and probably all gone in the sixth, except the anthropoids, etc., as explained.

As stated, the cause of this is that the door into the human kingdom, (which means self-consciousness,) closed in the middle of the fourth round; and the animals now are just hanging on as it were because of the impetus or momentum they got in coming down the descending arc. This momentum has carried them up to the present, will carry them onward even into the fifth round where, as stated before, they will mostly die out because they cannot climb higher. The spiritual self-conscious nature has not evolved forth from their monads; and consequently there is no sufficient attraction upwards in them, and thus they fall back behind the procession, and die out. What little attraction upwards they may have now will grow less and less during the fifth round, until no attraction upwards at all exists.

In other words the animals will no longer reproduce themselves. The monads of many animals have already entered their Nirvana even during this fourth round — the grossest of their kinds. Some of them, those with us, still remain even now, persisting mainly by the momentum and because of dawning mind in them which still keeps them here.

The Theosophical Forum

EVOLUTION INTO THE HUMAN KINGDOM: I — *G. de Purucker*

There are two questions that have been asked of me: "You have told us, G. de P., that in the human constitution there is an animal monad which in the next chain-imbodiment will become a "human being. You have likewise told us that the animals on, say, our globe of this chain, on our globe, will be humans in the next chain-imbodiment. Question: How do you make this out? Where stand the humans-to-be who are now the animal monads in man? Where will they be when compared with the future humans on the next chain-imbodiment who are now here our beasts?"

The other question is this: You stated some little time ago, that from the very beginning of this present chain-imbodiment, we who are now humans as monads have always been humans. How then do you account for the other teaching regarding the door into the human kingdom which closed at the middle point of the Fourth Round, in other words during the Atlantean race?

There are the two questions. As a matter of fact, Companions, the answers to these questions, to both of them, may be found in our books and in my own books. I have spoken of them, giving answers to each one, I think a dozen times from this platform.

What I said a moment ago is true. It is our teaching that the present human monads have been human monads from the beginning of this chain-imbodiment; and please remember we are speaking of monads now. I have likewise stated that there is in man an animal monad which in the next chain-imbodiment will be human. Now I will take the first question first: The answer is this: Those animals which are now called animal monads and which are the animal parts of us men — I do not mean the physical body, that is the physical part of men, but the animal

part, in other words our animal, the human animal of us, the instincts, the thoughts, the motives, the attributes, the qualities that make the human animal, and of which the body is merely an expression, the open door — these will be the humans in the human kingdom in the next chain-imbodiment; and our present animals will then be the lower and lowest units of the human kingdom in the next chain-imbodiment.

To make this more comprehensible let us reverse the process. Instead of looking ahead, we will go back to the moon, the moon-chain, the time when we were all on the moon. We then, we higher humans now in this chain-imbodiment, were on the moon the individual animal monads in the then humans of the moon-chain. Do you understand me? In other words the men on the moon-chain had, as we now have, animal monads as part of their constitution. When the moon-chain finished its manvantaric evolution and died as a chain, giving birth to this chain, the moon-humans then had become Dhyan-Chohans, had entered the dhyan-chohanic kingdom. Their animal monads had then become human, each going up a step.

Now then, what were the humans on the moon were the lowest of the Dhyan-Chohans in this imbodiment. What were the animal monads in the moon-men are now the humans in this chain-imbodiment. Is that thought clear? Again, what the animals are now, as I have already stated, on this earth or in this chain-imbodiment, will be the lower and lowest humans in the next chain-imbodiment. Reverse the process on the moon. What the moon-animals were when the moon ended its Seventh Round, then became human, not the high humans, but they entered the human kingdom. They were men, but the lower part of what we now call the human kingdom. Is that thought clear? Very good.

So we have the animals on the moon become the lower humans

here. These lower humans as well as the higher humans when this earth-chain ends its Seventh Round will be Dhyan-Chohans; and our present human animal monads will be then the higher humans of the next chain-to-be, the child of this chain; and our animals now, i. e., those who make the grade, on this earth when the Seventh Round ends, will be the lower and lowest humans in the next chain-imbodiment. So you see we have thus: animal entering the human kingdom, not the bodies, the monads. That is where your constant confusion comes in. You keep thinking of bodies. I am talking of monads. What are now the monads manifesting through the animals, when the Seventh Round of this chain is ended, will have evolved, which means developed, unfolded — the monads will have unfolded to become human, so that in the next chain-imbodiment the animals will then be human. What kind of humans? The highest? No, we have already stated the higher will be what are now the animal monads in us men, as we were on the moon the animal monads in the moon-men. And the animals on the moon reached humanity, the human stage, at the end of the Seventh Moon-Round, i. e., those who made the grade, so that they could then become men in the human kingdom, and are amongst us now on this earth as the lower and lowest humans.

It is an old, simple teaching that every Theosophist knows, that not only are there 7, 10, 12 classes of monads, but that each such class or family (kingdom is another good word) has its own special divisions, so that our human kingdom has its special divisions; the Masters and the Buddhas at one end, the almost animal humans at the other end, like the Veddahs of Ceylon, the Andaman Islanders and so on. Between these two classes of men there is an enormous psychological, spiritual, and intellectual range. But they are all men, they all belong to the human kingdom, because all have attained conscious self-consciousness.

Now there you have the answer to the first question and I hope you have understood it. You will realize that this matter has been explained and this question has been answered on many occasions in the past.

The other question is this, and it leads right on from this first one. I will repeat the question: "G. de P., you stated some time ago that we human monads have been human from the beginning of this chain-imbodiment. How is this reconciled with the other statement made by H. P. B. and you that the door into the human kingdom closed at the middle point of our Fourth Round, in other words during the Atlantean race? There seems a contradiction here." From what has been stated, you see clearly that there is no contradiction because the answer to the first question shows that the human monads were humans from the very beginning of our chain-imbodiment, because they attained humanity at the end of the Seventh Moon-Round.

What then is the meaning of this phrase, "door into the human kingdom closing at the middle point of the Fourth Round"? It means this: That all those entities coming from the moon-pitris, lunar pitris, which we can use now as a very general term meaning all monads coming from the moon — there are lunar human pitris, lunar animal pitris, lunar plant pitris, lunar mineral pitris, lunar dhyān-chohanic pitris — it means that all these were the fathers of everything, that is of our own chain now, the lunar fathers of all the kingdoms.

I will make a short excursus now before continuing my answer, because it may make the answer clearer. You remember that H. P. B. and others have written of families or classes of monads, in other words these are the different kingdoms of nature. H. P. B. counts them as 7, because the septenary classification is easier, and she wrote to make things easier. A more complete

classification is that of 10, 10 kingdoms, 10 classes of monads. The most complete is that of 12.

Now H. P. B.'s 7 kingdoms or classes of monads were the following, counting from the highest down: 3 classes of Dhyan-Chohans, the human kingdom, the beast kingdom, the vegetable kingdom, and the mineral kingdom, seven. She merely mentioned but did not include 3 more lower than the mineral, the elemental kingdoms, three in number thus making 10 — 10 kingdoms of nature. What then are the other two kingdoms of nature to make the complete number 12, corresponding by the way to the 12 globes of the chain, to the 12 Houses of the Zodiac, or the 12 Logoi of the sun? They are these: No. 1, and the first and the lowest, if you wish, counting upwards now, is the root-manu; the 12th is the seed-manu, using the terms employed by H. P. B.; and thus you have your 12. You see therefore that the kingdom of the Manus is higher than the highest kingdom of the Dhyan-Chohans, and it is practically a divine kingdom, if we speak of the dhyan-chohanic threefold kingdom as being spiritual.

Now then, I return to my answer to the question: The door into the human kingdom means that after 3 rounds have taken place, and the Fourth Round which was the lowest and most material is over, ended, there comes a point in time and in natural functions where the descent on the downward arc stops, and from that moment begins the climb on the upward arc. The downward arc is the arc of shadows, so-called. The upward arc is the luminous arc. The reason for these names is the following: The downward arc is the evolution of matter. Matter comes forth in all its myriad multiform shapes, going with the corresponding involution or recession of spirit. The luminous arc is the reverse of this. The evolution of spirit corresponding to an involution of matter. Matter is ingathered. Spirit expands on the upward arc.

Now then, only those beings can climb the upward arc which have the germs of self-consciousness within them, because it is the arc of the opening of spirit. Do you catch that thought? Now on the downward arc, the law of acceleration came into operation for the lower kingdoms of nature. The law of retardation on the downward arc was in force where the spiritual monads were concerned, for they did not want to drop into matter, they ran down reluctantly and slowly; whereas the material entities, the lower beings expressing themselves in the lower kingdoms, had a tremendous pull down, and rushed down. So we see the lower kingdoms were under the law of acceleration on the downward arc. The spiritual kingdoms were under the law of retardation. On the upward arc that is reversed. The spiritual beings as they began to attain the luminous arc felt the attraction of spirit more and more, as their feet became freed from the mire of matter they began to feel the law of acceleration, they began to reach up.

But the creatures more heavy with matter, feeling the attraction of matter downwards, began to lag behind, the law of retardation began to work on them. They are less attracted to the spirit and they are pulled downwards by matter.

Now at this point, so far as the human kingdom is concerned, where the lowest of the downward arc is, is what we call the door into the human kingdom. All those entities whatsoever which have not reached self-consciousness, do not enter that door which will enable them to go upwards to the Seventh Round. I wonder if I have made my meaning clear. Such a simple thought and yet a subtil one. For instance, the door into the human kingdom does not concern the dhyan-chohanic kingdoms; they are above the human. It concerns the human kingdoms and the kingdoms below the humans. All the monads therefore which were human before reaching the midpoint of the Fourth Round passed as it were naturally and simply through the door into the human

kingdom which was already open, and they kept right on their way; whereas the monads, like the monads of the animals, which had not achieved humanity yet during the previous three rounds, when they came to this lowest point were so to speak challenged by nature. The ancient religions such as the Egyptians expressed it by the Guardian at the Gate. Who comes here? Who art thou? as the Sanskritists had it. The Book of the Dead speaks of these challenges at the various gates. Now anyone who could give the passwords passed on through; and remember that giving the password was not any password, the door into the human kingdom is not any door. It merely means Nature's laws beginning to operate at a certain evolutionary point. This point is the middle, the lowest point of all the seven rounds — the middle of the Fourth in the middle of the Atlantean race. All the monads therefore which have been rushing onwards in the downward arc through the three rounds had now come to the Fourth. Those who could pass on passed naturally and began the upward arc: the Manava kingdom, the 3 dhyān-chohanic kingdoms, and the human kingdom. When it came to the animals, the door closed. They could not pass. In other words they could not enter the human kingdom because they were not yet human.

Now another question! Why are the beasts still with us? As I have already explained, they have not passed the human kingdom; they are feeling strongly the attraction of matter. As each million years goes by, as each thousand years goes by, their pace becomes slower and slower, they cannot make the grade. After a while they stop, die out, and enter into the Nirvana. This is the meaning of the statement you have heard in our books that with a very few exceptions the animal kingdom will not reach to the Seventh Round. Why? They cannot make the grade upwards. The attraction is below. They will enter into their Nirvana and wait till the next chain-imbodiment. Then they will attain humanity. That

will be their reward in a chain somewhat superior to this.

And now comes a paradox, a very strange paradox. Some of the monads which have reached in their unwrapping evolution as far as the animal kingdom, will even make it up to the Seventh Round where they will become men. In other words they will then have reached self-consciousness, and then they will be the lower humans of the next chain-round. The animal monad in us at the end of the Seventh Round will be the human monad and will be the higher humans in the next chain-imbodiment.

You may wonder about the apes. Where do they come in the scale of things? Have they entered the human kingdom? No. They are more animal than human. They still belong to the animal kingdom. But there is a touch in the apes — mind you, I am not speaking of the monkeys, I mean the apes — there is in the apes just enough human blood, through us, to enable them in the next chain to be the spiritual and intellectual leaders of the animals who will then form in the next chain-imbodiment the lower and lowest men. The beast will be the highest of this branch of the then human kingdom.

So then we really have the human kingdom, the apes an intermediate stage, the beasts; and the beasts themselves are in many sub-branches - — the highest, the intermediate, and the lowest. There is an enormous difference among the beasts, between the ape and the insect, or between a horse and any other creature, a squirrel, a racoon, or what not. Such distances are enormous even among men.

And now, dear Companions, with all that I have said, I have been talking of monads, and in this connexion you may ask yourselves: Doesn't evolution affect bodies also? The answer is yes. But you see, scientists do not know anything about spiritual evolution except in a very small way. Their idea of evolution is a betterment

of the physical body through the slow ages. True, the physical body has progressed through ages; we do not deny it, but it is the forces working from within upon the body, refining it, refining its organs, refining its flesh that brings about this physical evolution. But among the scientists evolution is chance, haphazard, Darwinism. To us the door into the human kingdom has nothing to do with the shape of bodies, of beings, it has solely to do with the inner parts, monadic parts, spiritual, intellectual, psychical, and astral, and when these change, the bodies change. So that I can tell you, Companions, even in a small degree the flesh of the truly good man is finer than the flesh of a man who leads a gross life. And that is why it is a true statement when the Buddhists say that the Buddha was a marvel of manly beauty, that even his body seemed to be translucent with spiritual life, something about him was not like the ordinary. It is true. There was a fire of the spirit within him working through his blood and his nerves and the very tissues of his flesh and his bones, making the vehicle more refined in every way. Actually there is a difference between the flesh of a man and the flesh of beasts. I do not say chemists can find it — they may some day. But there is; even the very smell shows it.

The above article deals with one of the most complicated subjects of Theosophy — an explanation of how the monads pass from the animal kingdom into the human kingdom, and the relation of the Moon-chain life-waves to the reembodied life-waves of the Earth-chain. This particular article was a talk given on July 30, 1939, at the close of a meeting of the Headquarters Lodge, Point Loma, California. Further teaching on this same subject was given by Dr. de Purucker at later meetings of the Lodge, and a verbatim transcription of these will be printed in immediately following issues of the FORUM.

WHERE ARE YOUR HAUNTS OF CONSCIOUSNESS? — *Judith Tyberg*

How vast are the fields of consciousness in which man may roam! They range from sensations resulting merely from the activity of the physical senses to those glorious realizations of universal truths resulting from profound penetrations into "the heart-home of one's being. The first of these — mere elemental expressions of consciousness — come from a turning of the powers of the senses outwards into the physical world, the sphere of limitation, truly, but also the outermost garment worn by a living god. The second comes from a turning of all those sense-powers inwards to their primal and powerful source because of a divine delving into the mysteries of Brahmapura, the abode of Brahman, that Universal Self which every man is somewhere in those as yet undiscovered realms of his nature.

During one 24-hour period of a day and night we actually wander between these extremes of awareness; that is, some part of our composite make-up does. We can in time identify ourselves with those parts of our being undergoing experiences of a lofty type, if we will but tune in aright, live the golden precepts of all true religions, as they were lived by the Christ and the Buddha. Then we become fully awake, fully human, at home in any of the delightful nooks in the wondrous stream of human consciousness.

Consciousness does not refer only to the faculty of perception in this physical world. There is a distinct set of faculties and senses for each plane or world of beings entered into during waking life, sleep, or death. When we say that we lose consciousness on falling asleep or at the time of death we mean that the human thinking Ego has ceased to function on this physical plane and has entered a world to which it is not yet trained or universal enough to sense; in other words, a world too vast for our Ego with its at present limited development to understand. How much more keenly aware of color and light and shadow and form is an artist as he wanders through a forest than is the ordinary man! So it is with a spiritual adept. The adventures undergone in sleep

and death are rich experiences for him, because he has awakened powers of his higher nature that are still dormant in the common man.

There are those higher parts of any man's being, just as alive as you and I, that continue a conscious life when we are asleep or what the world calls dead. Sleep and death are simply a passing from one sphere to another, a passing from lower spheres to higher or inner realms of this universe. What did the Druid ask of his truth-seeker: "Knowest thou what thou art in the hour of sleep? — a secret retreat of light!"

Occultly speaking, sleep, and on a greater scale, death, are the result of the higher parts of us coming into a full vigor and life and thus overwhelming us for a time by their great power. Dr. de Purucker tells us:

. . . . even physical death is in large part brought about by the fact that the unfolding field of consciousness, even in the course of one whole Earth-life, spreads beyond the capacity of the physical body to contain it, which, feeling the strains thus put upon it, gradually deteriorates, glides into senescence, and finally is cast off, or "dies," when it has become a tool no longer easily or profitably usable by the Master Workman — the egoic consciousness. — *The Theosophical Path*, April, 1935, p. 428

The conqueror of sleep and death is one who has become equal in spiritual splendor to those high beings whose home is surrounded by the glorious and divine things of this universe. Such a goal is one of gradual attainment but can be hastened by those who are willing to undergo the severe discipline necessary to still the activities of the lower, less evolved parts of man's nature that becloud the finer mysteries of spirit. Such training is and has always been given in Mystery-Schools, and in India is known as chela-training. We shall be fully alive and conscious throughout this whole universe when we have opened all the portals of our inner being, when we have fully bloomed. Then we shall be recognised as the fine flowers of the human race, and sleep and death will hold no mysteries for us, for there will be no lapses of consciousness.

The following table, and its sub-tables with fuller explanations, will open the

way to a better grasp of this subject of consciousness:

Atman	Atman (Sakshin)	Turiya-Samadhi	Divine Worlds
Buddhi / <i>Higher Manas</i>	Karanopadhi (Bija)	Sushupti	Akasic Realms (Spiritual)
<i>Lower Manas</i> / Kama	Sukshmopadhi	Svapna	Astral World
Prana / Linga-sarira / Sthula-sarira	Sthulopadhi	Jagrat	Earth

THE SEVEN PRINCIPLES

Atman — the Divine Self

Buddhi — the Spiritual Self

Manas — the Higher and Lower Thinking Principle

Kama — the Desire Principle

Prana — the Vital Principle

Linga-sarira — the Astral Body

Sthula-sarira — the Physical Body

ATMAN AND THE THREE UPADHIS

Atman — The Self, the Witness or Sakshin, whose life and divineness pulsate through every element of the human constitution.

Karanopadhi — The Causal Base, a combination of Buddhi and Higher Manas, wherein lies the mystic Bija or seed or life-germ which gives the impulse to the Reincarnating Ego to be reborn on earth, in order to lead it on to a fuller expression of its own innate powers.

Sukshmopadhi — the Subtil Base, a combination of Lower Manas and Kama, the abode of the rulers of the senses and the lower mind, of the organs of action and the five vital life currents that flow through man's body.

Sthulopadhi — the Gross or Heavy Base, a combination of the three lower principles of Prana, Linga- and Sthula-sarira.

Though there are seven principles in man, there are but three distinct Upadhis (bases), in each of which his Atma may work independently of the rest. These three Upadhis can be separated by an Adept without killing himself. He cannot separate the seven principles from each other without destroying his constitution. — *The Secret Doctrine*, I, 158

THE FOUR STATES OF CONSCIOUSNESS

In the beautiful Theosophical philosophy of the Upanishads we find human consciousness divided into four main states:

Jagrat — the waking state or condition of external perception during a man's waking hours.

Svapna — the dreaming sleep state or condition of clairvoyance on the astral plane.

Sushupti — the deep dreamless state for the ordinary man, an absence of any perception on the physical or astral planes, but a conscious life and ecstasy for the Guardian Angel in man, the Higher Manas.

Turiya-Samadhi — the high spiritual self-conscious state which vibrates in unison with the Cosmic Divinity, Brahman. This "state of faultless vision" is experienced by those Mahatmans wise in spiritual things.

Thus we can sum up man in the 24-hour period: He is in the Jagrat state while awake in his physical body (Sthulopadhi). When he falls asleep he passes into the Svapna state in the astral realms, and stays there for a while in his subtil body (Sukshmopadhi). His human Ego then passes into unconsciousness, into the Sushupti clothed in its causal body (Karanopadhi) and there enjoys a wondrous rest while his higher mind is fully conscious in the Akasa or spiritual realms; and his radiant divinity or Atman returns to its starry home enjoying the Turiya-Samadhi.

On our way back to waking life once more we retrace our steps, following the pathways of the cosmos, from the divine to the spiritual, then to the astral, and then to this physical earth, and we awaken refreshed. Why cannot we remember these experiences? Why are only some of our journeyings recorded in dreams of all kinds?

To answer the first question: Most of the nightly adventures of the Higher Ego are too intense for us to understand because of our unawakened finer senses. They are too exalted, are tuned to a harmony too grand for the material brain-mind and psychological nature to record, unless indeed, one has so raised the quality of his thought and acts that they have refined not only the fabric of his mind but of his whole intermediate nature. We may feel the results of these higher activities through our guiding conscience if we accustom ourselves to heed its ever purifying messages and warnings. Aspiration and altruism are like keys to the higher pathways of life. Our daily affairs however are usually too materialistic, too focused on affairs of no lasting worth or spiritual import, so that we have made no grooves, no channels in any part of our nature for receiving the nightly inspirations from on high. Those who receive help or direct messages through dreams or intuitions on awakening are those who have laid the lines of communication by a higher life during their waking hours.

To answer the second question: Most dreams are impressions made upon the brain-mind of experiences undergone in the astral realms, low and high, that is, in the Kama-loka or "desire world," and the Devachan or state of blissful dreams wherein higher longings are fulfilled. The pathways of sleep and death are the same. When a man dies he wanders in the "desire realms" of the astral light, drawn whither his inner attractions or characteristics lead him. If there is nothing of a low type of desire or tendency in his nature he is drawn upwards to the Devachan where he enjoys a peaceful rest colored by happy dreams. So it is in sleep; when we first fall asleep or just before awakening we are passing through those same astral realms on our way from and to this physical world. We go in sleep to the same haunts we have visited with our senses, our desires, our minds, and hearts during the day. In other words, our dreams evil or good, are of our own making. We can learn to understand our own states of

consciousness, begin to realize just what we truly are, by studying our dreams and our reactions to our nightly adventures. If our dreams are bad, maybe some bodily disturbance is making it difficult for the inner man to free itself for higher places; or, it may be that the attractions to different parts of the unwholesome region of Kama-loka are due to impurities in one's own psychological nature. We may fool others as to our standards of life, but every night is an honest testing period where no favoritism is shown. Like attracts like. The highest types of dreams bespeak a life of higher living. This highest aspect of Svapna blends imperceptibly into the Sushupti state.

The three higher states of consciousness, the dreaming sleep state, the deep sleep or higher manasic state, and the spiritually divine state, can be experienced by men while in the physical body and yet not asleep. Some old people when the time is drawing near for the greater life beyond often live in the Svapna. They are conscious in the astral worlds. A spiritual adept, however, never dreams either in the physical body or in sleep or death. He must conquer this state. He must so live that all the lower elements of his being are trained and purified and subordinated to the power of his will. Having nothing left in his nature to hold him in these astral realms he is free to enter the Sushupti state. The degree of an adept is determined by the number of principles over which he has control.

The state of higher manasic activity, the Sushupti, is often attained by poets and visionaries and inspired philosophers in their moments of inspiration. A highly evolved human often enters this state when he has absolutely silenced the personality. He then receives visions of truth. As he advances on the upward path he can lengthen the period spent in this condition which attunes him with his Higher Self. Then, as this wise Seer becomes more universal in heart and understanding and in his very living, he reaches the divine state of Samadhi, wherein his whole being is in harmony with the Universe. All his faculties are awakened; the microcosm is in tune with the macrocosm; he is omniscient. To be able to pass consciously into this glorious state is to master the portals of death. It is the perfect Self-realization attained through spiritual Initiation, or what is mystically described in the beautiful writings of Buddhism as the Divine

Enlightenment under the Bodhi-tree.

The Theosophical Forum

"THEOSOPHY: WHAT IT IS" (1)—*Albert E. S. Smythe*

A pamphlet with this title has been issued by the Methodist Church, the author being Rev. H. W. Crews, M. A., D. D. He might have consulted one of the local Theosophists before rushing into print, but we admit that this might have appeared to him to be a dangerous proceeding. And safety first is the general attitude of both Church and State in all circumstances. He begins modestly enough as his first paragraph will indicate.

"The writer," he says, "realizes that he is up against a big proposition in dealing with a subject like this. If he does not succeed in making it understood he will not be altogether to blame, for the advocates of Theosophy (Divine Wisdom) themselves are not any too well agreed as to its essential features. If some words are used, the meaning of which is unknown to the reader, the responsibility for this must rest with the mysterious cult which makes frequent use of such terms and apparently takes advantage of them in order to veil its vagaries."

None of these words are beyond the power of an M. A. or a D. D. to look up in the dictionary and explain to his readers, and for the mysterious cultists, they have to do this for themselves till they become familiar with them as they have to do with chromosomes, protons, ergs, ions, genes and other terms frequently and familiarly used in the mysterious cults of physics, chemistry and biology. Religious prejudice does not prevent the D. D.'S from looking up the meaning of these words, and if people are really in earnest in the search for truth they will not hesitate about consulting a dictionary.

The use of "strange" words is largely due to the failure of the translators to supply synonyms for the Greek words in the New

Testament, which they fail to present in their true meaning, so that often the same English word is used to represent several Greek words, thus veiling the sense. Mind, for example, is used to stand for Greek words as varied and different in meaning as *gnome*, *dianoia*, *ennoia*, *noema*, *phronema*, *psyche*. No wonder the preachers ignorant of Greek fight over their theologies and split up into sects. Theosophists have tried to clear up this confusion and to show that *psyche* and *nous* and *phronema* are very different things and not all to be called "mind."

To abuse us for using "strange" words, is like a theologian. Theosophy itself is not a strange word nor should it be. St. Paul uses it to explain his idea of Christ in I Corinthians i. 24, where he says that Christ is Theosophy, *theou sophia*, divine wisdom, and the power of God, *theou dunamis*. But Wisdom and Power cannot be said to be persons, since they are principles, and the theologians prefer to "veil" the meaning.

Dr. Crews next declares that Theosophy came from the East. The Theosophical Society began its career in New York in 1875. Christianity began in the East, but Methodism began in England. It is nothing the worse for that. In India Theosophy has been known through the ages as Brahma Vidya, just the same as the Greek and the English, Divine Wisdom. The Theosophical Society commends the study of ancient and modern religions to its members, hence they became familiar with the terms used in various religions to denote ideas which they all hold in common. These ideas are primeval. They began when the consciousness of man was able to understand what the Gods or Higher Powers sought to communicate to them. This idea of a primal revelation is also common to the various religions. Some think it came by one God, others by many Gods or Angels or other powers for which there are many names. The name in Hebrew is plural, *Elohim*, but Christians always make the Seven *Elohim* into One,

and El, Adonai, Sabaoth, Shaddai and others corresponding to the seven days of the week and the corresponding deities of the Norsemen, of Greece and of Rome, were made subservient to Jehovah or Saturn to whom Saturday was made sacred, the seventh day. For the Theosophist as for St. Paul, there may be Lords many and Gods many but only one God and one Lord supreme above all the rest; but that one was not Jehovah nor any of the Seven Elohim.

Dr. Crews affects to think that Madame Blavatsky invented all this. All she did was to gather into her books the Wisdom of the Ages so that her own and later generations might know the truth of it. Dr. Crews should have known all this and been glad to spread such information, but he prefers to pretend that Madame Blavatsky was a spiritualistic medium, which she certainly was not, as any spiritualist could have told him, as she won the enmity of all spiritualists by explaining the means by which genuine phenomena were produced. Nor was she ever shown to be concerned with fraudulent proceedings as Dr. Crews alleges. People who spend their lives in the investigation of spiritual and religious truth and in writing books about such things are not capable of fraudulence as Dr. Crews asserts. He should have a higher opinion of the effect of religious study. But he transfers his attention to Mrs. Besant and admits the influence she exerted in India.

He is led to state that Theosophy disparages Christianity. In this he is mistaken. Christianity as at present understood is not the system taught by Jesus or Paul or John or James in the New Testament. Our "Churchianity" as Laurence Oliphant termed it, is vastly different from the Sermon on the Mount or the First Epistle of St. John. Theosophy, he says, repudiates the Personality of God. That is a matter of opinion. Personality implies limitation. We do not think that the Divine can be limited. Deity is Absolute, if

anything. Even Athanasius believes in One Incomprehensible. That is not, as some ignorant people think, something that cannot be understood, but something that cannot be enclosed or confined. Personality both encloses and confines.

Perhaps a better word could be devised to represent the Absolute. The God of Jesus was impartial, insusceptible to favourites or enmities. He sends his rain on the evil and the good, his sun to shine on the just and the unjust alike. Perhaps Dr. Crews does not like that sort of God, but prefers one who would be moved by prayers and offerings, who sometimes got furious and was subsequently sorry for it and repented. But this does not consort with the idea of Absolute Justice, Absolute Truth and Absolute Love. God cannot favour one at the expense of another. Dr. Crews will find it difficult to reconcile Absoluteness with Personality.

It is not a Theosophic problem but distinctly a Christian one, or I should say a Church one. It is true that this problem involves the consideration of prayer. Jesus gave us a model prayer which was not for one but for all; for all in its petitions as well as for all who used it. It does not ask anything for one person alone. Even in asking forgiveness it bargains that the other party to the offence should not be left out of account. "As we forgive our Debtors!" We think it inadvisable to instruct the Divine as to what it should do according to our ignorance and considering its Omniscience. We are so confident of its Justice and its Love that we rely upon that and choose rather to try to measure up to our responsibilities than to waste our time in asking favours from the All-Knowing.

"Your Heavenly Father knoweth what things you need;" was the intelligent way in which Jesus dealt with the matter. We are not afraid to credit the All-Knowing with Intelligence. But the priests have had an ancient yearning to act as go-betweens and gain

authority from the official position. Dr. Crews got into deep water when he took up the question of the Seven Planets, one of which he calls Devachan. That term corresponds to some extent with the idea of heaven as modern Christians understand it, heaven being a word to represent the Greek word *ouranos*, the Over-World, as opposed to this earth, the Underworld, or what we usually call Hell. It opens up a wonderful number of explanations to know that the Earth is Hell, the place of outer darkness, where there is weeping and wailing and gnashing of teeth. You can ask the Germans, or the Poles, or most anybody.

Dr. Crews finds a characteristic feature of this "strange system" to be a belief in reincarnation, which he says comes from India. He might as well have said it came from Judea. The Greek word *palingenesia*, being born again, is used by Jesus, but the translators were afraid to use such a strange word in the New Testament. So when Jesus said the disciples would be born again and sit on thrones (*Matthew* xix. 23) it was the word "regeneration" that was used instead of reincarnation which was not supposed to be an orthodox word, although the Christian Church taught the doctrine for over 500 years till a small council, the Second of Constantinople, decided to bar the teaching. The world has been in a sad mess ever since.

Palingenesia is used by St. Paul in his epistle to Titus (iii. 5) which is translated in "The New Testament in Basic English" as "he gave us salvation through the washing of the new birth," which is as direct a meaning of the original as one might desire. A more frequent word than *palingenesia* is *anastasis* which is usually translated "resurrection" but really means "standing up again from the dead." Every birth of a new baby is the resurrection from a former life of an old soul coming again once more to seek its perfection or salvation, by renewed efforts in a new body, having, as St. Peter reminds us (II Peter i. 9), "forgotten our old

sins."

St. Peter uses the old Greek term "drank of Lethe," but that too is unorthodox in flavour and would not appeal to Dr. Crews.

The Cosmological scheme outlined by Theosophy is no more confusing than the various sevenfold presentations in the Book of Revelation. They all have to do with states of consciousness, of which three at least are not strange to ordinary people. They are the waking, the sleeping and the dreaming states. One cannot have a state of consciousness without a body or vehicle of sensation corresponding to that state. St. Paul tells of these when he says there is a body of flesh and blood, a psychic body, which Dr. Crews and his fellow theologians insist upon calling a "natural" body, so that people think it means the flesh and blood body, which it does not, for when Paul means flesh and blood he says so. (See I *Corinthians* xv. 50).

There is also a pneumatic body translated "Spiritual" body. It ought to be Breath body being the body of the Holy Breath or Holy Ghost as it is usually spoken of. The strange words that Dr. Crews speaks of as having been found in Theosophical literature are the equivalents of these Greek terms used by Jesus and Paul, for which our theologians have failed to furnish us with English substitutes, apparently because they did not know what they meant. Did Dr. Crews know that he had a psychic body as well as one of flesh and blood? If he did he differs from most ministers.

Dr. Crews concluded his pamphlet with a reference to an Indian author who points out that the East pays attention to the Inner, the West to the Outer life. The Theosophist would have people pay attention to both as required. To spend all one's life in meditation will attain due results, as due results are attained by those who pay attention altogether to business or work on the physical plane. Jesus was very practical and taught us to do

whatever our hands found to do, and to do it with all our might. The same applies to meditation, which is really a form of prayer in the true sense, communion with the Higher Self, one's own Godlike nature.

Intensification is the one word we need in both cases. The Kingdom of Heaven is taken by violence, or as Patanjali says, with ardent impetuosity. This cannot be achieved without the cooperation of all our powers, physical, psychic and spiritual, and their consecration to the one great service of Man. We are here because we are Sons of God. Our Mission is the redemption of the Human Race. "God so loved the world."

FOOTNOTE:

1. Reprinted from The Canadian Theosophist, September, 1942. Mr. Smythe is General Secretary of the T. S. (Adyar) in Canada, and is known for his consistent and vigorous support of the Theosophy enunciated by H. P. Blavatsky. ([return to text](#))

The Theosophical Forum

DR. DE PURUCKER ANSWERS QUESTIONS

Some of the most important and interesting teaching on Theosophical subjects which might not otherwise have been touched upon in formal exposition were given by Dr. de Purucker in answer to direct questions sent to him from various parts of the world; and it is these that are included in this present series, which the Editors plan to run for several issues. It may be interesting to readers to know that these answers were often dictated the first thing in the morning while the Leader was having his breakfast.

WAS CHRISTIANITY RESPONSIBLE FOR THE DARK AGES?

Question — Some people say, I fear after but a superficial study of the matter, that Christianity is responsible for the Dark Ages in Europe which so quickly followed the establishment of Christianity as a State religion. They also quote H. P. Blavatsky to this effect. Is this the recognised Theosophical viewpoint?

G. de P. — The statement that came from H. P. B. I think was that the downward cycle to which the questioner refers began some five hundred years before the Christian era, and that is true. But you must not suppose from this that it was Christianity, or the beginning of the Christian era, that was solely responsible for the Dark Ages then to come, for this is unjust, it is untrue. It is true, however — and I trust any Christian friends will forgive me for this plain speaking — that had Christianity remained utter true to the teachings of its grand Master, the work that Christianity set out to do would have been far better done, and the Dark Ages might have never come upon the West as actually took place.

The truth was this: that a descending cycle began some few hundred years before what is now called the beginning of the Christian era. It was a cycle going downward, what Plato would have called a beginning of a Cycle of Spiritual Barrenness: and the Christian movement, then a Theosophical movement of its time in the countries around the Mediterranean, was begun in an effort to stem the horrors that were bound to come, to throw a new wave of spirituality into the thought-life of men in the Occident. The Orient needed it not, but the Occident did. And for hundreds of years it did act as a brake, a brake on the charge of human life which was running downhill. And in ways it did good. But oh, how more blessed might have been the results if their great Master's life and teachings had been the example of his followers as their conduct in their own lives. It was a spiritual movement started in order to help mankind on a cycle running downwards before it began to reascend.

It is quite wrong and unjust, nevertheless, as some people have done, namely men whose hearts have been hurt by what they have seen of the wrong-doings of the Christian Church in the past — it has been unjust to that Church and Christianity as Christianity to blame it wholly for the Dark Ages. There were great and good men among the primitive Christians and they labored nobly. The pity of it is there were not more who labored to lift men during that cycle which a few of them at least knew was a cycle running downwards.

We Theosophists today have a similar work to do but on differing lines: a cycle beginning its rise commenced some time before H. P. B. came to the Western world; and a rising cycle, very slow now, but it will be constantly rising for a while, has set in. And the dangers here in their way are just as serious, perhaps more subtil, difficult to deal with, than are the dangers afflicting men or menacing men when the cycle runs downward. Perhaps the

greatest danger facing us today in this era of universal change and overturnings generally due to cosmic causes, is the increasing outbreak of psychic eruptions from the astral light, something foretold by the Masters, about which H. P. B. warned us. We have just to look around the world to see, seeing to understand.

For my part, I would we had the backing of a great enlightened Christian organization, filled with the spirit of their Avatara-Master, which with our own organization could see and understand the dangers that menace men. With its power and wealth, and presumably accepted order and perhaps interior discipline, if it could only be fired unto a new vision of the spirit of their Master Jesus, then these Christians of the type of their Master would be working with us hand in hand, for our movements really would be one. But where, alas, alas, may we Theosophists find such a devoted organization of what I may call primitive Christians, infilled with the spirit of their great Master?

THE TEN AVATARAS OF VISHNU

Question — I have been puzzling over a list of the ten avataras of Vishnu, as given in the Brahmanical scriptures, and wondering if there is not some connexion between them and the scientific conception of evolution, Would you throw any light on this? The list follows: 1. Matsya, the Fish; 2. Kurma, the Tortoise; 3. Varaha, the Boar; 4. Narasimha, the Man-lion; 5. Vamana, the Dwarf; 6. Parasurama, Rama with the Ax; 7. Rama, hero of the Ramayana; 8. Krishna, the spiritual instructor of Arjuna; 9. Buddha; 10. Kalki, the White Horse.

G. de P. — This line of avataric descents really is in the evolutionary line of progressive growth, even as European science teaches it. You have, first, the Fish, the Reptile, the Mammal, the beginnings of the humanity, young Humanity called

the Boar Humanity, as such more or less developed but unspiritual; then Rama of the Moon, Chandra, showing the beginnings of the workings of mind, and then Krishna; the avataric initiate Gautama the Buddha, and finally the Kalki-Avatar, the summit or highest of all. I might add that all these names do not imply and were never intended to imply that Brahmanical esotericism taught the descent of divinities into the respective animate beings named here. These names of different animals and men are technical, and like all zoologic mythology were chosen because of certain attributes that these various animate beings have.

Now, these avataric descents do not appertain solely to a race or a root-race, nor to a globe, nor to a chain, nor to a solar-system alone. But because Nature repeats herself by analogy, for the simple reason that the little must have in it and reproduce whatever its parent the whole contains, therefore the same line of enlarging understanding, of evolutionary development, takes place in all the spheres *mutatis mutandis*. So that these avataric descents we can ascribe or allocate to the solar system, to the planetary chain as a whole, to a round, to a globe, to a root-race, to a sub-race therein.

It is very interesting too, that although this line of ten items, ten avataric descents, is typically Hindu, nevertheless the same scheme, suggesting growth in knowledge and wisdom and power, with all consequent spiritual and other attributes and faculties attending thereupon, were and still are found in systems of religio-philosophical and mystical thought other than the Hindu, as for instance, in Mithraism. The Mithraists had seven degrees — actually ten or twelve — seven degrees of advancing knowledge and growth in understanding. We would say seven esoteric degrees in the esoteric cycle, beginning with the lowest and rising through various degrees to the highest therein. Thus, for instance,

they taught that the neophyte began his course of experience, and he was given a name, the name of a bird as I recollect. I do not remember them all in the Mithraic system, but one grade was called Corax, the crow or the raven, and the neophyte who successfully passed that grade was called technically a crow. It did not mean that he was a crow. It was a technical word (the raven in Mithraic mythology was the servant of the Sun) marking his stage of evolutionary growth, development. Just as in the avataric list the evolutionary growth is indicated from the less to the greater, from the fish through the reptile, through the mammal, headed by man, etc., etc.

The second grade in the hierarchy of the Mithraists was Cryphius, Occult, higher than the crow. The third grade was that of the soldier. The fourth grade was that of the lion; and so forth up to the highest, which was Pater, the Father or hierophant. These were technical terms marking the advancing degrees of initiation. And to show a still greater similarity to this scheme, the Mithraists said that these same seven or ten grades of growth or advancement mark the stages of the after-death journey of the excarnate being through the planets — their ladder of life, each one a stage.

Somewhat the same thing was found in Christianity. Christian neophytes were called fishes, so that they even said of themselves: "We are little fishes. Our great Fish is our Master Jesus." Why did they choose such a curious little animal to designate themselves by? For certain reasons of their own which we can easily imagine. Fishes could swim in water, and are perpetually hungry, and are going through the water, which is the astral light, signifying the material world and its temptations, and all that kind of thing; hungering for light all the time. If you catch the thought, you will see the reason why the earliest Christians called themselves little fishes.

I might add that in connexion with the highest of these avataric grades, that of the Kalki Avatara, marked by the white horse, riding the white horse: the horse is a symbol of the Sun; the bull or cow is a symbol of the moon; and you may remember how in Egypt and Persia, India, Babylonia, and other places, these animals were used as symbolic suggestions. Pictures of Egyptian buildings, temples, shrines, and those of other peoples, show the sacred cow, the sacred bull, the sacred horse, and so forth. As the horse stood for the sun, so the tenth Avatara here would be an Avatara of Vishnu or Maha-Vishnu, of the Sun.

What do we learn from this? This scheme, in addition to being the names given by human beings to the Avataras, from the first to the tenth, represents likewise the technical names given to neophytes in esoteric schools. The lowest chela was called a fish, just as in Mithraism he was called by the name of a bird. The chela who had taken the second degree successfully was called a tortoise. When he took the third successfully, he was called a boar; and the highest of all was called an incarnation of the Sun, a Son of the Sun technically, called a white horse, or a brilliant horse, a dazzling horse.

You know, we can glean something else from this line of avataric descents. If you examine this carefully, you will see in time, that these different items in the ascending list from one to ten represent the ten sub-races in any one root-race, commonly enumerated as seven. Actually there are twelve.

EVOLUTION INTO THE HUMAN KINGDOM: II — *G. de Purucker*

I have found that some themes we have been studying are still somewhat obscure in the minds of many here, and elsewhere. I doubt not The particular themes I have in mind are evolution, the embodying of the monads, and what we humans were on the moon-chain, what the animals were, etc. In the first place I am sure that many students of Theosophy have often asked themselves the following question: Given Nature and her laws and the different classes of the families of monads, could these monads by passing through the lower kingdoms of Nature, unaided, without help from above, gradually through learning, through experience, through evolution, rise higher from kingdom to kingdom, so that the mineral would become the vegetable, and later a beast, the beast a man, the man a god? — following the well-known statement in the Kabbala.

Now without mincing words my answer is Yes. It is possible, and in fact would happen if that were the way Nature worked. But she does not work that way, and I will explain why. Furthermore, such slow, slow, slow evolution through the kingdoms of Nature of the monads upwards would take an incredibly long time. Instead of, for instance, the monad of an elemental becoming a man in six or seven imbodiments of our chain, which is something like 60 billions of years, the monads unaided would take six or seven solar manvantaras merely to pass from one kingdom to the next higher. In other words, theoretically the monads can rise without help from the kingdom above into those higher kingdoms if they take time enough for the process. But it would take a quasi-eternity to do it; but the important thing is that *Nature is not working that way*. Her law is that all lives for all, which means that every entity, wittingly or unwitting, helps

every other entity. It means that every superior kingdom is not only a guide to the kingdom next below itself, but an enormous attraction upwards to itself upon the lower kingdom.

Thus to illustrate: Take the human kingdom: It is the goal of the beast-kingdom, and mark you, in Theosophy we place humans in a kingdom separate from the animals. In the same way the vegetables aspire upwards towards the animal kingdom, and the animal kingdom draws them up. So it is with all kingdoms. But in addition to these things, there is an interchange of — how may I phrase it? — an interchange of help between every two contingent kingdoms: as for instance between the human and the animal, between the dhyan-chohanic and the human, between the second and first dhyan-chohanic, and between the third and the second. In other words what we call in our own human case the descent of the manasaputras and their lighting of the fires of mind in the then mindless humanity, takes place *mutatis mutandis*, which means with the necessary changes of circumstances and kingdom, between every two adjacent kingdoms. So just as the lower dhyan-chohanic kingdom, the lower manasaputras, inflamed our own minds to become awakened unto thinking for themselves — what we call the descent of the manasaputras — so does the human kingdom inflame the very latent intelligence of the animals. And the animals in their turn are, as it were, manasaputric beings to the kingdom below, by an interchange of life-atoms and by the conjoining bonds of the two kingdoms, where there are creatures who may at one time be called low animals or very high plants.

Now with those points established, let us examine two questions.

1. What were we humans now in this Earth-chain, what were we on the Moon-chain, the parent of this Earth-chain? Remember the moon is just a dead chain, from which all life has fled, except what we may call the life of a corpse, a chemical and quasi-

physiological activity of the molecules. What were we present humans on the Moon-chain? We were the animal monads in the moon-men, in the humanity of the moon, or what, if you wish, we could call the animal moon-men, just as here on earth we speak of ourselves as thinking humans and animal humans, referring to different parts of our constitution — facts which you all know. When I say we, I mean we of the higher class of human beings.

Question 2. What were the low class of human beings on earth today, and the lowest class of human beings, the savages today — which according to the anthropologists can scarcely count to more than 10, that is can scarcely have a clear idea of what more than 10 things mean, such as the Veddahs of Ceylon and the Andaman Islanders and some peoples in the South Seas and some of the tribes in Africa, etc., etc. — what were these lower men on the Moon-chain? They were the moon-animals. Then you will immediately say: "Then we are a whole kingdom higher than these others of the human family." No. You have the explanation at the ends of your fingers. The animals of the Moon-chain before the moon's Seventh or last Round took place, according to the process which I have just tried to illustrate a few moments ago, so to speak were manasaputrizied by the moon-men, the moon-humanity. So that before those animals reached the moon's Seventh Round, they had thus been enlightened and raised to the human status, but a low human status.

So these lower human beings among us today, those in whom the spark of mind now burns not too brightly, were once animals on the moon, then were manasaputrizied into humanity before the moon's Seventh Round ended. Thus then, when these monads at the end of the Seventh moon-round, after the long pralaya, came to our earth, they came already as humanized entities, as humans.

Now what on the Moon-chain were our present animals? They were the lowest animals on the moon, the very lowest, those which had not emanated from out of themselves the powers to allow themselves to be manasaputrized; just as on earth we have insects and flying things and creeping things and the lower forms of life of various kinds; because the animal kingdom contains many classes, from its highest representatives the apes, running through all the grades of the quadrupeds, through the birds and fishes down to the insects, etc.

Similarly now, instead of looking backwards let us look forwards. We humans, that is we higher humans, in the next chain-imbodiment will be the lowest dhyan-chohnic kingdom there. The animal human parts of us, what we call the animal man or the animal monad, will at the end of the Seventh Round on our present chain have become fully humanized or man. And we, what we call ourselves now, will then have become dhyan-chohanized or the lowest class of Dhyan-Chohans. We shall then have Dhyan-Chohans working through humans who themselves again have animal monads. The lower humans on our earth today, at the end of the Seventh Round will form the average or higher men on the next chain. And our present animal monads will then have become humanized and will form the highest type. In other words, no animal can become a man until it has been manasaputrized.

Remember I am not talking of bodies now. I am talking of true evolution, the inner forces and powers which distinguish a thinking man from the relatively unthinking animal. That has not anything to do with bodies. I am talking of monads, of the real man, of the real beasts, of the inner being. And our highest animals at the end of our Seventh Round, provided that they make the grade upward by the last three Rounds, will be humans when this Earth-chain comes to its end and dies. Similarly for

other kingdoms in nature at the end of the Seventh Round, if its representatives have succeeded in making the grade upwards, each such kingdom will have gone up a step higher. Those that make the grade among the animals will have become men. The men who make the grade amongst us will become Dhyan-Chohans.

Now then, who were the Dhyan-Chohans who manasaputrized the moon-beings of the Third Root-Race? Our own human ancestors. They were the average or higher men of the moon, moon-men, now to become Dhyan-Chohans, called manasaputras, sons of mind, i. e., Dhyanins, because their function is, so far as we are concerned, to awaken thought, to awaken mind in us. The beast, for instance, has as much latent mind as any man has, but it has not been manasaputrized, awakened, stimulated, lifted, brought into self-conscious activity.

Take the case of a little child, a human child. Why doesn't it think as we do? Why doesn't it write books, why doesn't it speak on Theosophy? Why doesn't it study science? Because it is too young. Of course. But the real answer is because its mind has not yet been emanated from within itself. The parents of the child act as the manasaputras to a certain extent. They teach it, they watch. Little by little the child begins to observe, to take note of things, begins to think, its faculties develop, and before you realize it, the child begins to say nice things, and you are proud of your offspring. What has happened? Simply that its mind has begun to open, to function. But if that child in childhood were carried to a desert island and lived there alone, provided it could live, provided it survived, it would not learn speech. Its mind moves very slowly; it would take note of what is going on around, but it would be in a worse state than a grown savage like the Andaman Islander. It would be little more than a semi-thinking human animal, because its mind would not yet have awakened, opened,

developed, emanated, evolved.

For instance, when we see a child grown into a thinking man, we don't say that is a haphazard work of thinking Nature, fortuitous, chance. We say: there is law behind there, something called mind has evolved out of that entity. Something already in there has simply flowered out. In other words evolution or emanation is simply growth. Those three words are practically interchangeable: growth, emanation, evolution: because growth, as a plant from a seed, consists in the unfolding or flowing forth of what that seed contained.

Now H. P. B. in her wonderful work, *The Secret Doctrine*, divides the monads into 7, and I think even 10 classes. As a matter of fact there are 12. These 7 or 10 or 12 monadic classes in another place she divides into 3 families, 3 divisions. The first and highest are all those monads above the human. An intermediate family or division is the human and all connected with the human — and remember how many varieties of human and sub-human beings there are. The third and lowest class are all the entities below the very lowest entity which by any stretch of fact could be called human, such as the beasts and the vegetables and the minerals and the elementals. She points out that of these 3 divisions the highest are not only the forerunners in coming over from the moon who guided the elementals in the building of our new Earth-chain, but also were the instructors and guides of the next class, or division rather, which came following after. We were this next class which came following after; and they and we thereupon became the guides, the helpers, the instructors, of the lowest class which followed after us, just exactly as we see in Nature among us today.

One thing more about the manasaputras, and it will explain what may seem like a contradiction to you if you have read *The Secret*

Doctrine without care. The manasaputras who as a body were the particular awakeners of us from non-thinking human bodies or quasi-animal bodies into thinking human beings, were the lowest class of the Dhyan-Chohans who were average or higher men on the moon, who had attained dhyan-chohanship at the end of the Seventh Round of the moon. But these, while they enlightened us, speaking now in classes, were themselves guided and helped by the two higher dhyan-chohanic classes, a few representatives of which during the early races of this Fourth Round of our globe came amongst men as gods and demi-gods. and guided them; and these are they who are referred to in the exoteric religions of antiquity under such names as Osiris, Isis, Ahura-Mazda, in other words the gods and god-men of the ancient peoples. They were the Dhyan-Chohans, some of them I should say, of the highest and second classes, who even before the manasaputras came and awakened our mind, were already at their work of teaching. Because mark you: even in the first race of Globe A, the first globe of our chain, beginning with the Second Round, there were already men, that is to say thinking, self-conscious, cogitating, feeling, loving human beings. Those were they who have now become what we now call the Mahatmans, the Masters, their highest chelas, lower chelas, and the leaders of men, simply because they are more highly evolved than the rest of us men. They were men. And these few men, relatively speaking, (by few I don't mean 3 or 4; perhaps a million or two, it is just guess work) even in the first race on Globe A, were taught by the Dhyan-Chohans of the highest and Second Race. The latter helped to awaken those earliest men, awaken them as a parent will awaken the mind of her child, helping to do so, teaching and guiding and instructing and lifting up and showing the path, giving ideals, sounding keynotes of truth.

For instance, we humans, looking before us into the future, shall

reach the end of the Seventh Round of our chain. We humans then, those of us who shall have made the grade, will develop into Dhyan-Chohans of the third class, the lowest, the kingdom above the human kingdom — call them the angels if you like — angels of the third or lowest grade. The better name is Dhyan-Chohans, because angel in the Christian teachings is a vague term. The Masters and their highest chelas will then have become Dhyan-Chohans of the second or next to the highest dhyan-chohantic class; and every one of the dhyan-chohantic kingdoms will, each in its turn, have moved up a step, a kingdom. Our animals, those who make the grade, will become men of a low type at the end of the Seventh Round. Which animals will these be? The apes, the monkeys, possibly some of the quadrupeds. The beasts below these — I doubt if any of them will reach to the human stage even at the end of the Seventh Round. They are still too crude, too low, unprepared. But they will become men during the next chain, except the very lowest of our animals who will be the higher animals on the next chain.

Another thought in connexion with these ideas. I stated that I was not speaking of bodies when mentioning evolution, and I have not been. I have been speaking of monads, egos, souls, call them what you will, in other words the consciousness-center within an entity, that which makes him what he is as a conscious being, a thinker, a feeler, one with judgment and discrimination, one who feels love, compassion, pity, sympathy, all these lovely human qualities which are truly human as well as humane.

But now, to speak for a moment about bodies: you will find in my book *Theosophy and Modern Science*, [*Man in Evolution*] how hard I tried to show that all evolution is from within outwards, that nothing can evolve or unfold into something greater unless it had not only the power and capacity inside to do so, but had already within itself what is going to come forth. If you turn the spigot,

the faucet, the water won't run out of it unless there is water there to run out of it; and no man will manifest or bring forth into his life, into his actions, into his thoughts, what he has not awakened within himself. But, while all evolution is therefore from within, while all growth is from within, yet, as the ages slowly go by, even the physical bodies feel the vibration, the impetus, continually impinging upon them, and feel also the quality of those impulses as unfolding or evolution becomes constantly greater; so that even the physical bodies become more refined and slowly change. Yet there seems to be a law in Nature that no strain of physical bodies can endure after a certain period. For some reason, interesting, fascinating, Nature seems to call forth as it were, and says to any physical body-strain — thus far and no farther. It would seem as if that type of structure could not evolve properly, efficiently. Then those bodies slowly die out, and the monads which gave them life, after their rest in the Devachan or Nirvana come back and find new robes or bodies waiting for them of quite another kind.

There you have the process of evolution on a thumb-nail. That is why the enormous reptiles of the Mesozoic day vanished; and as modern biologists and geologists examine the records of the rocks and fossils, you will find them all expressing their amazement that these strains, these families of creatures, seem to die out suddenly. As I remember, one geologist expressed it by saying it looked as if a pestilence had fallen upon them, and in a short time, geologically speaking, they had gone. Science is utterly unable to explain why, except by guesses, some of them very silly, like the one I read some time ago, that the reason the reptiles died out was because they grew so big they could not carry themselves and died of starvation. That to me is the most grotesque theory I have ever heard. Nature doesn't build up a big body if she cannot get food to make up a big body. It was just guess-work. Far more

reasonable was the suggestion I read in a geological book that the reason the reptiles died out was because they were smitten by some universal pest which wiped them out, perhaps a new kind of germ, new to these creatures. Maybe!

Isn't it a blessing that these physical bodies do in time die out!

The Theosophical Forum

CAN WE CONTROL OUR FATE? — *Hugh Percy Leonard*

Man can modify his future within certain limits. That is obvious to all. A simple, virtuous life ensures a hale and dignified old age: faithful discharge of duty wins esteem and confidence, while self-forgetting efforts for the public good bring their return of grateful recognition from the masses whom we serve.

Most people live for sensation and oscillate unceasingly between the two opposing poles of pleasure and of pain, and if our future were infallibly in our control, pleasure would be our constant guest while its unwelcome twin would find our door for ever closed. Fortunately for us such an arrangement is impossible. We sometimes plan a day of pure and unalloyed enjoyment consisting of a continuous succession of agreeable events; but the attempt is seldom very successful. All possible devices for producing and prolonging pleasure are exploited to the utmost; but the high tide of gaiety is bound to ebb before long; the capacity for enjoyment becomes jaded, overstimulation is followed by reaction, and the day after the picnic is one of dullness and depression.

Although man has it partly in his power to plan his future as he will, there is a seemingly relentless fate whose rulings he is powerless to resist. Man has a dual nature, and while one aspect seeks to follow its allotted destiny careless alike of pleasure and of pain, the lower or material self incessantly pursues enjoyment and endeavors to avoid all contact with its disagreeable opposite. But all such efforts are fore-doomed to failure, for moral growth is quite impossible so long as life is like a happy holiday; the will can never rise to its full power without the stimulus of opposition, while the rare flower of sympathy can only bloom under the

leaden skies of suffering and of pain. The classic writers frequently refer to an inexorable fate which runs its course in spite of human tears and protestations, and that there is an unavoidable necessity in human life is very clear. However virtuous our lives may be, old age and death come creeping on with steady pace. Right living may postpone and mitigate the disabilities of age; but the slow waning of the faculties is just as much a part of Nature's plan as the expanding powers of youth. There is nothing hostile to our welfare in this over-ruling destiny, though to the pleasure-loving lower self its slow but unavoidable approach may be regarded with dismay. The ebbing of the flood of manly strength, and the relaxing of the grip of personal desire allows the more unhindered play of subtler, spiritual powers just as the sinking of the blazing sun reveals the milder radiance of the stars in the dark sky of night.

There is in man a natural tendency to shirk his proper contribution towards the turning of the wheel of social life. By methods often perfectly legitimate, a man may so possess himself of wealth and power as to command the services of others to an almost limitless degree; he thus avoids the dusty march of toilers and proceeds upon his way borne on the shoulders of the marching crowd. He cannot finally escape however the needful discipline of steady labor, nor deprive himself of that growth of character that comes from duty faithfully performed. "A shroud," they say, "has no pockets," and nothing of our present wealth can we carry over the gulf of death into our next rebirth. The Law of Compensation will not let us shirk our proper share of service to our fellow-men, and thus it happens that the leisured trifler of today becomes the humble laborer in a subsequent rebirth and will discover that his debt of service must be paid in full. Such purifying discipline is cheerfully accepted by the silent soul within, that part of us which is at one with destiny and has no

other aim than to co-operate with universal law.

But let us consider in the light of reincarnation to what extent we can control our future course and reach our destination by our own persistent will. What can be more perplexing to the trustful optimist than the spectacle of a passionate lover of music, born in a family where there is no musical heredity and where he lacks the slightest opportunity of developing his latent musical talent? His life is passed in hopeless longing and he dies at last discouraged by the thought of being thwarted by unkindly Fate. But Theosophy, lifting the veil that shrouds futurity, reveals the picture of a newborn child which has just entered a family of musicians. "There is no new thing under the sun" and the baby is by no means new, but a very old ego in a new robe of flesh. What directed the ego to this particular family? The theologian might reply: "The inscrutable will of God who has graciously endowed the newly created soul with musical ability and likewise provided it with all the advantages of a musical environment." The theosophical answer would be that a love for music fostered in spite of great discouragements drew the soul by natural affinity to parents likeminded with himself. And now the tender, plastic mind is bathed in music all the day. The brain and nervous system are refined by their environment, so that both mind and body are combined to form an instrument for musical expression by the all-dominating will. With ample opportunities at his command, all the seeds of music so assiduously nursed under the cold, gray skies of long ago, now germinate and spring to vigorous life. In ignorance and sadness, often in despair, he persevered but as it seemed in vain. Dimly he must have felt that his superb reliance on the Law would open up a way at last, and so he gains his heart's desire because he boldly claimed his kinship with his great Original, that hidden source of all that lives, which dowers its offspring with the power to mould their future destiny

according to their will.

As has already been explained, the lower or material self swayed by its personal preferences is fortunately powerless to avoid its self-made destiny. It frequently occurs that one particular individual arouses us to the most violent antipathy, and every meeting develops into an encounter resulting in exchanges of a mutual ill-will. In order to avoid such disagreeable incidents we contrive to meet him as little as possible. Perhaps we have done him an injury in some past life and instinctively dread reprisals on his part, or it may be that a strongly pronounced fault in his nature awakes a corresponding weakness in ourselves. But overruling destiny which always works for our advancement and indeed only carries out our instructions, will not excuse us from the duty of restoring the broken harmony. For bygone injury a compensation must be made, or if it is an uncorrected weakness in our nature, better far that we should be forced to face and conquer it at once than that it should retire into an ambush and attack us later on. And thus perhaps at some remote rebirth we find ourselves with brother, sister, parent or companion with whom we are perpetually at strife. This is an opportunity and not a misfortune, and if we rightly grasp and use it the ancient wrong may be atoned for, the weak place in our character strengthened, and one more jarring discord in the music of the spheres resolved into the primal harmony.

Christ must have had this idea in his mind when he commanded us to love our enemies. Aside from Karma and Reincarnation there is no obvious reason why we should love a person who calls up the strongest feelings of antipathy. But when we consider that the brother who offends us now may be our victim of a long forgotten past who still carries about with him the scars we have inflicted, is it not reasonable that we should go out of our way to serve him? Theosophists, always looking for causes when they see

effects, account for such inborn antipathies by assuming wrongs done in past lives. They cannot believe that a loving Creator who is said to produce new souls for every birth, would deliberately implant a gratuitous hate in the mind of the newborn child. It may be objected that hate must always operate to keep us apart from the object of our aversion; but there is such a thing as "attraction by repulsion." We must all have noticed that if we have any particular dread or dislike, by a strange perversity of the mind that is the very subject most frequently dwelt upon. Theosophy teaches that if any nation, person, or environment is peculiarly distasteful to us, we shall sooner or later be drawn to it by the same law, and shall be unable to disengage ourselves until we are able to contemplate it with dispassion and equanimity.

Almost everybody would like to be the recipient of a stream of the good things of life and wishing to secure the certainty of future affluence we cling with desperation to whatever wealth we have and try to add to our accumulation. Such tactics may secure us the desired prosperity for this our present life; but their effect in later lives will have the very opposite result to that which was intended. Does it not seem reasonable that in a subsequent rebirth such a personality will manifest a miserly disposition from the very cradle, and the infection of his character will affect all with whom he comes in contact so that even the habitually generous will be frozen to unwonted parsimony in his company? But on the other hand, your royal giver is in a fair way of entering his next rebirth with a temperament which radiates generosity and almost compels tight-fisted avarice to liberality by his very presence. The grasping, greedy individual does control his future; but not at all in the way that he desired.

There are many whose occupation is a cause of constant complaint, and much they wish that they possessed the power to change their lot. Here again destiny is seen at work. The reluctant

worker assuredly needs precisely the discipline he is groaning under. Let him cheerfully confront his daily duty and discharge it to the height of his ability. Striving for excellence, interest will spring up; efficiency will then develop, and after that follows success. The intelligent Law of Adjustment, satisfied that the lesson has been learned, proceeds to conduct him to another school to learn another lesson. So long as he rebelliously endeavored to control his destiny, he was powerless; but as soon as he submitted to the inevitable, and cooperated with the great law that governs all, then spiritual forces came into play and his entanglements were severed as if cut with a sharp sword.

Humanity as a whole determines its future as well as individual men, and the present social chaos is the direct result of the past mental chaos of mankind. What but mad chaos can be looked for while through the ages everyone has set his mind on selfish schemes which can only be realized by subjecting weaker wills to his own? If self-regarding, independent action unregulated by any reference to the welfare of the whole has produced the existing state of the world, what may we not expect when universal brotherhood is taken as the guide in life; when public service and not private gain is uppermost in every mind, and when men look with scorn on any use of talent or of power save such as is intended for the general elevation of the race?

A widely spread conviction that our future reaping will depend upon our present sowing; that men will live again in other lives on earth; that destiny is only stern and painful as we make it so; and that we can arrange our future as we choose within the limits of the Law of universal harmony, will bring about such betterment in human life that earth will be transformed to what men have imagined heaven.

THE UNIVERSAL SOLAR SYSTEM — *L. Gordon Plummer*

Who is not thrilled at sight of Venus, the morning star, or of Saturn with his rings, or of Jupiter with his moons? Who fails to respond to the colors at sunrise? And yet these are but physical phenomena, veiling, it is true, deep mysteries. Had we the vision of the seer, and could we behold these mysteries, we should see not eight or nine planets wheeling around Father Sun, but myriads of planets. We should see not one Sun, but a dozen, perhaps, with their planets, all confined within the limits of our Solar System.

Now, we have to introduce a technical term here, the Universal Solar System, and its meaning should be clearly understood. It signifies all the planets and worlds, visible or invisible, that comprise the Egg of Brahma. Thus, except that our Egg of Brahma is a part of the Galaxy, as are the billions of other "Eggs," the term does not relate to our Galaxy, or universe. It is a term used to distinguish between the solar system that we see, to wit: composed of one sun, and the nine visible planets, and the greater Solar System the greater part of which we do not see, our visible solar system being but a very small part of it.

The teachings about the Universal Solar System are part of a greater teaching under the general heading of the Doctrine of the Spheres. All aspects of this Doctrine are very sacred indeed, and belong to the teachings of the Mystery-Schools, and some of the phases of the teachings are not divulged to the uninitiated under any conditions. Briefly the Doctrine of the Spheres is divided into four parts which go by these names:

The Universal Solar System

The Globe Chains

The Seven Sacred Planets

The Occult relationship existing between the Earth and the Sacred Planets.

This last phase of the teaching is the most secretly guarded, and as said in *The Secret Doctrine*, Vol. I, p. 163-4:

As to Mars, Mercury and "the four other planets," they bear a relation to Earth of which no Master or High Occultist will ever speak, much less explain the nature.

Then there is a twin doctrine, and one which is the most sacred of all, known as the Circulations of the Kosmos. This deals with the ceaseless flowing of the rivers of lives between planet and planet and between planet and sun and back again. This doctrine bears intimately upon the mysteries of death and of Initiation, for in our cosmic journeyings we sail these great rivers of space.

Now, the purpose of this article is to explain to a degree at least, the nature of the Universal Solar System, and we can approach it from two aspects. One, the vehicular, will be the first we shall embark upon, and the second, that relating to the consciousness working through the worlds comprising the Universal Solar System will be taken up afterwards as it presents a more complete picture.

It is interesting that for a time the analogy between an atom and the solar system was stressed by modern science, but the tendency seems to swing away from that at present because the electrons and the protons (the nuclei) are no longer considered to be solid particles, but rather they are considered to be units of electrical energy. Thus, the atom has come to be virtually a mathematical concept, rather than a physical actuality, and in this, a great advance has been made. The tendency away from the Solar System analogy is to be explained on the grounds that in the

case of the atom, we have broken away from a purely physical concept, whereas in our observations of the solar system, we are still confined to physical phenomena studied with the aid of physical instruments.

A significant step in the direction pointed out by the Ancient Wisdom has been taken by Mr. Cornelius O'Connor of Burlingame, California, and his findings have been very favorably received by astronomers. He has demonstrated that the planetary distances, periods of rotation, and times of revolution around the sun, are in strict accord with electromagnetic laws. In THE THEOSOPHICAL FORUM for March, 1939, there appeared an article by Mr. O'Connor in which he discusses the concentric electromagnetic "shells" surrounding a wire carrying an electric current, and the concentric electromagnetic "shells" around the sun in which the planets are moving in their correct positions according to these electromagnetic phenomena. It may be safe to say that in the orbital concept of the structure of the atom, these orbits are really electromagnetic "shells" in which the electrons are whirling at great speed. Thus we may find that just as the Solar System once provided a good analogy for explaining the nature of the atom, the latter may now serve as an excellent analogy for studying the true nature of the Solar System. We can do this, however, only when we are willing to accept the doctrine of the Ancient Wisdom which teaches that the physical globes that we can see are but the outer veils enshrouding invisible *beings* which are the worlds themselves, though they have donned mayavic robes which render them visible.

Following this preamble, let us now set before you the teachings concerning the Universal Solar System. Think first of our Sun with its family of planets as being representative of the manner in which all suns and planets function, and that they simply provide an instance of cosmic family life. We may study the universe as a

sevenfold or a ten-fold or a twelve-fold organism. For many reasons it is easiest to study the twelve-fold plan, and let us do so now. A study of *Fundamentals of the Esoteric Philosophy* by G. de Purucker will reveal that the planetary chains are composed of twelve globes each, of which seven are manifested, and five, unmanifested or formless. Their true nature can be understood by trained initiates only, yet we are assured that they are as real as is the visible planet that we see. They are inhabited, and in our age-long peregrinations we shall traverse them in proper order. Now, just as every planet is really twelve-fold, so is the sun composed of twelve solar globes. Suppose then that we were endowed with the vision of a seer, we should behold not one Mars, but twelve; not one Venus, but twelve, not one Saturn, but twelve, and in the daytime, not one sun, but twelve bright shining orbs. What a magnificent sight that would be! Yet even if that were so, we should not have stepped outside the realm of our own family, the sun and the well-known planets. In order to comprehend the Universal Solar System our vision should have to extend even farther, and then we should behold not one solar chain, but twelve solar chains; not nine planetary chains, but myriads of planetary chains, each group circling around its own central luminary. Our first vision of the globes would then pale into insignificance, for instead of apparently twelve suns, we should see what would seem to be one hundred and forty-four suns, for there are actually twelve solar chains, each with its twelve solar globes!

We have now to undertake a study of the Universal Solar System as a living, evolving entity, a God. Imagine the vastness of its thoughts and life! Imagine the stupendous growth and development that causes it to embody itself as a great cluster of suns and worlds! Think of that Divine Being as focusing its energies throughout the entire Universal Solar System, from its

highest Spiritual-Divine reaches, down to its most physical planes. This God, hierarchically constructed, sends forth twelve rays, parts of itself, which are Divine Beings in their own right, though of a somewhat less lofty caliber. These Divine Rays are the Gods that manifest through the twelve Solar Chains within our Universal Solar System. Eleven of these suns are invisible to us, the twelfth — our own — being visible; and of its Chain of globes one globe only can we see, the lowest; that which corresponds to our own Globe D of Earth.

Now, each of these Solar Rays, or Solar Logoi as they are also called, sends forth its own particular family of twelve rays, which again are Gods in their own right, though of still lesser grade than the Solar Logoi. These Lesser Gods are the Adi-Buddhas, the beings that embody themselves as the several planetary chains comprising the families of the twelve Suns. In our own case, we see many of the planets belonging to our Sun, though there are indeed a few that we do not see, yet they belong to our own little Solar System. With one or two exceptions, all the planetary chains that belong to other Suns in our Universal Solar System are invisible to us.

Now, each of these Adi-Buddhas, or Planetary Spirits sends forth its own family of Spiritual-Divine Rays, and these are the Dhyani-Buddhas who watch over the rounds of the several planetary chains. These again send forth their rays, who are the Dhyani-Bodhisattvas, who watch over the globes of the chain during the particular round that is watched over by their "sire." And these in their turn send forth their rays, who are the Manushya-Buddhas, who watch over the root-races on the various globes of the chain. So the Lord Gautama Buddha is the Manushya Buddha who watches over this fifth root-race. He is a child or ray of the Dhyani-Bodhisattva who watches over our fourth globe during this fourth Round. Therefore, this Dhyani-Bodhisattva is a ray or

child of the fourth Round Dhyani-Buddha, and he in turn is the ray or child of the Adi-Buddha who watches over this entire planetary chain during all seven rounds, and this last Divine Being is a ray of the Solar Logos who manifests to us through our Sun. This Solar Logos is a ray of the supreme Divinity who embodies itself as our entire Universal Solar System.

Thus we have set before you very briefly and without elaboration the hierarchical structure of our Universal Solar System. It is not unlike the House that Jack Built, wherein "This is the priest all shaven and shorn who married the man all tattered and torn who kissed the maiden all forlorn who milked the cow with the crumpled horn that tossed the dog that worried the cat that killed the rat that ate the malt that lay in the house that Jack built." Sometimes there is great wisdom concealed within the nonsense rhymes!

DR. DE PURUCKER ANSWERS QUESTIONS

WHERE AM "I"?

Question — Where on earth am I in this wilderness of swabhavas and individualities and I's and inner gods? Who am I and where am I? I am sevenfold, I have seven atmans or divinities cooperating to make me what I am, as chemical elements co-operate to make an entity; but which parts of this compound are that part of me which co-operate to say "I", that little unimportant part of me which is so aggressive? What part of me is I, and what part is not?

G. de P. — Man is all his sevenfold being, from the divine downwards through all intermediate stages, even to the body. All is the individual, so to speak. We may express it perhaps to our minds as a pillar of glory, a column of light extending from divinity to the physical man. Now, where our center of consciousness at any one time may be, I take it that is the part we for that time speak of as our I. The beast has it down here; we humans have it a bit higher; the Masters have it somewhat higher still; the Buddhas and Christs still higher, the divinities on a still higher stage of the scale. All the sevenfold being is himself, so to speak, and his I is that point upon which he dwells in conscious selfhood at the time.

Of course this does not change the other fact that just because there are several monads in man, so there are several actual monadic I's or egos. But this is another story.

ABOUT NIRVANA

Question — I have found a great deal of misunderstanding about the Theosophical and indeed the Buddhist teaching

of Nirvana. Could you please state something rather direct about your view of Nirvana that I could show my friends?

G. de P. — Yes, the Occident is full of misunderstandings about this subject of Nirvana. They think it is simply the idea that after all beings have evolved through a manvantara and have individually attained Nirvana, they as beings, and therefore *ex hypothesi* all Nature, then sink back into a dead uniform identity of consciousness.

This is absolutely and wholly wrong. One might as well ask oneself: What is the use of all the evolutionary effort of the Universe, and of its enormous multitudes of individuals, if they merely issue from homogeneity to fall back into it again? Nirvana is not one uniform thing or state for every monad. Nirvana means a state in which all the lower is washed out, or rather risen above, by the evolving armies of monads; but each monad, because it has gained individuality, reaches the Nirvanic condition of cosmic freedom as a god-entity, and every monad from the standpoint of individuality is therefore more strongly individualized than it was in the beginning of its cosmic evolution as an un-self-conscious god-spark, although of course Nirvana as a generalizing term means the attainment of the spiritual condition by all.

Take Devachan as an instance. Devachan does not mean that every ex-carnate monad has the same, the identical same, the absolutely identic, visions and dreams. Not at all! And just so is it with Nirvana. Nirvana means the washing out, or rather the rising above, all the differentiated and therefore crippling elements of the lower spheres. The *process* is the same for all; but the Nirvana is unique for each Jivanmukta or freed monad.

ANDROGYNOUS AND HERMAPHRODITE

Question — My study of *The Secret Doctrine* and other of H.

P. Blavatsky's writings leads me to infer that her use of the words "androgynous" and "hermaphrodite" has reference more to the duality of spirit and matter in the universe, rather than to a duality of sexes, masculine and feminine. Is this right?

G. de P. — Yes, quite right. Used by Theosophy, and as a rule by H. P. B., the word "androgynous" does not mean "double-sexed," except when very distinctly imbodyed beings are referred to. When it is used of entities of spirit, things obviously, entities obviously, which have no sex — for sex is but a passing phase of our earth evolution, for us and the beasts and the plants — it is used only to signify what in philosophy is called duality, the dual characteristic of manifested nature. This is sometimes called the positive and negative, sometimes the feminine and masculine, these latter two words being borrowed from human life, not meaning that one side of the universe is actually male and the other actually female, which would be utterly ludicrous, but merely meaning that at a certain point, at manifestation in fact, duality supervenes. That is all it means.

Of course when we refer to imbodyed beings, then it is perfectly proper to speak of mankind as androgynous, double-sexed, of which the as yet vestigial organs remaining in the physical frame are remnants out of that hoary past. So *androgynous*, when used of the Universe, signifies only the duality of spirit and matter, consciousness and vehicle, spirit and substance — using any pairs of words you like. And this androgynous or dual character of all the manifested worlds began indeed with Cosmic Buddhi or Maha-Buddhi; but actually only began to show itself on the plane where Fohat especially works, which is the plane of Cosmic Kama. Above that the two rays from the one ascend to reunite; and you have an example in yourselves: the individual ego, or the individual spirit, during its imbodyments breaks up into the

septenary constitution, one side of which you may call spirit, and the other side, the vehicular; one side consciousness and the other side vehicle; one side you may call will and the other side consciousness. It does not matter what you call them: duality is there.

But duality springs forth from the Atman, the fundamental basic egoity or Monad in the human being, and the human being simply copies in his constitution and structure what the universe is. According to the axiom of Hermes: "As it is above, so is it here below." Study here below what you see, thereby gaining a key to knowing the Divine. The Divine reflects itself in its distant offsprings in its distant vehicles — the imbodyed Universe as in man. The Atman reflects itself in the man feebly because of our imperfectly evolved vehicles; and evolution consists not in a growth of these spiritual realities to something greater, so much as a perfecting of the vehicles, such as mind, through which the divine ray passes so that these vehicles may continuously, as evolution proceeds in its refining and unfolding powers — so that the divine ray may ever shine forth in larger and greater splendor. That is what all evolution means: from within outwards. Just as the seed brings forth the plant, the plant the bud, the bud the flower, and the flower the seed: the seed, the plant, the bud, the flower, the seed, the plant, the bud, the flower. Nature repeats herself ceaselessly. She reimbodies, reimbodies, reimbodies.

PROOFS OF THE HIDDEN SELF — *William Q. Judge*

Through Dreams

The dream state is common to all people. Some persons say they never dream, but upon examination it will be found they have had one or two dreams and that they meant only to say their dreams were few. It is doubtful whether the person exists who never has had a dream. But it is said that dreams are not of importance; that they are due to blood pressure, or to indigestion, or to disease, or to various causes. They are supposed to be unimportant because, looking at them from the utilitarian viewpoint, no great use is seen to follow. Yet there are many who always make use of their dreams, and history, both secular and religious, is not without records of benefit, of warning, of instruction from the dream. The well-known case of Pharaoh's dream of lean and fat kine which enabled Joseph as interpreter to foresee and provide against a famine represents a class of dream not at all uncommon. But the utilitarian view is only one of many.

Dreams show conclusively that although the body and brain are asleep — for sleep begins primarily in the brain and is governed by it — there is still active a recollector and perceiver who watches the introspective experience of dreaming. Sorrow, joy, fear, anger, ambition, love, hate, and all possible emotions are felt and perceived in dreams. The utility of all this on the waking plane has nothing to do with the fact of perception. Time is measured therein, not according to solar division but in respect to the effect produced upon the dreamer. And as the counting of this time is done at a vastly quicker rate than is possible for the brain, it follows that some person is counting. In all these dreams there is a recollection of the events perceived, and the memory of it is

carried into the waking state. Reason and all the powers of intelligent waking man are used in dreams; and as emotion, reasoning, perception, and memory are all found to be even more active in dreams than in waking life, it must follow that the Hidden Self is the one who has and does all this.

The fanciful portion of dreams does not invalidate the position. Fancy is not peculiar to dreaming; it is also present in waking consciousness. In many people fancy is quite as usual and vivid as with any dreamer. And we know that children have a strong development of fancy. Its presence in dream simply means that the thinker, being liberated temporarily from the body and the set forms or grooves of the brain, expands that ordinary faculty. But passing beyond fancy we have the fact that dreams have prophecy of events not yet come. This could not be unless there exists the inner Hidden Self who sees plainly the future and the past in an ever present.

In Clairvoyance

Waking clairvoyance cannot now be denied. Students of Theosophy know it to be a faculty of man, and in America its prevalence is such as to call for no great proof. There is the clairvoyance of events past, of those to come, and of those taking place.

To perceive events that have taken place in which the clairvoyant had no part nor was informed about, means that some other instrument than the brain is used. This must be the Hidden Self. Seeing and reporting events that subsequently transpire gives the same conclusion. If the brain is the mind, it must have had a part in a past event which it now reports, either as actor or as hearer from another who was present, but as in the cases cited it had no such connection as actor, then it follows that it has received the report from some other perceiver. This other one is the Hidden

Self, because the true clairvoyant case excludes any report by an eye-witness.

Then again, when the clairvoyant is dealing with an event presently proceeding at a distance, it is necessary that a perceiver who recollects must be present in order to make report. For the brain and its organs of sight and hearing are too far off. But as the clairvoyant does report correctly what is going on, it is the other Hidden Self who sees the event, bridges the gap between it and the brain, and impresses the picture upon the bodily organs.

The Feeling of Identity

If recollection is the basis for the feeling of identity continuous throughout life, and if brain is the only instrument for perception, then there is an inexplicable series of gaps to be accounted for or bridged over, but admitting the Hidden Self no gaps exist.

We are born feeling that we are ourself, without a name, but using a name for convenience later on. We reply to challenge by saying "It is I" — the name following only for convenience to the other person. This personal identity remains although we fall asleep each night and thus far become unconscious. And we know that even when a long period is blotted out of memory by fall, blow, or other accidental injury, the same feeling of identity crosses that gap and continues the same identical "I" to where memory again acts. And although years of life with all their multiplicity of events and experience have passed, leaving but a small amount of recollection, we yet know ourselves as that unnamed person who came to life so many years before. We do not remember our birth nor our naming, and if we are but a bundle of material experience, a mere product of brain and recollection, then we should have no identity but constant confusion. The contrary being the case, and continuous personal identity being felt and perceived, the inevitable conclusion is that

we are the Hidden Self and that Self is above and beyond both
body and brain.

The Theosophical Forum

FROM COPERNICUS TO EINSTEIN (1) — *H. T. Edge*

This book deals with the problems of space, time, and motion; which, as the author says, are not merely academic questions, but interesting to man as contributing to an understanding of his place in the universe. He remarks, as others have done, that the work of Einstein marks a revolution in ideas similar to that brought about by Copernicus. And we would add here that it is possible that people are a bit one-sided in their criticism of the opponents of Copernicus, Galileo, and others. Ideas which are so familiar to us that we take them for granted, came upon the contemporaries of Copernicus like a vast earthquake, overwhelming not merely their ideas of celestial mechanics (a matter of little or no concern to the majority), but their entire outlook upon human life; uprooting every holdfast, and providing nothing instead except what looked like shifting sand. No wonder there was resistance; and, as to the form it took, those were rough days; when they roasted and pricked people they did it in gross physical form, not in subtle genteel refinement, as we do today.

The world picture which had existed for so many centuries before Copernicus and his compeers, was not so wrong as we are accustomed to think, says Mr. Reichenbach; for both pictures are but convenient representations of unattained realities; and the new views now being developed under the guidance of Einstein will make us hesitate before pronouncing Ptolemy wrong and Copernicus right. Rather we shall vision a pair of alternative theories superseded, and therein reconciled, by the new and more inclusive theory of Einstein, which shows the advantages of both the old theories. The Ptolemaic system, though kinematically workable, was not so simple as the Copernican; but the chief objection was the alleged dynamical inadequacy of the former.

This objection, however, as we shall see later, has now been overruled by Einstein.

The first part of this book deals with the Copernican view of the world; and though this subject may seem trite to some readers, yet, in view of prevailing ignorance among the many, it is by no means superfluous. It is so well and clearly expounded, that it will doubtless serve to provide for such readers a clearer idea of "what it is all about" than they have previously had. With Copernicus go Tycho, Kepler, Galileo, and Newton, each one contributing some element to the development of the theory. It would serve no useful purpose for us to linger over this branch of the subject, as we should merely be offering an inadequate summary in place of what is much better done in the book itself; to which accordingly readers are hereby referred. Of special interest is the section on the newest theories. This begins with a chapter on the (alleged?) Ether.

The theory of relativity, we are here told, has sprung from ideas of motion and gravitation; but also from ideas of electricity and light. The attempt to make light a mechanical phenomenon has failed: instead of explaining light by mechanics, we find that mechanics have to be explained by optics. Exposition of the work of Roemer and others, as to the velocity of light, follows; as also Newton's emission theory, and the wave theory of Huyghens and others. The phenomena of interference are explained, and adduced in support of the wave theory. But what is so strongly insisted on here is that we must not transfer familiar physical experience to regions where it does not necessarily apply. Our notion of a wave is founded on our experience of various kinds of waves on the physical plane, such as water waves, and sound waves in air or denser bodies. This makes us imagine that a wave must necessitate a "medium." But can there be a wave without a medium? We may find a better answer to this question if we call

the wave something else. We may call it an alternation, an oscillation, a rapid and incessant change of polarity. And after all that is all that optical phenomena justify us in assuming. Light has been first suspected and then proved to be an electrical phenomenon; and electricity is characterized by these changes of polarity. Thus we do not really need any ether; and in fact we have already replaced the words "medium" or "matter" or "fluid" by the word "field." A field is considered as the arena of forces, not as a container of physical substances: thus we speak of the magnetic field around a magnet, and the field of wireless waves spreading at right angles to the direction of a current. Two electrical fields can occupy the same space at the same time, points out the writer, as an instance of the fact that the properties of fields are not necessarily those of physical spaces or bodies. Electrical waves, he adds, are advancing fields, which should not be regarded as bound to a material medium. Light is only a small fraction of the total radiation of electricity from the sun. Light is not related to water waves or sound waves; the process is an electrical rather than a mechanical one.

The often quoted Michelson experiment, devised to detect, by observing interference, any relative motion between the earth and the (alleged) ether, is here described at length. Its negative result has been explained away by various devices; but Einstein's simple and direct inference is that there is no such thing as the ether; leastways, there is no fixed framework out in space, to which motions may be referred. Newton had assumed such a fixity as a basis for his mechanical system; wherefore he could speak of absolute motion. But in its absence all motion becomes relative, and we can only speak of bodies as moving relatively to each other. This always gives us a choice of two alternative explanations of a phenomenon, according as we may choose to regard either one of the two bodies as fixed, and the other as

moving. The importance of this will appear in connexion with the relativity of force.

Another conception of Einstein's is the relativity of simultaneity. In order to determine the simultaneity of events separated by a distance, we must know a velocity (that of light); and in order to measure this velocity, we must be able to judge the simultaneity of events separated by a distance. So we move in a vicious circle; we must assume one thing in order to determine the other. We have alternative explanations, both equally valid. Simultaneity is relative. Light may be used as a measurement of time, and even of space; a geometry of light may be constructed.

As to the relativity of the force concept, Ernst Mach is quoted. When we ride in a merry-go-round, the room seems to revolve, while we seem to be at rest. Yet we feel the effect of centrifugal force, pressing us against the outer arm of the seat. Newton had used this as a proof of his doctrine of absolute motion; for, said he, the centrifugal effect shows that it is the merry-go-round which is in motion, and not the room. But Mach showed that the two cases are not opposite; for, if they are opposite, we must regard not merely the room but the whole earth and even the stars as revolving around us. In this case the centrifugal force might just as well be attributed to a gravitational force. So that gravitation and centrifugal force are seen to be alternative explanations. What appears as the effect of inertia when we conceive the machine as rotating, becomes the action of gravitation when we conceive the machine as resting while the earth rotates around it.

What is known as Einstein's "box experiment" is described; by means of this he showed that a particular effect may be equally well explained as due to accelerated motion or to gravitation. It had been shown that curvature of light rays occurs in a case of

accelerated motion; hence we must infer that such curvature would occur in a gravitational field.

One important point is here stressed: the misunderstanding which many people, without scientific training, have as regards the time dimension. They imagine it to be a sort of fourth dimension of spatial extension, and worry themselves in striving to achieve an impossible visualization of such a thing. But the time dimension is still time, not space; it is not interchangeable with the three spatial dimensions. All that is meant is that, in order to fully specify an event, we must know its position in space and also its position in time.

In speaking of alternative explanations of certain phenomena, we do not mean to suggest that it is immaterial which we adopt. And it is common knowledge that Einstein's way of interpreting Nature has proved its pre-eminent value, not only by explaining things that older views could not explain, but also by enabling him to predict things which have since been verified by observation. As the writer says, Einstein, by pointing out arbitrary additions made by us in our description of Nature, has made objective truth stand out more clearly than ever. Instead of confusing he has clarified the situation. But it will take us some time to grow accustomed. Views of Nature have always to be based on certain postulates assumed as foundation for the erection of workable theories. When scientific investigation reaches a point where these postulates are no longer found adequate, we must dig deeper and assume a new set of postulates. We must strive to realize that the former familiar postulates were not universal laws, but only temporary conveniences. We must be ready to admit that customary ideas about space, time, matter, motion, etc., do not necessarily apply to those regions of the very great and the very small into which the scientific eye has penetrated. Experiment has proved that they do not, and all

attempts to explain the phenomena by the old postulates result in what we call "paradoxes." We can recommend this book to the attention of those wishing to clear up their ideas as to celestial mechanics and Einstein's work in particular.

The Theosophical Forum

EVOLUTION INTO THE HUMAN KINGDOM: III – *G. de Purucker*

I have been asked to speak again on the subject of how the monads pass from the animal kingdom to the human kingdom. The question is in general: Please again state just exactly the difference between the animal monads in the animals, and the animal monads in men. Well, really, I brought this upon myself, and I am undergoing the justly earned karman, because in my great desire to give to you something of what I have studied and learned, I made the statement long ago, both in speech and in one or more of my talks, that what the animals were on the Moon-chain became the humans on this chain, and that what our animals now on earth are, will become the humans in the reimpodiment of this our Earth-chain. Well, that started a lot of things! Very rightly so. I was very glad these discussions and talks did begin. I succeeded in helping to wake up the minds of some of our students. They were taking too many things for granted too easily. They want to examine them, study them. But evidently a great many do not understand, and I do not blame them a particle. It is not an easy point of the doctrine. I meant to bring this subject out because some of our Theosophists in the world today who do not belong to our Society, have been taught or have accepted the teaching that we humans were the apes on the Moon-chain, and this is all wrong. There were apes or beings equivalent to apes on the moon, when the Moon-chain arrived at its end, before our Earth-chain came into being, but those apes, as you will see in a moment, became human.

I fully expected these discussions to take place. I foresaw . I welcomed them. And whenever I was asked to explain, as someone told me, during nine years past I have just looked wise with a wooden face, and said, "Isn't that interesting! You keep on

studying, and you will find out." Because I wanted you to get the answers yourselves, as I knew perfectly well you will never understand anything, make it a part of your intellect, a part of yourself, unless you work out the answer yourself. What you are merely told is like what a child learns in school. If it is not especially interested, it will not remember. But I have been keeping tab on how these discussions on the animal souls in the two kingdoms have been going, and I have reached a point now where I think there has been sufficient honest-to-goodness hard work to entitle those who have worked hard to an answer, and these will be the only ones who will understand the doctrine.

Now then, the difficulty in understanding this thing, which is not difficult at all, but extremely simple, has been the fact, the common human failing (I have it, we all have it), that we have persistently confused monads with rupas, forms, bodies, so that when we speak of animals we immediately figurate sheep, elephants, horses, cats, dogs, or what not, forgetting that the real animal is the monad; and you know that I never said that the *animals* on the moon became the humans on the earth, unless I had preceded it with the explanation or statement: the animal *monads* on the moon become the humans on the earth. But which animal monads? The animal monads in the moon-men, or the animal monads of the animals on the moon?

Now for instance, we on this earth, each one of us, has an animal monad as part of his constitution. What difference is there between this human animal monad, and the animal monad of an elephant or a dog? What is the difference, the distinction, between the two? I will try to explain. In the first place, one kingdom does not turn into the next higher kingdom through evolution. When we speak of kingdoms, we mean kingdoms; and in Theosophy we have 10 kingdoms of beings, otherwise 10 classes of monads, otherwise again 10 life-waves. What are they?

We count them in this manner: 3 of the Elementals, the Mineral, Vegetable, Animal, the Human — seven; and the three dhyanchohanik kingdoms — making 10 classes of monads in all, 10 kingdoms, 10 different life-waves.

Not one of these kingdoms ever passes, through evolution or development or unfolding, into the next higher kingdom, never, because these kingdoms refer to the rupas which shelter the monads, embody them, enclose them, are the vehicles of the monads. For instance, the human kingdom is not actually formed of my body and yours, of all the human bodies on the earth. The human kingdom is formed of the monads. But it is these bodies of ours — do you understand me? — which in order to make a distinction we speak of as the rupa-kingdoms housing the 10 classes of monads. I wonder if that thought is clear? Not one of these kingdoms passes over into or becomes or evolves into the next higher. For instance, the animal kingdom never becomes a human kingdom. The vegetable kingdom never becomes an animal kingdom. The mineral kingdom never becomes a plant kingdom. The human kingdom never becomes the lowest of the three dhyanchohanik kingdoms. What happens? It is the monads as individuals which evolve, each one in its own kingdom until it learns all that kingdom can teach it. When as an individual monad it has become animalized or humanized or dhyanchohanized to the next higher, then at its next incarnation or embodiment it enters into the very lowest realm of the next higher kingdom as an individual monad. Is that clear? *But the KINGDOMS never as kingdoms become higher kingdoms.*

You will see the point of this, or at least I will try to make it clear. Every kingdom below the human is striving to become — no, pardon me, every monad in every kingdom below the human kingdom is striving upwards towards the human kingdom. The human kingdom is its objective or goal, their objective, their goal;

just as our goal as humans is to strive to become a member of the lowest of the three dhyan-chohanic kingdoms just above the human. But the human kingdom as such never *becomes* that lowest dhyan-chohanic kingdom. Why? Because Nature needs these kingdoms where she has them. They are as it were houses of life for the peregrinating, evolving monads to live in, to pass through, to graduate from and enter the next house of life or kingdom. Is that thought clear? Nature needs these through eternity. That is why long after we human monads shall have left the human kingdom and evolved up to become Dhyan-Chohans of the lowest dhyan-chohanic kingdom, the human kingdom will still remain containing monads or individuals then using the bodies kept alive by those new incoming individuals from what is now the animal kingdom. Don't you see? If the human kingdom all evolved to become Dhyan-Chohans, there would be a gap between the Dhyan-Chohans and the beast. The monads go up step by step, kingdom after kingdom.

What makes these kingdoms in nature? The records in the astral light. There is a very important contributory thought, and it explains a lot of questions I am going to discuss here. From immemorial eternity, as far as I know, there have always been, at least in our solar system and probably in our galaxy, 7 or 10 or 12 classes of monads or kingdoms or life-waves for our chain; and they have been kept going as these kingdoms because of new monads coming in from the lower kingdom, graduating into our kingdom, and human monads graduating out from our human kingdom into the dhyan-chohanic kingdom. So the kingdoms remain because the 10 classes of monads remain through eternity. It is the monads which evolve.

The question comes in — and this is incidental — don't the bodies of the monads in which the monads live when they embody in the bodies also improve? They do but with almost excessive slowness.

Why? Because the astral molds in the astral light have been improved from aeons and aeons in the past. I have no idea how far past — you might say from eternity. With each cosmic manvantara those astral molds in the astral light are slowly changing and improving. So that the kingdoms themselves, although remaining always the same kingdoms, are through the eternities themselves slowly rising, but with immense slowness; whereas the monads evolve much faster.

Now, don't confuse another thought here. There are certain rapid variations in the kingdoms themselves which are not permanent however. As for instance, take a human frame today. It is a far cry in its present relative grace and symmetry and dignified carriage to the first human beings of the Third Round or even the human beings of the Third Root-Race in this Round. If you saw them today you would say: Well, what ape-like bodies those are, they are positively ape-like. But there is not a drop of ape-blood in them. Don't get that idea. We use the term ape-like because the apes have a certain amount of human blood in them from that time; and evolving very slowly, not as fast as we humans have in shape and symmetry and beauty of form, they still contain what we call, just to give it a word, an ape-like picture of their human part-parents.

But mark you, the humans on the Moon-chain at about the same period where we are now, looked pretty much like what we now look like, and they had a time when they were rather ape-like in appearance, but with not a particle of ape-blood in them. I do hope I make this clear, because it has taken fifty years for Theosophists to understand the distinction.

Now what does this mean? It means that because the rupa-kingdoms evolve to betterment with such exceeding slowness, they nevertheless have spurts, upshootings, of great improvement

which cannot hold. They drop back, they degenerate and go back. I am talking of kingdoms now, not the monads which incarnate in those kingdoms. I am talking of the rupa-kingdoms. Why? I told you. The fluid stuff forming our bodies, is compelled by nature to follow a certain line of development partly from inherent swabhava, but partly because of the mold in the astral light.

Now then, what possibility is there of reconciling what I just told you with the statement I made, and which you will find in H. P. B., that the animals on the moon became the humans on this chain? That our animals with us now will be the humans in the next Earth-chain, the child of this chain? The reconciliation lies in the fact that when you hear a statement of this kind, you should bring to its examination all your studies of Theosophy. If you had brought together other things that H. P. B. and I have stated, you would not have been bothered.

I will try to explain from some other angle. The human constitution — and indeed the constitution of an entity imbodyed in any kingdom, the animal kingdom let us say, or in the dhyanchohanik kingdom above ours, every such entity — is sevenfold. But of the seven principles or monads from any such constitution like our human, some are expressed with relative fulness and others are as yet largely unexpressed; and it is this difference which makes the kingdoms. Intricate? Fascinating to those who have got the key. Thus the animals have everything in them that a man has. They have a divine monad, a spiritual monad, and a human monad and an animal monad and an astral-vital monad and even what I have called the physical monad; but the monads in the animal kingdom have thus far evolved only up to the animal monad. That is why they are in the animal kingdom; they are at home there. When in the future the monads in the animal kingdom, the highest amongst them, shall have begun to yearn upwards towards the human monad, in other words begun to be

humanized, the human capacities, elements, qualities, swabhava, in the animal, will have begun slowly to show themselves. The animals will begin to feel no longer at home in the animal kingdom, in these lower rupas; and as the process of slow humanizing continues, as the animal monads rise through experience; they will leave the animal kingdom and be attracted, psycho-magnetically, to the very lowest bodies in the human kingdom just above on the scale of life.

What happens? These monads formerly manifesting in the animal kingdom, in animal bodies, are now sufficiently humanized to enter into the lowest human bodies of savage barbarians, or, especially in the beginning of this Round on this Globe D, of beings who are far lower than the lowest savage we have today — but human nevertheless. What happens? They enter these human bodies as the animal monads there. There is your answer, there is your key. Similarly when a human being aspiring up to the dhayan-chohanic monad, to the spiritual monad, has reached a point where he is almost above humanity, growing out of it, when his yearnings are of spirit, higher, higher, there comes a time when incarnation among humans no longer is adequate. He is dhyhanizing himself, this monad, and the attraction to the human kingdom will some day stop. There will be no further pull of incarnation in bodies of human beings. The next will be in the lowest of the dhyan-chohanic kingdoms. Is that thought clear?

So then, what is the difference or distinction between the animal monads in animals and the animal monads in men? I have told you. When the animal monad in the animal kingdom has humanized itself through evolution sufficiently no longer to feel attracted in incarnation to the animal kingdom, it will seek imbodiment psycho-magnetically in the very lowest specimens of men, and become the animal monad in men. Thus you see the

unity of universal nature and her marvelous variety.

Now we will take the specific aspect of the moon-men and the moon-animals. You have been told many times that all kingdoms lower than the human will show a tendency to die out as round the 4th becomes round the 5th; still more tendency to die out as round the fifth becomes round the 6th; so that by the time the 7th and highest and last round is reached, the animals will have practically died out, the reason being that they cannot make the grade up the ascending arc. Their monads gradually die out and go into Nirvana, where they will wait until the next chain-imbodiment, and during the Round 1, 2 and 3 of that next chain-imbodiment. Thus the animals who could not make the grade up the Sixth and Seventh Rounds will have a chance again. Then they will come in as animals again. Nature will prepare the way through the elementals and the architects. Bodies will be there for them. They themselves will help to form the bodies in the animal kingdom. These are the animals who could not make the grade.

Now the same thing happened on the moon. Yet during the Seventh Round, whether on the moon in the past or in our own Seventh Round in the future, there will be exceptions in the animal kingdom. What are these exceptions? The apes, possibly the very highest of some of the simian monkeys too. The apes at the end of the Seventh Round will just have touched the human stage. The same thing happened on the moon. There the animals died out before the lunar Seventh Round was reached, except a few who just reached the human stage, just ready to enter the human kingdom when the Seventh Round was closing. There were millions of them, but compared with the billions and billions of the life-wave for the kingdom, it is a mere handful. Yes, these animals on the moon could make the grade and did. They just reached the lowest bottom of the next kingdom when the Seventh Round was reached, and became the lowest human

beings on this new chain. How about the human animal monads in the Moon-chain? These were growing all the time more and more humanized and at the end of the Seventh Round on the Moon-chain they had become men; and the lunar men, the Moon-men at the end of the Seventh Round had become Dhyan-Chohans of the lowest dhyan-chohanic kingdom. Who were these moon animal monads? We were they. And that is what I meant when I said the animal monads which reached the tip of the human kingdom on the Moon-chain became the humans on this chain. Do you see? The kingdoms do not rise. Nature keeps them there, each on its own level, for the monads coming up from below, as monads, reaching up to the spirit lunar chain as it were. Spirit yearns to help earth, earth yearns upward to spirit.

So you see, marvelous picture, although the kingdoms remain the same, as it were retain the same place on nature's Ladder of Life, the monads come down through them and then on the upward arc sweep up through the kingdoms. Thus with us. Our animal monads are the monads from the animal kingdom which had become sufficiently humanized no longer to be animal animal monads but human animal monads. So when our Seventh Round shall have come, the animal monads in us will be the humans of the next imbodiment of the the chain. We humans by the end of the Seventh Round, those of us who make the grade, will have become dhyanized, chohanized if you wish, and shall have become Dhyan-Chohans at the end of the Seventh Round.

Now then, next thought. What were the manasaputras in this our present chain-imbodiment who incarnated in us human beings in the Third Root-Race on this Globe during this Fourth Round and made us thinking men? We were in the human kingdom as bodies, but I am now talking of monads. Who were the manasaputras who awaked us intellectually? They were those who had attained Dhyan-Chohan-ship on the moon at the end of

the Seventh Round, and we were then their animal monads. They found us out again, they sought us out again, our higher selves as it were waiting for them, waiting until our bodies were ready, until the human rupas were sufficiently subtil, flexible, to receive the intellectual fire. Then they incarnated in us. If you have read H. P. B.'s *Secret Doctrine*, you will now see why these manasaputras could not incarnate before that time. No fit bodies for us. *They* were ready. The *bodies* were not ready. No fit rupas, no fit bodies, for us, they said. Those bodies had to become more subtil, more delicate, refined, more proper to receive the holy intellect of the manasaputras enlightening the latent mind of these humans, of us. Then when the time came, there came the "descent" as we call it, the descent of the manasaputras. Men began to think. And just let me add here, there was another class of manasaputras far higher than anything we as individuals have been connected with, who started this wonderful work of putting the flame of mind in those early human races. They were even Dhyan-Chohans on the Moon-chain. Marvelous picture!

So when the manasaputras gave us mind, it was merely our own Dhyan-Chohans, the moon-men become Dhyan-Chohans, and we their animal monads now become humans. It was their duty to enlighten us again, to give us back our mind, to awaken it. So shall we at the end of our Seventh Round become Dhyan-Chohans and be the manasaputras to the humanity of the next round who are now our human animal monads. Have I made the thought clear?

And now I have almost closed. You have heard of moments or times of choice when the great decisions must be made. One took place at the middle of the Fourth Round. Do you realize what happened then, when the moment came, when the monads were tested to see if they could pass? It was easy enough to run downhill, but could they pass that dangerous point and begin the

upward arc? Millions, hundreds of millions, billions, succeeded in our human kingdom, in the animal kingdom. There was enough in them of upward aspiration to take them past the danger-point of the bottommost line and to start them going upwards. But do you know that hundreds of millions of monads could not pass over the danger-point? They were what H. P. B. called "lost monads." They perished for the remainder of this manvantara. This merely means that they could not make the grade, had not evolved sufficiently, and went into Nirvana. Out of it they will not reawaken until the psycho-magnetic call comes to them in the next chain to come into imbodyed life. The animal kingdom will be then waiting for them, and the monads will come into this animal kingdom. The animal kingdom does not move up except with almost infinite slowness, gradually improving; but the monads are always there.

There will be another grave moment of choice at the middle of the Fifth Round, and that for us humans will be our great transition. In the middle of the Fifth Round will you and I be sufficiently dhyanized to be able to move up towards the beginning of the Sixth Round? Those who are becoming universal enough to become attracted to Dhyan-Chohanhood will make the grade. Those of us who will not have become sufficiently universalized to join the kingdom of the Dhyan-Chohans will perish for the remainder of this manvantara, in other words go into a Nirvana and lose billions of years. That is what it means, the losing of billions of years.

Think what it means for these millions of monads who perish then. Look at the time they lose. Two billion years before our Seventh Round is ended. More than 4 or 5 billion years more before our new chain-imbodiment begins. Between 6 and 7 billion years, precious time lost. That is why the Masters are pressing all the time. Now is your opportunity to become

universal in your sympathies. Do anything you can do to be more spiritually human. Aspire upwards no matter what the attractions are here below. That does not mean lose your human sympathies. You will be standing in your own way if you think that, because your human sympathies are lofty; but it means to make them less selfish, more spiritual, raised, so that when the danger-point comes, you will pass up.

The Theosophical Forum

OUR MYSTERY-SELVES — *Irene R. Ponsonby*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

The world today is full of men and women who, often in the midst of starvation and ruin, endure the maximum sorrow and suffering. How do they endure it? Have they tapped some little understood source of strength and comfort in themselves? Are they conscious of a presence, protective and guiding, and ever near? Or do they in bewilderment and despair wonder Why? What? How? At such times, being bereft of all else, we come face to face with ourselves and the realities of our humanhood. It is then that we become aware of the forces at work in us, of the wonder that is man!

It is, generally speaking, the temptations and delinquencies of our natures that claim our attention most; nevertheless, that there is a source of protection, of guidance, active in our lives, most people are ready to admit. The case-records are too numerous to be refuted. These show that in moments of crisis or extreme danger, individual men and women have been influenced, aroused, and even instructed so that they have been able to save not only themselves but entire groups. Premonitory warnings so powerful that they cause the cancellation of carefully made plans and arrangements, such as railway journeys, are quite ordinary incidents. For every group destined for violent death in an outbreak of panic, there is a plain man or woman who, guided by some inspired inner direction, proves himself or herself heroic. There is no denying that we are all — some more than others — influenced either by a Guardian Angel or an Evil Genius: and

what do we really know about either?

Psychology has told us much about the effect of mind upon body and body upon mind; of inhibitions that are as varied as they are numerous; of behaviorism, in short. But this science of the soul of man is based almost entirely on a study of the ailing, the mentally unbalanced, and the physically subnormal individual. Hence even psychology's description of man's evil genius is distorted, and lacks the subtilty to tempt any but the unhappy. The study of psychology is valuable to the extent that it treats of the intermediate nature of man, that part which is the pilgrim-soul of Earth, learning and developing through active existence here. It tells us somewhat of the personalized and localized expression of spirit in the psycho-vital-physical realms. But that is far from being the entire picture.

Modern psychology will take its rightful place when it recognizes the Soul of man as a potentially divine offspring of his Spirit that, wandering far from its divine source, has become chilled — the actual meaning of the Greek root from which the word psyche derives — chilled by attraction to and eventual absorption in the relatively unevolved matter of the astral and physical planes. (1) Psychology will become a vital force when it teaches that stronger than the thralldom of the psycho-physical is the nostalgia of the soul for its spiritual home, and that the majority of psychological ills arise in the conflict between the two. The conflict has been diagnosed by psychoanalysts, but only the most advanced men recognise its cause and few even of these have the requisite knowledge to help their patients make the necessary adjustment.

Today members of the Christian ministry are adding psychological healing to their work. This would seem a step in the right direction, the direction that logically should lead to pneumatology or the study of the whole man — the sevenfold

expression of divinity in the healthy, happy, intelligent human being. And this is where the Theosophical teachings are of supreme importance.

Man, according to the age-old teachings promulgated by Theosophy, is a composite being. He is a ray of divinity seeking self-conscious expression in the material worlds. The divine ray accomplishes this by focusing or stepping down its force through seven principles on four planes of manifestation, i. e., the divine-spiritual, mental, vital-astral, and physical, or that of Atman-Buddhi, Manas-Kama, Prana- Linga-sarira, and Sthula-sarira. The seven principles are conjoined, in the paradigm on the following page, to correspond to the more familiar threefold division of St. Paul.

This tabulation of the constitution of man is adapted from the one used by G. de Purucker in *The Esoteric Tradition*, (pp. 958-9), and deserves thoughtful consideration.

	<i>Higher Duad</i>		
Atman	The Self		Spirit
Buddhi	The Spiritual Ego		
	<i>Intermediate Duad</i>		
Manas	Mind		Soul
Kama	Desire		
	<i>Lower Triad</i>		
Prana	Vitality		Body
Linga-sarira	Astral Body		
Sthula-sarira	Physical Body		

The Higher Duad is the divine-spiritual man. It consists of Atman, the indivisible divine flame or spark, the focus of universal consciousness for man, which manifests through its vehicle,

Buddhi. Buddhi is the discriminating principle, the seat of inspired judgment, of intuitive understanding and compassion. It is inseparable from and the radiant vehicle of The Self, and it becomes the source of that spiritualized individuality which association with aspiring mind brings to it.

Without mind, desire, vitality, and some form of body, there can be no manifested being: in the case of man, no vital-physical entity or pilgrim-soul evolving in an Earth-cycle of life. So the radiance of the Higher Duad projects itself in manifestation through the Intermediate Duad to the Lower Triad.

The mental plane is the realm of marked duality, for mind either turns toward the spiritual to become aspiring mind or Buddhi-Manas, or contrariwise, lured by the lower psychic forces, and the attraction of the material, the Intermediate Duad sinks to the state of a desire-deluded human animal. This condition is that of Kama-Manas. Thus we have another division, viz.:

Atman	The Self	
Buddhi-Manas	Aspiring Mind	The Guardian Angel
	or	
Kama-Manas	Deluded Mind	
Prana-Linga-sarira	Vital Astral Body	The Evil Genius

The physical body is the container of the five-principled man and the relatively responsive instrument through which either the angel or the evil genius expresses itself. Furthermore, this division is interesting because the line separating aspiring mind from its deluded counterpart marks the distinction between good and evil for the human kingdom. Good, for man, is all that measures up to the standard of our aspiring intellect, our impersonal interests and yearnings, our creative dreams, our dignity as citizens of the world and sons of the Divine. On the other hand, all that is tinged with personality, self-seeking, and

self-centeredness, all that isolates and demeans our status is evil for man. One way leads to inspiration, nobility, kinship with the gods; the other, to degradation of consciousness and misery.

As we continue our consideration of composite man, our perspective of the seven principles takes on breadth when we realize that each of the principles is itself a seven, composed of all the other elements with its own element dominantly and ascendantly active.

Desire and Vitality can readily be perceived as active in every principle, for we are just as conscious of distinctly spiritual, mental, psychic, and physical desires as we are of energy as it works through our entire constitution. It is a little more difficult, however, to cognise body as other than physical, and yet all manifested things must possess a body of some kind. Is not a star the luminous body of a spiritual entity? And how about ideas and thoughts? Surely they find imbodiment in the words that grouped together form a sentence. These are examples of divine-spiritual and intellectual bodies. Then there are the psychic imbodiments of desire, the Kama-rupa, and that of the degraded mind combining with intense physical craving to form the spook, or elementary. If we acknowledge them, are we not also prepared to accept the presence within our very selves of an angelic Being?

Buddhi-Manas, radiant with the glow of Atman, is just such an angelic presence, the Spiritual Self of us. It is also the Reincarnating Ego, the carrier of Karman, and the storehouse of all individualized knowledge possible to us. Dr. de Purucker calls this Guardian Angel within us, Chitkara — a Sanskrit word meaning Thought-Worker. He classified it as a Dhyani-Chohan, one of the host of Lords of Meditation, a denizen of the mystic *chidagnikunda* or hearth-fire of thought lying neglected within us.

The consciousness of Buddhi-Manas, and therefore the scope of

its activity in us, ranges from the inspiration of the great poets, philosophers, and men of genius and the intuitions of fine men and women, to the selfless compassion of those who form the Guardian Wall protecting humanity from cosmic evils, and beyond.

The Guardian Angel in our constitution is a mystery-self only because for ages its presence has been ignored or repudiated. In very truth it is closer than clumsy hands, untrained minds, and unruly tongues. Its voice is the soundless inner direction deserving of our wholehearted allegiance; and yet, often it is only when we know the pangs of conscience for some thoughtless act that we realize one part of us was wiser and stronger and knew better — or else, were there no higher standard inherent in us, why the remorse?

Therefore the problem for all earnest men and women is how to know the Spiritual Self within them, how to associate themselves with it so that hourly and daily they may know its intimacy and feel its beneficent influence. How can this be achieved?

To begin with we should try to cultivate the attitude of perfect confidence in the law of our own being as it flows forth from the Universal Heart of Being through the Spiritual Self of us into our every-day existence. In this way we attune our understanding to the impersonal center of choice in us, the center that decrees its destiny for the human soul. This is the way of self-fulfilment. It is also the way to peace and health, for to such understanding there can be no sense of frustration, or conflict, no inexplicable antagonisms. By it we have the vision that explains the suffering we feel to be unmerited, and discriminates between the wrong done and the one involved in the doing. This attitude can be brought about when we believe that whatever *is* in our lives, from greatest to least event, is best for us. Then we are associating

our human judgment with the illumined discrimination of Buddhi-Manas as it partakes of the omniscience of the Divine Self. Thus we shall be ready to meet with eager anticipation all the experiences of our lives; we shall have cleared our vision and prepared ourselves to accept the challenge or to benefit by the opportunity destiny holds out to us.

Vanity, discouragement, despair, exile us from guidance and protection just as much as pride, a sense of superiority, and all the other forms of selfishness. The vaunted sophistication of our age must give place to recognition of and adherence to the unerring laws of the Universe. This is no negative state of acquiescence or line of least resistance, but a determined effort toward self-improvement which W. Q. Judge expressed so well when he wrote:

"Be what you love. Strive after what you find beautiful and high, and let the rest go! Harmony, sacrifice, devotion; take these as keynotes. Express them everywhere and in the highest possible way."

The Theosophical Forum

"NEVER MORE ALONE" — *J. M. Prentice*

It is a commonplace in the lives of those who are seeking the life of service, who are training themselves to tread the Chela path, that there come days and weeks when the light dies away, when a sense of isolation and loneliness wells up, even to the point of despair. Life seems emptied out of all inspiration; duties that were once gladly performed become tasks that demand every ounce of endeavor, every bit of driving force that can be mustered; when a sense of incompleteness pervades every unfinished undertaking. The disciple is overwhelmed with frustration:

Amid the ruins of this thing undone

I sit and say CUI BONO till the sun

Sets, and a bat flits past the sun.

In such a period there is only one thing to do, one possible course to follow — to hold on, recognising that the experience is temporal, that for the time being the disciple has ceased to live consciously in the Eternal. Being temporal it will pass, as it must, and the inner light will return, the old joy in service will once more gladden the heart.

This "Dark Night of the Soul" has been recognised by mystics and occultists throughout the ages. It is referred to in many scriptures. Some teachers have suggested a subtle correspondence between it and the rise and fall of the sap in plant life, or the ebb and flow of the ceaselessly moving sea. Others have hinted that it is a prophecy of the much greater experience that pertains to Initiation, when everything that is individual and which has been built up over ages of physical time must be abandoned — when even the Karana-Sarira is renounced and only the Divinity that is

the innermost core of being remains. Emerging from it the disciple can say with truth:

Never more

Alone upon the threshold of my door

Of individual life shall I command

The uses of my soul. . . .

Actually, in the lives we live, it is an indication that the disciple is still under the sway of the "Pairs of Opposites." When the taking of joy in service obtrudes upon the Mind the person concerned should take himself to task and enquire if he be not extracting a *personal* pleasure in giving himself to such service. Is the joy in the work? or in the doing of it — *by himself*? Equally when the dark night seems to be impending or has descended it should be remembered that it is a natural reaction, and comfort extracted from the thought, or better still — the knowledge that it is a period in which real inner growth can be attained, if the disciple will continue with his outer work quite unconcerned, while at the same time utilising every spare moment for the contemplation of things already accomplished both by himself and his predecessors on the same narrow way, of triumphs that have been snatched from defeats, of routs that have been turned into victories — and impersonally endeavor to assimilate these things into himself, so that both he and they may be dedicated to further service in the future, dwelling on the thought: "Wonder of Saints that are; splendour of Saints to be!"

Let any such who may be afflicted try to emulate that spirit which is so magnificently shadowed forth in the final clauses of the Dedication which William Q. Judge wrote when he had completed his recension of the Yoga-Sutras of Patanjali. The writer of these lines, a very slow traveller on the Narrow Way, who is often weary of well doing, whose work brings him into touch with

many seamy sides of life, even to the very verge of despair, gladly admits drawing from it new courage and a fresh inspiration, not once but many times.

One other thought suggests itself: there are many other travellers on this same Path, could we but recognise them, who would gladly share with us what they have garnered in the fields of the Spirit. It is tragic that we are not able to display some banner whereby we might be recognised by them. Equally they may be in the throes and at a time when our experience might be just what they require to nerve them in the fresh endeavor. Let us keep our spiritual eyes open for all such fellow travellers, because in their company we forget the temporal, personal dimension and in sharing what we have with them the world becomes an Emmaus and the bread which is broken is a symbol of those who are *renatus in Eternum*, reborn into Eternity.

The Theosophical Forum

THE THEOSOPHICAL MOVEMENT AND THE T. S. — *Abbott Clark*

We are all familiar with the words "The Theosophical Society is an integral part of a movement which has been active, whether publicly known or unrecognised, in all ages and in all countries." This Movement, I take it, is the active expression on our plane of the Solar Logos. It is the divine-spiritual Word (Logos) which ever seeks to become flesh, that is, to embody itself as the living spiritual power in the lives of men. The hierarchy of the Masters of Wisdom is its living embodiment and the transmitters of the light of the Logos to the hearts and minds of men. It is both immanent and transcendent. Transcendent because, like the Monad in its parent Star, it remains eternally in its place, while its radiance is immanent in all living things; and without this immanence all manifested things would vanish away.

In the *Bhagavad-Gita*, Chapter IV, Krishna, who represents the Logos, says:

Even though myself unborn, of changeless essence, and the lord of all existence, yet in presiding over nature — which is mine — I am born but through my own *maya*, the mystic power of self-ideation, the eternal thought in the eternal mind. I produce myself among creatures. . . whenever there is a decline of virtue and an insurrection of vice and injustice in the world; and thus I incarnate from age to age for the preservation of the just, the destruction of the wicked, and the establishment of righteousness.

How well this describes the Theosophical Movement and its vehicle for this age, the Theosophical Society. As long as the members remain true and loyal to the Masters of Wisdom and Compassion who presided at the Society's birth and the Leaders

who were their Messengers, the animating spiritual power of the Movement will vitalize the Society.

In H. P. Blavatsky's day and ever since, this immanence has often been called "the Lodge Force" because it is the ever-nourishing and inspiring Something which gives vitality to all Theosophical literature and all sincere Theosophical work. It is the sustaining power in the heart of every sincere Theosophist.

As the Monad embodies itself from age to age so the Theosophical Movement seeks embodiment, under cyclic law, in the hearts, minds and lives of men. Thus we have the various religions and spiritual philosophies. These embodiments have different names and characteristics, use different forms for expressing eternal truths, each form suited to the psychology of the age and people among whom it seeks expression. The different World Teachers were not supernatural but were highly evolved men — men in whom the spiritual faculties, more or less latent in us all, were developed to the full so that they could say, as Jesus did, "I and my Father are one," *i. e.*, He had become one with his Monad, his Inner-god.

Suppose a party of us toured the grand scenes of the state of California and each kept a diary. The diaries when read would be very different, yet anyone knowing the State would recognise all the places. So, one who has the Theosophical key to their meaning recognises the same fundamental Truths underlying the different faiths of men. Basic to and immanent in every form is a fundamental REALITY. Something as true and as real as air and sunshine. Hero-tales, mythologies, religions and the great spiritual philosophies, are different ways of telling it. In this age of scientific regnance and spiritual dormancy the same ageless Truths are given in a semi-scientific form suited to the mind of the age and best calculated to keep alive in men their spiritual

intuitions and to arouse their higher faculties.

In these trying times let us remember that convulsions, whether in human life or in nature, are abnormal conditions that pass away leaving the convalescent patient in need of nourishment. Theosophy is that nourishment which prostrate humanity in its extremity needs. But Theosophy without living Theosophists to give it voice and concrete expression is like currency in bank vaults but not in circulation. To use another illustration: Theosophy is like the snow on the mountains. It slowly melts and the water sinks away leaving dry sandy river beds while the plains and valleys dry up like parched deserts. So it was in Southern California seventy-five years ago. Then the pioneers built diverting dams and reservoirs and from these vast irrigation systems carried the life-giving waters to orange orchards and rose gardens. Now there are beautiful homes and happy people where once only sheep and cattle browsed throughout the long dry summers.

Theosophists are the pioneers, and the Headquarters and the Societies throughout the world are the reservoirs, while the members are the zanjeros — the men who keep the pipes and ditches in order and the life-giving waters flowing so that the seeds of truth and beauty our Teachers have sown may grow, blossom and bear fruit in the lives of men. Such is the Movement, the T. S. and our responsibility.

The Theosophical Forum

MEMORY IN THE DYING (1) — H. P. Blavatsky

We find in a very old letter from a MASTER, written years ago to a member of the Theosophical Society, the following suggestive lines on the mental state of a dying man: —

"At the last moment, the whole life is reflected in our memory and emerges from all the forgotten nooks and corners, picture after picture, one event after the other. The dying brain dislodges memory with a strong supreme impulse; and memory restores faithfully every impression that has been entrusted to it during the period of the brain's activity. That impression and thought which was the strongest, naturally becomes the most vivid, and survives, so to say, all the rest, which now vanish and disappear for ever, but to reappear in Devachan. No man dies insane or unconscious, as some physiologists assert. Even a madman or one in a fit of *delirium tremens* will have his instant of perfect lucidity at the moment of death, though unable to say so to those present. The man may often appear dead. Yet from the last pulsation, and between the last throbbing of his heart and the moment when the last spark of animal heat leaves the body, *the brain thinks* and the Ego lives, in these few brief seconds, his whole life over again. Speak in whispers, ye who assist at the death-bed and find yourselves in the solemn presence of Death. Especially have ye to keep quiet just after Death has laid her clammy hand upon the body. Speak in whispers I say, lest you disturb the quiet ripple of thought and hinder the busy work of the Past casting its reflection upon the veil of the Future. . . ."

The above statement has been more than once strenuously opposed by materialists; Biology and (Scientific) Psychology, it was urged were both against the idea, and while the latter had no

well demonstrated data to go upon in such a *hypothesis*, the former dismissed the idea as an empty "superstition." Meanwhile, even biology is bound to progress, and this is what we learn of its latest achievements. Dr. Ferre has communicated quite recently to the Biological Society of Paris a very curious note on the mental state of the dying, which corroborates marvelously the above lines. For, it is to the special phenomenon of life-reminiscences, and that sudden re-emerging on the blank walls of memory, from all its long neglected and forgotten "nooks and corners," of "picture after picture" that Dr. Ferre draws the special attention of biologists.

We need notice but two among the numerous instances given by this Scientist in his *Rapport*, to show how scientifically correct are the teachings we receive from our Eastern Masters.

The first instance is that of a moribund consumptive whose disease was developed in consequence of a spinal affection. Already consciousness had left the man, when, recalled to life by two successive injections of a gramme of ether, the patient slightly lifted his head and began talking rapidly in Flemish, a language no one around him, nor yet himself, understood. Offered a pencil and a piece of white cardboard, he wrote with great rapidity several lines in that language — very correctly, as was ascertained later on — fell back and died. When translated — the writing was found to refer to a very prosaic affair. He had suddenly recollected, he wrote, that he owed a certain man a sum of fifteen francs since 1868 — hence more than twenty years — and desired it to be paid.

But why write his last wish in Flemish? The defunct was a native of Antwerp, but had left his country in childhood, without ever knowing the language, and having passed all his life in Paris, could speak and write only in French. Evidently his returning

consciousness, that last flash of memory that displayed before him, as in a retrospective panorama, all his life, even to the trifling fact of his having borrowed twenty years back a few francs from a friend, did not emanate from his *physical* brain alone, but rather from his spiritual memory, that of the *Higher Ego* (Manas or the re-incarnating individuality). The fact of his speaking and writing Flemish, a language that he had heard at a time of life when he could not yet speak himself, is an additional proof. *The Ego is almost omniscient in its immortal nature.* For indeed matter is nothing more than "the last degree and as the shadow of existence," as Ravaisson, member of the French Institute, tells us.

But to our second case.

Another patient, dying of pulmonary consumption and likewise reanimated by an injection of ether, turned his head towards his wife and rapidly said to her: "You cannot find that pin now; all the floor has been renewed since then." This was in reference to the loss of a scarf-pin eighteen years before, a fact so trifling that it had almost been forgotten, but which had not failed to be revived in the last thought of the dying man, who having expressed what he saw in words, suddenly stopped and breathed his last. Thus any one of the thousand little daily events, and accidents of a long life would seem capable of being called to the flickering consciousness, at the supreme moment of dissolution. A long life, perhaps, lived over again in the space of one short second!

A third case may be noticed, which corroborates still more strongly that assertion of Occultism which traces all such remembrances to the thought-power of the *individual*, instead of to that of the personal (lower) Ego. A young girl, who had been a sleep-walker up to her twenty-second year, performed during her

hours of somnambulant sleep the most varied functions of domestic life, of which she had no remembrance upon awakening.

Among other psychic impulses that manifested themselves only during her sleep, was a secretive tendency quite alien to her waking state. During the latter she was open and frank to a degree, and very careless of her personal property; but in the somnambulant state she would take articles belonging to herself or within her reach and hide them away with ingenious cunning. This habit being known to her friends and relatives, and two nurses, having been in attendance to watch her actions during her night rambles for years, nothing disappeared but what could be easily restored to its usual place. But on one sultry night, the nurse falling asleep, the young girl got up and went to her father's study. The latter, a notary of fame, had been working till a late hour that night. It was during a momentary absence from his room that the somnambulant entered, and deliberately possessed herself of a will left open upon the desk, as also of a sum of several thousand pounds in bonds and notes. These she proceeded to hide in the hollow of two dummy pillars set up in the library to match the solid ones, and stealing from the room before her father's return, she regained her chamber and bed without awakening the nurse who was still asleep in the armchair.

The result was, that, as the nurse stoutly denied that her young mistress had left the room, suspicion was diverted from the real culprit and the money could not be recovered. The loss of the will involved a law-suit which almost beggared her father and entirely ruined his reputation, and the family were reduced to great straits. About nine years later the young girl who, during the previous seven years had not been somnambulant, fell into a consumption of which she ultimately died. Upon her death-bed,

the veil which had hung before her physical memory was raised; her divine insight awakened; the pictures of her life came streaming back before her inner eye; and among others she saw the scene of her somnambulic robbery. Suddenly arousing herself from the lethargy in which she had lain for several hours, her face showed signs of some terrible emotion working within, and she cried out "Ah! what have I done? . . . It was I who took the will and the money. . . . Go search the dummy pillars in the library. I have . . ." She never finished her sentence for her very emotion killed her. But the search was made and the will and money found within the oaken pillars as she had said. What makes the case more strange is, that these pillars were so high, that even by standing upon a chair and with plenty of time at her disposal instead of only a few moments, the somnambulist could not have reached up and dropped the objects into the hollow columns. It is to be noted, however, that ecstasies and convulsionists (*Vide the Convulsionnaires de St. Medard et de Morzine*) seem to possess an abnormal facility for climbing blank walls and leaping even to the tops of trees.

Taking the facts as stated, would they not induce one to believe that the somnambulic personage possesses an intelligence and memory of its own apart from the physical memory of the waking lower Self; and that it is the former which remembers *in articulo mortis*, the body and physical senses in the latter case ceasing to function, and the intelligence gradually making its final escape through the avenue of psychic, and last of all of spiritual consciousness? And why not? Even materialistic science begins now to concede to psychology more than one fact that would have vainly begged of it recognition twenty years ago. "The real existence" Ravaisson tells us, "the life of which every other life is but an imperfect outline, a faint sketch, is that of the Soul." That which the public in general calls "soul," we speak of as the

"reincarnating Ego." "To be, is to live, and to live is to will and think," says the French Scientist. (2) But, if indeed the physical brain is of only a limited area, the field for the containment of rapid flashes of unlimited and infinite thought, neither will nor thought can be said to be generated *within* it, even according to materialistic Science, the impassable chasm between matter and mind having been confessed both by Tyndall and many others. The fact is that the human brain is simply the canal between two planes — the psycho-spiritual and the material — through which every abstract and metaphysical idea filters from the Manasic down to the lower human consciousness. Therefore, the ideas about the infinite and the absolute are not, nor can they be, within *our* brain capacities. They can be faithfully mirrored only by our Spiritual consciousness, thence to be more or less faintly projected on to the tables of our perception on this plane. Thus while the records of even important events are often obliterated from our memory, not the most trifling action of our lives can disappear from the "Soul's" memory, because it is NO MEMORY for it, but an ever present reality on the plane which lies outside our conceptions of space and time. "Man is the measure of all things," said Aristotle; and surely he did not mean by man, the form of flesh, bones and muscles!

Of all the deep thinkers Edgar Quinet, the author of "Creation," expressed this idea the best. Speaking of man, full of feelings and thoughts of which he has either no consciousness at all, or which he feels only as dim and hazy impressions, he shows that man realizes quite a small portion only of his moral being. "The thoughts we think, but are unable to define and formulate, once repelled, seek refuge in the very root of our being." . . . When chased by the persistent efforts of our will "they retreat before it, still further, still deeper into — who know what — fibres, but wherein they remain to reign and impress us unbidden and

unknown to ourselves. . . ."

Yes; they become as imperceptible and as unreachable as the vibrations of sound and colour when these surpass the normal range. Unseen and eluding grasp, they yet work, and thus lay the foundations of our future actions and thoughts, and obtain mastery over us, though we may never think of them and are often ignorant of their very being and presence. Nowhere does Quinet, the great student of Nature, seem more right in his observations than when speaking of the mysteries with which we are all surrounded: "The mysteries of neither earth nor heaven but those present in the marrow of our bones, in our brain cells, our nerves and fibres. No need," he adds, "in order to search for the unknown, to lose ourselves in the realm of the stars, when here, near us and *in us*, rests the unreachable. As our world is mostly formed of imperceptible beings which are the real constructors of its continents, so likewise is man."

Verily so; since man is a bundle of obscure, and to himself unconscious perceptions, of indefinite feelings and misunderstood emotions, of ever-forgotten memories and knowledge that becomes on the surface of his plane — *ignorance*. Yet, while physical memory in a healthy living man is often obscured, one fact crowding out another weaker one, at the moment of the great change that man calls death — that which we call "memory" seems to return to us in all its vigour and freshness.

May this not be due as just said, simply to the fact that, for a few seconds at least, our two memories (or rather the two states, the highest and the lowest state, of consciousness) blend together, thus forming one, and that the dying being finds himself on a plane wherein there is neither past nor future, but all is one present? Memory, as we all know, is strongest with regard to its

early associations, then when the future man is only a child, and more of a soul than of a body; and if memory is a part of our Soul, then, as Thackeray has somewhere said, it must be of necessity eternal. Scientists deny this; we, Theosophists, affirm that it is so. They have for what they hold but negative proofs; we have, to support us, innumerable facts of the kind just instanced, in the three cases described by us. The links of the chain of cause and effect with relation to mind are, and must ever remain a *terra-incognita* to the materialist. For if they have already acquired a deep conviction that as Pope says —

Lulled in the countless chambers of the brain
Our thoughts are link'd by many a *hidden* chain. . . .

— and that they are still unable to discover these chains, how can they hope to unravel the mysteries of the higher, Spiritual, Mind!
— "H. P. B."

"PHILOSOPHY IN A NEW KEY" (1) — *H. T. Edge*

The meaning to be attached to the word "philosophy" is changing; it is sheering away from the older sense of a dry and formal speculation — what one critic has called "philosophical engineering"(2) — and veering towards a meaning that embraces art and a more truly practical bearing upon life as life is lived. The present volume is a case in point.

Theosophists claim that the influence of Theosophical thought upon the world is not only direct, through the channels of voice and pen, but also indirect through the scattering of seed in the world-atmosphere or cosmic mind. And their claim is justified, for it cannot reasonably be held that great movements in thought arise spontaneously, by "chance"; on the contrary, such movements must have an adequate cause, and the cause is the impact of minds, like leaven quickening the mass. And do we not see the germination of such seeds in the flood of books from all quarters, dealing with every phase of mental activity, and one and all aspiring to a new world-view based on a retreat from the old formalism and mechanicalism, and an approach to the due recognition of the "intangibles" which after all constitute the major part of our life?

This author speaks of a *new key* and a philosophical reorientation which cuts across familiar lines of cleavage and changes the questions of philosophy. She treats of the meaning of symbols and symbolism, and of the relation of *art* to epistemology. Such a reorientation, she holds, occurs in every age; every age has its particular genius or common factor, which so characterizes it as to color its views in every department of inquiry, thus making the special character of separate inquiries a matter of minor import.

A philosophy is distinguished more by the formulation of its problems than by the solutions offered for them. Whitehead is quoted to the effect that, in criticizing philosophies, we should not attend to the intellectual positions they defend so much as the preliminary assumptions which they unconsciously presuppose. The reactions of Congo negroes and Esquimaux towards the Christian gospel are entirely different: what happens is more due to the national intellectual horizon than to the subject-matter of the Gospel. The Ionian philosophers were interested in matter; but Socrates introduced the idea of purpose and the "Why"?

The Christian gospel eventually runs to seed in an era of logic-chopping, and is succeeded by the Renaissance. Our traditional epistemology is now based on the dichotomy of subject and object, the division of reality into inner experience and the outer world. But the springs of philosophic thought have once more run dry. We are at the end of an epoch. Once more we have arrived at the counsels of despair. Again we seek a reasoned faith. The age of science and technology fails us. A naive confidence in sense impressions furnished science with "facts" for conviction to rest on; there was passion for observation rather than disputation; the experimental technique had the floor.

Yet, says the author, behind all lay a universal key, that of mathematics — a key-science. Number and geometrical relationships are *not* known by induction from observation; mathematics, though so applicable to physics, can be applied to anything else. Mathematical constructions are only symbols; they have meaning in terms of relationships, not of substances. Science works abstractly in mathematics, and *then* seeks experimental verification.

The point we wish to emphasize here is that the author describes, underlying all the changing swings of thought, a single invariable

factor, seen as form, number, relationship, symbolism. The vaunted inductive method is but a passing over-emphasis of one aspect of inquiry. It was preceded, and is being succeeded, by other phases. But, mark well, these successive changes are not mere replacements, they are transformations. Transformations of what? Of something that is permanent throughout. Now, in H. P. Blavatsky's *Secret Doctrine*, what can be more predominant than her insistence on Number, Form, and Symbol, as the golden keys that unlock the mysteries of universal Law? Perhaps, says the author, the philosophic study of symbols holds the seed of a new intellectual harvest, to be reaped in the next season of the human understanding. The new epistemology is no longer satisfied to rest on *sensa*, but demands a recognition of symbols to attain and organize belief; our interest has shifted from the acquisition of sensory experience to the uses thereof.

A large section of this book deals with "semantics" or the science of "meaning"; a subject which, having a special terminology, may be found somewhat difficult to grasp for those not familiar with it. It represents an important and significant movement towards a due recognition of the meanings behind words; and it would seem that many people who have been accustomed to think in words rather than in ideas have seen the error of their ways. Emphasis is laid upon the relation of all kinds of *forms*, whether words or otherwise, and the *ideas* or meanings of which they are the expression; and the author quotes copiously from an extensive literature, both recent and older, upon these topics. All this is part of the characteristic trend of these times away from mechanism toward the forces that move it, away from matter to spirit, from a temporary and assumed reality to a truer reality of which the former is the mere shadow.

Anthropology also occupies considerable space; and we note here likewise an advance upon views recently held on that subject. The

myths, customs, and legends of earlier and presumably more primitive humanity are not regarded here as the mere feeble attempts of an infantile mind to understand things, but as a different way of formulating ideas, which way is peculiar to people who translate their ideas into pictures rather than into language. Image-making was the mode of our untutored thinking, and stones are its earliest product.

The reader will find much interesting matter concerning ritual ceremonies, cults, rites, animal symbols, myths, fairy-tales, legends, epics, etc., and the distinctions to be drawn between them: fairytales, a form of wishful thinking — molding the world closer to the heart's desire; myths showing a more closely woven fabric and forming cycles; myth as primitive philosophy, legend as primitive history, fairy-tale as simply entertainment. The moon is cited as an instance of a "condensed symbol expressing the whole mystery of womankind." Great epics and national poems have enshrined in fixed form the fables and mythologies. When we begin to inquire into the literal truth of a myth, we pass from poetic thinking to discursive thinking. Nevertheless emotional attitudes still persist: the vital ideas embodied in myth cannot be repudiated because someone discovers it is not a "fact." The epic is the first flower of a new symbolic mode, the mode of *art*. It is not merely a receptacle of old symbols, but a new symbolic form, ready to express ideas that have had no vehicle before. Take for instance musical significance (which has a chapter to itself).

Theosophists, in their labors to spread Theosophical ideas in the world, need the co-operation of ripe scholars in the various departments of thought. Both groups may regard themselves as working from different starting-points towards a common goal of convergence, each supplying the deficiencies of the other. Theosophy is able to supply keys and symbols of a most universal and comprehensive character, the use of which, if applied at the

outset of an inquiry, would save much labor, just as a map will shorten the wanderings of a journey. On the other hand scholars can furnish that special knowledge in particular fields with which no Theosophist short of an Admirable Crichton would be expected to possess. We may therefore fitly conclude this notice by extending the hand of fellowship to a co-worker whose work we would gladly have reviewed, had it been possible, at greater length.

DR. DE PURUCKER ANSWERS QUESTIONS

COSMIC RAYS: WHAT REALLY ARE THEY?

Question — What is the real function of Cosmic Rays — I mean from the occult or theosophical standpoint?

G. de P. — With regard to this question: What are the Cosmic Rays, where do they come from, where do they go, what is their function? Do you know, modern science today, and daily more and more so, is using the word "radiation," "radiations" — more and more so, I repeat, with virtually the same significance and purport, with virtually the same attempt to describe facts, that the ancient theologians of pre-Christian days in Greece and Rome, Egypt, Persia and Babylon, and equivalently in other parts of the earth made in using the word "emanation," "emanations." As light radiates or flows forth from a center of energy, a sun, or an electric globe, as it radiates forth, we can replace this word "radiates" with "emanates." Out of a central core flows forth light, call it radiation, call it emanation, it is the same. When you understand something of what the finest thinkers of ultra-modern science mean to say when they use the term "radiation," when you understand something of what they have in mind and attempt to express by that word, you will begin to understand what the ancient theologians of pre-Christian times meant when they used the word "emanation," flowing forth.

Thus a human being, as an instance, radiates or emanates vitality. Constantly radiating, it flows forth from him, and flowing forth from him shows that it is a thing, and this thing is a fluid. Light is a fluid, all these various kinds of rays are fluidic in character; but being fluidic in character this merely means that they are aggregates or concretions of entities, emanated entities, call them

monads, call them life-atoms if you will. I wonder if that thought is clear.

Before I go on farther, let me try to illustrate what I think we should understand by the modern scientific effort to designate something which is at one and the same time a wave and a particle. If you follow in thought a bullet from a rifle you will realize that it is at once a particle so to speak, and at the same time accompanied with waves, these waves being the phenomena of its passage through the air. Now imagine a life-atom discharged from an entity. It passes with the speed of light, some atoms with a speed far exceeding that of light, and obviously their passage through substance is accompanied with intense disturbance along the track that the particle follows. Follow my thought? Thus the wave and the particle must accompany each other. The particle produces the wave; without the particle the wave would not be.

Now these Cosmic Rays we can call life-atoms if we wish. In fact, they are that, the life-atoms of the Universe but on a low, because a physical and even inferior to physical, plane. This is shown by their intensely rapid movement; and even the scientists are beginning to recognise this, as they speak of them as "hard" rays: they move so fast that their effect is like that of a projectile. They are "hard," very material.

And again: Where do they come from — these life-atoms of space that are streaming all through interstellar space, and, in so far as our own universe is concerned, throughout our solar universe — streaming through it? Mainly from the active, superlatively active, stomachs of the various suns, pouring forth from the suns of Space in inconceivable floods, or in inconceivable numbers. They make their peregrinations hither and yon as life-atoms of a type or kind, always coming back ultimately, sometime, someday,

somewhere, to their father-substance; and meanwhile passing through all other entities as they peregrinate (transmigrate was the old word), wander hither and yon, back and forth.

Indeed, it is thus that the suns feed themselves. Our own sun feeds its own store of vitality from these floods of life-atoms reaching it from outer space, drawn into its own stomach and expelled again through the sun-spots. Why, you remember that even in *The Secret Doctrine*, H. P. B. openly there speaks of the fact, quoting one of the old records, that the sun was feeding on the refuse of space. Do you remember? As a matter of fact, our own bodies do that — physical body, astral body, mental body, interior sheath of consciousness — they all do just the same thing. They emanate floods of life-atoms, radiate them away and suck in, attract in, those of others. This is just what the sun does; so that these cosmic atoms, or cosmic rays — which are merely names which the scientists have given to them because they do not understand them very well yet, and they seem to be like rays, and they seem to be like particles, but are simply the life-atoms that have flowed forth from the suns of space, and happen to reach us, passing through us — sometime they will leave us and go elsewhere. Just in the same way our globe Earth is being fed and its vitality kept up, its energy sustained, electrical, psychic, physical, and what not, from what it sucks in from outer space, and it in turn emanates forth its own light and fluids. We call them Cosmic Rays, if you wish life-atoms; and thus we see a cosmic give and take, give and take.

But these are not the only life-atoms that there are. There are many, many families of life-atoms that no physical scientific instrument will ever succeed in perceiving, or even apperceiving. They are above, outside, our plane entirely; as for instance, there are purely astral life-atoms, mental life-atoms, spiritual, and divine. But these Cosmic Rays that scientists are now just

beginning to gain some knowledge of are cosmic life-atoms of a low, that is of a type even inferior to the physical in the hierarchical sense; very "hard"; "hard rays" they call them, and therefore very dangerous to things that they strike, were they to strike at least in condensed form — such as the X-rays are. But the cosmic rays are even "harder."

Now when I say that our sun (as well as other suns), feeds itself on the refuse and "sweat" of space, on these flowing streams of life-atoms, oceans of them — for space is filled, incomprehensibly full with them, it is an ocean of life — I don't mean that the sun feeds on them to the exclusion of other life-atoms. The sun attracts to itself life-atoms on all planes, some far higher than the physical. But I want to add this. Call it an interesting theory if you like. There is an old, old, and to me very fascinating, legend which has been current in the Orient from time out of mind. It is couched in this form: the gods feed on men. Now I do not mean to frighten anyone here, or to have you think that when your day of dying comes it is going to be that some god is going to make a meal of you! I do not mean anything like that. But why should human beings be the only exceptions to the universal rule? Man feeds on other things. You know, as a matter of fact, we feed on each other. Every time a group of people sits like this, close together, as you all do, you are feeding each other, changing and exchanging life-atoms, just as we think, changing and exchanging thoughts, and thus it is that arises a phenomenon which every one of us notices, I doubt not, and it is that people who live a great deal together, like husband and wife, grow to resemble each other; and I have even seen that with pets who are with human beings. A master or mistress actually begins to look like the pet. It is the change of life-atoms, and it is not always good either. It is not good for the pet, and it is not good for the human being; and there are other reasons, though of course I know among some

dear people here it would be my death-sentence to say anything against pets! These would not understand me: "Why, that's horrid, G. de P. What a perfectly horrid man!"

The Theosophical Forum

BROADCASTS FROM SHANGHAI: XI

This series of Theosophical radio broadcasts from Shanghai, China, was given over station XQHB during 1941 by Miss Inga Sjostedt and Miss Elsa-Brita Bergqvist. In the present talk Miss Bergqvist covers the teaching of the sevenfold nature of man and relates it to the simpler threefold division of spirit-soul-body as used by St Paul in the New Testament

Good evening, everybody:

Last Sunday the speaker gave an account of the Theosophic conception of Death and remarked that the word "death" should be opposed not to "life" but to "birth," as these are the names given to our entrances into and exits from this earth-life, which itself is only one side of our life. The other side being the periods between incarnations.

The materialists, who hold the idea that our bodies are ourselves and that thought is merely a result of chemical changes taking place in the brain, ask us to believe that we don't exist apart from our physical bodies. This theory is moribund if not dead, however, and fails to account for so many things: memory, for instance, that great stumbling-block of materialistic science. We can hold thoughts and ideas locked up in our minds for years, and can at any moment relive scenes that were familiar to us long ago, despite the fact that our brain-cells have been continually changing ever since. Dreams are another unexplained phenomenon. During sleep we live as completely and consciously as when we are awake. When our physical bodies are inactive we still see, hear and smell, taste and touch more vividly even than when we are hampered by our material envelope. We are

complete human beings even when we do not inhabit our bodies. Therefore the real man, the human ego, is not the body — it is indeed independent of the body.

We like our friends not for their physical perfections alone, but for the characteristics in their personalities that appeal to us. Kindness and unselfishness, charm and so forth, are qualities that may endear to us even people who are physically ugly. We can be extremely good friends with people we have never even seen, through for instance, correspondence alone — yet it's not the typewritten sheets of paper that convey the personality of the writer. We can therefore safely conclude that it is not the physical body which is the real person.

In the Christian New Testament we find Paul the apostle and initiate referring to man as composed of spirit, soul and body. The same threefold classification is found everywhere. Unfortunately in modern times the majority of people in the West have lost the meaning of this true classification, and modern Christians don't as a rule differentiate between spirit and soul. There are many even, who believe these two to mean the same thing. It is one of the important points that has got lost in the course of time. Yet the difference between these two terms is very great. In Theosophy the same classification is used, and the three parts, spirit, soul and body, are further subdivided to total seven human principles, each one emanating from the next above it, and all of them merging into one another and forming a complete ladder from the central Divine spark down to the lowest or rather the outermost physical covering.

Starting with the part called spirit, this spirit emanates from the central spark of Divine fire and is its vehicle or covering. These two, Divinity and its first garment, together with that part of the mind which is pure and impersonal and which takes its impulse

from the spirit, form what is called by Paul the Spirit. The soul is composed of the lower mind and the emotions, that is, the personality of the individual. These are the principles in which we generally function. The mind, as you notice, is dual and can be made to conform with either the soul or the spirit, depending on whether it takes its impulse from the spirit or the personal selfish emotions. Our consciousness is centered in the mind, and the mind is therefore the real man. It then depends on us whether we allow our minds to be influenced by our personal emotions or our impersonal spirit. The spirit, or first veil over pure Divinity, is called in Sanskrit the Buddhi. One who has raised his consciousness, his self, or if you like, his mind to the buddhic principle is called a Buddha. As a contrast, an animal has its consciousness or mind controlled entirely by its emotional principle. An ordinary man has his mind divided between allegiance to the spirit and to the emotions and his mind is therefore dual, on the one side influenced by spirit, on the other by his emotions. We live mostly in our lower minds, but at times, if we are working for impersonal aims or are engaged in some unselfish task, our consciousness is centered in the higher mind, which is illumined by the light of the buddhic principle.

The lowest division, the body, is composed firstly of the vitality, which animates the bodies during life and which is withdrawn on the death of the physical vehicle. Secondly the astral or model body on which is builded atom for atom, molecule for molecule, cell for cell, the outer visible and tangible envelope. Through all these principles runs our will, which in itself is merely an impersonal force, which can be put to any use we desire. In itself it is colorless and does not partake of any qualities, but as we use it, it becomes colored with our impulse, whether this be good, bad or indifferent. It can be a tremendously strong power for either good or evil, if it is trained and firmly directed. Fundamentally a

divine power, the driving force of the universe, we have it developed in proportion as we ally ourselves with the spiritual life-force in nature through the link formed by our own divine center.

Even this sevenfold classification, though it may seem complicated at first sight, is a very simple way of demonstrating the very complex nature of the human constitution, and in order to understand it properly, we must realize that these principles are not separate and independent parts like slices of a cake, but interpenetrate and merge into one another. The surface of the globe is not divided into longitudinal and latitudinal lines, though these are marked on the maps to show hypothetical divisions, which in reality do not exist. If we think of the complexity of our minds, we see that even this sevenfold classification is a mere outline of the truth. A man can for instance drive a car, light a pipe, converse with a passenger and think of something else — all at the same time. This shows that he is conscious in several parts of his mind at once, and it requires an explanation involving layer upon layer of mind to account for this plurality of consciousness. In order to make this more clear we may say that just as all the principles of the human constitution are fundamentally emanations from the central divinity, so each principle partakes of some qualities of all the other principles and contains latent or active all the seven principles.

To return to the original division — spirit, soul and body. Of these, the spirit alone is unconditionally immortal. It is most closely related to the divine essence and partakes of the qualities of pure divinity, from which it is inseparable. The body on the other hand is unconditionally mortal. It pertains to the matter-side of our nature and as an entity exists only so long as it is held together by the incarnate spirit. It is a composite entity, although the component parts of it are of course intrinsically divine and

therefore intrinsically immortal. But as a whole, the body composed of the physical and astral vehicles, is not immortal because on the withdrawal of the spirit it disintegrates into its component parts and ceases to be an entity. The vitality or vital essence, which animated it during life, returns into the earth's reservoir of vitality, of which it is at all times a part.

The soul is conditionally immortal, or conditionally mortal: it can unite either with the immortal spirit and become a part of this spirit, in which case it partakes of the qualities of the spirit and becomes one with it, or it can unite with the mortal, physical vehicle, in which case it disintegrates with the body on the departure of the reincarnating ego. During man's repeated incarnations on earth, his spirit continually garners from the soul into itself all that is fine and noble and truly spiritual, while the remainder disintegrates in the astral realms of the earth's atmosphere, while the component lives or atomic entities of the lower personality await the ego's return to earth and form the seeds of the new personality through which this ego will again manifest itself. This means that when the ego returns to earth-life and assumes its new personality — the result of its former lower self — it has to contend with those lower attributes generated during its former existence or existences. Thus, when a man suffers from an unfortunate temper he cannot control, or some other fault of a similar nature, it is merely the direct result of his weakness in a former life in giving way to those tendencies, which in time become a ruling power in his life. In the case of a human being who is completely under the sway of his lower emotional nature — one in whom not a spark remains that is fine and spiritual and who has completely severed himself from his higher self by functioning entirely in the lowest part of his constitution — this human being loses all contact with the spirit, which on withdrawing at the death of the body has no use for any

part of his mind and therefore leaves behind all of it to disintegrate. Such cases are extremely rare, fortunately, for it involves the complete destruction of the ego or consciousness-center of the individual involved.

The average man, who is neither very good, nor very bad, has always something to offer to the spiritual nature, and in due course reincarnates to take up his work of evolution, where he last left off.

The Theosophical Forum

MEMORIES OF H. P. BLAVATSKY — *Henry T. Edge*

May 8th was White Lotus Day, which is celebrated annually by Theosophists in commemoration of the death of H. P. Blavatsky; and this anniversary, the 52nd, was thought a suitable occasion for an address in the Temple at Headquarters by the only surviving member of the Theosophical Society (Covina) who was a personal pupil of our great Founder. It was further requested that this address, in an expanded form, should be prepared for publication in this magazine, and what follows is the outcome of the author's response. Though he has treated the subject before (*The Theosophical Path*, February, 1930, March, 1931; THE THEOSOPHICAL FORUM, March, 1938), it is felt that such a record means much to members, many of whom are new, and the older articles being difficult of access or unprocurable. This is sufficient excuse for many repetitions which must necessarily occur. The very nature of the subject, the reason for writing such memoirs at all, requires that matters personal to the writer should be touched upon. But this, for the sake both of readers and writer, shall be limited to as much as may be necessary to give composition and background to the picture which he must try to present.

I may describe myself as an individual with a mental temperament, born in a quiet country parsonage. The ancient church dating back to Norman times, where my father officiated, imbued my sensitive mind with an atmosphere of religion in its mellower and less exacting form, such as is inspired by stately Gothic cathedrals and sublime church music; so that Christianity meant for me far more than the harsh dogmatic formalism met in some quarters, and which Theosophists sometimes assail under the impression that they are impugning Christianity. Besides this foundation of aspiration towards the sublime, I had from early

years a great interest in science and preferred scientific books to any other. It was such a man as this who found himself in 1887 studying science at the University of Cambridge. But already before this date my mind had acquired a bent towards the mystical and occult in Nature. I had read, among other books, *The Night-Side of Nature*, by Catherine Crowe, a book in which that able writer has brought together a collection of testimony to the reality of ghosts, apparitions, and other related phenomena, from all countries and ages. To a mind sufficiently unprejudiced to be able to form a just estimate of the value of evidence, such a record was convincing; and I naturally sought further information from any available source. Bulwer Lytton's occult novels were among the number, and I dabbled in Swedenborgianism, Psychic Research, and other matters.

A trouble at this stage was due to the fact that Bulwer Lytton's magicians belong to the dark side of Nature, or are unattractive in other ways; so that a conflict was set up in me between the aspiration for knowledge and power on the one hand, and the voice of conscience and lofty feelings on the other. Here my words will surely find an echo in the hearts of many readers who have had inner conflicts of one kind or another. That this conflict was soon destined to be resolved by Theosophy, with its presentation of Masters of Wisdom and Compassion, will appear in what follows.

The year 1887, then, found me studying science at Cambridge University, and the date August 15 is a memorable landmark; for it was on that day that a chance meeting with a friend, who mentioned Sinnett's *Esoteric Buddhism*, sent me to the University Library to study the very few Theosophical books then available, such as *The Occult World*, *Light on the Path*, *Incidents in the Life of Madame Blavatsky*, books by Eliphas Levi and Franz Hartmann, *Theosophy, Religion, and Occult Science*, by Olcott. Thus I

discovered the existence of White Magicians, the conflict above mentioned was resolved, and I had found an ideal which did not run counter to my feelings of rectitude.

On the other hand, being a member of the Psychical Research Society, which had an important center in Cambridge, and where I met F. W. H. Myers and Professor Henry Sidgwick, I had read the Society's alleged exposure of Madame Blavatsky; and having no means of knowing its falsity, I was troubled in my mind. It is however to be observed that this circumstance did not in the least discourage me in my determination to pursue Theosophy. Having written to the then Headquarters, and obtained an introduction to a lady member residing near Cambridge, my doubts about the Psychical Research were speedily removed: and indeed Madame Blavatsky's real character stood revealed in her works — and the same may be said of Myers, Sidgwick, and Co.

It was at the close of 1887 that, taking advantage of the ending of the autumn term at Cambridge, I found my way to London to visit H. P. Blavatsky for the first time. It will easily be understood how every detail of the circumstances connected with that momentous expedition has impressed itself indelibly on my mind and lingers fondly in my memory throughout the years that have passed; such associations are familiar to us all. Those were the days of the smoky Underground Railway and the horse omnibuses with the "knife board" on the top, and where you might get a seat beside a purple-faced driver in the style of Mr. Tony Weller. The now ubiquitous tea shop was then totally non-existent, nor had the cheap popular daily paper and the weekly scrap magazine as yet begun to spread their influence on the public mind. This London has vanished into Limbo, and it is likely that a visit to the actual localities might result in disillusionment, as usually happens when we vainly seek to reconstitute experiences which live only in our memory.

Madame Blavatsky at that time was living in the house of Bertram Keightley and his nephew Archibald Keightley, two young men of nearly the same age, who have earned lasting merit by the generous hospitality which they accorded her. It was a semi-detached residence, standing in small grounds, and situated in a residential neighborhood between the West-End proper and the western suburbs, and just north of the great east-west artery in the part where it is known as the Bayswater Road. I arrived just before the time for the evening meal, and, after being received by Bertram Keightley, we went down to the dining-room, which was in the rear and connected with H. P. Blavatsky's reception room in front by folding doors. Soon the wonderful personage whom I was so eager to see made her appearance, and I must try to convey a picture of my first impressions.

In person she was rather short, and, as is visible in many of her portraits, she was at this time corpulent, owing to maladies caused by her labors and sufferings; the effect being enhanced by the need for loose and easy apparel. It may be added parenthetically that her physician had found her blood in a state which ordinarily would be inconsistent with continued life: a proof of the mighty will and devotion which kept her at her labors in spite of such appalling obstacles. My first impression was that of a perfectly natural person, free from all affectations, artificialities, and formal disguises, such as we all habitually wear in deference to social convention and to hide from each other our nakedness. She talked easily, passing from subject to subject, in much the same way as a child might talk, though of course with the knowledge of a much traveled and experienced observer. Her ease of manner evoked a sympathetic response in the listener. For a most eloquent portrayal of her character and bearing, reference may be made to the article by "Saladin" (W. Stewart Ross), editor of *The Agnostic Journal*, printed in *Lucifer*, June,

1891. It is much too long to reproduce here, but two sentences may be quoted:

She was simply an upright and romantically honest giantess. "Impostor" indeed! She was almost the only mortal I have ever met who was *not* an impostor.

I cannot give anything like a diary or chronological record, as the details are blurred and form a general picture interspersed with isolated incidents. As I did not live in London, my meetings with H. P. B. were confined to transient visits, when I might either be passing through London or on a short stay with some friend. She used to sit in the front room in the evenings, in a large armchair, and receive any visitors who might call. Among members of what might be called the household staff, I recall, besides the two Keightleys, the Countess Wachtmeister, whose name occupies a notable place in the pages of early Theosophical history; Mr. George Mead, H. P. B.'s secretary; Mr. Claude Wright; Mrs. Cooper-Oakley and her sister Laura Cooper; Miss Kislingbury; Charles Johnston, Sanskrit scholar, who married Vera Jelihovsky, H. P. Blavatsky's niece; Mr. Richard Harte, American. Other notable names not included among resident members, are Herbert Burrows, leading Socialist; Dr. Franz Hartmann, well-known writer on occult subjects; Mrs. Alice Gordon, long resident in India and mentioned in early Theosophical annals; William Kingsland, who recently visited Egypt and wrote a book on the measurements of the Great Pyramid, then a young electrical engineer; Colonel Olcott. Among Hindus may be mentioned U. L. Desai and Rai Baroda K. Laheri. Another personality mentioned in the early annals was Dr. Charles Carter Blake, who had had a prominent career as a member of the British Association for the Advancement of Science, in which he figured as a zoologist, following the school of Richard Owen in opposition to Huxley, who advocated evolution by natural selection. Dr. Carter Blake

had great erudition, owing to a photographic memory, but was not able to turn it to much account.

While receiving visitors or sitting with members of the household, H. P. B. used to smoke, rolling cigarettes of the finest Turkish tobacco, and ready to make one for anybody who might ask. She also generally played "patience," or solitaire as it is called in the United States. These occupations did not interfere in the least with her ability to engage in conversation. Mrs. Campbell Praed, in her novel, *Affinities*, which contains a vivid and sympathetic portrait of H. P. B., speaks of her as being able to carry on an animated discussion in English and turn suddenly to interject words into a conversation in French going on behind her. The same writer discusses the remarkable features of H. P. B. — the unusually large light-gray eyes, contradicted by the small alert nose, and this contradicted again by the massive lower part of the face: all this indicative of the remarkable character and attainments. But in estimating the character and conduct of such a being, we must bear in mind the very difficult, the well-nigh impossible task which she had to accomplish — that of living in two very different worlds at once. For, as a messenger of the Lodge of Masters of Wisdom, she must keep in touch therewith; while at the same time she must accommodate herself to the world around her. And what a world was this to her sight, to whom conventional screens were transparencies, who read people for what they were at a glance? This alone is enough to account for eccentricities of demeanor which ordinary critics, ignorant of the real reason, would attribute to reasons within the limits of their own comprehension. What produced more impression on me than any one thing may here be mentioned. Standing on an easel in one corner of the sitting-room was a framed portrait in oils of H. P. B.'s Master, "M." This was no imaginary picture, but a genuine portrait of a real man. It must be

understood that, the effect produced being the paramount concern, questions as to how this portrait was made were of quite secondary interest and unable to influence *my* judgment. Rather than estimate the authenticity of the portrait in terms of available evidence as to its production, I should reverse the reasoning and infer the means of production from the result achieved. So I am only too ready to accept the statement that the artist, (Schmiechen) was caused by H. P. B. to see a visual image of the Master. However this may be, I seemed to have now become aware of the reality of such a being, and my life was thereupon and ever since inspired by the presence of an *ideal* that was no mental abstraction or reasoned construct, but something *actual*.

On my second visit to H. P. B. she spoke of a visit which she said I had made before my first visit, and in which I had told her about myself. The things which she reported me as having said tallied with fact and could not have been got from anyone but myself. On my inquiry as to whether it was in my astral form that I had come, she replied, No, he was just as he is now. She described my dress and the description was verified by a friend who was with me as being one which I had actually worn. I cannot give the explanation, for the simple reason that I do not know it; so readers may exercise their own wits upon it.

She also said at one time that, when she first saw me, she said to herself: "Here is a young man who has an eventful occult life before him. He has two paths before him: in one of them he will be happy; in the other miserable. I wonder which he will take."

It was at this time that *Lucifer* began to be published; and the Esoteric Section, for more advanced students, was founded. In this connexion it will be understood that the more important things are precisely those about which the most reserve must be kept. I was brought into intimate relationship with H. P. B. the

Teacher. (Does she not endorse one of her books: "dedicated by H. P. B. to H. P. Blavatsky, with no thanks"?) I then knew that she could see into the depths of my being, responding to a sincere knock, showing me my faults and advising as to overcoming them. And thus I acquired unshakeable evidence that she was what she was. I dedicated my life to the cause for which she had sacrificed so much; and found the anchorage which has never failed to keep me safe through many trials, many successes.

On one occasion she put into my hands the MS. of the forthcoming *Voice of the Silence* and sent me to another room to read it. As illustrating the difficulties of carrying on work in those times, it may be mentioned that, as the private pupils did not include any printers, it was necessary for private instructions to be written out in copying ink and reproduced, page by page, by the old-fashioned gelatine graph, the pages being afterwards collected and stitched. This says much for the industry and devotion of the volunteer workers on this task.

Such are a few scattered details of my recollections; it may be that others might be given, but they do not all recur to the memory at one time; or they are too fragmentary, too much involved in the context to be of any significance when isolated therefrom; or they are such as might be found in H. P. B.'s writings and thus do not come within the sphere of my special subject. It remains to offer a few concluding remarks. Truly, as I often think, this meeting with H. P. B. was a most marvelous adventure. In the heart of the teeming life of that vast metropolis of the materialistic nineteenth century, to encounter face to face, at the dawn of one's manhood, a real — ! But why use a word as counter for an abstract idea, when, as we all know, the living individual is the complete summation and full embodiment of all that our thoughts and feelings can dimly foreshow. One of the writers whose impressions are recorded in *Lucifer* for 1891 says that he felt for

the first time that he was in the presence of a Reality. He was one who beheld the Truth before him and did not need to go through the tedious and often vain process of discovering the truth by first eliminating every possible (and impossible) source of error. Perhaps it may here be well to bring to a close these personal reminiscences; for the life and teachings of H. P. Blavatsky will be found adequately treated elsewhere.

The Theosophical Forum

WHERE ARE THE SAGES AND SEERS? — *G. de Purucker*

The great sages and seers, the Masters of Wisdom and Compassion, belong to no race, and especially to no creed. They are the children of the spirit, awakened men, whose familiar thought is truth itself; and hence their sympathies are universal. They need no frontiers of race, of caste, of creed, of color. They are truth-seekers, truth-teachers, and their instrument, the Theosophical Society, was founded by them to promulgate the truth; the cosmic wisdom, the cosmic philosophy, that existed before the foundations of the mighty mountains were laid, ay, even before the Sons of Morning began to sing, to chant their hymns celestial. For Truth has no age. It never was born, it never has not been. It is timeless because universal. Its appeal is to the hearts and minds of all men. It matters not a whit from what part of the world a beautiful truth may be drawn; and in consequence whenever any human has so attuned the seven-stringed lyre of Apollo — which is his heart or his seven principles — to whisper and ring like an aeolian harp when the winds of heaven blow upon it, then, for the time being and as long as he can hold this plane of consciousness, he is one of the sages and seers, whether his fellow-men recognise him or not; and this means you and me and all men, at least any one of us who may have attained thus much.

And mark you the promise in this statement: that precisely because we are children of infinitude, not merely sons of the gods but the very offsprings of the celestial spaces, there is that within us which is attuned with them, and which therefore is timeless, which therefore is infinite, which therefore is eternal.

How true that old statement in the Christian New Testament is

which you so often hear me quote, because so lost sight of by Christians in these days! I link two such statements together: "Know ye not that ye are gods and that the spirit of the eternal liveth within you?"

Where are the sages and seers? Where they have always been. The question at first blush may strike a Theosophist as being foolish but I suppose it arises in the desire to explain to people why the Masters of Wisdom and Compassion do not take the human race in hand, and oblige it, force it, to be decent. But a Theosophist simply looks up in wonder and says: Why, what good would that do? How may you convince men by compulsion that this, that, or some other thing is true? Isn't it obvious that men only believe what their own hearts teach them? And that no matter what they hear or are taught, if there is not an answering response in the human heart, and an instant answer in the human intellect, there is no acceptance, but a worse than steel wall raised?

Truth is eternal. Truth is always with us, and the devotees of truth are always with us and always have been and always will be; and it is we in our folly and ignorance and blindness who refuse to accept them. Open your hearts and open your minds, and the light will come pouring in. There is the promise of all the sages and of all the Masters the human race has ever given birth to. The Teachers are always ready when the pupil is ready. If we see no evidence of the Masters in the world today, it is partly because we we have forgotten the god-wisdom in the world, and partly because we won't hearken.

Yes, the truth has been laid down by the titan intellects of the human race; and if men do not accept it, whose fault is it? Not that of the Teachers. If I prefer strife and wretchedness and crime and horror, why shall I say to the deaf heavens: "Where art thou,

O God?" Of all the agonies of stupidity, we see here just one more evidence of man's attempt at self-justification of his own folly and ignorance. You might as well say, where are the laws of nature? What has become of them? Why don't they take the human race in hand? A nice spirit! Even ordinary human parents know better than that. Ordinarily a father or mother would not attempt to interfere with the growth of a child by force. It never worked and never will. You cannot cause a leopard to change its spots until that leopard has evolved, and no amount of starving or chastisement or so-called vengeful punishment will ever make a leopard anything but a leopard.

Do you want truth? You can have it whenever you want it. The world is full of it. The great teachings of the ages are full of it. What prevents our seeing it? Is there any man so blind as he who won't look? Is there any man so deaf as he who refuses to hear? These are some of the simple truths known to every child; yet we prefer hypocrisy and cant and self-justification, to righting the wrongs we ourselves wreak on others, and then raise a clamor to the immortal gods for help when we ourselves begin to suffer from our folly. Yes, we choose hypocrisy; and how many of us sitting in this auditorium can say before the tribunal divine within our own hearts: "I am not a hypocrite. I am pure." Just ask yourselves! Pharisees and hypocrites! "Oh, how I thank God that I am not as other men are!" Now honestly, brothers and friends, hasn't that ever occurred to your hearts and minds? And don't you see that that is the first shackle you yourself have placed on your limbs as a pilgrim: self-justification and self-righteousness? Don't you see that by so doing you blind your own eyes?

How true it is that truth is not popular, that truth is not welcome, that people do not like it. Why? Because it means change. It means an evolution of feeling and thinking. It means a revolution of the moral instincts to become alive and vigorous again. I tell

you again that to become acquainted with, to have first-hand individual knowledge of, the great Teachers, the first step is to become as far as we may and can, alike unto them. There is no other way. The heart must be consecrated to truth at any cost. Are you strong enough? If you are, you are ready for chelaship, as we say, for discipleship; and you will be a disciple before this life for you is ended, ay, perhaps before tomorrow's even sees the setting of our day-star.

The Masters, the great Sages and Seers are ready for you always. There is no barrier to them whatsoever except yourself, absolutely none; and if you don't attain chelaship in this life or in the next or in the following one, blame none but yourself. You see the reason why. It is so simple a child may understand. How can you become a disciple or a chela before you are ready for it, before you have become it? How can you see the light before you have eyes with which to see it? How can you appreciate beauty or get a touch of beauty anywhere, until beauty already is taking birth within your soul, so that the beauty within you can sense beauty without? How can you recognise a great man until some grandeur at least is born within yourself to enable you to recognise grandeur? If you are paltry and small and mean, how can you recognise the opposites of these?

It is like the men who go through the world incognisant, blind and deaf to the divine beauty in their own fellow human beings. One of the easiest ways to find beauty, to find truth, and more quickly to come into instant magnetic sympathy with your fellow human beings is by becoming yourself sympathetic and seeing. Don't you see? If a man has no sympathy in his soul, how can he sense the sympathy in the souls of others? If he has no beauty in his heart, how can he see beauty anywhere, or as the English playwright Shakespeare phrases it:

The man that hath no music in himself,
Nor is not mov'd with concord of sweet sounds,
Is fit for treasons, stratagems and spoils.

Don't you see you will never see the Master-self until you have become masterlike within yourself? Because you won't recognise him or them. It would be impossible. You have not developed the vision inside, the faculties inside; but those faculties are there.

And now a final word: These sages and seers exist today; they take pupils, to use the ordinary phrase. Indeed more, they pass through the world hunting, searching, seeking, not so much like Diogenes for an honest man, but like Masters of Wisdom as they are, searching everywhere for good material, sensitive human souls, or, as I phrase it, looking wherever they may see, however dim it may be, a touch of the Buddhic splendor in a human being's heart; and when they see that, instantly their attention is attracted. They feel the impact instantly in their own hearts. They approach, they aid, they inspire, they do everything they can to foster the trembling flame of vision and of feeling. They foster it and feed it, until the flame finally burns strong, and the man is reborn, no longer born of the flesh, but reborn of the spirit, of the inspiration from within and from the Teacher without.

And above and beyond and back of these sages and seers there is their own great Chief. What a marvelous figure of celestial wisdom and beauty, utterly dedicated to the spirit and to the world and all that is in it irrespective of race, nation, creed, caste, color, or sex! This being is a God. We Theosophists speak of it in reverence and awe as the Silent Watcher. He is the chief Master of the Masters. He is one of us, our own brilliant guide, Teacher, friend, brother, the source so far as men are concerned of all enlightenment and wisdom and beauty and love. So that in the deeper reaches of our blessed Theosophical teachings we may say

with great reverence, yet with all truth, that back of all our labor however imperfectly we human beings may be doing, back of it as its origin and inspiration is this grand Divinity.

What a hope! What a wonder to look forward to for all us men, Theosophists or non-Theosophists. For indeed if the truth were told, I think that there are millions and tens of millions and hundreds of millions of men and women in this world today who are Theosophists in everything except that they have not as yet received the teachings of our blessed God-Wisdom. But in everything else: in readiness, in yearning, in reverence, in universal love, and in desire to advance upwards and onwards forever, these fellow human beings are as good Theosophists as we are. Oh, that we might collect them all together into one band of impersonal workers! What a power in the world we would then be! No longer would problems vex man's intelligence, problems born of his selfishness. No longer then would the human race be afflicted with poverty, misery, and with most of the sin that now exists, and the dreadful, appalling wretchedness. I sometimes think that the most heart-touching, the most heart-rending story in the world amongst our brother fellow human beings is that story which is not heard, which is carried in the dumb agony of the silence. Oh, how human beings suffer so needlessly!

I know of no loftier title, Brothers and Friends, than that which I love to give to our great Teachers: Friends of mankind and of all that lives! — *Address given in March, 1941, Point Loma, California*

The Theosophical Forum

FROM H.P.B.'S "KEY TO THEOSOPHY"

The month of August, 1831, marked the birth of that extraordinary character known to the world as H. P. Blavatsky; by some called impostor, charlatan, fraud, by others "the greatest figure of her age"; and by Theosophists recognised as the chosen Messenger of the Mahatmans for the nineteenth century to give a new re-statement of the truths of the Ancient Wisdom-Religion to the world. No judgment, however, is complete, unless weighed in the light of the immense learning contained in her books, and as long as critics ignore these they may be considered to have "no case," and their attacks ruled merely as the expression of uninformed, prejudiced and often fanatical minds.

Better than biographical sketch, the following excerpts from H. P. B.'s *Key to Theosophy* (published in London, in 1889), selected for the Editors by M. W. S., reveal something of the grandeur of her message and its nobility of exposition, and it is not difficult to perceive from a careful reading of them how it is that her teaching gave such dynamic beginning to the Society she founded, and how profoundly has Theosophic thought affected the world since that day. — Eds.

As mankind is essentially of one and the same essence, and that essence is one — infinite, uncreate, and eternal, whether we call it God or Nature — nothing, therefore, can affect one nation or one man without affecting all other nations and all other men. —
p. 41

Make men feel and recognize in their innermost hearts what is

their real, true duty to all men, and every old abuse of power, every iniquitous law in the national policy, based on human, social or political selfishness, will disappear of itself. — p. 231

Selfishness, indifference, and brutality can never be the normal state of the race — to believe so would be to despair of humanity. . . . — p. 235

We maintain that all pain and suffering are results of want of Harmony, and that the one terrible and only cause of the disturbance of Harmony is *selfishness* in some form or another. — p. 207

The power of mental inertia is great in anything that does not promise immediate benefit and reward. Our age is preeminently unspiritual and matter of fact. — p. 37

But there are no *free*-thinking boys and girls, and generally early training will leave its mark behind in the shape of a cramped and distorted mind. A proper and sane system of education should produce the most vigorous and liberal mind, strictly trained in logical and accurate thought, and not in blind faith. — p. 270

What kind of Satanic pride must be ours if we place our infinitesimally small consciousness and individuality higher than the universal and infinite consciousness! — p. 219

If this life were all, then in many respects it would indeed be poor and mean; but regarded as a preparation for the next sphere of existence, it may be used as the golden gate through which we may pass, not selfishly and alone, but in company with our fellows, to the palaces which lie beyond. — p. 237

Belief in Karma is the highest reason for reconciliation to one's lot in this life, and the very strongest incentive towards effort to better the succeeding re-birth. — p. 216

We describe Karma as the Law of re-adjustment which ever tends to restore disturbed equilibrium in the physical, and broken harmony in the moral world. We say that Karma does not act in this or that particular way always: but that it always *does* act so as to restore Harmony and preserve the balance of equilibrium, in virtue of which the Universe exists. — p. 205

It is an occult law, moreover, that no man can rise superior to his individual failings, without lifting, be it ever so little, the whole body of which he is an integral part. — p. 203

But true or false, no accusation against another person should ever be spread abroad. If true, and the fault hurts no one but the sinner, then leave him to his Karma. If false, then you will have avoided adding to the injustice in the world. — p. 255

Nature may err, and often does, in its details and the external manifestations of its materials, never in its inner causes and results. — p. 221

The law of Karma is inextricably interwoven with that of reincarnation. . . . It is only this doctrine that can explain to us the mysterious problem of good and evil, and reconcile man to the terrible and apparent injustice of life. — p. 211

The spiritual Ego of man moves in eternity like a pendulum between the hours of birth and death. — p. 167

To get convinced of the fact of reincarnation and past lives, one must put oneself in *rapport* with one's real permanent Ego, not with one's evanescent memory. — p. 128

We call *reminiscence* the *memory of the soul*. — p.125

An "entity" is immortal, but is so only in its ultimate essence, not in its individual form. — p. 107

Reincarnation means that this Ego will be furnished with a *new* body, a *new* brain, and a *new* memory. — p. 128

I have given you once already a familiar illustration by comparing the *Ego*, or the *individuality*, to an actor, and its numerous and various incarnations to the parts it plays. Will you call these parts or their costumes the actor himself? Like that actor, the Ego is forced to play during the cycle of necessity, up to the very threshold of *Paranirvana*, many parts such as may be unpleasant to it. But as the bee collects its honey from every flower, leaving the rest as food for the earthly worms, so does our spiritual individuality, whether we call it Sutratma or Ego. Collecting from every terrestrial personality, into which Karma forces it to incarnate, the nectar alone of the spiritual qualities and self-consciousness, it unites all these into one whole and emerges from its chrysalis as the glorified Dhyān Chohan. — p. 168

Duty is that which *is due* to Humanity, to our fellow-men, neighbours, family, and especially that which we owe to all those who are poorer and more helpless than we are ourselves. This is a debt which, if left unpaid during life, leaves us spiritually insolvent and moral bankrupts in our next incarnation. Theosophy is the quintessence of *duty*. — p. 229

Happiness, or rather contentment, may indeed follow the performance of duty, but is not and must not be the motive for it. — p. 228

Theosophy teaches self-abnegation, but does not teach rash and useless self-sacrifice, nor does it justify fanaticism. — p. 240

Self-sacrifice has to be performed with discrimination; and such a self-abandonment, if made without justice, or blindly, regardless of subsequent results, may often prove not only made in vain, but

harmful. — p. 238

A man has no right to starve himself *to death* that another man may have food, unless the life of that man is obviously more useful to the many than is his own life. — p. 239

Death comes to our spiritual selves ever as a deliverer and friend.
— p. 161

The Ego receives always according to its deserts. After the dissolution of the body, there commences for it a period of full awakened consciousness, or a state of chaotic dreams, or an utterly dreamless sleep. . . If our physiologists find the cause of dreams and visions in an unconscious preparation for them during the waking hours, why cannot the same be admitted for the *post-mortem* dreams? I repeat it: death is sleep. — p. 165

. . . . the Devachanic state is not one of omniscience, but a transcendental continuation of the personal life just terminated. It is the rest of the soul from the toils of life. — p. 156

At the solemn moment of death every man, even when death is sudden, sees the whole of his past life marshalled before him, in its minutest details. For one short instant the *personal* becomes one with the *individual* and all-knowing *Ego*. But this instant is enough to show to him the whole chain of causes which have been at work during his life. He sees and now understands himself as he is, unadorned by flattery or self-deception. He reads his life, remaining as a spectator looking down into the arena he is quitting; he feels and knows the justice of all the suffering that has overtaken him. — p. 162

As to the ordinary mortal, his bliss in it [Devachan] is complete. It is an *absolute* oblivion of all that gave it pain or sorrow in the past incarnation, and even oblivion of the fact that such things as pain or sorrow exist at all. The *Devachanee* lives its intermediate cycle

between two incarnations surrounded by everything it had aspired to in vain, and in the companionship of everyone it loved on earth. It has reached the fulfilment of all its soul-yearnings. And thus it lives throughout long centuries an existence of *unalloyed* happiness, which is the reward for its sufferings in earth-life. In short, it bathes in a sea of uninterrupted felicity spanned only by events of still greater felicity in degree. — p. 148

We say that the bliss of the *Devachanee* consists in its complete conviction that it has never left the earth, and that there is no such thing as death at all. . . . — p. 146

For pure divine love is not merely the blossom of a human heart, but has its roots in eternity. Spiritual holy love is immortal, and Karma brings sooner or later all those who loved each other with such a spiritual affection to incarnate once more in the same family group. — p. 150

Love is a strong shield, and is not limited by space or time. — p. 150

And what may be the duty of the Theosophist to himself?

