tures of Wilkes and his friend. In 1763 appeared *The Conference*, a second apology; *The Duellists*, three books of loose octosyllabics, called forth by the duel between Wilkes and Martin; and *The Author*, a satire of more general scope. These were followed in 1764 by *Gotham*, another piece of indiscriminate censure; by *The Candidate*, an attack on Lord Sandwich; by *The Times*, the last of Churchill's successes; and by *The Farewell* and *Independence*, which are worth little except as proofs of their author's decay. In the October of the same year he accompanied Humphrey Cotes to Boulogne, where Wilkes was then in exile, and died there of fever in a few days. He left some property, the proceeds of his writings, and bequeathed the editorship of his poems, with the material for illustrations and notes, to John Wilkes, who contrived to elude the bequest.

Churchill was a literary bravo, a man who liked broils and beating, and who was at the same time not indifferent to the rewards earned by the conflict. His satires are generally rough and loose in texture, disjointed in structure, and insolent in tone. They are full of good metal, it is true, but the ore lies heaped over with too much schist to repay research. His extreme facility of composition is perhaps a reason for this, as it is a reason why, writing from day to day, he should have gained and kept the public favour. Cowper praised him, but at best he was but an admirer and imitator of Dryden.

See Churchill's *Complete Works*, London, 1774, 3 vols. The best edition of the poems is that of Tooke, London, 1804, 2 vols., which has been reprinted (1844) in the Aldine Poets.

CHURCHILL JOHN, first duke of Marlborough. See **MARLBOROUGH**.

CHURCHYARD, THOMAS (1520-1604), "the Nestor of the Elizabethan heroes," was born at Shrewsbury in 1520, and was educated at Oxford. At seventeen he went to court, where he roistered through such money as he had. He then became attached to the earl of Surrey, applying himself during his three or four years of service to books, music, and the practice of poetry. He served his first campaign in Flanders (1542-1544) against the French, and his second (1547) in Scotland. He fought at Pinkie, but was captured next year at St Monance, and did not return to England till 1550. A tract called *David Dicar's Dream*, written at this time, not only involved Churchyard in a fierce quarrel with a contemporary scribbler, but brought down on him the censure of the Privy Council; he only escaped the pillory through the interest of his patron, the duke of Somerset. A third campaign took him to Ireland, whence he returned in 1552. Having been unsuccessful in a love suit, he once more betook himself to the Continent, to serve his fourth campaign, at Metz and elsewhere, under the great emperor. His absence extended over three years. On his return he began writing harder than ever, dedicating two of his works to Queen Mary. The war with France made him a lieutenant in the English army, and at Guines he acted as mediator between the besieged and the besiegers. He next addressed a poetical appeal to Elizabeth; he got nothing, however, but fair words, and had to write his *Tragedie of Lord Mowbray*, a contribution to the *Mirror for Magistrates*. He fought at the besieger of Leith in 1560; he again attempted fortune as a courtier; and he went off to Ireland, campaigning under Henry Sidney. In 1566 he wandered to Antwerp, where he headed a great force of religious partizans; but he speedily had to fly the country by reason, he says, of his extreme moderation. Next year he went back as one of Oxford's agents, returning to England in 1569, when he married. In 1593, after another journey to Scotland, where he witnessed Morton's execution, Elizabeth gave him a pension; and eleven years later, immediately after the publication of

his last work, the *Blessed Balm to Search and Salve Sedition*, he died. Churchyard seems to have been an active, garrulous, and cheerful adventurer. Strype praises him as a good soldier and poet and a man of honest principles. Of his multifarious publications the *Legend of Jane Shore* is most highly esteemed, while the *Worthinesse of Wales* (1587) and *Churchyard's Chippes* (1575) have been reprinted,—the former in 1776, the latter, by Mr Chalmers, in 1817. See D'Israeli, *Calamities of Authors*. and Minto, *Characteristics of English Poets*.

