Introduction

Welcome to NATIONAL GEOGRAPHIC *Maps*. This extraordinary program is an archive of every foldout map that has accompanied NATIONAL GEOGRAPHIC magazine during its first 110 years. Interactive map tours and time lines introduce you to the depth and richness of this collection of more than 500 maps.

Explore firsthand how mapmaking has changed over the past century as you browse through a diverse collection that includes an 1896 map of submarine telegraph cables crossing the Atlantic Ocean and a 1995 map that draws on the sophisticated technology of the Hubble Space Telescope to chart the heavens.

The top-notch search engine makes it possible to locate maps by region, theme, publication date, or any keyword you type. At any time, Help for using the program is just a click away on the Tool Bar.

With one click of your mouse, you can link to the NATIONAL GEOGRAPHIC *Maps* Web site* on the Internet to gain access to an online resource center for NATIONAL GEOGRAPHIC *Maps* users.

Enjoy watching history unfold as you explore the world with NATIONAL GEOGRAPHIC *Maps* on CD-ROM.

* Internet access required. User is responsible for Internet fees and telephone charges.

Minimum System Requirements

- Windows® 95 or Windows® 98
- QuickTime 3.0 (included)
- Pentium 90 MHz or faster processor
- 16MB of RAM
- 60MB free hard-disk space
- 4x CD-ROM drive
- SVGA video card supporting 16-bit high color
- 16-bit sound card and speakers

Optional:

- Printer
- 14.4 Kbps modem for Internet access
- 25MB free hard-disk for AOL software installation

Installation

Installing NATIONAL GEOGRAPHIC Maps

1. Insert Disk 1 of NATIONAL GEOGRAPHIC *Maps* into your CD-ROM drive, label side up.
2. The Autorun screen should appear, starting the Installation program. If the Autorun does not begin automatically, do the following:
 - Click the **Start** menu, and select **Run**.
 - In the **Open** text box, type **D:\SETUP.EXE** (where **D** is the letter of your CD-ROM drive) and click **OK**.
3. Follow the on-screen instructions to complete the installation.

Accessing the Internet

During the installation, Setup will ask to find your Internet browser. You can set up Internet access right away, or run the Internet Link Setup later from the NATIONAL GEOGRAPHIC *Maps* program group.

1. At the Internet Link Setup screen, click **Next** to run the Internet Link Setup program. If you do not want to run the Internet Link Setup program at this time, click **Cancel**.
2. Follow the on-screen instructions to complete the setup and select the Internet browser you want to use.

Note: If you need to change or set up your Internet link after the initial installation, run the installation program again from Disk 1. This time, select the Internet Link Setup option, and follow the on-screen instructions. You must install NATIONAL GEOGRAPHIC Maps prior to running the Internet Link Setup program.

Installing QuickTime® for Windows®

To view the NATIONAL GEOGRAPHIC *Maps* introduction video and interactive map tours, you need to have QuickTime installed on your machine.

1. While you are still in the NATIONAL GEOGRAPHIC *Maps* installation program, click **Next** to run the QuickTime for Windows Version 3.0 Setup program. If you do not want to install QuickTime at this time, click **Cancel**.
2. Follow the on-screen instructions to complete the QuickTime installation.

How to Use NATIONAL GEOGRAPHIC Maps

Running NATIONAL GEOGRAPHIC Maps

1. Select any CD-ROM from the set, and insert it into your CD-ROM drive, label side up.
2. Click the **Start** menu, select **Programs**, and then select **National Geographic Maps**. Click **National Geographic Maps**.
3. When the brief introductory video finishes, you can begin your map adventure.

Signing In

Each time you start NATIONAL GEOGRAPHIC *Maps*, you will be asked to Sign In. When you sign in, the program creates a file in your name. All of your bookmarks plus any search criteria or results lists that you save are stored in this file. The ability to reuse this stored information can save you time in future sessions. If you don't sign in, this information is lost when you close the program.

1. To sign in, type your name if this is your first session. If you've used NATIONAL GEOGRAPHIC *Maps* before, select your name from the list.
2. Click **OK**.

Note: Once you've signed in and have begun working with the program, you must restart the program to sign in under a different name.

Creating and Changing the Password

Users can create a unique password to manage the users list. Only by entering this password can you delete a user's name.

1. To assign a password, click the **Change Password** button. Type a password in the **Enter New Password** field, and again in the **Confirm New Password** field.
2. Click **OK**.