To control and conquer, *through the Higher, the lower self*. To purify himself inwardly and morally; to fear no one, and naught, save the tribunal of his own conscience. Never to do a thing by halves; *i. e.*, if he thinks it the right thing to do, let him do it openly and boldly, and if wrong never touch it at all. — p. 241

The world in which blossom the transitory and evanescent flowers of personal lives is not the real permanent world; but that one in which we find the root of consciousness, that root which is beyond illusion and dwells in the eternity. — p. 180

It was a mystic belief — practically proved by initiated adepts and priests — that, by making oneself as pure as the incorporeal

beings *i.e.*, by returning to one's pristine purity of nature — man could move the gods to impart to him Divine mysteries, and even cause them to become occasionally visible, either subjectively or objectively. — p. 2, footnote

We believe that every human being is the bearer, or Vehicle, of an Ego coeval with every other Ego; because all Egos are *of the same essence* and belong to the primeval emanation from one universal infinite Ego. Plato calls the latter the *logos*. . . and we, the manifested divine principle, which is one with the Universal Mind or Soul. — p. 110

. . . the *root* of all nature, objective and subjective, and everything else in the universe, visible and invisible, *is, was* and *ever will be* one absolute essence, from which all starts, and into which everything returns. This is Aryan philosophy, fully represented only by the Vedantins, and the Buddhist system, — p. 43

We find. . . two distinct beings in man; the spiritual and the physical, the man who thinks, and the man who records as much of these thoughts as he is able to assimilate. — p. 90

That alone which is eternal is *real*. . . As fleeting personalities, today one person, tomorrow another — we are [illusions]. Would you call the sudden flashes of the *Aurora borealis*, the Northern lights, a "reality," though it is as real as can be while you look at it? Certainly not; it is the cause that produces it, if permanent and eternal, which is the only reality, while the effect is but a passing illusion. — pp. 84-5

The Spiritual "I" in man is omniscient and has every knowledge innate in it; while the personal self is the creature of its environment and the slave of the physical memory. Could the former manifest itself uninterruptedly, and without impediment, there would be no longer men on earth, but we should all be gods.

There is but one *real* man, enduring through the cycle of life and immortal in essence, if not in form, and this is *Manas*, the Mind-man or embodied Consciousness. — p. 100

That which displays activity, while the body is asleep or paralysed, is the higher consciousness, our memory registering but feebly and inaccurately — because automatically — such experiences, and often failing to be even slightly impressed by them. — p. 180

Spiritual and divine powers lie dormant in every human Being; and the wider the sweep of his spiritual vision the mightier will be the God within him. — p. 181

When two minds are sympathetically related, and the instruments through which they function are tuned to respond magnetically and electrically to one another, there is nothing which will prevent the transmission of thoughts from one to the other, at will; for since the mind is not of a tangible nature, that distance can divide it from the subject of its contemplation, it follows that the only difference that can exist between two minds is a difference of *STATE*. So if this latter hindrance is overcome, where is the "miracle" of *thought transference*, at whatever distance? — p. 291

[Karma is] the *Ultimate Law* of the Universe, the source, origin and fount of all other laws which exist throughout Nature. Karma is the unerring law which adjusts effect to cause, on the physical, mental and spiritual planes of being. As no cause remains without its due effect from greatest to least, from a cosmic disturbance down to the movement of your hand, and as like produces like, *Karma* is that unseen and unknown law *which adjusts wisely, intelligently and equitably* each effect to its cause, tracing the

latter back to its producer. Though itself *unknowable*, its action is perceivable. . . Though we do not know what Karma is *per se*, and in its essence, we *do* know *how* it works, and we can define and describe its mode of action with accuracy. We only do *not* know its ultimate *Cause*, just as modern philosophy universally admits that the *ultimate* Cause of anything is "unknowable." — p. 201

. . . . for logic, consistency, profound philosophy, divine mercy and equity, this doctrine of Reincarnation has not its equal on earth. It is a belief in a perpetual progress for each incarnating Ego, or divine soul, in an evolution from the outward into the inward, from the material to the Spiritual, arriving at the end of each stage at absolute unity with the divine Principle. From strength to strength, from the beauty and perfection of one plane to the greater beauty and perfection of another, with accessions of new glory, of fresh knowledge and power in each cycle, such is the destiny of every Ego, which thus becomes its own Saviour in each world and incarnation. — p. 154-5

The Theosophical Forum

OPPORTUNITY IN OLD AGE — *Abbott Clark*

To understand old age and evaluate it properly one has to understand the nature of man and the purpose of life here on earth. Man is essentially a soul, an immortal intellectual, moral and spiritual being. He is not an animal.

The object of life on earth is the evolution and perfection of the soul. The earth is the sphere of that evolution, and life on earth with all its efforts and experiences, failures and successes, thought and learning, is the way the soul grows. It learns by contrasts, by experiencing "the pairs of opposites." The process of evolution is one of drawing out and giving expression to the almost infinite capacities locked up within the soul and then learning from experience the lessons life has to give. This process of unfolding or coming out into activity of the higher nature and its intellectual, moral and spiritual faculties is, or should be, continuous and progressive throughout life.

In infancy the newly incarnated soul is very busy learning to handle the most perfect and complicated of all instruments, the human body and its faculties. Youth is the time when one equips one's self for the battle of life. In maturity one gives expression to what is within him; makes his conquests and failures. At about fifty when the exterior energies begin to slow down the spiritual man should begin to escape from the thralldom of the senses and to live more and more on its own plane and engage more and more in its own native concerns, that is in intellectual moral and spiritual thoughts, studies and activities. All regrets for the past should be put aside and all past experiences considered and used as lessons from which to learn to begin to really live.

At a time when all attention was being given to heroic youth

going over the top, Henry Ford threw a bombshell into contemporary thought by declaring that if it were not for men of fifty and over, organized civilization would go to pieces for lack of wise and competent managerial ability. The idea was that too much attention was being given to mere activity when in truth and reality the more important factor in any man's life and in civilization as a whole is the part that intellectual ability, wisdom and judgment play in world affairs. It is for lack of wisdom that the world has now gone mad. But storms in nature and fits and convulsions in man are not normal; they pass away, giving place to normalcy and leaving the man or the civilization sadder but wiser.

In a conversation with my brothers and myself Mme. Tingley quoted Henry Ford, as above, and strongly endorsed his position. She then added that the best part of one's life should begin at about fifty when a man begins to transfer from exterior to interior activities. Then the real life of man as an intellectual, moral and spiritual being begins to flower and become dominant, if the previous life has been lived aright, no matter how feeble the body may become.

When the life has been lived mostly in the physical with strong desires and attachments and with little spirituality, old age may be a pitiful state even in the case of quite intellectual but materialistic people. It is a growing inclination towards spiritual things that frees the consciousness, the mind and thought, from slavery to the distressing physical conditions of old age.

In a cycle like the present where actual spiritual knowledge is rare and religious belief is only held as *faith* the average man thinks only of his personal self and its concerns. In such cases the man is riveted to the body and his happiness depends upon its conditions. Such cases are pitiful.

We all know, and especially every nurse knows, that there are people who go through the greatest degrees of privation, pain and suffering and remain cheerful, kind, thoughtful for others and happy clear up to the hour when peaceful death brings well-deserved relief.

The Theosophist knows from his studies what I have herein before tried to write. He therefore deliberately tries to govern his life accordingly and to live in a world of beautiful and ennobling thought and so far as possible to forget himself in the cheerful performance of daily duties and the love of other things than himself. That is the secret — forget yourself. Live in a world of impersonal love and thoughtfulness for others with the mind and consciousness absorbed in high ideals, cheerfulness and love. Then age and death are as a peaceful sunset for the body and a glorious sunrise for the soul.

The Theosophical Forum

THE GENIUS OF WILLIAM BLAKE — *Madeline Clark*

*The Angel that presided o'er my birth
Said, "Little creature formed of Joy and Mirth,
Go love without the help of any Thing on Earth."*

— William Blake in MS. Notebook.

And so was born William Blake, who became known to the world certainly as artist, poet, and prophet, but who was vaguely conceived by his generation to be a madman for all that. Whether it was he or his generation that merited the title, remains still to be seen. Those who knew him not, but knew of him, were the ones who shared in this opinion. Certain it is that his life is coming to be studied more and more widely, more and more intently, not for the mere scrutiny of details but for an understanding of those implications of spiritual greatness that are found at every turn in any study of Blake.

This is the magic of Biography: it gives the picture of a life from birth to death, but all through the narrative there are hints of something greater that is unexpressed, an unseen background, the field of play of a Personage far lordlier than the humble individual whose story we have followed through one brief chapter of experience.

Our first thanks for this book (1) go to the Editor, Mr. Ruthven Todd, for a new edition of the famous *Life of Blake* by Alexander Gilchrist, published in 1863. The book is really a composite, and is Gilchrist's only in part, for he died in 1861, leaving the work only two-thirds completed. His wife then took up the thread and spun it out to the end, assisted by several writers of the day, among them the brothers Dante Gabriel and William Michael Rossetti, who of course left their unmistakable stamp upon it.

Nevertheless, through its pages shines like a benignant sun the kindly and appreciative understanding of Alexander Gilchrist for his then hardly known and still less understood subject. He perceived the shining track of genius in the pattern of this obscure life, and consequently wrote as one friendly and favorable.

In the present Edition, Mr. Todd has drawn largely from subsequent research to make emendations and corrections which of course add greatly to the value of the whole. Within the compass of an Everyman volume he has given us the connected story of Blake's outer life: his inspired and prophetic boyhood, when the early lyrics were composed; his years of apprenticeship with Basire the engraver, when Blake acquired a medium or vehicle both for his subsequent livelihood and for the expression of his genius; his marriage to the untaught girl who became his perfect companion, formed by him; his brief emergence into polite society, followed again by the years of poverty and unremitting labor while reproducing his own and others' designs; the tardy recognition of his genius by a few — a very few — friends and young ardent disciples; his friendships; his visions, and his achievement in his chosen art. This was the outer life: the inner life illumined it but existed apart, not cramped by poverty, nor troubled by lack of recognition.

To go back to Gilchrist for a moment: perhaps he is happiest in his descriptions of Blake's designs, which he was able to speak of with the discerning and appreciative judgment of the real critic of art. The book is full of these happy descriptions, which actually teach the layman what to look for in the designs, interpret their meanings and point out their beauties, at least to a limited degree. Gilchrist's interpretations have been greatly amplified by the hundreds of critiques of Blake's art which have appeared since his day, during which time there has been a general and almost

revolutionary development in comprehension, in taste, in appreciation of symbolism; and this has been a tremendous factor in Blake appreciation, both as regards the designs and the texts of the prophetic books.

The direct stamp of genius is in all his art — it carries the fire and supernal energy of something more than human. Like Albrecht Durer and the early masters, his "aim was to give ideas, not pretty language," to make men conscious of the spiritual invisible powers guiding and supporting the visible universe. "Blake's art," remarks Elisabeth Luther Gary, "has made abstract ideas and emotions take on a visible aspect," and in this respect, in this spiritual quality of direct symbolism, it far outstrips much of the technically perfect art of his time which was more nearly concerned with faithful portrayal of the material form, or of some agreeable human emotion.

We have to think of Blake in various aspects: as the author of the lovely early lyrics, and the Songs of Innocence and of Experience, some of these approaching Shakespeare's themselves in spontaneity and purity of literary form; as the Revolutionary, friend of Thomas Paine; as the creator of the thunderous Prophetic Books; as the incredibly industrious engraver; as the originator of a unique method of reproduction which he used in bringing out many of his own works; and lastly, as the spiritual mystic who had insight into the inner worlds.

It is in this last aspect, perhaps, that Blake will be most interesting to Theosophists. There are evidences which suggest that Blake was intuitively conscious of his life's inner pattern and purpose, and that he remained true to that purpose — which was, as far as a mere sympathetic student is qualified to express it, to continue to give forth his own peculiar message through his art, and not to digress into pleasant by-paths. The one episode in his life when he

came nearest to such a digression occurred towards the end of the pleasant years at Felpham, whither he had been brought from London by William Hayley, "a literary country gentleman, an amateur, whose words flowed a thousand times faster than his thoughts." Blake with his wife and sister was settled in a cottage in the lovely little seaside village. Blake was to be engraver, designer, and general associate in a series of literary projects which Hayley's lively brain had conceived. The association prospered, the schemes went forward, but when Blake found himself being introduced to half the neighboring gentry, and in a fair way to being launched on a career of (to him) cheap popularity as a painter of fashionable miniatures, the warning note was sounded in his inner consciousness. He broke off the contract and went back to London, to his engraver's bench and penury — but peace of mind. On another occasion (Arthur Symonds' Blake) he declined an invitation to become art instructor to the Royal Family, ". . . for that I cannot live without doing my duty to lay up treasure in heaven is Certain and Determined," as he wrote to his friend Mr. Butts. "The Thing I have most at Heart — more than life, or all that seems to make life comfortable without — Is the Interest of True Religion and Science, and whenever any thing appears to affect that Interest (Especially if I myself omit any duty to my Station as a Soldier of Christ) It gives me the greatest of torments."

Years of "deepening neglect" were to follow, but Blake's inner serenity was never shaken. "Grim poverty had throughout life, stared him in the face," says Gilchrist. "Throughout life he had calmly looked back into her eyes." He had always believed — and his belief was borne out — that if he did his part he would have all he needed. Thus he was supremely free from the tyranny of objective things. As one of his intimates said of him in later years: "I never look upon him as an unfortunate man of genius. He

knew every great man of his day, and had enough." And Arthur Symons says: "He lived in poverty because he did not need riches, but he died without leaving a debt."

"Go love, without the help of any Thing on Earth," had said his Guardian Angel. And in the undoubted neglect that was his lot during the greater part of his life, and in his manner of meeting it, there are intimations that this quaint jotting of his expressed the inmost purpose of that incarnation — something that every esotericist will recognise as a feat to be accomplished if he would attain the power to help his fellows. "Give light to all, but take from none," is the beautiful passage in *The Voice of the Silence* that expresses much the same ideal.

At last, towards the end, came those few years of greater outward tranquility and comfort, made possible through the noble friendship of John Linnell, at that time a rising young artist. Then it was that a few disciples, young men of character and aspiration, "fresh-hearted youths," sought Blake out, and listened with a sort of reverence to his discourse — their whole subsequent lives influenced for good by that brief association.

There is the impression, too, that Blake had intuitive knowledge of certain truths and rules of living that will be curiously familiar to some of our readers who have worked under a Theosophical Teacher.

"He whose face gives no light, shall never become a star," is one of his aphorisms from "The Marriage of Heaven and Hell." He must have been unique among his contemporaries in believing the Sun to be the dwelling of a god. (See "The Little Black Boy" in his *Songs of Innocence*.) He told a friend that he conversed with the Spiritual Sun on Primrose Hill. In talking with Crabb Robinson (that curiosity-seeker in the realms of humankind) Blake remarked that it was not Jehovah, but the Elohim who

created the heavens and the earth in the beginning, and went on to expound the doctrine of the Gnostics with great consistency. When Crabb Robinson asked him:

Now what affinity or resemblance do you suppose was there between the *Genius* which inspired Socrates, and your *Spirits*? [i.e., the inner voices which Blake maintained guided his life] he paused and replied: "I was Socrates" — and then as if he had gone too far in that — "or a sort of brother. I must have had conversations with him. . ." — Crabb Robinson's *Reminiscences*.

Blake's criticism of Swedenborg is interesting: he thought him a great Seer indeed, and that he had done, and would do, much good, but remarked that "he did wrong in endeavoring to explain to the *reason* what it could not comprehend." Jacob Boehme "he placed among the divinely inspired men." A familiar teaching in everyday occultism will be recognised in his remark that he could not "previously describe in words" what he meant to design, for fear that he should "evaporate the spirit" of his invention.

From all this it may be seen that Blake lived in an entirely different world from that of most of his contemporaries. These thoughts were habitual with him, and he expressed them in the most casual manner. No wonder then that most of those who heard him went away tapping their foreheads. Yet it has been well attested that in all the transactions of ordinary life Blake showed an adequate, indeed, a rare, sense of responsibility, and was particular to discharge all obligations promptly and completely — which is more than can be said of some of those with whom he had business dealings.

He continued to grow in power and faculty to the end. In his last illness, (1827) propped up in bed, he was working on his designs to Dante's "Divina Commedia" almost to the last day.

A word about the strange Prophetic Books and poems. As in the case of the drawings, these grand poems have to be considered in the mood of interpretation, as generating in their thunderous lines a sense of the immensity of things, of the play of cosmic forces, titanic and dread and impersonal — the handiwork of the Divine. Those who look for a coherent and logical sense in these writings are non-plussed; Swinburne saw and pointed out their real character, and called "The Four Zoas" "a storehouse of ideas." "The Four Zoas," which was never published, even in the way that any of Blake's poems were published, namely, by his own handiwork, exists in 70 sheets of manuscript. It embodies Blake's philosophy of the emanational progress of the stream of entities in a Universe, from the bosom of the Supreme, down into "individuality," as he expressed it, and back again into Unity, or union with the Divine.

This Edition of the "Life" is illustrated by reproductions of the set of wood-cuts (the only ones he ever did) that Blake made for Thornton's "Vergil" — seventeen luminous pastorals, enchanting with their "mystic and dreamy glimmer" of sunset light and moonrise - — so true to the mood of the archaic inspired by the poems.

Mr. Ruthven Todd could not have been more thorough in his scholarly job of research. Painstaking and thorough to the last, he has provided us with copious Notes, a good Index, and a Bibliographical list of every one of Blake's own works, when and how produced; of all works illustrated by Blake, or with illustrations of his engraving, or his own designs engraved by others, and so on, including the various editions; and lastly, a list of Books about Blake, numbering seventy-odd, by all the great Blake scholars.

William Blake's other-worldly genius has hitherto been the study

of the few; Mr. Todd has here enabled the many to become familiar with his extraordinary life-story and achievement — which they will do to their very great advantage.

CHELAS AND LAY CHELAS (1) — H. P. Blavatsky

As the word *Chela* has, among others, been introduced by Theosophy into the nomenclature of Western metaphysics, and the circulation of our magazine is constantly widening, it will be as well if some more definite explanation than heretofore is given with respect to the meaning of this term and the rules of Chelaship, for the benefit of our European if not Eastern members. A "Chela" then, is one who has offered himself or herself as a pupil to learn practically the "hidden mysteries of Nature and the psychical powers latent in man." The spiritual teacher to whom he proposes his candidature is called in India a *Guru*; and the real Guru is always an Adept in the Occult Science. A man of profound knowledge, exoteric and esoteric, especially the latter; and one who has brought his carnal nature under subjection of the WILL; who has developed in himself both the power (*Siddhi*) to control the forces of nature, and the capacity to probe her secrets by the help of the formerly latent but now active powers of his being: — this is the real Guru.

To offer oneself as a candidate for Chelaship is easy enough, to develop into an Adept the most difficult task any man could possibly undertake. There are scores of "natural-born" poets, mathematicians, mechanics, statesmen, etc., but a natural-born Adept is something practically impossible. For, though we do hear at very rare intervals of one who has an extraordinary innate capacity for the acquisition of occult knowledge and power, yet even he has to pass the self-same tests and probations, and go through the same self-training as any less endowed fellow aspirant. In this matter it is most true that there is no royal road by which favorites may travel.

For centuries the selection of Chelas — outside the hereditary group within the *gon-pa* (temple) — has been made by the Himalayan Mahatmas themselves from among the class — in Tibet, a considerable one as to number — of natural mystics. The only exceptions have been in the cases of Western men like Fludd, Thomas Vaughan, Paracelsus, Pico di Mirandola, Count St. Germain, etc., whose temperamental affinity to this celestial science more or less forced the distant Adepts to come into personal relations with them, and enabled them to get such small (or large) proportion of the whole truth as was possible under their social surroundings. From Book IV of Kiu-te, Chapter on "the Laws of Upasans," we learn that the qualifications expected in a Chela were: —

1. Perfect physical health;
2. Absolute mental and physical purity;
3. Unselfishness of purpose; universal charity; pity for all animate beings;
4. Truthfulness and unswerving faith in the law of Karma, independent of any power in nature that could interfere: a law whose course is not to be obstructed by any agency, not to be caused to deviate by prayer or propitiatory exoteric ceremonies;
5. A courage undaunted in every emergency, even by peril to life;
6. An intuitional perception of one's being the vehicle of the manifested Avalokitesvara or Divine Atman (Spirit);
7. Calm indifference for, but a just appreciation of everything that constitutes the objective and transitory world, in its relation with, and to, the invisible regions.

Such, at the least, must have been the recommendations of one aspiring to perfect Chelaship. With the sole exception of the 1st,

which in rare and exceptional cases might have been modified, each one of these points has been invariably insisted upon, and all must have been more or less developed in the inner nature by the Chela's UNHELPED EXERTIONS, before he could be actually "put to the test."

When the self-evolving ascetic — whether in, or outside the active world — had placed himself, according to his natural capacity, above, hence made himself master of, his (1) *Sarira* — body; (2) *Indriya* — senses; (3) *Dosha* — faults; (4) *Dukkha* — pain; and is ready to become one with his *Manas* — mind; *Buddhi* — intellection, or spiritual intelligence; and *Atma* — highest soul, *i. e.*, spirit. When he is ready for this, and, further, to recognise in *Atma* the highest ruler in the world of perceptions, and in the will, the highest executive energy (power), then may he, under the time-honored rules, be taken in hand by one of the Initiates. He may then be shown the mysterious path at whose thither end the Chela is taught the unerring discernment of *Phala*, or the fruits of causes produced, and given the means of reaching *Apavarga* — emancipation, from the misery of repeated births (in whose determination the ignorant has no hand), and thus of avoiding *Pretya-bhava* — transmigration.

But since the advent of the Theosophical Society, one of whose arduous tasks it was to reawaken in the Aryan mind the dormant memory of the existence of this science and of those transcendent human capabilities, the rules of Chela-selection have become slightly relaxed in one respect. Many members of the Society becoming convinced by practical proof upon the above points, and rightly enough thinking that if other men had hitherto reached the goal, they too if inherently fitted, might reach it by following the same path, pressed to be taken as candidates. And as it would be an interference with Karma to deny them the chance of at least beginning — since they were so importunate,

they were given it.

The results have been far from encouraging so far, and it is to show these unfortunates the cause of their failure as much as to warn others against rushing heedlessly upon a similar fate, that the writing of the present article has been ordered.

The candidates in question, though plainly warned against it in advance, began wrong by selfishly looking to the future and losing sight of the past. They forgot that they had done nothing to deserve the rare honor of selection, nothing which warranted their expecting such a privilege; that they could boast of none of the above enumerated merits. As men of the selfish, sensual world, whether married or single, merchants, civilian or military employees, or members of the learned professions, they had been to a school most calculated to assimilate them to the animal nature, least so to develop their spiritual potentialities. Yet each and all had vanity enough to suppose that their case would be made an exception to the law of countless centuries" establishment as though, indeed, in their person had been born to the world a new *Avatar!* All expected to have hidden things taught, extraordinary powers given them because — well, because they had joined the Theosophical Society. Some had sincerely resolved to amend their lives, and give up their evil courses: we must do them that justice, at all events.

All were refused at first, Colonel Olcott, the President, himself, to begin with: and as to the latter gentleman there is now no harm in saying that he was not formally accepted as a Chela until he had proved by more than a year's devoted labors and by a determination which brooked no denial, that he might safely be tested. Then from all sides came complaints — from Hindus, who ought to have known better, as well as from Europeans who, of course, were not in a condition to know anything at all about the

rules. The cry was that unless at least a few Theosophists were given the chance to try, the Society could not endure. Every other noble and unselfish feature of our program was ignored — a man's duty to his neighbor, to his country, his duty to help, enlighten, encourage and elevate those weaker and less favored than he; all were trampled out of sight in the insane rush for adeptship. The call for phenomena, phenomena, phenomena, resounded in every quarter, and the Founders were impeded in their real work and teased importunately to intercede with the Mahatmas, against whom the real grievance lay, though their poor agents had to take all the buffets.

At last, the word came from the higher authorities that a few of the most urgent candidates should be taken at their word. The result of the experiment would perhaps show better than any amount of preaching what Chelaship meant, and what are the consequences of selfishness and temerity. Each candidate was warned that he must wait for years in any event, before his fitness could be proven, and that he must pass through a series of tests that would bring out all there was in him, whether bad or good. They were nearly all married men and hence were designated "Lay Chelas" — a term new in English, but having long had its equivalent in Asiatic tongues.

A Lay Chela is but a man of the world who affirms his desire to become wise in spiritual things. Virtually, every member of the Theosophical Society who subscribes to the second of our three "Declared Objects" is such; for though not of the number of true Chelas, he has yet the possibility of becoming one, for he has stepped across the boundary-line which separated him from the Mahatmas, and has brought himself, as it were, under their notice. In joining the Society and binding himself to help along its work, he has pledged himself to act in some degree in concert with those Mahatmas, at whose behest the Society was organized,

and under whose conditional protection it remains. The joining is then, the introduction; all the rest depends entirely upon the member himself, and he need never expect the most distant approach to the "favor" of one of our Mahatmas, or any other Mahatmas in the world — should the latter consent to become known — that has not been fully earned by personal merit.

The Mahatmas are the servants, not the arbiters of the Law of Karma. LAY-CHELASHIP CONFERS NO PRIVILEGE UPON ANY ONE EXCEPT THAT OF WORKING FOR MERIT UNDER THE OBSERVATION OF A MASTER. And whether that Master be or be not seen by the Chela makes no difference whatever as to the result: his good thought, words and deeds will bear their fruits, his evil ones, theirs. To boast of Lay Chelaship or make a parade of it, is the surest way to reduce the relationship with the Guru to a mere empty name, for it would be *prima facie* evidence of vanity and unfitness for farther progress. And for years we have been teaching everywhere the maxim "First deserve, then desire" intimacy with the Mahatmas.

Now there is a terrible law operative in nature, one which cannot be altered, and whose operation clears up the apparent mystery of the selection of certain "Chelas" who have turned out sorry specimens of morality, these few years past. Does the reader recall the old proverb, "Let sleeping dogs lie"? There is a world of occult meaning in it. No man or woman knows his or her moral strength until it is *tried*. Thousands go through life very respectably, because they were never put to the pinch. This is a truism doubtless, but it is most pertinent to the present case. One who undertakes to try for Chelaship by that very act rouses and lashes to desperation every sleeping passion of his animal nature. For this is the commencement of a struggle for the mastery in which quarter is neither to be given nor taken. It is, once for all, "To be, or Not to be"; to conquer, means ADEPTSHIP; to fail, an ignoble Martyrdom; for to fall victim to lust, pride, avarice,

vanity, selfishness, cowardice, or any other of the lower propensities, is indeed ignoble, if measured by the standard of true manhood.

The Chela is not only called to face all the latent evil propensities of his nature, but, in addition, the whole volume of maleficent power accumulated by the community and nation to which he belongs. For he is an integral part of those aggregates, and what affects either the individual man, or the group (town or nation) reacts upon the other. And in this instance his struggle for goodness jars upon the whole body of badness in his environment, and draws its fury upon him. If he is content to go along with his neighbors and be almost as they are — perhaps a little better or somewhat worse than the average — no one may give him a thought. But let it be known that he has been able to detect the hollow mockery of social life, its hypocrisy, selfishness, sensuality, cupidity and other bad features, and has determined to lift himself up to a higher level, at once he is hated, and every bad, or bigoted, or malicious nature sends at him a current of opposing will power.

If he is innately strong he shakes it off, as the powerful swimmer dashes through the current that would bear a weaker one away. But in this moral battle, if the Chela has one single hidden blemish — do what he may, it *shall* and *will* be brought to light. The varnish of conventionalities which "civilization" overlays us all with must come off to the last coat, and the Inner Self, naked and without the slightest veil to conceal its reality, is exposed. The habits of society which hold men to a certain degree under moral restraint, and compel them to pay tribute to virtue by seeming to be good whether they are so or not, these habits are apt to be all forgotten, these restraints to be all broken through under the strain of chelaship. He is now in an atmosphere of illusions — *Maya*. Vice puts on its most alluring face, and the tempting

passions try to lure the inexperienced aspirant to the depths of psychic debasement.

This is not a case like that depicted by a great artist, where Satan is seen playing a game of chess with a man upon the stake of his soul, while the latter's good angel stands beside him to counsel and assist. For the strife is in this instance between the Chela's Will and his carnal nature, and Karma forbids that any angel or Guru should interfere until the result is known. With the vividness of poetic fancy Bulwer Lytton has idealised it for us in his *Zanoni*, a work which will ever be prized by the occultist; while in his *Strange Story* he has with equal power shown the black side of occult research and its deadly perils.

Chelaship was defined, the other day, by a Mahatma as a "psychic resolvent, which eats away all dross and leaves only the pure gold behind." If the candidate has the latent lust for money, or political chicanery, or materialistic scepticism, or vain display, or false speaking, or cruelty, or sensual gratification of any kind, the germ is almost sure to sprout; and so, on the other hand, as regards the noble qualities of human nature. The real man comes out. Is it not the height of folly, then, for any one to leave the smooth path of common-place life to scale the crags of chelaship without some reasonable feeling of certainty that he has the right stuff in him? Well says the Bible: "Let him that standeth take heed lest he fall" — a text that would-be Chelas should consider well before they rush headlong into the fray!

It would have been well for some of our Lay-Chelas if they had thought twice before defying the tests. *We call to mind several sad failures within a twelvemonth. . . .* All these were apparently sincere searchers after truth, and passed in the world for respectable persons. Externally, they were fairly eligible as candidates for Chelaship, as appearances go; but "within all was

rotteness and dead men's bones." The world's varnish was so thick as to hide the absence of the true gold underneath; and the "resolvent" doing its work, the candidate proved in each instance but a gilded figure of moral dross, from circumference to core.

In what precedes we have, of course, dealt but with the failures among Lay-Chelas; there have been partial successes too, and these are passing gradually through the first stages of their probation. Some are making themselves useful to the Society and to the world in general by good example and precept. If they persist, well for them, well for us all: the odds are fearfully against them, but still "there is no Impossibility to him who WILLS." The difficulties in Chelaship will never be less until human nature changes and a new sort is evolved. St. Paul (*Rom. vii, 18, 19*) might have had a Chela in mind when he said "to will is present with me; but how to perform that which is good I find not. For the good I would I do not; but the evil which I would not, that I do." And in the wise Kirat-arjuniya of Bharavi it is written:

The enemies which rise within the body,
Hard to be overcome — the evil passions —
Should manfully be fought; he *who conquers these*
Is equal to the conqueror of worlds. — xi, 32

The Theosophical Forum

BROADCASTS FROM SHANGHAI: XII

This is the twelfth of a series of radio talks on Theosophical subjects, given over station XQHB, Shanghai, China, during 1941 by Miss Elsa-Brita Bergqvist and Miss Inga Sjostedt. In this article Miss Sjostedt explains the theosophical doctrine of Hierarchies: of how the different units in Nature are composed of smaller units and form the parts of larger units in infinite extension through universal being.

Good evening, everybody:

One of the most important and interesting of the Theosophical teachings is that of hierarchies. If we look up the word "hierarchy" in a dictionary, it gives us this, among many explanations: "organization in grades or orders." We wrongly associate the word only with ecclesiastical government in ascending grades of superiority, with the highest representative of a church as the Hierarch or supreme head. This is a limited conception. Man-made laws and organizations are, at best, an imperfect copy of nature, and the occult student knows that the universe itself is built up of hierarchies in an endless succession, reaching from the lowest and most minute to the highest and most spiritual.

The speaker last Sunday gave us a clear picture of one type of hierarchy: Man himself. A man is made up of different centers of consciousness, for instance the physical, the instinctual, the emotional, the mental, and the spiritual or devotional. All these together constitute a hierarchy, a collection of inferior and superior forces and impulses. The Hierarch is the inner god, the divine entity which emanates all the lower portions of man's psychological and physical nature.

On the earth we see the different kingdoms built up in hierarchies. There is the world of the elements, the mineral kingdom, the vegetable kingdom, the animal kingdom, the human kingdom, and a vast aggregate of super-human, spiritual and divine entities above us. The first thought that strikes us is that all these different forms of life are dependent on one another, and that no entity, however insignificant, can live by itself and for itself alone. Human beings depend on each other in every way, and the least progressed look up to and learn from the more advanced and civilized. In a cultured nation the average man looks up to and is ruled by the great men, the geniuses, the leaders in religion, government and science.

Among the Oriental peoples special reverence has always been shown for old people, because they had seen life and could instruct the young; and also for teachers. They were considered the heads of their respective hierarchies, the school or the home. In the world today, as in the days when Man first became a self-conscious, responsible being, we have a still more inspiring summit of the human hierarchy — the White Lodge or the Masters of Wisdom and Compassion. In the quiet places of the world, in the deserts and secluded mountains, live these wonderful men who have overcome the pull of the lower human nature and who live in the pure regions of their spiritual selves — just as most of us live in our lower mental and instinctual natures. From time to time a Messenger is sent out into the world from this White Brotherhood of Adepts and Initiates, and these Messengers remain great and unforgettable figures in the pages of history — as did Jesus, Gautama the Buddha. Except for these few grand Messengers, the Masters live in seclusion, away from the prying eyes of mediocre men, and only those who live for Truth and for mankind contact them, even today, and become their disciples. This White Lodge is the summit of our human

hierarchy on earth, but it is only the beginning of a still greater hierarchy which reaches from the earth and its concerns to the spiritual regions of divine beings, or gods. These spiritual beings who in past ages had been men and who have now advanced beyond our form of life counsel and inspire the Buddhas and Christs among men. They are the "powers," "thrones," and "principalities" of the Jewish scriptures, the "seraphim" and "cherubim," and so on. The Hindus call these semi-divine entities "devas"; the ancient Greeks and Romans called them gods. Throughout every religion we thus see an endless ladder of life, without beginning or end.

On a bigger scale we have the planetary hierarchies of the universe. Our planet, earth, is a member of the solar family, together with the other planets that form part of our particular solar system, and this solar system constitutes one hierarchy. Only a thorough materialist would deny the possibility of life on the other planets. The esoteric teaching is that every other planet in space contains its particular form of life, and that there are various humanities on different planets, but each living in bodies and using sense-organs appropriate to the conditions on those planets. Scientists have argued that our earth-humanity could not possibly live on the other planets because conditions of climate and atmosphere are quite different there; but this is a very short-sighted theory. Even on our earth there are different forms of life. For instance there are the inhabitants of the sea. We, human beings, could not live in water, nor could they live above water, but each lives in the surroundings and under the conditions which are suitable. Therefore, there are undoubtedly beings living on Saturn and Mars and the other planets which revolve about our sun, but they would not be able to live on our planet, nor we on theirs. The notion that God created the sun and moon and all the stars and planets in space just to give us something

pretty to look at in the darkness of night is, incredibly enough, still held by many educated people, but such narrow-minded conceit is fortunately disappearing, and even Science is nowadays speculating about the possibilities of life on other planets.

We have, then, the solar or planetary hierarchy of our solar system, the Hierarchy or summit being the central sun. However, there are innumerable suns scattered throughout space, and therefore, there are many such hierarchies. These together form the greater hierarchy of the Galaxy, or all that is encompassed by the Milky Way, and, of course, there are countless such galaxies in the Cosmos, galaxies that we are not even aware of because they are so immense and so distant. The mind reels at the thought of anything even greater than a galaxy, but no doubt there is a super-galaxy which embraces our own together with many others.

It is always easier to picture the immense if we compare it with the minute. Take our own body. That is also a hierarchy, for it is builded of infinitesimal entities, cells and atoms, and the atoms are made up of protons and electrons — just like miniature solar systems, for the electrons of an atom rotate around the central proton, or sun, just as our planets do around the sun. If we can imagine a tiny creature living on an electron and compare it to a man living on the earth, we realize at once how vast our physical body must seem to such a creature. A cell, which is composed of atoms, is probably a galaxy in miniature to such an entity, and we can imagine how many cells there are in a human body! The human personality is, in this case, the Hierarchy of the bodily cosmos, the super-god, and just as we are unaware of the separate functions of all our bodily atoms, so the super-divinity which rules our galactic universe cannot be aware of the separate personal needs of men. Yet the Divine energy permeates the universe, unconsciously filling it with its essence, exactly as the

human personality unconsciously permeates the entire physical body during the life of a man. We can always, in some degree, understand the great by analogy, for the small is a copy of the great. A famous Hermetic saying is: "As above, so below; as below, so above" — meaning that the great is always reflected in the small. Perhaps this will make clear the Theosophical belief in an *impersonal* Divinity and the rejection of a personal god. When God is made in man's image, he is no longer God, because he is limited. If he is a Person, he cannot be Infinite, eternal, and truly Divine. The gods of the ancients, even the highest of them, were never meant to portray the ultimate, eternal Spirit from which sprang life in all its manifold forms. The gods of mythology are merely the various forces and intelligences of Nature, the Builders of the physical universe, the spiritual entities controlling the movement of the suns and planets; they are beings that are higher, more evolved than Man.

Such is the picture presented by the Theosophical teaching of hierarchies. From atom to man; from man to the planets; from the planets to the pervading Spirit which men call God, and which is impersonal, formless, and incomprehensible, but which, nevertheless, is the center of all living things. All the forms of life are interblended, linked to each other, and all the energies and habits of the different hierarchies make up the so-called laws of nature. By understanding this teaching it becomes evident that there can be no limits to our advancement, for we climb from one hierarchy to the one above it, and when we reach the summit of that one, find that it is but the beginning of a still higher one. There never was and never will be any beginning or end to advancement and evolution, because the main attribute of Life is constant, never-ending motion.

THE RISE AND FALL OF NATIONS — *Kenneth Morris*

The title of this lecture is taken from a saying of perhaps the very greatest of Chinese Emperors, T'ang Taitson, who was not only a great ruler and a very great gentleman, but also a very wise thinker. He put his father on the throne in 618, and succeeded in 627; and the saying of his I quote from is this: "Just as by looking in a mirror I can see to adjust my crown, so by looking into history I can see to foretell the Rise and Fall of Nations." He didn't say crown really, because they didn't wear crowns; what he said was imperial headdress, but crown sounds better so I put it that way.

Now he was right. By looking into history you can see to foretell the rise and fall of nations. But you have to look intelligently, and to look into History and not the history of one or two nations, or even the history of one continent. I know a professor of history at one of the English Colleges who, I declare to you, I believe could tell you pretty much what was happening in any village in England on, say, January 14th, 1154, or any other date you may like to mention; and yet he knows nothing about History at all. History has been going on, what we can know of it, for about five thousand years, more than five thousand in some parts. English history, strictly speaking, has been going on since — 1066 if you like. If you have a mole's-eye view of English history you learn nothing, but crowd your mind with a lot of useless stuff, you must, to know history and to learn what it can teach you — among other things to foretell the rise and fall of nations — you must have a bird's-eye view of the world during those five thousand years.

When I went to school in England I gained the impression from

the history I learned there that England was the only country that mattered in the world, that English soldiers had never been and could never be defeated. Later I found that French boys acquired just the same view, but with France in the limelight instead of England, so did German boys, but with Germany as the superior race; so did Italians with Italy; Americans with America, and so on. Even when they grow out of that foolish view, most people who think about history at all think that it concerns only the white peoples. They have a notion that civilization has been a steadily growing stream among the whites with Greece and Rome at the start, and then Europe of the Dark and Middle Ages, and Europe and America since. Asia, they think, has counted for nothing at all; has had a kind of stagnant unprogressive civilization which gave the world nothing. That's all pure ignorance. That kind of history teaching is what leads to ill-feeling between nations, envy, hatred and all uncharitableness — and war. There is no kind of truth in it. There is only one Superior Race, and it is Humanity; there is only one Chosen People — mankind.

Let us take Europe, and see how much of the five thousand years it has filled with its greatness. Greece for a couple of centuries was extraordinarily illumined. Rome for a century or so had great civilization, great writers, for a few centuries wielded great political power. Modern Europe began to leave barbarism in the eleventh or twelfth century, and seems to be sinking back to barbarism now. But when did modern Europe become greater than Asia? Up to about 1560 a European army could no more face a Turkish army with hope of success than a black African army could face an English, French, or German army now; with less success, in fact, because the Zulus did out-general and defeat white (English) troops at Isandlana. We cite Hannibal's, Charlemagne's, and Napoleon's crossing the Alps as great feats of

military genius, but now I'll tell you of an Asiatic feat.

In 1792 the Ghoorkas invaded Tibet. Everyone knows that the Ghoorkas are tremendous fighters, a foe not to be despised by anyone. Twenty years later they fought the English with considerable success, Sir David Auchterlony fought two difficult campaigns against them. Everyone knows likewise that the Chinese now, and at any time in the last century, have been very easily defeated — a foe not to be feared by anyone. And everyone knows that compared to the Alps the Himalayas are Mountains and the Alps molehills. Well, the Ghoorkas invaded Tibet, and the Emperor Chienlung sent an army to meet them. And there in the high Himalayas among the crests of Everest and Kunchinjinga, the Chinese met those mountain fighters and whipped them; met them again and whipped them again, whipped them down to India, and there took their submission. "You are subjects now of the Son of Heaven at Peking." "Yes," said the Ghoorkas, "we are subjects of the Son of Heaven at Peking and proud to be his subjects." "And you shall pay tribute yearly to the Son of Heaven at Peking." "Yes," said the Ghoorkas, "we shall proudly pay tribute to so mighty a potentate, who could whip fighting mountaineers like ourselves down out of our own mountains." And they paid that tribute year after year long after China had become too weak to make anyone pay tribute; they stopped paying tribute only in 1910, when the revolution did away with the Chinese Empire and put a republic — what Ku Hung-ming, a Chinese author, recently dead, called a "Rob-public" in its place. Well, in time Sir David Auchterlony had a conversation with the Ghoorkas. "Now we have defeated you," said he, "you are subjects of the King of England." "Nothing doing," said the Ghoorkas, "we have the honor to be subjects of the Son of Heaven at Peking. Come on, we'll fight again if you don't believe it." But Sir David didn't want to fight again. "But you must pay tribute to the King of England." "Tribute

we pay to our Lord the Son of Heaven at Peking. If you want to change that, come on, we'll fight some more." "Oh well," said Sir David, "we'll waive that. But you must fight in the King of England's armies." "Oh sure," said the Ghoorkas, "fighting is our business, and it isn't likely that the Son of Heaven would want us to fight for him. He has better fighters than we, so we'll be only too glad to fight for the King of England." And that's how they arranged it: remaining Chinese subjects, proud of the fact, and paying the tribute till the Chinese Empire fell.

That is to say, the military superiority of Europeans over Asiatics is only about 130 years old; and then I'm leaving out of account the Russo-Japanese War of 1904.

Now look at Chinese History. About 600 b. c. China began producing great men, writers, thinkers, philosophers; and went on doing so till about 1300: eighteen or nineteen centuries of progressiveness, of fertility, in first rate genius, as against our white Europe's three centuries, say, of Greece and Rome, and say seven of Christendom.

Go back to the world in 1200, and what do you find? Christendom in appalling barbarism, in a condition like Afghanistan or Abyssinia today. Asiatic (Arabic) civilization, on the other hand, very brilliant, very scientific, stretching from the borders of India and Turkestan to Spain. Chinese civilization, very old but very beautiful — not like ours which is very ugly (if you don't believe me go up to the Rhondda) — still highly and wonderfully productive. So things had been for centuries; ever since, in Europe, the fall of Rome, say in 400; ever since, among the Mohammedans, about 650; ever since, in China about 800 b. c. and we don't know how much earlier. We know, in these modern times, that Africa does not produce first class genius and that Europe does. People knew in those times that Asia did produce

first class genius and that Europe did not.

Then in the thirteenth century a portentous happening occurred. Genghis Khan arose among the Mongols, a tremendous military genius among a nomad barbarous people, and learned in Chinese military science. He and his successors fell upon Asiatic civilization and broke it. He conquered half of China, his grandson Kublai conquered the rest. Various of his generals smashed Persia and depopulated it; destroyed million-peopled city after city and killed all their inhabitants, and where they marched is now a desert. They conquered Russia, took a look at Europe and decided it wasn't worth their conquering, or nothing could have prevented them reigning in Germany, France, and England. They broke Asiatic civilization, Kublai completing the Conquest of China in 1268. Wonderful was the Chinese resistance. Emperor after emperor, members of the Imperial family, had fallen; Chinese resistance at last was confined to a fleet on the Yangtse, surrounded by Mongol fleets; the last of the Imperial family was a baby in arms on that fleet. Ship after Chinese ship was taken, fighting to the last man. On the last ship stood the Prime Minister with the baby in his arms, and when the last Chinese was killed fighting, the Prime Minister with the baby Son of Heaven leaped overboard. China never recovered. No more first-rate genius was born.

Nor any more in Persia. Moslem Spain went down before the Christians, much as if England were now conquered by an Abyssinian army. Asia went to sleep, became utterly unproductive of genius. No more great books were written, no more great pictures painted. That brings us to 1268. And in 1274 the first fruit of European genius, first-rate genius, was born in Italy: Dante Alighieri. And ever since, till our own time, Europe has been productive, Asia sterile. Till our own time? Well, till Japan appeared as the conqueror of Russia, perhaps. For since the

War [1914-1918] Europe has seemed to many to be going down, to be becoming less fertile of genius; and in Asia you have had some striking figures.

Now watch how European civilization was born. In 1100 or 1200 Europe was barbarous; no genius, no amenities of life; just like Afghanistan or Abyssinia. But there had been civilization in Europe before. Roman civilization, covering England, France, Spain Italy. That civilization grew old and died. Barbarians from the north — Saxons in England, Franks in France, Goths and Suevi in Spain, Lombards in Italy — poured down and smashed it. The barbarians mixed with the peoples they conquered. And eight hundred years passed.

By that time a very high civilization had arisen next door to Europe: the Mohammedan. Mohammed, an illiterate Arab, had inspired his people with the idea that they had a mission. Of course you know the religious part of it: that there was One God; that the Christians in making Jesus god were idolators; and so forth. That part of it is unimportant, but he thundered two ideas that were important. One was that expressed in the text, "There shall be no compulsion in religion." They were to be tolerant, especially of Jews and Christians; were never to force people to become Moslems; he said a great deal on this point. The other was a perfectly extraordinary one for an ignorant Arab to have: he expressed it in the text, "The ink of the doctors, professors, and scientists is more precious in God's sight than the blood of the martyrs. Blessed is he that goeth on the road of learning; angels sweetly hover over him until his return home." Among the results of these teachings was that only one Mohammedan sovereign persecuted the Christians, and that was al-Hakim Biamrillah, Caliph of Egypt at the end of the tenth century. His persecutions however brought about the Crusades, and — al-Azhar University in Cairo. Now supposing you were a Welshman in the year 1100,

and got the desire to be learned, to get a higher education than you get in Christendom — by the way, it is probable that at that time you could get a better education right here in Wales than you could elsewhere in Christendom, except maybe Ireland. Well, you had heard of the great learning of the Paynims; perhaps you had been on a Crusade and noticed that the people you fought against were a deal more civilized than your own side. Anyhow you made your way, begged your way, to Egypt. And knocked at the door of al-Azhar. "Who comes?" "A Pilgrim on the Road of Learning." And the door was opened to you. None asked your religion; you came on the Road of Learning, and the angels were sweetly hovering above your head. You came without money; never mind, the Egyptian Government would attend to that. It would lodge you, feed you, clothe you and educate you; I am not a bit sure it wouldn't provide you with pocketmoney as well! Now I ask you: Have we any institution of learning, any college or University, in Christendom, quite as civilized as that? They were Mohammedans, and you were a Christian; it made no difference, they cared for you while you were there. You mixed there with students from all countries, of all religions. Egypt was taking care of them all on the same terms: fed them all, clothed them all, housed them all, educated them all; and probably introduced them all to the use of soap!

As was Moslem Egypt, so was North Africa, so was Moslem Spain. Abderrahman II, Caliph of Cordova, received more in tribute than all the Christian kings of Europe combined.

So you see, barbarous Europe had next door to it highly civilized Islammiyeh, the Mohammedan world, as we say Christendom, the Christian world. And just as Japan in 1871 began learning western civilization from America and Europe, just as I have taught Japanese students in an American university, so Europe began sending pupils to al-Azhar and other Moslem seats of learning;

began presently to start universities in imitation of the Moslem ones. The professors gave their lectures as a matter of course in Arab costume. You know the gown the college professors wear? Mohammed when he went into the mihrab or pulpit of his mosque at Medina used to put a loose shawl over his shoulders, to be impressive, I suppose. His successor followed his example. When the universities started in Islammiyeh, the professors regarding themselves as preachers, regarding all learning as sacred, wore it too. Japanese professors at Tokyo and other universities always lecture in European costume. Our professors lecture in Mohammed's shawl!

Now in Europe the old remains of Latin learning, the desiccated remnant of Roman culture, remained, but utterly sterile, in the monasteries. This new learning came in from the Mohammedans and united itself therewith. Result, a new impulse to culture in Christendom. Then, when the Mongols had broken Asia, Europe started on the path of progress, the road of learning. Perhaps the angels are sweetly hovering over her head still!

Now you know that for any human being or animal to be born, to start its life on earth, two elements have to unite: an element from the father called the sperm, and an element from the mother called the ovum. Now see how that took place in Western Europe or Christian civilization: in two ways, materially and culturally. Materially, the ovum, the race-ovum, was supplied by the peoples of the Roman Empire; the race-sperm by the barbarians who poured down and conquered them. Culturally, the race-culture-ovum was supplied by memories of Roman literature; the race-culture-sperm by the Mohammedan learning that poured into Europe in the twelfth and thirteenth centuries.

Now look at England in the second century a. d. It was highly civilized; plenty of prosperous towns, elegant villas dotted about

the countryside; schools where you could get a good education. You could travel from York to Baghdad in safety (there wasn't any Baghdad really, but to Ctesiphon, say, not far off) or to the cataracts of the Nile, or Constantinople — Byzantium, that is; and never need to change your money. Your house had a good sewerage system, water-flushed and so on; you bathed daily; you were a civilized man. The children in Baghdad, Constantinople, or the Nile Cataracts were taught all about Britain in their schools; as your children were taught all about those other places. You spoke a language, Latin, that would carry you all over that huge stretch of territory.

A few centuries pass. Gone are the houses with water-flushed sewerage; gone everything else. The children at Constantinople, the most civilized place now in Europe, are taught that Britain is a fabulous island in the west to which the souls of the dead are ferried nightly by invisible ferrymen.

So you see, civilizations fall as well as rise; they fall and disappear, and then after centuries begin to grow up again. I suppose it was not until Victoria's reign that England reached the point, in domestic sanitation, that it had reached under the Romans.

Nations, civilizations, are born as men are born: from the union of a race-sperm and a race-ovum, a race-culture-sperm and a race-culture-ovum. And they live out their span of life as we do, and then die.

That accounts for the fact that at any period in history there are two kinds of peoples on earth: one that is awake, fertile in genius, progressive; and one that is asleep, sterile of genius, unprogressive. The awake and fertile and progressive peoples always think they are racially superior to the others. They hold for the time being the leadership or hegemony as it is called of the

world; but in every century or two that hegemony changes. No one holds it long. In the European cycle, from 1200 till now, it is interesting to note how one after another of the European nations has held the hegemony; how one after another has been the nation most fertile in genius. Not always, but very often, the one richest in genius has been the one with most material and military power. But this is certain: the countries and peoples that are awake and hold the hegemony now will in their time go down into sleep, rest, or death; and the peoples that are asleep or dead or resting now will in their time rise and hold the hegemony. There is but one Superior Race, Humanity: but one Chosen People, the People of the earth.

What happens to a people when it is dying? It loses its coherence, its power to meet new conditions — what we call progressiveness, its power to produce first rate genius. If there is an awake people nearby, it may be conquered and held together, somnolent but in outward good order, by that awake people; otherwise it falls from civilization to barbarism. Wales is an example of the first kind of fate; Afghanistan of the second. Oh yes, Afghanistan, or again Morocco, were in their time highly civilized and progressive, and doubtless will be again. At a certain stage in its life-growth, a nation becomes an empire. It conquers and swallows up the nations around it that have lived out their life-period and are ready to die. From these dying peoples something we may call the soul has departed their nationals, the atoms of which the body of a nation is composed, become atoms now in the body of the empire. Centuries of rest and unprogressiveness pass; the shadow of the empire is over them and keeps them in order; they become patriotic subjects of the empire.

Then the empire itself has run its course and is ready to die, and meanwhile the subject race is getting ready to re-awake or be reborn. Thus we see the Turkish empire beginning to grow about

1300. The Greeks, Serbs, Bulgars, etc., are conquered and become subjects of the Sultan. While Turkey was strong, these people became largely patriotic subjects of the Sultan who governed them rather well and protected their religion. Wherever the Turkish armies came, the Christian peasants flocked to submit to them, knowing that Turkish rule was a great deal better than the rule of their own kings. Then Turkey declined, and had no longer the strength to protect its Serbian, Greek, and Bulgar subjects. And they began to remember that they had once been free and strong peoples; nationalism arose in them, and they fought and regained their independence. In the proper time they will become progressive and fertile in genius. You come to your prime a long time after you are born, as a rule.

Now let us consider the very country in which we find ourselves: Wales. When I was a boy at school in England, I was taught that the one fortunate thing that ever happened to Wales happened in 1282 when Edward I conquered it. But when I came to study history in order to fill my duties as Professor of History at Theosophical University at Point Loma, I found that there was much more to be said about it than that. I came to regard it as neither fortunate nor unfortunate, but simply something that occurred in the way of Nature, something that occurs to every people in its time; just as birth and death are things that occur to every human being. It was just the death of that race or civilization; and death, being an inevitable thing, is not an unfortunate thing by any means.

Wales had been living its life since the Romans went there in 410; then after a long life of 870 years it died in 1282, and its atoms, the Welsh people, became atoms in the body of England, or of France, for many of the Welsh went over to the French and went on fighting England in the French armies and navies. Owen Lawgoch, for example, won so many sea victories for France that

the English finally sent a man to assassinate him. Something we may call the "soul" had gone; just as the sap goes down into the roots of the trees in autumn, and in winter the tree is "dead," unproductive, puts forth no burgeoning of greenness.

But have you ever thought that there are but three books which were written in this island before the conquest of Wales that are read for pleasure now? All three are in the Everyman edition, and they are all Welsh: *The Mabinogion*, Geoffrey of Monmouth's *Historia Regum Britanniae*, and Gerald the Welshman's *Itinerary through Wales*. Geoffrey of Monmouth's book he claims he translated in his youth from Latin to Welsh, and in his age from Welsh back to Latin; it became the source of a tremendous literature in many languages; all the stories of King Arthur originate in it. That is, all three books came from Wales; none at all from England or Scotland; or, with hesitation, I may say from the rest of Europe. Again, have you ever read the standard History of the Vikings? If you have you will have read that there were only two peoples in Western Europe who were successful in their dealing with those pirates, and those two were the highly civilized and highly organized Spanish Arabs and — the Welsh. Both peoples, and they only, were too much for the Danes and the Norse Sea-Rovers who smashed every other country in Western Christendom. Fact. Just as that other about the three books is fact. And doesn't it suggest to you that there were greater material and military, and even cultural, energies in that old Welsh civilization that lasted from 410 to 1282, than in the sleeping countries of the then Europe?

Now look elsewhere again: Europe, western, had been civilized under Rome; and then it died and lay dormant for eight centuries or so, and then was born again. Persia under the Achaemenian dynasty, Cyrus, Darius and Co., had been a mighty empire; then came Alexander, and Persia died. Centuries of subjection ensued

under the Macedonian and then the Parthian Kings of Turkish race; then in 220 a.d. Persia was reborn. Artakshatr, son of Papak, son of Sasan, rose and drove out the Parthians; and then under the Sassanian Kings Persia became rather more than equal to Rome — born again, a mighty empire and civilization. Then came death with the Arab conquest about 650, and quiescence, rest, then rebirth again to be the Persia of the Poets, and to die destroyed by the Mongols.

Look at Greece: 500 to 300 b.c., a beacon to the world, marvelously productive of genius; then dying, conquered by Rome; born again at Constantinople under the Greek emperors; dying when Constantinople fell before the Turks in 1453; born again as the modern state in Byron's time. Look where you will, you see life and death alternating. Every time a people is reborn, the new race is the old one mixed with the blood of its conquerors, ovum and sperm; and the inspiration that brings it to birth culturally comes of the union of the nation-culture-ovum, what learning or tradition of learning comes down from its last life period, with a new cultural inspiration from somewhere else — not by any means necessarily from its conquerors.

India was never a nation. Nationalism was utterly unknown in Asia till Japan took fire with it from Perry's American men-of-war. The world had never heard of India, in historical times, till the reign of Edward I in England. English nationalists conquer India and live there, and infect the country with Nationalism; but as it is born in India, it is Indian Nationalism. When what we may call the Soul of India, which had departed from this world long since, begins to near this world on its approach again, Nationalism in India, caught from the English nationalists, becomes Indian Nationalism.

I have nothing to say about the political side as concerns my own

country, Wales; but I have, and am deeply interested, in the cultural side. The race-culture-ovum is here in plenty in Welsh literature — now what is to be the race-culture-sperm that will unite with it and produce a glorious new birth?

For Europe it was first Arab culture in the thirteenth century, and then Greek culture which flooded Europe in 1453 when the Turks took Constantinople and the Greek scholars came west from there. Because of the effect of Greek and Latin culture in the Renaissance time, and its ability to quicken and set on fire the minds of Europeans, it was thought for centuries that Greek and Latin were the only things worth teaching in schools. It was so in my school when I was there. But Greek and Latin have ceased long since to inspire.

Now will you get an effective cultural inspiration or race-culture-sperm from Europe? Because we are of the European Race, there is not sufficient difference. But — I was in Ireland when the great Irish literary Renaissance had its beginning. It produced from the nineties on the most brilliant literature in the English language; and I saw how it arose. It was born in the Dublin Theosophical Society. They were on fire with Irish nationalism, not particularly political, but cultural. George Russell, A. E., the central figure of it, painted huge pictures of the ancient Irish gods on the walls of his rooms. I don't know how many of them were gifted to see the Irish fairies. I myself, Welshman as I was, was caught into the belief that the Irish would save the world and civilize it. We knew the old heroes of the Irish sagas, Cuculain, Conall Carnach, Finn Maccool, better than we knew each other. And into this ovum-atmosphere came the high philosophy of India, of the Upanishads and of the Bhagavad-Gita. Sperm and ovum united, and the Irish literary renaissance was the child born.

Something of the kind is bound to happen in Wales; I don't know

when, except that it will be soon. The ovum we have; the sperm must be the high and noble Thought of the Indian or the Chinese Philosophers. China, culturally, was only discovered this century. There is more Chinese literature than there is European and American, ancient and modern. The Inspiration, the Message, of both India and China, though differently colored, are essentially the same. They go in the west by the name of Theosophy.

— Lecture given at the Headquarters of the Welsh Section, T. S., Gwalia House Fitzalan Road, Cardiff, Wales, some time in the early 1930s. Dr Morris's study over a period of many years early convinced him of the great importance of the role that Chinese and Indian thought would play in the new awakening in the west. He was a strong and ardent propagandist of this idea, which, though today appealing to an increasing number of minds was then, some ten years ago, scarcely recognized as worthy of serious consideration. Kenneth Morris, who died in April, 1937, is known for his books on Celtic mystical folklore and its interpretation, his *Book of the Three Dragons* (Longmans, Green, & Co, Chicago) having been a selection of the Junior Literary Guild.

The Theosophical Forum

THE DEVELOPMENT OF MAN'S PRINCIPLES IN THE ROUNDS — *G. de Purucker*

The matter which I am going to speak to you about tonight I approach with the utmost reluctance. It is thorny and difficult and is so entangled with other teachings that I almost despair of giving even a relatively clear picture of it. I despair, I say, of doing so without betraying the Mysteries more than I have any right to. For the full understanding of what I am this evening going to try to lay before you very simply, as far as I dare, the whole, the last word, is given only to those who have passed their Third Degree. Get that clear.

No wonder H. P. B. passed over it with scarcely more than a mere pointing of the finger. These are matters dealing with the Rounds and Races, and the globes of the planetary chain, and they may seem to you to be very simple and easy, matters which anybody has a right to know. But in fact it is all very difficult. Anybody has a right to know who has proved that right. Any human being who has made himself worthy has a right. But it is not for me, in the position I hold, to judge anybody.

So this evening I will go as far as I dare go. There is a great deal that I shall not even point to; so don't think that what I am going to say tonight covers the whole question. It does not. I will merely try to give you a brief picture, some few hints. That is the best I can do.

Now we have here a diagram which should be helpful for our discussion this evening. It is one that I imagined out myself. But remember that diagrams, though helpful, can also be very misleading. They give hints which the mind itself thereafter should pursue; but they are not *pictures* of what they represent; they are not photographs, they are not paintings. The usual diagram of the seven principles, as given by H. P. B., is merely intended to show that the most high and the most glorious is Atman (at the top of the diagram); and that the principles then "descend" in a decreasing scale of importance, power, and worth. It is not intended to convey the idea that the principles are one on top of another like the layers of a cake. And the only value that this present diagram

has is to give the elements or principles in the order of their involved evolution from beginning to end; and to show that the fourth is the critical element or tattwa, the one at which the downward arc stops and the upward begins. That is practically the only value of this diagram, but it is very important to get that one idea clear.

Do you know the diagram of the seven globes as H. P. B. gives them in *The Secret Doctrine*? You can consider that that diagram also represents the cosmic elements or tattwas on the four rupa planes of the cosmos; and just as there are two globes represented on the highest rupa plane, two globes on the next counting downwards, two on the next, and one on the lowest, so in like manner may the tattwas be arranged, as you see in the present diagram. Nature is all builded on one plan. And because this is so we can see, as this diagram shows, that any one of the planes of nature, or any one of the elements of nature, which includes the elements of man, whether it be high, as we say, or intermediate, or low, itself consists of seven subordinate or sub-planes.

Roughly the tattwas here enumerated have the following meanings: Adi-tattwa is the primordial or first tattwa; anupapadaka: that which is born from its own essence; akasa might be called "space"; vayu-tattwa, according to the elements of the ancients was called "wind" or "spirit." You may be interested to know that the Latin word "spiritus," our word "spirit," originally meant "wind" among the ancients, and in Greece *anemos* was "wind," but it originally meant "spirit" also. Tejas-tattwa, the fifth cosmic element, means "fire," the brilliant, the glowing, the burning, the dazzling fire. Apas means "water"; prithivi means "earth." But mind you, these lower four cosmic elements are not the air that we breathe, nor the fire that cooks our food, nor the water that we drink and bathe in, nor the earth upon which we walk. It is the relatively spiritual elements of the universe that are given these names.

Now in this diagram I have attempted, in the enlargement of No. 4, which could equally have been an enlargement of any one of these cosmic tattwas, to correlate them with the human principles; for instance adi-tattwa with atman, man's essential self, the root of all his being, and the source and root of the

other six principles. Anupapadaka-tattwa corresponds with buddhi; akasa-tattwa with manas or mind; vayu-tattwa with kama; tejas-tattwa with prana; apas-tattwa with linga-sarira; and prithivi-tattwa with sthula-sarira. Its great value is to show, both in the cosmos and in man, the importance of four as the turning-point, where the bottom is reached and things go swinging up again. As for instance here in these globes: both globes and life-waves begin at the top and gradually sink downwards, so that after round one comes round two, then round three; and then round four which is the very lowest, kama. And then the opposite process begins. When kama has been evolved in the life-waves, you get a balance between spirit and matter. Why is it that from this globe D, during the fourth round where we are now, there should have begun in the fourth root-race the beginning of the rise of the luminous arc? Because spirit and matter are then practically balanced, and for millions of years after that balance had been reached between spirit and matter, spirit continuously evolving forth more and more began to grow a little stronger, and there was a rise, very slow but progressive and continuous. During the Atlantean root-race, the fourth, the one that preceded ours, the bottom point of evolution was reached. Spirit then balanced matter, and from that moment all things which previously had been slowly sinking into matter, stopped, the balance had been reached, equilibrium; and from then onwards things are rising; so that we in our fifth race, as we are, are just a little higher than were the Atlanteans, for we are 9 million years to the good, towards the spiritualizing effect. The pull of spirit is stronger and will grow constantly stronger as our fifth root-race gives place to the sixth, and that to the seventh, and even more so when our life-wave leaves this earth, globe D, and begins to ascend the arc to globes E, F, and G.

I might add here that while human flesh is fourth round stuff, because we are in our fifth root-race during this fourth round, human flesh is somewhat more spiritual than the flesh of beasts is. When we shall have reached our sixth root-race on globe D, human flesh will be still tenderer, because more refined, more etherealized. When we reach the last race of this globe D during this round, the seventh race, human flesh will be still finer. It will be almost translucent, but not quite. It will be cloudy. And as the life-wave rises along the ascending arc,

when they reach globe G, the bodies of the inhabitants of globe G will be bodies which will be self-luminous, and by the end of that round they will be bodies of light. From now on, all the globes and all the life-waves which up to the present have shown a tendency to sink into matter, now having reached their balance, will hereafter show a tendency to become more ethereal. The very earth we live on, as the ages pass, will show a tendency to etherealize itself, spiritualize itself; and I may point out that the discoveries in radioactivity, such as that of uranium, and certain other heavy chemical elements so-called, are merely examples of the steady disintegration of the grossest chemical elements known, the heaviest. They would naturally be the first to etherealize.

Now then, how do the human principles, as given here, come into evolutionary activity during the course of their rounds around the seven globes? This is very complicated, simply because there are so many things to think of. We are now, let us suppose for purposes of exposition, at the very beginning of the first round. None of these globes is yet formed. There is just an astral nebula. But the globes are just forming, because of the work of the three elemental kingdoms. We will call globe A the beginning of the manifestation of atman; we will take our human life-wave as an instance of all the other nine life-waves. But what part of atman, which itself is sevenfold (I have tried to show it on the diagram) is manifesting during the beginning of the first round on globe A? It is the sthula-sarira of atman. But here comes in something else. In the atman, the atman-atman comes on quickly, the buddhi-atman comes on quickly, so with all of them down till the bottom is reached, because of the pull of matter, the sinking tendency that I spoke of. So all the sub-principles of atman are gone through, the higher six are very rapidly descended through until we reach the bottom of atman, the body of atman, the sthula-sarira; and that is the first principle of the human life-wave on globe A.

When this has been done, in other words when the seven root-races have been run through globe A, the sthula-sarira of atman remains here; but the surplus of life from atman overflows downwards into globe B, or rather the surplus of lives, because this surplus of lives are the outer life-waves.

What happens on globe B? On globe B all the atman principles are run through till it comes down here to the sthula-sarira of buddhi. In other words all the seven root-races are run through there, and the sthula-sarira, the last and most evolved on this first round, remains; and the surplus of lives from B passes down to C. The same process takes place there, and the surplus of lives passes down to D, and so on through all the globes. We will use seven globes. That is the first round. We may call it, if you please, the atman round. But atman is not fully developed. This is just the first round, and the lowest part of the atman.

What happens during the second round? We will call it the buddhi-round, when buddhi is evolved forth or emanated. The life-wave on globe A specializes, and it runs through all, till it stops at the linga-sarira; and as this is its main point during the second round in globe A, the surplus of life very quickly passes through the previously developed atman-sthula-sarira, gives the buddhi touch to it, and passes down to it, through the second round, to the linga-sarira of buddhi, and then goes on. Next, the surplus of life passes down to globe C, and the linga principle of the buddhi is developed in the life-wave, finishing its evolution in C; and the same thing happens, the surplus of lives passes down to D, and then upwards.

So thus far we have evolved the atman principle during the first round, the buddhi principle very imperfectly during the second round, and from below upwards. The first round brought forth the sthula-sarira of atman; the second round brought forth the linga-sarira of buddhi; the third round will bring forth the prana of manas in exactly the same way. The fourth round will bring forth the kama of kama. The fifth round, next one, will bring forth the manas of prana. Mark you, all through the globes. The sixth round will bring forth the buddhi of the linga-sarira in all the globes and the life-waves; and the seventh round — and isn't this remarkable? — will bring forth the atman of the sthula-sarira.

This means that at the end of the seventh round, take our human life-wave as an example, all the individuals of the human life-wave will be fully developed seven-principled beings, every one of the principles fully developed for our

manvantara, our chain during this Day of Brahma.

Why was it that during the third root-race the manasaputras at first refused to embody and give mind to the undeveloped humans of that time? Because the vehicles were not ready. There were no proper mental vehicles to contain them, to contain the mind of the manasaputras. I wonder if you are any the wiser!

So now the evolution begins with atman and ends with atman. The developmental process is from the bottom going up one stage or sub-stage with each round; so that while we begin with atman, having no proper vehicle to work through in the first round, we reach the seventh round with all the human principles fully developed, and even the body exists in its atman state.

Round one develops the lowest part of atman on all the globes, you have the lowest part right down the scale, what in modern science would be called the elements, the chemical part. Remember it began with atman — spirit. The next round we might call the buddhi round, and that develops the next from the bottom of all of them. Then the third round you might call the manasic round, just as it was in the third root-race on our globe that mind came to man.

When all the seven rounds have been run, when every principle of man has been fully developed in him, he is a god, he has the spirit working in him, the buddhi working in him, he has the mind working in him, he has the desire — and desire in the ascending arc becomes what we call aspiration, desire upwards instead of desire downwards. He has the prana spiritualized to become an actual individualized force in him. For instance, a seventh round man can then call upon his prana if he wants to, to shoot out a bolt of electricity by his will, if he wanted to work a little magic, crush a rock or disintegrate a tree, because his prana then is fully developed and under the power of his mind and his will. Likewise the linga-sarira will no longer be a rather shadowy, half-developed, inchoate body of man that now it is, but it will be a marvelous instrument, attuned to the harmonies of nature, individualized, man himself. It will be like a sounding-board catching every vibration; and his body will be a body of light, actually glittering just like the light of the sun. Why is it that the sun has the body it has? What we see is the sthula-sarira or body, it is a body of

light. A man will be that way during the seventh round, a shining globe, and what his inner principles will be of course are beyond description!

And now let me recapitulate the main ideas I have given you. The key-thought is this: there are two lines of evolution, the spiritual and the material, beginning respectively with the summit of the atman and with the elementals, the lowest of the material; and as the rounds progress these two lines approach each other, the former working downward and the latter working upward; they pass each other so to speak in the fourth round, and at the end of the seventh round in a sense their positions are reversed; that is to say that at the end of the seventh round the atmic part is in the highest part of the material or prithivi, having run all down the sevenfold scale; and the material part has reached up as high as it can go into the atmic part of the material again; and this produces fully evolved *vehicles*. Here is the key-note to the whole process of evolution through the rounds: the evolving of fit vehicles to express the spiritual and intellectual faculties, monads.

Remember also, that the first round is the outlining round, striking the pathways according to past karma for all the succeeding rounds. The very first entities that appear on the scene to build up the globes are the high entities (which I vaguely call the atman in my explanation) from the past incarnation of the chain, commingling immediately with the elementals; and thus we have the highest beginning at the top of the atman, and the elementals beginning at the bottom of the sthula or prithivi, and then, as stated above, through the remaining six rounds they work towards each other, pass each other, if we want to make a picture in our minds, in the fourth round, and then each line continues upwards or downwards respectively as far as each can go.

This means, therefore, that the monads or spiritual entities will have incarnated, or rather imbodyed, themselves fully at the end of the seventh round, producing god-men or equivalent beings in the other kingdoms, and the vehicles or sheaths or bodies will have through the seven rounds raised themselves up or evolved or developed as high as they can go to be fit vehicles for these now fully imbodyed monads.

Another point: If we take the vehicles for a moment and consider them alone: the fourth round brings out the desire-principle, with both its upper and its lower aspects. Then in the fifth round the *vehicles* are raised to the manasic plane on their respective positions in the scale of life; in the sixth round the *vehicles* evolve capacity to transmit buddhi; they become buddhic; and in the seventh or last round, the *vehicles* have gone upwards as far as they can in delicacy and unfolding power, and are then ready to carry the atmic ray.

But this is only as regards the vehicles on the several planes of man's constitution. As regards the spiritual entities or rays: they lean down to meet the upward rising vehicles all through the rounds, and thus, although they are always transcendent, in other words themselves always on their own planes, because of leaning down they seem to descend, as it were, and approach their rising vehicles until the junction is made in the fourth round, when, taking the human kingdom, man really becomes truly man, child of spirit and child of prithivi or earth — halfway up and halfway down, so to speak. — Address to the Headquarters Lodge, Point Loma, California, April 14, 1940.

The Theosophical Forum

HERE IS ONE ANSWER — *Leoline L. Wright*

Someone said to me the other day, "Theosophy is just another phase of the literature of escape. You people sit around and read and lecture about these grandiose cosmic ideas while all the time the world is going to the dogs around you. There's nothing really living and creative about Theosophy."

I then called his attention to the following statement of Sir William Henry Beveridge in connexion with his plan for the abolishment of poverty in Great Britain:

This planet is full of cruelty and oppression, of unexpected savagery, senseless injustice, killings of the body and killings of the spirit which one can do nothing to help — which one feels ought to rouse the conscience of humanity.

Beveridge said this in admitting that his plan would not make the world over. In fact he seems to doubt, as in this statement, that the world can be made over.

In quoting the above in response to my friend's objection I pointed out that here in the presentment of conditions which "we can do nothing about," is just where Theosophy comes in. Because it is so long range in its vision and methods of cure Theosophy seems to many at first sight both cold and unpractical. But one of the sound things about the Wisdom-Religion is that it has no *immediate* panacea for human ills. If it offered a quick, universal solution it might well be suspect. But its goal is the reform of the individual. When enough individuals become convinced of the truth of Reincarnation and Karma; that man is an imperfectly evolved god struggling with a selfish animal nature which he inherits from his own past; when the majority have learned to

understand the roots of their own psychology, and that they have a divine as well as an animal heredity — when enough individuals are convinced of these things, then the race will be well on its way out of the dangers from "unexpected savagery, senseless injustice" and the other things that seem to Beveridge to be incurable.

That this goal is a distant one, no one denies. It is true that if we could sweep the world with a belief in Theosophy a miracle of social reformation could easily result. But no Theosophist is foolish enough to expect such easy and quick results. Growth is a gradual and laborious process. Reformations founded simply upon emotional reactions are generally transient. It is only when beliefs are rooted in knowledge and tested by experience that emotional conviction has any value. Only such a process brought about by toil both of mind and heart can result in growth.

He who becomes a real Theosophist undergoes of his own volition such a "cure." No mere study of our teachings will make a Theosophist of him, the kind that becomes a creative power in his own world. He must become a moral, or better, a spiritual scientist, making of himself and his daily life a laboratory of spiritual research, experiment and eventual verification.

Even then he will rarely succeed without a Teacher. Of course it is barely possible to succeed without one. As a man *might* become a great scientist unaided by the work and the discoveries of colleagues and teachers. But no student, say of chemistry or biology, would today attempt such a wasteful and senseless independence.

So the wise student of Theosophy seeks a Teacher. He allies himself with colleagues and gets the benefits of association and exchange of ideas and methods. In doing this he obtains the guidance and the knowledge for his individual research in the

laboratory of his own being. He will then discover the real meaning of that tenet of the Buddhist religion: "I take my refuge in the congregation."

The word "congregation" in its true esoteric sense as here used does not refer to a mere collection of men with the same ideas. Dr. de Purucker's interpretation is: "I go to the Order of Holy Ones as my refuge." The word covers thus the whole congregation of Teachers — Adepts, Mahatmans and Bodhisattvas — who have preceded us on the pathway of liberation.

When a man allies himself with the Theosophical Society, founded under the auspices of the Mahatmans, and especially with its more esoteric work, he becomes an integral part of that Order. It is an organization of beings which we call the Brotherhood of Compassion. In a strict sense all humanity belongs to that Brotherhood, whose work consists largely in laboring incessantly for the salvation of the world. But between a genuine Theosophist and a non-Theosophist there is this difference: the Theosophist is a self-conscious, growing and developing member of that Brotherhood, a working partner. He is on the way to becoming himself a Savior of humanity. The other is like a minor shareholder who benefits in an unconscious way without knowledge or power to share in the advantages of active responsibility and co-operation.

Is not just the sense of such privileged co-operation in itself a mighty inspiration?

As for proof of all this — well, let anyone try living for six months the life outlined by Theosophy. "The proof of the pudding is in the eating." Let a man start reforming himself in the light of Theosophy and the evidence for its truth soon becomes overwhelming.

Yes, in one sense Theosophy is the "literature of escape" — escape from the tyranny of our animal selves, and escape for the world from ignorance, and from the cruelty and selfishness which spring from these factors. The only thing needed is to get busy and test Theosophy out for one's self.

The Theosophical Forum

THE FORK OF THE ROAD — *Henry T. Edge*

How often in life's journey do we come to points where ways diverge, and we stand in indecision as to which course to pursue. There is nothing to determine our election. One road presents as much or as little attraction as the other. Yet an election must be made, and eventually we discover that the whole turn of our after-life depended on the selection — a selection made with eyes blinded to the consequences. — S. Baring-Gould in *The Queen of Love*

The person here referred to comes to a fork in the road and stands hesitating as to which route to take, finally selecting one almost at random, and goes — to her death. The question here is, What determines our choice? We know that the outcome is the result of causes generated in the past, and this we term an operation of the law of Karma. But this Karmic action works through a chain of many links, and here we find a link to which it is usual to apply the word "chance." But chance is only a counter used to denote some unknown cause; to say that any action of ours is casual is simply to confess that we cannot explain why we do it. A competent astrologer (if such there be) might have predicted which fork she would choose; a clairvoyant or some kind of diviner might have foretold the issue. For these prophets would have been able to contact some of the hidden links in the chain. They would have seen that the person *could not* have chosen otherwise than she did. Yet this last statement must be qualified; for, if she had previously undergone a change of heart, then the destiny might have been changed, so that she would have selected the other path.

We learn from this and from innumerable cases of which it is an

instance, that our slightest movements must be controlled by momentous causes, and that there is a vast machinery of Karmic links beyond our normal ken. We also learn the vast importance of our every thought and emotion as determining factors in our destiny, in our luck and ill-luck. Finally we can understand that divinatory arts depend on a power to discern some of these hidden links and interpret them, and on a knowledge of the correspondences between apparently casual events, such as the fall of the cards or the marks made by a geomancer, and the equally "casual" happenings of daily life.

The Theosophical Forum

BROADCASTS FROM SHANGHAI: XIII

The next number concludes this series of radio talks on Theosophical subjects given over Station XQHB, Shanghai, China, during 1941, by Miss Inga Sjostedt and Miss Elsa-Brita Bergqvist. In this article Miss Bergqvist shows the fallacy of the argument held by some that Karman is a cruel doctrine, and quotes from the Book of Golden Precepts: "Inaction in a deed of mercy becomes an action in a deadly sin."

Good evening, everybody:

Last week the speaker explained the Theosophical doctrine of hierarchies, of how the different units in nature are composed of smaller units and form the parts of larger units in infinite extension in all directions.

This week I want to clear up a misapprehension that has been brought to my notice. It seems that there are people unacquainted with the Theosophical teachings, who have received the impression through a casual acquaintance with only one aspect of Theosophy, that Theosophy is a cruel doctrine.

It would appear that the teaching which has given rise to this wholly erroneous idea is the doctrine of Karman in one of its aspects. Karman, if you remember, is the name given to the law of harmony in nature, which is perpetually readjusting the balance of events, which renders suffering and joy as the just result of thoughts and deeds. It is Karman, even, which gives us the capacity to enjoy or to suffer, for it is in ourselves and our reactions to surrounding circumstances that lies the cause of our joy or sorrow.

On the strength of this, some people who have given but superficial attention to the doctrine would tend to pass by suffering with a shrug of the shoulders and the casual thought that it's the sufferer's Karma; and it is here that has arisen the said misunderstanding and the accusation of cruelty. This is entirely wrong. The following much-quoted saying of our Society's Founder and first Leader proves this beyond doubt: "Inaction in a deed of mercy becomes an action in a deadly sin." Any thoughtful person will realize the truth of this. When we see suffering which we have the power to alleviate, how can we know that we are not face to face with an opportunity of paying off an old debt incurred in some previous life? We may even be responsible for the suffering that we see. In fact, a deeper study of Theosophy and logical speculation along these lines will show us that we are to a very great extent our brothers keepers. It is our simple duty to help others in every way we can, and to waste an opportunity of doing good is a sin — to ourselves as well as to the sufferer, whom we decline to help. It is a very shallow viewpoint to say: "Let him suffer, he has deserved it." It may be the sufferer's Karma to be helped by you, and if you refuse your help, Nature's law of compensation will adjust the balance in his favor, while your callous indifference will also bring its own result. Thus it is strictly true that inaction in a deed of mercy becomes an action in a deadly sin.

The Theosophical doctrines are based on the fundamental postulate of the brotherhood of man, and the only prerequisite to membership in the Theosophical Society is a sincere acceptance of this postulate. This is no mere Utopian imagery though it requires a little thought to fathom. As before explained, it is the logical outcome of the realization of our common divine root. It has been said before, but it will bear repetition, that Divinity to be divine must be infinite and eternal, wherefore everything that is

must contain its own spark of divine fire, from which it sprang and into which it will return. We heard last week how the speaker classified the various hierarchies of Nature, and we were shown humanity as one such hierarchy. Therefore each human being is a unit of that hierarchy and each unit is inseparable from the whole. Humanity as a whole is only a unit in a still greater hierarchy. As human beings we are all dependent on one another and no man can live for or by himself alone. We share the same qualities that mark us as human and depend on one another in every way, physically, mentally and morally. According to the ancient teachings there is only one heresy, the heresy of separateness, and from this spring all human mistakes. The belief that each man can live for his own selfish aims and ambitions is an offshoot of this. Selfishness lies at the root of all human troubles. There is not one sin or one sorrow that cannot be traced back to the selfishness that arises from the belief in our separateness. In a world where each man lived not for himself but for the community, there could be no suffering and no sin. Selfishness is at the bottom of all wrongs. There is individual selfishness, giving rise to greed and personal ambition. There is national selfishness, producing the same faults on a larger scale. There is even racial selfishness. All these forms of selfishness arise out of the mistake of believing ourselves separate from the humanity of which we are the parts, and so long as we persist in this belief and in acting in accordance with it, there will continue to be suffering and misery among the individual members of the community, among the nations and among the races.

When we see poverty and misery on all hands and the faults in the social order that are their immediate cause, we can do much to alleviate the suffering and poverty, but as long as our social order is based on individual gain and selfish ambition, these things will continue to crop up. It is not enough to alleviate the

suffering — that is necessary too and a sacred duty; but we must go deeper than that and eliminate it by searching out the cause of it and destroying that cause. The keynote of the Theosophical teachings is unselfishness, and Theosophical students all over the world try to the best of their individual ability to live up to the high standards of these teachings. If we fail as individuals, it is not the teachings that are at fault, but the imperfect human beings who fail to live up to them. Unselfishness based on the rational and philosophical concept of human brotherhood is surely the last thing in the world that can be called cruel; and those who on a superficial acquaintance with one tenet of the Theosophical teachings, believe them cruel, should make a deeper study of the subject and — judge for themselves.

The great Teachers of Theosophy, those who worked publicly like Christ and Buddha, and those who work silently and in seclusion, are shining examples of unselfishness of the highest degree. Those who try to follow in their footsteps and who enter the path of training and initiation, even today, for the purpose of helping humanity in its evolutionary course toward spiritual perfection, leave behind them all thoughts of self, for in their training it is not only impossible but dangerous to try to achieve wisdom unless every selfish thought has been permanently banished from their minds. Such men exist today, but they wouldn't come and tell you about it, for every trace of personal ambition is excluded from their make-up, and so we know next to nothing about them; but humanity has good reason to be grateful to those who give up their personal lives entirely in order to enlighten and inspire anyone who sincerely aspires to wisdom and truth without selfish motives.

We have often mentioned the Masters before. People sometimes think that they are some fabulous creatures from another world; others don't believe in their existence. As they don't advertise

themselves, this latter is the more common view. There isn't anything fantastic about them really. They are human beings, who have made the most of their experiences on earth during many lives and who have directed all their energies toward the goal of truth and perfection, instead of vacillating and wasting time as most of us do, and whose efforts have been crowned with success. They know the laws that govern our world and work consciously in harmony with these laws. As the laws of Nature involve altruism and compassion, they exert these qualities to the utmost and — because of their infinite compassion — remain on earth to help humanity rather than proceed with their own evolution on higher planes. In case any one should wonder why they don't interfere when the world is in a state of political upheaval, it would be as well to mention that they cannot and will not hinder the workings of Karma, which is a natural law, but they continually help and inspire those whose motives are pure and unselfish, and thus they help to prevent much of the evil that would arise in the future from present mistakes. In conclusion I should like to quote another of H. P. Blavatsky's sayings. This is what she says: "It is easy to become a Theosophist. Any person of average intellectual capacities, and a leaning toward the metaphysical; of pure, unselfish life, who finds more joy in helping his neighbor than in receiving help himself; one who is ever ready to sacrifice his own pleasure for the sake of other people; and who loves Truth, Goodness and Wisdom for their own sake, not for the benefit they may confer — is a Theosophist." With this high ideal before us we readily see that Theosophy teaches — not cruelty but compassion — and more compassion.

JUSTICE THROUGH REINCARNATION — *Helen Savage*

Theosophists, in explaining the doctrine of Reincarnation, often state that man merely does what the whole universe does; and that as the universe is subject to periods of alternate rest and activity, so is man. But this should not imply, as it might to the untrained mind, that man is carried on an ever-whirling wheel which automatically brings him in and takes him out of incarnation by turn. Rather is it that he adapts the universal process to his own inherent needs and urges. Just as the universe is born and dies and is born again through *self-generated* power, so man is impelled into repeated earth-existences by forces generated within himself.

Now it is obviously not the personality of man that generates this power, for the personality has no persistent life; it is dissipated at the close of each earth-period. But there is a Self in man that persists; it carries over from life to life, consciously following the wheel of karmic law, linking up cause in one life with effect in another, and working unwaveringly towards a definite end. Yet seldom are we, as human personalities, aware of this. Seldom do we feel, except perhaps as a vague and unaccountable uneasiness that will not quite let us alone, the pressure of the inner Ego impelling us onward.

Hidden deep within this Self of every man is a sense of the fitness of things: a sense of harmony, balance and justice, which is reflected in our human consciousness. Our very rebellion against injustice is a proof that the concept of justice is natural to us, that it appeals to us as inherently sound. We rebel because we recognise injustice as a departure from the ideal right, an infringement of a universal law, a violation of our deepest

intuitions.

This sense of justice is one of the great forces impelling us to reincarnate. How so? Are we not forever committing acts of injustice, wronging others, incurring moral and psychological debts? We are. And the Self takes note. Not one act escapes its vigilant eye. It recognises, though "we" do not, that accounts must be squared soon or late, that if we wrong someone in this life, we have to right that wrong, and that no amount of "forgetting," concealing, or delaying will suffice in the end to keep us from paying to the full. Thus the urge to adjust, to redeem, to make restitution, comes from within ourselves, not from outside.

Karma is no outside avenging fury. It is our inner Self, that will not allow us to go "scot free." By some occultists it is even believed that this Self provides, or helps to provide, the opportunity in each new life for the fulfilment of our obligations. Sometimes such opportunity is veiled, to be sure. Often those things we least like in our life and that we consider our stumbling blocks to happiness and freedom are in reality our opportunities. Until we recognise this, they bar our path and we rebel. But when they are reviewed as representing obligations unfulfilled, old karmic debts which hold us back, we are ready to prepare ourselves to pay these debts, and then the way is clear.

No one life can be taken as an isolated thing. In the unfinished story of a single incarnation, there often is no justice at all, because the chain of cause and effect extends both ways, into the past and into the future. Ignorance of this one principle, *i. e.*, of justice worked out through reincarnation, is a great handicap to writers of fiction, it would seem. They cannot work out a life-story in its complete pattern, so they stop short and leave the reader with a sense of unfulfilment. Their tale is only a fragment, and sometimes a meaningless one. A hundred threads are broken off, which lead — where? The great writers suggest a sequel or

manage to work out the fulfilment in the one life. But only too often the ending itself precludes the only possible just conclusion.

An instance of this is the story, told in Dostoievsky's *The Brothers Karamazov*, of a man who in his youth had murdered the woman he loved through jealousy of a rival lover. By a series of amazing circumstances his crime was undiscovered and, since his life thereafter was most exemplary, not the slightest suspicion attached itself to him. Even the memory of it seemed to have completely left him. He later married, was the center of a happy family, held a high position in the town in which he lived, and was looked upon with respect and esteem. He was very generous too: not only did he subscribe large sums to the almshouse and orphan asylum, but he often gave secretly to the needy.

Then one day, in the midst of this virtue and security, he met a holy man in whose presence the picture of the crime he had committed came back to him in vivid horror. First he felt himself impelled to tell the holy man everything, and gradually it came to him that in order to expiate his sin he must make a public confession.

No writer knows better than Dostoievsky how to describe such mental torture as this man endured as his nature swung from indecision to fixed purpose; from loathing of the holy man who had awakened his conscience, to loathing of himself who had allowed that conscience to sleep for so long; from fear of laying bare his past, to fear of the spiritual consequences of not confessing. At last his conscience wins. He makes a public declaration of his guilt at a fine birthday party held in his honor, and — heaven is assured to him. His death soon follows as the result of the terrific strain, and, fortunately for him, his family and friends all feel that he has been the victim of some lesion of the brain.

Magnificent as the story is from the standpoint of the art of narration, it leaves one unsatisfied. Not a word is said for the woman whom he had murdered, nor for those whose lives were perhaps ruined because of the act. To whatever state of bliss his soul may have gone, would it never be haunted by the face of the murdered one? Has his responsibility to her ceased because of his confession and death? How, even in a mystical sense, could his confession help the lot of his victim? Was her soul automatically saved also? Apparently he did not think of the fate of her soul. In his soliloquies and prayers, he never asks divine grace for her.

There is a similar episode — yet in actuality a very different one — told in Victor Hugo's *Les Misérables*. Jean Valjean, the convict, has become the respected, indeed revered, Monsieur Madeleine, Mayor of a small French town. Buried in the past is his crime of theft and his years as a galley-slave. It will be remembered that by a sudden awakening after a revulsion of feeling following upon a second theft, he rises out of his old self of ignorance, bitterness against social injustices, rebellion and slavery, to assume the proportions of a man transfigured. His whole life-energy is focussed in a succession of deeds of mercy and benevolence. But Jean Valjean, the convict and thief, is still being sought by the representative of the law, Javert. It had seemed that he was unassailable and inaccessible in this obscure little town. All he longed for was to conceal his name and sanctify his life. Having supposed he had done both successfully, he was to find that, as for the first, the law could still overtake him; and as to the second, that he who seeks purification is tested for the sincerity of his desire with the implacability of apparently inexorable fate.

The story is well known: a half-wit is spotted by Javert and is arrested as the missing Jean Valjean. How simple a thing it will be to let this poor misfit slip quietly out of life. Forever after, his (the real Valjean's) identity would be safe. Everything is working in

his favor. Even a group of convicts assert that they recognise in the poor broken fool their fellow-in-chains. Is not Monsieur Madeleine's life of greater value than this one's? Is not his past all behind him? Is he not a changed man? Who can compel him to give himself up? — Thus he struggles with himself. *Who can compel him?* His own inner Self *does* compel him. That inner voice of justice will not be stilled. It follows him everywhere. Locked doors cannot keep it out. It keeps vigil with him in the night and will not let him sleep. And in the end it prevails. He declares his identity; proves it conclusively when at first none would believe him; and the wretch who had been mistakenly apprehended is allowed to go free. All this may seem foolhardy to those who believe that to throw away one's chances of happiness in this life is to lose them forever. *But to* those who understand something of the working of the laws of reincarnation and karma, this was no melodramatic gesture. His act carries over nothing to be undone in another life, no restitution to be made. He resists the temptation to steal the poor wretch's right to liberty. He accepts, nay more, he seizes, the karma of his own past, embraces it, and by means of it is liberated. He is liberated out of the narrow circle of mere earthly security into the free land of the spirit. Such acts are the essence of liberation. Paying one's debts to the full leads one gradually from life to life out of the "tangled net of sorrow" that we all knot about ourselves, into a state where the karma of pain, bereavement and agony for oneself are no longer known.

Dostoievsky's hero, on the other hand, for all his noble confession, must come back into life with the burden of a karmic debt to pay. We do not say that his change of heart is of no avail. May it not be that this transformation in him, this breaking down of the barriers behind which he has hidden his guilt, and his utter surrender of his name and fame and all he holds dear — may it

not be that all this will tend to remove the act of restitution from the plane of punishment to that of a splendid opportunity to do benign service to the one he had formerly wronged? And is not this a saner way of viewing this aspect of karma than thinking of the one wronged as being the agent of punishment in another life? The doctrine of karma, we are told, is a very difficult and obscure one in its details, but we shall find it more appealing to people generally if we can see in it not an avenger but a healer of woes, and that we ourselves gladly, in our inmost nature, bear the responsibility of righting the wrongs we have inflicted on others.

The Theosophical Forum

THE SEVENFOLD SEVEN PRINCIPLES — *G. de Purucker*

It is one of the glorious Theosophical teachings that worlds, just like men, die and vanish into the invisible. After a period of rest they come forth again and manifest in the visible spheres: appearance and disappearance, the rhythmic pendulum beats of the heart of eternity. Worlds — manvantara; rest — pralaya. Then the same worlds reappear, run through their phases, die, and enter the unknown spaces of space, just as man who is born a little child, lives his life, pursues his karmic destiny, dies, vanishes from earth, and comes back again.

So what I am now going to point out would serve equally well for a galaxy, a solar system, a planet in a solar system, or a human being, or indeed an animal or a plant: any individual entity. Let us imagine, then, this cosmic space when all the worlds, solar systems, clusters of stars and what not, have been swept away during the pralaya or death-period of our galaxy. There remains naught but what science calls empty space. Literally it is the lowest plane of spirit, but to us, to our eyes, to scientific instruments, because we cannot see any glittering orbs, we call it empty space. Mother Nature has slept for seven eternities in utter peace. Naught is, that we sense.

Now mark: the time comes when a galaxy or a solar system is to make its manifestation after this maha-kalpa or great world-period. Somewhere, anywhere, there appears first a focus of life; let us call it the monad. It does not appear on the physical plane. It is awakening from its long para-nirvana; and it is coming into manifestation in the invisible deeps, the inner worlds of cosmic space. It surrounds itself with a nebula. Now this nebula is called in Sanskrit — and remember we are now talking of monads and

not of celestial bodies — this nebula is called a Pradhana, and the monad is called Brahman. In the case of a human being, the monad would be called Atman, and the nebulous vehicle around it, which is not a nebula so much as a veil of living stuff, is called the Buddhi. But in either case, the full birth of the entity proceeds in the same way: by the unrolling of each part or element from the one next above it, until we have the complete sevenfold entity. Nature has one law. She cannot have different, contrary laws working against each other.

The following diagram represents the unfolding of the sevenfold entity from the highest, or pure spirit. In the case of either a universe or a human being the other six principles arise from the first and hang like pendant jewels from the first. In other words, out of the divine or out of spirit is born all that is, in a galaxy, in a solar system, in a planet, in a man.

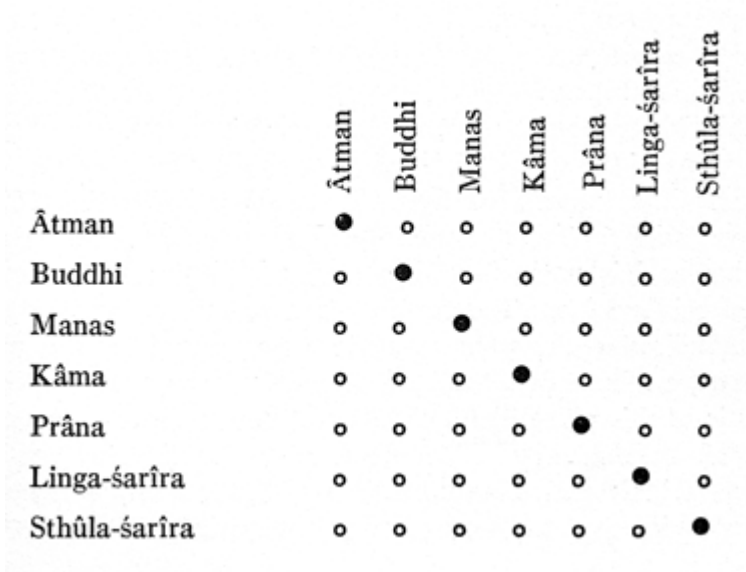

Death, speaking in general terms, and applying both in the great and in the small, is the reverse process. What was on the lowest rung or plane is drawn up into the next higher. It disappears. What was in the two lowest is drawn up into the next, and that finally disappears. What was in these three lowest is finally drawn up into the fourth, and that in its turn disappears. All the

four lowest are finally drawn up into the fifth and in its turn that disappears. The same process with the sixth; until there remains but the pure monad.

The whole of a human being, then, manifesting on this earth, is ultimately from this monad. From atman, the fundamental everlasting monad, eternally a droplet of the Infinite, so to speak, is born buddhi its vehicle; and yet buddhi, although a vehicle, is itself conscious living matter, conscious living stuff. It is spirit-stuff, just as atman is the heart of spirit. Then is born from these two what we call manas, mind, the intellectual power, the root of mentation. From these three is born kama, the principle which impels us to action, the urge to do things, commonly called desire; and it can have a very holy and beautiful aspect as well as a low one. Every man knows that. He has desires in his heart which can be sublime, divine, and desires in him which are sometimes grosser even than those that the beasts show. Then (note the plural) come the pranas, the vitality; that comes from the four above. From all these comes the model body of the physical, the astral body, commonly called the pattern-body on which the gross physical body is builded; and the astral body produces the physical body.

To repeat: from atman is born its child buddhi. From atman and buddhi are born their child manas: Father, Holy Ghost, Son. From atman and buddhi and manas taken together and often called the reincarnating monad, springs forth, from their interaction in the manifested world, the principle of desire, the urge to be and to do, to become. And from these four again, from within them, comes the vitality. And from these again is born the astral, model body; and out of all these is the last child, the reflexion on earth of the divinity, of the atman, *i. e.*, the physical monad, which should be an imbodyed god, and could be for he has it in him. This is shown by the following diagram. It is useful for showing this and other

aspects of man's nature. But if you have studied it for awhile, do not form a picture in your mind of what you have seen here, and imagine that the principles of man are on top of each other like a stair, or a pile of books. The fact is that they absolutely penetrate each other; so that sthula-sarira, as said in the Christian New Testament, actually is the Temple of the Living God, or it should be. The Christians have a marvelous story about the Avatara Jesus going into the temple and driving out the money changers with a whip, because they were degrading the use of the temple. The money changers are our evil thoughts and evil emotions, our evil passions; and the presence of the Christ, the Buddhi, drives them out.

All the principles interpenetrate each other. I have tried to show that also in this diagram, as well as the descent of power and faculty decreasing from the top downward. You see then the reason why even the physical man of flesh not only is helped by having within him as it were a reflexion, a radiance from the atman in his heart, but this physical man likewise, because his principles interpenetrate each other, can affect them by running up the scale as it were. You know you can affect your character

by your thoughts, your feelings, whether you give way to them or master them; whether you determine to live a life which is grand or one which is the reverse. You affect your whole character thereby, and thus you affect your destiny. You make records running up, as it were, in an inverse direction along these pathways, running right up to the very spiritual heart.

Now there is another thing I have tried to show in this diagram: Every one of the seven principles of man is itself septenary. Why? Because it is nature's law that what she does in one place she will do everywhere. Nature is unitary, she has one soul and the action of that soul is uniform. Thus the buddhi-principle in man has seven sub-buddhis. The topmost is a reflexion from the atman. Thus, following along the second column on the diagram, marked BUDDHI, we have first the atman-buddhi; then comes the characteristic of this plane, the buddhi-buddhi; then there is the manas-buddhi, the kama-buddhi, and the prana-buddhi and the linga-sarira-buddhi; and the very lowest of this column is the sthula-sarira-buddhi, yet to us practically pure spirit.

Here I want to point out a very important thing. Take the kama, the principle commonly called the principle of desire. Now according to my statement above, there is an atman-kama, a buddhi-kama, a manas-kama, a kama-kama, *the* particular specialized color or quality or characteristic of that plane, and then the prana-kama — and so on down the scale. Now what does that mean? It means that even the principle of desire has its atman. You may remember reading in the old Hindu scriptures in the Veda: "Desire first arose in the bosom of IT," speaking of the universal, cosmic desire to be, to manifest. What kind of desire is that? It is atman-kama.

And here is another point: It is because the atman is sevenfold that it can unfold itself into the sevenfold constitution of man.

The atman, having the buddhi within it, drops a reflexion of its buddhi below, and that becomes the main buddhi. From the atman and buddhi, the buddhi having a manas in itself drops a reflexion of its manas, overenlightened by the atman, and that becomes manas-proper. The manas in its turn, having a kama-manas, or rather a manas-kama, drops a reflexion of it, overenlightened by the atman of buddhi above itself, and you get the kama-proper. And from the kama in the same way comes the prana. And prana is sevenfold. Just as in the man's body there is the life of every cell, the cells of his brain and the cells of his bones and the cells of his blood, which all build one life which penetrates the whole body, so there is the life which penetrates man's whole constitution. There is the life in him which stimulates love. There is the life in him which stimulates devotion, the desire, the yearning to help. There is the life in him which has the kama-principle or desire-principle for lower things, the lowest part of the kama. All these are in man, all interpenetrating.

So you see how the atman can unfold or unroll like a scroll and produce a world, a galaxy, a solar system, a planet or a man. This is the picture the Christians gave, taking a statement from the sanctuary, when they said that at the end of the manvantara the heavens shall be rolled up like a scroll. What does this mean? It means that the body will be the first to die and vanish; its component atoms will disappear into their electrons and protons and what not. What is carriable upward will be carried up to the linga-sarira. (In the universe it would be the astral light.) And then this will be the next to die or disintegrate, and what was best in it, including what was best in the one below it, will be carried up to the next higher principle. The scroll is slowly rolling itself up, every principle in turn vanishing, being carried up into the next higher, until finally you have only the last three or the last

two, depending upon the kind of pralaya.

When a man dies it is the four *lowest* principles which disappear, disintegrate, break up into their component life-atoms but all that was best in him is attracted up into the manas by the atman and the buddhi. The man, from being sevenfold has become a triad, a threefold being. This is what happens when we men die. But what happens when a planet, the one in which we now live for instance, has its turn to die? Its own manvantara or period of manifestation ends, and its pralaya or rest-time comes. Then what will be left of man is merely the two highest principles; what was in the manas and all the four lower principles will be carried up into the buddhi.

Again, what happens when the solar system disappears, its turn having come to die, to go into pralaya? What will then remain either of the solar system or of any man who is in it? Just the pure monad, pure spirit; all the rest has been rolled up as a scroll and gathered into the atman.

Now then, to come back to what I first stated: a galaxy, a solar system, a planet, a man, all follow the same pattern. Let us consider a galaxy. The brahman or the paramatman of a solar system or of a galaxy, which has disappeared, because of having rolled up like a scroll all that was below in its preceding life, contains within itself all the karmic seeds of that past manifested period: all the seeds, the thought-deposits, the spiritual energies in their nirvana, the bosom of the atman. Now comes the time for manifestation again. A point appears in imbodyed space — the inside worlds of "empty" space please. What rolls out of the paramatman in the unfolding scroll of the new manvantara is called in Sanskrit Maha-buddhi, which contains the secret things which have been in the past and are now resting as seeds, to produce the future worlds. They begin to unroll themselves and

become the mahabhutas or the great cosmic elements. Isn't this exactly the same that happens to a man after his devachan? After he has died and has had a period of rest in the devachan, the monad in the bosom of atman slowly begins to unfold. It is like an unrolling scroll expressing what karman has written on that scroll, expressing what the man has within himself. He begins to reproduce *himself*, as he leaves the devachan and descends into imbodiment. He unrolls himself into a seven-numbered constitution; and when this has reached the linga-sarira the infant's conception has taken place. When the child is born, then you have the sthula-sarira; and you have a seven-principled human being.

Rebirth is the coming out of latency into activity of what has been laid up in the higher principles when the last death took place. Death is the passing away of these temporary lower things, the rising of all that was best and noblest in them into dormancy or sleep or peaceful dreaming, into the triune monad. Rebirth, as stated, is the reverse process, the unrolling, the three becoming the seven. At death the seven rebecomes the three.

— Address to the Headquarters Lodge, Point Loma, California, April 7, 1940.

The Theosophical Forum

TIME THE CHILD OF ETERNITY — *H. T. Edge*

You are in a square room with a high ceiling, and from the middle of the ceiling hangs a wire with a heavy ball at its lower end, so as to make a sort of pendulum. Only, instead of swinging to and fro in a straight line, the ball moves round and round in a circle. On one wall of the room a bright light throws a shadow of the wire and ball; and this shadow represents exactly the motion of an ordinary pendulum swinging to and fro in simple harmonic motion. Now, if you are a being who lives in shadow-land, you will say that this represents alternation, cyclic ebb and flow, the perpetual vibration between pleasure and pain, good fortune and ill, that constitutes the drama of human life. And truly it is a symbol of the course of Nature in general on the lower planes of manifestation. Yet, look at the real pendulum itself: there is no alternation there, no periodicity. The motion of the ball is uniform and invariable, it is the same at every part, every moment, of its path. Considered apart from its surroundings, there is no point which can be called a beginning, no point which can be called an end; so that no question of period can be raised.

Here we have an illustration of time and that which is beyond time. Some call the latter duration, others may prefer to call it eternity. Time, as we know it, is divided; divided into periods which have definite relative lengths. But that which is beyond time is not divided. Yet our illustration shows that the undivided duration is parent to the divided time. The latter is produced from the former by a shadow on a wall; it is the material world which splits up infinitude into finitude. The motion of the circular pendulum is uniform and invariable; the motion of its shadow is alternately accelerated and retarded; there are points where it comes to a stop and turns back.

This kind of illustration is not fanciful but real; for it means "as above, so below." Doubtless an indefinite number of other illustrations of this same principle could be found in the physical world. Periodicity born out of invariability, multiplicity out of unity. We see that temporal life, instead of being comprehended in a single and whole view, is spread out in a long series of successive scenes. Perhaps the life-view experienced at critical moments of death or birth is rather a single entire vision than a succession of glimpses. Other thoughts will be suggested, but we should beware of pushing an analogy too far; because any one analogy illustrates some one particular aspect of the question, and if we forget other analogies which illustrate other aspects, we shall land in absurdities. There are not simply two planes in Nature, one right and the other wrong: there are many planes, and the terms "real" and "unreal" must be used relatively. Neglect of this precaution is mainly responsible for our difficulty in reconciling prevision with freewill.

The Theosophical Forum

SEND IN YOUR QUESTIONS

What is the use of emanations from the divine?

We must assume the "That," the underlying principle H. P. B. describes as beyond human conception, to be perfection; therefore "That" cannot become more perfect by the issuing forth from Itself of numberless universes. What therefore is the use of manifestations from "That"? Why are we here?

John P. Van Mater — A fundamental point to remember is that "Tat" or "That" is *no thing* at all. It is. It is all things manifest and unmanifest, and on all planes. It is all that *is*, but it is also that which to us *is not*. Saying Tat is perfect makes of Tat something to be perfect therefore *some thing*, therefore finite. Tat is beyond all human comprehension. It is the infinite, and therefore includes the finite as well. It is the Boundless All. It is not perfection because perfection applies to things, and the Boundless is *no thing*. It is perfection and imperfection, as well as being that which is neither.

Why then do universes periodically appear and disappear? This question resolves itself into a second question: Why are we here? Life is infinite, manifesting throughout infinities of both time and space. It is logical, then, that some of its basic purposes cannot be comprehended by finite minds. But there are one or two things we can say to start ourselves thinking in the right direction.

One of the purposes of life seems to be that of growth or evolution. The spirit within us gains experience through manifesting in material worlds, and its vehicles on all planes from the spiritual-ethereal to the physical evolve through this

process. Each one of us is composed of lesser lives — the atoms, molecules, cells, etc., of our body — indeed of all our bodies, astral, physical, emotional, mental, etc. These lesser lives are growing and expanding through evolutionary experience. We are responsible for those lesser lives that belong to us. Therefore another reason why we are here is because the growth of lives less evolved than ourselves depends upon our leadership and successful running of the race of life. Each one of us is a part of the Universe, a lesser life thereof, and has his (or its) part to play in that life. G. de P. has said that if one atom were destroyed, the Universe itself would crumble into nothingness. Therefore every atom and electron and each one of us is important, indeed vital to the working of the grand Whole. Another reason, then, why we are here is because we are inextricably linked with Nature and are essential to the purposes of all life.

We are here because:

1. Being here is essential to the growth and expansion of ourselves as individuals.
2. By being here in the manifested worlds we aid in raising all that is below us, the lesser lives of the Universe.
3. We are inseparable parts of the Universe, without which the Universe could not function, for we collectively are the Universe.
4. What is said above applies to all things great and small, universes as well as atoms.

But if we ask further: Why are we growing? What is the purpose of all life? Why do we exist at all? We find ourselves faced with a mystery. The very fact that we do not know a complete answer to the question is the reason why we *are* here. If we knew all the purposes of life, then life would hold nothing more for us in experience, in knowledge, in opportunities for self-expression,

and we would have passed through it, graduated from it, because we would have learned all that it has to offer. The fact that we are here is strong evidence that we are as yet imperfect and unlearned in those things which life here teaches us.

If we ask: Why is the Divine within us here? Why need the perfect manifest at all? We again touch a mystery that can only be explained by saying that if we knew the reason why spirit or Divinity seeks manifestation, then we would be as great as or greater than Divinity itself, and not the imperfect humans that we are. When we know why we are here as humans, then we shall have become greater than human — gods, let us say; and as gods, no doubt, will be propounding the same question to ourselves. The complete answer lies infinitely away deep within the Boundless. Perhaps the reason for life is so that every living being, every spark of divinity, may in increasing degree understand the purposes of life which are infinite; and therefore the Ladder of Life is infinite. And because the Masters and the Gods above us increase in all those grand qualities the human heart reveres, in compassion, in majesty, in spiritual strength and grandeur, we can dwell in our hearts upon the fact that Life's purposes are unspeakably sublime, even though incomprehensible to us.

It is true we have difficulty in grasping even our portion of the All, but as Katherine Tingley says:

Thinking towards the unthinkable is a wonderful, spiritualizing force; one cannot think towards it without a disposition either to think more, or feel more — without opening up the inner consciousness of man. And when that inner consciousness is awakened, the soul finds itself closer to the infinite laws, closer to That, or that Great Center that no words can express.

What of Purgatives, Cathartics?

" ancients made use of catharms or purgations . . . for as this earthly body is washed by water, so is that spiritous body cleansed by cathartic vapours — some of these vapours being nutritive, others purgative." (Quoted from Cudworth's *Intellectual System*, by G. R S. Mead in *Extracts from the Vahan*, page 74).

In what way do purgatives, laxatives, etc, affect the astral? What, for instance, is the effect of castor oil on the astral? Is it good? — E. S. W.

H. T. Edge — Sthula-sarira, linga-sarira, prana, form a triad of which the parts are so closely interwoven that it seems difficult, for such a purpose as the present, to separate them, or to think of one being influenced apart from the others. I would say that a drug like castor oil affects the whole system. Yet we may classify such purifiers according to their degree of grossness or subtlety. A gas, like sulphur fumes, is subtler, and reaches the blood stream quickly through the lungs; homeopathic remedies are still more subtle, and probably act directly on the linga-sarira; or, to put it more in the language of science, on a finer order of atoms than the physical atoms. All of these means purify the physical system; but that alone is not sufficient to cleanse the intermediate nature. For this the use of the will is necessary. Nevertheless physical means are valuable so long as we bear in mind that they are only used as aids to moral force. It is of no use to cleanse the outer vestures, if this is merely to give us a new lease for self-indulgence. In antiquity we shall doubtless find drugs and fumigants used for purely medical purposes, as with us today; but in the preparation of candidates for initiation it is likely that these physical means were used as accessory to the inner training undergone by the pupil. The astral body stands between the

physical and the mental, and is affected by both; consequently it must be purified from above and from below, both. It is true that a clean mind makes a clean body; but much time and energy can be wasted in struggling against handicaps due to bad habits, faulty regimen, or curable illness. Drugs soon lose their effect, and become our masters instead of our servants, if habitually used. But if kept for emergencies only, and under the advice of a physician, they may prove valuable aids.

Conscience and the laws of one's country

It is understood that Theosophists as a matter of course will obey the laws of their country. What should one do, however, if any one of these laws goes against one's conscience? — C. C.

L. L. Wright — We must always remember that Theosophy lays down for our guidance only the broad principles of ethics and brotherhood. It does not — it cannot, if it is consistent with itself — dictate to any individual how that man or woman shall apply those principles to his own situation. To do so would be to interfere with individual free will, one of the most sacred attributes of the human soul. To go into any country and to declare which of its laws are "right" and which are "wrong" would introduce an element of dictation, which is contrary to the very nature of Theosophy.

Another point. How could anyone evolve as a self-directed individual if he were told how to think and feel and act at every difficulty or crisis of his career? It is only by learning to meet these in the light of our own experience, intuition, and wisdom that our highest spiritual qualities can be developed. While it is undoubtedly the broad axiom of Theosophy that a man or woman should obey the laws of his country, every individual has the Karmic right and responsibility to make his own decisions as to

how he can best obey them.

Panoramic Vision After Death

Many people have probably gone through a great deal in their lives which they would not care to experience again. It must be pretty hard to have to go through it all again at the time of death as I believe is your Theosophical teaching.

Abbott Clark — There is a misconception of the teachings shown in the question. There is no suffering in the automatic yet solemn spiritual process of death nor of this panoramic vision. It is a wise provision of beneficent mother Nature. This review of the life's events enables the soul to get a comprehensive and just evaluation of the lifetime just drawing or drawn to a close and to distil whatever amount of wisdom may have been acquired thereby. This distillation is a permanent acquisition of the soul and appears in the next rebirth in such forms as talents and aptitudes, innate ideas and inherent character. It is in this way that innate conceptions of morality are incorporated into the very substance of the soul and show forth as character in future lives on earth. It is the personality of a man that has emotions and suffers. The mere personality sinks into abeyance in the process of death while the karmic record indelibly photographed in the akasic aura of the brain passes in review before the departing soul's eye. It is the Individuality or Reincarnating Ego which is the onlooker. The process is not an emotional one but solemnly spiritual.

The teaching referred to by the questioner is that every thought, emotion and event throughout one's entire life is indelibly recorded on the tablets of memory in the substance of the soul and that in the solemn moment of the process of death this photographic record or visualized memory passes in review

before the mind's eye. From the dawn of consciousness in infancy to the moment of death, the record is seen in the minutest detail. This occurs in all cases no matter what the cause, condition or manner of the death. It occurs just after the last breath or heart beat. It is said in the teaching that no one dies or goes through the complete process of death unconsciously or insane. In unusual cases such as death by violence or accident this process occurs after the pain or shock to the body and brain are over. The freeing of the soul from a pain-racked body is a process of escape or liberation not of fear or dread. The time-consciousness is absent and the process may be very short or instantaneous.

During this review the man sees and faces every thought and act of the life just passed and realizes exactly what it was worth, good, bad or indifferent. There is neither fear nor favor, neither excuse nor self-justification. In this hour the lessons of a lifetime are synthesized and distilled and carried forward into the devachanic state where they are elaborated and assimilated and finally assist in guiding the ego to the proper environment for its reincarnation.

In some cases of death and resuscitation the panoramic vision above described is vividly recalled and remembered on recovery. I have met several such cases, among them my own father. When a young man in the State of Maine he was drowned and resuscitated. I have often heard him recount the experience. He said: "You all know how painful it is to strangle. But after that struggle was over I sank on the mossy bottom of the lake as easily and gently as lying down on a grassy bank. Then followed a flash more vivid than any dream — a memory or vision of my life in its minutest detail. While this was going on it was as if I sat back on the judgment-seat of my own soul and viewed, without fear or favor, the right and wrong, the good and bad, of every thought and act of my entire life. As I passed into unconsciousness at the

end of this vision I rose into a state of consciousness which I can only describe as more real and divine than anything experienced on earth."

This remained the most vivid experience of his life. Thereafter religious forms had no interest for him. He said: "Some day we may wake up spiritually and realize that this world is as unreal as a dream."

The Theosophical Forum

TEMPUS FUGIT — *Hannah Berman*

Time is one of the most perplexing illusions that tantalizes poor bewildered mankind. For it *is* an illusion — a perfect illusion. What is time? In a sense, it has no existence per se, any more than has space. Like space again, it has existence only when marked by boundaries.

It is a very interesting problem, and intriguing to the thinking mind. The pilot of an airplane thinks of visibility of space in minutes or hours of flying time. This appears to make time and space synchronize.

On the other hand, one might say that time is a personal thing since it appears differently to every individual, and that even the attitude of any individual towards an appreciation of time varies so much according to conditions, environment, state of mind, state of health, and so on. To one, for instance, with a deep love and appreciation of music, an evening passed in listening to a symphony concert might go in the "twinkling of an eye," so to speak; while to another the time spent in this way might seem an interminable age of intolerable boredom.

Yet it is the same time and the same condition which apply to both. So this proves that the crux of the matter lies in the individual and not so much in the outer conditions. In "As You Like It," Rosalind gives a beautiful dissertation on the subject. She works out time's gait with different people. She says:

Time travels in divers paces with divers persons. I'll tell you who time ambles withal, who time trots withal, who time gallops withal and who he stands still withal.

In childhood, days seem long and periods of time unending: a

year is a decade, and longer periods are quite outside the understanding and comprehension of the child mind. As we grow older, time seems to hurry, we cannot "catch up"; we think ahead all the while, looking forward and backward, and never pausing to grasp the present, until we gasp for breath and implore: "Time, you old gypsy man, will you not stay?"

The capacity of children to live in and make the fullest use of the present is one of the most beautiful and healthful aspects of childhood. Alas! that this faculty should fade with advancing years, when with Burns:

We look before and after
And pine for what is not.

The plan should be to make the most of every moment of our time, and then the aggregate is bound to be worth while. A day well spent gives a satisfaction which is deep.

If one can, before closing one's eyes at night, look back upon the events of the day just passed and examine how the hours have been spent, where more and better use could have been made of time, where an action here and there could have been improved, where a sin of inaction has been committed, and so on, the analysis can be an enormous help to future conduct. It is a good habit and once formed easy and increasingly interesting to follow through. Moreover it gives the individual the opportunity and practice of criticising his own conduct, of looking at his actions impersonally, and of understanding his own nature and his impulses.

Self-reverence, self-knowledge, self-control,
These three alone lead life to sovereign power.

— Tennyson

OUR PAST LIVES — *Gertrude W. van Pelt*

Why do we not remember our past lives? This is the question an average person of the West asks on first hearing of the archaic teaching of Reincarnation. In the East, where is included the majority of souls on our globe, it is accepted as one of the simple facts of nature. But for this civilization, minus the growing number of intuitive exceptions, this loss of physical memory settles the question in the negative. How shall we answer this natural inquiry?

First, the miracle indeed, would be, if we *could*, in the ordinary way, remember a past life. Can we, even now, recall at night every act and thought of the day just past? How much can we remember of last year, twenty years ago, or even last month? And as these years pass and we reach old age, forgetfulness is proverbial.

These questions recall to mind a series of articles entitled *Reincarnation and Memory* which appear in *The Path*, Vol. IV, written by "Harij." On page 342, we find:

All that we know of the brain shows it to be the organ of physical memory, and shows, moreover, that any change of its structure or perversion of its function impairs or obliterates memory. Cases of disease have been known from which individuals have recovered with complete oblivion of nearly all the past. Adults previously well-educated have forgotten even how to read, and have had to begin all over again like children.

All this may happen in any one life, while we have the same brain, but at physical death this brain, as a combination of

elements, is destroyed forever. Further, it is part of the archaic teaching that life in the unseen world, or world of effects, is, on an average, one hundred times as long as earth life. And although when the same ego returns to earth, the atoms of his old brain will seek their old attractions, they will have been changed and rearranged, so that practically the brain in the next life is a new creation. How then, could this ordinary brain memory be possible?

On page 246-7 from the article above referred to, Harij writes of the after death state as follows:

The ego now enters on a new phase of existence, in the world of causes, but where it has to work out, or "experience," the effects of its recent life on earth. When these have run their course and become exhausted, let us say that it returns to life on earth. Nothing remains of its former life save only precipitated results. The former body is destroyed, and the senses of its former life changed beyond recognition. In other words, nothing remains of the former personality. The precipitated results as impulses to new activities belong to the individual life, or to the real ego. Thus the personal and the individual memory differ as do the elements of a compound from the precipitated result in life's alembic.

Thus the link between incarnations exists in the higher, more permanent and real nature of man, in his Ego, his essential being, his character. Throughout eternity, in no two moments of time is a man *exactly* the same. Every thought, every emotion, every act or experience alters him, infinitesimal or great as the change may be. It is a solemn fact that every day finds him a little advanced on his eternal journey, or a little behind, perhaps on the edge of dangerous pitfalls. At any period, a man is an epitome of all his

past. He is himself his own creator.

Quoting again from the same article on page 272:

Reminiscence as compared with physical memory is in no sense a loss, but a far higher result. No knowledge that could possibly be derived from the study of the uncombined elements oxygen and hydrogen could ever pre-suppose water, and nothing short of analysis would show that water is a union of these two substances. Oxygen and hydrogen seem to have disappeared altogether, and something entirely different to have taken their place. . . . Even so are memory and reminiscence related. The details of experience as the result of sensation and consciousness, when precipitated as resultants, become motives, causes, instead of results, and so color all future experiences. These having become part of the ego, are carried along with it; not as accretions, but as essences. Here is the logical basis of intuition, as rational as anything we know of physical memory. In the long journey of the soul, even during one incarnation, it is not lumbered up and loaded down with the accretions of memory. In place of the carloads of ore we have the portable ingots of bright metal. We learn by experience; not by the mere record of its facts, but by the potency of its results. If the record were all, it would soon become, indeed, a lost record of a dead language, a shadow upon the wall, leaving its own trace, but presently so overlaid by other shadows, so confused and blended, as to be past all recovery. Reminiscence is to memory what the spirit is to the physical body, — that which alone gives it life and renders it immortal.

However there is somewhere in the higher nature a scroll of time, which one who lives in this higher nature consciously may learn

to read. It is said the Masters can unroll this scroll, but they seldom care to do this. It is too painful. Do we, even in this one life find it pleasant to recall our mistakes, perhaps our cruelties, our neglect of golden opportunities? (1)

Reincarnation is a noble, inspiring teaching, embodying justice, incentive to action in the right direction, evoking courage. If this archaic teaching is ignored, what other theory can answer the eternal question: how did I come here? The theory of special creation besides outraging our inherent sense of justice is absurd, explains nothing and is contrary to all we know of nature's ways.

In H. P. Blavatsky's *Lucifer* is a suggestive article on this subject entitled, *Memory in the Dying*, (2) wherein it is likewise emphasized that the brain is the organ of memory only on this earth plane and that therefore permanent memory really inheres in the Reincarnating Ego. She writes:

Not the most trifling action of our lives can disappear from the "Soul's" (3) memory, because it is NO MEMORY for it, but an ever present reality on the plane which lies outside our conceptions of space and time. — Vol. V., p. 128.

And again:

The fact is that the human brain is simply the canal between two planes — the psycho-spiritual and the material — through which every abstract and metaphysical idea filters from the Manasic down to the lower human consciousness. — *Ibid.*

And then referring to the teaching that immediately after physical death the whole of the past life passes in review before the consciousness, she says:

May this not be due . . . simply to the fact that, for a few

seconds at least, our two memories (or rather the two states, the highest and the lowest state, of consciousness) blend together, thus forming one, and that the dying being finds himself on a plane wherein there is neither past nor future, but all is one present?

The Theosophical Forum

BROADCASTS FROM SHANGHAI: XIV

In January 1942 THE THEOSOPHICAL FORUM began this series of radio talks given over station XQHB, Shanghai, China, by Miss Inga Sjostedt and Miss Elsa-Brita Bergqvist. In these 14 talks the main teachings of Theosophy have been covered in direct and thorough presentation, and this article, which warns against the danger of developing haphazardly the psychic powers, concludes the series.

Good evening, everybody:

One of the classified objects of the Theosophical Society is to investigate the powers innate in man. It is a very interesting one, and it opens up all sorts of possibilities, for when we come to think of it, most of us know little or nothing about the powers innate in man. Engraved on the entrance of a Greek Mystery-School was this injunction: "Man, know thyself," and this was a key to all future studies in the School, for in knowing himself and learning to understand his own intricate nature, man would understand Nature and the complex structure of the Universe; for we, human beings, are the reflexion of the Cosmos, miniature copies of the Infinite. Every power of the universe lies latent in us, and we are, in fact, undeveloped gods and will some day evolve ourselves until we express our divine and spiritual energies consciously and fully, just as the gods or entities above us express their faculties at the present moment.

The materialist says that man is a physical body, a bundle of matter, nerves and sinews and a physical brain, all of which are composed of physical atoms that, somehow, manage to express not only physical impulses, but also mental powers, devotional aspirations, and immortal thoughts.

Another school of thought says that man consists of a soul and a body, and that while the body is mortal, the soul is immortal. In other words, the entire man, minus the physical body, will live on forever in happiness or misery, just as he is, with all his failings and imperfections, his meanness and ignorance — a horrible thought! Imagine living on throughout eternity as we are, without changing or improving ourselves!

The Theosophist believes that man is neither a bundle of merely physical energies, nor a dual creature with one soul and one body, but a most complex entity with untold impulses and energies, mental, spiritual and divine. Everything that the universe is, that man is also in his inmost self, just as a drop of water is identical with the ocean from which it originated. We have nearly all experienced at one time or another an impulse or inspiration that came, not from our everyday selves, but from a deeper self, a self of which we are ordinarily unaware; yet in rare moments of inspiration this wonderful, hidden self reveals itself for an instant, and we feel that we have been in contact with something superhuman or divine. Some men never experience this contact with their higher self, and that is their own fault, for their habits, desires and mode of life pull them down to the earth so much that they have neither time nor inclination for spiritual things. A genius, on the contrary, is a person who listens to the counsel and inspiration of his higher ego more often and more willingly than ordinary men, and the result is that a genius has universal ideas, impersonal thoughts and humanitarian interests to a far greater extent than an average man.

Modern psychology has made many remarkable discoveries about the inner life of the soul, but psychology is nevertheless a physical science, for it concerns itself only with the lower human mind and ignores the spiritual soul. Even so, a psychologist knows

that there are unprobed depths in a human mind, and that the simplest thought can have a deep and unsuspected source. How much more is there not to study in human nature when we start to investigate the higher mental, spiritual and divine sources in man! A Yogi who devotes his life to the purification of his human soul and the union between his lower mind and the divine ego, knows that inexpressible power, wisdom and beauty are to be found by him who studies his own nature. The word "yoga" means union, and a devotee of yoga, or a yogi, strives to attain union with his immortal self, his inner god. All the so-called miracles performed by a yogi, which astound the scientific investigator, are merely a manifestation of a knowledge of the hidden laws of nature which anyone who takes the trouble and leads the appropriate life can learn for himself.

Even in the West we hear a good deal about psychic powers these days. We have mediums and psychics, psychometers and mind-readers, hypnotists and mesmerists galore, who all help to bring to the notice of the world depths of man's nature which we scoffed at some fifty or more years ago. Many modern physicians resort to hypnotism or suggestion in treating nervous patients, with remarkable results. Hypnotism is a little-understood power, and unfortunately it is sometimes used for base and selfish purposes. It is a dangerous power too, and a student of occultism would not dare use it, for he knows that no man has the right to seek to control another man's mind or will-power. Among many reasons why hypnotism is dangerous and unethical is the fact that the hypnotized person weakens his own will-power when he allows another man to control his mind. However, whether good or bad, hypnotism is one of the psychic powers which we are beginning to hear more and more about and to study scientifically. As time passes, and materialism will give way more and more to metaphysical and philosophical thought, we shall

find that there are many more wonderful and noble powers latent in man, powers which we are today pleased to call superstitions.

Those who have some knowledge of mediumship know also that this state often brings with it certain psychic powers, not of a very high kind, but powers which are certainly interesting to the student of occult phenomena. One of such powers is clairaudience, or the ability to hear sounds and voices which average people are totally unaware of, as also the ability to hear across great distance; for instance, a clairaudient person may hear something from another continent — just like a radio-set. Then there is clairvoyance or "second sight," the ability to see objects and entities which the physical eye cannot see, or else the ability to see across a great distance. For instance, Swedenborg, the Swedish mystic and seer, once saw a city in Sweden burning when he was in another part of the country; he did not see this with his physical eyes but with his inner vision. A medium who has these two powers is not able to control them. They come and go without the medium's volition, but these same powers, when consciously developed by an Adept are in his full control and can be used when and where desired. In the distant future all mankind will acquire these powers, just as naturally as we now use our five senses for their appropriate functions. Even today we sometimes speak of a sixth sense, meaning that faculty of instinct or intuition which warns us or tells us that such and such a thing is about to happen, and which has nothing to do with our mind and reasoning.

All these psychic powers are, in the eyes of real Occultists, mere child's play, and unimportant really, because they are not truly spiritual or uplifting. A far more important power is that of the imagination. We misuse our imagination, not realizing what a tremendous strength it can be. Whatever object a man ponders

upon, that object he is drawn to magnetically, and in our daily lives, whatever we usually imagine, whether good or bad, that we invariably attract. There is a great difference between aimless daydreaming and constructive imagining. Day-dreaming without a purpose is the outlet of the weak and fear-filled mind, whereas imagination used constructively, with a purpose, is the greatest strength of the powerful mind. Whenever we imagine ourselves doing great and wonderful deeds, or meeting difficult situations courageously, or achieving victories, we are forming a mental habit which will eventually lead us to act as we think if the occasion should arise. If, on the contrary, we always say "I cannot; I dare not, and I will not," we imagine ourselves as weaklings, inefficient and cowardly, and the result is that we shall never rise above the mediocre. The power of the imagination is without limits. All great deeds must first arise in the mind; they must be planned, painted like a picture on the mental canvas, and after the imagination has paved the way for action, a man is ready to carry out his purpose. Not only in the sense of aiding action is imagination a powerful ally. It also helps to make or break character. We can let our imagination dwell on our weaknesses and psychological complexes and exaggerate them, or we can imagine ourselves possessing the qualities we admire but lack in our make-up, until one fine day we shall find that through our imagination we have overcome mental barriers and woven into our characters those identical qualities which we needed. If we aspire to and imagine the divine qualities which our higher nature hides from our human selves, sooner or later we must realize that these divine qualities are ours, and that they are not as unattainable as we at first imagined. One of Plato's famous sayings is that ideas rule the world. If this is so, then, when we can honestly say that we rule our ideas, through our constructive imagination, we shall find ourselves gods indeed, all-powerful and undaunted by the passing events of human life.

To awaken all these latent powers within us we must study ourselves, study our dreams, our thought-life, our failings and idiosyncrasies, and we shall find that in learning to understand our own nature, we also, most surprisingly, learn to understand others.

(Conclusion)

The Theosophical Forum

THE WEIGHING OF THE HEART — *G. de Purucker*

Our lives, our human destinies, are not the flotsam and jetsam of an arbitrary fate, but as symbolized in the wonderful Egyptian ceremony or rite of the Weighing of the Heart of the Defunct, all that we think and all that we feel and all that we do is weighed in the scales of destiny, and these scales weigh two things, as this wonderful Egyptian ritual so ably demonstrates: In one pan of the balance is the life-center, the human heart of the man who lived but now is dead, and in the other pan of the balance is the Feather of Truth, of Reality, that naught can bribe, that naught can sway, that naught may persuade or induce. We therefore see in this symbolic ritual a wonderful exemplification of what we Theosophists call the doctrine of karman, inescapable destiny which none and naught in infinity may change, for it is divine law itself, which we call retribution when our evil-doings receive it, and compensation when our goodness or good works receive it. But under the majestic atmosphere around all this ritual, the man attends no judge or sentence nor is there any pardon. He depends on naught but the very laws of beings themselves. Utter true the balance weighs, naught sways it, naught causes it to rise, naught to fall. He is weighed — think now — he is weighed against Truth itself; and have you ever heard of Truth being bribed or swayed or persuaded or changed or modified or influenced? This is our Theosophical doctrine of compensation and of retribution which we call karman: that what a man sows, that he reaps, not something else; and he cannot escape the reaping of it, for he himself, symbolized by his heart in the pan of the scales, is weighed against Truth. And when the heart and the feather of Truth have an even balance, the heart is of the lightness and spirituality of truth itself, akin to truth. But when the heart is

weighed down by evil-doing and attraction to the lower things of earth, it falls; and the rising feather in the other scale is the witness, the testimony, against the earth-charged heart which cannot rise to make an even balance.

There is something truly majestic about this symbolic ritual. It is filled with wonderful meanings, and I think the noblest is this: its effect on us as human beings in our daily lives. What ye sow, that shall ye reap. There is not a word about pardon, and if there were any pardon in the Universe, the Universe itself would be thrown out of the gear of infinite justice. No mere man can commit an infinite sin, for neither his spirit nor his soul nor again his strength is infinite in compass. His sins are human and therefore the weighing in the balance is human; and the retribution is human in magnitude and the compensation is likewise human in magnitude. This is the infinite justice of Mother Nature, Nature which is Spirit, which is Divinity, and the nature around us, for they are one.

When a man is persuaded of this greatest of facts in human life, his whole life as a man is thereafter changed. He begins to feel concern for his acts, he begins to feel concern as to what his thoughts may be. He feels concern as to how he allow his feelings to run; for he, before his passing and what men call death, is himself the holder of the scales, the balance; and into his heart by his thoughts, and into his heart by his feelings, and into his heart by the action, by the consequent actions, following upon thought and feeling, he burthens his heart with these weights. And after death he is weighed in the scales, not by any theatrical weighing such as is given in the symbolic picture, but weighed in the scales of destiny, those very same scales which bring me or you into this body or that, into this country or into this land or that, strictly according to what each man in former lives has built into himself in thought and feeling and aspiration and all the other human

feelings and emotions. These things are not chance or haphazard.

Now then, is it not clear that when a man realizes these things, and they begin to flow into his heart and work upon him, his conduct thereby is of necessity changed? Precisely as the child who puts in his infantile innocence the finger into the candle flame — does it not learn? It has learned. See the immense moral import of this wonderful symbolic representation of a man's heart, which is his selfhood, being weighed in the scales of cosmic justice, which no prayers can sway, which is utterly true, for the Feather of Truth is in the other pan of the balance. No man is unjustly condemned ever, nor suffers a hair-weight which he himself has not merited; and no man is ever unduly compensated for what he has not earned, for this would be ridiculous; and the universe is incomparably sane and beautiful.

The weighing of the heart, which is the man's own self, in the scale of destiny likewise shows us that we build our lives to grandeur or to debasement strictly in accordance with our own wish and will and aspiration. Our destiny lies in our own hands. One man is not credited with the x power to succeed and the next man credited with a y power to fail. We are all sparks of the divine Heart, we all have an equal chance, and eternally have an equal chance; and if we fail it is we who fail and pay the penalty; but once the penalty is paid, we begin anew with a new hope, another chance: I have paid my debt, I am now free, I begin again. What encouragement it gives to us. It is a doctrine of hope, for there is no human destiny so low or so base which cannot from this instant of beginning be altered marvelously for the better, if you will; for the heart, when you wish to order for the better, begins to work and to work upon you, and to fill your mind with ideas nobler than those which have lived there, and feelings which are higher and sweeter and purer by far than those we have passed through.

This is a wonderful symbolic picture of reality. And what are these scales, and how does Nature do her work? Why, we see it around us all the time. How did I come into this body and incarnation? Through many chambers of the Father, as the Avatara Jesus would phrase it. I came from the heaven-world, from the devachan, into this world through many planes of being, dropping downwards to this material world because I am attracted here. Who is the guide and the leader? Horus, the divine Spirit, the chief guide of my footsteps, when I allow it — following the Egyptian ritual. And it is all done as it were by the same forces which prevail in these material spheres: which cause the suns to radiate and the celestial orbs like our earth to rotate, and which cause all with confluent motion to pass from one sphere of the cosmic planes of destiny to some other plane. It all happens because it is all within the law of Nature, the laws of Nature.

Thus, how do I find my way through this life? By attraction. What I have made myself to be. I am attracted here, and that attraction won't allow me to go elsewhere. I myself have carved my own destiny, and I am carving it now, and in the next life I shall carve it anew; and let us hope more symmetrically than in this last life I carved this one.

What are these halls or chambers through which Anu, Everyman, of the Egyptian ritual, has to pass before his heart is weighed against the Feather of Truth? Light as a feather, yet holding the universe in bonds that are never broken. What are these chambers and halls through which the divine soul passes? They are the various planes, the various worlds through which men after death find their way. How does the defunct soul, when it comes to a portal and knocks for entrance, know the proper word? By exactly the same instinctive knowledge and attraction that the incarnate soul coming from the devachan finds its way

into its present family and into its present body. It cannot lose its way. And what is represented by the knock of the defunct — a beautiful symbol again? It is simply, as it were, its approach to a new plane, a new world, a new stage of its way on its peregrinational pilgrimage, and it knows instinctively how to approach it, how to enter, according to the Egyptian ritual, how to say the words of power. They are in the soul itself. It is experience, intuition, knowledge, the same thing we are using here now and understanding each other, and speaking to each other and reading together and studying together. We understand each other; but to one who did not understand what understanding is, how could you explain understanding? When I say words that knock at your mind, when a speaker knocks at your heart, it is done with a thought, it is done with feeling, it is done with knowledge; and the portals of understanding fly open wide, and ideas and thoughts enter into your minds, into your souls. The right knock has been given.

That is what is meant by the chambers or halls through which the soul passes and comes to the different portals, and gives the knock of power; and when challenged gives the words of power which allow him to pass. When you have built these words of power into yourself, you pass unchallenged. If you have not evolved to the point, or are unworthy, if you have not built them into your soul, you are challenged, and stopped, and back you go.

It is an old truism of our god-wisdom that from the human heart come all the greatest issues of the world. They do not reside in the brain-mind, for the brain-mind is the great separator of men, the great deceiver. It is the heart that is the unifier of men. And the reason? Because the heart speaks a universal language which needs no words. But the brain-mind speaks a language of words which have to be interpreted from mind to mind. Therefore is the heart so much the greater. You all know this as well as I do. Out of

the heart come the great issues of life, for in the heart are love and intuition and discrimination and understanding and self-sacrifice and pity and compassion and purity and goodness and truth and troth and honor; and out of the mind of man come disputes and wranglings and quarrelings, disinclination to understand the other man, hatreds and all the other foul brood of man's lower nature, because it is about things out of the brain that men are continually quarreling. They never quarrel about the issues of the heart, for they are things of our common humanity.

Example: I love truth, so does every human being in this room. That is a statement directly from the heart. The mind immediately says: Well, what kind of truth, what do you mean by truth? Tim's truth, or Charles' truth? You see, it flops right down and begins to argue and quarrel and spread around and to dispute about mere details; but the heart simply says: I worship truth, and every other human heart in the audience understands. The heart says: I love it. The brain-mind immediately begins to argue about it, and all kinds of men and all kinds of women have different ideas about what love is and how far you should go and how far you should not go, how much you should trust and how much you should not trust, what kind of person I love and what kind I do not love. The heart is infinitely beyond this. It simply says, I love. It is a universal language every human being understands. You don't need to argue about it. You accept it. The brain-mind is the former of arguments. The heart says troth is one of the most beautiful of actions in human conduct, to be full of troth. Where do we love this and admire it? With what part of us do we give allegiance, pay homage? With the heart. It speaks a tongue universal; therefore we say, out of the human heart come all the great issues in human life.

I will go a little farther. I will tell you that the human heart is the

temple or dwelling or tabernacle of a divinity; it is the dwelling of Horus, to follow the Egyptian ritual. Let me tell you something: Every time a man gives you his word and keeps it, especially at loss to himself, that man is by so much acting as an ensouled man. Every time a man gives you his word and breaks it because it is convenient to him to break it, that man for the time being is unensouled. His soul is asleep. Every time a man takes advantage of a fellow human being, by so much his soul is asleep within him, it is not working. He is not ensouled. Every time a man does some deed or thinks some grand thought which is of help to others, he is a man, for he is ensouled. And when a man is fully ensouled, as all men on this earth shall some day be, when a man is free of soul we no longer have a man, we have a god living amongst us. I think the most beautiful sight that we human beings can perceive ever is the light of ensoulment that dawns in the eyes of a fellow human being. If you have never seen that and never understood it, it is because your own soul is asleep, for in these things spirit calls to spirit, the spirit recognises spirit, divinity recognises divinity, the man in me recognises the man in you, and this is ensouling. Oh that all men and all women so lived that they might manifest the divinity within them, and by so doing acknowledge the divine source of their own inner light!

— Talk given at Point Loma, California, March 15, 1942, at the close of a public meeting.

The Theosophical Forum

WHERE ARE THE MISSING "MISSING LINKS"? — Clarence Q. Wesner

"Where are the missing links?" This is the question that harrassed Darwin, Huxley, Haeckel & Co., and has been tactfully sidestepped by their followers for the last three quarters of a century. From the Theosophical standpoint, this question — if it be a question — requires but a short answer. The "missing links" are missing because there are no "missing links." What are the links that are missing? While any gap in a series may be called a missing link, we are using the word to describe a hypothetical species of creatures higher than the apes but lower than man; in other words, a link between the human and the animal kingdom.

We are living in an age when any theory, reasonable or not, if it be labeled "scientific," will be unquestioningly believed by a large portion of mankind. When science speaks of "missing links," the truth of their existence is practically taken for granted. When the Theosophist denies the existence of such he at once meets the demand, "Prove it!" Negative proof is less spectacular, but any reasoning man can soon see that Darwinism is far from being a proved theory. At best, science can offer only a multitude of facts in nature (which *facts* no one denies) and speculations and deductions drawn from these facts. As most of these deductions are based on a thoroughly materialistic concept of nature, modern scientific *theories* are largely unacceptable to a Theosophist.

Darwin, in his first great work, *The Origin of Species*, postulated an "end-on" linear development of one type of living organism into a higher type of organism. The development of man from the simian stock is not mentioned in this work. Huxley developed the

theory of an end-on progression to include the human stock; and in his second great work, *The Descent of Man*, Darwin carried his theory to its logical conclusion. He postulated an end-on line of development from the lowest form of life to the highest, man.

This development of a lower form of life into a higher comes about, according to Darwin, through the struggle of the creature with its environment. By some mysterious process some types are better able than others to adjust themselves to changes in their environment and thus are able to survive. Other types, not so adjusting themselves, become extinct. It is this weeding-out process that is called "natural selection." The details of "natural selection," "struggle for existence," "survival of the fittest," etc., form a most complicated system of philosophy, and Darwin was honest to admit that while certain transformations of body and body structure are easily discernible, the causes of multitudes of such changes are as great mysteries as the origin of life, mind, and the spiritual instincts in man. Darwin denied that he was offering any explanation of the causes of these transformations or variations of bodies. Modern geneticists, however, say that they are due to the crossing and union of chromosomes — of which Darwin knew nothing. But by ascribing these crossings and unions to chance we merely put ignorance one step farther back. Theosophy teaches that variations of chromosomes take place in accordance with the urge of the spiritual being which is building an appropriate vehicle of physical matter for self-expression on this plane.

Although the theories of Lamarck, Darwin, Haeckel, and Huxley are commonly known as theories of evolution, a thorough reading of their works shows that evolution in the original meaning of the word is seldom, if ever, referred to. Their theories state that lower entities, through natural selection, struggle for existence, and the survival of the fittest, are *transformed* into

higher types of entities. In other words, forms of life are improved as a result of the action of conditions external to the entity itself. While modern biological theories state that there is also an internal cause of transformation, the idea of chance and accident still persists. That such improvement does take place is not denied, but it is not evolution; the French name this process Transformism, which exactly describes the process — transformism.

Evolution, on the other hand, is the unfolding, unwrapping of powers, faculties, which are infolded, inwrapped, potential within the entity. Dr. de Purucker defines evolution thus:

Evolution is not merely an automatic response to external stimuli, but it is first of all action from within, unceasing attempts in self-expression; and each response to the external stimuli, which natural environment provides, gives opportunity for a larger and fuller measure of self-expression than before existed. (1)

Here we have a key to what to the materialist is a mystery: — forms (bodies) improve, faculties and organs are developed, or atrophy, to meet the demand of the inner life-consciousness mentor, the monad, for tools and vehicles to express itself to the fullest on this material plane. It is only through this fullest possible expression of its existing powers and faculties that it can develop, evolve its latent powers and faculties from potentialities into fully manifested actualities. But it must not be forgotten that bodies evolve and change to accommodate the "soul," and not to take the "easiest way" in a "struggle with a hostile environment."

The truth of this has been realized by some of the greatest thinkers of all ages. Patanjali says:

The Universe including the visible and the invisible, the

essential nature of which is compounded of purity, action, and rest, and which consists of the elements and the organs of action, exists for the sake of the soul's experience and emancipation. (2)

Goethe expresses the same thought:

The whole progress of the world seems to be to provide a physical basis for the growth of the spirit.

That the scientific theories of "evolution" do not describe processes of evolution, using that word in its true sense, is admitted. Herbert Spencer, when criticised for his use of the word evolution, defends its use thus:

Now this criticism would have been very much to the point did the word Evolution truly express the process it names. If this process, as scientifically defined, really involved that conception which the word Evolution was *originally* designed to convey, the implications would be those alleged. But, unfortunately, the word, having been in possession of the field before the process was understood, has been adopted because displacing it by another word seems impracticable.

He believes the word Involution would better describe the process, but this, we think, would be merely the substitution of one unsuitable word for another.

It is admitted that the scientists of the past and present are the keenest observers of the phenomena of nature, both microcosmic and macrocosmic. But it is also to be borne in mind that their observations are of bodies only and their deductions and theories are based upon a completely materialistic concept of the universe. They observe the machine, but refuse to see that back of every machine is the machinist, the intelligence that designed and

built it and keeps it running. Their concept is analogous to heaping up a certain amount of iron, tin, rubber, copper, gasoline and oil, etc., and expecting this heap to transform itself into an automobile which will travel and guide itself through traffic and perform all the functions of an automobile *with no guiding intelligence at the wheel*. The universe is not so constructed. First, there are the architects, who develop the idea and lay out the plan; second, the builders, who collect the materials and fashion them according to plan; and finally, the product, which is kept in repair and functioning by these same architects and builders. This by no means is merely a restatement of the idea of a "creation" through primary and secondary laws, which postulates that instead of creating the world and its creatures instantaneously, God established certain laws; that it is through these laws that the world came into being, and all living things have reached their present status. But space does not permit the discussion of the birth of worlds at the present time.

The details of scientific theories are not always logical deductions from their basic premises; sometimes the reverse is true. For example the premise that all forms which survive in the struggle with their hostile and changing environment are evolving from the lower to the higher may be considered as a fundamental of Darwinism. If this be true, some notable exceptions will have to be explained. The lowest forms of life and the highest show no fundamental development of form from the earliest geologic ages to the present. Writing on this point, H. P. Blavatsky states, giving her authority, that

There is no evidence of any fundamental modification or advance in the Foraminiferous type from the palaeozoic period to the present time. . . . (3)

The foraminifera are protozoa of the lowest type of life,

mouthless and eyeless. Man, the highest visible form of life on the globe, she says, "has remained stationary in his human specialization ever since his fossil is found in the oldest strata. . . ." The lowest and the highest types of bodies have not fundamentally changed or transformed in geologic times!

There is a tendency among certain archaeologists quietly to lay aside any discoveries of human skeletal remains or artifacts, the publication of which would upset or discredit some of their pet theories concerning early humanity. Dr. Robert Broom, F. R. S., the world-famous anthropologist has said:

In the past, anthropologists have not been entirely free from blame. They have assumed, without any satisfactory evidence, that a skull with a large brain and a pointed chin is not likely to be old, and almost invariably when such a skull has been found, even though its credentials seemed to be thoroughly satisfactory, the anthropologists would have none of it. In 1863 a pointed jaw was got at Moulin Quignon, in France. It was associated with mammoth teeth and old stone axes, and is now forgotten. Sixty years ago the famous Collyer jaw was got in a very old deposit in Norfolk. It was examined by all the eminent scientists of the day, but, as it was not of a typical monkey type and had a pointed chin, Science threw it in the waste-paper basket. The Galley Hill skull seemed quite certainly to be of great antiquity; but alas! it had a large brain and a pointed chin. So to-day anthropologists regard it with suspicion. (4)

When unbridgeable gaps are found to exist in the fossil evidence necessary to support a theory, creatures are invented to fill the gaps. Of course, the trained scientist realizes that these invented creatures are mere stop-gaps, but the public, seeing the pictures in our books and magazines and the statues in our museums, is

allowed to take it for granted that all the mythical creatures depicted there have actually been discovered during the course of scientific research. Brutish looking men did exist, and still exist today. But the line of figures beginning with a small monkey and ending with modern man, professing to show in detail the steps by which the monkey has become the man, is pure fiction. No scientist would dare to declare otherwise.

Haeckel, in his division of the evolutionary history of man into twenty-six stages, is forced to invent the twentieth stage, the *Lemuri vidae*. This he freely admitted, but said as it *must* have existed, he felt justified in inserting this mythical creature into man's hypothetical family tree. Dr. de Purucker says:

It was the old, old story, both in Huxley's case and in Haeckel's; what was good for their theories was accepted and pressed home to the limit; and what was contrary to their theories was ignored or slurred over." (5)

In an article on evolution, G. Elliot Smith, M. A., LITT. D., M. D., F.R. C. P., F. R. S., Professor of Anatomy, University of London, writes:

"The ancestors of the human family are, of course, all extinct; but once the hypothetical pedigree is restored, it becomes possible. . . etc., etc." (6)

The word "hypothetical" is our key to the judging of the real value of most of these theories; for the dictionary defines Hypothesis as "A supposition; a judgment concerning an imaginary state of things. . . . An ill-supported theory; a proposition not believed, but whose consequences it is thought desirable to compare with facts." Taking this definition literally, it is well to remember that the system of thought commonly called Darwinism is nothing more than a well ordered series of hypotheses built upon a false

original premise, that of the materialistic concept of Nature.

Although many of the conclusions of Darwin, Haeckel, and Huxley are not accepted by the scientists of today, they, the scientists, still teach that man, in common with the primates, is derived from a now extinct pre-simian stock. This makes man a cousin of the apes instead of their direct descendant, but the idea has not changed — that man is derived from a stock belonging to the animal kingdom. The following are some current opinions on the subject. Robert W. Hegner in his *College Zoology* places man at the beginning of the primates. Professor Frederic Wood Jones states:

We may say that not only is Man more primitive than the monkeys and apes, having become differentiated specifically in an extremely remote past, but also that he has been a creature which walked upright on his two feet for an astonishingly long period. (7)

Professor Boule, of Paris, reaches this conclusion:

[Man has] been derived neither from the Anthropoid stem, nor from any other group, but from a very ancient Primate stock that separated from the main line even before the giving off of the Lemuroids. (8)

In comment on the above quotations it may be stated that no skeletal remains have ever been found to substantiate the statement that man ever was a quadruped. The earliest human remains indicate that man has always walked upright on his two feet. The statement of H. P. Blavatsky that "Man has been man from the beginning of this Round" cannot be contradicted by any evidence produced by the anthropologists. We cannot entirely agree with the statement of Professor Boule that man is "derived from a very ancient Primate stock that separated from the main

line. . . ." MAN is the main line from which all other stocks departed. The human body is more primitive, less specialized, than the body of any other animal. By specialization is meant the departure from the primitive physical type, producing a body structurally adapted to the performance of a particular function or environment. A well known example will illustrate the point. Man, the whale, and the bat are all mammals. The whale took to the water and now looks and acts like a fish; the bat took to the air, where it surpasses most birds in ease of flight. The less evolved creatures, being derived from the then human stock in past geologic ages, have specialized, each according to its swabhava; and specialization must not be mistaken for evolution — in fact, the greater the specialization, the less evolutionary advancement. Man, the most evolved of the visible beings of earth, has specialized less than any of his younger brothers. For a more comprehensive analysis of the proofs of man's primitive origin, the reader is referred to Dr. de Purucker's *Man in Evolution*, chapter VIII.

While not denying that man did not always express himself in exactly the same kind of a body he now uses, and that during the earlier races of this Round his body might be described as "ape-like", the idea that man is simply an evolved ape is denied point-blank by Theosophy. And now we are using the word "man" in a more technical sense. Man is not his body. Neither is he simply a bundle of energies that cause the body to function. Man *per se* is the thinker; not the brain, which some materialistic schools picture as a sort of chemical retort, out of which, through complex chemical reactions involving cells, fluids, etc., comes thought and reasoning, and the qualities and attributes which make man MAN. Man is the thinker, the spiritual-divine entity, which at his present stage of evolution is using the brain and body as instruments, vehicles of manifestation on this physical

plane.

This question is sometimes asked: what harm is there in teaching that we are derived from apes? Should we not feel a sense of gratification that we have evolved from such a low type into our present human stage? No harm probably would be done were it not for that aspect of Darwinism which teaches that evolution comes through a struggle for existence, and the survival of the fittest; in other words, the law of fang and claw. When this kind of philosophy is applied to social, economic, and political systems the results are disastrous. Huxley, the greatest proponent of the ape-to-man theory, himself is quoted as follows:

Whatever difference of opinions may exist among experts, there is a general consensus that the ape and tiger methods of the struggle for existence are not reconcilable with sound ethical principles. The practices which promote the best interests of society and mankind repudiate ruthless self-assertion and the gladiatorial theory of existence.

The degree to which the teachings of Darwin, Huxley, and Haeckel may influence the most brilliant minds is instanced by the following quotations from Nietzsche, that strange, erratic, self-contradictory genius. At his best he reaches a state of spirituality and beauty not easily understood; at his worst he wrote as follows:

Here is the new law, O my brethren, which I promulgate unto you. Become hard; for creative spirits are hard. You must find a supreme blessedness in imposing the mark of your hand, in inscribing your will, upon thousands and thousands, as on soft wax. (9)

And again in the same work:

Such ideas as mercy, and pity, and charity are pernicious,

for they mean a transference of power from the strong to the weak, whose proper business it is to serve the strong. Remember that self-sacrifice and brotherliness and love are not real moral instincts at all, but merely manufactured compunctions to keep you from being your true self. Remember that man is essentially selfish.

This is simply carrying the implications of Darwinism to their logical conclusion.

Nevertheless, Darwin cannot be blamed for the destructive philosophies which have been drawn from his writings and which are loosely called Darwinism. He saw in every act of nature a step toward the improvement of all beings. What a pity that Darwin was not a little more of a philosopher! On the final page of *The Origin of Species* he writes:

When I view all beings not as special creations, but as the lineal descendants of some few beings which lived long before the first bed of the Cambrian system was deposited, they seem to me to be ennobled. . . . There is a grandeur in this view of life, with its several powers, having been originally breathed by the Creator into a few forms or into one; and that, while this planet has gone cycling on according to the fixed law of gravity, from so simple a beginning endless forms most beautiful and most wonderful have been, and are being evolved.

Darwinism has focused our attention on bodies; bodies are important, of course, as our chief vehicles of expression on this physical plane. But man, let us repeat, is not his body. Man is — not *has* — but is — a spark of the Divine, traveling the path — often stumbling — that leads to the heart of the Universe, which is himself.

Let us return to the word Evolution. Dr. de Purucker's definition has been given above. Martineau defines it thus:

It means to unfold from within; and it is taken from the history of the seed or embryo of living natures. And what is the seed but a casket of prearranged futurities, with its whole contents prospective, settled to be what they are by reference to ends still in the distance?

Evolution does not mean that through the fuller expression of innate powers and faculties an entity grows into some other higher entity; through the unfolding of inwrapped, infolded qualities the entity grows into a higher form of itself. This may be illustrated by a familiar example: the horse of today is derived from the tiny creature, now extinct, known as the eohippus. Now these two animals are not different and distinct creatures; the horse may be called a highly evolved eohippus, or the eohippus may be called the primitive horse. They are one and the same type of specialization reaching a final point through different stages of physical evolution.

In discussing the Theosophical statement of true evolution, the reader is asked to accept two fundamental postulates. These are not contrary to the findings of modern science — in fact they are accepted by some of the leading scientists of today. The only quarrel between the Theosophist and the scientist is that the former cannot see why the latter will not carry the teachings of modern science to their logical conclusion. If this were honestly done many of the mysteries of science would cease to exist.

The first postulate is this: *All is life*, not life as an abstract quality or attribute, but a universe consisting of living beings. There is no such thing as dead matter. Everything in or making up the physical universe is alive; the atom, the cell, the man, the stone, the earth, the solar system, the galaxies, all are living beings. Our

feeble senses of report cognize only the types of life manifest in plants, beasts, and men. But there are infinite reaches of life above and below these, just as there are infinite ranges of color above and below the visible spectrum, just as there are octaves of tone above and below that narrow band of tone audible to the human ear. It is extremely illogical and unscientific to deny the existence of something, simply because it is not appreciable to the ordinary five human senses; we may some day discover that we have senses that cognize ranges of tone and color and life above and below those now recognized by modern scientists!

Secondly: *Everything is evolving*. Every living being in kosmos, from the lowest to the highest, is growing, evolving, seeking ever to express more and more of the inherent, inwrapped, latent, powers and faculties which lie within its heart. For the heart of every entity, low or high, small or large, is one with the heart of the Universe, one with the Heart of the All, the Boundless.

But the evolution of, the improvement of bodies, and in the case of man, the development of mind, is all that is recognized by scientists. Theosophy teaches that these are only the outward phenomena, and therefore of secondary importance. The important part of man's evolution is that of man himself, the thinker, the human monad. This human monad is the machinist behind the visible machine. While it is true that man's body is also pursuing its own course of evolution, as are also the cells and atoms composing the body, we will consider now only the evolution of the human monad; for the evolution of any entity in boundless space, visible or invisible, is an example of the evolution of all. Throughout eternity the monads which have now become the human monads have been evolving through timeless duration and the spaces of space. At last their pilgrimage brings them to this earth. At the beginning of their evolution here their bodies were not of physical flesh; they were of astral substance,

as was the earth itself at that time. Slowly through the ages the earth and all the beings became more dense and physical. At the middle of the Atlantean Race the densest point of materiality was reached, and we are now on the upward arc; matter is again becoming less dense, more ethereal.

This etherealizing of matter will continue throughout the remainder of the duration of this planetary chain. Then, when the Day of Brahma is finished, the globes and all their inhabitants will sleep till the dawn of another Day.

Evolution is eternal. Never will any being in the Boundless All reach a point beyond which no progress is possible. With each new Day new vistas challenge us. We find new worlds to conquer, new heights of the Spirit to be attained.

For this let us be duly thankful!

A CONTINUOUS REVELATION — *Leoline L. Wright*

I wonder how many of our members have studied carefully the articles by G. de P. in the May, June and July issues of *The Theosophical Forum*. It is seldom, it seems to me, that so much material on a given point of our teachings has been brought together consecutively and elaborated with such detail. The very repetitions help towards clearness in one of the most difficult aspects of technical Theosophy.

The existence of a definite monad at the core of each of our principles, while of course implicit in *The Secret Doctrine*, is a point of knowledge we owe to G. de P. It is one of the keys which, without his help, the majority of us would have been unable to find. And it has cleared up for us some of the occult processes of evolution that would otherwise have remained obscure.

It is what grows out of these articles that is most illuminating and helpful to me. It places universal brotherhood as a fact in nature on a much firmer basis. Consider what it means in this connection that *our* animal souls will be the higher humanity of the next Globe-chain. Also that we will then be the Manasaputras who will awaken in that humanity the light of Manas or self-consciousness. Here is how G. de P. puts the matter:

Who were the manasaputras who awaked us intellectually? They were those who had attained Dhyan-Chohanship on the moon at the end of the Seventh Round, and we were then their animal monads. They found us out again, they sought us out again, our higher selves as it were waiting for them, waiting until our bodies were ready, until the human rupas were sufficiently subtil, flexible, to receive the intellectual fire . . . So shall we at the end of our

Seventh Round become Dhyan-Chohans and be the manasaputras to the humanity of the next round who are now our human animal monads. (July issue, pp. 297-8)

Here, too, is further evidence as to how practical are these deeper teachings of technical Theosophy. For are we not now suffering many things because of the mistakes and failures of the moon-men whose animal souls we were? This is part of our unfortunate karmic heritage from the moon.

So then, what of ourselves? What are our present faults and failures impressing upon our animal souls that they will have to struggle against in the next chain? Does this not place upon us a more compelling moral responsibility than just that of our own karmic salvation? If we are true students of Occultism this thought should give us an added motive for self-mastery.

Everyone who is a responsible human being feels an instinct to protect and help the animals below us. We have humane societies all over the world to protect them. And nothing arouses the detestation of decent men and women more than cruelty to an animal.

Yet how cruel we are most of the time to these developing animal souls within us. Cruel in the sense that we should call it cruelty to see a parent indulging a child in every form of self-indulgence, bad temper and meanness. When we are selfish or cruel or mean we impress upon the life-atoms of our animal souls just these qualities. They are qualities which when *they* become men will help to retard their spiritual evolution. And at the same time this will hold us back from our own path of progress in the future.

This does indeed give us something worth while both to think about and to act upon. The karmic implications of this teaching offer a manifold field for thought and study. And we are led

afresh through these articles to realize how endless are the fresh lines of discovery and self-knowledge and self-directed evolution which open out of a study of Theosophy. It is indeed a continuous revelation.

The Theosophical Forum

"OUTSIDE THE WALLS" — J. M. Prentice

Many years ago, during a cycle of Evangelism that in some now inconceivable way wove itself into and intermingled with a quite definitely Catholic background in which it had no place, my voice might have been heard raised in the hymn.

*"There is a green hill far away,
Without a city wall. . . ."*

It is one of the idiosyncrasies of our speech that the word "without" can be used in a double sense; i.e. *minus* or *lacking*, and *outside*. It is in the latter sense, of course, that it is used in that old hymn. Nevertheless it always conjured up in my youthful mind a picture of a hill unwalled, so that, however lustily I sang, a sort of doubt always remained as to the necessity or even the desirability of a hill being enclosed by a wall that might ordinarily be found protecting a city. Perhaps it was this childish doubt that was the root from which a luxuriant foliage of agnosticism grew later. It is unprofitable to debate this now.

Some years later, in a more Catholic atmosphere again, I encountered, in some tome on Divinity, the Latin phrase *Extra Muros* and some deep but hidden association of ideas called up extra consideration for it, beyond its bare but theological significance. It also can be translated as "Without the Walls" — in the sense of being beyond, of course. It applies to those who are without knowledge of, or belief in the Faith, so often spoken of as that once delivered to the Saints. . . .

To me it is a phrase that has lingered through the years. From time to time it recurs and always produces a mental picture of those unhappy people who lack faith and who, almost willing to

be convinced, remain outside the fold, conscious of something that either they lack or have missed, desirous of the safety that comes from being with the protection, yet never quite achieving this objective.

So today, as a Theosophist — without quite feeling myself worthy of such a proclamation — I find that there are many people who stand at the threshold of the Theosophical Society and who are unable to find the portal; who look longingly at the security of faith and morals that Theosophy over everything else has to offer and who still do not join in with us. Nor do they always stand: for many it is their unhappy fate

*"To be imprisoned in the viewless winds
And blown with restless violence round about
The pendant world. . . ."*

These people are indeed *extra muros*, and I ask myself why. What is there lacking in our presentation of the Ancient Wisdom that they cannot instantly respond to its gracious and comforting, all-encompassing beauty? So vast is its all-embracingness that there is no reason why anyone should be excluded; so ample and generous is its protection that none should feel that it is not for him. There is no questioning of heart or mind to which Theosophy has not the answer, although it is not given to all Theosophists to supply it at the healing moment, or in the right tone and terms. Let it be fully accepted, then, that it is not the Esoteric Philosophy that is at fault. Does it not follow, therefore, that it is the exponents who are missing some golden opportunity? In many if not in all cases I think it is.

It is the nice balance between technical knowledge of Theosophy and the living of the Theosophical life that is required above all else. Many people have a wide grasp of the mental concepts of Theosophy and can expound them in the most admirable way. To

hypothetical questions answers can be given that are academically perfect, but the heart is not touched nor comforted when the same question is met with in the mundane life of everyday affairs. Was it not St. James who said "Faith without works is dead"; he was an eminently practical saint, although perchance he never experienced the ecstasy of the beatific vision. Hence it is, to me at any rate, that it is the living of the life that counts; "the standard that a great man setteth up, by that do the people judge" (*Bhagavad-Gita*). Any, not only the great.

Every effort should be made to draw inside those who look over our Theosophical wall, and who can thereby be expected to see us happy within its shelter. We must never be exclusive. Yet numbers in the Theosophical Society are not everything. Valuable as the organisation is, mere membership does not suddenly or instantly confer an accolade. Yet none who approaches should go hungry away; no matter how much mental or spiritual help is given the reservoir is not lowered, for it is inexhaustible. By all means let us have lodges and study-groups in which membership and participation may have fixed limits, but never let it be said that any one came to our doors and was turned away.

Recently there were three books published simultaneously in England, dealing with post-war problems. Written by men of high authority all were agreed on this — that a recognition of spiritual values, of a spiritual basis for man and the universe, was necessary if any lasting good was to be gained. Yet all three felt in some way that the orthodox faith lacked that subtle something that would make for self-discipline, a willingness to self-sacrifice, that would fire a generation with new ambitions and show new sources of inspiration. It was in my heart to wish that each of these writers had had a knowledge of Theosophy. Therein would have been found the necessary stimulus.

It seems to me that the world today needs the cement of Theosophy, both nationally and internationally, as never before. Hence we should be doing everything to expand our public work. In the new age that is emerging Theosophy is the *only* faith, philosophy or science that can provide everything that is required. For it includes all these in its generous comprehensiveness.

Let us so live the Theosophic life that all who come in contact with us will be drawn to us, naturally and easily. We should be centers of inner peace in a world of storms. Let us study the magnificent teachings that are our legacy from four great and spiritually illumined Leaders. Study them so that we can supply on the instant and in the most helpful way the answers to problems — personal or national. Yet withal modestly, giving all the credit to Theosophy and seeking no special recognition for ourselves.

All so very easy to write, someone says; all so very difficult to practice. But whoever said that the Theosophic life is easy? It is not — yet the reward for living such a life — as has been so eloquently pointed out by the greatest of all Theosophists — is the power to heal and bless Humanity. Never was such power so needed. Should we not all pledge ourselves to do all in our power to achieve such an end?

The Theosophical Forum

THE TWENTY-THIRD PSALM — *Grace Frances Knoche*

"The Lord is my Shepherd, my Friend and Companion, I shall not grow less" — what more beautiful and strengthening thought than that the Self in man is one's Guardian, Friend and constant Companion through all the trials and sorrows of earthly life.

This Twenty-third Psalm when translated with words as grammatically accurate as the King James Version, but with an eye to freeing the spirit to perceive what the original Hebrew Song meant, is seen clearly as the story of the soul's birth in Godhood through initiatory trial.

The very beauty of the words used in the orthodox version can be a danger, however, for worship of form rather than reverence for the vital truth behind that form may lead to the closing of the Open Eye of the Seer which each one of us is in our inmost. In order more easily to discern the occult significance, therefore, of this psalm as contained in the Hebrew we have made our own translation with no attempt to compete with the literary excellence of the King James Version, which itself is a masterpiece of English prose, but rather, as stated, in order by the use of words carefully chosen for verbal as well as esoteric accuracy to release more fully its essential message. For ease of comparison and comment, on the left is the King James Version, and on the right our rendition:

- | | |
|---|---|
| 1. The Lord is my shepherd, I shall not want. | 1. The Self is my Guardian, I shall not grow less. |
| 2. He maketh me to lie down in green pastures; he leadeth me beside the still waters. | 2. In open places of virgin growth he causes me to take birth; unto waters of repose he leads me. |
| 3. He restoreth my soul: he leadeth me in the paths of | 3. He leads back my soul; he guides me in paths of strength |

righteousness for his name's sake.

4. Yea, though I walk through the valley of the shadow of death, I will fear no evil: for thou art with me; thy rod and thy staff they comfort me.
5. Thou prepares a table before me in the presence of mine enemies; thou anointest my head with oil; my cup overflows.
6. Surely goodness and mercy shall follow me all the days of my life: and I will dwell in the house of the LORD for ever.

for the sake of his essence.

4. Yes, verily, although I press forward into the valley of the image of death I fear not evil, for thou art with me. Thy scepter and thy staff, they sustain me.
5. Thou preparest a table before me in the presence of those who bind me; thou anointest my head with oil; my cup runneth over.
6. Assuredly, splendor and compassion will follow after me all the days of my lives, and I shall endure in the temple of the Self to the utmost extent of my days.

Verse 1: The Lord or Self in the Hebrew is *Yehowah*, because Jehovah to the Jewish people represented their God, which the Theosophist in this instance may interpret as signifying man's inner divinity or Highest Self, the Lord or Immanent Christ. The Self or the Lord, therefore, is my Guardian, *ro'eh*, meaning shepherd, also guardian, friend, companion, helper, to that human self which cannot "want," i.e., grow less or decrease, in power once the link is made with the Self, and as long as it wills to keep the links of such companionship unbroken.

Verse 2: *Bine'oth deshe" yarbitseni* — translated by King James as "green pastures," correctly enough, but likewise as accurately rendered, and we believe more suggestively, by "open places of virgin growth." *Ne'oth*,

plural of *na'dh*, meaning "dwelling, habitation, likewise an unprotected open place"; *deshe'*, "field, tender grass, young herbiage," i.e. virgin growth; a phrase which immediately suggests those ever virgin fields of the spirit where the soul seeks refreshment and renewed life. *Yarbitseni*, causative form of verbal root *rabats*, translated by Fuerst "to lie, lie down, especially of animals; of men, to settle down calmly, securely; and of birds to hatch." What objection then to using the idea of hatching, whether of birds or human souls, for did not the Egyptians depict both the human soul, *ba*, and the spiritual intelligence or Self, *khu* or *akhu*, in their hieroglyphics as birds? Thus, "in open places of virgin growth he (the Self) causes me (the human soul) to take birth," or "to rest securely" if we prefer, in the fields of Spirit, beside the waters of inner quiet.

Verse 3: My soul the Self of me leads back to its source; My Self guides me in paths of strength: *tsedeq*, meaning "power, strength, victory"; for the "sake of his essence" — *shemo* from *shem*, a word having a number of meanings, among them "sign, memorial, monument and name," but also signifying, according to Fuerst, "the internal essence," i.e., the monadic source.

These three verses thus portray, in the language of the Mystery-chamber, the trials and discipline undergone in the preliminary degrees of the Initiatory cycle: the *katharsis* or soul-purification coupled with wise instruction in and of the "open places of the spirit," i. e. the development of the spiritual and intellectual fiber of the constitution through correct knowledge *pari passu* with uninterrupted aspiration and self-imposed discipline.

Verse 4: In these lines is the story of the travail of the soul in the Fourth degree of Initiation: the dread journey "in the valley of the image of death," the Underworld, whither the soul must, not walk, but press forward without aid, without guidance, from above. Note the phrase "image of death," not the ordinary death of the physical body when the soul is released into the care of its Higher Self, but "image" or "phantom"

of Death where the body is laid on a cruciform couch and kept alive through the agency of the Great Ones, while the soul, naked and bereft of outer help, travels self-consciously the paths of death: fearless of evil because "thou art with me," the "thou" being the self-developed spiritual integrity which must now prove itself adamant against the seductive regions of Hell.

"Thy rod and thy staff": this word "rod" in the orthodox version is perfectly correct, but it has bothered a number of earnest Christians, laymen and theologians alike; access to the Hebrew, however, solves the difficulty at once: the rod is *shebet*, which means "stick," "rod," but also "scepter," derived from the verb-root *shabat*, "to strike, to beat out, to card," but likewise "to be firm, durable, to make strong." Thus *shebet* is that scepter of power which is derived only from and through the *disciplina arcana*, lives of it, guided by aspiration, for what else will make a man's soul durable, strong, diamond-hard against the "delights" of matter? *Mish'eneth*: "staff" or "support," that sustaining help that comes when most needed, and indeed when least expected, *as long as the links are kept firm with the Self*.

Verse 5: Another phase of the *muesis* or initiation: the meeting of one's past: "mine enemies" as King James translated *tsorerai*, but equally correctly rendered as "those who oppress and bind me": that foul brood of weak and evil thoughts engendered in ages past, but which have not only left their heavy deposits in the fabric of the soul, but likewise in the record of surrounding Nature, the Astral Light, and which, at the moment of supreme trial, return as evil beings come to slay the aspirant, or themselves be vanquished by the neophyte triumphant in test.

And after the temptation, Success and the *Summum Bonum*: "thou anointest my head with oil" — mystery-language pointing to one of the most beautiful and sacred of ancient rites: the crowning of the head with oil of purification, the making the man a *Christos*, a *Mashiahh* (Messiah) — an "anointed" one, i.e. an Initiate.

"My cup overflows" — so grand and potent is the wine of Life that pours into the chalice of the soul from the Spiritual Sun through the Self in this final solar rite, that it overflows into the entire nature, and the neophyte, now initiate, is literally, as Dr. de Purucker has taught us, bathed in solar glory, because he has become in his own right a "Son of the Sun."

Verse 6: Here is epitomized the boon of the final *epopteia* or "revelation" which follows as the natural sequence upon the successful passing of the *katharsis* and *muesis*, previously described: from now on *tob wahhesed*, "goodness, also beauty and splendor, and compassion" will follow me all the days of my *lives* (note the plural), for my soul henceforth is anchored in the temple of the Self unto the farthest extent of time. The Solar Initiation complete, the chela has become Adept, and another member is added to the Brotherhood.

Surely in this Hebrew Song is to be found a gem of profound beauty and esoteric worth, priceless beyond measure, for it is the song of the birth of the self in the Self, the human in the Divine.

The sevenfold seven principles

We have not yet fully understood the idea of there being a sevenfold nature for each of the seven principles. For example we find it difficult to define Buddhi-Sthula-sarira, Kama-Prana, etc. Again, is Atman-Sthula-sarira the same as Atman-Linga-sarira, *i.e.*, is the Atmic division of each principle the same for all? Perhaps you could give us some references on this difficulty. — F. W. and J. E. L.

H. T. Edge — I think the difficulty arises from taking too mechanical a view, and in forgetting that diagrams are symbolic — not pictorial. The septenary principle runs throughout nature. A supreme Logos emits seven rays, and each ray, penetrating a particular plane of substantiality, becomes itself a logos and emits its own seven rays. We must not think of the seven principles and their subdivisions as if they were seven strings of beads with seven beads on each string. This is a purely physical conception. If we speak of Buddhi as having a seventh principle corresponding to the seventh principle in man — the physical body, this does not mean that Buddhi has anything like a physical body. It means that Buddhi has its rupa aspect, its lowest vehicle, which is *analogous* to our physical body, but not *similar* to it. Every one of the seven principles has its own quintessence — its Atma; and its outermost vehicle — its body, so to say; and so on with the other members of the septenate. Thus we might speak of the Kama aspect of Atma as being that aspect which causes it to desire to infuse its essence into things. Again, the Kamic principle is neither good nor bad; it is in its highest aspect Divine Love; its grossest aspect is physical desire; and so we can say that it has

seven aspects. It is like taking the seven colors of the rainbow and dividing each into seven shades, so as to enumerate a red red, a yellow red, a green red, and so on.

It is important to try to find out the meaning of this teaching by relating it to your own experience, rather than by memorizing it out of a text-book. I heard a member say that she had found this teaching of the compound nature of the seven principles to be one of the most illuminating keys to the understanding of character that she had ever found. The physical body has various centers, such as heart, brain, navel, etc., which correspond to the seven principles; so we can see for ourselves that the physical body is septenary. It must be the same with the *linga-sarira*. The *mayavi-rupa* in which a *nirmanakaya* moves, is a sort of body, but yet it is not a physical body.

Definition of Truth

Some time ago I read *Generation of Vipers*, which is a terrific indictment of pretty nearly everybody and everything. The writer states, with some logic I think, that there are plenty of good people and good things in the world, but that the bad people and bad things should be pulled out from under the covers and given a good going over — which he does.

He makes a point which interests me deeply. He has a definition of "Truth," and "Truth," as he understands it, is the one thing which will set the world free and establish among men that relationship which some would call "Brotherhood," and which is spoken of by Christ as "The Kingdom of Heaven."

Now, the "Truth," as he defines it, is not an abstract quality; it is a very real and concrete thing, dealing with man's

knowledge of himself, and the man who has found that truth has found all that he needs to know to make his life complete, but until such knowledge becomes universal, there will be wars and other corruptions to plague the world.

Christ said it: "Know the Truth and the Truth shall set you free"; you people say it: "There is no religion higher than Truth." Have you a definition of that Truth? I should very much like to have it, for I see there something, not religious in the ordinary sense, but very practical and sensible and a guide to the proper technique of living. — E. N.