CHUSAN, the principal island of a group situated off the eastern coast of China, in 30° N. lat. and 122° E. long., and belonging to the province of Che-keang. It lies N.W. and S.E., and has a circumference of 51 miles, the extreme length being 20, the extreme breadth 10, and the minimum breadth 6 miles. The island is beautifully diversified with hill and dale, and well watered with numerous small streams, of which the most considerable is the Tungkeang, falling into the harbour of Tinghae. Most of the surface is capable of cultivation, and nineteen-twentieths of the inhabitants are engaged in agriculture. Wherever it is possible to rear rice every other product is neglected; yet the quantity produced is not sufficient for the wants of the inhabitants. Millet, wheat, sweet potatoes, yams, and tares are also grown. The tea plant is found almost everywhere, and the cotton plant is largely cultivated near the sea. The capital, Tinghae, stands about half a mile from the southern shore, and is surrounded by a wall nearly three miles in circuit. The ditch outside the wall is interrupted on the N.W. side by a spur from a neighbouring hill, which projects into the town, and forms an easy access to an attacking force. The town is traversed by canals, and the harbour, which has from 4 to 8 fathoms water, is land-locked by several islands. Temple (or Joss-house) Hill, which commands the town and harbour, is 122 feet high close to the beach. The population of the town and suburbs of Tinghae, which at the commencement of 1843 was about 27,500, had increased in 1846 to above 35,000. The population of the entire island is estimated at 250,000, of which the capital contains about 40,000. Chusan has but few manufactures; the chief are coarse cotton stuffs and agricultural implements. There are salt works on the coast; and the fisheries employ a number of the inhabitants. In Tinghae a considerable business is carried on in carving and varnishing, and its silver wares are in high repute. The principal exports are fish, coarse black tea, cotton, vegetable tallow, sweet potatoes, and some wheat. Chusan was occupied by the Japanese during the Ming dynasty, and served as an important commercial entrepôt. It was taken by the British forces in 1840 and 1841, and retained till 1846 as a guarantee for the fulfilment of the stipulations of the treaty. It was also occupied by the English in 1860. See plan in *Jour. of Royal Geogr. Soc.*, 1853.

CHUTIA or **CHOTÁ NÁGPUR**, a division or commissioner'ship of British India, under the lieutenant-governor of Bengal, comprising the districts of Hazárbágh, Lohárdágá, Mánbhúm, and Sinlhbúm, and the seven tributary states which constitute the South-West Frontier Agency, lies between 21° and 25° N. lat. and 82° and 87° E. long. It is bounded on the N. by the province of Behar, E. by the Bengal districts of Bánkura and Midnapur, S. by the Orissa Tributary States and the Central Provinces, and W. by the independent state of Rewá. Of its area of 43,901 square miles a large portion is occupied by hills and jungle, and the population is very sparse. The most important peak, Paresnáth, with its Jaina temples, has a height of 4400 feet. The Chutiá Nágpur plateau is an offshoot of the great Vindhyan range, and its mean elevation is upwards of 2000 feet above the sea level. In the W. it rises to 3600 feet, and to the E. and S. its lower steppe,