If you would like to change an existing password, type it in the Enter Current Password field. Then type a new password in the Enter New Password field, and again in the Confirm New Password field.

Deleting User Names

The Delete Users button allows you to delete user names if you enter the password.

1. To delete users, click the **Delete Users** button and type the password in the **Enter Password** dialog box and click **OK**.
2. Highlight the user's name you would like to delete, and click **Delete**.
3. Click **Close** to return to the Sign In box.

Introducing the Home Screen and Tool Bar

After signing in, the Home screen is accessible. From this screen, you can run all of the main features of NATIONAL GEOGRAPHIC *Maps*.

- Click the **Videotapes** to view the interactive map tours.
- Click the **Compass** to open the Search screen.
- Click **Milestones in Mapping** to learn about the evolution of mapmaking.
- Click the first issue of **NATIONAL GEOGRAPHIC magazine** to learn about the history of mapmaking at the National Geographic Society.

- Click the **keyboard** to launch the online resource center designed for NATIONAL GEOGRAPHIC *Maps* users. You'll find a map machine, educational games, and links to map areas at nationalgeographic.com.

Directly above the Home screen, you'll find the Tool Bar.

The Tool Bar is at the top of every screen. However, not all buttons are available at all times—the active buttons change depending on where you are in the program. From left to right, the 12 buttons are:

Back—click to go back to the previous screen.

Home—click to go to the Home screen.

Search—click to open the Search screen.

Search Results—click to see the results of your most recent search.

Maps Viewed—click to see a list of the maps you have viewed since signing in.

Bookmarks—click to see a list of the bookmarks you have created.

Milestones in Mapping—click to learn about the evolution of mapmaking.

NATIONAL GEOGRAPHIC Milestones—click to learn about National Geographic Society maps and mapmakers.

Map Tours—click to view the interactive map tours.

Internet—click to launch the NATIONAL GEOGRAPHIC *Maps* Web site.

Help—click to open Help for NATIONAL GEOGRAPHIC *Maps*.

Exit—click to close NATIONAL GEOGRAPHIC *Maps*.

There are three additional Windows® buttons you may want to use. You will usually find them in the top-right corner of your active window.

From left to right, these buttons are:

Minimize—click to minimize the window, creating a NATIONAL GEOGRAPHIC *Maps* button on the Windows® taskbar. (Click that button to restore the window to full size.)

Maximize—when viewing a map, click to display the window as large as possible on your computer screen.

Close—click to close the current window.

Note: Clicking the close button in the main NATIONAL GEOGRAPHIC Maps window will also close the program.

Touring the Collection

Nine interactive map tours and two time lines introduce you to the vast collection of maps and information on these eight CD-ROMs. Before you begin browsing the map collection, we suggest that you view one or more of the introductory programs we've included in NATIONAL GEOGRAPHIC *Maps*.

- **Map Tours**—interactive video tours introduce you to many of the topics covered in this collection. Click the **Videotape** on the **Home screen** or the **Map Tours** button on the **Tool Bar** to see a list of the Tours. Click on a title to launch the tour.
- **Milestones in Mapping**—this time line provides an overview of how maps have evolved from sticks and shells to sophisticated, computer-generated images. To begin, click the **Milestones in Mapping** book

on the Home screen or the Milestones in Mapping button on the Tool Bar.

- NATIONAL GEOGRAPHIC Milestones—this time line includes stories about the people who have created and used the National Geographic Society's maps over the past century. To begin, click the first issue of **NATIONAL GEOGRAPHIC magazine** on the Home screen or the **NATIONAL GEOGRAPHIC Milestones** button on the Tool Bar.

Navigating in Time Lines and Video Tours

As you move the mouse across these screens, you'll notice that the cursor changes to the pointing hand—indicating that the mouse is currently over a hotspot. Clicking on a hotspot will either present a pop-up image or text, play audio or video clips, or load the Map Viewer and display a map.

Note: You may have to change (swap) the CD in your disk drive to view a specific map.

You'll also find these additional navigation aids:

- Map Tours—click the **Single Forward (>)** and **Back (<)** arrows to move to the next or previous section of the tour. Click the **Skip To...** button to return to the list of all map tours, where you can click on a tour name to launch it. Each tour is comprised of three short movies and interactive screens. After each short movie, you'll be able to learn more about the topic just presented by clicking on hotspots. Once you've finished exploring a screen, clicking the **Forward (>)** arrow will start the next movie. At the end of each tour is a list of the maps in the collection that are related to the tour topic. Click on the name of the map to see it.