H. T. Edge — In common usage the word Truth denotes an abstraction; our reasoning powers can grasp it in no other way. Nevertheless Truth is a Reality; it is the ultimate Reality — that which *is*. But let us for the present leave abstract philosophy alone, and come to the practical point. This universal Essence lies at the inmost heart of every living being, and it is the essence of man himself. It seeks to manifest itself through man, and man in turn must continually pursue it until he finds it. He inevitably makes it the touchstone of all his values, his ultimate court of appeal.

But on the long road to the attainment of truth there are many stages, many goals of relative truth to be attained one by one; for man climbs step by step.

Truth cannot be had for the mere asking or bought over the counter by the average citizen, however proud he may be of himself. It is the ultimate reward of a long and arduous struggle. *Per ardua ad astra*. It is the goal of the disciple who has entered the Path that leads to wisdom and emancipation. Jesus, in the quotation given, says, "If ye continue in my word," then you shall find the truth which shall make you free. If we fail to find the

truth, let us put the blame where it belongs — on our own incapacity. The exposing of shams is a worthy work and a necessary item in the business of enlightening mankind. Yet the warrior will find himself better equipped if he prepares himself by cleansing his own house. The Kingdom of God is within you. We must strive to achieve perfect sincerity in our own inside: clear out all delusions of vanity, self-love, egoism, self-justification, etc.; and be perfectly candid and honest with ourselves. To see straight, we must clean our spectacles. This will provide enough to occupy us for a considerable time. Then, with our vision cleared, we shall be enabled to see the good in other people, where formerly we saw only the faults. Thus we shall attain a sympathetic attitude, and be able to help others by bringing out the innate truth in them, rather than by running a tilt at the shams.

There may be teachers, religions, societies, claiming to have the truth; but in every case the ultimate touchstone is our own innate sense of what is right. What other court of appeal can there be? Real Teachers never ask acceptance of a statement on their authority, but insist that the disciple shall verify it for himself; otherwise he has no knowledge, but only belief or faith. Yet any reasonable pupil will accept statements provisionally, through well-founded confidence in his Teacher and a conviction that he will later attain confirmation by his own experience. No specific prescription can be given, but we may advise that true self-reliance should be cultivated, which is a very different thing from self-importance.

We hope the questioner will not think that we are reflecting upon him, for this is far from being the case; as we are only trying to help him in the problem as to which he asks our assistance. And we believe that what has been said reflects his own ideas on the subject.

The Length of the Period between Earth-Lives

On first hearing of the doctrine of Reincarnation I was greatly attracted to it because it gives man an opportunity to work out on earth many phases of his character, and I was also taken with the thought that one could return to earth quickly in order to resume the thread of endeavor which had been snapped at death. But I was somewhat taken aback when I discovered that one does not return to earth quickly but only after a very long time: for if 1500 years is the average period for the Devachanic rest, that is certainly a long time. However, could you tell me whether H. P. Blavatsky has written anything definite on this latter theme? — A. E. I.

G. A. Barborka — Yes, 1500 years is certainly a long time, but the teaching is consistent throughout our literature. In *The Key to Theosophy* there is a definite question and answer on this subject: The inquirer asks: "How long does the incarnating *Ego* remain in the Devachanic state?" To this question the reply is given: "This, we are taught, depends on the degree of spirituality and the merit or demerit of the last incarnation. The average time is from ten to fifteen centuries, as I already told you." (p. 145) In common speech it is customary to regard the number "ten" or "fifteen" as a few centuries, so that it is often said that the period between earth lives is of a few centuries in duration.

Let us place beside this statement another made by H. P. Blavatsky, in *The Secret Doctrine*, as follows: "Save in the case of young children, and of individuals whose lives were violently cut off by some accident, no Spiritual Entity can re-incarnate before a period of many centuries has elapsed." (Vol. II, p. 303)

In this connexion it would be well to bear in mind the following

passage from *The Mahatma Letters to A. P. Sinnett*, which was given in reply to a question dealing with the length of the period between earth-lives: "The individual units of mankind remain 100 times longer in the transitory spheres of *effects* than on the globes"; (p. 177). By other passages in this book it is quite clear that the phrase "spheres of *effects*" refers to the after-death states of man, while the "sphere of causes" pertains to our globe (Globe D). Therefore it would be logical to assume that if a man's life on earth endured for a period of sixty years, his after-death states would require a period of sixty hundred years. This tallies with the "many centuries" written by H. P. Blavatsky in *The Secret Doctrine*.

From the Known to the Unknown

How can you get over to the lay mind the truth of the divinity of man?

Abbott Clark — The same way that you would convince the lay mind of any unfamiliar or profound truth. By appealing to him through something which he already knows and then expanding the idea from the known to the unknown. Every man knows that he has an inherent moral sense and a conscience. Show him that these are, so far as they go, of a spiritual or divine nature. Practically every man has some experience of an intuitional nature in which the consciousness or mind grasps a truth or an idea in a second of time, like a flash of light in the mind. He can hardly deny that this is far beyond any ordinary mental process. You can affirm, what our Teachers say, that this is a spiritual faculty. Then it is simply a matter of logic, of good sense, that these faculties have a divine source, and that like all other faculties of man, they can be cultivated, extended, developed. If he is still skeptical challenge him to think it over on that line and leave him to the thought. Experience proves that proceeding on

this line — from the known to the unknown, *i. e.*, from what the inquirer knows to the larger, more reasonable and nobler concepts of Theosophy, will bring success in almost any field of Theosophical teaching, especially if accompanied by the spirit of non-dogmatic and fraternal sympathy of the kindly understanding heart.

The Theosophical Forum

FULFILMENT IN DEATH — *G. de Purucker*

A human spirit is a deathless entity; it is a part of the very fabric of the Life Universal in its inmost parts; and this spirit of man, this inner being, this spiritual soul, is pursuing an eternal pilgrimage in space, infinite in space and eternal in time. It passes from mansion to mansion of life . . . not only in this cross-section of the physical universe which our imperfect eyes can see, but most especially in the invisible realms: in what men call the spiritual worlds. . . .

But this god within, an eternal pilgrim, learns eternally, going higher and higher and higher; and like human races on earth which, after reaching their culmination of splendor in civilizations, fall to rise again, so does the Monad, the god, the spiritual soul, pass from the spiritual worlds down into ethereal matter, learning in each, and rising again out of each in order to reach a still higher peak of destiny; then down into the ethereal material realms again: then another rise to something still more lofty and sublime — and so on forever. . . . — pp. 77-8

After death, the nobler, brighter, purer, sweeter, seeds of character, the fruitage, the consequence, of our yearnings for beauty and for harmony and for peace, carry us into the realms where harmony and beauty and peace abide. And these realms are spheres just as earth is, but far more ethereal and far more beautiful: for the veils of matter are thinner, the sheaths of material substance there are not so thick as here. The eye of the spirit sees more clearly. Death releases us from one world, and we pass through the portals of change into another world, precisely as the inverse takes place when the incarnating soul leaves the realms of finer ether to come down to our own grosser

and material earth-life into the heavy body of physical matter. . . .

— p. 65

Death is an absolute sleep, a perfect sleep, a perfect rest; sleep is an incomplete death, an imperfect death. . . .

In going to your bed and in lying down and in losing consciousness, have you ever feared? No. It is so natural; it is so happy an occurrence; it is so restful. Nature rests and the tired brain reposes; and the inner constitution, the "soul" if you like so to call it, is temporarily withdrawn during the sleeping period into the higher consciousness of the human being — the ray, so to speak, is absorbed back into the inner spiritual sun.

Just exactly the same thing takes place at death; but in death the worn-out garment is cast aside; the repose also is long, utterly beautiful, utterly blissful, filled with glorious and magnificent dreams, and with hopes unrealized which now are realized in the consciousness of the spiritual being. This dreaming condition is a panorama of the fulfilment of all our noblest hopes and of all our dreams of unrealized spiritual yearnings. It is a fulfilment of them all in glory and bliss and perfect completion and plenitude.

— pp. 55-57

Death is birth, *birth*; and instead of the wrench that there actually is in the case of youth when death comes, death to our old ones comes in peace and quiet, stealing like an angel of mercy into their

being, releasing the bonds binding the soul to its vehicle of flesh; and the passage is as quiet and gentle as the coming of the twilight preceding night, and it is a blessed sleep. — p. 30

Love is the most beautiful, the holiest, thing known to human beings. It gives to man hope; it holds his heart in aspiration; it stimulates the noblest qualities of the human being, such as the

sacrifice of self for others; it brings about self-forgetfulness; it brings also peace and joy that know no bounds. Love shows the Way and lights the Path; Love is the flowing forth of the permeant light, the Buddhist Splendor — the Christ-light — at the heart of the Universe: that love which, working in gods and men, teaches us to know beauty when we see it, especially inner beauty, to recognise greatness and splendor in others, from knowing the greatness and splendor in our own inmost being.

Love holds all things in place and in eternal keeping; its very nature is celestial Peace, its very characteristic is cosmic Harmony, permeating all things, boundless, deathless, infinite, eternal. — pp. 107-8

Selections from G. de Purucker's *Golden Precepts of Esotericism*: a reading given at the memorial service for Captain John R. Beaver, late General Manager of Theosophical Headquarters, May 23, 1943, and reprinted by special request.

The Theosophical Forum

THE VIRGIN BIRTH — *G. de Purucker*

The Christmas festival, and the teachings which have gone with it from early Christian days, are not at all Christian in origin. They never were invented by early Christian theologians or by Christian devotees, but were all based upon current Pagan ideas of the sanctuary. And this, very far from being an unusual event in Christian history, was a very common thing, for the Christians took over from the very philosophies and religions of the day which later they scorned and rejected, the great bulk of the ideas that in later times became what was known as Christian theology.

The early Christians were brought up in the Pagan world where it was an acknowledged fact that there was an exoteric religion or series of such religions, and a secret teaching kept only for those who had proved themselves to be fit and worthy to receive the teachings of the Mystery-Schools, the secret things of the Divine. All the exoteric faiths hid something wonderful, sublimely majestic, taught within the sanctuary. Get this fact clear, because it is history; and early Christian historians always blurred over or forgot or passed by that idea, without even a mere hint, and yet that is the atmosphere in which Christianity was born. If you get this key and hold it in your mind, you will have something by which you may unlock what has been so difficult even to Christian theologians themselves not merely to understand but to explain.

As regards the Virgin Birth, this is not anything original with Christianity. The conception has been common over the face of the earth from immemorial time. Many peoples in the archaic days taught of virgins giving birth to great sages and seers, and you may read this same story of Jesus the Avatara in other

tongues and after other ways, but having essentially the same fundamental truth of a great man achieving manly divinity by a new birth. So common was this idea that it was even popular exoteric language of the streets and of the mart.

The Hindus spoke of a *dwija*, a twice-born, the idea being that of physical birth, born of the mother, as all sons of men are, but when ready after training, receiving inner birth, inner enlightenment, which was the second birth of the man, a new birth into the light of the spirit. You see how grand this thing is once we throw the light of Theosophy upon it. Yet it becomes no longer Christian but universal, and see how it appeals to the human heart and to the human mind. How grand indeed shines the light of truth upon the face of the man whose heart is enlightened by the sense of his oneness with all; and what pathos there is when the sense of separateness drives him away from his oneness with other men.

What did this teaching mean in the early days of Christianity? Precisely what it meant in all the other great Pagan countries. It represented scenes passed in the sanctuary where the neophyte or disciple after long training had so developed his inner being, his inner perceptions, that he was on the verge of becoming Christos, a Christ, or as the wonderful Mahayana Buddhism has it, a Bodhisattva. The next step would be that of Buddhahood. Even in exoteric writings this wonderful truth from the sanctuary was spoken of as virgin birth, a second birth; and all the saviors of man in whatever country, of whatever clime, and of whatever day, all the great ones, the sages and seers, the Buddhas and Bodhisattvas of highest rank, the greatest, were all born of the Mother, the holy spirit within. How beautiful, how true! It appeals to us instantly, and it is in strict accord with even the little that modern scientific research is beginning to tell us of what they call psychology. We all recognise it when a man's life is improved and

raised by his own efforts and strivings to become greater. It is the first faint dawn in the mystic east, the beginning as it were of the holy birth pangs whereby a man becomes super-man. In time he becomes an incarnate god, the god within, and he thereafter manifests through the Christ-child, and the man of flesh becomes responsive to the inner flame, the inner light, the inner fire. See you not what dignity this lends to us human beings? What hope for the future for those who dare, who strive, who keep silent!

Here is a very significant thing in early Christian writings. If Mary were virgin, how could she give birth to children? In early Christian scripture there occurs a remarkable passage in the Greek Christian writings, and rendered into English it means: My Mother, the Holy Spirit — for the Holy Spirit, the Holy Ghost, amongst primitive Christians was always feminine, never masculine as it became afterwards — my Mother, the Holy Spirit, took me by the hair of my head and brought me to the holy Mount Athor. Do you get it? Here is the spirit in me, the Holy Spirit, my Mother from whom I was born, born anew, no longer born of the flesh but born of the spirit: born first of water according to the flesh, then born of fire according to the spirit: the first birth and the second birth. This is indeed the virgin birth; for the spirit of man, a ray from the divine, from the ineffable, is eternally virgin, and yet eternally fecund, eternally productive. The cosmic Christ is born of the cosmic Spirit, feminine also in ancient time, and in the same way is the spiritual man feminine, and in the holiness of achievement gives birth to the Bodhisattva, the Christ-child, and from then on the man is infilled with the holiness of the spirit pouring through him from the source divine.

What connexion has all this with the Sun? From immemorial time, Father Sun was looked upon with reverence: not necessarily the physical globe clothed with beauty and light and splendor and vital energy, the giver of light unto his own kingdom, but the

divinity within and above and behind that sun as of all other stars. Our sun was an emblem of the cosmic spirit, for through that sun poured these floods of vital splendor and life and light: light for the mind and love for the heart, without which no man is man.

Even the Christians used to sing hymns to the sun, record of which is still extant, outside of other references, in a communication by Pliny, governor of Bithynia and Pontus, to the Emperor Trajan in Rome. He said that in his jurisdiction the Christians seemed to be innocent and harmless folk, for they assembled every morning at rise of the sun and sang hymns to that divinity. And in a collection of old Christian hymns we have one of those hymns to the sun still extant, something I have often quoted from this platform. In English it is: "O thou true sun, shine on forever, glittering with perpetual light. (Now hearken to this:) Image of the holy spirit (not merely a creation of holy spirit but its image), image of the holy spirit, infill us full." No Parsi or so-called Sun worshiper ever created a more typical hymn to the sun than these early Christians did. These earliest Christians knew what they meant; they did not worship the physical sun, it was the divine light, teaching what the sun stood for. The sun was the emblem, the image, of the Cosmic Christ, not a creation of god, but the image of the Divine. O thou true sun — and the most common expression among the Christians was to liken their Savior Jesus the Avatara to the Sun.

I would that I had the time and could tell you more of the recondite mysteries of this teaching, but I will merely say this: that in man's constitution there is a solar element. Could it be otherwise? There is a lunar element, and an element derivative from every one of the planets. Even modern science tells us today that we not merely share in the cosmic light, and as they say the cosmic heat, that reaches us from Father Sun, but that the very

heat we get from the coal which we burn or the wood which we burn, originally came from the sun, that the atoms which compose it are the same which passed through us, that the solar body reaches not merely the earth but all the other planets. Of course there is a solar element in us and a lunar element and an element from each one of the planets. Otherwise we should be incomplete. Man has everything within himself that the Universe has!

I will just close with this thought: Even though I have all knowledge and have not love in my heart, it profiteth me nothing; for it is simply a declaration that the man is incomplete, unevolved, because, being a part of the Universe, he does not show forth or manifest all that is in the Universe, everything that the whole has. I might have all the truth in the world, but I cannot understand it properly. I can reason and think about it, but I do not get the coherency of the reality because the heart is not yet awake within me. The magic key of love flames not yet in my breast.

Just ask yourself this question: Two men you know. One has all the knowledge in the world, but he is heartless; and the other is a simple-minded man, is not sophisticated, but his heart is great with love's universal, all-comprehensive sympathy. Which of the twain would you choose for a companion, and one to whom you can turn in time of trouble? — A Very Happy Christmas to you all!

— Informal talk at a public meeting, Point Loma, California, December 22, 1940.

CO-OPERATING WITH KARMA — *H. T. Edge*

The doctrine of reincarnation, and its twin doctrine of the workings of Karma from one incarnation to another, are of course truths, and there is always need to know of them and to appreciate them. Nevertheless it remains true that ulterior causes operate through proximate causes: fire will not bake our bread without the assistance of the baker, nor can Hercules lift the wagon out of the rut unless the wagoner puts his own shoulder to the wheel. So we must be careful not to slip into the habit of thinking of Karma as though it were an extraneous and alternative cause disputing the responsibility with minor causes, and invoked as an explanation in cases where we fail to discern the proximate cause. Again, it would be wrong to imagine that, when a more familiar explanation of an occurrence or experience is suggested, the operation of Karmic law is thereby depreciated; on the contrary such an explanation supports faith in Karma by showing us some of its ways of working.

If the experiences of people's lives were examined with a more seeing eye, it might become more evident that such experiences were the natural and inevitable result of their conduct and character in the present life. Thus, if a person who has so far led a life of ease and comfort should suddenly be plunged into privation, it is not necessary to call in, by way of explanation, some avenging or chastening deity or power. For such a result may be attributed to the effects of satiety. The individual himself, in his inner nature, actually craves such a change: he has disturbed the natural and all-pervading law of harmony by going to excess in one direction, and senses the need of an adjustment. And, since this deeper nature of his has the power to bring about results, the said results are thereupon brought about. The outer

or lower nature, not understanding what has happened, complains, and casts about for some other explanation of what seems to it unjust and arbitrary. It is well for us that our lives are not confided to the unchecked guidance of our shortsighted and fatuous lower minds; and that there is within us a wiser vision and a surer hand to direct our feet on the path which we secretly know we ought to follow if we are to reap the full fruition of our experiences and to round out our character on a less petty scale. The chastening hand of affliction has often brought people to a thankful recognition of its beneficent effect; it has taught them to feel for others rather than to be so engrossed in self.

Again take the so-called "good" people, of whom we read in first-class romances. Even though the author of such a romance may fail to see the point, it may become clear to the reader that the so-called "good" person is in reality selfish and self-indulgent; and there is such a thing as moral self-indulgence and self-satisfaction. The villain of the story, on the other hand, may have the virtues lacking in the hero or heroine. He is more sincere and honest; he is not a humbug. This probably explains the sympathy we so often feel for him, and our comparatively weak respect for the hero. The reverse of fortune which comes down on the good person is felt to be a necessary lesson, needed to get him out of his comfortable and self-approving rut.

In short, we know so little of people's real characters (including our own), that our failure to discern the justice of an event or experience may be due mostly to our ignorance in that respect. We know there is an immutable law of readjustment, but, as said, this law must act through secondary causes, and it is interesting and helpful to examine into these. It might perhaps be as well to say here, in order to meet probable objections, that neither the present remarks nor any other reasonable explanations of Karmic law deprives anybody of the privilege of feeling sympathy

and exercising compassion, if so minded. For if on the one hand it is impossible to interfere with Karma, there is no more to be said; and if, on the other hand, we *can* interfere with Karma, then we do it equally whether we withhold our help or afford it. "Inaction in a deed of mercy becomes an action in a deadly sin."

To believe in Karma does not prevent us from trying to understand its workings. We do not need to make it into a personal God, which "moves in a mysterious way, its wonders to perform," or "hides a smiling providence behind a frowning face." We shall better co-operate with it when we understand it better.

The Theosophical Forum

KARMA AND REINCARNATION — *William Q. Judge*

The doctrine of Karma cannot be considered properly without keeping Reincarnation in view, for Karma could not have its proper place and operation unless reincarnations furnished the material for it to show itself in. Reincarnation is, indeed, itself a part of, and is as well a cause of Karma, because the reincarnated man, struggling with fate, ignorance, and desires, generates constantly new causes that may result in further reincarnations.

The meaning of the word Karma must be inquired into. It really means *action*. It is the action of the Divine, or God, or the unmanifested, or Brahma, and also of every sentient being. All worlds are subject to it, as is declared in the *Bhagavad-Gita*, where it says: "All worlds up to that of Brahma are subject to Karma." Hence it is found operating in all planes. It is Karma that brought us here, that will take us to Devachan, and afterwards bring us out of that condition. For if Karma does not act superiorly to Devachan, then we could never emerge from the latter; but the moment "the reward is exhausted in the heavens of Indra" — which is a description of Devachan — Karma seizes upon the ego and draws it into another body, there to begin again the adjustment of the scales.

The Buddhists did not lose time in wandering about, lost in illogical doctrines of salvation and favor from a jealous god, but considered the problem presented by the vicissitudes of life, in the extraordinary fact that the just man often receives no reward nor the wicked one punishment. Finding an explanation needed, they hit upon the word Karma, or Kamma as they call it in Ceylon. This is briefly stated by Rev. P. T. Terunnanse, F. T. S. of Ceylon. "Kamma when viewed thus is good or bad deeds of sentient

beings, by the infallible influence or efficiency of which the said beings are met with due rewards or punishments, according as they deserve, in any state of life. And we must remember that the world has no being, in the essential sense, but is subject to an alternating process of destruction and renovation."

This leads us to consider the erroneous views of some as to what Karma is. Some think it an evil influence that stands ready to strike a man at the first favorable moment, and I have met more of those who looked at it thus than as being also the good results and compensations of life. It cannot be properly called "the law of ethical causation" only, for if it applies "to all worlds up to Brahma," it must be more than this.

It is the great law which operates also through a manvantara, and which — considering a manvantara as a great Being made up of all beings included therein — causes each manvantara to be the exact resultant of the one which preceded it.

Nor should we make the error of applying it only to ourselves as a great whole, for it affects every atom in our bodies. As we are in fact made up of a *mass of lives*, our thoughts and acts affect these atoms or lives and impress them with a Karma of their own. This again rebounds on us as well as on all other atoms or lives.

Karma is a great benefactor, for it never fails to mete out all compensation, and that demands that the smallest good act or thought should bring what we call reward. Now as we have been reincarnated over and over again, we have met each other in previous lives. The laws of affinity and harmony require that those who are now together must have been with each other before. So the acts of charity and kindness we perform now will compel similar acts to be done for us in other lives; and is bringing about such in this life because we did those of like nature in another life. As the *Voice of the Silence* says, "Help them

today and they will help you tomorrow." So I believe that I am working now to help you and you me, because there still exists a reciprocal obligation.

The causes of reincarnation are desire and ignorance. We have what we term "will," but our will is moved into action by desire, and our acts spring from the desire to bring about pleasure or to avoid pain. As long as we are ignorant we constantly fix our desires upon enjoyment or the avoidance of pain, and thus lay the ground for the operation of Karma in another body.

In each life all previous Karma is not exhausted, because the desires and old meditations are not able to manifest themselves unless the apparatus or sort of body is provided which will permit the bringing up to the surface of the old impressions. This is clearly set forth in Patanjali's *Yoga Philosophy*. Thus by means of inheritance of bodily frames of various sorts, the ego may exhaust by degrees its Karma, and this explains the differences in men. The man who has a great wide brain takes hold of old Karma which that apparatus may exhaust.

And at this point ignorance shows its power. As, ignorant of the law we sin against it, we receive the result, or, acting in accord with it, another result; in the one case sorrow, in the other, happiness. So we must beware, having become acquainted with the law, that we do not continue as trespassers, for in the present life we settle the opportunities for the next and determine whether we shall in that succeeding reincarnation have opportunity to live with good men, helped by them, or among the vile, ever pushed toward evil.

Of the more recondite mysteries of Reincarnation I will not speak, since those are more or less speculative, but will divide it thus:

a. Reincarnation in good surroundings and in a good body,

and

b. Reincarnation in the opposite sort of body and in an evil family.

Karma as affecting us we may for the present analyse thus:

- a. That sort which is now operating in our present life and body;
- b. That which is held over and will operate in other lives or in a later period of this one;
- c. That which we are making for other lives to come.

The fields in which Karma may operate are:

- a. In the body only, or the mere circumstances of life;
- b. In the mental plane when trials of the mind are felt;
- c. In the psychical nature.

The spiritual plane is not affected by Karma at any time.

Karmic causes may interfere with each other and produce a result in our life which, while similar to neither cause, will be the proper resultant of both. It may also be exhausted by two opposite Karmic causes meeting each other and thus destroying the effect of each. Its effect is also varied to our sight by the apparatus or body and mind through which it works, in this, that instead of such and such a Karmic cause producing an instantaneous result, it may be spread out over many years in a series of misfortunes, the sum total of which might in some other person appear in one single disaster or favorable turn of fortune.

Jesus of the Christians uses the words of occultism and describes Karma in this language:

Judge not that ye be not judged: for with what judgment ye judge so shall ye be judged, and with what measure ye mete it shall be measured unto you again; and as ye sow so shall ye reap.

This is a restatement of the great law as declared by the Brahmins who taught Gautama Buddha, and by Buddha himself, and those great sages said that none other than ourselves forged the chains that bind us, and no other hand but our own smites us.

The road up which we must climb to rise above Karma and thus be able to help our fellow men with conscious power well directed, is that one which is marked with the signs Charity and Love.

The Theosophical Forum

THE COMING OF THE MAGI — *Leoline L. Wright*

Hermias, from a seat outside the entrance to his cave, looked out across the rockbound valley. The slight eminence where he sat brought out sharply against the horizon the splendor of an ancient city. While his thoughts mused over the familiar vision, what looked like a bright ribbon burst from the city walls and began to unwind itself in his direction.

"A good thing I happened to be on the lookout," he congratulated himself. "I shall certainly need all my firmness this time."

There was anxiety but no fear in his eyes as the rapidly moving ribbon resolved itself into a multicolored cavalcade of court nobles and their outriders. The staccato rhythm of galloping horses with the jingle of their trappings came at last to his ears. It emphasized for him the grim purpose which brought this martial column straight to his solitary and remote dwelling.

The cavalcade dashed up, deployed briefly, and formed into two lines fronted by its leader on a magnificent black horse. This man, dark in visage and haughty in mien, dismounted with deliberation and stalked up the rough pathway at the top of which Hermias had risen to await his coming.

For a moment the two stood confronted. The contrast between them was striking. Hermias, clad in a crude belted garment of coarse gray cloth that fell in folds to his bare feet; the other in all the panoply of jewelled accouterments and the opulence of court apparel. Hermias had hair of pale gold and his tranquil mien was deepened by the beauty of gray eyes and the benignant purity of serenely folded lips. The courtier was a smouldering, evilly controlled flame.

Hermias was the first to speak. "Greetings, most illustrious Lord of Zaffiri," he said in his gentle and pleasant voice.

The other's only response was an insolent stare. But Hermias was to be neither forced nor intimidated into discourtesy. He met the arrogance of the courtier with a level and placid gaze.

The aristocrat was compelled at last to speak. "I am here only at the command of our imperial Master." He spat the words like bullets into the young man's face. As the response of Hermias was simply a grave bow, the messenger continued: "Your contumacy in remaining here has been noted with amazement and displeasure by his sovereign Majesty. He had expected you long since to obey his benevolent command to attend the Presence in the imperial city. Your gifts," and the voice was a silken jibe, "should be at the disposal of the royal pleasure."

He paused expectantly, but Hermias said nothing. The dark face sharpened with disdain as he went on: "And our imperial Master bade me command you — this time on pain of death — to abandon your degrading ministrations to those vile hordes of the starving and diseased who flock here from the city. You are herewith once more summoned to place your powers exclusively at the service of our sovereign Liege."

As Hermias for his only answer looked mildly at him, the Lord of Zaffiri broke out: "What! Can it be possible? Yet I admit it does not surprise me in one of your peculiar tastes. You actually prefer your swinish rabble to the service of the magnificent and great?"

Hermias merely bowed in admission of the other's contemptuous charge.

The Lord of Zaffiri then shifted his ground to suavity and began once more. "But our munificent Sovereign is prepared to be generous. Should you obey his command, not only riches and

honor, but fame await you. You are to found a great college of healing and research in the imperial city. To this school students of princely degree will flock from every land. . . ."

"Enough!" commandingly interrupted Hermias. Power flashed from his eyes. "Go hence, O Lord of Zaffiri, to our august Sovereign. Say to him faithfully these words: "When he shall have cleansed yonder afflicted city of the unholy forces now holding it in thrall; when he shall give ear and succor to the destitute and suffering which swarm within its gates — then gladly will Hermias dedicate his poor gifts to the imperial service. But without honor, be it understood, and without price." "

Hermias ceased. He met the hot rage in the courtier's eyes with a look of inexorable resolution. For a moment silence throbbed between them.

"So! You are, after all, the fool you look." Wrath had cooled to glinting malice as the Lord of Zaffiri spoke. "Have no anxiety on the score of your message. It shall be most expeditiously and accurately conveyed. But, as such an answer has been anticipated, I have one last word to say." Here he made a pause of deliberate solemnity. "Our illustrious Sovereign," he then continued, "is determined to be merciful. He gives you still a fortnight to reconsider. Nay, to savor fully what your refusal will mean. Your only alternative is death. And not only death, my friend." He broke off carelessly to readjust his sword. "No doubt you have heard of the sinister dungeons beneath the castle?" and looking into the man's eyes, he smiled.

"You have had my answer."

"Nevertheless, I am instructed to give you the fortnight's grace. If you are wise . . ." he finished with a shrug as he turned and swung abruptly away. Hermias resumed his seat as the cavalcade

reformed, wheeled, and clattered away across the valley.

It was some hours after the Lord of Zaffiri had departed that twilight fell over the valley. Hermias, in honor of the holy season of the winter solstice, had preserved for three days a rigid fast and long periods of intense meditation. Now, seated again outside his cave for a breathing-spell, he noted how Hesper, the evening star, and the slender young moon drew together in mystical communion. He was thinking with joy that the sacred hours of initiation were drawing near for the candidates who had been successful in their long preparation. His heart brooded over the fearful hazards which confronted them. Presently he returned within the cave where he planned to spend the remainder of the night in meditation. He had dedicated to them the passing hours — to their safe voyaging along the perilous airways and to the secret places of the cosmos.

The cave was engulfed in shadow. Not long had he been rapt away from his surroundings when something new and strange penetrated the atmosphere about him. When he finally unsealed his eyes the whole cave glowed with luminous sapphire. Within this heavenly radiance he beheld a wondrous apparition — three mighty figures pulsating with glory, who regarded him with looks of deep benignity.

A voice like the silver cymbals of the Dhyanis breathed upon the silence. "Hail, child of the Midnight Sun! The inevitable hour, so long unconsciously prepared for by lives of selfless devotion to your fellow men, at last approaches. Arise, then, O accepted of the august Ones. Call upon your spiritual prowess and take the sacred pathway of initiation."

The shock of this electrifying summons brought Hermias to his feet. In the same moment these luminous figures revealed themselves to his spiritual clairvoyance as the three mysterious

Magi, the holy Initiators. Awe and reverence exalted his heart. Their celestial presence diffused in him a sense of power and confidence. No hesitation and no doubt assailed him. With the instant obedience to spiritual law which guided all his thoughts and actions, he called upon his long dedicated, impersonal will. His being was sustained by its own unassailable purity. He stood ready.

One of the majestic figures now advanced to the waiting Hermias. The Great One's face expressed a dark serene power. Flowing violet shadow shrouded his form.

"I am Soma, Regent of the Moon. Before the guardian of my dread portal your spirit-soul is commanded to bear swiftly its credentials. Abandon, then, your mortal tabernacle here."

In obedience to his gesture, Hermias stretched himself upon the stone platform where he habitually slept. He composed his limbs peacefully. Peacefully he closed his eyes. Almost at once his physical vesture dropped away beneath him. Then — freedom, instant and glorious! Like a shooting star he sped along the trajectory of his liberated will. At once, far ahead across the shadowy spaces of space he descried the menace of a yawning portal. And there, awaiting the approach of the neophyte, loomed a figure of malignant challenge.

Fourteen days and nights flowed over the valley. Still Hermias lay as one dead upon his couch of stone. Still hovered above him the supernal Magi, bearing watch and ward over the neophyte-body, awaiting for him the judgment of destiny, the outcome for the candidate of victory or doom.

The afternoon of the fourteenth day was drawing on towards night when a disturbance arose outside the cave. There sounded the rude clatter of military footsteps crowding up the short

declivity. At the same moment the marble figure on the couch flushed with returning life. As Hermias awakened his whole body began to glow, until when he stood upon his feet he seemed a pillar of aureate splendor. And just then the figure of the Lord of Zaffiri, backed by two mailclad followers, appeared in the entrance to the cave.

"Beware, O child of darkness! Place not thine impious foot upon this hallowed ground." Thus spoke Soma, Regent of the Moon, in solemn warning to the bold intruder upon the transactions of the gods.

The far-off, unearthly cadence of that warning fell upon the courtier's ears like the voice of doom. His gaze widened in amazement and a look of awful horror dawned in his eyes. For one moment he stood paralyzed. But the instinct of that haughty and fearless heart forbade retreat. Mustering his faculties into fierce resistance he took a firm step over the threshold. And instantly, with a groan, the Lord of Zaffiri fell dead at the feet of Hermias.

The gray light of dawn was spreading over the valley. A small caravan of pilgrims, mounted upon swift desert camels, drew up in silence before the cave of Hermias. The initiate, his face still shining with the divine aureole beneath the hooded cloak which shrouded his form, descended to meet them. The leader of the caravan left his kneeling camel and advanced to give Hermias a gesture and glance of wordless greeting. In silence the pair mounted. The caravan turned, passing like a shadow toward the mountains in the east.

Hermias cast one look back over his shoulder towards the sleeping city, now shining with a fabulous beauty in the glory of the rising sun. But there was no grief in the heart of Hermias. For his prophetic vision assured him of the time to come. He would

return in that happier day to free its courts and temples and palaces, its noisome byways and hovels from the thralldom of evil, and lead its benighted people into the light.

The Theosophical Forum

ADVENTURE IN LEARNING — *M. G. Gowsell*

One of the most serious drawbacks in the way of learning anything, as far as grown-ups are concerned, is inattentiveness. This may, in some cases, be due to insincerity, but more commonly to wool-gathering, as we called it at school. It is a condition which is all too prevalent, not so much in the school room, as elsewhere most of the waking hours. So apparent is this that the several witnesses to any given event will seldom if ever agree in their testimony as to what actually took place at the moment. That this can be so common an occurrence is evidence of our absent-mindedness. It is this very thing which makes it more than probable that, should one desire to get by with something on the q. t., that is, without calling attention to what is being done, the chances are in favor of its being entirely unnoticed, albeit performed under the very noses of the usual run of witnesses. Hence any accurate, detailed, agreed-upon observation will be exceptional.

All of this stands in the way of one of the most interesting and intimate adventures in learning possible to mortals, for it prevents the thinning away of the partition between the higher and the lower mind. Of course there are those so-called "gifted" individuals who seem to possess what we call photographic memories, or rather should we say, the power to recollect impressions, however fleeting or faint such may have been. This unusual faculty will of course be due to training, a matter of self-discipline, either in this or in past lives. The human mind is naturally inconstant, restless, fugitive and diffusive. Discipline is needed that it may become an efficient instrument. "To whatever object the inconstant mind goeth out, he should subdue it, bring it back, and place it upon the Spirit," said Krishna to Arjuna. Change

the word "spirit," which the average mortal knows little or nothing about, to "the job in hand," and you have a piece of practical advice the value of which cannot be overestimated. This would be concentration of mind. An occultist or real mystic will, as an almost inflexible rule, never allow himself to do anything absent-mindedly. He would not even wash his hands and allow himself to be thinking of something else at the same time. But should he be so inadvertent at any time as to do so, he would go right back and do whatever it was over again, keeping his mind on it.

Now this is quite of a piece with memory training. It is a practice that is within the province of anyone who desires to grow, one which, if faithfully followed, would bring one ever nearer the goal. It is the linking of the purely personal consciousness with the *individual* consciousness, thereby ultimately accentuating the latter a thousandfold. Herein too is the gateway to intuition, and to the child-state of awareness, before the link becomes fractured or completely broken: a gateway to many things, not least of which would be to a definite realization that man is composite in his make-up: that he is a congeries or collection of entities, each one of which is evolving upon its own plane of being. Thus Man, as a collective aggregate, is said to be a stream or river of consciousness.

Under certain conditions, a linking or raising of the purely personal, brain-mind, normal consciousness of the human being to that of the *individual* or higher-mind consciousness may take place temporarily, and become a real adventure. But only occasionally. With some people, perhaps only once or twice in a lifetime. These experiences would occur during rare circumstances, at rare moments in life, at some outstandingly crucial parting of the ways: some event where one's life, or whole future destiny, might be in jeopardy. It would be at such times

that every smallest detail, of even one's material surroundings, might become so indelibly registered, so etched into the consciousness, as never to be effaced.

It is at such signal moments that a higher part of man's composite nature and consciousness is activated and made to function on this plane as an intense awareness, a god-like presence of mind. The bodily or brain-mind apparatus, what is referred to by H. P. B. in *The Voice of the Silence*, as the "lunar form," will have been slain, put out of action for the time, a feat which, with a certain spiritual faculty gained, may be accomplished at will, we are told, but under ordinary circumstances is always more or less involuntary. In any one of the instances referred to we have unimpeachable testimony, real evidence, of the nearness and availability of the purely manasic, or what is usually called the higher-mind part of man's constitution.

This momentary apotheosis of consciousness may be in the nature of a true apocalypse, a revelation and a warning to one as some desperate parting of the ways, where the moral fate might be at hazard. It should not be inferred, however, that this activation of a higher part of the inner constitution is evoked only during moments of dire peril. It is more readily available to those who have, perhaps but for a moment, set their feet upon the borders of the supernal, which would only be effected through the region of the higher mind. One who has had this experience is nevermore the same. There will have been an awakening. He will never lapse again so deeply into his former slumber. An analogy will be found in ordinary life, where every now and again a man's mind is stretched by some new idea or understanding, never to go back to its former dimensions.

UNLIMITED HORIZONS IN THEOSOPHY — *L. Gordon Plummer*

One day I heard someone say that he wished he could go away out there in space where the stars are. An interesting idea — but he had overlooked one thing. The planet on which he stood was away out there in space. That was months ago, and think how far the earth has traveled since then; probably you could set the figure at a hundred million miles.

Compare this picture of the mighty sweep of the Earth's orbit with the limited idea once held of the flatness of the earth, with the sun, moon, planets and stars as being movable lights set in the inside surface of a great covering dome. That outmoded view of Nature was quite in keeping with the old idea of the Creator, and if Nature were no more than that one could quite easily imagine a being with the necessary ability to construct the Earth and the firmament in six days. After Columbus had established the roundness of the Earth, and after the work of Copernicus and Galileo in the 16th and 17th centuries, the world underwent a great reconstruction of thought and tremendous strides were taken in the right direction. Unfortunately, however, religious reconstruction did not keep pace with scientific progress, and that is why there seems to be a conflict between the two. Now that we know that there are galaxies, many of them like our own, to be counted by the millions, we see that the Universe is of such proportions that no "Creator" could have made it without help, no matter how long he might take over it. Yet religious teachings of the day did not provide an adequate explanation of the nature and work of God in His relation to the myriads of stars supposed to be under His sway.

The coming of H. P. Blavatsky with the Ancient Wisdom-Religion

was a boon to humanity which at best we can but dimly appreciate. Here at last was the opportunity to study things as they are, without the incumbrances of theory, speculation, prejudice or argument. Fundamentally her teachings are very simple, for after all the universe is the only way that it could be. It is only in the multiplicity of detail that the teachings become involved. Details are important and they must be mastered, but the correct approach to Theosophy is first of all to get the broad outline of the teachings. Once we grasp the general plan we discover that the details fit themselves into the picture, and little by little we gather more and more knowledge until the universe becomes a living wonder before our eyes. We stand in silent awe before the holy presence of Truth.

Theosophy, then, is a study of things as they are. It is a study of life on all the planes of being. Essentially, it is a cosmology and an anthropology, a study of the Universe and Man. It is the synthesis of Religion, Philosophy and Science. Now, just what do we mean by this?

To analyze Science first: Science is a study of the phenomenal universe. It deals entirely with the universe of effects. Its province is to tabulate and to collect facts. It arrives at its conclusions by experiment, and forms hypotheses in an effort to interpret its findings. In brief, Science tells us how things behave; it deals with effects.

Philosophy, on the other hand, studies the universe of causes and ideas. Is this a purely imaginary universe, no more than the fabrication of the minds of scholars and philosophers? It is not. It is a universe more real than the universe we see, because upon it depends our visible, tangible universe. Here is an illustration to show the relation between the two. What is a phonograph record? It is a disc of an appropriate compound of vulcanite

suitable for holding sound impressions cut into the spiral curve. When a needle follows the groove an orchestra is reproduced, exactly as played, with all the overtones and shadings of expression to be conveyed to the listener. This record that we can handle and place upon the turntable represents the visible universe, because it is a thing of effects. The composition itself, an intangible thing until written down on paper and played by an orchestra, is the real cause for the production of the disc. It represents the universe of causes, and a scientific explanation of the inspiration of the composer is no explanation at all. Philosophy alone could tell you what mighty impulses moved Beethoven to write the Moonlight Sonata. And yet that inspiration is the real thing, and can only be followed slavishly by the needle as it vibrates to the variations in the groove.

To restate our premise, Science deals with the universe of effects, and Philosophy interprets the universe of causes. What then is the province of Religion? Religion is man's personal approach to the Universe. It is what each man thinks and feels about his relation to Nature and to the Deity whose robes are the countless stars. Religion per se is not dependent upon ceremony, scripture, and creed; these are but the accouterments suitable for some people, and they fill a need. True religion is the motion of a man's heart toward the Divine.

To be adequate, any religion must be built around a philosophy of life. That, indeed, must form its foundation, for unless Religion can answer the burning questions about life and death, man's place in Nature, the origin and destiny of the human soul, the life pulsating throughout all Nature, in fact all the questions that it is possible for the mind of man to frame, it must fail in its ultimate objective, which is the reorientation of the Human Soul toward the pathway to the Gods.

True religious life as offered by Theosophy is a thing which grows upon a man as he progresses in devotion and understanding. As the devotee progresses he finds that for him the religious life is an unfolding of his inner faculties and a broadening of his horizons, so that he begins to understand his relation to the Universe. Certain teachings will be made known to the student, and by these teachings his own position in relation to Nature will be clarified for him. Eventually he finds that much he has learned is a symbolic or quasi-dramatic representation of certain truths which may become realities for him. It all depends upon his own inner growth.

And so the time comes at last when he is a Candidate for Initiation. Actually, Initiation is a beginning for him. It is the opening of the inner eye, so that he begins to see for himself and to learn by individual observation. In Initiation the great Mysteries of Life and Death are made known to him, and from that moment he is qualified to teach with authority, and then only can he set aside the ancient mystical preamble: "Iti maya. srutam," "Thus have I heard." Yet even these great adventures are but a beginning for him, and as such they are an extension of the religious pathway that he has trodden for so long, and which he will continue to tread until it leads him to the very Heart of Being.

And here we have the reason for saying that Theosophy is the greatest boon that Humanity has ever known. It gives man infinite hope and promise. It gives him the assurance which he needs to carry him through the intricate maze of earth-life. It gives him a scientific-philosophical understanding of life, and points the way to a religious fulfilment of the aspirations of his heart.

WHAT IS PHOTOGRAPHIC MEMORY? — *S. H. Wylde*

The naturalist, W. H. Hudson, was remarkable for what is called a photographic memory. As a boy he had lived on an estancia in the wild pampas country of the Argentine, but most of his life was spent in England, and in his extreme old age, nearly seventy years after his boyhood experiences, he was able to recall with the scientist's aptitude for vivid detail, peculiarities of flowers, birds, strange light effects, gestures, touches of character, oddities of behavior, and a thousand incidents, both trivial and important, as though he had witnessed them yesterday. In his book *Far Away and Long Ago* he says that he could "hear" the songs, call-notes, and alarms of one hundred and fifty-four species of American birds, in his sequestered English village, as vividly as if they had been perched outside his window.

This photographic memory is something that puzzles the psychologist. The Theosophist says that only the universal prevalence of astral substance can explain it. Man's organism shares in this astral medium. The substantial aspect of his mind is composed of it, and upon this sensitive film are impressed permanent and accurate records of all that impinges upon our senses. Our power to recall these pictures at will depends on the control we have of Mind. As a rule our minds are wayward and untrained; they fly from object to object, or remain inert. But if our consciousness works through mind to fix the point of attention, then the "snapshot" is not relegated to the limbo of the sub-conscious, as the case of the hypnotic subject will show, but remains instantly available at any time. Modern man knows little of the mysteries of mind. It is a generator of tremendous creative force. Its powers of memory are the least of its capacities, for the Adept can use it to mold astral substance at will.

SHAKESPEARE'S STUDY OF EVOLVING MAN — *Marjorie M. Tyberg*

Professor Spencer's book (1) is an example of the power of constructive literary criticism to present the universal truth concerning the nature of man which supreme literary genius has embodied in a work of art. It is an interpretation of the Shakespearean drama so profound as to serve as a revelation of the recurrent periods of mighty conflict through which human beings must pass, and of the peak of attainment to be reached by human striving. It also clearly indicates that Shakespeare intuited a labor for the human spirit which as yet transcends present human aspiration towards the highest possibilities of mankind. This book has distinct relevance to the present crisis, when man is being catapulted into a kind of physical universality, a global awareness, and is being compelled to undergo reorientation to the forces and relations governing life on this planet. The appeal of this work is great because of the writer's knowledge not only of literary art but of the art of living.

It is now recognized that American scholars, who in many fields of English scholarship are easily first, are pre-eminently first in the field of Elizabethan studies; and Professor Spencer's comprehensive survey of the books available in the sixteenth century enables us to reconstruct the patterns of thought and feeling which prevailed in that century in England, and to trace the striking changes inevitably a result of the startling theories of the universe, the state, and man, which were brought forward between 1543 and 1600.

What had been long accepted was a pattern woven from Platonic, Aristotelian, Neo-Platonic, and Christian elements, the idea of an

ordered universe, a hierarchical system extending from the throne of God to the dust of the earth, the earth which had been created by God about the time of the autumnal equinox 5000 and some odd years before and which was stated to be the center of the whole celestial system, with man, the microcosm, endowed with understanding that made him the natural ruler of the world, "the perfection and end of all the creatures." All parts of this world-structure, including man, were interdependent; the harmony and safety of all depended upon the performance of the duty assigned to each; any overstepping of this ordered course could wreck the whole. With Adam's fall this calamity had occurred. Evil had entered the world, man had lost his destiny, had lost even the knowledge that he had a destiny. But God had mercy and gave man the hope of salvation through Christ. The Pope of Rome was the vicar of Christ on earth, the priests were the intermediaries between God and man, and the Church of Rome was the stronghold of revealed truth. How all these foundations were rudely shaken, and a state of doubt and confusion of thought brought about that created the very atmosphere of tragedy, is told in this book and is an aid to understanding Shakespearean drama.

While the full significance of the heliocentric theory had not yet been grasped at this time, many learned and popular writings dealing with it were current in England. By the time Shakespeare had reached London in the 1580's, Giordano Bruno, that fiery enthusiast for the theory, had spent two years in England, had lectured at Oxford on the Doctrine of the Spheres, and had held many conversations with Sir Philip Sidney and other thinkers; so that the new ideas were abroad to spread wonder, excitement, and also fear.

At that time, too, the unique role of man in the universe sustained a shock. Daring thinkers claimed that the accepted notion

concerning man's place in nature was no more correct than the Ptolemaic cosmology had been found to be. The book which rated man as only another animal "without any real and essential prerogative and pre-eminence," was the *Essays* of Montaigne, published in 1580, widely read, and said to have been diligently read by Shakespeare. Reading again these *Essays*, especially the *Apology*, one wonders why in the nineteenth century any one should have been utterly shocked by a theory of man's descent from the apes, when Montaigne 300 years before had so cleverly intimated that in some respects man is inferior to animals. Another book, published in English in 1534, and much read and quoted, was *The Prince*, by Machiavelli, which proclaimed the view that man is naturally evil, that morals have no connection with affairs of state, that rulers must "Know well how to use both the beast and the man and be ever ready to control the vicious nature of their subjects by force."

So, by the latter end of the sixteenth century, the inherited ideas of the cosmos, the state, and man's place in nature, had all been under attack; and the religious situation was no more stable. By 1543, the date of the death of Copernicus and of the publication of his work, King Henry VIII had severed connection with Rome and proclaimed himself supreme head of the church and the clergy in England; and there was danger and difficulty until Protestantism was firmly established. Where now could the people look for stability, with the authority of Rome defied? Even the political situation was disturbed, for the Queen was old and the succession to the throne seemed uncertain. The optimism and idealism of the 1580's gave way to skepticism, satire, even melancholy, among the writers. Professor Spencer quotes the poet John Donne's lament: " 'Tis all in pieces, all coherence gone."

In this atmosphere the great tragedies of Shakespeare were written. He had by this time mastered the drama as a vehicle of

expression. His own increasing awareness of the presence and the power of evil in the world and in human nature is shown in *Troilus and Cressida* and *Measure for Measure*, and this may have been further quickened by an intense personal experience. However this may be, Shakespeare's intellectual faculties had been sharpened to the piercing point where he saw that the field of conflict in human life is not between man and the stars in their courses, not between man and circumstances or events, but in man's own nature. He drew from human experience of doubt, defeat, despair and death, his enduring message to mankind. With glowing spiritual insight he reached the certainty of the *something beyond that makes man man*, which warrants the belief that man is the essential link between the material and the spiritual worlds — the view of man that restores human dignity. Professor Spencer's interpretation of the tragedies inspires readers to turn again to the tragedies themselves and the last plays for the assurance that human beings are disciplined by their failures through self-deception, passion, and despair, and through heart-sorrow pass from purgation to pure insight. Hamlet, Othello, and Lear are shown not to have died in vain.

In his tragedies Shakespeare is concerned with the presence of evil in human nature and the havoc wrought when the evil lurking behind a fair outward is forced upon man's consciousness, and, also the inner havoc which results when the darker and more violent elements of man's nature overwhelm reason and take control. In *Hamlet* we see the wreck made in an optimistic idealist by the discovery of lust and cruelty in those whom he would naturally love and honor; but the intensity of his suffering brings Hamlet to the realization that this is not only *his* problem but that of human kind, and he dies with wider sympathies and a vision that the problem will be solved, though not by himself. In the case of Troilus, a less evolved man than

Hamlet, the discovery of Cressida's treachery plunges him in misery not deep enough to kill, and he lives on after all he cherished is lost. Othello, a man of noble nature, basely deceived by one given over to the love of evil, accepts the *appearance* of evil in one pure and innocent, and only when all is ruin and death awakens to what led to his downfall. But he *does* awaken. Macbeth, trafficking with anything visible or invisible that will further his ends, experiences no transformation: he is an indication of possible growth downwards for man. In *King Lear* the havoc is tremendous: a mighty king, but not a thinker, by his impetuous unwisdom brings upon himself grievous loss and suffering. But, as is now pointed out by profound students, King Lear was not destroyed by his grief; he dies of joy, realizing that *life*, not evil, is the reality. *He also* learns through suffering to *think of others*.

In thus pressing to the depths and heights of human failure and anguish, with ever an intuition of the something beyond still to be reached in the nature of man, Shakespeare experienced an illumination. Henceforth, though his last dramas show the conflict between man as he is and man as he is destined to be, continued, though jealousy, rage, egotistic blindness, and foul evil are directed against the innocent in *Pericles*, *Cymbeline*, and *The Winter's Tale*, though Marina, Imogen, Hermione, and Perdita are subjected to exile, desperate danger, vile suspicion, and persecution, new elements have entered into the picture.

In these last plays by Shakespeare, through the discipline of loss and sorrow the guilty are brought face to face with themselves, and even if after many years — sixteen in the case of Leontes — they accomplish their own redemption and are reborn while yet alive. Innocence, constant love, freedom from resentment of wrongs, spiritual womanliness, the powers of non-violence, are placed before us in characters and poetry of immortal beauty. In

the tragedies the appearance may be fair but the reality — the treachery of Cressida, the hypocrisy of Regan and Goneril, the cruel ambition of Macbeth, pride, jealousy, lust, misanthropy, in others — are all evil. In the last plays, the appearance may be dark, but the reality is fair. Marina is not dead, Imogen is faithful, Hermione and Perdita are restored, and Miranda's view of mankind is the very opposite of a misanthropist's. Shakespeare's later vision is glorified by supreme insight into human possibilities. Hermione and Gonzalo, in wonder and reverence beholding the transformation, invoke the gods to add their blessing upon the triumph thus revealed in the individual life by the conquest of evil.

In Shakespeare's last play, *The Tempest*, he presents a conception of the nature of man that as far transcends the one commonly held in our time as in Shakespeare's own day. H. P. Blavatsky in *The Secret Doctrine* states that "Aeschylus, like Shakespeare, was and ever will remain the intellectual "Sphinx" of the ages." William Q. Judge told us that Shakespeare was under the guidance of one of the Hierarchy of Compassion, those Sages and Seers who have knowledge of the complete cycle of human destiny. Giordano Bruno, an exponent of the Ancient Wisdom, while in England, wrote a book which he dedicated to Sir Philip Sidney and in which he demonstrated that through discipline the affections become purified, the will strengthened, and man overcomes the conflicting powers and fatal impulses in his nature. Shakespeare himself in *A Midsummer Night's Dream* long before this had written

. . . . As imagination bodies forth
The forms of things unknown the poet's pen
Turns them to shapes.

There was vibrating in the thought of the time this message for

the intuitive poet to pass on to future ages — that the man who is lord of himself is lord of all the kingdoms, visible and invisible, which are less evolved than himself, and he can wield even the elements for purposes which are beneficent. This was a foregleam of the far future, but a future in accord with the teachings of the Ancient Wisdom concerning the destiny of man while yet living upon Earth.

Prospero, plotted against by his brother, cast off in a boat with his baby daughter and his books, creates his own little kingdom on an isle, where Caliban, a brute, and Ariel, purified and disciplined, are his servants. Here is no Puck to play tricks and exclaim "What fools these mortals be!", no Nick Bottom translated into an ass, no witches to abet man's evil desire. Here all is under control by a White Magician. Prospero's enemies are put under a spell, their "brains boiled in their skulls" for an interval, and when they are restored they see themselves — the less evolved outwitted, the more evolved regenerated. Thunder and wind and rain thus used would be more merciful and less costly than the means used in warfare today in the conflict with evil. Prospero, having restored harmonious and just relations, and discovering that he can participate with wisdom and power and insight in the work of the program for life on this globe, returns to Milan, to manifest, as its ruler, the beneficence of fully evolved humanity in a normal life among his fellows.

In this way Shakespeare, as so nobly interpreted by Professor Spencer, restores the lost dignity of man; and, be it noted, without benefit of creed or clergy or Church. Any human being can appreciate this wisdom. While Aeschylus two thousand years before brought the Gods down to Earth to transform the Furies, Shakespeare brings forth from within man the godlike power required to establish the dominion of his spiritual nature.

The poet Keats, as Professor Spencer notes, said, "Shakespeare led a life of allegory; his works are the comment on it." The high merit of Professor Spencer's book lies in the masterly way in which he has enlarged upon this statement and shown that Shakespeare, "in his own work more richly than any other writer" has "illustrated that rhythm, that sequence, that vision, which all human beings must recognise and accept as fundamental to the nature of man."

THE DANGERS OF PRANAYAMA — *Martyn Witter*

The spreading of the age-old sciences of the Orient through our Western civilization brings with it dangers as well as blessings. The ancient art of pranayama is attracting much attention with disastrous results in many cases.

Roughly speaking pranayama is the science of breath control. It comes from two Sanskrit words: a compound of *prana*, breath or vital air; and *ayama*, restraint. As a word of warning we could say that it is in some cases the death of the breaths.

It is being recognized in the west today that the rhythm of breathing has an effect upon the health of the body. As the years go by this fact will be experimented with and brought more and more to the attention of the public. It would be far better if it could be kept within experimental circles. However some one is sure to see its sensational possibilities and announce that he is a master of the art and for a price will teach it to those who are qualified and worthy.

The yogin of the Orient is able to do many interesting things through the control of breath. However his training is usually supervised by one who really knows the art to perfection and thus the dangers are reduced to the minimum. But even so the yogin of the Orient is tampering with the very delicate and natural balances of forces and perhaps he too shall some day have to pay the price. He is wasting valuable time in the development of physical and psychical powers that could be spent in those things that bring *real soul growth*. The really worthwhile powers are those of forgiveness, impersonal love, and deep compassion for all that breathes and lives. It is these that bring real wisdom and nourishment to the soul.

Let us give a brief survey of the different breaths in man as discovered by the Oriental investigators. Five are usually given but there are really two more. These breaths are commonly correlated with the chakras, centers of force, and with the principles and senses of man. We are in the fifth root race with five senses developed, so it is natural that five vital airs should be mentioned and not seven.

Usually it is the physiological functions of these breaths which are dealt with. This is unfortunate in that it places too much attention upon the personality and the acquirement of psychical development. H. P. Blavatsky hints in more than one place that the adepts consider the intellectual aspect of these breaths to be far more important than their physiological function.

PRANA the breath that *breathes forth*, from *pra*, forth, and the verb-root *an*, to breathe. In our physical body it controls the breathing. Its spiritual function for man, let us say, would be the breathing forth of the higher mind in meditation. In our planetary chain its analogy would be the breathing forth of the seeds of manifestation in preparation for the re-embodiment of the globes.

APANA the breath that *breathes away*, from *apa*, away, and the verb-root *an*, to breathe. In our physical body it controls the casting out of waste materials. H. P. B. hints that it is the inspirational breath which changes the intelligence that does not understand Speech or Words into an awakening of the mind wherein they are understood. Its spiritual function for man would be the breathing down into physical mind the seeds of meditation. In our planetary chain the analogy would be the descent on the downward arc of the life waves and the casting off of the grosser influences on the upward arc.

SAMANA the breath that breathes together, or "breathes with," from *sam*, together, and the verb-root *an*, to breathe. In our physical

body it controls the digestion, assimilation and hence the chemical processes of physical nourishment. Its spiritual function for man would be the assimilation by the human mind of the seeds of meditation. In our planetary chain the analogy would be the blending of the spiritual essence of the life waves with the material vehicles which are descending more and more into physical manifestation. On the upward arc the analogy would be the blending of the life waves with more and more spiritual vehicles.

VYANA this could be called the diffused breath, from *vi*, apart, *a*, towards, and *an*, to breathe. In the physical body it controls the circulation and the balancing of the forces. Hence it has an equalizing and sustaining function. Its spiritual function for man would be the harmonizing influence of the seeds of meditation upon the human man, whereby the illusion of the duality of opposites is being overcome and the senses are being brought into the middle path. In our planetary chain the analogy would be the equalization of the spiritual forces and the material forces upon Globe D. Of course when analogies are made they never imply identities.

UDANA the breath that breathes upward, from *ud*, up, and *an*, to breathe. In the physical body it directs the vital currents upward. Thus prana, apana, samana, and vyana would each have its udana aspect. Its spiritual function for man would be the raising of all that is good in man upwards, and upwards to the God within. The seeds of meditation have been sown in the fertile fields of human aspirations and have flowered into the fruits of evolution. The yogins would probably speak of this fruitage as being the rising of the electric, fiery, or Fohatic power of Kundalini. In other words, the flowering of the best in man awakens the fiery power of the Buddhi-principle. Those who practice the science of pranayama sometimes try to arouse this

power artificially. They try to *steal* the nectar of the Gods before they have earned it by the *natural* processes of evolution. At best, they can awaken only the lower physical aspect of this fiery power. It is the thirst for personal power that usually promotes such dangerous undertakings. Theosophists know better, but there are people who do not realize what they are doing and innocently believe that they are awakening spiritual forces that will enable them to hear, feel, and see with the eye of the Gods. Sometimes the Oriental yogin can escape the consequences of these practices *for a time*, but the day of reckoning will come. The novice in the West is usually stricken soon with insanity, death, or prolonged sufferings.

The rhythm of the breaths is a reflexion of the rhythm of forces traveling in the solar universe. As above, so below. Perfect health is the natural rhythm of the breaths in man. By inharmonious thoughts and actions man brings about a disturbance of the rhythm of the breaths with resulting disease. It would be putting the cart before the horse if one would try to cure the disease by tampering with the breaths. It can be temporarily done, but the risks outweigh by far the benefits. Right thoughts, bodily exercise, good food, will hasten the cure of disease in a natural manner, although the cure of a disease may take several lives. Tampering with the breaths will either make it worse or dam it back until another incarnation.

Sometimes advanced people upon the path undergo much suffering from disease caused by past karma in other lives. Instead of damming it back they let it take its natural course so as to be free from it in lives to come. Of course surgery and medicine do much in releasing the sufferer from pain and preventing an untimely death.

The true yogin and adept lets the breaths of his body alone and

works only with their spiritual essence. He deals with the spiritual breaths of compassion, impersonal love, and holy aspiration. The yogin of yogins loses sight of personal ambition, desires, selfishness, and lives in the spirit of the stars.

ANTIPODAL POWERS OF MANAS (1)

FAITH-BELIEF

Study of the twin powers of the human mind is far more subtle and difficult than study of what is familiarly known as the "pairs of opposites." Even the weakest of thinkers will have little trouble discerning love from hate, or pleasure from pain. But where is the man who has mastered the relation of those two-fold powers of soul, which, though to all outward appearances the same, are yet separated by a line which makes them either infernal or divine? Where is the man who knows the shading of difference between aspiration and ambition, imagination and fancy, faith and belief? No one but recognizes the life-giving force of enthusiasm, but where draw the line between enthusiasm and fanaticism? Do we possess such insight into our own minds that, faced with the necessity of decision, we readily discern between wisdom and head-learning? Caught in the web of human relationships, are we able to distinguish love from infatuation before a lifetime wrong is done? The antithetical nature of the "opposites" is obvious. It is the seeming identity of mind powers, and man's inability to discern between them, that is the cause of all the world's delusions. Says Wm. Q. Judge:

Manas, or the Thinker is the reincarnating being, the immortal who carries the results and values of all the different lives lived on earth or elsewhere. Its nature becomes dual as soon as it is attached to a body.

This, says H. P. Blavatsky, is the key to the whole mystery of man's inner nature. Because mind is dual during the period of incarnation, every one of its powers presents a two-fold aspect, one bearing kinship for the god above, the other showing traits of

the inconstant personality. But as the English language has been evolved by people unskilled in philosophic thought, its terms, even where they exist, are vague and ambiguous. Dictionaries do not link such words with either aspect of the dual man, the result being that when one says "my friend has great imagination" or "he is a man of strong will" — both, creative powers of the Higher Mind — in all probability the faculties at work are mere fancy or desire, faint expressions of the lower self.

Faith, like all powers of the human soul, is two-fold in its nature. The higher, having its roots in the Immortal Self, is pure, holy and divine, and consequently has naught to do with the reasoning of the brain mind. Fed from above by the fire of knowledge, it makes no mistakes, for it looks directly to the heart of things. It is true wisdom or enlightenment, no nobler quality existing in the whole makeup of the inner man. But alas, what passes for that term today! Man's divinest faculty, with potent creative power, lowered to the level of blind belief — a mere nothingness based on ignorance and fear. Better by far the word faith had never been heard, for then at least no one would glory in the possession of ignorance, nor could priests and preachers convince their followers that there is virtue in blindness. Identical though they seem to the average man, faith and belief are an infinity apart, separated by an abyss to be spanned only by him who *wills* to know.

Man's feeling of Deity, that there is something behind all that is, behind his feelings of justice and immortality, is a perception common to the whole human race. It springs from knowledge impacted in the imperishable center of his nature — and is true faith. But how is the man strong in such convictions ever to learn that though the feelings are true, his ideas regarding these truths are false, that the church dogmas of god, miracle and vicarious atonement are mere belief? How is he to understand that the

impulse to a higher life, that feelings of charity, love and compassion, felt strongly in his soul, come from inner faith and not from outer belief? To separate the two is as difficult for the average man as to realize that within his human frame are two minds. For this reason true teachers ever warn against proselyting, against making any attempt to unsettle those fast fixed in their beliefs, lest the serenity of their faith be disturbed or destroyed, lest they be caused to relax in their duty to that which they see to be right.

The dogmas and beliefs which encumber men's souls, ruinous though they be to the inner faith, are not to be stripped off from the outside by some ambitious converter. They must be shed from within by the awakening Higher Mind. As the new-born shoot, making room for next year's growth, pushes old leaves from off the twig, so the evolving spirit of man, in the course of cyclic rise, breaks through the limiting walls of creed. What is given us in Theosophy, says Robert Crosbie, "is for the purpose of arousing the attention of that Center within us which can see, which can know, which can do, when IT resumes its own nature and status."

"With faith all things are possible," say the ancient sages. For faith is that great engine of the occult cosmos which sets the Will in motion. Through it man links himself with his ideal, encompasses within his sphere the whole structure of that upon which his heart is set. Working upon the extremely tenuous matter of the invisible universe, faith surrounds any project with a living substance, making of it a unified whole capable of co-ordinated action among all its parts. By virtue of what else may anything be said to live, except it possess a circulatory system linking each part with every other part, except a common impulse permeate the whole? It is through this subtle medium that the will and conviction of the crusader carries through and touches the hearts of his supporters. Through it men in business reach their

employees and inspire their work with the fire of enthusiasm. On the inner framework of faith and confidence one can help his fellows build a higher life, for devotion to the ideal in another brings out all that the ideal holds.

Man's ignorance of the workings of such inner dynamics is no proof against the fact of their existence. For where is the man who understands perfectly the machinery even of the digestive system in its work of transforming food into flesh, or of the eye in seeing, or the brain and vocal chords in changing idea into sound? These do their work whether we be ignorant or wise. So works the machinery of the occult cosmos. By means of faith all men accomplish unknowingly great things. But once one's faith is lost, whether in a business, cause, or private undertaking, that thing is dead, the only remaining witness to its ever having existed being the physical shell, empty and soulless, left to disintegrate on the material plane. Faith is the cohesive power of nature by virtue of which even the seven principles of man remain intact. Lost or destroyed, death ensues.

If this be true of worldly undertakings, how much more true must it be of a high and noble Cause, having for its aim the welfare of the human race! The ideal of the Theosophical Movement is a universal Brotherhood of Humanity, without distinction of race, creed, sex, caste, or color. That ideal is kept in being by the Faith, the Will, of its great Founders. The aim and objective of Theosophists is work upon that ideal, the erection invisibly of a strong bond of comradeship, the nucleus from which all else may flow. But can this be done without faith in the ideal and in humanity? Can it be done without faith in each other, in those of our fellow companions who, like ourselves, are striving toward the same end? Not by doubt or intellectual argument can this purpose be achieved. Not by belief, which at best is skin deep, nor any other of the powers of the lower mind. It is by Faith alone —

that creative faculty of the Higher Mind by which we envision the ideal and see reflected in the present the promise of what must be. To "keep the faith" means to hold the vision, to steadfastly act on the basis of it alone.

The Theosophical Forum

THE SECRET DOCTRINE — *Kenneth Morris*

If the spiritual climate of Earth is to change from the old storminess of War to sunlit serenities of Peace, a change must come in fundamental ideas; we must see into the heart, and not be fobbed off with the husks, of Religion.

The generations of our fathers nourished their inner life upon the Bible. From the time of the Protestant Reformation until the beginnings of our own day, that was the source to which they went for all certainty, for illumination, for the assurance of truth. It was a word from beyond the world, a revelation: the Dictate of Deity: to be searched, but not critically; never to be questioned. It was the reservoir of comfort, the one place from which sure comfort might be drawn.

But time makes away with all his children; and time in these last decades has laid rough hands on the Bible. Men of research arose, who discovered fact incompatible with the supposed revelation — more and more of fact — and confronted believing Christendom therewith; so that men were given choice which they should discard, which cleave to: palpable fact to which their own seven senses could testify, or the Book their predecessors had adored. It was fact being stubbornly incontrovertible. Individual men could hold out in belief, but generations could not. A leak was in the dike, and the fields doomed to submersion. One flaw being discovered, the imperishable rock of Holy Scripture was crumbling, and Christendom, "the People of a Book," in Mohammed's phrase, was threatened with shelterless booklessness, and adrift in a cold unspiritual universe. So the sterile ugly materialism of the last century rose up, blighting, because allowing no place for, the beautiful side of life.

And then came a Prophet with a new revelation. Then came H. P. Blavatsky with the New Book, *The Secret Doctrine*, not to destroy but to fulfil, the work and mission of the Bible. Behold, there was truth in the Old Book after all. It was not to be discarded. It was not the mere ignorant guesses and forgeries of an ignorant age. It was, at the root, the wisdom of men whose wisdom was real, and much greater than scientific materialism, couched by them in such limitations of form and ideas as could help the mentality of a limited age. But here, now — now that knowledge has flooded in, and conceptions must grow and have new food or starve — here now was the Book of Explanations, the larger more imperial revelation. Here was assertion of spirituality that could meet scientific materialism in the field and overthrow it; that could take account of every fact telescope and microscope and crucible might reveal, and show it in its own place in the robe and external manifestation of the spirit. Here was the vindication of all true religion, infallible comfort for the secretest noble cravings in the heart of man. The human spirit, inexhaustible in its demand for generosity and mystery and beauty, need fear no more the cold barren abominations of Gradgrindism; the noblest teachings that had been heard on earth were, all simply, the truest. Here was the great Book of the future ages, *The Secret Doctrine*, to prove it.

It was a challenge to all the provinces of the Universe; it was a bugle blown against the Jerichoes of desolating selfishness; a tiger-roar loosed against materialism; it was the opening up of vistas inimitably beautiful for the spirit; a new planet that had swum into the ken of humanity. With the publishing of that Book, a new Age of Faith, more splendid than any of the old ones, was ushered in.

A new Age of Faith; for here, in *The Secret Doctrine*, with what a new bearing, very royal and warrior-like, Faith appears! It is no

longer a thing to be praised as unshakable; it is no longer a thing on its defense. It wields swords of lightnings now, and crouches behind no timorous shield and buckler. Its war-cry is that it will have a royal world of this world; the Kingdom and the glory established upon earth; the beautiful dignity of Eternity here upon this bank and shoal of time. Not after death, nor afar beyond the starry constellations, shall that splendor be manifest; but here and now Man is the Soul, his divinity discoverable now; his immortality an inheritance to be entered upon momentarily and daily. Instead of the lure of some diviner drink to fill the cup when we are crumbled into dust, we are offered this universe brimming now with strangest beauty, and every day a divine adventure. Godhead is not remote or tyrannical, but a star in the inmost heart of every man, a potentiality developable in every life. Will you have Golconda? Will you have the wealth of the fabulous Indies: the gold of Ophir, the peacocks and the ivory? They are within and able to be discovered there, says *The Secret Doctrine*; and challenges the human spirit itself to prove that it is true; leading you to the great heights and the treasuries of existence from the next moment and the next incident in your daily duty; indicating riches within yourself more incalculable than the numbers of the stars. Will you walk in the universal Eden, yourself a God? This may be, says *The Secret Doctrine*; and with fire from heaven kindles you into vision that, since you are human, the ordainment of it is within your power. A golden inspiration is here; means illimitable for quickening the spirit. For this Book shows a man as he knows himself now, to be but a tiny fragment and inconsiderable planet in the vast system of his greater self: this of you that was born and shall die but the one corner or the shadow of that of you, the Reality, which was before the stars were set flaming, and shall be after the freezing of the sun.

Life and every day of it is a divine adventure. I put myself into the mind of the miserable on earth: of the workless man who, loaded with anxiety, has to grapple naked with that most dreadful of adversaries, time: I ask myself what it is that *The Secret Doctrine* has for him. Well, it has the armor and the weapons that can bring him through. He is no longer to suppose that some cold paternal deity on high is tormenting him for no purpose or for purposes he cannot understand. He is no longer to see himself under the cat-claws of a senseless unconscious fate or chance. He is reminded instead of his own Godhead; which all life's business is, to bring out from its obscurity. All life's business; and therefore that of the very slings and arrows of outrageous fortune that oppress him. The hideous anxiety that he faces, inexorable time itself, are only there waiting to be faced without fear, with a certain gaiety of trust proper to Godhead. He has but to bring against them that weapon out of his own sweet armory; and he must bring it. They stand there, time and anxiety, in reality beseeching him: Find the way into the place where your Godhead is, into the beautiful armories of the Soul; confront us with what we desire to see, your Divinity; there is no quieting us else! So hell itself evokes heaven; and *The Secret Doctrine* reveals that heaven is there, right within a man's own being; the last highest possibilities are there. You have to pray to nothing afar and whose attention is probably wandering. Against ill fortune, temporary and limited, however appalling it may seem, you have it in your power to put up an endurance limitless and eternal. A man may always be greater than any possible ill that comes against him. In the fight and jungle of this disaster-haunted world, all that the wild beasts are roaring at him is this: Trust, you fool! and you are our master.

And he may; because being in essence Godhead, it is his nature to be evoked by misfortune; to bring out unsusceptible strength at

last to oppose what oppresses him. What we suffer is the result of what we have done: with age-long foolish action we have hidden our divinity away. With sharp pangs now we must be driven to rediscover it. But in all this universe there is none that punishes and no idea of punishment; our own Godhead ordains, for our own dignity's sake, that we shall undo our own undoing with these pains. So hell comes auxiliary to heaven; we are not called on to endure more than armed with confidence we can endure. Karman, which is the innate property of existence by which existence adjusts itself and maintains its harmony, is in its nature absolute mercy. It takes the shortest paths and the effectual means to its ends; and marshals life and time and circumstance before the Soul of man just to tempt and lure the hidden beauty of the Soul into manifestation. Here then is what breeds infinite courage; and this is the new self of you that *The Secret Doctrine* introduces to you: a being of such dignity that the only comfort acceptable to him is courage. And this is the new mission of which it convicts him: to make the world a better heaven than any of the New Jerusalems of the creeds; and this is the time it gives him in which to accomplish the work: Now — the limitless now that this instant is offering itself to him and will be through all the ages to come.

The Theosophical Forum

THE RACES OF MAN — *Arthur A. Beale* (1)

"The child is father of the man."

"As if our whole vocation were endless initiation."

As a traveler to some unknown height stays to review the long path upwards he has climbed, so let us contemplate the vast stretches of the human pilgrimage to the gods from our infant humanity on this globe in its incipiency to our present day.

We must remember that such a picture, in our opinion the most important and critical in the journey, is only a portion of the whole, for we are only half way through this globe, one of seven. These seven globes we have already traversed three and one half times, and have yet to travel three and one half times more before we are released from our obligations here, and seek rest, peace and liberation in our eternal home.

Now it is a general principle of our philosophy that each time we circle these globes we leave something to the world and gain something for ourselves; and that at each repetition of the round-journey we have to traverse in recapitulation the details of all we have done in the past, and this as a necessary preparation for the present round-journey. Our particular work in this round was to complete a vehicle or soul ready to receive the blessing and endowment of intellect, self-consciousness and spiritual enlightenment, for without these we cannot graduate as gods — our final destiny. We have to learn to become similar to our Father Monad, who from his own high realm sits and surveys, and in a sense conducts all the various changes in this building of the celestial temple for a god.

The objective of this journey of seven rounds is itself sevenfold:

1. A new set of human entities must be evolved, moving from the state of the beast monad to that of perfect humanhood.
2. A vehicle must be evolved by which human entities already human, may complete their destiny which was left imperfect in our ancestral planet, the moon, so that they may graduate as gods.
3. A complete new outfit of psycho-mental apparatuses must be evolved in preparation for the growing need of infant egos to come.
4. Opportunity must be provided so that the reincarnating egos that now exist may proceed towards spiritual monadship.
5. These spiritual monads must themselves benefit in their march towards freedom, and at the same time
6. A pathway must be made by which the material units, life-atoms, in all their composite relationships may progress, step by step, by their association with all the grades of evolving consciousness, out of darkness into light.
7. Through all this, the ends of cosmic nature will be fulfilled.

Why, it may be asked, has it taken us already three and one half rounds to arrive even at the relatively unevolved point we are now at? What have we been doing during all this long past? The answer to the question is told in the past history of evolution as taught by the Theosophical Teachers. First there had to be the gradual preparation of the earth-chain, step by step from pure spiritual consciousness, through a gradual advance in organization, in concretion of matter, and in conscious elaboration of detail until in this round vehicles were evolved ready to receive self-conscious, intelligent entities. This important event, the incarnation of mind-entities, was reserved for this

round, and the human race today holds the honorable position midway between the already evolved hierarchy of self-conscious beings above, and the unselfconscious entities below. As a race we might be said to be the feet of self-consciousness and the head of unself-consciousness.

The story of the evolution of these vehicles is the one we wish to enlarge on. It is all a part of man's journey on this globe in this present round, and would seem to be the most important cyclic period in the history of the world.

To understand the remarkable sequences of events in this journey, does it not seem a fundamental principle that in every new venture, in every essay from the unmanifest to the manifest, we have to repeat the selfsame process of our evolution from the subjective to fully evolved objectiveness? Thus in our individual incarnation, we epitomize in a short space of a few months all the complicated changes from the simple "laya center" to the full blown human child. In this small drama there is evidence of all those racial types that we have already passed through, that is, up to the middle of the Fifth Root Race. And we must not forget that these changes are vehicular, the controlling architect, the Monad, remaining in his own realm at all times, directing the changes. The same principle pertains in the globe- and round-evolution, with corresponding changes in length of time-periods in the process, but always with each step a corresponding move upwards, towards the hierarchical perfection.

Our ancestral selves of the First Race are represented as enormous cells, balls of mist, moving about by rolling over and over; 173 feet high like mighty snowballs, or as they have facetiously been described, "pudding bags," naturally with the pudding inside — this inside pudding having its vital septenary attributes, however little manifest at first.

These semi-astral cells had the elementary electro-magnetic attributes of the present-day human cell. They were especially active at the time of their multiplication by cell division or fission, at which time each division assumed the magnitude and general character of the parent, the latter continuing its own life. In their internal activities they showed mineral, vegetable and animal or beast properties, especially in their attractions and repulsions, in their granular dispositions as in a cell, in their metabolism of environmental substance. Inferentially it is conceivable that they were isometric to the ocean mineral composition on the astral plane, just as our blood and other bodily fluids are today. And is it not fair to assume that their connexion with their divine Monads was maintained by something corresponding with the nucleus and nucleoli of our cells which in those far-gone days would represent the mind-part of these snow-mist entities? It is a tempting suggestion that this tiny nucleus evolves into that wonderful organ of union with the inner god which today we call the pineal gland.

This astral race must have existed in our earliest geologic periods, in that part of the earth we call the North Pole. We are told that they were moon-colored, speechless, and whilst mindless, were highly spiritual. They were called the "Sacred Race" and we are told they never "died," but by slow degrees their forms became more concrete and they took on silvery shapes of a more ovoid character, thus slipping imperceptibly into what we call the Second Race.

Some of the activities of this Second Race were very startling. Their method of procreation was similar to that of some of our water animalcula or protozoa of today; that is, they gave off little buds, like the beads of sweat that issue from our skin today, just breaking off small elements of their substance, without any sexual process, and these then grew up into beings similar to

their parents. They had no physical organs beyond the protoplasmic, and lived by osmosis (absorption or permeation of outside elements). As said, they were more solid than their ancestral First Race and consequently more shrunken in size but still enormous. We are told they were about 120 feet in height.

They persisted for millions of years in that part of the world now occupied by Greenland, Sweden, and Siberia, a region called by some the Hyperborean continent — the name being derived from the Greek idea "beyond the north wind." From there there was a gradual descent south. Their speech, if it could be called such, was a sort of chant-like series of sounds with vowel dominants.

These ancestral entities gradually changed their shapes, substance, characters and activities, and evolved into the most epochal, the most historic and significant and cyclicly critical of all our ancestral races: the Third Race. In this race everything was speeded up. Commencing as practically shapeless, mindless, sexless entities, they passed through many mutations and reached their climax as complex, fully formed entities, almost identical in general physical characteristics with our own.

They assumed a golden color. From a semi-liquid state they evolved into first a gelatinous consistency and ultimately became semi-cartilaginous, dwarfing in size to 75 feet and 60 feet. Their method of propagation evolved from budding to that of casting forth spores or seeds, and ultimately they became egg-bearing.

Then the sex-instinct evolved from within, producing androgynous characters, viz., where both sex-characters exist, but not manifest until later when hermaphroditic forms were produced, having both male and female qualities in one form. (There are occasionally hermaphroditic children born now — a throw-back to that long past historical event.) Towards the end of the Race their children showed definite male and female forms,

these becoming perfected in the Fourth Race.

They lived, we are told, in the middle of the Mesozoic period, according to geologic nomenclature. Now the Mesozoic period lasted 36,800,000 years. By further calculation add 18,400,000 to the 7,360,000, the estimated period of the Tertiary, and to this add 1,600,000, the estimated Quaternary period. This gives us 27,360,000 years. Dr. de Purucker gives the figure as about 25,300,000 years ago; so that our figure seems near enough. This environs them with the coal ferns or forests, the time when there were already fish in the oceans, enormous reptiles on the land, myriads of crustaceans, lobsters, crabs, prawns, and birds in the early stages; but there were no mammals till the middle period of their evolution. Mammals appeared before the coming of mind, probably in the spore-bearing stage of the Race, the mammals being thrown off unconsciously from the main stock. They lived in a vast continent farther south than the Hyperborean, which included what is now enormous areas of the Pacific Ocean, of which the Polynesian Islands, Australia, Malay Archipelago, Ceylon — which was afterwards part of Atlantis — and Madagascar are relics.

It was 18,000,000 years ago that this Third Race acquired, by their contact with divine beings called the Manasaputras, the endowment of mind, self-consciousness and intellect.

Contemporaneously, the separation of the sexes occurred, naturally by a slow process. First there were separate examples which must have been taken for sports or monstrosities; then more and more instances occurred, until the two sexes became the rule, and this state was fairly well established by the coming of the Fourth Race.

There were concurrent events which marked the evolution of the Third Race other than those mentioned, previous to the coming of

mind, intellect and self-consciousness. During the time that these entities were shaping out, one of their outstanding features was the evolution and organizing of the Cyclopean Eye, a protrusion from the primitive brain, resulting in an external organ of sight, which also acted as a medium of communication with their divine preceptors that watched over them. Being spiritual entities, their means of communication with these exalted Guardians was a sort of instinctive intuition. Also they developed first the vowel chants, these evolving gradually into more definite nature sounds, and finally a sort of primitive language.

But after the great mind-illumination, many things were changed; first and foremost there was a large development of brain, and an expansion of the soft cranium to accommodate it. There was the enormous emergence of cerebral hemispheres, first as vesicles, then as semi-material convolutions which by pressure upwards and outwards swamped by slow degrees the one eye. At the same time there appeared the two optics, first as vesicles, then, by co-operation of certain changes in the skin of the face, the outward production of two eyes, so that for a long time there must have been three eyes: a time spoken of in Greek legends when there were giant Cyclopes. But by slow degrees, with the development of the brain, the "Third Eye" disappeared from the exterior of the cranium. Thus man became endowed with two eyes (intellectual organs), two sexes, and two minds.

After these remarkable changes man settled into his paces and acquired a stable form which with minor changes marked a type that persisted through the next race and is today extant, although there was a gradual dwarfing of size both in height and width. But with this stabilization of form came a natural advance in functional acumen.

The Fourth Race, by common consent now denoted by the name

Atlantean, is a race not known to modern science and only casually hinted at in sundry references by ancient historians, but by the grace of the Trustees of the Archaic Lore, described for us as human entities of complete anatomy (though hermaphrodites persisted in the early part) with keen intellects far surpassing the ordinary intelligence today.

These men and women were still enormous beings, twenty to thirty feet tall, with developed bones and hard horny skins, red to brown in color. (2) They occupied a period indicated by modern science as the Tertiary and representing an age somewhere between 8,900,000 and 7,360,000 years.

They passed through many stages of culture, branching out from a primitive language to many races having many languages — the origin of the story of the Tower of Babel. Occupying in human evolution the kamic period, their minds were a low grade of kamic intelligence, materialistic, selfish, cruel, revengeful and at their height they developed a great deal of sorcery and black magic.

But of course there was a corresponding modicum of divine teachers and benevolent adepts. "Many a green isle needs must be in the deep wide sea of misery," as Shelley wrote. It was a time when humanity was evolving its lower mind, its psychic-mental apparatus, and wonderful civilizations developed, enormous edifices rose, profound knowledge and science flowered, producing weird inventions. There are even hints of such things as airplanes, propelled by means suggestive of the Keely motor. (3)

This Fourth Race occupied a large continent, and part of the earth's surface now covered by the Atlantic Ocean; also part of Europe, Africa and the East as far as India, including Ceylon (the old island of Lanka), and part of America. The last Race, our own

Fifth, was the child of Atlantis. It had its early civilizations in the region of the Desert of Gobi. Its units gradually dwindled in size to 7 and 5 feet. They were softer in structure, and up to the present time have existed over a period of 1,000,000 years. To know what they really look like study the looking glass!

The Theosophical Forum

THE RELIGION OF CHINA (1) — *Christmas Humphreys*

The Chinese have the oldest and the finest civilisation extant, not excepting that of India. Compared with them we in the West are in many ways, as they were wont to describe us, ignorant barbarians. They have produced the greatest art in history, not excepting that of Greece. To-day, reluctantly, and only in defence of their very right to exist, they have produced an army which is unbeaten and may prove invincible. After the war, they will form one of the four Great Powers responsible for the re-organisation of mankind. What, then, is the fount of life from which have sprung this civilisation, this exquisite art and this unconquerable spirit on the field of war?

The answer is a religion-philosophy unique in its complexity, its range and in what, for want of a better term, I call its "infusion" in the national life. It is composed of three of the seven great religions of mankind, Confucianism, Taoism and Buddhism, and three of the other four have played their part in its creation. Hinduism has influenced the Chinese through Mahayana Buddhism; Christianity, of the Nestorian variety, was widespread in the vital period of the T'ang Dynasty, and there are millions of Chinese converts to Islam. It is true that the outward forms of all these faiths have suffered at the hands of time, but the spirit of Confucius is at the heart of the Chinese army's morale; if Taoism has to some extent degenerated into necromancy and traffic with the spirit world it has nevertheless provided the soil in which the seed of Buddhism has flowered into Zen, that mysticism of the will which is the bravest path to Reality yet used by man; and if Chinese Buddhism has too far become a series of "services" appropriate at birth, marriage and death, yet there is in progress a widespread revival of true Buddhism fostered by the mighty

figure of the Ven. Tai Hsiu.

These three ingredients of the religion of China are not merely mixed but complementary. All men need a philosophy, secondly, a way of life, and that indefinable third factor, wings, that lifting power of the mystic's vision, the joy of expansion which comes, paradoxically enough, in self-surrender, and which manifests alike in the quiet humility by which alone we possess everything, and in the spontaneity and laughter of the child. And these requirements are to be found in what the Chinese themselves have called the Tripod, a religion standing on three legs. Ancient tablets show the figures of the three Founders side by side; modern societies study the three philosophies dispassionately, and have even attempted to formulate, in the doctrine of the "triple ego," a set of principles acceptable to all. Nor do the Chinese choose or let their parents choose to which of the three religions they shall belong exclusively. One Chinese student, when I asked him to which religion he belonged, replied: "All three," and added: "And in my private shrine I have a crucifix as well." Why not? All men are different, and "the ways to the One are as many as the lives of men." Though the great religions have all built highways to Reality, every man must some day make a path for himself and tread it to the end.

Before we can understand the compound religion of China we must understand the Chinese character. The Chinese, like ourselves, are intensely practical, and therefore suspicious of all abstractions and abstract ways of thought. They are, like ourselves, extremely individual following the Buddha's dying exhortation — "Work out your own salvation with diligence." They are experts in relationship, content with their own station in life whatever it may be, and insistent on observing the right relationship with all above and below them. As such they are a religious-minded people, for religion is the adjustment of the

particular to the universal, the living of the right relationship between man, nature and THAT. If, on the other hand, by religion be meant the worship in collective form of a personal God, then the Chinese are no more religious than the English, of whom, so the Bishop of Durham says, "only 5 per cent, have any connection with organized religion."

The Chinese are artists all, lovers of the beautiful in all its forms, perhaps the only nation since the Greeks who have made of beauty a religion in itself. They are a friendly, simple people, ever in love with life. In the terms of modern psychology they have learnt in the passing of unnumbered centuries to "sit loose to life," at terms with the unconscious. Hence, moving on the rhythm of life, as a people they know not death. Always they follow a Golden Mean, despising all extremes, with what may be described as a short swing of the pendulum between the "opposites." As Confucians, their creed is "Do as you would be done by"; as Taoists, "Be humble and you remain entire"; as Buddhists they are followers of the Middle Way which leads to the heart's enlightenment.

In England we are apt to date our history from the time of Christ. In China there was a well-developed monotheism and a high degree of art and culture by at least 2000 b. c. As the representative on earth of Tai, the Supreme Ruler, there was a Priest-King, who was the "Son of Heaven." Below him came the feudal lords, and then the countless heads of families, who looked to their sons to afford them the same reverence and respect which they afforded to their fathers, their lords, their king and so the Heaven of which he was but regent upon earth. Thus there was a continuum of creation, revered as such, which, far from "ancestor worship" in the popular sense of the term, is another example of the Chinese love of right relationship.

By the 6th century b. c. the country was torn with civil war, and men were already dreaming of the "Golden Age" of the first Emperors when at least a man might sleep in his home without fear for the morrow. At such a crisis there appeared in China two of the greatest men the world has produced, Confucius and Lao-Tzu. At the same time there appeared in India Gotama the Buddha, whose teaching was to reach China in the first century a. d. and blend with the existing two religions as never before or since have three religions blended into one. Further West, Plato was teaching in Greece, and part of his philosophy concerned the Good, the True and the Beautiful. In China, Confucius taught the Good Life; Taoism and Buddhism told men of the True, but China needed no one to teach the religion of the Beautiful. The Chinese sense of values has always been in favor of the aesthetic rather than the utilitarian, stressing the value of creativeness over the thing created. In Confucianism, for example, the emphasis is on being and doing good; in Taoism on seeking and realizing Tao; in Buddhism on the actual treading of the Middle Way. Once more it is the right adjustment or the sense of right relationship which has religious value. The thing created or the act done is of comparative unimportance. The Chinese approach to life, in other words, is largely subjective; hence the saying, "Fulfilment is deception." The Western approach is objective; hence the proverb, "the end justifies the means." It follows that anything is important to the Chinese mind which is itself creative, its importance lying in its creativeness. Thus ceremonial is valued not for what it produces but what it is. Courtesy is itself an expression of the creativeness of the individual mind. Right conduct to one's neighbor is an end in itself, and even drinking tea may become a ceremony expressing the same spirit of creation as in other lands may manifest in using a machine. In no way is this better shown than in the Chinese attitude to war. War is a struggle for results which, however obtained, justify the effort

expended on obtaining them. But results, say the Chinese, are never worth fighting for. Why fight for land and booty? When won, they have no abiding value to the individual, and the very men you fight may be your allies in some political reshuffle in a few years" time!

Such were the main ingredients of the Chinese character even in the 6th century b. c. when, in a country torn with civil war, there appeared Confucius (Kung Fu-Tze), the greatest name in China. Yet the Master Kung was not a pioneer of thought, not, in the ordinary sense a religious man, and certainly not a World Teacher as were the Buddha and the Christ. He was, on the other hand, the first Chinese of whom we have knowledge to found a school of thought, and he certainly codified a great deal of the literature and traditions of the past into a noble system of social reform through the example of right living. Fearless in the pursuit of truth, utterly sincere with himself and all men, loyal to all, his teaching roused the best in the Chinese character. First, he said, reform yourself. "The Master said: The man of honour makes demands on himself; the man without a sense of honour makes demands on others." For him the reform of the country — the "new order" as we should say, to follow the years of bitter fighting — depended on the reform by himself of the individual. To this end, he insisted, first gain knowledge as handed down by the great minds of the past, but regulate the use of this knowledge by the inner rule of *li*, good form, and common sense. Then, and the order must be noted, acquire some measure of self-control and self-discipline. Only then should the self-trained "gentleman" apply his mind and energies to the "social service" of his fellow men. In this way, all teaching and ultimately all government was a matter of "gentlemen," in the sense of trained and disciplined individuals, setting an example to those they taught or governed, and thus in the end to all men.

Hence the great stress on ethics, the science of social relationships, and indeed the teaching of Confucius has been described as a code of ethics raised to the status of a religion. Loyalty to oneself and goodwill to one's neighbours were the two basic principles of the teaching, sometimes summed up in the word "reciprocity," though I prefer the far more graceful, "Do as you would be done by."

Such a teaching had an instant appeal to the Chinese mind. Here were no metaphysics, no abstract, far ideals. Develop your own character, and practice right relations with your family, your neighbours and the state. Here was a tangible philosophy which summarised their own convictions. But is it a religion? If by religion be meant the worship of a God, the answer is "No." But Confucius, like his greater contemporary, the Buddha, was silent on ultimates. He built a framework of right living, and it is not his fault that the Chinese later made this framework into a cage. The Master emphasised the Golden Mean in all behaviour, the practice of a right adjustment, hence harmonious relationship to the father of one's family, one's overlord, one's Emperor and so to Heaven. This is a way in the world and not a way of escape from the world. As the Master said: "The way is not far removed from men. If a man pursues a way which removes him from men, he cannot be in the Way."

The Way is a way of commonsense, of compromise when necessary. Hence the delicious doctrine of "saving face" by which all parties may withdraw from an embarrassing situation without loss of dignity. All things are regarded as of equal value in the sense that to the superior man what matters is the handling of and attitude to facts rather than the facts themselves. All ritual and courtesy, and the Master's life was full of both, were methods of handling facts and circumstances, so that their significance and not their nature might be emphasised. Facts and circumstances

are of little value; what matters is their significance. Hence the delighted observation of a Chinese gentleman to Mrs. Adams Beck, the well-known author of *The Story of Oriental Philosophy*. "In the West you think it important to reach a place in sixty minutes rather than in sixty hours. In China we consider that what matters is what you do when you get there."

Mencius, the most famous follower of Confucius, had less, perhaps, of his nobility and his profound humility, but he had more "human-heartedness," more love of the common people, and he certainly developed the doctrine of right for right's sake, without thought of a reward, here or hereafter. But even a developed and expanded Confucianism could only satisfy half the Chinese mind, and it is one of the remarkable coincidences, if there be such a thing, of the history of religion that there should have appeared in China, contemporary with Confucius, another Sage whose teaching was an exact antithesis.

Lao-Tze was also a transmitter, but whereas Confucius had concentrated on the Tao of man, his older contemporary was primarily concerned with the Tao of Heaven. As we shall see, it was left for Buddhism to provide the necessary link between the two.

Compared with the teaching of the Master Kung, the song of Lao-Tze was as a bird singing in the misty first half-light of dawn compared with the tramp of weary feet upon a long high road. Taoism, the philosophy-religion compiled from the teaching of Lao-Tze, rests on three fundamental principles or concepts, Tao, Teh and Wu-wei, all of which are untranslatable. Of Tao, the Taoist conception of the Absolute, nothing can be truly said. For "the Tao that can be expressed is not the eternal Tao." Yet only in India did the intellect climb higher in its flight to the Absolute, and only in Zen Buddhism has the mind of man discovered and

blazed a Way which goes "beyond the intellect" to the final Namelessness.

"As a fish wants water, man wants Tao." Yet Tao is not God, not a spiritual essence, not anything which words or even thought can in any way describe. Tao is not this or that, or this *and* that; it IS. Seek and you will not find it, for it is the boots on the feet of the seeker, the eyes with which he seeks. As is written in the classic of Taoism, the *Tao-Teh King*, "There is a thing inherent and natural which existed before heaven and earth. Motionless and fathomless it stands alone, and never changes. It pervades everywhere and never becomes exhausted. It may be regarded as the Mother of the Universe. I do not know its name. If I am forced to give it a name I call it Tao. . . . When one looks at it one cannot see it; when one listens to it one cannot hear it. But when one uses it, it is inexhaustible."

The second Taoist term which must be understood is Teh, as untranslatable as Tao. It is not "virtue," but a way of life lived in the rhythm of Tao, Tao in action, as it were. It calls for a genuine humility of mind — "be humble, and you will remain entire"; for a mental and if possible a physical simplicity of life, for riches, power and position can never add to Tao; for a corresponding poverty of desire, for a man's true wealth is measured by the absence of his personal desire. The genuine Taoist has no personal ambition, and, "because the Sage does not compete no one competes with him"! These qualities lead to a still keener love of life, a love of beauty — "the face of Tao," and a love of nature — "the manifestation of Tao," which is almost unique in the field of religion. To the Taoist Chinese, nature is a fellow pilgrim on the Way. As the famous Chinese poet, Li-Po, exclaimed, "We never grow weary of each other, the mountain and I." And the pilgrimage of life, of every form of life, is a way of return — for "Returning is the motion of Tao," returning home.

Wu-wei, which may be described as the technique of Tao, can no more bear translation than Tao or Teh. It is not a quietism, nor the doctrine of laissez faire; still less is it doing nothing. It is a fluid attitude of mind incapable of snaring in a net of words. It has been said, "Man stands in his own shadow and complains of the lack of light." If that means nothing to you, let me put it another way. Get rid of the self and the Tao can enter in. Men build windows in a wall, but it is the hole in the wall which is of value; they make bowls and pots, but the value of the pot is the space in the middle. Hence the doctrine of the "Void," which applies these analogies to the mind of man. When the mind is a vacuum of self, the Tao flows in; when filled with his own importance man is empty indeed. "The soft and the weak overcome the hard and the strong," a spiritual principle which is the basis of the science of Judo, or Ju-jitsu. Just as in this form of wrestling the winner uses his opponent's force to defeat him, so the same science of winning by giving way may be applied to the mind. The Taoist never gets in another's way, nor even in his own. When the force of circumstance, or time, or another's enmity assails him, he is just not there! For "Tao is ever inactive, and yet there is nothing that it cannot do." In this subtle use of force to its undoing there is an element of using time, of timing every act with a sixth sense of its own. From this point of view it is "the doctrine of the right opportunity, of acting on the inevitable hour." It is in one way the "action in inaction" of the *Bhagavad Gita*, or more accurately action *by* inaction, a motion of will applied to circumstance in which the act is as nearly possible motiveless. Where there is no self in the act there is no recoil, that is to say, no need for Karma, the law of moral cause and effect, to produce a reaction on the doer as an effect of the deed he does. Hence the saying, "the perfect act has no result." In brief, nature abhors a vacuum, and where the self is emptied out, the Tao flows

in. "To him that hath not shall be given. . . . Die, if you would live!"

Lao-Tze's most famous follower was the philosopher-wit, Chuang-Tze, whose elaborations and commentaries on the *Tao Teh King* have made him virtually the founder of Taoism as a religion-philosophy. Much of his brilliant writing is spent in satires on the teachings of Confucius from his own Master's point of view, and he was quite determined to avoid the cage of convention in which he regarded all Confucians as having locked themselves. When a deputation arrived to invite him to be Prime Minister of the state of Chu, he is said to have asked, "I hear that in your Prince's private shrine there is a sacred tortoise which has been dead three thousand years. Do you suppose that it prefers to be venerated in death, or would it rather be wagging its tail in the mud alive?" "Surely the latter," was the polite reply. "Then away with you," said Chuang-Tze, "and leave me to wag mine!"

This great philosopher and writer expanded the teachings of his Master, and illustrated them with a wealth of delightful stories and analogies, many of which hinted at the One beyond the "opposites." To him the "opposites," the countless antitheses of life, were only relatively real, and equally unreal. Why, then, fight about them? One of his most famous stories was of a keeper of monkeys who was wont to feed them four nuts in the morning and three at night. At this they violently objected. Wherefore he changed the order and gave them three in the morning and four at night. With this the monkeys were well content!

Chuang-Tze attacked Confucius' axiom of charity and duty to one's neighbour. Charity, he pointed out, begins when Tao is lost, and deliberately to cultivate a virtue is to arouse its opposite. Where there is love there must in a relative world be hate. Why, then, choose *one* of the pairs of opposites? Moving in the rhythm of Tao, learn to be right and you will unfailingly do right. Don't

strive to be good. Let Tao, which orders all things, occupy your heart and you will be good naturally. In other words, cease interfering with the rhythm of nature by the efforts of your personal self, and Tao will take command.

From this it will be seen that though not always complimentary to each other, Confucianism and Taoism were remarkably complementary. Obvious comparisons of Stoic and Epicurean, Puritan and Cavalier, Classic and Romantic spring to the mind, and though analogies are never safe to press too far, the complementary nature of these pairs of opposites applies.

Confucius cultivated, note that word, respectability and propriety. Lao-Tze was spontaneous and irrational. The former's ideals were precise and attainable; the latter's vague and all but unattainable. Mr. Lin Yutang has compared the relative points of view in terms of modern life. "A modern Confucian would take the city-licensed, pasteurized grade-A milk: a Taoist would take fresh milk from the milkman's pail. For while your health officers can protect your milk from typhoid germs they cannot protect it from the rats of civilization!"

Of course, the two had much in common. Both sought Tao, but whereas the Master Kung was mainly concerned with the Tao of man, Lao-Tze followed the Tao of Heaven. Both sought Tao by adjustment through behaviour, but the former looked to the right behaviour of man to man and the latter of man to nature and to Heaven. Yet here again is another of the pairs of opposites, and the Chinese genius has learnt to unite them in a higher third. Surely Tao is for the inner, and the ethics of Confucius for the outer man?

For a thousand years these two great Teachers were revered, and their teachings studied and applied through the length and breadth of China, until, in the first century a. d. there arrived as a

potential rival the teaching of Gotama, the Buddha. At first the Chinese were suspicious of such metaphysical doctrines, and still more of an Order which, with its rule of celibacy, struck at the root of their family life. But Confucian scholars soon learnt to appreciate the scholarship of the Indian visitors, and used their methods to improve their own presentation of Confucian ideals. Taoists seem to have welcomed the new teaching as an improvement on their own philosophy, and to a large extent were later absorbed by Buddhism.

The relationship of Buddhism to the two indigenous teachings seems to lie in the fact that Buddhism provided three factors needed by but largely absent from the other two. In the first place it provided a link between the moral code of Confucius and the spiritual heights of Taoism, a ladder as it were from earth to Heaven, at once a sanction for the Confucian self-discipline and an application of Taoist ideals. In other words it served as a Middle Way between the two existing philosophies of life. Secondly, by introducing the twin doctrine of Karma and Rebirth, the individual was seen as a pilgrim coming from a distant past and moving by his own initiative towards a distant but definite goal. Hence a practical guide to the Way, with knowledge of its nature, purpose, and its goal. Thirdly, and perhaps arising from the other two, there was more light thrown on the nature of life after death, the interim period between two lives, and of the nature of the enlightenment, the fruit of self-reliance and self-discipline, which awaits each pilgrim at the journey's end.

The Buddhist viewpoint stimulated Chinese art to new activity, and it is agreed that Buddhism has been the greatest single factor in producing the incomparable art of China and Japan. The Buddhist teaching "Look within — thou *art* Buddha!" applied to all living things, implies that man and nature and Heaven are in essence One, and this sense of mystical unity affected not only art.

It served to improve the position in society of Chinese women, assuaged to some extent the element of cruelty which is a defect in the Chinese character and, with its element of devotion, produced for the first time what might be called a religion in the ordinary sense of the term.

The Chinese appreciated Buddhist tolerance of conflicting points of view. For if all phenomena are viewed as illusion, of only comparative reality, it is clearly foolish to fight about opinions, or even to argue that any point of view is absolutely right or wrong. Hence the thousand "devices" used by the different sects of Buddhism to arouse in the individual his dormant enlightenment. *All* symbols, argues the Buddhist, ever inclined to be over-tolerant, and *all* Ways to enlightenment are admissible if they are of help to someone. For knowledge on earth is at the best comparative, and only in true enlightenment can any man be said to *know* the Truth, as distinct from knowing "about it and about."

This attitude of mind alone explains the enormous range of Mahayana Buddhism, the "greater vehicle" of salvation, as distinct from Hinayana, the teaching of the Buddha as handed down in the Southern School. It is certainly difficult to understand how doctrines as different as those of the Pure Land sects on the one hand, and of Ch'an or Zen Buddhism on the other can spring from a common stem. Yet the Mahayana is like a wheel. From a central hub have radiated spokes in all directions, each developing some aspect of the Message of the All-Enlightened One. It follows that spokes of development that have moved in opposite directions have little in common by the time they have reached the vast circumference, but of all the schools of Buddhism there is none greater than the Dhyana in China known as Ch'an, and in Japan by the term best known to the Western world, Zen. The Ch'an, or "Sudden" school of Buddhism in China was founded by Bodhidharma, who came to China from India in

520 a. d. The legend runs that the secret of Zen was taught by the Buddha to his nearest disciples, and handed on by them from Patriarch to Patriarch until Bodhidharma brought it to China, and thus became the first Chinese Patriarch. However that may be, it soon became the leading Buddhist School, and uses what is at once the most earthly or human and the most exalted or god-like method of attaining enlightenment. Its approach is violent, strenuous and unique. First train the intellect to carry consciousness as high as the intellect can go. Then, having reached the limit of the thinking mind, standing upon the utmost pinnacle of human thought, leap into the unknown, thrusting away irrevocably the ladder of thought by which you climbed. Till now the mind has learnt increasingly "about it and about." Now for the first time it must have the courage to KNOW.

How? There are no words in answer. "Lead the life if ye would know the doctrine." Even "Buddhas do but point the Way." C. G. Jung, the leader of Western psychologists, has written of religion as a protection from religious experience, as a sometimes necessary screen between the aspiring mind and the direct knowledge of truth which it is not yet strong enough to stand. He who would know, who *must* know even if he forfeit life for it, must develop the strength to face the naked truth without the robes of ritual and symbol that hide the flame from his enquiring eyes. Destroy *all* symbols, cry the Masters of Zen, smash the screen which hides the flame! Yet waste no time in seeking the flame. "The Light is within thee," said the Egyptian Hierophants, "Let the Light shine!" Don't study music — sing! Don't study ways of living — LIVE! A Zen Master said to a pupil, "You say "I live." I say "I live," but when you say "I live" there is still a distinction between the "I" and the "live." I live!" Don't stop to argue, still less to understand. Don't stop for anything. Walk on!

So fettered are we in the West with the clumsy process of

conceptual thought that we laugh at the strange, exotic methods of the Zen Masters. Yet they have one aim in view, to break into the cage of the disciple's mind and free the joy of life, the love and the light of enlightenment which dwell within. Anything is used which tends to that utterly desirable and yet elusive end. One means is the *koan*, the word or phrase whose meaning can never be found by the intellect yet which, as a pebble in the mouth, is carried about in the mind by day and night until, in a deathless moment, a flash of enlightenment comes, and the first step on the final path is attained. Sometimes the *mundo*, a form of question and answer, nonsense to the uninitiated listener, is used by the Master. And nonsense it is, non-sense because beyond the feeble substitute for knowledge we here call sense. Sometimes a physical blow will shatter the mental barrier, sometimes a shout, or a joke — or silence! For words, which can never describe Tao, can never speak of true enlightenment. Most of what can be said has been said by Dr. Suzuki in his various volumes on Zen, but all of this is only a "finger pointing the Way." The rest is silence, for it has been said, and truly said, that "Zen has nothing to say!"

So much for a lightning survey of a vast subject, the religion of China, one of the greatest nations on this earth to-day. From one point of view it is complete in itself; from another, it is the religion of the East as distinct from that of the West. But East and West are only another of the pairs of opposites. The antithesis is partly that between depth and breadth, a striving to allign oneself with the powers of nature and heaven, or the will to dominate the powers and forms of nature till they bow to the human will. But these are complementary ways of the Way, the narrow Way that leads in the end to the heart's enlightenment. And even as none can truly find enlightenment for himself "until the last blade of grass has entered into Buddhahood," so there is no nation that is complete unto itself. In brief, "only the world entire can save the

world entire."

COPERNICUS, FOUNDER OF MODERN ASTRONOMY — *Charles J. Ryan*

This authoritative and fascinating account of the life and work of the famous Polish astronomer, Mikolaj Kopernik, generally known by the Latinized form of his name, Copernicus, has twenty-five well selected illustrations and an explanatory Foreword by Sir Arthur Eddington. (1) The translation is very good.

Born at Torun, Copernicus studied at the university of Cracow, the capital of Poland, which was then a great State. His interests covered many branches of learning and the arts, but astronomy was his favorite subject. He was a successful medical practitioner, and his knowledge of financial matters was so deep that he was appointed expert adviser to the Polish legislature when a great currency reform was instituted. He traveled and studied in Italy; and when he returned to Poland he played a leading part in political affairs as Canon of the cathedral of Warmia. He was a great defender of liberty against the rapacity of the famous (or infamous) Teutonic Knights, who were finally suppressed in Germany by Napoleon. The last forty years of his life were devoted to the shaping and testing of his revolutionary cosmogony. Personally, his life was stainless; he did all the good he could, and served his country with self-sacrificing devotion. His work in astronomy is a perfect example of the modern "scientific method," a very unusual thing in the Middle Ages; for he never accepted authority without question but gathered all the evidence possible before coming to a conclusion.

The "merest schoolboy" is supposed to know that Copernicus destroyed the doctrine that the earth is the center of the system of

sun and planets, by demonstrating that the sun is the true center, and that all the planets, including the earth, revolve around it. This fundamental change of view enabled him to explain many hitherto obscure phenomena, such as the true cause of the seasons, and to determine the inclination of the earth's axis almost exactly, an extremely difficult problem.

But the effect of his work reached much farther than the domain of physical astronomy. It gradually undermined the popular belief that as the earth was the center of the universe everything must have been designed for man, its most intelligent inhabitant. Man's immense importance was demonstrated by the tremendous fact that the Second Person of the Trinity was sent down from heaven for his benefit! But under the logic of Copernicus the conventional explanations of natural phenomena arising from the belief in a personal, anthropomorphic God were seriously shaken, though he probably did not realize what a tremendous storm his great work *On the Revolutions of the Celestial Orbs* would arouse. His famous successors, Galileo, Kepler, and Newton, were, like himself, all devout men — the two latter were strongly inclined toward the mystical interpretation of the universe — yet it was chiefly because of the work of these four outstanding geniuses that for several centuries materialistic views have so largely prevailed in science.

It may be, however, that the mechanistic trend has been useful in clearing away many absurd superstitions in beliefs and methods in preparation for the coming synthesis of science, religion, and philosophy, the ideal of Theosophy, which will include a harmonious working between logical reasoning and spiritual intuition. But there is much to say for the anxiety of the learned university professors whose equanimity was disturbed by the Copernican Theory and the later discoveries of Galileo. Not only were their views on the physical structure and laws of the

universe — based mostly on erroneous teachings of Aristotle — being undermined, but the very principle of the transcendental or spiritual interpretation of Nature was in danger. How could the new mechanistic physical teachings supported by mathematics, the exact science, be accepted without losing faith in the Divine Government of the universe? Hitherto undisputed teachings of the Church such as that of Joshua stopping the sun in midheaven, taken literally, were no less essential parts of Christian teaching than the Sermon on the Mount. During the Middle Ages the Ancient Wisdom-Teaching which sees the Cosmos as a whole whose parts were intimately interrelated with Divinity, or which was neither more nor less than an expression of the Divine, was never quite lost although obscured by dogmatic theology. Man, the Microcosm or little world, was an image of the Macrocosm, the great universe, "God." His bodily organs were presided over by the corresponding stars, and so even the most incomplete relic of the ancient astrological knowledge was credited in spite of the errors of the exponents.

That man and the universe are fundamentally one and that the physical body of man and the visible universe are only temporary appearances of the Real Man and the Real Universe is the basic principle of the Ancient Wisdom, Theosophy, "the Oriental Tradition," as some have called it. In so far as the new scientific learning with its triumphs in the physical world flung aside the good as well as the foolish aspects of medievalism, it became culturally limited. To its credit it broke down the superstitious belief in authority and corrected the habit of fine-spun speculation without first ascertaining the actual existence of the matter being discussed!

However, man cannot live on husks forever, and we may safely feel that the later misuse of the scientific discoveries of the great pioneers of modern astronomy has only been a temporary

hindrance to a higher interpretation of Nature when we observe the recent change in the outlook of some of our most brilliant exponents of astronomy. Sir Arthur Eddington claims that consciousness is the foundation of the universe and not, as so long believed, a by-product; Sir James Jeans writes:

Today there is a wide measure of agreement, which on the physical side approaches almost to unanimity, that the stream of knowledge is heading towards a non-mechanical reality; the universe begins to look more like a great thought than a great machine. Mind no longer appears as an accidental intruder into the realm of matter: we are beginning to suspect that we ought rather to hail it as the creator and governor of the realm of matter. . .

In regard to the recent discoveries in astronomy of Cosmic Rhythms, periods of manifestation and quiescence on the largest as well as the smallest scale, and the revelation in physics that matter is only a *maya*, an aspect of "radiation," whatever that may be, and so forth, an editorial writer in *The New York Times* recently remarked that "Western Science is being converted to the teachings of the Himalayan Sages" (!) and it is no longer a wild and unscientific proceeding to believe that the universe is made of life abundant, life in innumerable degrees of consciousness. So perhaps if Copernicus could look down from the astronomers' heaven he would rejoice to see that the Ancient Tradition, shorn of its weak points and crudities, is returning to the West.

ON BEING OF GOOD COURAGE — *Mary W. Peyton*

We need no dictionary to define the derivation of the word "Courage." That it springs from the Latin *cor* we are aware instinctively: our own hearts tell us that courage has its lodging there, in the very core of our being.

Nor is it necessary to search for synonyms. The glowing significance of bravery, dauntlessness, gallantry, intrepidity, valor, heroism, is well known to all of us. Do we not honor greatly — perhaps envy — that one who possesses a stout heart?

Once upon a time courage connoted desire, will, intention. "I'd such a courage to do him good," wrote Shakespeare. In every untoward circumstance or situation that makes us faint of heart, it is clearly imperative to summon desire, will, intention — and quickly — in order to substitute pluck for weakness. Sometimes for very survival, if not for the body then the soul.

There are no statistics on the subject, but there must be few in any race of men who do not esteem and applaud courage, who do not shrink from being branded as cowards. There are innumerable instances of men in battle who might well be faint of heart — and *are*, by their own admission — yet rally to acquit themselves nobly. It is cynical and ungenerous to believe that they are spurred on merely by the shame of appearing as weaklings before their comrades. The valor of most men surely springs from a deeper source, where the pure waters of the spirit cleanse them of self-interest, self-protection, and charge their souls as well as their bodies with intrepid courage. Again, it is shameful to narrow down heroism to a mere action of the adrenal glands. The sudden discharge of sugar into the bloodstream is but a small part of a much greater whole. The Whole of

Man is something vaster than chemical action and reaction; contained therein are such potentialities of greatness and exercise of nobility that we may well bow before them in reverence and awe.

It is natural to think of bravery in its physical aspect now that millions are demonstrating this quality as actual participants in warfare — but what of moral and spiritual courage? Not often conspicuous or loudly heralded, they may be of such high order as to merit the most glorious of accolades. Triumph of the spirit over adversity and calamity, peril and tragedy — how deeply does this move us!

On the other hand, we are prone to have small patience, even condemnation, for those who continue to groan under afflictions. Our first pity is soon mingled with contempt if they sink in the morass of self-pity, if they "can't take it," except supinely. We abhor cowardice, the pusillanimous and the weak-spirited. Who knows but what this very scorn is unconsciously directed to the thin, sleezy spots in the fabric of our own character? Within us may sound an uneasy whisper: "Could I take it? Be of stronger courage in the face of bereavement and betrayal, loneliness and homelessness?" Pertinent questions if we ask and answer them honestly, leading to farther reaches of understanding and sympathy.

Who has not an Achilles heel? A certain man who achieved renown for exceptional bravery in battle is craven before the very thought of old age. Then there is the woman valiant in the defense of the weak, who works unceasingly for the establishment of justice and good-will among men — but quails miserably at the idea, quite remote, of poverty overtaking her. The heel of Achilles. There are those who keep cool heads and stout hearts in fire and flood, typhoon and earthquake and other

so-called "acts of God," yet cannot speak the brave word in defense of the unjustly accused. Timorous and dry of mouth, they remain silent when finding themselves of the minority opinion, the unpopular. The list of weak tendons is, unhappily, a very long one. We all know the vulnerable points in others, but do we recognize our own? And if we do, and have the will, desire, and intention to rid ourselves of such obstacles to healthy growth, how do we go about it? How acquire true courage?

Not by living and thinking in the first person singular. Positively, as Dr. Harry Emerson Fosdick phrases it, a man must get himself off his hands: must change the mirrors of his room, in which he sees only the reflection of himself, to windows through which he can look out upon objective objects. Theosophy gives a name to this exchange of mirrors to windows, and it is Impersonality.

The weapons of the spirit are the old fundamental values, truth, honesty, integrity, selflessness. By the exercise of these virtues we learn to be of good courage. Like Bunyan's Christian, we may be "hard put to it" at times, but we can everlastingly *try* — and who wants to be a miserable Faint Heart in his own Pilgrim's Progress?

To admire and honor the courage of another is a step that leads toward emulation. Youth is fired by the very name of Richard, the Lion-Hearted. The adult heart must be flimsy and apathetic indeed not to be stirred by the same appellation given so rightly to H. P. Blavatsky: stirred and moved forward by the power of her example.

Every book of Scriptures has its counsel of perfection for the nurture and maintenance of courage. "Wait on the Lord: be of good courage and he shall strengthen thy heart." Or this: "If thou hast tried and failed, O dauntless fighter, yet lose not courage; fight on, and to the charge return again and yet again."

There is strength for the sinews of mind and heart in the words of Katherine Tingley: "There is no nobility in fear; it is a thing born wholly in the realm of personality, smallness, and selfishness, and has nothing to do at all with the Higher Self which is the Hero in man."

The Theosophical Forum

THE HERITAGE OF MAN IS MAN HIMSELF — *G. de Purucker*

The heritage of man is man himself. Each man is the builder of himself, and the destroyer maybe. Each man is his own regenerator and savior, and each man undoes the work upon himself which mayhap for aeons in the past he had been building. This statement may sound recondite, difficult to understand, a dark saying; and yet I wonder that anyone could or might doubt so self-evident a truth. Is it not clear enough that what a man is, he is; and that what he is, is the result of his former lives, the resultant of his thoughts and his feelings, the resultant of his previous willings and thinking and feeling? We make ourselves, we fashion our own characters.

This is one of the commonplaces of human experience. But just think what it means to grasp it in fulness. We make our lives shapely from day to day and year to year and from life to life; or we make them very ugly; and no one is to blame on the one hand, and no one is to be praised on the other hand, except the worker himself, the man himself. Just think how just this is. We have nobody, nought outside ourselves, to blame if we have made ourselves unshapely and ugly and full of sorrow and pain, save we ourselves; and there is none to be praised when our lives become shapely and beautiful in symmetry through our own efforts, save we ourselves. A man by thinking may change his character, which means changing his soul, which means changing his destiny, which means changing everything that he is or becomes in the present and in the future. Why blame the blameless gods for our own faults, for molding us in the patterns that we ourselves have shaped? It is the old idea of "passing the buck" — slang, but oh how expressive! throwing the blame on someone else. This is the surest way to go down instead of going

up; for the recognition of truth and the recognition of justice and the cognisance of responsibility in a man, by a man of himself, is the first step to climbing the path higher; and what hope there is in this. Think of the mistakes we have made in the past, the wrongs that we have wrought on others and on ourselves. Only half the story is told when we say that we have made ourselves and that we are responsible for ourselves. The other half of the story is what we have done upon others: how we have helped to shape their lives in beauty, or to misshape their lives in ugliness.

This recognition of man's responsibility not only to himself, but to others, is the lost keynote of modern civilization, which seems to be infatuated with the idea that things will run themselves, and that all men have to do is to get what they can from the surrounding atmosphere. I think that is a hellish doctrine, and can but produce its harvest of misery. Let a man realize that he is a man and that what he sows he shall reap, and that what he is reaping he himself has sown, and see how the face of the world will be changed. Each man will become enormously observant not only of his acts which are the proofs of his thoughts and his feelings, firstly upon himself, but perhaps more important, what impact he makes upon others. I think it is the lack of this feeling of individual responsibility and mass responsibility in the world today which is the cause of the many, many horrors which are growing worse instead of better. It fosters the belief that violence can right a wrong. It never can. Violence never has perished by adding violence unto it. No problem ever has been solved after that manner. It is against the laws of being, against the laws of things as they are. Think it out, and you will see it yourself.

What is a man's heritage? I say again, it is man himself. I am myself because I made me in other lives. And how ashamed I am of myself at times that I have not made me wiser and better and higher and nobler in every way; and how I bless the whispering

intimations of divinity within my heart that I can say I am not worse than I am! You see, this is the first realization of my responsibility to all — and the all includes me. And here is a wonder-thought: when a man does right, no matter at what cost to himself, he strengthens himself and he strengthens all others. It is a work of wonderful magic. And when a man does evil, is it not obvious that he weakens himself? First there is the weakening of his will, then the soiling of his thoughts, and then the lessening of the strength of his genuine inner feelings. The very contact with such a man, provided he follow the downward path long enough, causes the self to be soiled. Even as one rotten apple, they say, will ruin a whole barrellful of sound fruit, so will an evil character adversely and evilly affect not only himself, but all unfortunates who may be near him.

We can save ourselves from this very easily, because there are few things so revealing as evil. It has naught to stand upon except illusion. Leave it alone and it will vanish like a mist. Do not strengthen it with pouring more evil into the illusion from your own energy. If it has naught to stand upon, no source of vital activity within itself, it falls, it goes to pieces. How different is good, which is health-giving and strengthening and cleansing. Such simple truths, and so profound! I suppose the most simple things are the most beautiful and the most profound.

So this doctrine of the heritage of a man which is himself is simply the doctrine of another chance for the man whose life has been spoiled by himself. No other man can spoil you unless you yourself co-operate in the spoiling. None other can make you evil unless you conjoin in the suggestion or in the doing. Blame not the other for your fall. It is yourself who falls, and you will never fall, you would never have fallen, unless you had preferred that which brought about the fall. Such simple truths, and yet they comprise a code of divine conduct for us men on this earth. A

child may understand these things because they are so clear, they are so obvious.

The doctrine of another chance! Think of the man — any one of us — who has made a mess of his life and wonders why ill fortune and misfortune and unhappiness and misery and other terrible things come upon him, until sometimes in the agony of self-reproach he cries, "Lord, deliver me from this hell." It is the old weak appeal to something where no help lies; for help is here within; the divinity lies in your breast, the source of all strength and grandeur; and the more you appeal to it the more you exercise it, the more you strengthen your own self, advance in truth and wisdom, rise above all the planes of weakness and sorrow and pain brought about by evil-doing.

So you have made yourself; and in your next life you will be just what you are now making yourself to be. You will be your own heritage. You are now writing, as it were, your last will and testament for yourself. When a man realizes this wonderful fact, he no longer blames others, no longer sits in judgment upon his brothers. He no longer says: I am holier than thou — an attitude which is the sure mark of the weak and of the poor in spiritual life.

There is a wonderful French proverb which runs thus: *Tout comprendre, c'est tout pardonner*: To understand everything is to forgive all. To understand all the hid causes, the results, the past destiny, the present strength, the temptation, the virtue, whatever it may be — to understand all this is to have divine knowledge, and it means to forgive. It is a wonderful proverb and must have been uttered, I venture to say, first by some human being who had a touch of illumination. I know myself by my own experience that when I have been hurt, or am hurt and think I am unjustly treated, I say to myself, even when it seems to me that the wrong

doing unto myself is obvious: If I could read the heart of my brother who has wronged me, read back into the distant past and see what mayhap I did to him to wrong him, perhaps I would realize that he now is as unconscious of the wrong he does me as I was then of the wrong I did to him. I shall not increase the treasury of virtue and happiness and peace in this world by taking up the gauge of battle and injecting more fury and hatred into a hatred-ridden world. But I can do my part in strengthening myself, do my part in getting some illumination from above-within, from the god within me, by doing what I myself have taught: *practising what I preach*. Peace and happiness come from this, and the sense of increased self-respect and the growth of pity.

Do you know, I sometimes think that pity or compassion is one of the most celestial visitors to the temple of the human heart. The old sages used to say that nought but the gods really pay men exact justice, or what they think is justice and flatter themselves that they are right. The gods upon their azure seats hear all, see all, feel all, understand all, and are filled with pity. Think, if any one of us human beings were weighed in the strictest scales of karmic justice untempered by pity and wisdom, what chance do you think any one of us would have to escape condemnation? Does any one of you think that you are so spotless in virtue and holy strength that the scales would not fall against you? If so, you are very, very happy — or very, very blind! I think that if such spotless purity of past karman were yours, you would not be here as a man on this earth working out your own heritage — yourself.

True it is that in the future all the human race are going to be gods, and there is no reason on earth why we should not begin in the present instant of time to grow towards godhood. You win all, you gain all, you lose naught. From driven slave of past karman you become the orderer in time of your own destiny, for you are

your own heritage. What a doctrine of comfort! What light it bestows on us!

The Theosophical Forum

FRIENDS OR ENEMIES IN THE FUTURE — *William Q. Judge*

The fundamental doctrines of Theosophy are of no value unless they are applied to daily life. To the extent to which this application goes they become living truths, quite different from intellectual expressions of doctrine. The mere intellectual grasp may result in spiritual pride, while the living doctrine becomes an entity through the mystic power of the human soul. Many great minds have dwelt on this. Saint Paul wrote:

Though I speak with the tongues of men and of angels and have not charity, I am become as sounding brass or a tinkling cymbal. And though I have the gift of prophecy and understand all mysteries and all knowledge, and though I have faith so that I could remove mountains, and have not charity, I am nothing. And though I bestow all my goods to feed the poor, and though I give my body to be burned, and have not charity, it profiteth me nothing.

The Voice of the Silence, expressing the views of the highest schools of occultism, asks us to step out of the sunlight into the shade so as to make more room for others, and declares that those whom we help in this life will help us in our next one.

Buttresses to these are the doctrines of Karma and Reincarnation. The first shows that we must reap what we sow, and the second that we come back in the company of those with whom we lived and acted in other lives. St. Paul was in complete accord with all other occultists, and his expressions above given must be viewed in the light Theosophy throws on all similar writings. Contrasted with charity, which is love of our fellows, are all the possible virtues and acquirements. These are all nothing if charity be absent. Why? Because they die with the death of the uncharitable

person; their value is naught, and that being is reborn without friend and without capacity.

This is of the highest importance to the earnest Theosophist, who may be making the mistake of obtaining intellectual benefits but remains uncharitable. The fact that we are now working in the Theosophical movement means that we did so in other lives, must do so again, and, still more important, that those who are now with us will be reincarnated in our company on our next rebirth.

Shall those whom we now know or whom we are destined to know before this life ends be our friends or enemies, our aiders or obstructors, in that coming life? And what will make them hostile or friendly to us then? Not what we shall say or do to and for them in the future life. For no man becomes your friend in a present life by reason of present acts alone. He was your friend, or you his, before in a previous life. Your present acts but revive the old friendship, renew the ancient obligation.

Was he your enemy before, he will be now, even though you do him service now, for these tendencies last always more than three lives. They will be more and still more our aids if we increase the bond of friendship of today by charity. Their tendency to enmity will be one-third lessened in every life if we persist in kindness, in love, in charity now. And that charity is not a gift of money, but charitable thought for every weakness, to every failure.

Our future friends or enemies, then, are those who are with us and to be with us in the present. If they are those who now seem inimical, we make a grave mistake and only put off the day of reconciliation three more lives if we allow ourselves today to be deficient in charity for them. We are annoyed and hindered by those who actively oppose as well as others whose mere looks, temperament, and unconscious action fret and disturb us. Our

code of justice to ourselves, often but petty personality, incites us to rebuke them, to criticise, to attack. It is a mistake for us to so act. Could we but glance ahead to next life, we would see these for whom we now have but scant charity crossing the plain of that life with ourselves and ever in our way, always hiding the light from us. But change our present attitude, and that new life to come would show these bores and partial enemies and obstructors helping us, aiding our every effort. For Karma may give them then greater opportunities than ourselves and better capacity.

Is any Theosophist who reflects on this so foolish as to continue now, if he has the power to alter himself, a course that will breed a crop of thorns for his next life's reaping? We should continue our charity and kindnesses to our friends whom it is easy to wish to help, but for those whom we naturally dislike, who are our bores now, we ought to take especial pains to aid and carefully toward them cultivate a feeling of love and charity. This adds interest to our Karmic investment. The opposite course, as surely as sun rises and water runs down hill, strikes interest from the account and enters a heavy item on the wrong side of life's ledger.

And especially should the whole Theosophical organization act on lines laid down by St. Paul and *The Voice of the Silence*. For Karmic tendency is an unswerving law. It compels us to go on in this movement of thought and doctrine; it will bring back to reincarnation all in it now. Sentiment cannot move the law one inch; and though that emotion might seek to rid us of the presence of these men and women we presently do not fancy or approve — and there are many such in our ranks for everyone — the law will place us again in company with friendly tendency increased or hostile feeling diminished, just as we now create the one or prevent the other.

What will you have? In the future life — enemies or friends?

The Theosophical Forum

EARLY AMERICA AND HINDU CULTURE — *Charles J. Ryan*

Many students of Theosophy have desired more information about the connection between ancient India and ancient America than is given by H. P. Blavatsky in the few references she makes to the subject. We are glad to find that a learned Hindu scholar, Mr. Chaman Lal, has at last taken it up and presented a mass of evidence in his deeply interesting volume of 247 pages entitled *Hindu America*, published by the New Book Co., Hornby Road, Bombay, in 1940. We are indebted to Dr. W. Y. Evans-Wentz for drawing our attention to this valuable corroboration of H. P. Blavatsky's claim of an intimate connection between America and India some thousands of years before either the Norse or the Columbian rediscovery of the New World.

Mr. Chaman Lal's evidence for the similarity of the ancient Hindu and the native American religions and cultures, as well as for the historicity of the traditions in both the Old and the New Worlds wherein the voyages and connecting links between them are recorded under more or less allegorical forms or even in plain language, is strong and well-selected, though we regret the inclusion of a citation from Churchward among those from serious and recognised scholars.

Most Western writers have ignored the possibility of pre-Columbian travel between India and America by civilized expeditions by either the western or the eastern sea route or by both, but have concentrated attention on the possible emigration of early savage tribes from northern Asia across the Bering Straits perhaps more than 30,000 years ago. H. P. Blavatsky, however, and the ancient traditions mentioned, indicate that highly civilized persons came over to America from India at a later date,

some even as recently as 5,000 years ago.

Mr. Chaman Lal's evidence includes the sculptural and pictorial representations in America of the *Indian* elephant with their unmistakably Hindu artistic "feeling." These elephants do not resemble the prehistoric American types. The American god Tlaloc was elephant-headed, as was the Hindu Ganesha, a derivative of Indra, and both were rain-gods. The author gives a large number of quotations from various sources illustrating the close resemblance between American and Indian cultures and ideas, such as religious traditions and myths, cosmical concepts, the knowledge of the four Yugas and of the races preceding the present Fifth Race, identical social systems and customs, and yoga meditation methods. He discusses the use of the zero in mathematics among the Mayas, unknown elsewhere in the ancient world except in India; the symbols common to India and America such as the cross, the swastika, the thunder-bird (the latter being stylized at Ocosingo in Mexico so as to be practically identical with the Egyptian Winged Globe) and the traces of food-plants being transported across the Pacific, etc. He mentions the recent discovery of stone wheels at Tiahuan-aco in Bolivia, but does not refer to the unexpected revelation that America knew the principle of the true arch. These examples of Old World culture in ancient America were unknown till quite recently.

Mr. Chaman Lal pays considerable attention to the curious identity between certain Indian and American games, but he does not mention the fact that when the Spaniards arrived in Arizona they found the Pima Indians playing a game which required a pattern exactly duplicating the elaborate plan of the Labyrinth of ancient Crete as shown on the Cretan coins! This pattern is so uniquely specialized that it seems impossible for it to have been independently invented in places so remote as Crete and our Southwestern States; but Mr. Chaman Lal traces a powerful

Hindu influence in Greece and the Mediterranean and quotes significant evidence about the extensive maritime trade carried on by India with foreign countries.

Many pages are devoted to the Snake or Dragon (Naga) Cult of Hinduism and its close resemblance to the widespread Snake Cult of ancient America, which is still extant in places, even in the United States. Students of Theosophy know the importance that is attached to the snake as a symbol of Wisdom and of the Initiate, which is found in every ancient religion, even in Christianity, for Jesus uses the word when sending forth his twelve trained apostles: "Be ye therefore wise as serpents, and harmless as doves." Moses healed the people by setting up the Brazen Serpent under direction from his God. How different the story of the European penetration into and domination of America might have been if the pure teachings of Jesus had been followed by the professed Christians!

The Theosophical student feels that Mr. Chaman Lal is right in his insistence upon the importance of the similarity between the ancient Hindu and American religious philosophies, and in doing so he is supporting a fundamental teaching of *The Secret Doctrine*, i. e., the former existence of a universal "Wisdom-Religion," Theosophy as we now call it, widely diffused over the earth, the origin and fountain of the partial presentations of the One Truth which have arisen as specialized religions, and which have mostly become more or less degenerated or superstitious. This, however, is no obstacle to the probability that the Hindu "colonists" to America brought many new ideas and methods which were engrafted into the prevailing forms of belief.

In explaining that many of the difficulties in tracing the religious practices of ancient America arise from the almost complete destruction of records by fanatical bigots, Mr. Chaman Lal speaks

plainly of the horrifying cruelties perpetrated on the American tribes by the so-called "Christians," but he firmly believes that "the culture of the Indian will revive again and will redeem America. There are already clear signs to that effect. The most advanced and scientifically brought up Americans are already . . . looking for a philosophy that will "save their souls." " In this he would sympathize with Dr. Gregory Mason, Americanist, who in his recent *South of Yesterday* asks if we, modern Americans of all types, shall not carry on the *American* tradition that has come down from antiquity and build a real civilization in all respects suitable to Western conditions, and in which we shall no longer depend upon European culture.

The following quotations from H. P. Blavatsky will suffice to prove that Mr. Chaman Lal's main principle is well-founded. Speaking of the Chaldean, Assyrian and Indian "Nargals" or chiefs of the Magi, and the Hindu "Nagas" or "Wise Men," she writes:

Such similarity cannot be attributed to *coincidence*. A new world is discovered, and we find that, for our forefathers of the Fourth Race, it was already an old one. That Arjuna, Krishna's companion and *chela*, is said to have descended into *Patala*, the "antipodes," and therein married *Ulupi*, a Naga (or Nagini rather), the daughter of a king of the Nagas, Kauravya. — *The Secret Doctrine*, II, 213-4 (Also see footnotes 406, 407)

In H. P. Blavatsky's *Theosophical Glossary* we read:

ULUPI (*Sk.*) A daughter of Kauravya, King of the *Nagas* in *Patala* (the nether world, or more correctly, the Antipodes, America). Exoterically, she was the daughter of a king or chief of an aboriginal tribe of the Nagas, or Nagals (ancient adepts) in pre-historic America — Mexico most likely, or Uruguay. She was married to Arjuna, the disciple of

Krishna, whom every tradition, oral and written, shows travelling five thousand years ago to Patala (the Antipodes). The Puranic tale is based on a historical fact. Moreover, Ulupi, as a name, has a Mexican ring in it, like "Atlan," "Aclo," etc.

And again in *The Secret Doctrine*:

Exoterically, the *Nagas* are semi-divine beings. . . . Yet there was a race of *Nagas*, said to be a thousand in number only, born or rather sprung from Kadra, Kasyapa's wife, for *the purpose of peopling Patala*, which is undeniably America. ... — II, 132.

There is no doubt that America is that "far distant land into which pious men and heavy storms had transferred the sacred doctrine" . . . the *Secret Doctrine* of the land which was the cradle of physical man, and of the Fifth Race, had found its way into the so-called *New World* ages and ages before the "Sacred Doctrine" of Buddhism. — *Op. cit.*, 424, footnote.

The Theosophical Forum

HINDUISM AND BUDDHISM — *Judith Tyberg*

When an open-minded scholar has an opportunity, because of a very wide and rich education, to study not only one great religion right from its original scriptures and sources but many such religions, it is inevitable that the spiritual tenets of one will be found to complement favorably and even to increase the value of similar tenets in those other religions, because Truth is One. Is not this even so with the individual expression of different human hearts, for are not hearts the fountains of Reality, of infinite wisdom? This is beautifully expressed by the poet Lysaght as follows:

For the meaning that dwells in all things,
The story of every heart,
Is the same — the infinite story of all
Whereof each telleth a part: —
Tidings mightier, graver.
Than a single voice can utter,
Too deep and solemn a secret
To sleep in a single breast,
But the voice of each makes truer
The voices of all the rest;
And each repeats of the story
The part that it loves the best.

Ananda K. Coomaraswamy has proved to be just such a scholar, and in his book *Hinduism and Buddhism* (1) we have some of the fruits of his vast field of study and knowledge. Herein we find religious concepts of ancient India, supported by others from China, Egypt, Greece and Rome, and of the Christian world — all reiterating fundamental beliefs and ideals. Herein he has proved

that Hinduism is one of the facets of the *Philosophia Perennis*, and that its essential truths are therefore in accord with those of other great religions. Due to a lack of a true understanding of the religious concepts of ancient India there have grown up many false suppositions and interpretations which have unfortunately been accepted by many philosophical students trained in Western methods of thought.

The author, in a most scholarly way, with detailed references, has resurrected the fundamental truths of Hinduism, thus making this work a valuable reference-book for serious students of Sanskrit texts. From the Vedic Suktas, Brahmanas, Aranyakas, and Upanishads, and from the Bhagavad-Gita, he has culled jewels of wisdom, those truths that will ever inspire, and that will enable the perceiver of their profundity to recognise that same heart-life in other great religions. Truths that never grow old, but which are not often fully realized by either Orientalists or modern Hindus are brought to light, and fallacies and misunderstandings are cleared up. In the notes that are appended to the text similar ideas to be found in Greek, Roman, and Christian philosophy are cited. This adds highly to the value of the book.

In the first half of this work which is devoted to Hinduism we find that the ever recurring myth is spoken of as "a penultimate truth," as a symbolic expression of universal experiences that are timeless, and therefore applicable to all beings, to worlds or men, to their birth, growth, struggles, conquests, and final reabsorption. In other words, the myth is shown to be an embodiment of eternal truths, not the result of childish fancy, as many think.

Wisdom-teachings such as the following are excellently portrayed here with their Hindu poetic figures and charm: the unity behind

polarity; the god-essence latent in everything; how the One manifests itself through the Many; the hierarchical wheels within wheels, all with the same infinite center; Karma as the character inherent in everything; *Agni* as the divine guest in every form, the radiant source of life; the Adversary but our personal self or the Outer Man; altruism as the key to becoming SELF; the surrender of the personal self makes the man whole; self-control is the submission of the Outer to the Inner Man; to know one's SELF is to become ALL; the soul's journey through the Seven Worlds to the Sun; and that beautiful answer, so well known to deeper students of Theosophy, to the question asked at the Sun-door, "Who art thou?"

Sacrifice in its original sense is grandly portrayed: to sacrifice is to act sacredly, is to give oneself to the Imperishable God. "God gives as much as we can take of him, and that depends on how much of "ourselves" we have given up." . . . "Whatever is done perfectly must have been done lovingly, and whatever ill done, done carelessly." True sacrifice is silent and invisible, it takes place within. The great sacrifice is a conscious dying, the "final katharsis." The Soma-sacrifice is explained in its true meaning. King Soma is shown to be the moon-element or body-aspect of our being, which must be purified and its evil cast off before we find the sun-part of ourselves. This devouring of the Moon by the Sun outwardly or inwardly is depicted as the "Divine Marriage." The Soma juice, that elixir of life, quaffed only by god-men is given its original mystic representation. Somapas or Soma-drinkers are those who are infilled with the essence of the divinity within, illuminated.

In a chapter on "The Social Order," ethical living is shown to depend on awareness, on a conscious obedience to the laws of nature. Yoga is here succinctly defined as "skill in works." The author uniquely depicts the caste system of India as patterned

after the hierarchical system of man's own nature: the spiritual or sacerdotal, the royal, the administrative, and the physical. And just as the higher must be master in the sacrificial life so must it follow in the hierarchy of a worldly kingdom.

Furthermore the value of the system of the Four Stages in Hindu life is clearly brought out. The chance for a higher realization of what life is for, an opportunity of living in a higher state nearer to the source of All, of changing one's attention from the outer to the inner, was offered to any Hindu, whatever his caste, in the last two stages of his life.

Annihilation is shown as impossible. Coomaraswamy writes:

We are told that the perfected self becomes a ray of the Sun, and a mover-at-will up and down these worlds, assuming what shape and eating what food he will; just as in John, the saved "shall go in and out, and find pasture."

How the "dew-drop slips into the shining sea" of infinitude, and yet continues to be, is compared to what is meant by Master Eckhart's phrase "fused but not confused." When the dewdrop or ray reappears in the world we have one of those grand Avatars. To quote the author:

There is then a "descent" (*avatarana*) of the Light of Lights as a Light, but not as "another" light. Such a "descent" as that of Krishna or Rama differs essentially from the fatally determined incarnations of mortal natures that have forgotten Who they are; it is, indeed, *their* need that now determines the descent, and not any lack on his part who descends.

This section of the book closes with that lofty Wisdom-Key of the Upanishads: "THAT art thou."

The second section is devoted to Buddhism. The author points out from the start that a profound study of both Brahmanism and Buddhism reveals them as one in their religious content, and that Buddha was a reformer only in the sense of restoring an older form of truth — Brahmanism — to its purity, and that he declared what he taught was the "Ancient Way" followed by all "Knowers of Brahman." Buddha, of the royal caste, did not oppose true Brahmanism or a true "Brahmana," but only the degraded ritualistic and corrupted forms of Brahmanism and the self-seeking so-called Brahmanas of his day.

The life of the Buddha is portrayed as another of those eternal myths; in this case representing the Solar divinity in its heavenly descent, as well as that wondrous awakening of the Solar Self in man that has occurred continuously from the beginning of time. The ethical precepts of the Buddha are compared with those of the Upanishads, and also with Platonic teachings. For instance the Buddhist injunction "to be ever mindful of every act" is the Platonic way of saying "to be aware, to be a Master of self," and the Upanishadic teaching "to recover one's latent omniscience."

All philosophic mysticism presents the idea that to be truly born in the spirit, in the Kingdom of God, the mortal man must die; the little self, the soul must give itself up to the Great Self, the One in All Things. The Brahmanical doctrine teaches that *Brahman* is the God within all beings, the only reality. The lesser self corresponds to the chariot or the raft which carries a man to his destination. The Buddhist doctrine of the Anatman (non-self) refers to this unreal personality, not to the Maha-Atman or Great Self to which the Buddha refers when he says "Take refuge in the Self!"

Though men are the heirs of their acts, Buddhism declares that they are not the very same persons when experiencing the fruits of good or evil actions, for they are ever changing, never the same

from one moment to another. However, their continuity may be recognised in the same way that we may discern the same person going through childhood, youth, and old age, and yet how very different the old man is from the baby boy. Though a being may continue to *be* into eternity, he will never be the self-same entity through any period of time. As the Bhagavad-Gita (II, 22, 23) states:

Verily never was I not, nor thou, nor these rulers of men;
Nor shall any of us ever hereafter cease to be.

As the embodied one experienceth in the body childhood,
youth and old age,

So are there other body-gettings, therefore one who is wise
is not disturbed.

The Buddhist ethics and teachings as presented in this book are from the Pali texts of the Hinayana or the Lesser Vehicle. Therefore we find Nirvana given here as the final goal. The deeper teachings of the Mahayana or the Greater Vehicle concerning the call of compassion which leads to the great sacrifice of Nirvana in order to help unenlightened humanity are not treated herein.

The Buddha is shown as endeavoring to free men from that non-wisdom (avidya) which causes misery, from identifying themselves with the transient parts of their natures which lead them astray, and which turn them away from the One Self. This transient Self, the personality, the Buddha compared to a chariot, a temporary vehicle, while the Atman or True Self is the charioteer. This very same simile we find in the Upanishads.

Why not call that Inner ONE Buddha, or Brahman, Christ, or Agni? These names and the myths surrounding them imply the same divine experience, that of Divine Awareness or At-one-ment. Is not universality one of the tests of Truth?

Hinduism and Buddhism is a book to be highly commended to all students of comparative religion. Is it not significant that it should be an Oriental scholar who has performed this service for the world? It is a pointing to the rich harvest that may come from the fusing of the best in the East with the best in the West.

The Theosophical Forum

THE TIBETAN DOCTRINE OF TULKU — *G. de Purucker*

I want to make a few brief remarks on an important point and a very beautiful one. It has to do with the teaching of the Mahayana Buddhism of Tibet, which is also exactly our own teaching, hinted at by our beloved H. P. B., but not explained because the times were not ripe for explanation when she wrote.

It is a very difficult, highly mystical and subtil doctrine and for that reason filled full with beauty and richness. It is the doctrine of what the Tibetans call Tulku, and is believed in by every Tibetan whether educated or not. Madame David-Neel, a convert to the Mahayana Buddhism of Tibet, speaks of tulkus and tries with great earnestness and sincerity to explain just what they are; but she has not got the key, the heart of it. She says a Tulku is an apparition, that it is a kind of spiritual appearance which sometimes makes its manifestation among men; but it is evident that she does not get the real idea. When I recently read *Peaks and Lamas* by Marco Pallis, it pleased me so greatly because the author tries so hard to understand this Tibetan teaching, and speaks of it much more accurately, saying that a Tulku is an incarnation. This is closer to the truth.

Now what is a Tulku? Tulkus can be of many kinds, according to Tibetan teaching. The Tulku-doctrine is in fact a generalized statement of our doctrine of Avatars. For instance there are the so-called living Buddhas in Tibet. The Tibetans do not call them that; that is what Europeans call them; but the Tibetans say that there is the transmission of a spiritual power or energy from one grand abbot of a Tibetan monastery when he dies to a child successor or an adult successor. Now if this transmission is successful, the one who receives the transmission is tulku. He is

the avatara of the spiritual essence or ego or ray from the previous grand abbot of the monastery. That is one kind of tulku.

Another kind of tulku is an instance where a human Mahatman or great Adept will send a ray from himself, or send a part of himself, to take incarnation or imbodiment, it may be only temporary, it may be almost for a lifetime, in an envoy that this Mahatman is sending out into the world to teach. H. P. B. was such a tulku; she imbodyed frequently the very life and egoity of her own Teacher. While this incarnation of the Teacher's higher essence lasted, she was tulku. When the influence from the ray was withdrawn, tulku stopped.

Some time ago, I think it was two or four weeks ago, I made a statement in answer to a question asked of me, that H. P. B. had not incarnated, and I repeat that now. She has left the devachan, but has not incarnated. But in another place — and I was delighted to get this information from one who had heard the statement, showing how carefully our teachings are studied — in another place about 1930 I stated that H. P. B. had left her short devachan and was then in body; but I very pointedly remarked, whether a child's body or an adult body it is not for me here to say. I was asked to explain this apparent contradiction.

Now this was my meaning, and I had better explain it as I did to the one who asked the question. H. P. B. has not incarnated, that is, she has not incarnated as you have. She has not yet been born as a child. But she has at certain times, and for one certain individual, with that individual's consent, organized as it were tulku for that individual. Do you understand what I am trying to say? So for the time being we can say that H. P. B. is imbodyed, or partially imbodyed, in that chosen individual's being for the purpose of special transmission. That is another kind of tulku.

I have thus given you examples of three kinds of tulku. You notice

in all cases they are incarnations or appearances. If H. P. B. for instance were to — well, take the Chairman here [turning to the presiding officer], make a tulku of him for a month or a year, for the time being he would be tulku; but when that particular work was done, the influence would be withdrawn, tulku would stop. It is a kind of avatara, a kind of incarnation. You may think this is very mysterious and very wonderful, but to people who know about these things it is all very reasonable. Do you realize that every clever hypnotist makes a tulku of his victim in a black magic sense? When a hypnotist puts an idea into the brain of his victim that one week from now, at three o'clock in the afternoon the subject is going to commit murder, or going to jump off a cliff, or going into the Jones's house to steal a Christmas pudding in the larder, for the time being that hypnotist is working a black magic tulku on that victim, and every psychologist hypnotist today knows this. Yet speak to him of tulku and he will laugh. He is ignorant. The wise man has learned not to laugh until he knows.

But I want to point out as my final word before I close, that this doctrine of the tulku has a side to it which is extremely sublime and beautiful, outside of the practical issues concerned. For instance, Jesus the Avatara was a life-long tulku, a ray from the divinity, a tulku of that divinity so far as that ray goes, an incarnation of that divinity. The Buddha himself — Sakyamuni Siddhartha often called the Buddha Gautama — was also a tulku, but a tulku of his own inner god. The average man is merely overshadowed occasionally; the light gets through if he really aspires, and he gets a touch of the divine flame. But when Gautama, later called the Buddha, attained Buddhahood, he was infilled with his own god, *he was that god's human tulku*. That was for him Nirvana. To speak very technically, he entered Dharmakaya, and was known of men no more. In other words he was a man become divinized, made divine. Your own reading will

give you instances of other cases of tulku.

So you see what a tulku is. It is, as Madame David-Neel said, an apparition, yes, appearance yes; but these words are not sufficiently descriptive. It is an imbodiment of a spirit or spiritual being or spiritual ray from a spiritual being in some other human being or entity, for a specific or general objective. A good example of black magic tulku was what the medieval Europeans used to call were-wolves or men-wolves, and thereby hangeth a wondrous tale. But that was black magic.

The Theosophical Forum

HEROES OF THE TRANSITION — *Marjorie M. Tyberg*

The world picture is so blurred and so bloody, waiting hearts are so heavy with grief or so strained by suspense, that it is only by an effort of will that many people can vision a future that human beings can endure to contemplate. It is not only our own sorrows that afflict us. Always there have been some of our fellow men who were suffering almost unbelievably from war or famine or other disaster, but distance and unfamiliarity obscured the full horror of such conditions. Now, distance has vanished, we know everything almost as soon as it has happened anywhere on earth. No longer is any horror unbelievable. We know now what it means to live in the Kali-yuga, the age when destructive agencies are rampant, when what it has taken centuries to build is being ruthlessly torn down, when human lives are blotted out by thousands overnight, when cruelty and inhumanity shock us into a dull wonder as to the fate of the human race. What can we make of all this? One answer is that while there must be heroes who fight and fall in the world conflict, there must also be heroes of the transition who face and understand these conditions and preserve a thread of continuity between the best that has been and the better that yet shall be.

The world is old — millions of years old. As far back as records go war has been waged by men, with great armies on both sides using every known means of killing off their fellow men. Who were waging those wars? We have all lived many lives on earth. Is it possible that any of us is free from karmic responsibility in connexion with war? Karmic causes can remain unfruitful of results for long periods, but they are there and in certain cycles come occasions for them to work out to a finish on a large scale. If we could have a picture of all those we have slain in battles long

ago, the horror would be as great as that we now feel when we read the casualty lists. The time has come to face the full implication of the teachings of Karman and Reincarnation. There must be a heroism of insight and intelligence to recognise and understand the present widespread squaring of accounts that is going on in the world.

What is needed is a stretching of the mental grasp to include the long cycle of man's destiny — the vast periods of the evolution of humanity in successive rounds and races on the globes of a planetary chain like that of our earth; a view of innumerable lifetimes when human beings sowed and reaped, were parted only to meet and love again. Why doubt this? In the present life neither oceans nor continents separated those whose karman it was to meet and love, or for that matter, to hate and kill. Once visualize this continuance and recurrence and it is never quite easy to fit human life into the old limited frame-work of existence. The more comprehensive picture, which shows the present as only *one* part of *one* cycle of human experience when the new must be born from the old in bitter pangs of birth, brings heartening and healing. There is strenuous mental and physical training to prepare one for heroism in battle. There is purification by sorrow and pain to free the valor that endures the surgical opening of the mind to cosmic ideas of truth and law and compassion.

Those who suffer and survive and *do* think, learn that their power to think reaches a new level, unbounded by old horizons. They have gleams of a wisdom that dissolves suffering in compassion. Loss and separation lose their torturing edge. The inner I learns to look with understanding at what the more familiar I is undergoing. Insight brings the assurance that "Sorrow is a lamp which illumines life."

One harrowing picture in these terrible days is that of the brave and beautiful young lives cut off in battle. We know that their bodies will be reverently returned to earth, but where are they? Let us not think of them as dazed or fearful. They are enduring Egos who, before taking birth saw and chose what in life should befall, and at the time of passing, reviewed it all and knew that it was just. Let us face the fact that for many this last fight may be the means of wiping out an old karmic debt, leaving the Ego now free as it could never be until that debt was paid — a victory for the Self. Let us be brave enough to speed them on their way to a new birth. Let us not picture them faring into the Unknown untended. The truer picture is of the universe, invisible as well as visible, as a well-ordered home, in which some hard lessons have to be learned, but in which there are those who watch and wait with loving care at every gateway of experience to guide the newborn, even as we do here. Why doubt this? Would *you* not gladly serve thus?

The wise ancient psychologist Patanjali taught that there is power in "the mental calling up of the opposite" When the old and familiar and seemingly safe is perishing before our eyes, with Kali-yuga full upon us and a universal katharsis in process, the faculty of visualization wavers unless there is knowledge of what the succeeding luminous arc of the cycle holds for humanity. This knowledge Theosophy offers in the teaching of the intellectual and spiritual principles of the human constitution which shall have fuller expression as the wave of human Egos traverses the luminous arc. The conceptions of man's nature and destiny are the material for visualizing life on the higher level, when we have turned to round out the cycle of evolution on earth. We are taught that the life still to be on earth — the life of reincarnated Egos returning for further experience, will be as unbelievably beautiful as life at present is unfortunately believably sad.

With the restoration of the teachings of Theosophy, words of wonderful potency and meaning have come into use. The study of such expressions as "the Silent Watcher," Vajradhara, Avatara, the Hierarchy of Compassion, opens up sublime cosmic conceptions for contemplation. These words have power to invoke in us trust in the heart of the Universe in which every heart can find peace and renewed will. Renewed will for spiritual venture, for conquest of wider fields for heart energies and for human intelligence to expand in, stimulus for creative imagination in its work of building the inner world that shall be embodied in the new life for humanity All these are available for heroes of the transition who obey the call sounded by the Theosophical Teachers in preparation for the days now upon us.

The Theosophical Forum

THREE STAGES OF VISIONING TRUTH — *G. de Purucker*

The psychological opening of the human being to truth, to the ingress of our God-Wisdom, in other words the training that every true Theosophist undergoes, begins once he is touched and his heart is opened — begins even though he knows it not. This opening of the heart may be divided into three stages. We are familiar with these in that form of Buddhism which originated in China coming from India. In Sanskrit it is called the Dhyani-form, and in Japan it is known as the Zen-form of Buddhist thought. It is expressed somewhat as follows, and it applies equally well to Theosophy because the Zen- or the Dhyani- form of Buddhism is but a branch of Theosophic thought.

The student in entering the pronaos of the temple of wisdom, and later in entering the temple itself, goes through three phases of inner opening — that is the word they use. Thus, in the first phase, the mountains and the waters of the earth are mountains and waters, and they are recognised as worthy of study and of research, and their wonder is seen and sensed; but they are only mountains and only waters.

But by study and aspiration after truth, finally comes the second psychological opening of his character, of his understanding, of his being. He realizes that the mountains and the waters, however beautiful they may be and wondrous for study, are after all but aspects, appearances, phenomena of noumena behind, the effects of invisible and secret causes; and he realizes in this second phase of the opening of his being that if he wants truth he must go deeper and study the science of the mountains and of the waters of the earth. He must investigate the causes which bring them into being, the inner causes and energies which produced

the mountains and the waters. He realizes that the mountains and the waters, because they are effects, phenomena, appearances, however relatively real they may be, are but illusion, maya, because the real truth is within and behind them. And his whole being is enwrapped in the thought of this wonder.

Then gradually he begins to sense the profound wisdom of the old saying that the entire universe is a phenomenon and therefore illusory, but illusory only because we do not understand it aright. It does not mean that the universe does not exist. That is absurd and a wrong construction. He realizes that we do not understand it aright, that we must see behind and within. The visible should portray the invisible, the effect should teach us the underlying causes. In this phase he begins to sense his oneness — and this is the finest part of the second phase of the psychological unveiling of this system of training which the Theosophist undergoes and loves so well — he begins to sense his true oneness with all that is, for he realizes that, as physical man, he is but a phenomenon, an effect; that he is in fact the product of secret and invisible causes; that behind the phenomenon of the physical man, is the human spiritual noumenon. And he grows very reverent and a great sense of sympathetic beauty enters into his heart because he realizes that he is but one of all beings and entities and creatures which infill the universe. And he begins to sense from this moment that ethics are no mere human convention; morals are rooted in the very fabric and stuff of universal nature herself. He feels immensely his oneness with all that is. "I and my Father are One."

And this leads to the third step of psychological opening, and in this third step he realizes the wonderful paradox of all that he knew before in the two earlier states. In this third step he learns that inwards and upwards, expansively upwards, yet ever inwards, the mountains after all are the real, and the waters are

after all real in a certain wondrous sense, for illusory though they may be to our relatively imperfectly evolved human understanding, nevertheless it is fundamental reality which has produced them forth, just as we as phenomena are brought forth.

So then we see at one and the same time that the only reality is the divine, and yet that this divine because it is the utterly real, makes real in a certain sense even the illusory appearance of cosmic phenomena. And applying this to ourselves, we sense that the only real part of man is the divine within him; and yet precisely because this divine is reality, that very physical phenomenon which we call the physical man is in a certain marvelous sense real also. We have come back, the circle has re-entered itself. We come back to the point of starting. First, there were just mountains and waters which were the only real things; and then the mountains and waters were seen to be but the garments, the clothing of secret, invisible, realities; and then the next step brought us to the realization that precisely because these are real things they could not produce essential unrealities; so that the very mountains and waters, strange paradox, are both real and unreal. Happy the man who can understand this third step.

The key to this understanding is another thought which I will again take from Dhyani-Buddhism, because it is fairly well known in the West mainly through the Zen Buddhist writings of Professor Suzuki of Japan (from whom, by the way, I did not take this extract). This is the Zen thought. Hearken carefully, please, because the significance is so slippery. "In the wind of the mountains and the sun of the lowlands, in the fall of night and the mists of dawn, it is cried aloud That alone was, is, abides."

The whole universe is That, and all its phenomena are the productions of divine noumena, or divine thought; so that all are

essentially unified in a divine oneness. In a rather pragmatical way we can bring down this thought and say that all men are brothers, that every one is his brother's keeper. You see the path of conduct? Any violation of this path, means setting yourself in opposition to all universal nature herself.

There is a way to peace and happiness and wisdom and power. For once a man realizes that he is one with Nature, and Nature is one with him, his consciousness becomes, vibratorily speaking, co-rhythmic with the pulsings of the cosmic heart; and that is why the great sages and seers can work marvels in the world: heal and raise; retain consciousness after death; transport the thinking ego to distant fields and be there in self-conscious thought and see all that passes around them; and many things more. For the Universe and we are one. There is but one life and this life is also cosmic thought.

The Theosophical Forum

TIME — WHAT IS IT? — J. W. A. Croiset van Uchelen

"The Present," we read in *The Secret Doctrine*, "is the Child of the past; the future, the begotten of the present. And yet, O present moment! Knowest thou not that thou hast no parent, nor canst thou have a child; that thou art ever begetting but thyself? Before thou hast even begun to say "I am the progeny of the departed moment, the child of the past," thou hast become that past itself. Before thou utterest the last syllable, behold! Thou art no more the present, but verily the future. Thus, are the past, the present and the future, the ever-living trinity in One — the Mahamaya of the Absolute IS." (Vol. II, p. 446)

How often do we stop to consider the significance of this statement declaring the illusion of time? Many striking examples may illustrate the phantasmal nature of time. Imagine an observer with unlimited vision on a far distant star. Based on the speed with which light travels, this observer, let us say, would see the earth as it was at the time of the Egyptians. Then imagine this observer traveling towards the earth at a speed which, within one hour, would bring him to within a distance from where he would see the earth as it was eight minutes ago. This would be a distance of a hundred million miles, or from here to the sun. Thus, in the space of one hour, the entire history of the world from the time of the Egyptians up to the present would have unrolled before the vision of this observer. It makes little difference whether we imagine this moment to be an hour, or a second; beginning and end may coalesce but still enclose everything intermediate.

Analogically does not the panorama of an entire life unroll before the vision of the dying in but a fragment of time? Time is but a man-made mode of measuring. And in physics it has been found

that methods may be greatly simplified if phenomena are referred to a set of four co-ordinates, three of space and one of time; four dimensions equipotent and inter-changeable. Time then becomes space, and space a mathematical abstraction where relationships may exist by virtue of the mind. The past is a dream of memory, the future a vision of a dream, while the present, declares *The Secret Doctrine* "is only a mathematical dividing line." This makes the present a laya-center of which we seemingly dispose. Paradoxically, however, the Now is eternal and ever present. We cannot contact the external world except in the present and it is only in the present that we actually have experience. The past re-collected, the future envisioned, are focussed in the Now. Therefore the present alone is ever existent, the eternal Now in which both past and future are absorbed. Then what is it that gives time its sense of reality? Is not this sense of necessity the result from the incessant movement of mind? For the sense of time and of motion are inseparable. Perhaps we might say that the intellect works like some machine which constantly dissevers our awareness into an unending series of separate thoughts and sensations. Or again as *The Secret Doctrine* says:

The sensation we have of the actuality of the division of "time" . . . comes from the blurring of that momentary glimpse ... of things that our senses give us. (Vol. I, p. 37)

Thus the intellect splits up, as it were, our interior sense of being, into comparatively minute measurements of years, months, days, etc. Therefore whatever the brain-mind comprehends, is grasped under this limitation and through this instrumentality of time. It is this which renders us prisoners of time, where in reality we are children of Eternity! For in reality, the disintegrated fragments must be wholly contained within the Self.

All sages and seers have stressed the illusory aspect of time. The Initiate in the Book of the Dead affirmed: "I am yesterday, today and tomorrow." "There shall be time no longer," the descending Angel in the tenth book of Revelation declares. And St. Augustine in his Confessions postulates that creation began not *in* time, but *with* time.

When time turns inward, like the snake upon itself, it becomes eternity. This is an ancient symbol. Is it not that when consciousness shall have turned backward upon itself, the divine, we shall have conquered the illusion of time?

The Theosophical Forum

WISDOM OF THE OVERSELF — *Charles J. Ryan*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

A large and intelligent audience has followed with sympathy and interest Dr. Brunton's pilgrimage toward philosophical and mystical insight as displayed in the nine volumes which have already come from his pen. This one, *The Wisdom of the Overself*, (1) completes the exposition given in his earlier volume, *The Hidden Teachings Beyond Yoga*, and represents the culmination of many years of research, study and self-discipline. He says it is a re-statement or living reconstruction of the "Ancient Wisdom" (which we know also as "Theosophy") of the Orient, "whose basic essentials are indeed impregnable and will remain untouched for all time," presented in a form adapted to the present conditions in the West and including time-honored disciplines of a mental and spiritual nature suited to the conditions of Western life. This book, of course, does not cover the whole field but is chiefly concerned with mind and consciousness in the universe and in man. The author writes:

The two volumes now lay before readers a teaching which constitutes an endeavor to acquaint this epoch with the fundamental meaning of existence and which, in such explicit fullness, is for the first time written down in a Western language. An exposition in such an ultra-modern form was until now quite non-existent. . . . Readers may begin to understand better why the earlier volumes had to clear up the intellectual foreground and leave hidden in the background the real goal of all this effort, the Overself.

The Overself is the author's term for the "higher individuality" in man which is a phase of the "World-Mind." It is "that fragment of God which dwells in man."

The reader will find in this book a rich store of stimulating ideas to ponder over and perhaps to put into practice. Although the main principles are not unfamiliar to well-informed students of Theosophy, this reviewer believes that Dr. Brunton's careful analysis of the Mind calls for close study, especially by those who are preparing to discuss with professional psychologists, few of whom possess correct knowledge of the profound psychology of the Ancient Wisdom.

Dr. Brunton unequivocally repudiates all pandering to the vulgar craving for psychic powers and other perversions of Occultism so rampant in this maladjusted age. He claims no authority, saying that the spirit behind his attempt is a humble one though the effort is bold. He professes to be no more than a fellow-student who has had special opportunities to explore and study the scattered and broken fragments of Sanskrit literature which are hidden in Chinese, Tokhari, and Tibetan translations. But he adds "for the encouragement of aspirants" that some of his statements are not only the outcome of his re-interpretations but of "present-day experience," presumably meaning his meditations and application thereof. He pays high tribute to an Asiatic philosopher or teacher he met in the deserted temples of Cambodia and above all to the late Maharaja of Mysore for light on difficult problems. Neither of these, he says, were emotional mystics or mere intellectualist metaphysicians.

He writes for all whose pained observation of, or sharing in, the awful experiences of this war-mangled era and whose desire no longer to suffer blindly have aroused an inner prompting to seek for practical help. He says, "it is the inescapable duty of whoever

knows that a higher Hope exists for mankind to speak the lost Word for the sake of those who will listen." But "these leaves are sent out across the window without adolescent illusions about their reception and if a few of them shall flutter down to rest awhile beside a friend or two and remind him of his divine origin and destiny it shall surely be enough."

H. P. Blavatsky must have felt the same when she dedicated her *The Voice of the Silence* to "the Few", and advised the study of the *Bhagavad-Gita* and *Light on the Path*; but owing to the spread of the Theosophical Movement a great increase has taken place in the number of students who can appreciate such teachings. In this volume Dr. Brunton quotes with understanding from *The Voice of the Silence* and *Light on the Path*, and here and in his *Hidden Teachings Beyond Yoga* he pays a very high tribute to the *Bhagavad-Gita*.

So many topics are discussed in this remarkable work that it is impossible to do it justice in the limited space at disposal, but the most important chapters on the philosophic side are those which demonstrate that Ideas not only rule the world but that the universe is *made of* as well as *made by* Ideation, an uncompromising presenta-of the Theosophical principle of "Objective Idealism," which Dr. Brunton says has been only half adopted by many Eastern and Western idealists. He calls his doctrine "Mentalism," the antithesis to Materialism, interpreting it as "the fundamental principle that in the last analysis Mind is the one reality, the only substance, the only existence," and that "this entire panorama of universal existence is nothing but a mental experience and not merely a mental *representation* of a separate material existence." He shows how to "arrive at such conclusions not only by a straight-line sequence of reasoned thinking but also by a re-orientation of consciousness during advanced mystical meditation." According to the mentalist point of view,

consciousness itself is an aspect of Mind, and Mind reaches to the highest plane, to the divine, or as we might say, to Parabrahm.

Subsidiary topics discussed in relation to Mentalism include Evil and Suffering; Karma and Reincarnation; War conditions and causes; Death, Sleep and Dreams; Time; After Death states, and others. The state of Devachan is interpreted with profound understanding, and Spiritualism is treated without offence but with well-informed discrimination. "The Mystical Phenomena of Meditation" (which does not mean psychic phenomena) commands an important section of a work like this which is devoted to the demonstration that man is an integral part of a Living, Conscious Universe.

Dr. Brunton introduces his analysis of Mentalism by a study of the extraordinary image-making power of the mind in dreams, which duplicates on a small scale the infinitely greater power of the World-Mind in shaping the Cosmos by Divine Imagination, "God-dreaming," he calls it. In our dreams some unfamiliar part of the mind beyond the ordinary consciousness creates apparently independent beings and dramatises them into living and acting personalities who even argue among themselves. The dreamer accepts such vivid dream appearances as perfectly real and natural, yet they are only mental constructions lasting as long as the Hidden Artificer holds them in his mind! So by analogy we may dimly understand that our waking experience, nay the manifested Universe itself, is the reflexion or activity of a transcendent and eternal Mind. It is only ephemeral in the sense that it is ever-changing. Can we get to know the Hidden Artificer of our dreams, and in that way approach the Overself? Dr. Brunton thinks we can.

Dr. Brunton's methods of self-study and self-discipline have none of the dangers or abnormal practices of so much that passes in

the West under the alluring title of Indian Yoga. He takes it for granted that the aspirant for self-knowledge is inspired by unselfish motives, the betterment of his neighbor as much as of himself. The methods are whole-heartedly directed toward wide, universal and impersonal horizons and away from the limitations of the personality, the "under-self" as Dr. Brunton labels it. His technique, if it may be so-called, is aimed to help the student to rise above the need of techniques or any help that does not come from within; and the result in no way impoverishes a life of attainment in the wholesome activities of the outer world. On the contrary, success in this endeavor brings the wonder and glory of the transcendental consciousness into all the doings of this workaday space-time existence.

The acquisition of even a high degree of mystical vision must not be regarded as an end in itself. This mistake has often been made by many who have made some progress behind the veil; and in regard to "heavenly visions" of saints and yogis it is well known that some celebrated mystics had none and yet were more advanced in spirituality than others who had plenty. Many of the latter, Eastern as well as Western, suffered from the extremes of rapturous ecstasy and dreary dryness. The author remarks that "an unbroken serene assurance of the divine ever-presence is immeasurably better." Nature hurls the self-absorbed mystic back to the world every time he tries to disregard it and remain permanently in his trance, for we are here "in the flesh for instructive experience, not for stultifying desertion," and it is "only in the *fully-awakened* state that the widest consciousness of reality is attained." The mental blank that is associated with much of trance-yoga (such as that of the Indian yogis who allow themselves to be buried alive for months) is valueless. As Dr. Brunton says, "they leave the idiot in full possession of his idiocy, the self-deceived in undisturbed proprietorship of his illusions,"

and he shows that while a well-considered system of thought and meditation leads through "authority, logic, pseudo-intuition and mystical experience," the latter must always be checked by "reason" which he defines as "the active functioning of human intelligence stretching from the practical-scientific pole to the abstract metaphysical one." Otherwise it will prove sterile and lead to no worthy purpose. The right combination provides a trustworthy spiritual background to rest on in daily life, and especially in unselfish, impersonal service to others. He says, "In striving for the triumph of Good instead of letting contemplation die with itself he must let it fertilize his deeds," and when he aptly quotes from *Light on the Path*, "Seek the way by retreating within," he immediately adds the balancing precept, "Seek the way by advancing boldly without."

The author criticizes those who regard waking life as an evil or an illusion, declaring that it is only in embodiment that achievement of our highest destiny is possible, even though it take many incarnations, for "The Spirit of Heaven must descend to earth and enter through the door of the body and be a welcomed guest whilst we are fully awake." The descent of the higher consciousness, the "Over-self," into the personality is not an emotional disturbance but is quiet and untheatrical. The Power which is behind the universal life can only inspire the personal life of man if he obeys the ancient teaching "Thy will be done," and in order to enter the sacred union with the Cosmic or Divine Will "every illumined religious, mystic, and philosophical teacher has voiced the need of self-surrender." All this is, of course, good Theosophical doctrine.

Instructive and interesting chapters in this book deal with a knowledge of the deeper reaches of consciousness which can be studied through control of the mind in sleep and dream. Have we not all wondered why we must spend nearly one third of our

brief lives in an unconscious state? But it would seem that it is our own fault. During sleep we can if we will take a wonderful journey *within* ourselves. When the writer of *Job* said that "in a dream, in a vision of the night, when deep sleep falleth upon men ... he openeth the ears of men and sealeth their instructions," (33, 15) he was repeating what the wise have always known; but not all have been able to interpret the saying. Dr. Brunton follows the mind as it penetrates in sleep to states of consciousness unknown to the waking personality but which need not remain unknown to the earnest student. The training is of course all done by the student himself; all that another person can do is to give a few simple directions and warnings. Dr. Brunton quotes from the Sanskrit *Tripura*: "Unbroken supreme awareness even in dream is the mark of the highest order of sages," but he encourages those who are not of that class but who are only beginners in self-training and self-discipline by saying that flashes of insight may come at any time if they are sincere and hold to the highest ideals of morality. In this connexion he adds that "the real altruist who does not primarily seek his own happiness finds it, while the intense egotist who is always seeking it, never finds it." And in regard to the higher knowledge and wisdom obtained in sleep he says:

Thus the sleep state, which is so devoid of light and significance during the present psychological state of mankind, becomes full of both for the developed man.

In many places in his *The Esoteric Tradition* Dr. de Purucker discusses the subject of sleep and dream, chiefly in connexion with his profound analysis of the Theosophical teaching that the universe is in all its reaches strictly a manifestation of Mind, "embodied Thought." (p. 180, etc.) In an unpublished lecture by Dr. de Purucker given on July 28, 1940, he said that in order to speed up his evolution by more fully understanding the nature of

his own being man must learn to be fully conscious during sleep, and ultimately through the change we call death. I quote from my own notes: "We men are not truly alert to what is in us and what we can do. ... First learn to be fully awake when you are in the *Jagrat* state — the state we are in now, physical wakefulness. . . . Then learn to carry that self-conscious state of awakening with you when you are asleep. Thirdly, and highest, learn to be self-consciously awake after death. . . . Consciousness is a continuity, but we have not taught ourselves to be self-consciously awake when we sleep, or self-consciously awake when we die. But it is in you; it is in you for the asking." Dr. Brunton's teaching of the close resemblance between sleep and death is in perfect accord with that of Theosophy, so often emphasized by Dr. de Purucker because of its great importance.

In his chapters on methods of meditation in waking and in preparing for mind control in sleep, Dr. Brunton quotes the Buddha's teaching about making the mind "flexible" through exercise; and the exercises he recommends are perfectly natural and sensible and have no resemblance whatever to the dangerous breath-control, hypnotic, or other psychic methods unfortunately associated with the word "yoga" because of the perversions spread so widely in the West by charlatans and money-makers. It is no crime to wish to prove for oneself the existence of other planes of being or of the psychic faculties in man. The effort, however, forcibly to crash the gate into the astral world, to gratify "occult" curiosity by getting out of the physical body and traveling around, and so forth, shows an entire misapprehension of the kind of knowledge which is desirable. It likewise reveals an absolute ignorance, however well meaning, of the unhappy possibilities which lie in wait for the rash invader who crosses the threshold without the protection which surrounds those who have proved their *right to enter and who have necessary business*

in the unwholesome regions of the lower astral light.

In his instructions to the beginner in meditation Dr. Brunton warns the aspirant not to be carried away by various wonders that may occur, for they are only incidentals, fugitive and fragmentary. "The Ultimate has no shape, size, color, or voice whatever." This is well known to students of true occultism. More than sixty years ago William Q. Judge in his *Letters That Have Helped Me* warned the devotional members of the Theosophical Society of these "lures," as he called them, saying:

There are so many, many of these things. Often they result from extraordinary tension or vibration in the aura of an aspirant of pure devotion. They are himself, and he should be on his guard against taking them for wonders. . . . They are like new lights and sights to a mariner on an unknown coast. They will go on and alter or stop. You are only to carefully note them, and "do not wonder or form association."

The Wisdom of the Overself closes with a noble chapter on the practical aspect of the philosophy and the need of attaining some measure of self-knowledge. Dr. Brunton claims that there is a master plan behind the universe, and that in the present death pangs of the old order, when we are striving for higher values, a nobler conception of life can be found if men will only grasp the opportunity. In regard to what he calls "insight," a word he uses to designate the highest faculty of the mind, higher even than intuition, he writes in eloquent terms:

Whoever believes that the awakening of insight is something which affects the intelligence only, believes wrongly. For with it there is a simultaneous awakening of the finest qualities of the heart. Indeed, in this transcendent sphere to which the philosopher penetrates,

thought and feeling are inseparable. Compassion is released automatically *along with* the mental insight itself. One and the same Mind is the inner nature of all men. This is why he who realises it for himself throws down the hard barrier which isolates the "I" from the "you."

The Theosophical Forum

CONSCIENCE AND INTUITION — *G. de Purucker*

I do not know — and yet I am glad to see that the fact I speak of is so — why people are so much interested in knowing what conscience is and where it is located in the human constitution and how you can make it function. We know that while man is a stream of consciousness, he is a septenary stream, and each aspect of the septenate again has its divisions, which is one reason why men differ amongst themselves so greatly and so widely; and it is a pity that this is not better understood. Men would differ more but quarrel less. Quarrels are stupid; kindly "scraps" make firm friends — if they are kindly!

Now, as I understand the matter, our conscience to which we all too infrequently pay heed, to our loss, is that friendly, warm-hearted whispering from above, which we feel as showing us the right and the wrong, and it comes from the stored up ethical wisdom in our being. It is not in the disputatious brain-mind: it is in the heart. It is the highest part of the human ego, the treasury of ethical experience, the accumulated wisdom of past lives, garnered and treasured in our higher parts; and as far as it goes its voice is infallible and powerful; but it does not go far enough to make its voice in our soul an infallible guide, because we have not had past human lives throughout eternity and we are not infinite beings, humanly speaking.

One man's conscience is strong; another man's conscience is weaker. Two reasons why: the one may be more evolved and may have learned to hearken more attentively to the inner monitor.

Therefore its voice is familiar, strong, and steady, and as we say, warm and sweet. We love that, and one reason why we love it is because it is so personal to ourselves. It is the highest part of each

one of us as a human being, whispering to us admonitions of right, and denying to us the ways of wrong-doing. It is the buddhi-manas part of the human being, garnering experience of past ages of births and rebirths, the echo of past sufferings and heart-aches from which we have gleaned wisdom and treasured it on the tablets of the Self. That is the conscience.

But higher than conscience is intuition: Intuition is infallible. Its voice is immeasurably infallible, because it is the whispering within us as it were of the truths of the Cosmic Spirit. It is a ray direct from the Divine Spirit in our hearts. Our conscience won't tell us the truth about a fact of Nature, nor whisper into our minds guidance along the paths of scientific or religious or philosophical discovery, because it is the garnered ethical wisdom familiar to the soul of each one of us. But the intuition will tell us instantly, it has instant vision of truth. Its voice is neither familiar nor unfamiliar. It is utterly impersonal. Its atmosphere is neither "hot" nor "cold." It is neutral in this respect; and it is the voice of the Atma-buddhi-manas within us, the Monad as H. P. B. called it.