from 800 to 1000 feet in elevation, comprises a great portion of the Mambhatm and Sinhhhatm districts. The whole is about 14,000 square miles in extent, and forms the source of the Barákhār, Dámodar, Kásá, Subanrekhá, Baitaraní, Bráhmání, Eb, and other rivers. *Sál* forests abound. The principal jungle products are timber, various kinds of medicinal fruits and herbs, lac, *tasar* silk, and *mahnú* flowers, which are used as food by the wild tribes and also distilled into a strong country liquor. Coal exists in large quantities, but is at present only worked on a small scale on the Hazáribágh district. Formerly gold was washed from the sands in the bed of the Subanrekhá River, but the operations are now almost wholly abandoned. Iron-ores abound, together with good building stone. The population in 1872 was 3,825,571, residing in 25,766 villages or townships and 752,287 houses. Of these the Hindus numbered 2,567,292, or 67·1 per cent.; Muhammadans, 169,006, or 4·4 per cent.; Christians, 15,798, or 4 per cent.; persons of unspecified religion, 1,073,475, or 28·1 per cent. These last consist of non-Aryan tribes who were driven from the plains by the Hindus and took refuge in the mountain fastnesses of the Chutiá Nágpur plateau. The principal of them are Kols, 292,036 in number; Santáls, 220,096; Uráons or Dhángars, 208,343; Mandás, 190,095; and Bhumij, 128,289. These tribes were formerly turbulent; and a source of trouble to the Muhammadan governors of Bengal and Behar; but the introduction of British rule has secured peace and security, and the aboriginal races of Chutiá Nágpur are now peaceful and orderly subjects. Of late years missionaries have worked hard among them, and several thousands of the Kols and Santáls have accepted the Christian faith. Only six towns contain upwards of 5000 inhabitants, viz., Ránchí, 12,086; Hazáribágh, 11,050; Ichak, 8999; Chatra, 8818; Pnuliá, 5696; and Raghunáthpur, 5380. The principal agricultural products are rice, Indian corn, pulses, oil-seeds and potatoes. A small quantity of tea is grown in Hazáribágh and Lohárdágá districts. Lac and *tasar* silkeloth are largely manufactured. The revenue of the British portion of Chutiá Nágpur in 1870 was £101,651, the expenditure £79,472. Of the total revenue the receipts from land amounted to £23,698. The police of the British districts consisted in 1872 of 1590 officers and men of the regular force, maintained at a cost of £31,131; 172 officers and men of the municipal police, costing £981; 15,104 men of the village watch, costing £17,592; the total strength being 16,866 officers and men, and the total cost £49,705. In 1872-73, the Educational Department inspected 571 schools attended by 15,871 pupils, and the total cost of Government for the education of the people was £2371. The climate of Chutiá Nágpur is dry and healthy.

CHUTIÁ (CHOTÁ) NÁGPUR TRIBUTARY STATES.

These are seven in number,—Sirguja, Udaipur, Jashpur, Gangpur, Boná, Koriá, and Chang Bhakár. At the decline of the Marhattá power in the early part of this century these estates came under British protection. They are now under the political superintendence of the commissioner of Chutiá Nágpur, and the charge of them constitutes what is known as the South-West Frontier Agency. Before the rise of the British power in India their chiefs exercised almost absolute sovereignty in their respective territories. The Rájás now pay a light tribute to the British Government, and are invested with magisterial authority to punish offenders by fine not exceeding £5 or by imprisonment not exceeding two years. The states are mountainous, thinly cultivated, and inhabited for the most part by wild aboriginal tribes. They cover an area of 15,419 square miles, the largest states being Sirguja and Gangpur. Their aggregate population amounts to 405,980 souls, giving an average of 26 persons to the square mile. No towns exist in the

Tributary States, and only three villages contain more than 1000 inhabitants. The following is a brief description of each of the States:—

(1.) Sirguja, the largest, lies between 22° 30' and 24° N. lat., and 82° 35' and 84° 10' E. long. It is bounded on the N. by the independent state of Rewá and the districts of Mirzápur and Lohárdágá, on the E. by the district of Lohárdágá, on the S. by the Bilápur district of the Central Provinces and the states of Udaipur and Jashpur, and on the W. by the state of Koriá. It is very hilly, with elevated table-lands affording good pasturages, and cut up by numerous ravines. The rivers are the Kanhar, Ker, Mahán, Son, and Santek, the last being formerly known as the Diamond River. Hot springs exist in the state. Extensive *sál* forests cover a large area, affording shelter to herds of wild elephants, antelopes, bisons, buffaloes, and many sorts of deer, and also to tigers, bears, and other beasts of prey. The area is 6103 square miles; the population in 1872, 182,831 souls, residing in 1205 villages and 36,463 houses:—classified, according to religion—Hindus 68,789, or 37·0 per cent.; Muhammadans 1370, or 3 per cent.; aborigines of the Dravidian stock 73,256, of the Kolarian stock 39,416, total 112,672, or 61·0 per cent. The principal agricultural products are rice, Indian corn, and other inferior cereals, pulses, oilseeds, and cotton; the articles of export—clarified butter, grain, oilseeds, lac, gums, jungle silk cocoons (*tasar*), &c.; imports—brass and pewter vessels, picco goods, and ornaments. The place of trade is Bisdámpur, the capital of the state, Prátápur, and Jhilmilí. The total revenue of the estates in Sirguja in possession of the different members of the chief's family is £7000; the rental of the personal estate of the Rájá, £3000; the expenditure on administration, £212. A small body of police is maintained by the Rájá, and he can at a short notice put himself at the head of 1000 fighting men. Sirguja pays a tribute of £130 to the British Government.