- Milestones in Mapping—Click the **Single Forward** (>) and **Back** (<) arrows to move to the next or previous screen in the time line. Click the **Double Forward** (>>) and **Back** (<<) arrows to move to the next or previous epoch. Click the **Skip To...** button to return to the list of the epochs. You can click on the name of an epoch to launch that portion of the time line.
- NATIONAL GEOGRAPHIC Milestones—Click the **Single Forward** (>) and **Back** (<) arrows to move to the next or previous screen in the time line. Click on the **yellow NATIONAL GEOGRAPHIC boxes** to hear stories about the maps and the people who have created or used them. Audio, video, and map hotspots are often included in this section.

Searching for Specific Maps

You can use the Search feature to easily sort through the collection of 535 maps, narrowing your search by region, theme, publication date, or keyword. To open the Search screen, click the **Compass** on the Home screen or the **Search** button on the Tool Bar.

From top to bottom, there are three main areas in this screen: Search for, Search by, and Limit Search to. Each of these areas is explained below.

Search for

To quickly locate the maps or information you want, type any word or combination of words in the box. The more specific keywords you type, the more focused your search will be. For example, typing the keywords **Atlantic Ocean** will give you fewer—and better—results than typing **ocean**.

Note: This is the only area in which you must set search criteria—both the Search by and Limit Search to areas are optional.

Narrowing Your Search with Boolean Operators

In addition, you can narrow your keyword search by using these Boolean operators in the Search for box:

- **AND**—retrieves items that contain all the terms in your search query. For example, typing **Africa AND Australia** locates all maps that show both Africa and Australia.

Note: If you type two or more words and no Boolean operators, the program will search for these words as if you had typed AND—for example, you will get the same results whether you type Atlantic Ocean or Atlantic AND Ocean.

- **OR**—retrieves items that contain at least one of the terms. For example, typing **Africa OR Australia** locates all maps that show either Africa or Australia.
- **NOT**—retrieves items that contain one of the words or phrases, but not the other. For example, typing **England NOT New** locates all maps that show England but not those that show New England.
- **Asterisk ***—indicates that the search can include any number of characters in place of the asterisk (also known as a wildcard). You

can place asterisks anywhere within a search term. For example, typing **paleo*** locates all maps related to paleoanthropology and paleontology. Or if you wanted to search under Mediterranean but were unsure how to spell it, you could type **Medi*ean** and then search for the term in the list of results.

- **Question Mark ?**—indicates that the search should include only a single character in place of the question mark (a special wildcard). You can also place question marks anywhere within a search term. For example, typing **north??st** locates maps of the Northeast and the Northwest.
- **Square Brackets []** —searches for the exact phrase enclosed within the square brackets, with all words in the order typed. For example, typing **[a traveler’s map]** locates all maps that use that exact phrase.
- **Double Quotes “ ”**—allows you to use words that act as Boolean operators in your search, such as “OR” and “NOT.” For example, typing **exploration and discovery** will search for the phrase rather than the two individual words.

Using Find Topics

You can also use the Find Topics button to help you select keywords. This feature is particularly useful if you are unsure of how to spell something or if you’d prefer to select keywords from a list.

1. Click the **Find Topics** button in the **Search for** area.
2. In the dialog box that appears, select the type of item you want to search—Titles, Insets, Geographic Names, Series, or All.

3. Type the topic name in the box at the top of the screen. As you type your topic name, the list will scroll down to highlight the closest match. For example, if you selected Geographic Names and then typed *Ven*, you would see a list of that includes *Veneto*, *Venezuela*, *Venice*, and *Venus*. Or, if you prefer, you can click a letter to see all topics that begin with that particular letter.
4. Once you have found the keyword(s) you want to use, select it from the list in the center box and click **OK**. This will place the keyword you selected in your Search for box.
5. If you wish to limit your search further, select your other search settings.
6. Click **Start Search**.

Using Alternate Names

If you are searching for maps that show a country, geographic region, or city whose name has changed over time, this feature will help you broaden your search.

1. Click the **Alternate Names** button in the **Search for** area.
2. In the dialog box that appears, type the name you want to search under. For example, if you want to find all the names associated with Russia, type **Russia** in the dialog box. The list will automatically highlight all related names, including the Soviet Union and U.S.S.R. (This will select all maps that focus on any one of those country names.)
3. Click **OK** to return to the Search screen. The **Search for** box will display your selection.