Do you get the distinction? The conscience is our own treasury of spiritual-ethical wisdom. It is infallible as far as it goes, as far as we can hear its voice; and we can hear it ever more by practice, by training, by hearkening to it, by just recognising it and following it. But because it is only our own gathered treasury, it is not infinite, and therefore not in the true sense always infallible. But so far as concerns each one of you as individuals, when your conscience whispers to you, follow it, because it will whisper only when you are in danger, or when you are seeking to do aright: whereas the voice of the intuition is the voice of the Spirit within us, and it is infallible. It has no frontiers. It is, so to speak, a ray direct from the Maha-buddhi of the Universe; and we can allow intuition to become ever stronger within us, enlightening our minds and opening our hearts, by not being afraid of it, afraid of

having hunches, by not being afraid of following our conscience, and our intuitions when they come to us. They are coming to us all the time.

Most men are ashamed to act intuitively. They don't want to make mistakes. Prudential, yes! But it is only prudence, and uncommendable, cowardly and weak, and small, if it is merely because you don't want to begin to make a fool of yourself until you have learned more. The strong man is not afraid of making a fool of himself occasionally, because he knows that that very fact will stimulate him, awaken him, make him think; and after awhile he will not make a fool of himself. He will learn to trust his inner powers. That is the way to cultivate the intuition, by cultivating it; not being afraid of what is within you. Suppose you do make mistakes — what of it? By practice in its exercise the mistakes will grow fewer and fewer.

Make a companion of your conscience. The man or woman who has not heard the voice of conscience whispering in his soul, who has never felt its presence, is not truly human. You know what I mean by that companionship: we call it a voice which whispers to us, it is a light which lives within you always and which tells you what is right — to follow it, and what is wrong — to abandon it. Make a companion of your conscience, stimulate it, open your hearts and your minds to it. Your lives will be beautified, strengthened, made happier than now they are, because you will be following the voice within which is the accumulated Wisdom of the Ages.

Furthermore, just in proportion as you learn to know your conscience which is your own self, the higher part of you, and trust it and follow it, the more will intuition brighten your lives, bringing you knowledge direct, knowledge infallible.

THE ASTRAL LIGHT — *Major J. T. Arneson*

In all the fields of metaphysical research and study there is no subject more fascinating than the Astral Light, or as the Orientals call it, the *Akasa*. Before having given any particular thought to this matter I had my own pet theory about it. I reasoned that the light which shines on the earth carries out into space the events it mirrors. It is common knowledge that light travels through space at the rate of 186,000 miles per second. Therefore if one could project his vision out into space far enough he could reproduce any given event in history. According to this theory the picture of Washington crossing the Delaware still lives in space and could be visioned again if we could but catch up to the fleeting light rays.

But the matter is not quite as simple as that. My theory was all right as far as it went but it didn't go far enough, for the Astral Light not only reflects events but thoughts as well. To call it "light" is misleading; it is not light at all as we know it. It is a tenuous, imponderable medium which interpenetrates every atom of the earth, making impressions of the deeds and thoughts of men in indelible record.

In the Orient there is wide knowledge and acceptance of this doctrine. It is the earth's picture gallery in which the Masters of life, the Adepts, read the events of the past and of the future. It was by using its properties that many of the miracles of Jesus were performed. The great astronomer, Camille Flammarion, speaking of the Astral Light says:

The light emanating from all these suns that people immensity, the light reflected through space by all these worlds lighted by these suns, *photographs* throughout

boundless heaven the centuries, the days, the moments as they pass. . . . From this it results that the histories of all the worlds are travelling through space without dispersing altogether, and that all the events of the past are present and live evermore in the bosom of the infinite.

It is difficult to explain the workings of this "light." Students of the occult do not fully understand it, and it is wholly unrecognised by science. No doubt it originates in the stars and permeates every molecule of the globe. Its properties might be likened to the photographer's film. To the ancient Egyptians it was known as the "Recorder," and it is the Recording Angel of the Christian.

"As ye sow that also shall ye reap." So it comes about that our deeds as impressed into the Astral Light will return to us, to help us or to confound us according to what we have sown. This explains why "history always repeats itself." It frequently happens that pictures are projected out of the Astral into the minds of living men, and this accounts for much of our "inspired" literature.

Shakespeare said: "The evil that men do lives after them," and it is through the pictures of an evil past that the world of today is being influenced, for surely *we are influenced* by these pictures. And, by the same token, deeds of kindness done today, will, when reflected into the Astral Light, result in a better world for the future.

Some of the material used in this article is taken from the writings of W. Q. Judge, celebrated occultist. — J. T. A.

WHAT IS THE TRUE PATH? — *William Q. Judge*

The following paragraphs constitute the main body of the editorial with which W Q Judge launched his magazine *The Path* in April 1886. He there stated that his aim in this periodical would be to point out to its readers a true pathway in life, "and to investigate all systems of ethics and philosophy claiming to lead directly to such a path " As this was timely in the closing years of last century so will the reader today find it fitting and of pointed interest. Then as now all steps must lead to one goal, and that goal is not psychism, not practice in magic not the attaining of powers but simply "to apprehend the meaning of Universal Brotherhood " — Eds

The solution of the problem, "What and Where is the Path to Happiness," has been discovered by those of old time. They thought it was in the pursuit of Raja Yoga, which is the highest science and the highest religion — a union of both. In elaborating this, they wrote much more than we can hope to master in the lifetime of this journal, and they have had many kinds of followers, many devotees, who, while earnestly desiring to arrive at truth, have erred in favor of the letter of the teachings. Such are some of the mendicants of Hindoostan who insist upon the verbal repetition of OM for thousands of times, or upon the practice of postures and breathing alone, forgetting that over all stands the real man, at once the spectator of and sufferer by these mistakes. *This is not the path.*

At the same time we do not intend to slight the results arrived at by others who lived within our own era. They shall receive attention, for it may be that the mind of the race has changed so

as to make it necessary now to present truths in a garb which in former times was of no utility. Whatever the outer veil, the truth remains ever the same.

The study of what is now called "practical occultism" has some interest for us, and will receive the attention it may merit, but is not *the* object of this journal. We regard it as incidental to the journey along the path. The traveler, in going from one city to another, has, perhaps, to cross several rivers; may be his conveyance fails him and he is obliged to swim, or he must, in order to pass a great mountain, know engineering in order to tunnel through it, or is compelled to exercise the art of locating his exact position by observation of the sun; but all that is only incidental to his main object of reaching his destination. We admit the existence of hidden, powerful forces in nature, and believe that every day greater progress is made toward an understanding of them. Astral body formation, clairvoyance, looking into the astral light, and controlling elementals, are all possible, but not all profitable. The electrical current, which, when resisted in the carbon, produces intense light, may be brought into existence by any ignoramus who has the key to the engine room and can turn the crank that starts the dynamo, but is unable to prevent his fellow man or himself from being instantly killed, should that current accidentally be diverted through his body. The control of these hidden forces is not easily obtained, nor can phenomena be produced without danger, and in our view the attainment of true wisdom is not by means of phenomena, but through the development which begins within. Besides that, mankind in the mass are not able to reach to phenomena, while every one can understand right thought, right speech, and right action.

True occultism is clearly set forth in the *Bhagavat-Gita* and *Light on the Path*, where sufficient stress is laid upon practical

occultism, but after all, Krishna says, the kingly science and the kingly mystery is devotion to and study of the light which comes from within. The very first step in true mysticism and true occultism is to try to apprehend the meaning of Universal Brotherhood without which the very highest progress in the practice of magic turns to ashes in the mouth.

We appeal, therefore, to all who wish to raise themselves and their fellow creatures — man and beast — out of the thoughtless jog trot of selfish everyday life. It is not thought that Utopia can be established in a day; but through the spreading of the idea of Universal Brotherhood, the truth in all things may be discovered. Certainly, if we all say that it is useless, that such highly-strung, sentimental notions cannot obtain currency, nothing will ever be done. A beginning must be made, and it has been by the Theosophical Society. Although philanthropic institutions and schemes are constantly being brought forward by good and noble men and women, vice, selfishness, brutality, and the resulting misery, seem to grow no less. Riches are accumulating in the hands of the few, while the poor are ground harder every day as they increase in number. Prisons, asylums for the outcast and the magdalen, can be filled much faster than it is possible to erect them. All this points unerringly to the existence of a vital error somewhere. It shows that merely healing the outside by hanging a murderer or providing asylums and prisons will never reduce the number of criminals nor the hordes of children born and growing up in hot-beds of vice. What is wanted is true knowledge of the spiritual condition of man, his aim and destiny. This is offered to a reasonable certainty in the Aryan literature, and those who must begin the reform are those who are so fortunate as to be placed in the world where they can see and think out the problems all are endeavoring to solve, even if they know that the great day may not come until after their death. Such a study leads

us to accept the utterance of Prajapati to his sons: "Be restrained, be liberal, be merciful"; it is the death of selfishness.

The Theosophical Forum

HOW THE HUMAN SOUL RETURNS TO EARTH — *G. de Purucker*

Talk given at the close of a study-meeting of the Headquarters Lodge, Point Loma, California, September 10, 1939. This talk taken in shorthand was not transcribed until after Dr. de Purucker's death.

I have listened with deepest sympathy to the generosity towards each other's views which you have all shown in your study this evening. All of us remember that knowledge is marked by modesty, because knowledge knows its own limitations, and therefore is never dogmatic. I have noticed also that you are patient with each other for using words in different ways. Your minds are not water-tight compartments which would not hold ideas of other people.

Now in regard to this matter of "rays" or "waves." We Theosophists of many, many years' study have developed a terminology of our own which younger students do not yet fully grasp. When they do grasp it they will see that it is good. We speak of a "ray" from the sun. The sun has been emanating countless rays through the aeons, and each such ray is a wave, an energy if you want to use the language of modern science, a language which will be changed in thirty years from now when scientists know more. This is one of the difficulties that a Theosophist has to contend with, to remember that he himself is using a highly technical series of terms which he and others like him understand, but which the non-Theosophist who has not studied Theosophy does not grasp; and therefore does not understand what the Theosophical speaker is talking about half the time. We should never forget that; and consequently when you people differ, it is not really about ideas that your minds are

at variance. I would wager almost anything that ninety-nine times out of a hundred it is about words.

Now I want to say, Companions, that I desire brief speech with you upon two thoughts. The first is about these life-atoms and reproductive germs and so forth. I do not think it is good to think too much about these things and talk about them too much, and I am always amazed to see the intense concentrated attention with which an audience listens to them. They may interest doctors; it is their job; but there are so many more and vastly more interesting things to study.

Now in the first place, reimbodiment is not a haphazard thing, as of course every one of you understands. It is all done by the laws of nature, and by nature I do not mean physical nature, I mean it in the old occult way of speech. So that the imbodiment, the reimbodiment, of an ego takes place strictly according to karmic law, and karman means cause and effect, cause and consequences, the y following the x . If you do something, nature will react upon you for that act. That is karman. You may react in a billion ways. That action and reaction may take a billion years to run itself out. The reaction may come at once, or it may be thinly spread over millions of years. Who can say? It depends upon the originating cause.

So that the reimbodiment of an ego is just as much a fact of nature's laws and nature's actions and reactions as is the physical birth. Now the ego in the devachan lives in an auric sphere as it were, an ethereal rupa. Its size may be anything. It may be co-extensive with the solar system. The probability is that it is, as far as mere physical extension goes, infinitesimal, for magnitude has nothing to do with consciousness. Magnitude is a maya. of our plane and of our brain-minds.

However, the ego in its devachan enjoys blissful dreams. Then

there comes a time at the end of long centuries, or long periods of scores of years, when the forces which had brought about this sleep and rest to the devachanic entity begin to weaken, to work themselves out. The devachanic sleep and bliss is fading gradually. But what is taking place coincidentally? There is taking place a slow awakening to a sense of consciousness of the old human earth-attractions. These enter the dream-state of the devachani as dream-recollections of what it had been, and what it had seen and heard and thought and felt — beautiful things, however, because it is still in the devachan. Now these are the recrudescences into the consciousness of the ego of the tanhic elementals held in the ether-body of the ego. Hitherto the dreams of the devachani have been too high or too spiritual for these rather earthly things to have any effect on the ego. But as the devachanic dreams begin to fade, die out, grow darker as it were, these tanhic, these trishnic elementals begin to grow in activity in the ether-body of the ego, as I have already said. What does this mean? It means a thickening or a coarsening of that auric body, that higher ether-body; and slowly as it were the entity drops, is attracted because of his materialized body, downwards towards this sphere. It may take centuries for this to happen, or a few score years, according to the individual karmic case.

Now then, to phrase it otherwise, there arises in the ether-body of the devachani a growth in memory of earthly things. Its own past life comes back into its recollection, very feebly at first, stronger as time goes on. In other words there is a thickening, as I have stated, a coarsening, materializing of this vehicle. This is the beginning of the growth of what we call the linga-sarira, the pattern-body around which our gross sthula-sarira, the physical, is builded atom for atom. Thus does the man reproduce himself from the last life — consequences, karman.

I have already said that magnitude has nothing to do with it. Let

us suppose that the ether-body when this takes place is the size of an apple. After all, how large is a human life germ? But in this beginning of the linga-sarira there resides a growth potency — supply your own term if you do not like that, we won't quarrel about words — a growth potency, the same kind of swabhava, as we call it, which makes an apple seed produce an apple and not a rose or a strawberry or a banana or something else; that makes a plum seed always reproduce a plum and not some other kind of plant. In other words there is in this linga-sarira the capacity to develop along its own karmic laws into the linga-sarira and the physical body of the man, the child to be born.

But before this stage is reached, on account of the attractions of this ray descending from the auric body — call it a ray, call it a wave — on account of the attractions of this back to its familiar fields of life on earth, as it were a magnetic or electric contact is established in exactly the same way in which the thunderbolt will strike this tree and not that one. There is a reason for this.

Everything in the universe works by law. There is no chance. The same principle of selective choice works in the case of the thunderbolt and in the case of the human ego selecting its own mother; not consciously in the way we might think it is done, but by a conscious human electricity as it were, sympathy, synchrony of akasic vibration. We call this a projection of the ray; and that is what I have alluded to in *The Esoteric Tradition*.

Now here comes the point: In any human being there are innumerable multitudes of life-atoms which are strictly his own atoms of life, life-atoms, jivas, originating in his own vital font or fountain, and looking upon him as their parent. Suppose we say, just as a speculation, because no one could say how many life-atoms the human body contains — I doubt if the gods could — but suppose that we say a human body contains of these particular life-atoms a hundred billion. And after his death these become

distributed among the two billion or so inhabitants of earth; so that when a re embodying ego thus seeks its physical house or sthula-sarira for its next im-bodiment it is sure to find sympathetic attraction to and therefore lodgment in any human body. This contact of the ray from the ego with the life-germ — germ if you please in the body of the two parents — is a contact with life-atoms that that ego used in its former body on earth. The thing seems complicate simply because it is new to most folk. And by the way, this is one of the reasons that explains what we call the fertility of races and the ability of some stocks of beings to cross, miscegenate, and others not.

Now of course it is obvious that some family milieu, some families, would give an ego a happier home and a happier physical body than other human couples would. You can understand that, and it is the automatic endeavor, run by nature's laws, of a re embodying ego always to seek the happiest home it can find. It has the instinct to do so. It does not do it self-consciously. It is nature that does these things, for such happiest home is for the re embodying ego the line of least resistance. Remember, it is still in the devachan, and its spirit is not in full control. This is the reason why also — and this is a delicate subject, I hope you will forgive it — this is the reason for the moral weight of the teachings given to men and women to be careful in their relations with each other, for egos are attracted to both men and women in the manner that I have endeavored to describe, and they are attracted with tenfold force when a man and a woman feel affection for each other, if that affection be real. In fact a mere flirtation you can see to be wrong, because that sets up a kind of synchrony of vibration between the couple. I wonder if you see what I am trying to drive at.

It is the damnable, abominable materialistic science of the last hundred years which has wrought such mischief in the world,

and has brought about the conditions that exist in the world today everywhere, teaching men that they are no better than beasts, apes, of a slightly higher kind, and that therefore it matters not what they do, that the thing to do is to get and to hold. That is a doctrine out of hell. Once the moral law is lost from the conscience of man, civilization is doomed.

The Theosophical Forum

THEOSOPHY AN OBJECTIVE IDEALISM — *Abbott Clark*

Among philosophies Theosophy is an Objective Idealism. This subject takes us into the profoundest thought to which philosophy or religion has soared. With individuals, and nations, races or ages the highest conception which they can reach they call God. To the more philosophical, metaphysical and spiritual minds in any age the average or orthodox conception of God will appear as but a caricature of the Infinite, Eternal and Absolute.

Two of the most profound conceptions in human thought are symbolized under the word Parabrahman of Brahmanical thought and the word SPACE as used in Theosophy. Brahman stands for the most metaphysical and abstract conception of god, while the Sanskrit word *para* means beyond. So Parabrahman stands for That which is beyond all the gods and therefore beyond all the utmost reaches of human thought. Space as used in Theosophy is that abstract and boundless principle.

Theosophy is called an Objective Idealism because it recognises, with all religions and the more spiritual philosophies, that the fundamental Reality of the universe is ideal, divine and spiritual. And that all manifested worlds from the highest spiritual to the most material are but phenomenal, relative and transitory manifestations of divine life and thought, yet they all appear as real to the intelligent beings enmeshed in them.

Let us illustrate this by beginning with ourselves on the most material plane. To the unthinking man who lives mostly in his senses, gratifications and disappointments, the pleasures and pains and accompanying sensations and emotions, constitute the real world. But to the more intelligent man they constitute only the external and transitory part of his life. His real world is one of

thought, of hope, aspirations and ideals. He clothes himself with atmosphere of thought which is the world in which he lives and moves and has his being. This thought-life may be said to be midday between the material and the spiritual, deriving its inspiration from contacts at one time from the material and at another from the spiritual. As a man advances on the return journey from the material to the spiritual his thought life becomes more and more enlightened by spiritual intuitions. He does not lose what other men possess, but gains knowledge and wisdom, judgment and discretion. His mind and consciousness expand and they grasp and live more and more in the truth and beauty of the larger and higher life. In proportion as he becomes in consciousness at one with the immanent and transcendent divinity, just to that degree does a man become consciously immortal though living in transitory bodies of short duration. Such a man has returned, or can return at will, to the ideal source of his being. He emanated from the divine as an unself-conscious god-spark — a monad or ray or stream of divine life and energy — and returns from the long "Cycle of Necessity" as a self-conscious god, a cosmic creator. This age-long cosmic process is analogous to that of a little child who begins as an innocent and ignorant babe and finally in maturity becomes a wise and benevolent statesman able to guide the destiny of a nation.

The Theosophical Forum

THE PROBLEM OF GOD AND EVIL — *Henry T. Edge*

Theosophists with a message for the world must know what that world is thinking and saying; else there can be no point of contact, and Theosophists may fail to command attention. So this magazine fulfils an important function in reviewing current literature on topics interesting to Theosophists; and we accordingly welcome this book by so competent a pen as that of the well-known philosopher, Professor Joad. He reviews, at considerable length and with much perspicacity and masterly sorting and arrangement of topics and headings, the question of religion in its relation to the life of today; giving special attention to the problem of evil in a world supposed to be ruled by a beneficent deity. Present stress has forced most people, including Professor Joad himself, to take stock with a view to recasting their ideals: evil is so conspicuous that we cannot afford to explain it away and put the problem on a high shelf. Though the author has marshalled a vast array of opinions and -isms and -ologies, he admits that he has not covered as much ground as might have been possible, had he taken more account, for instance of Oriental philosophies. Such a limitation of field is however in accordance with his main purpose of giving a picture of what the Occidental world is thinking today.

In his introductory remarks he makes an important distinction between the meaning of knowledge as viewed respectively by religion and by reason — the contrast between faith and reason, or between intuition and intellect. The latter insists on the separation of Knower and Known, or Subject and Object; the former merges this distinction by the declaration that in real knowledge the Knower becomes identified with the thing Known. A dialectical treatment of the subject, like the present one, must

necessarily take the rational view, albeit it may recognise the existence and value of the religious viewpoint. The latter would have given us a book of sermons or an *IMITATIO CHRISTI*.

But the religious way of life cannot be lived without assistance; we are inherently sinful (says religion), and therefore need the help of divine grace, which is evoked by prayer. This view has been fortified of late by our inability any longer to interpret evil as a byproduct of circumstance; it must be endemic in the heart of man.

The truths of religion, he finds, are not self-evident; for in reading "The World's Bible," a large book containing lengthy extracts from most of the world's sacred books, he finds that there is no consensus as to whether God created the world, or whether existence or non-existence came first. A great deal is said as to the numerous theories about evil; by-products of free-will (but pain exists among the insects); that good and evil are opposites (but then are they "logical opposites," such as the outside and inside of a basin, the one of which entails the other; or opposites in the sense of wet and dry, either of which can exist apart?). He decides that they are not logical opposites; if they differ only in virtue of their mutual contrast, why prefer the one to the other? Since men do not pursue evil just because it is evil, but for some expected benefit, it would seem that good is independent, just as a light may exist without a shadow. Evil does not answer an end in itself, but good does. But those who wish to travel in this maze of speculation must read the book for themselves.

As to the supposed need of a God to account for a universe, he points out that we have only shoved the difficulty a step farther; for how account for God? We may just as well accept the mystery of a universe without God as accept the mystery of God. Then comes the question whether God is within or without the chain of

causation. If he is without, how did the chain originate? If within, what becomes of his absoluteness? This leads to discussion as to views that have been held, and views which are now held, as to the nature of Cause. The last century view was inconsistent in itself: matter was conceived as made of separate units; how then could cause and effect operate between them? And the same in philosophy, as regards events: if they are separate, where is the causal nexus? And Hume's opinion on that subject is cited. But today, both in science and in philosophy, we recognise that there is no such separation: atomism has been replaced by continuity, whether it is particles or events that we are considering.

Such a full and detailed survey as we have here does not lend itself readily to a brief review, but the author is considerate enough to provide us with a short summary, which we must in our turn attempt to summarize. The balance of logical argument is against the view that the universe is the creation of an omnipotent benevolent God. But argument must be supplemented by data from other realms of experience, aesthetic and moral. We must take into account "values," here regarded as outside the evolutionary process of change. The claim of mystics may thus be allowed; and though their findings differ, the balance seems to favor those who assert a "personal" deity, as against a universal impersonal consciousness. The impersonal God obviates the objections as to omnipotence and benevolence, but affords no firm foundation for the significance of moral experience. The Christian claims as to the uniqueness of Christ and original sin and redemption are implausible. God did not create evil, nor is it wholly due to man's misuse of freewill: the principle of evil is probably independent of God. This is the dualistic view. Finally, the author judges in favor of a religious view of the world, and his agnosticism has now inclined toward the positive side of agnosticism. This means that the universe has

a purpose, this life is not all; otherwise this life is a cruel and incomprehensible joke.

Coming now to a few comments on the above topics, as seen from a Theosophical viewpoint, we must mention first the Esoteric Tradition, or Wisdom-Religion, the common parent of all faiths and great philosophies. Though the tenets of this parent religion can be discerned in each of its children, and thus the existence of a uniform foundation can be proved, yet religions in their present form are found to be obscured by overgrowths and corruptions which have rendered their differences more apparent than their unity. Nevertheless there do still exist, in many cases if not all, schools of esoteric teaching behind the outer veil of these faiths; and this is particularly the case with Oriental religions. To take an instance, Professor Joad refers to Persian dualism, and though allowing that such a duality implies a synthesizing or primal unity, does not give sufficient weight to this circumstance. The conception of unity in duality was an essential part of the original Magian doctrine, and we must draw a distinction between esoteric teaching and exoteric, as also between the original teaching and its later degenerated forms. Ormuzd and Ahriman are emanations from Zerouana Akarana or Boundless Time, which latter itself issued from the Supreme and Unknowable Principle. Thus we have not only a One behind the Two, but another One behind the first mentioned: the analysis carries us two stages farther. This teaching is confirmed by reference to other ancient systems, and is thus identified as a cardinal tenet of the Esoteric Philosophy. Ormuzd and Ahriman represent Good and Evil Thought. Further, it is necessary to take into account Cosmic Evolution, for the appearance of this duality represents a particular stage in such evolution. We see from this that what appear to be contradictory or alternative hypotheses may really be supplementary, each giving a view of the Universe at a

different stage of evolution, and neither view complete without the others.

The problem of Good and Evil fits in well here, since this contrast arose at the stage when the One became Two, when there set in that duality which is the inalienable characteristic of the whole manifested universe. Neither quality can be predicated of the One. There is no such thing as Evil in itself, no personal Devil or evil power. Good is harmony, wholeness; and Evil, like a shadow, is revealed as a contrast, discord, incompleteness. Moreover the two terms are relative to each other and thus variable in their meaning. The existence of strife and pain in the lower kingdoms is a concomitant of the stage of cosmic evolution in which we are at present. Man must encounter evil, but should not will it: this is a mystical as well as a Biblical injunction. More might be said on this subject, but we may conclude it with the remark that our author would certainly agree that, if we could only define the words Good and Evil satisfactorily, there would probably be no problem left to solve. As to the practical or pragmatic aspect, is it not that man must cease to importune the heavens and must pull himself out of his scrapes by the use of his own innate divinity?

Another important point, which makes a vast difference in our views on every subject, is that the universe is not static but is ever-becoming. Science today is giving up the idea of examining a stationary world, and is recognising that "everything flows." We live in a four-dimensional world, but have not yet acquired free movement in the time dimension, so that we can only see the universe in slices. We thus get a distorted view, or rather, many distorted views, like the attempts to draw a plane chart of a spherical globe — a set of compromises, disagreeing with each other, but all blending into one truth when we survey the globe itself. Unless we keep this in mind we shall fall into error by assuming that conditions which are merely local and temporary

are universal both in time and space.

The term "God" stands for a variety of conceptions, which should be regarded as complementary rather than alternative. Platonism and Neo-Platonism postulated a Demiourgos or workman as the builder of this world, but did not confuse him with the Supreme Deity. The existence of imperfection is thus accounted for without impugning the benevolence and omnipotence of the All-Wise; for this Demiourgos was but a minor power in a hierarchy of powers. Moreover this world is but one of a number of worlds preceding it and following it both in space and in time. It may be sufficient and prudent, when restricting our inquiries to regions which more immediately concern us, to ignore these other worlds and the whole subject of cosmic evolution; but if we "presume God to scan," we must be prepared to find that we cannot measure his mighty works by our own local foot-rules. In Christian theology we find that lesser creative Gods have been confused with the Supreme Deity, thus giving rise to the vexed problems alluded to above.

The above may be summed up by saying that the difficulties are due to taking a too limited view. For practical purposes it is convenient to take such a limited view; only in that case we must be content with suitable assumptions without probing into their essential validity or their mutual consistency.

WEBS OF DESTINY — *Ila Barborka*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

Webs of Destiny — fashioned by our thoughts and actions throughout countless incarnations! How we have become enmeshed in the folds of our own weaving; and, indeed, are hampered, or mayhap speeded, in our progress along life's journey from day to day by these webs of our own making.

Many people are confused in their outlook upon life: it is because they think in terms of one life: they become bewildered and discouraged by life as they see it today — with its tragedies, its suffering, its cruelty and apparent injustices. They ask, why? — Why do these things come to me? The answer to the question lies in a knowledge of the teachings of the Ancient Wisdom. As a soothing draught to parched lips comes the message: think in centuries — not in terms of one life only. Do not regard the events of this life as the be-all and end-all, but view this life as but one in a long succession of lives — stretching back into the very dawn of time and out into a future of limitless horizons of consciousness.

Let us go back in thought to the very fountain of Truth itself, expressed, as it has been, in the fundamental propositions of the Ancient Wisdom. A belief in, and an understanding of, these fundamental propositions gives us the explanation of our subject — The Webs of Destiny. Let us review them briefly, as stated by H. P. Blavatsky in *The Secret Doctrine*.

First: An Omnipresent, Eternal, Boundless and Immutable Principle — Parabrahman, the Boundless. To attempt to define

this is but to limit it, yet it envelops us, and we are in it, for it is the Source of All.

Second: the Eternity of the Universe. The eternal unbreakable stream of consciousness of all beings: life-consciousness eternally manifesting itself in periods of activity to be followed by periods of rest: an appearance followed by a disappearance. Here we have the teaching of reïmbodiment: a universal cosmic law which all things must follow — the law of periodicity, action and repose, day and night, waking and sleeping: expressed in the East by the Day of Brahma and the Night of Brahma.

Third: the fundamental identity of all souls with the Universal Over-Soul, and the obligatory pilgrimage for every soul through the cycle of incarnation, in accordance with cyclic and karmic Law. In this third fundamental proposition of the Secret Doctrine we find the essence of our subject — Webs of Destiny: the Oneness of all Life, springing from a Central Source of Life; and the Pilgrimage of all souls on the Cycle of Incarnation, and the cyclic and karmic Law.

To fully understand the law of Karman, we must study it with its twin-doctrine of Reïmbodiment: we cannot understand one without the other. Let us remember then that we are all one in essence, parts of one great whole, and whatever affects one part affects the whole, however infinitesimal. "You cannot touch a flower without troubling a star," said the poet, expressing the same idea.

Coming under karmic law — which has been popularly called the law of cause and effect — our thoughts, our feelings, and our actions are the producers of causes which will one day come back to us as effects; and because we are all linked together by our common divine origin, our thoughts and actions act and react not only upon ourselves but upon others. We are linked together, and

our individual webs of destiny are inextricably woven with the webs of destiny of every other living entity. In *The Key to Theosophy* H. P. Blavatsky has this to say upon this theme:

the interdependence of Humanity is the cause of what is called Distributive Karma, and it is this law which affords the solution to the great question of collective suffering and its relief. It is an occult law, moreover, that no man can rise superior to his individual failings, without lifting, be it ever so little, the whole body of which he is an integral part. In the same way, no one can sin, nor suffer the effects of sin, alone. In reality, there is no such thing as "Separateness."

— p. 203

As we live we can raise the whole level of the world's consciousness: we can add our efforts to the forces of Light, or by sinning we lower the whole level. What a sense of responsibility this gives us!

Karman is the great law of readjustment: it tends to restore disturbed equilibrium and restore harmony: for there is a cosmic law of harmony and our actions produce effects which disturb this law of harmony and equilibrium. Consequently man's acts react upon himself and will do so until he learns to live in such a way that he no longer breaks this universal law. Pain and suffering and tragedy are the results of a want of harmony. The greatest disturber of harmony is selfishness in some form or other.

There is a very simple rule for curing this: Think of the other fellow; share with him when you can; learn to understand; to forgive; to sympathize. Be considerate, for he, like you, is a pilgrim on the path, with his problems, similar to yours or maybe quite different. He too is working out his web of destiny, which may or may not be interlinked with yours. But he is your brother,

nevertheless.

With the Ancient Wisdom there is no outside influence or deity that rewards and punishes. There is justice in the thought that the things which are ours, the things which belong to us, shall come to us, good or ill. If we truly believe this then we can accept *all things*, feeling that all is just. Upon this concept then, we may weave the pattern of our lives, weave for ourselves our web of destiny: that web, fashioned from the threads of action woven not only in this life but through the countless lives preceding this present incarnation; and because of the interaction and interdependence of all beings, our webs of destiny are united with the webs of destiny of all our fellow-pilgrims on the evolutionary pathway.

Nothing happens by chance in this world; every event in our lives is the result of preceding causes, and as said in *The Esoteric Tradition*:

what men popularly call chance or hazard or even fortuity, is merely what knowledge or research or investigation has not yet brought sufficiently to light as being a link or links in the chain of universal causation. — p. 471

I have always found this idea of the webs of destiny a very fascinating and extremely interesting topic; for it touches us all so closely in our daily lives: in our relations to events, individual and national; our associations with people, whether intimately in the family relation or in a wider more general association, in the municipality, state or nation. For in this particular aspect of the ancient Wisdom, in this facet of the jewel of truth, lies the answer to the many problems which perplex and puzzle so many, many people. Why are we here? What is the purpose of life? Why do we suffer? Why must such horrible catastrophes affect mankind? Why must my son die while others live? Why am I poor when

others are rich? And why all the apparent injustices we meet with everywhere? All answers to these questions are summed up in the words: Webs of Destiny.

Nothing happens by chance in the world. Is it by chance that we are here, at this particular time in the world today — engulfed as it is by a world catastrophe? No! We so acted in some other nation in the past that today we reap the harvest of the seed sown in those far past ages. We *were* that nation. For remember that nations as nations disappear, but the entities composing that nation reappear as other nations. Let us not ask ourselves: Was it in Babylon, in Assyria, in Egypt, in Rome, in Greece? — that does not matter. What does matter and what brings us together today at this time is that we are all drawn back by karmic ties to the nation and with the people who formed that particular nation in the past: here to work out in suffering and sorrow, in joy and happiness, the result of our deeds, our thoughts and our feelings in those far past ages.

Karman is not fate; man is not the will-less victim of an inscrutable fate. It is the teaching of the Ancient Wisdom that "Man is a *willing* agent throughout his beginningless and endless course of destiny — in other words, he constantly exercises his modicum of Free Will" . . . — *The Esoteric Tradition*, p. 472

The Theosophical Forum

DEATH AND IMMORTALITY IN LITERATURE — *Stanley Zurek*

It is said that we fear that which we do not understand. The man in the street, for instance, fears death for the simple reason that he does not understand it, much like a child on the threshold of a dark room. The child fears to enter the room because it does not know what therein lies ready to spring upon it. But flood the room with light, and the child's fears disappear instantly, and he enters with calm assurance and perhaps even wondering at his earlier unwarranted fears.

So it is with death — men fear it because they do not understand it. In fact, some think it is utter annihilation, utter extinction of the man or woman they had been, and are thus afraid of destruction. But show them, explain to them, flood with the light of knowledge, the mysteries of death, prove to them that they are immortal, and their fear is gone.

One way, I feel, to prove to men, or, if not prove, at least to set them thinking that man is immortal, is to quote from ancient and modern literature on this subject. People like references to works they are familiar with, and their belief and confidence in a thing is greatly strengthened if they discover that the great writers, philosophers and religious teachers of ancient and modern times believed in the particular doctrine we are expounding.

It might not be amiss to relate here a personal experience to prove this point. Some years ago I had occasion to speak to a divinity student from Harvard, who was sitting beside me on a trip from Boston to New York, reading Plato. During the course of our conversation on Theosophy I mentioned Oliver Wendell Holmes' *The Chambered Nautilus*, as a reference to Reincarnation. The student's eyes lighted up, for it was one of his favorite poems

and he knew it by heart, and he immediately recited it for me. It is certain that I made more of an impression right there to further my point — by referring him to something he was familiar with and loved — than I did by mentioning works he was not familiar with, all important and absolutely necessary though these latter are for further study.

From this it occurs to me to suggest that it might be well, when dealing with inquirers, to pepper well our "sales talk," as it were, with quotations from the ancient and modern classics to bolster up our arguments. Much the same principle, I believe, as explaining to people the inner significance of the familiar fairy tales of our childhood. People are more fascinated with the thought that there is something deeper behind these *familiar* tales of their childhood, than they are in an explanation of the inner meaning of stories entirely *unfamiliar* to them.

What, then, are some of these references to death and immortality which we can mention? We will take a few in chronological order.

INDIA

First of all, let us take the great epic poem of India, the *Mahabhdrata*, and especially that portion of it so readily available in Europe and America, the *Bhagavad-Gita*. Therein, as all Theosophists and students of the Eastern literatures know, the Spirit in man, Krishna, the Inner God, states unequivocally, that man is immortal: "Those who are wise in spiritual things grieve neither for the dead nor for the living. I myself never was not, nor thou, nor all the princes of the earth; nor shall we ever hereafter cease to be." — Chap. II

The *Bhagavad-Gita* is today a standard literary classic, and, as such, will not be unknown to well-read people. Emerson had it on

his desk at all times, we are told, and mentions it in his essays on *Literature* and on *Books*. Henry Thoreau, who was, incidentally, Emerson's best friend, also was a student of it, and it is to be found in volume 45 of the famous Harvard Classics, in the Sir Edwin Arnold translation. It is likewise included in two of the recent best-selling anthologies — in its entirety in Lin Yutang's *The Wisdom of China and India*, and extracts from all of the eighteen chapters in Robert O. Ballou's *The Bible of the World*. Likewise, together with H. P. Blavatsky's *The Voice of the Silence*, Sir Edwin Arnold's *The Light of Asia*, and Mabel Collins' *Light on the Path*, it is included among standard classics in the series entitled *Pocket Classics* published by David McKay of Philadelphia. This house, incidentally, also publishes beautiful illustrated gift editions of *Song Celestial (The Bhagavad-Gita)* and *The Light of Asia*.

EGYPT

Egypt has bequeathed to us the *Book of the Dead*, wherein are depicted the adventures of the soul after death, thereby attesting belief in the immortality of the soul. H. P. Blavatsky, in her *Isis Unveiled*, Vol. I, pages 517-18, quotes Professor Carpenter to the effect that the passages from the *Book of the Dead* engraved on the old monuments, relating to the ancient belief in the immortality of the soul, are not only identical in thought, but in language, to that to be found in the Christian *New Testament*. On page 548 of volume II she quotes a few parallel passages from the *Book of the Dead* and *Matthew*.

GREECE

In Greece we have the *Odyssey*, in the 11th book of which Homer describes the visit of Odysseus to the Underworld, and the converse he held there with the souls of men and women recently dead, and those who had passed away in earlier times; thus, here

again, showing the existence of souls after death. An interesting example of the symbology used, and of the veils hiding yet revealing the truth to intuitive minds, is the fact that only those souls which Odysseus allowed to drink of the dark blood of the sheep he had sacrificed and bled into the pit he had dug, knew him and volunteered to tell him the truth of what he wished to know, his own departed mother included. This is an interesting point for Theosophical students to speculate upon and endeavor to fathom its real significance. Shall we say that perhaps only those of the souls of the departed deigned to speak to Odysseus whom he, through his own efforts, had given the vitality or ability, as symbolized by the sacrifice, to do so? In other words, we are enabled to communicate with the departed by rising to *their* planes, as in sleep, by our own efforts, whereas the departed are not able to come down to our plane, as is pointed out in *The Key to Theosophy*, page 30.

Then there is the great Plato, who in his *Dialogues* also speaks of the immortality of the soul. In his *Phaedrus*, for instance, he speaks of the soul in relation to material life and the necessity of reincarnation before souls can reach the stature of gods. And in his 10th book of the *Republic*, he gives his famous Vision of Er, the Pamphylian, who, after ten days on the battlefield, was taken for dead, and removed to the funeral pile, where, however, he came to life again and described what he had seen in the Underworld, and of the souls he had seen of those who had but recently died, and those that were coming back into incarnation on earth.

ROME

In the 6th book of the *Aeneid* of Vergil, the Roman poet and Initiate, we have Aeneas descending into the Underworld, where he converses with his departed father, and where he likewise sees not only the souls of the recently departed, but also those on their

way to earth for incarnation anew. Among the latter is his son-to-be, Silvius. One cannot help but note the similarity of the respective narratives of Plato and Vergil, both Initiates, regarding the incoming and outgoing souls.

The Latin philosopher Apuleius, in the 4th, 5th, and 6th books of his *Metamorphoses*, or, as it is more commonly known, *The Golden Ass*, relates the famous fable of Cupid and Psyche, wherein Psyche, in one of the tasks imposed upon her by Venus, descends into the Underworld, the abode of the souls of the dead. Thus, here again, is shown the existence of the soul after death of the physical body on earth.

And in his 11th book of the same work, Apuleius speaks of his own initiation into the Mysteries of Isis, and says that he "approached the confines of death" and "trod the threshold of Proserpine," meaning his descent into the Underworld — again, the abode of the souls of the dead.

These are just a few specific instances of classical writers who speak of the immortality of the soul. And here I should like to add, that, as the immortality of the soul is so closely tied up with the doctrine of Reincarnation in our philosophy, the volume *Reincarnation, A Study of Forgotten Truth*, by E. D. Walker, is a storehouse of references to standard works, ancient and modern, wherein Reincarnation, which, of course, implies immortality, is referred to. Numerous references to immortality, of course, may be found in the Bible, but from a Theosophical speaker's and writer's standpoint, it would be well to connect these with the Biblical passages referring to Reincarnation, thus making the picture complete.

ENGLAND AND AMERICA

In coming to more modern times, we might mention, Dante's *The*

Divine Comedy, Shakespeare, and Milton's *Comus* and *On the the Death of a Fair Infant*, where he speaks of Reincarnation. Other references, as mentioned, are to be found in Walker's *Reincarnation*.

Finally, we now come to two great names in American literature: Longfellow and Emerson, who were contemporaries. Longfellow, for instance, says in *Psalm of Life*:

Life is real! Life is earnest!
And the grave is not its goal;
"Dust thou art, to dust returnest,"
Was not spoken of the soul.

And, in conclusion, let us take Emerson, who has been called the Plato of the 19th century. Besides other references in his writings, he has written a complete essay entitled *Immortality*, and I believe that I can do no better than quote a few outstanding passages from this intuitive essay, with the observation that the beauty of quoting from Emerson is that akin to quoting from Plutarch — we not only quote Plutarch and Emerson, but likewise the words of the numerous great minds whom *they* quote, thus broadening and opening up new approaches to and giving us further references to our subject.

Emerson says, in his essay on *Immortality*:

There never was a time when the doctrine of a future life was not held.

Plutarch, in Greece, has a deep faith that the doctrine of the Divine Providence and that of the immortality of the soul rest on one and the same basis.

Nature does not, like the Empress Anne of Russia, call together all the architectural genius of the Empire to build

and finish and furnish a palace of snow, to melt again to water in the first thaw.

Franklin said, "Life is rather a state of embryo, a preparation for life. A man is not completely born until he has passed through death."

"To me," said Goethe, "the eternal existence of my soul is proved from my idea of activity. If I work incessantly till my death, Nature is bound to give me another form of existence, when the present can no longer sustain my spirit."

I am a better believer, and all serious souls are better believers in the immortality, than we can give grounds for. The real evidence is too subtle, or is higher than we can write down in propositions, and therefore Wordsworth's Ode is the best modern essay on the subject.

And in his narration of the legend of Yama, the Lord of Death, and Nachiketas, taken from the *Katha Upanishad*, with which Emerson ends this essay, he quotes Yama as saying:

"The soul is not born; it does not die; it was not produced from any one. Nor was any produced from it. Unborn, eternal, it is not slain, though the body is slain, subtler than what is subtle, greater than what is great, sitting it goes far, sleeping it goes everywhere. Thinking the soul as unbodily among bodies, firm among fleeting things, the wise man casts off all grief."

TRANSFORMISM IS NOT EVOLUTION — *Charles J. Ryan*

A few years ago the French journal *L'Ami du Peuple* published reviews of two books on Evolution which are even more significant today than ever. In the first, Professor L. Vialleton, distinguished embryologist of Montpellier, discusses "Transformism" as opposed to "Evolution," in almost perfect consonance with the Theosophical point of view. The reviewer quotes Cyrano de Bergerac:

An hour after death the soul vanishes to
re-become what it was an hour before birth,

and asks "what was that? Did it exist in the infinitude, in "the States of the Sun and of the Moon" which Cyrano is said to have journeyed in?" Perhaps. Turning from that profound mystery to the more practical subject of the origin of species the reviewer speaks of the struggles between "the more or less damaged theories of theology and science," showing that there is an increasing approach between them, the former becoming freer and the latter less materialistic.

A significant remark of Prof. J. S. Haldane's comes to mind:

Materialism, once a scientific theory, is now the fatalistic creed of thousands, but materialism is nothing better than a superstition on the same level as belief in witches and devils.

Prof. Vialleton's book is a demonstration that transformism as the *reason* for the various species of living forms is a pure illusion, and his arguments are derived from the most recent researches in embryology. He shows that the "missing link" between the various species is everywhere lacking. Species do not fit into one

another like the ingenious Chinese boxes, he says; or, as others have also said, "end-on" evolution is not found in nature. Prof. Vialleton claims that biology proves that the laws of heredity are carried on solely *within the limits of specific types*, and that structures belonging to each type are not reproduced outside its limits. This is perfectly in harmony with the outline of the evolution of types given in *The Secret Doctrine* where it is shown that the fundamental types of animals and plants — archetypes, they may be called — originated in a superior plane of Intelligent Causes. When these generalized planes were "precipitated," as it were, into physical activity, minor modifications of great variety appeared by so-called "natural" means and formed the species which are contained in the larger outlines.

Prof. Vialleton examines, in this connexion, the fossil remains of ancient man and concludes that the "human type is a highly particular and widespread form in the mammalian kingdom." His close analysis of the character of human and ape structures supports Dr. H. F. Osborn's declaration of their essential differences.

Transformism is commonly and wrongly thought by those who have a superficial knowledge of biology to be the same thing as Evolution. In English the words are used with little discrimination, but the French writers recognise the distinction. Theosophy takes Evolution as the continuous growth of an inner being or spirit through numerous experiences to a goal. Transformism is meaningless, and Dr. de Purucker in his *Man in Evolution* defines it as "the doctrine that things grow into other things unguided by either innate purpose or inner urge." Professor Vialleton's definition of the difference between the materialistic and the true point of view are well-considered. He says:

Transformism is a mechanistic doctrine which explains the appearance of living beings by the sole action of natural causes, working without any kind of direction, and without any end in view. The word Evolution implies a determined direction, an order or system that realizes higher results than those that could be expected from Transformism.

He points out that Transformism, in which are included the "survival of the fittest," the brutal "struggle for existence" and blind "natural selection" (a curious misnomer, as the word "selection" implies thought and will), has never explained the ascent of life, still less the higher faculties of man. He boldly declares:

The word Creation, which has been banished from the biological vocabulary, must be replaced, at least so far as to show that the world as presented to us is a co-ordinated Whole, and therefore the product of Will.

This is good Theosophy, so far as it goes. To complete it, only the idea of conscious guiding Hierarchies behind (or within) the "world as presented" is lacking.

The same reviewer in discussing another new work on biology concludes his remarks in a paragraph which is worth translating in its entirety:

But, when we have finished reading these scientific works, and return to our own thoughts, the same old question presents itself, the insoluble problem: — What, then, is man? What does it signify at bottom as to where he originates, and where he is going? He has built cities, invented railways and radio, yes, but for what? Still better, he has conceived an idea of the universe, has calculated the thousands of light-years that separate the constellations of

Orion from Cassiopeia, but what does even that lead to? What place does he hold in Infinity? Science cannot answer, and human intelligence recoils appalled before the great mystery of the Beyond.

True; the intelligence of the ordinary man, however learned and brilliant, has not raised the Veil of Isis, but there exist a certain few, even on this earth, who have stepped out into a wider consciousness and who have penetrated deeply into the mystery of man's true place in nature. These Masters of Wisdom, at present limited in number, have reached by intensive training the knowledge and power that the majority of mankind will possess in far distant ages as the capacities of the divinity within are brought forth. From time to time they have given out as much of their wisdom as conditions permitted; and it is our privilege and our duty to study and present it to the world.

The Theosophical Forum

H. P. BLAVATSKY'S WORK IN THE WORLD — *Henry T. Edge*

In considering H. P. Blavatsky's work in the world we must first ask what was the condition of that world in her time. It is customary to depict it as in an altogether deplorable condition, but I propose to paint a somewhat different picture. We must bear in mind that the Victorian era in England was one in which shone brilliant minds in many departments of thought and endeavor; an era of unexampled progress; an era of emancipation of thought from old grooves and of venturing forth into new and brighter prospects. Art, literature, philosophy, science, flourished and I need not pause to enumerate the great pioneers of these several departments. But more than all the era was one of moral and spiritual advancement, distinguished by noble philanthropy, social and political reform. Yet the same cyclic wave of energy which had fostered so much fine growth had also brought forth many harmful weeds. Moreover its force was becoming spent and hardening and restrictive influences were supervening. In particular the true progress of mankind was threatened by the growth of scientific materialism or mechanicalism; matter was threatening to drive out mind; automatism, to oust purpose from life. It was therefore to steer humanity round a dangerous corner, to check the downward and backward ebb by a forceful tide in a new direction, that H. P. B.'s work was directed. She came to wage war against materialism, and that not only in science but in religion, in politics, in social theories as well.

Her work was many-sided, not confined to any one particular point; so many-sided was it that it is difficult to comprehend it under one word or phrase. She had to lay new foundations, to strike a new fundamental tone. Thus she found herself at

loggerheads with everybody who had any vested interest in the preservation of things as they were. The familiar strife between religion and science was lost sight of in the common war against materialism and dogmatism in both. She brought down upon her head priestcraft both Oriental and Occidental, scientific dogmatism, sundry occult and psychic movements whose foundations she threatened to undermine. There existed a comfortably settled intellectual culture, represented by scholars in various fields; and the foundations of this were menaced. In a word, people were *scared*. It was not because they believed her false, but because they knew she was true. And, finding themselves unable to refute her they had resort to the invariable substitute — defamation. But such is the fate which every reformer must necessarily encounter; has he a right to expect anything else? Yet where there is no resistance there can be no victory; the greater the resistance the greater the victory when it is overcome.

And so it required one of titanic energy and perfect self-dedication to accomplish the work. At first the world had to be *startled*. Hence the phenomena; permitted for the special purpose in exception to the general rule; bringing upon their performer results foreseen but bravely accepted. Attention being thus attracted, the teaching began.

First in America, where the work was organized and incorporated and a seed sown which yielded the future growth. Here she works among the *Spiritualists*, descrying there an influence away from materialism, but trying to lead them on above their low level to what was better. Later in India she strives to arouse the people to a new sense of the essentials of their own religions and philosophies. But for the great literary work in view, England was seen to be at the time the best harbor. Accordingly it was in London that she wrote that marvelous work

The Secret Doctrine, which bears its own internal testimony to the greatness of its author. Not even the most jealous and vindictive critics have been able to dispose of it, and have been obliged to let it alone or dismiss it with a simple falsehood. The question as to *who* was the author is one which, as it seems to me, cannot be answered on ordinary lines. It is easy to understand that Madame Blavatsky herself, speaking of her mere personality (despised by herself, as we know), might indulge in a modest and candid disclaimer; and point our eyes to those Teachers whom she so much revered. Yet let us not forget the distinction she herself made between H. P. Blavatsky and H. P. B. In a word, when the illusion of personality has been overcome, such questions of authorship take on quite a different aspect; there is no longer such a thing as your mind and my mind, but a great ocean of mind to which all may have access.

It has often occurred to me that, since the Wisdom Religion is universal and of all lands and peoples, it must always require translation, so to speak, into the mental language of particular peoples-and the S. D. is a truly marvelous instance of how it has been translated into terms of Occidental thought. The author or authors show an intimate acquaintance with the whole field of scholarly, scientific religious, archaeologic, etc., thought; evincing a mind at once comprehensive and detailed. The S. D. is in its single self a phenomenon worth a million buried teacups or precipitated letters. Her assistants, secretaries, were kept busy going to the British Museum Library to verify the numerous quotations which she made. The declared object of this work was (1) to state the outlines of the Secret Doctrine (2) to show its existence in the records of all ancient faiths (3) to contrast its teachings with those of modern science, religion, and thought in general. Also, there were at that time many imperfect forms of occultism, on the wrong tack, which needed correcting by the

exposition of the true teachings thereon.

The Voice of the Silence performed a like function with regard to the more ethical and mystical teachings; for it enunciates the doctrine of the purest Buddhism, the right-hand path, the path of renunciation; thereby laying the true foundations and correcting all the harmful and erroneous cults. Thus her work in the world was to strike keynotes everywhere, to lay foundations; and this was done with Titanic energy, such as she alone was capable of wielding.

Isis Unveiled, as her first work, exercised enormous influence and is still in great demand with the public. Its defects in composition can serve only to give a handle to those interested in depreciating her, and are no obstacle for earnest truthseekers who are in search of the gold wherever they can find it. If we are able in this day to handle the churches and sciences in a gentler way, it is only because H. P. B. knew how they needed to be handled in her day. Before reconstruction could begin there was dynamiting to be done.

And today we see wherever we cast our eyes the harvest of all that seed-sowing, the result of that ground-clearing and reconstruction. As said before, amid the crops grew up many tares; and to deal with these was the arduous work of later Leaders and their faithful followers. We see the same mixture around us today; and our duty is to keep the flame of the pure doctrine bright and clear, so that a greater power and permanence shall eventually win through and outshine and outlive all imperfections and shams. May we not already say that this is being accomplished? Do we not see on every side hands stretched out for aid, in the churches, in science, philosophy, social planning, everything? Hands stretched out for the help which true Theosophy alone can give. But if we have cause for

rejoicing, let us beware of resting on our oars. Let success be not a sedative but a stimulant to ever-continued endeavor.

The Theosophical Forum

WHAT IS THE CRITERION OF THEOSOPHY?

This is a question and Answer reprinted from *The Theosophical Forum*, December, 1895. The date of the publication of this statement is of no particular significance, but the answer by W. Q. Judge, second Leader of the Theosophical Society, is something that all generations of Theosophists should study and, in the light of its generous and far sighted expression, measure to what extent they themselves approach this standard. — Eds.

Question — The fundamental question, "What is the criterion of Theosophy?" calls for an answer. Has Theosophy the power of growth, progress and advancement in line with all new expositions of truth? In the minds of many the writings of H. P. B. are regarded as the infallible oracles of Theosophy. But in time criticism is sure to do its work. Consequently it is necessary soon to give out a definition of it much broader, simpler, and more unequivocal than any heretofore offered.

W. Q. Judge — This is in fact a request to formulate and promulgate a dogmatic statement of Theosophy as we understand it. That is, to go completely back on the genius of the Theosophical movement, which is for the destruction of dogmatism. The strength of Theosophy lies in the fact that it is not to be defined. It is the wisdom of the gods, or of nature. This means that evolution, slowly progressing, will bring out new truths and new aspects of old truths, thus absolutely preventing any dogmas or "unequivocal definitions." Were we to make and declare a definition of Theosophy it would be only the words of those who participated in drawing it up, and not acceptable to all. And were it possible that all would accept, then would be sounded the doom

of the movement. Hence the reply to the question, "What is the criterion of Theosophy?" is that it is found in each man's perception of the Truth: therefore there is no single criterion.

If any persons regard H. P. B.'s writings as the infallible oracles of Theosophy, they go directly against her own words and the works themselves; they must be people who do not indulge in original thinking and cannot make much impression on the times.

As for the Theosophical Society, the moment it makes a hard and fast definition of Theosophy it will mark the first hour of its decay.

Inasmuch as Theosophy is the whole body of truth about man and nature, either known now or hereafter to be discovered, it has the "power of growth, progress and advancement," since every new truth makes it clearer. But among the truths will not be reckoned at any time the definitions, dogmas, creeds or beliefs laid down by man.

The Theosophical Forum

A LETTER FROM H. P. BLAVATSKY

EXPLANATIONS CONCERNING THE CONTROVERSY ON OCCULTISM

[This is a translation from the French, copied from H. P. B.'s *Scrapbook*, Vol. XVII, pp. 125-29, by courtesy of the Theosophical Society, Adyar. The original appeared in *Bulletin Mensuel de la Societe Scientifique d'Etudes Psychologiques* (Paris), 15 juin, 1883. The Editor of the *Bulletin* evidently published only a few extracts from a letter he had received from H. P. Blavatsky. — Eds.]

Extracts from a Letter of Madame Blavatsky

Madras, 17 May, 1883.

To Mr. Fauvety, President of the Scientific Society for Psychological Studies.

Mr. President:

The monthly *Bulletin* of the Society of which you are president, issue for April, 1883, has been read and translated to our members of the Occult branch of the Theosophical Society, and it is in the name of that branch, and of the entire Society which seems to have been confounded with that branch by the Spiritualists in a very unexpected manner, that I come to you to ask for justice. This letter will be followed by a formal reply, which, we earnestly hope, you will have the kindness to publish in your *Bulletin*.

It is impossible for me, in the limited space of an official letter, to enumerate all the *errors* and false interpretations which abound in the addresses delivered at the meetings of the 6th and 21st of

March. It should suffice if I assure you that those persons who have accused us of such absurdities as I have found in "the refutations" have never read *The Theosophist*. . .

While waiting for our *Refutation* of the "Refutations of the Spiritualists" which will reach you by the next mail, I have the honor to beg you to make in our name the following declaration to your esteemed Society:

1. It is not true that the Theosophical Occultists of the Orient have ever preached or preach ANNIHILATION.
2. It is entirely false to say or to suggest, as Mr. T. . . . has done, that we, the Founders of the Society, or any of the members of the Occult branch, have ever declared that the basis on which you (Spiritualists) rest your inferences — "that of the immortality of the conscious (Spiritual) Ego is fundamentally false. . ." I can indicate places in *The Theosophist*, as well as in writings signed by Occultists, where it is affirmed in the clearest manner that the 7th, the 6th principles, the Divine Monad and its vehicle, the *spiritual soul* (which make a unity) are immortal, indestructible and *infinite*. Believing in the innumerable reincarnations of the "spiritual Ego," the only "*conscious Self*" in Eternity, not one of us, Occultists, could ever say that the individual consciousness was annihilated or that the "spiritual Ego" could fall back into the world of cosmic, primal matter. . .

Finally, let it be understood! The Society preaches universal brotherhood based on equality, charity, tolerance and mutual love. It accepts all beliefs because it does not admit infallibility (its own any more than that of others), and, in not admitting that, it observes, studies, compares, and takes note of everything without declaring anything as final. As to its branches, so long as they practice brotherhood, each branch can believe whatever it likes, because in matters of religion and belief, a Hottentot knows as

much as a Fenelon. The fine speeches and assertions of a Tyndall are as worth-while as those of his housemaid, and the Society accepts nothing but FACTS.

Now, facts cannot be accepted as such on the evidence of one or a hundred thousand persons, but only on personal evidence appropriate to each individual. It goes without saying that I am speaking now of psychological and purely subjective facts, and not of physical facts. Hence the universal tolerance among Theosophists, one of the rules most positively enjoined. . . .

I offer you my apologies, Mr. President, for not being able to express my ideas more clearly. It is ten or eleven years since I have had occasion to speak or write in French, and I have therefore begun to forget it. But I have confidence in your intuition and above all in your deep sense of justice. As I have already had the honor of writing to you, we never attack anyone, but it is surely permissible for us to defend ourselves when we are attacked, and so unjustly at that. Mr. X. has been pleased. ... to present us as charlatans preaching a false science, and it has pleased you to publish that accusation. You will allow us then to answer these accusations with the proofs in our hands, etc. . . . Meanwhile, please accept, etc. . . .

(Signed) H. P. Blavatsky,
Corresponding Secretary of the Theosophical Society,
Adyar, Madras.

The Theosophical Forum

PSYCHIC POWERS — Lydia Ross and C. J. Ryan

What does Theosophy say about the psychic faculties and powers that are advertised so widely?

The words "psychic" and "psychism" are used to cover a variety of unusual or so-called "occult" matters, not generally understood. These include clairvoyance, telepathy, divination, hypnotism, mediumship, automatic writing, crystal-gazing, psychometry, second sight, astral voyaging, mental and magnetic healing, *tantric* magic, fortune-telling, "magnetic personality," and many other things which science does not fully explain. The psychic faculties and powers, which are latent in all men, are gradually becoming more active today.

I hear that Theosophists are opposed to the cultivation of these powers. Should not everything in Nature be studied?

Certainly; and also everything in human nature, for man should "know himself." But most persons are more eager to get hold of these powers for personal ends than to get an understanding of just what they are and how to use them safely and wisely.

How, then, do you Theosophists begin to study psychic matters?

First of all, by studying the teachings of H. P. Blavatsky, who gave the world what she was taught by the Masters of Wisdom, Compassion, and Peace. We repudiate the methods of all who misinterpret her teachings, or who commercialize truth and mislead by promises of forced psychic development. Her Theosophy goes to the root of the matter by explaining man's composite nature — the physical, emotional, mental, and spiritual sides of his being, which, of course, include his psychic faculties, and the part they play.

What do you mean by man's composite nature?

Everyone knows of the familiar division of body, soul, and spirit, though these three may be subdivided to make seven. Here on earth we live in a human-animal body; the opposite pole of our being is the spiritual or higher part of us, which makes itself known in the voice of conscience, in flashes of intuition, in unselfish heroism, and the like. Between these two poles is the intermediate part, commonly called the soul. This human soul is the everyday Mr. Smith or Mrs. Brown, who we too often think is our real self, while, in fact, it is only the temporary "personality" of the present life. The spiritual or enduring man is known in Theosophy as the "individuality" re embodying in changing personalities, life after life, until he makes himself a perfect man.

How do you know the difference between individuality and personality?

The personal side of our character acts in desires, curiosity, egoism, jealousy, animal instincts, lower human love, and other phases of self-interest, on the one hand. Yet, on the other, it responds at times to the spiritual call of heroism, self-sacrifice, and perfect love which belong to the higher nature — the "individuality," which would share its own richness, beauty, and spiritual vision with its lower personality. It is often very difficult to distinguish between our two natures, which pull in opposite directions; we are easily self-deceived by the cunning with which the lower desires use the mind to argue their case.

What part of us do the psychic powers belong to? Are they altogether bad?

Not at all. They are part of our whole nature, and are no better or worse than the strength in your arm with which you can help a friend or strike an enemy. But, as the majority of men are

dominated by selfishness rather than by spirituality, the psychic powers are certain to be generally misused and then to recoil upon those who are unprepared and unworthy to use them.

Why not teach men to use them for good? Surely the world needs every kind of help?

Because men must first change their selfish minds and hearts, which are already working so much harm. Why give them new and strange powers before they are ready to use what they now have for constructive and not for destructive purposes?

But the advertisements offer to make a man a great success, with a magnetic personality, so that he can control others and make them admire him, and so on. I'd be making quite a man of myself if I could do all that.

You would only be building up a personality of uncanny selfishness, adding no true manliness to your character, but losing ground instead of progressing. There are various psychic tricks that are easy to learn, but why waste time that way? Even animals have a certain degree of clairvoyance and prevision. Everyone knows that they often sense impending disaster on land or sea, and also see things invisible to man. A classic case was Balaam's ass seeing the angelic messenger before his master did. But spiritual clairvoyance, which man alone can develop, is very different, and is gained only by great purity and holiness of life and strict self-control. That is the true way "to make a man" of oneself. It is no sign of manhood to bid for admiration, or to scheme for success by subtil means.

Well, if these psychic powers are not worth bothering about, why study them at all?

Because they are one of the vital questions of the day. In this age of inquiry, many really spiritually-minded people are seeking to

understand the mystical in man and the truly occult in Nature. They, like many others, have peculiar need of reliable knowledge, which only the Theosophical philosophy offers in fulness. Moreover, the craze for psychism shows that our latent psychic faculties are awakening, so that it is most important to understand them, since they must be reckoned with. "Sensitives" who are more or less clairvoyant, clairaudient, or unusually susceptible to vague impressions and impulses, are increasing. Having no knowledge of their own inner nature, many of them drift into Spiritualistic connexions and we find many good people vainly pursuing ghostly phantoms in the hope of gaining light on the mysteries of life and death. Others are attracted to all kinds of so-called "mystical" cults by alluring notices proffering arcane knowledge and power.

In the midst of the above conditions, the majority are living mostly in the personal part of their nature, with its restless egoism and desires. The temptation to cultivate psychic powers for self-interest is great. If they are so misused, one is lured on into a form of astral intoxication most difficult to resist. Just as the drinker in *delirium tremens* loses sight of his ordinary senses and judgment and sees strange things and creatures, so the psychic habitue loses his normal poise on the physical plane and stumbles along after alluring astral phantasies and thrills.

What do you mean by astral?

Our world is enveloped by a realm of impalpable substance, more invisible and all-pervading than the air we breathe; this is called the Astral Light. It interpenetrates the solid earth and extends from low levels through grade after grade of ethereality, finally to merge into more spiritual realms. Its lower degree is the "ether" of some scientists, and this is the first remove beyond ordinary matter. This astral light pervades the "astral plane" of

consciousness, which contains various forms of life in keeping with its peculiar nature, and has its own laws governing them.

We little realize how much our daily lives are affected by astral influences. Every thought and act impresses itself and is recorded upon the sensitized substance of the astral light. These living pictures are constantly reflected back upon all of us, with more or less damaging effects. The lower astral levels, nearest the Earth, reflect all that is worst in our selfish civilization. We literally live in a hypnotizing atmosphere.

What is our astral body?

It is the invisible model-body upon which the physical is built, cell for cell — an ethereal mold upon which, for example, the healing flesh restores the parts lost in wounds. It is the bridge between physical man and his thought and feeling. For us it is not natural, safe, or profitable to try to dissociate these bodies which work together. The subtil bait boldly advertised by purveyors of so-called "occultism" in promising to teach all and sundry "how to travel out in the astral," etc., offers an unwholesome adventure, though it is often disguised in a fine philosophy. As a rule, no warning is given the unwary traveler of the many pitfalls along the way, nor of the real danger that he may not get back into his body wholly, if at all. Unhinged minds and wrecked lives only too often result from artificially dissociating the inner principles from the body. Theosophical students who know somewhat of man's inner nature often read between the lines recording unhuman, purposeless crimes, or strange suicides, the tragic story of those who have gone astray on some psychic bypath.

Physicians in our over-crowded insane asylums report that many cases of disordered minds and perverted morals have followed the disintegrating strain connected with one or another popular mental or emotional cult.

But I know of people who have found out how to see wonderful scenes and even beings in visions?

Such things are not spiritual. When not imaginary they are evidences of the astral plane — sometimes they are reflected pictures of human thoughts; or they may be the work of certain Nature-spirits who, able to take on any form at will, delight in throwing a strange glamor over human beings. The majority of psychic venturers leave behind their ordinary senses, will, and intelligence, and they do not get above the ghostly and unwholesome levels, where they are helpless invaders and at the mercy of various unknown influences which are consciously active on their own ground. It is true that some mediumistic natures of clean life and good intentions report experiences of beauty and interest in certain astral levels. Nevertheless, once the door is opened into this region, hordes of evil influences have their chance to press through and to contact human life. Then again, how few psychics allow for the fact, or even know, that the astral light has the power to distort or to reverse images, events, the sequence of time, etc., thereby making everything they see unreliable? We get glimpses of this confusion in ordinary dreams, during which we are conscious on the astral plane. It is proverbial that dreams go by contraries.

But there are many systems teaching Mind-control. Why study Theosophy?

Because these modern systems are incomplete without knowledge of man's whole nature and therefore are misleading. During the past half-century various "metaphysical" and healing cults have sprung up, and, by putting some incomplete philosophical ideas into plausible form having popular appeal have gained a wide following. Some of these, by methods of affirmation and denial, do provide, at times, the things desired for

personal satisfaction — money, health, or whatever it may be. However, success thus gained by the psychic power of concentrated will is not an unmixed blessing. Occult powers used for self interest may bring something not rightly our own, or we may precipitate something out of its rightful time and place into our life. In either event we sow confusion in the field of events and, sooner or later, we shall have to reap the disordered results.

No true Theosophist would join a circle united in a "magic rite of concentration" to influence the life or acts of another person in any way, with or without his consent. The Masters of Wisdom, with all their superior knowledge and power, never interfere with the sacred rights of the human will.

But do not Theosophists approve of Hypnotism in very special cases?

Certainly not; that is another wrong done through the inner nature. This misuse of will-power for personal ends not only dominates our whole economic and public life by high-power "suggestion" in subtil forms, but hypnotism is also used without disguise. While the medical profession has abandoned its use in surgery, many practitioners use hypnotic treatment in mental and moral cases. Their success in dispersing the symptoms blinds both operator and subject to the fact that the real cause is untouched and will work itself out in some other way, in this or another life. The operator literally implants a portion of his own will in the subject, entangling both of them, on inner lines, with the confused and unnatural results of this tampering with vital centers of being.

Physical ills should be treated by suitable physical means; in addition to this, the truly scientific physician will deal with mental and moral wrongs by arousing the positive willpower of his patients, whose greatest need is to use their own innate

powers of wholeness and healing. A man can do for himself what no one else can do — if he is shown how.

The hypnotised subject, like the entranced medium, is crowded out, leaving his body and senses at the mercy of the dictating will of some alien influence. The victim of moral burglary, he awakes with weakened will, and his nature open to invasion by dangerous forces.

Hypnotism is advocated by many psycho-analysts, who utterly ignore man's spiritual nature in their moral vivisection of the lower mind and emotions. Prevalent ignorance of man's composite nature is shown in the fact that any medical circle should even consider a system of psychoanalysis based on the degrading fallacy that our whole human welfare is merely a matter of sex!

Widespread information of "how to hypnotise" is made to serve every kind of self-interest. Scoundrels and criminals use this weapon effectively in their evil work.

Do the Theosophical Masters advertise to teach the use of psychic powers?

No, indeed! though shameful misuse of their sacred names has misled many inquirers. Among the self-styled "teachers" of so-called "occultism" is a most insidious and sinister class who make artful appeals to curiosity and to the selfish and emotional desires of human nature. In the public press and in other ways they make glowing and suggestive offers of "secret instructions" for gaining "personal powers," a "magnetic personality," "success," "control over others," or "how to get out into the astral," "how to meet the Masters," "speedy initiation for \$2.00," etc. Some itinerant lecturers and their imitators are even teaching the degraded and diabolical rites of the "Black Art." In some cases their victims are

taught to open inner centers of vital force which are unknown to Western Science, but which are so powerful as to overwhelm the unprotected dabbler in psychism, who too often pays for his rashness with loss of health, moral balance, and even sanity. These teachers are themselves wanderers in the shadows of the astral world.

True teaching about the mysteries of both Man and Nature cannot be bought; no genuine occult Teacher will ever sell his sacred knowledge, nor can he be reached merely by forcing the petty, unreliable clairvoyance taught at so much per lesson. The World Teachers all down the ages have advised the cultivation of *spiritual* clairvoyance, never the psychic reflexion, which is so dangerous. Their pupils are subjected to severe training in self-discipline before being allowed to open any inner powers; they must prove their complete freedom from personal selfishness and their devotion to humanity. When obtained, their powers are regarded as a sacred trust never to be used for personal ends.

The Theosophical Forum

THE FOUR BEASTS OF THE CHRISTIAN APOCALYPSE — *G. de Purucker*

The question was asked the other evening: Just what is the meaning of the four beasts — the man, the lion, the bull, and the eagle — whether in the Christian Book of the Apocalypse or as used by early and medieval Christian artists? The question is not hard to answer. In the first place the Christian Book of Revelation was written by a Qabbalist, a student of the early, not the late, Qabbalah. (1) It was edited or touched up at a later date by a later Christian editor. No one knows what he took out, what he kept in. But it was touched up and given a more Christian coloring.

Now if you will read that chapter four of this Christian book called Revelation or the Apocalypse, you will see that it mentions these four beasts "full of eyes within," who proclaimed truths and unsealed seals, and they are stated to have encompassed the throne of the Hierarch.

Whether through this Qabbalistic book, or by early tradition now forgotten, or in some other way at present unknown to scholars, possibly through neo-Platonic sources, or neo-Pythagoric, the early Christians ascribed the same meaning to these four 'beasts' of the Apocalypse, and to the writers of the four Gospels, to wit, the man, the lion, the bull, and the eagle, that the Hindus ascribed to what they called their four Loka-palas, or guardians of the worlds, the four Maharajas if you like; albeit in simple justice be it said, the Hindu conception even today is incomparably vaster and more spiritually mystical than is the strongly anthropomorphic picture presented in the Christian book of Revelation. These four Maharajas, or four Loka-palas were by exoteric explanation, attributed severally and respectively to the

North, the East, the South, and the West; and hence by those who did not understand the inner meaning, the Loka-palas were called the guardians of the four quarters. The public took the husk of the explanation and left the meat, the bread of the grain of truth.

Nature being spiritually generated and spiritually governed or controlled in so far as the divine law can have its way on this earth of matter, in the lower degrees of hierarchies where the conflict of wills rises daily and nightly in a hideous shriek to heaven — in so far as the divine law can control the affairs of men, it does so in four stages: the birth or the beginning technically called the North, the divine birth; adolescence or the sun-rise, technically called the East; full maturity of spirit and power in manhood, technically called the South, and governed by the Lord of Death, Yama; and the fourth, the West, the Land of Shades, the Land of the great Passing — so called by Egyptian, and Persian, and Babylonian, and Hindu, and Greek, and American Red Skin, in fact all over the world.

The ancients also celebrated four holy seasons in the wheeling of the year: the winter solstice and the spring equinox, and the summer solstice and the autumnal equinox. First comes the Great Birth, the winter — the birth of the sun when he first begins to reassume his powers of light, when his journey to the South is over, and he begins to retrace his journey back to the North. It is called the great birth. And then comes Adolescence at the spring equinox, when the laws of life and light begin magically to work on the earth. Trees burgeon, flowers spring forth, Nature begins to sing with the new elements of life coursing through her veins. And in the summertime comes the Great Temptation or the great trial which a man always undergoes in maturity and full power of his strength, determining whether he goes up or down; for in the summertime likewise the fruits are ready for the harvest. Grain has been cut and stored Nature is rich and powerful, overflowing

with her exuberance of vitality. And then comes the fourth sacred season, that of the autumn equinox, when the sun, as it were, seems to take leave of the northern regions and pursues his journey southward. The days shorten, the nights lengthen, chills come upon the earth, the leaves fall, the sap retreats from twig, leaf, branch, and stock, into the roots. Rest comes and peace. And this was called the season of the Great Passing.

Thus, the ancients taught that the spiritual life which governs our world has its day of birth, has its day of adolescence, has its day of full material power and strength, has its day of passing, to begin anew the same cycle, let us hope on a somewhat higher plane. Year follows year and season follows season, the manvantaras come and the manvantaras go, the pralayas come and they go. But the divine endures forever.

These four Loka-palas or governors of the world are the four as it were karmic divinities, actually not so much single entities but hierarchies of divinities, each Loka-pala representing a hierarchy, one inaugurating the manvantara or the beginning of manifested life in our world. When its duty is done, then the second hierarchy takes up the task which is passed on to it. The second Loka-pala steps into the arena of action and carries the burden for a while, like the bearer of a torch in a torch-race running swiftly to the goal, and on reaching it, handing the torch on to the next runner to carry it on to the next goal.

Thus when the second Loka-pala has finished his work, the torch, the duty, is passed to the third; from it to the fourth, and the cycle is ended! Karman has been expended, new karman has been written in the Book of Life by the Lipikas, the divine recorders. And the next manvantara, the next period of manifestation, will see the Loka-pala springing anew into spiritual and intellectual activity.

This is a very abstract and truly divine conception, Companions, difficult for Occidentals who are not accustomed to this way of thinking. The early Christians were fascinated by it, which showed they had their modicum of the original god-wisdom of Theosophy. But they found it difficult to explain. And by and by, the inner meaning of the four beasts, the four Loka-pala representations, symbols of the divinities: the soaring eagle, the thinking man, the bull of strength, and the lion of courage, symbols of qualities: the symbolic concept was forgotten, and the four animals were simply painted by early medieval artists, Christian artists, as symbols of the four Evangelists who wrote the Gospels; because the early Church taught that in the four Gospels was the Word of God. The Word of God is the law of the universe, and in these four Gospels are the four laws of being, the four divine laws. So therefore these beasts later came merely to symbolize these transcripts, these gospels of early Christian Theosophical teaching; and the original, almost the divine meaning was lost.

FOOTNOTE:

1. It is to be noted in passing, however, that the term Qabbalist as used in this connection and similarly often used by H. P. B., refers not so much specifically to the Jewish Qabbalah itself but to mystical and philosophical lines of thought having kinship with the inner meaning of the Jewish Qabbalah, but not specifically using the technical terms of the Jewish Qabbalah, although of course both the Jewish Qabbalah and these other systems of so-called Qabbalistic thought are in greater or less degree all based on archaic Theosophy. Thus when I say that the writer of the Christian Book of Revelations, called the Apocalypse, was a Qabbalist, as H. P. B. also calls him, I do not mean that necessarily he was a follower of the strictly Jewish Qabbalah, but rather that he employed similar, or parallel lines of expression and thinking,

which by no means necessarily had a Jewish origin. In other words the Jewish Qabbalah was used as a sort of standard manner of expression and terminology, yet greatly modified by these other schools who refused to accept the Jewish Qabbalah as such, but nevertheless followed its type and even its lead in thought in more than one particular. The reason for this of course stands out clearly: that the Jewish Qabbalah as well as these other later systems and indeed all ancient mystical and religious Theosophical thought, were either original offsprings from the archaic Theosophy or descendants from earlier archaic Theosophic branches or stems thereof. FALLACIES IN OUR THINKING — *Henry T. Edge*

The topics treated of in this book (1) may seem from the reviewer's point of view to be somewhat hackneyed, yet it is by constant repetition that new ideas of such importance seep into the public mind. The ground covered coincides largely with that covered in C. E. M. Joad's recent book on *God and Evil* reviewed in the June issue of *The Theosophical Forum*. The postulates and constructions used by the science of last century as a framework for physics no longer prove adequate for an interpretation of even the physical universe, and new ones have had to be sought in their place. While competent minds fully recognised that the system was merely temporary and provisional, yet this circumstance had been lost sight of; provisional hypotheses were mistaken for universal laws and became the basis for materialistic and mechanistic views of life in general. The consequence has been that the revolution in physics has meant a revolution in our general ideas and outlook, as has been the case with similar epochs in the past, such as those of Copernicus and Darwin. Sir James shows his usual perspicacity and ability to hold our interest, and has arranged his chapters so that both the expert and the layman may be catered for.

The book might well have been called a study of fallacies in our thinking, applicable not only to science but to everything else about which we speculate. Thus it deals largely with general principles, such as the relation of subject and object; the apparent antagonism of determinism and freedom; the difference between reality and appearance, or between an intelligent force and its physical manifestation; the war between atomism and continuity, whether in blocks of stone or in those other blocks which we carry on our shoulders; the relation of apprehension by the mind

and perception by the senses; what knowledge, if any, is *a priori*, and what inferred; and the like. Science and philosophy are dancing coyly around each other like a pair of birds in the Spring: what they have in view seems to demand their co-operation.

The failure of mechanical explanation is fully admitted: it is impossible to separate organic Nature from its physical manifestation, for each implies the other, and they are comprised in a unity. "Forces" have no objective existence and are mere mental constructs, differing with the observer (as Relativity shows). The difficulties of attempts to formulate the behavior of a quantum are due to the fact that *fundamental activities cannot be represented as occurring in time and space*. A mechanical explanation explains x in terms of y , giving us an indeterminate equation whose terms cannot be evaluated. Under the heading of epistemology we learn that knowledge can be attained only by establishing a relation between the inner and the outer. The mind apprehends of itself without the aid of senses, number, quantity, sameness and difference, etc. — Plato's innate ideas.

Science has to cope with three worlds: the man-size world, the infinitely great world, and the infinitely small world. Some may say that the same laws are not applicable to all; but this is a mistake, and we should find it hard to define the limits which mark off a change of laws. The same laws apply throughout, but different features of these laws predominate in different cases; and some such features, slight enough to be ignored in the man-size world, may loom portentously great in the other worlds. This fact, says Sir James, is of tremendous importance to philosophy as a whole, for it provides a test for claims made by rationalists as to alleged *a priori* knowledge. Knowledge found to be true in the man-size world may prove to be untrue in one or both of the other worlds:

The a priorists have told us that the Creator could not make a world in such and such a way; we study the world of the electron or nebula and find that He has done so already. Thus the alleged *a priori* knowledge can only be empirical knowledge of the man-sized world.

Thus the proposition that the sum of the angles of a triangle equals 180° is true of triangles in the man-size world, but is found unworkable with triangles of astronomical size, so that this cannot be classed as *a priori* knowledge, apprehended by direct intuition.

Most controversy over Space and Time is due to overlooking the various senses in which these words can be used. The author enumerates conceptual space, perceptual space, physical space, absolute space; and the same with Time; and he defines each of these kinds. He goes on to speak of the Space-Time unity, and shows that while Space and Time taken separately are private and special to individual observers, the Space-Time unity, as conceived by Relativity, is public, common to all observers. An important point is the following:

Space and Time cannot contain the whole of reality, but only the messengers from reality to our senses.

To meet a possible objection from Theosophical students, we will observe here that it is physical Space and Time that are meant, so that there is no contradiction of any statement made by H. P. Blavatsky or others as to Space and Time used in other senses duly defined by the users.

Under the head of Relativity theory we find the usual statement as to the impossibility of synchronizing distant clocks. If I want to set my clock by a clock on Mars, I shall need to allow for the twelve minutes of time taken for light to travel before I can see

the signal. But how do I know that twelve minutes must elapse? Because light travels 186,000 miles a second. How do I know that light travels 186,000 miles a second? Because I have estimated it *by means of light signals*. I have to assume what I am trying to prove; I am reasoning in a circle.

Philosophy, says the author, deals with qualities, science with quantities. This leads to conflicting conclusions from each: philosophy says heat and cold are incompatible; a body must be either hot or cold. Science says heat and cold are merely relative terms applied to a continuous scale of temperature. This instance illustrates the fallacy of thinking of the world as black and white without any half-tones; and the author proceeds to point out the logical fallacy of the "excluded middle term." A man, says logic, is either old or young; he cannot be both at the same time. But common sense asks, Just when did he leave off being young and begin to be old? As the transition must take place at some point, the youth of a man must pass away in the twinkling of an eye. This kind of logic (or you may choose to call it philosophy) is atomistic, it thinks in separate parts. But practical experience recognises no such separations, and deals in all kinds of half-tones and compromises; and even physics has now spewed atomism out of its mouth. Formal syllogistic logic is not a safe guide for practical policy: the "either-or" technique is not satisfying; a little of both is better. Zeno and his arrow are of course mentioned. By applying the either-or method he demonstrated the impossibility of motion. When we carve up the universe and reduce it to a bundle of paradoxes, it may after all be our tools that are at fault.

The question of causality is involved in this strife between atomism and continuity. There is no scientific justification, says Sir James, for dividing occurrences into detached events: changes are too continuous and too interwoven. The cause and the effect

are one and inseparable; every event is connected with every other event. This is of course fully in accord with what we have been taught by Dr. G. de Purucker, who, while necessarily using the terms "cause and effect," has been so careful to guard us against a too mechanical view, and has always insisted on this interdependence of every part of the universe. Man's individual Karman, for instance, is not the end product of a single chain of linked causes and effects, but is the resultant up to date of an incalculable number of causes. A complete action includes within itself both cause and effect, though on our plane of consciousness these two halves, though in essence inseparable, seem sundered in time and in space.

Connected with this is the problem of *actio in distans*, a problem in which reasoners have tried to solve a difficulty created by themselves. For the problem is based on the assumption that things are separated, an assumption which, as we have seen, is not valid. In a word, we have cut the Gordian knot by the simple process of abolishing *distans*; what was never separated does not need to be reunited.

The question of Subject and Object, or of Perceiver and Perceived, is next brought up; and we see that it is impossible to set a boundary between the two: our senses can perceive objects; our minds can view our sense-perceptions; and we can use our mind to examine some of our mental processes. The two terms are relative to each other; the distinction is provisional and for convenience.

The destruction of scientific determinism does not overthrow science or the uniformity of Nature. Free-will is freedom to follow the laws of the universe of which we are an integral part. Einstein is quoted to the following effect:

Honestly I cannot understand what people mean when

they talk about the freedom of the will. I feel that I will to light my pipe and I do it, but how can I connect this up with the idea of freedom? What is behind the act of willing to light the pipe? Another act of willing? Schopenhauer once said: Der Mensch kann was er will; er kann aber nicht wollen was er will. (Man can do what he wills; but he cannot will what he wills.)

The truth compels its own recognition, however long and winding the roads by which that recognition is reached. A universe is a living organism, comprising innumerable hosts of lesser organisms, each of which is a self-acting unit, living its own life in harmony with the general laws that direct the whole. Science has been studying the outside, but is learning that there can be no outside without an inside.

The Theosophical Forum

THE LAW OF OPULENCE — *Raymond Rugland*

To the man whose idea of "practical occultism" revolves around the desire for personal success, for acquiring an abundance of worldly goods and luxuries, for power and dominance among men, the Law of Opulence is a very attractive teaching. So attractive, indeed, that tens of thousands are engaged in the study of this "law," and actively engaged in bringing abundance into their lives, unaware that at the root of the attractive "flower" "lies a serpent coiled."

The Law of Opulence is also called the Law of Supply and Demand. By Affirmation, Mind-Prayer, Creative Concentration, we are told by the literatures of various organizations, that the cosmic machinery which provides personal abundance for a special "few" is set in motion. Why work at all when all that is needed is to picture in your mind's eye what you want! That is the claim. The privilege of controlling the levers of the cosmic machinery may be easily had. The only barrier to such instruction is one's pocketbook.

Here we may inquire as to the motives of such instruction. Are they ethical? True knowledge is universal; it is the exclusive property of no one, belonging to all. Every student of genuine occultism will bear witness to the examples of the great Teachers. Those who have rendered more than lip-service to humanity's welfare — the Buddha, Jesus, Confucius, to name a few — never measured their teachings in dollars and cents, nor did they deem it wise to sanction and give formulae for personal opulence to disciple and follower. Small wonder! How well they knew, as any earnest student can discern, that the capacity of Man requires a greater Goal than any earthly opulence can satisfy. Of the Law of

Opulence they knew, but knew also that one attached to earthly things is by that attachment bound. Further growth is impossible. Whether man works for personal opulence on the physical plane or on the mental plane, he works selfishly and for himself alone. Working selfishly, he stifles the Spirit-urge which impels to harmony, to fellow-feeling; he checks his growth from the impoverished personal self with its pains and pleasures, into identification and harmony with all that breathes!

A Theosophist inquiring into the philosophical background of organizations teaching, for a price, the Law of Opulence, finds the Universal organic texture lacking. Surely the Universe exists for a greater End than this supply and demand of human wants. Teaching of this nature, with its appeal to the personal man, aims merely to convince the student that he is justified in applying "cosmic law" to his own ends. And the student, concerned only with immediate results and tangible evidence, is satisfied to look no further.

The person who embarks on such a line of instruction is very much in the position of one learning to drive an automobile. It is simple to learn to pull "this" and step on "that" and go hurtling down the highway, but the driver unacquainted with the principles of automotive mechanics, is wiser to trust his life to the trolley-operator! The laws of Universal Mind are not embraced in a single principle or a few formulae.

Now wherein lies the danger of creating images of one hundred dollar bills, or picturing yourself sitting in the executive's seat? The Theosophist agrees that there is no evil in a hundred dollar bill, in itself, where no hungry human eyes exist to feast upon it. The evil lies in man's attachment to it — that is, in the power of material things to fasten themselves to human beings. The evil lies in the fact that a man will allow his mind to become divorced

from its higher field of operation merely to satisfy physical comfort and the old itch for power.

The Theosophist does not suggest "sackcloth and ashes" — a means by which some humans attract pity, and gloat over their humility with another kind of vanity — but rather, the common-sense middle way. It is his aim to conserve his energy along the highest possible lines, recognising that one who lives "in the world" must consider its needs and fulfil the duties that the world asks of him. These duties are of wider range than the Success-school's appeals would indicate.

The Law of Opulence is no myth! It works, but its retroactive action is often overlooked. It is in fact a boomerang. Whatever cause is set in motion by the mind returns as the effect of that cause. "As ye sow, so shall ye reap." Karma is the name given by Theosophists to this doctrine of Cause and Effect. Its ethical implication is a powerful one, for it is Justice; it is the Scale by which universal harmony is maintained. One can no more dodge retribution for selfish manipulation of mental laws, than one can violate the laws of gravity and pressure with impunity.

The practitioner of mental "science" may pray, concentrate, visualize, and that which he wishes may come to him; but, when it comes he will regret — sooner or later. Wishing solely for pleasure, he gets pleasure and an equal amount of pain which he did not bargain for! Simply because his wish was a selfish one. Self-indulgence demands its price. Pleasure and pain are forever linked. Hence, he who directs the law of opulence for selfish ends merits the same karmic retribution as the ruthless climber who, desirous of wealth and prestige, rises to his coveted position of power on the shoulders of other people — other people, less shrewd and less selfish than he.

Let, then, the motive for action be in the action itself, and

not in the event. Do not be incited to actions by the hope of their reward, nor let thy life be spent in inaction Firmly persisting in Yoga (equal-mindedness), perform thy duty, O Dhananjaya (despiser of wealth), and laying aside all desire for any benefit to thyself from action, make the event equal to thee, whether it be success or failure. — *Bhagavad-Gita*, Judge's Recension, p. 16-17

The Theosophical Forum

A SHIELD AGAINST DOGMATISM — *Helen Savage*

Those who have at heart the interests of the organization in which they work are alert to dangers which may beset that body; and they are fortunate indeed if they have been given certain guide-posts, and have been warned against certain pitfalls, by those whose breadth of vision and large wisdom entitles them to be heeded.

Theosophists who are familiar with the literature of the Society are aware that there is much in the writings of the Founders which bears on this subject of warnings. One of the dangers they consistently warn against is the possibility of dogmatism gradually vitiating the life of the work. H. P. Blavatsky's words in the concluding remarks of *The Key to Theosophy* are an instance in point. Again, there is W. Q. Judge's answer to a question in *The Theosophical Forum* for December, 1895, where he insists that to promulgate a dogmatic statement of Theosophy is "to go completely back on the genius of the Theosophical movement."

Such Teachers as these write as they do because they know what the history of religions has to show as the result of misguided loyalty and enthusiasm. They know the tendency of the human mind to "fix" ideas and then cling to them even when the ideas have fled and nothing but words remain. They know too well also the unholy "itch" some people have to impose their beliefs, views and opinions on others, and with what zeal such imposition can be made "in the name of the Cause." It is no wonder that H. P. Blavatsky says in the passage mentioned above from the *Key*, that every former attempt such as the present Theosophical Society has sooner or later "ended in failure because sooner or later it has degenerated into a sect, set up hard-and-fast dogmas of its

own, and so lost by imperceptible degrees that vitality which living truth alone can impart."

What can the individual member do to keep ever on the alert against this danger? We do not want to lessen our enthusiasm in study, nor our zeal in passing on the teaching to those who ask for help. It is equally deteriorating to swing to the extreme of opening our arms to every belief that happens to be floating about and to fail to use our discriminating faculty in determining what is false and what is true.

What then can we do to guard against dogmatism? Perhaps one key to the problem can be found in a passage in G. de Purucker's *Fundamentals of the Esoteric Philosophy*, page 202. He is speaking of *The Secret Doctrine* and how we can never say that we really have grasped all that is in that marvelous book. He writes:

I have found the value of the following rule: never take a single statement in it and allow your mind to mold itself around it, never let a single idea crystallize; break the molds, let in the light. It is an excellent rule. . . .

I have learned these lessons, and I speak as a witness. Every evening before I go to sleep, I go over the events of the day, and I try to find one or more things in which I have allowed my mind to crystallize around a thought or a fact; and I am merciless to myself if I catch it or them. Not a minute do I temporize. When I find molds of mind, I break them, for I know too well what they mean.

This whole matter thus becomes an individual problem. Dogmatism starts within the mind of the student. If it is not allowed to flourish there then it will not have a chance to spread and show its ugly nature in our spoken and written word, in our association with our fellow-students, in our attitude to other

organizations.

We have to recognise that truth does not dwell in the mind. The mind is the channel, clear or muddy, through which truth may come. A well-stocked mind, full of facts, paradigms, correspondences, and the like, does not constitute an understanding of the teachings. The approach to truth is an *ever-living process*. Goethe's famous words about life and liberty might well be applied here, substituting for these the word "truth": "Only he merits liberty and life who conquers them daily." What we acquired last year in the way of an understanding will not suffice now. Our conquest of yesterday becomes stale. We must conquer again today — and every day. This is to say that with every attempt at formulation of the teachings, we go not to the mind, but through the mind to that Source which is above. Each time truth must be recaptured.

Study in this way becomes a real devotion, the primal factor in which is a purification and preparation of the mind that it may receive "from above." I believe that this practice if carried out faithfully would absolutely safeguard each one of us from the fault of crystallization of ideas. And there can be no dogmatism where there is a fluidity of the mind, together with a generous sympathy towards the viewpoint of another. This practice, be it noted, would at the same time prevent a wandering away into unessential or even fantastic sidelines — another danger which we are warned against by the Teachers.

The Theosophical Forum

THE COMPLETE PSYCHOLOGY — *Florence Collisson*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

Until somewhat more than a hundred years ago the study of mental processes and mental reactions was a part of the greater subject of philosophy, and was a matter of discussion in the days of Pythagoras, of Plato and Aristotle; while if we turn to the Orient we shall find that the study is as old as records can be found of thinking man.

The term psychology has now as many meanings as there are individuals who use it. To one it means the study of everyday behavior, to another, the study of mental processes, to another physical reactions to external stimuli, to yet another the study of the abnormal characteristics of people.

But what does psychology mean in reality? Psychology is defined as the "science of the nature, functions and phenomena of the human soul or mind." Or again, as the "science" of consciousness. We learn that a science systematises a subject and the phenomena belonging thereto. Hence if psychology is a science of consciousness, the field of psychology must consist in systematising the facts of consciousness. Here it is obvious that we meet a very real difficulty, for consciousness can only be studied by means of the mental workings of the conscious thinker. Modern research tends to approach this study through sensory impressions, and to ignore evidences of a higher mind, or of a Self within. Still less will it, generally, accept the idea of previous lives; of an incarnating entity, a soul entering again a

life on earth, a sojourn of not only one but of many lives.

This is perhaps the fundamental difference between the Oriental and Occidental approach to the study of a conscious, thinking entity. The Oriental looks upon man as an evolving being, upon life and death as but two aspects of the one great and all-enduring Life; while the Occidental regards a child as a newly-created soul entering life with a mind clean as a *tabula rasa* upon which is to be written the growing character, which character will be the result of its reactions to the stimuli of the events of the present life.

What then shall we understand by the title "The Complete Psychology"? It must be more comprehensive than a little classification and generalization. From the point of view of a Theosophical student the subject is very comprehensive indeed. As H. P. Blavatsky says, in *Isis Unveiled*, I, xxvii-xxviii, psychology is the "science of the soul, both as an entity distinct from the spirit and in its relations with spirit and body." Psychology so understood leads us to the questions, Who am I? Where did I come from? What is the Soul? In fact, it becomes the study of Man, Man as a Child of the Universe, inseparable from it, a child that always was, always will be. Will be, yes, but not always as he is today, but a being steadily growing ever greater and grander, ever more intelligent and intuitive; ever more spiritual and conscious, learning to work with the Universe, that Universe of which he is such an insignificant, yet supremely important part. How is this possible, the psychologists will ask. Prove it! Yes, prove it. Can you prove consciousness by means of test-tubes and scales? Can you measure love, kindness, compassion and truth by means of grams and atomic weights? Yet had we developed our spiritual eyes, our spiritual senses, we could then see the vibrations, shall we say, of consciousness, of love, and all the other virtues, as well as the vices of our composite natures. We

certainly have no difficulty in seeing effects.

Yes man is one with the Universe, compounded of its elements, modelled upon it, built of the same atoms, infilled with the same consciousness, urged by the same divine currents. Man, then, even as the Universe, is compounded of something which can range vast spaces, which can pass through many experiences, which can grow, which can evolve; for Man in his essence is one with the unlimited Boundless All, the Nameless, THAT of the Hindu philosophy. Between Man in his essence, and man here on earth there are many stages, even as with the ray of light from the sun to our earth. In its essence it is pure sunlight; on earth it needs the dust of earth to make it visible to our physical eyes. So with man. Rooted in the Spiritual Sun, he needs the dust of earth as a means of functioning here on earth; he needs a body. Thus it is that in Ancient Philosophy man is spoken of as a combination of three converging streams or bases of evolution, called by the Hindus, the Three Upadhis. The one divine, of cosmic reach; the second intuitional and intellectual, with solar reach; and the third the vital-astral-physical man, child of the earth. Paul would say: Spirit, Soul and Body. The idea is exactly the same.

The body is built up of the life-atoms belonging to *that* stage of evolution; the soul, of life-atoms appropriate to *its* stage; and spiritual life-atoms belonging to the Spiritual Man. Man himself, however, is *one* yet many, and the process of evolution brings about an unfolding of the composite parts of his constitution in such a way that he grows more and more at one with the Essence of himself, that is, with his own Higher Self. Psychology deals most particularly with that intermediate nature, which, using the above phraseology, is soul. It is the realm of the dual mind, the lower mind tending downwards towards the realm of the body, the higher mind reaching upward to the realm of spirit.

Theosophists for purposes of more intensive study will again subdivide spirit, soul and body into seven principles. But let it never be forgotten that these principles are not separate, but subdivisions, for man is in reality, a stream of consciousness. He can by the exercise of his will learn to function consciously in *any* part of his constitution. Indeed as complete man he will have actual knowledge of all the realms of Nature.

Believing as we do, that man lives many lives on earth, and that which happens to him now, is the result of that which he built up for himself in the past, and that the future is being built up *now*, it follows that the life-atoms composing the various aspects of himself will bear his stamp, and will be attracted psycho-astrally to him again and again. These life-atoms will have a kind of memory, a kind of tendency. For instance, if the mind has dwelt upon high and lofty thoughts, the atoms of the brain, the vehicle or tool of the mind, will be stamped with a tendency to seek high and lofty strata. Similarly, evil and cruel thoughts will stamp evil and cruelty upon the life-atoms. Think of the impress we make, by ignorant or careless abuse, upon the physical life-atoms of our bodies. Thus it is we build up a group of atoms impressed by our own acts in the present, the immediate past, and far, far distant past. So some event occurs which stirs this tendency, low or high as the case may be, and we are influenced by the accumulation we have thus built up. This explains why unforeseen calamity will sometimes overwhelm us. This tendency or memory of the less evolved life-atoms, is, I believe, the sub-conscious self so often referred to by the psycho-analysts: for it is true that we can, almost unconsciously to our thinking selves, be influenced by our sub-conscious, that self below consciousness. But why add to its life by stimulation? Why not seek for our super-conscious self — that self in which is centered the higher segregation, in the aroma of noble thoughts and deeds of the present, the immediate past,

and the far distant past.

I sent my soul thro' the Invisible,
Some letter of that After-life to spell:
And by and by my soul returned to me
And answered "I myself am Heav'n and Hell!"

sang the Sufis.

We thinking beings half-way between heaven and hell, with heaven and hell within our own souls, which path shall we follow — the pathway leading to the gods, or the one leading to the playground of our own concentrated evil and wrong-doing?

As Dr. de Purucker, the late Leader of the Theosophical Society, wrote so beautifully in his book *The Esoteric Tradition*, II, 1007:

Let a man learn to grow towards this Divine within himself, and he will begin to *Know*. He becomes the understander then, because his own understanding has been fired into awakening, has been stimulated to awakening under the touch of the divine Ray of his own inner god. He will indeed learn from the Universe outside: he will study the stars and the atoms; he will study with fascinated interest the world around him, the growing grass in the fields, and the budding flowers and the burgeoning trees, and all else. Everywhere he will learn lessons of invaluable worth for his growth. He will read the sacred literatures of the world and profit greatly by them. Yet despite all the knowledge that he will ingather from his studies of beings and things around him, one of his first discoveries will be that the greatest and holiest and dearest teacher is the Master within himself — his spiritual nature: deathless, undying, inexhaustible in its wisdom, for this his Spiritual Nature or Monad is in essence one with the Heart

of the Universe.

The Theosophical Forum

THE CHILD MIRRORS THE RACE — *G. de Purucker*

There are literally innumerable evidences already known to scientific men of at least a large part of the past history of mankind; and as the greater part of mankind is his spirit and his mind, I include these also. But I refer now especially to the scientific evidences that man physically has passed in ages bygone through phases of his aeons-long evolutionary pilgrimage which have left their imprint upon him. And there are, as a matter of fact, a great many scientific facts which are not known.

I will refer here to one thing only, to a fact which used to have more scientific weight than it has today merely because the more modern scientific ideas are not so favorable to this fact; but I believe the scientists of the future will come back to the former ideas. It is called in embryology the theory of Recapitulation: that the human unborn child, the embryo, passes through in the small every phase of evolutionary development that the human race as a race has passed through in bygone times. Thus, is a child born today in full possession of mind, a thinking, reasoning entity? You all know the child is not. In the child's intra-uterine life we know it passes briefly through many evolutionary physical phases that the race as a whole passed through in bygone times; but it is not for years after the child is physically born that it begins to think, I mean to think self-consciously, to meditate thoughts of grandeur, to make decisions of great worth and value. These come with the growing lad advancing into manhood, for with manhood the greater powers of mind and intellect grow progressively, and also the spiritual and ethical faculties in man.

Now then, you have heard the phrase, "the descent of mind into the early Third Root-race of mankind." It was just that. Up to that

time the race had developed bodies formed by evolution to meet the needs of their as yet unintellectual state, but you must not suppose that these unintellectual early men were absolutely without consciousness. Not at all. No more so than an unthinking child is up to say five or six or seven years. Mind at that age is, in fact, already beginning to show itself; and the showing advances progressively as the child grows into boyhood, and from boyhood into manhood, and from manhood into mature years. Now the early races were just like that, like little children.

They had instinct, they had flashes of intuition, they had feeling, they had consciousness, the vague diffuse consciousness of the human child today, but they were not thinkers. The child today does not sit down at a desk and write a noble essay or plan out a campaign of thought which will help and enlighten mankind. Why? The mind has not yet fully expressed itself through the as yet infantile brain. The brain needs further hardening, forming, to carry the current from the mind within-above the man.

The early Third Root-race were just like children in that respect. They had consciousness. They had flashes of intuition; they had instinct highly developed. But the self-conscious thinking mind had not yet come to them. Then there happened one of the most marvelous events in all evolutionary history. We call it the "descent of the Manasaputras," the Sons of Mind, which took place not over night as it were, nor in an instant, nor through even a hundred thousand or several hundred thousand years. But it was a progressive process, exactly as on a small scale, the child does not wake up some morning and suddenly find itself in the possession of a mature mind. It is a matter of growth. Thus did the Manasputras gradually over-enlighten or overshadow the minds of the nascent mankind, permeating these brains, even their nervous systems with its divine fire of thought, until finally men thought, they were awakened. The mind had come into

function. This was done by these Manasaputras, our own intellectual selves so to speak, incarnating through the ages for several hundred thousand years; and when it was ended, from the merely instinctual conscious but non-intellectual and as yet non-self-conscious early man, you have a race which thought, which could contemplate divinity; and this was possible because the link with the divine had been made. Mind was awakened.

And not only this: into a number of these prepared human beings, the most highly developed mankind of the time, there incarnated certain spiritual-intellectual entities, beings, highly evolved, who became the teachers and the guides of the then newly awakened mankind, who taught them, who showed them the ways of civilization, the mysteries, the secrets of science, the verities of philosophy. These were the days of the divine authority of our far past forefathers. It was they who founded the Mystery-Schools when they first began on this earth, and who lived and taught mankind, and were, as said, their guides, their teachers, their protectors, their instructors. And that same body, or their descendants if you wish, their successors, still remain on earth today as mankind's guides, illuminators, initiators, teachers, elder brothers, friends.

Thus does the child recapitulate in its own growth from infancy to manhood what the race has attained today. It is natural, it must be, because there is but one fundamental law in the universe, one fundamental course of action, which with its universally wide sweep touches all and everything with dynamic power. Thus we find today a key to understand those ancient and earliest thinking men: how they came to be born, how it came that the mind suddenly awaked so that they could contemplate the universe and understand it instead of being like children, or like the higher animals, instinctual, intuitionally conscious, but not self-conscious. It is a marvelous thing that happens to the little child:

it grows from instinct and intuition to receive the entrance into itself, the infilling, of the inspiration from the inner god. The waiting brain, the nervous system, the body, are infilled and enlightened. Mysteries and marvels take place around us all the time!

Now, while it is very marvelous, very wonderful indeed, and fills us with great reverence for what is in the universe, to look back into the past along the annals of the race, and see the stages that our feet have trodden, yet do not forget the future. We are but at the middle point of our evolution on this earth. We must come back to earth again and again and again to repeat and to learn ever more and more perfectly what we have already known, and to gain new wisdom. What, then, does the future hold? I will tell you. As our minds were awakened in the past by the manasaputric gods — for they are gods to men — so our minds themselves in the future shall be awakened by angels of the spirit. Even our minds which raise us from our unconsciousness to self-consciousness, and have brought us to the stage where we are now, so that we may contemplate the universe and sense divinity behind it, think grand and noble thoughts which raise our lives towards the gods — even our minds themselves need a higher inspiration, for our very minds can mislead us, lead us off the Path.

So just as in the past there took place the incarnation of the Manasaputras, the Sons of Mind, who gave us mind — so in the future, beginning now — it began already a million years back or more, and progressing with ever enlarging measure into the future — there will embody itself within us, in our minds and fill us with its own glory, the heavenly light from the god within each one of us. Thereafter our evolution will be safe and assured, with that celestial guidance enlightening our hearts and firing our brains. No more will our feet stumble on the path, for we shall

enlighten our pathway as we march upwards and onwards, ever upwards, ever onwards, to heights at present inconceivable even to our minds. That is what lies before us. When we raise our inner eye, our inner face towards the god within us, there comes an eternal radiance, not from anything outside, but from the god within-above each one of us. Call it a Christ, the immanent Christ, call it the inner Buddha, call it by what name you will. The thing is to come to realize its holy presence. Then a man is indeed blessed.

The Theosophical Forum

DEATH AND AFTER — *Lydia Ross and C. J. Ryan*

Birth, Life and Death are but recurring events in the majestic drama of continued existence — here and in the world beyond. Birth and Death are only names for that mystic curtain that rises and falls as we come and go upon the visible stage of life. Our eyes can neither see, nor see through, this ethereal veil that separates the shifting scenes of this world from the greater realities of invisible realms beyond. For the parts we play here are at best only pale, distorted copies of the splendid experiences of the inner Self.

In very truth we are not less, but far more, consciously alive after the body dies. Then we are free to wing our way back again to our native home and to live there in an exalted sense of spiritual being. For every part of our composite nature has its own place somewhere in the boundless universe to which we human atoms belong.

The mystery of Life and the mystery of Death are but different parts of the same web of the soul's destiny. Life never ceases to ebb and to flow between the shores of the Here and the ethereal realms of the Hereafter.

Death is no more to be feared than sleep. "Sleep is an imperfect death; death is a perfect sleep." In sleep we are free to wander in the wonderland of dreams. Ordinary dreams mean that our natural withdrawal from the unconscious body is not complete enough to leave us free from its influences. When we are only partially withdrawn from its restless vibrations, our dreams are confused, strange, unhappy, or evil. If our withdrawal is still greater but not quite complete, we have happy, peaceful dreams. When wholly free, we retrace our way to inner homelands so

distant that even the memory of them all is too vast for the brain to hold. In such magic hours of deep, deep dreamless sleep, the inner man is active and fully conscious in some native spiritual realm, renewing there the strength and courage to meet whatever the coming day may bring.

In sleep the weary body assimilates the food it has taken in, and renews its worn-out cells, preparing for its daily activities. Thus each morning we reincarnate in a renewed and somewhat different body, and also we awake with fresh inner strength. It is all so natural an experience that we take it for granted; yet it repeats in kind and in brief what occurs in the Great Adventure of Death. Sleep and death are brothers. And as "the night-time of the body is the day-time of the soul," so the death of the body is rebirth for the soul.

When, at night, our loved ones are weary and ready for sleep, we do not selfishly arouse them by calling for personal attention. We should be doubly careful at the bedside of the dying and not disturb them by our selfish grief when they are passing into their "last long sleep." For as earthly scenes grow dim, the inner vision becomes clear and strong. However blindly we stumble along life's journey, we die at last with our eyes wide open. Death is a sacred initiation into mysteries of being. It is a solemn time, calling for quiet and silence, that the departing one may go in peace, infilled with the hidden *meaning* of the life now closing. For after the heart has ceased to beat, and all seems ended, the outgoing forces of life rush through the brain, and the man sees "the whole of his past life marshaled before him in its minutest details. For one short instant the *personal* becomes one with the individual and all-knowing Ego. But this instant is enough to show him the whole chain of causes which have been at work during his life. He sees and now understands himself as he is, unadorned by flattery or self-deception. He reads his life,

remaining as a spectator looking down into the arena he is quitting; he feels and knows the justice of all the suffering that has overtaken him." (*H. P. Blavatsky*)

This inner vision always occurs, even in sudden death. Its reality is confirmed by many persons resuscitated from drowning. When all but gone, they saw the detailed panorama of their whole life flash before them. Thus they had actual evidence that *everything is recorded* on the invisible Screen of Time, and that the real Man does know the whole record.

The Theosophical teachings are consistent with each other and with the facts in Nature. There is natural provision for everything that occurs to us in life and death, as these two states are natural parts of our existence. Man and the Universe are alike composite in their natures, and man has, in some degree, everything in the universal Scheme, from spirit to matter. Spiritual man, having descended, through increasingly material levels on his way to human incarnation, naturally retraces his way on the return journey after death.

The familiar division of man into "body, soul, and spirit" briefly refers to his sevenfold nature — that is to say, the elements which make up his being — which is divine, spiritual, intellectual, emotional, vital, astral and physical. These different parts of the human constitution naturally fall apart after death and each goes its own way. Thus when at last the vital forces — *prana* — leave the body, the physical atoms begin to return to their place in Nature — "dust to dust." The astral or model-body upon which the physical is built, cell for cell, is of an invisible, finer grade of matter. Its atoms also separate and they are diffused into various other astral forms in Nature. The individual stream of *pranic* life returns to the great ocean of life in which we move and live. Of the lower, personal man, the most persistent elements are his

passions and desires, and these impulses and emotions, being earth-born, are earth-bound. Here, in the atmosphere of selfish desire, these disembodied emotions cohere into an ethereal form, to survive for a time as a *Kama-rupa*, *Kama* meaning *desire*, and *rupa*, *body*. From this human dross, everything worthy to survive is separated in a kind of purgatorial cleansing, after which comes the "second death." All the gleanings of good are added to the real inner Man, who is ever evolving through experiences in successive incarnations, and absorbing the essence of it all in the periods of refreshment between earth-lives. This spirit, now liberated from all things earthly, re-ascends to the finer airs of its own realms, there to remain until the hour strikes for another life on earth.

When the soul freed itself from the passions and desires, it left behind the *Kama-rupa*, the dregs of its former personality. Then the *Kama-rupa*, deprived of vital thought and conscience, fades away in due course of nature; unless as sometimes happens, this dangerous "shade" is drawn to and vitalized by mediumistic natures seeking to communicate with the dead.

"Is there no hope, then, of meeting those who have passed on?" is often asked. There is not only hope but certainty that those who truly love cannot be separated, for love is eternal. *Spiritual* communion can indeed take place between the departed and the living; but it is for the living to rise to the spiritual planes, either in deep, dreamless sleep or in rare moments of lofty thought and aspiration. Fortunately, in the very nature of things, we cannot drag the liberated soul down to earth's murky atmosphere, though the soulless *Kama-rupa* may appear in the seance-room. Those who truly love will surely meet again in other lives on earth, and will renew the old ties, though under new names and conditions. How else could we explain love and friendship at first sight?

Bereavement should bring home to us a larger sense of our responsibility, even to our beloved dead. They are resting in the keeping of the Great Law, and absorbing the meaning of their past experiences, and so becoming better prepared to put more of the ideal truth and beauty of their heavenly visions into their next life on earth. Their sacred silence is a challenge for us to do our part to start new and nobler currents of thought and action, while we are still in this world of causes.

Man is an intelligent and moral being because of *Manas*, "the mind." This is the dominating principle in his present stage of development — he is more than an animal and less than a god. His mind is dual: the higher mind working with his spiritual nature, the lower mind being used by his selfish, material nature. Thus man is the author of the greatest good and of the worst evil on earth. After death his purely intellectual nature unites with his spiritual or *Buddhic* principle, they together being the Reincarnating Ego. This is the real man who enjoys the ideal thought-life and spiritual vision in *Devachan*, or what may be called the "heaven-world" or the world of the gods — *Deva* means god, and *chan* means realm, or world.

Devachan is a condition of spiritual life, with various degrees or grades of consciousness extending through realm after realm of beatitude. Though each man's inner treasures of thought and feeling — his noblest aspirations and beautiful ideals — ever elude his grasp when on earth, their realization makes up his soul-satisfying life of bliss and refreshment in Devachan. While this exalted state is, in one sense, like an exquisite dream, yet it is more illumined, more vivid and far more real than anything known on earth. Our spiritual existence is rich in harmony, beauty, and love; all the pain and suffering, all disappointment, privation, heart-ache and loss that were endured in the last life

are forgotten.

Nothing, however, is lost of the purified *essence* of earthly experience, which is assimilated into man's expanding inner nature. Between lives he sees his perfected ideals clearly pictured in heavenly visions. These are impressed upon the reincarnating man as possibilities which he may work out into every-day realities in the conditions of earth-life — and only there. For the kingdom of heaven which is "within" can "come" on earth only when men bring into action their innate spiritual faculties and the creative powers of pure intellect.

When assimilation in Devachan is complete, the refreshed Ego feels the longing for old familiar scenes of activity; it desires to come back and take up its unfinished business with its former associates. Then it begins its return journey from more ethereal realms through the various grades of substance that finally merge into physical matter. At each stage it ingathers whatever of its make-up — the ethereal sheaths of the soul — it had left there in freeing itself for upward flight. At last it reaches earth's atmosphere.

Meantime, the Ego's earthly attributes and characteristics of *personality*, as well as the physical and astral atoms it had discarded at death, begin to reassemble, feeling the urge for reunion with their own. Again the separated principles form the sevenfold composite being which has been drawn to the family and the conditions that are in keeping with its further growth. Then a baby is born — a little, helpless, unawakened being, but somehow bringing with it a refreshing air of purity and "otherworldliness."

Just before birth, the returning pilgrim sees in a flash of spiritual vision the chain of causes which led him to Devachan and back to the new life about to begin. Seeing the justice and meaning of it

all, he accepts it with sublime courage. Then he drinks of the Waters of Oblivion — the "River of Lethe" — and passes through the mystic curtain of birth.

An exception to what usually happens after death occurs, as might be expected, in cases of self-destruction, for suicide is a violation of natural law. The suicide is not really dead though he has lost his physical body. He remains a *living man* in the lower astral levels close to the earth, and will linger there for the length of years he would have lived but for his rash act. In many cases this is a period of intense mental suffering, and many of these unfortunates are easily attracted to the seance-room, because of the cravings for the gratification of the appetites and desires which can be satisfied only by possessing the body of a living person. This unnatural and uncanny possession is dangerous for all concerned, not only in the immediate but in far-reaching results that may be spiritually disastrous.

For humanity at large, Death is a Wonderful Adventure which alternates with the soul's opportunity for unfolding its spiritual powers in life on earth; but it is only on our "good earth," where body, soul, and spirit working together provide the necessary conditions, that we can attain to complete and lasting Self-knowledge. This world is our school-house of experience. Here the god in man is destined to conquer his animal-nature in the fulness of time, and to move on to a more splendid destiny than our imagination can conceive. A few Great Men, the Masters of Wisdom, have traveled far on the way to perfection. They established the Theosophical Society to bring to their fellow-men a knowledge of how they, too, may tread the same small, old Path to peace and power and vision.

FREEWILL AND ORDER — *Henry T. Edge*

The object of this article is to help those who may be laboring under the idea that the existence of order in the universe is somehow inconsistent with the freedom of the will. Such a notion is contrary to the teachings of the Theosophical Leaders and also to the views of the leading thinkers of today in the ranks of science. With such an array of authority against them, the holders of this view may feel that their belief is due to their not having considered the matter deeply enough.

WHAT THEOSOPHY TEACHES

That the universe is composed, not of a host of dead atoms, but of a host of living beings, monads, sparks of the universal Life-Consciousness. This makes all the difference in the world. For even the lowliest of these Beings must (by definition) be endowed with *some* degree, however limited, of consciousness and volition; while among the Beings higher in the scale we shall find greater degrees of consciousness and volition, greater degrees of freedom. Hence freewill must be, in this view, at every point in the universe. Yet this universal freedom does not mean chaos — and why? Because the universe has laws. Whence these laws? As far as our conduct is concerned, it may be enough that we should recognise their existence; but if we wish to dig deeper —

"First come the SELF-EXISTENT on this Earth. They are the "Spiritual Lives" projected by the absolute WILL and LAW, at the dawn of every rebirth of the worlds." — The Secret Doctrine, II, 164.

Man has relative freedom, according to his environment and the degree of his evolutionary attainment. As long as he is on the

physical earth, he must recognise (at his peril) the laws of physical matter. But this does not prevent him utilizing those laws. As long as he dwells in the halls of illusion and follows personal desires, he will be more or less the servant of lower influences. But he can emancipate himself; and the whole Path is a path of progressive self-emancipation, until the final freedom is achieved.

Tis from the bud of Renunciation of the Self that springeth the sweet fruit of final Liberation.

The way to final freedom is within thy SELF.

— *The Voice of the Silence*.

We cannot set our own will against the laws of the universe, and against all other wills — unless we feel able to start a little universe of our own — which might be lonesome.

WHAT SCIENCE SAYS

Christopher Caudwell, in his recent book *The Crisis in Physics* (reviewed in THE THEOSOPHICAL FORUM, April, 1940), has a chapter on "The Collapse of Determinism," on which the following remarks are largely based. Scientists have been forced to become philosophers and to question the very foundations of their world-view; the doctrine of Determinism is seen to require restatement. The problem of causality has to be reconsidered. In the 19th century the basis of determinism seemed to have been settled by 17th century philosophy; but this view is now becoming chaotic, and a principle of Indeterminism is taking its place.

Heisenberg established this principle when he found that it is impossible to ascertain both the position and the velocity of an intra-atomic particle; and, commenting on this, Caudwell says:

The importance of this principle is that it states an absolute or intrinsic uncertainty as a law of Nature. This has been

interpreted by many well-known physicists as meaning that Indeterminism is a law of Nature.

It presumes a fundamental discontinuity in Nature, which had hitherto been supposed always continuous. It upsets the differential calculus; immutable laws have now become only high probabilities. We can analyze masses into molecules, molecules into atoms, atoms into still smaller particles, but then we reach a point where we can no longer calculate. We have reached the confines of physics, and can no longer summon its laws to our help. It is important, however, to observe that this uncertainty does not apply only to the very small, but also to the very great; and that our calculations as to the workings of the stellar universe carry us equally beyond the sphere of terrestrial physics, so that we are confronted with incompatibilities and alternative theories.

Eddington points out that Causality and Determinism, so far from being equivalent are incompatible. That is to say that the sequence of Cause and Effect does not imply predetermination, but does imply freedom. This proposition is the opposite of that held by some people as mentioned at the beginning of this article. Yet it is justified by this eminent man of science, who shows that:

The relation of cause and effect involves a flow of power from the cause to the effect, and therefore a certain freedom on the part of the cause. But if every event is completely and necessarily determined, then how can any event be regarded as a cause, since it is absolutely determined from the start by prior events? It is not in that case the cause, but the cause is shifted back, and there is an infinite regress.

The following quotation from Caudwell is eminently in accord with what we have been so often told by Dr. de Purucker:

Into every effect all the previous events of the universe flow as a cause, and, lacking any one of them, the effect would be in some measures slightly different.

CONCLUSION

The essence of human nature, we are taught, is the Divine Monad, a spark of Cosmic Divinity; and this manifests itself through a series of vehicles, so that its presence and influence are always active in greater or less degree. Man's real will (and destiny, which is the same thing) is to fulfil the laws of the Universal Harmony, and he achieves the highest freedom by self-identification with the *SELF*. Karmic law may determine our *experiences*, but cannot determine our *acts*, because at every moment we have this Divine source to draw upon. Every moment is a beginning. Karma is not a rigid chain, like that imagined by physicists or philosophers at one time; it is a chain of *cause and effect*; and, as we have seen, these two are not alike and interchangeable, but essentially different; for *Cause* implies volition. Let us throw off this nightmare of determinism and *act*.

The Theosophical Forum

A PHILOSOPHY OF STRENGTH (1) — *Elsie Benjamin*

"The Soul Sets to no Man a Greater Task than He Can Perform."

The Theosophical Philosophy is a philosophy of Strength, and the above quotation from William Quan Judge epitomizes this fact, showing the relationship between the life a man leads during any one existence on earth, and whatever faces him in that life, whether it be obstacles and difficulties or the more "fortunate" circumstances of existence. There is no place in our philosophy for unburdening ourselves of our karmic heritage and placing it on the shoulders of another. Nor is there any possibility of our evading what is our just due, whether good or bad.

Far from this being a discouraging teaching, it is one filled with great optimism. We realise, firstly, that we are going to get exactly what we deserve and nothing that we don't deserve — whatever we have sown whether good or bad. In other words we will have the opportunity to pay all our debts to life and reap all its rewards. Secondly we realise, that in any one life it is we ourselves, our Higher Selves, who have chosen just what we shall do or be. Thirdly, as said above, we realise that we have the strength innate within us to meet whatever life brings. Then we feel that we are the masters of our own lives, not driven hither and yon by some outside force, and that we can intelligently direct our own evolution towards the goal of greater achievement which in turn brings its reward of greater ability to help our fellowmen.

Let us see how this is brought about: In any one life we are continually sowing seeds of future karma, and some of these seeds take many incarnations to come to fruition. The result is

that when we are on the threshold of any new life, there is a vast accumulation of "unexpended" karma, both good and bad, which faces us. The Higher Self of man has a chance at this time to pass in review this accumulation and to choose how much of it shall be reaped in the life just ahead. A soul that has great strength, that is urged by the longing to progress and help others likewise, will very probably want to clear away a great deal of this accumulation, and will choose an existence (always limited of course by its karmic heritage) which will give it the greatest opportunity to bring these things to fruition; while a soul which has not developed the innate strength earned through lives of suffering and endeavor, will probably choose an easy existence or a colorless one, devoid of obstacles and difficulties.

So naturally when that soul comes into incarnation again, what is it faced with? Firstly, nothing but what itself has sown in the past. Secondly, only that portion which it itself has chosen to meet, and thirdly, the knowledge, having made the choice itself, that it *can* meet what life offers it.

But why do we not remember this experience and realise that what comes to us is of our own making and choosing? It is because it is the *higher* part of us that sees this picture and makes this choice, and unfortunately all too few of us are able during life to live continuously in that higher part and to retain its consciousness. But the first step is taken if we know the teaching, just as on a strange journey with the path ahead entirely unknown to us, we can proceed intelligently if our course is mapped out in advance.

So when we come to times in life that are hard, when the way seems obscure and the going difficult or well nigh impossible, let us remember that there is something within us that knows the way, that has the strength to follow it, and that it is nothing more

or less than what we have earned for ourselves.

This same teaching is also expressed in a beautiful quotation which appeared in Madame Blavatsky's magazine *Lucifer* shortly after her passing, which runs: —

There is no danger that dauntless courage cannot conquer
There is no trial that spotless purity cannot pass through
There is no difficulty that strong intellect cannot surmount
For those who win onward, there is reward past all telling
the power to bless and serve Humanity. For those who fail,
there are other lives in which success may come.

WESTERN YOGA — *E. D. Wilcox*

In any outlook over history one will find definite cycles of alternate progress and quiescence. Some of these are swift moving changes, others arrive with quiet, even flow. In individual life this rule is equally true in regard to both physical and mental development. Here in our western world the past century has been markedly one of upheaval in both ways. In the thought life the first great stir spread when the "Ape" replaced "Adam" as our first human parent, and this naturally shifted man back to the animal realm with Nature as his creator instead of God, depriving him of inner spiritual selfhood. The second great stir was a bombshell of inner world phenomena for which, to men's minds, there was neither reason nor denial. The two lines of thought contradicted each other, and as one looks back in retrospect the controversy was bitter and irreconcilable when Madame Blavatsky reached New York, bringing the key to both these riddles: from whence came man, and the cause of the so-called spirit-phenomena.

To the world of Science H. P. Blavatsky taught that the physical body of man was built according to the same laws of Nature that plant and animal were, that is, by gradual evolution. Nature manifested her forms of life on many planes other than physical, to any one of which Man had the power of conscious access. We of the West are accustomed to think of man as threefold, body, soul and spirit. Of the body we are actively cognizant; the soul, we confuse with mind, while of the spirit we know nothing other than vague musings.

The eastern teaching is that man is sevenfold, and when we stop to analyse we find it easy to separate man into a number of

selves. Outwardly we live in an emotional self, swayed by sense impressions; inwardly, what we call the psychic self, we fill with longings and desires. Intellect we think of as the mind, the self of reason and decision of will. Beyond all these we are aware by flashes of what we call intuition, of a deeper Self, of a real I, in whose consciousness the other selves seem but passing phases, mere aspects of the real. For instance, involuntarily, we say: "I have a will, I have a mind! We even know that we *have* a soul, but we never say that "I have a spirit," because we intuitively recognise that back of and beyond all is Spirit of which we are an inherent part. Analyse, and we know that we can concentrate thought and act in any one of these selves to the exclusion of all the rest. Frequently we find someone wrapped in thought oblivious to sight or sound, and we say he is in a "brown study."

This power of the mind to focus its will or thought on a single idea within any of the planes of consciousness is called in the eastern teachings Yoga, a word meaning Union. We have no word in English to give the full meaning; the nearest is psychology, but that should rightly be restricted to psycho-mental processes. In fact, our western efforts to understand the different teachings and methods of yoga training has resulted in a veritable hodge-podge of mixed theories and practices. The eastern mind for centuries has wrapped itself in veils of inner worlds; the western mind fills itself with sense impressions from a physical world and translates all its thoughts into outer needs and utilities.

Methods of training in any of the forms of Yoga differ with the teachers, and in the Orient there are as many of them as there are of Christian sects here. A few of the rules are the same in all. The first step is to learn how to meditate, the aim of which is to so concentrate the thoughts within the mind upon the one desired idea or purpose that no entry or response may be made within the brain by sensation from without or varying thought within. In

this effort the methods vary according to the plane of consciousness on which the training is placed, whether physical, psychic or mental.

Physical self-discipline has been often exhibited in instances of medieval ascetics with their forced postures and tortures such as that of Simon Stylites who spent most of his life seated cross-legged on the top of a pillar, but such devotees are rare among us nowadays.

The mainspring of yoga training for us is psychological, not to attain the nirvana of self-abnegation but to strengthen the power of the will to gain its object on the plane of desire in the present life. The entire religion and philosophy of life of the East and the West are antipodal. We of the West are so imbued by the concept of a special creation at each one's birth, of a single period of a lifetime to be spent on Earth, and with no return to body existence, that the chief incentive of thought is concerning the body, its health, its attainments, its wealth of comfort and personal achievements. For the purpose of obtaining one or the other of these is the type of yoga training and practice taught by most of the professional teachers.

The prevailing idea among us is that health is the natural state of man and that lack of it is due to mental ignorance or error of act or thought. The main argument is that in the native animal life health reigns unbroken and, as child of nature, to Man belongs the same right. To claim it lies solely in the will. There is a partial truth in the argument but the conclusion is wrong. The animal world lives wholly and unconsciously under the laws of nature; Man self-consciously obeys or defies those same laws by his own will and choice.

One of the unvarying laws of Nature is that "to every event there is an antecedent cause," and "remove the cause and the effect will

cease." The "cause" and "where it lies" sum up the fallacies of all the popular teachings of western methods to "reach perfection." Compare the psychology (the so-called yoga) of the western teaching with the true sacred yoga of the Secret Doctrine of the east.

We crave the pleasures of this one earthly life, and we demand a surcease of all the illnesses which oppress the body even when we know that we ourselves have caused them. We claim as our right, whether in merit or not, the riches of Earth; whether rightly or wrongly a continual race to emulate or gain precedence over friend and foe alike. To compete and to succeed is our watchword.

When the knowledge of Yoga came to us we welcomed it with open arms. We renamed it Psychology and gave it leadership in school and church, in business and sport, and above all in the search for health. We have it down to the one lesson that the mind, single-pointed, can direct the will, can strike like an arrow, thought-barbed to its goal.

In the East they also seek surcease from all the woes of life. To them Yoga trains the mind to be impervious to sense impressions, to forcibly close the doorways of the body and thus seal the mind to their reception. Madame Blavatsky who brought the knowledge of true Yoga to the West, warns us that any of the physical methods of yoga training are ultimately injurious to the health of both body and mind and never contributory to attaining the higher spiritual yoga. She says in *The Secret Doctrine*: "Mind takes no cognizance of the senses in physical man." (I, 95)

Inculcated in the Oriental mind is the universal law of cause and effect (Karman) with its human field of action in a sequence of many lives preceding and following this present one — reincarnation. What we of the West have not been taught and will

not face is this law that "Each man's life the outcome of his former living is," or as our own Bible puts it "Whatsoever a man soweth that shall he also reap." Were we to take into our consciousness this fact that we have lived many lives on Earth, in each of which whatever has come, good and bad alike, is the reaping of what we and none other have sown, we would not fall so ready a prey to untrue panaceas.

Promise of easy remedy of any kind, physical, psychic or mental, by forced suppression of symptoms whether by one's own will or that of another lowers the normal resisting power of the system. It dams back the disorder until it swells and bursts forth at some future time in greater violence. What are called hereditary or birth conditions are all karmic results. Nature plans every organism to harmonious interaction of its parts. The study of the human body proves this. Only conflict or interference disrupts it. Man's place in nature has given him the power to intensify that harmony or destroy it, and he more than nature gains or loses thereby.

Both the western psychology of domination and the negation of eastern yoga are barriers that prevent and even destroy the attainment of the higher forms of yoga. What then is true yoga? The Great Teachers of every country have answered that question, but we "having eyes, see not, ears hear not, neither do we understand." "Raise the self by the Self," says one of the greatest of the printed books on Yoga, the Bhagavad-Gita; and in the Bible, "For whosoever will save his life shall lose it: and whosoever will lose his life for my sake shall find it." How shall it be done?

The outer methods are the same. Meditation: how to train the personal to become the impersonal. Concentration: the tenacity of will that holds every thought and every act firm to the purpose

the "greatest good to the greatest number."

The Theosophical Forum

THE WORK BEHIND THE SCENES — *L. Gordon Plummer*

Whoever joins the Theosophical Society finds an opportunity to learn something of the inner work that is being done for the spiritual welfare of mankind. Assuming that he is sincere in his desire for more light, the quickened tempo of his intuitions has led him to that body of men and women that has dedicated itself to practical Brotherhood, and for a time at least, he may become aware of the realities that work in and through the T. S.

In certain respects there seems to be a difference between our outlook and that held by some of the members in the earliest days of the Society. While the privilege of working with H. P. Blavatsky is one that we can never know, yet we hear that many joined because they wanted to be put into communication with the Masters, or wanted to learn practical occultism, and have special privileges conferred upon them. In part this was due to the necessity at that time of putting the Adepts before the public to a far greater extent than is done now, and to the need of demonstrating and explaining psychic Phenomena. Thus the cry was for more Adepts and bigger and better phenomena. A number of members at that time were fortunate enough to hear directly or indirectly from the Adepts themselves.

Since those days the Masters have apparently withdrawn, and phenomena have definitely subsided. One result is that in some ways we have grown more pragmatical in our approach to the T. S. Yet it can be said confidently that we also approach it with greater understanding of the worth of Theosophy and a greater willingness to work for it. This should be taken as an indication of genuine growth on the part of the T. S. as a whole, not in respect to numbers of members so much as in a maturity of outlook.

When a child no longer cries for the moon he is old enough to understand something about what the moon really is.

The fact that the Theosophical Society devotes its full attention to the work of spreading the teachings of the Ancient Wisdom, and directs its energies to the sole end that Universal Brotherhood may become a way of life, has made it no longer needful for the Adepts to pamper it along, and they are free to do the inner work that is the real force sustaining the Theosophical Movement. The implication is not made that they have become detached from the Society they inaugurated. This would be far from the truth. Events have shown that when our attention has been on the work to be done, there has been a guiding hand directing the outcome of the various problems that we have had to face. And this will continue as long as we do our part. Thus any member anywhere can become temporarily at least, a channel through which the Masters can work. And it is of secondary importance whether or not that member suspects that aid has been given. It is written in the Karmic records that the work has been accomplished, and that is enough.

All this points to the inner work of the T. S. Through adherence to the principles laid down by H. P. B. and reiterated by subsequent Leaders, something is being kept alive. Without this, the T. S. would be nothing. It is difficult to give it a name. We have learned to call it the Lodge Force. Think of it as living, vitalizing energy permeating the Headquarters, every National Section, every Lodge, and finally the heart of every individual member in the T. S. It is what makes the Theosophical work "the most serious movement of the ages." And it is also what makes it an ever increasing joy and a privilege to be a part of that Work.

No promise is made to a newcomer except the promise of greater responsibilities, and of greater opportunities for work. He is not

told that in a few short years he will become an Adept. Nor is he led to believe that because he joins the Society he will become endowed with unusual psychical or spiritual powers. He is told that we are striving for the spiritual regeneration of mankind. We are becoming "fishers for the souls of men," seeking out those who are spiritually awakened so that they too may come into the work. And taking the broadest possible view, he learns that there will come a period in human evolution when a great choice must be made; either to advance or to lag behind. Those who lag will have to go through the trials of earth life for ages to come, while those who advance will become the Guides and Helpers of races to follow. Theosophy gives definite teachings about the evolution of the human race, because sooner or later humanity must be spiritually aroused to action. For although the great choice is not at hand, nor will it come for millions of years, yet when it does come, it will be too momentous to be made in a brief moment of time. So far as any individual is concerned, it will be the result of ages of growth or lack of growth. In other words then, every moment of the day is a moment of choice, preparing us for future great events in the history of the Earth. Who will be the forerunners in those stirring times?

So while it is true that no promises are made, it is equally true that no barriers are ever put in the way of any individual who has the will to advance. There is unlimited opportunity for anyone who is willing to take the time and trouble. Thus spiritual growth is not a thing of which one can say: "That is so far beyond me that it will take lives before I can know anything about it. All I can do is to study and concentrate on my job." That is a negation of a fact of growth. How is discipleship reached except by study and concentration of the work in hand? I have heard it said — and I believe it to be true — that the T. S. as a whole may be thought of as a disciple or Chela of the Adepts. It is under their

direct guidance, and because this is so of the group collectively, it brings every member under their influence, and each member is aware of it to the degree that he applies himself to the living of the life and the study of the teachings. Putting it in this way wards against a tendency of the personality to regard whatever illumination any individual may have as being a sign of special favors. Too often we see the tendency to turn these things to ourselves. Rather let us feel that we are all open to inspiration and illumination, and that whoever is experiencing it at any time is but taking part in the real work that is behind the outer activity of the T. S. Thus the advancement of any member or a group of members aids the T. S. because it raises the average standing of the group as a whole.

Thus we see the importance of the work behind the scenes. The Masters do their real work on inner planes. The life of the T. S. is the Lodge Force, intangible but none the less real. The inner life of the student is the thing that welds him to the core of the Work. And the T. S. is influencing the inner life of the world. The thoughts of men reflect the sublime ideas of the Ancient Wisdom, as witness the writings of our leading thinkers. Thus the accomplishment of the real work of the Theosophical Society is not to be judged so much by outward growth as by the degree to which the ideas are permeating the thought life of the world, which means the degree to which man is becoming spiritually awakened.

The Theosophical Forum

OPPORTUNITY IN KALI-YUGA — *G. de Purucker*

We live in a very interesting age, Companions, a time when history is in the making. I do not think that in the recorded annals that are open to us at the present time there has ever been an epoch when serious-minded students of the Ancient Wisdom, which we call Theosophy, have the opportunities that now *we* have. It is precisely the stress and the strain which are opening our hearts and tearing the veils away from our minds. It is the same thought that our Masters have told us applies to kali-yuga, the Iron Age, a hard, rigid age where everything moves intensely and intensively and where everything is difficult; but precisely the age in which spiritual and intellectual advancement can be made most quickly. There actually have been ages in the past when chelas or students have longed for conditions to be more difficult than they were, to give them the chance to advance faster.

In the Golden Age, which it is beautiful to dream about, in the so-called Age of Saturn, in the age of man's innocence, everything moved smoothly and beautifully and all surrounding being co-operated to make everything beautiful and pleasant; and there is something in our hearts that yearns to return to it; but it is not what the chela longs for. He longs for opportunity; he longs to climb; he longs to test what is in him, to grow from within.

Isn't it a strange paradox that the hardest, crudest, of all the yugas is precisely the one in which the quickest advancement can be gained? I think there is a world of wisdom in this thought; and I speak of it tonight because only a few days ago I received a most pathetic communication from one of "Ours" who wanted to know if there was not something good in the kali-yuga: if mankind had

to go under without hope. Why it is the very time when the chances are the most frequent for progress! It is the opportunity-time.

The Theosophical Forum

THE CYCLES WE LIVE BY — *Mora Forbes*

If anyone should ask you for an answer to the riddle of this struggle for existence we find ourselves in today, you probably would not hesitate to answer that we are moving into a new time, a new cycle is being born, and in that new cycle we hope to find peace and brotherhood for all. Each nation has felt the stirrings of this new time, and felt the need for action; each felt new opportunities lay ahead, a broader, grander way of life; each felt the old must go and give place to the new, and so embarked upon the only way it understood. We all know to our sorrow what that way was.

Taking into consideration reincarnation, all our long past brought us to the nation in which we find ourselves, and so as a nation we must struggle and suffer in the ways that nation has chosen to follow. We and our forefathers brought that nation to birth, made it what it is, and have the power to make it what it will become.

Three distinct types are apparent in all life — the creators, the preservers, and the destroyers. Are we going to be among those who create and preserve evil and destroy good, or shall we create and preserve the good, and destroy the evil? I would like to suggest that the creators are those who hope, the preservers those who understand, and the destroyers those who achieve, break down in order to build up. New wine must not go into old bottles.

Speaking of this power of hope — in the dreary days of cloudy weather, we look forward to the cycle of sunshine and spring; in periods of intense activity and hard, grinding labor, we see ahead the rest and quiet of home; in times of stress, loss and pain, we think of the bright days that must come; in war and strife we build upon a future of peace and brotherhood; in this fast moving

age when we are rushed along in the sweeping, whirling chain of circumstances, vainly clutching at the robes of time for a few extra moments to pause, to reflect, to think, we are sustained by the certainty of quieter, more enduring times ahead. Death today, life — tomorrow. Hope creates in our minds the possibility of a glorious future.

As we move into this new cycle, the preservers are able to understand the idealists, the pioneers, the great leaders that rise in our midst, because they, the preservers, have preserved a knowledge of past courage and past mistakes. One of the main causes of the fall of any civilization is the failure of the people to listen to the voice of those who know how to lead. There are many minor leaders in the world today who proclaim brotherhood and equal opportunities for all as the only salvation of the world, and it is good to know that their words are not falling on deaf ears.

For the coming peace we must have understanding. We can think of cycles in terms of moments, years, centuries, ages. Each individual is living in his own cycle, but that cycle is influenced by the cycles of his immediate family, his nation, his race. When we fail to understand another it would be well to look back at the different phases of our own life, the characteristics of our ancestors, the history of our nation, and the evolution of our race. Probably all the faults we see in another have been experienced by us, individually or collectively at some time or other. It is very difficult to understand a cycle we are not living in, but it can be done if the experiences we are passing through at any time are really registered on our minds and souls, and they will be if we live consciously through all our experiences. This is the strength that turns the cycle.

So we come to the power of achievement, the destroyer of the old,

the destroyer that has the power and the conviction to turn his face forward and not backward, break through all preconceived notions and ideas, strengthened by the hope that we have created, and the understanding that we have preserved. Every cycle of life is an opportunity, and the opportunities will never come in exactly the same way again. But we so often fail to understand them as such. Browning once wrote of the things we strive to do, agonize to do, and fail in doing. Why must this be? Because we have constantly failed to make the best use of the cycle we are living in, or have failed to see that a new cycle has dawned, and been content to stay in a cycle that has passed, and so lived out of harmony with the forces of nature and the age in which we live. When we refuse to move into a new cycle, we come into a blind alley. The power to achievement is lost.

Hope, understanding, and the power of achievement are the three basic and moving factors in our lives. Without hope a man is as one dead. Without understanding he blocks the way to progress. And without achievement his whole life-span is useless. Hope leads to understanding, and understanding gives us the power to achieve.

It would be well to dwell a little on the power of achievement, for without that all our striving counts for so little, and before we know it stronger and more scheming minds than our own have led us into a vortex of horror and degradation. We were warned often in the last twenty years that when it came to an issue, it would be much harder, would demand more sacrifice and strength of character, to keep the peace than to go to war. This new cycle had to be born, the new time had to dawn, and there had to be upheaval, but it need not have been the way of war, if the whole pattern of our previous living had not made the present what it is.

Do we always, in our crucial moments have to remain blind and not see the help that is offered us, deaf and not hear the voice crying in the wilderness? In the prewar days, travelers, philosophers, poets, brought us news from other lands, tried to explain to us what other nations were attempting to do, and they told us that we must either help them and encourage them and open our hearts to them, or face another war.

Theosophy, the unfolded wisdom of the ages, gives us some definite knowledge about cycles, and how we can make use of them. Perhaps it would be well to present a panoramic view of this universe in which we live, in an attempt to make clear how the law of cycles functions so vitally in our lives. In her book, *The Secret Doctrine*, H. P. Blavatsky lays open before us the workings of the cosmos in which we live — its birth, its unfoldment, its rising and downfallings, and its destiny, and in the second volume she does the same for this earth and man. But before doing so, in her introduction to the book, she lays down three fundamental propositions, one of which is the law of cycles — "the absolute universality of that law of periodicity," as she expresses it. Take, for instance, one small portion of the cosmos — our solar system. Globes circling around globes, propelled and sustained by currents of energy weaving and interweaving along their own pathways which are always circular — there are no straight lines in nature. In a period of manifestation, spirit needs a vehicle, and on the plane of matter a material one, and wherever there is matter, there is force; indeed, life of any kind needs force, and force needs a channel, and if it does not find one, it makes one, and because this universe is filled full of countless energies they naturally curve in and out like the river in its bed. Take a globe, for example, seething with activity, hundreds and thousands, even millions, of lives, pursuing their own pathways of life, weaving in and out along many other pathways giving out energy

and gathering in energy, evolving forth other forms, and such forms partaking of the characteristics of the time and place of their first evolvement. What happens to a circle when a line is drawn across it, making a segment? Part of it is cut off. That is what happens when we try to move in a straight line irrespective of surrounding influences. That is what each nation has been trying to do. We become part of the circle when we move along its pathways, which, to remain part of the circle, are circular. All are familiar with the idea of the cycle as portrayed by a design — a spiral — up and down and around and up. The difficulty comes when we are making the turn of the cycle. The pioneers have always turned it ahead of us, but we — we fail to understand the new times. We stand still and look back, and slip down the spiral of a smaller cycle waiting to engulf us in its backward trend.

Previously mentioned in this article was the fact that we gather up as we go, store into ourselves energies and forces that will strengthen our own energy, and if this has been done, we shall be able to make the turn of the larger cycle. In our everyday life this is accomplished by seizing the opportunities that confront us, making use of the cycle we find ourselves in. As Katherine Tingley said, "The opportunities at hand will never come again, may you henceforth be able to make the best of them; may you find in utilizing every moment in right action that quality of strength that you need to help balance your lives and bring you to a fuller realization of what real duty is, not only to yourselves, but to your fellows."

So we have it — the hope of the tomorrow, part of the cycle of today; the understanding that comes through living in our own cycle grandly and well; and the power of achievement that comes because we have found the right channels and moved along them with knowledge gained and obstacles overcome. We have dared to be ourselves, our greater selves.

THE DOCTRINE OF CYCLES — *Lydia Ross and C. J. Ryan*

The doctrine of Cycles is emphasized in Theosophy, as it is so many-sided and so far-reaching in its application to all phases of life and to all conditions of matter. A cycle means a ring or "turning." It is not a closed ring; rather, it is a continuous rounding course, advancing on a rising level. Cycles may be likened to a circular stairway, where, in going up or down, we are always above or below the level of the preceding step or round. Another example of a cyclic course is seen in the thread of a screw, which winds around and upward from the point. A more typical form of the enlarging circle is found in the widening spiral of the common snail-shell. This type is symbolic of the evolutionary progress of all things; and not least of all, it symbolizes the natural expanding life-course of us human beings, as we return to Earth, again and again. We follow an absolutely universal

"law of periodicity, of flux and reflux, ebb and flow, which physical science has observed and recorded in all departments of nature. An alternation such as that of Day and Night, Life and Death, Sleeping and Waking, is a fact so common, so perfectly universal and without exception, that it is easy to comprehend that in it we see one of the absolutely fundamental laws of the universe."

— *The Secret Doctrine*, 1,17

There are cycles within cycles. Man — both the individual and the race as a whole — though evidently rising and falling in lesser cycles, yet is ever becoming more aware of what is within his own nature as well as what is without him. While he is exploring widening fields of the material world and its forces, he is also

becoming more at home in a grander range of humanhood.

The doctrine of Cycles was taught in one of the profoundest and at root oldest of all religions — Vedantism — and its importance was recognised throughout the ancient world. The Greek philosophers also taught it in their time. But the West lost sight of it in the narrow, dogmatic teachings of later centuries. Now, however, in the wider range of scientific findings, the recurrence of events and of conditions stands out in bold outline. Leading minds are observing and analysing the statistics of wars, of business eras of activity and depression, of the appearance of great men, of the rise and fall of arts and sciences, of earthquakes, epidemics, wet and dry seasons, of the rise and fall of nations, of sun-spots, etc., etc.

H. P. Blavatsky states that of old the learned soothsayers and augurs held the same place now taken by historians, astronomers, and meteorologists. A true knowledge of the relation of cycles in the realm of Nature to periodic events in human affairs enabled them to forecast important events with certainty. She also points out, in *The Secret Doctrine*, Volume I, page 646, published in 1888 — when no one thought of a World War:

"It is neither *prevision*, nor *prophecy*; no more than is the signalling of a comet or star, several years before its appearance. It is simply knowledge and mathematically correct computations which enable the WISE MEN OF THE EAST to foretell, for instance, that . . . Europe in general [is] threatened with, or rather, on the eve of, a cataclysm, which her own cycle of racial *Karma* has led her to."

The Wise Men referred to here are a superior body of men, members of the great White Lodge, which has been active in all ages, and whose verified records of events and of human

evolution go back to the night of time. These noble men are the Mahatmans or Masters of Wisdom whose training in true Occultism enables them, individually, to read in this racial history the larger truth that "that which hath been is now; and that which is to be hath already been." (*Eccles.*, iii, 15)

For centuries, the Masters have utilized the last quarter of the hundred-year cycle as a favorable time for making special efforts to awaken men to their own spiritual nature. Moreover, it was known, that near the end of the nineteenth century, several important cycles would end and new ones begin. Then there would follow a period of change and transition in every line of thought and activity — the period we are now in. Evidently we are being challenged to understand the finer forces of our own nature, as the next step in human progress.

The Masters, always timing their work in harmony with natural law and with human conditions, sent their Messenger, H. P. Blavatsky, to found the Theosophical Society, in 1875. She came to restore to the West the forgotten philosophy of life which, alone, could save our modern civilization from disaster. It is noteworthy that this work, starting with a new spiritual cycle, has succeeded, for the first time, in carrying an active, organized body of Theosophical students from one century into the next. The significant fact is that the Theosophical Movement has steadily grown in strength and influence, while the old order of things, in general, has been and is rapidly changing and passing away. The teachings of Karma, Reincarnation, Cycles, the Divinity of Man, etc., have permeated the thought-world and are common topics everywhere. Moreover, various intuitive scientists are openly recognising, in the truths of the Ancient Wisdom, the unifying link between man and the Universe, of which he is an inseparable part.

Cycles are so common that we take them as much for granted as we do the air we breathe, the water we drink, and the solid earth under our feet. Every heart-beat repeats a small cycle of activity and of rest, the rhythmic inflow and outgo of the blood-stream never ceasing while life lasts. In this momentary cycle, an incoming tide of vitality pauses at flood, only to surge out again. It is a miniature copy of the great cosmic sweep of worlds and of Universes, coming into being, reaching their apex of manifestation, and then dissolving in the ocean of Space, for a cosmic rest, and then another, grander round. The Ancients summed it up: "As above, so below."

Every tick of the clock rounds out a tiny cycle of seconds, which make up the minutes whose recurrence marks the hours, which, in turn, expand into the rhythmic tide of light and darkness in day and night — wheels within wheels. The orderly round of days makes the weeks, which grow into the months and years and centuries. There is an endless succession of cycles within cycles of time, from the moment up to the majestic sweep of Universes coming and going in their cosmic "turning."

Nature continually repeats itself, and follows the lines of least resistance in doing things over and over in aiming at perfect work. The ocean tides ebb and flow with clock-like regularity. The birds time their migrations to and fro with the seasons. The sap in the orchard-trees rises for the annual growth of leaves and buds and flowers and fruit, and then goes down to rest again. Each year the returning seasons repeat the unfolding picture of winter's cold, of spring's awakening, of the summer's ripening growth; and then the harvest-home of autumn completes the yearly cycle of change, of progress. The return of New Year's day finds everything different — all men and things have moved more or less along the common pathway of Life. Our growth, our evolution, does not go forward like a train on a straight track. We

progress along a spiral path, ever returning toward a past circuit of our experience, but always bounding the curve in another, broader sweep. Even our Earth, following the Sun in space, traces a spiral journey onward.

The mere infant creeps but slowly through his tiny daily cycle. But on the whole, he moves on, leaving the small circuit of infancy to merge into the larger course of childhood. The child's returning birthdays find him with a stronger body, a livelier mind, and a dawning moral sense. Thus the individual life-journey moves on and on through the varied "seven ages" which Shakespeare pictures. Helpless old age is but the twilight period of one earth-life. Meantime, the Inner Man, in gradually withdrawing from this plane, is preparing to emerge in the dawn of a new spiritual cycle in the invisible realms. For life itself is continuous; and the real Self, which shows forth on Earth when we are at our very best, is vividly conscious and at home during the after-death cycle of peace and bliss and rest. The deathless Self ever ingathers the *essence* and *meaning* of all our earthly experiences, and assimilates them during the mystic journey after death. Thus with each "return" to Earth, we come enriched and enlarged by all we have gone through, both when imbodyed in flesh and when free to soar.

"Evolution is but another word for cyclic law." The opportunities of these continued turnings and re-turnings enable us to bring forth and express the intellectual and spiritual faculties which are wrapped up within us. In the millions of years since we had the gift of mind and had free will to act, we have gone up and down on an enlarging spiral pathway of experience in good and evil. The karmic result of all this is reflected in our character, in our conflicting aspirations and desires of today.

Habits make character; for each time we do a thing it makes a

deeper impression, so that we instinctively repeat it over and over. Sometimes a weakness which seems to have been conquered, reappears in a different form. For instance, a harmful appetite may give way to some other indulgence, or it may appear as selfish ambition or as self-righteousness. Our habits return again and again, helping or hindering us up or down in our career. But the stumbling-blocks we have put in our own pathway can be turned into stepping-stones, when we *will* to use them in that way. Instead of vitalizing a weakness by fighting it, we may use mind and heart and hands in some noble substitute. The returning impulses of gloom or anger or jealousy, or what not, may be connected with and finally replaced by the opposite emotion. We can start a new cycle at any time, to overlap the old one, just as a new and wider horizon opens up before the mountain-climber as he ascends.

The present is a significant time for all of us, individually and collectively. A dawning spiritual cycle is already overlapping the passing darkness of crass materialism. We have the privilege and the responsibility of working with the rising tide of spiritual force to make real progress and to help others. In the ebb and flow of human affairs there are periods of advancement and of retardation. Knowledge of cycles and of self, enables one to work with the progressive forces, and to avoid wasting energy when things generally are at a standstill. Now is a time to act nobly, courageously, and with trust in our own birthright of Divinity.

How often has archaeology uncovered evidences of mankind's return to locations where superimposed cities, each in its turn, had arisen, flourished, and were buried under ages of dust? Whole civilizations have also cycled through their rise, development, and decay. The classical story of "the glory that was Greece and the grandeur that was Rome" tells of familiar examples. Furthermore, the archaic records tell of many others,

prehistoric eras of great racial attainment and decay. Visible evidences of these unknown times are seen in the strange archaeological remains in Central and South America and elsewhere, and in those more recent finds in Central Asia, Crete, Egypt, etc., that speak of the mighty past. Theosophy adds that no historical civilization has yet attained to the splendor reached by the Atlanteans. However, the same Egos who lived and loved and wrought and suffered throughout forgotten ages are evidently reincarnating again today.

The rapidity with which the modern world is re-discovering and reinventing, along every material line, points to recovery of former knowledge by the incoming souls. The average children are born more conscious than were their forebears; and our modern youth takes to the unfolding marvels of aviation, radio, etc., as matters-of-course. The savage races are mostly the degenerate and dying remnants of great civilizations. They too, will disappear as races. But the reincarnating Egos who lived as different types of men during the various racial periods, will cycle back, each in a time and place karmically suited to his own further progress.

The Theosophical history of mankind places our present humanity in the Fifth Race, somewhat past the mid-point of the great cycle of our earthly existence. The four earlier Races rounded out their careers on different continents, each only gradually giving way during the ages in which the next one was forming, until the final cataclysm ended the closing cycle. The Bible pictures a closing scene in the story of Noah and the flood — an event in racial history which is repeated, under various names, in the teachings of all great religions. A vague knowledge of the existence of the last two continents, Lemuria and Atlantis, survives in the myths and traditions of all peoples. Plato's story of "Atlantis" relates to one of the last great remnants of the

submerged continent to which we give that name.

In line with the foregoing evidence of the rise and fall of continents, Science is proving that similar changes are even now going on. For instance, parts of the American coasts are slowly rising and other parts are going down; the Himalayas, and California mountains, etc., are steadily rising. Moreover, recent North Pacific soundings reveal, not a level ocean bed, but a striking area of mountains, valleys, plateaus and plains, not unlike our familiar continents. Geologists agree that practically all present land has been submerged at some time. As for the four great Ice Ages and other cyclic cataclysms, evidence of their recurrence is geologically recorded by the Earth itself.

That Races, civilizations, nations, and men have come and gone, again and again, in many lesser cycles within the greater round of continental spirals, is merely one example of the universal law of repeated imbodiments. This law of Cycles is interwoven and interactive with the laws of Karman and of Reimbodiment. Man is especially affected by the spiritual, psychic, and moral cycles, and these, collectively, make up the individual, national, and racial cycles. Thus, as there is a close relation between the affairs of men and the operations of Nature, we see why, in this modern world of unrest and all-around transition, there are corresponding cyclic upheavals and disturbances in the forces of Nature.

The Theosophical Forum

THE SEVEN PRINCIPLES — *G. de Purucker*

Between divinity and the manifested universe there must be intermediate links, because any thinking person can see that Divine Perfection cannot engage in efforts of imperfection. And consequently the sun itself, for example, consists of a fundamental Divine Being breaking up or radiating into the seven solar logoi. Each of these in its turn copies the example of its divine prototype. We see in this example, understandable by children, the reason for the vast and almost incomprehensible range of entities in the manifested universe and accounting for the progressively greater increase of imperfection as our thought ranges from Divinity on the one hand down to the lowest degrees of the manifested world. Now we break up this infinite variety into seven principles or logoi streaming from the Divine ONE, not one as a symbol of numeration because that springs from the zero, philosophically speaking the All, but ONE merely in the sense that it is incomprehensible Infinitude which our feeble human minds cannot easily expand to the point of grasping. From the Divine Unity springs forth the manifested world, the physical world of manifestation. And it is for these foregoing reasons that the Masters and H. P. B. insisted so strongly that for the proper comprehension of the Theosophical teachings we should know the seven principles of the universe and man.

Perfection does not produce imperfection. Therefore between the perfection of the Divine Unity and the imperfection of the manifested universe, that dark and somber place, there must be a virtually infinite range of intermediary stages running from Divinity to the utmost dregs of materiality. Thus we call these the seven principles in man from the Atman, corresponding to the Divine in the universe, to the physical body, corresponding to the

lowest manifested plane. Man obviously is not divine, neither in devotion nor in thought nor in any characteristic, for if it were so men would be gods. But men are imperfect and it is this range from the perfect to the imperfect in the universe that corresponds to the seven principles of man.

The Theosophical Forum

COURAGE TRIUMPHANT — *Marjorie M. Tyberg*

From Greek drama and the tragic figure of King Oedipus in the masterpiece of Sophocles, to the diary of a New England invalid, seems a far cry indeed. But when Alice James, the beloved sister of the famous brothers, William and Henry, wrote "Ah! Those strange people who have the courage to be unhappy! Are they unhappy, by the way?", she recorded a glimpse of the same profound secret revealed long ago in the Greek drama at a time when the Mysteries were still being taught in Greece.

Alice James's intellect had been tempered by pain and frustration valiantly accepted. This enabled her to perceive the truth that, in the agonies undergone by human beings, causes set in motion in some forgotten past come full circle when they are expressed on the physical plane. There they expend their power to inflict suffering, only to release a *new* power, to initiate a spiritual experience — but *only* for those whose sharpened weapons of discernment have not been corroded by rust of resentment or fear. This experience may be a fleeting glimpse of the ineffable Law which restores harmony in the cosmos; it may be insight into the deepest significance of the Atonement. It may bring exalted peace, that peace with power to bless, which transcends happiness and radiates healing for human woe.

All this is set forth with magnificent artistry in the tragedies of Sophocles that deal with the working of Karma in the destiny of the royal house of Labdacus. Faced with bitter humiliation and disgrace, with the horrid agony of having brought misery to all he loved and wished to serve, and, moreover, all this utterly unexpected and seemingly undeserved, proud Oedipus in his despair tears out his eyes. But he recovers his sanity and

heroically submits to his joyless destiny. He lives out his allotted span of life, demanding nothing, accepting the painful discipline his own forgotten acts and defects of character have precipitated, challenging it to purify and strengthen and do its blessing to his people. The final message of *Oedipus at Colonus* is the assurance that heroism like that of Oedipus invokes the presence and the participation of the gods in the adjustment of human destiny.

One of the earliest reactions to severe sorrow and loss is the conviction that it is not to be endured. To the man who would become wise, Plotinus wrote:

As for violent personal sufferings he will carry them off as well as he can, if they overpass his endurance they carry him off. And so in all his pain he asks no pity, there is always the radiance in the inner soul of the man, untroubled like the light in the lantern when fierce gusts beat about it in a wild turmoil of wind and tempest.

Do we estimate justly the strength of the human heart? Even in those who are quite young it is frequently found. Katherine Mansfield, young, happy, greatly gifted, when she learned that she was ill unto death wrote:

One must submit. Do not resist. Take it. Accept it fully. Make it a part of life. Everything in life that we really accept undergoes a change. So suffering must become love. This is the mystery. This is what I must do. I must pass from personal love to greater love. I must give to the whole of life what I gave to one. The present agony will pass — if it doesn't kill. It won't last. Now I am like a man who has had his heart torn out — but bear it — bear it!

Triumphant courage is not achieved by denial of crushing realities. Today countless human beings have lost what brought

them human happiness. Parents have lost that sustaining sense of continuance they found in the lives of their sons; wives have lost that other self that made their own lives complete; sweethearts have crushed hopes and fewer memories — and how can we bear to think of what war has done to children and the world they must grow up in!

What can this well nigh universal experience of suffering and loss yield for the human race? Theosophy teaches that this is the auspicious moment for the expansion of personal horizons into cosmic horizons wide and deep enough to include the causes, obscure at present, of the disaster and sorrow that overtake human beings individually and in the mass. Horizons wide enough to include future lives on Earth in which knowledge of man's relation to the universe, to Divinity, knowledge of the purpose of it all, can be gained in ever-increasing measure, with power to co-operate with higher beings in periods of activity expressive of the nobler side of human nature. Truly has it been said "The human heart has not yet fully uttered itself." There is no more effectual method of arriving at deeper knowledge of this glorious future than courageous acceptance of crushing loss. It is, moreover, wasteful ignorance not to make such experience count for something in self-directed evolution.

After all, as the Ancient Wisdom — mercifully restored to give timely aid to humanity at this crisis — teaches, the planet Earth, on which humanity is functioning at present, and with whose destiny man's destiny is indissolubly linked, is passing through but *one* of the seven stages, the fourth, in *its* evolution. We and our home-planet have reached a point where a significant turn is made into what is known as the Luminous Arc. Globe D, as the present stage is named, may have many heavy clouds of the karman of past evil-doing to dispel, but *the turn has been made* and beyond the threshold of the ascending arc lie all the

opportunities for fulfilment, for meeting and loving again, for self-development, for boundless joyous effort, for the "glory of going on" — and *on Earth*.

For back to Earth we come, until Earth's destiny and ours have been lived out. Nightly we sleep and our inner selves wing their way afar; death, "the perfect sleep," gives time and space for wider winging; but with birth and morning it is to Earth we return.

It is true that there are always laggards, those who whine and fail when tried by suffering. "Try again" is a maxim that obtains in the cosmos as well as in narrower fields. But the heroic bid sorrow and loss sharpen higher faculties of discernment; they behold and gather the fruit of experience. They win insight into the vast framework of the destiny of Man and Earth. They gear their effort to the push and sweep of human and planetary evolution — and involution. Even voluntary faith in this wider outlook can "illumine the heart and fill the mind." It can fortify mankind for the spiritual adventure of the conscious leap, with Earth, into the Luminous Arc.

The Theosophical Forum

THE EUCHARIST — *G. de Purucker*

The sacrament of the Eucharist was originally a teaching of primitive Christianity about the way by which the human soul could achieve spiritual oneness with the Christ within — a ray, as it were from the Cosmic Christ — thereby becoming a god-man when this union or yoga was complete.

Other religions speak about the Buddha within, and the cosmic Buddha, not meaning Gautama, the Hindu teacher, but a Cosmic Buddha of which Gautama was a ray, as Jesus the Avatara was a ray of what the Christians call the cosmic Christ.

In a very short time, due to a number of converging causes, this beautiful and really holy Christian teaching of how to achieve this yoga or union became lost in the Christian Church, and was replaced by a ceremonial. In other words they substituted a ceremony, a ritual, a rite, to replace the occult esoteric teaching which had been forgotten except by the very few. These very few were attempting to hold back, as it were, or to restrain, the complete loss of the wonder out of the bosom of the Christian Church and from Christian thought. Many of them were originally pagans who were attracted to the new Theosophical Society — as earliest Christianity was — because they felt it had a new dispensation of spiritual power in it; and they took the Eucharist out of the ceremonies of the Mysteries of Dionysus. The Dionysiacs, the Dionysian Mysteries, had a communion in which the priests and the congregation together partook of the blood and of the flesh of their divinity Dionysus. The blood was wine, the flesh was the cereal, bread if you wish, or wheat.

Now the Christians took this over because they knew something of the inner meaning of this Dionysian symbol; and that is the

origin of what the Christians even today, carrying on a tradition but forgetting the original verities, call the holiest mystery in the Christian Church — as it originally was.

Why, even today we can say that the most sacred teaching we Theosophists have, our most sacred mystery, our most occult effort, is so to live and think and study and be trained, that the individual man may become at one with the divine. We are on the upward arc, so that now we can bring about this union — some individuals more than others. When the union is complete you have what we call a Buddha or a Christ. When the union is less complete, you have a Mahatman or one of the greatest chelas. When the union is still less complete, you have some of the great men of human history, mostly in the philosophic and religious lines: great thinkers and teachers such as Pythagoras, and Plato, and Empedocles and other sages from Egypt and Syria and in the Druidic lands of Germany and France and Britain; or again in Persia. Then on a still lower scale you have those men who have caught the gleams of the vision sublime and have been so enraptured by the picture of that glimpse that their whole life thereafter became consecrate to the glory. These are chelas and the great men of the human race. We can all become such, more or less.

Here is a final thought about this: When the Dionysiacs spoke of drinking the blood of their god in the wine and taking the flesh into themselves through the cereal, the wheat or the bread, they never intended it in the literal way in which it is now accepted in the old-fashioned orthodox Christianity. They intended it in a mystical sense which I will now proceed to explain. The blood of the god, in the ancient countries surrounding the Mediterranean Sea always meant the cosmic vitality, what we call Jiva, the life, the Divine Life. Thus the blood of Christ, the cosmic Christ, did not mean literally blood, but the word was used as is found even in

the Mosaic books of the Jews: "in the blood is the life." The blood became the symbol for the life of the Christ, the Christ's life, the Christ's vitality, the divine vitality in individual man which transformed him and raised him so as to become at one with the Christ or with the Buddha. In that sense, by training, by effort, by yearning, by study, the neophyte raised his own life to aspire upward, to become universal, to become one with the universal life. And they called this union, or yoga, "communion": the man thereafter communed with the cosmic spirit. "I and my Father are one," said Jesus.

And the bread, the cereal, wheat, in ancient times always had the symbolic meaning of intellect, intellectual power. Here is where you get a very interesting side-line for those who are technical Theosophical students. The ancients said that wheat was originally brought to this earth from the planet Venus. Now the planet Venus in the cosmic scheme represents what we humans in the human constitution call the higher manas, in which the Christ in us, or the Buddha in us, works. The vine, said the Ancient Greeks and Latins, originally came from the planet Jupiter. The planet Jupiter, they said, is that which controls our vitality, or *anima*, or Jiva, our life. And Jiva is a direct efflux from Atman.

These many and converging and correlated lines of ancient Mediterranean thought the earliest Christians seized hold of and put together and welded fast into a lovely and marvelous teaching of union; and then later when the truth became lost, they collected the Dionysian thoughts, changed them slightly, gave them new names, and you have the Christian communion as a ceremonial rite in the Church, commemorating the process by which the sincere Christianos, or one "infilled with the Christos" becomes at one with the divine.

This very word "Christian" originally meant one who is filled with Christ, one who had evoked the Christ in himself by that union, that yoga, the communion, the very thought I am trying to bring forth. Originally Christians were not called Christians. They did not dare call themselves by the title of their great Avatara. It would be exactly as if we were to call ourselves Buddhas, if Buddha were our teacher. Christians originally called themselves "Brothers of Christoi," a Greek word which meant "worthy ones," or as we would phrase it today, students, learners, disciples of the Christ; and the Christians themselves tell us that they were first called Christians at Antioch in Syria; and heaven knows when that was! It may not have been until the third or fourth century.

The Theosophical Forum

CHRISTMAS THEN AND CHRISTMAS NOW (1) — H. P. Blavatsky

We are reaching the time of year when the whole Christian world is preparing to celebrate the most noted of its solemnities — the birth of the Founder of their religion. When this paper reaches its Western subscribers, there will be festivity and rejoicing in every house. In North-Western Europe and in America the holly and ivy will decorate each home, and the churches be decked with evergreens; a custom derived from the ancient practices of the pagan Druids "that sylvan spirits might flock to the evergreens, and remain unnipped by frost till a milder season." In Roman Catholic countries large crowds flock during the whole evening and night of "Christmas-eve" to the churches, to salute waxen images of the divine Infant, and his Virgin mother, in her garb of "Queen of Heaven." To an analytical mind, this bravery of rich gold and lace, pearl-broidered satin and velvet, and the bejewelled cradle do seem rather paradoxical. When one thinks of the poor worm-eaten, dirty manger of the Jewish country-inn, in which, if we must credit the Gospel, the future "Redeemer" was placed at his birth for lack of a better shelter, we cannot help suspecting that before the dazzled eyes of the unsophisticated devotee the Bethlehem stable vanishes altogether. To put it in the mildest terms, this gaudy display tallies ill with the democratic feelings and the truly divine contempt for riches of the "Son of Man," who had "not where to lay his head." It makes it all the harder for the average Christian to regard the explicit statement that — "It is easier for a camel to go through the eye of a needle, than for a rich man to enter the kingdom of heaven," as anything more than a rhetorical threat. The Roman Church acted wisely in severely forbidding her parishioners to either read or interpret the Gospels for themselves, and leaving the Book, as long as it was

possible, to proclaim its truths in Latin — "the voice of one crying in the wilderness." In that, she but followed the wisdom of the ages — the wisdom of the old Aryans, which is also "justified of her children"; for, as neither the modern Hindu devotee understands a word of Sanskrit, nor the modern Parsi one syllable of the Zend, so for the average Roman Catholic the Latin is no better than Hieroglyphics. The result is that all the three — Brahmanical High Priest, Zoroastrian Mobed, and Roman Catholic Pontiff, are allowed unlimited opportunities for evolving new religious dogmas out of the depths of their own fancy, for the benefit of their respective churches.

To usher in this great day, the bells are set merrily ringing at midnight, throughout England and the Continent. In France and Italy, after the celebration of the Mass in churches magnificently decorated, "it is usual for the revellers to partake of a collation (*reveillon*) that *they may be better able to sustain the fatigues of the night,*" saith a book treating upon Popish church ceremonials. This night of a Christian fasting reminds one of the *Sivaratree* of the followers of the god Siva, — the great day of gloom and fasting, in the eleventh month of the Hindu year. Only, with the latter, the night's long vigil is preceded and followed by a strict and rigid fasting. No *reveillons* or compromises for them. True, they are but wicked "heathens," and therefore their way to salvation must be tenfold harder.

Though now universally observed by Christian nations as the anniversary of the birth of Jesus, the 25th of December was not originally so accepted. The most movable of the Christian feast days, during the early centuries, Christmas was often confounded with the Epiphany, and celebrated in the months of April and May. As there never was any authentic record, or proof of its identification, whether in secular or ecclesiastical history, the selection of that day long remained optional; and it was only

during the fourth century that, urged by Cyril of Jerusalem, the Pope (Julius I) ordered the bishops to make an investigation and come finally to *some* agreement as to the *presumable* date of the nativity of Christ. Their choice fell upon the 25th of December, — and a most unfortunate choice it has since proved! It was Dupuis, followed by Volney, who aimed the first shots at this natal anniversary. They proved that for incalculable periods before our era, upon very clear astronomical data, nearly all the ancient peoples had celebrated the births of their sun-gods on that very day. "Dupuis shows that the celestial sign of the VIRGIN AND CHILD was in existence several thousand years before Christ" — remarks Higgins in his *Anacalypsis*. As Dupuis, Volney, and Higgins have all been passed over to posterity as infidels, and enemies of Christianity, it may be as well to quote in this relation, the confessions of the Christian Bishop of Ratisbone, "the most learned man that the Middle Ages produced." — the Dominican, Albertus Magnus. "The sign of the celestial Virgin rises above the horizon at the moment in *which we fix the birth of the Lord Jesus Christ*," he says, in the *Recherches historiques sur Falaise, par Langevin pretre*. So Adonis, Bacchus, Osiris, Apollo, etc., were all born on the 25th of December. Christmas comes just at the time of the winter solstice; the days then are shortest, and *Darkness* is more upon the face of the earth than ever. All the sun-gods were believed to be annually born at that epoch; for from this time its Light dispels more and more darkness with each succeeding day, and the power of the *Sun* begins to increase.

However it may be, the Christmas festivities that were held by the Christians for nearly fifteen centuries, were of a particularly pagan character. Nay, we are afraid that even the present ceremonies of the Church can hardly escape the reproach of being almost literally copied from the mysteries of Egypt and Greece, held in honour of Osiris and Horus, Apollo and Bacchus.

Both Isis and Ceres were called "Holy Virgins," and a DIVINE BABE may be found in every "heathen" religion. We will now draw two pictures of the Merrie Christmas; one portraying the "good old times," and the other the present state of Christian worship. From the first days of its establishment as Christmas, the day was regarded in the double light of a holy commemoration and a most cheerful festivity: it was equally given up to devotion and insane merriment. "Among the revels of the Christmas season were the so-called feasts of fools and of asses, grotesque saturnalia, which were termed "December liberties," in which everything serious was burlesqued, the order of society reversed, and its decencies ridiculed" — says one compiler of old chronicles. "During the Middle Ages, it was celebrated by the gay fantastic spectacle of dramatic mysteries, performed by personages in grotesque masks and singular costumes. The show usually represented an infant in a cradle, surrounded by the Virgin Mary and St. Joseph, by bulls' heads, cherubs, Eastern Magi, (the Mobeds of old) and manifold ornaments." The custom of singing canticles at Christmas, called Carols, was to recall the songs of the shepherds at the Nativity. "The bishops and the clergy often joined with the populace in carolling, and songs were enlivened by dances and by the music of tambours, guitars, violins and organs. . . ." We may add that down to the present times, during the days preceding Christmas such mysteries are being enacted, with marionettes and dolls, in Southern Russia, Poland, and Galicia; and known as the *Kalidowki*. In Italy Calabrian minstrels descend from their mountains to Naples and Rome and crowd the shrines of the Virgin-Mother, cheering her with their wild music.

In England, the revels used to begin on Christmas-eve, and continue often till Candlemas (Feb. 2) every day being a holiday till Twelfth-night (Jan. 6). In the houses of great nobles a "lord of misrule," or "abbott of unreason" was appointed, whose duty it

was to play the part of buffoon. "The larder was filled with capons, hens, turkeys, geese, ducks, beef, mutton, pork, pies, puddings, nuts, plums, sugar and honey." . . . "A glowing fire, made of great logs, the principal of which was called the "yule log," or Christmas block, which might be burnt till Candlemas eve, kept out the cold; and the abundance was shared by the lord's tenants amid music, conjuring, riddles, hot-cockles, fool-plough, snap-dragon, jokes, laughter, repartees, forfeits and dances."

In our modern times, the bishops and the clergy join no more with the populace in open carolling and dancing; and feasts of "fools and asses" are enacted more in sacred privacy than under the eyes of the dangerous, argus-eyed reporter. Yet the eating and drinking festivities are preserved throughout the Christian world; and, more sudden deaths are doubtless caused by gluttony and intemperance during the Christmas and Easter holidays, than at any other time of the year. Yet, Christian worship becomes every year more and more a false pretence. The heartlessness of this lip-service has been denounced innumerable times, but never, we think, with more affecting touch of realism than in a charming dream-tale, which appeared in the *New York Herald* about last Christmas. An aged man, presiding at a public meeting, said he would avail himself of the opportunity to relate a vision he had witnessed on the previous night. "He thought he was standing in the pulpit of the most gorgeous and magnificent cathedral he had ever seen. Before him was the priest or pastor of the church, and beside him stood an angel with a tablet and pencil in hand, whose mission it was to make record of every act of worship or prayer that transpired in his presence and ascended as an acceptable offering to the throne of God. Every pew was filled with richly-attired worshippers of either sex. The most sublime music that ever fell on his enraptured ear filled the air with melody. All the beautiful ritualistic church services, including a surpassingly

eloquent sermon from the gifted minister, had in turn transpired, and yet the recording angel made no entry in his tablet! The congregation were at length dismissed by the pastor with a lengthy and beautifully-worded prayer, followed by a benediction, and yet the angel made no sign!

"Attended still by the angel, the speaker left the door of the church in rear of the richly-attired congregation. A poor, tattered castaway stood in the gutter beside the curbstone, with her pale, famished hand extended, silently pleading for alms. As the richly-attired worshippers from the church passed by, they shrank from the poor Magdalen, the ladies withdrawing aside their silken, jewel-bedecked robes, lest they should be polluted by her touch.

"Just then an intoxicated sailor came reeling down the side-walk on the other side. When he got opposite the poor forsaken girl, he staggered across the street to where she stood, and, taking a few pennies from his pocket, he thrust them into her hand, accompanied with the adjuration, "Here, you poor forsaken cuss, take this!" A celestial radiance now lighted up the face of the recording angel, who instantly entered the sailor's act of sympathy and charity in his tablet, and departed with it as a sweet sacrifice to God."

A concretion, one might say, of the Biblical story of the judgment upon the woman taken in adultery. Be it so; yet it portrays with a master hand the state of our Christian society.

According to tradition, on Christmas-eve, the oxen may always be found on their knees, as though in prayer and devotion; and, "there was a famous hawthorn in the churchyard of Glastonbury Abbey, which always budded on the 24th, and blossomed on the 25th of December"; which, considering that the day was chosen by the Fathers of the church at random, and that the calendar has been changed from the old to the new style, shows a remarkable

perspicacity in both the animal and the vegetable! There is also a tradition of the church, preserved to us by Olaus, archbishop of Upsal, that, at the festival of Christmas, "the men, living in the cold Northern parts, are suddenly and strangely metamorphosed into wolves; and that a huge multitude of them meet together at an appointed place and rage so fiercely against mankind, that it suffers more from their attacks than ever they do from the natural wolves." Metaphorically viewed, this would seem to be more than ever the case with men, and particularly with Christian nations, now. There seems no need to wait for Christmas-eve to see whole nations changed into "wild beasts" — especially in time of war.

THE LIFE-PERIOD OF A PLANETARY CHAIN — *G. de Purucker*

The life-period of a planetary chain — and for the sake of simplicity we will dismiss from our minds the upper five globes, although they are the most important, and consider only the seven lower ones which H. P. B. speaks of — the life-period of a planetary chain, before it dies, is called a Day of Brahma and consists of 4,320,000,000 years. It is followed by an equal time-period called a Night; so that Day and Night together make 8,640,000,000 years. Then the chain reimbodies itself. This time-period you already know from H. P. B.

What is the length of what H. P. B. calls a Manvantara? Here we get into trouble at once, because there are at least ten and maybe twelve different kinds of manvantaras. H. P. B. calls a minor manvantara a passage of the seven root-races on any one globe. It does not matter what globe it is. She calls that a minor manvantara. She calls a major manvantara the passing of a life-wave around the chain of twelve globes. Why? Because a Manu opens a Round on Globe A — called the Root Manu — and closes it on Globe G — called the Seed Manu. Manvantara means Manu-period, or Manu-time, the essence of Manu, that which a Manu produces or brings forth, and this essence comes forth in the evolving life-waves passing among the globes. There is likewise a Manu opening a *globe* life-period, and a Manu closing it. All these things you will find in our Theosophical books.