(2.) Udaipur lies between 22° 3' and 22° 50' N. lat., and 83° 5' and 83° 50' E. long., and is bounded on the N. by the Mainpát plateau in Sirguja, on the E. by Jashpur, on the S. by Raigarh, and on the W. by Bilápur in the Central Provinces. Country hilly, diversified with plains, and possessing one of the most extensive coal fields in India. Principal river, Maud. Area, 1051 square miles, of which 121 are cultivated. Population—27,708—Hindus, 7351; Muhammadans, 118; aborigines, 20,230. Principal villages—Rábkoh, the capital, and Durki. Exports—cotton, resinous gums, oilseeds, rice, wild arrowroot, iron, and a small quantity of gold, obtained by washing. Udaipur came under the British protection in 1817, and now pays an annual tribute of £53.

(3.) Jashpur, the most populous of the states, lies between 22° 20' and 23° 15' N. lat., and 83° 30' and 84° 30' E. long., and is bounded on the N. and E. by the district of Lohárdágá, on the S. by the states of Gangpur and Udaipur, and on the W. by the state of Sirguja. The country is divided almost equally into high and low lands. The only river of importance is the Eb, in the bed of which diamonds are found, and from time immemorial its sands have been washed for gold. Jashpur iron, smelted by the Kols, is highly prized. Jungles of *sál* forests abound, harbouring elephants, bisons, and other wild beasts. Jungle products—lac, silk-cocoons, and beeswax, which are exported. Area, 1947 square miles; population, 66,926—Hindus, 11,498; Muhammadans, 423; aborigines, 55,005. Principal villages—Jashpur Nagar, the capital, and Sanod. Agricultural products—rice, barley, Indian corn, and other inferior crops, pulses, oilseeds, hemp, flax, &c. The Rájá possesses an income of about £2000, and pays through the Sirguja state a tribute of £77, 10s. to the British Government. Jashpur came under the protection of the British Government in 1818.

(4.) Gangpur extends from 21° 50' to 22° 30' N. lat., and 85° 10' to 85° 40' E. long., and is bounded on the N. by Lohárdágá district, E. by the Sinhhhatm district, S. by Sambalpur and Bámra, and W. by Raigarh in the Central Provinces. The country is for the most part an undulating plain, broken by detached ranges of hills, one of which, the Mahávíra range, possesses a very remarkable and imposing appearance, springing abruptly from the plain in an irregular wall of tilted and disrupted rock, with two flanking peaks. The rivers are the Eb and the Bráhmání, formed here by the union of the Sankh and the Koel, both navigable by canoes. The Eb was formerly famous on account of diamonds found in its bed, and its sands are still explored for gold. One of the largest coal fields in India extends into the state. Jungle products—lac, silk cocoons, catechu, and resin, which are exported. Wild animals—bisons, buffaloes, tigers, panthers, leopards, hyenas, wolves, jackals, wild dogs, and many sorts of deer. Area, 2484 square miles; population, 73,037, viz., Hindus, 28,192; Muhammadans, 231; aborigines, 45,214. Principal village, Suádi, the residence of the Rájá. The soil is exceedingly fertile, yielding sugar cane, tobacco, rice, and other cereals, pulses, oilseeds, and cotton. The chief enjoys a revenue of about £200, out of which he pays £50 as tribute to the British Government, the connection of which with the state dates from 1803.