4. If you wish to limit your search further, select your other search settings.
5. Click **Start Search**.

Search by

In this area, you can search the collection for maps related to a specific theme, a particular region, or both. For both Theme and Region, the default search is set to **ALL**.

- To pick a single Theme, click the **arrow button** at the right side of the box and then select a theme from the list that appears—for example, select *Economic* or *Historical*.
- To pick a single Region, click the **arrow button** at the right side of the box and then select a region from the list that appears—for example, select *Asia* or *South America*.

Limit Search to

In this area, you can narrow your searches to the words in the map titles, insets, or to specific publication dates.

Map Titles or Insets

You can limit your search to either map titles or map insets. The default is initially set to search all titles and inset text. Inset maps are smaller maps that appear on the same page as the primary map. Map insets show an enlarged portion of the primary map or related information. For example, an inset street map of Rome appears on the map of Italy, and inset maps of Alaska and Hawaii frequently appear on maps of the contiguous United States.

To narrow your search, click either **Map Titles Only** or **Map Insets Only**. For example, if you typed **North America** in the **Search for** box and selected **Map Titles Only**, the search would return a list of maps that all had North America in their titles, rather than the longer list of all maps that include North America.

Publication Date

You can narrow your search to maps published within a range of years. The default is set to search All Years included in the collection, maps published from 1888 to 1999. For example, if you limited your search to 1997, you would see only the maps that accompanied a 1997 issue of NATIONAL GEOGRAPHIC. However, a map published in 1997 could convey information about an earlier time or culture—such as the Roman Empire.

1. Click **Limit Date Range**.
2. To change the start date for your search, click the **arrow button** at the right side of the From box and select a date from the list that appears.
3. To change the end date for your search, click the **arrow button** at the right side of the To box and select a date from the list that appears.

Note: To limit your search to a single year, select that year in both the From and To boxes.

Saving and Running Searches

Once you have finished setting your search criteria on the Search screen, you are ready to run your search. However, you may first want to save your search settings to refer to later. For example, you may want to go back and change one of the settings to alter your search results.

To save your search criteria:

1. Click the **Save Search** button in the upper-right corner of your screen.
2. In the dialog box that appears, type a descriptive name and click **Save**.
3. Click **Close** to return to the Search screen.

To run a search:

1. Specify your search criteria in the three areas of the Search screen. Or click **View Saved Searches** and select one of your saved criteria sets in the dialog box that appears, then click **OK**.
2. Click the **Start Search** button at the top of the screen.

Viewing Your Search Results

After searching its database, NATIONAL GEOGRAPHIC *Maps* will display a list of the maps that fit your criteria on the Search Results screen.

In the Hits box, you'll see the number of maps that fit your criteria. Each of these maps will be listed in the Search Results table, which has three columns—select box, map Title, and publication Date.

Search Results Hits: 535

<input type="checkbox"/>	Title	Date *
<input type="checkbox"/>	Caspian Sea	May 1999
<input type="checkbox"/>	Caspian Region: Promise and Peril	May 1999
<input type="checkbox"/>	Biodiversity	February 1999
<input type="checkbox"/>	Diversity of Life	February 1999
<input type="checkbox"/>	A Traveler's Map of Spain and Portugal (1998)	December 1998
<input type="checkbox"/>	Spain and Portugal (1998)	December 1998

Projection:
Scale:
Series:
Back of Map: Caspian Region: Promise and Peril
Related Article: "The Caspian Sea," pages 2-35, May 1999

Initially, the maps are listed by publication date, with the most recent maps appearing first. If you prefer, you can change the order so that

the titles will be listed in alphabetical order. To do this, click the bar at the top of the Title column. The active sort column is always marked with an asterisk.

Saving Your Results

You can save all or a portion of your search results for later reference.

1. Select the map results that you want to save. To select specific maps in the list, click the select box to the left of the Title column. To deselect a specific map, click the select box again. You can also select all of the maps in the list by clicking the **Select All** button. To eliminate all of your selections, click **Deselect All**.

Note: Maps that you select and save will be available from the View Another Map button on the Map Viewer screen. For more information, see [More Viewing Tools](#).

2. Click the **Save Results** button in the upper-right corner of the screen.
3. Type a descriptive name in the dialog box that appears. Then click either **Whole List** or **Only Selected Items** to specify which map results you want to save.
4. Click **Save** and then **Close**.