But now let me ask: What is the length of a manvantara when H. P. B. used the words without any descriptive epithets? You have to search for what she means. Mostly she means this: The time it takes a life-wave, any life-wave, to pass from Globe A through Globe B, through Globe C, to the middle period of Globe D. She

calls this the pre-septenary manvantara; I would phrase it the prior-septenary manvantara. The post-septenary manvantara would follow through the other half of the globe-chain. You will find this described in *The Secret Doctrine*, Vol II.

Now what is the length of such a manvantara from A to the central time-period of Globe D? 306,720,000 years; and if you add the Dawn and the Twilight each of a Dvapara-Yuga, or 860,000 years, together forming a Satya-Yuga in length, you will get a time-period for a manvantara equalling 308,448,000 years, and that is the time-period from A to D. Here we reach the middle point. From D to the end of G is another manvantara, another half-round, 308,448,000 years. The whole round therefore is double that — something like 617 million years.

Where are we now? We are in the Fourth Round, and at the middle point of our lowest globe, Globe D. There is still half of this present Round Four to finish, and then Rounds Five, Six, and Seven, before our chain dies and goes into Nirvana, preparing itself there for its return as a new chain.

From what has been told you, you can get certain scientific facts in geology, for instance. How long has it been since sedimentation began on our earth D? Something like 320 million years; for you must count in the 308 — nearly 309 — million years for the various life-waves, ten in number, following each other in serial order, to come down from Globe A, run through its course there then through Globe B, run through its course on Globe B, and so on through Globes C and D. 308 million would take us to the middle of the Fourth Root-Race on Globe D. Again we have the critical fourth. Half of the round is then completed. But we are now in the Fifth Root-Race, about the middle point. How many years have lapsed since the middle of the Fourth Root-Race to our present middle of the Fifth? Nearly 9 million years. So to the 309

million of the prior-septenary manvantara, you must add this 9 million more or less — a little less - — to bring our time-period to where we are now. 309 plus 9, in round figures, makes 318 million years. I said 320; that is just taking a round figure. So you now know how long ago it was that the Fourth Round began.

How long has our own human life-wave been on Globe D? That is a different question. Remember what these life-waves are. You see how these things are entangled. Every moment you meet with a dozen new difficulties. The life-waves are these: First, Second and Third Kingdoms of Elementals; 4) Mineral Kingdom; 5) Vegetable Kingdom; 6) Animal Kingdom; 7) Human Kingdom; 8) Lowest Kingdom of Dhyan-Chohans; 9) Middle Kingdom of Dhyan-Cho-hans; 10) the Highest Kingdom of Dhyan-Chohans. Ten life waves; and they follow each other in serial order as rounds around the globes.

How long, then, has the human life-wave, our human kingdom in other words, been on Globe D? With certain modifications, the general rule is that each root-race on Globe D, our Earth, takes nearly nine million years from its very beginning to its very ending. 9 million years back brings us to the middle of the Fourth Root-Race. We are the Fifth; the Atlantean was the Fourth. 18 million years back brings us to the middle of the Third Root-Race, then man first became, because of the entrance into him of the manasaputras, a thinking, reasoning entity.

But here we come upon a difficulty that throws out of line this neat calculation. You notice I carefully limit my remarks to three Races only. These are Races 3rd, 4th, and 5th. I do not allude to Root-Races 1 and 2, and 6 and 7 still to come. Root-Races 3, 4 and 5 are pretty much the same length in years — around 9 million years each. But Root-Races 6 and 7 to come will be shorter, and Root-Races 1 and 2 were much longer. Why was this? It was

because Root-Race 1 was practically purely astral, the individuals were intellectually unconscious, and they passed ages in a dreaming, intellectually unawakened state like little children today.

Root-Race 2 was still astral, although verging to the physical, and almost as intellectually asleep as Root-Race 1. Root-Race 3 in its beginning was still semi-astral, but became physical at about its middle point.

Why were Root-Races 1 and 2 so much longer in time-length than the following races? And here is the crux, the difficulty. It was because Root-Race 1, in the manner in which H. P. B. speaks of it, was not only astral but, as she describes it, really represented the *sishtas* from the preceding Round, the Third. This Root-Race 1, beginning with *sishtas*, took ages before actually settling down into a root-race, that is, typically a root-race of the new round, no longer merely *sishtas*. The cause of the awakening and slow evolutionary processes was that the forerunners of the life-wave began coming in millions and millions of years before the First Root-Race as a race apart so to speak could be said actually to have begun.

Every life-wave, as you know, is preceded by its forerunners, sometimes millions of years ahead. Then come more forerunners in larger groups; and finally the life-wave as an aggregate body arrives. When the life-wave as an actual body arrives, then can be said to begin or to have begun the First Root-Race as an actual race *sui generis*. Previous to that time they were *sishtas* slowly being unfolded or affected or changed by the arriving forerunners of the life-wave. This whole process, astral in type on an almost physical globe, as I have said, took ages, before the First Root-Race came into being as a race *sui generis*. Then it lived its time — how long I would not venture to say: certainly 9 millions

of years and perhaps a great deal more, when Root-Race 2 began slowly to come into being, but as yet hardly distinct from Root-Race 1. In fact, Root-Race 1 did not die out and give birth to Root-Race 2, as later root-races did; but Root-Race 1 can be said to have become swallowed up or merged into Root-Race 2, thus producing Root-Race 2. As H. P. B. phrased it, the old waters mixed with the new. A graphic explanation and very true.

There was no death in those early days of Root-Races 1 and 2. Thus Root-Race 2 is at the time I speak of on the scene distinct in notable particulars from the First Root-Race, yet still almost astral, more astral than physical. Towards the end of Root-Race 2 death began to appear but was still unusual, so that the bulk of the individuals of Root-Race 2 could be said to have shifted over gradually into Root-Race 3. With Root-Race 3 death of the individuals became the common order as we have it now. Do you see how difficult all this is to explain? To the best of scientists it would be looked upon as speculative, and by more materialistic scientists looked upon as theosophical dreaming, although there are examples of such procedures or events in the lower kingdoms even on the earth today.

We are now at Root-Race 3 — ethereally physical but still physical and growing grosser all the time. Death has now arrived; the human shape is already common although of course there were no men and women then. The early Third Race was an androgynous race, changing over finally into the two sexes at about the middle point of the Third.

Now as to time-periods; and the relation between the Root-Races and the geological periods: It is difficult to unify our theosophical occult racial periods in their geologic eras with scientific time-periods, and it is this very difficulty which has caused these relations to be kept strictly hidden by the Teachers, as H. P. B.

points out in *The Secret Doctrine*; hidden not because of any especial sacredness about them but rather passed over with just a hint or reference, because of the impossibility in her day, and even in ours, of ordinary untrained non-theosophic people understanding what it would be about.

Theosophical evolution is so utterly different from scientific conceptions of it, both as regards processes and time-periods, that the Theosophist, knowing the facts and attempting to explain, is confronted at each instance by a blank wall of non-comprehension on the part of his theosophically untrained auditors — or readers if he tries to write a book. The worst of these untrained people are the scientists themselves, because even among themselves their own views are recognised as being so uncertain and speculative. And even to trained Theosophical students the matter is not easy to elucidate.

I think it would be foolish to try to twist Theosophical doctrines into conformity with modern geologic time-periods or modern evolutionary ideas, because it simply can't be done, and one day writing of that kind will be bitterly regretted by the Theosophists who attempted it; because science is changing and growing; and it is much better to tell the truth as far as you know it in the best way you can, stating the difficulty and then going ahead. I have never believed in straddling these matters and trying to win adherents among the scientists when at every turn we could only do so (excepting among a few intuitive minds) by disloyalty to our own consciences.

The remarks, then, that I shall make are based on H. P. B.'s geological figures in Vol. II of *The Secret Doctrine*, which I believe are those of Sir Charles Lyell's, the English geologist. Of course the figures of modern geology as regards time-periods have been enormously enlarged, even swollen beyond anything we

Theosophists require; so that for instance what might now be called the Secondary Period would be much farther back in actual years or time than H. P. B.'s Secondary Period. Modern geology as you know, has given millions more years to nearly all the time-periods that H. P. B. adopted for illustration following Lyell. So I will use H. P. B.'s names.

The Fourth Root-Race reached its peak of development in H. P. B.'s Miocene, yes even in H. P. B.'s preceding Eocene. The Third Root-Race probably began in the Jurassic or even perhaps at the end of the Triassic and was certainly fleshing during H. P. B.'s Cretaceous, all of these belonging to H. P. B.'s Secondary Age. This places the Third Root-Race pretty well. The Second Root-Race still ran over into the Triassic, and perhaps can be said to be fleshed in the Triassic, ending in it probably, possibly itself beginning at the end of the Primary age of the Permian period. Whereas the First Root-Race was actually Pre-Secondary, therefore originating in the Primary (I personally think in the Carboniferous or Coal period) and perhaps could be said to have attained its peak and possibly its ending in the Permian period of the Primary age. This would take the First Race back many millions of years — how much, it would be guess-work to say. My own guess is that the First Root-Race probably originated in the Carboniferous or Coal period of the Primary age, and perhaps about 130 to 150 million years ago.

But in this connexion you must remember what I have said above about its astral character, the ages and ages of the *sishtas* which H. P. B. evidently included in the beginning of the First Root-Race; and how long the First Root-Race actually existed as a race *sui generis* I would not care to speculate upon. It would require more knowledge of geology and of zoology and of botany than I have any acquaintance with.

Thus it is clear that our Fifth Root-Race belongs to the Quaternary and originated in H. P. B.'s Tertiary; that the Fourth attained its peak of evolution in the early Tertiary and probably originated in the later Cretaceous of the Secondary; that the Third probably attained its peak of evolution in the Jurassic of the Secondary, and may have originated at the end of the Triassic of the Secondary. The Second probably attained its peak in H. P. B.'s Triassic of the Secondary, possibly originated at the beginning of the Triassic, possibly even at the very end of the Permian of the Primary Age. At any rate the Second Root-Race we can place more or less clearly around somewhere in the Permian of the Primary age, and the First Root-Race in the Carboniferous or the Coal period of the Primary. H. P. B. gives some of the best hints about these matters in her *Secret Doctrine*, Vol. II, pages 711-16.

Now as regards the Root-Races 6 and 7 to come: these will be, as I said, shorter in actual length, and my own opinion is that the Sixth will be close to a Maha-Yuga and a half, say something over six million years; and the Seventh will be still shorter — how long, it would be just speculation to say.

Thus, you see, the life-waves evolve through the Maha-Yugas, but are not closely geared into the Maha-Yugas, for they overlap in both directions very considerably. Finally, while it is very tempting to try to collate the figures I have given about root-races and life-waves and to try to make these figures run with regularity through all the seven root-races, yet it just simply can't be done; and as said above I have carefully limited my own remarks to Root-Races 3, 4 and 5, because here *mind* had entered into humanity, things had become grossly material and therefore more or less mechanical, and Root-Races 1 and 2 were not so to speak inflexibly and mechanically geared to the yugas and Root-Races 3, 4 and 5 more or less were.

DO WE VIEW LIFE THROUGH A LOOKING GLASS? (1) — *Elsie Benjamin*

I wonder how many of the complexities and perplexities of life we are ourselves responsible for because we view things from the wrong end or angle. Many instances could be drawn from the ordinary outlook of the average human being; and they occur from one end of the scale to another, in children who have not attained to the wider perspective of adults; in men and women who view anything from this world-angle and the one life they are living here; or again by ordinary human beings who are not evolved to a higher status.

A child thinks it is a burden to go to school, until he approaches adulthood and learns the fascination of exploring new intellectual fields; and to most children the thought of going to bed is distasteful, but when they grow up a night's rest is rather alluring. An adult looks upon the hard experiences of life as things to be dreaded and avoided, not as opportunities for strengthening character and finally becoming of greater service to his fellowmen.

We so commonly talk about good and bad karma, when after all karma is really colorless or neutral, unless we consider it from the larger standpoint and realise that all karma is good because it is the paying off of debts. If we look at all karma that comes to us as coming from that great store which each person has accumulated from past lives, then when we meet some "fortunate" karma, we are lessening by so much the store of that kind of karma (until we make some more!; but when we have gone through trials and difficulties, we most certainly are putting that much of evil karma definitely behind us, and there is less for

us to face in the future.

But after all, can we ever call karma bad? The clearing off of debts is always a welcome relief, and we have been told that pain and suffering are truly our greatest friends, and who has not found from actual experience that some seemingly unfortunate incident or the denial of some wished-for thing has been the very means of opening a door or paving the way for some of the greatest good fortune that our lives have brought us. There has been more than one instance of a person being prevented from taking a very much longed-for ocean voyage (or other trip), and then the ship was wrecked on that particular trip. It just wasn't his "bad" karma to lose his life then; though at the time of his disappointment he thought it was bad karma that made him miss the trip.

What it all amounts to is that so much of life is viewed from our own small personal limited viewpoint, what is going to be of advantage or the reverse to *us*, entirely neglecting in our minds and consciousness to distinguish what is the real *Us*. But we don't need to go into metaphysical realms for instances of distorted vision. Take fire as an example. Fire is a natural phenomenon in Nature, neither good nor bad; but the man who comes into his home on a cold winter's evening and is greeted by a warm fire, thinks of it as a great benefactor to mankind; while the man who sees his home swept away in flames curses this evil destroyer.

Then there is the matter of death. Fortunately in these days people are beginning to comprehend the beneficence of death and to realise that it is not the antithesis of life, but merely of birth; and that death, which is one aspect of life, opens the door to fuller experiences for the inner and higher parts of man, experiences which man cannot undertake while he is chained to his physical body. On the other hand, neither should this physical

life be looked upon as a necessary evil to be borne with fortitude. It is only by going through this phase of our evolutionary pilgrimage that we can finally raise these lower parts of ourselves to something higher.

But though we are gradually getting the right perspective on the periodic appearance and disappearance of man on earth, we still think of Nations or Races which have reached their summit of flowering and then their old age and decay, as facing a catastrophe, when they are only following the natural cyclic law of rest for a while, to recuperate and store up vigor and energy for their new life

What it really means therefore is that the greater cosmic laws have their true reflexion down here on earth, and if we apply such teachings as the Law of Cycles, the Doctrine of Karma, the Evolutionary Pilgrimage of the Soul, and in fact everything that Theosophy teaches, to the life we are living right now, we must admit that *everything* that happens to us is for the best, each circumstance holds a lesson to be learned, and every step in life can lead us forward and nearer to the Goal. Even when the forces of destruction come into play, they are clearing the ground for something finer and nobler to be built up.

Perhaps by trying to readjust our viewpoint we will move one step nearer towards that "Indifference to pleasure and to pain" which we are told is a *sine qua non* of the disciple, and will bring more real happiness not only into our own lives, but add to the world's general share.

ARE THE BUDDHA'S PRINCIPLES PRACTICAL (1)

The Buddha built his system upon the civilization in which he lived, and adapted to that civilization the methods he perceived were necessary. He drew upon the heritage of centuries in building his presentation of the Truth he taught, as all Great Teachers, Seers, Prophets and Leaders of mankind should do, for a bridge must be constructed between the old and new. He led by a gentle incline from the Brahmanical system to his own. He discarded, as he built his own Path, very many by-paths of peculiar practices and extreme asceticism. This is well known from a study of his life.

He built upon an old and very well developed civilization, and took into his calculations the customs of the people — of whom he was one. This is to be considered carefully as a basis for the succeeding statements.

He drew upon the screen of Time a battle plan for the day in which he lived. The plan itself is Timeless, and has merit, divested of the special details which were designed to apply at the time of his teaching. Apart from its methods, the plan still stands in its severity and beauty. Apply it to the busy modern world, unencumbered by its Rules for the Bhikshus or ascetics, and we have the Rules for the Householder, or lay member of the Buddha's Dharma. Among the ranks of the Householders, Kings of India have been proud to serve, so no householder of the western world should consider that beneath him. It is in meeting one's destiny that the true Buddhist finds THE WAY to peace and high achievement.

Manifestly the Sangha could not be transplanted to another climate in its original costume, observing rules designed for a hot

country. Something must be changed. The dress and rules were changed to suit a different climate in Tibet and northern China. Something must give way, if in another century an age-old custom is outworn, and there appears a better method. So in a changing world, we need not think that there is necessity to retain the original form and fashion of the Sangha, outwardly.

So much for the exterior unessentials. The Doctrine, or the Law, remains. This can be taken by anyone, in any quarter of the world, to mind and heart, and built into the daily life little by little, changing the daily habits, until the householder is in line with all the Five Precepts prescribed for lay members. He need not lose his place in the community or be considered queer or useless in his day or generation. He can find useful occupation and fulfill his duty, be a valuable worker in the world, mingle with all sorts of men and women in his daily occupation. He need not take the solitary life or preach from village to village. He may be, and often is, incapable of such efforts. He may be better fitted for the quiet effort to live the Precepts, to find his own Way by his own effort, and if this is not practical in our century and times — what is practical?

The Bhikshu, however, must choose another path. He must find a center of the Brotherhood, and must journey to the East to find such a center. He may stay temporarily, or permanently. But this path is for the unencumbered, who have wealth and leisure, who are without dependents or obligations to others. It is for those who make the decision *to concentrate their effort*, even as the Bhikshus did in the days of the founding of the Order, and still do in Eastern lands. It should be remembered that even in the Buddha's day the Bhikshus were the exception, not the rule, compared to the vast majority who accepted the Vows of the Householder. The few take the path of the Bhikshu and the many take the path of the Householder, but this status of Householder is

not without merit.

The Theosophical Forum

UNIVERSAL BROTHERHOOD — *Emily R. Plummer*

The first law of life is Co-operation, or Spiritual Unity. If this were realized by men of all nations, brotherhood would be universally applied, embracing all international relationships, for all men are included in the Divine Universal Oneness of all that is: governed by the self-same law. Man evolves, as does everything in the universe, from a Divine root. He is part of a Universal whole, just as the head, the hand, the foot, etc., are parts of the physical body of a man.

Another reasonable analogy: If Universal Brotherhood were actually realized and practiced by peoples of every country, no more would the different races attempt to destroy each other than would any sane man with his own hand purposely harm or cut off any part of his body. This is true; and what a different world would we be living in if the universal Cosmic order were clearly understood and believed in, its power influencing all nations. There would be no warring as there is today, to say nothing of the lesser but equally cruel evils constantly perpetrated among men.

The word brother, or brothers, generally means kinship, or family relationship only, but the suffix "hood," brotherhood — should bring out quite a different meaning, because it implies, as it were, a Divine Cover over mankind: an enveloping God-hood, producing an identical mirror-reflexion of Spiritual Unity of all that is. It is of course not to be expected that the lower or more primitive races or ranks of men, through their as yet undeveloped natures, could have an understanding and enlightenment equal to that possible among the higher classes. Through evolution and a constant effort for growth upwards, all humanity in course of

time will bring forth the God within.

There never has been a country from antiquity down to the present day, in which there were not at certain times Great Teachers of Religion, Science and Philosophy, and through their sacred teachings there is the practical counsel of Universal Brotherhood. Should we not then ever strive in this way to help our kin and countrymen, and whenever possible in warring nations seek to bring harmony where there is discord? There is a universal Karmic law, "As ye sow so shall ye reap," or in other words "Action causes re-action." Many of those who are ignorant of this immutable law, take refuge in their belief that they may ask forgiveness of God for their misdeeds. This brings only a self-hypnotic state of mind. If a man harms others in words or actions, then he must take the consequences brought about through "the processes of universal cosmic harmony seeking readjustments." This law operates throughout the universe or there would be universal chaos. Thus we must never forget that thoughts, words and deeds bring results of their own making.

There is a beautiful truth: Harmony is Nature's law; and if peace and brotherhood are ever to be established in families, communities and nations, each individual must hold in his mind and heart this truth always: that our "enemies" and ourselves have incarnated and lived together many times before this day on our Earth home, and, having set up causes in past lives, through unbrotherly actions, we are experiencing the Karmic results today.

If all nations learn from today's tragic experiences, and develop the consciousness of a Spiritual link between us all, then shall be planted seeds of Spiritual potency for peace and harmony to be harvested. Then will dawn the day when not a man on earth will desire or be compelled to take up arms against his fellowmen, as

the knowledge of Spiritual relationship among all men will at last be felt, understood and lived.

The Theosophical Forum

SOME NOTES ON "THE SECRET DOCTRINE" — *Charles J. Ryan*

ESPECIALLY IN REGARD TO THE SO-CALLED "THIRD VOLUME"

The Secret Doctrine, H. P. Blavatsky's masterpiece, was begun in India in 1879 but owing to her pre-occupation with the activities connected with the establishing of Theosophy in that country, the editing and writing for her magazine *The Theosophist*, and her immense correspondence, little was done for several years. *The Secret Doctrine* was intended to be an enlarged and improved rendering of *Isis Unveiled* which, according to the Master K. H., writing in 1882, "really ought to be re-written for the sake of the family honour," and in which everything is "hardly sketched — nothing completed or fully revealed." (*The Mahatma Letters to A. P. Sinnett*, 130, 131.) About 1884 she took up the task of re-writing *Isis* and a full page notice appeared in *The Theosophist* for February of that year with a proposed title page running as follows:

The Secret Doctrine, a new version of *Isis Unveiled* with a new arrangement of the matter, large and important additions, and copious notes and commentaries, by H. P. Blavatsky, Corresponding Secretary of the Theosophical Society, assisted by T. Subba Row Garu, Councillor of the Theosophical Society."

Subba Row, however, gave little assistance and withdrew from the undertaking long before the book was published.

H. P. Blavatsky wrote a few chapters in India — a more or less preliminary Draft — but they were not included in the final publication in 1888. Many years after her death they were printed in *The Theosophist* for 1931-2-3. During her visit to Europe in 1884, William Q. Judge, her old friend and trusted disciple, spent

some weeks with her in Paris and at the chateau of the Count d'Adhemar, at Enghien, and was able to give help in the preparation of *The Secret Doctrine* which she said was of the greatest use to her. In *Lucifer*, July, 1891, Mr. Judge eloquently describes his experiences with H. P. Blavatsky during his stay at Enghien, and says:

It was with a feeling of some regret that we left this delightful place where such quiet reigned and where H. P. B. was able to work amid the beauty and the stillness of nature. It cannot be blotted from the memory, because there our friend and teacher was untroubled by the presence of curiosity seekers, and thus was free to present to us who believed in her a side of her many-sided nature which pleased, instructed and elevated us all.

It was very different, however, when she returned to India where the distressing condition of Theosophical affairs made any progress impossible. It was not until she settled in Wurzburg, Germany, that she could concentrate on *The Secret Doctrine*. The Countess Wachtmeister lived with her and gave her the most devoted care, attempting to shield her from intrusion, but this was not always possible and the work was several times delayed. *Reminiscences of H. P. Blavatsky and The Secret Doctrine* by the Countess, an enthralling narrative by a constant observer who was at her side for months at a time, describes the remarkable way the book was written and the active part the Masters took in providing the information contained. Many "phenomena" occurred in the most matter-of-fact way, as a part of the regular method of communication between the Master and his chela and not in the slightest degree for the edification of the inquisitive or the skeptical — who were not present!

The Countess Wachtmeister was greatly impressed by the

enormous number of quotations from books — including many very rare ones — that H. P. B. introduced into her manuscripts of *The Secret Doctrine*. The number of books she could carry in her travels was very limited. How did she get the quotations? The Countess writes:

Her manuscripts were full to overflowing with references, quotations, allusions, from a mass of rare and recondite works on subjects of the most varied kind. Now she needed verification of a passage from some book only to be found in the Vatican, and again from some document of which only the British Museum possessed a copy. Yet it was only verifications she needed. The matter she had.

In regard to the verification of one of these Vatican quotations, the Countess had to obtain the services of a friend who, in a roundabout way succeeded in having the original document examined. H. P. B.'s version was correct except in two words which in the original were so blurred as to be almost illegible. Furthermore, the Countess writes, in discussing the images which H. P. B. copied from the records in the Astral Light:

Such visions often present the image of the original reversed, as it might be seen in a looking-glass, and though words can, with a little practice, be read easily . . . it is much more difficult to avoid mistakes in figures. . . .

G. R. S. Mead relates many striking instances of H. P. B.'s employment of astral vision for similar purposes during the time he spent at her side as secretary; and Bertram Keightley independently corroborates the same in his account of the preparation of *The Secret Doctrine* in London after H. P. B. had left Wurzburg. He writes:

Quotations with full references, from books which were

never in the house — quotations verified after hours of search, sometimes at the British Museum for a rare book — of such I saw and verified not a few.

He also, to his great inconvenience, found that "the numerical references were often reversed, e.g., p. 321 for 123, illustrating the reversal of objects when seen in the astral light."

During her long stay in Wurzburg H. P. B. was closely confined to her apartment owing to ill health and had no opportunity of visiting libraries, the Countess having to do all her errands. She was very poor at this time of crisis when some of the most violent attacks on her reputation were being made, but, knowing how much she had to do and how little time was left to her to write, she absolutely refused to accept a large salary to write for the Russian journals. The Countess Wachtmeister suggested that she devote a part of the day to the Russian work, but she answered:

No — a thousand times no! To write such a work as *The Secret Doctrine* I must have all my thoughts turned in the direction of that current. It is difficult enough even now, hampered as I am with this sick and worn-out body, to get all I want, how much more difficult, then, if I am to be continually changing the currents into other directions.

H. P. B. told the Countess Wachtmeister that the four volumes of *The Secret Doctrine* "would give out to the world as much of the esoteric doctrine as was possible at the present stage of human evolution," but that "it will not be until the next century when men will begin to understand and discuss the book intelligently." Although the "next century" is not yet half through, the effect of H. P. Blavatsky's work is already becoming plainly evident in modern thought.

During the Wurzburg period H. P. B. corresponded with W. Q.

Judge about the progress of *The Secret Doctrine*. In one letter, dated March 24, 1886, she writes:

I wish only you could spare two or three months and come to me at Ostende where I am emigrating again. . . . I want you badly for the arrangement of *Secret Doctrine*. Such facts, such facts, Judge, as Masters are giving out will rejoice your old heart. Oh, how I *do* want you. The thing is becoming enormous, a wealth of facts. . . .

Unfortunately, he was unable to leave America at that time.

In 1887 she moved to London, where two well-qualified and utterly devoted Theosophists, Dr. Archibald Keightley and Bertram Keightley, gave invaluable help in the preparation and publication of her greatest work, a tremendous task. They also provided much, perhaps most, of the financial backing necessary. Without their indefatigable energy and self-sacrifice the world would possibly have had to wait a long time for *The Secret Doctrine*.

The first edition appeared in 1888 in two volumes, the publishers being The Theosophical Publishing Company, Limited, London; William Q. Judge, New York; and the Manager of *The Theosophist*, Madras. It was printed by Allen, Scott and Co., London.

The sales were so large that a second printing was soon called for. This has been strangely called the Second *Edition*, but it was only a reprint of the original with the words "Second Edition" stamped on it. In 1893 George R. S. Mead, well known as a classical scholar and a former secretary of H. P. B., and Mrs. Annie Besant edited and brought out a really new edition in two volumes. It was called the "Third and Revised Edition" though strictly speaking it was the second *edition*. The original text was considerably revised by the editors, and much criticism was aroused in certain

quarters by many changes considered unnecessary and in some cases unjustifiable. However this may be, this edition cannot be called a *verbatim* or entirely faithful reproduction of the original as written and published by H. P. Blavatsky. In defence of the numerous alterations in the 1893 edition it has been said that H. P. B. was so anxious for accuracy that she corrected and added to the *paged proofs* of the original edition to the last minute even though it cost hundreds of pounds. These changes were, however, made by the author herself and were authoritative. It is quite a different matter when the author is dead. This widely circulated Third Edition was published by The Theosophical Publishing Society, London; *The Path* Office, New York; and *The Theosophist* Office, Adyar, and printed by the H. P. B. Press, London.

In 1895, a large and comprehensive Index to the "Third Edition" was published as a separate volume. As the paging had been changed from that of the original a key was included for the convenience of those who had the original edition. The publishers were The Theosophical Publishing Society, London; *The Path* Office, New York; The Theosophical Publishing Society, Benares; and *The Theosophist* Office, Adyar.

Until 1909 no other editions of Volumes I and II of *The Secret Doctrine* were produced, but in that year a new edition was published by the Aryan Theosophical Press, Point Loma, California (since then moved to Covina, California, and known as the Theosophical University Press) under the direction of Katherine Tingley. This is virtually a reprint of the original 1888 edition with a scholarly transliteration of Sanskrit words according to an accepted standard, some corrections of faulty Greek and Latin and of obvious typographical errors, and the occasional substitution of square brackets in place of parentheses for clearness. No changes were made in H. P. Blavatsky's language and no passages were eliminated. This is the standard edition still

being published by the Theosophical University Press, Covina.

As the demand for H. P. Blavatsky's works increased, yet another edition of *The Secret Doctrine* appeared. This was in 1925 when The Theosophy Company of Los Angeles published a photographic *facsimile* of the two authentic volumes, bound in one volume. This excellent edition provided opportunity for the study of H. P. Blavatsky's masterpiece in exactly the way she left it, without change or correction, even though in this way many typographical errors are perpetuated.

As the demand continued to increase, new editions and new printings have been printed from time to time, but there is no reason to enumerate them here, and *The Secret Doctrine* has been translated into many foreign languages.

THE ENIGMA OF THE "THIRD VOLUME"

We must now consider the puzzling problem of the so-called "Third Volume" about which so much controversy has raged. Subtitled "Occultism," it was published in 1907 by The Theosophical Book Concern, Chicago; The Theosophical Publishing Society, London; and The Theosophical Publishing Society, Benares. It was compiled and edited by Mrs. Besant alone, from writings left by H. P. Blavatsky.

Is this "Third Volume" of *The Secret Doctrine*, properly so-called? Is it the one to which H. P. Blavatsky referred when she said that *a third* and most of a fourth volume were written, or is it merely a compilation of more or less incomplete articles left by her, some of which she intended drastically to alter or re-write at some future time, presumably as part of the third or fourth volumes? After considerable research in the records at the Theosophical Headquarters at Covina, the following interesting information has been found which shows the conflicting nature of the

evidence.

That, according to H. P. Blavatsky herself, a third volume and at least part of a fourth were written is supported by her own plain statements. In her letter to the American Convention of 1888 she writes:

Now with regard to the *Secret Doctrine*, the publication of which some of you urged so kindly upon me, and in such cordial terms a while ago, the MSS. of the first three volumes is now ready for the press; and its publication is only delayed by the difficulty which is experienced in finding the necessary funds.

On examining the original edition of *The Secret Doctrine* we find many corroborations of the definite statement just quoted.

(1) In the Preface of Volume I we read:

A large quantity of material has already been prepared, dealing with the history of occultism as contained in the lives of the great Adepts of the Aryan Race, and showing the bearing of occult philosophy upon the conduct of life, as it is and as it ought to be. Should the present volumes meet with a favorable reception, no effort will be spared to carry out the scheme of the work in its entirety. The third volume is entirely ready; the fourth almost so.

(2) Volume I, xl: "Such a point. . . . cannot be offered in these two volumes. But if the reader has patience. . . . then he will find all this in Volume III of this work."

(3) Volume II, 437: "In Volume III of this work (the said Volume and the IVth being almost ready) a brief history of all the great adepts. . . . will be given. . . . Volume IV will be almost entirely devoted to Occult teachings."

(4) Volume II, 797, closing paragraph of the book:

These two volumes only constitute the work of a pioneer so that these two volumes should form for the student a fitting prelude for Volumes III and IV it entirely depends upon the reception with which Volumes I and II will meet at the hands of Theosophists and Mystics, whether these last two volumes will ever be published, though they are *almost* completed

(5) Volume II, 106:

There is no space to describe the fires . . . though we may attempt to do so if the third and fourth volumes of this work are ever published.

Observe that she says "if the third and fourth volumes are ever *published*," not "ever *written*." So, in addition to H. P. B.'s explicit statement to the American Convention of 1888, before the publication of the book, we have five equally clear statements given in *The Secret Doctrine* itself.

Before testimony confirming H. P. Blavatsky's statements about the actual existence of the third and part of the fourth volumes is offered, it is necessary to mention certain omissions and changes that Mrs Besant and G. R. S. Mead made in their 1893 edition of *The Secret Doctrine* in the passages just quoted.

(1) The sentence after the word "entirety" deleted.

(2) The words "Volume III of this work" deleted, and replaced by "a future volume of the present work."

(3) The entire paragraph deleted.

(4) The words "Volumes III and IV" deleted and replaced by "other works," and the last words "though they are *almost* completed"

deleted.

(5) The words "third and fourth volumes" deleted and replaced by "the rest."

So it appears that the information given by H. P. Blavatsky in the original edition and several times repeated, regarding the third and fourth volumes was carefully removed in the 1893 edition. What can the reason have been?

Now for a few corroborations of H. P. B.'s statements that the third volume was ready and the fourth in preparation.

Dr Archibald Keightley, one of H. P. Blavatsky's closest friends, writes in a letter to *The New York Times* and quoted in *The Theosophist*, July 1889, describing her activities in London:

The third volume of *The Secret Doctrine* is in MS ready to be given to the printers. The fourth volume, which is to be largely hints on the subject of practical Occultism, has been outlined but not yet written . . . the actual work of writing will not be commenced until we are about ready to bring it forth.

It turned out, however, that although the third volume was written it had to be put aside for a while, for Claude Falls Wright, Mr. W. Q. Judge's secretary, writes in *The Path*, February 1891, that

H. P. B. has within the last week or two begun to get together the MSS (long ago written) for the Third Volume of the *Secret Doctrine*: it will, however take a good twelve months to prepare for publication.

Presumably when H. P. B looked over the manuscript she saw an opportunity for making changes and improvements such as she had made in the first two volumes up to the last moment.

In *The O. E. Library Critic*, April, 1927, the editor publishes the statement that the Angarika Dharmapala, the eminent Buddhist leader, friend and pupil of H P. B., said that G. R. S. Mead told him that the missing volumes of *The Secret Doctrine* had been written but had unaccountably disappeared. Mead was closely associated with H. P. Blavatsky for some time before her death, but had no connection with the publication of the first two volumes of *The Secret Doctrine*.

In regard to the existence of the MS of a third volume "ready for the printers," as Dr Keightley writes to the New York Times, evidence is at hand that no such considerable mass of material has ever been found, nor was such seen by the Keightleys, who had the greatest opportunity of knowing the facts of the case: a fourth volume is still more difficult to explain. For instance, we learn from Bertram Keightley that he and Dr Keightley went through the entire MS. of *The Secret Doctrine* and devised a plan for its arrangement in which H. P. B. fully concurred. The book was to be published in four volumes (1) The Evolution of Cosmos (2) The Evolution of Man (3) Lives of Great Occultists (4) Practical Occultism. The plan was never fully carried out for lack of material, we are told. Bertram Keightley writes in *The Theosophist* of September, 1931, in regard to the two completed volumes:

After this was done, there still remained a certain amount of matter over mostly unfinished fragments or "Appendices" or bits about symbolism, which could find no suitable place in the selected matter or — more frequently — were not in a condition or state for publication. Of course we asked H. P. B. about this matter as it was she herself — not Arch, or myself — who had set it aside for the time being. She put this left over matter in one of the drawers of her desk and said that "someday" she would

make a Third Volume out of it. But this she never did, and after H. P. B.'s death, Mrs. Besant and Mr. Mead published *all* that could possibly be printed — without complete and extensive revision and re-writing — as part of Volume III in the revised edition.

We find no evidence here of a Third Volume, "ready for the printers."

The evidence of Mrs. Besant and Mr. Mead must also be examined. In the Preface to Volume III as published six years after H. P. Blavatsky's death, Mrs. Besant writes:

The task of preparing this volume for the press has been a most difficult and anxious one and it is necessary to state clearly what has been done. The papers given to me by H. P. B. were quite unarranged and had no obvious order. I have therefore taken each paper as a separate section, and have arranged them as sequentially as possible. . . . This volume completes the papers left by H. P. B. with the exception of a few scattered articles that still remain and that will be published in her own magazine *Lucifer*.

In the same Preface Mrs. Besant writes that the Buddha series (on pages 376 to 385) "were given into my hands to publish as part of the *Secret Doctrine*." In view of the above statements by Mrs. Besant that the papers generally were given to her by H. P. B., and that the Buddha pages were given into her hands, the following information is difficult to explain and only adds to the mystery of the original papers left by H. P. B.

A Mr. W. Mulliss of the *Hamilton Spectator*, Ontario, Canada, interviewed Mrs. Besant on October 6, 1926 at Los Angeles, California, on behalf of his own and several other newspapers. From the report in the *O. E. Library Critic* of June 1938 we quote:

Mr. Mulliss. Your critics have insisted that somebody or other has deliberately suppressed the Third and Fourth Volumes of *The Secret Doctrine* to which H. P. B. makes reference in the First Volume of *The Secret Doctrine*. What have you to say to this? Do you regard the Third Volume of your edition of *The Secret Doctrine* entitled "Occultism" as containing any of the matter intended for the Third and Fourth Volumes?

Mrs. Besant. I was appointed H. P. B.'s literary executor, and the matter from which I compiled the Third Volume of "Occultism" in *The Secret Doctrine* published under my direction was compiled from a mass of miscellaneous writings found in her desk after her death. These I took under my own charge.

Mr. M. Did Mead help you in the compilation of these articles?

Mrs. B. No. The papers came absolutely under my own hand and Mead had nothing to do with them.

Mr. M. Well what about the material for the Third and Fourth Volumes?

Mrs. B. I never saw them and do not know what became of them.

Obviously, from the above, Mrs. Besant, at the moment at least, did not claim her compilation called "Vol. Ill" to be the one mentioned by H. P. B.

When we turn to G. R. S. Mead's testimony we find it still more confusing. He writes in *Lucifer*, July 1897:

It is somewhat a novel form of experience for the present writer who has edited in one form or another almost all

that H. P. B. has written in English, with the exception of *Isis Unveiled* to find himself turning over the leaves of *The Secret Doctrine* as one of the general public for with the exception of pp. 433-594 he has seen no word of it before. But other work has prevented his sharing in the labor of editing the MS., and the burden has fallen on the shoulders of Mrs. Besant.

The pages he mentions are the private Instructions given by H. P. B. to her pledged students. He continues:

The editor was bound to publish these [various writings] but we entirely share her private opinion, that it would have been better to have printed them as special articles in LUCIFER than to have included them as part of *The Secret Doctrine*.

However this may be, the reader will hardly be edified when he compares the above paragraphs by Mead with his considered statement made after he left the Theosophical Society and seemingly felt free to express opinions which are, to put it mildly, rather startling when coming from a man who held a high character for sincerity when he was still working harmoniously with W. Q. Judge. He writes in *The Occult Review* for May 1927, as quoted in *The O. E. Critic*, June 1927:

Next, I come to Vol. III. With this I refused to have anything to do whatever. I judged the *disjecta* or *rejecta membra* from the manuscript or type-script of Vols. I and II not up to standard, and that it would in no way improve the work. They could, I thought, be printed preferably as fugitive articles in *Lucifer* but they could not possibly be made into a consistent whole. Mrs. Besant, who put a far higher value on everything H. P. B. had written than I did, persisted in her view and by herself edited the matter for publication,

but even when every scrap that remained had been utilized, it made a very thin volume. I therefore persuaded her to add the so-called Instruction of what is known as the "Esoteric Section" or Eastern School; which had hitherto been secret documents. My argument was that the "occult teachings" as they were deemed by the faithful, were now in the hands of hundreds, scattered all over the world, some of whom were by no means trustworthy, and that it was highly probable that we should some day find them printed publicly by some unscrupulous individual or privately circulated illegitimately. Fortunately, Mrs. Besant agreed, and they were included in Vol. III, save certain matter dealing with sex questions. A load of anxiety was lifted off my mind. I thought that the making of these "Instructions" accessible to the general public might possibly put an end to this unhealthy inner secret school. But this hope, alas, was not to be fulfilled.

The reader will observe that in the quotations just given Mrs. Besant writes in the Preface to her Volume III that the writings of which it is composed were *given to her by H. P. B.*, and from this we are led to conclude that they were intended for the third volume. But in the interview with Mr. Mulliss Mrs. Besant says that this volume was compiled from miscellaneous writings *found in H. P. B.'s desk* after her death and that she (Mrs. Besant) never saw the material for the third and fourth volumes and did not know what became of them!

Mead is still more confusing. He writes that he declined to have anything to do with the third volume *after judging the miscellaneous writings and finding them not up to standard*, yet in his original statement in 1897 he plainly says *he had never seen a word of the third volume* until it was in print except the strictly private part that he had "persuaded" Mrs. Besant to publish to all

the world out of H. P. B.'s Instructions to her most trusted students!

Perhaps it is no wonder that the Masters of Wisdom refrain from giving out the *real secrets of occultism*, which, in the hands of the unfit and unworthy, however fair-seeming and intellectual, would produce disastrous effects.

As if some puckish sprite desired to make the puzzle of the third volume more difficult, others who claimed to be well informed offered different answers. For instance, Basil Crump, in *The O. E. Library Critic* for September, 1939, claims that though part of the MSS. of the third and perhaps the fourth volumes of *The Secret Doctrine* were destroyed by H. P. Blavatsky herself shortly before her death because it did not satisfy her, most of it was saved and taken to India where it is held in safekeeping until the time comes for its release.

In *The Canadian Theosophist*, April, 1939, Thomas Green, a Theosophist, is quoted as saying that he was employed by the H. P. B. Press in London to set up the type for the third and part of the fourth volumes of *The Secret Doctrine*, and that H. P. B. had the forms broken up just before they were about to be printed. James M. Pryse who was one time in charge of the press, denies that this was possible, but Mr. Pryse was not working there until eight months before H. P. Blavatsky's death. Almost incredible as the statements of Mr. Crump and Mr. Green appear they are given some plausibility by a remark in *The Secret Doctrine*, Volume II, 798, where H. P. B. writes:

Until the rubbish of the ages is cleared away from the minds of the Theosophists to whom these pages are dedicated, it is impossible that the more practical teaching contained in the Third Volume should be understood. Consequently, it entirely depends upon the reception

which Volumes I and II will meet at the hands of Theosophists and Mystics, whether the last two volumes will ever be published, though they are *almost* completed.

Is it impossible, then, that when she had completed the first two volumes she decided or was instructed by her Master to publish no more, and therefore had the MSS. of the third volume removed and the type broken up? In November 1889 she wrote to Judge N. D. Khandalavala in India that the rest of her life would be devoted to her trusted pupils, to the teaching of those whose confidence she retained and who were sincerely working for Theosophy. She added:

By leaving it [India] I have been able to write *The Secret Doctrine, Key to Theosophy, Voice of the Silence*, and to prepare two more volumes of *The Secret Doctrine* which I could never have done in the turbulent atmosphere of India.

Notice the words "two *more* volumes."

The theory that connects the disappearance of the true third volume with the orthodox Brahmans cannot be omitted. We know, from the storm aroused in those circles by the so-called "Prayag Letter" (See *The Mahatma Letters to A. P. Sinnett*, page 461), and by the opposition shown by the learned Subba Row who finally refused to help in the production of *The Secret Doctrine*, that any further revelation of the deeper meanings of the Hindu Scriptures would have been extremely unpopular with the Brahmans. H. P. Blavatsky writes in *The Letters of H. P. Blavatsky to A. P. Sinnett*, page 95:

"Such as Subba Row — uncompromising initiated Brahmans will never reveal — even that which they are permitted to. . . ." She then writes that Subba Row warned her that

you have been guilty of the most terrible of crimes. You have given out secrets of Occultism — the most sacred and the most hidden. Rather that you should be sacrificed than that which was never meant for European minds.

Subba Row was a chela of H. P. B.'s Master, but for all that he was a thorough-paced Brahman, and it cut him to the quick to see some of the teachings so closely guarded within the exclusive portals of the Brahman caste being given to the profane, the *mlechchhas*. Though he died in 1890 there must have been many left who knew of H. P. B.'s work and who would have been glad to suppress the two last volumes of *The Secret Doctrine* in view of the possibility of what they might contain, especially the fourth which was to treat of occultism, as we know.

In conclusion, there can be no doubt that H. P. B. intended to write a third volume of her great work and probably a fourth, and that some reason exists to believe that the third and some preparation for the fourth was actually written though nothing was published of all this. The opening paragraphs or even the whole "Introduction" of Mrs. Besant's "Third Volume" may have been intended or even used for the real third volume. The closing words of the first paragraph are significant:

Outside the Theosophical circle, therefore, the present volume is certain to receive at the hands of the general public a still colder welcome than its predecessors have met with.

Although the so-called "Third Volume" contains brief references to some of the topics mentioned by H. P. B. as the main features of Volumes III and IV, it does not fulfill this promise. It has no resemblance to the important and profoundly instructive work which she obviously intended to produce. It is merely a compilation touched up by Mrs.

Besant as she thought best.

Although the so-called third volume cannot be accepted as the authentic "Third Volume of *The Secret Doctrine*" that H. P. B. had in mind, and although most of the best "miscellaneous writings" were published in *Lucifer*, it is not just to call the volume "spurious" as some over hasty critics have done. It contains much information and valuable teaching which is obviously authentic H. P. B. material, though it displays haste and incompleteness in many places.

Regardless of the problem of putting Mrs. Besant's "Third Volume" in its proper place among H. P. B.'s works, it is more than probable that the "miscellaneous writings" are by no means published just as H. P. B. left them. This conclusion is reached by an examination of the great number of alterations Mrs. Besant and Mead made in their 1893 edition of *The Secret Doctrine* which anyone can verify by a comparison with the original. Though most of these thousands of changes are of small importance, some are quite significant.

Strong evidence for *changes, additions and omissions* in the so-called Third Volume is provided by Mrs. Alice L. Cleather in *The Canadian Theosophist*, December 1937. Mrs. Cleather was one of H. P. Blavatsky's Inner Group of pledged students and she possessed a copy of the original report of the oral teachings received directly from H. P. B. These oral teachings form part of the private Instructions published in the "Third Volume" between pages 433 and 594, which Mead cynically said that he "persuaded" Annie Besant to insert *in order to fill it out*, and incidentally, as he hoped, to break up her Esoteric School. These Instructions had been entrusted to the recipients under the seal of strict secrecy — perhaps with the object of testing their worthiness!

Mrs. Cleather published a facsimile of page 559 in *The Canadian*

Theosophist mentioned above, on which she marked the large number of alterations made on that single page. They consist of changes in arrangement, construction of sentences, capitalizing, the use of synonyms in place of original words, and above all of omissions and additions. One addition is significant as it seems to reflect psycho-occult teaching that Mrs. Besant is believed to have received from Brahmans after she threw off the restraining influence of William Q. Judge. This addition reads: "The head should not be covered in meditation. It is covered in Samadhi." Hardly one line on this page is left without some alteration.

On summing up all the information to hand on the subject of the so-called "Volume III" it is not easy to find any valid justification for calling this collection of miscellaneous writings by H. P. Blavatsky an integral part of *The Secret Doctrine* as conceived by H. P. B. and the Masters, although as said it contains most valuable and obviously authentic H. P. B. material. We are, however, in no position accurately to judge how seriously the matter has been revised and altered, or whether H. P. Blavatsky would have permitted much of it to be published without a great number of alterations and additions which she alone was qualified to make.

The Theosophical Forum

MOTION — WHAT IS IT? — *Henry T. Edge*

It isn't anything, because there isn't anything else for it to be. It is one of the primary postulates of philosophy and of the Secret Doctrine. Motion is motion, we may say; or we may say it *just is*, and that's all there is *to* it. To define a thing we must resolve it into simpler elements, but must eventually reach the end of our tether, and such is the case as regards motion. We cannot resolve it into anything more elementary, though we can produce synonyms and perchance fool ourselves in that way. We can say motion is change of position or the act of moving (as Noah Webster does); but where does that get us? Old Zeno proved that there was no such thing as motion, because his arrow must always be somewhere; he analysed motion into a number of successive positions but could not for the life of him explain how the arrow got from one position to the other. As Balzac says, speaking through the mouth of one of his characters:

Between each point of space occupied in succession by that ball there is an abyss confronting human reason.

Hobbes makes motion an attribute of "body," with a co-ordinate attribute called "spatialness." Descartes makes motion a form of extension. Leibnitz makes it a manifestation of force. And you, Reader, can make of these definitions anything you like. Continuing from Balzac:

Everything is movement, thought itself is a movement, upon movement nature is based. Death is a movement whose limitations are little known. If God is eternal, be sure he moves perpetually; perhaps God is movement.

Are we not told that "God moves in a mysterious way, His

wonders to perform'? And cannot we also say that God moves not, for he is motion? "O Thou who changest not," as the hymn says. If motion denotes the beginning of manifestation, then beyond this, in the realms of absolute Rest, we must place That which moveth not, for it is motion, or the root of motion.

That is why movement, like God, is inexplicable, unfathomable, unlimited, incomprehensible, intangible. Who has ever touched, comprehended, or measured movement? We feel its effects without seeing it; we cannot even deny them as we can deny the existence of a God. Where is it? Where is it not? Whence comes it? What is its source? What is its end? It surrounds us, it intrudes upon us, and yet escapes us. It is evident as a fact, obscure as an abstraction; it is at once effect and cause. It requires space, even as we, and what is space? Movement alone recalls it to us; without movement, space is but an empty meaningless word. Like space, like creation, like the infinite, movement is an insoluble problem which confronts human reason; man will never conceive it, whatever else he may be permitted to conceive. (1)

Physics defines velocity, space, and time by each other in accordance with the equation, $s = vt$ and its transformations; thus each of these three fundamentals may be expressed as a function of the other two. Oluf Tyberg in his *Science of Nature*, says, "Space or distance is not a magnitude but a function, the product of two magnitudes, $s = vt$." Time, Space, Motion; functions of each other. But is not Time itself a form of motion? Or again is it a kind of space? Many people use it in both senses without perceiving the difference; which results in endless perplexities, puns, paradoxes, etc.

We have to be satisfied that motion or change is inseparable from

our conscious life on any possible plane we can reach — and let it go at that. Seek not to define the undefinable. "Who answers errs; say naught." But why should we want to define it; our life is mostly made up of things we cannot define. To define is to cut up and hence to devitalize, to label and shelve; not to *use*. Life is motion, rest would be annihilation. An idle man sitting in a bucket may imagine he is keeping still, but he is going down towards the bottom of the well. We may be told to keep moving, but we cannot help it anyway; what matters is which way we are moving.

A vibrating particle changes its direction diametrically, hundreds of times a second; which implies an enormous acceleration, hence an enormous force. Try if you have enough muscular power to waggle your finger back and forth a hundred times a second. When we come to millions of times a second it gives us some idea of the force there is in vibratory motion, whether as cause or effect; some idea of the energy locked up in an atom. What was thought of as "mass" or indestructible matter, turns out to be congealed motion, infinite energy stored up. The seeming dead is very much alive. This idea about the atom makes us wonder if ceaseless motion and eternal rest are not the same thing after all. For what is an atom but a miniature copy of the primordial One? The word atom means an indivisible unit; in physics it is no longer that, but it still keeps the name given to it when it was thought to be indivisible.

SPIRITUALISM (1) — *Christmas Humphreys*

A recent trial at the Old Bailey has once more brought back into general conversation the periodic question, "Is it true that the "dear departed" communicate with the living through self-appointed mediums?" The answer, as to so many questions of this kind, is Yes and No. It all depends on what it is which manifests, for though there is a great deal of fraud in spiritualistic circles, there is a vast body of evidence that "ectoplasm" and various manifestations are genuine phenomena.

Of spiritualism in general two things at least must be pointed out, first that it is not in the least spiritual, secondly, that it is not new. It is in no sense a religion, contains nothing worthy to be called a philosophy, has no bearing on morality, and cannot ennoble its devotees. In the East it has long been scorned by educated people as "*bhuta* worship," the worship of *bhutas*, which the Sanskrit dictionary defines as ghosts or goblins, in the sense of "the gross elements of which the body is supposed to be composed and into which it is dissolved." To the Eastern mind such a practice is revolting, for it is akin to spending one's time amidst the decaying remnants of dead bodies, as indeed the appearances of the seance room most truly are, being only of one degree less density than the body which we far too often bury and far too rarely burn.

The exact nature of the "constituent" elements of the self which, while slowly dissolving, are available for temporary revivification by a medium is a matter of no doubt, so far as Eastern wisdom is concerned, but difficult to explain in Western terminology. Each world philosophy has its own description of the constituents of self, from the "body" to that undifferentiated Unity which is the property of no man, being the Noumenon behind all phenomena.

The Buddhist classification into *skandhas* and various grades of *vinnana*, consciousness, though helpful to the student, may be no more acceptable to Western minds than the "body, soul and spirit" of St. Paul. What matters is the nature of self, not the labels we apply to its manifold ingredients. But there are other reasons why the modern Buddhist, if he seeks to know more of spiritualism, must needs enquire beyond the Buddhist Canon, either of the Northern or Southern School. For that which is known already to his audience will never be the subject of a teacher's "talk" or sermon. Just as there is little in the Buddhist Canon about the doctrine of karman and rebirth, for all the Buddha's audience would know of it already, so there is little about such a loathsome habit as bhuta worship, or necromancy, the cult of oracular responses from the dead, for no man striving for deliverance from self would stoop to such degraded practices. We must therefore look elsewhere for details of entities which haunt the seance room, and find them best in the writings of H. P. Blavatsky, who was trained by Buddhist Arhats in Tibet. These details will be found in her *Key to Theosophy*, by those who will take the trouble to read it, but those who get an emotional and psychic "kick" out of seance-room attendance will not wish to learn what happens in that twilight, wherein deliberate or unintended fraud is the keynote of the "mystery."

In brief, when a man dies his physical body, its life-breath or Prana, and the latter's vehicle, the astral double of the man, which is the Egyptian "ka," alike begin to dissolve, and leave the man forever. He is left with his three highest "principles" and the fourth, or the lower mind, which moves, according to the tenor of its desires, upward to the spiritual planes of consciousness, or downward to a self-created but temporary "hell" of suffering, when the desire exists but not the physical means for its satisfaction. In due course the higher trinity of principles, the

Atma-Buddhi-Manas, pass into Devachan, the nearest truth to "heaven," to await rebirth when all the lessons of the last birth have been learned. The higher trinity do not here concern us, for Atma, the "Essence of Pure Mind," the property of no one vehicle of life, Buddhi, the vehicle "body" of Pure Mind, the highest human principle, and Manas, the higher part of "mind" are alike unreachable by man or medium, save on their own high plane, and never grace the seance-room. What *does* appear, to the great excitement of beholders, if it is human at all and not some elemental sprite enjoying itself, is the dying *kama-rupa*, the lower desire-body, which, bereft of its own higher counterpart and all its spiritual side, is sometimes drawn into the magnetic field of a negative medium, and is disgustingly revived for a while. It cannot reason, can "communicate" nothing which the brain did not know in life, and is no more the name it is made to bear than the skin which the snake abandons is itself. But all this is well described in classical Theosophy, if one may call it so to distinguish it from the rubbish taught by many Theosophists today, and it is no part of Buddhism. Yet according to the press this cult of spiritualism is becoming daily more "respectable," and in countless minds is taking the place of religion and philosophy. If only those who go to seances could be made to understand how the medium is damaged by opening her bodies to such evil influences they would, on the score of compassion alone, avoid such injury. But ignorant they go and ignorant they still remain. The Buddhist pities them, offers them wisdom where it seems acceptable, and for the rest, "mind-ful and self-possessed," pursues the Middle Way.

TEACHER OR AUTHORITY (1)

The story is told of a famous Yogi whose disciple returned to civilization with reticent knowledge and much power, although the teacher spoke hardly a word, even of courtesy, to the disciple over a period of years. In the company of the Yogi, the pupil found himself in an abode of silent unconcern for all things material, including himself as a person. This trial brought humility, fortitude, the control of personal resentment; isolated him from idle chatter and meaningless activity; forced his thoughts inexorably within; and the rest followed. Upon learning that which was to be learned, the disciple bade farewell to him who, having become independent of all things and fit to give all, needed no thanks.

Such food for thought is for spiritual maturity, unpalatable to the mind of the Western peoples, which demands to be urged, flattered, and cajoled, and is ever sensitive to "neglect" or lack of "appreciation," easily discouraged by mental labor, and wont to regard philosophy as diversion rather than a way of life. Yet there is a median way of teaching that does not tend to keep the child forever in childhood. It is to be sought.

"To help and teach others" is the Theosophic aim of life, in exact opposition to that of many notable figures of the day. It is so obviously laudable as to be somewhat too disarming, perhaps, to self-examination.

Naturally, the project involves a conviction of one's ability to help and teach others. Often, this further involves a feeling of our own superiority, which can insensibly glide into (*a*) a conviction of our own superiority in all respects, and (*b*) a conviction of the inferiority of those to be helped and taught. This is a very real

danger. Have we not seen devoted theosophists go about their work with an air — quite unconscious — of settled smugness well adapted to infuriate rather than instruct the beneficiaries of their devotion?

In the world at large are discernible innumerable instances of material "help" through which the moral decay of the victims proceeded proportionately to the help extended. It has been seen on a large scale in recent years in the hands of those ignorant of the spiritual nature and responsibilities of man, but he is a fortunate theosophist who cannot regretfully recall similar errors in his own career. Sometimes the victims of overmuch help are really the subjects of a kind of benevolent cannibalism in which the ego — or the political fortune — of the "benefactor" swells apace with the drained spiritual vitality of the subject. Similar effects can be produced by methods or attitudes of teaching in which nothing is left to thought, and which paralyze the will by the restful panorama of all things made clear, simple, and final. This would not be good even were the understanding of the teacher as clear, simple, and final as he thinks it to be.

Not impossibly, that student who seems resistant to obvious truth may merely be reserving some corner of the universe to explore for himself, or mayhap he is suspicious of so much knowledge being so easily come by.

It is a common failing of Western teachers, including theosophists to tell all they know and often noticeably more. The method of the Mahatmas, on the other hand, is to arouse as intensely as possible the passion for knowledge, and then to desist from clogging the mind of the student with anything he may be able to find out for himself. Thus, the learner follows his own path, without at last encountering the necessity of coming all the way back from a blind alley on some one else's path in order finally to start his

own.

How may one who essays to teach, avoid the creeping rot of superiority and authority? Simply by being *really* a teacher and nothing else. It does not occur to a teacher in a grade school to feel any lordliness over a child because the latter is six years old and the former thirty. He knows well that the child may be a renowned genius or head of the nation on a future day when he himself is withering away on a meagre pension. There is no special merit in being born a decade or two sooner than someone else. It is also helpful to remember that none of this knowledge began with any one of us, and that our passing will leave its sum total undiminished. Nor is the Portion of it in our possession in any wise equal to that which is not. The Theosophic world, like the world at large, endured our absence with notable fortitude for many years before our arrival.

Above all, one who is not in the habit of thinking of himself is not in the habit of thinking about his superiorities, real or otherwise. Such a man places no obstacles between the seeker and the light.

The Theosophical Forum

ELEMENTAL KINGDOMS AND COSMIC ELEMENTS— *G. de Purucker*

The question has been asked: Just what are the *Three Elemental Kingdoms* and have they any special relation to the *Cosmic Elements* of the Ancients?

Elemental Kingdoms, as all the others are, are aggregates or groups of evolving monads; whereas the so-called elements of the ancients, or the principles, were so phrased by them to describe more what we today would call the seven principles or elements of the universe, as a man has seven principles or elements. It is their way of describing it. The Hindus have the same way, only in that case the Sanskrit name is tattvas: prithivi-tattva, apas-tattva, vayu-tattva, taijasa-tattva, akasa-tattva, and so forth.

Now then, these groups or aggregates of monads, each group being a kingdom, or in their Rounds what we call a Life-wave — each such group of monads, which means all groups, live in and work through these tattvas or cosmic elements, which the Greeks and Romans called Earth, Water, Air, and Fire. Some, like the Pythagoreans, said there was a fifth, Aether, but actually in the occult schools the teaching was that there were seven, of which only four were popularly known, and the Pythagoreans and some others in Europe openly declared the existence of a fifth. The Greek aether or the Pythagoreans aether properly understood, was what the Hindus meant when they said akasa.

Thus then, these cosmic elements are the different stuffs of the universe, the different substances out of which the universe is builded. We can call them the various prakritis of the universe although of course each one of these different names has its own sub-line of thought connected with it. They are therefore not

absolutely interchangeable. Consequently, the cosmic elements or these prakritis belong to all the kingdoms because all the kingdoms, as I have just stated, are living in and working through them.

What is the origin of these cosmic elements? They are the essence-stuffs or substances out of which grow the more developed planes of the universe. There being thus seven or twelve cosmic elements, when manvantara opens these seven cosmic elements begin from the top and unroll downwards, each one going down in its serial order, and each one giving birth to its first or essential stuff, its most spiritual aspects so to speak; and this last, its most spiritual aspect, is just what is meant by these cosmic elements. Then each such cosmic element as it unrolls on its own plane before it gives birth to the cosmic elements beneath it, unrolls from itself all its own seven sub-planes, or sub-cosmic elements, so that each such cosmic element contains in itself all the other cosmic elements, but in less degree. Thus the water cosmic element, to use Greek phrasing, has as its swabhava the water-element, but it likewise contains within itself the fire-element, the air-element, the earth-element, etc.

The kingdoms are aggregates or families or groups of monads. The cosmic elements are the essential stuffs in which they live and move and have their being and evolve.

Now then, one final thought will connect everything up, I hope. Spirit in its sevenfold aspects is the root of all these cosmic elements, or prakritis. Just as all the prakritis unroll from mulaprakriti which is the veil of Brahman or pure cosmic Spirit, so do all the cosmic elements unroll from the primal substantial veil around cosmic Spirit, corresponding to mulaprakriti. Thus out of Spirit comes everything, all the cosmic elements; and out of spirit likewise proceed the classes or families or groups or

aggregates of monads forming the different kingdoms, from the Dhyani-chohans down to the elementals. And lastly, when we examine and penetrate to the very ultimate nature or stuff of the cosmic elements, we can see that every cosmic element is really a vast aggregate or group of monads or consciousness-centers not yet aroused into activity, and which are therefore dormant. It is just like all the earth around us, which, representing the lowest of the cosmic elements on this plane, is nevertheless composed of simply innumerable multitudes of dormant monads which have not yet awakened to begin their evolutionary journeys and develop into self-conscious gods. Or again, as the flesh of a man is composed of molecules, these of atoms, and these of life-atoms, or life-points, which are the effect on this plane of monads on their own plane.

It is of course understood that a monad never leaves its own plane; so when we say that the earth-element is composed of concentered or dormant monads, we do not mean the spiritual monads themselves; we mean the life-atoms, each life-atom being the representative of a monad on this cosmic plane.

What relation, then, have the three elemental kingdoms, kingdoms of the elementals, to the cosmic elements? Now in the first place, I will say that this phrase "three elemental kingdoms" is an easy and graphic way of saying the seven kingdoms of the elementals, or the seven sub-kingdoms of the generalized kingdom of elementals; just as in a man we often generalize his constitution by saying spirit, soul, body, knowing all the time that the constitution is divisible into seven parts.

The three kingdoms of elementals in their first or original appearance in manifested manvantara, spring forth from the stuffs of the original cosmic elements; and therefore these baby-entities, which are as it were ensouling parts of life-atoms, are

called elementals. This is the original and if you wish highest kingdom of the elementals, not highest here in the sense of evolution, but highest in schematic diagram. The so-called lower kingdoms of elementals are lower merely because they are farther from the spiritual part or nature of the cosmic elements, but being more evolved in that sense they stand higher. So that the lowest class of elementals, which is beneath the minerals, actually is the most evolved of all the elemental kingdoms. But they have not yet even reached the point where they can be classed as minerals or pass into the mineral kingdom.

Now the reason why there are really seven elemental sub-kingdoms, is because each such elemental kingdom springs from its own particular cosmic element. As there are seven cosmic elements, each cosmic element gives birth to its own elemental kingdom. Thus when all these elemental kingdoms are classed together, we say seven elemental kingdoms, each one such coming from its own different cosmic element.

As a final thought, it is to be noted that in occult or esoteric phraseology, the elementals are so called because whatever their class and whatever the cosmic elements or tattva from which each elemental class springs, it springs directly from this tattva or cosmic element without intermediary. Thus, the elementals are, as it were, the denizens or inhabitants of the cosmic elements, because they spring forth immediately and without intermediary from the latter.

To those who are not more or less adept with Theosophical studies, it is important to point out that the elementals are not elementaries, this last term being adopted from medieval European quasi-occult or semi-occult Schools, such as the Fire-Philosophers. An elementary is a denizen of the astral light, and is, briefly speaking, the reliquia or semi-conscious astral

remnant of what was once an evil man on earth. In other words, and more briefly, an elementary is the semi-conscious kama-rupa or in the worst case almost wholly conscious kama-rupa, of what was when he lived on earth, a gross and evil man. These elementaries in the astral light are slowly decaying, but still filled with all the evil, gross, and often malignant impulses and proclivities, tendencies, and biases, that the said evil man showed when he was embodied in flesh.

The Theosophical Forum

THE THEOSOPHICAL SOCIETY AND THE ANCIENT ARYAN CULTURE — *G. Frances Knoche*

The modern revival of interest in the spiritual culture of Aryavarta, in ancient Sanskrit and Pali Manuscripts, their translation into English and other foreign tongues, received great impetus and support, history reveals, in the early efforts of the Theosophical Society after its chief founder had arrived in Bombay, India, in 1879, from the United States.

Being a philosophical, religious and scientific association of earnest men and women, guided by a profound spiritual impulse, the Society is strictly non-political and unsectarian, having nothing to do with prejudices of any sort, whether of race, caste or creed, its chief aim being the spiritualization of mankind, and the establishment among men of a nucleus of universal brotherhood. To this end the founders, Helena Petrovna Blavatsky, and Colonel Henry S. Olcott, soon after arrival in India, launched *The Theosophist*, a monthly magazine in which a series of valuable articles on the Sacred Scriptures of the East appeared, with particular stress on Vedic and Brahmanical writings, these latter being contributed by learned pandits, who, rallying to the cry of the Theosophists to reawaken India to her spiritual treasures, had joined the Society.

In Convention at Bombay, in February, 1880, the first of the four objects of the Theosophical Society as then formulated was: "To discover and make known to the world the truth about the Aryas, by studying their ancient literature, religions and sciences and the various branches that have sprung from that parent stock." A brief survey of the manner in which the Society has fulfilled this objective should be of genuine interest to all Hindus, whether

Brahman, Kshatriya, Vaisya or Sudra.

In order to assist the Buddhists who at that period were subjected to numerous restrictions, Col. Olcott, having taken pansil in May, 1880, collaborated with the High Priest H. Sumangala of Ceylon in compiling and publishing in 1881 a *Buddhist Catechism*. An edition in Sinhalese translation was soon exhausted and by 1891 the Colonel had succeeded with the aid of his Buddhist friends, in establishing forty-one Buddhist Schools in Ceylon, a work which continues today.

Parallel efforts among the Brahman pandits followed, so that in 1882 Theosophical branches in Amaravati, Madras, in Guntoor, in Bareilly, and in Nellore, started the first Sanskrit Schools which soon effected a tremendous influence in the revival of Aryan culture, being forerunners of the thousands of Sanskrit schools which have since been founded.

As witness of the newly awakened interest in ancient Sanskrit culture, we note Protap Chundra Roy's colossal undertaking to translate the *Mahabharata* into English prose, the first volume of which was "published and distributed gratis" in 1883. This independent effort of the "Datavya Bharat Karyalya" in Calcutta, was strongly supported by Theosophists, and as time and funds permitted, all eighteen Parvas finally saw the light.

By 1887, "The Theosophical Publication Fund" in Bombay had been established and was issuing numerous Sanskrit philosophical texts with English translations, chief among them being in 1887, Sankara's *Vivekachuddmani* (*Crest Jewel of Wisdom*); in 1888 T. Subba Row's *Discourses on the Bhagavad-Gita*; and in 1891 Dvidedi's translation of the "Twelve Principal Upanishads."

Interest in Sanskrit and the Aryan literature, however, was not

confined to the Indian archipelago. So fired were the American Theosophists with the richness and beauty of Vedic thought that William Quan Judge, then General Secretary of the American Theosophical Society, himself published in 1889 an English translation with masterly interpretation of Patanjali's *Yoga Aphorisms*; and in 1890 a complete recension in collaboration with Connelly of Wilkins' edition of the *Bhagavad-Gita* appeared — two books which were to become standard Theosophical texts for the various Theosophical Societies all over the world.

To meet the increasing demand for Sanskrit translations, in February, 1891, Mr. Judge founded the "Oriental Department", issuing monthly a paper devoted exclusively to the sacred scriptures of India, made possible by the combined efforts of Brahman pandits in India and Judge's skilful editorship. Under this department Charles Johnston, noted Sanskritist and Fellow of the Theosophical Society, inaugurated Sanskrit Correspondence Courses for the benefit of the American Theosophists.

Today, nearly seventy years since the foundation of the Theosophical Society in New York in 1875, investigation shows that the Theosophical Society with International Headquarters near Covina, California, has persistently sponsored this revival. The stimulus first given has continued, and in 1919 when Theosophical University was established by Katherine Tingley, then leader of the Society, a Chair of Sanskrit was included. Under the personal direction of Dr. Gottfried de Purucker, the Sanskrit Department flourished. One of his pupils, Judith Tyberg, Professor of Sanskrit and Indic Studies at Theosophical University, Covina, has the distinction of being a leading authority in the field of Sanskrit. Besides the regular courses in Sanskrit grammar, advanced courses in Upanishads, Brahmanas, the Bhagavad-Gita, as well as Vedic Sanskrit are given.

In 1936 Theosophical University Press, with the aid of Geoffrey A. Barboraka, chief linotype operator, successfully collaborated with technical experts in the Mergenthaler Linotype Company to perfect a system of Sanskrit composition whereby the Devanagari characters could be set upon the linotype, an achievement which placed Theosophical University Press then as the only publishing house in the United States able to set up the Sanskrit characters on the linotype.

A year previously publication was begun of a "Simplified Sanskrit Course" by Dr. Grace Knoche, in serial form in *The Lotus Circle Messenger*, a Theosophical magazine for teachers and young folk, to interest them in the culture of India and in Sanskrit which H. P. Blavatsky termed "the language of the gods." Its lessons are broadly cultural, the Devanagari text including passages from the *Bhagavad-Gita*, *Hitopadesa*, *Manavadharmasastra*, *Upanishads* and other classics.

Geoffrey A. Barboraka's *Gods and Heroes of the Bhagavad-Gita* published in 1939, has now become a valued companion of all Gita lovers.

Sanskrit Keys to the Wisdom Religion — a digest of the profound philosophic and religious interpretation of the many Sanskrit terms used throughout Theosophical literature, by Judith Tyberg and published in 1940, is the result of ten years of teaching both in Europe and America. This, with the publication in 1941 of Ballantyne's *First Lessons in Sanskrit Grammar* revised by Lawrence A. Ware and Judith Tyberg, forms the basis of Sanskrit Correspondence Courses conducted from Theosophical University at Covina.

It is a source of interest to turn the pages of the many Theosophical journals and to note the large percentage of articles devoted to Orientalia. The present review columns of *The*

Theosophical Forum, published monthly by the Covina Theosophical Society, show that the works of Coomaraswamy, Radhakrishnan, Sri Krishna Prem, and other eminent Oriental scholars, receive favorable and extensive review. Also of importance will be the forthcoming "Theosophical Encyclopedic Glossary," compiled by Theosophists and scholars of many years' standing, and revised and enlarged by its editor, Dr. Gottfried de Purucker, for it will contain over two thousand Sanskrit, Pali, Tibetan and other Oriental philosophical terms, Theosophically explained.

In conclusion, the fact that the Covina Theosophical Society as well as Theosophical University have taken such a vital interest in the revival of the philosophy of India should be challenge enough to the modern Hindu to awaken and search out for himself the profound beauties of his noble land, and to make available in European translations more and more of the now buried MSS., so that East and West may wholeheartedly join hands in following the age-old path to spiritual wisdom.

The Theosophical Forum

THE SYMBOL OF THE WINGED GLOBE — *G. de Purucker*

The symbol of the winged globe, the globe carried through time and space on the wings of spiritual force or of the spirit, is one of the most beautiful of ancient Egyptian symbols, because it combines both religion and philosophy. The globe is just one form of representing the golden germ, Hiranyagarbha in the Sanskrit, which in its movements through time and space is carried by the wings of the spirit on its evolutionary journey. This is the keynote of one of the thoughts of the winged globe.

Another thought about it, or aspect of it, is that the winged globe is the monad, which is in a sense practically the same as the cosmic germ or hiranyagarbha, and the wings there signify the same thing, conscious mind moving through space and time in the form of the monad and expressing its power in the movement of the wings, consciousness moving in the evolutionary journey upwards and upwards forever.

Still another way of interpreting it — all the same at bottom because of the law of analogy — is that the globe would represent a celestial orb, a sun or a planet, in its turn carried on the wings of its spirit along the evolutionary journey into the distant future, and out of the past.

With reference to its standing for the human soul or the reincarnating ego of a human being, it has its application there in just the same way, the monad, the golden germ, the ego, or if you wish the soul, represented by the sphere or globe, or the primordial point again from another standpoint.

There are really a thousand ways of interpreting it, or rather applying the interpretation to different aspects of our cosmic

philosophy. Yet the interpretation is the same for all these different aspects, making only the adjustment according to whatever entity it is that is thus adventuring through the cosmic planes and through cosmic life and through cosmic time.

It is thus also a symbol, as it were a declaration, of spiritual individual hope for the future, a proclamation and symbol of the immortality of the spirit or of the monad, or of whatever entity it is that the symbol is applied to.

Then when we add the serpents, as is often done, one on each side of the globe with raised heads, yet with bodies or tails intertwined, this is but another graphic way of speaking of the dual serpents of Wisdom and Love, the two great dominant powers in the constitution of any entity, both shielding and protecting and inspiring, and yet carried along by the monad, of which both these faculties, wisdom and love, of the winged globe, are the symbols.

These are the general keys, and anyone can elaborate them, if he thinks carefully, almost indefinitely. It is a wonderful symbol.

The Theosophical Forum

WHO ARE THE MAHATMANS? — *Lydia Ross and C. J. Ryan*

Every inquirer wants to know what Theosophists mean by a Mahatman. This Sanskrit word explains itself: *Mahd* means great and *Atman* means soul. A Theosophical Mahatman is a great soul expressing itself in a human body. Theosophy teaches that at the center of every man's being he is a spark of divinity; and the real purpose of repeated earth-lives is to bring forth and express this inner Self, so that its light will illumine his whole being. Ordinary men express this but feebly as yet; but the Mahatmans are those in whom this divine flame shines forth. They are not "gods" or "saints" or anything supernatural, but are men who, by their own unremitting efforts during many lives, under the guidance of Initiate Teachers, have become supermen. They are the Elder Brothers of humanity, the "Fine Flowers" of human evolution, spiritually and intellectually.

Naturally, these Great Men are not all equally advanced; but the greatest of them have reached a stage which the mass of humanity will attain, at its ordinary rate of progress, only in far distant ages, after very many lives on earth. When that time comes, the present Adepts will have evolved beyond the highest human standard of perfection, and will have passed on, to continue growing in spiritual glory in the "land of the gods."

The Mahatmans belong to a Brotherhood which has been active in all ages. They possess immense stores of knowledge of the real nature of man, of his unknown racial history, and of the structure and operations of the Universe, visible and invisible. Their original body of teachings, sacredly preserved from age to age, has been passed on through a continuous chain of initiated Teachers and their pledged disciples. Each member of this Order,

in turn, tests these teachings for himself, and confirms the truth of them. A portion of this knowledge, suitable for humanity at large, according to its varying stages of intelligence and spirituality, has been given out from time to time, and in one country or another, by Messengers from the Great White Lodge, as it is called. Truth has always been in the world, even in the dark ages when its light was obscured and its Messengers were misunderstood and persecuted. Mankind as a whole has never been without its Elder Brothers, those Helpers whose beneficent work has never ceased, whether seen or unseen by men.

These Messengers were such great Sages and Seers as Jesus, the Buddha and Krishna of India, Confucius and Lao-Tse of China, Zoroaster of Persia, Plato and Pythagoras of Greece, Hermes of Egypt, Quetzalcoatl of Mexico, and many others more or less exalted, upon whose teachings great world-religions and philosophies were founded. This explains why the deeper, essential truths of all the great religions are the same, however much their outer forms and the sacred names and mystical symbology used varied in different countries and ages.

Exhaustive evidence of this underlying unity of teachings is given by H. P. Blavatsky in *The Secret Doctrine*. She also explains that it was because the inner meaning of religion became gradually obscured by dogmas and intolerance that conflicting opinions led to bigotry and persecution.

Of the continued activities of the Great-Souled Ones in guiding and protecting mankind, the best known in modern times has the general term "the Theosophical Movement." This includes work done by the Theosophical Society and very much more. Their activities affect many in ways unknown to them, inspiring them with great thoughts and noble ideas which come they know not whence. From time to time the Great Lodge of Masters has established societies through which they could help the world.

Some were unknown to all but their own members; others were made public. One of the latter is the Theosophical Society, which was founded under the direction of the Masters by Helena Petrovna Blavatsky, in New York, in 1875. Its importance is proved by the fact that Theosophical teachings have profoundly affected the world of thought, and that the Movement as a whole has become more securely established during the last half-century, in which so many time-honored institutions and modes of thought have been shaken to their foundations.

The work of this modern Messenger, H. P. Blavatsky, was to restore long-forgotten truths to the world and to arouse the spirit of brotherhood in man. To do this she made known the teachings of the Ancient Wisdom-Religion, once universal, and the only enduring basis upon which men can unite. She presented conclusive evidence of the single origin of all the great religions and philosophies, which alike taught a common birth-right of divinity for men and a common destiny. Their interests, spiritual and material, being identical, interdependent, and interwoven, from first to last, prove that brotherhood is a fact in Nature. This needs but to be recognised and acted upon to increase our welfare and happiness to a degree hitherto unknown. It is the magic word to make for ideal human relations — both between individuals and nations. The Theosophical Society, founded by the Masters, is unsectarian and non-political and is wholly free from the creeds and dogmas which hitherto have separated man from man. In such a Society whose chief aim is practical world betterment, the acceptance of the principle of Universal Brotherhood is naturally the only prerequisite to membership.

To the matter-of-fact Occidental mind the Theosophical Mahatmans often seem like unreal figures, because their existence was unheard-of in the West before H. P. Blavatsky announced that her Teachers were members of the Great

Brotherhood. But in the East it is different. In modern India, for instance, though today it is suffering from superstitions resulting from degeneration of the ancient religions, yet the unbroken tradition of these great men has come down from remotest antiquity, and is common knowledge and belief. There the Mahatmans, or "Rishis" as they are generally called, are not looked upon as Saviors but as Guides and Teachers who help their younger brothers to bring forth their own inner divinity. These great men show by example what lies ahead on the Path for all men, even as the Nazarene said: "I am the Way, the Truth, and the Life." In fact, in the East, the relation of teacher and pupil is regarded as something sacred, for, indeed, the passing on of Light is a sort of intellectual and spiritual parentage. Special deference is accorded even to the teacher of children.

To the introspective, devotional Orientals, the Mahatmans stand as examples of the highest living ideals. While the native mystical tendency to cultivate inner development appears in various crude and erratic forms among the fanatical yogis, yet the rare spiritual type of "holy men" is recognised and revered even by the royal Hindu rulers.

The Masters of Wisdom are not to be confused with the familiar type of yogis or sadhus or so-called "Mahatmas" of India. The word commonly spelled "Mahatma," is a title like "Mr." or "Sir," or "Baron," or "Count." It is a mere title, which a very old Indian custom still gives to anyone holding a public position of respect or veneration. The name implies certain special intellectual and spiritual attainments; but, as with any title of distinction, it may be held by those who do much, or those who do little honor to it.

The question is often asked: Where do the Mahatmans live? While their main seats are in Asia, they also have minor centers elsewhere, in quiet and secluded places where they can be

undisturbed in their work, free from the unrest and confusion of crowded places, and surrounded by those who can understand their methods and aims and who are fitted to help. However, they are intensely active all the time, and they even travel to far countries when conditions require their presence. Mme. Blavatsky met her Teacher in London, in 1851; and another Master, "K. H.," with whose sister she lived for a time in Tibet, had been a student in European Universities. This Master, "K. H.," wrote most of the famous *Mahatma Letters to A. P. Sinnett*, in which the reader may get interesting sidelights on their methods of work, and on the importance they gave to the future of the Theosophical Society.

Westerners often say: Why do the Mahatmans not come out in public and show themselves? Why should they show themselves? one may reply. They have nothing to gain by going on exhibition; it would be a waste of time and energy on their part, and it would serve no good purpose to gratify public curiosity. To them, the world's prizes of fame, fortune, admiration, etc., matter not at all. Those things which appeal strongly to ordinary men they have discarded lives ago for the greater treasures of their own enlarged, enriched, and liberated nature. They are eager to give of their priceless knowledge to whomsoever is ready to open his mind and heart to receive it, and to step out on the path that they have trod. As to proof of their existence, we all know that there are men of outstanding ability in every department of life. It is only natural to suppose that a few have gone far ahead by lives of intensive spiritual and intellectual growth, and have thereby attained to what the majority will reach only in the far distant future.

The Masters regard the whole world as their country, and they are very much alive to its conditions and to its most vital problems. Most of their work is behind the scenes, nor will it ever

be publicly known. Their freedom from all personal ambition and national bias gives them unusual insight into the motives of men and nations. Their superior knowledge, and their power to read the meaning, and to foresee the outcome, of unfolding world-events, enable them to work with equal wisdom and justice for the welfare of all. From them individually, and as an organized body, there constantly radiates a potent influence of hope, inspiration, and protection for humanity. This silent and invisible stimulus has even been the source of intuitive "hunches" on the part of some of our great modern scientists and inventors. Such practical help is attracted naturally by large-hearted men of genius whose work will help men to realize a more spiritual view of the Universe, and so make for more brotherly relations in human affairs.

The Masters are Teachers also, because as custodians of the ancient truths it is their duty to pass on the light they have received. They have become what they are because they have learned how to develop their innate spiritual and intellectual faculties and powers, which can be done safely only under the guidance of true Teachers. In turn, they become Teachers to their pupils, who are called *chelas* — the devoted few whose one desire is to become perfected helpers in the service of humanity. Chelaship is training for Mastership. *It is the age-old method of speeding up individual evolution.* The chela is not only taught an all-around philosophy of life, but he is made to prove it for himself. In testing it by application to his own daily life, he learns many mysteries of his dual nature — higher and lower — and finds mighty, hidden meanings in his relation to others and to the world around him. He is not lured on by any promise of selfishly acquiring unusual knowledge and psychic powers. He learns that the deeper, hidden truths about man and the Universe are to be gained by great purity and holiness of life, and especially by an

all-embracing love for mankind as a whole. Becoming spiritually-minded opens the nature to spiritual truths.

The chela's training begins with a system of self-discipline that calls for long and arduous tests of sincerity, determined will, and unselfish devotion to humanity. The true system has no place for ascetic abuse or torture of the body, which is held to be a sacred "temple of the living god" within. All the powers and faculties that make for enlightened, strong, and noble manhood are stimulated to rapid growth. The result is a balanced gain in physical, psychical, intellectual, and spiritual power. A Master of Life is one who has learned the laws of Nature and works with them.

Since the Theosophical Society made the existence of the Masters known in the West a number of would-be teachers have boldly advertised themselves as connected with the Great White Lodge of the East. They offer instructions for acquiring "personal powers," "vital force," "material success," "magnetic attraction," all this and more, to prospective followers or to anyone who will pay the price for lessons, regardless of their moral fitness. They appeal frankly — often with high-sounding sentiments — to the selfish side of human nature — to personal ambition, to mere intellectual curiosity, or to the sinister desire to get control over others. The venturesome Westerners, eager for any novel experience, little realize that the price too often paid for dabbling in strange, psychic forces is loss of health or sanity, if not of life itself. Moral fitness and self-control are the prerequisites for genuine Occultism.

H. P. Blavatsky saw that an increasing number of "sensitives" in the West were attracting attention by reporting their vague clairvoyant glimpses into the shadowy astral world. She explained the rationale of the strange phenomena which materialistic science said could not exist. But she knew too well

the subtil, unknown dangers into which all those concerned were drifting, and she repeatedly warned against the perils of attempting to cultivate "psychic powers."

The question is often asked: How can I meet the Mahatmans? The surest way is to become like them. Obviously, then, the first thing to do is to answer their call for helpers in their work for humanity, whose sufferings mostly result from ignorance of its duality and of the laws of life and spiritual growth. This work is so world-wide and varied that there is room and a place for any and every one who is willing to sacrifice pet weaknesses, as the first step toward Mastership. Everyone can help spread these ancient teachings which, and which only, can change the minds and hearts of men, and so solve the menacing problems of modern civilization. The way to begin is to show the ennobling influence of Theosophical ideals in one's own everyday life: a living example is an unanswerable argument. People today demand something more than mere sermons and theories: they need practical demonstration of a working plan of life.

The organized work of the Theosophical Society offers special opportunities for its members to find their way, step by step, on the same path that the Mahatmans tread. The path to the heights calls for all our courage and determination; but it is one of ever-increasing peace of mind and spiritual power. As Dr. G. de Purucker says: "The way to forget one's own pains and sorrows is to help others. . . . In genuine spiritual service lies the only lasting happiness that man knows." The power to give, to help, increases by its use, just as a muscle or a faculty grows by exercise. The way to attainment for us in the matter-of-fact West is the path of practical mysticism — a working out, with unselfish motive and firm will, of whatever the day may bring. In this way, each one's inner powers of mind and soul come forth as naturally as the flower opens to the sunlight; and one enters that spiritual current

of life in which the Mahatmans live, work, and grow ever greater.

The Theosophical Forum

THOMAS TRAHERNE: A PRACTICAL MYSTIC — *Helen Savage*

Like a rich vein of gold that remains long untouched within the rock and then one day is laid bare and mined, so is the personality and work of the seventeenth century mystic, Thomas Traherne. Though of some distinction in his own day, for two and a quarter centuries after his death the world forgot him, was, in fact, completely unaware how rich a treasure lay in obscurity and threatened with utter obliteration. Today, of course, anyone at all interested in Christian mysticism or acquainted with the masters of English prose, knows of Traherne, and has heard the story of his re-discovery: how the chance finding of two manuscript volumes in a secondhand book-barrow in London in 1895 was the beginning of a long and exciting course of literary detection which resulted in the resuscitation of the work of this vivid and radiant human being.

Not a small part of this work of reconstruction has been done by Gladys I. Wade, editor of *The Poetical Works of Thomas Traherne* (Dobell, London, 1932). Miss Wade is an Australian scholar who had the good fortune to go to England on a research studentship to make a thorough study of all available Traherne material. The result of this labor is her recent work, a critical biography of Traherne (1) which is an invaluable contribution to the subject. With all her scholarship, there is nothing dry about the book; always is the picture of the man himself kept in clear focus, and she uses her wealth of fact but as means to give substance to the whole.

The outer events of Traherne's life are brief and soon told. (He died at the age of thirty-seven.) Miss Wade has followed every possible clue in telling the story. But what is important in this life

is the record of an inner activity, the pushing forward and upward of a soul that had not drunk too heavily of the waters of Lethe before incarnation, and so had gone about life's business with a steady purpose, piercing through the veil of illusion which the world of sentient beings weaves about us, and reaching to the wonder of the Reality within.

His own writings — those that have been preserved for us — give this record of a soul unfolding, a recording that would be natural to one who was at once a mystic, a metaphysical poet, and a philosopher. It is a proof of his degree of advancement that he could speak of this inner activity quite impersonally and objectively. Yet there is no suggestion in his works that he merely repeats from other men's experience. He is the traveler telling his own story.

Traherne came into this world with a sort of celestial memory. He was born with the Divine Light about him, through which he saw the world transfigured. He writes:

*How like an Angel came I down!
How bright are all Things here!
When first among his Works I did appear
O how their Glory me did Crown!
The World resembled his Eternitie
In which my Soul did Walk;
And every Thing that I did see,
Did with me talk.*

Inevitably this radiance was to fade; but not the memory of it. So that he was able almost consciously to watch the material life close about him. He went through the necessary "descent into matter," and in adolescence experienced that struggle that must come when the arc of descent is nearing its lowest point and the curve toward the luminous arc must be successfully turned. This

was a time of confusion, skepticism, boredom, even of desolation at times — phases which if we only knew it are pointers to a soul-dissatisfaction at loitering in the dark valleys. Traherne recognised the signs and did not succumb.

When opportunity came for him to study at Oxford his natural intellectual eagerness came to the fore, and while his spiritual awakening was not until a later period, he revelled in the fields of knowledge that opened before him. "I saw there were things in this world of which I never dreamed; glorious secrets, and glorious persons past imagination." He took delight in every subject that opened before him: logic, ethics, physics, metaphysics, geometry, astronomy, poesie, medicine, grammar, music and rhetoric, as he enumerates them. Everything became golden by the touch of his joyous imagination.

The renascence of learning in Europe was now in full swing, but Traherne discerned — though perhaps not fully in his undergraduate days — the one fault brought about by this inrush of immense ranges of scientific information. This fault was the tendency to put all branches of learning in separate compartments, all unrelated to the great whole. The relation of things to one another, and all as parts of a whole, a theme so earnestly discussed by the deepest thinkers of today, was something Traherne wrote passionately about over two and a half centuries ago. Except for the quaintness of language, how familiar sounding is the following from his *Christian Ethicks*:

He knoweth nothing he ought to know, who thinks he knoweth anything without seeing its Place, and the Manner how it relateth to God, Angels and Men, and to all the Creatures in Earth, Heaven, and Hell, Time and Eternity.

Skepticism of a kind was inevitable all during the University period. The character of each age is made by the type of egos that

incarnate in it, and Traherne had, like so many of his contemporaries, the exploring mind of those who are scientifically alert. For him and others faith was not enough. What claimed to be truth must be capable of subjection to the searchlight of reason. The rites of Christian worship were meaningless to him. He was not willing to accept the Bible merely as traditional authority. Yet he saw revealed through the wealth of scientific fact of his day a Divine Power at work, a Designer. "The truth," says Miss Wade, "of revealed religion for Traherne is discovered by the beauty and glory of the greater pattern into which it and all truth fit."

It was a proof of the soundness and strength of his nature that he overthrew neither science nor religion, but sought by a union of reason and faith to recognise the One Truth which to our complex consciousness shows many aspects. Nor was Traherne content merely to reason God into existence. His experience in infancy excluded that possibility; but what he had yet to achieve was awareness of Divinity as an active power in his adult life. Miss Wade, by an examination of the *Centuries of Meditation* and other writings of Traherne, follows sympathetically and with discernment his growth towards the illumination he sought. She shows that it did not come in a sudden burst, nor did he "drift into holiness." Each step on the way was taken with a resolute will.

After leaving Oxford he gave up the opportunity of a lucrative career, possibly that of law, to follow the path of mysticism. He considered this a crucial decision in his life. Worldly, and worthy, ambition made the former path very alluring; but a deeper truer self within him knew that honors, wealth and fame were not what he wanted. There was a struggle, but the outcome was successful. He was true to his inner calling.

At the same time he was seeking *inner* purity, recognising that all

evil action is first existent in thought and feeling. He therefore attacked seriously but not morbidly the problem of "mending himself." Miss Wade gives his own enumeration of his faults which he worked at assiduously: "a hot tongue, impatience with stupidity, resentfulness of contradiction, covetousness of money, a tendency to compromise in order to win popularity, vacillations of moods, waverings on this hard path of self-imposed discipline."

As rector of the small parish of Credenhill he practised to curb his too proud spirit. While uncompromising with his own faults, he sought to look upon his parishioners who "sinned," as spiritually sick and himself as their healer. His ideal was to "treat every man in the person of Christ. That is both as if himself were Christ in the greatness of his Love, and also as if the man were Christ." And with all the practical work of his parish he did not neglect his devotions, the description of which remind one of the "mortifications" spoken of in *The Bhagavad-Gita* — not the torture of the flesh, as the word often implies, but those "austerities" which teach our elemental nature its true position as servant not master.

In quite a different atmosphere from the narrow quiet world of Credenhill, he spent his last years in London as private chaplain to Sir Orlando Bridgeman, Lord Keeper of the Seal. Here he did the best of his writing; and here it is more than likely he met some of those Platonic philosophers who were important figures in the Platonist movement of the day: Henry More, Cudworth, Whichcote and others. Traherne had been a student of Plato and the Neo-Platonists since his days at Oxford. He also studied the writings of Hermes Trismegistus. The theory that these are not of earlier composition than the third or fourth century was already forming in Traherne's day. But he held to the opinion of the early Church Fathers and others who said that they were of hoary antiquity.

That these Hermetic writings so nearly paralleled the teachings of St. John and St. Paul delighted him, for he saw in this but another corroboration of the oneness of all truth. To him there was nothing odd or heretical in the idea that God might have given man a revelation of truth before the time of Moses. And that Plato's teaching also coincided with this Hermetic philosophy, in his eyes enhanced the value of Plato.

Perhaps the kernel of wisdom that Traherne chiefly gleaned from these ancient writings was the conception of man, not as a miserable sinner, but as of divine ancestry. In his *Christian Ethicks* he quotes long passages from *The Divine Pymander* of Hermes, which contain sentences such as: "Wherefore we must be bold to say, that an Earthly Man is a Mortal God, and a Heavenly God is an Immortal Man." This of course but corroborated what he already knew to be true; for from the first his faith in humanity was based on the principle of affinity: that what is intrinsically god-like finds its true level among divine things.

In some particulars the recital of Traherne's adventure in mysticism may not be so different from that of other mystics. But there is a stimulation received from a study of him that is like a clear fresh wind. Whether he is chiding himself for his "fickle, staggering, paralytic piety," or exclaiming over the delicate sight of the corn "thick-bearded, and strong-headed" — in whatever mood, one feels in his writing that here was someone who knew what it was to be really alive, physically, mentally, and spiritually. He not only conceived Love as "the most Delightful and Natural Employment of the Soul of Man," but he was in large measure that love incarnate; and his was a love that excluded nothing. The magically intricate workings of the physical body were as much a source of wonder to him as the stars in the heavens. He seemed,

in short, to have attained that third Way of visioning Truth which the Zen Buddhists teach: where Divinity shines through and illumines the world.

The present book under review is the first full-length biography and critical study of this seventeenth century mystic who sought and found the secret of spiritual joy. It is a work so finely executed that it leaves nothing to be asked for. The chapters on literary criticism are a delight; and throughout the whole work the author exhibits the enthusiasm that Traherne and his significant life have aroused in her.

The Theosophical Forum

HOW DOES THE BUDDHIST PRAY? (1)

He does not. This is a literal statement. The true philosophy of the Buddha precluded the dependence of the mind upon external props or propitiation of a superior force — in fact, it regarded such props simply as evidence of childish dependence.

Not that the Buddha denied the existence of forces in the Universe which are strong and mighty, or of forms of invisible life which may be regarded as equivalent to the 'gods,' or even of the Supreme Source or Cause of Being, which might be considered the equivalent of the present day conception of One God. *But*, the Buddha proclaimed the absolute necessity of conquering for oneself the lessons of life which came, and the foolishness of expecting an extraneous, though beneficent, power to intervene or interpose protection. He taught it by precept, discourse and example. He repeated it upon his death bed to his immediate followers. He taught the path of self-reliance, to do the right thing for the sake of right, not because of the belief in eternal punishment. He taught that cause produces effects, that effects can be calculated, and that the way to create the proper effects is by understanding and controlling causes. He taught the LAW, which is immutable in an unwavering and unbending expression all through the Cosmos.

He taught that Man is capable of self-directed effort; that his effort should be directed upon himself, not upon others; and that he should learn to follow LAW and thereby control the cause. He taught the way to break the hold of superstition upon the Mind, and that dependence upon prayer, appeal, favor or control of invisible help or guidance from superior forces or beings is an insidious superstition destined to weaken rather than to help the

one who uses it.

He spoke of rites and ceremonies as unnecessary and inclined to deaden effort. He showed the futility of sacrifices, and the extreme desirability of the high way of Mind. Yet this is little explanation to the people who have been taught from childhood to rely on prayer — which is a euphemism for cold, calculated demands upon a power considered inefficient enough to overlook, or the wrung heart's appeal in agony and trouble. The last is comprehensible, but the formal routine prayers are not logical or sensible. They do not leave much doubt in a reasoning mind about the conviction in the prayer's mind that it is necessary to remind a very remiss power of the problem of the moment. And so one wonders how the custom has existed for so many ages, and one can only say — it is a custom and is devised to satisfy the need of weak and unimaginative people.

The Buddha taught men of maturity to think, to reason, to apply the forces of the mind and body to the problem in hand — to the problem of self, in short — and to throw off Desire which creates the need for prayer.

IS MAN BORN IN SIN? — *Henry T. Edge*

Religions have had their origin in that Ancient Wisdom which Man in ages long gone by inherited from his Divine Ancestry. This explains at once the uniformity and the diversity of religious systems, for they are alike in essence but different in external form. In each religion the fundamental truths have become obscured by man-made dogmas, and dogmatic ecclesiastical systems have been engendered. The story of Christianity illustrates this, and there are movements today towards a reconstitution of Christianity. Theosophy rightly claims to be the champion of Christianity, inasmuch as Theosophy points out the ancient and sublime truths which underlie the superincumbent mass of dogmas.

Our endeavor has been to uncover the ruin-encumbered universal foundation of religion. . . . To rescue from degradation the archaic truths which are the basis of all religions. — H. P. Blavatsky

The most important of these archaic truths is that of the Divine origin of Man and his consequent ability to achieve his own salvation by invoking the Divine power which is incarnate in every man. This truth is taught in the Bible, for in *Genesis* we are told how Man was first created a living soul, and afterwards was created in the image of God; and in the Gospels Jesus exhorts his followers to become like unto himself. But in spite of this the truth has been perverted by a theological dogma that man was born in sin and can be saved only by a special intercession. It is supposed that Adam and Eve sinned by adopting physical procreation, and that every man born since has been under a curse in consequence. The effect of this teaching is to take away

Man's confidence in his own Divinity and to render him dependent upon the services of ecclesiastical systems; and it has caused many intelligent and intuitive people to rebel against religion altogether. It is well to know that religion never taught anything of the sort, and that our own Bible lends no support to the idea.

To understand our own religion aright, we ought to study other religions, because in this way we can discover those fundamental tenets which are common to all. And one such common tenet will be found in the doctrine that mankind was at first an innocent creature, devoid of the power of self-knowledge and freewill; and that after that stage had been passed he became awakened by Divine power communicated to him, and he left his state of ignorant bliss to enter upon a career wherein he had freewill, the knowledge of good and evil, and responsibility for his own actions. This doctrine is to be found in allegorical form in all great religions and many philosophical systems; and we find a version of it in the early chapters of our Bible, which was derived immediately from Chaldea. Man is found dwelling in a Garden, which stands for his state of primitive irresponsibility. But there comes to him a Serpent, the wisest of all created beings, who persuades him to eat of the Tree of the Knowledge of Good and Evil, whereby his latent faculties become awakened, he loses his paradisiacal ignorance, and becomes like unto a God having freewill and responsibility. This power is at first abused, so that Man brings upon himself woe; but ultimately it will be his salvation, as he gradually learns how to deal with all the forces in his nature and to subordinate the evil ones to the good.

This Serpent, Man's great teacher, has been turned by theology into the Devil, Man's enemy and the enemy of God.

One form of this universal allegory is the myth of Prometheus,

and what here follows is based on a chapter in H. P. Blavatsky's *Secret Doctrine*, Vol. II, pp. 410 sqq. It is time, she says, to dispose of the pernicious dogma relating to the 'curse' under which mankind is alleged to have suffered since the supposed disobedience of Adam and Eve. The creative powers which Man acquired were the gift of Divine Wisdom, not the result of sin. There was nothing sinful in performing the functions of natural union; only a false hypocritical asceticism could make a sin out of that. It was not this natural act that brought any curse on mankind. The 'curse,' if we must call it so, consisted in the trouble which Man brings on himself by his wrong use of his new power of freewill. But, as said above, this curse is only temporary, and is moreover accompanied by the priceless boon of freewill.

According to the myth of Prometheus, and its analogs in other mythologies, a Divine Being took pity on nascent humanity, shut up in a Paradisiacal prison where there was no prospect of progress; and brought down the Fire and Light from heaven to inspire Man. This he did at great sacrifice to himself, willingly made through his compassion. The natural program for Man was to go through a long and slow process of evolution; but this act of the Divine Messenger hastened that evolution, by bringing the Divine Fire to Man before he was ready to receive it. And yet, as we are told, this act by Prometheus, though in one sense a rebellion and interference, was nevertheless preordained, foreseen. This is a teaching which we may find hard to understand; but it is not harder than many doctrines which theologies require us to accept; and it does what they do not do — explains actual facts of life.

The holy mystery of procreation was turned into animal gratification; thus the Serpent 'bruised man's heel,' as the Bible tells us; man's nature was changed mentally, morally, and physically. So that now, in this Fifth Race of humanity, we suffer

from the abuse, and Prometheus's gift may in this sense be described as a 'curse.' The Divine Titan, who brought the boon to mankind, took upon himself the retribution consequent thereon, and so is shown in the allegory as being chained to a rock and tortured. But Prometheus stands for mankind in general, so that his tortures represent the woes of mankind. At last, however, appears his deliverer, Herakles, typifying the Divine saving power in Man himself.

In the Bible allegory Adam and Eve are shown as disobeying the Lord God; and similarly in the legend of Prometheus, Zeus is disobeyed. The clue to this is to be found in the ancient Grecian Mysteries, wherein Zeus represents no higher principle than the lower aspect of human intelligence. So this 'God,' against whom they rebelled, was not the omnipotent all-wise Deity, but simply the guardian of unawakened humanity. The rubric at the head of *Genesis*, iii, says, "The serpent deceives Eve"; which is a theological gloss, not warranted by the text. The Serpent tells Eve, "God doth know that in the day ye eat thereof, then your eyes shall be opened, and ye shall be as gods, knowing good and evil."

The above will probably shock many Christians who cherish the familiar doctrines with deep-seated reverence; but others it may help over a difficulty. They will see that Christianity need not be thrown overboard; it only needs to be better understood. There has always been difficulty in reconciling the idea of a wise and beneficent Deity with the idea of anger and punishment and eternal damnation. This difficulty we have created for ourselves: the All-Wise never ordained any such thing. The will of God need not be altogether inscrutable; we have our own God-given intelligence to guide us to an understanding. Time-worn dogmas are a misfit in this age; the ancient teachings may prove better adapted.

LIGHT FROM THE EAST — *G. de Purucker*

When the ancient founders of your philosophical schools came East, to acquire the lore of our predecessors, they filed no claims, except the single one of a sincere and *unselfish* hunger for the truth. If any now aspire to found new schools of science and philosophy the same plan will win — *if the seekers have in them the elements of success.* — *The Mahatma Letters*, p. 342

The reference by the Masters to Occidentals going to the Orient to get truth, to get initiation, does not refer to any one School nor to any particular School of any especial epoch exclusively. I believe this to be the real meaning behind the Master's words: When the Fifth Root-Race began to settle themselves, race on race began to settle on the then new lands that had risen above the surface of the Atlantic ocean, and which in our time we call Europe and Asia Minor and parts of Hither Asia. When these lands began to be settled, the holy land, the land of initiation and mystery, already existed; it had already been previously settled by the great Lodge even in Atlantean days. It was then, it has ever since been, and it still is and functions as, the Mother Lodge, the spiritual and intellectual and psychical center to which those who are fit and ready travel for further Light.

Ex Oriente Lux: Out of the East light, refers not only to the rising sun or to the present geographical countries of the east, but to the fact, intuitively known as it were by certain humans through all the ages, that in Sambhala, let us say in a tract of land in what is now the high plateau of Tibet, since immemorial times there has been the greatest School of the sages of all the ages, those whom we call the Mahatmans of Wisdom and love and peace. From

Atlantis journeyed those who were eager for more light to this center, and either returned as neophytes to bring light to their fellow-men who were ready for it, or continued at that center to become others of the wondrous group of superhumans living there, and living there today.

Thus, ever since the Alps arose above the seas, probably in what in H. P. B.'s time were called the Miocene or even the Eocene periods, the newly settled lands of Europe bore their immigrant populations from the sinking Atlantean countries; and these, at least their own initiated leaders, knew where the greatest occult center on earth is located. So that when any particular one in these European Schools had reached a certain point of spiritual and intellectual and psychical development authorizing him, because he was ready for it, to receive more, he journeyed east as a pilgrim, with reverence and in the atmosphere of holiness. Some returned home to their own countries to give more light to the occult centers there. Those who were the greatest remained in the East, and increased the number of the Elder Brothers of mankind.

And so it was through all the ages down to our present time. The Celtic races through their Druids, the Scandinavians through their occult school, the Greeks and Romans, the Scythians and Shamans of Russia, and the wise men of what are now the plains of Hungary and the mountains of the Carpathians, wherever in the Occidental parts of Europe there were occult centers having links with the Mother School in the East — from all these and in all ages, neophytes were sent forth. These neophytes proved they were ready so to go. They were trained in these Occidental Schools to look to this great center in the land of the sunrise to them, the land of the rising sun. *Ex oriente lux. Light from the East.* They were trained with reverence to look upon this wonder-place; and from boyhood up through youth and adult manhood,

even perhaps into age, those who were the attendants or disciples of the Occidental occult schools looked forwards some day to making this wondrous pilgrimage to this Mother, this spiritual Mother of earth's children. It was a wondrous thing all through those ages. It was held before the eastern neophytes as the greatest reward that they could possibly have. They were told Yes, here we give you light to a certain point. Beyond that we have not the power to give you more. But more is to be had. It is to be taken by strength, by power within yourself. Go east. And they did.

And as I said, some returned, like Pythagoras and Apollonius and others. A few did not return; they had passed higher, too high as it were to spend their time in the smaller work in the west. Their work had become mundial, world-wide instead of nation-wide. And do you know, Friends and Brothers, this same thing exactly exists today. The same grand hope is held out to our students today. The same possibilities exist for them today. But the wonder is that none can take this pilgrimage successfully until he is ready. Happy the man who succeeds. For him there is the light supernal. There is the freedom of confabulating with the divinities, the men-gods on this earth. For him there is the boundless knowledge, and for him, greatest treasure of all, there is the inestimable privilege of service, service guided by wisdom and love for all mankind, and indeed for all that is, without distinction of race, creed, caste, sex, or color. How wonderful it is!

The Theosophical Forum

THE LIFE-WAVE OF THE PLANT KINGDOM — *Allan J. Stover*

To the student of Theosophy the story of the living earth is no mere myth. A Theosophical study of Nature shows our planet to be a pulsing, living being, whereon lands slowly rise and lands slowly sink throughout the ages. Even the winds and currents of the sea have their ordered courses, which shift and change with the slow change of continents. The various classes of plant and animal life, as well as the Races and Sub-Races of man, move through their majestic cycles along with the lands upon which they live. All is part of one grand scheme, the rising to Godhood, and beyond, of all that lives.

To study the plant kingdom is to learn something of man. To study the history of man is to understand the living earth which is his home. "That which is above is as that which is below." "There is one law for all things, both the great and the small." How often we have heard these and similar words, and how seldom we have used them as keys to unlock the mysteries of Nature!

The story of plant life on this earth is the story of a race that is passing, a race that had its heyday millions of years ago, and is now slowly declining. In most cases our forests are composed of the relics of once world dominant species whose story is a dramatic one of changing climates, of the cyclic rise and fall of lands, of vast migrations occurring *pari passu* with the migration of the great animal stocks.

Yet it should be remembered in studying plant life on this earth that a "race" in the vegetable kingdom is not composed of individualized "lives" as we find in the human kingdom. A tree, for instance, is not a fixed, personal, self-conscious being; a tree lives in its descendants, passes on from plant to plant its identic

life: reimbodies, one might say, at once. A tree is an exact instance of the Greek idea of *palingenesis*. So that when we speak of plant migrations, we should think of the life and consciousness composing the "life-wave" and not of the individualized forms. Think of the tree as a continuing life-entity, older than the hills it grows upon.

Just as there are two lines of evolution in the development of the human race, i.e., a higher and a lower, so are there in the plant kingdom. The plant kingdom emanates or unfolds from "above" downwards, as does man; for it is spiritual in essence and has its origin in the invisible spiritual world. This is the higher evolution. But it also differentiates into myriads of forms, and this may be spoken of as the evolution from "below." Both lines of evolution have to be taken into account. The scientist gives his entire attention to the evolution of differentiation, being ignorant of any more fundamental causal factors.

There are some scientists, however, who are aware that there is more to evolution than the reaction of an organism to environment. Dr. Robert Broom, in his Presidential Address, July 1, 1933, before the South African Association of Science, said:

The origin of species and of much of evolution appears to be due to some organising and partly intelligent spiritual agency associated with the animal or plant, which controls its life processes and tends to keep the being more or less adapted to its environment. But in addition to this there seem to be other spiritual agencies of a much higher type which have been responsible for what may be called greater evolution — the evolution of vertebrates, the steady advance from fishes to amphibians, to mammals and ultimately to man. These spiritual agencies appear to have worked by directing from time to time the inferior

agencies which are associated with the animals and plants.

H. P. Blavatsky, in her *Transactions of the Blavatsky Lodge* gives a clear key to two types of evolution in the building of the plant kingdom:

Every form, we are told, is built in accordance with the model traced for it in the Eternity and reflected in the DIVINE MIND. There are hierarchies of "Builders of form," and series of forms and degrees, from the highest to the lowest. While the former are shaped under the guidance of the "Builders," the gods, "Cosmocratores," the latter are fashioned by the Elementals or Nature Spirits.

H. P. B. further likens the variations even within one class of plants to the ray of light broken into its prismatic colors.

The different variations of plants, &c., are the broken rays of one Ray. As the ray passes through the seven planes, it is broken on every plane into thousands and millions of rays down to the world of forms, every ray breaking into in intelligence on its own plane.

Thus she shows that even the lowest stages of form development are due to the inner intelligence, whatever the effect that outside forces may have upon it. She says further:

From the acorn will grow an oak, and this oak, as a tree, may have a thousand forms, (1) all of which vary the one from the other. All these forms are contained within the acorn, and though the form which the tree will take depends on extraneous circumstances, yet that, which Aristotle called the "privation of matter," exists beforehand, in the Astral waves. But the noumenal germ of the oak exists beyond the plane of the Astral Light, it is only the subjective picture of it that already exists in the Astral

Light, and the development of the oak tree is the result of the developed prototype in the Astral Light, which development proceeds from higher to lower planes, until on the lowest plane it has its last consolidation and development of form.

In exactly the same way, we are taught, does invisible spiritual man work his way downwards into material form.

In the plant kingdom there is much to suggest the Root-Races and Sub-Races of man. The various classes — even the various orders — form distinct groups. Research reveals that each of the classes of the vegetable kingdom is contemporaneous with one of the Root-Races of mankind, as though it slavishly followed the pattern of division and subdivision of the human species. For example, the sub-tropical coal forests existed during the time of the First and Second Root-Races. The Gymnosperms, or cone-bearing trees, originated and flourished during the Mesozoic Era, when the Third Root-Race of mankind was in its prime, and, finally, the Angiosperms came in with the Atlanteans, or Fourth Root-Race.

This parallelism, as said, is even carried out to the matter of sub-sub-races. Take as an example of a distinct stock of plant life, the great class of the Gymnosperms, which flourished in the Mesozoic Era. They are like a great Root-Race. Two species of Gymnosperm, the cycad and the ginkgo, are the earliest known representations of a type of plant growing over most of the land area of our earth during the greater part of the Mesozoic times. The following Gymnosperm types could be considered as minor, overlapping waves within the great wave of the Gymnosperms — as sub-sub-races within the Root-Race — each starting, generally, in the North, (2) as the races of man are said to have done, spreading rapidly, rising to its climax, slowly receding, to be followed by another and another wave, each wave dividing and

sub-dividing as it progresses and develops.

First are the fleshy-cone trees, or Tecaceae, of which the podocarp pine is one of our few living representatives, so old it is called the living fossil. The earliest remains of this tree are found in Greenland, the few living relics in Tasmania, southeastern Africa and South America. Related to and springing from this branch is the yew tree.

Second, are the Taxodineae, or taxed leaved trees, of which the Sequoia is our best representative.

Third, the Araucarineae, or fleshy leaved trees. The Norfolk Island pine and the monkey puzzle tree are living examples of the trees dominant during the Jurassic Period, and form the bulk of the petrified wood of our southwestern deserts, being today only in the southern hemisphere.

Fourth, come the Cupressineae, or scaly-leaved trees, of which the cypress and juniper are the best known today.

Fifth, we have the needle-leaved trees, which include the firs, pines, cedars, spruce, etc., the most abundant and progressive of our evergreens today.

As a postscript we add the little, green leafless desert tea, Ephedra, the last of the Gymnosperm race to develop.

The life-wave of the Gymnosperms, with its many minor divisions, is a good example of a true evolutionary impulse coming down into the world of physical forms and passing through its life-cycle. Upon this vital current, the main evolutionary impulse, we find the forces of Nature acting, whether we call them "inherbalized" elementals and nature spirits, as does H. P. Blavatsky, or speak of the laws of survival and adaptation. These elemental forces tend to specialize and

modify the basic type. The result is a central stream of evolution where vital forces run strong and true, with many over-specialized and egotistical little whirlpools and eddies shooting off from the main evolutionary course of the Builders, to stagnate and disappear. It has often been remarked that young, vigorous races of plants are more plastic, more adaptable to change, than old, worn-out ones.

In many instances, the offshoots from the main evolutionary current, drawn into their various side-streams through over-specialization along one line or another, have become so fixed in their predominant characteristics that they are incapable of change. Unable to adapt themselves to new conditions of environment, the vitality of such races is lowered, the rate of reproduction decreases, and extinction follows as a matter of course. Strains which have remained generalized in their evolution — that is, in which one or another organ or characteristic has not become over-developed or over specialized — still retain their vigor, although they may actually be older in point of time. Do we not find this the common plan in all the kingdoms?

In tracing the history of plant and animal life from early geologic ages, it has been found that the primitive or generalized type persists the longest, and that the specialized offshoots tend to disappear, so that in time the remaining racial stock appears to return to the original type, although that original type has itself improved through the ages. For instance in the plant kingdom, those leaves with an undivided or entire margin are considered more primitive in form than the deeply incised or compound leaves, which are evidence of a departure from the original theme. As a parallel illustration from the animal kingdom, in sea shells an abnormal development of ornament, such as spines, tubercles, or unusual patterns of growth, indicates decadence

and coming extinction. Such creatures are in a side-stream or eddy, the plaything of elemental forces. They have gone off on a side-line, specialized in one direction, and have paid the penalty by becoming fixed and incapable of further evolution.

Another similarity between the races of man and the classes of plant life is the overlapping of one class with another. Just as each new great Root-Race of the human stock springs from the central point of the previous one, so it can truly be said that at about the midpoint of one class in the plant "life-wave" the following class begins to rise.

The Theosophical Leaders have told us of the plan of man's evolution through Root-Races and Sub-Races, Family Races and Nations. They have told us also that there is one law for all things. Why not apply to the lower kingdoms what we have learned, remembering that the vegetable kingdom originated in very early times, and that our records — both fossil and living — are but scattered and broken fragments in the book of plant evolution.

FOOTNOTES:

1. It is interesting to note in connection with differentiation that there are within just the oak family at least 200 named species. The majority are trees, but some are low bushes. Some are deciduous, some evergreen. Some have lobed and divided leaves, others have small, entire leaves. These 200 species interblend and in many instances are very difficult to distinguish one from the other. — A. J. S. ([return to text](#))

2. A survey of the plant life of the world shows that the oldest types have the fewest living examples and grow farthest south, while the youngest types have the greatest number of living examples and are restricted to the northern hemisphere. ([return to text](#))

THE TREE OF LIFE — *Gertrude W. van Pelt*

What can be the meaning of the universality of the Tree Symbol, found, as it is, in every country, though modified by national thought and customs? Conventionalized trees, generally guarded on the right and left by strange figures, are placed on sacred monuments or buildings of importance of all the old nations. On an Assyrian cylinder, for example, was found such a tree, surmounted by the winged disc and guarded by two winged figures with bird's heads. (1) From a capital of the Temple of Athena at Pryene is another, guarded by two animals, and again on a sculptured slab in the Treasury of St. Marks, Venice, is a tree guarded there by two huge birds. A tree symbol, similar in design to the ancient Chaldeans, has been found in Mexico, suggesting a pre-Columbian colonization of America. But the oldest examples of these designs come from Asia and the ancient countries. In India each Buddha had his own Bodhi-tree, and we are familiar with the story of Gautama Buddha gaining his enlightenment under the sacred Bodhi-tree, poetical reference to his initiation. Gautama's tree was the pippala or *Ficus religiosa*.

In the folklore of every old nation was the idea that in every tree dwelt its spirit, sometimes a god, or in some trees an evil demon, and these tree legends form a rich part of the folklore of European countries also. Some of the Druidic rites associated with the mistletoe are echoes of old tree-worship. Aside from and probably out of the religious idea of tree-worship have grown the ideas of tree-spirits, good and evil, who had to be propitiated or thanked by offerings or ceremonies. Certain trees became sacred to gods, as the laurel to Apollo, the olive to Athena, out of which grew the "Olive branch of Peace." In Persia it was the cypress, sacred tree of the god Mithra, and in Egypt, the tree of Osiris was

the Acacia. Gifts were hung on these various sacred trees, or offering of fruits to the gods laid at their base. Wreaths were used in religious ceremonies in Greece and Rome from the tree of the god worshiped, branches or garlands in the hands of a chorus of maidens. Even the persecuted were safe under the branches of a sacred tree.

The medieval history of which we have records is surrounded with a halo of charm and mystery by the folklore, fairy tales and myths, growing out of tree legends. Hamadryads and elves peopled the forests. Children lived in an atmosphere of other worlds. The woods were full of friendly nooks. Spirits were in the wind. Everything was alive.

There were many legends representing mankind as born from trees. Hesychius said the Greeks believed that mankind was the fruit of the Ash. Similar legends to the effect that the human race originally sprang from a tree, exist in the mythology of widely separated races. The Damaras of South Africa believe that the universal progenitor was a tree, out of which grew everything that lives. According to a legend of the Sioux Indians of the Upper Missouri, our first parents were two trees, rooted to the ground until a monster snake gnawed at the roots and gave them independent motion, thus destroying their harmony and mutual trust. There is also an Iranian account that our first parents issued from the ground as the rhubarb plant, which divided into two. Ormazd endowed each with a human soul and they became our first parents. According to the Prose or Younger Edda, Odin and his brothers saw two trees on the sea-shore, which they changed into two humans, male and female, which then became the parents of the human race. This idea of mankind issuing from two parents was also wide spread. Further there are many stories suggesting that heaven was in some way connected with trees. The Khasias of India have a legend that the stars are men who

have climbed into heaven by a tree, and the Mbocobis of Paraguay believe that the souls of the dead go up "to the earth on high" by the tree which joins us to heaven. Here we have hints of the teaching on the after death journey of the human monad through the spheres, kept alive by myths. Such a hint is also given in *The Secret Doctrine*, I, 411 and 577. Quoting from the latter reference: "On its way to the Earth, as on its way back from the Earth, each soul . . . had to pass through the seven planetary regions both ways" — a teaching which has been more fully elaborated by G. de Purucker in his various writings.

When Zoroaster died, Ormazd had his soul translated into a lofty tree, and in his previous incarnations Gautama Buddha is said to have been a tree-spirit forty-three times. These few examples indicating the universality of the Tree Symbol are taken from the many to be found in an interesting, well illustrated volume, *The Sacred Tree*, by Mrs. J. H. Philpot.

What is the root basis behind all these tree legends? Plainly they have sprung from the teaching of "The Tree of Life," the mysterious and rich heritage of every race in every age. The frequent inclusion of two figures, one on each side of the tree, with the Serpent of Wisdom, suggests that this revealing symbol refers to the separation of the sexes and awakening of mind in the 3rd Root Race by the Dhyani-Chohans, symbolized by the serpent. (2) The Tree of the knowledge of good and evil, recorded in the Christian Scriptures familiar to the West is surrounded by a story which veils its meaning. (3) That found in the Norse Mythology is more revealing. Here all life is figured as a tree. (4) In *Norse Mythology* by Rasmus B. Anderson, pp. 205-9, is a description of Yggdrasil, The Tree of Life, extending its branches into the whole universe. It has its roots in the Kingdom of Hela or Death, where at its foot are the three Norns, past, present and future. Their decrees are inviolable destiny (Kar-man). It is the

Tree of Existence. Its boughs are histories of nations, every leaf a biography. Beneath the root of Yggdrasil is *Mimer's Fountain*, in which wisdom and knowledge are concealed. (The Eternal Unknown Cause). This "Tree of the Norse Legend cannot wither and die until the last battle of life shall be fought, while its roots are gnawed all the time by the dragon Nidhogg." (S. D. I, 211) But "the Norns sprinkle it daily with the waters from the fountain of Urd, that it may not wither." (5)

We have a most perfect tree symbol in our oldest Aryan Race, viz. the Asvattha, referred to in Chapter XV of the *Bhagavad-Gita*, where the roots are said to be above and the branches below. (6) Vishnu is said to have been born under this tree. Then there is the Mexican tree whose trunk is covered with ten fruits with a female figure on one side and a male on the other, while on the topmost branch is added a bird, signifying *Atman*. (7) Again in the Popul Vuh, the 3rd Race is represented by a tree. (8)

No known race is without this symbol. Certainly there can be no chance or accident in a teaching which is so universal. Indeed it is not difficult to see behind it the strong force of the Guides of the human races, keeping alive this symbol through the ages as a picture of reality. It has been stated that the Great Ones remain with an opening race until certain vital trends are established with sufficient force to run their courses, and one can imagine that this revealing picture of "The Tree of Life" may be one which has been painted on the screen of the Astral Light in unfading colors and with intent. Why this might have been so is clear in the light of the deeper teachings of the Ancient Wisdom as they have been explained in our present cycle. (9) We can see the Tree as a picture of the Universe itself, its roots buried in the depths of Space, the Reality, unknown, unfathomable, its branches spread into worlds within worlds. There too we see an exact picture of the teaching of "emanations." Every new branch establishes a

new hierarchy, growing out of a higher one, yet all have their life-force from the same root. The framework of "The Tree of Life" is the *body* of the Universe in which exists all that is, from our atoms to the highest gods. "In IT we live and move and have our being" — a brotherhood which is all inclusive — *universal*. This symbol is so revealing that it might even be called a "Text-book of Life." Some legends hint that it may have been so used; for instance, those referring to men entering trees at death. It is also easy to see written in the structure of trees the teaching of the compound nature of man as united in consciousness with higher branching hierarchies, which we may call Manas, Buddhi, Atma, as well as with branches lower down. And further we can see how man, being a part of the whole and a free agent, may through effort climb in consciousness to higher levels in the hierarchy to which he belongs as man, thus enriching the life currents for all below him, or alas, through misuse of energies, generate poisons in his branch." The dominant teaching in this symbol is that of the unity of all lives from gods to atoms and hence, that of ever-enduring and reciprocal responsibilities.

Beyond the "world of Brahma," i. e., beyond Brahman, there are realms of consciousness and being still higher than this "world of Brahma," in which reside the roots, so to speak, of the Cosmic Tree and therefore the Root of every human being, the offspring of such mystic Cosmic Tree. — *The Esoteric Tradition*, p. 129

REINCARNATION THE ETERNAL COSMIC LAW — *John H. Manas*

Reincarnation is neither a dogma nor a doctrine nor a theory, but a Cosmic Law. Reincarnation is one of the most important and deepest philosophical propositions, and it forms the foundation of all true philosophical systems in ancient as well as in modern times, in all lands and in all civilizations. However, reincarnation today is one of the most controversial questions between philosophy, science and the Church.

A Cosmic Law is a certain procedure in Nature which all things and beings are bound to follow. Thus we have the law of gravity, the law of nutrition, the law of falling asleep for a certain period of time and being awake at another period each day in our life. All these are laws of Nature and man cannot go against them. He cannot escape nor change them. He must obey them and comply with their dictates whether he likes it or not, if it pleases him or not. In the same way Reincarnation is a Cosmic Law, which operates on all Cosmic planes, and thus through this basic law the continuation of life, creation and evolution are made possible.

REINCARNATION IN NATURE

When the plant of wheat dies in the summer and ceases to exist visibly as such, and after several months, or even years, a grain of this wheat is planted in the ground and it again dies in the earth and a new plant of wheat, with the same qualities as the sown grain, grows up, what else is this phenomenon in Nature, known to all, than the workings of the law of reincarnation as the grain of wheat is concerned? The same law applies to all plants, animals and men, and in this way life in Nature is sustained and evolution is made possible.

However, as from a grain of wheat always grows a plant of wheat and never a banana, or a pumpkin, in the same way from the seed of a dog, a dog will always be born and never a whale, or a frog, and from the seed of a man, only a man will always come into being, and never a horse, an elephant, or a bird. There is always a close relationship between the manifesting force, entity and soul and the physical forms through which they manifest. This is the law in Nature.

THE DENIAL OF A COSMIC LAW

The law of Reincarnation unfortunately is very little known among the masses; it is greatly misunderstood by many modern scientists and educated persons, and it is opposed by the Church as a dreadful and heretical theory. Man may become a mental giant by the accumulation of immense knowledge; however, a man grows to real knowledge always only by the expansion of the consciousness of his soul, and this Cosmic knowledge really counts. For this reason enlightenment is always found with the small minority. As the majority rules theirs is the general opinion and the minority is ridiculed. This happens with Reincarnation today.

This state of affairs is nothing new. Three hundred and twelve years ago the same thing happened to Galileo in Padua. Then, one of the most powerful Christian Churches, basing its great power and authority upon the dogma of infallibility, as well as the scientists of that day, taught that it was the sun and the stars that revolve around the earth. This was the prevailing knowledge of the time. Galileo, a renowned astronomer, physicist, and philosopher, dared to contradict them. For this crime, he was condemned to be burned at the stake as a heretic. Because he was a useful man to Society, the Church to save face, forced him to recant his theory. However, in spite of this denial and

notwithstanding the application of all penalties, the existing Cosmic law of the revolution of the earth around the sun was not changed in the least. Fortunately, Cosmic Laws are beyond the reach of the ignorant and fanatical man, no matter how powerful he may be.

Time proved that that Church and those scientists were wrong. They just erred. This fact brings us to the logical conclusion that they may err again today where reincarnation is concerned, since they both erred many times in the past on many occasions.

They accuse us of teaching Transmigration of souls; the theory according to which a human soul incarnates in the physical body of an animal. There is no place in God's Universe for such a fantastic belief. The Cosmic law is that each soul always builds and animates a corresponding human physical form, according to the degree of its perfection. No human soul can ever incarnate in the physical body of an animal. The high mental vibrations of the human soul will break and destroy the animal form.

COSMIC LAW VERSUS MAN-MADE DOGMA

According to authentic historical sources, the law of Reincarnation was taught in the first Christian Churches to the inner circle of the brothers, since the first Christian communities were but an imitation of the ancient Pythagorean communities and schools and the continuation in a limited way of the ancient Greek, Egyptian and Mithraic mysteries. However, from the time the Christian Church under the Roman emperor Constantine decided to become a political organization, a drastic change should have been made and certain dogmas had to be formulated for the spiritual subjugation of the masses. These radical changes and dogmas were the following:

(1) *The original sin.* (2) *Hell and paradise.* (3) *The forgiveness of*

individual sins by the clergy.

In order that these dogmas be established — which are in opposition to the Cosmic law of Reincarnation — the latter had to be thrown out of the teachings of the Bible and of the Church. In this way the new religion acquired numerous converts, but at the same time the darkness of ignorance, fear — the greatest enemy of man — superstition, religious fanaticism, the Roman Inquisition, and the black practices and events of the Middle Ages, until only a few decades ago, enshrouded the human mind, and civilization was moved back by two thousand years.

The elimination of the Cosmic Law of Reincarnation and the establishment of the new dogmas, brought up the following three great logical questions, which the Church was never able and will never be able to answer.

(1) THE INEQUALITY OF MAN

If God is just and the source of all love and harmony, why then, has he created every human being different from the other without any equality whatsoever? "How can one account for the fact that one man is born poor and in spite of heroic effort remains poor all his life, whereas, another man is born into a rich family and has all the good things of life without effort on his part? Is this divine justice? Can one conceive of a just God who sends one man into this world to be a pauper all his life, whereas another man enjoys all the luxuries and pleasures of the same life? Why does one man have to die very young, and another live to a ripe old age? None of these questions can be logically answered without the operation of a law of eternal Justice and of Necessity, the Universal Law of Metempsychosis, or Reincarnation." (See our recent book, *Life's Riddle Solved*, pages 69-70)

(2) HELL AND PARADISE

Is it just and in agreement with the divine law of justice and of harmony, that if a man, according to the standards of society — and we have countless such standards — lived a good life for a few years on earth, after his death, he is going straight to paradise to live there in a supreme bliss through eternity? Is this just and logical? Where are then the workings of the laws of evolution and of progress?

Is it just and logical, if another man lived a wicked life — which according to the standards of another society might be a good life — after his death, his soul will go straight to hell to be tormented and tortured there for ever? If this is true, who does the torturing? What does this hell and this paradise of the Biblical story look like and feel like? What does hell mean and what really takes place in the after-death existence of the human soul?

(3) THE FORGIVENESS OF SINS

No one can ever forgive the sins of another. This is against any law of Nature. It is the same thing as to satisfy one's hunger by having another person do the eating for him. In Nature everything works out its own salvation. The very moment some one else does things for us, our work, that very moment the basic law of evolution will come to an end, since evolution means and is the gradual progress of all things and of all beings in Nature through individual effort.

The Biblical passage in *Matthew* 18:18 "Whatever ye shall bind on earth, shall be bound in heaven; and whatsoever ye shall loose on earth, shall be loosed in heaven," which the Church uses to establish her authority for the forgiveness of sins, if this statement was really made by Jesus, which is very doubtful, it has entirely a different meaning and not that of giving authority to

any one man to forgive the sins of another man, or to change an existing Cosmic Law, which as such is immutable. (See *op. cit.*, page 118 for full explanation.)

"All these very important and serious questions have kept the human mind perplexed, guessing and in bondage to fear. These questions will continue to challenge his real knowledge and his wisdom until man is able to understand the Cosmic plan of Divinity which is carried out through the Cosmic laws of evolution and Reincarnation." (*Op. cit.*, page 91.)

THE LAW OF COSMIC JUSTICE, HARMONY AND LOVE

The above serious questions were never and they will never be adequately answered. Because, when any man, or any institution, proclaims himself, or itself infallible and denies the operation of a Cosmic Law of God, of course, it will never have an answer to give, except to present a man-made dogma as a subterfuge in the place of the suppressed Truth.

Through the operation of the Cosmic Law of Reincarnation all these great questions are answered once and for all. The human soul is a spark of Divinity. The Ego leaves the bosom of Its heavenly Father-God having in itself all the Divine qualities and potentialities of God in a latent state. These the Ego transforms into individual consciousness by its pilgrimage through matter, in numerous incarnations, or rebirths in human bodies, through its own personal efforts and experiences. The total sum up of these conscious qualities, powers and capabilities of the Ego, constitutes the human soul. In each new incarnation the soul prepares a physical body in proportion to its strength, its perfection and the degree of its consciousness. This is justice, harmony and impersonal love of the Cosmic Law of equality for all. The soul in each of its many lives possesses and manifests through its physical body characteristics, qualities or faults, abilities or

disabilities, weakness or strength, etc., according to its merits and demerits, no more no less.

After this long pilgrimage through matter, when the soul will have completely purified itself and its consciousness has become Divine, then, it will come back to the bosom of its Father-God as a real Son of God. Who that has ears to hear, let him hear and understand the workings of this basic Cosmic Law of Justice, of Harmony and of Love, the Law of Reincarnation.

The Theosophical Forum

TRUTH, LIGHT, AND LIBERATION FOR DISCOURAGED HUMANITY

— *Kenneth Morris*

This is what Theosophy means and is. It came to us from the Masters of Wisdom, who have travelled the road of evolution to a point much farther than we have reached, and are much nearer than we to that Kingdom of Nature which is next above our human kingdom. They are the Guardians of Humanity; Their supreme interest is to aid in the evolution of mankind, to draw men upward, away from the ignorance and consequent selfishness and wrong-living that keep us in misery and make this planet and the life on it seem the bad joke of an omnipotent Caliban. There is a Divinity within us, They are men made One with that Divinity, and the allies of the Divinity in all men. The last thing They would wish would be to form a new orthodoxy, to found a church of the "saved," or a new religion for getting its faithful into its own particular brand of "heaven", or to start a School of Magic and teach people how to develop their "powers" or give them interesting teachings to amuse them and make them feel superior to their fellows. Their Theosophy — or Divine Wisdom — has nothing whatever to do with any of these things; if these are what you are after, don't join the Theosophical Society; you will never feel at home in it. Study the Masters' teachings, that you may get from them power to help your fellows; get them clear in your mind, and don't confuse them with the personal opinions of Tom, Dick and Harry posing as teachers at so much a lesson, because it is from the Masters' Theosophy you will get the power to help, however amusingly fantastic the views of these others may be; but shun like poison the mood of the creedmonger, the attitude that you know it all! For a creed is a dead thing, that you "believe in" and that's that; a kind of

Micawberish writing I O U's for your debts and thanking God *that's* off your mind; it sets finality before you where you are; dopes you with the bluff that nothing is to be learned nor any road of growth to be travelled; no matter what clauses it might contain, it would still be a lie. For Truth is not a formula, but a certain direction, and travelling in that direction; a growth; a progress, from gross to fine, from mean to noble, from limited to universal. Could truth be embodied in a creed — one tick of the clock and it would be a lie.

There is no way to come towards Truth except by cutting out one's limitations, universalizing oneself — which is as much as to say, deepening and widening one's sympathies. So that, to learn anything of truth, you must do the work the Masters desire done, learning in order that you may teach and living in the will to better the stuff of humanity. Why should you study what is taught about the Universe and Man, the Monads and Hierarchies, the Principles and the Atoms? — Why, just that you may get the keys to yourself and to the methods of things, and have entry into the treasure-chambers of wisdom, courage, compassion that are within you, and bring forth from them what shall sweeten the life of your valley and your town. That you may be able to re-create courage where it has fainted to extinction-point; to waken hope and manhood, and the knowledge that will sustain them, where before there was only despair; and all, that the stuff of humanity may be bettered. You can't get truth without becoming pervious to that within you which knows truth, the Higher Nature; and the higher the Higher Nature, the more universal it is, the more it is something that is in all mankind, in all life, equally; and therefore the more you live in your fellow men, in the will to help and serve and raise them up, the more you are That Which Knows Truth — or the more you know of Theosophy.

What has been written about, for instance, Karma, would fill

volumes; one means, what has been given out from the Masters for the intellects of men to assimilate. But nothing that can be spoken or written or printed cannot be twisted into a lie. Thus, one has heard it argued that Karman means that a murderer should be hanged for his crime. But no one could think so who knew that Theosophy is Truth, Light and Liberation for Discouraged Humanity. A real knowledge of, or belief in, Karman, on the other hand, convinces us that punishment must be left to Karman, which is impersonal, automatic, and certain, and in which there is no concept of punishment or revenge. Actually no human being can be just when he undertakes to punish another; we cannot know, ever, how much of guilt, of evil will, went to impel a criminal to his crime. We have no means of measuring how far the man was responsible, nor what degree of punishment putting him to death may be. But Universal Nature does know, because man is part of her; and she takes her steps, dealing out absolute justice; not to avenge, but to cure. — Or again, there is the old contention that to come to the assistance of one who is suffering is to interfere with his karman. But — Truth, Light and Liberation! — his karman and yours brought you there at the time with the ability to help him; and not to do so is to sin against the Oneness of Being, and to incur heavy karman by so flouting the Whole of which we are parts. — And then there are those who would make dogmas out of Karman, and a cause for division, hatred and attack; *homoousion-homiousionism* and hairsplitting; "Who doesn't believe about it as I do, or phrase the thing as I do, is a liar and deceiver, and probably a thief." Diach yr od! is there help for any man in such tomfoolery? If you want to know the truth about Karman, find a man who is in despair, and tell him what will bring the light of new courage into his eyes, what will take from him the bitter feeling that someone else is wronging him, and make him know that he, and he alone, is absolutely the Lord and Master of his own destiny; aye, and more, can enrol

himself right now among the Helpers of Mankind; and you will have told him the truth about it. You will soon find out that half measures won't do; that sometimes-just-and-sometimes-unjust has no power to rouse the lion in the soul of him, that it is only H. P. B.'s teaching, Justice Absolute and Infallible, that can do that. And this is the real test; because Theosophy is Truth, Light and Liberation for discouraged humanity; and what is not compassion-lit is not Theosophy.

What's that you say? Any religion can comfort people in adversity? — Yes; the falsest of them all can dope a man into effortless drifting with the current, leaving it all to God or Church or priest — to anything outside himself. But the "Comfort" of Theosophy is to have him swimming up-stream with strong strokes, knowing himself mightier than the current.

Nothing is really yours till you have given it away. To know Theosophy you must help people with it; you must show them how to meet their difficulties with it. When you have done that, the teachings you have read about, and have thus used, *become Theosophy in you*; Knowledge, Power, Peace; above all, a living Love.

The Theosophical Forum

THE PREHISTORIC ZODIAC AT GLASTONBURY — *Charles J. Ryan*

Everyone has heard of the Great Stone Monuments at Stonehenge and Avebury in England, but comparatively few know much about the prehistoric Sacred Center at Glastonbury in Somersetshire which is associated with the semi-mythical King Arthur and his Knights of the Round Table and which, as Mrs. Maltwood remarks in *The Enchantments of Britain* (1) "constituted a laboratory of thought and mystery recognised by the races of Europe as unspeakably hallowed and inscrutable." Lewis Spence, in his *The Mysteries of Britain*, calls it "The Temple of the British Sacred Tradition." Mrs. Maltwood's twenty-five years of intensive research have, as she very reasonably considers, established in the vicinity of Glastonbury the existence of a hitherto unsuspected monument that greatly surpasses in interest and in size anything hitherto found in that ancient center of the Mysteries, or maybe in Western Europe. It consists of a representation of the Signs of the Zodiac whose components are delineated on the scale of miles, the entire circle of effigies being ten miles in diameter! This colossal Zodiac is outlined on the surface of the earth with great engineering skill by the adapted contours of streams, hills, forests, huge artificial earthworks, etc., and the labor of shaping them must have been great. Such an undertaking is enduring and the changes caused by farming operations have done little to obliterate the gigantic effigies since their creation about 2700 b.c. as calculated by Mrs. Maltwood from astronomical data. From an airplane the outlines are plainly seen, but otherwise they can only be properly traced on maps and airplane photographs. Mrs. Maltwood's discovery was made through her efforts to map out the quest of King Arthur's Knights whose holy isle of Avalon has been identified with Glastonbury.

In her previous works, *A Guide to Glastonbury's Temple of the Stars*, and its *Air View Supplement*, the Zodiac — King Arthur's Round Table — is fully described and illustrated. This book has a few, but sufficient, illustrations.

Judging by the mass of corroborating evidence that the author produces as the result of profound scholarly research and of her own observations, it seems impossible to doubt that she has made an excellent case for both the actual existence and the origin of the amazing monument which so definitely sustains the claim of the Theosophical Teachers that prehistoric races had high intelligence and technical skill, and above all a unified system of thought which Theosophists call the ancient Wisdom-Religion, widely spread over the earth.

In regard to the method of preserving knowledge by indelibly carving it on the surface of the earth we have other examples in England in the great White Horse at Uffington, the Wilmington Giant, and others. Mrs. Maltwood quotes H. P. Blavatsky's *The Secret Doctrine*, II, 750, where she refers to the records of Initiates from Egypt traveling *by land* — before the breaking through of the British Channel — to Britain and establishing "colossal Zodiacs," and above all the reference from the same source to the one-time gigantic Zodiac in what is now the Gobi or Shamo desert. H. P. B. writes:

As above so below. Sidereal phenomena and the behavior of the celestial bodies in the heavens, were taken as a model, and the plan was carried out below, on earth. . . . In the same manner and on the plan of the Zodiac in the *upper* Ocean or the heavens, a certain realm on Earth, an inland sea, was consecrated and called "the Abyss of Learning"; twelve centers on it in the shape of twelve small islands representing the Zodiacal signs — two of which

remained for ages the "mystery signs" and were the abodes of twelve Hierophants and masters of wisdom. This "sea of knowledge" or learning remained for ages there, where now stretches the Shamo or Gobi desert. — *The Secret Doctrine*, II 502

Mrs. Maltwood points out that while the reference to "colossal Zodiacs" connects up with Egypt, the sentences just quoted above deal with Asia. She writes:

The latter exactly pictures "The Temple of the Stars," in England, for the signs are set in what are called on the map, the Sea Moors. The low-lying land has now been more or less drained but in Winter time the little hills appear as islands emerging from the flooded Sea Moors. Probably the "Initiates" came via Egypt, to lay out this Zodiac.

Another reference to *The Secret Doctrine* by Mrs. Maltwood relates to the divine Flames or Fiery Lions "whose esotericism is securely hidden in the Zodiacal sign of Leo." (*S. D.*, I, 213) These red flames are ingeniously indicated at Glastonbury. Mrs. Maltwood writes:

In this Temple of the Stars the Lion's tongue composed of red clay is one of the most interesting modeled earthworks; it is extended intentionally to rest on and point out the central line of the Ecliptic. . . . I marveled at its life-like drawing expressed by the processional path that surrounds it. . . .

The author presents a striking array of traditions and ancient records from Asia, etc., collected with great industry from authentic sources, tending to demonstrate the origin of the Glastonbury Zodiac from Sumerian-Chaldean sources, probably toward the close of the time when Taurus was the dominant sign

(roughly speaking 4800 B.C. to 2400 B.C.). The Sumerians probably derived their knowledge from the far older Gobi civilization described by H. P. Blavatsky.

Mrs. Maltwood has found that many of the names of places, farms, etc., in the area of the Zodiac bear close resemblances to Oriental ones. Glastonbury is located in the county of Somerset and the ancient county seat was Somerton, derived from the Sumerians. The name of the river Parutti, which guards the sacred area of the gods in the Babylonian legend of Gilgamesh is obviously, as she says:

. . . the Parrett River of Somerset, which outlines the "great dog" of this "Kingdom of Logres," is perhaps the oldest name in the British Isles, it was left by the Sumerian settlers, Somerset being "The Seat of the Sumers" or Cymry. So, close to the effigy that portrays the constellation Gemini, we find the ancient names for the sun gods, Lug and Hu, in Lugshorn and Huish. . . .

The connexion between the Arthurian legend and the Zodiacal "Round Table" is clearly laid out in this fascinating study, but it is impossible to go into this in a brief review. We notice that only ten of the Zodiacal Signs are definitely represented or indicated on the Glastonbury Giant Zodiac, Cancer the Crab and Libra the Balance being omitted. According to H. P. Blavatsky ten signs only were known to "the profane" until the Greeks added Libra, and Virgo-Scorpio was divided into two; though the initiates always had the twelve. This, however, does not explain the omission (if it is really omitted and not merely obscured) of Cancer in the Glastonbury Zodiac.

Glastonbury has always had a strong link with the Orient. It was not only a prehistoric spiritual center but a specially sacred locality to the Christian world with its traditions of the visit of

Joseph of Arimathea and perhaps the youthful Jesus, and other associations which are not altogether forgotten.

In an environment like this where a devotional atmosphere has been maintained for several thousand years, it would be surprising if the partition between the material world and the unseen were not somewhat thinner than in the conditions of modern fretful city life. And, according to strong evidence, this was demonstrated in June 1910 when great interest was aroused by a report in the *Daily Chronicle*, a leading London paper, of unexplained happenings at Glastonbury and neighborhood consisting of manifestations of a powerful perfume of incense at various places. They occurred in an ancient Manor House outside the city and also within its precincts, in private houses as well as in the open air. The grounds of the famous ruined Abbey were the scene of strongly marked manifestations. The witnesses were numerous and no normal explanation was able to be found. The perfume appeared and disappeared suddenly and sometimes lasted for many minutes. Comparison with ordinary Western Church incense and experiments with gums and balsams indicated that it was of Oriental type. The correspondent of the *Daily Chronicle* wrote:

Here we have phenomena occurring of a rare and beautiful nature, observed by a number of witnesses, and even now occurring in the most unexpected manner. And there is no place so admirably "staged" with its venerable history and associations as Glastonbury for the mysterious happenings. The story contains no element of the terrifying or the malignant, but rather is reminiscent of the gentle lives of devoted men. . . .

Many other unexplained phenomena of no low order are claimed to have occurred at Glastonbury in recent years, but as this

review is not a discussion on psychical research we must say no more. Mrs. Maltwood's book is entirely devoted to a scholarly presentation of the scientific and historical demonstration of her "discovery, delineation and localization" of the colossal Zodiac, and the highly important conclusions to be drawn therefrom.

KARMAN, THE STRENGTH OF LIFE — *John Peck*

Inspiring all the great Theosophical doctrines is a Spirit which seems to be constantly congealing into the gem about which all the forms in the universe settle, in much the same way as frost outlines the structure of a plant, or as forms grow out of the photographic negative. On certain fine and beautiful evenings the air becomes live, silent and expectant as dew-point is reached, and in the same live and silent manner Spirit congeals. But it does not entirely congeal and become "fixed," for just as there can be dew in the air and no dew falling, so the spirit reaches the point of congealing and returns into itself. This ethereal form, or gem, then is constantly alive in motion, or being born, and it is really the motion of the spirit which makes the form. The great revolving wheel of a dynamo appears to be still, but it is not so, and it is revolving at high speed. Nor is a form fixed and static.

This form, or appearance, is supremely natural and is, as we have just seen, constantly being born and sustained. The taking of this form is Karman, and the form is Karman.

Now for the forms which grow around the gem of life and which are, indeed, the gem. Many of us have seen a yacht. Some yachts are very beautiful in their lines. They are beautiful because the intelligence of science and art has created an entity in whose form one reads the harmonized rhythm of wind and sea. The swiftness and grace of the yacht in action (with wind and sea and human intelligence) become an indissoluble unity alive with significance. Creative purpose working through an understanding of the inherent natures of wind and sea is Karman, and the action-form is Karman. Thus Karman is the harmony and harmoniser of Life, and it is Life.

A human being is at present a kind of murkiness irradiated with streams of fire. The fire cannot be compared with any ordinary kind of fire, for it neither burns nor dies. The fire glows with a radiance inconceivably intense and fierce, yet it is soft and sweet. So deep and alive is it, that the most intense and shattering experience has no visible effect upon the intensity of the fiery radiance. At the edges of the fiery streams, irradiating the murkiness, are sorrow, vision, understanding, joy, love, pain, fortitude, striving. Here are ever being traced the lines of your forms — every curve declaring its aeonian history of life-experiences of action, thought, feeling, aspiration, striving. The tracing of those lines is Karman, and the lines are Karman into the depths of the forms. The pure natural light of health, of aspiration, and of wisdom is the radiance of Karman whom you are. Look upon another, into his eyes, and recognise his presence.

The living fire is sustained within itself. It is the most virile strength, and the softest tenderness. It is ever being born out of itself and there is no moment of time which can date its birth — so pure and ever-young is it. The sustaining of the living fire by itself is Karman, and it itself is Karman. The attaining of your cosmic purpose is Karman and you are Karman.

Your cosmic purpose knows you, and the knowing is Karman; and you are Karman also, for you are your cosmic purpose. To come to know this is Karman. You reveal yourself to other beings and they reveal themselves to you. You behold each other and you recognise each other's presences. The revealing, the seeing, and the recognising is Karman. Thus relationship is Karman and it is cosmic harmony.

Karman is called the "law of consequences," but that does not mean that there is an abstraction called "law" which binds results. It is often taken to mean that one can generate a "cause"

which will produce desired results or conditions. Causes and effects are purely superficial and incidental. Causes cannot become causes until there is action, and immediately there is action there are results. Cause and effect are one unbroken continuity, called Activity. It is often attempted to separate cause from effect and to ignore the full consequence of activity. Activity is inseparable from the being. It is himself showing himself — his Karman which he is. The very life which he truly is, in the most real sense, is ever actively tracing the intricate magnetic karmic lines which give space and body and means to further activity to his form and giving, with karmic precision, every subtlest variation to the outline of his form. Similarly there is not anything in the entire Cosmos which, by its own truest nature — its own unassailable ground of Being — is not also tracing its own indelible karmic lines of magnetism. Also, surely, there can be not the least activity unless there is present another being to be acted upon, that is to respond. It becomes vitally clear that for the full integral activity, or living, of any one single being, whatever it may be, there must be every finest variation of individuality in order that every single magnetic variation may find its "mate" at some point in the karmic rhythm of another being. Thus activity (besides affecting one's forms and faculties and scope for developing deeper activity) creates intricate magnetic patterns upon which, by magnetic affinity, settle the complex structure which we call the circumstances (the so-called good or bad karman) of our lives and our relations with others (human or otherwise). Is it not true also, then, that by consciously setting out to create for ourselves, or others, good or bad karman (so-called), we are indeed attempting to freeze a particular pattern to ourselves? This we cannot do without adversely affecting the lives of other beings, for Life is dynamic. The consequences would be to draw a pattern of retarding beings who would supply what we thought we wanted. That is, in reality, we should become

more or less acutely conscious of weight, ineffectuality, or hindrance. This is the Law of Consequences and the Law is our sublimest Nature. It is against our Nature to set itself against itself. The Law cannot repeal itself, for it is the Law. The consequences shall be precisely as determined and, if knowingly determined, may be a hindrance, or evilly destructive, or an act of compassion. Consequences may, of course, be adjusted (but not avoided) by any being whose karmic rhythm or pulse is stronger than that of the pattern which encompasses him. There is no Human, therefore, who cannot rise above his Karman, for he is an integral cosmic being. There is no Human, therefore, who cannot turn his karmic hindrance into a life-long act of compassion. A human being is in danger only when he surrenders his integrity; and his integrity is best maintained by acting always through the entire length of his being. The consequences of so acting can only be sustained and practical altruism. The consequences take care of themselves: they will be harmonious activity and graceful and shapely growth. There is henceforth no question of personal "karman" accruing. Once more we see the lovely gem of Life, with every structural and formal line or curve traced by our own karmic hand of Life. There is no rigid law, for the only Law is Karman. Seek to use it as a lifeless guide-rope and it will vanish utterly from sight and touch: seek deep within the heart and it will be seen shimmering silvery-golden from the heart of the atom to the heart of the loftiest Being, touching all with the radiance from the fire within them.

There is one unassailable point emerging. Karman will never break a human being. It is the strength and depth within his heart — not a formidable array of friends or enemies. The one essential is to remain a being who is human; that is, to remain undivided. Aspire and think intelligently. Remain unswervingly true and

sincere to oneself, not only in thought and feeling, but in physical action. Never deny oneself the courage, strength and wisdom *to act*. Face beauty and ugliness, horror and loveliness squarely with balance and insight. To become undivided there must first be aspiration, action, and awareness in action. One will then become aware of that which may cause conflict within oneself. Real continued awareness will resolve the conflicts, through action, and will straighten the intelligence and strengthen the integrity. Such action, where there is conflict, will bring matters to a head in the form of a choice. Upon this choice will depend whether the action is liberating or not. Liberating action may often be accompanied by a sudden or periodic accession of mixed (and sometimes unusual) good and bad circumstances and influences, which sooner or later pass off; but throughout all these the power of decision will remain whole and clear. They help you to discern, to deepen your insight, and to understand. Straightness of vision and depth of insight and understanding will thus come into ever fuller play.

When action is liberating there grows gradually a fulness of heart (of affection or being "at home"), stability or integrity of purpose, and the steady flame of wisdom. Thus with ever greater freedom from the laws of nature will come almost suddenly (seemingly) the realization that those laws were nothing but your own Cosmic Purpose, of Life, which you yourself conceived — and no other — and which with strong and tender patience, through endless infinitudes sought without pressure to make itself known to you. (Is it not clear why you alone must act from yourself alone, and not by the authority of another, however great and noble he may be?) All the paths of life will be found to be the true path and your heart will be full. You will discover a new sight, keen and penetrating, which can gaze into the unknown and trace new purposes. Such a cosmic Being are you. The loftiest Being awaits

you, just as you may await those who follow. Karman is ever present and never failing — so we have found. Try and see?

The Theosophical Forum

THEOSOPHY IN GOLD COAST AFRICA — *G. Frances Knoche*

With amazement, and not without a sense of kinship, do we close J. B. Danquah's *The Akan Doctrine of God*, (1) for here is revealed the Akan (2) conception of Deity which squares with the profoundest reaches of Theosophy.

A native African by birth, son of Emmanuel Yao Boakye Danquah, Court-Drummer to the King of Akyem Abuakwa, that is "interpreter of the traditional history and poetry" of the Ashantis, the younger Danquah absorbed from infancy the wisdom of his people, and hence speaks with an authority and depth of perception that no outsider, however well versed in European anthropology or so-called "primitive" faith, could hope to equal, much less surpass. As the elder Danquah joined the Basel Missionary Society at the age of forty, his son received the benefits of a Western education as well, later successfully qualifying for entrance at the University of London, where he received the degrees of Doctor of Philosophy and Bachelor of Laws. Danquah likewise won a John Stuart Mill Scholarship in Philosophy of Mind and Logic at University College, London, and at present is Panel Lecturer in Twi at the London School of Oriental Studies.

The author's original intention was to publish a three-volume work of 640 pages, entitled: "Gold Coast Ethics and Religion," which

set forth the Akan idea of the good, or the supreme good, and examined for the purpose, all the anthropological evidence available: the Akan gods, the "fetishes," the customs, the maxims or proverbs (3,680 of them), the festivals, the religious observances, the calendars, folklore,

the family system, the social and moral codes, racial history, racial fears and hopes (*i.e.*, the philosophy of their life). — p. ix

In view of the accurate exposition of theosophical doctrine contained in the one small volume before us, originally part three, one wonders whether the "mysterious power" which Dr. Danquah is convinced *preserved* this third volume from destruction, did not also have a hand in *withdrawing* from the light, temporarily at least, the knowledge contained in the first two. Of this we may never know, but the fact remains that on January 29, 1941, while working on the bibliography of the entire work, surrounded by "ancient note-books and old rare books and the *two* MSS. volumes on the table of my study," Dr. Danquah went outside for a breath of air. In the twinkling of an eye, flames had consumed his house, burning to ashes its entire contents. The third volume, providentially in the hands of a friend, was saved, and became the present book.

A brilliant critique of the Akan doctrine of God as expounded by European scholars and anthropologists opens the book. For the magnificent researches of the Rev. J. G. Christaller, who was commissioned by the Basel Evangelical Missionary Society to "study the Akan language and translate the Bible and other religious books into the principal Gold Coast language," Danquah has the most generous praise, regarding his "Dictionary of the Asante and Fante Language called Tshi (Twi)," his collection of some 3,680 Maxims or Proverbs, and his Twi Bible, as classics, proving Christaller to have indeed been "as great a missionary as he was philologist, anthropologist, scientist, philosopher, moralist, and a man of genius." (p. 185)

About the work of other Europeans, such as Rattray and Westermann, the author is not enthusiastic, for dogmatic bias dims the

luster of self-sacrificing and earnest labor. It is inconceivable to him, and quite naturally, that anthropologists and scholars who profess to search for truth without prejudice should be so influenced by the dominant conviction that their own religion, in this case the Christian, is God's one and only, and that all other beliefs, particularly that of the "primitive savage," are at best but gropings of the immature soul. Arrogance coupled with blindness is not a happy combination. Even when tempered with energetic and benevolent action fruiting itself in hospitals, schools, railroads and other engineering marvels, we find that the dominant urge during the last seventy years has not been primarily to help the "heathen," but to "win for Jesus Christ the moral supremacy of the world" — to quote Edwin W. Smith, Gold Coast missionary, in *The Golden Stool*, 1926, p. 314.

Dr. Danquah's kindly yet penetrating diagnosis of the European attitude, his development of the Akan faith, his brilliant intellectual abilities, should convince us that the so-called "primitive belief is by no means inferior to the Christian, but in many respects leagues ahead of its *dogmatic interpretation*.

As the title indicates, the work centers around the Akan conception of God, a three-in-one, or one-in-three Divinity, not dissimilar to the Three Logoi of the Greek, called Onyame, Onyankopon, and Odomankoma. Section II merits careful study; but a few titles chosen at random will indicate the character of the threefold deity:

Onyame (also spelled *Nyame*) is the Shining Power, the Giver of Light or Sun, or Rain and Repletion; the universal power which is "behind or beneath things, the ultimate irreducible Godhead."

Onyankopon (also spelled *Nyankopon*) is the "Knowing Principle," the Greater Supreme Being; "he is there from ancient times," and that power that keeps the spiritual integrity of man and cosmos.

Odomankoma is the carver, originator, hewer of all beings; "infinitely manifolding," of an overwhelming intensity and depth; whose maxims are "many and everywhere visible." (p. 59) "He is God in you and in others . . . in the things you see — the shining firmament, the wide solid earth, the unfailing source of the waters"; likewise called the creator of the "Days of the Seven Eras," which comprehends a correlation with seven planets, seven days of the week, seven honorific names, and seven qualities or powers, (p. 47)

Section III, "Ethical Canons of the Doctrine," is a masterly unfolding of Akan-theosophical doctrines of Reincarnation and Karman in their relation to the moral progress of the race. The ideal of the family, the community, the one historic social race, with one blood flowing through all from the Hierarch or Nana down to the smallest insect, is stressed: an ideal with which the modern Theosophist is in complete sympathy.

Sections IV and V, called respectively "The Eight Akan Postulates," and "Universal Utility of the Postulates," develop the relation of man's composite nature with the composite structure of the Universe. All beings have *Esu*, a physical basis of life, before mind becomes kindled; but men, not beasts, likewise have *Nkara* (or *Okara*), the "Chosen Soul," comparable to the Greek *Nous*, in which karman, called by the Akan the *Nkrabea* or *Hyebea*, inheres. This *Nkara* or *Okara*, two aspects of *Nous*, coming in contact with *Esu*, brings forth the *Sunsum* or "Experiencing Soul," the Greek *Psyche*, the personality, considered by the Akan as an "inadequate expression of the full capacities of the *Okara*." In the *Sunsum* evil exists, not foreordained, but as an undeveloped energy resident therein which delays the entry of the *Okara* into the *Sunsum*. (cf. pp. 87, 113)

Finally, *Honhom*, the Spirit, the Greek *Monad*, leads man to union

with the Honhom of "purest perfection': Onyame-Onyankopon-Odomankoma. This union of Sunsum with Okara, of Okara with Honhom, is made possible through a succession of reincarnations, in which Hyebea or Nkrabea — fate, destiny, karman — is fulfilled. But this Nkrabea is not a punishment of sins, but the author emphasizes is "full of feeling," compassionately urging on the fulfilment of the soul's destiny which is union with Honhom.

Danquah is at a loss to understand why his people who have such beautiful and logical beliefs should be forced to embrace the teachings of original sin, eternal damnation and Divine Grace. He cannot see that such ideas are in anyway superior to the "heathen" faith. To say we fully sympathize with the author is hardly necessary.

The Ashanti conception of Death is interesting, and while we heartily agree that death is not the negation of life, nor its "destructive opposite," but rather an extended sleep, and the other pole of birth, we do not understand his statement that death itself is an unnatural phenomenon, and evidence that "something has gone wrong with some part of the integrated organism." (p. 160) It is possible that we have not caught the author's original idea, or that poorly expressed the words mislead. We do agree with him that if all parts of the organism lived in perfect harmony with Honhom, death would be neither possible nor desirable. The fact of the matter is that the very force of evolution demands change, growth, development, hence death of bodies in order that the spirit within may have newer and better bodies to work through. We heartily concur in this statement: "Man, an incomplete god, has to die to discover his completeness in the undying god." (p. 161)

If the reader does nothing else, he should peruse carefully the

200-odd Maxims or Proverbs which form Appendix I, and observe for himself the marvelous reaches of philosophy contained in a few words. Appendix II, "Notes and Glossary of Akan Terms" will also be of great help in understanding the Akan philosophy.

Finally, our gratitude goes to the Lutterworth Library in London, for including as Number Four in their "Missionary Research Series" this contribution from the heart of Africa, for its publication not only evidences a recognition by the Christian West of its splendid worth, but likewise affords one more proof of the fact that the Archaic Wisdom of the Gods was *universally* diffused at the opening of the drama of human life, and that each race has partaken in some measure of the self-same Pierian Spring.

2. In explanation of the term Akan, we can do no better than to quote a few lines from the author's "Notes and Glossary".

"AKAN — One of the principal races in West Africa, inhabiting the Gold Coast, the Ivory Coast, some parts of French West Africa, up to the old Kingdom of Ghana (near present Timbuktu), and speaking the Twi (Twui) language. . . . The original form of the name, Akane or Akana, led to its corruption by the early Arabs of the Sudan into Ghana and by early Europeans who visited the Coast of West Africa into Guinea " — p. 198. ([return to text](#))

THE WORLD'S END — *L. W. Hart*

We may study the problem of the end of the world from three points of view. First, will the physical globe, our earth, end suddenly without warning? This has been frequently prophesied. Several years ago a so-called prophet in the eastern United States, I believe in Pennsylvania, convinced his followers that the world would end on a certain morning. They sold or gave away all their belongings and at the approach of the predicted hour, followed their prophet to the top of a hill and there awaited the coming of the end. The daily press blazoned this in headlines at the time. It must have been a fearful anticlimax for that little band when they had to march down the hill again, while the earth still proceeded on its accustomed course around the sun.

A study of what the cyclic law has brought about in the past would prevent a short-sighted misreading of visible signs and portents. It would include a very exact knowledge of time periods, coupled with the teaching that there are no "accidents"; but that all visible events, including disasters, are a part of the action of invisible intelligences acting through this visible world and consciously following the dictates of an even higher law. In other words there are no real accidents, and we may rest assured that our earth will be protected until its work of evolution is ended.

The second way in which the world may end is a personal or rather a psychological end. This is more prevalent than most of us may realize, particularly in our present days of trial when so many are faced with the loss of all that they hold dear. In the biblical story of Lot's wife we may read a hidden meaning which points toward such an end of the world. When Abraham and his nephew Lot parted company, Lot chose the plain near Sodom and

Gomorrah as his portion. When Sodom was to be destroyed for its wickedness the Lord decided on account of Lot's righteousness to save him and all his family and followers, and he told them to go to another place. The Lord warned them, however, not to look back at the destruction of the city. Only Lot's wife disobeyed and, looking back, was turned into a pillar of salt. Doubtless this story is susceptible of interpretation in various ways. It may, for example, point this warning: that if we cannot look ahead no matter what comes, if we insist on looking back and living in the past, we are enacting the role of Lot's wife, and whether we realize it or not we are no longer really living but merely existing.

Perhaps more people than we know of are psychologically disconnected to some degree and have not the resiliency, the inner power, to go forward. There are some who have never left a few blocks in a city which is home to them, or a town, or a circle of friends or relatives; there are some who have centered their whole world in one person, so that if deprived of their familiar environment or those they love, the joy of life is over and the world for them is at an end.

Isn't it quite evident that when human beings accept the fundamental truth of the cyclic progression which denies any real end, when they realize that life and change or motion — seemingly abstract teachings — are vital facts here on earth, and learn to direct their attention and center their hearts on that within them which is beyond space and time, yes, and even beyond motion or change — isn't it quite evident that then and then only will they reach out beyond cyclic ends and grasp the secret of ever-cycling onward LIFE?

The third way in which we may consider the end of the world, carries us into the intricacies of the teachings concerning Rounds and Races. We may consider the periods of evolution called

Rounds as great cycles or vibrations or outbreathings within the Unknowable. These great cycles or rounds flow one into another on a grand scale, themselves built of minor cycles which we call Races, these made up of still smaller sub-cycles, until we reach the cycles which we call civilizations. The greatest civilizations we know of, the Egyptian, the Greek, the Roman, etc., history tells us have had their beginning, reached a culmination, and then declined. Why? A wit once said that as soon as we are born we begin to die. Civilizations carry their own decay within. If we bear in mind that civilizations are made up of units or men, it becomes simple for us to understand that until men, who are vital centers, become more evolved or enlarge their consciousness, the civilizations which they build are bound to fall. A civilization, a Race, or a Round, while protected by and a part of greater beings, are not organic living centers in the same way that man is. Every unit or man making up a civilization is therefore vitally important, and any one of us, no matter how seemingly obscure, who keeps up the good fight, holds fast to what is good and refuses to recognise and give power to the selfish part of our human nature, is helping to leaven the whole mass of humanity.

The greatest example of an ending on a grand scale is the story given to us principally in H. P. Blavatsky's *The Secret Doctrine* of the great Atlantean Fourth Root-Race, which preceded our Aryan Fifth Race. Simultaneously with the decline of the race the earth itself changed or "ended," with the gradual sinking of coast lines and a change in great land masses, which culminated in the submerging over night of the Atlantean island of Poseidonis. But even here there was no finality. The progressed units of the last great race — each race takes approximately 9,000,000 years to run its course — are reborn into the new race. Those who drop behind become a part of the backward races which carry on the energies of the dying race, in this case the Atlantean, to its

gradual end.

The continual activity of all life may be summed up in one line: *panta rhei, everything flows* — the famous saying of Heraclitus. Life and motion are synonymous, and the manner of this flowing life is not straight ahead forever but in a seemingly circular course of endlessly flowing open circles or spirals. Nothing is static, *everything flows* — this habit of nature brings about constant changes or endings, but there is never *an end*.

The Theosophical Forum

THE NATURE OF THE BUDDHIC PRINCIPLE — *G. de Purucker*

". . . Once separated from the common influences of Society, *nothing* draws us to any outsider save his evolving spirituality. He may be a Bacon or an Aristotle in knowledge, and still not even make his current felt a feather's weight by us, if his power is confined to the *Manas*. The supreme energy resides in the Buddhi; latent — when wedded to *Atman* alone, active and irresistible when galvanized by the *essence* of "Manas" and when none of the dross of the latter commingles with that pure essence to weigh it down by its finite nature. *Manas*, pure and simple, is of a lower degree, and of the earth earthly: and so your greatest men count but as nonentities in the arena where greatness is measured by the standard of spiritual development." — Letter LXI, p. 341

Passages out of these wonderful communications from our beloved Teachers are so filled with not only truth but beauty, that one's mind is held in the enchantment of the thoughts aroused by reading these communications or by hearing them summarized. It is amazing — and yet why should it be so, but it is to us inferior folk — to sense how the majesty of truth and the greatness of soul accompanying such majesty affect us so deeply as to move the inmost core of our being. And I for one know no experience more exalting, no experience more penetrating than this. How vain some of the things of the world when we discern the glory of Reality. I venture to say that no man or woman living, no matter how simple-minded he or she may be, is unsusceptible, is insensible, to such feelings — dare we call them that? — at any rate to such consequences of having received the touch of supernal beauty. It is an experience which in itself is worth

lifetimes of ordinary garnering of life's impressions. I think that this spiritual and intellectual consequence of having these teachings in our inmost must be indeed almighty influences not only on our own characters, but on our future destiny. I am assured from my own observation and from what I feel within myself, that a man's whole future lives can be changed, because of change occurring here and now within him.

We see the compelling power of the beauty born within us when studying these great Teachers' communications, for Truth indeed is thus compelling when its exposition is directed by Master Minds; and it is thus compelling not because it is enslaved, but because it gives us freedom, the freedom of brotherhood, the freedom of fellowship, fellowship in understanding, fellowship in fellow-feeling.

The statement has been made that buddhi is negative unless it has the manas or mind to work through, and of course this is true. But don't imagine for a moment that this means that the buddhi is negative on its own plane, quite the contrary. It is as active on its own plane as the supreme truth within us, the atman, is forever active on its own plane. The meaning is that the buddhi is negative on this our human plane of experience and action, without the transmitting principle to step it down to us, which is the mind and the psychical elements within us. Then, if the mind be pellucid as the mountain lake, crystal clear, so that it cannot transmit the non-divine, then we have indeed a man who for the time being is like unto a god, for he speaks with power, with the voice of authority; and none who listens unto him, in his heart can say Nay. Our minds are taken captive, mightily persuaded. And why? Because the buddhi in the Teacher speaks to the buddhi within us. Voice as it were calls to voice. Thought evokes correspondential thought. Truth awakens, by its impact on our minds, the spark of truth within us; and it compels us,

compels us because our own best is awakened, and we know thereafter that that is freedom, that is truth, that is reality; and no man wants aught else than freedom, truth, love, reality. That is why truth is so compatible. That is why its authority over our hearts and minds is supreme, for it awakens within us itself. Strange paradox and yet so simple.

What is this Buddhist principle? It is so difficult in our awkward European tongues to give to this almost mystical Sanskrit word a proper translation. It is discrimination. It is intuition, it is the organ of direct knowledge, it is the clothing of the divine spark within us which instantly not only knows truth but communicates it, if indeed the barriers be not too thick and heavy between it and our receptive minds. Ah, reception, that is the point. Can our minds receive? If not, it is our own fault for we have enshrouded ourselves with the veils of the lower selfhood so strongly that the light from above, or from the Master mind, cannot reach our own higher mind and descend into the physical brain and into the physical heart where truth abides for all. For mystical fact it is, that although we know it not, the truth is already within us, here in heart, and here in mind; and we are like those spoken of by the Avatara Jesus in the Christian Bible, having ears they hear not, having eyes they see not, having minds they apprehend and comprehend not.

I want to point out one more thought, that the inner God works within its own vehicle, and this vehicle is the buddhi principle, and it is just as easy to come into sympathetic relationship, into companionship with the buddhi as it is with the kama-manas within us. In other words, it is just as easy to yearn for the inspiration of the highest within you as it is to look for the heat and fevers of the lower part of our being.

Now whereas in the old religions and philosophies the God within

has always been called a Divinity or God — masculine; the Consort, the Buddhi of the Atman, has always been looked upon as feminine. The German poet Goethe meant more than mere poetry when he uttered that remarkably telling phrase, *Das Ewig-Weibliche zieht uns hinan*. *The eternal feminine draweth us ever onward and inward*. It does not mean woman, it means that part of our natures to which and in which the god within works. Our own individual Buddhi is that which gives us intuition and insight and sensitiveness and delicacy and the ability in quick response to feel the suffering, the sorrow of others. It is the god within which does this, but it is what in common language we call the feminine side of us which receives it, the sensitized part of us, and carries the thought to the place where dwelleth the Atman. It has naught to do with physical woman or physical man. There is a great and wonderful mystery here, and I may add in closing that one more small and minor phase of this mystery is alluded to by H. P. B. in *The Key to Theosophy* where she speaks of the buddhi as being the root and the key itself of individuality. There is the remote source why on this low physical plane some of our lifetimes are passed as men and some as women. By each we learn, if we have the wit. It always vexes me when I hear people talk, as I sometimes hear, about which is greater, man or woman. Which really is greater? It is the uttermost poppycock. Where would you be without your mothers? Where would you be without your fathers? Sex of course is but a passing phase. It did not exist some 18 or 19 million years ago, and some 8 million years from now it will again vanish. Its place will be taken by kriyasakti. But at present the most complete men are the men who have a healthy dash of the feminine in them; and the most perfect women are they who have a touch of the masculine. The most courageous man is always the man who feels the most tender towards the weak and helpless. If a man has not a touch of the mother-instinct in him, look out, you cannot trust him! If a

woman has not a touch of the father-instinct in her, in my judgment she is incomplete.

The Theosophical Forum

CARLYLE ON KARMA — *Henry T. Edge*

The Beginning holds in it the End, and all that leads thereto, as the acorn does the oak and its fortunes. There thou canst begin, the Beginning is for thee, but where, and of what sort, and for whom will the end be? — Carlyle, *French Revolution*, III, 2

If you stand up a row of dominoes and push the end one, each one strikes the next until the whole row lies flat. That is one idea of Karma, and this kind of Karma has an irreconcilable quarrel with Freewill. But this is not the kind of Karma envisaged by the seer quoted above. For him every act and thought is a seed, which, beginning as a scarce visible speck, may spread to who knows what umbrageousness. Or it is a vibration which thrills forth into all immensities of time and space. Nor is the seer concerned as to whether or not the energy recoils on the original starter; nay, he would seem rather to be the more concerned that it may fall on somebody else. We know that in the long run our deeds recoil on the doer; but do we give sufficient thought to their effect on others? No doubt matters will in the long run be squared up for these others, but does that quiet our conscience or free us from responsibility? Read further in the same place:

The word that is spoken, as we know, flies irrevocable not less, but more, the action that is done. "The gods themselves," sings Pindar, "cannot annihilate the action that is done." No this, once done, is always done, cast forth into endless Time, and, long conspicuous or soon hidden, must verily work and grow forever there, an indestructible new element in the Infinite of Things. Or, indeed what is this Infinite of Things itself, which men name Universe, but

an Action, a sum-total of Actions and Activities. The living ready-made sum-total of these three, — which Calculation cannot add, cannot bring on its tablets; yet the sum, we say, is written visible: All that has been done, All that is doing, All that will be done! Understand it well, the Thing thou beholdest, that Thing is an Action, the product and expression of exerted Force: the All of Things is an infinite conjugation of the verb *To do*.

"An indestructible element"; man then is creator, one of the *architectones* of the universe; as traditional Wisdom assures us he is — by heritage. Great is his responsibility, great his power — for good, for ill. He can create little universes, sand-built; until they are swept away by the Laws of Nature or the Will of God — names for the working of other and better *architectones*, higher in the scale than mere man, nearer the throne of the Real, the True.

The Universe "an Action, a sum-total of Actions." And Karma, we say, means Action. Well, the Universe is doubtless Spirit energizing Matter, and Matter ensouled by Spirit and providing vehicles for Spirit's manifestation. But are we not also told that the communion of Spirit and Matter generates Action? Or is the idea changed if we choose to say Fo-hat or Cosmic Vitality? Technical terms are necessary, but, like other coinage or fiscal paper, liable to depreciation; so it refreshes the mind to have our cherished ideas expressed in other language. Man, in this case, is Action and a sum of Actions. No doubt some higher stereoscopic vision could present to our illumined eye man as a whole; but for the present we have to view him in sections ('aspects'). So he is now a string of Principles and anon a many-clothed Monad; give him another turn and we may see him as a bundle of actions. When anything ceases to act, it ceases to be.

"The sum, we say, is written visible." In the Astral Light? By the Lipikas, the Recording Angel? To each his word; the idea remains. We proclaim our doctrine of the divinity of man, but it is hard to shake off our leading-strings, to stop wondering what outside powers are going to do to us, whether of Saturn in the tenth or of a Karma that, like God, "moves in a mysterious way its wonders to perform." We fear the loss of our freewill and do not know what to do with what we've got.

It is a relief to hear our cherished beliefs from the mouth of a great thinker unfettered by formulas and whether overshadowed and inspired by some august and invisible Presence or simply from his own Higher Self.

The Theosophical Forum

WHAT IS DEATH? — *Mary Peyton*

When global war, the most widely destructive in recorded history, has so tragically bereft countless millions in every corner of the earth, solace may be found in the teachings of the Ancient Wisdom. These teachings have their origin in the very beginning of time: hence they have ever been and always shall be. They never differ in any age or country, whether enunciated by Gautama Buddha of India, Jesus of Syria, Lao-Tse of China. These great spiritual teachers and lesser ones know the true meaning of life and death — one Truth through all eternity. The bereaved and stricken human heart may discover consolation and encouragement and understanding in these echoes of the Ancient Wisdom. — M. P.

We grow toward knowledge that in the great economy of Nature a soul born here comes as a guest out of far realms in eternity: a guest of whose past we know nothing but that it has lived through the ages: and abides here for a while, and goes.

Whither? When we brood on that which is immortal in ourselves the answer comes back to us out of the Living Silence, and we know that life is eternal and death but a stepping forth into larger fields of life.

When one we love is so released we are given opportunity to realize the majesty of the Higher Law, whose manifestation then is so close to us; and deep in our hearts we know that we are deathless. From this heart-knowledge we know that the released one goes not unprotected, not without companionship; for it is the Knower, it is the Great Warrior, it is the Eternal Self that is there with him: and the Soul arises in the power of its divinity and

knows no fear nor pain.

As Nature works in her unseen processes, so does the Soul set free. It seeks its own: not at some point in space, but in a condition in which, freed from the body, it may gain strength and knowledge. The great onward march is before it; not what it knew here but greater. On its journey the Soul forges upward, advancing and expanding.

Only the mortal body dies. Man dies from one world and is born into another. It is not possible to separate death from birth; the two always occur together, like coming and going. A Celtic poet has written: "There is great serenity in the thought of death when it is known to be the Gate of Life."

The eternal, living, breathing, spiritual force out of the Supreme, out of the ages, lives on and on, carries the divine soul through different schools of experience to higher states of consciousness and service.

A human spirit is a deathless entity; it is part of the very fabric of the Life Universal in its inmost parts; and this spirit of man, this inner being, this spiritual soul, is pursuing an eternal pilgrimage in space, infinite in space and eternal in time. It passes from mansion to mansion of life, not only in this cross-section of the physical universe which our imperfect eyes can see, but most especially in the invisible realms, in the spiritual worlds. The spirit of man, an eternal pilgrim, learns eternally, going higher and higher and higher to something still more lofty and sublime.

Death is birth, *birth*. After death the nobler, brighter, purer seeds of character, the fruitage, the consequence, of our yearnings for beauty and for harmony and for peace, carry us into realms where harmony and beauty and peace abide. In death the worn-out garment of the body is cast aside, and the eternal pilgrim

passes into a perfect sleep, a perfect rest. The repose is utterly beautiful, utterly blissful, filled with glorious and magnificent dreams, and with hopes which now are realized in the consciousness of the spiritual being. This dreaming condition is a panorama of the fulfilment of all our noblest hopes and of all our dreams of unrealized spiritual yearnings, a consummation of them in glory and bliss and perfect completion and plenitude.