(5.) Bonái extends from 20° 10' to 21° 10' N. lat., and from 84° 30' to 85° 25' E. long., and is bounded on the N. by the Gangpur state and the Sinbhúm district, on the E. by the state of Keunjhar in Orissa, and on the S. and W. by the state of Bámra in the Central Provinces. It is for the most part covered with a mass of uninhabited hills, except the central part, through which the Brahami river passes, forming a fine fertile valley along its course. Principal heights—Mánkarnáchá, 3639 feet. Báddiugarh, 3525; Kámratár, 3490; Chelíatáká, 3308; and Kondádhár, 3000. Products—almost the same as Gangpur. Area, 1297 square miles; population, 24,832, viz., Hindus, 10,416; Muhammadans, 32; and aborigines, 14,384. The chief enjoys an income of about £600, and he pays an annual tribute of £20 to the British Government. In 1803 the British Government entered into treaty relations with Bonái.

(6.) Koriá lies between 22° 58' and 23° 49' N. lat., and 82° and 82° 59' E. long., and is bounded on the N. by the Rewá state, E. by Sirgujá, S. by Biláspur district of the Central Provinces, and on the W. by Chang Bhakár. Country extremely hilly; highest point, 3370 feet. Rivers—Heshto or Hasdo, Gopath, and other minor streams which feed either the Son on the N. or the Malanuddy on the S. Jungle and agricultural products—same as the other states. Mineral product—iron. Tigers commit great havoc in the villages, and wild animals abound. Area, 1631 square miles; population, 21,127, viz., Hindus, 10,807; Muhammadans, 140; aborigines, 10,180. Principal village—Sonhát, the residence of the Rájá, which contains a mud fort. The Rájá enjoys an income of about £700, and pays a tribute of £40 to the British Government. The relations of the British Government with this state commenced in 1818.

(7.) Chang Bhakár state protrudes like a spur into the Rewá territory, which bounds it to the N., W., and S., the eastern side being bounded by the state of Koriá, of which it was formerly a fief. The natural scenery of the country consists of hills, ravines, and plateaus, covered with forests of *sal*, with small villages at distant intervals in the jungle. Herds of wild elephants commit sad havoc on the crops, which has caused the desertion of several villages. Area, 906 square miles; population, 8919, viz., 2728 Hindus, 34 Muhammadans, and 6157 aborigines. The chief has an income of about £300, and pays a tribute of £38, 12s. (W. W. H.)

CHUTTERPUR, a city of British India, in the province of Bundelcund, 180 miles S.E. of Agra, and 140 S.W. of Allahabad. It was established by the Rajah Chutter Sal, the founder of the short-lived independence of Bundelcund, and the resolute opponent of the Mogul empire in the 17th century. Situated but a short distance from the diamond mines of Pannah, and forming an important entrepôt in the trade between the Deccan and Benares, it soon grew into a very flourishing city. It is still a thriving place, but it maintains its prosperity less by its transit trade than by its manufactures, of which the most important are paper and coarse cutlery. It is irregularly built, and contains but few buildings of individual interest. The palace is a modern structure of hybrid character, combining the features of an Italian villa with those of a Rajput castle. There was formerly a political agent of the British Government in the city, but he has been transferred to Nowgong. The territory of which the town is the capital contains an area of 1240 square miles, with a population of from 200,000 to 300,000. The revenue is stated at not more than twenty lacs of rupees per annum. As the Rajah Pertab Singh had no male issue, the territory on his decease would have lapsed to the paramount power; but in acknowledgment of his fidelity and the beneficial results of his administration, the British Government recognized a successor in the person of his grand-nephew Juggut Singh.