Printing Your Results

You can print all of the search results, or only those results that you have selected.

1. If you want to print a subset of the listed maps, make sure you have selected them by clicking the select boxes that appear to the left of the map titles.
2. Click the **Print Results** button in the middle of the screen.

3. If you want to print all listed maps, click **All Records** in the **Print Range** area. To print only those maps that you have selected, click **Selected Records**.
4. Click **OK**.

Learning More about Each Map

A quick overview of each map appears in the Map Details box, which is below the Search Results list. To see the Map Details for any map in the list, click once to select the title in the Search Results list.

Note: You can also use the up and down arrows on your keyboard to scroll through the list.

For more detailed information about a selected map, you can click one of four buttons.

- **Preview Map**—shows a thumbnail picture of the map.
Note: You can go directly to a preview of the previous or next map in the Search Results list by clicking View Previous or View Next.
- **Find Place**—lists the most important geographic places on the map.
- **Map Insets**—shows a list of insets that appear on the map.
- **Map Summary**—gives detailed data about the map.

Continuing Your Search

If you want to find additional information about the subject of a map, you may want to consult the related article in NATIONAL GEOGRAPHIC magazine. To find the name and date of the article:

1. Select the map in the **Search Results** window, and consult the box in the bottom-left of the screen.

2. You can also find this information by clicking the Map Summary button. At the top of the dialog box that appears, you'll see a Related Article. There you'll find the name of the article, the pages it appeared on, and the issue of the magazine both the article and the map were published in.

To learn more about NATIONAL GEOGRAPHIC *Maps*, you can visit the Society's Web site. An easy way to do this is to click the **Keyboard** on the Home screen or the **Internet** button on the Tool Bar. This will take you directly to our exclusive online resource center.

Viewing Maps

To view a map, double-click on a map title in the **Search Results** list, or click on a map title once to select it and then click the **Show Map** button.

You can also go directly to a map inset or to a particular place from the Search Results screen. Here's how:

1. Click the **Find Place** button to open the List of Geographic Names dialog box, or click the **Map Insets** button to open the List of Insets dialog box.
2. Select the **Place** or **Inset** you want to view by double-clicking on its name. Or click once to select the name, and then click **Go There**.

Swapping CD-ROMs

You can run a search and preview maps with any of the eight CD-ROMs in your disk drive. However, each map is stored on only one of the

NATIONAL GEOGRAPHIC *Maps* disks. You may have to change (swap) the CD in your disk drive to view a specific map. Here's how:

1. Wait until the program gives you a message, telling you which CD you need—for example, "Insert the disk labeled NATIONAL GEOGRAPHIC *Maps* Disk #2."
2. Take out the CD that is currently in your disk drive and replace it with the disk asked for in the message—for example, insert Disk #2 into the empty disk drive.
3. When your machine has finished reading the new disk (the CD-ROM indicator light will turn off), click **OK**.

Note: You can keep several maps from several different disks open at the same time. However, once you close a map, you'll need to reinsert the CD to open the map again.

Note: When the program is running, only swap CDs when the program tells you to do so. Swapping CDs at any other time will produce an error message.

Navigating Around a Map

There are several ways to change your view of the map displayed on your screen. You can move the map with the scroll bars along the bottom and right side of the map. Also, the following viewing options can be found on the Tool Bar.

From left to right, these buttons are:

Focus Point—when this button is selected, a bull's-eye symbol appears on the map to show you the last place you clicked.

This is especially helpful when you want to zoom out to gain a larger image, yet easily track where you just were.

Pan—when this button is selected, each time you click on the map, the map will recenter around the place you clicked.

Zoom In—when this button is selected, each time you click on the map, it will zoom in so you can see a magnified view of a smaller portion of the map.

Zoom Out—when this button is selected, each time you click on the map, it will zoom out so you can see a larger portion of the map.

Zoom Level “buttons”—this series of circles shows you the current zoom (magnification) level. Click the smallest circle to see the entire map; clicking each successively larger circle will give you a more detailed view of a smaller portion of the map.