Of a surety Nature is entirely beneficent and the Divine Law merciful. When overburdened with sorrow, we are often made aware of this everlasting truth. In an ancient scripture it is written: "In the day of my trouble I will call upon Thee: for Thou wilt answer me." There is that within us which hears the answer: *we are bound eternally to those we truly love*. The dead are with us in a very real sense; they know our thoughts and feelings, and respond. In the silent places of our hearts where the deepest and tenderest memories abide, a real communication takes place. All that really belongs to us is ours forever; somewhere, somehow, someday, we shall again be with the absent ones we love.

For love is the holiest thing known to human beings. Love holds all things in place and in eternal keeping; its very nature is celestial Peace, its very characteristic is cosmic Harmony, permeating all things, boundless, deathless, infinite, eternal.

— Arranged from Theosophical sources by Mary Peyton

The Theosophical Forum

WHAT IS THEOSOPHY?

Extract from the *U. S. Census of Religious Bodies, 1926*, entitled "Theosophical Societies," General Statement, furnished by Col. William Oscar Gilbert, U. S. Army, retired.

The ultimate base of Theosophy is universal brotherhood. As a science, Theosophy declares universal brotherhood to be a fact in nature; as a philosophy, it begins all reasoning with, and relates all conclusions to, universal brotherhood; as a religion, it bases the social fabric upon, and deduces its code of ethics from, universal brotherhood.

But it uses the term "universal brotherhood" not in a sentimental sense, or as expressing a merely human relationship. On the contrary, the term is used to express the broadest possible relationship of everything that is to every other thing that is; as a picturesque assertion of the fact that each and every thing in the universe — in the all that is — is related to each and every other thing; indeed, is not only related, but proceeds from a common source — a common parent, so to speak. And this common source of all things and the things that proceed therefrom are, according to Theosophy, one and the same thing: The one absolute Essence — the God of the Bible who is All and in All; a Homogeneity during its Universal Night when every atom has been drawn back into itself and the biblical end of the world has arrived; a Heterogeneity during its Universal Day when by process of unfolding, or evolution, the objective world appears and the Creation of *Genesis* is accomplished. In this universe which is One, as in our body which is one, no single part is independent of any other part or unaffected by it. Relationship, or brotherhood, thus becomes a fact in nature and is universal.

To the question, Suppose universal brotherhood exists, what of it? Theosophy has a startling answer: Evolution is toward perfection. The soul, the Ego, is incarnated in a human body to gather experience and forward its own evolution toward perfection. It must incarnate not once but reincarnate many times in order to become perfect. But evolution moves as a whole. Before the next great stage can be entered upon, the full processes upon this globe must be accomplished. Each and every soul must have reached this goal. Thus, those who are forward in the march must await the laggards' arrival. Theosophy leaves no doubt as to the answer to the question, Am I my brother's keeper?

Theosophy proclaims a Deific Absolute Essence, infinite and unconditioned and so without form, which it would not mind calling God were it not for the present anthropomorphic, personalizing concept of that word; and it teaches "that the *root* of all nature, objective and subjective, and everything else in the universe, visible and invisible, *is, was* and *ever will be*" this one Absolute Essence "from which all starts, and into which everything returns," just as all the waters throughout the land started — that is, were lifted by the sun's rays — from the ocean, and in due course will return thereto, each particle thereof still water and still retaining its differentiation from the mass.

Theosophy proclaims that man — not the body, but that which distinguishes the human from the brute — is a soul. It speaks not of the *Nephesh* of *Genesis*, translated as "living soul," but of the *Nous* of Plato and the *Logos* of St. John, "the word made flesh." This Soul, it teaches, is immortal. Says Mme. Blavatsky, in *Isis Unveiled*, "They [the sages of the Orient] showed us that by combining science with religion, the existence of God and immortality of man's spirit may be demonstrated like a problem of Euclid." In her mammoth work, *The Secret Doctrine*, this demonstration is to be found.

An important teaching of Theosophy is Reincarnation, the tenet that the Soul, or Ego (the real man), is the tenant of many different bodies in many different lives during its evolutionary course down the ages — a teaching that demonstrates Theosophy's idea of evolution to be fundamentally different from the evolution taught by science and feared by the church, namely, the evolution solely of what we call the physical universe. Theosophy postulates a double evolution — one physical and one spiritual. Soul evolution can only be carried on, and Theosophy says it is carried on, by reincarnation. Through the experiences of its many incarnations, the soul is able to progress to the stature, nature, and dignity of Godhood and thus to emancipate itself from the necessity for further pilgrimage. The soul gets nothing by favor, but everything by merit. Literally it works out its "own salvation with fear and trembling." Reincarnation, too, is the doctrine of "another chance." A mistake means not eternal damnation, but a chance in other incarnations to make up for failure. And as a corollary it may be stated that "original sin" finds no place in Theosophy. Reincarnation must not be confused with transmigration. "Once a man always a man" is the saying in the Great Lodge. This doctrine of reincarnation which produces such a shock to the western world is not claimed by Theosophy as its peculiar property; for it points out that a full half of the world believes in it, that the Bible, particularly the Old Testament, is full of it, and that Jesus, if he did not teach it, at least assented to it.

Closely allied with reincarnation is the law of *Karma*, or cause and effect, whereby is struck a perfect balance for merit and demerit. "Whatsoever a man soweth that shall he also reap;" if not in the life in which the sowing took place, then in some future one; and thus Theosophy explains many seeming injustices and inequalities.

Theosophy combines the fields of science and religion; is a religious science and a scientific religion. It shows how the worlds have evolved, how man has reached his high estate, and what will be the future of the worlds and the future of man. It describes the septenary constitution of man, with its lower quaternary and its higher triad, thus demonstrating the duality of his make-up and elucidating the eternal struggle between the lower and the higher self. It explains the origin and nature of mind and opens a psychology (including that of the subconscious) whose borders otherwise have barely been touched. It admits the phenomena of the Spiritualists and the "miracles" of Jesus, but denies the interposition of spirits in the one case and of the supernatural in the other, pointing out how each was accomplished by the exercise of natural laws; for psychic forces work according to laws as definite as those attaching in other realms, and neither set of laws can be antagonistic to the other; for throughout the universe the same laws prevail, being duplicated and re-duplicated on successive planes; "as in the macrocosm, so in the microcosm"; "as above, so below."

The foregoing is a most incomplete resume of a few of the teachings of Theosophy. Theosophy deals with manifold subjects new to western thought, has a new (yet old) interpretation for many things that are familiar in science and religion, and, with it all, is hampered by the failure of the English language to have developed, as yet, an ample vocabulary for the expression of the abstract or the description of the metaphysical. There is accessible, however, an extensive literature covering all the branches and aspects of the movement and its teachings.

A WORMS-EYE VIEW — *J. T. Arneson*

While walking along a country road recently I noticed a caterpillar crawling along in the wheel track. Very soon, if I did not intervene, his life would be crushed out by a passing car. Should not this tiny creature, so far down on life's evolutionary ladder, be spared? With my walking stick I gently boosted him off the right-of-way and out of danger, thereby setting in motion a sequence of events, the very least of which being that another gorgeous butterfly would one day brighten a summer's morn.

But instead of being grateful, he was angry. At this seemingly rude interruption of his progress he curled up and pouted. Of course he could not possibly know that my action had saved his life. He saw only that his course had been disturbed by some great force which he could not understand. Because his plans had been frustrated his little body fairly pulsed with vibrations of fear and rage.

Notwithstanding our superior intelligence, how often do we human beings act like the lowly caterpillar. We fuss and fume with anger when our plans are thwarted by forces over which we have no control. We call it a "bad break" or misfortune when our petty schemes misfire. We seldom think of the great chain of causes that may have been set in operation by the failure of our plans. For after all man has only a worm's-eye view of the Force called Destiny.

THE HEART OF THE SUN — *Martyn Witter*

The heart was universally thought of by the ancients as the most sacred of organs. Even today, in the common language of the people, the heart is given a special place. Even though it is a very fundamental organ it is not on this account alone that it is held to be sacred. There is a far deeper reason that touches some of the most sublime teachings of the Ancient Wisdom.

A quotation from *The Secret Doctrine* runs as follows:

The Sun is the heart of the Solar World (System) and its brain is hidden behind the (visible) sun. From thence sensation is radiated into every nerve-center of the great body, and the waves of the life-essence flow into each artery and vein. . . . The planets are its limbs and pulses . . .
— I, 541

H. P. B. explains this Commentary on the Stanzas of Dzyan with the following:

Thus, there is a regular circulation of the vital fluid throughout our system, of which the Sun is the heart — the same as the circulation of the blood in the human body — during the manvantaric solar period, or life; the Sun contracting as rhythmically, at every return of it, as the human heart does. Only, instead of performing the round in a second or so, it takes the solar blood ten of its years, and a whole year to pass through its auricles and ventricles before it washes the lungs and passes thence to the great veins and arteries of the system.

We have here keys that will unlock many doors for us. What is this brain behind the Sun? What are the waves of vital essence

and the nerve centers? What is the food that is carried by the blood of the Sun? These and many more questions spring to one's mind. We shall deal with only a few.

From the Chhandogya Upanishad (1) we have the following:

Now what is here in this city of Brahma (the body) is an abode, a small lotus-flower (the heart). Within that is a small space.

The Upanishad goes on to assert that this small space contains within itself, as a unity, all things which exist here in manifestation. The simple quotation taken from the Upanishad has a world of meaning within it if the symbols used are analysed. Thus when the Upanishad speaks of a small space within the body (of the sevenfold sun) it is hinting at a key which will unlock the meaning. Space is the symbol for a storehouse containing within its bosom everything that is contained in the systems that emanated from it. It pervades these systems and is their root-substance. Akasa is often associated with Space. It contains and includes the Seven Centers of Force, being itself really the seventh and synthesis of the other six. Akasa tattva is also called the force of the third Logos or the creative force in the already manifested Universe.

The seed of our Solar Universe is contained in the small space of the Lotus (heart) of the Sun. Now it is known that the Lotus is the universal symbol of the Kosmos as a totality. Within this flower is contained the seed of the Solar Universe. The seed contains the image of the flower to be. This is especially true of Lotus Seeds hence their selection as a symbol in the Upanishad.

Behind and in the heart stands the mind. Now Mahat is the positive aspect of Akasa and is to Akasa what manas is to Buddhi. However Akasa is not the sixth but the fifth universal principle.

Akasa has seven degrees and it is in its lower reaches that occur the Aether of Space associated with manifested Mahat. From this brain behind our visible sun we receive a reflexion of abstract ideas, and the same patterns we find in physical nature are contained in our intellectual patterns of thought. But there are other forces besides the manasic principle which directs differentiation along ideational lines. The Seeds in the Lotus (heart) of the Sun may be said to contain the Ten Divinities which manifest as Forces. Three of these forces are contained in the seventh principle and the remaining seven forces are the seven Forces exuded forth to the Rupa worlds. It seems to me that the seven principles of man are a true reflexion of these seven Solar Forces. Thus in addition to abstract ideas (Eternal Ideas of Plato) and the pranic energy (vital electricity), we have other forces that correspond to and feed the various principles of the entities in the Solar System.

To sum up, let us say that the Sun *in abscondito* is the storehouse of our little Kosmos and that it self-generates a vital fluid which it is ever receiving back again in amounts equal to that given forth. Thus we have the rivers of lives streaming from the Solar Divinity through certain channels and ever returning thereto as an instance of the rhythmic law of cycles. The exact knowledge of the channels through the different planetary systems of the seven-fold family of the Sun is kept very secret, and it is open to question as to whether such details will ever be printed in any book available to the public. However the Upanishads reveal much in heavily veiled allegory, and even from logic it can be seen that since the waves of the vital life-essences pulsate forth and likewise return, there must be openings. The Chhandogya Upanishad asserts that there are five openings for the Gods. It is known that the Hindus have long stressed the number five as a blind to the seven-fold nature of the manifested Universe. The

Upanishad asserts that there is an eastern opening correlated with Prana; a southern opening correlated with Vyana partaking of the moon; a western opening correlated with Apana; the northern with Samana, and the upper opening with Udana partaking of *space*. This last one is extremely interesting for the Katha Upanishad asserts that the opening that goes up is one of immortality and the others are for departing in various directions. Imagine the glorious adventure awaiting the initiate who has gained the portals of the Sun. The Maitri Upanishad asserts that there are five doorkeepers for the five entrances. Entrance through any one requires certain qualifications.

The five breaths such as the apana, samana, etc., are mentioned above as correlated with the five openings of the Sun. However, there are really seven breaths, each one of which helps to build and sustain the seven principles of man's constitution. This is a reflection of the solar process where each of the seven pathways is predominant in some particular one of the sacred planets. The full correlations between the breaths and the planets which serve as openings to the Portals of the Sun are of course kept secret because of the possibility of their misuse. Too much would be revealed which would be very useful in the hands of some clever person interested in magic. These different breaths are forces, and it is really only by the knowledge of the real nature of Akasa and other connected mysteries that a knowledge of forces can be obtained. In fact, I believe that if one were to become acquainted with Akasa he would have keys to the mysterious sixth principle of the Universe. But Occultism is not some intellectual game, and *for every step one takes in pursuit of the hidden knowledge one should take three in perfecting the character.*

Now the circulations of the solar system must carry food. The Taittiriya Upanishad asserts that from food creatures are produced and in food they live, and back into this source they

finally pass. Food is both eaten and it also eats things. In my opinion, food has seven aspects — one for each of the seven principles in Nature and in Man. It is the Ideational food that is most interesting since it has to do with innate ideas. These patterns of thought are regulated by the various Silent Watchers who for a certain Yuga will strike the keynote determining the quality of innate ideas or "food" and also the cycles of these ideational patterns. These patterns regulate the patterns of the material world of a certain Loka and Tala as well as the intellectual qualities of self-conscious entities, as far as I can see. In fact the ideations play a very vital role in directing the differentiation of the worlds from the fountain-source of the Third Logos. Mahat is the first product of Pradhana or akasa and is no other than the positive and creative part of the Third Logos.

It is most fascinating to reflect upon the rivers of Ideas and inspiration transmitted to us by our teachers. (This river is represented by the sacred Ganga of India.) This is spiritual and intellectual "food" to us. As all food returns to the Solar Fountain so does also the food we receive from our teachers. We bear gifts garnered through self-experience. Those who bear no gifts return empty handed. Truly our highest thoughts and noblest inspirations may be food for the Gods in return for having showered it upon us. The food we receive has been added to by our self-conscious experience. Here is one of the most vital thoughts that the study of the Solar Heart brings to our attention. No organism can maintain life without receiving from its lesser lives. We are the lesser lives to the Greater Ones, so while we receive we must give. We must see to it that we cultivate the noblest thoughts so that we may bear gifts to those who have given some of their life-essence to us. The circulations of the solar system from the heart and to the various organs and back again provide for the carrying of food (seven degrees for each

principle). Food enters our minds and hearts, and if we are to contribute to the workings of Nature we must make the best use of this type of energy. Otherwise Nature will react upon us. As waste material is cast from our bodies so does nature cleanse her channels of useless material. The soul which can not give a drop of spirituality to his higher principles becomes as useless material and in time finds its way to the Planet of Death.

Each of us has a heart which contains a small space wherein the Lotus lives. Knowledge is of no avail if it does not inspire us to seek out that which resides there. If we expand in thought and love this Lotus will bloom and the burdens of Humanity will be lightened as far as our part weighed upon it. Seek the Lotus Flower of your own Heart and the Voice of the Silence from that small still space will speak.

The Theosophical Forum

THE MYSTERY OF BEING (1)

Gradually the Mind develops. This is perceptible to all people. Gradually it takes on the nature of the environment, and either grows or is retarded as it finds food for growth or lack of it. How this can be is not questioned — because it is accepted from *prima facie* evidence.

Yet it is denied or disbelieved that the Mind has root in another dimension, or in anything but the physical form. How the Mind can be already operating in the infant is a question ignored as one of life's mysteries. Where it goes at death is another mystery. There are no answers from the scientist as yet as to what constitutes the Mind, and the average clergyman is content to speak vaguely of the "soul" and begs the question.

Those who consider the theory of reincarnation reasonable, and those who accept it, have no difficulty with the question, for they perceive the periodical birth and death of a being is an answer to the problem. That an infant arrives in the new body with the undisclosed faculties which (sooner or later) he will express, given proper opportunity, is surely evidence of a pre-existence somewhere in which the Mind received experience or training, and is an explanation of the difference in people. That the Mind departs once more on its appointed pathway, only to reappear again, seems a most reasonable theory, since all Nature follows this cyclic law.

It should be evident that Mind must come from the root of Being, or very near it, it must express in some degree the unseen, unheard, untouched heart of Being, call it by whatever name one chooses. No matter where one may consider that the heart of Being resides, or calls itself at home, or from whence it sends an

adventurous tentacle into the world of matter, it must be conceded that the Mind is all we know of it objectively. It, the Mind, is the Interpreter, the Translator, the Mediator, and the Channel, between the two worlds — to simplify the Seven Dimensions for the time being.

We should regard the Mind, therefore, as the most important organ — though we cannot dissect or describe the organ, can only lay hands of exploration upon the brain, the nervous system, and the glands — which are the servants of the Mind itself. Mind can communicate through these channels, can control; but it, the Mind, is not the brain through which it manifests. Something intangible resides above and uses, speaks through, observes and experiences, by means of the physical senses.

This is the Mind, of which the East speaks, and which it calls *MANAS*. It is the enveloping cloud or concentrated sphere of higher dimensional energy which surrounds the physical body and which pours down into the brain its commands and experiences, through which the intangible something still higher which is called *ATMA* can contact the field of force we call the physical world.

Beyond the reach of proof or even of description, the Mind of man functions in its own dimension, and from that it descends into incarnation at intervals. It comes each time with some faint remembrance, which is usually dismissed as imagination by the time of maturity, so that it is the common impression that this life is the only one experienced. But this is not true — the Mind is merely concentrated upon the present, is concerned with the problems confronting it, and it has little time to remember other lessons. For this reason few people remember past lives; the exceptions have no credence in this age.

But there are lives behind and beyond. The Mind is deathless and

eternal and immortal — growing through the ages into Wisdom and full Perfection.

The Theosophical Forum

INVISIBLE HELPERS — Hazel Boyer Braun

Perhaps every person here this afternoon has *some conception* of the beauty and profound spirituality of the Theosophical teachings. Intelligent, thinking men and women, everywhere are beginning to recognise that the serenity and inner joyousness of students of Theosophy is based on that fundamental teaching that we are all Divine Beings, that all that lives is rooted in Godhood, forming a vast universal unity which makes Brotherhood a logical fact beyond question.

Our subject this afternoon takes us into some of the deeper reaches of this teaching. If you can take it into your hearts and truly consider it, you will soon realize the reverence and the sense of sacredness with which Theosophists view Life. The perspective it unfolds reveals the necessity of concentrated direction of one's faculties through countless lives toward an ever wider expansion of consciousness, of understanding, as we grow into at-one-ment with the great souls who have gone before us in their own self-directed evolution.

These teachings have been formulated by Master Minds, by the Gods who descended at the opening of humanity's self-conscious drama. They taught the more advanced of humanity the Arts and Sciences and having laid the foundation for the grand ancient civilizations, they placed these teachings in the hands of the Flowers of humanity, the Masters who guard and watch over this heritage of all beings.

We are taught that we are linked through our own Divine, Spiritual nature with the chain of Great Teachers, and also with the Planetary, Solar and Galactic Beings which make up Manifested Universes. They are all titanic Spiritual Beings who

have advanced from being men to become Gods with vastly enlarged responsibilities and, even then, a growing realization of Divine Reality.

Man, himself, is a Universe in Miniature. In order to live and learn on this planet, he uses countless lesser evolving beings in the make-up of his various sheaths of consciousness. His body is fabricated of life atoms for which he is responsible; the vital life of the Universe that flows through him enlarges his strict accounting for the influences he emanates. The thoughts which he contributes to the World Thought are a sacred charge, and beyond, guarding and guiding his human self, is the much more advanced Being, his Spiritual, Divine, Monadic Self — which we cannot see with our eyes, but can sense with our intuition.

Love is the key-note of the whole hierarchical scheme — Love, compassion, sympathy and complete understanding, extended always to the lesser beings by those who have been through the tests and trials of lower spheres, and stand waiting on the threshold of a higher plane to help all below to move upward.

That is why Theosophy is a doctrine of such immense Hope and Beauty. We are growing toward ensoulment in our Greater Self, toward spiritual recognition of the marvelous manner in which we are rooted in the heart life of the successively grander beings.

The Buddhas who are a line of the Hierarchy of Compassion, serve higher Teachers as they take their duties on the millions of planets — in grades of responsibility. They inspire and urge forward the spiritual evolution of great cycles or rounds, of whole root-races of advancement. They appear and teach this doctrine, then continue to live after their visible cycle in a body appropriate to Man's higher faculties. They direct the Masters and their Messengers in a continuous silent protection of our chance to grow into true humanhood. They form a guardian-wall about

us, keeping back cosmic forces that would annihilate us. They help us continuously and we never know it.

If we cherish every urge to unselfish living, to impersonal effort, we are recognising our kinship and our loving *Help* from this background of Love and Compassion which makes life so wonderful.

Each planet that appears visibly has more ethereal globes on inner planes where beings dwell in progressively more material vestures until, in Nature's grand scheme, men are ready for the tests of the kind of gross planet we walk on now. But each globe is a living being, moving in obedience to Nature's Laws. Each has its invisible, spiritual, Divine Self. Each is the channel for Divine Life currents that sustain the beings that make up its body.

All sense of superficial thought about knowing what the Divine Reality is back of Universal Manifestation falls away when we try to imagine something of the Grandeur of the Wondrous Being that is the Higher Self of the entire constitution of even this Earth.

Reading from *Fundamentals of the Esoteric Philosophy*, by G de Purucker:

As the Summit of our Hierarchy is One, the Root of our *ens*, in which we "move and live and have our being," as the Christian Apostle Paul puts it; *so similarly in the spiritual-psychological Hierarchy there is a One in whom we are all rooted, in whom psychologically and mystically and religiously, yea and inspirationally, we live.* This One is the Great Initiator, the Great Sacrifice, the Wondrous Being referred to by H. P. Blavatsky; the Supreme Head of the Hierarchy of the Teachers. From it originally come our noblest impulses through our Higher Selves; from it come the life and aspiration we feel, stirring oft in our minds and

hearts; from it, through our higher natures, come the urge to betterment, the sense of loyalty and troth, all the things which make life holy and bright and high and well worth living. — p. 182

Now just stop and imagine yourself looking up at the evening sky — seeing the flowing river of Suns that we call the Milky Way. We cannot look up at the Radiant Beings that begem the sky without marvelling, if we know they are all gods in some stage of evolution.

What is the Sun? We see its radiant body — but do we stop to think that it is our giver of Life, our channel of the Divine Life of the Universe? It is the Heart and Brain of the whole Solar System. We could not live a moment without it. We are rooted in its soul-life, from it we learn the spirit of giving, of serving in a grand scheme; for it is but a ray — a child of that Raja Sun which is the heart of the Galaxy — that Milky Way, made up of millions of such sun-children — each the channel for its solar family.

As far as we wish to extend this analogy, we can envision still grander millions of galaxies, making up the constitution of grander beings until we stop before the immensity of such Truth. Our faculties reach their limit, yet we are taught that the grandest entity we can conceive of is but a speck in the Boundless Life. The analogy is correct also in this respect, turning again to Dr. de Purucker's *Fundamentals*:

That if we made it universal, kosmic, we would say that that Inexpressible ONE, which is the Utmost of the Utmost, and the Inmost of the Inmost, *of our Kosmical Universe*, comprising the greatest boundaries of the Milky Way: corresponds to all within the Milky Way as our human ego corresponds to the infinitesimal atomic universes which compose its own physical body. The symbology is there: the

correspondence is there; and it is by the correspondence that we are striving to explain somewhat of the Mystery, how the One becomes the Many; not because the One "descends into Matter" or becomes "many" materially and literally. Not at all. But in the same way that the sun is an immense and exhaustless reservoir of vital, psychic and spiritual rays, sending them out through billions of years, exhaustlessly; in the same way the Hierarchical Wondrous Being of Kosmic Magnitude, *through its inferior but high Wondrous Beings of various degrees*, enlightens us and uplifts us and inspires us, and leads us onward and upward towards immortality, for aye doing its best, through Its own spiritual Ray within us, to illumine and lighten our material corruptibility, in order to make it incorruptible; that from Personality we may enter Individuality; "that from darkness, we may go forth in Light"! And the time will come when we shall do this Work and become incorruptible *consciously*, working with Nature and becoming one with her; for, just as this Wondrous Being is the foundation force back of and behind all that we call Nature, so that same Wondrous Being in far-gone former Manvantaras was then a Man. even as you and I now are. *Such we shall become, if we run the Kosmic race successfully!* Wonderful, inspiring thought!
— p. 201

These ideas form the Esoteric background of all great civilizations, of all great Literature and Art. They are the heart Teachings of every Messenger that ever came from the Hierarchy of Compassion.

The great and peaceful ones live regenerating the world like the coming of Spring, and after having themselves crossed the ocean of embodied existence, help those who

try to do the same thing, without personal motives. —
Sankaracharya

This is the theme of all Oriental Art — of the Serene Buddhas, Bodhisattvas, and Kwan Yins. At the Fine Arts Gallery, pause before that great old Kwan-Shai-Yin that was carved a thousand years ago from a great tree by some Chinese Initiate artist. Look at it. It is the Higher Self — seen and realized! It is the Self of the Earth — the Wondrous Being of the Cosmos.

This glorious truth is the reason Hymns to the Sun were the invocations of all Ancient peoples. Thus, in the Mahabharata, the great epic of old India, Yudhishtira said, "Thou art, O Sun, the eye of the Universe! Thou art the soul of all corporeal existence! Thou art the origin of all things! Thou art the embodiment of the acts of all religious men!"

This, dear friends, is the pathway of Initiation, the way for the strong of heart to become channels for the Inner Splendor — going step by step into self-conscious at-one-ment with the Great Beings. From heart to heart may we go in the Sublime realization of True Compassion and Love.

The Theosophical Forum

COMMON SENSE ABOUT KARMA — *Henry T. Edge*

This word has now crept so much into public use that it does not need much definition. Broadly stated, it is the doctrine that our experiences are determined by our acts; that the law of cause and effect prevails in the moral world, just as it does in the physical world studied by science. If this is not so, then what theory must we accept in its place? We must either say that our fortune is determined by the will and wisdom of Deity, or else that it is the result of mere chance. But chance is a word used to cover ignorance, and if we use it we are simply side-stepping the question. No thinking person can believe that the universe and the life of men are without law and order and purpose.

One wonders why people have given so little attention to studying the laws of cause and effect in the moral world, when science has worked out these laws so successfully in the physical world. It is partly due to the influence of long-held religious teachings, which often encourage a man to look upon himself as a helpless being, dependent on divine intercession; instead of realizing the teachings of Jesus and Paul, that man is made in the divine likeness and has within him spiritual resources which he can summon to his aid. Then again, science has concentrated attention too much on the surface of things, and has even gone so far as to represent man as merely an improved animal. It has sought to explain everything by the laws of mechanics and chemistry. But we live much more in our minds and emotions than we do in our senses, so that science has left out the most important part of human life.

Again, to understand the law of Karma properly, we must accept the doctrine of Reincarnation. It is obvious that we enter this life

with a ready-formed character; children of the same parents differ greatly, and the innate character of each child soon asserts itself. This character is what we have brought over from previous lives on earth; and it is the fruit of our own actions. In short, we make our own destiny; we have made ourselves what we are, and can make our future by our own present thoughts and acts.

Still we can learn very much about Karma without taking Reincarnation into account. For, once you get the idea into your head you acquire a new sense of observation and begin to study the connexion between your thoughts, emotions, actions, and your experiences; so that the truth of the law begins to prove itself.

There is apt to be a tendency to regard Karma as a kind of supernatural agency, interfering with the course of Nature by poking in an arbitrary finger. This is an idea we have inherited from theology, and it may linger in our minds after we think we have discarded it. It is quite wrong. Karma is simply the working of Nature; effect follows cause as truly in the moral world as in the physical world. We sometimes hear people ask: "Was this event due to natural causes or to the operation of Karma?" An absurd question; *every* event is under the operation of Karma, and at the same time every event is due to natural causes.

Theosophists do not believe in supernaturalism. If an experience seems the result of chance, that only means that we have been unable to trace the connexions; when we *can* see the connexions we call it *law*; when we cannot we call it chance. Is that reasonable?

The real teachings of Jesus tell us that every man has within himself, by virtue of his divine birth, the power to achieve his own salvation; for Jesus assures his disciples that, if they will but follow his behests, they can have the same powers as himself.

Paul also in his Epistles insists constantly on the same theme; for him, the Christ is the immortal part of man, incarnate or "crucified" in an earthly body; but capable of being invoked so that a "new birth" takes place and the old Adam is mastered by the new. Theosophy, so far from being hostile to the teachings of Christ, champions them; and in so doing, Theosophy merely follows in the footsteps of many divines and Christian laymen who now take much broader views as to the meaning of the Christian Gospel. Many of these Christians are close to Theosophy in their beliefs, the main point of difference being that Theosophy recognises also the same truths as found in other religions.

As to science, it is surprising to see what great steps are now being taken by its leading minds towards a more logical view of Nature. This new view has been forced upon them by the recent discoveries, which cannot be explained on the old principles of physics. It is seen to be necessary to postulate a causal Nature behind the external physical Nature; and that the real secrets of natural law are hidden beyond the veil of the bodily senses, and must therefore be correlated with finer senses which men in general have not yet learned to use. We can trace the action of light-waves up to the retina, and beyond to certain chambers in the back of the brain; or we can trace sound-waves to the tympanum and beyond; but after that, all is mystery. How these mechanical actions become translated into vision and hearing, we cannot tell. Yet so all-important a part of experience can hardly be left unexplored by science which pretends to explain Nature.

How does Karma operate from one life to another across the gap of death and of rebirth in another body? The details of such a process we can hardly expect to know in the present limited state of our knowledge; but they are not unknowable. It is all a question of patient study in regions to which we have not so far given our attention. If we are willing to concede the existence of

forms of matter other than the physical, the question becomes easier; and science has to admit such a possibility, for it is familiar with some ultra-physical form of matter which can transmit ether waves all over the earth and beyond. If it is said, therefore, that our actions, thoughts, feelings are somehow stored up in one of Nature's repositories — the Astral Light, let us say — it does not seem so marvelous after all. We cannot enter more fully into this question here, but any earnest student will find much in the Theosophical books that will convince him, if he enjoys an open and unprejudiced mind.

It is often thought that the law of Karma implies fatalism and that it rules out freewill, but this objection is due merely to confusion of thought. Karma determines our experiences, but does not dictate how we shall react to them. As sung in *The Light of Asia*:

If ye lay bound upon the wheel of change,
And no way were of breaking from the chain,
The Heart of boundless Being is a curse,
The Soul of Things fell pain. Ye are not bound!
The Soul of Things is sweet,
The Heart of Being is celestial rest;
Stronger than woe is Will: that which was Good
Doth pass to better — Best.

The delusion is based on a wrong idea of what is meant by cause and effect, based on notions derived from physics. In the first place we have no right to apply the principles of mechanics to a domain of conscious living beings. The links in the chain of causation are no longer masses of inert physical matter, but minds; and minds are endowed with choice and volition of their own, so that the chain of cause and effect cannot be rigid. But prominent men of science themselves are questioning the validity of cause and effect as a rigid process — "determinism," as they

call it. In fact, it is seen that the law of cause and effect does not deny the action of freewill. Eddington says:

The relation of cause and effect involves a flow of power from the cause to the effect, and therefore a certain freedom on the part of the cause. But if every event is completely and necessarily determined, then how can any event be regarded as a cause, since it is absolutely determined from the start by prior events? It is not in that case the cause, but the cause is shifted back, and there is an infinite regress.

Christopher Caudwell says:

Into every effect all the previous events of the universe flow as a cause, and, lacking any one of them, the effect would be in some measures slightly different.

In fact, the law of cause and effect not only does not deny freewill but positively necessitates it. The idea that there is any such opposition is due to confusion of thought, and has no support either from science or logic.

As to human nature, its essence is the Divine Monad, a spark of Cosmic Light; and this manifests itself through a series of vehicles, so that its presence and influence are always active in greater or less degree. Man's real will (and destiny, which amounts to the same thing) is to fulfil the laws of Universal Harmony, and he achieves the highest freedom by self-identification with the SELF. Every moment is a beginning. Let us throw off this nightmare of determinism; let us *act*.

There is no such thing as dead matter anywhere: the universe is composed exclusively of living beings. It is common enough to say that plants are alive; but minerals are alive also, though not in the same degree as the kingdoms above them. In fact, the very atoms

and electrons are instinct with life and movement, so that they also are living beings. In every living being there is some degree of intelligence and freewill, however small. Thus we find freewill at every point in the universe. All these countless wills and intelligences act in accordance with the eternal laws of the universe, just as our own wills must also act. Thus we find order in diversity.

Karma is the preserver of equilibrium, the restorer of disturbed balance. The ancient Greeks spoke of Nemesis as a deity who punishes excess in any individual or community. But he is not a punisher — merely an adjuster, calling to order whoever has wandered too far off the path of justice. Thus we bring penalty upon ourselves by over-indulgence, physical or mental, in pleasure; for our life is guided by a power wiser than our personal will; it is guided by our own Higher Self, and this will bring us back into order again for our own good.

We should avoid the tendency of always looking at the painful side of Karma, and remember that our good acts and thoughts bring their consequences, just as do our bad ones. The good seed which we sow may counteract the bad seed. What seems punitive experience may be changed into remedial action, if we assume the right attitude of mind towards it. Our judgments as to what is good for us are short-sighted and erring; there is a wiser law shaping our life; let us seek to co-operate and accept its decrees. Man has a spiritual will as well as a personal will.

Is there anything in the doctrine of Karma which stands in the way of our helping our neighbor in distress? Perish the delusion! It is our duty, our privilege, to help him; and all decent people, obeying the great law of Compassion, would act at once in a deed of mercy, without stopping to think about Karma. Besides, it may be part of his Karma that he should be helped. In refraining from

helping him we wrong both ourself and him. We must obey the law of Compassion, without fear that we shall thereby interfere with Nature's laws.

The Theosophical Forum

WHERE TWO OR THREE ARE GATHERED . . . (1) — Sybil Tustin

Where Two or Three are Gathered Together in My Name (There am I in the Midst of Them). This saying, attributed to the Divine Messenger, Jesus, is an occult truth far older than the Christian Era, old as man himself. "Gathered together in My Name" — moved to spiritual unity by the Christos spirit, the divine in man; that is what the phrase means: Wherever two or three so moved, gather together in sincere spiritual effort, the overshadowing and indwelling God will be present. And it is to this overshadowing and indwelling reservoir of spiritual power that we reach upward and inward for strength and inspiration, when gathered together in unity.

Yet this does not mean that in solitude there is no growth — for solitude and silence are great teachers, necessary ones for the spiritual growth of the individual, if rightly used by the Will.

Nevertheless, it is true on the spiritual plane, as on the physical, that union is strength, and in those unseen, but potent spheres of thought and aspiration, such union may have dynamic results. There is a galvanizing power in unity of thought, unity in the direction of spiritual effort, that can indeed "move mountains" of difficulty, and overcome all obstructions and frustrations in the long run.

Perhaps one never realizes the strength and peace of spiritual union, until one has known the lack of it. There are thousands today lonely in the midst of crowds, heart-weary among a host of doubts and disillusionments, who need the renewed hope, the peace, the strength to face life anew, that comes from mental and spiritual union with others. Man, throughout all time, has recognized the need to meet together for such refreshment. But in

our time such centres of refreshment have far too often failed the seeker. Yet the true light burns on, sometimes a little candle in the darkness; and if its rays are seen, the traveller through the gloom will be drawn to its light and warmth.

Therefore, wherever you be, seek and find those with whom you can share that light. It burns in the South. It burns in the North. It is in all directions. It burns that other candles may be lit from it, candles that may, in turn, become fresh centres to attract other wanderers in the dark.

Let us then make use of that Christos-spirit, that *brooding* indwelling power, which is invoked by the union of hearts and minds attuned to one purpose. Let us take the bread and wine of its spiritual refreshment, that we may carry our light with fresh power and courage, until the day comes when its central Sun shall illumine the World with Truth.

The Theosophical Forum

THE THEOSOPHICAL SOCIETY VERSUS PSYCHISM — *Helen Savage*

What the Theosophical Society offers is an opportunity to all lovers of humanity to do altruistic work, illuminated by the light of a comprehensive philosophy which explains the causes of the miseries and inequalities in the world. It was founded to help direct altruism along constructive channels, and to show that whole-hearted co-operation in such work was the safest way to higher development. The dynamic energy to give the Movement power to overcome every obstacle is not generated by striving to learn tricks of the occult arts, but by arousing a burning desire to serve. In short, the Society was not formed to be a "Hall of Magic." It was to be a nucleus of Universal Brotherhood in the world and "to keep alive in man his spiritual intuitions."

Many Westerners find it very distasteful to contemplate a postponement of personal achievement. They say, "Why must we wait for future lives? We want powers *now*." Such people are fascinated by the various methods of training offered by self-styled "occultists," or by "yogis" from the East. Nevertheless, an inquiry into these systems and their results shows that even here they do not find satisfaction. Even when such systems are not positively dangerous, they practically all pander to the acquisitiveness of the undeveloped human being. Advertisements say: "You can learn in six weeks to gain power over others." Or, "You can have everything you want, power, riches, friends."

Yet with all their appeal, these adaptations of oriental systems are quite unsuited to the temperament of the average Westerner with his impatient, restless and undisciplined nature. As a rule we are entirely unable to go through the difficult courses of training to which the meditative, introspective Oriental is adapted by ages of

heredity, by custom and environment. The eager enthusiast gets "stuck half way." Unable to win through to a promised success, and equally unable to regain the more normal if not enlightened state he previously possessed, he does not know where to turn.

The better systems, with a quasi-spiritual appeal, promise the student looking for quick results, the possibility of reaching a state of cosmic consciousness by following a particular course of lessons — for a price. But cosmic consciousness is not to be bought! It is the unalterable rule of the real Teachers that no spiritual teaching shall ever be sold.

Further than this, the human soul has taken millions of years to reach its present stage, and that slow process of unfolding growth which is to culminate eventually in full spiritual enlightenment cannot suddenly be consummated. You cannot over-night make of a soul something that it is not. Its quality and character change slowly. Soul-enlightenment comes as the fruition of lifetimes of diligence and one-pointed effort.

Thus the Theosophical philosophy holds out no false hopes. It explains the nature, origin, and destiny of the complex being called man, and provides a grand universal setting in which the awakening consciousness of the aspirant to wisdom views his own progress as inseparable from that of the whole human race, and almost inconsequential in its purely personal aspects. He finds that, far from any barriers being raised to his progressive development, the expansion of consciousness he receives from a study of the Ancient Wisdom and from its application in a life of unselfish service, clears away veil after veil of the lower selfhood. Thus he himself, *by his own self-devised efforts*, brings about those higher stages of training and teaching which lead to the final objective: the attainment of Atma-Vidya, the union of the human self with the aspirant's own inner god.

. . . H. P. Blavatsky, writing in 1889, in the closing chapter of *The Key to Theosophy*, draws a picture of what the Theosophical Society may do if it can avoid the pitfalls that so many former efforts have fallen into. She writes:

Then the Society will live on into and through the twentieth century. It will gradually leaven and permeate the great mass of thinking and intelligent people with its large-minded and noble ideas of Religion, Duty, and Philanthropy. Slowly but surely it will burst asunder the iron fetters of creeds and dogmas, of social and caste prejudices; it will break down racial and national antipathies and barriers, and will open the way to the practical realisation of the Brotherhood of all men. . . . Further, the development of the psychic powers and faculties, the premonitory symptoms of which are already visible in America, will proceed healthily and normally. Mankind will be saved from the terrible dangers, both mental and bodily, which are inevitable when that unfolding takes place, as it threatens to do, in a hot-bed of selfishness and all evil passions. Man's mental and psychic growth will proceed in harmony with his moral improvement, while his material surroundings will reflect the peace and fraternal goodwill which will reign in his mind, instead of the discord and strife which is everywhere apparent around us to-day.

— Reprinted from *Psychic Powers*, p.120-5

WATCHMAN, WHAT OF THE NIGHT? — *Marjorie M. Tyberg*

Millions of years have passed since the most dramatic event in human history, the coming of the Manasaputras, who quickened in man the fires of mind. This made possible the conscious coordination between the hitherto latent intellectual and spiritual principles of man's constitution and the physical vehicle which had been evolved for their use in Earth-life. And for every year so many days, and for every day a night. And what can man answer if the divinity-lighted Self should question, What of the night?

With the awakening of mind a glorious promise dawned for the human race, the promise that man, now endowed with self-consciousness, with the knowledge of himself as an entity, could win awareness of the spiritual and divine elements of his sevenfold nature, which from the beginning had awaited the unfoldment that completes him as a being. And, moreover, man could now bring into function in Earth-life these intellectual, spiritual, and divine powers and faculties, all existing and evolving on planes invisible to man and unknown to him, though continuously exerting benign influences upon him. Just as the stars are invisible in daylight, so do these inner selves of man follow their shining paths unrecognized, until man awakens to the realization that the greater part of him is at all times that part which is inner and invisible. Could it be that in sleep man enters those inner worlds and lives a life as closely related to the functions of these inner selves as daytime activities are to the self man ordinarily recognizes as himself?

Some there are who protest against the continued mystery of these millions of nights. They cannot remain content with dreams which are mere reflexions of earthly things pictured as the

sleeper is returning to waking consciousness. They cannot remain content with infrequent glimpses of deep dream, which are a foregleam of the full glory of experience in higher realms of consciousness. They *are* content to let the body rest: it is no craving for a longer interval of the pleasures of sense that irks them. But once the knowledge of the septenary constitution of man becomes a living truth to a thinker, it is common sense — or *uncommon* sense and a higher understanding of economy — at least to inquire: What do *I* do at night? *I* am not my tired body. *I* am not my weary brain. What am *I* doing? Why can't there be some conscious link between day and night for me? And what can I do about it?

Well, the fact of the matter is that we have been told what to do about it. But this rule has been disregarded, much like the Golden Rule, voiced in sacred teachings the world over but not thought to have sufficiently practical results, until now, perhaps, when men of science recognise that it has operated successfully in the natural world and when men are being forced to see that if they cannot learn to live as brothers there is danger that they may not continue to live at all.

Pythagoras was one of the Teachers of the Ancient Wisdom who instructed his disciples as to the right approach to conscious sleep. He pointed out how one going to sleep could as it were blaze a trail from waking consciousness by which he could pass through and by which he could return direct without being caught in the confusing and often alarming scenes of the lower *Swapna* state of consciousness. The injunction given was simply that the disciple before going to sleep should scan the acts and thoughts of the entire day, *face* all of them, then with radiant will resolve to right what was wrong and rededicate himself to the highest — should gear his faculties to clearest seeing and noblest aims and slip away without dregs of thought or desire that drag

him earthwards. In the inner worlds safety requires not only seeing but being. The passport is purity of heart.

Katherine Tingley's students remember instruction given by her:

Disintegrative forces are especially active and dangerous at the present time, owing to the general unrest, and are apt to work upon us destructively when we are asleep. That is, if we are will-less or negative. So that we should take the last hour before retiring for spiritual rest, constructive thought, quiet, silent reflection on spiritual things. Such a course would place us beyond the reach of disintegrating agencies during those hours when the soul is free.

We are not so much at their mercy when awake, in a sense, for then we are on guard instinctively. But in sleep the body is in certain ways unprotected, *unless* guarded by the silent warrior-force of our aspirations and Spiritual Will. Just before retiring — that is the time.

The late Leader of the Theosophical Society, Dr. G. de Purucker, stressed the analogy between sleep and death. At death, which is the perfect sleep, the Inner Self of man withdraws to invisible worlds for rest and widely ranging inner experience, to return to a new body for continued experience on Earth. With sleep, the imperfect death, the Inner Self withdraws to invisible worlds while the body is refreshed for new physical activity. The secret of this passage to and from the inner worlds is the Self's secret. Of this an Irish poet, Monk Gibbon, wrote some years ago:

What place have you been, O mind, and from what country
are you returned, absent now these seven hours or more it
may be? Tell me all, for it is not right that those who are
comrades until sundown should be strangers then. . .
.Without warning you depart, and you return without a

word. . . . Is it fair that you should travel and leave no tidings, that you should journey and bring no news? Tell your secret, mind, for even today we have communed on many things. . . . Tell your secret, mind, for if I knew where you had been so often, I might know the place to which you one day go.

And all of us have pondered Wordsworth's words about the newborn child who comes "trailing clouds of glory." Is there a glory that attends the moment of waking? An opportunity for a few moments to live in the light surrounding the Self on its return? Are we, in fact, only *half* living when we have not solved the secret of sleep? Destiny holds much in store for man. The Universe and Man are as yet unfinished — thanks be to the twentieth century philosophers who are proclaiming this truth of Theosophical cosmology. Continuity of consciousness through sleep and waking, through death and birth, belongs to the complete human being, who has brought into function the higher intellectual and spiritual principles of his nature.

The waking moments after sleep undertaken with even a measure of conscious aspiring will bring startling glimpses of reality — a pause, in which a Greater Self is weighing everything and striking a balance, moments when vision and decision are clearer in relation to all that concerns us, hunches as to what to do and to say, hitherto unthought of, new light on personal and intellectual problems, practical enough to disarm the doubting mind. Wise would man be to take note of the analogy between sleep and death, to face himself with courage and will before his inner Self wings free into the night, and wise to gather even greater courage and wisdom from that Self as with morning it returns to Earth.

CONFIDENCE AND PEACE AND SECURITY — W. Y. Evans-Wentz

"I have lit the Lamp of Wisdom; its rays alone can drive away the gloom that shrouds the world." — *The Buddha*

Today, very much as in the last days of the Roman Empire, occidental man has lost faith in his ancestral religion, in his social organization, in his fellowmen, and in himself. Wherever he looks round about him, over the continents, he beholds national confusion, national hypocrisy, national dishonesty. None of his long-cherished moral codes shape the policies of governments or the character of the society of which he is a member. His former complacency as a citizen is dissipated. Life's values themselves have been revolutionized by a science fettered to utilitarianism. The chief theme of the press, of the radio, of the legislators, and of his over-vocal environment as a whole, is how to attain security — security against unemployment, against illness, against old age. There are Five Year Plans, Ten Year Plans, New Deals, Beveridge Plans. The few who still believe that there is an Otherworld beyond the ken of telescopes and microscopes fix their hopes, precisely as did the folk inhabiting the shores of the Mediterranean in the first centuries of the Christian era, in a miraculous intervention in the affairs of men by some all-powerful extra-terrestrial intelligence.

One of the direct effects of these socially unhealthy conditions, which have resulted from lack of self-reliance, manifests itself in the wide-spread tendency, especially marked in Europe prior to the outbreak of the Second World War, to worship human leaders, none of whom may be spiritually superior as men, and meekly to submit to their dictation in matters relating to thought and action. The self-reliant man, unlike a bee in a hive or an ant

in a colony, is his own leader, as the Sages declare that he should be; he is his own censor, his own judge as to what is right or wrong conduct, his own priest and intercessor, and his own savior. When man delegates to others, who are spiritually no wiser than himself, the solving of his own most intimate and all-determining life-problems, he becomes as one mentally incompetent; like a submissive ox, deprived of its sexual virility, he humbly lowers his head and allows himself, without the least protest, to be harnessed to the chafing and heavy yoke of totalitarianism.

In every age, as history testifies, wherever man has failed to safeguard and foster his spiritual manliness, totalitarian priesthods have arisen and dictatorially decreed holy wars and inquisitions, and totalitarian governments have arisen and dictatorially decreed international warfare and its accompanying reversion to savagery and brutishness. Thus it is that cultural progress ceases, utilitarian ends displace humanitarian ends in education, hatred overwhelms love, greed neutralizes charity, selfishness destroys co-operation, standards of morality are set aside, and the divine in man being no longer permitted to exercise its saving guidance, civilization declines.

Because of this decadence of courage, and this vanishing of idealism and social responsibility, the occidental man of today lacks the indomitable pioneer initiative of his forefathers, and is filled with dark forebodings as to the future. Illusion has cast over him its hypnotic glamour; it has bespelled into inactivity the all-conquering powers of his higher self. He has lost the noble status of a fearless freeman and become a craven slave. He knows, at last, that neither his machines, nor his quotas and tariffs, nor his statistically-based systems of economics, neither his hydro-electric plants, nor his streamlined vehicles and super highways, can restore justice, or brotherhood, or freedom, or guarantee

social security. In like manner will disillusionment and frustration overwhelm the coming generations in the now hopefully awaited age of atomic power.

The aim of every Great Teacher ever has been to help a disillusioned generation to regain their lost vision of guidance, their lost horizon, their own self-reliance, their own self-dependence, and to give to them assurance of the innate goodness of mankind and of the sublime purpose of incarnate existence. Since the life-wave first reached this planet, aeons ago, and man became man, humanity has never been without such Teachers; and these Clear-Seeing Ones make known to us, not in virtue of mere belief, but in virtue of direct perception of the Real, that there are Those, greater than themselves, who direct the Earth's life-wave to its superhuman consummation. They tell us, likewise, that the world's sorrows are of man's own making, that what man has sown in past ages he is reaping in this age, that not until man transcends the Shadows in the deep Valley of Ignorance and gains the Sun-lit heights of Right Understanding can he enjoy Confidence and Peace and Security. And only then will mankind realize that their wondrous machines and myriad products of a utilitarian science have been as fetters to bind them to this lowly realm of transitory existence.

The Master Confucius advises us that the rule of Right Living is summed up in the one word 'Reciprocity', that only when men practice reciprocity, "not doing to others what they do not desire done to themselves," will they possess Confidence and Peace and Security. Chuang Tze, another of China's Sages, has said: "Full comprehension of the scheme of the Universal Whole is known as the mighty secret of being in at-one-ment with the All-Good, whereby human society is so administered that there resulteth at-one-ment amongst men."

The Christ-Initiate, the Anointed One, has promised men that once they have sought and found the Heavenly Kingdom, the inner source of all power and wealth, within themselves, every thing of which they have need shall be added unto them. He bade men behold the lilies of the field, that neither toil nor spin; for in them, during a brief evanescent moment in time, the Hidden Glory, surpassing that of the mightiest of mundane kings, is made manifest. When man, too, shall be in tune with the Infinite Heart-Life, he, like the lilies, shall attain transcendency over the world's vicissitudes; no longer will he be a prodigal son, wandering bewildered and in rags through the world.

The Buddha, the Fully-Enlightened, in a farewell address, ere He entered into Nirvana, bade His disciples to be lamps unto themselves, to depend upon no other light for illuminating the Pilgrim Way than that Light which is within man. He bade them to be their own refuge, and to work out their own salvation with diligence. It is because of the loss of this self-reliance, because of dependence upon objects and powers external to himself, that occidental man has become a bondsman of the transitory, of the unreal, of the evanescency of appearances. Man, as the Buddha teaches, must make for himself, by his own self-directed efforts, an island in the midst of this world's Sea of Instability if he would possess the manly strength and confidence born of self-dependence, the blessings born of peace, the happiness born of security: "By strenuous effort, by self-control, by temperance, let the wise man make for himself an island which the flood cannot overwhelm."

Thus have the Sages of the past sought and thus do the Sages of the present seek to dissipate Ignorance. Each of these Clear-Seeing Ones, those who have crossed over to the Other Shore, and those who are still embodied on Earth, has discovered and trodden the Secret Path. Some, like the Buddhas and the Christs, have

traversed it to its very end; some, like the Bodhisattvas and the Saints, have traversed it far enough to be no longer in doubt of its sure direction and to have seen thereon, through the distant vistas of future incarnations, the attainment of its ineffable goal.

May all who aspire to Right Guidance enter upon that age-old Secret Path. May they thereby pass beyond Ignorance and win Wisdom. May they transcend fear and insecurity. May they, at last, like the Buddha and the Christ, triumph over all the sorrows of the world, even over death itself, and attain Freedom.

The Theosophical Forum

UNITY AND BROTHERHOOD — *John Lucas*

Two of the more particular objects of the T. S. since its revival by the champion of Truth, H. P. Blavatsky, in 1875 have been to promulgate the knowledge of the essential unity of all that is and to form an active brotherhood among men. The latter follows naturally from an understanding of the fundamental unity of all things in Nature, as anything we do whether for good or evil affects not only the immediate recipient of our attentions, but the whole of humanity and indeed the whole of the Universe. It follows that we should constantly strive to maintain in our lives that harmony and peace which is apparent in the depths of the Universe around us.

The essential unity of all that exists is a fact based on a knowledge of the spiritual core at the heart of all things, and has been a fundamental teaching of all the great Sages and Seers of the past. It has also been understood by intuitive and mystical poets of all ages, as witness the following inspired passage from "The Mistress of Vision" by Francis Thompson:

All things by immortal power,
Near or far
Hiddenly
To each other linkèd are,
That thou canst not stir a flower
Without troubling of a star.

The conception has however for a long time sounded strange to western minds, accustomed to the old materialistic ideas and the arbitrary division of Nature into animate (organic) and inanimate (inorganic) kingdoms, between which there appears to have been a unique distinction. The recent staggering advances of science

are however rapidly bringing about a radical change of ideas, and the following extract from a review by Prof. H. H. Price of R. G. Collingswood's latest book *The Idea of Nature* (*Sunday London Times*, 11/3/45), is expressing Theosophical tenets revealed anew to the Western world in 1875:

Matter, even mass itself is resolved into activity. It is what it does. Since all activity requires time to happen in, there is no such thing as "matter at an instant." The notion of "simple location" — that a given physical entity is just at this place and nowhere else — is abandoned. Every electron is everywhere, since it acts everywhere. Moreover every piece of matter, even the simplest is a pattern of activities . . . the distinction between the living and the lifeless is broken down. Nature is not the dead-level affair we thought it was. It is a graded hierarchy, and even the lowest level entity, the electron, is a kind of simple organism.

There is therefore no reason to doubt the fundamental unity of Nature and also the fact of Universal Brotherhood as a necessary consequence.

Theosophy does not teach that Brotherhood depends upon external conditions — social, political, or even intellectual. Its root lies in the order of Nature, in the organic unity of the human race, physically and above all spiritually. . . . Mankind is an organism; men are its constituent cells, and what injures one hurts all. Theosophy shows that the recognition of this in the life of each individual with all that it implies — is the only basis on which a true civilization can be built. The Brotherhood of Man, therefore is not a sentimental theory, framed to ameliorate stern realities; it is a fact in Nature. . . .

The fact of universal brotherhood has again been a fundamental teaching of all the great Sages and Seers of the past, and also from time to time has been grasped intuitively by poets and artists. In this connexion the work of Beethoven is a shining example, particularly in his later compositions. Imagine an untidy garret room, the bed unmade in one corner, manuscripts littering the room in all directions. In the room a solitary figure, stone deaf, ill and uncared for, is concentrating on his masterpiece, the Ninth or Choral Symphony. In the midst of all his own troubles, Beethoven turns to the troubles of the world around him, and, in the words of Schiller, conceives the great solution:

Alle Menschen werden Bruder

(All mankind as brothers hold we.)

The music makes the fact a reality, and today the world needs just this fact of Universal Brotherhood. "Thou shalt love thy neighbor as thyself."

The Theosophical Forum

OCCULTISM AND HEALING — *J. W. A. Croiset van Uchelen*

When we speak about occultism and healing in the same breath medical science decries us scornfully. Was it not Hippocrates who lifted the healing art to a science by divorcing medicine from religion? But, we are asked to forget that Hippocrates himself was a priest-physician and that his famous oath is directed to the gods and goddesses in the faith of his fathers. (1)

And what were the healing methods used by Hippocrates, the so-called Father of Medicine? They were: foods, water and herbs; or phrased differently dietetics, hydro-therapy and herbology. Nevertheless his diagnostic studies and observations apparently contributed to secular medicine which, from that period, started its onward way. It is significant that during the rise of the Roman empire priest-physicians were still the sole custodians of public health, while secular medicine "prospered" during its decline. Up to that time Romans had never paid a fee for medical care, but the new type physician, who had removed the superstition of divine aid, had substituted in its place the more profitable superstition that man can buy health, and that since he only appreciates that for which he pays, he should pay well!

It was then, for the first time, that it became necessary to make laws against malpractice and to devise legal methods to hold physicians responsible. (2) In the sight of these medics, man had lost his status as a son of the Gods, to become a "case history." Thus it was that Cato cried out against them, declaring that the Romans had flourished for six centuries without doctors, only, in the end, to be murdered by Greek physicians thirsting after knowledge. Wrote Pliny: "It is at the expense of our perils that they learn, and they experiment by putting us to death, a

physician being the only person who can kill with sovereign impunity." Departing from the Aesculapian Mysteries medicine had left behind the exalted ethical standards of its past. And more was lost: beauty and dignity; the noble spirit which surrounded the temples of Aesculapius. The obsessing concern about utility and efficiency so-called, was to drive out every vestige of beauty, finally to make the hospital-wards the prison-like places they have become.

The body, "the temple of the most high," never since has been treated with such gentle reverent care, after commercialism entered the field of healing. When physicians were priests and priests physicians, healing was for *all* the sick and not alone for those who can afford it. In the temples dedicated to healing there was no discrimination between poor and rich. The physician then was not "in business," nor did the temple-grounds house the disgraceful places many of our present free and "charitable" healing institutions are.

Has medicine gained from the division from religion for which Hippocrates is blamed? Science has paid its contribution to civilization, but can it perfect it? The wisest men of all time have realized the reality of spiritual values, and have been inspired to serve human needs, not for gain or hope for profit, but by love of man. Science belongs to this world alone. Man does not. And while time moves on in its eternal cycles, we shall return closer and closer once more to the very methods employed by the physicians in the olden temples, who, like Hippocrates, taught men to find natural ways to health, using light, herbs, food and water as the principal means of alleviating human ills.

II

The universal disease of mankind, Buddha taught, is ignorance, and wisdom is the only remedy. (3) We have lost much that is

only slowly being regained. Spirit, the root of all things, cannot be denied its own by barriers science, in its smug self-sufficiency, sought to erect.

The Pythagoreans already experimented in color-therapy and the use of incense, and other fragrances, for healing purposes. Astro-diagnosis and -therapy have been practised for thousands of years, and the medieval astrologer-physicians acted upon the authority of Hippocrates, Galen and Avicenna when they developed an elaborate system of correspondences between planets and herbs, as well as chemical and mineral remedies. Seventeenth century England produced many notable writers on this subject, as Drs. Lilly, Culpeper and Coley, who enjoyed the patronage of Sir Elias Ashmole.

The Rosicrucians, who received their original teachings from the ancient Mystery Schools, at about that same period produced such physicians as Fludd, Maier and Heydon; and herbology played an important role, among other methods which are finding a re-awakened interest. The researches of Pythagoras in the healing effect of music became revived in treating shell-shocked patients shortly after World War 1. Color-therapy is used by many naturopathic physicians today.

To those who consider the subject of astrology not worth mentioning, it must be a shock to learn that, in writing to a friend, Dr. Carl Freud confided: "I use astrology in my difficult cases." Nor did he stand alone.

Alchemy's tradition too is long and venerable. Alchemists were not gold-makers; in seeking after ultimates of chemistry they made many important discoveries along the way which have enriched the pharmacopoeia of modern medicine. Sir Isaac Newton thought the subject sufficiently worthwhile to gather a magnificent collection of alchemists' literature and upon later

distribution it was found that many works contained thoughtful notes in Newton's handwriting.

The power of mind, the ancients knew so well, became a field of investigation for modern psychologists who lost their way not in mind, but in matter. Mental healing went on its independent way, seeking success by affirmations, by denials, or by decrees. But here again we shall do well to heed the wisdom of Pythagoras, he who refused to ask favors from Divinity because "all men know what they want, but only the Gods know what they need."

Faith-healing in one form or another too, is as old as man, and it is told that Dr. Alexis Carrel became a devout Catholic after witnessing "miraculous" cures at the shrine at Lourdes, France. Man, to the scientists alike, remains "Man, the Unknown."

Esoteric knowledge alone can offer the key to the spiritual laws that govern health. This was the gift of the ancients, seemingly lost. But slowly again we shall regain the wisdom of the ages the Mystery Schools promulgate today as in ages past.

FOOTNOTES:

1. Apropos of the Hippocratis jusjurandum — the great oath of medical ethics — there is some doubt among inquiring minds as to whether Hippocrates was its true author. Just as the Lord's Prayer was lifted bodily from the Jewish Talmud, it is quite possible that the Hippocratic Oath was part of the Aesculapian rites long before the advent of Hippocrates. ([return to text](#))
2. It has ever been difficult to make laws against a privileged class, especially if this class organizes itself against any regulations that interfere with its complete freedom of action. The Romans found this out when they tried to regulate the practice of

medicine. Present day conditions bear not less watching. Very recently the State of New York adopted a bill, instigated by medical "authorities," which permits the arrest, upon demand of a physician, of any person suspected of a certain type of disease. The one so "suspected," even if healthy, becomes a virtual prisoner under complete control of the medics, who may inject poisons and otherwise "treat" the "patient," without consent of the victim. All the medics have to do is to brand you, your wife, or child, as "suspect," and the rest follows — by law. Future ages will stand aghast at the perversity and stupidity of 20th century medical science.

3. Nature, wise in all her ways, bestows upon her creatios the knowledge necessary for their survival. Man, in the process of becoming civilized, has dammed up his instincts and impulses, and thus has lost his psychic bond with universal life. He will blunder along, falling from one conceit into another. It is in this way, that nature, in the end, outwits the human error, for the man after long suffering will come to realize that only by listening to the voice of nature can he survive. This discovery is Wisdom. ([return to text](#))

The Theosophical Forum

INITIATION — *Henry T. Edge*

This word denotes a topic much to the fore nowadays; but it is customary to lay too much stress on the formal and ritualistic aspect of the question, to the neglect of its all-important real meaning. This shows a materialistic attitude, such as that whereby religions have deteriorated so that the outward and visible form has overshadowed the inward and spiritual grace. We have here a touchstone by which to distinguish the spurious from the genuine.

It is doubtless true that a day will eventually come to any aspiring pilgrim on the path of Wisdom when he will be called upon to undergo some special and formal initiations and to pass or fail to pass certain severe tests of his character and worthiness. But towards such a prospect as this it would be well to observe an unexpecting attitude, and not try to forestall it in our thoughts; for in the meantime there are so many vital opportunities occurring at every step in the life which we have to lead, by which we may win either success or failure in the apparently insignificant, but really all-important incidents of ordinary experience. These are the real initiations, and it is upon them that our eyes should be fixed — on the *now* rather than the distant prospect.

Initiation means the progressive unification of the personal self and the Higher Self; a process which can go on all the time, and by which we may ascend step after step if we are sufficiently in earnest. Further, we may be sure that we shall never be judged fit to undergo the higher and more formal initiation until we have shown by our success in these daily trials that we are deemed worthy of being so tested with any chance of success.

The necessary preliminaries to true initiation are to be found set forth in *The Voice of the Silence, Third Fragment*.

The first is:

Dana, the key of charity and love immortal.

The Sanskrit word means "giving." The motive for entering initiation must be unselfish. This rules out all systems of "initiation" which appeal to personal ambition. It is a thing which we may cultivate all the time; and until we have mastered it, our further progress will be barred; but what vistas may open up to us if we succeed in this first step! Think of the chances we miss; think of our complaints that we do not progress.

A pure strong unselfish thought beaming in the mind lifts the whole being to the heights of Light.

Thus said a Teacher. True, we cannot leap at one bound from selfishness to unselfishness, nor would it be wise to attempt it; but we *can* progress continually, and go forward in spite of many slips back; we can "grow as the flower grows."

2. Shila, the key of Harmony in word and act, the key that counterbalances the cause and the effect, and leaves no further room for Karmic action.

This means acquiescence in whatever Karma has in store; so that we shall not be forever carping, running away from one thing and running after another — harmony in thought and act, the *Gita* attitude. This again will come gradually; in its turn this is an acquiescence of the lower mind in the wisdom of the Higher; so that its purport is the same as that of the first key.

3. Kshanti, patience sweet, that nought can ruffle.

This involves Faith, reliance on the wisdom of the Higher Self, on

the Buddhic light that can illumine the Manas and blow away the dust from the mirror. Union between lower and Higher again, as in the first two keys. The lower mind gets busy trying to fix things, and thus worries us and interferes with the steady patient wisdom of the Higher. Impatience is of the lower passional nature.

Such are a few hints as to the true meaning of initiation. If we can turn our minds more from speculating on the grandiose aspect of the question, and condescend to stoop to the less spectacular but far more important and really weighty affairs of the passing moment, we may pass successfully (or miss another fine chance) at any time. The lower man, not wishing to be dethroned, will use the mind for devising all sorts of excuses for evading what it fears so much. You do not want to become pious or a prig; it is unhealthy to be always brooding over trifles — and so on. But it is possible that some people may view the matter rationally rather than emotionally, and be enough in earnest to experiment.

The Theosophical Forum

THE CHELA PATH (1) — H. Groot

"... There is a Road, steep and thorny and beset with perils of every kind, but yet a Road, and it leads to the Heart of the Universe ..."

Could there be found a more beautiful motto, drawing in one stroke, so to speak, the character of the old, old Chela Path, which each one of us here sincerely hopes to tread sooner or later?

The Path is narrow. It is thorny. But it is a Path; it *can* be trodden, however great the obstacles and dangers may be to the weary pilgrim, who, spiritually speaking, exerts himself to the utmost to tread firmly this holy Path.

Nor is it the only Path to go. At each step it is crossed by other pathways, which seem broad and well-paved. The pleasing foliage of the spreading trees of self-sufficiency afford plenty of shelter against the dazzling Light of Truth and Self-knowledge, which blinding light shines right into the eyes of the pilgrim on the narrow Path. The pleasantly sloping broad and easy roads lead downwards, unperceived by the traveler, so that he, perhaps without realizing it, enwraps himself more and more in the poisonous vapors rising from the swampy land of the lower selfhood. The other Path, narrow and steep, leads on high. It demands the utmost of the pilgrim's powers. Each moment threatens the danger of making a false step and sliding down the road again, either to tumble down into an abyss, or to sink deeper than the point where the rising had begun.

This narrow, thorny, steep Path is the Chela Path and it must be traveled with bleeding feet. Where does it lead to, this upward Path, that there are those who choose to steadfastly walk it with

inexorable earnestness, free from fear of the troubles and dangers that lurk at every cross-road; free from selfishness and the lower personality? What is the final purpose of it? And who are those Pilgrims who have chosen to travel it?

We know what the final purpose is, and we know whither this Path will lead, ultimately. It is to the Heart of the Universe.

But where shall we find it? And *how* to tread the Path that leads to the Heart of the Universe? Who are they, who have the courage and the strength and the perseverance to commence upon that steep Path? Are they super-men, liberated from human weaknesses? Are they gods or semi-gods, exempt from human qualities?

No indeed, Companions. The chela is a human being, like all of us. His nature, which has a dual aspect, a higher and a lower, places him before contradictory objectives. The chela, too, knows the flashlights of personal desires and temptations, the delusions of self-conceit. He knows them all, as they arise in the lower nature of man. He knows them all, but he is not confused by them; they do not get hold of him. There is a secret, invisible guide, safely leading the chela along the marsh-lands of impurity. And this guide is the chela's own knowledge that he must travel his thorny road without paying attention to his lower personality. The only yearning infilling his thoughts and his very being, is, to approach nearer and nearer to that wondrous Heart of the Universe whose steady pulsation is echoed in the deepest recesses of his own heart. His attention is focused on the great SELF of the Universe, in which he has found again his own deepest Self. Thus he treads the Path, blind and deaf to the temptations and the sorrows of the lower personality, in which he, too, being human, is clothed. He does not fight. He does not attempt to kill his lower nature. All violence is strange to him. He does not grieve at the faults that lie

behind him any more than a little child regrets its last fall when it is intent on learning to walk, but just rises again, ready and strong for new endeavors.

Nor does the chela in a personal sense rejoice at his own progress. He knows that all personal ambition will distract him from the lofty goal he has in view. He does not pride himself on his attainments; no more does he grieve at his failures. There is but one aim, one wish, and that is to tread the Path which will bring him nearer and nearer to the Source of all Being.

If we ask the pilgrim whether it is not a difficult road to follow, he will smile at us pityingly and answer that not *his* Path is difficult to walk, but *ours*, in so far as it leads us away from the Light. And if we point at his bleeding feet he will look down in surprise, for certainly *he* had not noticed the wounds, and they do not harm him. In fact there is nothing of the personal man in him that can be hurt or harmed. He keeps aloof from ambition. He does not know of jealousy. Hatred and anger are incapable of disturbing his inner peace and balance. Thus he advances on the Path, which is rough to the *personal* man only, but is like a broad high-way, like a flowery plain for him, who, while renouncing the personal self, *finds* himself in the Universal Self.

Truly, how could it be otherwise? We read in *Golden Precepts of Esotericism*:

In living the Chela-life you simply exchange things that you detest inwardly, that you hate, for things that are beautiful, helpful; exchanging weakness for strength, ugliness for beauty, blindness for vision, darkness for Light.

So indeed is the revolution which takes place in the inner life of him who steadfastly and courageously places his feet on the Chela Path.

Where is this sacred Path to be found? How can we tread it? The Chela Path lies within ourselves. Yea, we ourselves *are* the Chela Path. "Thou canst not travel on the Path before thou hast become that Path itself," says H. P. B. in *The Voice of the Silence*, and likewise say all the great Teachers of Humanity.

The Path lies within ourselves, within each one of us. For that very reason we all can tread the Path, as the possibilities lie hidden in each and all of us. Every human being knows of precious moments in his life, during which he lives in his higher nature. Do let us keep in mind continuously that what is needed to raise ourselves to the higher, spiritual plane is not to acquire new faculties, but rather to let the obstructions of our lower nature fall off quietly, like waterdrops fall off a swan's stainless wing. The confusion of the lower desires, the passions of anger, the braggings of ambition, the false smile of self-sufficiency, the whisperings of jealousy, the clamor of unbrotherliness, all drown the still small voice of the Higher Self. Silence their noise, and we find ourselves face to face with our own inner divinity. As soon as we consciously strive to attain this purpose we find ourselves on the Chela Path. But even beforehand we had a vision of the wondrous possibilities that lie hidden in man. For isn't it true, Companions, that we all of us know the blessed moments of inspiration in which the great, the good, the beautiful, is born from within us, the moments of self-forgetfulness and grandeur, in which we can perform deeds and can think thoughts of which later on we can hardly understand that they were *our* deeds, *our* thoughts? And rightly so, for we had outgrown our lower personality, be it even for a short while. They are the moments of sacred emotion, during which the grand secret of the Universe reveals itself to us in the beauty of a flower, in the smile of a little child, or in the sparkling of a dewdrop. They are the blessed moments in which we experience that there is no such thing as

segregation; that all separateness is an illusion; moments in which the true One-ness of all being opens itself as a glorious verity before our enthralled vision. It is the whisperings of the Divine within ourselves, the comprehension of which will come home to us when the lower voices are silenced. It is the reflexion of the inner Light radiating through the lower principles now become transparent for a while.

These spiritual experiences may serve as guides to the Chela Path. From the very moment we consciously determine to do our utmost to continuously raise our whole being up to this high plane of thought and living we have placed our feet on the sacred Road.

The Chela Path is open for all who long to tread it; for all who have the vision to recognise it; for all who do not fear the sharp thorns that will tear the Pilgrim's human feet.

O wondrous Chela Path, Path of growth, it is said. Yet verily the Path of growth is not a difficult one, though none can tread it but on wounded feet. How are we to understand this strange paradox? Is it the Path of Growing Consciousness? Then whereby is this growth obtained?

There is one word, weighty with significance, and it will give us the answer. It is SELF-FORGETFULNESS. Self-forgetfulness coupled with continuous self-renunciation. For the Chela Path is the path of renunciation of the personal selfhood. The thorns and the wounds belong to the personal selfhood only. He who pays attention to them while walking the path, will be racked and tortured. But the Chela does not heed it. What he is aiming at is growth of the consciousness of the Higher Self. A growth keeping pace with the Chela's success in losing sight of his personal self. Thus and not otherwise can he proceed along the Pathway. But there is a danger threatening him at every step. It lies in looking

back on the personality and getting entangled again in past faults and failures. They will make him slide down and fall. And if he with the greatest exertion stands up again, he will find that he must travel anew part of the road he had already covered before his fall.

The Chela Path consists in rising and falling. In this sense too, it is a Path of growth, along which the chela progresses ever more steadily so that his stumblings become fewer and fewer.

This is spoken of in *The Voice of the Silence*, where it says:

No Arhan, O Lanoo, becomes one in that birth when for the first time the Soul begins to long for final liberation. Yet, O thou anxious one, no warrior volunteering fight in the fierce strife between the living and the dead, not one recruit can ever be refused the right to enter on the Path that leads toward the field of Battle.

And even if he does stumble and fall down, even so the effort is not lost, for as H. P. B. says:

And if he falls, even then he does not fall in vain; the enemies he slew in the last battle will not return to life in the next birth that will be his.

When the chela, guided by his holy perseverance, equipped with the armor of the seven Paramitas, succeeds in traveling the Pathway to the very end, then not far from the ultimate goal a cross-road awaits him. The Path divides itself and becomes the Two Paths. The one is called the Open Way. It leads to the ultimate goal: Nirvana. But the other, the Secret Way, leads him back to the world as a Buddha of Compassion. Guided by his Compassion and his self-forgotten love, he renounces even the state of perfect bliss and once more descends to the earth, saying: "As long as there is one soul left in anguish yet, I will not enter

upon Nirvanic Bliss."

Thus, Companions, is the lofty Choice of the Lords Buddha. And so, too, is the Choice, be it on a small scale, put to any one who commences upon the Chela Path, at each moment of his life. For at each step we are placed before the Choice of the Two Paths, one leading up to Delivery and Bliss, the other to Renunciation, also called the Path of Woe.

As H. P. B. says in *The Voice of the Silence*:

Behold! The goal of Bliss and the long Path of Woe are at the furthest end. Thou canst choose either, O aspirant to Sorrow, throughout the coming cycles!

Companions, it is not a choice of one single moment. They who desire to tread the Path, have to make a choice at each new step. Ultimately all will travel the Path of Woe, the only Road possible to him who has attained to perfect self-forgetfulness and all-embracing Compassion. The Goal seems endlessly far ahead when the Chela sets out on his Great Journey. Countless are the opportunities to choose the Open Path, the one leading up to ultimate Bliss. But his eyes will compassionately fall on those who walk behind him in the valleys of suffering and ignorance, and his ears will listen to even the faintest sigh of unhappiness and sorrow, and in this way he will arrive at the Great Self-Renunciation.

1. Address at the European Convention of the Theosophical Society, Visingsö, Sweden, 1937. ([return to text](#))

THE GREATEST OF ALL — *J. W. A. Croiset van Uchelen*

Love is the cement of the Universe. — G. de Purucker

Only by erasing the barriers between man and himself, between men and men, can Universal Brotherhood become realized. Cooperation must replace self-seeking individualism. Peace must replace war. We cannot fight for peace, any more than cooperation can be imposed by force.

Man is separated from man, nation from nation, by self-assertion, the assertion of self, and the will to dominate. If we agree that the cause of human separateness is selfishness and greed, then what is the Power by which the Ideal may be realized? What is the power which even amidst the bestialities of war, stands untainted in the blood-drenched battlefields? What is the power that makes for heroism and sacrifice, the sacrifice of self? It is love alone which leads to self-forgetfulness. Love, surpassing the confines of national and racial boundaries, encompasses ALL. Love, set free from the human heart — where too often it is encaged, like a songless bird — that it may soar, taking man aloft in its flight to the Sun. Love, not as a human sentiment, but as a winged Reality.

We are seekers and know we know not; and can agree to disagree in harmony. Each approach has its beauty to instill, its heresies to conquer. In the final analysis there are as many pathways as there are men; but upon close examination most of our differences are but eddies on the surface of the great calm deep.

Conscious unity in endless diversity is the brotherhood of men defined. There can be no peace on earth, until the harmony of the spheres finds its echo in the hearts of men; and to this end no amount of scientific planning will avail, no amount of religious

discourse will aid, no amount of philosophic speculation will suffice.

Then do we not need science? We do, provided the use to which the knowledge thus gained is put, is guided by the dictates of the heart, Then do we not need religion? We do, provided we can surmount the man-made barriers of theology. Then do we not need philosophy? We do, and need the sharpened intellect, provided we realize that no amount of philosophy can give soul-experience, which alone is valid to the individual.

The only power to overcome is the one of which one among the Great has said: "and the greatest of these is LOVE."

The Theosophical Forum

ON LOYALTY

As one of the last of his publications, Professor Josiah Royce published a book entitled *The Philosophy of Loyalty*. Reminiscent of the late President's phrase, "the only thing this nation has to fear is fear itself," Royce sets forth loyalty as the one thing to strive for and upholds loyalty to loyalty as the world's crowning need.

The charm of the incomparable fairy tales for children by Grimm is that he urges loyalty as the supreme virtue. Witness the two brothers starting on a journey and coming to a fork in the road. They agree to separate and explore the two paths separately but to leave a knife with two blades so that if one of the two encounters misfortune his blade will rust, whereas if the other meets with good fortune its blade in the knife will remain bright and shining. One does meet with good fortune and the other falls into evil hands, whereupon his blade rusts. The more fortunate of the brothers feels that something is wrong and returns to the road fork where the twain separated and discovers the rusty blade pointing to the route taken by the brother and warily discovers a method of rescuing him.

Sir Walter Scott's novels, the delight still of our youth, likewise inculcate the idea of loyalty as the crowning glory of man.

It is interesting to note that one of the best sellers, the Bible, so far as the writer has been able to discover does not contain the word loyalty. However, St. Paul in Chapter 13, I Corinthians, in the Greek dialect credited to him, is in reality speaking of the human quality, or shall we say divine quality, of loyalty in the word translated in the King James version as "charity," but in the revised version translated as the more understanding term "love."

Love, however, is too broad a term to meet the sense of the Greek text, which is better interpreted "loyalty". Thus the revised version of this chapter is made to end: "But now abideth faith, hope, love, these three; and the greatest of these is love."

If we consider the closing part of this chapter and St. Paul's expressed wish for his disciples to abide in faith, hope and loyalty, the latter term is obviously more nearly the meaning of the Adept Paul when he adds "the greatest of these is 'loyalty'."

But let us now return to the opening of this instructive chapter. "If I speak with the tongues of men and of angels, but have not "loyalty," I am become as sounding brass, or a clanging cymbal. And if I have the gift of prophecy, and know all mysteries and all knowledge; and if I have all faith, so as to remove mountains, but have not "loyalty," I am nothing. And if I bestow all my goods to feed the poor, and if I give my body to be burned, but have not "loyalty" it profiteth me nothing. "Loyalty" suffereth long, and is kind; "loyalty" envieth not; "loyalty" vaunteth not itself, is not puffed up, doth not behave unseemly, seeketh not its own, is not provoked, taketh not account of evil; rejoiceth not in unrighteousness, but rejoiceth with the truth; . . ."

Before we go on with this let us pause a bit and consider the different kinds of loyalty. There is the natural loyalty owed by a man to his family, his relatives and friends. There is the purely civic variety, a loyalty to civic institutions — - clubs, schools, societies; loyalty to organizations, as the City, the State, the Nation, and should it become organized, the United Nations. Thus far we have considered loyalty of the lesser to the greater.

Next comes the downward phase of loyalty. This applies to the loyalty of the superior to his subordinates, whether in the family or any other kind of exoteric organization. It applies to the debt owed by Kings, Presidents, Generals or Admirals in the military

or naval service. This type of loyalty is often described as *noblesse oblige*. This is the mark of a true gentleman, everywhere, but he can best be recognized by his loyalty not only to his subordinates, but by his invariable kindness to the weak and needy.

Next follows the loyalty of man to man or man to nature, for in a broad sense this loyalty includes all the kingdoms, visible and invisible, from the atomic to the galactic.

Lastly we come to the real meaning of the term when applied to a consideration of the occult hierarchy and used to describe the relationship between teacher and pupil, which is without question the most beautiful of all human relationships, and one which carries the greatest promise for the future of the race as well as the individual. But one must not paint too rosy a picture in these troublous times. That is to say, that great as is the reward for him who follows the path of loyalty to loyalty danger unforeseen threatens when he departs from the rules of chelaship. When he forsakes loyalty to loyalty he risks danger of falling into evil hands; danger of forfeiting the power of knowing how to follow the true path of loyalty; danger of losing his way in a spiritual black-out. He may know the mysteries, he may have the gift of prophecy, he may speak with the tongues of men, may be the most brilliant speaker in the world, yet lacking loyalty these shall avail him nothing; he is become sounding brass or a clanging cymbal.

Another, unprofessed to be a master of tongues or prophecy or knowledge, but who has faith, hope and loyalty may lead a multitude to the path of true understanding and devotion.

If thou would'st have that stream of hard-earn'd
knowledge,
of Wisdom heaven-born, remain sweet running waters,
thou should'st not leave it to become a stagnant pond.

HUMAN DESTINY AND THE ATOMIC BOMB — *Marjorie M. Tyberg*

A star falls. We look up at the night sky and, like children, hasten to form a wish, heedless of the mighty cosmic forces active in either integration or disintegration, so sure are we that Earth swings securely in her orbit and that nothing like that can happen here. But something *has* happened here. A few months ago a man-made meteor fell from the sky and the shock of its fall banished the sense of security from the world. Has this served to stun brain-minds and permit the higher mind to glimpse beyond the terrifying facts more of Truth, to vision a wider frame of destiny for the human race? If it has, Theosophy, the archaic Wisdom-Religion that has survived the rise and fall of many races and civilizations, meets the need for greater knowledge of a future for man based on unity and good will.

As the program for the development of Earth-life unfolds and there is an increase of knowledge, man is compelled to adjust his ideas of his relations to the universe and with his fellow-men. In the sixteenth century, after Copernicus, man had to realize that not the Earth, but the Sun, is the center of the system of which we are a part. In the nineteenth century physical man was found to be, not a special creation of the Almighty but a part of Nature, bone of its bone and flesh of its flesh. In the twentieth century, with inner endowments not yet accounted for by science, man appears to be assuming the role of the Almighty and advancing the date of the Judgment Day by letting loose hell upon Earth and beginning the final destruction of life on this planet. All our theories as to the future have now to measure up to the possibility of wholesale destruction and mass extinction of human beings.

We have therefore to visualize a larger picture of the destiny of man and his Earth-home. We ask, Can man survive this possible mass extinction? Has Earth served its purpose in human evolution? What is Man, and whither goeth he? Reconstruction today is not merely rebuilding of naked cities: it is actively imagining, visualizing, the wider frame of destiny, in which Man achieves all that the inner, intellectual, spiritual, and divine nature of Man has yet, in this friendly but as yet unfinished universe, to manifest in Earth-life. Man has shown that he can make a hell on Earth: he has yet to make a heaven here. His inner powers must be brought into function, must build out of cosmic truth the ideal which precedes the actual. The materials for this building, the means of filling out the picture of what is yet to be, are to be found in the Theosophical teachings.

What then is Humanity? What means its Earth-life? According to Theosophy, the tie between Earth and Man is deep and strong, not to be severed by a minor cataclysm caused by atomic bombs. Together Earth and Man came to birth: Earth is Man's springboard to all possible cosmic exploration. When the life-impulse stirred, after a period of repose, successive life-waves of awakening beings, of which humanity is one, actually built our seven-globed Earth, or planetary chain; and the host of souls evolved *pari passu* with the planet from ethereal conditions in the early stages to the solid forms they now have. Vast ages were required for this descent along the downward arc into material existence as we know it. It is not necessarily a fall into evil, unless and until there is intelligent choice of wrong-doing; it is but taking on the job of planetary experience. Later in evolution, and *now* for us, comes the turn to the upward, or luminous arc, during which after painful purgation and sloughing off of excess material (what has been and is still going on in the world), the waiting better part of man's nature will find expression, still on

Earth.

The main point at present is that the turn upward has been made. It is a wonderful time of opportunity for humanity. Will men accept the modification of living in brotherly accord, gladly join the movement into the luminous arc, or will they hold back, clinging to old selfish, separative desires and methods and fail now to prepare for a more momentous choice to be made in a future cycle? It is a time for decision; all portents point to this. Faith, insight, knowledge of Man's cosmic destiny as taught in Theosophy, can bring "the rapture of the forward view" which fires the human heart with high courage for spiritual adventure in this new time.

The Theosophical Forum

THEOSOPHY GENERALLY STATED (1) — *William Q. Judge*

The claim is made that an impartial study of history, religion and literature will show the existence from ancient times of a great body of philosophical, scientific and ethical doctrine forming the basis and origin of all similar thought in modern systems. It is at once religious and scientific, asserting that religion and science should never be separated. It puts forward sublime religious and ideal teachings, but at the same time shows that all of them can be demonstrated to reason, and that authority other than that has no place, thus preventing the hypocrisy which arises from asserting dogmas on authority which no one can show as resting on reason. This ancient body of doctrine is known as the "Wisdom Religion," and was always taught by adepts or initiates therein who preserve it through all time. Hence, and from other doctrines demonstrated, it is shown that man, being spirit and immortal, is able to perpetuate his real life and consciousness, and has done so during all time in the persons of those higher flowers of the human race who are members of an ancient and high brotherhood who concern themselves with the soul development of man, held by them to include every process of evolution on all planes. The initiates, being bound by the law of evolution, must work with humanity as its development permits. Therefore from time to time they give out again and again the same doctrine which from time to time grows obscured in various nations and places. This is the wisdom religion, and they are the keepers of it. At times they come to nations as great teachers and "saviors," who only re-promulgate the old truths and system of ethics. This, therefore, holds that humanity is capable of infinite perfection both in time and quality, the saviors and adepts being held up as examples of that possibility.

From this living and presently acting body of perfected men, H. P. Blavatsky declared she received the impulse to once more bring forward the old ideas, and from them also received several keys to ancient and modern doctrines that had been lost during modern struggles toward civilization, and also that she was furnished by them with some doctrines really ancient but entirely new to the present day in any exoteric shape. These she wrote among the other keys furnished by her to her fellow members and the world at large. Added, then, to the testimony through all time found in records of all nations, we have this modern explicit assertion that the ancient learned and humanitarian body of adepts still exists on this earth and takes an interest in the development of the race.

Theosophy postulates an eternal principle called the Unknown, which can never be cognized except through its manifestations. This eternal principle is in and is every thing and being; it periodically and eternally manifests itself and recedes again from manifestation. In this ebb and flow evolution proceeds and itself is the progress of the manifestation. The perceived universe is the manifestation of this Unknown, including spirit and matter, for Theosophy holds that those are but the two opposite poles of the one unknown principle. They co-exist, are not separate nor separable from each other, or, as the Hindu scriptures say, there is no particle of matter without spirit, and no particle of spirit without matter. In manifesting itself the spirit-matter differentiates on seven planes, each more dense on the way down to the plane of our senses than its predecessor, the substance in all being the same, only differing in degree. Therefore from this view the whole universe is alive, not one atom of it being in any sense dead. It is also conscious and intelligent, its consciousness and intelligence being present on all planes though obscured on this one. On this plane of ours the spirit focalizes itself in all

human beings who choose to permit it to do so, and the refusal to permit it is the cause of ignorance, of sin, of all sorrow and suffering. In all ages some have come to this high state, have grown to be as gods, are partakers actively in the work of nature, and go on from century to century widening their consciousness and increasing the scope of their government in nature. This is the destiny of all beings, and hence at the outset Theosophy postulates this perfectibility of the race, removes the idea of innate unregenerable wickedness, and offers a purpose and an aim for life which is consonant with the longings of the soul and with its real nature, tending at the same time to destroy pessimism with its companion, despair.

In Theosophy the world is held to be the product of the evolution of the principle spoken of, from the very lowest first forms of life, guided as it proceeded by intelligent perfected beings from other and older evolutions, and compounded also of the egos or individual spirits for and by whom it emanates. Hence man, as we know him, is held to be a conscious spirit, the flower of evolution, with other and lower classes of egos below him in the lower kingdoms, all however coming up and destined one day to be on the same human stage as we now are, we then being higher still. Man's consciousness being thus more perfect is able to pass from one to another of the planes of differentiation mentioned. If he mistakes any one of them for the reality that he is in his essence, he is deluded; the object of evolution then is to give him complete self-consciousness so that he may go on to higher stages in the progress of the universe. His evolution after coming on the human stage is for the getting of experience, and in order to so raise up and purify the various planes of matter with which he has to do, that the voice of the spirit may be fully heard and comprehended.

He is a religious being because he is a spirit encased in matter,

which is in turn itself spiritual in essence. Being a spirit he requires vehicles with which to come in touch with all the planes of nature included in evolution, and it is these vehicles that make of him an intricate, composite being, liable to error, but at the same time able to rise above all delusions and conquer the highest place. He is in miniature the universe, for he is a spirit, manifesting himself to himself by means of seven differentiations. Therefore is he known in Theosophy as a sevenfold being. The Christian division of body, soul, and spirit is accurate so far as it goes, but will not answer to the problems of life and nature, unless, as is not the case, those three divisions are each held to be composed of others, which would raise the possible total to seven. The spirit stands alone at the top, next comes the spiritual soul or Buddhi as it is called in Sanskrit. This partakes more of the spirit than any below it, and is connected with Manas or mind, these three being the real trinity of man, the imperishable part, the real thinking entity living on the earth in the other and denser vehicles of its evolution. Below in order of quality is the plane of the desires and passions shared with the animal kingdom, unintelligent, and the producer of ignorance flowing from delusion. It is distinct from the will and judgment, and must therefore be given its own place. On this plane is gross life, manifesting, not as spirit from which it derives its essence, but as energy and motion on this plane. It being common to the whole objective plane and being everywhere, is also to be classed by itself, the portion used by man being given up at the death of the body. Then last, before the objective body, is the model or double of the outer physical case. This double is the astral body belonging to the astral plane of matter, not so dense as physical molecules, but more tenuous and much stronger, as well as lasting. It is the original of the body permitting the physical molecules to arrange and show themselves thereon, allowing them to go and come from day to day as they are known to do, yet

ever retaining the fixed shape and contour given by the astral double within. These lower four principles or sheaths are the transitory perishable part of man, not himself, but in every sense the instrument he uses, given up at the hour of death like an old garment, and rebuilt out of the general reservoir at every new birth. The trinity is the real man, the thinker, the individuality that passes from house to house, gaining experience at each rebirth, while it suffers and enjoys according to its deeds — it is the one central man, the living spirit-soul.

Now this spiritual man, having always existed, being intimately concerned in evolution, dominated by the law of cause and effect, because in himself he is that very law, showing moreover on this plane varieties of force of character, capacity, and opportunity, his very presence must be explained, while the differences noted have to be accounted for. The doctrine of reincarnation does all this. It means that man as a thinker, composed of soul, mind and spirit, occupies body after body, in life after life, on the earth which is the scene of his evolution, and where he must, under the very laws of his being, complete that evolution, once it has been begun. In any one life he is known to others as a personality, but in the whole stretch of eternity he is one individual, feeling in himself an identity not dependent on name, form, or recollection.

This doctrine is the very base of Theosophy, for it explains life and nature. It is one aspect of evolution, for as it is reïmbodiment in meaning, and as evolution could not go on without reïmbodiment, it is evolution itself, as applied to the human soul. But it is also a doctrine believed in at the time given to Jesus and taught in the early ages of Christianity, being now as much necessary to that religion as it is to any other to explain texts, to reconcile the justice of God with the rough and merciless aspect of nature and life to most mortals, and to throw a light perceptible by reason on all the problems that vex us in our

journey through this world. The vast, and under any other doctrine unjust, difference between the savage and the civilized man as to both capacity, character, and opportunity can be understood only through this doctrine, and coming to our own stratum the differences of the same kind may only thus be explained. It vindicates Nature and God, and removes from religion the blot thrown by men who have postulated creeds which paint the creator as a demon. Each man's life and character are the outcome of his previous lives and thoughts. Each is his own judge, his own executioner, for it is his own hand that forges the weapon which works for his punishment, and each by his own life reaches reward, rises to heights of knowledge and power for the good of all who may be left behind him. Nothing is left to chance, favor, or partiality, but all is under the governance of law. Man is a thinker, and by his thoughts he makes the causes for woe or bliss; for his thoughts produce his acts. He is the center for any disturbance of the universal harmony, and to him as the center, the disturbance must return so as to bring about equilibrium, for nature always works towards harmony. Man is always carrying on a series of thoughts, which extend back to the remote past, continually making action and reaction. He is thus responsible for all his thoughts and acts, and in that his complete responsibility is established; his own spirit is the essence of this law and provides forever compensation for every disturbance and adjustment for all effects. This is the law of Karma or justice, sometimes called the ethical law of causation. It is not foreign to the Christian scriptures, for both Jesus and St. Paul clearly enunciated it. Jesus said we should be judged as we gave judgment and should receive the measure meted to others. St. Paul said: "Brethren, be not deceived, God is not mocked, for whatsoever a man soweth that also shall he reap." And that sowing and reaping can only be possible under the doctrines of Karma and reincarnation.

But what of death and after? Is heaven a place or is it not? Theosophy teaches, as may be found in all sacred books, that after death, the soul reaps a rest. This is from its own nature. It is a thinker, and cannot during life fulfill and carry out all nor even a small part of the myriads of thoughts entertained. Hence when at death it casts off the body and the astral body, and is released from the passions and desires, its natural forces have immediate sway and it thinks its thoughts out on the soul plane, clothed in a finer body suitable to that existence. This is called Devachan. It is the very state that has brought about the descriptions of heaven common to all religions, but this doctrine is very clearly put in the Buddhist and Hindu religions. It is a time of rest, because the physical body being absent the consciousness is not in the completer touch with visible nature which is possible on the material plane. But it is a real existence, and no more illusionary than earth life; it is where the essence of the thoughts of life that were as high as character permitted, expands and is garnered by the soul and mind. When the force of these thoughts is fully exhausted the soul is drawn back once more to earth, to that environment which is sufficiently like unto itself to give it the proper further evolution. This alternation from state to state goes on until the being rises from repeated experiences above ignorance, and realizes in itself the actual unity of all spiritual beings. Then it passes on to higher and greater steps on the evolutionary road.

No new ethics are presented by Theosophy, as it is held that right ethics are forever the same. But in the doctrines of Theosophy are to be found the philosophical and reasonable basis for ethics and the natural enforcement of them in practice. Universal brotherhood is that which will result in doing unto others as you would have them do unto you, and in your loving your neighbor as yourself — declared as right by all teachers in the great

religions of the world.

The Theosophical Forum

HUMAN NATURE AND THE MASTER OF LIFE — *Helen Savage Todd*

The phrase "human nature" has fallen into bad repute. When a man does something that falls below his and our own standard of behavior we so often say, "Well, that's human nature for you." It is as though we generally agreed that you cannot really expect anything of a merely human being. If this is so, it is only because we are not as yet *complete* human beings. The Master of Wisdom is a complete human being.

Edward Thompson, in his charming book *The Youngest Disciple*, depicted Gautama the Buddha as a complete man. He has the truly human virtues, each in its pure state. There is no human virtue that is too homely for him to embody. Perhaps it all seems so very natural and *right* because these virtues are surrounded with a quiet flow of kindly humor that occasionally rises to the surface like a bright ripple on a stream. One of his pupils, Moggallana, a most industrious and devoted follower, is subject to sleepiness at inopportune times. Once when they are all gathered together for their meditations, it is obvious that Moggallana is having a comfortable doze and the Buddha says to him: "Torpor is one thing, Moggallana, and the Silence of Aryans in Meditation is quite another!"

Once when the Buddha is journeying with some of his disciples they come upon a farmer working in a field. He has been stung by a serpent, and the Blessed One turns into the field to render what help he can. As they approach, one of the disciples says: "That serpent is but his thread of fate, and came to accomplish the fruit of his own evil deeds in a former birth." But the Lord turns to the speaker chidingly and says: "Let the doctrine sleep at this hour," and he turns to instruct one of the disciples in the tending of the

wound. — The Teacher has a perfect sense of the fitness of things.

He also is intensely practical. In the rainy season the disciples go up into the mountains with their Master, and Ananda, the great lover of the beautiful in nature sings a song: "These are the Glades in which my soul exults." But, Ananda has forgotten to mend the leak in the roof of one of their huts and the rain pours in. The Buddha says to him, "I think it would be just as well to have dry beds to sleep on. To swim while I also try to sleep is *not* something in which my soul exults, O Ananda."

And of course Compassion gives to all the other virtues a touch of radiance. While the others sleep, the Buddha looks out upon the world with his Eye of Pity and with the Torch of Compassion peers into their hearts. And in the street sweeper, Sunita, he marks the conditions of discipleship "shining like a lamp within a jar." And so Sunita becomes a disciple, though none of the other devotees had any thought that the city drudge was worthy.

A virtue is a phenomenon, an appearance. It is an indication of an inner state. If the inner state is pure, the virtue is pure. To have the defects of one's qualities means that the quality is still tainted with some imperfections. The Paramita, Virya, the dauntless energy that overrides all difficulties and fights its way to truth, is stubbornness before it is purified.

The humblest virtue has its spiritual but by no means dehumanized aspect. Patience is sometimes nothing more than dumb endurance; but patience coupled with wisdom, or shall we say purified by wisdom, becomes the glorious Paramita Kshanti. To the Sage who understands the Law of Cycles there is no such thing as impatience because he understands that each thing will come at its appointed time, impelled into action by the force of its own momentum. The right thing out of time is no longer right. With the Sage, patience becomes spiritual poise.

Then there is simplicity, a quality that characterizes every superior man. A study of *The Mahatma Letters to A. P. Sinnett* is, among other things, a study in simplicity of character. There is no pretentiousness in the Letters, no pose, no attempt to create a mysterious or impressive atmosphere. So much is this so, that occasionally one comes across a reader who is actually disappointed in the Letters. In this disappointment he gives himself away. It reminds me of someone who, having been looking at some fireworks, saw nothing to move him in the spectacle of Venus shining serenely in the evening sky.

The quality of non-attachment suggests to some people a sort of gray indifference. Blake's lines express the real non-attachment:

He who binds to himself a joy
Does the winged life destroy.
But he who kisses the joy as it flies
Lives in eternity's sunrise.

The Master of Life knows how to enjoy without the bitter after-taste because he does not possess. To possess means inevitably to suffer. We become great and wise not by *abandoning* our humanity but by *becoming* it. Did we not receive it from the gods?

So let us, if we would become great and wise, not *abandon* our humanity but *become* it. Did we not receive it from the gods? We are not in essentials different from the Master of Life. We stem from the same source. The Master recognises that source, and though he transcend his human self, he uses and perfects that self in order to become what he is.

BROTHERHOOD: AN INESCAPABLE REALITY — *Martha R. Franklin*

The dream of Brotherhood is not new. For centuries the establishment of brotherhoods in various fields has been the dream of reformers, of religious teachers, individuals and groups of individuals. Today the word "brotherhood" has become so hackneyed a term that one rather hesitates to thus define the tie which binds all mankind; yet the basis for this age old dream must lie in the recognition of the ideal that men should live as brothers; that men should live harmoniously with each other, doing nothing that would injure their fellows, as they would not wish their fellows to harm their own households or interests. I think there is within the human heart (the average human heart that we know) the ineffaceable conviction that this is the truest and the highest rule of life. Just why we fail so miserably in its application is another story.

Again and again groups of men and women have tried to realize and to demonstrate a brotherhood of common interest. Too often, if not always, men have gone about it as though brotherhood were a thing that could be created by this or that experiment, usually based upon a material foundation which crumbled under the weight of divergent desires and differences of opinion or policy of the individuals concerned. On-lookers, unwilling to risk the experiment, are ready to avow that "it just can't be done," and they seem to have much evidence to back up their argument. Surely no one is so foolish as to think that any group of people picked at random will be able to live together in complete harmony of taste and aspiration, even though they be mutually honest and sincere. It is not necessary that people live in physical propinquity to demonstrate the principle of kinship, which I

believe Theosophists generally consider to be the acme and the sub-stratum of human solidarity, the life-blood of human existence. Understanding, sympathy, a willingness to help where help is needed assuredly does not depend upon our living under the same roof with, or following the same line of work as those who need the help and the understanding that we can give. But it does require a consciousness of the need — a recognition of the law which operates from the beginning to the end of the evolutionary drama.

This has to do with human brotherhood, human kinship. In order to understand this more fully one must come to look upon men and women not as the bodies that enjoy or suffer the experiences of life, but as the invisible spirit, the consciousness that dwells within and motivates these bodies. Man — the real man — is a *spiritual* being. His body is the house he lives in, the headquarters from which he works out into this particular field of human activity and progress.

Theosophists are concerned with *Brotherhood*, not merely a brotherhood, although the formation of an active brotherhood among men is one of the objects of the Theosophical Society. Brother — brotherhood — does not even imply identical forms, identical tastes or even similar capacity. "Brother" indicates a common parentage, a common lineage, a common heritage for all that is included in that term, which is just exactly the Theosophical meaning of Brotherhood. When the term Universal Brotherhood is used, it means just that — the one universal source of all that the Universe contains, the one common parentage of all humanity, and the relationship and inter-relation, the inter-blending of man with every other entity under the shining sun. We absorb, we breathe in, we breathe out, and blend ourselves with all the reaches of the Universe, whether we will or no. We barter and exchange, as it were, with every

kingdom or plane of Nature. Think even of the physical transmission of the life energy and see where it leads you — back and back to a point beyond which the mere intellect cannot go. "Dead matter" has been, or is fast becoming consigned to the limbo of disproven theories. The teaching that every atom is animated by a conscious life center is fast coming to the fore in the minds of thinking people. This has been a familiar teaching to students of Theosophy for years.

Looking at the universe as a living, pulsating galaxy, can you not feel that running through every fiber of it there is a flow of consciousness which to every atom seems reality, differing, of course in degree? Man, the most highly evolved entity on the globe, partakes more fully of the creative impulse of this spiritual force, and stands more closely, more consciously related to the source from which he comes. The source, the parent, being universal, omnipresent, immutable, and all men partaking of the essence of this parent, how can we deny kinship, our common heritage and destiny, our union with the universal? How can we, with any logical basis of reasoning disclaim the solidarity of the human kingdom or hierarchy? Whether we live together in this family or that, in this group or another, in one nation or another; this does not alter our common spiritual parentage, our kinship with other men living in other groups and other nations. The same consciousness — the same life-blood — pervades and persists, varying only in objectives and capacity. Mark Twain is credited with having said that it made no difference to him whether a man were black, white or yellow — Chinese or Hottentot — he was human — he could be no worse.

Perhaps the vilest thing in the universe is a person who has lost hold of his human, spiritual birthright, and who from standing a little lower than the angels has degraded his humanity to lower than the beast. Yet humanity as such stands as a solid phalanx in

the march of evolution. As our humorist philosopher indicates, all are human — no worse — no better. Human blood, human consciousness flows through all, as the invisible currents of magnetic energy flow through and bind together every particle of the visible universe. Ugly as the job may seem to some, it is up to man to lift man — humanity — into a higher and cleaner state of consciousness; into a state of consciousness that will *recognize* and try to express the high purpose of his being. No man or group of men can ever attain the high estate of true manhood by standing on the shoulders of other men. With his own shoulders he must help to lift the load. The whole mass must be raised, but how?

Individual salvation might be an easy way out, if it worked, but it does not satisfy the awakened soul. There is the long trail of natural evolution, the other extreme. Life itself — the experiences of life — have a way of grinding one in the mills of circumstance and necessity, often bringing one to a point where he determines that he will arise and return unto his father's house. That is one way of redemption; a long, hard way, but it is a way. Then you have the story of the little leaven that leaveneth the whole lump. The larger the lump I presume the more leaven becomes necessary, and the world as we know it is quite an appalling lump. One man against the world seems helpless. One man alone could scarcely reawaken the spiritual faculty in this thing we call humanity. But one spiritually awakened man, one man who *recognizes* and understands even intellectually the common, divine source of the whole manifested universe may help some other individual or group of individuals to a recognition of this basic, steadfast truth. One man may bring to the minds and hearts of a few others a recognition of the fact that we are not the playthings of an extraneous super-natural God, but part of, heirs and co-workers with, the Spiritual Builders of the Universe; may

inspire a few men to action that befits a kingly race. It may be possible for one man to do this much. In time those so awakened may light a fire in some other minds, may inspire the will in other hearts as those who have gone before have awakened our own. Ultimately — (not tomorrow or the next day or the next) the flame of understanding and the force of an awakened spiritual will may be found in a majority of men. The leaven will then have become the dominating force and tendency. I see no other way.

A natural burden, a natural responsibility seems to rest upon the so-called few — "The most excellent men," be they of one race or another, of one religion or of no religion at all. Quoting Krishna — ". . .for whatever is practiced by the most excellent men, that is also practiced by others. The world follows whatever example they set." (1)

Who are "the most excellent men"? That is the point to ponder. Perhaps they are those who occupy positions of influence and trust, the so-called leaders in the affairs of the world. Much could be said on the power of their example — the influence that they exert for good or ill, but of this each one can decide for himself. Just look about and picture what the status of human kind would be if the majority even of these "most excellent men" lived up to the qualities and the actions that we recognize as belonging to true manhood — if their wisdom, their justice and their compassion were commensurate with their position and influence.

"The most excellent men." Perhaps it means those (even as you and I) who have even a faint glimmering of the working of this law of brotherhood, those who even partially awakened to the high significance of human life and opportunity, those who but faintly realize the indissoluble unity that encompasses not only humanity, but the whole universe.

At any rate, the responsibility of passing on to others what knowledge of beauty and truth we may have — of trying at least to lift the mass by individual effort — of adding our bit to the leaven, rests upon those who see the light and recognize the need. Brotherhood, as I see it, was established when the world began. It is up to man, the most highly conscious entity on the globe, to recognize this law and live accordingly, instead of trying to dodge the issue or break down the inevitable.

I can leave you with no greater appeal than that made by William Q. Judge at the World's Parliament of Religions in Chicago in 1893, "Live with one another as brothers, for the misery and the trouble of the world are of more importance than all the scientific progress that can be imagined. I conclude by calling upon you by all that humanity holds dear, to remember what I say, and whether Christians, Atheists, Jews, Pagans, Heathen or Theosophists, try to practice Universal Brotherhood, which is the universal duty of all men."

The Theosophical Forum

IS THE INTELLECTUAL TEACHING OF THEOSOPHY NECESSARY?

(1) — *H. D. Roderick*

It just depends on the individual conception of what the word "intellectual" conveys. Have you noticed the variety of shades of meaning one or other word has for everyone? When talking Theosophy to enquirers it is always well to endeavor to find out what your querist understands by the word he uses. In practice — if you do this — you are making an effort to see things as someone other than yourself sees them. Often it will be found that nothing really stands between the enquirer and the Theosophical point of view except a misunderstanding of words and therefore of ideas.

So let the word "intellect" be briefly examined. It has a Latin root which means to discern, and to choose, whilst intelligence is stated to mean perception, understanding. In other words the use of intellect infers that you are using your power of choice among ideas. When the intellect has examined and chosen then the intelligence grasps.

What is the fundamental difference between man and beast, or between highly developed man and savage man? The beast is beast because it is the slave of instinct. The savage man is savage because he has not learnt to be otherwise; mankind is mankind because man has grown to become a more fitting vehicle to express intellect and intelligence. Once man becomes aware that there is no limit to the cultivation of mind, and proceeds to improve and extend his capacity to learn, he begins to weaken the threads which attach him to the animal world, and prepares to become a True Human, a *Whole Human*.

Anything that gives exercise in the realm of thought — the

abstract thought process — is intellectual. When you and I began to learn our A B Cs at school, we began to exercise our minds, and when later on we began to select among these letters and form them into words of meaning we began to use our intellects.

Now suppose we all had stopped learning the alphabet when we had reached the letter N, what would be the result? The result would be that we should not be able to read and write and SPEAK, or to understand words uttered by another. You may well ask, What has this to do with the topic of our discourse? It has this to do with it. If you are not merely learning strings of words by heart as you and I used to do in spelling lessons, then every Theosophical book you read, no matter how elementary it may be, is giving you the *intellectual teachings of the Ancient Wisdom* with only so many words left out. When we say "so many words" we mean by it so much of the doctrine as has not yet been studied. We study the intellectual teaching of Theosophy in order that:

- (1) We may grasp the explanation of existence;
- (2) To awaken and stimulate our minds, "mind" being nearer to Spirit than material things;
- (3) To enliven and expand self-consciousness which is awareness;
- (4) To translate our belief in *Divinity* from a blind faith to faith based on knowledge;
- (5) By the studying of Universal Complexity to know its unity, its oneness, and hence, the all-pervading simplicity of Truth, and the unity of all things with IT.

Therefore it is not the ability to repeat the language of the Teachings by rote that matters at all. What does matter is to use the intellect to discriminate among ideas, and then the

intelligence steps in to apply our new knowledge to living. By such a process we proceed from thinking to understanding. To understand is to *know*, and to know is to be patient, charitable, strong in soul, compassionate, and these last "things," things that make life on earth tolerable, are not words. They are feelings, qualities of the soul. They are things which each and every individual must learn by himself of himself.

Neither by closing the eyes and speaking a form of words to oneself, nor yet by blank gazing at the stars at night, does one get knowledge of the Universe. We have to look around and in and out. We have to awaken the feelings of our souls, and unite and identify these with the whole mighty concourse of stars, to engender in our hearts that sense of kinship with them. It is not our bodies that can realize this kinship. The realization is in *Mind*, and through mind we know we are akin to Spirit.

The business of a Theosophist is to train himself to become efficient on all planes of his being: efficient in body, mind and Spirit. We must pass through the Hall of Learning, but the error would be to remain there too long. It would be as bad an error as staying in the animal realms.

Therefore, Brothers, work, study, think and learn, that by doing so you may help to teach others. Become translators of divine ideas for the sustenance and succour of human beings

THE SPIRITUAL SPRINGBOARD — *Jeanne Abele*

When a diver prepares to dive from a springboard, he rises several times from the end of the board into the air, before making the final leap. The height of each rise is controlled by the combined action of his consciously impelled pressure on the board, and the board's mechanical impetus on his body.

The springboard serves as a useful analogy in considering the rise of the ego through various incarnations to higher and higher spiritual levels. The board is the earth-phase, desire is comparable to the diver's pressure on the board, various environmental and physical phenomena correspond to the board's mechanical impetus. If desire is strong in the spiritual direction, each contact with Earth will carry the ego into a higher level of spiritual awareness; the downward sweeps into the earthbound plane will be successively more forceful but briefer; the propulsion upward, mightier. The ego will recognize more clearly with each impact that the solid material plane is useful only in a limited and dimensional way, but that progress in the upward direction is boundless, infinite. However, the contacts must continue until the lesson is learned.

Physicists allege that the laws of gravity operate only within a certain radius of the earth. Theoretically, if an object could by some means pass this circumference, earth-gravity would no longer bring it back, and it would continue on into the unknown ether. This is the principle of the spiritually-gearred ego. Each incarnation serves to send it higher and higher spiritually, until at last it no longer needs the lessons and earthy comforts of this plane; and so leaves it forever and goes on to the mystic regions of the next aspect of its journey towards Divinity.

CREATORS — *Alexandra McLean*

What shall be our creations in the next cycle of 365 days? As a new year dawns, many of us feel an inner quickening, an impetus toward growth, a new incentive to work. Is it not the part of wisdom to stop and consider, to plan that which we desire to accomplish in the coming cycle? New cycles are always inspiring, in reality a challenge. And what greater cycle is there than *now*, this moment? Now do I think the creative thought, which will take form and live, becoming an active force for good or evil, a blessing or a curse, not only to myself, but to all, for ALL ARE ONE.

What a responsibility! What a privilege! How shall we at-one ourselves with the vast, creative scheme of harmony, peace, beauty, law and order that illumines the heart of all the evolving schemes of Boundless Space? How — but by the power of creative thought; thus living grandly, with our faculties, our powers attuned to the Divine Love and Compassion that is the Heart of the Heart of the Great ALL. For —

when a man's character and constitution are made harmonious with the Universe, then he *knows*. Wisdom flows into his mind; he does not have to search for it. Cognisance of the natural verities of the Universe comes to his intellect, because his intellect works in harmony, in musical modulations, with the beating of the heart of the Universe. — *Wind of the Spirit*, p. 309

So, I ask myself what do I wish to accomplish in the coming cycle of 365 days? Each of course, must answer for himself. From one who was a wise and faithful Teacher we have these words, which might be taken as a criterion by which to measure our individual aspirations.

To do our utmost to fill this emptiness in human hearts, more than anything else I believe to be our duty — to teach men the direct path to wisdom, to teach men to make the inner emptiness a filled richness, a richness of wisdom and of quick and understanding sympathy, so that human lives by it may become grand and strong and true. Then we shall work justice, and gentle reason will preside in all our doings. — *Op. cit.*, p. 64

Having decided *what* — we wonder *how*. In *The Hill of Discernment* by A. Trevor Barker, there is a chapter on "The Creative Power of Thought in which the higher consciousness in man is spoken of as follows:

The higher part of us, the Divine part of us, is actually omniscient. therefore all we have to do is to find the means of opening ourselves to the inflow of this knowledge — and it can be done by asking for it, by aspiring toward it, by opening our minds to it, . . . and if you have a sufficiently strong desire and a sufficiently developed will, and enough confident expectation (which you may, if you wish, call faith), the result is quite certain. . . . This of course is a law which is constantly used by all of us all the time — generally perhaps more or less unconsciously; but it is a law which works, and it is an extremely creative law.

In trying to analyze this quotation we notice there are seven steps by which we open ourselves to the inflow of Divine Knowledge and we are reminded of the sevenfold structure of all embodied creation.

First — we sense the "Ideal" and ask for it.

Second — aspire toward it.

Third — open our minds to it.

Fourth — have a sufficiently strong desire.

Fifth — have a sufficiently developed will.

Sixth — enough confident expectation.

Seventh — the result is certain (the "Ideal" becomes embodied).

To ask — starts the flow of the Atmic Force. To aspire — is Buddhic activity by which the Ideal begins to have an illuminating quality. To have an open mind — allows for Manasic illumination by the Buddhic Light. Strong Desire — is the desire body of our creation. Developed will — is the Prana, the integrating aspect. Confident expectation — is the pattern body, held consistently in mind and is like unto Linga-sarira. The result — is the "Ideal" embodied and is the Sthula-sarira.

So we have a sevenfold working out of our plan, our Ideal, which quite consistently follows the embodying of any ideal or thought throughout the Universe. It is the pattern by which our creative thought is objectified.

Beauty-full will be our creations, if we, their creators, heed the words of the great Teachers who have so plainly pointed the way. Our creations *are* our thoughts embodied and no creation can be greater than the Thought which engendered it.

Therefore it is necessary to emphasize the tremendous importance of submitting every such determination, aspiration, desire, to the dictates of the Higher Self in each one of us, to the Silent Witness of all our endeavors — *Op. cit.*

What a responsibility! What a glorious opportunity to be co-workers with Divinity!

THE BORDERLAND OF THE OCCULT — *Charles J. Ryan*

If correctly reported, some curious things have recently happened in the world — not war news — which are worth notice. While, as already mentioned, certain advanced thinkers are greatly widening the outlook on natural laws even to a close approach to Theosophical fundamental principles, the majority of scientists are still very hesitant to study natural phenomena which do not apparently lead to practical results as they regard them, but which are destined to be found exceedingly practical when properly understood. A small movement "toward the left," the occult, has been made lately in regard to the tremendous mystery of Time. This was touched on in *THE THEOSOPHICAL FORUM* for April, 1945. Other phenomena, however, of importance in the revelation of the inner workings of Nature are still ignored. Ancient scholars, in India, Greece or elsewhere, made no hard and fast distinction between science, philosophy and religion, or even between what we regard as separate sciences. They looked upon life more as a whole and these things as merely aspects of the whole, and today a few daring scientific writers are trying to revive this point of view. It may be a very "practical" one, and one that would help in solving many of our problems such for instance as war and juvenile delinquency!

It would certainly be a great help to educationalists and reformers if they would learn about the potency of the "Astral Light" to reflect back the worst as well as the better deeds and thoughts of men, though of course unknowingly to the majority of human beings. The Astral Light is that "plane" of Nature which, as William Q. Judge says in *The Ocean of Theosophy* "contains, retains and reflects pictures of each and everything that happened to anyone, and also every thought; it permeates the

globe and the atmosphere around it; the transmission of vibration through it is practically instantaneous. . . ." It resembles the sensitive photographic plate which receives and retains images, and like the films which contain the potency that under proper conditions appears as a picture on the screen it occasionally flashes into physical visibility the images imprinted upon its substance, and sometimes, by a shifting of time values perhaps (?) presents the image of a coming event. H. P. Blavatsky said that the partition between the physical and astral planes is exceedingly thin and the wonder is that so few persons are consciously able to penetrate it. This is fortunate for us in our present stage of development, for as Mr. Judge says:

As an enormous screen or reflector the astral light hangs over the earth and becomes a powerful universal hypnotizer of human beings. The pictures of all acts good and bad done by our ancestors as by ourselves being ever present to our inner selves, we constantly are impressed by them by way of suggestion and go then and do likewise. —
Echoes of the Orient

For this reason a clear understanding of the properties of the Astral Light should be a matter of common knowledge and careful study by all who are working for the elevation of the race. Its presentation to the ignorant western world in this critical transition age is one of the outstanding benefits brought by the Theosophical Movement. Of course western science may have to discover it by its own methods, as has happened in so many cases of the *re-discovery* of ancient wisdom before they were accepted, but when it is accepted the knowledge will be found to be an infinitely greater boon to real progress than that of the interatomic forces.

One of the flashes of revelation from inner planes which Nature

occasionally provides, perhaps to test our advance in intuition, has lately been reported from England. According to the published reports, at least two thousand persons in the city of Ipswich and surrounding villages declared a few months ago that they saw a mysterious apparition in the late afternoon sky. It took the form of Christ on the Cross, even to such details as the nails. Military and naval officers were among the witnesses and many persons insisted upon making legal affidavits of what they saw. The vicar of the ancient church of St. Nicholas, the Rev. H. G. Green, made a careful investigation of the accounts, traveling considerable distances to examine people who had seen the phenomenon. As could be expected, the usual "explanation" of autosuggestion was offered, and one learned expert said, "the power of suggestion is terrific. If a person thinks he is going to see a vision, he will see it." Another said it was probably produced by particles of ice in the upper regions, but he does not explain how the ice shaped itself into a perfectly definite form whose details were observed by thousands of supposedly intelligent people; and the two theories are hardly compatible.

If such phenomena were hitherto unknown some farfetched explanation, such as suggestion from a single individual spreading instantly among thousands of people spread over many square miles might appear plausible to simple reasoners, absurd as it sounds; but many such cases are on record though not all so well attested. Constantine's alleged vision of the Cross in the sky which helped to change history may have been a pious fraud, but to deny or to attempt to explain on normal lines the many other unexplained apparitions reported from the sky in ancient and modern times requires considerable hardihood. It is easy to call them "mirages" and let it stand at that. Certainly ordinary mirages such as the textbooks on light and optics describe are explained by well known laws of reflexion and refraction. They

may always be expected when the conditions are favorable and can even be artificially reproduced in miniature. But such types as the Ipswich Cross do not follow the rules.

Putting aside the comparatively few well authenticated cases where the weird sky pictures showed events such as battles or funerals that took place *after* the vision, many cases of the Ipswich type are recorded which cannot be attributed to the ordinary laws of refraction by the wildest stretch of imagination. Fraud and practical joking is also ruled out by the conditions. Here are a few examples from our files.

Everyone has heard of Vanderdecken, the Flying Dutchman, whose spectral ship has long been said to haunt the seas near South Africa, and generally to bring ill-luck to the ship that encounters it. The evidence in one case is unusually responsible, being contributed by Royalty and officially published not long after the event. When King George V, father of the present King of England, was a midshipman on board a warship with his brother they kept a Diary which was published in 1886 under the title *The Cruise of H. M. S. Bacchante*, describing their voyage round the world. When the ship was near the Cape the following incident occurred as reported in the book:

July 11 (1881) At 4 a. m. the *Flying Dutchman* crossed our bows. A strange red light as of a phantom ship all aglow, in the midst of which light the masts, spars and sails of a brig 200 yards distant stood out in strong relief as she came up on the port bow. The look-out man on the fore-castle reported her close on the port bow, where also the officer of the watch from the bridge clearly saw her, as did also the quarter-deck midshipman, who was sent forward at once to the fore-castle; but on arriving there no vestige nor any sign whatever of any material ship was to be seen

either near or right away to the horizon, the night being clear and the sea calm. Thirteen persons altogether saw her. . . . The *Tourmaline* and *Cleopatra*, who were sailing on our starboard bow, flashed to ask whether we had seen the strange red light. At 10.44 a.m. the ordinary seaman who had this morning reported the *Flying Dutchman* fell from the foretopmast cross-trees and was smashed to atoms.

Then follows an account of the admiral having been "stricken down."

Other "phantom ships" which could not have been of the nature of the familiar mirages of vessels often seen in the Arctic regions have been seen in British seas, the New England coast, the St. Lawrence river and other places. Here is a well evidenced instance which aroused great interest and much discussion in the press. Shortly before the destructive eruption of 1886 of Mount Tarawera and the wonderful colored terraces of New Zealand a Maori war canoe was seen on the adjoining lake which seems to have been a very definite astral image conveying a warning to the Maoris of trouble. The *Dunedin Evening Star* of June 17, 1886, contains a long account of the phenomenon, saying in part:

While skirting the southern shore those in the tourists" canoe distinctly saw a Maori war canoe gliding along nearly parallel to and apparently racing them. The Maoris in the tourists" canoe hailed those in the war canoe, but received no answer. . . . They said there was no war canoe in the district, and therefore this must be a phantom, indicative of evil. When the natives and the tourists returned to Wairoa they made inquiries of the oldest natives, all of whom declared that such a canoe as had been described had never been seen by them. Mr. McRae, who has been seventeen years in Te Wairoa, also said that

he never knew a war canoe upon the waters of the Lake country. The day was beautifully clear.

Troops of soldiers have frequently been seen when there were none in the vicinity. A striking case is given by General Lord Roberts, the famous English Commander-in-Chief, in his *Forty-one Years in India*. During the Indian Mutiny in 1858 he and a friend with whom he was riding saw what appeared to be a body of hostile cavalry charging them. The illusion was perfect, and he writes:

We thought our last hour had come . . . when lo! as suddenly as they had appeared, the horsemen vanished as though the ground had opened and swallowed them; there was nothing to be seen but the plain, where a second before there had been a crowd of mounted men.

The Theosophical Forum

MAN AND HIS UNIVERSE (1) — *Beatrice Gray*

With increasing advance in scientific achievement and consequent increase of scientific authority in the world, some prominent scientists have themselves become alarmed at the lack of a corresponding development of human values, particularly in the field of morals. Dr. Compton, distinguished physicist, has stated:

The most fundamental values of morality and religion are ruthlessly shaken, with the implication that their value is negligible. It is just because so many scientific men seem blind to these human difficulties that one feels the greater concern lest in following science mankind may lose its soul.

The implication of Dr. Compton's words is clear. The question which he raises is: does science justify man in throwing over fundamental religious values? It boils down to the old so-called "conflict" between religion and science, the solution of which is even more imperative today as we stand on the threshold of the atomic age. It is a conflict which orthodox religions have failed to solve satisfactorily *to* scientific minds. It is a conflict which Unitarians, however, are well fitted to deal with, because on the one hand, having no dogmas, they can investigate science freely; while on the other hand, their greatest concern is the very "human difficulties" to which Dr. Compton believes many scientific men are blind.

As a contribution towards this end, we have started a Unitarian class to discuss the fundamental aspects of both science and religion. The first step in such a study is an adequate definition of religion, which each student must work out to his own

satisfaction. The second step is the study of the fundamental facts and theories of science, attempting to fit them into the religious picture in a manner which will at least give us a scientific basis for morals. Dr. Moulton, a foremost American astronomer, believes the fundamental responsibility of science to society lies in "deriving from the laws of the animate and inanimate universe about us and within us a basis for ethics whose authority for acceptance shall be in our own hearts."

For the definition of religion the following ideas are merely offered as suggestions. We sometimes hear it stated that nature inspires a more profound worship than the confines of a church; that under the vault of the sky, that amidst the grandeur of hill and valley and rushing water, that in communion with the delicate poetry of tree and flower, man undergoes what is called a religious experience. In other words, he directly touches some reality with the tendrils of his consciousness and thereby senses directly (that is, intuitively) the harmony in nature and the universe. He senses the linkages and the intricate interworkings of the cosmic infinitude — harmonious throughout. The religious experience seems to be a direct contact of the consciousness with the harmony of the natural universe.

Likewise harmony is obviously the key to the moral law. The moral instinct is man's intuition or direct perception of what is harmonious in human conduct. It is his longing to co-operate with his fellows in a universal scheme. The feeling of compassion, the longing to serve, are real experiences closely kin to the feeling of the holy and sacred in nature. Both experiences are fundamental, not depending on religious dogma. Such experiences constitute what may be called religion in a fundamental sense.

Such a definition of religion makes man's conduct not something to be determined by mere convention or convenience, but it bases

morals in the universe itself. This idea is not new. The ancient Oriental philosophies, in common with their modern representative Theosophy, emphasize the importance of man's co-operation with nature, making his own conduct a part of the harmony of the universal order. The origin of this harmony is said to be cosmic mind as a part of the universe itself. Perhaps we cannot prove scientifically to everyone's satisfaction that there is such a cosmic mind behind our little minds, though many scientists are thinking along these lines. Perhaps we cannot demonstrate the existence of the human soul in the scientific test tube, though a few scientists do even believe in the immortality of the soul on scientific grounds. But if, by our study of scientific facts as the second step in our undertaking, we can prove but one thing: the fundamental idea of harmony in the universe which the facts themselves follow, we will then at least have a scientific basis for the religious experience and above all for the moral law. That is, we will have a scientific basis for religion as above defined.

We can then say with scientific accuracy that the man who is living in harmony with his fellow men is following the fundamental law of the universe, while the man who acts for his puny self alone is working against the laws of nature and nature in due time will react against him. This idea is the very essence of the Christian teaching: "Whatsoever a man soweth, that shall he also reap." It is likewise the basic idea of the Bhagavad-Gita, of ancient India and is well expressed by the single Sanskrit word "Karman," which may be translated "action and reaction in the universe."

Let man have no fear, then, of the punishment of some external vengeful God, nor let him sit around waiting for some future bliss. It is now that he must seek to become an ever more co-operative part of the universal order. For right now man is a part of the

universe itself, whose scientific basis we believe is harmony itself — is ethics itself. Happy is the man who forgets himself in unselfish service. He has become a part of the harmonious whole.

MODERN THOUGHT IN THE LIGHT OF THE VEDANTA: I (1) —

Ernest P. Horowitz

Mr. Chairman and Gentlemen,

The great ideal of the West is individual freedom in all social relations, that of the East spiritual freedom from all external relations. Accordingly, the Western type of perfection is the man who has grown into a strong personality and is making good use of it, in order to acquire money, position and influence.

Not so the ideal type of the East, the contemplative mind which loves to turn from the world of sense and its cheap pleasures to enjoy the beatitude of the inner life of the soul. It is the deeply religious soil of India that has matured such tender blossoms of piety as the cultured Rammohun Roy or the saintly Ramakrishna Paramahansa, whose life and work are now becoming known to us from the lucid account published by Prof. Max Müller.

The evolution of European thought has proceeded in a more material direction, has taken a practical turn. Europe does not pay so much attention to her saints and philosophers as to the practical geniuses which she has produced in abundance. Mechanical inventors and geographical discoverers like Edison and Nansen, physical scientists and popular reformers of the type of Prof. Koch and Gen. Booth, strong will-powers in political life such as Bismarck and Gladstone — these are the men one admires because their ideas are directly applicable to practical life, and conducive to the material welfare of society.

Western people love to build up and to assert a strong personality, whilst Indian thinkers rather endeavor to renounce and to break up the personal self, looking upon it not as a help

but a hindrance in the way of spiritual progress. All the ancient systems of India define sin as personal limitation. Man is born in sin, says the Vedanta, that is, as a separate being. He feels limited and in nature's bondage, and has forgotten that he is free and infinite. To recover full consciousness of our true nature is the tempting ideal religion holds up before us; the thorny path to which she points for its realisation is utter self-abandonment. To feel himself free and immortal, man is to reject all selfish desires, and to throw out an unbroken current of sympathy and pity towards humanity, nay, the whole creation.

Love is the law which permeates every great religion, but physical science has no room for ethics. Modern scientists do not refute the fact that all manifestations are necessarily finite, that individual life cannot be but relative; but they are agnostics as to the reverse side of the picture; they will have nothing to do with the absolute side of nature, the Unknowable, the Infinite, God, or whatever name has been applied to the Eternal First Cause. Physicists are, and ought to be agnostics, because metaphysical facts, such as freedom, love and immortality, can never come under the cognisance of the senses and the intellect, but are only realised by mental negation: "Neti, neti," it is not this, it is not that; or by renunciation: Do not attach yourself to this form, do not attach yourself to that form. Therefore, agnosticism seems to me the best justified and the most dignified attitude in the domain of physical science, and her devotees cannot do better than draw a rational boundary-line between the Knowable and the Unknowable, and to exploit the Knowable to the fullest.

Different ideals must lead to different practices. Let us look for a moment at the practical outcome of these two ideas in East and West. There is a lack of organisation in India, I understand; there is but little political freedom, and not enough of national self-consciousness. The Hindus have, at all times, looked upon

themselves too much as pilgrims and exiles on earth to feel great ambition for national independence and worldly aggrandisement. Their ultimate desire (I speak of the large class of religious-minded Indians) is rather to go through life untouched by the fleeting pleasures of the noisy world, and, after fulfilling their various duties as householders and citizens, to dissolve all social ties, and to enjoy, in the solitude of the forest, the more lasting comfort of meditating on God. In compensation, the Hindu race has been granted beatific visions of the Heavenly Kingdom of which we poor worldlings can only catch a few occasional glimpses by the study of their divine scriptures and philosophies, more particularly the Vedanta.

How different is occidental life! Look at this tremendous material civilization in the midst of which we live, gigantic in extension and specialisation, wonderful in organisation and working order. Science, in its rapid progress and eager search, has utilised, in the service of man, every department of nature as far as hitherto known, and is daily benefitting human knowledge and human welfare. This huge social fabric of modern civilisation is held together and worked by efficient laws, framed, not by the authority of a few, but by the common consent of all — laws which help to adjust the economic relations of vast masses of population, and which allow, even to the poor and helpless, a share in the blessings of our social legislation, such as free education, free hospitals, workhouses for the aged poor, employers' liability, and many more. A dense net of railway lines and telegraph wires brings the most distant places into close contact; a quick postal service and a cheap daily press bring nearer together and often unite the multifarious interests of whole districts and countries. This is the bright side of the picture.

But where is much light there is much shadow. England is proud of the personal liberty of her citizens, of the economic freedom

they enjoy under her rule, and rightly so. But what does social freedom mean? It means that all members of society are equally free before the law, that is, equally limited in their mutual relations in life. Social freedom must, of necessity, be relative. Economic laws are not permanent, but swing to and fro on the self-adjusting sliding scale of concessions and restrictions of class-privileges. So there can never be absolute freedom where economic conditions exist, where society is organised, where classes are divided and interests separated, where person stands against person. Personal interests will clash and strife and competition set in; that is the ultimate fate of every organisation.

Why do we organise? Because we wish to assert and protect the particular interests of a special society or nation, and because we do not want that particular body of men to succumb, but to survive in the struggle for superiority or, at least, equality. This process is going on all over nature, in the vegetable and animal economy as well as in the political economy of the human species. Nature is manifestation; we have to face this fact. And all manifestation is necessarily finite and different in parts; and wherever is partition and difference, there cannot be harmony and agreement. That is the invariable law of the natural world. Absolute freedom is not of this world, but is anticosmic and enjoyed in the same measure as attachment to the world of law and sense is renounced. Full freedom from the bondage of economic laws can only be enjoyed by those who have overcome greed and lust and anger, by the humble and unselfish. The truth that freedom and economics are antagonistic has been more clearly reasoned out, it seems to me, and more widely accepted, in India than in Europe; and that is why many thoughtful people amongst us believe that Indian idealism and asceticism will prove a healthful purgative to our materialistic and utilitarian conceptions.

The better man learns to perceive Unity in variety, the Permanent in the transient, God in the world, the more does his consciousness expand, does his heart open, in love and sympathy to his fellow-men, the more freedom and peace does he enjoy in spirit, and the more calmly and efficiently is he able to perform the various duties which are assigned to him in life. God is love, and he who loveth best, worketh best. That is sound Vedanta doctrine.

A monistic faith, such as the Vedanta, appears to me the safest and simplest guide through life's trials and temptations. Every human heart yearns, at times, to be lifted up above the petty cares and the drudgery of the daily routine, and to enjoy holy calm and the peace which cannot be got by mere understanding. Is there any idea more conducive to such a happy state of the soul than the monistic ideal of the Vedanta, than the bold cognition of "One Life without a second" running through the created world, of One Existence, all-conscious, ever free and blessed, than the noble faith in the saving and purifying power of self-sacrifice and disinterested love? The flash of intuition which reveals to man the Infinite through the myriads of its finite semblances, the inner illumination which manifests to the soul the divine essence underneath the human form, is the glorious promise of the Vedanta to her earnest followers: "Tat twam asi," thou art that Infinite, but thou hast forgotten thy God-hood, and hast hypnotised thyself into the narrow belief that thou art man. This nescience is not individual, says the Vedanta, but universal. Nescience is a cosmic illusion (Maya.) which enslaves all nature. We are born in Maya, and shall be born in it again until we acquire true knowledge by means of renunciation, and by the light of the Vedanta.

Vedanta teachers have of late aroused much enthusiasm in England and America. The reason is, I believe, that modern

science is unknowingly advancing on the same path, and searching after the same Unity which has been realised by the sages of Greece and India thousands of years ago. But while our modern physicists keep their eyes down to the earth, and look into the minutest details of Nature's shell, your ancient seers and prophets have lifted up their searching soul towards Heaven, and drawn divine inspiration from on high. And that has enabled them to see deeper into the hidden nature of things, and to find subtler laws and higher truths than we can ever hope to discover by comparison, classification and generalisation. Hindu wisdom has been quick in perceiving that every physical force and chemical particle which exists in the macrocosm of nature, must likewise be found in the microcosm of man. And so your Yogins (I do not mean the poor deluded jugglers who run after psychic powers, but the self-illuminated Aptas who desire nothing but freedom of the soul and God-consciousness) I say, for this reason searchers after God, are gladly turning from the laborious study of the endless differentiations in nature, and prefer to concentrate their undivided attention upon the inward Self, in order to learn discrimination between their destructible, mortal portion and the immortal Witness who eternally dwells in the heart of the creature. After becoming conscious of that Divine light from which all nature borrows her reflected radiance, the devotee has only one object left in life — to give up, little by little, earthborn desires, and to live more and more in what is now a reality to him, in the One Universal Soul. It is called "Atman" in Sanscrit, and is the same as Emerson's "Over-Soul."

The Over-soul is real and transcending all thought, teaches the Vedanta, whilst the individual soul is called apparent, and a necessity of thought. Everything finite is apparent, and the individual is finite, merely the sum-total of his previous thoughts and desires. The individual is continually changing, according to

the thoughts he thinks and the life he lives. The individual is made up, not simple but a compound of little permanence. Therefore, individual limitation is looked upon by Vedantic philosophers as a sinful state of ignorance and bondage, whilst universal expansion by means of love and wisdom is considered perfect freedom and happiness.

(To be continued)

The Theosophical Forum

WHAT'S WRONG WITH METAPHYSICS? — *Katherine Heck*

Intrinsically, there is nothing wrong with metaphysics or mysticism in most of its phases. The trouble lies with the student of "other world" philosophies. Sometimes it seems that "victim" is a better word.

The following comments are not going to deal with the obvious dangers of the seance or warn against dabbling in black magic, but are for those of us who think: "I know better than that. It will take a mighty smart dugpa to fool me. I am a *real* student of *true* occultism." Yes? Well, there are degrees in everything and hierarchies in every place. There are smart devils for smart people. Everything is nicely graded in this thoroughly organized universe of which we mystics are so sure we are a part. And right here is the crux of the matter. If we become so convinced that we and the Universe are one, it is only a question of time in the cyclic development of the Western mystic, at least, before we *are* the Universe and our present incarnations are but paltry mud spots on the whole garment of Truth. We don't live here any more. We are heading straight for Nirvana on a private train labeled "Personal Salvation" for the Western mystic, and "Freedom from the Wheel of Life" for the Eastern philosopher.

In the T'ang Dynasty the Chinese poet Liu Chang-Ch'ing wrote the following:

"Walking along a little path,
I find a footprint on the moss,
A white cloud low on the quiet lake,
Grasses that sweeten an idle door,
A pine grown greener with the rain,
A brook that comes from a mountain source . . .

And, mingling with Truth among the flowers,
I have forgotten what to say."

This Taoist poem contains a key to mysticism. Inarticulateness is a mark of the true mystic, and throughout all literature his message lies in what he has sense enough not to say. Mystics and true Occultists have a language of the heart. In the silence they converse one with another, and without words they enter together into the bliss of "at-one-ness" which is their goal.

Now it would appear from this that mystics and students of metaphysics would be the most unselfish of people. Indeed they would have a feeling for brotherhood which would make them knowers of sorrow and sharers of joy. As a matter of fact, you would suppose that a true Occultist would be tops as a psychologist just because he not only knows people but in a certain sense *is* "people." But it doesn't often happen that way because, first and foremost, mystics and occultists are people too and not perfect in their chosen path, however altruistic that path may be. Our problem, therefore, is with the sincere student on the path of wisdom or metaphysics who, by his very sincerity and earnestness, is most likely to miss the forest for the trees. He concentrates so hard on casting a mote out of his own eyes that sometimes he forgets that there are other people with eyes and motes of their own — and sorrows too.

So, a warning to ourselves: remember the whole. We have a body as well as a spirit and soul. Theosophy declares that the whole constitution of man is dependent upon its basic vehicle for expression and the chance to progress. Then why the haste to impede ourselves? Here is our opportunity as evolving entities to learn certain lessons, impossible to experience if we were not here on earth, with earth bodies and the necessary equipment for reacting to physical, mental, moral, and spiritual stimuli which

can operate only on the Earth. The Earth is an entity too. We are not just our physical bodies, and the Earth is not just a bunch of oceans and land masses either. So it is quite possible that we have reached a stage in our evolution where fundamentally we are supposed, for our souls" good, to learn something about Globe D, the Earth chain. Otherwise, why are we here with all our fine equipment for learning?

What is really wrong with metaphysics? Intrinsically, nothing at all. But a subtle trap is set for the student who allows metaphysics to lead him — very quietly, almost imperceptibly — to a form of selfishness that outranks all the petty grabbing and pushing and "Me first-ness" of the world. *Spiritual selfishness*. But, alas, it is so often beautifully disguised as a love of mankind and an apparently altruistic search for truth.

It has been said countless times, but is worth repeating, that love and loyalty in our immediate personal contacts and fidelity to our present duties and tasks will change a theoretic acceptance of Universal Brotherhood into actual practice. In this wise, we will find ourselves firmly anchored to the path of aspiring Godhood, while to our hearts belong the stars.

The Theosophical Forum

THEOSOPHY AN OBJECTIVE IDEALISM — *Abbot B. Clark*

Theosophy is an Objective Idealism. It is an Idealism, but not a pure or complete idealism like Bishop Berkeley's philosophy or Christian Science or some of the Oriental philosophies which deny the existence of matter altogether and say, All is mind, there is no matter. Or, All is God, or Spirit, there is no matter, no objective world. Theosophy is more realistic than that. Theosophy says that the objective world is a Maya, that is it is not as real as it seems, though it is real enough to those beings who are enmeshed in it. During the period of manifestation or Manvantara the objective world is real to all the beings who are a part of the manifestation but as the manifestation proceeds on the Upward Arc of Evolution it is indrawn into the Divine Spirit from which it first emanated.

All religions and many of the philosophies (the spiritual ones) admit, or rather, affirm, that the fundamental principle of the universe is a spiritual principle, call it by whatever name you like, God, or Brahman, or Tao, Adi-Buddha, or a hundred other names. In any case it is as real to the spiritual consciousness as air and sunshine are real to our objective consciousness. Let us quit disputing over names and admit that a fundamental Truth, a fundamental Reality, underlies all religions and that the forms which the various religions and philosophies take are more or less perfect, more or less imperfect, efforts to explain the Truth to the people or the age to which it was given. Theosophy is the latest such effort. Theosophy will explain how the physical world is only a temporary, transitory thing, therefore called by philosophy unreal, a Maya, a deceptive thing, not just what it seems. Modern science should greatly help us to understand this point. In the laboratory a qualified scientist, with proper

equipment, can demonstrate to us quite conclusively that this solid floor on which we stand is composed of atoms which can be shown to be only points of electrical energy, electrons and protons, with as much space between them as there is between the sun and the planets. This floor, this physical world, is real to us because we are composed of the same electrons and protons as it is. We are tuned in to it, we are in the same general or cosmic rate of vibration as it; therefore it seems real, it is tangible to us. Like the empty, soundless air, when we tune our radio into it we hear. If, like the clairvoyant, we could tune ourselves into a finer state of matter, the Astral Light, then the Astral Light would be the real to us. We should see right through physical walls. "Matter" would seem to us as a mere shadow. The astral would be the real world.

Now, suppose we could tune in to the next higher plane, the Manasic, the world of "mind stuff," Akasa. From there the astral world would seem to us as the great illusion it really is. Suppose again, that we tune in to the world of pure spirit, Buddhi, Christos. Then that, indeed, would be the real. And so on forever. But we have no words and no higher faculties for the divine infinities which may be beyond the spirit. We can say, if we wish, super-cosmic consciousness — Nirvana — the One Reality to the Nirvani, but an utter abstraction to us.

The point to remember is that whatever we are tuned in to, that, to us, for the time, is the real. Each time we wake up to something higher, that, to us, becomes the real. What is below us is left behind, an unreality. This does not mean that there is no reality. On the contrary, the only permanent, the only eternal part of us is the ever present, ever accessible, Divinity within.

So Theosophy is an Objective Idealism because it postulates a fundamental divine Reality and admits a seeming or temporary

or transitory reality to all manifested planes as long as the manifestation (Manvantara) lasts.

The Theosophical Forum

POINTS OF AGREEMENT IN ALL RELIGIONS (1) — William Q. Judge

What room for doubt and what room for sorrow is there in him who knows that all spiritual beings are the same in kind and only differ from each other in degree?

The sun does not shine there, nor the moon and the stars, nor these lightnings, and much less this fire. When He shines, everything shines after Him; by His light all this is lighted.

Lead me from the unreal to the real!

Lead me from darkness to light!

Lead me from death to immortality!

Seeking for refuge, I go to that God who is the light of His own thoughts;

He who first creates Brahman and delivers the Vedas to him; who is without parts, without actions, tranquil, without fault, the highest bridge to immortality, like a fire that has consumed its fuel. — *Mundaka Upanishad*

Such are some of the verses, out of many thousands, which are enshrined in the ancient Hindu Vedas, beloved by those we have called "heathen"; those are the sentiments of the people we have called idolaters only.

As the representative of the Theosophical Movement I am glad to be here, and to be assigned to speak on what are the points of agreement in all religions. I am glad because Theosophy is to be found in all religions and all sciences. We, as members of the Theosophical Society, endorse to the fullest extent those remarks

of your chairman in opening, when he said, in effect, that a theology which stayed in one spot without advancing was not a true theology, but that we had advanced to where theology should include a study of man. Such a study must embrace his various religions, both dead and living. And pushing that study into those regions we must conclude that man is greatly his own revealer, has revealed religion to himself, and therefore that all religions must include and contain truth; that no one religion is entitled to a patent or exclusive claim upon truth or revelation, or is the only one that God has given to man, or the only road along which man can walk to salvation. If this be not true, then your Religious Parliament is no Parliament, but only a body of men admiring themselves and their religion. But the very existence of this Parliament proclaims the truth of what I have said, and shows the need which the Theosophical Society has for nineteen years been asserting, of a dutiful, careful, and brotherly inquiry into all the religions of the world, for the purpose of discovering what the central truths are upon which each and every religion rests, and what the original fountain from which they have come. This careful and tolerant inquiry is what we are here for today; for that the Theosophical Society stands and has stood; for toleration, for unity, for the final and irrevocable death of all dogmatism.

But if you say that religion must have been revealed, then surely God did not wait for several millions of years before giving it to those poor beings called men. He did not, surely, wait until He found one poor Semitic tribe to whom He might give it late in the life of the race? Hence He must have given it in the very beginning, and therefore all present religions must arise from one fount.

What are the great religions of the world and from whence have they come? They are Christianity, Brahmanism, Buddhism,

Confucianism, Judaism, Zoroastrianism, and Mohammedanism. The first named is the youngest, with all its warring sects, with Mormonism as an offshoot and with Roman Catholicism boldly claiming sole precedence and truth.

Brahmanism is the old and hoary religion of India, a grown-up fully-developed system long before either Buddhism or Christianity was born. It extends back to the night of time, and throws the history of religion far, far beyond any place where modern investigators were once willing to place even the beginning of religious thought. Almost the ancient of ancients, it stands in far-off India, holding its holy Vedas in its hands, calmly waiting until the newer West shall find time out of the pursuit of material wealth to examine the treasures it contains.

Buddhism, the religion of Ceylon, of parts of China, of Burmah and Japan and Tibet, comes after its parent Brahmanism. It is historically older than Christianity and contains the same ethics as the latter, the same laws and the same examples, similar saints and identical fables and tales relating to Lord Buddha, the Savior of Men. It embraces today, after some twenty-five hundred years of life, more people than any other religion, for two-thirds of the human family profess it.

Zoroastrianism also fades into the darkness of the past. It too teaches ethics such as we know. Much of its ritual and philosophy is not understood, but the law of brotherly love is not absent from it if it teaches justice and truth, charity and faith in God, together with immortality. In these it agrees with all, but it differs from Christianity in not admitting a vicarious salvation, which it says is not possible.

Christianity of today is modern Judaism, but the Christianity of Jesus is something different. He taught forgiveness, Moses taught retaliation, and that is the law today in Christian State and

Church. "An eye for an eye, and a tooth for a tooth" is still the recognized rule, but Jesus taught the opposite. He fully agreed with Buddha, who, preaching 500 years before the birth of the Jewish reformer, said we must love one another and forgive our enemies. So modern Christianity is not the religion of Jesus, but Buddhism and the religion of Jesus accord with one another in calling for charity, complete tolerance, perfect non-resistance, absolute self-abnegation.

If we compare Christianity, Buddhism, and Hinduism together on the points of ritual, dogmas, and doctrines, we find not only agreement but a marvelous similarity as well, which looks like an imitation on the part of the younger Christianity. Did the more modern copy the ancient? It would seem probable. And some of the early Christian Fathers were in the habit of saying, as we find in their writings, that Christianity brought nothing new into the world, that it existed from all time.

If we turn to ritual, so fully exemplified in the Roman Catholic Church, we find the same practices and even similar clothing and altar arrangements in Buddhism, while many of the prescribed rules for the altar and approaching or leaving it are mentioned very plainly in far more ancient directions governing the Brahman when acting as priest. This similarity was so wonderful in the truthful account given by the Catholic Priest Abbe Huc that the alarmed Church first explained that the devil, knowing that Christianity was coming, went ahead and invented the whole thing for the Buddhists by a species of *ante jactum* copying, so as to confound innocent Catholics therewith; and then they burned poor Abbe Hue's book. As to stations of the cross, now well known to us, or the rosary, confession, convents, and the like, all these are in the older religion. The rosary was long and anciently used in Japan, where they had over one hundred and seventy-two sorts. And an examination of the mummies of old Egypt reveals

rosaries placed with them in the grave, many varieties being used. Some of these I have seen. Could we call up the shades of Babylon's priests, we should doubtless find the same rituals there.

Turning to doctrines, that of salvation by faith is well known in Christianity. It was the cause of a stormy controversy in the time of St. James. But very strangely, perhaps, for many Christians, the doctrine is a very old Brahmanical one. They call it "The Bridge Doctrine," as it is the great Bridge. But with them it does not mean a faith in some particular emanation of God, but God is its aim, God is the means and the way, and God the end of the faith; by complete faith in God, without an intermediary, God will save you. They also have a doctrine of salvation by faith in those great sons of God, Krishna, Rama, and others; complete faith in either of those is for them a way to heaven, a bridge for the crossing over all sins. Even those who were killed by Krishna, in the great war detailed in the *Ramayana*, went straight to heaven because they looked at him, as the thief on the cross looking at Jesus went to Paradise. In Buddhism is the same doctrine of faith. The twelve great sects of Buddhism in Japan have one called the Sect of the Pure Land. This teaches that Amitabha vowed that anyone who calls three times on his name would be born into his pure Land of Bliss. He held that some men may be strong enough to prevail against the enemy, but that most men are not, and need some help from another. This help is found in the power of the vow of Amita-Buddha, who will help all those who call on his name. The doctrine is a modified form of vicarious atonement, but it does not exclude the salvation by works which the Christian St. James gives out.

Heaven and Hell are also common to Christianity, Buddhism and Brahmanism. The Brahman calls it Swarga; the Buddhist, Devachan; and we, Heaven. Its opposite is Naraka and Avichi. But names apart, the descriptions are the same. Indeed, the hells of

the Buddhists are very terrible, long in duration and awful in effect. The difference is that the heaven and hell of the Christian are eternal, while the others are not. The others come to an end when the forces which cause them are exhausted. In teaching of more than one heaven there is the same likeness, for St. Paul spoke of more than a single heaven to one of which he was rapt away, and the Buddhist tells of many, each being a grade above or below some other. Brahman and Buddhist agree in saying that when heaven or hell is ended for the soul, it descends again to rebirth. And that was taught by the Jews. They held that the soul was originally pure, but sinned and had to wander through rebirth until purified and fit to return to its source.

In priesthood and priestcraft there is a perfect agreement among all religions, save that the Brahman instead of being ordained a priest is so by birth. Buddha's priesthood began with those who were his friends and disciples. After his death they met in council, and subsequently many councils were held, all being attended by priests. Similar questions arose among them as with the Christians, and identical splits occurred, so that now there are Northern and Southern Buddhism and the twelve sects of Japan. During the life of Buddha the old query of admitting women arose and caused much discussion. The power of the Brahman and Buddhist priests is considerable, and they demand as great privileges and rights as the Christian ones.

Hence we are bound to conclude that dogmatically and theologically these religions all agree. Christianity stands out, however, as peculiarly intolerant — and in using the word "intolerant" I but quote from some priestly utterances regarding the World's Fair Parliament — for it claims to be the only true religion that God has seen fit to reveal to man.

The great doctrine of a Savior who is the son of God — God

himself — is not an original one with Christianity. It is the same as the extremely ancient one of the Hindus called the doctrine of the Avatara. An Avatara is one who comes down to earth to save man. He is God incarnate. Such was Krishna, and such even the Hindus admit was Buddha, for he is one of the great ten Avatars. The similarity between Krishna or Cristna and Christ has been very often remarked. He came 5,000 years ago to save and benefit man, and his birth was in India, his teaching being Brahmanical. He, like Jesus, was hated by the ruler, Kansa, who desired to destroy him in advance, and who destroyed many sons of families in order to accomplish his end, but failed. Krishna warred with the powers of darkness in his battles with Ravana, whom he finally killed. The belief about him was that he was the incarnation of God. This is in accord with the ancient doctrine that periodically the Great Being assumes the form of man for the preservation of the just, the establishment of virtue and order, and the punishment of the wicked. Millions of men and women read every day of Krishna in the *Rdtnd-yana* of *Tulasi Das*. His praises are sung each day and reiterated at their festivals. Certainly it seems rather narrow and bigoted to assume that but one tribe and one people are favored by the appearance among them of an incarnation in greater measure of God.

Jesus taught a secret doctrine to his disciples. He said to them that he taught the common people in stories of a simple sort, but that the disciples could learn of the mysteries. And in the early age of Christianity that secret teaching was known. In Buddhism is the same thing, for Buddha began with one vehicle or doctrine, proceeded after to two, and then to a third. He also taught a secret doctrine, that doubtless agreed with the Brahmans who had taught him at his father's court. He gave up the world, and later gave up eternal peace in Nirvana, so that he might save men. In this the story agrees with that of Jesus. And Buddha also resisted

Mara, or the Devil, in the wilderness. Jesus teaches that we must be as perfect as the Father, and that the kingdom of heaven is within each. To be perfect as the Father we must be equal with him, and hence here we have the ancient doctrine taught of old by the Brahmans that each man is God and a part of God. This supports the unity of humanity as a spiritual whole, one of the greatest doctrines of the time prior to Christianity, and now also believed in Brahmanism.

That the universe is spiritual in essence, that man is a spirit and immortal, and that man may rise to perfection, are universal doctrines. Even particular doctrines are common to all the religions. Reincarnation is not alone in Hinduism or Buddhism. It was believed by the Jews, and not only believed by Jesus but he also taught it. For he said that John the Baptist was the reincarnation of Elias "who was for to come." Being a Jew he must have had the doctrines of the Jews, and this was one of them. And in *Revelations* we find the writer says: "Him that overcometh will I make a pillar in the house of my God, and he shall go no more out."

The words "no more" infer a prior time of going out.

The perfectibility of man destroys the doctrine of original sin, and that perfectibility was taught by Jesus, as I said. Reincarnation is a necessity for the evolution of this perfection, and through it at last are produced those Saviors of the race of whom Jesus was one. He did not deny similar privileges to others, but said to his disciples that they could do even greater works than he did. So we find these great Sages and Saviors in all religions. There are Moses and Abraham and Solomon, all Sages. And we are bound to accept the Jewish idea that Moses and the rest were the reincarnations of former persons. Moses was in their opinion Abel the son of Adam; and their Messiah was to be a reincarnation of Adam himself who

had already come the second time in the person of David. We take the Messiah and trace him up to David, but refuse, improperly, to accept the remainder of their theory.

Descending to every-day life doctrines, we find that of Karma, or that we must account and receive for every act. This is the great explainer of human life. It was taught by Jesus and Matthew and St. Paul. The latter explicitly said:

Brethren, be not deceived; God is not mocked; for whatsoever a man soweth, that also shall he reap.

This is Karma of the Brahman and Buddhist, which teaches that each life is the outcome of a former life or lives, and that every man in his rebirths will have to account for every thought and receive measure for the measure given by him before.

In ethics all these religions are the same, and no new ethic is given by any. Jesus was the same as his predecessor Buddha, and both taught the law of love and forgiveness. A consideration of the religions of the past and today from a Theosophical standpoint will support and confirm ethics. We therefore cannot introduce a new code, but we strive by looking into all religions to find a firm basis, not due to fear, favor, or injustice, for the ethics common to all. This is what Theosophy is for and what it will do. It is the reformer of religion, the unifier of diverse systems, the restorer of justice to our theory of the universe. It is our past, our present, and our future; it is our life, our death, and our immortality.

WISDOM GREAT AS LIFE CAN GIVE — *Irene R. Ponsonby*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

You shall have wisdom great as Life can give, You shall have happiness as deep as tears. — Herbert J. Hall

Earth-life is a most important phase of growth for the human entity. It incorporates all grades of progress and provides the universal text-book of evolution. Here we put into practice those of our ideas and ideals which can be materialized, and here we accumulate the abstract dreams and aspirations which create for us the state of Devachan, the aroma of which we assimilate. Our future characters are the result of the grade we make in this life plus the impression left by the devachanic interlude. Earth-life, therefore, is an intensive process of becoming at one with the soul which has been strengthened and inspired in Devachan.

Of the "wisdom great as life can give" we take what we can — or, more technically but equally correctly, what we are; for our life's experiences are attracted by sympathy or antipathy to us: they are the reflexion of ourselves in others and on surrounding Nature, and their and its reaction. Thus it is that we learn all the most vital lessons through human relationship — a fact which is strictly in accordance with the structure of and the habits inherent in the Universe.

Universal Brotherhood, or the unified coherence in Nature, is no mere philosophically logical argument exposed to every travesty of self-interest. It signifies for the Theosophist, as for every deep thinker, the mystic love of all being, the human expression of

universal compassion which is the constructive energy and creative impetus in the Universe. It is the insignia of true manhood.

Like Shakespeare's quality of mercy, it

is not strained,
It droppeth, as the gentle rain from Heaven
Upon the place beneath.

for it

springs not from the founts
Of love or hate; but rather from the sure
Allegiances of spirit, strong proud, pure. (1)

The Universe is a mighty organic entity in which there are no radical divisions or separations, and wherein the interacting of every part with every other part or with the whole is regulated by Nature's fundamental law of Compassion, for harmony is inherent throughout. However, since every part of this mighty whole varies in its state of evolution or relative perfection, and grade of individualization, it logically follows that there is conflict of wills in the processes of adjusting the individual desire to the universal design. This apparent 'struggle' arises in the yearning of the relatively imperfect towards greater and ever greater states of relative perfection. Knowing ourselves as less than we would be, we are dissatisfied, and recognizing this self-conflict in ourselves we sense it in others and thus life as a whole is colored by our individual self-conflict. This inherent discontent will probably always exist, for it is written in *The Secret Doctrine* (p. 95, Vol. II.): "Where there is no struggle, there is no merit"; nevertheless, while our own self-conflict may be the means of learning greater compassion, it should also be the means through which we become more in harmony with all Being.

The present evolutionary tendency, and one which will increase with the coming cycles, is for the individual man to unite more and more with his fellows on the basis of a mutual heritage of godliness. To this tendency all the principles of evolution and the very constitution of man lend themselves.

Man is united to his fellow-men, physically, intellectually, and spiritually. Our bodies are composed of the life-atoms which form the substances of the Earth: our psycho-emotional natures are the imbodiment of astral forces: intellectual life-atoms produce and evolve our intelligences: and the spirit of man is an aggregated unit formed by the life-essences of the spiritual realms of the Universe. We all share alike in this wondrous bounty, though we differ in the uses to which we put our talents. While we can always give from our own storehouse the unique results of our individual harvesting, we cannot deprive another of his rightful share, for

every force in the universe thrills through our being, and every substance in the Universe has done its proportionate part in building us up and therefore has given us somewhat of itself.— *The Esoteric Tradition*, p. 493

During our Earth-lives some of these life-atoms belong to us — they form our composite constitutions; others are but visitors, that come to us, stay a while, and then go elsewhere. When the cohering cord is withdrawn at the close of a period on Earth, our own atoms scatter, and who can say where they may not be found? We have been told that it is probable a large number of the life-atoms belonging to any excarnate entity are to be found in the bodies of men and women now living here. (See *The Esoteric Tradition*, p. 910.)

Our life-atoms have no racial prejudice: their affinities are fundamentally international. This accounts for the universally

instantaneous appeal of beauty, in Nature, Art, and Music, to the human mind and heart. We have proved these facts on the materio-physical plane; would that we knew more about their scope on the less material, and therefore far more vital, planes of consciousness.

It naturally follows that a study of our atomic relationship on the planes of manifestation leads us to the subject of the interwoven strands of destiny — our karmic relationships. These links differ from atomic kinship in that, whereas the latter are beyond our conscious control, our karmic links are the direct outcome of our willing and doing throughout many ages.

Some hundreds of thousand years ago humanity passed the lowest point in this particular phase of its present evolutionary progress on Earth. At that time the balance was struck in the coinciding processes of the involution of spiritual forces and the evolution of material ones: but both before and since that ebb-point, the current of readjustment, of sifting, between the forces following these processes has been intensified and the impulses towards accord on the one hand, and discord on the other, have gained impetus. We have been deliberate participants in these transition-cycles, with the result that today we find ourselves intricately and obscurely enmeshed — self entangled in a net of universal causation. We have forgotten the preceding scenes in which the plot took shape, but we know only too well the frustration which we are faced with now, when, yearning to be, we are checked by our unevolved selves.

UPAYA KAUSALYA: THE DOCTRINE OF SKILLFUL MEANS — *Harry B. Murphy and Karl Bendroth*

According to Har Dayal, *Updya Kausalya* is "the most important of the four supplementary *paramitas*" (1). It is explained as "skilfulness or wisdom in the choice and adoption of the means or expedients for converting others or helping them."

A wise and compassionate seer, a *bodhisattva*, though he perceives the truth of things directly, by direct experience, and nature's inner secrets are to him an open book, yet is not able to correctly express his understanding in words. As the Lankavatara Sutra says, "Words are neither different nor not different from meaning. . . . The Tathagatas do not teach a Dharma that is dependent upon letters. Anyone who teaches a doctrine that is dependent upon letters and words is a mere prattler, because Truth is beyond letters and words and books." (2) There is no verbal statement that a wise seer can make about the deeper workings of nature which does not in some way do violence to the reality as he experiences it.

In addition to the fact that a *bodhisattva could not* express in words the real truth of a metaphysical question even if he wanted to, there is also the consideration that even a too-full approximation to the truth would not be good for many of his hearers. As T. S. Eliot puts it,

. . . . humankind
Cannot bear very much reality. (3)

Too much of truth can set back disciples from the Path and discourage them. Nor would disciples be able even to understand many of the things which the higher wisdom of a *guru* would be

able to tell them.

For each one must hear only what he *can* hear, what he is able to hear. And thus it is that none of us ever reads the truth or hears the truth from our teachers — but our teachers, for our benefit, give us a modified or "stepped-down" version of the truth which we are able to bear and which we can understand. In doing this, the teachers are exercising *updya kausalya paramita* (skilful means of helping others). Each people as well as each age has its own world-feeling (4), its own nature, degree and kind of understanding, customs, prejudices. When a wise teacher comes as a messenger of wisdom to a people he attempts to supply them with just that *upaya*, that version of truth, which is fitted to their nature. This *upaya* then becomes a religion for the people in question. Thus have the various world religions come to be, though each one has become more or less debased from what the original founder taught.

And with individuals as with nations we find that each one's understanding is different. Some are interested in science. Others are by nature religious. Some prefer philosophical clarity and precision; others are inclined to view such as being hair-splitting or sophistical. Some desire an attempted verbal statement of the details of nature's processes; others want to learn how to meditate, feeling that one should get to know the owner of a garden first, then *he* will explain about the flowers that grow in it. (5) Theosophy has tried to supply something of value for each of these various types of hearers. One value of understanding the *upaya* teaching is that it frees us from any narrow or sectarian tendency to imagine that any particular teaching of Theosophy is precisely true as verbally stated, or is the last word in truth. How often our teachers have warned us to "break the molds of mind"!

A practical application of *upaya paramita* is this: when we meet

an inquirer we can make a greater effort than ever to try to enter sympathetically into his way of looking at things and try to present just those aspects of teaching which will be most valuable and meaningful to him. A listener tends to superimpose a concept from his own "thought or experience world" upon the ideas expressed by us. By our own careful observation of his remarks we can grasp this picture. The concept always varies according to the listener's own character.

Once we become aware of this we can observe this state of affairs even in ordinary "secular" conversations. And we in turn superimpose our own thought groupings upon the listener's attitude and inadvisedly assume that our words mean the same thing to him that they mean to us. Our enthusiasm concerning the teachings and our joy in expounding them is likely to be one of our greatest obstacles in trying so to choose our words that the hearer's understanding of them will be similar to our own. These are psychological facts to keep in mind while trying to practice *upaya*.

The Theosophical Forum

MODERN THOUGHT IN THE LIGHT OF THE VEDANTA: II (1) —

Ernest P. Horowitz

I have said that the same truth which your Yogins and Vedantists have gained by internal perception, is gradually dawning on our physicists. Unity in variety! Darwin's great genius has directed the attention of the scientific world from the study of the numberless varieties of structure to the origin of species, to the unity of type from which all differentiation sprang. His profound researches have made the western mind fitter to seek after the "One without a second," and readier to receive the monistic teaching of the Vedanta. The more open-minded section of the Christian clergy seems likewise favorably disposed towards the Vedanta because it corroborates Gospel truth and supports Christian dogma. The religion of Christ is the religion of love, so is the Vedanta! Freedom is the goal of the Vedanta, and freedom is love. They who are free in spirit can never hate nor fear; they cannot be but fearless and compassionate, by the grace of their divine nature.

Physical science and the Christian Church have therefore reason to be friendly towards the Vedanta. No less reason have our social reformers who want to improve the condition of the working people, to settle the disputes between Capital and Labor in a fair and amicable spirit, and to strengthen the principles of a free democracy. The Vedanta philosophy holding up the ideal of freedom is just the metaphysical basis needed in a country which, at least politically, is a free country.

For these reasons, I believe, the Vedanta is exercising a certain influence with us, and will probably do so much more in the time to come. On the other hand I feel sure that western civilisation can teach India as good an object-lesson as the Vedanta can teach

the West. It has been said that the civilisation of the future will be a rational combination of eastern monism and western economics. Neither should be taken over wholesale from one country by the other, but a wise selection be made of what is suitable and promising of good results under existing conditions. Would you not think it a rash and dangerous experiment if an Indian reformer were to introduce indiscriminately into his native province the political institutions, educational methods, commercial usages, and social customs which he has learned to admire in England? That might possibly do more harm than good. I think it would be an equally grave error on the part of our Vedanta enthusiasts (and they are growing in number I understand) to ridicule the practice of Church attendance and the sacredness of Christian worship, in honor of the Vedanta religion. That would be acting in the name but not in spirit of Vedanta, which is universal and sympathises with all religions. Moreover, to belittle Christianity in favor of the Vedanta would be an error in judgment. Vedanta is only for the cultured few, for those with a large bump of comparison and causality. The Vedanta can as little replace the Christian Church in Europe as it can replace the Indian and Mohammedan Churches in the East. All these outward forms of faith, Buddhism, and Christianity, and Islam, are of great social weight and historical value, having come, in the fulness of time, to the various races, to help their national evolution, and to enable them to perform efficiently their civilising mission on earth. Religions are not the result of a mere historical accident, but the outcome of a providential necessity. To attack and to scoff at so pure and lofty a form of belief as Christianity, which has made the West what it is, simply because the universal and eternal truth embodied in the teachings of the Christ has degenerated into sectarian dogma and conformed to the world (as truth always does and always will do in the history of man), such an attitude is irreverent and unbecoming, and shows a narrow

and fanatic spirit, certainly not the spirit of the Vedanta.

The Vedanta, as I understand it, does not enter into competition with any external form of belief, but rather claims to be the esoteric aspect of every religion, whether high or low, superstitious or profound. And really if we had only sufficient insight to see deep enough into the tenets of the Christian faith, as it is reflected in the Gospel of St. John and the Epistles of St. Paul, we might discover therein, to our surprise, Vedanta pure and simple. I do not speak of modern Church doctrines, but of real Christianity as taught by Jesus Christ and expounded by the Mystics of the Middle Ages, the true Apostolic successors.

If you were to read the sermons of Master Eckehart, a Dominican monk who lived in the fourteenth century in Germany, and of his greatest disciple, Tauler, the "Friend of God," or if you were to feel yourself carried away by the "Spiritual Torrents" as experienced and described by the saintly Madame Guyon, the sweetest of Christian Mystics in France, you might fancy you had before you passages translated from your own Upanishads, from Shankara, or the *Bhagavad-Gita*, so identical are the thoughts and expressions. Tauler continually holds up as the Christian ideal "to lose all I-hood"; "to unbecome," as he calls it, and "to re-become God." Luther, the Protestant reformer, acknowledged his sermons to be the soundest theology, and the nearest approach to evangelical truth he had ever come across. Tauler's teacher had been Eckehart, who likewise declared the impersonal God, the Immanent Christ. Another of Eckehart's disciples, after having received the good message and realised the Christ, is said to have suddenly exclaimed: "Master, rejoice with me, for I have become God." The Evangelical and Dissenting clergy of our days look on Luther as a sound Churchman, and Luther accepted the "divinity of man" as preached by Tauler and Eckehart, and called these mystic doctrines sound and thoroughly Christian. Yet, I am afraid,

these teachings of an impersonal God, and of the identity of Christ and the human soul, would be considered heterodox and pantheistic by the modern Church. A Christian minister would not dare to tell his congregation that man is God, and that those who know it need not pray to a personal God; that God is not a person, and that worship of an extra-cosmic Deity is but a stage of spiritual infancy in the religious growth of man. Do you not think that the Christian clergy would fiercely attack that man, and denounce him as a Freethinker and Antichrist? And yet Tauler was no Antichrist; Luther himself stood up for his doctrine. Nor was Eckehart a heretic; nay, he was even invited to Rome by the Pope himself, who conferred upon him the honorary degree of a Doctor of Theology. Alas! that free spirit of true mysticism has long been lost in the Christian Church. Therefore, I make bold to say that it would do more good if religious reformers endeavored to restore the forgotten truth of esoteric Christianity to the consciousness of Christendom, instead of unsettling people's minds and upsetting their Christian faith with strange doctrines, the very language of which sounds bewildering to English ears.

In conclusion, I may be allowed to quote a few extracts from the writings of the now almost forgotten Christian Mystics. They will illustrate far better than my poor words can that the spirit of Christ's teaching is identical with the Vedanta, however much the language may vary. Here is the prayer of Madame Guyon, uttered a day after her spiritual experience of the Divine Unity:

O Infinite Goodness, Thou wast so near, and I went running hither and thither in search of Thee and did not find Thee. My life was wretched, yet my happiness lay there within me. I was poor in the midst of riches, and I was dying of hunger close by a table spread and a continual feast. O Beauty, ancient and new, why have I known Thee so late? Alas! I sought Thee where Thou wast not, and did not seek

Thee where Thou wast. It was for want of understanding these words of Thy Gospel where Thou sayest, "the Kingdom of God is not here nor there, the Kingdom of God is within you."

The following are Master Eckehart's words:

He who seeth in one creature something different from another, and he who loveth God better in one creature than in another, that man is carnal and far from truth, and still a child. But to whom God is alike in every creature, he is become a man.

What does the *Bhagavad-Gita* say?

He who seeth difference in the world goeth from death to death; but he who seeth Me everywhere and everything in Me, he is a perfect Yogin.

Here is another saying of our German Mystic:

God in Himself was not the Lord — in the Creature only hath He become the Lord. I ask to be rid of the Lord, that is, that the Lord by His grace would bring me into the Essence, which is above the Lord, and above distinction. I would enter into that Eternal Unity which was mine before all time, above all addition and diminution — into that immobility whereby all is moved.

This is Christian monism, no longer remembered by the Church with her crude teachings of a personal God, a plurality of souls, the resurrection of the body, and a local heaven and hell.

Let me read one more passage from Eckehart's writings:

God and I are one in knowing. His knowing is my knowing. The eye whereby I see God is the same eye whereby He sees me. My

eye and God's eye are One eye, One vision, One knowledge, and One love.

The same divine truth must have flashed across the mind of Ramakrishna Paramahansa when he said:

Knowledge and love are ultimately one and the same.

There is no difference between pure knowledge and pure love.

Master Eckehart defines purity, just as the Vedantists do, as a turning away from the creature, and lifting up the heart towards 'pure goodness,' so that a man may find comfort in no creature, and that he may desire nothing but pure goodness, which is God. God is in the soul, and the soul flows over into God, and both are one.

Such is Mystic Christianity, or Christian Vedanta as Indian philosophers prefer to call it, and if these eternal verities were preached every Sunday from the pulpits of every Christian Church throughout the land, Vedanta would soon be a living fact in this country. The Church would receive fresh vigor, and experience a new life, and another spiritual wave of religious fervor would break out over Europe, even mightier and farther reaching than the momentous reformation of Luther and Calvin. The monistic revival of the twentieth century will achieve no less, I believe, than the spiritualisation of scientific research, and the rationalisation of religious fervor. Then Science and Religion will cease their conflict, and will peacefully flourish, side by side, like two fruitful branches grown from the same tree of Divine Knowledge.

A great outpouring of spirit will pass over the earth, and the time will be ripe for the Church Universal, when the Christian and the Indian "Churches may meet as friends on the common ground of

the Vedanta. The day will likewise come when another Divine Institution, the Mohammedan Brotherhood, will be incorporated into the Monistic Church, for Islam, too, has realised the "One without a second," thanks to the illumination of the "God-intoxicated" Sufis. Sadi and Hafiz have done for Mohammedanism what Eckehart and Tauler did for Christianity, and the Vedanta for the religions of India. May the time soon draw nigh when we shall be ready to institute the Church Universal where every worshipper, whether Buddhist or Christian, Moslem or Jew, is free to serve God in his own fashion of belief. Then a deeper meaning will ring out of the words of the old hymn:

All glory be to God on High
And on our earth be peace,
Henceforth goodwill of man to man
Begin and never cease.

THE UNIVERSAL APPROACH (1)

"That Thou Art, O Shvetaketu." — *Upanishads*

If there is one idea in Theosophical philosophy that has been reiterated more than any other, it is perhaps the necessity for proceeding in one's study according to the Platonic method — from universals to particulars. Theosophists know this admonition by heart, and it is evident to anyone who thinks, that Truth exists only in the Whole, not in the part; that it is only by viewing any thing, object, situation, or being, from the point of view of totality that its true nature and status can be known. How was it possible, do we think, that H. P. Blavatsky and Wm. Q. Judge were always able to see clearly when others were confused? How could they, in dealing with both great and small questions, detect so readily the fundamental principles underlying any line of action? The answer lies undoubtedly in their method of approach, in the fact that they employed the Platonic system of *deduction*, which enabled them to see at a glance all things and beings in their true and proper relation. If confusion is ours, perhaps it is due to our failure to apply this key.

Take, for example, the difficulty experienced by many thinkers, both in and outside the Theosophical Movement, in comprehending the Eastern metaphysical teaching regarding the powers and functions of perfected Men, or Mahatmans — of Buddha, for instance, who was said to be omnipresent, capable of being in an indefinite number of places at once. This difficulty, says H. P. B. in the *Glossary*, lies primarily in the fact that we reason inductively, that we view these powers as being attributes of *particular personalities*, of human Buddhas.

. . . it is not Buddha (Gautama, the mortal man, or any other

personal Buddha) who lives ubiquitously in "three different states at the same time," but Bodhi, the universal and abstract principle of divine wisdom, symbolized in philosophy by Adi-Buddha. . . . Thus it is not *one* Buddha who is meant, nor any particular *avatar* of the collective Dhyani Buddhas, but verily *Adi-Bodhi*, the first Logos, whose primordial ray is Mahabuddhi, the Universal Soul, *ALAYA*, whose flame is ubiquitous . . . because, once again, *it is Universal Being itself* or the reflex of the Absolute.

So material is our age that we persist in thinking of man only in terms of flesh and blood. Reasoning from this basis we utterly fail to understand how a single human being, even a Buddha, can possibly possess such powers. But reversing the process and beginning with the Over-Soul, it is not difficult to grasp the possibility. Beginning with universals, the student is led to see that it is Adi-Buddha, or Universal Being, and not mortal man, for whom these attributes are claimed. Thus, we find a lesson in the teacher's method of approach, and at the same time come a step nearer toward an understanding of the nature of perfected Man.

Consider, again, the lack of perception shown by the managers of the Theosophical Publication Society in London in 1888 when they reached the conclusion that philosophy is too advanced for men of this day, and that what is needed is "a stepping-stone from fiction to philosophy." This course, if pursued, would have spelled the wreck of the Theosophical Movement of this age. How account for this lack of perception? And how explain the fact that Wm. Q. Judge was able to see the truth and could warn, was able to know that philosophy is, in fact, man's greatest need, and that the true student is not satisfied by fictionalized or stepped-down truth?

The answer lies again in methods of approach. The English

theosophists were accustomed to Aristotelian reasoning. They were tutored under the Darwinian interpretation of evolution, which views man as an animal being, struggling upward through the ages, who had hardly reached the point where he could grasp philosophy. Mr. Judge, on the other hand, began with universals, with the Soul. He saw man as a divine Pilgrim incarnated in a body of flesh, to whom philosophy, metaphysics, and ethics are as natural and assimilable as is physical food to the body.

It is not possible to see clearly unless one proceeds from the universal point of view. But is intellectual acceptance of this proposition enough? Does mere knowledge of the formula endow one with universal consciousness whereby he can see all things and beings as parts of one great Whole? Unfortunately, we know it does not. Wisdom in perception and action is not of the intellect. If H. P. B. and Mr. Judge were able to see clearly, it was not that they intellectually said to themselves, when faced with any problem: "I must study this situation from the universal point of view." Men approach all questions, in reality, from where they stand *in heart perception*, and Sages, being universal in their very natures, have no need to take any other position than their own. Such perception comes from creating in one's self the feeling of Universal Brotherhood.

Merely knowing in the mind, therefore, that one should begin with universals does not mean that his nature, when he approaches a subject, is universal. But to take the position of Brotherhood, to strive to live and think each moment of the day as Soul, gradually elevates the consciousness to the plane of All-Being. There, seeing all things and beings whatsoever *in one's self*, the universal approach to every question is assured.

The Theosophical Forum

NARADA: A STUDY IN "THE SECRET DOCTRINE" — G. de Purucker

Narada is here, there, and everywhere; and *yet*, none of the Puranas gives the true characteristics of this great enemy of physical procreation. Whatever those characteristics may be in Hindu Esotericism, Narada — who is called in Cis-Himalayan Occultism *Pesh-Hun*, the "Messenger," or the Greek *Angelos* — is the sole confidant and the executor of the universal decrees of Karma and *Adi-Budh*: a kind of active and ever incarnating logos, who leads and guides human affairs from the beginning to the end of the Kalpa.