CIBBER, or CIBERT, CAIUS GABRIEL (1630–1700), sculptor, was born at Flessburg in Denmark. He was the son of the king's cabinetmaker, and was sent to Rome at the royal charge while yet a youth. Nothing further is known of his earlier life, save that he came to England during the Protectorate, or during the first years of the Restoration. By his second wife, Miss Colley of Glaiston, a son was born to him afterwards to be known as Colley Cibber. Besides the famous statues of Melancholy and Raving Madness ("great Cibber's brazen brainless brothers"), once in old Bethlehem Hospital and now at South Kensing-

ton, Cibber produced the bas-reliefs round the Monument on Fish Street Hill. The several Kings of England and the Sir Thomas Gresham executed by him for the Royal Exchange were destroyed with the building itself in 1838. Cibber was long employed by William fourth earl of Devonshire, and many fine specimens of his work are to be seen at Chatsworth. Under that nobleman he took up arms in 1688 for William of Orange, and was appointed in return carver to the king's closet. He died rich, and, according to Horace Walpole, built the Danish church in London, where he lies buried beside his second wife, to whom he erected a monument.

CIBBER, COLLEY (1671–1757), actor, dramatist, and laureate, was the eldest son of Caius Cibber, and was born in London. Sent in 1682 to the free school at Grantham, he distinguished himself by passing through all its grades, from lowest to highest, and by producing an "Oration" on the death of Charles II.—whom he had seen feeding his ducks in the park—and an "Ode" on the accession of James II., with whom he had sat at worship in Whitehall Chapel. He was removed in 1687 on the chance of election into Winchester College. Caius Cibber, however, had not then presented that institution with his statue of William of Wykeham, and his son's claim was ignored. The boy went to London, and amused himself with the theatre, for which he had a passion. It was presently decided, on his own recommendation, that he should not return to school, but that he should go straight to Cambridge, for certain colleges in which university the sculptor was then executing commissions; meantime he was invited to Chatsworth, the seat of his father's patron. On his way thither, the Revolution broke out, and father and son met at Nottingham, where Colley Cibber was received, at the instance and in the place of Caius Cibber, into Devonshire's company of volunteers. He served in the bloodless campaign that resulted in the coronation of the Prince of Orange, and on its conclusion, at his father's request, presented a Latin petition to the earl—afterwards duke—imploping his interest and protection. By that nobleman's desire the young man returned to London, and ere long his craze for things histrionic enrolled him in Betterton's grand company of actors. After playing "full three quarters of a year" without salary, as was then the custom of all apprentice actors, he began to be paid ten shillings a week. His rendering of the little part of the chaplain in Otway's *Orphan* procured him a rise of five shillings; and a subsequent impersonation, on an emergency, and at the author's request, of Lord Touchwood in the *Double Dealer*, advanced him, on Congreve's recommendation, to a pound a week. On this he contrived to live with his wife and family, and to produce a play—*Love's Last Shift*. Of this comedy, highly praised by Southern and Dorset, Congreve said that it "had only a great many things that were like wit in it;" Vanbrugh honoured it by writing his excellent *Relapse* as a sequel. In 1697 Cibber was included by Collier among the reprehensible in the famous *Short View*. In 1704 he brought out, for himself and Mrs Oldfield, his best play, the *Careless Husband*, the most striking scene in which is said to have been suggested by an episode in the life of the notorious Mrs Brett (better known as the Countess Macclesfield) to whom the MS. had been submitted. In 1711, with Collier, Wilks, and Dogget, he became a patentee of Drury Lane theatre, where, in 1712, Addison's *Cato* was produced under his management. In 1715, on the occasion of the Rebellion, Cibber adapted the *Nonjuror* from Molière's *Tartuffe*; the play, a mere *pièce de circonstance*, ran eighteen nights, and the author received from George I., to whom it was dedicated, a present of two hundred guineas. In 1726 he pleaded the cause of the patentees against Sir Richard Steele (who had succeeded Collier as manager of Drury Lane) L