More Viewing Tools

The **Show Tools/Hide Tools** menu gives you access to additional tools. Initially, this menu is hidden. To display it, click the **Show Tools** button to the left of the bottom Tool Bar. A menu will pop up to display the following menu options:

- **Show Navigator/Hide Navigator**—click to show or hide a thumbnail navigation window, which you can use to track where you are on the large map. You can also use the navigator to change your view of the map. When you click on a location on the Navigator map, the large map will recenter on that spot.
- **Print**—click to open your Windows Print dialog box. For more information on printing options, see [Printing Maps](#) below.
- **Select Area**—click to activate the **Select Tool**, which you can use to select any area on the map you would like to copy.
- **Copy**—click to copy the area you've selected with the Select Tool. For more information on copying maps, see [Copying Maps into Other Programs](#) below.

- **View Another Map**—click to see another map in the collection. In the dialog box that appears, select the **Current Map Windows** list to choose one of the maps you currently have open. Choose the **Selected Search Results** list to choose a map you selected from the Search Results list. Any Search Results that you have saved are available, as well as region, series, and theme lists. Click on any of the items to see a list of the maps included in that category. Double-click on a map title to open a map, or click once and choose **Go There**.
- **See Back of Map**—the maps in this collection were originally printed on paper, with information often appearing on both sides. Click this button to access the map or information that appears on the reverse side of the map you are viewing.
Note: This button is disabled if the map being viewed has no flip side.
- **Find**—click to see a list of the most important place names, the map legend, and map insets on the active map. From this list, you can select and go to that place on the map.

Using Bookmarks

To find your way back to a particular map easily—during this session or at a later date—create a bookmark. You can create a bookmark for the entire map or a “zoomed in” portion of it. In addition, you can create bookmarks that take you to screens within the time lines.

To create a bookmark

1. Open the map or screen you want to bookmark. If you want to bookmark only a portion of the map, make sure that you have zoomed in so that only that portion is visible in the Map Viewer screen.

2. Click the **Bookmark** button on the Tool Bar.

Note: You cannot see the Tool Bar if the map window has been maximized.

3. In the dialog box that appears, type a descriptive name for your bookmark and click **Add**. Then click **Close**.

To view a bookmark

1. Click the **Bookmark** button on the Tool Bar.
2. In the dialog box that appears, select the bookmark from the list. Then click **Go There**.

To delete a bookmark

1. Click the **Bookmark** button on the Tool Bar.
2. In the dialog box that appears, select the bookmark from the list and click **Delete**. Then click **Close**.

Returning to Previously Viewed Maps

At any time, you can easily return to any map that you have viewed since you signed in.

1. Click the **Maps Viewed** button on the Tool Bar.
2. In the dialog box that appears, you'll see an alphabetical list of all maps you have viewed. Click **Order of Maps** viewed if you want to see the maps listed in the order that you viewed them. The map you viewed most recently will appear at the top of the list.
3. To return to a particular map, click twice on its name in the dialog box. Or click once on the map title and then click **Go There**.

Note: No matter how many times you have viewed a map, its title will be listed only once in the Maps Viewed box. When sorted chronologically, the map list uses the most recent viewing.

Printing Maps

You can print any map—or section of it—that is open in the Map Viewer screen.

1. Make sure the map you want to print is open. If you want to print only a portion of the map, make sure that you have zoomed in so that only the portion you wish to print is visible in the Map Viewer screen.
2. Click the **Print** button on the **Show Tools/Hide Tools** menu.
3. In the dialog box that appears, select the printing options you want to use:
 - To print the entire map at the largest zoom level across several sheets of paper, click **Tiled Map**. You can change the number of sheets of paper that it will print on by adjusting the map's size in the print calculator.
 - To reduce the map's size so that all of it fits on a single piece of paper, click **Fit Map to Page**.
 - To print only the portion of the map that's visible in the Map Viewer screen, click **Active Window**.

Note: Depending on the map dimensions and the current zoom level, this may tile the map across several sheets of paper.

4. Select any other print settings you want to use, such as **Number of Copies**.

Note: Make sure to choose the paper orientation—Portrait or Landscape—that best matches the map's orientation.

5. Click **OK**.

Copying Maps into Other Programs

Within the Map Viewer window, NATIONAL GEOGRAPHIC *Maps* lets you select and copy any map—or any section of a map that will fit on-screen. The copied map is stored temporarily in the Windows Clipboard. From there, you can paste the image into other software programs that accept images, including most word-processing or desktop-publishing programs. Remember: You can only “store” one image at a time on the Windows Clipboard, and that image is lost when you shut down the computer.

Please note: All copyright laws apply.