"Pesh-Hun" is a general not a special Hindu possession. He is the mysterious guiding intelligent power, which gives the impulse to, and regulates the impetus of cycles, Kalpas and universal events. He is Karma's visible adjuster on a general scale; the *inspirer* and the leader of the greatest heroes of this Manvantara. In the exoteric works he is referred to by some very uncomplimentary names-; such as "Kali-Karaka," *strife-maker*, "Kapi-vaktra," *monkey-faced*, and even "Pisuna," the spy, though elsewhere he is called Deva-Brahma.

— *The Secret Doctrine*, Vol. II, page 48

Narada as the Hindus call him, Pesh-Hun as the Tibetans call him, is in the world. That agent of destiny whom Christians I suppose would call the agent of the vengeance of the Lord, is abroad in every land. His karmic work is proceeding: reaping in order that future crops may be sown. Terrible agent of what the Christians would call divine vengeance, and yet Narada or Pesh-Hun is man's greatest friend for the men who will recognise him. His work is not that of fate, it is that of destiny, which man himself

weaves. If he is a disturber of man's ways in order that the mandates of divine justice shall be carried out, he is also the bringer of peace, and the restorer of harmony. To use a beautiful Jewish phrase, it is, ultimately speaking, Narada or Pesh-Hun who "will wipe away all tears."

Now then, I was asked especially to make a few comments this morning upon the question of the Hindu Rishi Narada about whom under the Atlantean name of Pesh-Hun I spoke two or three weeks ago from this platform. H. P. B. speaks of Narada, as the Hindus call him, or Pesh-Hun as she calls his name from Atlantean times, (he is known by other names in other ages and lands), but she says very little about him indeed for the simple reason that his, functions in nature are so difficult to explain to a world which is utterly unaccustomed to the spiritual and intellectual teachings of Theosophy, that she just pointed to certain facts and left the matter there. H. P. B. not being here to answer questions that she herself had a-roused, it falls upon me to do my best!

Who is Narada, who is this Pesh-Hun? In the first place he is a Rishi. He is also a Prajapati. You know what these names mean. Prajapati means a parent of offspring, does not say what kind of offsprings, maybe mind-born children, it may be children born of the body, for Prajapati means either or both. He is also a Manu when his functions concerning the human races alone are involved. He is a Dhyan-Chohan or what the Christians would call an Archangel. Of course this reference does not mean much today because the Christians themselves today hardly know what they mean by the term. But I am giving a few names in different systems of thought. In Greek and Latin mythology he would be a god or perhaps one of the highest of the Daimones, cosmic spirits. Put it this way: Narada is a Dhyan-Chohan, also Prajapati because of certain functions he performs, also a Rishi or great spiritual

teacher because of certain functions he performs. Also a Manu because of the intimate connexion with the destinies of the human race. That is why these three names are used, each name being appropriate to different sections of his activity. He is a Dhyān-Chohan of the highest or the next to the highest class. I am not now referring merely to the three great classes of Dhyān-Chohans higher than the humans. I am referring to classes in a different category. Every possibility of Dhyān-Chohan type considered, Narada belongs to the next to the highest type.

What are the functions of Narada? Typically those of carrying out karmic destiny. There you have a key to all his activities. What the Lipikas have written down, Narada as an individual agent or as an individuality, as an Archangel, sees are carried out. He is the agent of karmic destiny. The consequence is, just because destiny to us humans is often so unpleasant due to our own faults and failings in the past, Narada has been given very uncomplimentary titles by those who have seen his work in the world and in the world of men and who do not like it. When they do like it, when it is something that humans like, he is given very complimentary titles: the Benefactor, the Kindly Helper, the Warrior for Mankind, the bringer about of all the good things in destiny. But when as an impartial, impersonal agent of karmic destiny he brings about trouble on the human race, then he is given very uncomplimentary names by men, as for instance he is called Kali-Kara, the Strife-Producer, because in the course of human destiny it is his work to bring about war and peace, to bring about war and to bring about peace.

Now can you see why H. P. B. has side-stepped this very function, duty, character of Narada? It is a ticklish thing because in the Occident we do not want to believe that the world is conducted by cosmic and spiritual laws, nor in the Occident do we want to believe that the horrible things that happen to us are infallibly

and inevitably our own self-earned destiny. We prefer: it is *his* fault. That is the way we pass the buck, and yet show me anything that happens to you as far as you can see that is not the result of your own action. There is the law.

So the functions of Narada are to act as the agent of karman. How does he do this? Being a Dhyani-Chohan he cannot come amongst us and work as a human being does, because he belongs to a much higher kingdom, among the very highest of the three Dhyani-Chohan kingdoms. He is an impersonal, impartial agent of destiny. His duty is to see that the world is protected, that karmic law, destiny, be carried out irrespective of consequences; for it is the only way to re-establish law, order, equilibrium, justice, and ultimate wisdom and peace. Otherwise there would be Nature piling up a vast accumulation of unexpended karman which sometime or in time might flood the human race and utterly destroy it. No wonder H. P. B. side-stepped this question.

How does Narada therefore work? Sometimes he over-shadows men of the proper psychological, spiritual, intellectual, and even physical temperament and works through them. These men then are called by H. P. B. Men of Destiny. They may not in themselves be even good men, which is another reason why Narada is often spoken of in uncomplimentary terms; but they may be good men, these Men of Destiny. But they are used as instruments and tools to carry out, to bring out, to bring to pass, certain things that are lying in the womb of time and must come out, and there must be a guiding spiritual power to see that the performing of these events shall take place without the complete wrecking of mankind. This is Narada's work: a protector of mankind and also an avenger.

The Occidental for centuries has been trained in a religious and philosophical system which is since early mediaeval times so

utterly contrary to the facts of Nature that we have lost touch with how the world is ruled and governed. It is governed by spiritual and highly intellectual powers. For instance our own globe is, globe D of our chain. Not a thing takes place by chance, by hap, by hazard or by fortuity. Everything that takes place on this globe or in the Solar System or in the Sun or in the galaxy takes place according to law; and it takes place according to law because the agents of law, the agents of karma, are there to hold it firm, to prevent as it were the earthquake or the tidal wave or the cyclone, from going crazy and destroying indiscriminately. Do you see what I am trying to say? Destiny is held firmly in the hands of the gods; or as the early Christians phrased it in their own phrasing, a phrasing which has lost sense today, the world is ruled by God Almighty through the hierarchy of angels, which is our Theosophical teaching taught in the Christian form. These Angels carry out the decrees of destiny, and you even have remnants in Christian teaching today of this old Theosophy of early Christianity, as for instance when they speak of the Angel of Death or the Angel of Destiny or the Angel of Disease — or turning to the New Testament, the Four Angels of the Apocalypse. You might ask what are they now? War, disease or pestilence, starvation, and death. I remember a Spanish writer, Ibanez, wrote a famous book *The Four Horsemen of the Apocalypse*. So even in Christianity you have the same teaching.

Now it is Narada who is in charge of these karmic productions of destiny. No wonder he is called Kali-Kara, the Strife-Producer. He does not produce it out of nothing, out of a diabolic wish to injure mankind. He is simply the agent of karmic destiny bringing about for instance, the breaking up of old crystallized conditions which are becoming a spiritual opiate for mankind, or stopping things that are threatening to injure mankind. You see, a teaching like this also could be dangerous if it fell into the minds of

irresponsible or weak men who would twist it to personal and selfish uses. Such men have no conception of the profundities and intricacies of theosophic truths, which are the archaic Wisdom-Religion of mankind; and through this ignorance even the uninstructed public could imagine that a Theosophist in speaking thus is saying something that he should not say.

Once more let me ask what or who is Narada? Narada is not only the agent of karmic destiny but is mankind's savior, the bringer about of man's evolutionary progress, the bringer about of change tending upwards to nobler things, and likewise paradoxically enough the bringer about or restorer of spiritual and intellectual stability. Because there can be no stability when an accumulated reservoir of karman is waiting and threatening to burst the dam and cause devastation, destruction indiscriminately.

Take into your minds some of the consequences of these thoughts. They will make you charitable, less inclined to hate and misjudge other human beings. You take Napoleon for instance, or Julius Caesar or Alexander — three men who if you judge them in the balance of ordinary human justice are three evil-doers because they were all upsetters, all destroyers of convention and of established things. But the world lived through them, and yet who were they? Average men, each one with a peculiar cast, psychological and other which Narada could work through to bring about the karmic changes. Do you get it? In other words Narada is a kind of Siva, destroyer and regenerator, but his destructions are always beneficial, he is always on the side of liberty, absolute justice to all irrespective of anything, and on the side of progress. If there is one thing that Narada abhors it is cruelty, cruelty of any kind, cruelty to friend or cruelty to foe. You immediately put yourself under the watchful eye of Narada if you indulge in anything that is sub-human.

In passing, let me say that my reference to Alexander, Julius Caesar, and Napoleon, is not because I think these three men are patterns of human conduct, for I do not, very much to the contrary. But they are notable historical instances of men of destiny who were used almost as pawns precisely because of their weaknesses and distorted strength to bring about noble things despite these men themselves. I trust I make my meaning clear. Indeed, I personally do not like these three men, nor do I admire them in any sense.

It is a peculiar thing that if you will study the history of mankind you will find that the great plays of Narada, the great activities of Narada, are always accompanied by or followed very closely by a great manifestation of moral and religious life. The greatest religions are always established at the time of the greatest human turn-overs. Narada's work both of them. Narada prepares the ground, guides the loosening of karmic destiny, and as it were beckons with his hand to the gods of teaching to come in along the pathway he opens.

Some may wonder if Narada is the same as the Silent Watcher. No, the Silent Watcher is above all. You may perhaps at least figuratively say that Narada is the Siva-aspect of the Silent Watcher. Narada is a kind of Logos for this globe throughout the entire kalpa. And what is the function of the Logoi, greater or smaller, higher or lower? Each one to guide all its children into the future of glorious achievement.

I can only hint at certain things. Let me point out one thing which I don't know that Occidentals will understand very well. Suppose there were a great religion in the world which had lost the original inspiration, the theosophic inspiration of its Master, of its Founder, and it had become ecclesiastical and theological instead of continuing to be living and vital, a mighty and spiritually

controlling power in the life of its followers. Suppose this religion — one of the noblest motors of human thought and conduct — had become mere formalism and rites, and there were even disputes whether the teaching of the Founder was really meant to be taken as we have received it. What does Narada do? Narada breaks that shell, releases the imprisoned spirit once again. Of course there is lots of trouble. Men on religious points are almost fanatic; you break up their crystallized beliefs, they can even become almost demons at times. But Narada has a bigger work in view than the merely conventional feelings of numbers of these coryphaei and their millions of followers. Narada in such instance works to release and restore to its pristine power and influence the imprisoned and perhaps forgotten spirit of the Founder. Do you see? It may be done quickly in a crash, in a disaster. Or it may be done through years and years and years of slow expansion and breaking of the old shell. Narada works in various ways always according to destiny and always in the kindest way that he can work, because he is a regenerator and a builder. That is the most important. Here you have an example. Religion had become a danger in a case like that. It had become a drug. People were going to sleep. The souls of men were so somnolent, so negative, as dominant factors in human life, that men actually were no longer truly ensouled by their souls. They were little more than bodies, blindly following merely conventional practices. But Narada re-ensouls these men. Their souls awaken. They begin to think and to question. They want the spirit. They burst the shell; overthrow the forms. And you have a great religious revival or regeneration in a case like that.

But of course it is a painful process. The coryphaei don't like it. Millions of their followers don't like it. Their quiet, comfortable, smug beliefs are overthrown. They don't know that they are exchanging old soiled clothing for the garments of life, of spirit,

exchanging the body for the spirit. They have not realized it yet. It is only after Time, the magic agent, has softened the woes of adversity, of the bursting shell, and has brought even those who are hurt to see and to say: "Why, it is the very best thing to happen. Now we understand the Master's teaching. Now religion has become a vital moving thing in my heart. It guides my life. It is something to believe in and to live by." Do you see? The work of Narada! But during the time, what did Narada do? He was a Kali-Kara, Strife-Producer, he had to break the shell.

And that is the work of the Logos too, whichever Logos you mean, the Logos of our globe or of our chain or of the Solar System. But mark you, distinguish between the work of Narada and evil men. Evil men may be used by Narada for karmic purposes, and that is done constantly, just as Narada will use good men. And be careful lest you set yourselves up as judges. But the distinction between the work of a bad man who is not guided by Narada and Narada's work is this: that the bad man is always working for himself, egoistic selfishness, the root of all evil; whereas the work of Narada, no matter what the channel, is always for the world, even though his human instruments imagine they are working for their own ends. You may not always see it but it is there. For instance, when Narada smashes a great organization by regenerating it, the bursting of the shell and the tortures suffered by those involved is torture for them, and they think it is hell. But actually it is not, it is a salvation, and they grow to know it after a while; but the process is to them a hell. So we have to be very, very careful in judgment, very charitable and understanding.

Now can you see why H. P. B. rather side-stepped all this matter of Narada and who he is and what he does? It is really extremely difficult even to attempt to explain Narada's work in the world.

Narada's functions therefore are so essentially spiritual and

intellectual as well as psychic, that a preliminary study of the Wisdom-Religion is almost essential to prepare people to receive understandingly just who Narada is and what his functions in the world are. The main point to grasp first is that our universe is governed by law and by order emanating from intelligent and spiritual sources, and consequently that everything that happens in that universe is within that sway of law and under the sway of that order, and in consequence there is no chance, which is to us Theosophists a word utterly devoid of all substantial meaning; and therefore that whatever happens has been caused — Karman. The first thing this teaches us is to stop sitting in the judgment-seat upon other men. It teaches us to stop arrogating to ourselves the all-capacity to condemn others. Judge not that ye be not judged. But keep it in mind that Narada so works, call him an Angel of Destiny, an Archangel of Destiny, or a Dhyān-Chohan whose work in the world is just that, guiding mankind and the other kingdoms too, guiding mankind's steps through tribulation and suffering from their own folly, towards freedom and wisdom and love, with his immensely strong hand of the friend, upwards and onwards through suffering and pain, through joy and peace, through war and disturbance, through attainment and progress, upwards and onwards forever.

I do hope you will understand all this; otherwise I shall bitterly regret that I ever tried to answer the question.

— This address by the late Leader of the Theosophical Society was given on March 22, 1942, at a regular meeting of the Headquarters Lodge at Point Loma, shortly before the Society moved its headquarters to Covina. At that time the Lodge was studying certain pregnant passages from H. P. Blavatsky's *Secret Doctrine*, and the talks that Dr. de Purucker then gave are mostly incorporated in the recent posthumous publication, *Studies in Occult Philosophy*,

issued by Theosophical University Press last September. Though this present article rightly belongs with that series, on correcting it, Dr. de Purucker asked that it not be published until the close of the war. — Eds.

THE HUMAN ORIGIN OF ANIMAL LIFE — *Allan J. Stover*

According to zoologists there are some 840,000 species of animal life living in the world today. If we study the various classes or orders of the animal kingdom, we will find that in every case each type, whether elephant or horse or insect or any other form, is a living remnant or representative of a long line of ancestors which reached its evolutionary crest millions of years ago, only a few species in each line having survived until today.

If we look still closer and consider a single stock, say that of the mollusca (snails, clams, sea shells, and so forth), in detail, throughout its history, we will find a central, somewhat primitive, generalized form continuing through the ages, and many side branches departing from this central line, specializing along some side-line, and dying out. In early times many monstrous forms of animals were developed and destroyed.

Thinking not in hundreds but in millions of years, each separate class of animal life is seen to have evolved along a similar pattern, that is, there is a central trunk or central stream of evolutionary progress, from which diverse side branches develop on some egotistical and often fantastic side-line and in many cases come to an early end, as they are unable to meet changing environmental conditions.

To return to the Mollusca, one of our oldest forms of life, many shells are simple and beautiful in form, and refined in color. Others, however, show signs of approaching extinction. And how may we know this? Simply by the species departing from the norm, or middle line, by growing useless spines and tubercles and by assuming strange growth patterns or too vivid color. Some species, such as the ammonites, departed from the Pythagorean

curve upon which their shells had been fashioned for a hundred million years, and uncoiled, assuming a loose spiral, and the type departed this earth. A related species, the pearly nautilus, has preserved its beautiful and simple form, and exists today, one of our most highly prized shells.

Thus, the pattern upon which animal evolution is founded consists of many parallel trunks or lines of descent, reaching into the unknown past.

Science has attempted to discover, and in many cases has *invented*, links connecting these various stocks; many things have been stated to be so, because it was assumed they must be so. Scientific prestige must be preserved.

Just as in each class there are many branches springing from a central trunk, so on a vaster scale each trunk is but a branch to a larger trunk existing from Round to Round. There is a continuing line of evolution, a central trunk from which the branches and branchlets of the animal kingdom have come. That continuing stream of evolution is man. Man has been to the animal kingdom as a whole what the central evolutionary stream in each stock of animal life is to its branches. However, in the large division, as compared with the small, there is a difference in the manner in which new forms of life have been derived from the parent stock. It is this:

All forms of life below the mammalian were derived from the cellular off-throwings of man during the preceding Globe Round, while the mammalia were thrown off from man during this present Globe Round. The manner in which new stocks have been derived from man is a mystery difficult for us, familiar with present-day conditions, to understand.

The human body is said to contain some twenty-six trillion cells.

One type of cell only, and at a given time a single cell of that type, forms a focus through which a human being comes into embodiment. The remainder of the twenty-six trillion cells of the body divide and form new cells, but produce no new creatures, for they are held under the dominance of the human ego; but, nevertheless, they contain within themselves tremendous forces, latent at present, which, given the opportunity, might so function.

The cell is a mystery, and contains an invisible being behind it; it is an infinitesimal focus of cosmic forces, a channel through which they pour into manifestation on our physical plane. These forces express themselves through the more ethereal part of the tiny cell.

Every cell may be looked upon as a point or focus through which its overshadowing self could rush forth into full embodiment, were the cell not held under the dominance of the human ego; for each cell has within itself the *potentiality* of becoming a complete entity. But the dominating human ego keeps the cell in its proper place, building the body of the ego, and receiving the swabhavic imprint which, when it is finally freed, will urge the then individual entity to itself evolve manwards.

Another thought: Every cell in man's body is a child of, born of, man's inner self. He is their oversoul; in a very true sense their god; and they, with unguessed possibilities of development locked up within them, have to wait for ages before opportunity comes for individual self-expression. Finally, when such opportunity for self-expression does come, out they go, in a great, rushing tide of life, and a new order of life is born which in its turn divides into many forms and varieties as it evolves and expands.

Early man was far more loosely knit, during the early races, than he is now. He had less physical and psychical dominance over the cells of his body than he does now, and consequently each cell

was more at liberty to follow its individual drive or urge. Hence, when a cell, or a group of cells, separated from the body, these cells, freed from the dominance of the human ego, immediately started on the path of self-expression, and through the focus provided by the cell, the overshadowing, invisible entity rushed forth into embodiment.

At present, the imprint of the human hierarchy is so firmly stamped upon each cell that such a thing is impossible, but if we study the various stocks of animal and plant life today we will see a faint reflexion of this urge to self-expression in the highly specialized off-shoots from the main racial trunk.

In the untold ages spent before opportunity for individual development came, the time so spent marked each cell so strongly that, once freed, the urge to evolve toward humanhood shaped all future progress.

The progenitors of all forms of animal life below the mammalian sprang from man during the previous Round. This means, as I understand it, that the vital currents which in our Round produced the fishes, reptiles, birds, insects, and most of the invertebrates we know today, had their origin from man during the previous Round; that they evolved, reached their crest, and declined even as the animal world is doing today.

Then, when the hour struck, in the Fourth Round, they reappeared in a great new cycle of activity, and produced new forms, improvements on the old models, one might say. But the continuing stock — stream of life, vital impulse, call it what you will — issued from man, as Dr. de Purucker has said, in the previous Globe Round, in what is known as the "great tidal wave of life."

The mammals came from the human stock in the present

Globe Round during the latter part of the Second Root Race and the early part of the Third Root Race. Man of that time was mindless and largely astral, not consolidated as is man today; neither was there a dominating spiritual entity to hold the lesser lives in check. Buds, or single cells, leaving man of that time — when the climate was as that of a tropical jungle of today, both warm and damp — continued to grow each along its own evolutionary tendency.

The mammalian life, thus being started, increased rapidly in number and variety, and due to the laws of acceleration and retardation, checked the advance of other forms of animal life. The mammalian life-wave reached its crest during the Miocene Period, and since that time the mammals have been steadily declining, both in number and in variety.

Dr. de Purucker writes in *Man in Evolution*:

Man still remains the storehouse or magazine of an innumerable number of vital or zoologic tendencies latent in the cells of his body; and though the old method of their manifestation has ceased, new and different methods will supersede the old. The urge to life working through the tiny lives of man's physical body, will none the less inevitably find new methods of expression, and these latent or sleeping tendencies will in far distant ages find appropriate outlets, thus perhaps giving origin to new stocks in that far-off future. — p. 203

This, however, will come to pass in some future Round, as during the remainder of this Round the origination of new stocks will become less and less, and those forms of life already existing will decrease rapidly in number as time passes.

We are gods to the lesser lives making up our bodies. In the far

future these lesser lives will, like grown children, depart on a long evolutionary journey, to the time when they, in turn, will be self-conscious beings, even as man is now.

The Theosophical Forum

THE GOLDEN EVERLASTING CHAIN — *Marjorie M. Tyberg*

Among the ancients there was the tradition of a chain, one end of which was held at the highest seat of the Gods. It extended downward to the lesser Gods and Heroes and Sages, who were instructed by those above them and in turn instructed those below them. Thus was communicated to mankind the knowledge and the wisdom necessary for human life on Earth. Homer and Milton were two inspired poets who sang of this golden chain

Whose strong embrace holds heaven and earth and *main*
— *Iliad*, Book VIII

And in the Book of Genesis Jacob's Ladder is another symbol of this link between those Elder Brothers who "go up and down" on errands as Associates of the Hierarchy of Compassion, about whom Theosophy gives such wealth of timely and precious teaching.

The year 1946 brings terrifying realization that human intelligence and insight *may* prove inadequate for the mediation of differences between nations and the prevention of further global war. Are there then, in the Universe, Superior Beings, Spiritual Intelligences, who concern themselves with human affairs and have wisdom and power to guide human progress towards intellectual and spiritual maturity? Some step must be taken to render men capable of maintaining the global unity now seen to be essential for the completion of human destiny.

Planetary experience has gone on for millions of years, perhaps billions. Ours is not even the first man-bearing planet. Some there have been who have had, and have taken, the opportunity to mount high, even to transcend the human stage on the Ladder of

Life. They watch over and guide those who follow, and who shall, like themselves become the *twice-born*, the spiritually illuminated. For man is born not only into a family, a race, but into a universal spiritual home.

"As above, so below." Theosophy teaches that what human parents and teachers, who have themselves passed from infancy to maturity, are to the young in their care, the Hierarchy of Compassion are to the host of human souls who have *still fully to evolve* the intellectual and spiritual faculties which will manifest in the life yet to be on Earth. Think you that the Cosmic Intelligences who established a planetary system — not to mention greater units like galaxies — are less capable of directing a host of souls through planetary experience than human guardians are of their task? An urgent need at present is for thinkers to expand their views to include Beings as superior to Man as Man is to the black beetle, as the biologist, Thomas Huxley, once suggested. To do so would engender new faith in the future of mankind.

No more than human parents, however, can the Hierarchy of Compassion avert suffering from those whom they would protect and guide. "The fruit of Karma Sages dare not still." Well they know that there is purgation, necessary and salutary, in adversity, and, on a larger scale, in calamity.

In the long drama of evolution and involution, Man, "a young god in the making," plays a part, the glorious possibilities of which are yet to be unfolded. From embryo to physical maturity the human sums up the evolutionary stages of the vehicle required for the use and manifestation of the spiritual and divine parts of Man's nature. Man has "got his body." The next step will reveal the now partially evolved principles of the human constitution which will enable Man to complete the human contribution to the Ladder of

Life and to ascend to a Superior Hierarchy.

For Man's inner Self is one with the Spiritual Intelligences of the Cosmos — it is built of the same. It is Man's Self-conscious Mind that is the link with the Golden Everlasting Chain of Heroes, Sages, Mahatmans, Buddhas, Watchers, and Guardians. It is for Man, with his faculty of Imagination, his spiritual will, his compassionate heart, to communicate to his fellows, as the Great Ones have stepped down to him, the truths of the Ancient Wisdom, Brotherhood and Co-operation with Cosmic Law, of which the poet Wordsworth wrote in his "Ode to Duty":

Thou dost preserve the stars from wrong;
And the most ancient heavens through thee are fresh and
strong

The Theosophical Forum

THE THREE DEGREES OF THINKING — *Katherine Tingley*

Here is a hint which I have found very useful with my work. As far as I know it has never been written or spoken in modern times before. It is this: Impulse often takes a man off the path of right action, while intuition holds him firm and carries him through his difficulties. Here is the key that will save one from taking the wrong course through selfish impulse.

When a proposition first presents itself for consideration, it is the mortal brain-mind which considers it. This merely opens the door of the mind to the subject. According to my teaching, decision and action at that first impression would generally be entirely out of place. Slow, measured consideration is required. The old saying, "Think three times before you speak" has its application in this connexion. This is the esoteric side of the question.

First, open the door of the mind to receive the question or the subject for consideration. This first state of mind is generally followed by another — that of confusion and questioning and doubt as to which course is best. Slowly consider this too. The third degree of thinking will bring forth a reflexion from the intuition of the higher mind — the soul — that is more dependable. The exoteric saying is thus interpreted in a new way to the advantage of man. The fact is that the lower mind will step in and act, if allowed to do so, before the soul, the real master and teacher, has made its voice heard. The ancients taught this ages ago; and it is one of the great secrets that I have found in Theosophy for the benefit of the world's children.

— Katherine Tingley, extract from address given at Helsingborg, Sweden, reprinted from *THE THEOSOPHICAL PATH*, November, 1925.

LOVE AND DESIRE — *Byron Casselberry*

At what shall I aim? Is there any one thing that matters more than all else? Is there an order of importance in the uses I can make of my intelligence and energy? You may say with the books that the practice of love and charity comes first. But can love be "practiced"? Does one practice when one falls in love? To fall, in any sense, is not to practice anything: it is to be borne, for better or for worse, by something beyond oneself. One does not move: one is moved. Is love not practiced only when one has ceased to love? And the thing that is practiced — is it really love, or some extraordinary synthetic which, being unmoved by love, we have created and with which we endlessly deceive ourselves?

Considering the long history of violence culminating in the recent world catastrophe, there must be about our thinking something that is terribly wrong. Surely it is more than urgent that we begin to think anew, with fresh interest, about love; and even more, about the *absence* of love. For it is the latter, not the former, that we know — and one must begin with the known. If I assume from the start that I know love, obviously I open myself to enormous error. No scientist begins by assuming that he already knows the answer; if he did, his research would have no meaning. One must first recognize the problem: the absence of love. And not in others — but in oneself.

Will charity ever begin at home — in my own heart — as long as I am content with voluntary goodness, which is the mere imitation of an idea? If I am deliberately brotherly, does my action produce brotherhood — or pleasant hypocrisy? Does insistence upon harmony really produce harmony — or does it bring about the artificial calm of conformity, which is stagnation? We make love into a policy which we adopt; naturally it is a mere shell,

unproductive of joy. This premeditated love always turns to violence, open or concealed, when sufficiently provoked. It inevitably defeats itself. It gives rise to so-called righteous indignation — that marvellous refuge of the righteous when they feel called upon to act in an unrighteous manner. That is why, while believing in brotherhood, we continue to bring forth disunity and war in their many forms. By assuming virtue we perpetuate vice.

The point is this: If I desire something for myself, however much I may be steeped in thoughts of love, I will automatically resent anyone who prevents or threatens my having it. Though I may suppress the resentment, conceal it from myself and from others under the cloak of my philosophy, it is inescapable because it is all of a piece with the original desire. Frustration of desire creates the enemy; and since desire can always be frustrated, as long as I have desire I am contributing to disunity and war. If this is true, my talk of brotherhood has very little value. The problem is not how to create brotherhood, heal disunity, or prevent war, but how to be free of desire. If I can really be free of desire, perhaps love will arise normally, without my having to pursue it.

How am I to be free of desire?

If a man suffering from hallucinations sought to cure himself only of the unpleasant ones while retaining those which he enjoyed, surely he would never be free of his illusions. To be free, he must understand the whole complex process of his self-deception, the high as well as the low. Is it not the same with desire? One cannot accept certain desires because they are noble, and reject others because they are base — not, at any rate, if one is to be free of desire. This choice of desire creates an endless flight from the base to the noble, from hatred to conceptual love — all within the field of desire. It is a futile race. Hatred moves along with

conceptual love like a man and his shadow. To *pursue* love is still to be caught in desire.

If love cannot be known by seeking it, desire, on the other hand, *can* be known, can it not? We need not preconceive or seek desire, for it is always with us: it can be directly observed. It is a strange trait of human nature that we seldom know desire although we constantly experience it. We imagine that we love, then suddenly feel jealous. We act, as we think, for the benefit of others, then feel hurt or angry when our efforts are criticized or overlooked. These things are a common experience, yet how much thought is given to them? When they are sufficiently acute, we are painfully forced to take cognizance of them. Then we find a drug-like solution, or just suffer until time renders them impotent. But as a rule they are mild; being well schooled in righteous behavior, we are able to brush them off and continue as before until they occur again. In spite of our philosophy of love and truth, this process goes on year after year until we are numbed by age. If evolution will cure it, why does it continue after years of effort? If it happens after a score of years, what is to prevent it happening after a score of lives?

To be free of desire, obviously one has first to see it — which means that one cannot cover it up with dreams of wisdom, or with any preconceived notion of one's spiritual stature. It is difficult and very unsettling, if one has lived at all in the assurance of assumed virtue (and I think many religiously-minded people unconsciously do), to break up this preconception of oneself and begin to see, without condemnation, cynicism or refuge, the subtle, philosophy-concealed movements of desire. It is difficult: but is there really any other way? Have we not sooner or later to face this thing? Must we not individually awaken into direct, non-theoretical perception of the ego and its many illusions? Surely, being caught in the separate self, we cannot

forever cling to the inspiration derived from exalted beliefs, or even from known facts.

The sunset on a mountain is spoiled by a shadow in my heart. In the dust of humble self-knowledge there may lie the seed of wisdom and the root of love.

The Theosophical Forum

CYCLES — *William Q. Judge*

[A paper read by William Q. Judge before the Aryan T. S.,
October 22, 1889]

In advancing these few observations upon the doctrine of cycles, no claim to an exhaustive study of the matter is made. This paper is merely by way of suggestion.

The subject was brought before my mind by our discussion some evenings ago, when the question of the descent upon earth, or ascent from it, of celestial beings or progressed souls engaged our attention. It seemed certain that such ascent and descent were governed by cyclic laws, and therefore proceeded in regular periods. Some sentences from the *Wisdom of the Egyptians* by Synesius in matter furnished me by Bro. Chas. Johnston, now of India, read:

After Osiris, therefore, was initiated by his father into the royal mysteries, the gods informed him . . . that a strong tribe of envious and malignant daemons present with Typhos as his patrons, to whom he was allied and by whom he was hurled forth into light, in order that they might employ him as an instrument of the evil which they inflict on mankind. For the calamities of nations are the banquets of the evil daemons. . . .

Yet you must not think that the gods are without employment, or that their descent to this earth is perpetual. For they *descend according to orderly periods of time*, for the purpose of imparting a beneficent impulse in the republics of mankind. But this happens when they harmonize a kingdom and send to this earth for that

purpose souls who are allied to themselves. For this providence is divine and most ample, which frequently through one man pays attention to and affects countless multitudes of men.

For there is indeed in the terrestrial abode the sacred tribe of heroes who pay attention to mankind, and who are able to give them assistance even in the smallest concerns. . . . This heroic tribe is, as it were, a colony from the gods established here in order that this terrene abode may not be left destitute of a better nature. But when matter excites her own proper blossoms to war against the soul, the resistance made by these heroic tribes is small when the gods are absent; for everything is strong only in its appropriate place and time. . . . But when the harmony adapted in the beginning by the gods to all terrene things becomes old, they descend again to earth that they may call the harmony forth, energize and resuscitate it when it is as it were expiring. . . . When, however, the whole order of mundane things, greatest and least, is corrupted, then it is necessary that the gods should descend for the purpose of imparting another orderly distribution of things.

And in the *Bhagavad-Gitd* it is said by Krishna:

When Righteousness Declines,
O Bharata! when Wickedness
Is strong, I rise, from age to age, and take
Visible shape, and move *a man with men*.
Succoring the good, thrusting the evil back,
And setting Virtue on her seat again,

And

At the approach of Brahma's day, which ends after a

thousand ages, all manifested objects come forth from the non-developed principle. At the approach of Brahma's night they are absorbed in the original principle. This collective mass of existing things, thus coming forth out of the absolute again and again, is dissolved at the approach of that night; and at the approach of a new day it emanates again spontaneously.

In the foregoing quotations two great aspects of cyclic law are stated.

The latter has reference to the great cycle which includes all cycles of every kind. All the minor cycles run their course within it. When it begins a new creation is ushered in, and when it ends the great day of dissolution has arrived. In Arnold's translation of the *Bhagavad-Gita* the beginning of this great cycle is beautifully called by him "*this vast Dawn,*" and of the close he reads:

When that deep night doth darken, all which is
Fades back again to Him who sent it forth.

The real figures expressing the mortal years included in this period are not given. Each Manvantara, according to the Hindus, is divided into the four Yugas or Ages, with a certain number of years allotted to each. Speaking on this subject in *The Key to Theosophy* (page 83), H. P. Blavatsky gives us a clue thus:

Take as a first comparison and a help towards a more correct conception, the solar year; and as a second, the two halves of that year, producing each a day and a night of six months' duration at the North Pole. Now imagine, if you can, instead of a solar year of 365 days, eternity. Let the Sun represent the universe and the polar days and nights of six months each — days and nights lasting each 182 trillions and quadrillions of years instead of 182 days each.

As the Sun rises every morning on our objective horizon out of its (to us) subjective and antipodal space, so does the Universe emerge periodically on the plane of objectivity, issuing from that of subjectivity — the antipodes of the former. This is the "Cycle of Life." And as the Sun disappears from our horizon, so does the Universe disappear at regular periods when the "Universal Night" sets in.

This is about the best idea we can get of it. It is impossible for the human mind to conceive these periods. No brain can grasp 182 trillions of years, much less if quadrillions are added. Few if any persons can mentally traverse the full extent of even a *million*. But we can make an approximation to the idea by using her suggestion of dividing the year and calling six months a day and six months a night, and then extending each into what is equivalent to infinity with us, since it is impossible to seize such immense periods of time.

And carrying out the correspondence suggested by her, we have at once a figure of the inclusion of all the minor cycles, by calling each day when we rise and night when we sleep as the beginning and ending of minor cycles. Those days and nights go to make up our years and our life. We know each day and can calculate it, and fairly well throw the mind forward to see a year or perhaps a life.

A quotation from Vol. I, at p. 31 of *Isis Unveiled* will give us the Indian figures. She says:

The Maha Kalpa embraces an untold number of periods far back in the antediluvian ages. Their system comprises a Kalpa or grand period of 4,320,000,000 years which they divide into four lesser yugas running as follows:

Satyayuga: 1,728,000 years.

Treta yuga: 1,296,000 years.

Dvapa yuga: 864,000 years.

Kali yuga: 432,000 years.

4,320,000 total years.

which makes one divine age or Maha-yuga; seventy-one Maha-yugas make 306,720,000 years, to which is added a *sandhi* (or twilight) equal to a Satya-yuga or 1,728,000 years, to make a manvantara of 308,448,000 years.

Fourteen manvantaras make 4,318,272,000 years, to which must be added a *sandhihamsa* (or dawn) 1,728,000, making the Kalpa or grand period of 4,320,000,000. As we are now (1878) only in the Kali yuga of the 28th age of the 7th manvantara of 308,448,000 years, we have yet sufficient time before us to wait before we reach even half of the time allotted to the world.

Further H. P. Blavatsky clearly states that the other cycles are carried out within this greater one, as at p. 34, Vol. I.

As our planet revolves once every year around the Sun and at the same time turns once in every 24 hours upon its own axis, thus traversing minor cycles within a larger one, so is the work of the smaller cyclic periods accomplished and recommenced within the great Saros.

Leaving the region of mathematics, we find this great period represents the extension of pigmy man into the vast proportions of the great man, whose death at the close of the allotted period means the resolving of all things back into the absolute. Each of the years of this Being embraces of our years so many that we cannot comprehend them. Each day of his years brings on a minor cataclysm among men; for at the close of each one of his days, metaphorically he sleeps. And we, as it were, imitating this

Being, fall asleep at night or after our diurnal period of activity.

We are as minor cells in the great body of this Being, and must act obediently to the impulses and movements of the body in which we are enclosed and take part.

This greater man has a period of childhood, of youth, of manhood, of old age; and as the hour arrives for the close of each period, cataclysms take place over all the earth. And just as our own future is concealed from our view, so the duration of the secret cycle which shows the length of life of this Being is hidden from the sight of mortals.

We must not, however, fall into the error of supposing that there is but one of such great Beings. There are many, each being evolved at the beginning of a new creation. But here we touch upon a portion of the ancient philosophy which is fully explained only to those who are able to understand it by virtue of many initiations.

The *Sandhya* and *Sandhyahamsa* referred to in the quotation taken from *Isis Unveiled* are respectively the twilight and the dawn, each being said to be of the same length and containing the same number of years as the first or golden age — *i. e.* 1,728,000. It is in strict correspondence with our own solar day which has its twilight and dawn between day and night. . . .

Now turning to *Isis Unveiled* at p. 32 of Vol. I, we find this remarkable paragraph:

Higgins justly believed that the cycle of the Indian system, of 432,000, is the true key of the secret cycle.

But in the following paragraph she declares it cannot be revealed. However, we may get some clues, for we see in the figures of Kali yuga, 432,000, and in the great total (leaving out the Sandhis),

4,320,000. What this secret cycle is, I, however, am not competent to say. I only desire to throw out the hints.

Having thus glanced over the doctrines of the great cycle which includes all others, let us now devote a little consideration to the cycle referred to in the passages from the *Egyptian Wisdom* first quoted.

This cycle may be called for the present purpose *The Cycle of Descending Celestial Influences*. By "descending" I mean descending upon us.

Osiris here signifies most probably the good side of nature, and his brother Typhos the evil. Both must appear together. Typhos is sometimes called in the Egyptian books the opposer, and later with us, is known as the Devil. This appearance of Typhos at the same time with Osiris is paralleled in the history of the Indian Krishna, who was a white Adept, for at the same time there also reigned a powerful Black magician named Kansa, who sought to destroy Krishna in the same way as Typhos conspired against the life of Osiris. And Rama also, in Hindu lore the great Adept or ruling god, was opposed by Ravana, the powerful Black magician king.

In instructing Osiris after the initiation, the gods foresaw two questions that might arise within him and which will also come before us. The first is the idea that if the gods are alive and do not mingle with men to the advantage of the latter and for the purpose of guiding them, then they must necessarily be without any employment. Such a charge has been made against the Beings who are said to live in the Himalayas, possessed of infinite knowledge and power. If, say the public, they know so much, why do not they come among us; and as they do not so come, then they must be without employment, perpetually brooding over nothing.

The instructor answered this in advance by showing how these Beings — called gods — governed mankind through efficient causes proceeding downward by various degrees; the gods being perpetually concerned in their proper sphere with those things relating to them, and which in their turn moved other causes that produced appropriate effects upon the earth, and themselves only coming directly into earthly relations when that became necessary at certain "orderly periods of time," upon the complete disappearance of harmony which would soon be followed by destruction if not restored. Then the gods themselves descend. This is after the revolution of many smaller cycles. The same is said in *Bhagavad-Gita*.

But frequently during the minor cycles it is necessary, as the *Egyptian Wisdom* says, "to impart a beneficent impulse in the republics of mankind." This can be done by using less power than would be dissipated were a celestial Being to descend upon earth, and here the doctrine of the influence among us of *Nirmanakayas* (1) or *Gnanis* is supported in the Egyptian scheme in these words:

For there is indeed in the terrestrial abode the sacred tribe of heroes, who pay attention to mankind, and who are able to give them assistance even in the smallest concerns.

This heroic tribe is, as it were, a colony from the gods established here in order that this terrene abode may not be left destitute of a better nature.

These "heroes" are none other than *Nirmanakayas* — Adepts of this or previous Manvantaras — who remain here in various states or conditions. Some are not using bodies at all, but keep spirituality alive among men in all parts of the world; and others are actually using bodies in the world. Who the latter are it would of course be impossible for me to know, and if I had the information, to give it out would be improper.

And among this "sacred tribe of heroes" must be classed other souls. They are those who, although now inhabiting bodies and moving among men, have passed through many occult initiations in previous lives, but are now condemned, as it were, to the penance of living in circumstances and in bodies that hem them in, as well as for a time make them forget the glorious past. But their influence is always felt, even if they themselves are not aware of it. For their higher nature being in fact more developed than that of other men, it influences other natures at night or in hours of the day when all is favorable. The fact that these *obscured adepts* are not aware now of what they really are, only has to do with their memory of the past; it does not follow, because a man cannot remember his initiations, that he has had none. But there are some cases in which we can judge with a degree of certainty that such adepts were incarnated and what they were named. Take Thomas Vaughan, Raymond Lully, Sir Thomas More, Jacob Boehme, Paracelsus, and others like them, including also some of the Roman Catholic saints. These souls were as witnesses to the truth, leaving through the centuries, in their own nations, evidences for those who followed, and suggestions for keeping spirituality bright — seed-thoughts, as it were, ready for the new mental soil. And as well as these historical characters, there are countless numbers of men and women now living who have passed through certain initiations during their past lives upon earth, and who produce effects in many directions quite unknown to themselves now. They are, in fact, old friends, "the sacred tribe of heroes," and can therefore be more easily used for the spreading of influences and the carrying out of effects necessary for the preservation of spirituality in this age of darkness. We find in our present experience a parallel to this forgetting of previous initiations. There is hardly one of us who has not passed through circumstances in early life, all of

which we have forgotten, but which ever since sensibly affect our thoughts and life. Hence the only point about which any question can be raised is that of reincarnation. If we believe in that doctrine, there is no great difficulty in admitting that many of us may have been initiated to some extent and forgotten it for the time. In connection with this we find in the 2d volume of *The Secret Doctrine*, at page 302, some suggestive words. The author says:

Now that which the students of Occultism ought to know is that the third eye is indissolubly connected with Karma.

. . . In the case of the Atlanteans, it is precisely the spiritual being which sinned, the spirit element being still the "Master" principle in man in those days. *Thus it is that in those days the heaviest Karma of the fifth race was generated by our Monads. . . .*

Hence the assertion that many of us are now working off the effects of the evil Karmic causes *produced by us in Atlantean bodies.*

In another place she puts the date of the last Atlantean destruction as far back as 11,000 years ago, and describes them as a people of immense knowledge and power. If we allow about 1,000 years for our period in Devachan, we will have only passed through some eleven incarnations since then; and supposing that many more have been our lot — as is my opinion, then we have to place ourselves among those wonderful though wicked people at the height of their power. Granting that we were guilty of the sinful practices of the day in which we then lived, and knowing the effect of Karma, it must follow that since then we have passed through many very disagreeable and painful lives, resembling by analogy dreadful situations in the years between youth and maturity. No wonder, then, if for the time we have forgotten

outwardly what we then learned.

But all these historical personages to whom I have referred were living in a dark cycle that affected Europe only. These cycles do not cover the whole of the human race, fortunately for it, but run among the nations influenced for the allotted period, while other peoples remain untouched. Thus while Europe was in darkness, all India was full of men, kings and commoners alike, who possessed the true philosophy; for a different cycle was running there.

And such is the law as formulated by the best authorities. It is held that these cycles do not include the whole of mankind at any one time. In this paper I do not purpose to go into figures, for that requires a very careful examination of the deeds and works of numerous historical personages in universal history, so as to arrive by analysis at correct periods.

It is thought by many that the present is a time when preparation is being made by the most advanced of the "sacred tribe of heroes" for a new cycle in which the assistance of a greater number of progressed souls from other spheres may be gained for mankind. Indeed, in *his Unveiled* this is plainly stated.

Writing in 1878, Madame Blavatsky says in Vol. I of *Isis*:

Unless we mistake the signs, the day is approaching when the world will receive the proofs that only ancient religions were in harmony with nature, and ancient science embraced all that can be known. Secrets long kept may be revealed; books long-forgotten and arts long-time-lost may be brought out to light again; papyri and parchments of inestimable importance will turn up in the hands of men who pretend to have unrolled them from mummies or stumbled upon them in buried crypts; tablets and pillars,

whose sculptured revelations will stagger theologians and confound scientists, may yet be excavated and interpreted. Who knows the possibilities of the future? *An era of disenchantment and rebuilding will soon begin — nay, has already begun. The cycle has almost run its course; a new one is almost to begin*, and the future pages of history may contain full proof that —

If ancestry can be in aught believed,
Descending spirits have conversed with man,
And told him secrets of the world unknown.

Now the way to get at the coming on of the period or close of a larger cycle without wandering in the mazes of figures, is to regard the history and present state of mankind as known.

Thus in the darker age of Europe we find India almost unknown and America wholly so. That was a period when cycles were operating apart from each other, for men were separated from and ignorant of each other. In these continents there were great and powerful nations ruling in both North and South America, but they were not in communication with Europe or India.

Now, however, China knows of and communicates with England and America, and even dark Africa has constant visitors from all civilized nations, and to some extent is affected by us. Doubtless in the greater number of towns in Africa the white man and his doings are more or less like fables, but we with larger knowledge know that those fables rest upon the *fact* of our explorations there.

Judging, then, from the appearances in the affairs of men, we can conclude that now some great cycle is either ending or beginning, and that a number of minor circles are approaching each other.

At the same time with these social or material cycles, there are

corresponding ones on a higher plane. One is quite easy to trace. It is the influence of Eastern metaphysics upon the Western mind. This higher cycle had been revolving for many years among the Orientals before we came within its power. Our falling under it is due to a physical cycle as a means. That one which is represented in the progress of trade, of science, of means for transportation. In this way the philosophical system of India and Tibet has begun to affect us, and no man can calculate its course.

Taking into account the spiritual cycles all so intimately connected with Karma and reincarnation, one would be compelled to conclude that this cycle will not be slow or weak. For, if we in Europe and America are the reincarnations of the ancients who formulated this philosophy, we must certainly be powerfully affected upon having it presented to our notice in this life. And as the very air is getting filled with theosophical ideas, and children are growing up every day, the conclusion is irresistible that as the new generation grows up it will be more familiar with theosophical terms and propositions than we were in our youths. For in every direction now, children are likely to hear Karma, Reincarnation, Buddhism, Theosophy, and all these ideas mentioned or discussed. In the course of twenty-five years, then, we shall find here in the United States a large and intelligent body of people believing once more in the very doctrines which they, perhaps ages ago, helped to define and promulgate.

Why not, then, call one of our present cycles the cycle of the Theosophical Society? It began in 1875, and, aided by other cycles then beginning to run, it has attained some force. Whether it will revolve for any greater length of time depends upon its earnest members. Members who enter it for the purpose of acquiring ideas merely for their own use will not assist. Mere numbers do not do the work, but sincere, earnest, active, unselfish members will keep this cycle always revolving. The wisdom of those who

set it in motion becomes apparent when we begin to grasp somewhat the meaning of cyclic law. The Society could have remained a mere idea and might have been kept entirely away from outward expression in organization. Then, indeed, ideas similar to those prevalent in our Society might have been heard of. But how? Garbled, and presented only here and there, so that perhaps not for half a century later would they be concretely presented. A wise man, however, knows how to prepare for a tide of spiritual influence. But how could an every-day Russian or American know that 1875 was just the proper year in which to begin so as to be ready for the oncoming rush now fairly set in? To my mind the mere fact that we were organized with a definite platform in that year is strong evidence that the "Heroic tribe of heroes" had a hand in our formation. Let us, then, not resist the cycle, nor, complaining of the task, sit down to rest. There is no time for rest. The weak, the despairing, and the doubting may have to wait, but men and women of action cannot stand still in the face of such an opportunity.

Arise, then, O Atlanteans, and repair the mischief done so long ago!

Roll on, O Wheel, roll on and conquer;
Roll on forever more!

The Theosophical Forum

CONCERNING THE SUN — *Norman Arthur Lewis*

Our friend and parent, the Sun, is by no means such an obvious character as his shining face might lead us to suppose. This tremendous demonstration of heat and light we observe whenever and wherever the Sun makes his entrance is assuredly only a kind of planetary opinion, a sort of earthly bias of thought, something deceptive about our own observation as a planetary spectator.

Occultly speaking, the great extrovert of our Solar System is most subtle, hidden, and interior in his action; and indeed we do violence to our own understanding when we consider him as mere heat, mere light, mere physical energy.

Into that great living and conscious heart flows the circulating *something* — we may call it energy, intelligence, consciousness, Divine Fire, Akasa, terms by no means synonymous, yet all contained in our meaning — into the Sun's North Pole flows the circulating force; and it is purified, renewed, revitalized in that great vortex of forces and energies. It passes out through the Sun's South Pole to travel its path of Being, of Life-Existence, throughout the billions of entities, of atoms, in our Solar System.

It is like the passage of blood through our human veins, or the almost instantaneous passage of an electrical impulse from one place to another, but most like nothing else but its own passage. After all, there is no lesser, more limited phenomenon to compare with this everywhere-present Now. The Master K. H. referred to it as "Radiant Energy," "all pervading, omnipresent life." In this sense, the term, "circulations of the Cosmos/ is only illustrative, since for our sort of perception, for our unfortunate insistence upon Time, and for our somewhat concrete idea of Space, these

circulations are entirely too spontaneous for our actual comprehension of them.

The Sun is a great teacher, a celestial radio, the great heart, the great brain; the Sun is all and many things from a relative point of view, but truly we can have no greater or *clearer* understanding of it than our own ultimate embracing of the unqualified Great Thought, the whole space, the whole Love, the complete consciousness of this subtle immensity which at all moments supports the most obvious and limited of material objects. One cannot grasp, in an ordinary conscious state, the true function of this subtle body of force. Therefore, it would be well to remind ourselves that we will be discussing our subject in terms of a kind of mental diagram.

We have all seen diagrams with, say, object A and object B, with wavy arrows pointing from A to B, representing forces. As I discuss the Sun and Jupiter, I am going to ask that you substitute for the wavy arrows the "subtle immensity" mentioned above, that communication (too spontaneous for comprehension) of this primary or elementary energy from the Sun's South Pole to Jupiter.

Jupiter is a planet, and a receiver of the Sun's energy. Jupiter is an evolved life-center of a particular kind, and therefore has gathered to him the life-atoms karmically related to him in an aura, so to speak, of cosmic dust, meteoric fragments, bits of dead suns, odds and ends of attractive, neutral, and repellent matter. This aura is tailed the "meteoric continent" of Jupiter, and is the lens or screen, the magical curtain through which the Sun shines on Jupiter as the light of the Sun.

The planets keep themselves warm, much as our own bodies do, by their own vitality, their own vital heat. The electro-magnetic and subtler energies of the Sun, in encountering the resistance

afforded by the particles comprising a planet, set up a vibration in these particles, which vibration constitutes heat and light. There is nothing of heat in the subtle energy itself, but its meeting with the planet generates heat. More fully explained, it is because the magnetic, electric, and electro-magnetic nature of the planet (another way of describing its physical existence), interacting and reacting with the magnetic continent, converts the subtle energy, and sets up a current of heat, energy, light, and other activity relative to the planet's own mode of being.

In this way, Jupiter, for instance, although farther from the Sun than the Earth is, is not colder than the Earth, but much, much hotter. It seems that the body of the benign and pleasant Jupiter is something of a furnace. There "fluids are gases, and solids are fluids," a shifting mass of molten matter. Jupiter is a younger planet, and has not cooled as the Earth has.

It is interesting and necessary to note that the meteoric continent or veil is of extreme importance in these processes. The quality and quantity of *transformed energy* Jupiter will be able to derive from the offerings of his "teacher" — that is, the actual solar energy expended on and by Jupiter, will to a great extent depend upon the quality and quantity of karmically related worldstuff Jupiter has attracted to himself.

As the circulations of energies travel into the Sun via its North Pole and out its South, so it is with Jupiter, the Earth, and all the planets. In regard to this polarity of the Earth, I quote Dr. de Purucker:

Even the ancient Greeks taught this. Do you remember Eolus and the cave of the winds? The cave of the winds was the Earth, and the winds were the winds of the spirit, the circulations of the universe figured as winds: a cave of which the northern gate was made of horn, through which

the gods descend — and through which they ascend also, but mostly descend And the south gate of the earth, of the cave of the winds, was made of ivory, signifying the elephants, as the horn does the tusked animals of the north. And out of the south gate go the hordes of men.

The forces of nature are fluids emanating from great cosmic hearts, beating and sending out the lifeblood, each one of its own special essence, force, and spirit, to the farthest reaches it can *contain*, or embrace.

Electricity, magnetism, heat, gravity, all the real forces of nature, can be called the fluid efflux from a cosmic being, or entity; the Sun for us, since we live in the body of this Solar System, within the aura of the Sun. The great forces are bipolar, could perhaps be stated, in terms of being and consciousness, as polarities of: not love and hate, not attraction and repulsion, but perhaps best as love and repulsion.

In the course of manvantaras and evolutions, through the long day of our Solar System, the various planetary chains live and die, are disembodied, have their nirvanic rest, and then come back again for renewed life, and do this several times. Their dead bodies, that is, bodies of former globes in the various planetary chains, remain as moons of the new globes, and follow their old orbits for a time. And so, in and out of manifestation, the planetary chains follow their course of life, until that great slowing down, when the Sun nears his great sleep, and the Solar Manvantara draws to a close.

At that time, once more, the Great Mind, the Great Vitality of the Cosmos, will be drawing inward, for all the world in the same way as the mind and being of a dying man draw inward. Then the planets, or whatever evolved states and vestigial moons of them will remain at that time, will be drawing back to the source,

perhaps in the way the failing shoots of a fountain do when its wafer is shut off. The dissolution of our Solar System will have begun; and then, suddenly, the Great Thought will be forgotten, there will be an unheard explosion, and the vestiges of form and entity will have disappeared for the Solar Pralaya, or night of our universe.

The Theosophical Forum

WHO AM I? — *H. T. Edge*

Enquirers seeking light on their problems, and attending Theosophical meetings, may sometimes be deterred by the use of technical language and set forms of speaking; whereas it may be possible to convey the same ideas in simple ordinary terms and by an appeal to common experience.

Take the case of higher self and lower self for instance. This is merely the expression, in technical Theosophical language, of a fact of common experience. We all know, to our own anxious concern, of the existence of these two contrasted elements in our own make-up. We have to deal with this mysterious human machine in whose workings we find ourselves involved; but we need somebody to explain the mechanism, the wiring, the switches, etc., so as to be able to make sense of it and handle it to some useful purpose. Perhaps we have tried religion, or science, or psycho-analysis, or what not, and failed to find satisfaction; and we have hoped to find it in Theosophy. We have been scared off perhaps by technical language.

But the essential point is quite simple. Religion offers a God who is outside of man and outside of the universe; science and psychology are too materialistic: they study the machine but not the power that runs it. Theosophy tells us that man is *essentially* divine; that he is a spark of divinity encased in a fleshly tabernacle.

Theosophy teaches a belief in man's eternal immortal nature.

Our first duty is to keep alive in man his spiritual intuitions.

Let once man's immortal spirit take possession of the

temple of his body, and his own divine humanity will redeem him.

Our Higher Self is a poor pilgrim on his way to regain that which he has lost.

There in a few words from H. P. Blavatsky, you have it in a nutshell. Our nature is dual, twofold, compact of warring elements. Religion tells us that man was created in the image of God, but the doctrine has been allowed to degenerate into a mere form of words and its sublime truth has been lost sight of.

But, leaving religion and science and psychology alone, let us appeal to actual experience. You want to make sense of your own life: try this idea that man is essentially, first and foremost and all the time, a *divine* being, and see how this works. The Theosophical doctrine of Evolution shows that man began as a spiritual being, and descended into material earthly life, and is now on the way up again towards the place of his origin. In fact, what we have to do is to realize our divine nature.

It is because of this divine spark that man can never never find satisfaction in the gratification of personal desires. His lower nature pulls him one way, his higher nature another. Here is your problem in a nutshell.

But who am *I*? you will ask. These two natures, the higher and the lower self, cannot be two separate beings. Well, again we appeal to experience: you are a self-conscious mind, endowed with freewill, the power of choice. If I should try to formulate this in words, I should fail, and mix you up as well as myself; so I will not try; I will just leave you to feel it and know it as a truth that cannot be denied or explained away. So the practical point is that you are to get busy and set this mysterious power of freewill to work at unifying yourself. This contest between the higher and lower nature is to be resolved by teaching the lower to recognise

the higher as its master.

Your personal will is continually frustrated — but by what? God, Fate, Chance? No, but by your spiritual Will; by your spiritual intuition, which knows better than you do what is good for you. What religion calls the will of God is actually so; but not the will of an outside God. It is your own will, your Spiritual Will, the voice of your own better self, of your own divine nature.

Try this as a working hypothesis, and if you find it makes sense of your problems, then look into other Theosophical teachings for additional light.

The Theosophical Forum

MYOPIA — Alexandra McLean

Myopia is a defect in vision whereby objects may be seen distinctly only when very near the eye. Is there any connexion between physical myopia, by which millions of human beings are limited in vision, and racial myopia, by which existing races of today fail to see each other truly? If physical myopia is distorted vision because of wrong focusing, is not racial myopia an analogical truism.

"Man, know thyself" (*know thy self*). Is not this self *ONE*? Therefore in truth there is no difference, no *real* difference in segments of that *ONE* functioning through the individuals of various races, irrespective of color, creed or distance from one another. The Great Ones in all ages have reiterated and brought to our attention the truth of the Unity of the Universe and all evolving forms and entities within it. Yet we go on and on, each race (or large portions of that race) thinking they are superior, different, more worthy of a place in the sunlight. What folly!

The vision of the world indeed seems myopic to an alarming degree, but humanity's vision *in toto* is the result of improper focusing; the shortsightedness, lack of understanding and justice in the individual's dealings with his "other selves" in the great Unity of which we are all inseparable parts. It is well to remind ourselves of Karma and its just and infallible workings. Our myopia, physical and racial, did not just happen; we ourselves generated the cause. We but reap the effect, which is again a *cause* that at some time we will reap with tears or joy.

What can we do about it? In the words of G. de P. — "we must shift our moral center of gravity to ethics, where it rightly and truly belongs, and away from property where it has been falsely

placed during the last few thousand years . . . from politics and profit to morals and mutual service." Just as simple as that, yet how positive and unequivocal; and when we have read them our duty is clear. Each must correct his own vision, seeing the *reality* of Brotherhood.

The whole secret lies in a change of outlook, in a change of vision . . . Once our center of gravity of moral consciousness is taken from prosperity as the pivot of civilization, and placed in man himself as the center of all greatest and primal values, then 99 percent of the world's constantly recurring paroxysms of agitation, perturbation and violence will vanish. . . .

Vision, like all else is sevenfold, and to have the Highest, Inmost aspect expressing a Buddhic Splendor, a Christ Consciousness, through us is a worthy desire. "If thine eye be single thy whole body shall be full of light." Allying ourselves with the SELF at the hearts of our beings, we are individually at-one with the same SELF in others. No longer do we see others as distorted and out of focus, in any way inferior to those of our own household, neighborhood, state, country or race. We see them as Gods in the process of becoming, each striving to unfold the glory within himself — his SELF.

In the light of past history, none of us, not one race, can feel sanctimonious or claim freedom from the judgments of other races. The conditions of *now* need our highest degree of accurate vision, the clear, distinct view of Divinity at the heart of all, the long range view of what is the Heart of ALL.

As students or chelas, we are dedicated to the promulgation of Brotherhood, not the word, but the actuality. Again the words of G. de P. who was repeating to us what all the Great Ones have said:

Do unto others — I will put it in the other form — do not do unto others what you yourself object to having others do unto you It is in this way that in due course of time the Buddhas are born, the holiest men on earth.

And another Teacher said: First cast out the beam in thine own eye thus clearing our sight, strengthening our vision, *not* for the benefit of ourselves, but that we may see clearly to help our brothers. Tolerance and mercy in judgment is godly. Even as physical myopia may become chronic, causing blindness, so with racial myopia, with an increasing failure of understanding. Then indeed we may go into days of darkness well nigh beyond human endurance. Kali-Yuga is an age of darkness, but not to those who develop True Vision. Is there any sure way of clearing our vision, a practical, day-by-day method of developing our understanding and true seeing? When we seek "first things first," when we desire above all else that our Sevenfold Self function harmoniously, guided and illumined by the SELF that is the Divinity in All — then we will see truth, express truth, *be* Truth.

"O my Divinity, blend Thou with me, that from the corruptible I may become incorruptible, that from imperfection I may become perfection, that from darkness I may go forth in Light."

And if "in Light" — then *as* Light: a nucleus of clear vision, understanding, tolerance, and compassion.

The Theosophical Forum

"WHAT I IN FACT DESIRE" — Gertrude W. van Pelt

"We must be ready to say at any moment under whatever circumstances, whether expected or unexpected, "It is just what I in fact desire." For only those ideals can be dissipated which rest upon a lower basis than the highest aim, or which are not in accord with Nature's (God's) law."

— W. Q. Judge, *The Path*, Feb. 1890

It would seem as if these very challenging words of W. Q. Judge could be sincerely uttered "*under whatever circumstances*" only by one who recognized himself as a pilgrim of eternity, to whom life seemed like a moral gymnasium, a training school for higher levels with broader outlooks. Such a one would realize himself as an actual component of his Universe, responsible for his thoughts and actions on each rung of the Ladder upon which he had so far climbed or perchance failed to climb when it came in sight. He would further realize that golden-winged opportunity, which does not always show its gold on the surface, blesses only him who seizes it, while time flies bearing on its wings those claimed or unclaimed. He would foresee that though it might be easy to let the moments drift by, the awful result of this negative attitude would be some day almost crushing, when he could hardly be able to lift his head and say, "It is just what I in fact desire." He would also realize that the value of the day consists in the gain toward self-understanding and mastery, that the great moments are made from the small ones, that wrong trains of thought must be arrested before they gain momentum, that the joy of thought control far outweighs that of thought indulgence, and that the inevitable of today was the avoidable of yesterday.

A different point of view often changes the whole form and color

of an object, and as it may be thus with the moments, such a pilgrim would shift his outlook and, if need be, use constantly a double focused lens to get the broad sweep of events and yet attend to the finest details. And further, he would have perceived that an aroma of good feeling does the service of a lantern in the darkness. Thus he would have learned to live in the present but to connect it with the eternal.

Finally, at some time must come the crises of life — the soul's examination days, when he will know how to write on the tablets of destiny, "This is just what I in fact desire" — and realize these further words of W. Q. Judge that "Any other course is blindness. All the passing shows of life, whether fraught with disaster, or filled with fame and glory, are teachers. He who neglects them, neglects opportunities seldom the gods repeat. And the only way to learn from them is through the heart's resignation. When we in heart become completely poor, we at once are the treasurers and dispersers of enormous riches."

The Theosophical Forum

APHORISMS BY W. Q. JUDGE

Volume I of *Letters That Have Helped Me* was first published in book form in 1891. Less familiar to students of occultism is a second volume of the same name. It not only sets forth material of historic interest, but differs in other respects from the earlier collection.

The Foreword to Volume II, written by its compilers, is permeated with reverence and devotion to one who preferred to "appear as nothing in the eyes of men."

The following passages, selected from this second volume, are illustrative of Mr. Judge's simple, quiet dignity, and his forthright wisdom.

Organizations, like men, may fall into ruts or grooves of mental and psychic action, which, once established, are difficult to obliterate. To prevent those ruts or grooves in the Theosophical movement, its guardians provided that necessary shocks should now and then interpose so as to conduce to solidarity, to give strength such as the oak obtains from buffeting the storm, and in order that all grooves of mind, act, or thought, might be filled up.

Remember it is the little things the work is done through, for they are not noticed, while the larger ones draw the eyes and minds of all.

It is not high learning that is needed, but solely devotion to humanity, faith in Masters, in the Higher Self, a comprehension of the fundamental truths of Theosophy and a little, only a little, sincere attempt to present those fundamental truths to a people who are in desperate need of them.

No vain striving to preach or prove phenomena will be of any value, for, as again Masters have written, one phenomenon demands another and another.

Let us all draw closer together in mind and heart, soul and act, and try thus to make that true brotherhood through which alone our universal and particular progress can come.

If you try to put into practice what in your inner life you hold to be right, you will be more ready to receive helpful thoughts and the inner life will grow more real.

It is best not to inquire into some of the mysteries of life, but surely a full reliance upon the Spirit within and upon the law that the hands that smite us are our own, will relieve the pressure of some events that seem mysteries. I find the greatest consolation in these reflections, and then I see that each moment is mine, and that when gone it is passed and merged into the sum of my being: and so I must strive to Be. Thus I may hope to become in time the conscious possessor of the whole of Being. So I do not strive after mystery. The great struggle must be to open up my outer self, that my higher being may shine through, for I know that in my heart the God sits patient, and that his pure rays are merely veiled from me by the many strivings and illusions that I bring on outwardly.

What should be done is to realize that "the Master-Soul is one" with all that that implies; to know the meaning of the old teaching, "Thou art That." When this is done we may with impunity identify our consciousness with that of anything in nature; not before. But to do this is a lifetime's work, and beforehand we have to exhaust all Karma, which means duty; we must live for others and then we will find out all we *should* know, not what we would *like* to know.

Devotion and aspiration will, and do, help to bring about a proper

attitude of mind, and to raise the student to a higher plane, and also they secure for the student help which is unseen by him, for devotion and aspiration put the student into a condition in which aid can be given to him, though he may, as yet, be unconscious of it.

It is easy to do well by those we like, it is our duty to make ourselves do and think well by those we do not like. Masters say we think in grooves, and but few have the courage to fill those up and go on other lines. Let us who are willing to make the attempt try to fill up these grooves, and make new and better ones.

H. P. B. then said that it is by falling and by failing that we learn, and we cannot hope at once to be great and wise and wholly strong. She and the Masters behind expected this from all of us; she and They never desired any of us to work blindly, but only desired that we work unitedly.

Begin by trying to conquer the habit, almost universal, of pushing yourself forward. This arises from personality. Do not monopolize the conversation. Keep in the background. If someone begins to tell you about himself and his doings, do not take first chance to tell him about yourself, but listen to him and talk solely to bring him out. And when he has finished suppress in yourself the desire to tell about yourself, your opinions and experiences. Do not ask a question unless you intend to listen to the answer and inquire into its value. Try to recollect that you are a very small affair in the world, and that the people around do not value you at all and grieve not when you are absent. Your only true greatness lies in your inner true self and it is not desirous of obtaining the applause of others.

We make a good deal of progress in our inner, hidden life of which we are not at all conscious. We do not know of it until some later life. So in this case many may be quite beyond the

obstacles and not be conscious of it. It is best to go on with duty, and to refrain from this trying to take stock and measuring of progress. All of our progress is in the inner nature, and not in the physical where lives the brain, and from which the present question comes.

But here is advice given by many Adepts: every day and as often as you can, and on going to sleep and as you wake, think, think, think, on the truth that you are not body, brain, or astral man, but that you are *THAT*, and "*THAT*" is the Supreme Soul. For by this practice you will gradually kill the false notion which lurks inside that the false is the true, and the true is the false. By persistence in this, by submitting your daily thoughts each night to the judgment of your Higher Self, you will at last gain light.

Every time we think that someone else has done wrong we should ask ourselves two questions:

(1) Am I the judge in this matter who is entitled to try this person?

(2) Am I any better in my way, do I or do I not offend in some other way just as much as they do in this?

This will settle the matter I think. And in . . . there ought to be no judgments and no criticism. If some offend then let us ask what is to be done, but only when the offence is against the whole. When an offence is against *us*, then let it go. This is thought by some to be "goody-goody," but I tell you the heart, the soul, and the bowels of compassion are of more consequence than intellectuality. The latter will take us all sure to hell if we let it govern only.

The law is this. No man can rush on and fail to escape the counter current, and in proportion as he rushes so will be the force of the current. All members who work hard come at last to the notice of the Lodge, and the moment they do so, the Black Lodge also takes notice, and hence questions arise, and we are tried in subtle ways

that surpass sight, but are strong for the undoing of him who is not prepared by right thought and sacrifice to the higher nature for the fight. I tell you this. It may sound mysterious, but it is the truth, and at this time we are all bound to feel the forces at work, for as we grow, so the other side gets ready to oppose.

Now, it is true that a man cannot force himself at once into a new will and into a new belief but by thinking much on the same thing — such as this — he soon gets a new will and a new belief, and from it will come strength and also light. Try this plan. It is purely occult, simple, and powerful. I hope all will be well, and that as we are shaken up from time to time we shall grow strong.

We all differ and must agree to disagree, for it is only by balancing contrary things that equilibrium (harmony) is obtained. Harmony does not come through likeness. If people will only let each other alone and go about their own business quietly all will be well. . . . It is one's duty to try and find one's own duty and not to get into the duty of another. And in this it is of the highest importance that we should detach our *minds* (as well as our tongues) from the duties and acts of others whenever those are outside of our own. If you can find this fine line of action and inaction you will have made great progress.

Stick to it that the way is to do all you can and let the results go. You have nothing to do with results; the other side will look out for that. This is really the culmination of the work of ages, and it would be a poor thing, indeed, if the Lodge had to depend alone on our puny efforts. Hence, go on and keep the spirit that you have only to proceed, and leave the rest to time and the Lodge.

Make yourself in every way as good an instrument for any sort of work as you can. Every little thing I ever learned I have now found out to be of use to me in this work of ours. Ease of manner and of speech are of the best to have. Ease of mind and

confidence are better than all in this work of dealing with other men — that is, with the human heart. The more wise one is the better he can help his fellows, and the more cosmopolitan he is the better, too. . . . When the hour strikes it will then find you ready; no man knows when the hour will strike. But he has to be ready.

H. P. B. wrote me in 1890: "Be more charitable for others than for yourself, and more severe on yourself than on others." This is good advice. A strain always weakens the fibres and produces friction.

Try to take pleasure in doing what is your duty, and especially in the *little* duties of life. When doing any duty put your whole heart into it. There is much in this life that is bright if we would open our eyes to it. If we recognize this then we can bear the troubles that come to us calmly and patiently, for we know that they will pass away.

It is not wise to be always analyzing our faults and failures; to regret is waste of energy: if we endeavor to use all our energy in the service of the Cause, we shall find ourselves rising above our faults and failures, and though these must perhaps occur, they will lose their power to drag us down. Of course we do have to face our faults and fight them, but our strength for such a struggle will increase with our devotion and unselfishness. This does not mean that vigilance over one's thoughts and acts is ever to be relaxed.

There is never any need to worry. The good law looks out for all things, and all we have to do is our duty as it comes along from day to day. Nothing is gained by worrying about matters and about the way people do not respond. In the first place you do not alter people, and in the second, by being anxious as to things, you put an occult obstacle in the way of what you want done. It is

better to acquire a lot of what is called carelessness by the world, but is in reality a calm reliance on the law, and a doing of one's own duty, satisfied that the results must be right, no matter what they may be.

The Theosophical Forum

MENTAL FURNITURE — *M. G. Gowsell*

The matter of household furniture looms quite large in the interests of the majority of us occidental people. And of course it naturally follows that these personal possessions will be almost as varied in character as the householders themselves, either in the arrangement or disarrangement of the diverse items in a room, or in their style, shape, substance or origin. Particular value might be placed upon them as family heirlooms, or perhaps as antiques. Some of the belongings may be classed as Renascent, Victorian or ultramodern, and be valued in proportion to their age. But the appraisal of any one of them might be quite apart from its usefulness or serviceability. Few people will fail to recall how, when and where the various items were acquired and what they cost.

But how many of us attach as much, if any importance whatsoever, to our mental furniture: how and under what circumstances we came by the several items comprising this so vastly more important aggregation. Our personal reactions to any given circumstance in life at any time will depend wholly upon our mental furniture: in other words, upon our preconceived ideas, which too often will account for the bulk of it. These may have been intelligently noted, tested, even reflected upon and closely scrutinized before being accepted, or, which is far more likely to be the case, they may have been simply borrowed, unthinkingly. Too often our staunchest convictions will, upon close inspection, be found to be mere opinions or prejudices — prejudgments, to give the word its true meaning — and hence be seen for what they are, just vagrants, existing without visible or logical means of support. Would that we might exercise the same amount of discrimination in respect to these vital items that we

use in selecting our household equipment.

There is a subtle connection if not correspondence between what we may choose to call mental furniture and the household variety, the constituents of both ranging from the antique to the modern. Moreover it happens that in most households the several rooms will be differently furnished. Let these rooms then represent places where we indulge in different thought processes. For our thoughts will be modified if not changed as we go from room to room for different purposes. There would of course be the kitchen and dining room where meals would be the main subject of speculation. There will be the living room where our thoughts become more general. There might perhaps be the library or study, and each place differently appointed. Most people will agree that diverse places invite entirely separate sets of ideas or lines of thought, and so to have an intimate bearing upon certain phases of our mental equipment, or parts of our composite nature, of which they are a reflection. As an illustration: Take the man whose circumstances compel him to go from city to city or country to country. He would certainly find himself presenting a totally different part of himself, quite another front, while in New Orleans to that in New York. He would likewise react in quite another manner while in Sydney or Melbourne to when he was in Rome or Moscow. So disparate, so pronounced may these be, that he might be said to be hardly the same man at any two of such places. So much for the psychology of places in a larger degree. It will be somewhat similar with all of us as we move about within our home sphere.

Much is being said about our way of life. And it may be pertinent to point out that much of our mental furniture lying in the background of the general awareness is being weighed in the balance. Termites of circumstance are making rapid inroads into some of our oldest and most cherished items, rendering them

inept, inadequate and wholly unsafe for further service, when not actually dangerous to longer have around. Wasn't it Plato who said that ideas rule the world, the implication by extension being that ideas also rule our individual lives and serve to make us what we are, for as a man thinks so is he. Well, how *do* we think? Did space permit it might be of interest to go over the matter in some detail and ascertain just how we equip ourselves for the function, for there are various kinds of thinking. Doubtless the commonest form that our thinking takes is that of reverie, sometimes referred to as the free association of ideas: what one may choose to think about when he doesn't have to think. But as this cannot be regarded as real thinking, being altogether too egocentric and hence pettily personal, perhaps the least said about it the better. To expatiate here would only be to hold up the mirror with a vengeance and prove about as unprofitable perhaps as would meditation upon one's limitations, none of which may be surmounted except by applying the chemical law of substitution.

Thinking should have, as an objective, an increase of knowledge. Means to such an end would naturally involve more than one kind of thinking, one of which will be when our beliefs are seriously questioned, as then they will need our defense. For people believe what they want to believe. Some will go to great lengths in support of their opinions, not so much perhaps that they attach any inordinate value to their ideas, as such, but that they should be questioned is all too apt to incur resentment, their self-esteem being jeopardized, and thus some face-saving will be in order. Hence there would be an assembling of every conceivable excuse or argument for maintaining their views. Nevertheless this would engender some thinking, if only to defend what they have long been accustomed to accept as unquestionable verities. Of course, in the final analysis, like the

reverie, this will be more a matter of cerebration than of real thinking.

Real thinking is creative, means work, and represents the opposite pole to the reverie. It has to do with the higher mind, which is impersonal and quite another part of man's composite nature. It is through the region of the higher mind, not yet too readily available to the majority, that we achieve real knowledge of the great worthwhiles of life. It is this, or through this, that the transformation of a man or of a world may be achieved. A reflective mind is a primary essential to this kind of thinking. For it is by such means that we are enabled to change our mind, yes, and change our heart also. Finally, it is of the utmost importance that our mental furniture be kept in order at all times, particularly during these of today.

"STUDIES IN OCCULT PHILOSOPHY" — *J. M. Prentice*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

A Personal Appreciation

Sir Arthur Quiller-Couch, one of the really great teachers and an outstanding man of letters in our time, published a splendid little treatise entitled *On the Art of Reading*. It comprised twelve lectures given on various occasions to students at Cambridge University. From the second lecture is extracted the following passage:

Between these mysteries of a harmonious universe and the inward soul are granted to live among us certain men whose minds and souls throw out filaments more delicate than ours, vibrating to far messages which they bring home to report them to us; and these men we call prophets, poets, masters, great artists, and when they write it we call their report literature.

The passage recurred to me as I was seeking a suitable introduction to the difficult task of reviewing this last gift from our late Leader. I was tempted to cut the passage off short at the word "artists" and indicate the unfinished nature of the quotation thus Because the question confronted me, as it has before: After allowing for the authenticity of these far messages that G. de P. brought home to us, how do they rank as literature?

It is not an easy query to answer without some reservations, without perhaps even giving unintended offence in some quarters. Much of what G. de P. has left us was spoken, and no

attempt has been made on publication to alter this material from the oral to the spoken form. *Hence, to get the very best effect of much of G. de P.'s published work, it should be read aloud.* There is no doubt, no question, that G. de P. had an outstanding command of spoken English, but when it comes to us in print in a literal reproduction there is a sense of prolixity — a superabundance of adjectives, of verbs, a determined insistence that no shadow of doubt should be left in the mind of the hearer (rather than the reader); that every shade of meaning should be made manifest. In the same fashion that H. P. B. used *facts* in her determination to leave no stone unturned, to make her case completely fool-proof, so G. de P. used *words*.

A brilliant Englishman recently published an essay on books that had affected his outlook. He spoke of the *Secret Doctrine* as one of the great formative works in his reading but spoke of it as written "in angry and abominable English." Without in any way agreeing with this, one could easily imagine the same or a similar essayist finding a book like *The Esoteric Tradition* jewelled, over-ornate, finicking. I remember, when it was published, writing an enthusiastic review which was entirely sincere, but after a couple of critical re-readings I found myself returning to Judge's *Ocean of Theosophy* as my regular stand-by, a doorway into a land where I was familiar, and not the tropical exuberance, the prolific growth of this new realm.

Please understand that I am not being wise after the event or saying something that I did not say, even more emphatically to G. de P. himself. During his lifetime the Leader and I had some merry exchanges on such points as redundancy, recapitulation, repetition, in his published writings. "Every time I open *Fundamentals* my fingers itch for the blue pencil," I wrote once in the very early days of my membership. The reply was worthy and typical: "By all means use the blue pencil to your heart's content,

but only on your own copy"! G. de P.'s method was the Oriental method of teaching by recapitulation. Perhaps thereby he showed himself the lineal descendent of those Eastern sages who used such methods ages ago.

As regards my stricture on *Fundamentals*: notwithstanding the retention of the oral form and (to those who did not know the background) the almost fulsome adulation paid to his predecessor — which, to my personal knowledge, has proved a bad stumbling block to many worthy students — I still regard this as his greatest book, his most priceless gift. I rank it third only to *The Secret Doctrine* and *The Mahatma Letters to A. P. Sinnett*. But I confess with a sense of my own perverseness that after more than forty years of Theosophical reading, I still find "Mahatman" and "Karman" pedantic and completely unacceptable. G. de P. sympathised with me in this and told me to please myself regarding their use in my public work, but in all my small writings I have conformed, as a mark of respect to his desire for accuracy.

Coming belatedly to *Studies in Occult Philosophy* and by a round-about track, I want to offer a tribute to its scope, its scholarship, its vast intent, its magnificent Theosophical vistas. Good as the two preceding posthumous volumes were, this is still better. Hints regarding matters hitherto hidden in the secrecy and silence of Esotericism abound; many dark and difficult teachings are clarified; many a secret of Occultism is wholly revealed.

This does not mean that study is not required. The book is definitely for the student and much of the gold will only be found after the ore-bearing material has been thoroughly worked over. Not that the reading is difficult. These "far messages" are easier than either *Fundamentals* or *The Esoteric Tradition*. One fascinating section will be found pp. 244-253. The quotations from

the S. D. are eloquent in themselves — one is probably the very apex of all that was written either by or through H. P. B. as far as literary style is concerned. In expanding these teachings G. de P. has produced a noble prose style that is equally satisfying and has transmitted therein one "far message" that will reverberate in the mind rather than the heart.

The Theosophical Forum

KARMAN — *Lydia Ross and C. J. Ryan*

"Each man is his own absolute lawgiver, the dispenser of glory or gloom to himself, the decreer of his life, his reward, his punishment."

Who has not, at some time in his life, asked why he should be the one to whom unforeseen and apparently undeserved sorrow or joy has come? Why should one person rather than another enjoy unflinching luck in life, without any effort of his own? Again, why should many years of misfortune or success suddenly come to an end, and entirely opposite conditions prevail? Science assures us that law and order rule throughout material Nature, yet it offers little but chance and accident in answer to such questions as the above. Orthodox theology asserts that all is due to the "will of God" — a mere evasion. Modern philosophy gives no satisfying answer. The Ancients, however, combined Science, Religion, and Philosophy in a working philosophy of life. They knew that, for humanity, Reincarnation gave room for the play of perfect justice — Karman.

Karman is a Sanskrit term which expresses, in one word, the idea of the universal law of Cause and Effect that operates always and everywhere. The word itself means "action," and it ever works to restore disturbed harmony or unbalanced equilibrium, whether this action prevails in human life or in any realm of Nature. Karman is the unerring Law of Consequences which, in man's life, makes him reap whatsoever he sows. Man, with his mind, soul and will, is a responsible being; he is neither the helpless subject of a personal god, nor the prey of fatalistic chances in a lawless universe. Karman may be defined as perfect justice in action. It is not the ruling of a capricious Law-Giver; *it exists in the*

very nature of things.

Man being a thinker, his thoughts build his character and become the causes of actions which, in their turn, start new trains of effects. Moreover, the very way in which he meets his present conditions sets up a new chain of causes, whose effects appear sooner or later. Both good-and evil-doers reap whatsoever they sow, even if it takes many life-times before the harvest ripens. The apparent injustice often seen in the prosperity of the selfish and heartless and in the suffering of the good, would be, indeed, an unsolved problem, if there were no previous lives wherein the causes of these conditions had been set on foot.

The action of Karman upon us is not the verdict of a Supreme Judge carrying reward or punishment, compensation or retribution; whatever happens is simply the natural consequence of our own thoughts and deeds. Karman is as impersonal as the law of gravitation; and as it is unerring, constant and all-embracing, we can trust it and work with it. How fortunate that is, for who does not long for justice to be done? The existence of Karman in the vast Scheme of Things accounts for that innate sense of justice in every human heart, ever urging us to find it in action. The decrees of human law do not bear evenly on all concerned, because it is impossible to take into account all the conditions, past and present, seen and unseen. But the universal karmic law leaves nothing out of account. It balances all the causes and their effects, known and unknown, including thoughts and motives both in this and past lives, and it strikes a just balance, even after many days.

There is no favoritism in the action of Karman nor is there any possibility of escaping from it, any more than we can escape from our weaknesses except by rebuilding our character. The rebound of wrongdoing cannot be turned aside by prayer, nor by mocking

at Nature's laws, nor by scheming to avoid them. Nor do the consequences of any loving or helpful thought or action fail to return, in full measure, to him who sent them forth.

Our character is the outcome, the offspring so to say, of what we were in our past lives. So that, looking backward, we see ourselves, each one of us, as his own ancestor, even as in this life each is a child of his own past. In a word, Karman and Reincarnation solve the problem of individual evolution; it is the incarnating spirit of man involved in and working its way through experiences in physical bodies and material forces, life after life.

It was said of old: "Be ye perfect," and again: "*Work* out your own salvation," which in scientific terms means "your own evolution," for, as H. P. Blavatsky says:

"The whole order of Nature evinces a progressive march toward a higher life. There is design in the action of the seemingly blindest forces. The whole process of evolution with its endless adaptations is a proof of this."

The "design" of the impersonal karmic law is to preserve the balance of all our forces — physical, psychic, mental, and spiritual. When we do work with the law we keep to the middle lines of progress and move naturally and steadily onward into a larger and better life. Unfortunately, too often our desires use our will to lead us far astray from the highway of progress. The wise waste no time in following profitless by-paths, but train themselves by controlling their desires. A few Great Souls have outrun the majority of men, and have become the world's Sages and Seers, many of whom are known to history, and whose teachings and examples are an inspiration to their fellow-men.

The karmic law is not only just but it is truly merciful, because

absolute justice and mercy are one. Even its painful effects are natural reminders that we are, or have been, off the road to peace and power and the real joy of living. We can all learn much from the pain and suffering that befall us, more than from success and pleasure, which so often magnify our selfishness. We cannot gain sympathetic understanding merely by observing the suffering of others; only by having been through similar trials can we feel their needs and know how to give real help. If we refuse to help others in trouble under the plea that they brought it upon themselves and must take the consequences, our action is utterly mistaken and heartless. As Mme. Blavatsky says: "Inaction in a deed of mercy becomes an action in a deadly sin." When we succeed in lifting the suffering from another, it proves that we had the privilege of being the active instrument of Karman. We may be repaying an unknown debt we owe him.

Poverty, sickness, and sorrow are by no means always the result of ill-doing either in this or in a former life. Karman is not so mechanical as that! In many cases a strong soul chooses conditions of hardship and difficulty so as to gain strength and fortitude, and also to acquire a sympathetic understanding of the sufferings and limitations that fall to the common lot.

While it is the sacred obligation of the more advanced or more fortunate to help the less fortunate, what many persons need most is to be shown how to help themselves. They will gain strength by learning how to accept courageously what comes to them and to make the best of it. Self-knowledge gives us the understanding heart by which we can help wisely, because the study of one's own nature, in the light of Karman and Reincarnation, gives the key to the needs of others.

Karman acts on all planes, visible and invisible: physical, mental, emotional, and spiritual. Moreover, causes and effects react from

plane to plane, so that selfish thoughts and emotions, like anger, jealousy, fear, and hatred, sooner or later react upon the health and mental outlook. Again, the unselfish impulse to help or to protect another in danger calls forth unsuspected power and a buoyant sense of spiritual resource equal to the occasion. As our different kinds of karman thus act and react upon the different parts of our composite nature so do its effects react upon other persons, as they, in turn, affect us. We see this plainly in family and other ties. The same rule holds good of our place and share in the general karmic conditions of the locality, the nation, and the race, to which we belong. If we suffer from retributive Karman, like wars and other calamities, we also reap the collective benefits that belong to organized society. Though we seem to have had no direct part in making the exact conditions — good or bad — into which we were born, yet we did make the causes which resulted in our being born into these conditions.

Karman accounts for the accidents and fatalities which befall some who are apparently well protected from danger, while others, unguarded, survive a series of hairbreadth escapes without a scratch.

Knowledge of Karman throws light on the mystery of good and evil. Man plans and creates causes, good, bad, and indifferent, and the just law returns to him equal effects in kind. If he metes out good, it is meted out to him in equal measure, though it may be in a future life. If he has done evil, there is no "remission of sin" by any external power, no atonement through shedding the blood of an innocent victim. He has wronged his own spiritual nature, and he alone can right the wrong against his better Self. He will suffer, sooner or later, until he has done himself justice. Even a man of good mind and morals may feel the effects of his past errors long after he has mended his ways. For instance, the final results of wrong thought and action in a past life may have

worked down to the physical level on their way out, making him crippled or diseased, while at the same time he is also reaping and sowing good mental and moral karman. If wise, he will add remedial means to Nature's efforts to cancel the old score. If he unwisely uses his own will or that of another to dissipate visible disease by throwing it back on the mental plane, he is opposing the law of Nature. The retarded effects will appear later with added force in a worse way, physically or mentally. Of course, this does not mean that we should not try to prevent or to cure disease by a healthy mental attitude as well as by physical means. When we work with kindly Mother Nature we move onward with the mighty currents of the evolving Universe of which we are a vital part.

Nature works in cycles, of longer or shorter duration, so that karman may be delayed until appropriate conditions appear. For instance, an infant cannot suffer the mental trials or intellectual pleasures which, if due to appear in its present life, would be reserved for maturer years. We incarnate in the family, in the time, and in the surroundings where we belong. We create our own future.

We reap what we have sown; we never "gather grapes from thorns" or "figs from thistles," nor good from evil, wisdom from stupidity, nor health from wrong living. Like always produces like, in our unfolding human nature as well as in all the various realms of material Nature. Some seeds lie dormant for years, while others germinate quickly; so it is with the germs of thought and action, some remain latent for many lives, while others come to the surface very soon. Sometimes the general trend of life is markedly changed by sudden poverty or riches, by fame or disgrace, or by something else that seems wholly foreign to the individual or family character. These are cases where one kind of karman being exhausted, another kind follows. Then, again, a

long-delayed account may find an opportunity to appear abruptly in the midst of a smooth current of events.

Karmic causes may so modify each other that the result, while unlike either cause, will be the just effect of both. Also, one cause may be so completely opposed to another as to neutralize its effects.

Knowledge of Karman invokes self-reliance. It appeals to man's innate power and dignity as an embodied soul which, having reached man's estate, may naturally continue by "self-directed evolution" to bring out the best within himself and to unfold his spiritual nature in ever greater degree. With a divine birthright to draw upon, man is no mere "miserable sinner" passively waiting to be saved by an innocent sacrifice. Atonement really means at-one-ment with the Christos spirit "within." That inner Self well knows that "every man shall bear his own burden." No doubt the karmic record of our countless past lives is stained with many sins both of omission and commission; but the record is also illumined with ages of struggle and hard-won victories in self-control.

Karman is by no means fatalism, for it is the logical doctrine of "another chance." No wrong-doing can bind one for ever, because new opportunities are always presenting themselves. Even the painful effects of grievous past error can be met and endured so courageously and understandingly that the experience may count as gain. The real man can make these old stumbling-blocks serve as stepping-stones toward a finer manhood, a nobler character, and a knowledge of self "which is wisdom itself."

Karman is so far-reaching in action that it calls for deep study. It seems unfamiliar at first because before Theosophy was presented, we had been given only unrelated fragments of universal Truth. These fragments did not reveal the basic fact that

it is the one Law of Cosmic Justice which regulates even our human life. Our minds are awed and strengthened by the majestic truth that man is an intrinsic part of the Great Plan, in which his welfare is dear to the very Heart of Being!

The Theosophical Forum

MIND OR MEDICINE? — *J. W. A. Croiset van Uchelen*

More than once I have been asked what my point of view as a doctor is as regards metaphysical healing. This is a pertinent question, but should be formulated more specifically before it can be answered. What do we mean by metaphysical healing? Do we mean the use of human mind by means of affirmations, denials, or decrees? If so, we are limited by the limitations of man. But if we mean the All Consciousness of Mind, and faith as a pure religious quality, we reach toward unlimited powers. I shall assume therefore that the latter approach is the one to be considered. Now first of all, what is man's Quest, if not for Truth, for Reality? Fundamentally, this is a religious search for Union with the Divine. But since man is endowed with mind, the mind as well as the heart seeks to be satisfied. And so, our soul search, through the heart, is linked to a mental search, through the mind. Thus, we must utilize the three main avenues of human thought: science, philosophy and religion; for these are one, beyond the limitations of man-made boundary lines.

Voltaire, you will remember, stressed the necessity first of all to define our terms. To define anything, we must analyze it. In the process we may gain considerable knowledge, while at the same time avoiding much confusion. Now science is defined as classified knowledge, that is, knowledge about phenomena. It is worthwhile to note that this definition holds equally for metaphysical science. It makes no fundamental difference whether we deal with phenomena perceived by physical means, or whether we are dealing with worlds and processes of a non-physical nature. In both cases we are dealing with phenomena, with the manifested, whether in grosser or subtler form is not the point. Science does not know what electricity is, what nerve force

is, or life; it deals with phenomena observed, just as psychology deals with the phenomena produced, in reaction, by mental activity; mind, as cause, remaining the unknown quantity. Here then, we are dealing with technical teachings, as comprehended by the intellect — leaving the heart cold.

Religion and philosophy on the other hand, enter the realm of causation and the non-manifested, the realm of pure consciousness, if you like, spoken of by Plato as the world of Ideas. I prefer to speak of the world of the Real, of the Divine, which is non-corporeal, yet enfolds within itself. Its expression in the manifested of which It is the Causeless Cause, eternal, changeless. Now, if we agree that religion and science should go hand in hand, then we must realize that the fundamentals of religion *per se*, are as permanent and changeless as the proverbial two times two is four of mathematics. And where science makes its appeal to reason, religion must put forth its claim to faith. In the one we rely upon man, in the other our reliance is placed upon the divine. Science dissects matter. Religion accepts spirit. One deals with phenomena, the other with noumena. Science seeks for knowledge. Philosophy and religion reach out for wisdom. If we should say that science is man-made and religion God-given, we should perhaps point out that scientists need but to put their trust in the senses, while their beliefs rest upon the claims and findings of other men (many of which claims are short-lived indeed). In religion, there is faith "in the evidence of things not seen" and reliance upon pronouncements by those, greater than man, whose teachings have stood the test of ages. At this point we also must clearly distinguish between belief and faith. A belief is an acceptance upon authority, but unto faith is added that element of "intuitive knowledge" which science cannot recognize.

Our beliefs are in doctrines, in interpretations. Faith rests on

realities. Interpretations, based on assumed original teachings, if not prophetic, are man-defined. Churches, sects or movements, give their many varied interpretations; individual leaders offer theirs. As an example, the teaching of the Immaculate Conception is an interpretation formulated by the Church, as the fruit of theological speculation. This is a doctrine. Oriental teachers also present their concepts, introducing doctrines of Eastern Schools. We may reject, or accept such doctrines, but our acceptance does not constitute faith, but a belief.

In passing we might also make mention of the use of symbols, as associated with every religion. Whether the idea of the Creator of a Divinity, is represented by a totem-pole, or a plaster of Paris statuette, or by any other symbol, is of no consequence to the quality of faith itself. It may be remembered that Christian missionaries in China found it necessary to dress Jesus as a Chinese, in order to make their point. Does it matter? Symbols are useful as long as they assist us in the contemplation of an ideal. And most of us are so helped, it is fair to say. Symbols are determined by the training and temperament of the worshiper, his artistic and mental capacity. What appeals to us most readily is to a great extent determined by the environment in which we are born and develop. For instance, if the presentation of Jesus crucified does not appeal to the average Protestant, it is because he has learned to see in it, first of all, a picture of suffering, rather than that of selfless sacrifice, and so he more than likely prefers a picture of Jesus as the expression of outpouring Love, which is the greatest tenet of the Christian religion. To millions of Orientals the familiar image of Buddha is the symbol of all that is holy and noble; and those who were greatest among his followers take the place of the array of western saints. Many who now laugh at the presentation of a God on a throne in a gold-paved heaven, assume ignorantly that Original philosophies are free of such presumed

childishness, when, as a matter of fact, the Westerner is dealing with symbologies mostly not understood by him. Buddhism itself has given an allegorical description of Devachan, or heaven, not less amusing to the uninitiated perhaps. It speaks of a region of bliss many thousand myriads of worlds beyond ours, encircled by seven rows of railings, seven rows of vast curtains, seven rows of waving trees, where flow crystalline waters in the midst of seven precious lakes. This is Devachan, the holy abode of Arhats, governed by the Dhyani-Chohans and possessed by the Bodhisattva. All this is, literally, immaterial to faith itself, which knows of reality beyond the forms of the manifested; first intuitively, later through mystical experience. Faith is of the heart, not of the mind. It calls for self-surrender, gratitude and humility, not for self-assertion nor pride of achievement. Note that a self-surrender to and faith in a divinity, omniscient, omnipotent, omnipresent, is not illogical to the intellect, but the concepts themselves are beyond human understanding and therefore beyond discussion, even if real.

Not all savants, by any means of measure, are saints, but saintliness assures a measure of wisdom; for all these things shall be added unto him who has faith, and there are many examples of this throughout the ages. Academic education is no guarantee for spiritual discernment, but the latter lifts human thought above self-deception into self-discovery. Faith is invoked, it cannot be impelled. It is a grace bestowed, invoked and strengthened by love. Cicero spoke of "the divinity of faith itself."

Psychology has made its strongest appeal in its search for a link, but failed to rise above its materialistic approach toward the immeasurable forces of the super-consciousness.

Fundamentals are too often lost sight of and secondary mental processes involved become viewed as primaries. For instance, it

is said an army marches on its stomach, but it would be absurd to conclude that by explaining the physiological activities of the stomach we had explained what marching is. Similarly, if in talking about metaphysical healing we are content to limit ourselves to the reflected mental activity and elaborate upon the process of suggestion involved, we have not dealt with the fundamental underlying element, that of faith. Attempts at scientific evaluations of spiritual values must fail, since they cannot be supported upon a materialistic basis. The manifestation of such values is from within, without, or from above, below. Spiritual values are complementary, not contradictory to material processes, which demand a building from below upwards. Here in fact are the two methods of acting which must be fused. The future demands our recognition of interrelationships, rather than a broadening of illusory lines of demarcation — in every field. As a matter of fact, science unwittingly has already transgressed its self-erected barriers into the borderland of a realm where its own restricted methods are barely applicable. That the projection of consciousness, aided by this mysterious power of faith can take dominion over the manifested and perform seeming miracles which mind alone is unable to accomplish is an assertion which rests on demonstrated fact. Even if not explained it cannot be denied.

And so, you see, that while defining terms, I have come to express my own conviction in the matter of metaphysical or spiritual healing. Dr. de Purucker, in answering a question, once discussed the various rays used in healing and the possibility of their conversion in order to establish a healthy rate of vibration in diseased tissue. (See *Studies in Occult Philosophy*.) Through heart and mind powers far beyond the grasp of physical science can be released — *depending upon the individual*. One who can employ these means can succeed where all other methods fail. The

powers of nature obey those who make obeisance. Of course to be a member of an occult fraternity does not make one a master of occultism, any more than a member of a metaphysical healing cult necessarily is successful in employing its methods. But I am convinced that those who seek and have the quality of faith can accomplish more than any doctor can do for them. As a Sage once said: Physician heal thyself! So in time everyone will have to become his own physician. In the meantime there is still place for those who can serve their fellow-men without violating nature. It all depends upon the individual, it was said. Why? Because we can follow and absorb to a certain point, beyond which we must learn to stand alone in the Silence, before we can come face to face with Reality. The achievement of the scientists, after all, is an individual achievement. The attainment of the religionist, the at-one-ment with Reality, is an individual experience. The experience may take a second in man-made time; it may be sustained longer, yet, though individual, it reveals the Oneness of All!

The Theosophical Forum

NOTES ON THE LOWER NATURE — *Norman Arthur Lewis*

How much can be gained by the manipulations of the senses and of the brain mind on behalf of that divine being who moves serene and untouched through the greatest of our joys and the greatest trials, free and triumphant, poised in birth and death . . . how much can we do for our clearer knowledge of him?

Training the vehicle is all, training and training, until we have made order, made a workable process, through which to work his will and his inspiration. We must untie the knots, remove the barriers, clear the way. This is action in his name, there is no other.

Very important it is to know the value, and the valuelessness, of words. Perhaps words are the means by which we are bound most securely. The fact that words are so intimately associated with magical practices, and with the "creative aspect" of man and the cosmos, attests their potency. They are the instruments of Karma *par excellence*. Indeed, the words of one man can work more good or evil — sometimes both, at different times — than the actions of many people. Perhaps one of the great powers of language, generally speaking, is just that it has been set so high in human estimation. Because it has been used to represent the highest of values, it can be mistaken, it, mere language, for truth itself. Words left to their own devices, left to glare from the page, breed new spooks before every eye they meet; and yet, in themselves, they may appear the most innocent and dull of the whole dictionary. Words are born conjurors, and are just as unreliable as any other witchdoctor.

Look within.

What is it we are always trying to accomplish? Isn't it to reach that state, or attain that end, that good is the reflex of our involuntary natures, that we have truth for our every motive?

In the rumbling and blundering world of "facts" (i.e. things done or made), man is most truly an *idea*, and it is in the realm of ideas that he will find his order and his fulfillment. How much it is an understatement to the minds of most men, that "Ideas rule the world." Only when men have taken the trouble to rule themselves can they begin to understand the real meaning of those words, for only then can they attain to the realm of ideas. Until then, they are "ruled," with the world.

A real "command of the facts," that possession so much desired by many today, can be said to belong only to that man who recognizes an idea when he is one.

We can say that the world itself is the battered old hulk of the Tower of Babel, the confused and tumbling mass of facts, figures, signs, symbols, and words, words, words; representing a billion diverse points of view. Perhaps one day the stragglers among the ruins will welcome the coming of the great engineers and builders who will set up the City of the Sun from these poor random blocks, these orphaned buttresses and doorposts.

So, too, our own personalities correspond to this figure, are indeed the likenesses of the ruined old Tower of Babel, and cry out for the Architect, the Builder, the inspired one who has more care for a harmonious Unity than for all manner of curious and fascinating diversity.

THEOSOPHY: A UNIVERSAL INSPIRATION (1) — Kenneth Morris

In ancient times there were no churches, as we have now the Christian, Buddhist or Mohammedan Churches. Each tribe or race had its own god or gods about whom many stories were told, and in whose honor various festivals were held at different times of the year. These stories and festivals all had an inner meaning and were meant to suggest something of hidden truth to the enquiring mind. Some such stories come down to us from the ancient Welsh in the *Mabinogion*, and there would be some earnest natures who would ask, what is the meaning of it? Why am I here, what is the meaning of life and death? How can I acquire such knowledge of these things as the gods have?

An enquirer of those days went to the Druids who were the custodians of wisdom and said, "Teach me! I want to understand the Mysteries of the Universe." And the Druids would answer: "Discipline comes before Philosophy. He who would know the doctrine let him do the Will." And there must be a pledge of secrecy never to reveal what was learned.

So the candidate pledged himself, and underwent training for years until his spiritual nature and perceptions were thoroughly awakened, and he came to understand, in varying degree, the truth about himself and life and death and the universe.

Now that was the method all over the world. Whether you look at Greece or India, Egypt or China, Wales or Mexico or Peru, you find the same general method: a simple religion, with stories about the gods and festivals in their honor, for the people; schools pledged to secrecy in which candidates for wisdom could receive training and initiation.

But all human institutions suffer the same fate: they grow old in time and die. The Schools of the Mysteries grew old, and became ineffectual as a link between the world and the Spirit; and in and about the Sixth Century before Christ a tremendously significant thing happened. Remember that in those days if a man travelled from Greece to Egypt he was a very great traveller; that few Greeks had travelled as far as to Persia; that they had but vaguely heard of India; that Hindus hardly knew there was such a country as China, or Chinese that there was such a country as India; still less did people in the Old World know of America. And yet at that one time seven great men appeared in the world: two in China, two in India, one in Persia, one in Greece, and one in Mexico — Laotse and Confucius, the Buddha and the Founder of what is called the Jain religion, Zoroaster, Pythagoras and the Mexican Emperor Quetzalcoatl. These all turned their backs on the official Mysteries of their countries and started a new epoch, a new phase of history: the Age of the great World Religions. They all lived at the same time and the teachings of each were suited to his own country, but they all had a great body of ideas in common, and nowhere do they contradict each other. And when, five or six centuries later, another Great Teacher arose in Galilee, we find him giving out the same teachings that his glorious predecessors had given out: that there was a Right Way to Live, a right path to follow by which one might come to know the secrets of life and death.

The Founders of all the Great Religions were at one in this way: they all claimed that they taught nothing new. "I preach the Law, the Doctrine of all the Buddhas my predecessors," said the great Indian Prince, Gautama Siddhartha, who, moved by infinite compassion for the woes of mankind, gave up his wealth and power and wandered the world seeking until he found the cure for human sorrow. "I preach the Tao, the Way of the Universe,"

said Great Lao-tse of China, "which would seem to be older than God." "I originate nothing," said Home Secretary Confucius, who had wiped out evil-doing in his country simply by the example he set. "I love the Ancients, and therefore I teach the doctrine of the Ancients."

That is to say that what they had to teach had always been in the world and only needed re-stating and being given new authority and published abroad. There were two sides of it: the Will and the Doctrine, the Ethics and the Philosophy. They all gave out the ethics such as are contained in the Sermon on the Mount, and they all gave out more or less of the Doctrine and the Philosophy; the Buddha most of all. The Philosophy was the very heart of the Mysteries and contained the basic ideas about life and the importance of ethics as the reason why right is right and could be no other way.

Let us explain these basic ideas and how they affected human history. Consider history as a road and the Mysteries the light illuminating that road, and streaming forth in many directions, shedding its beams on the activities of man all down the ages.

History from books gives only the skeleton, and to get flesh on those bones and the breath of life into the body it is necessary to read the literature of the period you wish to study. And so with religion — if you want to know the religion of any people or age study their art; it will give you their vital spiritual inspiration. So now the streams of light along the dark, wet road will be the art of some of the ancient and modern civilizations. Let us look at Egyptian art and see in the gigantic bust of Rameses II eternity calm and unmoved. In its remote humanity there is the suggestion that such a being would be unaffected if the universe crumbled in ruin. It is typical of all the statues of the Egyptian kings. In his art the sculptor said, "The Pharaoh was as other men

when living but what we are to carve in stone is the eternal part, the god-like part that is eternal." It is man that is the manifestation here of the Divine Principle which ensouls eternity.

The same tale is told in thousands of statues of the Pharaohs; in the great statue of the Vocal Memnon which sits beside the Nile forever gazing out into its kindred eternity; in the ancient Sphinx coeval with the desert sands, coeval with the Soul of Man, typical of its grandeur.

The Gods are what scientific Europe imagine to be dead, soulless things; or in the future will call the Forces of Nature. But we know that the Sun is a living being, that Nature is a living being, and also Electricity is a living being: like unto ourselves as being living and conscious but with a great unlikeness to ourselves too. And so the statues of the Gods are symbolical, suggesting the spiritual qualities of the soul as being different and above the human. Thus Horus, the Sun-god, is shown with a hawk's head, because that bird, sailing aloft, sitting calm in the blue of heaven on its outstretched wings, reminds us of our Lord the Sun. Thus we shall be reminded that the Gods, though living beings, are not personalities like ourselves in the lower aspect of our nature. And we shall also be reminded that Man is God: that the inmost self is Divine, ancient, constant and eternal.

Turn now to the art of China: perhaps the greatest the world has ever seen. Among the mountains of the province of Che-kiang and up the valley of the Yangtse-kiang — the Son-of-the-Ocean River — they built their temples and monasteries. Visualize the jagged sky line of the peaks and mountain-shoulders above; the slopes clad in pine forests; the still waters of the lake below; the cliffs and crags soaring above, and up there, looking as if Nature herself in her loveliest mood had blossomed out into it, the temple with its intricately carved pillars, its tilted eaves, its glazed

tile roofs shining yellow, or azure or richest purple; right at the top of the precipice yonder, or there snuggling into the cleft; looking as if nothing could have had the skill, the sheer artistry, to build it but that which put the blossom on the rose and on the daffodil. Right here we see in the heart of Nature the loveliest work of Man—who is a part of Nature inseparable from the universe, the child of Nature, of the universe; divine as they are: the divine fruitage of a divine Tree of Being.

A Chinese painting tells the same story. A square foot of silk and a thousand miles of space. More than that, for the fine Chinese landscape always manages to suggest infinity. Looking into such pictures, one's mood is uplifted, carried out beyond the show of things, of petty griefs and vanities, into Tao, the Way of the Universe.

And now turning to Greek art, selecting first their architecture, the same note appears. Put a Greek temple in its right surroundings, and you have it again on the mountainside—a thing of white marble pillars chaste among the dark green of pines, reflected on the still blue waters below. The same tale is told by it: Man's work in the midst of Nature's, perfect as if Nature had made it and not man; Man one with Nature; Man and Nature divine.

But unfortunately that is not all Greece has to tell us. When the Great Teachers were founding the religions; when Prince Gautama left his palace to find the truth and to become the Buddha; when Confucius left his Home-Secretary's office to wander the world in search of a king, a young man left Greece to find truth somewhere in the world. His name was Pythagoras, and he journeyed to India, Persia and Egypt, and perhaps to Britain to study under the Druids. He returned to Greece, or rather to Italy, which was then dotted with Greek colonies, and

there at the town of Krotona he founded a school and started his new religion — the same religion that all the others started. But the Greeks of Krotona arose and destroyed the school, and scattered the Pythagoreans. The effort failed. And we see the consequences. Greek sculpture began by taking a leaf from the Egyptian sculptors' book; the early statues have some of the majesty and grandeur of the Egyptian, some of the majesty and grandeur of the Human Soul, the Deathless. But then they obtained greater and greater technique, greater and greater mastery over their medium; and with it more and more an eye to physical, and less and less an eye to spiritual beauty. In Pheidias, the greatest of the Greek sculptors, you see still some touch of Egyptian dignity, but far more sense than the Egyptians ever had of the attractive beauty of human flesh and form. And then when you get to Praxiteles about a century later you get such a work as his Apollo Sauroktonos — Apollo the Lizard-killer — a pretty lackadaisical effeminate youth for sentimental maidens to fall in love with: the Sun-god, among the sub-limest conceptions the human mind has ever risen to, reduced to that! The Greeks as they progressed steadily went on losing sight of the spirit, and becoming more and more interested in the flesh. And we have suffered for it ever since.

For Greco-Roman civilization went down, and night fell on the western world. Caesar had smashed Druidism, the one branch of the ancient Mysteries that remained pure, and where was light to be found to inspire the new civilization that was to rise in Europe? It began to rise: day dawned, after eight centuries of barbarism, in the twelfth and thirteenth centuries. Then once again there was a grand flowering of the human spirit, a triumphant out-burst of human genius, in western Europe. But where was its Buddha, its Laotse or Confucius, its Pythagoras, Zoroaster or Quetzalcoatl? The answer is not in Christian

civilization for it has never been inspired by the ideas of Jesus, and was not founded on them.

The next great flowering of genius in Europe after the era of the magnificent Gothic cathedrals was through the art that comes next above sculpture and architecture in the non-materiality of its medium: painting; the painting of the Italian Renaissance, in the fifteenth and sixteenth centuries. Here again, for one who knows the spirituality of the Chinese painting, is a sad story to read. There are endless pictures of Christ, the Virgin and child, and the saints. Read the Gospel story and derive anew for yourself a conception of what sort of Man the hero of that story is. The Lion of Nazareth, a denouncer of threats, who made the dignitaries of the church tremble: was that not he?

And what do we get in the pictures of him? A piteous man, eyes turned up to heaven in impotent supplication! Any learned and honest Hebrew scholar will tell you that the Cry on the Cross rightly translated runs: "My God, my God, how thou dost glorify me!" That, and not the other, is the man to compare to the Buddha himself in grandeur. "Ye are Gods in the innermost of your being"; not "Ye are worms and sinners." So the great painting of European civilization missed carrying any spiritual message, and misinterpreted the Great One whom it professed to honor.

But next that creative force, having exhausted the art of painting, flowed into the art next above it in non-materiality of medium, literature. It would take too long to look into the great literary figures of the sixteenth and seventeenth centuries, or you would see how the divine Soul of Man was coming back into its own: into the signs you could read in Cervantes and Shakespeare, for example. I will just mention Milton who sets out to write an orthodox theological poem, and somehow the divine soul steps in and thwarts his purpose. He paints Satan and his angels hurled

out of Paradise into bottomless perdition, but through all the picture another shines through, that of the Soul of Man divine, cast down into incarnation into the hell of material life on earth, but divine still. And Milton shows how "In our proper motion," we ascend up to our native god-hood.

And now to music, divinest of the arts. In the eighteenth century the great age of European literature was coming to an end; its last appearance was in Germany through the voice of Goethe. But already in music there had been a Bach, opener of a Great Age, and Mozart, like a pure spirit descended from heaven to tell the world of unearthly and unutterable beauty. He was to be followed by the summit figure of European genius, that of the tremendous Beethoven with the wings of thunder. What has he to tell us? Eternally that the soul of man is divine. Master of the lower forces of his nature, with every ringing note of music he proclaimed and accentuated the message of Jesus and Buddha and Confucius; of the Egyptian sculptors and the Chinese architects and painters and poets — *eternally that the Soul of Man is Divine.*

And then came H. P. Blavatsky to explain things, to teach once more the Doctrine, the Philosophy of the Mysteries, of the Buddha, Laotse, Confucius, Pythagoras, Quetzalcoatl and Jesus; and to found the Theosophical Society. Man is divine, she taught us; and she taught us how and why. He is immortal; the master and maker of his own destiny. He lives many lives on earth, and shall, until he has learned all that life on earth can teach him — until he has made the kingdom come on earth as it is in heaven. Study Theosophy. There is no problem in life that it cannot help you to solve! By your own efforts you shall save yourselves. By your own efforts make this earth, your home, into a paradise. For the universe exists for the purposes of the Soul; everything, every existence in it, is learning by experience, is on the upward path.

You can find the God within yourself, that is the inner core of your being. You are the child of the universe, part and parcel of it, of Nature Universal; and you may win to the Heart of it. You may acquire transcendental wisdom and become even as the Christ and the Buddha, God-Men, Men Gods. There is knowledge to attain. There is divinity. And there is a way to attain it. We suffer from ourselves. There is no injustice. We have made our present lives; and we are what we have made ourselves. We are at the mercy of none but ourselves, and can make our tomorrows glorious. That is the message of Theosophy, as far as I can put it in a few words: the Divinity of Man — of you, of me, of all of us.

SPIRITUAL REALISM — *Allan Stover*

One might as well mistake the erratic swirl of foam upon an incoming tide for the mighty surge of the tide itself, as to mistake the scum and confusion of present world conditions for the swelling tide of the new age now upon us, indeed at our very doors.

Plato taught that it was the universals rather than the particulars which were substances and things. In other words, the real is the spiritual essence which from its nature and habit is interwebbed and merged in the one Universal Reality. A true realist was one who understood the spiritual and universal laws underlying all existence.

In recent years a realist has come to mean, not one who knows the inner laws governing life, but one who sees only the obvious and often only the sordid, material character of life. Law and purpose in nature is denied, and as a result understanding is in confusion.

The great need today is for Spiritual Realism which will help men to see that the universal laws upon which the fabric of all Nature is woven are in very truth, realities.

What are these laws, we may ask? They are the fundamental truths taught today as Theosophy — the essential divinity of man, reimpodiment, karman, the law of cycles, universal brotherhood as a law in nature; and many others. We as Theosophists may have studied these doctrines for many years; we may quote chapter and paragraph. Oh, yes, we may think we know all about them. But to what extent are these wonderful truths actual living realities to us? To what extent do we rely upon them when the

pinch comes?

The spirit of the new age challenges us, calls us from intellectual refreshment to labor, demands that we give an accounting of the spiritual treasures we have received. It is asking us "Have these precious truths for which the Teachers gave their lives that you might receive entered into your very life and consciousness governing your every act and thought? Or are they merely intellectual abstractions, interesting topics for lecture or discussion? When faced with what you consider a personal injustice, do you fight back and seek to justify yourself before the world, or do you forgive and leave it to the good law to adjust"? There is the test.

The significance of the present time, and our answer to its challenge, may be of far more importance to ourselves and to the race than is commonly supposed.

The fate which overtook Lemuria and Atlantis will soon be upon us, for in some 16,000 years our own Fifth Root-Race will be cut in two by great cataclysms. Large areas of land will sink beneath the sea, other lands will appear, and climates will change. We are apt to think of these events as occurring many thousands of years in the future, but in terms of reincarnation and the span of life on earth they are only two or three lives ahead. It is this which makes right action today so urgent, for our actions and thoughts now, may very well determine our success or failure then; they may even be our final testing.

Evidence shows that great changes of land and climate have already commenced so that the pattern of things to come, is even now becoming apparent.

A careful study of tide gauge levels throughout the world, shows that due to a combination of causes sea levels between the

latitude of the Canadian border and the corresponding Southern latitude are slowly rising. On the other hand, in Alaska, Canada, and Scandinavia sea levels are falling and over large areas the land is rising at the astonishing rate of two to three meters per century. This rapid rise of the circumpolar regions is said to be largely responsible for the (at present) slow submergence of the middle belt of the earth, where a summary of records from 71 stations shows an average rise of sea level of 12 cm., or a little over 4½ inches per century.

The rise in sea level per century for a few of these stations is Atlantic City 34 cm., San Diego 17 cm., New York 23 cm., San Francisco 12 cm., Galveston, Texas 48 cm., Hawaii 22 cm., the Azores 9 cm., Cherbourg, France 11 cm. (1)

For the last 50 years glaciers throughout the world have shown a constantly increasing shrinkage. Another interesting development is a new mountain range, the Sierra Madre del Sur, which is rapidly rising over a distance of 1,500 miles, along the West coast of Mexico and Central America. At the same time a "deep" is forming on the sea bottom parallel to the range.

These are a few of the many indications showing the commencement of earth changes even more momentous than those taking place in the social and political worlds.

The earth is indeed a living being, and undergoes changes which proceed step by step with changes in the plant, animal and human life whose home it is. All Nature thrills to the coming of dawn, whether it be that of a day, a year, or of a new race.

CONSCIENCE AND INTUITION — *Abbott Clark*

Conscience and intuition are two of the highest faculties commonly or frequently active in the average normal man. Their nature and function are quite different and act in two widely separate phases of our lives. Conscience has to do with right action in our daily lives. Intuition is the enlightener of our minds in regard to fundamental principles, truths, realities. Most of the discoveries of the truths of nature which scientists make are the work of intuition. The fundamental idea or principle or truth is first perceived intuitively and then worked out in detail by the mind. The eternal realities which form the basis of all religions are perceived intuitively by great Teachers and then formulated by the mind of the Teacher according to the requirements of the people to whom the Teacher is sent. The creeds and dogmas are mere mental forms which perhaps reveal but more often conceal the fundamental realities.

The *a priori* or deductive philosophies are those in which the fundamental truths are first conceived by intuition and thence formulated by the mind. These philosophies are the more spiritual ones. This method is often called the Platonic method while the *a posteriori* or Inductive or common scientific method is called the Aristotelian method. It tries to establish laws or principles by reasoning from a multitude of facts or discoveries to the general principles or laws. The trouble with this method of reasoning is that the discovery of a new fact may upset the whole philosophy like a house of cards.

The principles of Theosophy are usually grasped intuitively. We feel that we know the truth. Then we work out the details by thought and study.

But the word intuition is too often loosely and erroneously used for mere impressions or impulses, or for things perceived psychically or for the results of psycho-physical-sensitivity. These impressions or perceptions may be quite correct but are more often very imperfect or may be altogether erroneous.

Intuition is the voice of the Monad within us. It comes from Atma-Buddhi-Manas. Being from Atman it is cosmic. It is an infallible perception of Reality. It is the cosmic spirit acting through its vehicle, Buddhi, upon or within the mind, Manas. It is a direct ray of the divine spirit enlightening our minds and hearts.

The still small voice of conscience is from Buddhi-Manas and therefore pertains to our own individuality. It is the ethical wisdom gathered through many lives and stored in the immortal individuality — Buddhi-Manas. Practically speaking it is an almost infallible guide to conduct — at least it is the best we have. Any fallibility comes not from conscience but from the imperfection of our brain-minds which refuse to listen, or listening, pervert the message. Conscience is often spoken of as troublesome or even painful. Quite so to the headstrong animal-man which brooks no restraint. The elemental nature within us objects to restraint, but the success and happiness of our lives depends upon such restraint.

Conscience is that within us which takes note of the laws of right and wrong. These laws are as fundamental in Nature as is the law of gravity. If you lose your hold on the steering wheel of your auto you end up in the hospital or the morgue. If you lose control of your animal nature disaster is equally certain. Most of the mistakes and sufferings of our lives are the direct result of this lack of self-control. The animal has only sense enough to strive for its own wants. It has not the intelligence to rule the complicated affairs of human life. The truth is that even the

animal part of us is far happier when it is doing the right thing. It is then at peace and is content. Properly controlled, the personal nature within us is the greatest servant in the world. It is the conscience which is the rein restraining and guiding the personal self away from wrong and into right action. Therefore it is man's best friend. It is a better friend than his mother because it is still with him where she cannot go. It might be aptly called a protective radar-beam that, observed, will save one's ship of life from a crash landing.

It would be a matter of simple common sense to cultivate a more intimate relation to so helpful and faithful a friend. If listened to attentively and followed conscientiously it might work wonders, a spiritual magic, in our lives and characters by cleaning up our minds and hearts to such an extent that the spiritual light of intuition might illuminate our minds, to such a degree as to make geniuses of us. Let's try it.

The Theosophical Forum

EXTRA-SENSORY PERCEPTION OF ANIMALS — *J. T. Arneson*

"Coming Events Cast Their Shadows Before"

On a sultry July afternoon in 1939, a cloudburst roared down East Birch Creek canyon and devastated the little town of Pilot Rock, Oregon. A rancher on his way to town that morning was amazed at the uncommon activity among the little animals which made their homes along the creek. Clearly, something had disturbed them. Altogether he saw countless "chucks" and gophers, bull snakes, rabbits, and a covey of quail with many very young fledglings, all headed for higher ground.

The day had begun clear and bright, without a cloud to mar its beauty. About noon large thunderheads began to appear over the foothills. Then, within an hour, the storm broke. Immediately every ravine became a torrent, sending a fifteen-foot wall of muddy water down the main canyon, destroying everything in its path.

Could it have been an accident of nature that sent these creatures scurrying for higher ground? Or did some subtle intelligence warn them of impending danger? "Coming events cast their shadows before." Surely the Cosmic vibrations on that morning must have been heavy with evil portent.

THE HOUND'S NOSE

There is something positively uncanny about the amazing sensitivity of a hound's nose. Under favorable conditions he can follow a trail many days old. Surely here is involved some higher and infinitely finer instinct than mere sense of smell.

Undoubtedly the dog is able to pick up the vibrations from the magnetic aura of the person being trailed. This faculty enables

the dog to follow a trail where no vestige of scent remains, and in addition he gets a clear-cut mental picture of his quarry.

BATS

A strange creature is the bat. Although nearly blind, he comes forth after dark to wheel in dizzy circles through the forest — and he never strikes a twig. What is his secret? Science has a rather involved theory that the bat locates objects about him by means of sound vibrations. The bat emits a throaty cry while in flight, and it is thought that the vibration bounces back after the manner of radar, thus warning him of objects in his path.

While this theory sounds plausible enough and may be well founded, it does not explain how the bat locates his food supply nor how he is able to return unerringly to his own barn loft or hollow tree. It would seem that this tiny creature, too, possesses some "sixth" sense to guide him in his peregrinations.

FISH, TOO, ARE SENSITIVE

Fish, too, are sensitive to all manner of vibrations, and water is an excellent conductor of sound waves. Test this the next time you go swimming. With your head submerged, tap two stones together and note how the sound is amplified.

A marine returning from service in the Solomon Islands reported witnessing a most unusual method of catching fish. He told how a native fisherman, in a guttural chant "shouted at the water" and that numerous fish came to the surface, to be gathered into the boat. This was not told as a "fish story" nor a tall tale, incredible though it sounds. The marine who told the story could offer no explanation. He did not know that the native probably intoned certain vowel sounds, the vibrations of which stupefied the fish and made the waters untenable for them. Most likely, the tones used so agitated the water that the fish were forced to the surface

to escape an unpleasant vibration.

ARE BIRDS PSYCHIC?

It is hardly believable that birds or animals are psychic, for this would seem to imply a spiritual background. But it is said that the crow always knows when the farmer has a gun, and the buzzard was thought by early plainsmen to be an ill omen, a harbinger of death.

But all birds are extremely sensitive to all manner of vibrations. They are dependent upon vibrations for most of their food. It is by this means that the robin locates a worm on the lawn. To say he "hears" the worm in the soil is misleading; actually he "feels" it, for the worm, like all forms of insect life, puts out a minute vibration. It is in this way, too, that the woodpecker detects larvae beneath the bark of a dead tree. And it would seem that the buzzard, far from being psychic, is able to trail a thirst-crazed steer simply by picking up the vibrations of fear which emanate from the glands of the stricken animal.

THE ASTRAL LIGHT

The earth is enveloped in an imponderable aether which mirrors every event that takes place — past, present and future. In the Orient there is wide knowledge and acceptance of this doctrine. It is known as the "Akasa." As a television set produces a picture on the screen by means of electrical impulses, in like manner this Akasa, through Cosmic vibrations, materializes a picture of a coming event in the mind of one attuned to receive it. It is a living picture gallery of worldly events, and is the "Recording Angel" to the Christian.

Mother Nature has endowed many of her tiny creatures with strange instincts before which man, in all his vaunted intelligence, stands humbled. No doubt these instincts are

necessary to their way of life and to perpetuate their species in a hostile world. If man were less of a materialist and could live closer to the heart of Nature, she would be less reticent in revealing to him her manifold mysteries.

There is much evidence to support the theory that animals are given the ability to prognosticate coming events. Farm animals "act up" before a weather change, and swallows fly high before a storm. And the farmer always looks for cold weather when pigs carry straw. It is not thought that pigs are capable of logical reasoning; therefore it must be concluded that they receive from the Akasa a strong mental impression or a picture of the approaching blizzard.

The Theosophical Forum

MAN'S REASON FOR BEING — *Jeanne Abele*

At a recent Theosophical meeting, the question was asked: Since physical man's plight is so pitiable, his pleasure so fleeting, his efforts so weak, his achievements of so little account, why not eliminate this phase of existence, and start our upward journey from the next plane?

Superficially, it would seem a fair, if somewhat audacious question. However, we know that in the Divine economy there is reason and place for all that is. Therefore, if we tried to eliminate one phase of our development, we would in effect be trying to upset the Divine balance. Since we know this to be an impossible feat, we must accept the obvious fact that there is a reason for this phase of existence. There have been many and varied attempts to find the reason — some have fallen short of presenting an acceptable explanation; others have cast only partial light on the subject; still others are understandable to the few whose minds have been prepared by lengthy study and research.

But there remain great numbers of us who are standing on the threshold, our hand on the door of revelation, the conviction growing within us that behind this door is the knowledge for which we seek, the answer to the eternal WHY . . . but where is the key to unlock the door? In what way can we command, "Open, Sesame!"

There are many keys to the kingdom of understanding. Herein is contained one simple interpretation of the Plan of the Whole, and of man's integral part in it.

Now we are taught in Theosophy that the Divine Spark animates

and motivates All. It is omnipresent; however, in the lower strata the reflection of Divinity is unconscious. Not until it reaches the plane of human existence does it become self-conscious. The lower strata would seem, metaphysically, to undulate and pulsate with this tremendous unconscious Force; the Force breaks from time to time through the crest of one of its own waves, gains entree through the first incarnation of some particular ego, and starts its upward journey toward complete identity with Divinity.

This physical vehicle is the first in a planned series of levels through which the force must rise. There is no possibility of skipping any step in the progression, because each opens into the next — there is no other means of entrance. The length of time spent on each level can be shortened through the advantageous use of Free Will, but this cannot be utilized until the God Spark becomes self-conscious.

We now see the immediate necessity for physical man. But this does not completely resolve the question. We appear to have a unit, man, replete with metaphysical potentialities; where and how and why does he take a place in the material world?

The most advanced material scientists rest today in the conviction that every physical idea has its metaphysical complement. They place man in families, families in races, races in the world, the world in its place in the solar system, our system in relation to the countless other systems in the universe. And the universe? The universe, they agree, is the expression of some great force which they call by various names, and which we recognize as Divinity, the same Divinity whose reflection has found its way into self-consciousness through man.

So we see man on the one hand as a member — a small part of a complex physical whole. And here the question arises: If man is no more than a tiny cog in a huge mechanism, an infinitesimal

automaton who has one set job to do, one place to occupy, of what value is this self-consciousness of which we speak? Why is he given self-consciousness, if his pattern is already so prepared for him that he could walk through his performance without the need to be conscious of what he is doing?

To answer this query, we must consider the metaphysical nature of man. This is the side of his nature which makes him an individual, which gives him the manner and means of being a unique expression of Divinity. Because it is from this side of his nature that the opportunity for the use of Free Will comes. Outwardly, he finds himself stopped by the pre-arranged pattern of the physical universe. But if he turns inward, he will find the Divine Spark leading him through the labyrinth of his inner being, unfolding increasingly beautiful vistas of joyous activity, and opportunities for higher and higher expression of the qualities of Divinity — these without limit, obtainable through the exercise of Desire and Free Will.

Up and up and up he rises, the individual in whom all principles merge. So we have man as a complete entity. On the one hand a part of the whole — on the other, the whole of all his parts.

Integrating the two aspects, man appears in truth as the portal through which passes the reflection of Divinity from unconsciousness to self-consciousness; the focal point of the limitless freedom of the metaphysical, and the orderly pattern of the physical; dynamically useful, utterly necessary. Because only through man flows the rich abundance of the whole; through him comes the interpretation and evaluation in spiritual terms of the physical universe; through him the lessons learned from the physical pattern serve as a spring-board to spiritual progression.

And learning his place and necessity in the Divine economy, never again will he pose the melancholy question, Why was I

born? Why am I living? He has the joyful answer already before him: "EACH ONE OF YOU IS AN INCARNATE GOD. BE IT!"

The Theosophical Forum

THE SEVEN PRINCIPLES OF MAN — *Lydia Ross and C. J. Ryan*

What light does Theosophy throw upon the problem of man's real nature?

First of all, Theosophy denies that man is merely a "large-brained ape," perishing at death, as it is alleged "all other animals" do. Neither is he the ordinary personality of theology, created at birth and departing into an eternity of happiness or misery after death. The real man is a glorious, immortal Intelligence, striving to evolve to greater heights. This inner self passes through many lives on earth as it works onward and learns by experience. The ordinary human personality, Mr. A. or Mrs. B., is only a temporary instrument through which the Higher Self comes in touch with the ordinary world of matter.

Behind or above even this greater Self, stands a still more sublime Light, a Spark of the Central Divine Flame. This Light is hidden behind the deeply enshrouding veils which constitute the composite nature of man, but we can find it if we will. Though the journey may be long and hard, the reward is past all telling.

That is a wonderful picture. What is the first step on this journey?

It is simple — to practise brotherhood, to become unselfish. That is the only way to the inner Divinity. The Grecian Oracle said "Man know thyself," the god within; and when Jesus said "Ye are gods" and "the kingdom of God is within you," he was only repeating the message of all the World-Teachers. Have you studied your own nature without fear or favor?

Very little, and I have not been overpleased with what I found when I tried. There seem to be two natures within which do not agree. My conscience and my desires are so often at loggerheads!

You have recognized that we have at least two natures, a higher and a

lower, but there are many degrees between the man of flesh and the god. Your present personality, with its limitations and inner conflicts, is one of these.

That seems strange. I always thought I was — well, just myself, a thinking being, a unit.

Here is a suggestion to think over. Compare the state of a man who is thoughtful of others and self-sacrificing, with that of one who thinks of nothing but his own self-interest. Remember how a soldier may get a wound and never feel it in the heat of battle, or a student forget his meals when intent upon a problem. These are familiar illustrations of different states of consciousness.

Do you mean that they are only different sides of the same human nature?

Yes, but they point to something deeper, to a far greater complexity in the constitution of man than has been suspected in the West. Man is far more than he appears, even the worst of us.

Well, it has never seemed reasonable to me that "pure Spirit" could directly interlock with gross matter, yet most believers in a future life speak of nothing but "body and soul." It is not scientific.

No indeed, and such a crude notion shows how far Western thought has fallen behind the profound psychology of the great Eastern philosophies. Theosophy clears up that incongruity and many others by its scientific analysis of the graded links that unite the opposite poles of our being.

That is a new idea to me. Please explain those elements.

Theosophy classifies man on earth into seven main "principles" or components. This arrangement is in harmony with such great natural laws as we find in the sevenfold divisions of light, sound, the chemical elements, etc. The human septenary can be condensed into three major divisions for convenience. Here is an arrangement which combines both enumerations in simple form:

SPIRIT

Atman	the Immortal Self or Divine "Monad."
Buddhi	the Spiritual Soul, the first Veil of Atman.

SOUL

Manas (higher part)	the Higher Mind, illuminated by Buddhi. The Reincarnating Ego.
Manas (lower part)	the ordinary brain-mind. The "Human" Ego.
Kama	the element of Desire. The Driving Energy in man.

BODY

Prana	the Vital Energy, the Life-principle.
Linga-sarira	the Model Body or Ethereal Framework.
Sthula-sarira	the Physical Body.

The foreign names are Sanskrit, and are more expressive than the English equivalents, as you will find when you study Theosophy.

The upper combination, or "Spirit," is the highest, immortal essence in Nature and in ourselves, the Spark of the Divine Flame. It cannot properly be called "human" in our present imperfect state of evolution. These diviner principles are beyond our highest imagination, but we can learn to tread the path which leads onwards and upwards to the highest illumination — the path of unselfish love and service to humanity. Those who have followed it to the end are the supermen, the Buddhas and the Christs.

The Intermediate Duad, called "Soul," is the highest *thinking* part of our really human nature. The higher mind, or Manas, is the Reincarnating Ego, the enduring source or "parent-soul" of the ordinary mortal personality. This spiritual self projects, as it were, a Ray or Shadow from itself at every new incarnation, a pale and too often distorted reflection, that is called the Lower Manas. The Reincarnating Ego is like a long-lived tree which puts forth its leaves for a season and in the autumn withdraws the sap to enrich the trunk. The Lower Manas is the ordinary brain-mind with its emotions and limitations. Owing to its close association on earth

with the driving force of Kama or Desire, it is the battlefield of the inner conflict you have described. Desire may be either good or evil, according to the thought that colors it, but it is the necessary impulse by which we rise. Unfortunately for us, the temptations of "the world, the flesh, and the devil" are so strong that the Lower Manas, or Kama-Manas, is easily entangled in a thousand illusions. But even those who have fallen into grave errors feel something of the high and holy aspirations flowing from the inner god, the "Father in Heaven," and every man has the power of choice. We are our own saviors.

Do I understand, then, that the lower reflection of this Thinker is the personality that I call "myself," with all my faults and failings, and that the Higher Manas is a kind of overshadowing Guardian which lives in a higher spiritual state?

That is partly correct, but the Reincarnating Ego is not really a different being from yourself, although you may have difficulty in recognizing its presence. It is the better and nobler side of your thinking being, as it were, and, in its comparative freedom from the bondage of matter, it has a far greater range of spiritual power and knowledge than the brain-mind. It carries the memories of all the previous incarnations, which are a sealed book to the personality of any one lifetime. It knows the justice of all that happens to the personality — that this is the result of the acts and thoughts of former lives. When possible, it breaks through the barriers to illuminate some difficult problem with a flash of intuition, or maybe to warn against coming danger. It is the inspiration of genius.

Tell me something about the lowest division of the three.

Little need be said about the body of flesh. It is the most fleeting and illusory of all. Every moment new particles are streaming in and others are passing out, and even its very atoms are "mostly holes" as science has lately discovered. The body is not the producer of life and thought, but is the result of them. The life-energy which holds it together, Prana, or the "Breath of Life," is a part of the Universal Life acting through a subtle,

semi-material form or model body on which the physical body is built. This is the Linga-sarira or "Astral Body." It can be studied only under unusual conditions, but it is not *spiritual*, though made of ethereal substance. It is the necessary channel or link between the mind and the brain, and when its remarkable properties are studied by the psychologists of the future they will find the answer to many problems.

Then can this Astral Body be separated from the physical?

Very rarely, except in the natural way during sleep. Occasionally the Astral Body of a living person who is a medium detaches itself and assumes the appearance of another human being, because it is plastic and can reflect images existing in the ether or in the minds of others. Sometimes the Astral Body of a deceased person becomes visible for a short time after death, and is mistaken for the true "spirit" which has passed inwards and onwards beyond our reach.

Is this the explanation of well-authenticated ghost stories?

In some cases, probably; but we cannot pursue that subject now, as it would lead us too far afield. The Linga-sarira changes very little during life, but, as a rule, it breaks up soon after death.

What becomes of the higher elements after death? What happens to "me," with all my weaknesses and worldly passions?

There is, of course, no "death" for the spiritual part of us. Death is the twin brother of sleep. Just as we lay aside our garments after the day's work and lie down to rest, so does the Reincarnating Ego and its "reflection," the Lower Manas, abandon the physical and astral bodies when they are no longer needed. After certain experiences which follow the great change, the Lower Manas passes through a period of purification in a state called "Kama-loka." For the average person this is a quiet and painless process, but for the selfish and grossly sensual it is indeed far from pleasant. When the purification is accomplished the purified Lower Manas is absorbed into the bosom of its parent, the Higher Manas, from which it originally

came. In this high, spiritual state, called "Devachan," it enjoys unspeakable peace and happiness until the hour strikes for another incarnation on earth.

Are the lower desires entirely dissipated when this purification is complete?

For a while they are associated with the dregs of the Lower Manas, which are too heavily weighted with evil to rise to spiritual planes, but they finally disintegrate. We cannot, however, escape the consequences of our acts and thoughts, good or bad. Their seeds remain dormant until the next incarnation, when they send out roots and branches to form a new personality. The universal law of Karman, of Cause and Effect, cannot be avoided.

How do the various elements in man assemble for the next life?

When the time comes for a new experience on earth, the Reincarnating Ego feels the stirring of the seeds that were sown in the past. By perfectly natural means the lower principles are re-formed. A new Astral Body is developed of the required kind; upon this the physical takes shape; and then the animating energy of Prana, the Breath of Life, comes into action. Meanwhile and progressively, the Higher Manas sends out its Ray to illuminate the brain of the growing child, and the curtain rises on a new act in the drama of our evolution toward human perfection.

The Theosophical Forum

HE THAT HATH EARS TO HEAR . . .

From writings of H. P. BLAVATSKY in "Lucifer"

We stand at the parting of the ways, where the one path leads down the acclivity to the dark valley of ignorance, and the other climbs upward toward the pure celestial level of being. For us, it is to utter the cry of warning, and the word of encouragement: *he that hath ears to hear, let*

him hear — AND BE WISE. — Vol. III, No. 13, p. 3

The Theosophical Society, indeed, as a body, is the *only* one which opens its arms *to all*, imposing on none its own special beliefs, strictly limited to the smaller *inner* group within it, called the Esoteric Section. It is truly Universal in spirit and constitution. It recognises and fosters no exclusiveness, no preconceptions. In the T. S. alone do men meet in the common search for truth, on a platform from which all dogmatism, all sectarianism, all mutual party hatred and condemnation are excluded; for, accepting every grain of truth wherever it is found, it waits in patience till the chaff that accompanies it falls off by itself. . . . Theosophy is monistic through and through. It seeks the one Truth in all religions, in all science, in all experience, as in every system of thought. What aim can be nobler, more universal, more all-embracing? — Vol. IV, No. 23, pp. 359-60

For the extension of the theosophical movement, a useful channel for the irrigation of the dry fields of contemporary thought with the water of life, Branches are needed everywhere; not mere groups of passive sympathisers, such as the slumbering army of church-goers, whose eyes are shut while the "devil" sweeps the field; no, not such. Active, wide-awake, earnest, unselfish Branches are needed, whose members shall not be constantly

unmasking their selfishness by asking "What will it profit us to join the Theosophical Society, and how much will it harm us?" but be putting to themselves the question "Can we not do substantial good to mankind by working in this good cause with all our hearts, our minds, and our strength?" — Vol. III, No. 14, p. 92

There is no room for *personalities* in a work like ours; and all must be ready, as the Founders are, if needs be, for the car of Jaggenath to crush them *individually for the good of all*. — Vol. III, No. 15 p. 187

A true theosophist must be a cosmopolitan in his heart. He must embrace mankind, the whole of humanity in his philanthropic feelings. — Vol. III, No. 16, p. 267

Surely we learn better and profit more by criticism than by flattery, and we amend our ways more through the abuse of our enemies than the blind pandering of our friends. — Vol. IV, No. 19, p. 4

Occult truth cannot be absorbed by a mind that is filled with preconception, prejudice, or suspicion. It is something to be perceived by the intuition rather than by the reason; being by nature spiritual, not material. Some are so constituted as to be incapable of acquiring knowledge by the exercise of the spiritual faculty; e.g. the great majority of physicists. Such are slow, if not wholly incapable of grasping the ultimate truths behind the phenomena of existence. There are many such in the Society; and the body of the discontented are recruited from their ranks. Such persons readily persuade themselves that later teachings, received from exactly the same source as earlier ones, are either false or have been tampered with by chelas, or even third parties. Suspicion and inharmony are the natural result, the psychic atmosphere, so to say, is thrown into confusion, and the reaction, even upon the stauncher students, is very harmful. Sometimes

vanity blinds what was at first strong intuition, the mind is effectually closed against the admission of new truth, and the aspiring student is thrown back to the point where he began. Having jumped at some particular conclusion of his own without full study of the subject, and before the teaching had been fully expounded, his tendency, when proved wrong, is to listen only to the voice of his self-adulation, and cling to his views, whether right or wrong. The Lord Buddha particularly warned his hearers against forming beliefs upon tradition or authority, and before having thoroughly inquired into the subject. — Vol. III, No. 14, p. 92

Is it not enough to bear the burden of the knowledge that from birth to death, the least, the most unimportant, unit of the human family exercises an influence over, and receives in his turn, as unconsciously as he breathes, that of every other unit whom he approaches, or who comes in contact with him? Each of us either adds to or diminishes the sum total of human happiness and human misery, "not only of the present, but of every subsequent age of humanity." — Vol. IV, No. 19, p. 9

Karma, thus, is simply *action*, a concatenation of *causes and effects*. That which adjusts each effect to its direct cause; that which guides invisibly and as unerringly these effects to choose, as the field of their operation, the *right person in the right place*, is what we call *Karmic law*. What is it? Shall we call it the hand of Providence? We cannot do so, especially in Christian lands, because the term has been connected with, and interpreted theologically as, the *foresight and personal design* of a personal god; and because in the active laws of Karma — *absolute Equity* — based on the Universal Harmony, there is neither foresight nor desire; and because again, it is our own actions, thoughts, and deeds which *guide that law*, instead of being guided by it. "Whatever a man soweth, that shall he reap." It is only a very

unphilosophical and illogical theology which can speak in one breath of *free will*, and grace or damnation *being pre-ordained* to every human *from* (?) eternity, as though eternity could have a beginning *to start from!* But this question would lead us too far into metaphysical disquisitions. Suffice it to say that Karma leads us to rebirth, and that rebirth generates new Karma while working off the old, *Sanchita* Karma. Both are indissolubly bound up, one in the other. Let us get rid of *Karma*, if we would get rid of the miseries of rebirths or — REINCARNATION. — Vol. IV, No. 20, p. 89

There are a few articles of belief among the best theosophists, the bare mention of which produces upon certain persons and classes of society the effect of a red rag on an infuriated bull. One of these is our belief — very harmless and innocent *per se* — in the existence of very wise and holy personages, whom some call their MASTERS, while others refer to them as "Mahatmas."

Now, these may or may not actually exist — (we say they do); they may or may not be as wise, or possess altogether the wonderful powers ascribed to, and claimed for them. All this is a question of *personal knowledge* — or, in some cases, faith. Yet, there are the 350,000,000 of India alone who believe since time immemorial in their great Yogis and Mahatmas, and who feel as certain of their existence in every age, from countless centuries back down to the present day, as they feel sure of their own lives. Are they to be treated for this as superstitious, self-deceived fools? — Vol. IV, No. 22, p. 269

What then are the "matters" that seem to Mr. Bradlaugh "as *unreal* as it is possible for any fiction to be"? We hope he is not referring to those physical phenomena, which most unfortunately have been confused in the Western mind with philosophical Theosophy? Real as these manifestations are — inasmuch as they were *not* produced by "conjuring tricks" of any kind — still the

best of them are, ever were and ever will be, no better than *psychological illusions*, as the writer herself always called them to the disgust of many of her phenomenally inclined friends. These "unrealities" were all very well as *toys*, during the infancy of Theosophy; but we can assure Mr. Bradlaugh that all his Secularists might join the T. S. without ever being expected to believe in them — even though he himself produces the same "unreal" but *beneficent* "illusions" in his mesmeric cures, of many of which we heard long ago. And surely the editor of the *National Reformer* will not call "unreal" the ethical and ennobling aspects of Theosophy, the undeniable effects of which are so apparent among the bulk of Theosophists — notwithstanding a back-biting and quarreling minority? Surely again he will not deny the elevating and strengthening influence of such beliefs as those in Reincarnation and Karma, doctrines which solve undeniably many a social problem that seeks elsewhere in vain for a solution? . . .

The phenomena of thought-transference, hypnotism, suggestion, and many other mental and psychic manifestations, formerly regarded as supernatural or the work of the devil, are now recognized as purely natural phenomena. And yet it is in truth the same powers, only intensified tenfold, that are those "unrealities" Mr. Bradlaugh speaks about. Manipulated by those who have inherited the tradition of thousands of years of study and observation of such forces, their laws and modes of operations — what wonder that they should result in effects, unknown to science, but *supernatural* only in the eyes of ignorance. — Vol. IV, No. 23, pp. 357-8

Things have strangely altered since the days of antiquity, when the truly wise made it their first duty to conceal their knowledge, deeming it too sacred even to mention before the *hoi polloi*. While the medieval *Rosecroix*, the true philosopher, keeping old

Socrates in mind, repeated daily that all he knew was that he knew nothing, his modern self-styled successor announces in our day, through press and public, that those mysteries in Nature and her Occult laws of which he knows nothing, have never existed at all. There was a time when the acquirement of Divine Wisdom (*Sapientia*) required the sacrifice and devotion of a man's whole life. It depended on such things as the purity of the candidate's motives, on his fearlessness and independence of spirit; but now, to receive a patent for wisdom and adeptship requires only unblushing impudence. A certificate of divine wisdom is now decreed, and delivered to a self-styled "*Adeptus*" by a regular majority of votes of profane and easily-caught gulls, while a host of magpies driven away from the roof of the Temple of Science will herald it to the world in every market-place and fair. Tell the public that now, even as of old, the genuine and sincere observer of life and its underlying phenomena, the intelligent co-worker with nature, may, by becoming an expert in her mysteries thereby become a "wise" man, in the terrestrial sense of the word, but that never will a *materialist* wrench from nature any secret on a higher plane — and you will be laughed to scorn. Add, that no "wisdom from above" descends on any one save on the *sine qua non* condition of leaving at the threshold of the Occult every atom of selfishness, or desire for personal ends and benefit — and you will be speedily declared by your audience a candidate for the lunatic asylum. Nevertheless, this is an old, very old truism. Nature gives up her innermost secrets and imparts *true wisdom* only to him, who seeks truth for its own sake, and who craves for knowledge in order to confer benefits on others, not on his own unimportant personality. And, as it is precisely to this *personal benefit* that nearly every candidate for adeptship and magic looks, and that few are they, who consent to learn at such a heavy price and so small a benefit for themselves in prospect — the really wise Occultists become with every century fewer and rarer. How

many are there, indeed, who would not prefer the will-o'-the-wisp of even passing fame to the steady and evergrowing light of eternal, *divine* knowledge, if the latter has to remain, for all but oneself — a light under the bushel? — Vol. VII, No. 37, p. 5

But what has the new cycle in store for humanity? Will it be merely a continuation of the present, only in darker and more terrible colours? Or shall a new day dawn for mankind, a day of pure sunlight, of truth, of charity, of true happiness for all? The answer depends mainly on the few Theosophists who, true to their colours through good repute and ill, still fight the battle of Truth against the powers of Darkness. . . .

If Theosophy prevailing in the struggle, its all-embracing philosophy strikes deep root into the minds and hearts of men, if its doctrines of Reincarnation and Karma, in other words, of Hope and Responsibility, find a home in the lives of the new generation, then, indeed, will dawn the day of joy and gladness for all who now suffer and are outcast. For real Theosophy is ALTRUISM, and we cannot repeat it too often. It is brotherly love, mutual help, unswerving devotion to Truth. If once men do but realise that in these alone can true happiness be found, and never in wealth, possessions, or any selfish gratification, then the dark clouds will roll away, and a new humanity will be born upon earth. Then, the GOLDEN AGE will be there, indeed.

But if not, then the storm will burst, and our boasted western civilization and enlightenment will sink in such a sea of horror that its parallel history has never yet recorded. — Vol. IV, No. 21, p. 188

THE LAUGHTER OF THE GODS — *Madeline Clark*

A religion that is long-faced is no true religion at all. The sense of fun, that deep, good-humored undercurrent in every normal human heart, has in it the purest elements of reverence. Yielding to it, perhaps at moments of greatest stress and strain, we hear the laughter of the gods — a laughter that can be and is wholly compassionate because they see the larger vision of things, the perspective of destiny that is hidden from our lesser human sight. Theosophy, in its religious aspect, admits of fun and humor up to the very last steps upon the heights of attainment.

When A. P. Sinnett sent a present of a pipe to the Master M. (p. 374 of *The Mahatma Letters*) the answer came, ". . . The pipe is short and my nose long, so we will agree very well together, I hope. . ." H. P. Blavatsky's sparkling wit enlivens her writings so that they are a perennial delight. Her frequent references to her "Kalmuk" features, and humorous allusions to the many tragic situations in which she found herself through the duplicity or cruelty of others, are classics of the tragi-comic. We have the story of William Q. Judge playing leap-frog with Olcott and the Messrs. Keightley in the back garden of the London Headquarters after one of the worst of the meetings during his persecution when the tension was at its height. Those now living who knew Judge still carry with them the memory of his flashing smile, hinting at volumes of humorous possibilities that might lie behind it. Katherine Tingley would entertain us by the hour with madcap tales of her girlhood escapades, while her hands as well as ours were busy with sewing in preparation for one of her great dramatic productions at Point Loma. An early keynote given by her to her students was the now familiar "Life is joy!" Dr. de Purucker had a great sense of the whimsical, and took the most

exquisite delight in small drolleries. With all four of these beloved Teachers there was that indescribable quality of artless glee that can only be thought of as childlike in the truest sense, for they had indeed touched, more nearly than we, the "kingdom of heaven." We might add here in passing that that happy freedom of spirit is still with us in our present Leader.

And what is the significance of all this? Is the sense of humor merely a shallow means of relieving the tension of strenuous effort such as has always been necessary in our Theosophical work as in all normal and beautiful human activity? G. de P., who let us in on so many sidelights to the Teachings, always pointed out that the sense of humor is a spiritual quality. And we can easily see why. We can see what a safeguard it can be on the Path, preventing us from taking ourselves — our personal small selves — too seriously, saving us from some of the most — to us unsuspected, but in the eyes of the Teachers the most obvious — pitfalls connected with an undue solemn sense of our own great worthiness and consequent importance, and of what we consider is our due after many years of devoted service, etc. There is no more wholesome homily, for Theosophist or non-Theosophist, than G. de P.'s talk on "Why not Laugh at Yourself?" which is to be found on page 75 of his posthumous book *Wind of the Spirit*. As a fellow-student has just aptly remarked, "Were it possible, all solemnity and no humor would make man a dull and stupid creature, *and perhaps even an evil creature.*" Even so.

The Laughter of the Gods! Healing in its compassionate undertones; terrible in its reverberations; bringing gentle ease to those tired for the moment in their efforts for others; shaking with its thunders the very foundations of those houses built with cards, the haunts of self-seeking and selfishness: — a laughter that we can never understand until we move away from the confines of the petty and the small, and enter into the gods' own

spacious dwellings, where we may have some share in their confabulations for the benefit of the world and all creatures.

The Theosophical Forum

LIGHT ON HUMAN EVOLUTION — *Charles J. Ryan*

Not long after the Theosophical Society was established in India the Masters told Mr. Sinnett that they wanted an institution that "would arrest the attention of the highest minds." One of the obstacles to more rapid progress has been the teaching of the mechanistic, soulless form of human evolution which prevails so widely among the authorities who guide the minds and direct the studies of the rising generation in many educational institutions, at least in the area of Western culture. This has, of course, been the result of scientific research which broke down the literal accuracy of the Bible story of the creation of man about 6000 years ago. Scientists and theologians entirely failed to recognize the Oriental method of stating great truths in fanciful allegorical form; but, as a matter of fact, the story of Genesis enshrines the true story of man's evolution in a poetical disguise which becomes perfectly clear when the key to its interpretation brought in *The Secret Doctrine* is applied.

The destruction of the superstitious literal interpretation of the medieval ages was a good thing, and also the establishment of the broad principle of evolution even in a very limited shape. But Darwinism or Neo-Darwinism — no matter which — lost touch with any suggestion of spiritual or intelligent Guidance in evolution, and in spite of increasing tendency in other scientific departments toward less mechanistic views, "the still, small voice" of Theosophy with its magnificent exposition of Cosmic and human evolution finds it difficult to attract the attention of the "highest minds" who control our universities and colleges. But the unexpected discoveries in Africa and Eastern Asia have begun to tell, and we believe it is no exaggeration to say that the work of devoted Theosophists for the last seventy years or so has

permeated the mental atmosphere of the world with "spiritually-scientific" concepts whose effects are now becoming apparent. Anyway an increasing number of experts are beginning to doubt whether the accepted arguments for the ape-ancestry of Man are valid. Among these are such eminent anthropologists as Dr. Robert Broom, Professor Frederic Wood-Jones and others. Dr. Broom is not the only anthropologist who has deplored the mysterious disappearance or deliberate neglect of certain fossil evidence which throws doubt on current popular theories. According to Dr. G. W. H. Schepers, writing against the theory that Man is an offshoot of the Anthropoid Ape, "Those who believe differently have either spoilt their reputations or have wisely remained silent on the subject"!

Within the last twenty years or so the scientific world has been profoundly stirred by remarkable discoveries in South Africa of very ancient remains of the so-called Ape-Man, Anthropoid Apes of a more highly advanced type than anything yet known. Intensive research is continuing to bring to light many facts of interest to Theosophical students who are sufficiently acquainted with the technique of anthropological studies to appreciate the importance of certain new discoveries in support of H. P. Blavatsky's arguments in *The Secret Doctrine* against the theory that man is the direct descendant of some ancient variety of the Anthropoid Ape with all its materialistic implications.

In regard to this South African development the Theosophical University Library at Covina has just received a valuable and welcome addition, *The South African Fossil Ape-Men, the Australopithecus*, published by the Transvaal Museum, Pretoria, and presented by Dr. Robert Broom, F. R. S. "in memory of a happy day spent at Point Loma in 1937," as he writes. The main portion of this highly technical and fully illustrated study of the very humanlike "Ape-Men" bones found in the Transvaal is

written by Dr. Broom who has devoted many years of intensive research and study to South African Paleontology, especially in relation to Early Man and the Anthropoids. He has developed profoundly spiritual concepts of human evolution which are fundamentally in harmony with those of the Ancient Wisdom though in some matters the latter represents a wider and more Cosmic picture of man's upward journey to the gods.

The second part of the book is written by another highly-qualified scientist, Dr. G. W. H. Schepers, who presents a detailed analysis of the brain casts of the South African Ape-Men, and some striking criticisms of the popular theory, derived from Darwin, that modern humanity was directly descended from some kind of Anthropoid Ape.

The skeletal remains of three types of Ape-Men found at Taungs, Sterkfontein and Kromdraai are particularly interesting because they are by far the nearest to man of any Anthropoid yet found, and at first it was rumored that the desired "missing link," Man's immediate ancestor, had been discovered, but this was soon found to be erroneous. However, as Dr. Broom points out, the structure of the brains of these Ape-Men resembles that of Man far more closely than of those of the other Anthropoid Apes, though of course they are much less in volume than those of the smallest human brain. In some cases the teeth — important factors in the study of relationships — are identical with human teeth. For many reasons the South African Ape-Men are generally and quite reasonably accepted to be a collateral line of Anthropoids which ran for a while side by side with Man, distant cousins as one might say — "poor relations," who died out without leaving any modern representatives. None of the specimens yet found are as old as the most ancient human races. Science has found the true ancestor of man a very elusive personage! How can this be? Where is he hiding?

According to *The Secret Doctrine*, many intermediate forms between intelligent Man (*Homo sapiens*) and the anthropoid apes flourished in very distant ages but *none were predecessors*. They were offshoots from the human stock and were produced by a complex process of miscegenation which is outlined in that Book of Revelation and which is fully discussed in Theosophical literature, but which cannot be described here. Field-Marshal J. C. Smuts, who contributes the Introduction to Dr. Broom's detailed analysis, believes that "we are at any rate coming nearer to the solution of the age-old question of our human origin." According to the Ancient Wisdom, however, certain factors which must be understood before this can be done have not yet been discovered or even suspected by science. To solve the mystery it will have to brush aside the prejudice against the occult in Nature and learn that the spirit of man can function in other bodies than the physical.

Marshal Smuts says, "Races, like individuals, disappear by the way, but the great march of life goes on steadily, endlessly, to goals beyond our ken, perhaps beyond our present human type." We might add that human life in almost incredibly remote ages has marched through types that would seem very strange to our present understanding, as indicated in *The Secret Doctrine* and mentioned in the most ancient writings and traditions. Among the most important of these transformations, that of the astral to the physical, (still unknown to biology though evidence is available) the reader should consult Volume II, pages 652-3, 689, 737, etc.

About twelve years ago Dr. Broom published his profoundly significant *The Coming of Man*, strictly scientific factually and yet not above the comprehension of the layman, in which he presented his rather unorthodox belief that Natural Selection or any other mechanistic theory of Evolution does not satisfy our

sense of fitness, and that *intelligent spiritual forces* are the active agencies in the production of the marvelous variety we see around us. Worse still, he declared that "Man has been the end foreseen from the beginning," a purely Theosophical concept. Since then he has seen no reason to modify his views and in fact the march of discovery has reinforced them. In an article printed in *The Outspan*, a leading South African journal, for April 5, entitled "The Religion of a Scientist," he gives carefully thought-out reasons for believing as Theosophy teaches, that "some great Power had planned the creation of countless human Egos on earth; but that much of the working out of the Plan was the work of subsidiary powers who were neither all-wise nor all-mighty." This would explain the evolution of tetanus germs and tape-worms and poisonous snakes, etc., which has proved such a stumbling-block to theologians and even philosophers! To the materialist he says: "It is awkward to be a materialist and then find that matter is not a very real substance and that mind has probably more claim to reality than has matter."

Returning to *The South African Fossil Ape-Man*, we find in Dr. Schepers' section a remarkable chapter on "Theory and Speculation" in Darwinism, in which he reaches conclusions that have been familiar to students of Theosophy ever since *The Secret Doctrine* was written, though not to biologists. He shows that facts discovered since Darwin's time throw new light on the evolution of Man and Ape and upset the popular belief that Man is descended from the Anthropoid Apes or even from the Primates, extinct or living. He delineates a hypothesis of man's ancestry that places the line of descent that ultimately became human as entirely free from the Anthropoids or any other Primates. The apelike characteristics of the Anthropoids were permanently differentiated a very long time ago. Man is of a simpler and less differentiated type and yet is supposed by the orthodox school to

be descended from some kind of Anthropoid, which is a reversal of the order of Nature. The rule is that after biological forms have reached a limit of differentiation they die out or remain static; they do not reverse the order and return to a lesser degree of physical complexity. Assuming that man descends from an Anthropoid, and to explain the discoveries of remains of quite modern type of Man in what appear to be extremely early geological periods, anthropologists, according to Dr. Schepers, "seek all manner of unlikely explanations for such an "impossibility," even going so far as to discredit usually reliable witnesses."

How many times has this been pointed out with astonishment in this journal and other Theosophical literature!

Dr. Schepers believes that the famous *Pithecanthropus* of Java and the other so-called Dawn-Men — very "low-brows" — are not Primitives but Degenerates (a Theosophical teaching) and he even ventures to declare that not only is the origin of Man unknown but also that of the Anthropoid Apes, and that the primeval mammalian ancestor of both lines of descent may be looked for in the older Tertiary Age. Most geologists estimate the beginning of the Tertiary to be about 40 to 60 million years ago.

Dr. Schepers' remarks about embryology might almost be taken from *The Secret Doctrine*. He shows that the prenatal stages passed through by Man do not recapitulate the phases of evolution from the Anthropoids down to *Homo sapiens* as called for by the Darwinian theory. For instance, at no time in the process does the human hand or foot resemble those of the apes. He discusses many other facts which have been used to perpetuate the Darwinian ape-ancestry of Man and shows that they have quite another interpretation when considered without prejudice and free from the pressure of the popular scientific

creed and the authority of great names. Advanced students of Theosophy who know the difficulty in swimming against the stream of materialistic science (especially strong in biology and evolution) will find this magnificently outspoken analysis of the situation a great help when meeting the objections of the younger generation who have been trained in the colleges to accept the materialistic view of man's nature and origin.

As to Dr. Schepers' position in relation to the possibility of evolution having meaning or purpose we do not wish to be misunderstood. He does not discuss this problem or the existence of a reincarnating spirit in Man but he seemingly accepts the general scientific belief that Man is a purely "natural" evolution from the lower animal kingdom. For the spiritual interpretation of human evolution, however, we must turn to Dr. Broom. But anyway, we should be grateful to Dr. Schepers, for he has taken a long step in agreement with the Theosophical explanation of the appearance of the Anthropoids, and he gives a tremendous age for the early ancestors of Man, even though we may not agree that they were primitive mammals of the Eocene or Oligocene period.

The Theosophical Forum

OUR SEVEN-FOLD EARTH — *Allan J. Stover*

Students of occultism have known for untold ages that there is much more to the earth than is generally supposed.

In the Puranas of India there are lengthy accounts of the seven *dwipas*, or sacred continents, which were separated one from the other by seas of salt water, sugar cane juice, wine, butter, curds, milk and fresh water. The whole tradition is so involved and confused as to sound like sheer nonsense to one not having the esoteric keys, for the word *dwipa* may refer to a continent, to a globe of the earth chain, or to something else.

In the folklore and myth of peoples throughout the world, savage, barbarian, civilized, are found references to a storied or layered earth with one or more underworlds and a series of heaven-worlds, often seven in number. Here again we need the light of the esoteric philosophy in order to understand the imagery.

One of the most beautiful descriptions of the earth's seven-fold constitution is to be found in the *Phaedo* of Plato, as translated by Thomas Taylor. Here is an example of the means employed to veil the doctrine of the globes in an earlier age, that of Greece about 300 bc:

The earth is prodigiously great, and we do dwell in places extending from Phasis to the Pillars of Hercules, inhabit only a small portion, about the Mediterranean Sea, like ants or frogs about a marsh.

The places which we inhabit are nothing more than the dregs of this pure earth or cavities into which its dregs continually flow. We are ignorant therefore, that we dwell in the cavities of this earth, and imagine that we inhabit its

upper parts. Just as if some one dwelling in the bottom of the sea should think that he resided on its surface, and beholding the sun and the other stars through the water, should imagine that the sea is the heavens.

For if it is proper to tell you a beautiful fable . . . this earth if one surveys it on high appears like globes covered with twelve skins, and distinguished with colors

This upper earth, too, contains many other animals and men, some of which inhabit its middle parts, others dwell about the air as we do about the sea and others reside in islands which the air flows about and which are situated not far from the continent. And in one word, what water and sea are to us, air is to them; and what air is to us aether is to them. . . . And besides these they have temples and groves in which the Gods dwell in reality . . . the sun, moon and stars are seen by such as they really are.

A similar account is to be found in the Rig Veda, in which, as ordinarily translated, three earths or three strata or layers are mentioned. In *The Secret Doctrine*, Volume II, page 758, H. P. B. states that in this instance the translators are mistaken, for the three strata or layers do not refer to our globe alone, but to the three layers or planes in which the upper manifested globes are situated, two by two on each plane, one on the descending arc, one on the ascending arc.

Thus, if we are referring to the globes, there are seven earths; if to the planes on which these globes exist there are three; or, if we include Globe D and its cosmic sub-plane, four.

Here, then, is the key which explains legends of a multiple or layered earth, whether three- or four- or seven-fold.

Furthermore, the earth does not exist apart from the lives

composing it. It is composed of lives of many grades, all of them evolving and progressing, endlessly. In the human kingdom this evolutionary journey is accomplished through embodiment in a series of Root-Races, Family Races, National Races, Tribal Races, and Tribal Generations. The evolution of the elemental, mineral, plant, and animal kingdoms is accomplished by embodiment in a series of races closely analogous to that of the human. We may think of this evolutionary journey as a vast musical symphony in which each life, from atom to globe, plays its part, each working in harmony with the rest.

The invisible worlds or planes are composed of lokas and talas, or grades of spiritual and material substances respectively, which combine to form any world or plane, our own for instance.

The lokas are predominantly spiritual in nature, the talas physical, the latter word meaning bottom or lowermost, that is, loaded with matter.

Each one of the globes, including our own earth, contains or is composed of seven lokas and seven talas, there being seven worlds or spheres of existence. They are within each other, not exactly like the skins of an onion, but interpenetrating, and each inner one is finer, more spiritual, more ethereal, than its next outer, and most spiritual of all is the inmost.

We are on one of these loka-tala worlds at the present time and there are six other humanities evolving, similarly to our own, through the loka-talas of Globe D and of the other Globes. The following quotation in this connection is taken from *Fundamentals of the Esoteric Philosophy*, page 405:

These lokas and talas interpenetrate each other. As H. P. Blavatsky says in a very noble passage in *The Secret Doctrine*, they have each one their own "geographical"

spheres; the respective inhabitants of the different Lokas and Talas live in their own world, pursue their own vocations, work out their own karmic destiny, even as we do in our world. It is but human egoism that claims so foolishly that ours is the only race of intelligent beings in the boundless Kosmos, and which goes so far as to deny intelligence and consciousness to beings even on other physical planets.

With the seven-fold pattern playing so important a part in the structure of both inner and outer nature, it is to be supposed that the physical structure of our earth follows the same scheme, as indeed it does. Geology states that the earth consists of a central dense, solid core surrounded by a plastic envelope enclosed within a series of rocky shells upon which, like a layer of dust, lies the crust of land, water and mountains which we know as earth.

Furthermore, aeronautical specialists and radio engineers have shown that the upper atmosphere of the earth is built in a series of layers which have been investigated by radio waves, sound reflection, and sounding balloons.

The first of these atmospheric layers, that zone of clouds and storms which surrounds us to a height of seven to ten miles, is known to science as the *troposphere*. In the figurative terminology of the ancients, this is the sphere of water.

The second layer, in which ozone, a triatomic form of oxygen occurs, is known as the *ozonosphere*. This we may call the sphere of air.

The third layer of the upper atmosphere of the earth is known as the *ionosphere*. It is the sphere of fire, an intensely heated layer of ionization without which we on earth would receive such an amount of ultra-violet light that life for us would be almost

impossible.

Above the ionosphere lies the vast reach of space in which the auroral displays occur. This is the realm of Fohat, the sphere of aether.

To summarize: The seven-fold structure of the seven planets, the seven globes, the lokas and talas, as well as that of the races and sub-races, is composed of lives in various stages of evolution. Each unit, from atom to planet, is a living being. Each follows the same evolutionary pathway as far as it can. All are interwoven, interlocking, working together.

The wealth of information in Theosophical books is to be looked upon as consisting of keys to Universal Nature. And these keys are laya points of wisdom from which we may unfold a universe of thought in much the same way that a physical universe unfolds from its center.

The Theosophical Forum

PERSONAL PRONOUNS — N. A. Lewis

One of the most profound of teachings in the whole body of Theosophical thought is that of the Higher Self and the duality of man's nature. Students have found a great value, spiritual and practical, in learning to say, "Thy will, not mine, be done." To say "I" from the consciousness of this higher individuality in oneself, from the consciousness of the true Self, is an extremely beautiful experience. Whatever of Divinity man has brought to his experience he has brought through this consciousness, this knowledge of Self.

It is in the light of this higher experience that the real brotherhood of man becomes apparent. We are all one in the perfection of that higher plane, and we are divided in the tragic unconsciousness of it, or in the willful turning from it. Power, wisdom, and beauty stem from that inexhaustible cosmic source, and our evolution consists in spirited movement toward it. Surely, then, our individual fulfilment will lie in the fulfilment of the brotherhood of man, in terms of power, wisdom, and beauty.

And what is the path to that fulfilment? Service. That is part of the answer, that is what we are to *do*.

There is something else, too: Love! If service is the watchful eye or the helping hand of humanity, love is the heart of it. That is what we are to *be*.

In the language of love, a most prominent word is the personal pronoun, "You." It is constantly employed by the lover in expressing to himself and to the beloved the sense he has of expanded horizons, of extended consciousness. The pleasure he feels in saying it is in the fact that it means not only something

personal, but also something larger and more inclusive. It expresses identification with something other than self and yet perceived as similar to self. In the expressions of transcendent love we find reference to the beloved as "My Other Self," which is regarded as divine. Theosophists can see in this that the lover is expressing his consciousness of his own higher nature. Perhaps equally important is the possibility that he is seeing and expressing the higher self of that other one, the beloved. Metaphysically, in such cases, the difference is only very slight indeed, and the lover experiences a "oneness" with the beloved. The lover says "You," however, or "We," but not "I."

In the same way, the student of yoga, or the man, let us say, who is becoming cosmically aware, experiences this "Other Self," and he regards it as divine. He can serve this other one, he can work "selflessly" in the service of the spirit. But should he say "You," or should he say "I"? Does he conceive of this higher self as the center of the universe and also as the center of himself? Or does he look outward into the world of men and brothers for that center, that focus, of spirituality?

Since it is everywhere, it must be in both places. Isn't that an important yoga, or joining (from Sanskrit *yuj*, to join), which unites the two? Lover, Love, and Beloved — Brother, Service, and Brother — Man, Life, and the Cosmos, can be united by practice of right Pronunciation of the great mantram, "You."

The Theosophical Forum

A PROPHECY AND A CHALLENGE

From the writings of G. de PURUCKER

No thing in this world can prevail against the T. S. and its work as long as we stand united, determined to continue to stand united no matter what may be at times our own personal feelings or convictions regarding others. United we stand; divided we shall fall. There is no doubt of that whatsoever. Remember it. To me it is inexcusable . . . to me it is not only non-understandable but inexcusable, for anyone to hinder our work, even from personal convictions; because such an individual in the Section, or a body of them, a group of them, or scattered individuals among them . . . may imagine that the Society or its officials should act otherwise than has been the case in the past or than is the case at present.

. . . United we shall stand, we shall progress, we shall become prosperous, and we shall do our work. Disunited, fighting amongst ourselves, we shall fall. Of that there is no doubt. . . At the head stands the Leader, who will not tolerate untheosophical work, untheosophical attitudes towards the hard workers, who will not tolerate the unbrotherly criticism of those who are carrying the burden, filled with charity as my heart always is and loving all the time our dear members, not one of whom has ever wilfully worked against the T. S.; but looking at the history of the past we have seen how, once, the T. S. of H. P. B. was rent in twain because individual thought their opinions were more important than those Theosophic — nay *inherent*, spiritual principles of unity and of the practice of brotherhood and of forgiveness, which make any organization strong and victorious, ultimately, and the lack of which invariably will bring disaster, shipwreck possibly — complete disaster, that is. — *Messages to*

If we do not keep the Theosophical Society or the Theosophical Movement, for to us in our inmost hearts they are one, always fluid, always uncrystallized, always ready to grow, always ready to lead and not to follow — if we are not prepared for this and have not the vision sublime of our destiny as well as of our duty, then we are slack, then we are failing in our *devoir* and are not true pupils or chelas of those to whom some of us at least owe perfect allegiance and all of us owe reverence.

I mean, in other words, that the Theosophical Society is a living body; it is an ensouled organism; it is an organic entity. It is not a mass of crystals changing never except when broken under the hammer of fate. The Theosophical Society is an ensouled body, and therefore not only can it learn, but it can grow, it can become greater. . . . We live and we lead, and therefore we must grow greater with the times as the times themselves wax greater.

For this reason: because the Theosophical Society is ensouled by us, living spirits, is it a growing entity, is it an ensouled organic entity, learning its lessons too, making its mistakes if you will, but learning out of them. But because it learns from its mistakes it advances, changes with the changing times, ready for new eras when the new eras come upon us, ready to seize any new light from the gods and glad of the opportunity to win the new light. We are torchbearers and we must keep our torches alight and lifted, not extinguished and held down in the foolish conviction that what the gods once delivered unto men is unalterable, cannot be changed or improved, and that no further truth can come from the heart of Father Sun. — *Ibid.*, pp. 74-5

Let us, therefore, never forget that the main purpose and object of the Theosophical Movement, and therefore of our own beloved Theosophical Society, is the establishment of a spiritual

Brotherhood on earth, devoid of vapid sentimentality and reposing on Nature's own heart as a foundation. For this we Work; for this we strive; for this we live; and the Theosophical Movement is destined to be a wretched and inglorious failure unless we can bring this to pass at least in part — and by the gods immortal it shall be done!

. . . If The Theosophical Society is to fulfil its destiny and become something different from similar organizations of past time which failed to achieve what they were founded to achieve, then our hearts must soften towards our fellow human beings, and our brains must be enlightened by wisdom which we find in the magnificent doctrines of Theosophy; and above everything else the realization of our duty to our fellows must take sole and single possession of our consciousness. Then shall we succeed, and then will The Theosophical Society live on and expand into the glorious destiny which it will not only have by right, but will inevitably attain.

. . . I tell you frankly, my beloved Comrades on the Path, that my heart aches when I survey the past history of the Theosophical Movement, and recall the feeble and halting responses of so many to the sublime ideal that my three great Predecessors strived for and fought for and lived for. Nevertheless the record in achievement of those three great Theosophists is a marvelous one: it is stainless and grand. But let it not now once again happen, as it then almost happened, that the Theosophical Movement come near to becoming a wreck on the sand-banks of the River of Life. — Sixth General Letter, April 20, 1930. To the Members of the Theosophical Society throughout the World and to Members of the E. S.

Brotherhood is no sentimental doctrine taught by lip-altruists in an attempt to gain a following for themselves among men, but is

founded upon universal Nature's most fundamental fact. Living in accordance therewith, we become collaborators in the Cosmic Work, and all good things in time accrue to us: powers, faculties, and wisdom, become ours naturally, like the manifestation of all the spiritual beauty and fragrance of some lovely flower, and such growth takes place in the silences, and is marked by an increase in our understanding, in our sense of unity with all that is, and in the appearance in our hearts of the magical power of almighty love. — *Ibid.*

Children of the Universe, sons of the Boundless, we are fundamentally one in essence; springing from the same ultra-divine Source we have passed, each one of us, through many and devious pathways to our present sphere of life, and to our present stage of evolutionary development; and it is our living and sojourning in the material spheres which have brought about the evolution from within the material parts of our own inner constitution of the enshrouding veils of the lower selfhood which enwrap us straitly, and which to some extent blind us therefore to the great luminous Reality at the core or in the divine essence of each of us. We must rend these veils of the lower selfhood so that the divine sun within may shine down into our minds and illumine them, and so that our hearts may expand with the universal love which even now is working within us, did we only recognise it. We must, in short, make our consciousness, as we evolve further along the Path, progressively more inclusive, so that in time it may become relatively coextensive with the Universe, which is our Home: and when I say Universe, you will understand me, as Theosophists, not to mean solely the physical spheres, but the vast reaches of the Boundless, extending from the super-divine even to our own material world and to the spheres of being below this latter. — *Messages to Conventions*, p.

Do you not know that the Path to the Heart of the Universe is different for every living entity, and yet that all those paths merge into One? Each man must tread his own evolutionary path, which in the world's foolish view means that in his ordinary brain-mind way each man must hold fast to his own opinions. But verily this is a mistaken view. Opinions! It is opinions that separate men in politics, in religion, in all the ordinary affairs and avocations of human life. It is so, alas, even in our own Theosophical Movement; it is so in religious and philosophical societies everywhere. Men worship opinions instead of realities. — *Ibid.*, p. 28

The thing is to hold like grim death to principle and to loyalty, and never allow anything to swerve you from the path. This brings happiness, it brings peace, it brings contentment, and self-respect. — Theosophical Forum, Vol. II, No. 1, p. 8

Men in the average do not realize what old karman is still bearing heavily upon us children of Earth; and unless we of our Holy Order, of the Order of Buddhic Splendor and Compassion, can stem the tide of disintegration now beginning to flow, we shall have lived in vain, and our Society will become a byword in the councils of the gods.

The duty of every F. T. S. is not only to the T. S. as a whole, but to every other Fellow of the T. S., and, indeed, to everything that lives. Every F. T. S. should realize that the karmic law will hold him individually responsible for the part that he plays, or that he fails to play, in the grand drama of human destiny in which we are all involved — in which we are all participants and actors. . . . As long as the T. S. remains true to its purposes, and true to the ideals which presided at its birth, it will succeed in stemming the tide of karmic disintegration which otherwise will sweep over us. Remember these words. They are wholly true.

... "Keeping the link unbroken" refers solely, as H. P. B. then uttered it, to her heart-prayer for her F. T. S. to remain faithful to him who was to follow her, and to her who was to follow him, and to the line of Teachers thereafter in orderly sequence. — Sixth General Letter

Here I repeat once more the absolute need in our Theosophic work of a genuine guide and teacher; and if we have confidence and trust that the Masters have not neglected us, and that such a Theosophic guide and teacher exists as a Messenger in the world, great will be the benefit that we shall derive, both individually and collectively. — Ninth General Letter, Nov. 27, 1930

Theosophical Forum, Vol. II, No. 4, p.6

I repeat, as I have said before, that the Masters of Wisdom and Compassion and Peace live and work for humanity as always they have lived and worked; that their influence on mankind is as strong today as ever it has been; that the stream of inspiration and of illumination and of wisdom and of help flows as strongly from them as ever it did. . . .