fore Jekyll, Master of the Rolls, and won his case. In 1730 Mrs Oldfield died, and her loss was followed in 1731 by that of Wilks; Cibber, who had been named laureate on the death of Eusden, sold his share in the theatre, and retired from the stage, and only appeared thereafter on rare occasions. In 1742 occurred the quarrel with Pope, which resulted in the exclusion of Theobald and the elevation of Cibber as the hero of the *Dunciad*. At seventy-four he appeared on the stage for the last time as Panulph in his own poor tragedy of *Papal Tyranny*. His conversation (of which Johnson said that "taking from it all that he ought not to have said, he was a poor creature") was agreeable to the last, and he died as full of worldly honours as of years.

Cibber's reputation has suffered greatly from the acrid censure of Pope and the rough scorn of Johnson. There can be no doubt that he was by no means an unamiable character, and that he was deficient neither in wit, sense, tact, nor feeling. The little passages of dramatic criticism and reflection scattered through his *Apology*, while they prove his extreme perspicuity and excellence of experience, are perhaps the most delicate and subtle of their kind in the literature of his time; while the fact that his version of *Richard III.* should have kept the stage for a century is of itself no mean proof that his scenic sagacity and instinct were remarkable. As a dramatist, he has neither the broad humour and strong comic vein of Vanbrugh, nor the fine English and the masterfulness of Congreve, nor the frolicsome gaiety and airy fancy of Farquhar. His characters are flat; his plots are neither natural nor well conducted; his dialogue is often flippant. He attempted, moreover, to extract a highly moral end from his sympathetic studies of social weakness and impurity, and the result (particularly in his continuation of Vanbrugh's unfinished *Journey to London*) is not happy. His *Odes*, the subject of several of Johnson's keenest pleasantries, are wretched. His best work is the *Apology for his Life*, a book which the same critic declared to be a standing proof that any man might do well who was able and willing to keep to his own ground.

See *An Apology for the Life of Colley Cibber, Comedian* (London, 1822); Cibber, *Dramatic Works* (London, 1777, 5 vols.); Boswell, *Life of Samuel Johnson, LL.D.*; and Isaac D'Israeli, *Quarrels of Authors*.

CICACOLE, a town of British India, in the presidency of Madras and district of Ganjam, about 58 miles N.E. of the town of Vizagapatam, on the left bank of the River Nagawalli or Naglandi, a few miles from its mouth. It is an irregular mud-built place, but possesses several mosques and bazaars of some importance. Its principal manufactures are cotton goods and excellent muslins. There is a military cantonment a short distance from the now dismantled fort, and a small English church occupies the corner of the parade ground. A school where English is taught is supported by the London Missionary Society. The town formerly gave its name to one of the five Northern Circars. Its population is about 12,800.

CICERO, MARCUS TULLIUS, born at Arpinum (Arpino) on the northern border of the Volscian territory, 3d January 647 A.U.C., 106 B.C. His family was of equestrian rank, and his father, though living in retirement, was intimate with some of the public men of the day. The orator Crassus took an early interest in the young M. Cicero and his brother Quietus, and directed their education. As an orator, a statesman, and a man of letters Marcus became the most consummate specimen of the Roman character under the influence of Hellenic culture. He was first placed under the tuition of the Greek poet Archias, a teacher at Rome, with whom he read the poets and orators of Greece, composed in the Greek language, and also wrote Latin verse. This literary training he combined with study under the