1. Click the **Select Area** button on the **Show Tools/Hide Tools** menu.
2. While pressing the left-mouse button, drag the cursor to draw a square around the portion of the map you want to select. Then release the mouse button. You can resize a box by positioning the cursor over one of the bounding lines, holding down the left-mouse button, and dragging the line to resize the box.
3. Click the **Copy** button.
4. Open the other program and the document into which you want to paste the copied map.
5. Click **Paste**. (This command is often listed on the **Edit** menu.)

Tips & Tricks

Here are some helpful tips to keep in mind as you navigate through NATIONAL GEOGRAPHIC *Maps*.

Set Everything to ALL to List the Entire Collection

If you want to see all 535 maps included in NATIONAL GEOGRAPHIC *Maps*, there is an easy way to view the entire list. On the Search screen, type or select **All** for every one of the search criteria, and then click **Start Search**. The **Search Results** screen will list all 535 maps.

Never Change Disks Without Being Prompted

When the program is running, only swap CDs when the program asks you to do so. Swapping CDs at any other time will produce an error message.

Save Your Search Results

By saving all or a portion of your search results, you can create customized map lists. Then, by using the View Another Map button on the Map Viewer screen, you can retrieve these lists and use them to go directly to specific maps.

Use the Preview Maps Button

When you are in the Search Results list, you can use the Preview Maps button to view a thumbnail picture of any map listed—regardless of which CD-ROM the map is stored on. Clicking the **View Next** or **View Previous** buttons lets you easily flip through pictures of all maps in the results list.

Use the Find Place Button

On the Search Results screen, select a map name and click the **Find Place** button to see a list of the major geographic places shown on that map. You can go directly to any of those places on the map by clicking on its name.

Keep Several Maps Open

You can keep several maps from several different disks open at the same time. This allows you to position maps side-by-side on your screen and compare them, or to quickly move back and forth between them.

Note: Once you close a map, you'll need to reinsert the CD-ROM to open that map again.

Use the Navigator to Change Your Map View

This thumbnail picture, which appears when you click the **Show Navigator** button, helps you track where you are on the large map. When you click on a location on the Navigator map, the large map will recenter on that spot.

View Photo Credits in Help

Zoom in to read the photo credits on any map. However, you'll find the map, video, and photo credits for the time lines and interactive tours in the Photo Credits section of Help.

Use the Alternate Names Button

If you are searching for maps that show a country, geographic region, or city whose name has changed over time, this feature will help you broaden your search. By clicking the Alternate Names button and typing

just one of the names, you can find all of the maps that focus on any one of the names.

Create and Use Bookmarks

By bookmarking maps and screens, you can quickly return to them—during this session or at a later date. You can bookmark full views or “zoomed in” portions of any map. You also can bookmark screens within the Milestones in Mapping or NATIONAL GEOGRAPHIC Milestones time lines.

Use the View Another Map Button

When you are on the Map Viewer screen, the View Another Map button gives you an easy way to go to another map in the collection. You can select maps from several lists, including the maps you currently have open; the maps you selected from the Search Results list; and maps listed by region, series, or theme.

Technical Support

Topics Entertainment technical support department is available to assist you with any issues regarding the product you purchased. Technical support can be reached via e-mail or U.S. mail.

Contacting Technical Support:

When contacting technical support, please provide as much information as you can about your computer system and the problem you are experiencing.

Helpful information to include would be the following:

- Your first and last name
- Phone number, fax number, mailing address, and e-mail address
- Name of the product, version, platform, and format.
Example: National Geographic Maps, Version 2, Windows 95/98, CD-ROM
- Brief description of your problem.
- Type of computer including name brand. (Mac or PC) If you cannot find the name of your computer say IBM PC Clone.

*Example: I have a Dell PC Pentium 200MHz,
Memory: 64MB of RAM, Hard disk: 12GB hard disk,
Video card: ATI Matrox Milenia 8MB video card
CD-ROM Drive: I have a 4x Panasonic CD drive
DVD-ROM: I have a 2nd generation Phillips DVD-ROM drive
Sound Card: Creative Labs 16-bit sound card*

- If using a network please mention the type of network being used.
- Modem type and speed. *Example: US Robotics 56K Flex internal modem*
- Version of Windows or Macintosh operating system.
- If you are having a printing problem specify the name, make, and model of the printer you are using. *Example: HP Deskjet 870 CSI*

Check our Web site, <http://www.topics-ent.com>, for answers to frequently asked questions and other technical support information. Go to the support section to get FAQs, downloads, patches, etc.