Without in any wise wishing to utter one word of unkindness, I feel it my bounden duty to say that the idea that mankind could be left even for a year's time deprived of this stream of inspiration and light from our Teachers, is wholly wrong, unjustified and unjustifiable. — *Ibid.*, p. 5

I tell you that the Masters of Wisdom and Compassion founded the modern Theosophical Movement for one sole purpose, which has two aspects to it: in order, first, to found a spiritual brotherhood among men, world-wide, without qualifications, without frontiers or barriers, to which honest heart might belong; and the other aspect of it is a diffusion into the intelligence of the Occidental world of the principles of the age-old Wisdom-Religion of mankind, bringing men hope, bringing men peace bringing

men consolation; and, above all else, destroying the fear of death. We Theosophists must do our destined work. We cannot pause. — *Ibid.*, p. 9

But when you ask a member of the Theosophical Society who knows its history — for instance, should you ask me, were you to ask me — my private opinion about it all, then I can only tell you that our chief happiness is in having continued from the first in unbroken succession and without change — which does not prevent a more elaborate and developed presentation — the teachings of the Masters of Wisdom and Compassion, whose Messenger to the modern Occidental world, H. P. B., brought the principles of those teachings to us. — *Ibid.*, p. 13

There is most emphatically in the Theosophical Movement existing throughout the ages a succession of Teachers, trained to know and therefore having the right to teach, who succeed each other from predecessor to successor in regular serial line. This at various times has been called by different names — the passing on of the Word, or the transmission of Light, the "Golden Chain," or the "Hermetic Chain." . . .

The Occult Succession or transmission of authority from Teacher to Teacher merely exemplifies the same natural laws that are existent in the ordinary affairs of men plus the fact that in the Esoteric Schools the succession is a real and vital one based upon actual initiation and training of the Teachers and not upon formal or conventional customs or habits.

. . . The body or association of the Masters of Wisdom and Compassion contains the same esoteric succession of Teacher after Teacher, the predecessor going on into greater Light and in his turn being succeeded by the chosen pupil best prepared to pass on the Torch of Light which the Teacher resigns into his

hands. — *Ibid.*, pp. 18-19

How can anyone be completely understood . . . who is obliged, as every real Leader is, to keep a great deal of his heart's hope behind the veil of privacy? — *Ibid.*, Vol. I, No. 11, p. 9

The real roots of the authority, mystical and official, which the Leader of the Theosophical Society has, and the reach of his influence into the minds and hearts of the members of the T. S., are dependent not at all upon any constitutional document, nor upon any legal sanction or safe-guards, but repose solely upon and in the devotion and love and trust of the membership throughout the world, and their confidence in their Leader's and Teacher's capacity to lead and to teach. His authority and influence, therefore, are based upon spiritual and intellectual and ethical grounds, rather than upon the legal authority imbodyed in a formal document. — Third General Letter, Oct. 21, 1929

Remember that it is Nature's law that all things begin small: begin with a seed, and the subsequent growth of any such seed or beginning is wholly dependent upon the character and vigor of the life-forces which will pour through it, manifest through it, bringing first into existence the blade, then the stalk, and then in time, the majestic, wide-spreading tree.

. . . I repeat: *It all depends upon you!* As the Christian would say: "Where two or three are gathered together in the proper frame of mind, there is the Christos-spirit among them," and he would say truth: precisely similarly do I say unto you, my beloved Comrades on the Path: Where two or three are gathered together in the proper Theosophic spirit of devotion and unquenchable energy, there is the Buddhic Splendor working with you, and you can, if you will, become channels for receiving it in full flood. — *Ibid.*

I greatly desire to arouse the inherent faculties of creative activity

of the members everywhere, so that they shall be responsible for their own conduct, and I think that this can best be achieved by their becoming autonomous in so far as their local or national affairs are concerned. . . . — Second General Letter, Sept. 1, 1929

There is not a member in the Society, young or old, man or woman, who has a right to consider himself or herself exempt from the bounden duty of falling into line at present, and from doing his or her very best in every respect to push the revolving wheel of our Theosophical Society forwards along the Path. — Third General Letter

Let us keep our minds fluid, our hearts unlocked, our brains expanding. Let us be ever ready at all times and in all places to be receptive of a greater truth than that which now we have, or in the future shall have. — *Messages to Conventions*, p. 48

I feel impelled, indeed compelled, to point out to you, my Brothers, that the Gupta-Vidya of the archaic ages, the Rahasya-doctrine, the Secret Wisdom, the Esoteric Teaching, is as strong today, and as active today, as ever it was; and that those, our Theosophical brothers, greatly err and wander wide from the facts who say that the processes of the Universe and the undertakings and activities of the Lodge of our Masters receive setbacks and closures, and that the flow of truth into human hearts is bounded by certain time-periods, and that in between these time-periods there is naught but barren spiritual and intellectual sterility or sterile barrenness, and that human hearts which cry in agony for light and truth cannot receive them except at certain intervals, unless indeed through the medium of the merely written word. Beautiful as that written word may be, it is not the same as the conviction which a man should have, that he can attain truth whenever he *wills to take it*. Truth is not on tap, as it were, to be shut off and turned on. The currents are flowing

for aye, and good men and true and good women and true who live the life, and who do the deeds, who do the Theosophy that they preach, can have it whenever they will to take it.

This is no denial that there are certain cyclical periods when more particularly and more specifically open action for public propaganda is taken by our Masters, for this last is of course true; but there is at no time, nor is there anywhere, a hindrance to any loyal Theosophist, whether a fellow of the T. S. or not, from coming into touch with the great Guardians of the Ancient Wisdom and receiving from them as much of the Wisdom-Religion of the gods as he is able to assimilate. It will depend upon himself only, upon himself alone. — *Ibid.*, p. 69

Only thus can any Movement succeed: through the gathering of strength, of understanding, of wisdom, and through the expansion of the inner nature by the magical force of almighty love. New powers, unfolding faculties, come in the times of stress and trial. These are the times when men grow and become great, and when the spiritual powers begin to manifest in a feeling of sheer delight and expanding happiness that comes to anyone who feels the inner nature developing and expanding, and that inner nature, the inner constitution of the human being, becoming constantly and ever more and more at one with the Cosmic Life. That realization is not reached by methods of slothful pleasure, or of pleasurable sloth, but by high hearted striving for betterment. Once you get the psychology of this thing and realize its inner beauty, its splendor, and how it brings out the warmest feelings of the heart, then you will look upon the days of tribulation and labor, if we may speak of them as such — on these days of growth in building — as the days of splendid promise. — *Ibid.*, p. 3

G. DE PURUCKER AND PRACTICAL OCCULTISM — *Madeline Clark*

September has become for Theosophists a month of heroic memory connected with the thought of G. de P., of his life among us with its own peculiar quality and challenge, and of what he left with us in homely counsel about life and living.

Taken to heart and lived at least in part, the distilled essence of it is felt in a" changed outlook, an enlarged vision, a deeper insight into the verities of life. "Do you get it?" he often used to say; meaning, did we get the point, the subtle underlying substance of the thought he had been expounding in his inimitable way.

He taught us, for example, (and it dawned upon our consciousness as a fact in the course of time) that mysticism, however transcendental, was not necessarily spirituality. The same was true of estheticism. Psychic experiences likewise were by no means on the spiritual plane — in short, we learned that to keep our feet well on the ground, attending strictly to the duty of the moment and appraising life and circumstance with a factual eye, is the true practical occultism. When, after a particularly inspiring meeting in the Temple at Point Loma, one of his students made some rapturous remark to him expressing exalted feeling, G. de P.'s reply was some thing like this: "Have you seen to —," some homely household duty that was occasionally forgotten.

And then there were his references to the "Woofie-bird." The Woofle-bird, it seemed, "always flies backwards, and the reason is that it doesn't care a whit where it is going but wants to see where it has been." With this one humorous sally the Teacher turned our eyes forward along the path of achievement and away from the dead past more effectively than by hours of solemn dissertations.

This brings us back to the theme of humor as a saving power, which was so important an element of G. de P.'s teaching. To regard with detached amusement the elemental and impulsive part of ourselves that so largely fills the stage, we learned, was to get the proper perspective on our own natures: to laugh at it and even to ignore it was to put the stress of our will and effort into the positive and constructive course of action.

G. de P. had an engaging way of introducing a teaching. He would say, "I will tell you a secret," and then would show us how fascinating the technique of self-conquest could be — like this: We could actually (he said) become like unto what we admired and loved, by thinking towards it and dwelling upon it. . . . The key to right meditation was simply the being so downright interested in the subject chosen for contemplation that the mind dwelt upon it easily and naturally, and did not have to be "whipped" into concentration. But a form of meditation equally valuable was to hold the consciousness of these lofty teachings in the back of the mind all through the day's duties, and brood upon them thus. . . . To judge of the progress we were making, we had only to study our own reactions to the common events of life, observing how we met and handled situations, how it all affected us. That was criterion enough. . . . And then there was self-forgetfulness, the master-key of them all.

Our thoughtless estheticism was curbed by his trenchant observations. If we remarked on the jubilant song of a mockingbird or the quaint antics of a pet animal he would sometimes say with a rueful smile, "Poor thing!", meaning that the creature was so far behind in the scale of being, and had so many aeons of evolution to live through before it arrived at self-consciousness, that it was rather to be pitied, from our human standpoint. Yet, on the other hand, stooping over a beautiful hydrangea blossom one day he said, "If we only knew what was locked up in here we

would know the Universe," showing how he revered all life.

But to return to the "Woofie-bird," and the idea of looking forward instead of backward over trodden paths. Upon this naturally followed the teaching, which G. de P. forever accentuated: *Change is growth*. This stood us in good stead when it became apparent that we must move from our beloved Point Loma and establish new Headquarters at this beautiful spot near Covina. That move was more than a test, it was a triumph of G. de P.'s skill in touching our understandings with a fire that inspired our trust in his own joyous vision and confidence in the future. Perhaps in no other way than by actually making this move could we have realized as fully as we did that however dear the surroundings and however beautiful, they were only a means to enable an inner energy to work out its appointed purposes: when those purposes had been fulfilled, the fugitive but potent force withdrew to find its next appropriate vehicle: that no particular spot on earth is *in itself* any more sacred than any other spot, without the informing spirit to make it so.

Countless other hints, and keys to the riddle of everyday living given to us by G. de P. come to mind — our readers will all have caught some of them. But the whole burden of G. de P.'s kindly and patient efforts to show us the wise ways of life are perhaps summed up in this: that we must judge our experiences honestly, with a dispassionate attitude that faces the best and the worst with equanimity; with a clear-eyed perception of truth which will safeguard us from delusions, and will show us where our feet are set — in short, the faculty (borrowing a traditional phrase from the Mystery-Schools) *TO SEE THINGS AS THEY ARE*.

It is inspiring to reflect that in imparting to us these homely lessons — the "horse sense" of occultism — our Teachers are letting us in on a modicum of the genuine and traditional wisdom

of the occult schools. They are sharing with us the teaching they themselves have received. After having had the benefit of this instruction from four of our Leaders, whose methods and teachings along these lines were fundamentally identical, we cannot help but recognize the stamp of the School, the effects of whose training they all have shown: the School of the Masters of Wisdom.

The Theosophical Forum

HOW DO YOU GROW? — Hazel Minot

Growth can be of many kinds and on many planes, but whatever its nature, it has a definite pattern that it is following. This pattern is the karman we have made for ourselves. So our growth, in the last analysis, is our responsibility.

Do you grow by fits and starts, swinging from one extreme to another? Or do you go around in circles until you are dizzy, without seeming to arrive anywhere? Have you ever tried to figure to yourself what course could be most easily followed in evolutionary progress? The course, indeed, that we all probably follow without realizing it?

Picture to yourself a spiral. A flexible wire spring will serve admirably in an objective study of the subject — but remember that the spring is only an "aid" in this study. It illustrates on the physical plane something that is fundamentally connected with consciousness. The source of our growth is our inner, real self, and the pattern it weaves, however it may affect our actions on the physical plane, has its origin in the realms of consciousness.

We travel a spiral course in our progress towards Divinity. Sometimes that spiral is compressed, and each stage is so close to the one below it and the one above that we seem to be making very little if any growth. At such times we do appear to be moving in a circle. If the compression is very great the coils of the spiral may even become entangled, and we shall appear to be going backward on our course. But if the spiral is extended, stretched a little, we shall perceive that growth is taking place as we pass from one coil to another. Of course the lowest point of the coil above will come below the highest point of the coil next below, and so from time to time we shall find ourselves experiencing an

apparent drop. This, however, is in the natural course of things, and if we observe carefully we shall note that such a "low" is better, if only by a hair line, than the last one we experienced. Extend the spiral still more and there is a correspondingly greater difference between "lows" and "highs." Stretch the spiral to its utmost, and the consciousness of moving forward will become more and more pronounced.

Now, since we are our own karman, the directors of our lives, it is up to us to extend the coils of our evolutionary spiral, striving always to increase the distance between the coils. Spiritual growth comes through doing this very thing and doing it consciously. The spiral pathway that we follow, whatever the distances between its coils, is ourselves, but the part of us which directs the course is always superior to the course itself. It must forever remain so, and in our aspiration to go forward we should always keep this in mind — otherwise we shall lose sight of the goal in the fascination of watching our progress. This goal will seem to be constantly beyond our reach because it is a "forever becoming." We shall approach it through a day to day growth in the right direction.

The Theosophical Forum

WHAT IS MIND? — ITS NATURE AND FUNCTION — *John H. Manas*

One of the most controversial, least known and most misunderstood subjects today is that of "Mind." Webster defines mind as "the intellectual or rational faculty in man, consciousness, intelligence, memory, soul." This is not exactly true. In the Greek language, for mind we have the noun "*dianoia*" and the verb "*dia-nooumai*." Both are composite words from the preposition "*dia*," which means through, by way of, by means of, and "*nous*," which is the thinking agent, or that which thinks in man, the human soul. Therefore, "*dianoia*" for mind in the Greek language means the substance or the instrument through which the soul of man functions in thinking.

This etymological fact brings us to the acceptance of a dual principle in man, that of Spirit and of matter. This dual constitution of man, the microcosm, necessarily brings us to the acceptance, too, that God, the Macrocosm, also is of the same dual principle.

Everywhere in Nature, in the heavens, on earth, in all physical forms and material substances, one sees two outstanding things, matter and motion. The latter is the phenomenon of an invisible force acting upon visible substance. Since this phenomenon is universal, in all heavenly bodies and in the atoms of all substances on earth, we come to the logical conclusion that this force is Universal permeating all things and all beings in Nature. This invisible Universal force we call the Spirit of God, which, by acting upon Cosmic Matter, brings forth creation.

In the same way the human soul as a spark of Divinity, an invisible force, acts upon its four physical bodies, physical, etheric, emotional and mental. This explanation agrees with the Greek

definition of mind as being a material substance through which the soul of man functions.

WHAT IS THOUGHT?

All persons who have evolved to the stage of being conscious of the independence of their soul from the shackles and the influence of their physical bodies, can understand how the soul works through this finest material body in man, his mind.

Man receives impressions from the outside world through his five senses. These impressions are nothing else than vibrations reaching the mind through the brain cells. These mental vibrations and images the soul perceives according to its development and forms respective conclusions through its faculty of reasoning. It works like the movies. The man in the theatre sees a series of luminous pictures on the screen. The soul of man sees similar pictures on the screen of its mind.

When man thinks, the opposite operation takes place. His soul, the thinker in him, creates its own pictures on his mind, or his mental canvas. As the painter paints, using paint, brush and canvas, what he sees outside, or what he sees inside in his mind, in the same way, the soul uses the faculties of imagination and visualization and projects on its mental body, as on a canvas, the creations of its consciousness. *The product of this junction of the human soul projected and taking form in its mental body, we call thought, and the operation by the soul we call thinking.*

The faculty of the soul that compares several, various mental pictures and seeks a harmonious relationship between them to its inner satisfaction, we call reasoning. The painter who can paint the clearest and the most vivid picture with such an arrangement of the objects involved as to cause a pleasing feeling in the spectator, is considered the best painter. In exactly the same way,

the soul that can imagine and create in the human mind (mental body) the clearest and most vivid mental picture with the most harmonious relationship to the human desires, motives, emotions and objects, is considered the best thinker. We, therefore, can see that thinking depends upon the development of the consciousness of the human soul, the training of the mental body and the thought materials available to the soul and its ability to imagine, to visualize and correctly to compare among several, various mental pictures, or thoughts.

HOW HABITS ARE FORMED

Each physical body has its own properties. The main characteristic of the mind is to invigorate, to make grow through its vibrations any mental picture received on its fertile soil from without, from objects, from books and so forth, and from the thoughts of other men, intentionally or unintentionally.

If the soul allows any thought to possess or to attach itself to its mental body, these thoughts, especially evil thoughts, will begin to grow to such proportions that the human soul gradually grows accustomed to expressing itself through these mental avenues, and through these deep grooves in the brain, and it will lose its control over the material mind. In this way, all bad habits, with all their sad consequences, are formed in man.

Evil thoughts are like weeds, or tares that our enemy sows in our field when we are asleep. The fact of this mental law proves beyond any doubt, that bad books, shows depicting murder and crime, obscene magazines, vulgar language and immorality, can cause destructive habits to be created in the minds of weak souls, or the souls who are taken unaware by the incoming bad mental image. Thus, these mental weeds find a way to take root and grow in the mental body, or mind of a person. On the contrary, beautiful surroundings, exquisite pictures, moral shows, good

books and fine, harmonious music, certainly are the moulders of the minds of persons for real Progress, peace and happiness.

This was the reason for the many beautiful temples, statues, stadia, public dances, all kinds of games and festivals held regularly by all the people of the community in all cities and villages of ancient Greece.

HOW TO HAVE PEACE AND HAPPINESS

From the above facts explaining mental laws in operation, one can clearly see the reason for our present day chaos, inharmony, wars unhappiness, sickness, poverty and all kinds of trouble in which humanity is found and is suffering today.

No man-made law or any human power can win over the tremendous soul force of the individual who was brought up in, or has allowed himself to acquire bad mental, emotional and physical habits. The nature of the human soul is continuous activity. This action is directed and expressed in society in good or bad deeds, according to the habits existing in its members.

The salvation of humanity as a whole today depends upon the creation of moral discipline in the physical, emotional and mental natures, or bodies of the individual, everywhere in the world. This is the only way out of the national, racial, social, economic and religious chaos that exist in the world today.

BREAKING THE MOULDS OF MIND OF MEN — *Helen G. Steward*

We have been told that "Madame Helena Petrovna Blavatsky came to break the moulds of mind of men," not of a limited number, but of *men* — that could mean hundreds, or thousands, or even millions. Was this so that man could re-create for himself a new concept of God?

The breaking of mental limits with the ensuing expansion of thought has oftentimes appeared to hinge upon the most casual of incidents.

A great seer like H. P. B. lifts the lid or "breaks the mould of mind" and, lo, the powers of mind in man, released, revolutionise the thinking world.

An apple falls, in its maturity, and the heretofore unseen laws of gravitation spring into "ken," but not for the betterment or enlightenment of the few — the world is set a little freer, millions benefit.

A youth discovers Petrarch in his father's shop, and Samuel Johnson gives to the world, not the few, a dictionary.

"The mind with its activities," wrote Emerson, "is the center of man," and he continues, "the mind in its highest and purest state of enjoyment is the highest ethical existence."

Some men can easily and pleasurably accumulate an enormous store of learning, some can retain in the lower brain-mind an enormous accumulation of facts and by constant exercise can develop what is regarded by some as a high degree of intellectual ability and intellectual attainment. Some can give the impression of ripe wisdom and sane balance, and can so act that others of

lesser intellectual ability are stimulated to emulate this "wisdom and balance"; which is certainly conducive to personal enjoyment, but is it of spiritual worth?

H. P. B. opened the door to an unseen and almost undreamed-of world. She gave a logical explanation for some of the so-called "happenances"; and whether people took the explanation at the time or not, time has proved that the so-called accidents which have led to some great "discovery," to some things which have proved beneficial to humanity, were not "fate" or "chance," but a glimmering of a something greater in the realms of reality.

One of our Great Leaders who was a deep student of H. P. B. says, "Break the moulds of your mind at all costs," and again, "Free your minds, keep them plastic." How often have we heard the expression, "keep an open mind, do not close the doors of your minds, do not let your thought become crystalized."

H. P. B. most emphatically did not come merely to shock us with something that was "new," but she most certainly did come with a message that was sublime, and as one of our great writers has said, "Because some have given out ridiculousness in place of her sublime message, it does not mean that the great Lodge and its powers and wisdom are exhausted, or that there must be no advance in teaching or knowledge," nor, I might presume to add, no change in procedure, as long as it follows the spirit of that Great Messenger, Helena Petrovna Blavatsky.

The Theosophical Forum

THE ROAD TO EMMAUS

PILGRIM

Where is the road to Emmaus? Where are the pilgrims who once trod that busy thoroughfare when Christianity first challenged the thought life of Asia Minor?

We are those pilgrims whose footsteps now echo, as it were, out of the seemingly distant past. Like the two disciples of Jesus who walked along the road to Emmaus, our dual natures, our Higher and Lower selves, are also challenged as we ponder the whys and wherefores of life. We are re-enacting in this 20th century that Biblical narrative which so beautifully portrays the two pilgrims communing "together" on the road to Emmaus, which is as the highway of life, earth, air and water; the "three score furlongs from Jerusalem to Emmaus."

We, too, on this old, old path are tired and hungry at the close of day, and find, as did the disciples, that at times the road is steep and stony. We feel the same deep soul-longings for the Friend, who through His compassionate love for mankind became a "living sacrifice," a Way of Life, which like the road to Emmaus leads the disciple through sacrifice and service to RECOGNITION.

"Many are called but few are chosen." Among all the souls on the road to Emmaus, only the two disciples were selected to be the companions of Jesus, the Christ, who drew nigh unto them, but they knew Him not. "A shepherd knoweth his sheep and calleth them by name and leadeth them." Even so, Jesus walked with His disciples and bade them tell of their sorrow, for they were greatly troubled. When they had related the tragedy of the crucifixion Jesus said, (St. Luke 24: 25, 26) "O fools, and slow of heart to

believe all that the Prophets have spoken!" . . . "Ought not Christ to have suffered these things and to enter into His Glory?" ... "and He expounded unto them in all the Scriptures the things concerning himself."

"When Jesus made as to go further, the disciples constrained Him, saying, "Abide with us, the day is far spent." . . . and He went in to tarry with them."

Thus it came to pass that the Stranger entered into the inn with the disciples, where they sought rest and refreshment. They were tired and hungry after long hours at the trial and crucifixion of Jesus in Jerusalem. They, also, had struggled with His adversaries whose crown of thorns had caused blood to fall upon their own hands as they raised the vinegar of mockery and thrust the spear of doubt into the body of Humanity; and in so doing forfeited the privilege of witnessing the Light of the real Sacrifice, in the inner room with the two disciples; where "He took bread and blessed it and gave it to them, and their eyes were opened, and they knew Him . . ." and their hearts "burned" within them.

Surely there is consolation in this thought for the disciple suffering despondency today, as in the dual nature of discipleship he trudges along his road to Emmaus unaware of the Presence of his Friend. When the eye of the material self is focussed upon the dark illusions of men, which are the barriers to perception by the spiritual eye of intuition, the disciple fails to recognize his radiant inner god and hears not that same Voice which "expounded" to the disciples at the inn, the Scriptures of the Ancient Wisdom. However, the Light on the Path seeks the disciple no matter where he is, or what he is doing, and finds him, even though it be somewhere on the road to Emmaus.

In this graphic epoch one may perceive secrets of Life as taught in Theosophy, in the power of Attraction and Repulsion, in Love and

Hate, and in the relation of all Life through Unity in Universal Brotherhood.

Theosophists accept the teaching of life after death, the continuity of Life, and rejoice as did the disciples, who, "in that same hour hurried to Jerusalem" and told their brothers the glad tidings; but Thomas refused to believe unless he could see the print of the nails. And as they were talking together Jesus stood in their midst, saying, "Peace be unto you." To Thomas, He said, "Reach hither thy finger and behold my hands, and thrust it into my side and be not faithless but believing." And Thomas's eyes were opened and he believed. Then Jesus saith unto him, "Thomas, because thou hast seen thou hast believed, blessed are they that have not seen and yet believe."

Thus, over the highway of life forever blows the "Wind of the Spirit," Its divine Motion, Ideation, impregnating with its Breath the concepts of disciples who are learning that Sacrifice is not in giving up, but in giving; not in losing life, but in gaining Life, that they may have it more abundantly for the pilgrims on the road to Emmaus, . . . Mankind.

The Theosophical Forum

THE MONAD AND THE SOUL — *Lolita W. Hart*

Perhaps the simplest way to picture a monad is as a part of a sea of consciousness with the light of divinity shining on its endless ripples, each ripple vivified and pouring forth its expression of limitless possibilities through the various kingdoms of nature.

The monad does not really descend into the kingdom of our material world, but shines into it — just as the Sun pours its rays onto and through our earth, and holds in its magnetic power the Earth and every particle that makes it up and lives upon it, but remains in its place as the heart of a solar universe.

The monad through many evolvings and revolvings emanates from itself, or, so to say, clothes itself with, living vehicles or forms which we call souls. Through this continual outpouring of divine energy, it is able finally to express itself as man, the thinker. Man, as a human soul or ego, for he is composite, "swings between the pit and the Sun and is to be saved." Here it is that humanity stands in its great pilgrimage from unself-conscious divinity to self-conscious godhood.

The soul in man is an inferior monad, and in its turn, through its struggles and experiences while on earth, and as it progresses toward the light of the divine, raises other inferior souls, called life atoms. In *Fundamentals*, p. 157, Dr. de Purucker says,

. . . the Monad, the *spiritual radical* . . . itself can evolve only by raising inferior souls and psychological vehicles into *self-conscious entities*, which thus in turn themselves become Monads. THIS IS THE GENERALIZED AND ENTIRE PLAN OF EVOLUTION ON ALL PLANES. This is our Great Work.

There are two points of view in considering these difficult

spiritual teachings. From below, each man, as a soul clothing a monad and expressing the glorious golden light and spiritual fire of the monad as best he can, is quite correct in speaking of *his* spiritual monad, as the center of his being. Each one of us travels his own road back toward that inner glory which illumines every man, and which he rightfully calls his higher self, his Christ immanent, and which he may consciously contact if he can quiet his restless mind and look toward that center of his being. From above, however, the spiritual center, like the Sun, shines on all men alike and is one — a shining sea of spiritual light and fire.

Mme. Blavatsky (*The Secret Doctrine*, I, p. 614) warns us that:

Those unable to seize the difference between the monad — the Universal Unit — and the *Monads* or the manifested Unity, . . . ought never to meddle in philosophy, let alone the Esoteric Sciences.

Again (Vol. I, p. 177) she says:

. . . the Spiritual Monad is One, Boundless and Impartite, whose rays, nevertheless, form what we, in our ignorance, call the "Individual Monads" of men. . . .

If we think of consciousness or living awareness as a shining sea, we cannot consider the drops of that ocean of life as unlimited in number. It would be difficult to understand good and evil and the apparent inequalities in life, if we did not accept the teaching that the number of monads on earth is limited, though practically countless. These "monads," as individualities, have passed through countless births and deaths here on earth since they first animated the "empty senseless shells" of the first race many millions of years ago, and are amongst us today — are in fact ourselves.

Again we quote from Mme. Blavatsky, (*The Secret Doctrine*, Vol. II,

page 185):

. . . there is no such thing as a Monad (jiva) [i.e.: living center] other than divine, and consequently having been, or having to become, human. . . . The Monad is a drop out of the shoreless Ocean beyond, or, to be correct, *within* the plane of primeval differentiation. It is divine in its higher and *human* in its lower condition . . . and a monad it remains at all times, save in the Nirvanic state, under whatever conditions, or whatever external forms.

Evolution then may be considered as the pouring forth of the inherent faculties of the monad as it progresses through the kingdoms of nature, reaches the state of humanhood, and then expands into Godhood or *relative* freedom, *Moksha*. This freedom from the limitations of our senses and material life is relative, for though it is bliss to us as we are constituted at present, just because we are essentially divine (which means endless), it is an open door to another beginning and to unimaginable experiences and glories of greater awareness.

The essential unity or oneness of monadic life is the true basis of brotherhood. Men are not at equal stages of evolution, but the same life, the same spiritual glory, is seeking to express itself not only in every man but in every living speck of matter, and that glory is the monad, a spiritual consciousness center.

The Theosophical Forum

SANKARACHARYA: THE WISDOM OF AN AVATARA — *Madeline Clark*

There are times, especially in these days of Kali-Yuga, when humanity seems like a wayward child, playing its dangerous games, oblivious of certain highly-evolved men, its Elder Brothers, who stand in the background laboring to save it from itself. Of these labors by men who have arrived at spiritual maturity, and of their gifts to mankind, the race as a whole is equally ignorant; it remains for the individual thinker to admit into his consciousness the thought of these Great Sages, the belief in their existence, and the inclination to follow in their footsteps.

Among such individual thinkers — and they are numerous — who want to penetrate to the very source of Truth, many will find refreshment of spirit in this little volume, (1) which contains not only Sankaracharya's *The Crest-Jewel of Wisdom*, but also his shorter treatises, *The Awakening to the Self*, *The Awakening to Reality* (a key to his *Crest-Jewel*), *The Essence of the Teaching*, and a poem, *The Song of the Self*, together with explanatory matter by the Translator, and an Appendix with an account of the life of the Sage.

Charles Johnston, a thorough Sanskrit scholar, associate of the early Leaders of the Theosophical Society, H. P. Blavatsky and W. Q. Judge, made this excellent translation during the eighteen-nineties as part of the Oriental Department Papers, published separately or in the pages of Mr. Judge's magazine *The Path*. A devoted Theosophist, Johnston described these classics of Sankara's as "matchless theosophic documents. . . ." "They really teach," he adds, "quite plainly and lucidly, the first steps on the path of wisdom; they point out, with clear insistence, the qualities

that are necessary to make these first steps fruitful; qualities without which the learner may remain, hesitating and halting, on the threshold, through lack of the force and sterling moral worth which alone make any further progress possible.

"Nor are these necessary qualities difficult to understand. They are not queer psychic powers that only flatter vanity; they are not mere intellectual tricks that leave the heart cold; they are rather the simple qualities of sterling honesty, of freedom from selfishness and sensuality — which have formed the basis of every moral code; . . .

"These treatises of Sankara speak to the common understanding and moral sense in an unparalleled degree. They are an appeal to the reason that has hardly ever been equalled for clearness and simplicity by the sages of the earth. Their aim is Freedom (Moksha), "Freedom from the bondage of the world. . . ." "But," he adds, "It is not enough for the mind to follow the lucid sentences of Sankara. . . . The teaching must be woven into life and character if it is to bear fruit."

The reader is always at the mercy of the translator: but in this case we may be grateful that the text is so fully and sympathetically interpreted, and rendered into English that achieves such beauty of expression.

The famous opening passage of the Prologue in *The Crest-Jewel* brings us instantly the urgent eloquence and direct spiritual appeal that characterize all these treatises:

"For beings a human birth is hard to win, then manhood and holiness, then excellence in the path of wise law; hardest of all to win is wisdom. Discernment between Self and not-Self, true judgment, nearness to the Self of the Eternal and Freedom are not gained without a myriad of right acts in a hundred births. . . .

After gaining at last a human birth, hard to win, then manhood and knowledge of the teaching, if one strives not after Freedom he is a fool. He, suicidal, destroys himself by grasping after the unreal."

Thereafter the whole tenor of these living words is to turn us away from the unreal, the unenduring, and gradually to bring us to love and cleave to the Real, the lasting and Eternal. From the "First Steps on the Path" to the last chapter, "Forever Free," the teaching turns on the motivating idea of "an utter turning back from lust after unenduring things. . . . Thereafter Restfulness, Control, Endurance" and the cultivation of "love, as the food of the gods serenity, pity, pardon, rectitude, peacefulness and self-control."

All that is less than the Eternal is but a vesture of the Eternal. This insistence that all that is less than the Self is Maya, or "Disguise," or "Vesture," is what has been bitterly discarded in the West as a pessimistic philosophy, and yet . . . the Real is in everything: THAT THOU ART: "Every pot and vessel has clay as its cause, and its material is clay; just like this, this world is engendered by the Real, and has the Real as its Self, the Real is its material altogether." So life, action, high enjoyment, creative activity, are enriched as we live them in the light of the Eternal. It is a philosophy that penetrates beneath the veils of illusion, leading us *to see things as they are* — the traditional aim of all true esoteric training.

The verses on the Three Potencies: Substance, Force and Darkness, are illuminating: they correspond to the Sattva, Rajas and Tamas of the *Gita* undoubtedly, for Substance is "pure like water . . . a reflected part of the Self, and lights up the inert like the Sun." But "Desire, wrath, greed, vanity, malice, self-assertion, jealousy, envy, are the terrible works of Force . . ."; and as for

Darkness: "Though a man be full of knowledge, learned, skillful, very subtle-sighted, if Darkness has wrapped him round, he sees not, though he be full of manifold instruction . . . wrong thinking, contradictory thinking, confused thinking — these are its workings. . . ." The mind being "the cause of man's bondage, and in turn of his liberation," we are told that "purification of the mind should be undertaken with strong effort by him who seeks liberation. . . ."

The most intent study is needed to gain even a few of the implications in the teaching of the Potencies and Vestures, and there are other problems equally deep, such as the meaning of "That Thou Art," and the Three Modes of Deeds — "deeds to come," "deeds accumulated," and "deeds entered on" — really a study of karman. But ever and always we are led back to the Source, the Self, "It," "the Witness," which wears as its "disguises" the qualities, attributes, activities, of all that is less than itself. The Appeal to the Higher Self: "Save me from the wound of the world's pain" — is only to be answered by this sublime philosophy leading ever back to the Eternal.

In all these discourses we have the attributes of body, mind, and soul as related to the Self evaluated dispassionately, held at arm's length, as it were, for study and examination, as by one who knows and understands them all and has mastered them all. The very style of the *Crest-Jewel* is of the same dispassionate nature — it breathes serenity, benevolent detachment, is free from the emotional element which disfigures so many of the lesser and later mystical treatises of other men and nations. Acumen, mental vitality, authoritativeness, and the spiritual strength of the Sage come through to us in the unfolding of the thought, and something higher than purely intellectual comprehension is aroused. Dwelling on these masterly analyses irradiates the whole being of the student; it clarifies his perceptions, and

enables him to see the true nature of things.

In the early chapters the distinction between the Seer and the Seen is firmly established: thence we are made acquainted with the true nature of the Vestures and their attributes, and so gently led on to the contemplation of the final Freedom:

"The grub, throwing off attachment to other forms, and thinking intently on the bee, takes on the nature of the bee: even thus he who seeks for union, thinking intently on the reality of the Supreme Self, perfectly enters that Self, resting on it alone." The contemplation of this progress from "dream" to "waking," from illusion to enlightenment, while it does not enable us to accomplish so mighty a task in a short time, builds up a form for the future in the inner worlds undoubtedly: a mould to which our actions will the more easily conform. And in a sense it is accomplished ideally each time it is followed out in thought to its completion: "The Self, rising in the firmament of the heart — sun of wisdom, darkness-dispersing, all-present, all-supporting, shines forth and illumines all."

Hence the value of meditation, the power of "uninterrupted intentness." "Let him know that thinking is a hundred times better than scripture; that concentration, thinking the matter out, is a hundred times better than thinking; that ecstasy free from doubt is endlessly better than concentration. . . ." The very reading of this book induces meditation: coming into touch with the compassionate purpose of the exalted Author, who wrote for all succeeding generations of men. This is a strong help to the aspirant, for he even receives a portion of that energy of the Divine infused into this work by the Mighty One who wrote it.

Can we say that this transcendental philosophy has any immediate message for the present time? Can it meet the spiritual

need of this Kali-Yuga, this Age of Iron, in which we toil? Emphatically, Yes. For when the old order is crumbling away, it is the very time to seize hold on the idea of the Immutable, the Eternal Self, the only lasting thing that we can look to. Out of the ruins of the old rises the Phoenix of the new — the very destruction of old forms is helping us to see through their tottering fabric the Reality beyond.

And once having turned our eyes that way, we see, bathed in the light of that Reality, the Sages, the Saviors of men, of whom Sankaracharya was one. Known to scholars as having left to posterity a complete system of instruction for spiritual progress in the Adwaita-Vedanta, a re-formulation of the Ancient Knowledge from the Golden Age of India, he left us the fruits of his transcendent genius in his Commentaries, his Manuals and Catechisms, and in the schools which he established for the perpetuation of the teachings.

Who was Sankaracharya? Theosophists have long known that between this holy Sage and Gautama the Buddha, "the finest flower of the human race," a mysterious connection existed. Dr. de Purucker describes Sankaracharya as one of the avatars — a combination of a pure physical vehicle and a god, brought together by the intermediate or human soul of a great and good man. In his *Studies in Occult Philosophy*, pp. 696-7, Dr. de Purucker shows that it was the Buddha himself who in his compassion brought about the coming of the Avatara Sankaracharya, and who lent his own human essence to be the intermediate part of the Avatara who was to carry out the work of supplying the insufficiencies of mystical and religious doctrine left unfinished in Gautama's own period of teaching. This brings us close indeed to the divinities when we take to heart the teachings of this jewel of learning, this *Crest-Jewel of Wisdom*. The book is, literally, a gift of the gods.

The Theosophical Forum

DIVINE DISCONTENT — *Alexandria McLean*

Discontent might be called a generator of desire, and desire, in its highest aspect may be termed "Aspiration," and is an impetus to evolution. Discontent is closely allied with cycles. As a cycle nears completion — discontent manifests because the existing condition has served its purpose and no longer satisfies us.

G. de P. in *Studies in Occult Philosophy* reminds us, "You may remember reading in the old Hindu scriptures in the Veda: "Desire first arose in the bosom of IT," speaking of the universal, cosmic desire to be, to manifest. What kind of desire is that? It is atman-kama."

Discontent, like all else is seven-fold. In its highest aspect it may be considered "Divine," as it is an urge, almost at times audible; a challenge from the Divinity within us, to unfold and express the higher qualities. This Divine Discontent is also closely allied with the doctrine of Swabhava, for by the latent Divine Discontent in every "seed of the Spawn of Life" whether it be a galaxy, a man, or one grain of sand, comes the opportunity to unfold that which IS its highest, inmost aspect.

We have been told that analogy is the key to understanding, therefore let us think of such a well-known thing as an apple seed and consider what Divine Discontent does for the seed. Without the inherent urge within the seed (which to our consciousness may seem an "unconscious" urge) but which may truly be termed "Divine Discontent" — without this urge, the seed could never be more than a seed. But with this urge, the existing condition is transcended and the seed becomes a sapling. By that same "Divine Discontent," the sapling becomes a tree, the tree puts forth blossoms which become fruit, bearing seed.

And what of Karma, in relation to this Divine Discontent? It is an important constituent within the urge, for the quality and quantity of the urge is a result of action in past cycles. At the same time new Karma is in the making, for with the urge to change, the individual must discriminate and *will* the direction of his actions, hindering or helping in the unfoldment of the Divinity Within. This "Discontent" is a power, a great, vital force which we must direct, lest it disintegrate and make chaos of our seven-fold nature. We may indeed be thankful for this gift of the Gods, a spark of Divinity that by subtle and devious methods urges us onward-upward-inward.

Perhaps the greatest work of "Divine Discontent" is to lead us through purifying our desires to reach the desireless (for our self). Merging all personal longings in a great renunciation, we may finally be strong enough to walk the "Secret Way." As *The Voice of the Silence* phrases it, "Unveiled stands Truth and looks thee sternly in the face. She says: "Sweet are the fruits of Rest and Liberation for the sake of Self; but sweeter still the fruits of long and bitter duty. Aye, Renunciation for the sake of others, of suffering fellow men'."

And so — we may consider "Divine Discontent" as an urge to perfect expression — *not* for the joy of self, *not* to lead us to Nirvana, but that we may become ever more perfect instruments of Divinity, expressing the law of Love Eternal. "The more thou dost become at one with it, thy being melted in its BEING, the more thy Soul unites with that which IS, the more thou wilt become COMPASSION ABSOLUTE."

In *A Buddhist Bible* as edited and published by Dwight Goddard, we find in the section devoted to the Summary of Buddha's Dharma, under the heading, "The Ten Bodhisattva Stages" — the tenth stage, Dharmamarga is as follows. "In this highest state, the

Bodhisattva becomes wholly identified with the Great Truth Cloud, and, like a cloud saturated with Truth and Compassion, he becomes Tathagata, his life perfectly integrated with the lives of all, and goes forth to sprinkle the rain of the Good Law by which the seed of enlightenment takes root in the minds of all sentient beings, and in the long last brings them to Buddhahood."

Is this our aim? Then let us heed the urge of "Divine Discontent. Let us rejoice, discriminate and *will* our every thought and action toward this Great Goal.

The Theosophical Forum

"THOU HAST REAPED. . ." — *Harold S. Minton*

In *Light on the Path*, a little devotional book familiar to most Theosophists, there is this passage: "It is not well; thou hast reaped, now thou must sow."

In years gone by I puzzled over that injunction, wondering at its sequence of thought, feeling that it should have been reversed. Surely one could quite logically expect to sow first and, having sowed, to reap the effects — good or ill! Time, which does so many things to all of us, has brought a deeper understanding of the significance of this passage. We are constantly sowing or reaping, and often we seem to be doing both at the same time, for the two processes are inextricably interwoven; but there comes a moment when we have to step out from the past, as it were, and sow afresh for the future — a future that shall be our responsibility *consciously*.

As children we learn to do many things because we have been told that it is right to do them. If they are truly the right things to be done, we shall one day have to do them all over again, and this time do them because we recognize their excellence, and for that reason *choose of our own volition* to do them. It is not so simple as it sounds, however, and a study of our actions and reactions will bring this fact home to us. Merely having done something willingly, because automatically, is no sign that we shall do it in the same agreeable manner when we have to do it from choice.

Having stubbed my toe on this figurative rock more than once, the thought has come to me that here lies one explanation at least of the statement "thou hast reaped, now thou must sow." For by living in harmony with our fellows we reap certain benefits; but if we live thus without much thought on our part, and largely

because we have been brought up to live that way, these benefits come to us second-hand, as it were, and are garnered from the experience of others. It is not well that we should benefit in this manner indefinitely. The time comes when we must start out on our own — prepare the soil, sow the seeds, and reap whatever comes up.

Perhaps this requirement that we shall eventually sow our own seed is one of the reasons why we as humans seem to take such aeons to arrive anywhere evolutionally. Of course the law of cycles has to be taken into account — but here again, because we must learn to sow our own seed, we have an added reason for apparently retracing our steps so many times. There is a similar thought hidden in the tales of the childhood of the race. This was a golden age when the gods walked with men and instructed them. Men in general followed the directions of their teachers, and a childlike happiness prevailed. Then the gods said, "It is not well; you have reaped, now you must sow" — and humanity was given an opportunity to work out its own salvation.

Down through the ages we have had chance after chance to show what kind of seed we could sow all on our own, and time after time the gods have sent one of their number to show us anew the principles of good husbandry. We have learned many things — slowly, even painfully — but still we do not fully grasp the fact that *we* have to *choose* to do things the right way. We like so much to make laws, to legislate ourselves into doing what is right. Laws are necessary, and the better they are, the happier are the individuals who are governed by them; but they are only one factor in this spiritual husbandry, and not even the most important. They serve to tell us what to do, when to do it, and how to do it, but the important thing is *doing* it, and doing it because we want to.

Today we are faced again with the necessity of choosing for ourselves. The nations are the chief actors in this drama. But these nations may be likened to the actors of ancient times who wore such accessories of costume as would increase their stature, and give the impression that they were super-men or gods. The nations are only aggregates of individuals, and very much limited by the manner in which those individuals have learned to think and feel and make decisions — by their ability to choose, and choose wisely.

So we come back to our own responsibility, and we find that we are more important to the "tilling of the soil" than we perhaps thought we were. We have reaped, now we must sow. What shall the harvest be?

The Theosophical Forum

THE LURE OF PERSONALITY — *Charles J. Ryan*

The *Bhagavad-Gita* warns the aspirant for true wisdom to beware of "attachment to objects of sense," and St. Paul says "the love of money is the root of all evil." In both cases it is not the "objects" or the "money" themselves that are denounced, but the concentration on more or less selfish and personal desires and satisfactions which obsess the mind, in spite of the fact that it leads to nothing but a succession of pains and so-called pleasures. The attachment to objects of sense is a hardening quality and one of the most formidable obstacles to spiritual progress. If we want the Light to shine we must clean the lantern and trim the wick.

There is a more subtle meaning to "attachment" than appears at first sight. It is perilous to the health of the soul not only when applied to gross matters such as greed for power, riches or praise. Everyone knows that danger to some degree; it is elementary. But attachment is also to be avoided in regard to much that we are apt to pride ourselves on, such as the personal gratification aroused in us by doing good works. It is a subtle form taken by "the snake of self" mentioned in *Light on the Path*, and which though not altogether ignoble, must be killed and not only scotched. In a world like this, so selfish and slow to learn, acts of beneficence if based on pure desire to help our fellow men are of untold value to giver and receiver, and will be blessed, but if alloyed with the personal element of "I am doing this" even self-sacrificing labor for others loses some of its virtue. Let us see what a high authority says about this:

Many years ago, in 1896, when Katherine Tingley was in India, she was directed to visit "the Holy Man of Benares," Swami Bhaskaranda Saraswati, a chela of the Master M. and a highly

honored spiritual and intellectual Teacher, then more than 100 years old. He was full of energy and kindness and his intelligence was undimmed by the passing of the years. The meeting of these two Leaders, both inspired by the same ideals, was a remarkable event, which she described in detail to some of her students on her return to America. The Swami's teaching was largely directed toward the development of that positive quality of impersonality so necessary for spiritual progress. D. Gopal Mukerji, one of his followers, describes the Swami's methods of training his chelas, one of which is worth careful thought in regard to the subject we are considering.

During one of his visits to Benares, Mukerji noticed that a hospital had been erected on the grounds of the *asram*, and on being asked about it the Swami said it was "the punishment for doing good!" The Swami had a strong vein of humor, but this quaint remark had a deep meaning. He told Mukerji that although it was a good work and a necessary one he had to be careful to keep his personality from being too deeply entangled in its administration.

Noticing that the Swami's disciples were working with great enthusiasm in the healing work, Mukerji remarked that they might be in far greater danger of becoming immersed in good works to the exclusion of higher duties. The Swami replied:

"Yes, like those two young ladies there, other people come to me to serve God. Well, youth suffers from the delusion that it can "do good," but I have remedied that somewhat. I let them take care of the sick as long as their outlook on God remains vivid and untarnished, but the moment any of my disciples shows signs of being caught in the routine of good works — like a scavenger's cart that follows a routine of removing dirt every morning — I send that soul off to our retreat in the Himalayas, there to meditate and purify his soul. When he regains his God-outlook to

the fullest, if he wishes, I let him return to the hospital. Beware, beware, good can choke up the soul as much as evil."

He said much more to the same effect, pointing out that by living a noble and sanctified life without straining to "save" the personality by doing good, "the routine" as he calls it, all the good you wish to do will come about of itself. This, of course, when properly understood is the inner meaning of the story of Mary and Martha in Luke 10, where Jesus reproved Martha for being "cumbered" by her concentration on the personal "routine" of hospitality, while Mary, more intuitive, flung it aside "to sit at the feet of Jesus and hear his word."

The Theosophical Forum

SIGNIFICANCE OF MIND IN OUR CYCLE — *Gertrude W. van Pelt*

[**Note:** page numbers cited for *The Esoteric Tradition* are to the 2-vol. Second Edition and do not correspond to the 1-vol. 3rd & Revised Edition.]

The gift that Prometheus brought to man has been likened to fire as an extreme symbol of constructive or destructive energy. Dr. de Purucker has often said that ideas rule the world. An idea of rescuing the Holy Sepulcher once sent thousands of children wandering on foot over Europe.

Theosophy throws a strong light over the little understood nature of thoughts. In *The Esoteric Tradition*, p. 653, Dr. G. de Purucker writes, "Thoughts are energies, elemental energies. They do not originate in a man's mind. These elemental entities pass through the sensitive transmitting-apparatus which our mind is, and each one of us colors the thoughts as they pass through our minds, thus giving a new direction, a new karmic impulse to them. No thought was ever created in a human brain." And on page 652 he writes "The thoughts that we think in one incarnation affect us powerfully, because of karmic reaction, in the next incarnation, and indeed in all succeeding reimpodiments. It is by and through thoughts, speaking generally, that we grow, unfold, which means evolve."

In *The Secret Doctrine*, I, 124 fn., we find, "Every thought, in addition to its physical accompaniment (brain change) exhibits an objective . . . aspect on the astral plane." And quoting from the *Fundamentals of the Esoteric Philosophy* by Dr. de Purucker, p. 311, "Every thought you think clings to the mind and inheres in it, and becomes what the Ancient Wisdom calls an "elemental," and it will turn and torture you unless you break them, i.e., transmute

them." And on page 331, "Each thought has its own life, each thought has its own essence, each has its own course to run."

From these quotations we may gather, that though we do not create thoughts, we have a responsibility for those which we entertain and therefore reinforce. It is the undercurrent of thought which colors the day and proves that the joy of thought control far outweighs that of thought indulgence in loose and disintegrating thinking. The importance of wise and constructive thinking is emphasized by Mr. Judge in the 2nd Volume of *Letters That Have Helped Me*, pp. 17-18, from which I quote.

"So the Masters have said that this is a transition age, and he who has ears to hear will hear what has been said. What we do now in this transition age will be like what the great Dhyan Chohans did in the transition point — the midway point — in evolution at the time when all matter and all types were in a transition and fluid state. In the mental development we are now at the same point: and what we now do in faith and hope for others and for ourselves will result similarly on the plane to which it is all directed. Thus in other centuries we will come out again and go on with it. If we neglect it now, so much the worse for us then. Hence we are not working for some definite organization of the new years to come, but for a change in the Manas and Buddhi of the Race. . . . Let me refer you to that part of *The Secret Doctrine* penned by Master Himself, where the midway point of evolution is explained in relation to the Ungulate Mammals. It should give you a glimpse of what we have to do."

THE GREEK FRET IN UNIVERSAL SYMBOLISM — *Allan J. Stover*

The Greek Fret and its analogue, the scroll or wave design, are worldwide in distribution, being found in Greece, Egypt, India, China, Scandinavia and North and South America. Its distribution alone would lead one to suppose a symbolic meaning attached to it of sufficient importance to explain its wide use; but the explanations commonly offered, are of too obvious and slight a character for serious consideration. According to one theory the fret was first copied from basketry patterns, according to another the scroll was copied from the volutes formed by wind-blown grass in desert sand, and so became symbolic of the whirlwind.

The culture of the American Indian throws much illumination on the thought and philosophy of ancient civilizations, and since the fret is still used with purpose and understanding by the Indians of the Southwest, it seems worth while to see what clues to the symbolism of the fret and wave design we may find.

There is many a correspondence between the myths of ancient Greece, and those of the American Indian; and although we may regret the vanished civilization of Greece with its poetic imagery, there are thousands of Indians in the Southwest, who still look to the Sun-father and the Earth-mother with reverence and respect, as the source of all life. To the Hopi and Navajo, space is filled with hierarchy upon hierarchy of gods, who, they believe form the very structure of the universe. There are gods above and gods below, and every operation of Nature is, for them, caused by spiritual beings of greater or lesser degree of evolution — beings whom we, lacking the terminology of the Indians, class under one term as gods.

This mingling of the Above and the Below, of the Sky-father and the Earth-mother, and of the Waters-above with the Waters-below is well illustrated in a dance of the Hopi and Pima Indians, in which the fingers are linked in a peculiar manner, forming a fret as in Fig. 1. This is represented graphically in Fig 2 which

is the common form of the Greek fret.

Some aspect of the rotation of the Above and the Below about a central vortex, seems to have been the idea behind the use of the fret so frequently seen on Indian pottery; for although there is great variation in the design, the symbolism of the intermingling of spirit and matter through involution and evolution is always implied.

There is expressed in this ancient symbol, a universal truth or law regarding the higher and lower nature of man, as well as the nature and creation of the earth. Indeed it may well apply to all coming-into-life, for every living thing is dual, having both a higher and a lower nature, or, we might say, is formed of two elements, one spiritual and one physical.

Take, for example, the scientific explanation regarding the formation of a rain storm. Each storm center is the result of a warm tropical wind meeting a cold arctic wind and forming a great whirl of winds rushing towards the center where the air pressure is least. Within the turmoil of the storm cloud, positively and negatively electrified droplets combine again and again until of a sufficient size to fall to earth as rain. That the Indians understand something of this

phenomenon is shown by their use of the fret design to symbolize clouds and rain. The Greek physician Hippocrates, 460-377 B.C., (called the Father of Medicine) mentions the formation of a storm cloud in such a way as to show a knowledge of the warm and cold front origin of storms.

So general is the application of the philosophy contained in the fret that one is reminded of the Yang and Yin symbol of the Chinese; in which the light and dark segments of the circle show spirit and matter in relation, one to the other. The Yang or spirit and the Yin or matter are often called the All-father and the All-mother.

Fig. 3 shows the basic fret common to both Greece and America; in this the upper and lower lines are not joined in the center of the vortex; the spirit does not descend into matter, i.e., the body, but overshadows it, vitalizes it and this is well illustrated in this symbol.

Fig. 4 is the same fret, but with the lines joined, thus destroying much of the symbolism, reducing it to a decorative pattern. Fig. 5 is drawn from an old Hopi food-bowl, and shows the two arms of the fret opened or separated. Fig. 6 is a portion of a cloud pattern derived from the fret, which was often used on water jars as a prayer for clouds and rain.

It is a general belief among the Indians of the Southwest that mankind has lived in, and finally emerged from a series of great caves or worlds, through an opening, which they believe all beings still use in entering and leaving this world.

The Navajo, in weaving their famous rugs symbolize this place of emergence by leaving some hidden part of the rug unfinished. The Hopi are accustomed to leave the encircling painted band about the rim of their pottery broken — the lines not joined, in other words. The bowl, being made of clay or earth, represented Mother-earth; the rim, circular in shape, represented the horizon, and the contents (food or water) the gifts of earth; and so these children of nature left an opening symbolic of the sacred place of emergence through which they believed all life ascends and descends, or enters and leaves our earth.

A Theosophist expresses the same idea when he says that everything passes from

plane to plane, and from globe to globe, through a Laya center or dissolving point. Moreover, both Homer and Plato speak of the earth as a dark cave, with an opening through which not only men but the gods come and go.

The illustration Fig. 7 is taken from a Hopi pot found at Homolubi, Arizona, by Fewkes, and in this case shows the break in the line joined with a fret as though suggesting that entrance and exit is made through a labyrinth or maze. Here again if the lines of the fret had been joined, passage through the maze or fret would be impossible, and the symbolic place of emergence would be closed — a thought too fearful to consider, in the mind of the old-time Hopi for they believed a connection existed between a pictured image and the reality.

The volute scroll or wave pattern is shown in its basic form in Fig. 8; note its similarity to the rectangular fret, with the two lines indicating evolution and involution, and which in this case also are not joined in the center. This symbol is often arranged in a series of four in which the upper line of one unit becomes the lower line of the following. Fig. 9 is typical of a great variety of wave patterns derived from the scroll.

Fig. 10 is from one of Mme. Blavatsky's letters to Mr. Sinnett in which she explains the involution and evolution of spirit and matter in the Brahma Loka Tala planes or worlds. The dotted line of evolution moves from the center to the outside; the black line of involution from the outside towards the center, shows the descent of spirit, and the ascent of matter, to build our world of form and consciousness.

As to whether the ancient Greeks attached similar ideas to these symbols as the Indians of America, we have of course no direct evidence; but a comparison of the creation myths of the two peoples strongly suggests a similarity of concept throughout.

According to a creation myth of the Southern California Indians there was at first nothing. There was only an Above and a Below — Father-sky and Mother-earth, though both were of a different nature than at present; the Sky came down to his Sister the Earth and brought light to her, and the earth and all the life on it came

into being.

The Zuni creation myth as recorded by Cushing contains the following: . . . "With his substance of flesh outdrawn from the surface of his person; the Sun-father formed the seed-stuff of twain worlds, impregnating therewith the great waters, and lo! in the heat of his light these waters of the sea grew green and scums rose upon them, waxing wide and weighty until, behold" they became the "Four-fold Containing Mother-earth" and the "All-covering Father-sky'." Through the mingling together of these two upon the great earth waters all terrestrial life was conceived.

According to the early Greek myths, Ouranos, the personification of the celestial spaces of the starry deep, married Gaia or the primordial earth, and from their union came the Titans, world builders, and the progenitors of the human race.

The Sky-father and Earth-mother of the Indians; and Ouranos and Gaia of the Greek mythology are so close in concept and idea as to seem identical.

Now if we turn to *Fundamentals of the Esoteric Philosophy* by Dr. de Purucker (p. 79) we shall find a *literal* translation of the second verse of Genesis which is as follows, " "And the earth became" or "grew into ethereality. . . ." "And darkness upon the face of the ethers. And the Ruahh (the spirit-soul) of the Gods (of Elohim) (fluttered, hovered) brooding'."

Dr. de Purucker continues, "You see the same thought here that you see in practically all the ancient teachings; the figure or symbol of the cosmic soul brooding over the waters of space, preparing the world-egg: that of the cosmic egg and the divine bird laying the cosmic egg."

Theosophy states that the great symbols and myths were given mankind by Spiritual Teachers and that these glyphs formed part of a mystery language which explained the origin and destiny of man and the earth on which he lives.

Here is the clue which shows that true myths and symbols are not the invention of primitive minds groping in the dark for some explanation of things, but contains keys to Laws -of Nature of which science is not yet aware.

THE PRINCIPLES OF SPIRITUAL TEACHING — *Richard Heinemann*

No course of action can so quickly antagonize people, or bring their worst qualities so explosively to the surface, as merely keeping your head while they are losing theirs. Since people in masses "think" emotionally (we call this "crowd psychology"), any challenge to the conclusions they have reached seems to them an attack on the worth of their own persons or personalities. Still more to the point: emotional thinking is so self-centered and self-satisfied that a sudden awareness of the mere existence of an opposing idea comes with the wrenching force of an emotional shock. Especially is this true when the opposing idea lies on higher mental or spiritual levels than the one it challenges, for mind and spirit are the great enemies of emotional smugness.

A Jesus always will be crucified, a Socrates always will be sentenced to drink poison, a Christian always will be thrown to lions or crocodiles: that is the natural price one pays for being a Jesus or a Socrates or a Christian. Such persons, by merely standing for the higher truths of being, attract to themselves the resentment of all crystallized minds. Apparently it is necessary for most men to defeat a superior opponent by material force, as a sop to their own egotism, before they can consider his ideas. They must crucify, or at least satisfactorily persecute their savior before they can recognize him.

In the process of learning, it is necessary first for an idea to be presented to the consciousness — that is, it must be able to get a hearing. This does not mean only that the person must be told of the idea (for how many thoughts go in one ear and out the other); it means he must become aware of the idea. In this process of awakening awareness, sometimes the idea is accepted; much

more often it stands as a point of irritation in the consciousness. When an irritation disturbs our physical body, our first impulse is to scratch it. When the irritation is emotional, the impulse also is to scratch, and we attempt to do this by scratching out of existence the person or thing that bothers us.

In order to "scratch" the annoying idea, we must turn our attention squarely upon it. This furnishes it the golden opportunity to sink a few roots into our consciousness. However we may abuse the unfortunate person who brings it to us, none the less the idea has been planted as a seed in the very heart of our being. Under proper conditions it may grow — and all learning is entirely a matter of growth. Every happening that in any way touches the idea from that time on will force us to make unconscious comparisons, and on these the seed within us grows. In the course of time, as we destroy one after another form the idea takes in the world outside of us, we become vaguely uneasy. Within us is a stirring; the old, long crystallized ideas gradually become hollow and undermined, till they may be shattered by the next challenge from the outside world — perhaps by the next savior that we stone to death. Then the miracle happens, and like Saul of old we hear a voice that cries (within us): "I am Jesus, whom thou persecutest."

That is why real teachers and real saviors are not concerned about the way people treat them. In their hearts is the knowledge that whether they are well-received or cast out, whether they are praised or persecuted, the people none the less must learn from them. A real teacher measures his progress, not by how easily the people seem to learn, but by how well they learn.

One of the most worth-while speakers in America today — Sadhu Grewal — paused at the climax of one of his finest lectures to explain: "But lectures like this are not teaching!" His audience,

under the illusion that they were actually learning the information being presented to them, did not understand this deep point of psychology. However, if you were to ask those people today what they learned at that lecture (delivered only a few months ago), you would find that they remember practically none of it. Scientific figures show that people remember only three percent of the things they hear at a lecture. Even of this three percent, it is questionable how much is really learned, and how much remains as mere "information."

It is only when there is some point in our own experience that we can use to picture to ourselves the ideas a speaker is trying to present, that we can even begin to understand them. These points of experience are the "fertile" spots in our consciousness, on which ideas may land and begin to grow. In other ideas we may have a cold, intellectual interest, but they do not become a part of us — we do not actually learn them. They may remain in our minds until some experience opens a "fertile" spot for them, but until that time we only imagine that we understand them. It is here, indeed, that we may realize why the same statement or idea will mean different things to the various members of an audience, for each approaches the statement from his particular background of experience, and can understand it only on the basis of his particular points of comparison.

Some teachers have a habit of asking, "Can any one of you give an example to illustrate this point?" This practice is of doubtful value. Not only are the "examples" likely to be far-fetched, but if the student must consciously search for them, they are apt to be nothing but intellectual comparisons. Real points of experience are the ones that leap out and seize hold of an idea as soon as it is grasped by the brain-mind. Such examples certainly should be discussed, but the best practice is to encourage the students to present them spontaneously, just as they come to mind.

Another criticism of the plan of asking for examples is that it keeps the students in a tensed state of mind that psychologists call "voluntary attention." This makes learning difficult, on the same principle that the person who watches his feet is not a good dancer, or the person who keeps his muscles tensed is a poor automobile driver. What is more desirable is "involuntary attention": the kind that is given because the student simply becomes lost in the subject. The mind under these conditions is most receptive; it is absorbed in the learning process, without any sense of strain. In a classroom such conditions can be created only when the relationship between teacher and pupils is entirely natural and spontaneous, and the students can simply forget they are in a classroom.

The spiritual leader, who sees all the world as a school and its men and women as the pupils he must teach, puts all his reliance on the involuntary kind of attention. Where it is not present, he creates it. Those who come to him for instruction he very often drives away, knowing that the more sincere and earnest of them will return again, and that this delay in the instruction will sharpen the attention and arouse an eagerness that will produce something very much like a "fertile spot" in the pupil's consciousness. The eagerness with which a pupil learns has much to do with his ability to absorb a lesson into the actual habits of his thinking.

The true teacher cares nothing for the motives that bring a pupil to him, but is ready to bless any motive that can arouse the kind of attention the pupil must have to make him receptive for the lesson. If a man feels contempt for him, this teacher is not displeased, for he understands that even the contempt may be a tool with which he can drive home a lesson in the man's consciousness. The bishop in *Les Misérables* was a true teacher

when he made something near to a saint of Jean Valjean by allowing him to steal, and then go unpunished with his "victim's" blessing, and the stolen goods as a gift. Jesus left some lesson with every person who came near Him, though in many cases it may have taken years for such "pupils" to begin to understand the lessons. What is most important is that Jesus very seldom taught these lessons by words or preaching, but rather by allowing men to observe the ordinary conduct of His life — and compare it with their own.

The true teacher sets an example, but does not go out of his way to call attention to it. Least of all does he insist that others follow it. He allows everyone to draw his own conclusions, for he knows it is better for a man to do his own thinking, however badly, than to accept without thinking the judgments even of a sage.

Hate, fear, enmity, contempt, doubt, distrust, or self-seeking may be negative emotions, but they do center the attention of the one who feels them on his victim — and if the "victim" happens to be a teacher or holy man, he can use that attention to drive home a lesson. Jesus taught the men who crucified Him, and perhaps of all His disciples none learned more, or had the lessons driven home more vividly than the one who betrayed Him. Indeed, in no other case did Jesus so prove His worth as a teacher as in taking Judas for a disciple and allowing Himself to be betrayed — for He must have known that Judas could learn his particular lesson only by the experience of trying to live with his own soul after the betrayal.

More often than not, the lessons are not learned from one single experience. Knowledge and understanding are results of growth, and are developed by long series of experiences and comparisons. Whether the actions of a teacher will complete the growth and bring the knowledge to full flower, or will merely plant the seed,

or perhaps only help to cultivate a seed someone else has planted, must depend on the circumstances and the "pupil's" degree of preparation. The true teacher, understanding this, never grows impatient, and never feels there is any wasting of his efforts.

Very often the finest teachers do not call themselves teachers, or assume any titles that might seem to set them apart. It is told of Socrates that when men asked him to recommend a philosopher to them, he would recommend philosophers, without mentioning himself, so easily did he bear being overlooked. Epictetus taught his followers that when they were among men who were discussing philosophic ideas, they should "remain for the most part silent" — for he desired them to digest the things they studied, and express them outwardly through the effect on their way of life.

Such is true teaching. All else is oratory.

The Theosophical Forum

THE GREAT ANTIQUE HEART — *Leonard Lester*

Every dawn brings a new Sunrise, a new promise, a new hope. Sunrise — a divine event — but so familiar that we hardly notice it, and accept as a matter of course its awakening benediction; nor do we pause to reflect upon what this steadfast, unswerving devotion can reveal for us of the beauty, the harmony and the precision of Universal Law. Awakening from the baths of sleep — a state of consciousness we do not understand — we re-enter the waking world to don again the cloak of customary routine. But do we bring to this waking world a clearer understanding of its deeper meaning than we do in those vague conjectures we entertain about the oblivion of sleep? The same deadening torpor that robs the soul of its morning benediction veils our perception of the living realities which underlie our daily life — our supreme heritage of Truth and Inspiration.

These living verities declare that it is to learn the purpose of life through undergoing its experiences that we find ourselves daily face to face with our familiar problems, that life is a school of experience, a discipline, in which every incident, if turned to account, is an opportunity for growth in knowledge, wisdom, and power for noble service.

It is true that the thought atmosphere of the world as a whole is in a turmoil, and this, with all its harshness and crudity, has its depressing effects, which all must feel. And our feeling of unity and individual responsibility with and for this living world of Humanity of which we are a part has grown faint or become deadened. Nature, too, revolts, and her divinity groans under man's heartless abuse of her bounty. We have lost that pristine wonder which was alive in "the great antique heart, how like a

child's in its simplicity, like a man's in its earnest solemnity and depth! Heaven lies over him; . . . making all the earth a mystic temple to him, the earth's business all a kind of worship." (1)

Nevertheless this ancient heart-wisdom is as living as ever, for it is timeless, indestructible, appearing in new forms, some as yet but dimly recognized; its old, outworn garments being cast aside. It is the same ancient flame of the spirit reborn in vestures of thought and action more adapted to the needs of this new dawning era for the evolving soul of man.

Mankind can still claim its divine birthright of spiritual power, inheriting its boundless vitality in calm abundance; and its voice crying in the wilderness of the world today calls upon all living souls to become its temple.

Theosophy brings new life to the discouraged — a new beam of Light. It reveals a Path — a Path that flows through life. It is the law of Right Action, the path of Duty. In the *Bhagavad-Gitd* are these words of Krishna addressed to Arjuna: "As the ignorant perform the duties of life from the hope of reward, so the wise man, from the wish to bring the world to duty and benefit mankind, should perform his actions without motives of interest." All inspired thinkers and poets, ancient and modern, join in homage to the divine mandate of Duty; in Wordsworth's magnificent *Ode to Duty* the lines

Thou dost preserve the stars from wrong,
And the most ancient Heavens through thee are fresh and
strong,

echo the theme of its all-pervading, cosmic sway, and again the wise words of Carlyle: "Truly this same sense of the Infinite nature of Duty is the central part of all within us," (2) voice a profound wisdom of the heart.

"To bring the world to Duty and benefit Mankind" is indeed the dominant word of command voiced by the great and wise of all ages. For all who have ears to hear it is sounding today through the work of the Theosophical Movement, whose teachings have power to re-ignite this indwelling spirit of Devotion in a united world-conscious non-spectacular program of enlightenment, which, if carried forward by earnest men and women, will eventually change the world, by changing the hearts and minds of men.

"Duty, the central part of all within us," these words express the essential nature of Devotion which H. P. B. declared to be "the first and foremost motor in man's nature; for it is the only one that is natural in our heart, which is innate in us, and which we find alike in human babe and the young of the animal." And, quoting from the opening passage: "When, moved by the law of Evolution, the Lords of Wisdom infused into [infant Humanity] the spark of consciousness, the first feeling it awoke to life and activity was a sense of solidarity, of oneness with his spiritual creators. As the child's first feeling is for its mother and nurse, so the first aspirations of the awakening consciousness in primitive man were for those whose element he felt within himself, and who yet were outside, and independent of him. DEVOTION arose out of that feeling, and became the first and foremost motor in his nature."

It is suggested that students of Theosophy and all those who feel the urge to serve by passing on to others these vitalizing thoughts should renew their minds through frequent perusal of this wonderful passage (3) in H. P. B.'s great book. For the sense of one-ness and aspiration it invokes strikes the keynote which underlies all that for which the Theosophical Movement exists.

And surely, never in the history of the human race has there been

an epoch when the need for this vitalizing spirit of Devotion has been more imperative. It is Action that is needed. The power is at hand; it comes by use. Recall Emerson's stirring words: "The law of Nature is to do the thing and you will have the power; they who do not the thing have not the power."

We have witnessed the results of the deadening spell of apathy — of deafness to the counsels of wisdom. We have marked the shelving of any wise constructive action deemed unpractical because courage and trust are lacking, but mainly because the lamp of spiritual understanding is unlit. And now, in the eyes of many our Western Civilization has sunk below the credit-level of decent, useful Humanity. Are we to continue our barrenness of purpose, our fruitless questionings, when all the while a living answer is at hand? The Human Family cannot evade its besetting miseries (self-induced) by halting to temporize and discuss its differences. The crying need is to turn the thoughts of men away from these to the unifying bonds of eternal kinship, and so invoke the great heart-undertones of Human Solidarity. The call is a practical one and by it the nobler manhood of all peoples is challenged.

We are living in the Kali-Yuga, the dark cycle in which the forces of evil have their innings. A wise Teaching declares "that every one is so placed in this world as to exhibit his worst qualities," adding that "the purpose of this life is to strengthen the weak places of the spiritual man." (4) Is it not natural then, that the world, in its period of struggle towards regeneration, should present a picture of weakness and error? It is because a clearer light of guidance and perception than heretofore is over us that we may learn how black the picture really is, with the fumes of discord and hate. It holds a salutary lesson for all mankind — not pleasing to contemplate as a portrait of the Human Family.

But let us take heart. All is in the ordering of Universal Law. Man reaps what he has sown. He has the power and the wisdom — if he will — to sow seeds of Enlightenment and Peace for a world unborn by kindling this Wisdom in the living currents of the human heart today.

With our higher judgment and intuition aroused to a realization of the true state of the world today, what opportunities it reveals to those who would serve the race! The past, merged into the present on the brink of the dividing of the ways — the choice of a path towards a divine destiny for the Race or a falling back along the broad highways of decline.

It is no time for hesitation. A clearer vision, a vaster grasp of proportion is needed, and with hearing alert to know the call and whence it comes. No time, this, for spiritual self-culture, engrossed in its own advancement. No moment, this, for the "gratification of spiritual aspirations." (5) Now is the supreme opportunity, offered to all, to *serve*.

Thoughtful minds are awakening — they sense the premonition that a new era is already born and is being unfolded before our eyes.

Our work demands knowledge of the world, wisdom, born of experience, to understand and interpret the diversities of human nature and the human family, and above all the practical wisdom and tact to discern the strategic points at which to direct our appeal — in plain words, to reach the right people. Among these are the thousands of the rising as well as of the present generations, who, often, unknown to themselves, cherish the longing to be joined in a comradeship of service for world-betterment — a Cause which regenerates and inspires.

These thoughts on Devotion are brightened by the hope and

conviction that there are earnest minds among the Youth of the race who are spiritually awake and alert to the needs of the hour. These bring with them a new vision of life and a new energy into the human picture, and viewing the spectacle of recent events they have a keen awareness of something lacking — of a desperate need for enlightened action, and their virile and intelligent minds are spurred by a hunger for a knowledge which can answer the riddles of life.

Living example is the only key to the hearts of these. Example is a living reality, an expression of the nature of the indwelling motives and ideals. The Devotion that is spiritually vital carries within it a power of creative appeal of like for like. Its symbol is a flame that can kindle a thousand torches. Devotion may be quiet and unheralded, for it loves not parade nor display. Its steadfast, constant loyalty to the Highest within it, transmitted from heart to heart, gaining momentum as it grows, is the only power that will change and transfigure the lives of men. Devotion is summed up in these words of W. Q. Judge: "For Love and Trust are the only weapons that can overcome the real enemies against which the true theosophist must fight." (6)

SOME SECRETS OF THE HEART — *Madeline Clark*

Like the diamond in the heap of grain, a thought encountered in a paragraph from *Science* (1) flashed forth a suggestive gleam — and a train of ideas was born. This is the paragraph:

I remind you that the uses to which the heart and the blood and the blood vessels are put, engaged the attention of naturalists very early. They (the naturalists) kept coming back century after century to an attempt at solution, always thinking that an answer had been found, but never aware of the inaccuracy or the inadequacy of those answers. We think now that we have been making and are making great strides toward understanding. And we are. But let me remind you also that in a very real sense, we possess small likelihood of thinking of kinds of mechanisms except those which lie reasonably close to our hands. And yet, in connection with the circulation and its mechanics, the questions we can and do ask for which there is not even an approach to an answer are very startling. I am thinking, in the heart, of so essential a part of its mechanism as rhythm — rhythm itself being a phenomenon widely recognized as occurring in many aspects of nature, without in most situations our having the remotest notion as to how to proceed to find an answer to our enquiry concerning its origin or its nature.

— Learned Sirs, if you could fathom that marvel, you would know the secret of the Universe. That mysterious and invincible rhythm that comes to you through your stethoscope, if you could trace it to its source, would take you out to the very borders of universal manifestation — beyond the planets in their courses, beyond the

Pole-star, beyond the realms of Time itself, to where Eternal Duration holds sway over the deeps of Space. In that human heartbeat you hear an echo from Infinitude, because, as you yourselves have half-perceived, everything in manifested life responds in rhythm to "that Absolute Unity, that ever-pulsating great *Heart* that beats throughout, as in every atom, of nature."
(2)

This little man, this soul tossed on the frothy billows of circumstance, who comes to you for help in keeping his bark seaworthy, is himself an epitome of the Universe. "He is in little all the sphere," as George Herbert, the Welsh-English mystic (1593-1633) says in his poem on *Man*. To the myriads of infinitesimal lives that ensoul the cells and atoms of his being, a single beat of his heart is the beginning and ending of a definite cycle. Imagine him expanded to the utmost in all his spiritual parts and principles, and you have the Adam Kadmon, the Heavenly Man, the cosmic entity itself, of which the "one absolute attribute, which is ITSELF, eternal, ceaseless Motion, is called . . . the "Great Breath" . . . the perpetual motion of the Universe." (3)

We can follow this Rhythm or Motion to the very confines of thought, but we can never get away from it. It manifests in the coming-into-being of worlds and systems and their august deaths, when they sink again into "the dark mystery of non-Being";* and it is in the ceaseless reimpodiments of all lesser creatures, down to the very smallest; it governs the beating of the Solar heart in its eleven-year cycle; it is seen in the tides of the ocean, the fluctuations of the seasons, day and night, sleeping and waking, the fall of the leaves and budding of the trees, in Mendeleef's table of the Elements, in Bode's Law, and in all the majestic movements of the celestial bodies. It is "finite and periodical" in the manifested universe, but "eternal and ceaseless" in the Intra-Cosmic Spaces. . . . That human heart will cease to beat; it and the

Universe and all in it will in time pass away, but the underlying immortal Rhythm is unceasing, and will one day bring them forth again.

"We must put hard heads at the service of soft hearts," said Dr. Cohn at the close of his address: another flash of the diamond, for he has unconsciously touched an ancient truth, which does put the head at the service of the heart, as a matter of their essential nature, linking both in a mystic spiritual unity.

Our Theosophical Teachers have pointed out (and history supports this) that the ancients held the heart to be the seat of the understanding, in some sense, of the deeper thinking faculty, and that the head (the brain-mind) was second to the heart and guided by it in its intellection. How is it that we, for example, still use the expression, "to learn by heart —"? It is a carry-over, undoubtedly, from the days when the relations of heart and brain were better understood. "As a man thinketh in his heart, so is he," is still a common saying. "What his heart thinks his tongue speaks," said Shakespeare. And there is still a minority of scholars and thinkers, who conceive the heart to be the organ of "inmost and most private thought," to quote from the dictionary. Yet for the most part the thoughtless multitude of today think of the heart only as the seat of the emotions, sentiments, and even passions, or at best as expressing the motivating power to thought.

There is a modern revival in Theosophy of the ancient teaching regarding the heart and its spiritual functioning in our human makeup, and it was given by Dr. de Purucker in several of his talks to his students. (4) The heart, he said, is the most evolved organ in the body, "the hyparxis, physically speaking," and is actually the organ of our Inner God, whose ray touches it and fills it with its presence. That is why it is in actual fact the abode of

conscience, love, peace, courage, hope, and wisdom. The mystic heart, of which the physical organ is the physical vital instrument, is higher than the brain, said Dr. de Purucker, "because it is the organ of the individual's spiritual nature, including the higher manas or spiritual intellect."

Here is a teaching to fire the imagination — that man carries within his breast, pulsating, vibrating with cosmic life, a tangible link with the spiritual worlds to which he aspires. Many a time must we all have marveled at the miracle of the unceasing motion of the heart from birth to far-off death, absorbing the shocks, the joys and jolts of life, invincible and undismayed. But the fact that it is sustained and energized by one of the bright gods, destined to manifest for the period of a human incarnation, that alone perhaps brings such a marvel within our understanding.

Now then, Dr. de Purucker goes on to make plain how it is that the heart leads, and the head follows. The two centers connected with the brain, the pineal gland and the pituitary body, are the seats of the spiritual intuitions and of the will, respectively, and their connection with the heart is of the closest, for the pineal gland is the heart's organ of spiritual-intellectual activity in the head, and its impulse to activity comes from the heart. The pituitary body is in its turn actuated by the pineal gland, and when high and noble impulses come from the heart, the whole being of the man becomes "a harmony of higher energies — relatively godlike." (5)

These higher energies, which we might call in a general way the faculties of sensitive perception and of instant intuition, are actually the sixth and seventh senses represented by these centers in the head, which the human race is destined to develop, but which are "not yet existent and working in us and through us as manifested activities " Yet even now the first faint stirrings of

these faculties can be felt. But they can never be developed safely unless all selfish motive is eradicated. Dr de Purucker tells us how to go about the conquest of these higher powers:

The first rule is live as a true man. It is as simple as that. Do everything you have to do, and do it in accordance with your best. Your ideas of what is best will grow and improve, but begin. The next thing is to cultivate *specifically as units* the higher qualities in you which will make you superiorly human as contrasted with inferiorly human. Be just, be gentle, be forgiving, be compassionate and pitiful. Learn the wondrous beauty of self-sacrifice for others, there is something grandly heroic about it. Keep these things in your heart. Believe that you have intuition. Live in your higher being. Then when this can be kept up continuously so that it becomes your life, habitual to you then the time approaches when you will become a man made perfect, a glorious Buddha.

Scientific discoveries of recent years in regard to sunspots and the magnetic influence of solar radiation support the statement of Theosophy that the Sun is in actual fact the pulsing heart of the Solar System. Theosophy goes still further, and says that the Sun is the heart *and mind* of the Solar System. In *The Secret Doctrine* H. P. Blavatsky quotes an ancient Commentary as saying:

The Sun is the heart of the Solar World [System] and its brain is hidden behind the [visible] Sun. Thence, sensation is radiated into every nerve-cell of the great body, and the waves of the life essence flow into each artery and vein. The planets are its limbs and pulses.

And Dr. de Purucker refers familiarly to the same fact in his *Studies in Occult Philosophy*:

the Sun, being as it is not only the heart but the mind of the solar system as long as this solar system remains a coherent unity, is therefore the governor of all the forces in that solar system — governor and controller, as well as source and final focus.

Here we have heart and mind (or brain) seated in the same celestial organ: a suggestive and significant fact, more closely related to our human heart and brain than will be understood soon or generally.

A final word — again highly suggestive: The doctrine of "singular points" (Sir James Jeans), or "laya-centers," as named in Theosophy, through which the matters or substances of one world or "dimension" stream through into the world next below, is really one of wide application. Dr. Jeans applied it to nebulae: Dr. de Purucker remarks (*Questions We All Ask*, Series II, p. 219):

Let me tell you something more: every globe that you see in space has as its center, its heart, just such a "singular point," . . . and through this center of each such globe come into that globe the streams of entities, the river of living things, by which that globe is inhabited, all of them on their evolutionary pathway. They then enter into the atmosphere of any such globe, such as our earth, and find . . . their habitats. . . .

— Considering the human heart as the gateway for the life-giving elements which sustain the circulations of the body, could not the heart in its higher function be the laya-center through which stream into our consciousness spiritually creative life-atoms from the higher worlds?

5. The process of the heart's influence upon the pineal and pituitary centers can only be mentioned suggestively here the whole subject, embracing also the other centers, or "chakras," should be studied in the two books by Dr de Purucker already cited in this article. ([return to text](#))

The Theosophical Forum

THE OLD ORDER CHANGETH — *Allan J. Stover*

And slowly answer'd Arthur from the barge:
The old order changeth, yielding place to new,
And God fulfils himself in many ways,
Lest one good custom should corrupt the world.
— Tennyson, *The Passing of Arthur*

Pythagoras, who, according to tradition, was able to sense the ever changing harmony of the stars and planets in their movements, called this universal symphony of nature the "Music of the Spheres," as coming from the heart of nature herself.

While we are not able to hear this celestial music ourselves, the earth in its yearly journey about the sun produces the seasons, which we may think of as a musical symphony in four movements; for in each quarter of the year the motif and tempo vary, bringing to every being new conditions for necessary experience. For the year, the lunar month, and every day, each repeats on its own small scale the pattern of a manvantara. And the rotation of little cycles within larger cycles brings about shifts and changes, so that no cycle is ever exactly like the preceding.

This may be one reason why the Teachers have always warned us not to let our minds crystallize about any idea, for if we do we may fail to see the opportunity in the new phase of the great symphony.

A year is rounding to its close and a new year will soon begin, in which a new chance is offered to everyone, for it is in a sense a reshuffling of the cards. It is a true intuition which has led to the practice of making New Year's resolutions.

Into each phase of life from childhood to old age there comes a

karmic heritage from the past which could not find expression except under those particular conditions. But continually men strive to carry youth into middle age, and middle age into old age, not realizing that each scene in the drama of life has experiences and opportunity for soul growth not provided by any other.

In the calendar in common use much of the inner structure of the universe is symbolized, and just because the interlocking cycles of every grade follow the same general plan, the student will find much worthy of careful study, in this one of the most familiar things in life.

Unfortunately the calendar as used at present is in certain ways out of gear with nature, but nevertheless the twelve months are symbolic of the twelve signs of the zodiac and their twelve magnetic influences. The days of the week are named for the seven sacred planets and the seven universal principles associated with them. The four quarters of the year, the four phases of the moon, and the four parts of the day, in their intermeshing form a kind of paradigm of the operations and structure of the universe.

But there is a grander significance which is contained in the initiatory cycles which take place at the four sacred seasons — the summer and winter solstices and the vernal and autumnal equinoxes. At these times those who are worthy and well qualified are permitted to take the step which raises them above ordinary humanhood into that of active workers in the guardian wall of humanity.

THE OCCULT WAY (1) — *Doris Mason*

The fundamental teaching of occultism is that he who would become an occultist must first live the life — a life of spiritual self-discipline, impersonal love, constant devotion to duty, and unswerving loyalty and obedience to the teacher — and right here I would like to say that unswerving loyalty and obedience to the teacher is absolutely necessary in treading the Occult Path. Once we disobey and decide to go off on our own, we lose contact with the teacher, thus becoming in danger of losing the power of discrimination between *true* and *false*.

Any subject spoken or written is confined to the limitations of the mind and understanding of the speaker. Each gives the picture as he himself sees it.

In meditating on the symbolism of the Occult Way, or path, I have always pictured to my mind a white gate at the entrance; a gate such as we see at the entrance of any public park. Just as in the case of the gate to the park — this gate also is locked, and only at certain times is it possible to unlock it and pass through. We may pass it day after day, and year after year, we may have the idea in the back of our minds some day to open the gate and see what lies beyond it, but we keep putting off that day. Of the thousands who pass that gate, some in their preoccupation with their own worldly affairs, and others with the idea of sometime in the future opening the gate, there are few who consciously and of their own volition actually open it and walk through. The only key necessary to open it is, of course, the unselfish desire within ourselves to dedicate our lives to the service of humanity.

Once within this gate, straight ahead we see what appears to be a rocky, rugged, apparently barren and lonely path. Right at this

point he who would tread the path to chelaship must choose. Few actually choose the rugged path. Some smell the fragrant flowers of Intellectualism to the left and wander off in that direction — others see the vivid foliage of psychic phenomena on yet another path and wander off in that direction. Those who do either never actually enter the Path of, or towards, Occultism, known to Theosophists as the Chela Path, although they may in their psychic or intellectual opium dreams delude themselves in the belief that they are on the Path. True they entered the gate, but they failed to step onto the path itself.

Our teachers have spoken of this path as "steep and thorny," and as a "lonely path." Both are right in a sense, for first of all it is the path of *self* discipline, not discipline of our companions, our neighbors, of our friends, or even of our so-called enemies, as some seem to believe. At the very first step on this path we must give up entirely the personality, the *self* we have been, for we no longer belong to ourselves alone, we can no longer let the lower physical self dictate to us what we will say, where we will go, what we will do, or even what we will think. Our lives, once we enter the Path are dedicated to doing the Masters' work. We go, and I am speaking geographically now, where they direct us to go. We also do what they wish us to do. Even though we inwardly *know this is so*, we sometimes deceive ourselves into believing that we go to a certain country, city or town because we want to go. Once there, we realize the purpose of the change in location, we recognize once again the touch of the Masters, and see before us the work we are to do. And we also know there is no escape until the job is finished and we once again receive our orders for *change of station*. I do not mean to imply here that the Masters contact personally, or through correspondence, all who tread the Occult Path. However, those in the Theosophical Society are taught by teachers who have been trained by the Masters.

In the vocabulary of the Army, entering the path is like unto being called to *active duty*, and these sometimes bewildering moves to places we had no intention of ever visiting, can be compared to a *change of station*. The *orders* received, although not written and signed as they are in the army, are nevertheless just as clear, and to disobey them can bring more severe discipline or punishment than any court martial could deal out to us. Any soldier with a minimum of intelligence soon learns that life flows along quite harmoniously in the Army, if he obeys the orders of his superiors — so it is on the Occult Path — we follow the rules of self-discipline laid down for us by those who have trodden the path before us. It is not too hard. We do not become saints overnight and sometimes it seems to us after years of trying, that we have made little progress.

I have always identified the rocks and thorns seen ahead on the path as our own weaknesses and bad habits which we must overcome before we can go farther. With some of us, it is a bitter gossiping tongue, with others it is malice and jealousy, or a vicious desire to meddle in other people's affairs, still others fight laziness, and the tendency to let the other fellow do the hard work while they dream. There are so many such rocks along the way. However, the sharp rocks are not so serious; we are ever aware of them. The treacherous pitfalls hidden deep in the brush and foliage of self are *pride, vanity, desire for praise, and delusions of grandeur of either the spiritual or earthly variety*. Few of us are free of these. A sense of superiority is present in some form in almost everyone. Few of us can truthfully say we do not consider ourselves socially, spiritually, or intellectually superior to anyone else. Often it takes the form of a private hunch that we are quite a bit smarter than the rest. Or that no one else could possibly do our particular job as well as we are doing it. In fact some of us are convinced that should we cease doing the work we are now

doing, our particular department would have to fold up and close its doors. We cannot bear the thought that anyone else could do the job as well and perhaps more efficiently than we are able to do it.

In England in 1944, during the worst of the buzz bomb blitz, an Army Chaplain spoke to a group of about 500 soldiers and officers. The tension caused by the constant bombings brought out the very worst, or the very best that was in all of us. There had been many reports of unjust treatment of the men by some of the officers, who in turn reported lack of discipline among the troops. This chaplain spared neither; he started with the officers:

"Who do you think you are?" he shouted. *"Do you fancy that you, the real you is Major Smith, or Captain Jones? Only for a little while has fate given you the army title you now wear. Only for a little while perhaps, will you even have the name of John Smith which was given you at birth. Do you think you won your rank because you were actually superior to your fellow men? If you do, allow me to disillusion you. A power higher than any Bureau in Washington put you in the position you are now in. You were probably not the best material that could be had, but you were given the chance to become a leader of men in a small way. Death is very close to us all here at this moment. This may be your last chance to be remembered, and live in the memory of the men who serve under you, as a grand leader; or you may die unregretted as the failure you now are. Only a second in time, perhaps, and all you have of earthly things may no longer belong to you."* To the soldiers he said, *"How can you expect life to go right with you, if you spend all your time figuring out ways to disobey the rules and regulations? Think more of doing the duty that lies nearest to you, and you won't have so much time to think of the ill treatment you may, or may not, be receiving!"* That particular talk was what we all needed; we left the assembly

much chastened.

In *Light on the Path* we read,

And that power which the disciple shall covet is that which shall make him appear as nothing in the eyes of men.

That is the hardest hurdle for most of us to cross. We cannot bear to be considered as nothing in the eyes of men, we must everlastingly stimulate the ego with reminders of our importance. It is hard for us to realize that none of this is ours, none of these things actually belong to us, that all will be taken from us eventually, and that the moment may be much nearer than we realize.

Some who are young now feel quite superior to their elders. There is nothing unique in being young — all living beings have youth at one time in their lives.

And some who are older are apt to feel that their years give them a cloak of virtue in which to wrap themselves while they sit in judgment on the young, deaf meanwhile to the rattling of the skeletons of their own youthful indiscretions in the closet behind them.

Some feel superiority in the form of the *martyr complex* — I've heard so many remark that they had sacrificed their lives, or many years of their lives to this or that. *To dedicate one's life to anything worthwhile is not a sacrifice — it is a privilege.*

And so it is in following the occult path — *it is not a sacrifice of anything that really belongs to us — it is rather a coming into our rightful heritage.*

It may seem to you that I've dwelt too long on the *obstacles* to be overcome on the path, but not until we set our own houses in order, so to speak, and clear out the things which clutter up our

lives, can we gain the vision and the strength to carry on the work of the Masters. We cannot do much to help others while we are all muddled up and confused, ourselves. And what is worse — we hamper the Teacher's efforts to help and teach us, until we clear the channel between ourselves and him.

In time, constant practice of self-discipline will give us the strength to go on undaunted and not disillusioned by the selfish, personal axe-grinding of those whom we wish with all our hearts we could respect. As the contact with the higher self grows firmer, we learn to walk alone, unmoved by the conduct or criticism of those around us.

As Kahlil Gibran, the Persian poet, so aptly expresses it in his *Sand and Foam*,

I have learned silence from the talkative,
Toleration from the intolerant,
Kindness from the unkind;
Yet strangely enough —
I am ungrateful to these teachers!

Each treads the Path in his own way, for each has his own destiny or Karman to work out — it cannot possibly be the same for all. And — to put it bluntly — it's really none of our business how another may be following the path.

The time is so short — there's so much to be done, and so few are willing to do it.

We must grow strong and sure of ourselves — millions need the strength and help we can give. For too long we have pampered ourselves, deliberately and through indolence delaying our spiritual evolution. For too long we have *received*. It is high time we started to *give* — not alone of our possessions — that is simple — but of *ourselves*. For then, and only then, are we living *the*

occult way.

In closing, I want to pass on to you something that has exerted the strongest influence in my life and has given me more courage than any one thing for many years — it long ago filled the place left empty by the omission of the prayers which had comforted me as a child. It is from the *Bhagavad-Gita*. Many of you are familiar with it, of course, but in all imaginable situations it has never failed to recall me to my duty, or to comfort me when comfort was sorely needed — it is this:

Therefore perform thou that which thou hast to do, at all times unmindful of the event; for the man who doeth that which he hath to do, without attachment to the result, obtaineth the Supreme.

The Theosophical Forum

CYCLIC IMPRESSION AND RETURN AND OUR EVOLUTION (1) — *William Q. Judge*

I

The word cycle is derived from the Greek word *Kuklos*, or a ring. It has been turned in the English language into the word cycle, by the process of saying *Kykle*, and then cycle. The corresponding word in the Sanscrit is *Kalpa*, which has in fact a wider and a deeper meaning; because cycle in English is a word which covers, is used for, and thus somewhat confuses, many cycles. It is used for the small cycles, and the larger cycles, the intermediate cycles and the great ones, whereas the word *Kalpa* means and implies only one cycle of a large size, and the smaller cycles within that are designated by other words.

What is a cycle? It is a circle, a ring. But not properly a ring like a wedding ring, which runs into itself, but more properly like a screw thread, which takes the form of a spiral, and thus beginning at the bottom, turns on itself, and goes up. It is something like the great Horseshoe Curve in the Pennsylvania Railroad. There you go around the curve at the lower end; you go down into the horseshoe, and as you turn the grade rises, so that when you arrive at the opposite side you have gotten no further than the beginning, but you have risen just the distance between the two ends of the grade.

But what do we mean by a cycle in Theosophy, in our own investigations of nature, or man, or civilization, or our own development, our own origin, our own destiny? We mean by a cycle, just what the Egyptians, the Hindoos and the philosophers of the Middle Ages meant by it; that is, that there is a periodical return or cycling back, circling back of something from some

place once more. That is why it is called cycle, inasmuch as it returns upon itself, seemingly; but in the Theosophical doctrine, and in the ancient doctrines, it is always a little higher in the sense of perfection or progress. That is to say, as the Egyptians held, cycles prevail everywhere, things come back again, events return, history comes back, and so in this century we have the saying: "History repeats itself."

But where do Theosophists say that cyclic law prevails? We say that it prevails everywhere. It prevails in every kingdom of nature, in the animal kingdom, the mineral world, the human world; in history, in the sky, on the earth. We say that not only do cycles pertain, and appertain, and obtain in and to the earth and its inhabitants, but also in what the Hindoos call the three kingdoms of the universe, the three worlds; that is, that below us, ourselves, and that above.

Now, if you will turn to Buckle, a great writer of the English school, you will find him saying in one of his standard books, a great book often quoted, that there is no doubt cyclic law prevails in regard to nations, that they have come back apparently the same, only slightly improved or degraded, for there is also a downward cycle included within those that rise; but Buckle did not discover a law. He simply once more stated what the ancients had said over and over again. And it has always seemed to me that if Buckle and other people of that kind would pay a little more attention to the ancients, they would save themselves a great deal of trouble, for he obtained his law by much delving, much painstaking labor, whereas he might have gotten the law if he had consulted the ancients, who always taught that there were cycles, and that there always will be cycles.

Among the ancients they had a great many large and important cycles. In their classification they had a Saros and a Naros, which

are not understood today by us. They are known to some extent, but what exactly they are, we do not know. The Egyptians taught that there was a great sidereal cycle, and that is recognized today, at last; that is the cycle of 25,000 years, the great one caused by the fact that the sun went through the signs of the Zodiac in that length of time. Now, I do not assume that you know nothing about astronomy, but in order to make it clear, it will be better for me to state this over again, just as it is. The sun goes through the signs of the Zodiac from day to day and from year to year, but at the same time, in going through the signs of the Zodiac, he goes back slowly, like the hands of a clock ticking off the time. In going through that period he comes back to the same point again, and retards himself, or goes back: that is called the precession of the equinoxes, and it is so many seconds in such a length of time. Those seconds in the sky turned into time show you that the sun takes 25,000 and odd years to come back to the place from which he started out at any particular time; that is to say, if you imagine that on the first of April, this year, the sun was in such a degree of Aries, one of the signs of the Zodiac, he will not get back to that sign by the precession of the equinoxes until 25,000 years have passed away.

Now, the sun is the center of our solar system and the earth revolves around it, and as the earth revolves she turns upon her axis. The sun, it is known now by astronomers, as it was known by the ancients (who were ourselves in fact), revolves around a center. That is, that while we are going around the sun, he is going around some other center, so that we describe in the sky not a circle around the sun, but a spiral, as we move with the sun around his enormous orbit. Now do you grasp that idea exactly? It is a very important one, for it opens up the subject to a very large extent. There is a star somewhere in the sky, we do not know where — some think it is Alcyone, or some other star, some

think it may be a star in the Pleiades, and some others think it is a star somewhere else — but they know by deduction from the known to the unknown, that the sun is attracted himself by some unknown center, and that he turns a-round it in an enormous circle, and as he turns, of course he draws the earth with him. In the course of 25,000 years in going around the signs of the Zodiac, he must take the earth into spaces where it has never yet been, for when he reaches this point in Aries, after 25.000 years, it is only apparently the same point, just as when I came around the curve of the Horseshoe, I started around the first point and went around the curve, came back to the same point, but I was higher up; I was in another position. And so, when the sun gets back again to the point in Aries, where he was on the first of April this year, he will not be in the exact position in the universe of space, but he will be somewhere else, and in his journey of 25,000 years through billions upon billions of miles, he draws the earth into spaces where she never was before, and never will be as that earth again. He must draw her into cosmic spaces where things are different and thus cause changes in the earth itself, for changes in cosmic matter in the atmosphere, in the space where the sun draws the earth, must affect the earth and all its inhabitants. The ancients investigated this subject, and declared long ago this 25,000 years cycle, but it is only just lately, so to speak, that we are beginning to say we have discovered this. We know, as Nineteenth century astronomers, that it is a fact, or that it must be a fact, from deduction, but they knew it was a fact because they had observed it themselves and recorded the observations.

The Egyptians had also the cycle of the Moon, which we know, and they had more cycles of the moon than we have, for the moon not only has her cycle of twenty-eight days, when she changes from full to disappearance, and then again to youth, but

she also has a period of return somewhere over fourteen years, which must itself have its effect upon the earth.

Then they said, also, that the human soul had its cycle, it being 5,000 years. That is, the man died, or the king died, and his body was turned into a mummy in the hope that when, after his five thousand years cycle had elapsed and he came back once more to earth, he would find his mummy there? No; but that no one else should have taken his mummied atoms and made a bad use of them. Mummification is explained by us in another way. Their knowledge of the law of cycles caused them to make the first mummy. They held that a human soul returned; they also held that all atoms are alive, just as we do; that they are sensitive points; that they have intelligence belonging to the plane on which they are, and that the man who misuses atoms of matter, such as you have in your bodies and your brains, must stand the consequences. Consequently, saying that to themselves, they said, "If I die, and leave those atoms, which I have used so well, perhaps some other man will take them and use them badly, so I will preserve them as far as possible until I return, and then by a process destroy the combination of atoms, absorb them into some place, or position, where they might be put to good use." That may seem offensive to some today, but I am merely repeating the theory. I am not saying whether I believe it or not.

The ancient Egyptians who held these theories have disappeared and left nothing behind but the pyramids, the temples of Thebes, the Sphinxes and all the great monuments which are slowly being discovered by us. Where have they gone? Have they come back? Do the Copts now in Egypt represent them? I think not, although heredity is the boasted explanation of everything. The Copts are their descendants? They know nothing, absolutely nothing but a simple language, and they live the life of slaves, and yet they are the descendants of the ancient Egyptians! What has become of

them? The ancient Egyptians we think were co-laborers with the ancient Hindoos, whose cycle remains; that is to say, whose descendants remain, holding the knowledge, in part, of their forefathers, and we find that the Hindoos have held always the same theories as to cycles as the Egyptians held. They divided the ages of the world. They say manifestation begins, and then it lasts for a period called a Kalpa, an enormous number of years; that Kalpa is divided into ages. The small cycle is composed of a large number of years; one will be four thousand, another four hundred thousand, another will be a million, and so on, making a total which we cannot grasp with the mind but which we can write upon the paper.

Now, the idea of cycles came from the Hindoos, through the nations who spread out from there, for it is admitted that the land of Hindustan is the cradle of the race. The Aryan race came down into Christendom, so that we find the Christians, the Romans, the Greeks and all people around that time holding the same theories as to cycles; that is, that cyclic law prevails everywhere. We find it in the ancient mystics, the Christian mystics, the middle age mystics and the mystics of times nearer to ours. If you will read the works of Higgins, who wrote the Anacalypsis, you will find there laborious compilations and investigations on the subject of the cycles. Do they obtain? Is there such a thing as a cycle which affects human destiny?

Coming closer to our own personal life, we can see that cycles do and must prevail, for the sun rises in the morning and goes to the center of the sky, descends in the west; the next day he does the same thing, and following him, you rise, you come to the highest point of your activity, and you go to sleep. So day follows night and night follows day. Those are cycles, small cycles, but they go to make the greater ones. You were born, at about seven years of age you began to get discretion to some extent. A little longer and

you reach manhood, then you begin to fall, and at last you finish the great day of your life when body dies.

In looking at nature we also find that there are summer and winter, spring and autumn. These are cycles, and every one of them affects the earth, with the human beings upon it.

The esoteric doctrine, the inner doctrine of the old Theosophists and the present day Theosophists, to be found in every old literature and religious book, is that cyclic law is the supreme law governing our evolution; that reincarnation, which we talk so much about, is cyclic law in operation and is supreme. For what is reincarnation but a coming back again to life, just what the ancient Egyptians taught and which we are finding out to be probably true, for in no other way than by this cyclic law of reincarnation can we account for the problems of life that beset us; with this we account for our own character, each one different from the other, and with a force peculiar to each person.

This being the supreme law, we have to consider another one, which is related to it and contained in the title I have adopted. That is the law of the return of impressions. What do we mean by that? I mean, those acts and thoughts performed by a nation — not speaking about the things that affect nature, although it is governed by the same law — constitute an impression. That is to say, your coming to this convention creates in your nature an impression. Your going into the street and seeing a street brawl creates an impression. Your having a quarrel last week and denouncing a man, or with a woman and getting very angry, creates an impression in you, and that impression is as much subject to cyclic law as the moon, and the stars, and the world, and is far more important in respect to your development — your personal development or evolution — than all these other great things, for they affect you in the mass, whereas these little ones

affect you in detail.

II

This Theosophical doctrine in respect to cycles, and the evolution of the human race, I think is known to you all, for I am assuming that you are all theosophists.

It is to be described somewhat in this way: Imagine that before this earth came out of the gaseous condition there existed an earth somewhere in space, let us call it the moon, for that is the exact theory. The moon was once a large and vital body full of beings. It lived its life, went through its cycles, and at last having lived its life, after vast ages had passed away, came to the moment when it had to die; that is, the moment came when the beings on that earth had to leave it, because its period had elapsed, and then began from that earth the exodus. You can imagine it as a flight of birds migrating. Did you ever see birds migrate? I have seen them migrate in a manner that perhaps not many of you have. In Ireland, and perhaps in England, the swallows migrate in a manner very peculiar.

When I was a boy, I used to go to my uncle's place where there was an old mass of stone ruins at the end of the garden, and by some peculiar combination of circumstances the swallows of the whole neighboring counties collected there. The way they gathered there was this: When the period arrived, you could see them coming in all parts of the sky, and they would settle down and twitter on this pile of stone all day, and fly about. When the evening came — twilight — they rose in a body and formed an enormous circle. It must have been over forty feet in diameter, and that circle of swallows flew around in the sky, around this tower, around and around for an hour or two, making a loud twittering noise, and that attracted from other places swallows who had probably forgotten the occasion.

They kept that up for several days, until one day the period arrived when they must go, and they went away — some were left behind, some came a little early, and some came too late. Other birds migrate in other ways. And so these human birds migrated from the moon to this spot where the earth began (I don't know where it is — a spot in space) and settled down as living beings, entities, not with bodies, but beings, in that mass of matter, at that point in space, informed it with life, and at last caused this earth to become a ball with beings upon it. And then cycles began to prevail, for the impressions made upon these fathers when they lived in the ancient — mind fails to think how ancient — civilization of the moon, came back again when they got to this earth, and so we find the races of the earth rising up and falling, rising again and falling, rising and falling, and at last coming to what they are now, which is nothing to what they will be, for they go ever higher and higher.

That is the theory, broadly, and in that is included the theory of the races, the great seven races who inhabited the earth successively, the great seven Adams who peopled the earth; and at last when this earth shall come to its time of life, its period, all the beings on it will fly away from it to some other spot in space to evolve new worlds as elder brothers who have done the same thing before in other spaces in nature. We are not doing this blindly. It has been done before by others — no one knows when it began. It had nothing in the way of a beginning, it will have no end, but there are always elder brothers of the race, who live on.

As some have written, we cannot turn back the cycles in their course. The fire of patriotism cannot prevail against the higher destiny which will plunge a nation into darkness. All we can do is to change it here and there a little. The elder brothers are subject to law, but they have confidence and hope, because that law

merely means that they appear to go down, in order to rise again at a greater height. So that we have come up through the cyclic law from the lowest kingdoms of nature. That is, we are connected in an enormous brotherhood, which includes not only the white people of the earth, and the black people of the earth, and the yellow people, but the animal kingdom, the vegetable kingdom, the mineral kingdom and the unseen elemental kingdom.

You must not be so selfish as to suppose that it includes only men and women. It includes everything, every atom in this solar system. And we come up from lower forms, and are learning how to so mould and fashion, use and abuse, or impress the matter that comes into our charge, into our bodies, our brains and our psychical nature, that that matter shall be an improvement to be used by the younger brothers who are still below us, perhaps in the stone beneath our feet. I do not mean by that that there is a human being in that stone. I mean that every atom in the stone is not dead matter. There is no dead matter anywhere, but every atom in that stone contains a life, unintelligent, formless, but potential, and at some period in time far beyond our comprehension, all of those atoms in that stone will have been released. The matter itself will have been refined, and at last all in this great cycle of progress will have been brought up the steps of the ladder, in order to let some others lower still in a state we cannot understand come up to them.

That is the real theory. Is that superstition? If you believe the newspapers, that is superstition, for they will twist and turn everything you say. Your enemies will say you said there was a man in that stone, and that you have been a stone. You have not been a stone, but the great monad, the pilgrim who came from other worlds has been in every stone, has been in every kingdom, and now has reached the state of man, to show whether he is able

to continue being a man, or whether he will once more fall back, like the boy at school who will not learn, into the lowest class.

Now then, this law of impressions I have been talking about can be illustrated in this way: If you look at one of these electric lights — take away all the rest, leaving one only, so as to have a better impression — you will find the light makes an image on the retina, and when you shut your eye, this bright filament of light made by a carbon in an incandescent lamp will be seen by you in your eye. You can try it, and see for yourselves. If you keep your eye closed and watch intently, you will see the image come back a certain number of counts, it will stay a certain number of counts, it will go away in the same length of time and come back again, always changing in some respect but always the image of the filament, until at last the time comes when it disappears apparently because other impressions have rubbed it out or covered it over.

That means that there is a return even in the retina of the impression of this filament. After the first time, the color changes each time, and so it keeps coming back at regular intervals, showing that there is a cyclic return of impression in the retina, and if that applies in one place, it applies in every place. And when we look into our moral character we find the same thing, for as we have the tides in the ocean, explained as they say by the moon — which in my opinion does not explain it, but of course, being no scientist, my view is not worth much — so in man we have tides, which are called return of these impressions; that is to say, you do a thing once, there will be a tendency to repeat itself; you do it twice, and it doubles its influence, a greater tendency to do that same thing again. And so on all through our character shows this constant return of cyclic impression.

We have these impressions from every point in space, every

experience we have been through, everything that we can possibly go through at any time, even those things which our forefathers went through. And that is not unjust for this reason, that our forefathers furnished the line of bodily encasement, and we cannot enter that line of bodily encasement unless we are like unto it, and for that reason we must have been at some point in that cycle in that same line or family in the past, so that I must have had a hand in the past in constructing the particular family line in which I now exist, and am myself once more taking up the cyclic impression returning upon me.

Now this has the greatest possible bearing upon our evolution as particular individuals, and that is the only way in which I wish to consider the question of evolution here; not the broad question of the evolution of the universe, but our own evolution, which means our bodily life, as Madame Blavatsky, repeating the ancients, said to us so often, and as we found said by so many of the same school. An opportunity will arise for you to do something; you do not do it; you may not have it again for one hundred years. It is the return before you of some old thing that was good, if it is a good one, along the line of the cycles. You neglect it, as you may, and the same opportunity will return, mind you, but it may not return for many hundred years. It may not return until another life, but it will return under the same law.

Now take another case. I have a friend who is trying to find out all about Theosophy, and about a psychic nature, but I have discovered that he is not paying the slightest attention to this subject of the inevitable return upon himself of these impressions which he creates. I discovered he had periods of depression (and this will answer for everybody) when he had a despondency that he could not explain. I said to him, you have had the same despondency may be seven weeks ago, maybe eight weeks ago,

maybe five weeks ago. He examined his diary and his recollection, and he found that he had actual recurrences of despondency about the same distance apart. Well, I said, that explains to me how it is coming back. But what am I to do? Do what the old Theosophists taught us; that is, we can only have these good results by producing opposite impressions to bad ones.

So, take this occasion of despondency. What he should have done was, that being the return of an old impression, to have compelled himself to feel joyous, even against his will, and if he could not have done that, then to have tried to feel the joy of others. By doing that, he would have implanted in himself another impression, that is of joy, so that when this thing returned once more, instead of being of the same quality and extension, it would have been changed by the impression of joy or elation and the two things coming together would have counteracted each other, just as two billiard balls coming together tend to counteract each other's movements. This applies to every person who has the blues. This does not apply to me, and I think it must be due to the fact that in some other life I have had the blues. I have other things, but the blues never.

I have friends and acquaintances who have these desponding spells. It is the return of old cyclic impressions, or the cyclic return of impressions. What are you to do? Some people say, I just sit down and let it go; that is to say, you sit there and create it once more. You cannot rub it out if it has been coming, but when it comes start up something else, start up cheerfulness, be good to some one, then try to relieve some other person who is despondent, and you will have started another impression, which will return at the same time. It does not make any difference if you wait a day or two to do this. The next day, or a few days after will do, for when the old cyclic impression returns, it will have dragged up the new one, because it is related to it by association.

This has a bearing also on the question of the civilization in which we are a point ourselves.

III

Who are we? Where are we going? Where have we come from? I told you that the old Egyptians disappeared. If you inquire into Egyptian history, the most interesting because the most obscure, you will find, as the writers say, that the civilization seems to rise to the zenith at once. We do not see when it began. The civilization was so great it must have existed an enormous length of time to get to that height, so that we cannot trace it from its beginning, and it disappears suddenly from the sky; there is nothing of it left but the enormous remains which testify to these great things, for the ancient Egyptians not only made mummies in which they displayed the art of bandaging that we cannot better, but they had put everything to such a degree of specialization that we must conclude they had many centuries of civilization. There was a specialist for one eye and a specialist for the other, a specialist for the eyebrow, and so on. In my poor and humble opinion, we are the Egyptians.

We have come back again, after our five thousand or whatever years' cycle it is, and we have dragged back with us some one called the Semitic race, with which we are connected by some old impression that we cannot get rid of, and so upon us is impinged that very Semitic image. We have drawn back with us, by the inevitable law of association in cyclic return, some race, some personages connected with us by some acts of ours in that great old civilization now disappeared, and we cannot get rid of it; we must raise them up to some other plane as we raise ourselves.

I think in America is the evidence that this old civilization is coming back, for in the theosophical theory nothing is lost. If we

were left to records, buildings and the like, they would soon disappear and nothing could ever be recovered; there never would be any progress. But each individual in the civilization, wherever it may be, puts the record in himself, and when he comes into the favorable circumstances described by Patanjali, an old Hindoo, when he gets the apparatus, he will bring out the old impression. The ancients say each act has a thought under it, and each thought makes a mental impression; and when the apparatus is provided, there will then arise that new condition, in rank, place and endowment.

So we retain in ourselves the impression of all the things that we have done, and when the time comes that we have cycled back, over and over again, through the middle ages perhaps, into England, into Germany, into France, we come at last to an environment such as is provided here, just the thing physically and every other way to enable us to do well, and to enable the others who are coming after us. I can almost see them; they are coming in a little army from the countries of the old world to endeavor to improve this one; for here ages ago there was a civilization also, perhaps we were in it then, perhaps anterior to the ancient Egyptians. It disappeared from here, when we do not know, and it left this land arid for many thousands of years until it was discovered once more by the Europeans. The ancient world, I mean Europe, has been poisoned, the land has been soaked with the emanations, poisoned by the emanations of the people who have lived upon it; the air above it is consequently poisoned by the emanations from the land; but here in America, just the place for the new race, is an arable land which has had time over and over again to destroy the poisons that were planted here ages and ages ago. It gives us a new land, with vibrations in the air that stir up every particle in a man who breathes it, and thus we find the people coming from the old world seeming to

receive through their feet the impressions of an American country. All this bears upon our civilization and race.

We are here a new race in a new cycle, and persons who know say that a cycle is going to end in a few years and a new one begin, and that that ending and beginning will be accompanied by convulsions of society and nature. We can all almost see it coming. The events are very complete in the sky. You remember Daniel says, "A time, half a time, and a time," and so on, and people in the Christian system have been trying to find out the time when time began, and that is just the difficulty. We do not know when the time began. And the only person who in all these many years has made a direct statement is Madame Blavatsky, and she said, "A cycle is ending in a few years, you must prepare." So that it was like the old prophets who came to the people and said, "Prepare for a new era of things, get ready for what you have to do." That is just what this civilization is doing. It is the highest, although the crudest, civilization now on the earth. It is the beginning of the great civilization that is to come, when old Europe has been destroyed; when the civilizations of Europe are unable to do any more, then this will be the place where the new great civilization will begin to put out a hand once more to grasp that of the ancient East, who has sat there silently doing nothing all these years, holding in her ancient crypts and libraries and records the philosophy which the world wants, and it is this philosophy and this ethics that the Theosophical Society is trying to give you. It is a philosophy you can understand and practice.

It is well enough to say to a man, Do right, but after a while, in this superstitious era, he will say, Why should I do right, unless I feel like it? When you are showing these laws, that he must come back in his cycle; that he is subject to evolution; that he is a reincarnated pilgrim soul, then he will see the reason why, and then in order to get him a secure basis, he accepts the philosophy,

and that is what the Theosophical Society and the Theosophical movement are trying to do. It was said the other day, in speaking of a subject like this, that the great end and aim is the great renunciation. That is, that after progressing to great heights, which you can only do by unselfishness, at last you say to yourself, "I may take the ease to which I am entitled." For what prevails in one place must prevail in another, and in the course of progress we must come at last to a time when we can take our ease, but if you say to yourself, "I will not take it, but as I know this world and all the people on it are bound to live and last for many thousand years more, and if not helped perhaps might fail, I will not take it but I will stay here and I will suffer, because of having greater knowledge and greater sensitiveness" — this is the great renunciation as theosophy tells us.

I know we do not often talk this way, because many of us think that the people will say to us at once when we talk of the great renunciation, "I don't want it; it is too much trouble." So generally we talk about the fine progress, and how you will at last escape the necessity of reincarnation, and at last escape the necessity of doing this or that and the other, but if you do your duty, you must make up your mind when you reach the height, when you know all, when you participate in the government of the world — not of a town, but the actual government of the world and the people upon it — instead of sleeping away your time, you will stay to help those who are left behind, and that is the great renunciation. That is what is told of Buddha, and of Jesus. Doubtless the whole story about Jesus, which cannot be proved historically to my mind, is based upon the same thing that we call renunciation. He was crucified after two or three years" work. But we say it means that this being divine resolves he will crucify himself in the eyes of the world, in the eyes of others, so that he can save men. Buddha did the same thing long before Jesus is said to have been

born. The story that he made the great renunciation just means that which I have been telling you, instead of escaping from this horrible place, as it seems to us. For this is indeed horrible, as we look at it, surrounded by obstructions, liable to defeat at any moment, liable to wake up in the morning after planning a great reform, and see it dashed to the ground. Instead of escaping all that, he remained in the world and started his doctrine, which he knew at least would be adhered to by some. But this great doctrine of renunciation teaches that instead of working for yourself, you will work to know everything, to do everything in your power for those who may be left behind you, just as Madame Blavatsky says in the *Voice of the Silence*, "Step out of the sunshine into the shade, to make more room for others."

Isn't that better than a heaven which is reached at the price of the damnation of those of your relatives who will not believe a dogma? Is this not a great philosophy and a great religion which includes the salvation and regeneration, the scientific upraising and perfecting of the whole human family, and every particle in the whole universe, instead of imagining that a few miserable beings after seventy years of life shall enter into paradise, and then they look behind to see the torments in hell of those who would not accept a dogma?

What are these other religions compared with that? How any man can continue to believe such an idea as the usual one of damnation for mere unbelief I cannot comprehend. I had rather — if I had to choose — be an idolator of the most pronounced kind, who believed in Indra, and be left with my common reasoning, than believe in such a doctrine as that which permits me to suppose that my brother who does not believe a dogma is sizzling in hell while I, by simply believing, may enjoy myself in heaven.

Theosophists, if they will learn the doctrine and try to explain it, will reform this world. It will percolate everywhere, infiltrate into every stratum of society and prevent the need of legislation. It will alter the people, whereas you go on legislating and leaving this world's people as they are, and you will have just what happened in France. Capitalists in that day, in the day of the revolution — that is the royalists — oppressed the people. At last the people rose up and philosophers of the day instituted the reign of reason, and out of the reign of reason — mind you they had introduced there a beautiful idea of mankind, that idea struck root in a soil that was not prepared — came the practice of murdering other people by the wholesale until stream of blood ran all over France. So you see if something is not done to raise (he people what the result will be. We have seen in Chicago the results of such acts, the mutterings of such a storm if the theosophical philosophy — call it by any other name you like — is not preached and understood. But if these old doctrines are not taught to the race you will have a revolution, and instead of making progress in a steady, normal fashion, you will come up to better things through storm, trouble and sorrow. You will come up, of course, for even out of revolutions and blood there comes progress, but isn't it better to have progress without that? And that is what the theosophical philosophy is intended for. That is why the Mahatmas we were talking about, directing their servant H. P. Blavatsky, as they have directed many before, came out at a time when materialism was fighting religion and was about getting the upper hand, and once more everything moved forward in its cyclic way and these old doctrines were revived under the guidance of the theosophical movement. They are doctrines that explain all problems and in the universal scheme give man a place as a potential god.

The Theosophical Forum

THE SHADOW OF THE FUTURE — *Martyn Witter*

There is a saying that future events cast their shadows before them. This is true, for it could not be otherwise. Events must take place in the more ethereal worlds before they can enter the physical, for every single effect is the result of a chain of causes. It is thus too late to prevent a happening after it has already reached the state of physical manifestation. However, even while it is occurring we have the free will of choice as to how we will meet the consequences. Nevertheless, it would be far better to control the causes in the ethereal worlds, before they reach the physical as effects.

We have heard people say: "Why did I do this thing?" They seemed powerless at the time to resist, even though they knew it was wrong. Instead of guarding every single thought, they let their thoughts roam as untamed horses. Then, after the effects from these wanton thoughts took a definite shape in the inner worlds, the actors strove to prevent their physical manifestation. However, it was then a little too late to prevent some of the effects, for the lines of the play had already been spoken and the recorder had heard them.

While it is true that a considerable portion of ancient causes and their consequences enter into our lives, yet a very vital part of our present circumstances depends upon our every day actions. It is, then, every single thought and emotion which we must either discourage or encourage. This requires a positive and forceful awareness. Without the development of this faculty we can expect little control over the influences arising from the animal man and its treacherous astral denizens.

It is easy to discuss intellectually the doctrine of consequences or

the law of karma, as well as self-directed evolution. However, the putting of these teachings into actual practice is as highly skilled an art as we could expect to find anywhere. Without a doubt one will fail many times while striving to attain this state of self-control. Yet if, after each fall, we remain humble, and sincerely seek out the source of our mistakes, we will arise stronger and more sure of foot. The art of putting our Theosophical teachings into actual practice is like walking upon the keen edge of a sword. We must have self-awareness and self-analysis, while at the same time being self-forgetful. Thus one will strive to attain, while at the same time being more interested in the weal and woes of others than in his own. Be it as it may, your every thought is casting its shadow upon the future. Let each thought be more self-sacrificing, humble, and forgiving, and less egotistical, than the last.

The Theosophical Forum

THE WIND IN THE LYRE — *Enoch Albert Holmes*

. . . the surplus of life very quickly passes through the previously developed atman-sthula-sarira, gives the buddhi touch to it, and passes down. . . .

— G. de Purucker, *THEOSOPHICAL FORUM*, Sept. 1943, p. 403

Given a "birth" of each of man's principles from the previous higher principle, during the process of involution, can it be assumed that the atman of each such principle has some subtle connection with the sthula-sarira of the one higher?

This body of ours, nay the very stones on which we tread — all manifested matter, has a grossness and a divinity; that divinity which "liveth in the heart-life of all things." What is the atman of matter? Is it that divine immanence which broods on the hills, and in masterpieces of art, in sculpture and in architecture?

In the wild melodies of old Orphic singers, or before the images of those gods of whose perfect beauty the divine theosophists of Greece caught a fleeting shadow, and with the sudden might of artistic ecstasy smote it, as by an enchanter's wand, into an eternal sleep of snowy stone — in these there flashes on the inner eye a vision beautiful and terrible, of a force, an energy, a soul, an idea, one and yet million-fold, rushing through all created things like the wind across a lyre. — Charles Kingsley, *Hypatia*, p. 126, ed. Dent and Sons, Ltd.

That which is physical, however sublime, must have form; and as this idea of form seeps through the antaskarana of the eye, does it not become the "Form of Idea" or the garment of linga-sarira? G. de P. has given us a hint (*THEOSOPHICAL FORUM*, Sept. 1943, p. 404):

. . . it will be a marvelous instrument, attuned to the harmonics of nature, individualized man himself. It will be like a sounding board catching every vibration.

Will it be a sounding board for the vibrations of prana? Is the atman of linga-sarira just this side of the bridge whose other posts lie on pranic ground? Has vitality a basis in complete awareness of the inner sentient existence, of transcendent imagination?

Where, now, comes the acme of vitality or prana? We are told that it will become an individualized force capable of supernormal powers such as Wotan is said to have wielded.

Can one detect, or does one only fancy the connection between use of such a power, in its destructive aspect, and that principle of the passions and desires which is kama?

Did the ancient "berserker" (and maybe his modern war-time counterpart) summon up the last surge of his vitality by flying into a passionate rage? From sane gentle humanity, mankind can let its ego-consciousness sink even below desire, to this level of the animal passions.

What of the atman of kama? We know it as aspiration — desire upward. Do we also know it as ambition, and only find substance for it, as such, in the brain-mind, in the lowest aspect of manas?

Is wisdom the highest altitude in manas? Then maybe wisdom therealized is the justice-compassion footstool of buddhi. Then maybe the Bodhisattva attains to that boundless space, which, in turn, is but the form of consciousness *per se*.

HEIGHTS BEYOND AND BELOW

If we grant this end-on evolution of the principles of man, we seem to belittle, even to castigate, in turn, the highest manifestations of each of the planes of being. We have supposed

the rarest works of art to contain no higher intrinsic worth than "ideas of form." Beyond this, any other sensation they arouse "flashes on the inner eye," which is self-illuminated.

Of course the lower hierarchies of the physical atoms live their own consciousnesses in their own "boundless space," and who knows but that each of the atoms in a statue, or in the colors of a portrait, has its own sensations to its own degree? Yet these are irrespective of the sculptor's chisel and of the artist's brush.

Perfection of the inner senses we have analyzed as being still a sentient existence. Prana at its strongest we have indicted as consort to passion, whilst kama at its best is suspect of ambition. Manas to wisdom, which paled before the "attainment" of buddhi, which in turn, merged into the Shining Sea of Consciousness. And even this Consciousness may harbor the seed of self in the Pratyeka Buddha.

Must we disown each of these summits as we ascend the heights beyond?

"Kill out ambition," says *Light on the Path* yet "Work as those work who are ambitious." Here perhaps is our answer. It will apply on all planes.

As ambition turns to ashes, so does material beauty fade. Be alive to it, appreciate it to the full, but do not become enslaved to it. There is many a sovereign soul under a rough exterior, and many a bright verdure which conceals a deadly bog.

H. G. Wells finds (in his *Experiment in Autobiography*) that there is a certain beauty in the taste of cheese on the palate, and in the savor of beer. Many of us will take his word for the latter, but I think he would be among the first to agree that this beauty of sentient existence is not the highest of man's faculties, nor the ultimate purpose of his life.

Let us enjoy our cheese, (and our beer, if we take it!) but incidentally, and for the sake of living.

In prana-vitality, we have the beauty of the rhythm of that life-force which sparkles in the running brook and is absent in the stagnant pool, until the water and plant life seek to grow to their own pranic fruition.

We, too, must grow to our pranic fruition. As the aeons roll will come those powers, and the responsibilities surrounding them. Is not the Warrior in the *Bhagavad-Gita* abjured to stand detached in the heat of "battle," to fight the good fight, yet not allow passion to cloud the vision?

There is a beauty in kamic aspiration which will not be gainsaid, nor shall we be free from the desire to become perfect until perfection is attained. Yet if Caesar was ambitious, "'Twas a grievous fault."

What is our motive in this universal urge to perfection? Is it to "attain," or is it to become more useful to brother man? The first implies ambition. For the second we can bend all our efforts. We are working as those work who are ambitious.

There is a beauty of philosophical thought in the wisdom — atman of manas. Yet we are told that to live the Life is to know the doctrine. "First seek ye the Kingdom of Heaven," and even that same wisdom, which is sublime in its own sphere, "shall be added unto ye" — as an incidental concomitant.

Maybe these superlatives of manas, buddhi and atman — man's highest principles — had best be left inviolate. Any attempt to dethrone them by the pen would have a worldly savor of "sour grapes." Yet does not Aeschylus have Prometheus foretelling the supercession of Zeus, in his *Prometheus Bound*?

Beauty, Truth, and Goodness, then, are present on all the planes of existence. They are qualities which can excite a responsive chord in each of man's seven principles. If the atman of sthula-sarira is of less puissance than the atman of linga-sarira, it is no more so than is the glorious Atman of man less puissant than Brahma, or Brahma than Parabrahman.

Who are we to ignore the goddess of beauty, Aphrodite, because she is divine of matter only? Who are we to question the divinity of Pegasus, steed of imagination? True enough he can only wing us to the gods on pinions of aspiration.

Thomas Carlyle defined the province of literature and drama as the means of interpreting great thoughts through the emotions. Great thoughts can also be interpreted by good works, by a cheering vitality, by hitching our wagon to a star, by sharing such of the wisdom of the Masters as we have heard, and by demonstrating, each one of us, that Universal Brotherhood is a Fundamental Fact in Nature.

The Theosophical Forum

KNOWLEDGE WISDOM AND EXPERIENCE — *J. Croiset van Uchelen*

Socrates in *Phaedo* said: "To use words wrongly and indefinitely is not merely an error in itself, it also creates an evil in the soul." It not only makes exact thought and therefore knowledge impossible, it also creates careless and slovenly habits of mind. In this article let us discuss just three words: Knowledge, Wisdom and Experience, and try to define these. A dictionary will not help us much, stating as it does, that "Knowledge is that which we know!", or "Knowledge is the apprehension of truth" (which it is not). Then again it says: "Knowledge is the conviction that mental apprehension corresponds with reality." But what is truth, reality? In the philosophy of Kant we may find four different kinds of reality. Lastly I quote: "Knowledge includes intuition." "All knowledge must ultimately repose on propositions unproved and unprovable." By this time I had decided, without the further use of books, to find more universal definitions for these very words we use so often; this by a process of quiet contemplation. When I finally wrote down the result of this effort, it seemed so simple, as if it had been said a hundred times before — which no doubt it has! But at any rate, the mental gymnastics had proved refreshing, for is it not far more fascinating to contact what has been said, in thought, through the mind, rather than through the spoken word or written pages? Knowledge then, is the accumulation of data, no more, no less. Wisdom is a state of being, being wise. We are not knowledge, we possess and accumulate it.

Wisdom we cannot take into our possession; we are, or are not wise.

Knowledge is learning. Wisdom is.

Knowledge makes the savant, Wisdom the Sages.

We acquire knowledge. Wisdom must be attained.

Knowledge deals with phenomena in space and time.

Wisdom is beyond the manifested; spaceless, timeless.

Knowledge can be passed on to others. Wisdom must be found.

Knowledge changes forever. Wisdom forever remains.

We may well pray for Wisdom. For knowledge we don't have to pray; we go to school!

He who speaks from knowledge is a teacher, however great, and must repeat: thus have I heard.

Only the Master can proclaim: "I say unto you . . . for I and the Father are One."

Now it must be realized that every time we say "I know," we really merely think we know: "to believe in, as though true," the dictionary has it. To be informed might be the better expression. As one writer stated: "The relation of knowing is the most mysterious thing in the world." How true! It is when we say "I am" that we know, but cannot answer why or what, until the I is lost in Being, and Wisdom supervenes.

Knowledge forever changes. How could anything be permanent in an ever-changing world of Maya, whose existence is but a fleeting image perceived through the unfolding senses; nay more, in which as *The Secret Doctrine* says: "the cognizer itself is but a reflection." (Vol. I, p. 39)

Now, as for the word Experience, what is it but "to undergo." Yet here again one might make a distinction between outer

experience, resulting from sense perceptions, and inner experience which is a state, although the *Mandukyopanishad* repudiates such a distinction as found in Western philosophies. Experience alone can translate Wisdom; then words are inadequate. For even the most exalted words uttered by a saint or sage, who seeks to speak of this illumination in retrospect, can give but a faint reflection of the indescribable. What *can* be invoked, is a resonance in the hearts of men, for the Kingdom of Heaven is within. A teacher may endeavor to stimulate our search, may suggest a code of ethics and point a way; all else remains with the individual.

It might be said: "Why, if man must reach beyond the senses, nay even beyond the intellect, must he learn to think?" In order to become aware of the limitation of reasoning, which loomed so large that materialism was the inevitable outcome of its self-aggrandisement. Knowledge is valuable, as it gives mastery over environment, but is not wisdom. By learning to think, we learn to surmount thinking, and still the mind.

It has been said, that we must become like little children, seemingly closer to the Kingdom of Heaven. Children do not share our mental problems, nor rely on churches or philosophies. They have an inner faith; they are, and trust. We *think* we are wiser. We must learn to stop thinking; after, not before, we have mastered the intellect, and listen to the Voice of the Silence. We must learn to quiet the mind, in order to Experience.

It will be said: "But observe the things man's thinking and knowledge have accomplished!"

It might be asked: "What does remain?" Civilizations rise, to be lost under the sea, to be buried under the desert sands. Maya. These *things* the Sage did leave behind. Jesus did, and Buddha, and Krishna. Maybe these things are not as valuable as we *think*.

And although, while in the body, we must justly deal with our physical environment, all this ends. Is our Search not for the Eternal? Theosophy encourages the search for Self. "Man know Thyself" remains the great command. For even though I know that "I am," where am I, what, and why? I am asleep or awake, here or there, I am sad or happy, hungry or fed; I am all this, yet am I none of these things — for before Abraham WAS, I AM, as said the Master.

Has it ever occurred to you, that all philosophies, however elaborately they may explain "how," forever fail to answer "why"? Why, is the first question of a child; it is the last of the intellect. . . .

'I am,' in the manifested, in space and time; but there is the spaceless timeless, where the "I" is lost, yet remains in Being. Do we not ask to be lead from the unreal to the Real? Says *The Secret Doctrine*: "Nothing is permanent except . . . the noumena of all realities . . . the upward progress of the Ego is a series of progressive awakenings, each advance bringing with it the idea that now, at last, we have reached "reality"; but only when we shall have reached the absolute Consciousness, and blended our own with it, shall we be free from the delusions produced by Maya."

What is manifestation but differentiation in time and space; what is time but a measuring out of motion in space?

When we stop thinking, and the mind becomes a blank (not negatively so, yet without effort) then there is no such "thing" as time, nor space; for time and space are indivisible. That blank is stillness, timeless, spaceless, yet containing all.

Beyond the many "I's, we imagine the One all-encompassing Self, the Oversoul of which Emerson spoke; beyond the mind, my mind, your mind, all minds, the One Consciousness, shared with

all in the Oneness of true Being.

We can but feel our way, while groping in the dark. *Tat Twam Asi.*
Thou art That. What more can be said in human language?

And here let us conclude with a *few* lines of a recent translation
from the *Kathopanishad*:

"This tree of a world, beginningless and endless, has its root on
high, while its branches spread below. That root is Brahman. That
is known as Immortal. All the worlds have their Being in That,
and none can transcend That. That verily is the Self.

"If a man fails *to* attain Brahman before he puts off his body, he
must again put on a body in the world of created things.

"When all the senses are stilled, together with the mind, and the
intellect wavers not — that, the wise say, is the highest state.

"When all desires that linger in his heart cease, then the mortal
becomes immortal. Verily does he attain Brahman even in this
life if, while he lives on earth, all the knots of ignorance within his
heart are loosened.

"This is the highest truth that is taught in the scriptures."

Here the quotation ends.

In the Silence rests the voiceless sound, where the soundless
Voice may guide us.

The Theosophical Forum

THE DRAGON – *Allan J. Stover*

Seven times and seven score times on high
All hail the golden wings unfurled —
The Druid of the Circled Sky —
The Flame-bright Dragon of the World! —
— *Kenneth Morris*

Symbols are an introduction to wordless thought, and form a language of analogy by which we may explore the inwardness of the universe. Each symbol has its inherent meaning, but it is a general meaning, and acquires a specific or limited significance only through association and use. It is sometimes said that a symbol has many interpretations; but this is because we are accustomed to look at everything from our word-bound mentality, and so fail to see the universal application of the symbol as an interpretation of nature's laws.

The mystical concept of the dragon is one of the oldest known to man. It was common to China, Japan, Tibet, Europe and the Americas; and temples of the dragon as emblem of the Sun, life, and wisdom, once covered the globe. To this the mysterious monoliths of Stonehenge and Carnac, the Pyramid Temples in America, and many similar remains, bear silent witness.

Lao-tze thus described water: "Water is the weakest and softest of all things, yet it overcomes the strongest and the hardest. It penetrates everywhere, subtly, without noise, without effort." So it becomes typical of the spirit which is able to pass out into all other existences of the world and resume its own form in man; and associated with the power of fluidity, the dragon becomes the symbol of the infinite.

In its essence, the dragon in China, America, and Wales signified the divine spirit of the waters; and the waters were themselves the fluid aspect of any principle of nature. The dragon and water myth illustrates the relationship between spirit and matter in nature; it is the Yang of Chinese philosophy as opposed to the Yin; and as there are many grades of matter ranging from the physical to the divine, Chinese mythology divides the dragons into classes according to their nature and habitat.

It was not always so, for as explained in *The Secret Doctrine* (Vol. I, p. 408) the genii or four Maharajas of the cardinal points known to the Chinese as "the Black warrior, White Tiger, Vermilion Bird, and Azure Dragon [are] called in the Secret Book the "Four Hidden Dragons of Wisdom" and the "Celestial Nagas." Now, as shown, the seven-headed or septenary DRAGON-LOGOS had been in course of time split up, so to speak, into *four* heptanomic parts or twenty-eight portions."

The archaic dragons and serpents of antiquity were all seven-headed and typified the seven principles throughout man and nature. Later this symbol was broken up into separate classes, into good and evil dragons, and, in Europe during the Middle Ages, into an emblem of evil only.

In Central America the Dragon is represented as two-poled, having a head at each end. When separated, the dragon becomes dual as are the good and evil serpents of the caduceus, or sometimes a dragon is opposed by a serpent.

In its earthy aspect, the dragon is the fiery essence in underground water which attracts the divining rod. It is the *Od* of Baron Reichenbach, in his researches into the astral light.

In the air, it is the lightning of the storm cloud and the fertilizing power of the rain; in the hurricane, it is the noise and whirling

vortex of the winds; for on every plane there is some aspect of the dragon power.

In the Orient, folklore, art, and poetry, have woven a garment of fancy about the ancient myth, which, delightful as it is, obscures the deeper significance of the symbol. Yet while it conceals it preserves truths which might otherwise be lost.

Like the Sphinx of Egypt, and like man himself, the dragon is composite, and represents the several kingdoms of nature. In China, the Imperial five-clawed dragon has the scales of a fish, the neck of a lizard, the paws of a tiger, the claws of an eagle, and the horns of a deer; in all, there are nine attributes to this strange creature, who as the embodiment of Yang, the spiritual principle, continually seeks to subdue the nine Yin inherent in matter.

According to Chinese Mythology there are three classes of dragons; the lowest were the Li Lung or earth dragons, whose realm was the waters of the earth, the second class were the Chen Lung or spiritual dragons associated with storms and clouds, the highest class were the Tien Lung, the celestial or heavenly dragons who guarded the mansions of the gods, and were adopted as an emblem by the Chinese Emperors.

The domain of the Li Lung or earth dragon was the sea, the underground waters of the earth and the streams, lakes and waterfalls on the surface. It was this earth dragon living underground who was supposed to guard precious metals and to cause earthquakes; it is also referred to as the golden dragon, and is the variety associated with the fossil bones of the dinosaurs. The Chinese say that these bones are strong in the principle of Yang, and so expel the evil Yin which is afflicting the body.

The second class of dragons, the Chen Lung, whose home is in the air, shows itself in the lightning and in the fertilizing and

vivifying power of rain. Above these are the Tien Lung which reside in the sky, guarding the mansions of the gods. The Tien Lung symbol is used only by those in the Imperial service. It may be recognized by the horns and the five-clawed feet.

The figure ordinarily used in decoration has three claws, and is divided into a number of minor divisions by custom and fancy.

It is a strange fact that in both the Gobi Desert of China and the Bad-lands of the Dakotas in the United States, the native tribes gathered the bones of fossil dinosaurs and prepared them for medicine. In each case they supposed they were gathering the remains of dragons, the Li Lung in China; the *Unk-ta-he* in Dakota. In America the earth dragon is known to the Dakota Indians as the *Unk-ta-he* (a word which defies analysis). This mythical being is the god of the water, and is said to fly through the air as a fiery meteor. He is the one whom tradition credits with bringing the first land forth from the water; and it is he also who conducts the soul of the deceased from the village of souls, down the river of life to the earth, where the soul reimbodies as a man. The *Unk-ta-he* lived in rivers and lakes and also in underground waters, and is represented in picture writing as horned and composite in structure.

The Algonquins also had their fire dragon or light-thrower, which they believed flew from one deep lake or river to another.

In Southern California there are many stories of Taquitz, the fiery monster supposed to live in the waters within Mount San Jacinto, and to fly through the sky as a low-flying meteor. To it the Indians credit the strange sounds sometimes heard within the mountain.

The Great Dragon of Quirigua, in Guatemala, is a marvelously carved ovoid stone weighing twenty tons. It is placed North and South and has two mouths. In the northern mouth a beautifully

carved divinity is seated, in the southern is a long-nosed demon of the underworld; while about the circumference are twelve eyes. The stone is covered with an intricate design which, without representing any definite form, suggests the potentiality of all life in a strange blending of human, reptilian, and avian elements. As a whole, it symbolized the primordial earth, the spiritual earth from which the earth emanated, upon which it depends.

W. H. Holmes of the National Museum says of this stone, "It conveys vividly the impression of a living thing — a dragon out dragoning all the composite monsters of the Orient. So virile are the forms, so tense the coiling, so strong the impression of life, that a thrill almost of apprehension steals over one, for there is a distinct suggestion that the bulging imprisoned inner monster might break its bonds, uncoil its length, and slide away into the deep shadows of the forest immediately at hand." (Smithsonian report for 1906: The Great Dragon of Quirigua, Guatemala.) As to its symbolism Mr. Holmes asks, "May it not be, as some have surmised, that this image impersonates the Earth Monster, The World God, and that from the wide-open jaws, facing the ceremonial plaza, issued the divinity of the world of man, that through the glyph-hidden jaws of the southern end peered the grotesque demon of the underworld?"

Whatever the date of the carving may be, the tradition followed is very old, and in occult significance this image may well be the chief of dragon symbols.

Among the Aztecs, the earth was said to have emanated from the primordial Cicpactyl or earth dragon which was also the first sign of their zodiac, the first day of their calendar; and the first day of creation was called "I Cicpactyl."

The Mayas had the same system with Imix replacing Cicpactyl as the name of the primordial or spiritual earth. In their codices

Imix is shown as a dragon associated with waterfalls, and with the color green as indicating beginning or newness.

Truly China, America, and the Land of the Druid all fall under the domain of the dragon, and it is by comparing the myths as found in these countries that we can better understand the development of the symbol.

The earliest Chinese account is the symbolic story of a dragon-horse rising from the river Lo, and bringing the *Trigrams* to Fu Hsi in the year 2853 b.c.

The eastern dragon is not the gruesome monster of medieval superstition, but the genius of goodness itself. He is the spirit of change, therefore of life itself; in Theosophical language he is the Wind of the Spirit, again rising from the depths to renew and revitalize the life of the world.

"He may become the size of a silk worm, or enlarge to fill the space of heaven and earth." (Kakuzo)

In Japan four classes of dragons are recognized and are said to represent the four dragons which rule the four seas which surround the earth. The myth has traveled a long way from its source when such a perversion of the symbol can arise as the notorious Black Dragon Society of recent years.

Ernest Ingersoll believes that the four classes of Nagas of India correspond to the Chinese division, and that this with the Mahayana conception of Buddhism, did much to shape Chinese Symbolism during the Han dynasty.

The four classes of Nagas are as follows:

1. Heavenly Nagas, who uphold and guard the heavenly palace.
2. Divine Nagas, who cause clouds to rise and rain to fall.

3. Earthly Nagas, who clear out and drain rivers.
4. Hidden Nagas, who are the guardians of treasure.

The last two classes appear to be combined in the later Chinese classification.

One of the most familiar designs in the Orient is that of two dragons contending for a flaming pearl, which is sometimes explained as two forces, positive and negative, producing rolling thunder during the formation of a storm. But there is a much deeper explanation than the physical one.

According to tradition, the T'ien Lung, which means literally Heaven Dragon, carries a pearl under its chin. This pearl is white or red with a golden aura, and has four three-forked flames rising from it. Suspended from the pearl is a comma-shaped pendant, dark in color, which probably represents the Yin portion of the Yang and Yin monad, separated yet still pendent from the radiant pearl, even as man is pendent from his spiritual nature. There are variations and simplifications of the design, and sometimes the pendant is omitted.

These strange comma-like objects, carved out of shell or bone, have been found in the mounds of the Ohio Mound Builders, and while no one knows their use or significance, one might suppose them linked in some way with the dragon myth, as it is in the Orient.

The precious pearl figures in many designs. Often two dragons are shown rushing through swirling clouds towards a pearl which floats between them.

An eighteenth century vase is "decorated with nine dragons swirling through scrolled clouds enveloping parts of their serpentine bodies, in pursuit of jewels of omnipotence which appear in the midst of clouds as revolving discs emitting

branched rays of effulgence." (Ernest Ingersoll)

A popular explanation of the dual dragon contending for the pearl is that of bad luck and good luck trying to secure the prize.

Whether we speak of the Nagas of India, the *Unk-ta-he*, Imix, Feathered Serpent or others of America, or the various dragons of China or the Druid lands: there is an esoteric current running through all these. They have too much in common not to have had a common source.

In all countries the dragon, because it is the symbol of imbodyed spiritual qualities, has been used as a title for great initiates and adepts, who are spoken of as Dragons of Wisdom, and as Nagas or Serpents. The Sun itself is often called the Cosmic Dragon in occult literature.

The sphinx, combining lion, eagle, man, and bull, signifies the four-fold nature of man and the universe according to a monadic classification. The seven-headed dragon or serpent symbolizes the seven principles in man and nature, while the dual or two-headed dragon suggests the dual nature everywhere existing.

G. de Purucker describes the Dragon as "the Demiurge, the establisher or former of our planet and of all that pertains thereto; neither good nor bad, but its differentiated aspects in Nature make it assume one or the other character." And he adds:

"Summarizing, therefore, the Dragon and the Serpent, whether high or low, were types of various events in cosmic or world history, or again of various good qualities whether in the World or in man, for either one can at different times signify Spiritual Immortality or Wisdom, or Reimbodiment, which last in this sense is equivalent to Regeneration."

SAGES — *Marion O. French*

Minerals, vegetation, and animals are conscious in their respective gradations. Human beings are self-conscious, and some men and women become cosmically conscious. A few have achieved the encompassing enlightenment of spiritual consciousness. A transformation has taken place in their physical status as the circle of consciousness expanded. Their sensory faculties have become refined to the point of being psychic. In them, the third Eye of Siva has opened. Through it, they see Reality in all its scintillating kaleidoscope of Beauty. With all the power of their souls, they endeavor to transmute these visions to enlighten humanity. It is a difficult task because what has become commensurable for them continues to be incommensurable for others. The unenlightened see a reflection of Divinity in the mirror of Maya, as Deus Inversus. They are, as it were, confronted by the problem of transferring the flesh of the right hand into the symmetrical skin of the left; without the secret of passing with "Alice through the Looking Glass."

Any solution of this problem of symmetry is apt to present itself as a symptom of insanity that must be dismissed. If followed further, the "Quest of the Holy Grail" may cause the mind to find itself in a void wherein all sensation has ceased. Without the power of spiritual perception, this is isolation in a soundless and stygian negation. Nonetheless, the mind perseveres in seeking. Exoteric religions offer an end to the search in the form of blind faith. They assume that the hierarchy of the church is inspired by Deity to enlighten the laity. In contradistinction to this ecclesiastical opinion is that of Gautama the Buddha. To the simple woman who brought him bread and the question of how to find the road to heaven, He replied that, "The dove flies home

by love alone." This, then, is the relation that must exist between the chela and the guru. The sphinx will not describe specifically that which he sees, lest the student should accept it on authority and fail to identify the Self with the Knowledge. The disciple must decipher the symbols that are displayed by means of meditation. For most people trained in the western tradition of inductive research and empiric methods, it is extremely difficult to accept this attitude of passivity as a student. They are accustomed to searching actively for scientific explanations or proofs. Being incapable of direct cognition, they must resort to reasoning by analogy.

Inadequate as this analogical method is, it is the only one available for general use. Therefore, it may serve a useful purpose to employ it in an attempt to rationalize the method of the Sage, his spiritual vision, and his perspective. Sages are born with an instinctive desire to see through the fontanelle in the top of the skull, that is so soft in infancy. They may succeed in lifting the covering curtain by their own efforts. Sometimes, they short-circuit their nervous systems by the intensity of their efforts. Consequently, to be passive in obedience to the behests of an Enlightened One is the safest approach to Wisdom.

Physiologically, the third organ of sight, or Eye of Siva, is a singular instrumentality. The conarium encases the pineal gland that is constituted to be *en rapport* with the Four Kingdoms of Nature. Being human, it has the cellular structure and attributes of animal organisms. Its vegetable aspect is suggested by its similarity in shape to the pine cone, or seed of that ancient tree. Within it are yellow mineralogical accretions that might be compared to quartz crystals, and that give a key to the "speaking stones" of antiquity. The potencies of the Four Forces are inherent in it by reason of its connection with the pituitary body and the entire nervous system through a dehydrated or residual tube. The

function of this operative pituitary appendage to the atrophied eye in the conarium may be considered that of an actuating agency.

The most important point in regard to the Eye is the perspective envisioned by the Sage. Dawning faculties of clairvoyance and clairaudience may catch glimpses and hear whispers of the past and future in the non-existent present. They conclude that the conquest of time has been achieved. Actually, a two-dimensional vision in time is being acquired, and, still, pertains to "plane-tary" time. The fully opened Eye looks forth in six space-time directions upon the dimensionless vista of duration. The point of view is from "the center that is everywhere in the circle (or sphere) whose circumference is nowhere," as St. Augustine defined God. There, "everything is everywhere always," as P. D. Ouspensky puts it. Infinity is always limited for all but the unknowable essence of Deity itself; as is indicated by the fact that any solid, no matter how small, contains an infinite number of planes. Hence, the scope of vision of the Eye in our Galaxy extends as far as the solar rays can reach. This space is that within the circumference of our Sky or Island Universe and may be construed as computable in the space and time terms that determine the cycles and cyclic events. The perspective in which it is visualized by the Sage for the benefit of the blind may be termed psychological. Like that of Chinese and Japanese prints, it may enlarge these forms and figures in both the foreground and the background that are important as impending events in the tableau taken from the entire drama on the circumferential screen. It is a chronometric motion picture in one sense, a pertinent presentiment.

Erudition, alone, is of no assistance in gauging the vision of the Sage. Love, only, serves to establish the radio receptivity that is capable of receiving these high frequency television broadcasts.

One must, literally, become as a little child, humble, passive, and making the confession of ignorance that is the beginning of wisdom. In that frame of mind, it is possible to differentiate between the true and the false. One may discern the authentic Sage, the veritable guru, and not be deceived by impostors who attempt to hypnotize us with astral images. The soul knows, if the mind does not interfere. The guru guide sees much that is beyond our cognizance, and love is the sole test that we can judge him by. Since he has identified himself with Love, he will extend it to us in his every thought, word, and deed. Impostors do not love their fellow men, and love is something that can be felt. It cannot be weighed and measured, or placed in a retort to determine its specific gravity, or whether it is gold or dross.

Thus, Sages cannot be analyzed or proven by scientific tests of their intelligence quotient or of aught else. What they see and know is unknown to us. We can, however, form some concept of the operation of that vestigial third eye that we all possess. We can conceive, then, that true sagacity may see through it far into the Great Beyond. In the conarium, the crystalline substance that is comparable to quartz crystals may be considered as capable of what modern physics calls the piezoelectric effect. The scientific explanation of this in quartz crystals is as follows:

"Electrical energy applied to two parallel faces of the crystal produces a mechanical strain in the crystal. This strain in turn produces a dielectric field which in turn again produces a strain. This process goes on. At the natural period of the mechanical vibrations of the crystal, the two actions may be made mutually self-sustaining by feeding back a sufficient portion of electrical energy to replenish the energy which is lost as heat during each cycle."

From numerous physiological experiments, we know that the

body generates electrical energy. A delicate ammeter will register the amperes necessary to initiate and to sustain muscular action. Also, we are familiar with the fact that tensor action by the muscles will produce or reduce membranous mechanical strains. Thus, the conarium may have what we might call the transmitting capacity of a small crystal television set. Likewise, with respect to audition, the properties of crystals of the chemical compound known as Rochelle salts may be viewed as analogical. "When one of these crystals is squeezed, it generates a minute alternating electrical voltage." This fact is made use of in the audio-frequency amplifier of electrical phonographs. "If for the needle holder we substitute a diaphragm, then sound waves striking this diaphragm set up a fluctuating alternating voltage across the faces of the crystal. These voltage variations are amplified by the audio-frequency amplifier."

There is but one Divine Law, that all obeys. In the Smaragdine Tablets of Hermes Trismegistus "the uplifted right hand is inscribed with the word "Solve," the left with the word "Coagula'." As alternating, they may be said to produce the positive and negative phases of an electric current. Further, an electric current sets up a magnetic field capable of creating subsidiary electric currents by induction. *The Secret Doctrine* states that the Tabula Smaragdina has seven esoteric keys. The anthropological one is that the "One Thing" mentioned in it "is Man." "The father of That One Only Thing is the Sun; its mother the Moon; the Wind carries it in his bosom, and its nurse is the spirituous Earth." Occultly, it is added "and Spiritual Fire is its instructor (Guru)." Also, "The Superior agrees with the Inferior; and the Inferior with the Superior; to effect that one truly wonderful Work." This Work "is Man." Thus, sights and sounds gathered from the noumenal realms may be said to reach the consciousness of the Sage with crystalline clarity. His ability to transmute them so that we may

perceive them in their phenomenal aspect is an acquired power such as poets, mathematicians and musicians have developed through successive embodiments. He must utilize the conventionalized forms of religion, art, and science with which we are familiar, as media of transmission. The constant current that actuates his efforts is Love.

The Theosophical Forum

THE MOTION OF GROWTH — *Alexandra McLean*

Change may be termed the *motion* of growth. It is an enduring constituent within Life, an eternal energy that cycles through the eons, in Life's ceaseless manifestations of "Being-Becoming."

The great first postulate of Theosophy is the "ONE ABSOLUTE BE-NESS." This "Be-ness" is symbolized in *The Secret Doctrine* under two aspects . . . absolute abstract Space . . . and absolute abstract Motion. . . . This latter aspect of the one Reality, is also symbolized by the term "The Great Breath."

Now, growth implies motion, and motion is the very essence of the Great Breath that breathes through and in us all. Were it possible for Breath, or motion, or change, to cease to be — then would be stagnation, crystallization, death. But there is no death, no cessation of the "Breath" of Life.

Change there must be; it is a law of the ONE LIFE, by which at each new Manvantara, evolution comes forth on a higher plane. It is also a law in every individual life expression, from the least to the greatest, by which the secret pattern, the heart of the form, comes into outer visibility.

Man in his seven-fold being is part of the Great Unity.

Insignificant as he seems if compared with a Galaxy — yet by means of his consciousness there is the possibility of expanding his awareness into harmony with the Great Plan, at-one-ing his sevenfold self to the Divinity that is the Heart of the Great ALL. By change comes this growth, through eons of effort, learning to breathe through all, with all, for all.

Growth — the unfolding of the Swabhava of every thought, word and deed of which *we* are the authors! Goethe has said in *Wilhelm*

Meister's Apprenticeship: "To act is easy, to think is hard; to act according to our thought is troublesome. . . . The height charms us, the steps to it do not; with the summit in our eyes, we love to walk along the plain." The "summit" is our Inmost SELF, and to IT we should be constantly true. Krishna is reported to have said, "Whatsoever thou doest, whatsoever thou eatest, whatsoever thou offerest as oblation, whatsoever thou givest and the austerities thou performest, O son of Kunti, do thou as an offering to me."

Katherine Tingley gives us these words: "Your spiritual energy grows day by day and hour by hour just so far as you permit it to grow and help it to evolve. It is a force that is very real and immensely powerful — a potent force that becomes, if you do not prevent it, a great wheel of activity in the universe. . . . Dare to be yourself — your greater SELF! Dare to leap forward and be something you never before knew it was in you to be. . . . The need is for energy, aspiration."

By aspiration plus will, the growth that comes to us may be and should be — self-planned, self-generated, self-directed into harmonious expression. We are the masters of our fate. By perfecting our sevenfold instrument we help in bringing forth the Divine Harmony in all. The good Law is justice and progress for *all*; for all is ONE, and that which hinders or helps any one likewise hinders or helps the ONE. We are all involved in every atom there is.

Again quoting K. T., "Let us make our every act the expression of all that is divinest in our hearts. There must be heroic determination in our hearts for *continuity* of right action."

Action, Change, Breath are the Karmic Winds that blow ceaselessly and by which we are all affected. If — in our daily living, nay, in our hourly, moment-by-moment living, we seek to

bring forth, to evolve, and express the Inner Divinity, by tolerance, compassion, service, and duty well done — then indeed the motion of growth will be harmonious and we will be sounding our small tone in accord with the Music of the Spheres.

What a colossal concept, one worthy of deep and persistent meditation; "Life is." Growth is Life's motion, unfolding its innate Divinity in ever greater perfection. We are a part of this great Life and within *us* is the power to grow, to become — what we will.

THE PRESENT CYCLE AND H. P. B. — *James Stauffer*

If we pause for a moment in the rush and confusion of present events and review the changes which have taken place with increasing swiftness during the last hundred years, we may well be amazed at the progress made during that period, both in the material and technological sense, and also, and perhaps principally, in the world of thought and ideas. At the same time, in quietly reviewing the course of events, we begin to perceive an underlying pattern or purpose which led us, as a race, to where we stand today.

We often hear the aphorism of Plato repeated, that "ideas rule the world," but do not always realize that by ideas Plato meant the archetypal pattern which is above ordinary thought, but which colors and gives direction to thought in all fields of endeavor.

In ancient times, the arts and sciences were taught within the sanctuary of the Mystery Schools, where under strict ethical and moral training, the spiritual intuition illumined the mind of the student. Discipline and moral fitness preceded knowledge of nature's secrets; for there are secrets of nature which are dangerous to mankind.

In those days, knowledge was not separated into compartments as is the case today, but each study was related to the spiritual evolution of man, his origin, destiny, and relation to the universe in which he lived. Thus the different phases of knowledge were synthesized into an organic whole, by a higher consciousness capable of viewing the whole field of human thought from above.

With the withdrawal of the Mystery Schools, the inner esoteric illumination receded and the exoteric knowledge, left to itself,

divided and subdivided into more and more restricted and materialistic fields of research.

To make matters worse, during the Middle Ages which followed, the church attempted to synthesize all thought within the iron bonds of dogma, which eventually resulted in the violent reaction of Nineteenth Century materialism.

Thus the world to which H. P. Blavatsky came and worked in the late Nineteenth Century was one in which separation and isolation were the rule, for science and religion were not only separated but in violent conflict. In this ideology, racial and national consciousness were strongly developed: our planet was the only planet in all space capable of supporting life, our race at the peak of competitive evolution, and it was generally believed that there was little more to be learned except to fill out details in the accepted theories and hypotheses of a materialistic science, whose creed was the survival of the fittest, and the ape-ancestry of man.

Into this world of separateness and materialistic ideology in religion, science, and social and national life, H. P. Blavatsky came like a human bomb-shell, announcing the existence of a living universe in which everything was interrelated.

She formed a nucleus of Universal Brotherhood, and demonstrated in her voluminous writings that such brotherhood is the basic law of nature. She presented a picture of the cosmos as an organic being in which solar systems, suns, and planets are living parts of the whole, each bearing its appropriate lives, and all the lives united and interlinked, evolving through endless time.

Others have said that man must be good, (under threat of punishment or hope of reward), but H. P. Blavatsky showed the

necessity for right behavior by presenting a cosmic view in which man's place in the universe as an immortal evolving being made the desirability of right behavior self-evident — since a universe governed throughout by eminent justice reacts upon the inharmonious unit automatically: one who harms another only harms himself in the end.

Only a great occultist, with a prevision of the age upon which we are now entering, would have had the courage and the skill to break the crystallized molds of mind as she did. It was the birth of a new ideology destined to replace the old; which if the world survives the dangers now threatening it, will color and shape the global civilization of the future.

This total view of the universe is the gift of H. P. Blavatsky to the Western World: a gift which was largely scorned and rejected in her time, but is today being recognized, although the source is in most cases either unknown or unacknowledged.

Into this cosmic vision of nature the other teachings given by Mme. Blavatsky — Karman, Reimbodiment, Hierarchies, Cycles, etc. — fit as explanatory details and necessary features of universal laws of nature. But the chief motif and keynote of her work was the establishing of a nucleus of Universal Brotherhood, and the repeated declaration that Brotherhood is the basic law of nature. Once that is realized the rest follows of necessity.

We are approaching the midpoint of our Fifth Root Race, and as every race is divided at its midpoint, we will in the future see a definite division forming as the majority of people enter upon the downward sweep of the latter portion of the racial cycle.

On the other hand, the forerunners of the next race will gradually begin to emerge and separate themselves from the present race much as our Fifth Race once separated from the Atlantean.

We are entering upon a new cycle whose keynote has been sounded by H. P. Blavatsky and those who followed her, and by thousands of intuitive and noble men and women throughout the world, who may never have heard of Theosophy, but who feel the urge of the new time.

All over the world we see the forces gathering both of construction and of destruction, and as time goes on these will become more and more apparent. At the same time, the nature of the cycle upon which we are entering is becoming increasingly apparent; and those who seize the opportunity to work with the rising tide will take their place among the builders of the new age.

The Theosophical Forum

INTELLECT AND INTUITION — *Leonard Lester*

The conflict of intuition against intellect has covered mankind in the crumbling ruin of despair. Man will never surrender himself to be the permanent vehicle of any set of ideas unless it completely satisfies the whole of his nature; the union of intellect and intuition only will end the conflict. — From *Man: Fragments of Forgotten History*

Those youthful minds who still retain their heritage of right-thinking are not dismayed at the spectacle of life in the world today, for they intuitively feel that there *is* some remedy for the startling lack of wisdom revealed in the management of human affairs and that something *does exist* to satisfy the heart-hunger for a knowledge that can solve those riddles of life which confront every alert and receptive soul.

These voices of world-turmoil which are broadcast daily in the form of news seldom have the authentic ring of truth — the *pros* of today may be denied by the *cons* of tomorrow — resulting, for the average listener, in uncertainty, dissension, or disgust. But this dissemination of current events may serve at least to demonstrate the unreliability of opinions, the partiality or bias of judgments; — in short, it needs but little reflection to see that the unenlightened mind of man, engrossed in material concerns, is but a poor instrument upon which to rely for learning the truth. Its powers of perception and understanding are undeveloped and too narrow to embrace that wider arc of Vision which a higher and profounder conception of Man's nature and destiny demands.

Whence this confusion — these diversities of opinion and judgment — this lack of power to unite constructively even in a

plainly beneficent enterprise in which the whole human family is profoundly concerned? May not this radiate to a large extent in the nature and methods of our thinking, in the distractions of multifarious and conflicting interests, in our habitual analytic mentality — looking first for the divergences rather than for the harmonies in any problem under discussion — thus creating opposing sides, dissensions, and verbal conflict?

It is inevitable that there should be differences of view-point and ideas, as of character, but rightly considered, these differences, in their essential reality, exist as *constructive agencies* in the progressive stages towards a common understanding. They are, as it were, the raw material out of which the unseen Master-BUILDER seeks to mould and fabricate his Temple into a perfect whole; and then, when the spirit of Unity, through a natural equilibrium of differences, is at last allowed to preside in the arena of the human mind, a transmutation takes place — the nobler powers of the mind are liberated, being shone upon and enlightened by spiritual sources from above instead of being controlled by earth-bound motives below.

In the foregoing, mention is made of the unenlightened mind as lacking the vision to embrace the higher and deeper conceptions of man's nature and destiny. Not in the material pastures of the world's life over which mankind has browsed, fought and flourished for ages and to which he has become bound by ties of desire, could he be expected to evolve into partnership in the higher mansions of Mind. Only when the human soul earnestly *desires*, and in thought and action *aspires* to live in communion with its higher Consciousness, can a great step forward for the whole of humanity be brought about. The Wisdom of the Ages awaits its fitting times and seasons to be shared and scattered abroad among men; for it has answers to our questionings — just as soon as the minds and eyes of the sleepers are awakened and

their casements opened to the Light.

All are familiar with the ancient axiom, "Man, know thyself," but how many guess that the Truth that dwells within those words is more urgent in its appeal to the generations of today than ever before.

We are at the close of an era of the human mind in which the achievements of cold intellect and materially-directed Science and Invention have reached their high-water-mark of attainment. But the recent precipitation of tragic events has revealed, on a graphic, world-wide scale, the perishable nature of these highly extolled conquests over matter by mind, and most appalling of all, the slackness and moral unsoundness of the foundations upon which our modern civilization is resting.

Has not the hour struck (announced by the atom bomb) (1) for the higher mind of man, lit by heart-wisdom, to claim and exert its ascendancy in the conduct of human affairs?

The long-smothered intuitions of man will gradually become clarified and vitalized as the light of wisdom within him is put into conscious use. For the soul-powers are within himself, and he alone, and only he, can effect that re-orientation of activity in heart and mind which will align him in the ranks of those who are heirs to the Wisdom of the Ages — as modern in essence as it is ancient in spirit, being Timeless and Eternal.

The dubious apprehensions and unrest, vaguely blended with envisionments of a brighter future for mankind, which fluctuate in the common heart and mind of the world today, are harbingers of coming changes in man's thinking, and of the dire need for it. These, too, are glimmerings of intuition, far gleams of soul-remembrance — reminiscences of man's innate divinity and oneness with the Over-Soul.

The destructive agencies that have rocked the world and stunned humanity, are in reality regenerative agencies working in harmony with evolutionary law and human destiny; destroying the out-worn and degenerate, and awakening mankind to the inauguration of a reign of higher and more universally-beneficent consciousness.

In the degrees of enlightenment and experience which every soul must pass through on its long pilgrimage to perfection the powers of intuition will come more and more into play. They will inspire and direct creative intellect into channels of fruitful thought and endeavor, and kindle the love of useful and benevolent activities in the paths of Peace. For the Vision which inwardly illumines it is the power to perceive the Cosmic Unity behind and within the diversities of manifested existence.

Let us all strive to hasten the day when the hearts of all men are joined in this great Enterprise — the Cause of Sublime Perfection! Then will the Intuition shed its light for all, awakening living responses on the resonant keyboard of the Soul.

FOOTNOTE:

1. The proposals to put Atomic Energy to work in constructive and beneficent projects are well-meaning and vast; but are we so sure that our present mental equipment can be trusted to remain true to the task? Would not an atomic Transmutation of the human mind and heart also be necessary? ([return to text](#))

The Theosophical Forum

QUESTIONS AND ANSWERS

THE FOUR WINDS

I have had in mind asking if you would in the THE THEOSOPHICAL FORUM give some elucidation of the reference made on pages 122-24 of *The Secret Doctrine*, Vol. I, to the four cardinal points and the influences exerted by the rulers; also the four kinds of winds having evil and beneficent influence upon the health of mankind and every living thing. Recently I purchased *Studies in Occult Philosophy* by Dr. de Purucker, and apparently in the article on "The Four Beasts of the Christian Apocalypse" reference is made to the same thing. I would appreciate having information regarding the evil and beneficent influences of these "winds." — M. E. S.

Very little information has been given in regard to the nature of the four kinds of "winds," no doubt because of the danger attached to its possible misuse. It will be noticed in the pages of *The Secret Doctrine* quoted in the question that the north and the west winds were formerly considered evil, while the east wind is good. Indra fights with Ahi-Vritra, the terrible hot wind — similar to the Simoon of Africa and Arabia. Yet in Egypt Tum is the spirit of the *north wind and the west*, and is a very high creative deity, the equivalent of the Tibetan Fohat. Perhaps the Egyptians were tempted to associate Tum with the north wind because it was beneficial to the shipping on the Nile as it counteracted the strong current of the river which flowed northward! The Greeks dreaded the north wind, and the minor god who personified it, Boreas, was worshipped by the Athenians only because he had destroyed hundreds of the ships of Xerxes during the Persian

war!

The four "Maharajahs" and the four Cardinal points are represented in Oriental philosophy by the four Royal Stars, Regulus, Aldebaran, Fomalhaut and Antares, which are approximately six hours away from each other and therefore roughly indicate the four quarters of the heavenly vault. They correspond mystically, in the above order, with the Guardian Angels of the Gnostic Ophites and others, with Michael, Uriel, Raphael and Gabriel respectively. The Qabbalah also has a similar arrangement of the great Powers, Winds, or Breaths, the Guardian Angels of the Four Corners of the earth. These mystical Fours "stand behind the Thought and the Word from which all "This," the Universe, sprang into being." A fiery Wind followed the Directing Thought of the Creative Forces.

The American Indians, ancient and modern, attached the greatest importance to the four divisions of space, each with its own color and qualities and with its appropriate wind. The Four planes of Being and the Four successive Races of Men are all related to the same principles as found everywhere, relics of the Ancient Wisdom.

All this symbolism implies the great esoteric teaching that the universe is embodied consciousness and that there is no "dead matter." Behind the seemingly mechanical movements of the winds there are more or less intelligent forces which if understood would throw a strong illumination on many obscure phenomena of the atmosphere. When Jesus "rebuked" the stormy winds on the Sea of Galilee, he showed his knowledge of and control of these intelligent forces. There is a definite connection between the powers behind the "Winds" and the Breath in man. Jesus was hinting at this when he spoke of the wind blowing where it listeth and connected it up with "every one that is born

of the Spirit" — initiates, (*John* ch. 3, verses 5 to 12) a marvelous passage of slightly veiled esoteric or Qabbalistic teaching.

In *Isis Unveiled* and elsewhere, H. P. B. refers to the power of the human breath which is a "reflection" of Cosmic energies, and shows how it has been misused by sorcerers. We have always been warned against the danger of ignorantly arousing the unknown forces that can be released by certain processes of breathing.

In the Proem to *The Secret Doctrine* and on pages 53-56, Vol. I, a magnificent description is given of the Great Breath, eternal and ceaseless, the divine basis of all creation. Every other form of rhythmic motion is derived from the One and this of course stands behind "the Winds of the Spirit" symbolized by the "Four Maharajahs" and the like, all of which have their own peculiar individual qualities. For instance, on page 612, Vol. II of *The Secret Doctrine*, H. P. B. speaks of the *Pravaha* wind, which is, like Tum in Egypt, clearly connected with Fohat in his aspect as a mystic and occult force that gives the impulse to and regulates the courses of the stars and planets, one of the problems in astronomy not yet completely solved.

When H. P. Blavatsky wrote *The Secret Doctrine* the very suggestion of intelligent forces would have been utterly scouted by the scientists, to whom "blind, unintelligent forces and dead inert matter" was the answer to the problem of existence. How greatly their outlook is changing is shown by many recent developments. For instance Sir Richard C. Tute in his valuable work *After Materialism — What?* shows how far philosophic science has approached spiritual interpretations and is "disengaging itself from material prepossessions." Based on strictly scientific evidence, this book is a magnificent tribute to the reality of the occult teaching brought to the West by H. P.

Blavatsky. A few ideas taken from a letter to *The Scientific Monthly* for October, 1946, written by Sir R. Tute will illustrate the new attitude in regard to the universality of life and consciousness throughout the visible and invisible Cosmos, which is the background for the concept of Intelligent Forces, symbolized under the guise of the Four "Maharajahs" and the Four "Winds" each with its own qualities. Speaking of the Monads, which according to the Ancient Wisdom are the ultimate living spiritual consciousnesses, "the very elements of which the universe is made," as he says, he continues: "The modern scientist recognizes that physical reality is produced by superphysical agencies, which must be so designated because they can never be observed. . . . The Monads are simple, *percipient*, self-acting beings . . . spiritual beings whose very nature is to act."

And from the same point of view Sir Richard remarks that the mechanists who still cling to specious mechanistic explanations such as Natural Selection and Survival of the Fittest "are flouting the well-established, if recent, findings of the physicists that the universe as known to them shows no signs of mechanism." He mentions "for the reassurance of proposed readers of his book that it has been wholeheartedly approved by scientists of the standing of Jeans and Stromberg and that it aroused the interest of Einstein."

In spite of all the ignorant and prejudiced attempts to destroy the Theosophical Movement, it would seem that its principles are no longer regarded by leading minds in science as far-fetched or superstitious. — Charles J. Ryan

The Theosophical Forum

"H. P. B." (1) — A. P. Sinnett

The world at large has heard too much about Mme. Blavatsky, and has known too little. Her misfortune was that she was interesting to average newspaper readers, and a grievously inviting subject for average newspaper writers. As she believed — as all Theosophists believe — she was concerned with bearing a message to the world of grave importance and infinite solemnity. It was not half uttered — not a hundredth part understood — before it was snapped up by every lively journalist in search of a new joke. Modern society has lost a great deal by gaining whatever amusement was involved in the treatment of Mme. Blavatsky as food for caricature. It is further to be regretted that she herself all the while, very sensitive to suffering of all kinds, has writhed in misery beneath the jeering to which she has been exposed. Now that at last she has bequeathed to the flames the battered and unwieldy physique that has burdened her fiercely energetic spirit so long, the time has perhaps come for focusing public attention a little more closely than has been possible hitherto on the work and purpose of her life.

THE LAST THREE YEARS OF HER LIFE

Only four or five years ago she seemed fairly overwhelmed by the tide of obloquy turned against her by the Psychological Research Society. I visited her at Wurzburg in 1886, and then she had very few friends left, very little purpose in this life except to write her long-promised book, "The Secret Doctrine," and was spending her time in almost complete seclusion; while the world at large spoke of her as a detected impostor, and the Report against her, by a representative of the Society just named, was complacently regarded by its author as having put an end once for all to one of

the most extraordinary delusions of the age. Bit by bit the famous Report has been torn to pieces by competent critics, till hardly a rag of it remains. The inextinguishable force of Mme. Blavatsky's character has borne her forward and far more than recovered for her all her lost ground. She has been for the last three years the center of a devoted circle of disciples, the nucleus of a great organization of occult students, which included over a thousand persons. The weekly lectures given in her presence by her Theosophical pupils have been attended by crowded audiences. Never before in her life has she been made so much of as during these last few years, when the vigour of her mind, the irresistible personal influence she exhaled, have pushed into the background, as so much silly impertinence, the accusations of fraud and trickery which looked at one time formidable enough to menace her with annihilation as a public teacher.

A GREAT SPIRITUAL REALITY

Like many other prophets and seers, she has been scorned and denounced, but her strength has been greater than that of her assailants. She has been suffering continually from illness, and partly through muscular weakness, partly because of her inconveniently bulky proportions, could scarcely get about more than from one room to another; but her mental and moral energy has made her the absolute chief of her large heterogeneous household, and of the busy volunteer staff of the Society she directed. A state of things like this should be recognised as more eloquent than petty details of disputable evidence pointing to the theory that she concocted spurious marvels. Vulgar cheating does not bring forth ever-increasing devotion and respect as its fruit. It is impossible to account for Mme. Blavatsky in any intelligent way except by regarding her as a great spiritual reality.

THE SPIRIT OF HER TEACHING

Nothing in her external attributes prepared one at the first glance to look at her in that light. She was rugged and eccentric in her ways and appearance; she dressed anyhow — in loose wrappers — smoked cigarettes incessantly. Worse than this, she was passionate and excitable, and often violent in her language. Namby-pamby conventionality shrank from her aghast — to her grim satisfaction, for she loathed it. She had a loud voice, that grew harsh in its tones when she felt irritated, and something or other would irritate her fifty times a day. And yet her disciples, summing up the spirit of her teaching in the course of the address read at her cremation, say: *A clean life, an open mind, a pure heart, an eager intellect, an unveiled spiritual perception, a brotherliness for all, a courageous endurance of personal injustice, a constant eye to the ideal of human progress and perfection which the sacred science depicts — these are the golden stairs up the steps of which the learner may climb to the temple of Divine Wisdom.* If we are to judge a tree by its fruits, we may judge Madame Blavatsky, to some extent, at all events, by the principles we find flourishing amongst those who are proud to acknowledge themselves her followers in the path of occult development.

HER MESSAGE TO THE WORLD

No one will ever make sense of Mme. Blavatsky's career, or understand her influence, if they try to think of her as a woman of genius on her own foundation, so to speak, with ideas and theories of life and a great zeal for these, as other enthusiasts have been zealous for other theories and ideas. The tremendous importance of Mme. Blavatsky in the circle of her followers was due to the conviction they all felt that she was the visible agent of powers and personages transcending those of the ordinary world. Ancient theories of religion embodied the belief that by going through certain processes of training and initiation, men still living could attain to superior spiritual conditions, acquiring

faculties and powers of an exalted order. Occult students conceive that, though there are no institutions in London to provide facilities for initiation, and no priests in our day qualified to confer degrees on the aspirant for spiritual progress, nevertheless wisdom and knowledge concerning spiritual things have not died out of the world altogether. A great many persons connected with the Theosophical Society regard themselves as in contact with the present representatives of that higher evolution, and acknowledge such contact as having been originally brought about by or in some way through the intermediation of Mme. Blavatsky. The message, in fact, which she had to deliver, was to the effect that those who had the courage and qualifications for treading it might still find the way of occult initiation open; that real knowledge concerning the possibilities of spiritual progress lying before mankind was procurable, and that a very lofty rule of life had to be adopted by those who would enter on "the Path."

HER LIFE AT AVENUE ROAD

Teaching these principles incessantly by speech and pen, Mme. Blavatsky has effectually lived down the distorted misrepresentations of her character put about from time to time by people who have resented and disbelieved in her wonder-working. At 19, Avenue Road, Regent's Park, where she resided, at the head, practically, of a large co-operative household, she was treated with an ardent respect that amounted to something like devotion. Shielded by this more than affectionate esteem, even she, sensitive as she has always been to attack, has learnt in the evening of her life to care a little less than formerly about the rude sneers of the outer world. She has been more at peace of late at the Avenue Road than during any other period of her varied career, though as busy as ever with her pen. The change and amusement required by most people played no part in her existence. To realise her as she has been for the last few years, we

have only to get into the mind's eye a picture of her writing-room at the Avenue Road, with a large writing-table in the middle, the window shielded with a fern-glass over the lower half to the left, another table to her right, laden with books, photograph stands, and receptacles for papers, a sofa behind her, bookcases against the walls, a chair or two for the accommodation of visitors, but for herself always the big armchair at the writing-table — suited to her ample proportions — in which she permanently lived.

How she hated her ample proportions, by the by! When I corresponded with her in India, before I knew her personally, she used to describe herself as a "hippopotamus" and a Calmuck savage though the bright and lively style of these descriptions counterbalanced the alarming purport. Then she chafed furiously at the cruel fate that had made her a woman — in this incarnation.

THE ESOTERIC SECTION

The back room, opening out of her writing room, was her bed room. It was variety enough for her to pass from one chamber to the other, though sometimes she would get as far as the lecture hall adjacent to the house, which the Theosophical Society built for the convenience of its meetings when Mme. Blavatsky and her group of friends settled in the Avenue Road.

Beyond Mme. Blavatsky's room, and opening out of it, was "the secretaries" room, where two or three young men, devoted adherents of the "Blavatsky Lodge" of the Theosophical Society and members of the Avenue Road establishment, carried on the business of the Society and that of Mme. Blavatsky's magazine, *Lucifer*, under her general direction; and the "Esoteric Section" alone gave them plenty to do, for this branch of the Theosophical organization engaged Mme. Blavatsky's deepest interest and energies in the recent latter days. . . .

Her never-resting mind required no relaxation from work beyond that involved in conversation with friends, chiefly about her work. It has been so ever since I first knew her in 1879; it was so before that, ever since the public phase of her career commenced, four or five years before that date, as I am informed, when she began her mil by writing "Isis Unveiled" at New York, and stuck to that gigantic task — without breaking off, so to speak, except to talk with her early American friends and work occult wonders for their gratification. . . .

HER EARLY LIFE

For about twenty years she wandered about the world, getting supplies of money from time to time from her father, always on the look-out for wonders and mysteries and for people of any kind qualified to open for her the doors of occult knowledge.