two Scævolas, the augur and the pontifex, and from these Roman masters he imbibed the spirit of the national law and ritual. His aim was to prepare himself by liberal as well as technical training for the career of an advocate; but the Roman institutions required him to serve in the field also, and he took part in the campaign of Sulla against the Italian confederates in the year 87. Returning to the city he betook himself once more to the pursuits most congenial to him, and attended on the teaching of Philo the chief of the Academics, of Diodotus the Stoic, and of Molo a philosopher of Rhodes. Many teachers had been driven at that moment from the schools of Greece by the invasion of Mithridates. Cicero, at the age of twenty-six, pleaded a civil cause in the speech *pro Quinctio* (81 B.C.), and again in a criminal action against Roscius Amerinus in the following year. After these efforts, which brought him some distinction, he suddenly withdrew to Athens, on the plea of weak health, but probably to avoid the displeasure of the dictator Sulla. Here he studied under Molo and others, with a special view to the practice of declamation, and the management of his physical powers in a profession which made severe demands upon them. He travelled also through the Roman province of Asia, and stored up a vast amount of information in a mind singularly acquisitive and endowed with extraordinary facility of arrangement and expression, but with comparatively little fertility of invention or breadth and strength of character. Cicero was from the first an imitator and an adapter rather than an original thinker. He was throughout a follower rather than a leader in action as well as in speculation. His mental training disposed him specially to admire past models or cling to existing institutions, and he was always too easily subjected to the influence of characters stronger than his own. His position, indeed, as a new man, or a struggling candidate for political honours which neither his birth nor his means could naturally command, made it necessary for him to attach himself to the leaders of party; but his versatile talents soon rendered him a valuable adherent, and it speaks well for the times in which his lot was cast, amidst the deep corruption which pervaded them, that his honest and enlightened patriotism was on the whole appreciated and rewarded.

It was from policy, but partly also from his own kindly feelings, that the young orator, on resuming his profession, preferred to distinguish himself in defence rather than in attack. This course impressed the good-natured public in his favour. Moreover, the class from which the judices were taken, conscious that the position of defendants in a criminal suit might at any time be its own, was often glad of an excuse for screening public delinquents. It may be said that even the impeachment of Verres was rather a defence of the injured Sicilians than a hostile attack upon an individual, who was allowed to withdraw quietly from the city. Cicero's triumph in this famous cause (70 B.C.) raised him to the pinnacle of reputation. He had already attained the quaestorship (77 B.C.). He succeeded to the aedileship in 69, and became praetor in 68, a year memorable in his career for the passing of the Manilian law, which he warmly supported, by which Pompeius was constituted commander against Mithridates with extraordinary powers, in the place of Lucullus. Pompeius was at this period accepted by the oligarchy as their leader, though not without reluctance and distrust. Cicero gladly attached himself to their cause, and flattered himself with the hope of reconciling the senate with the knights by a more liberal and genial policy. Meanwhile he hoped, by favour of the dominant party, to attain the consulship. He found himself a candidate for that magistracy along with Catiline, a man of ruined character and already under suspicion of plotting against the state. Nevertheless he did not hesitate

to combine with him in his canvass, and to undertake his defence on a charge of malversation. Cicero obtained the consulship; Catiline was defeated, and thereupon betook himself to treasonable machinations. It was the business of his late ally to track these intrigues and defeat them. The vigour and courage with which Cicero conducted himself at this crisis won for him by popular acclamation the title of "Father of his Country" (63 B.C.) But the nobles ill requited the service he had done them. They now felt themselves secure in their ascendancy. They affronted Pompeius, they made light of Cicero, and allowed him to be treated contumeliously by a tribune, who, under pretence that he had condemned citizens unheard, forbade him to make the usual declaration of the services he had performed in his consulship. Cicero, in laying down his office, was only permitted to exclaim—"I swear that I have saved the state." Caesar, at the head of the popular party, countenanced this affront; while Pompeius, perhaps a little jealous of the rising statesman, on his return from the East vouchsafed him no cordial support. The real weakness of his position was made painfully manifest to him. He would not consent, however, to remove to a distance, and declining to sue for the government of a province, devoted himself for a time mainly to literary pursuits, composing among other things a poem on the glories of his own consulship. Meanwhile the enemies he had made became more emboldened. Clodius, a worthless demagogue, assailed him with a formal charge for putting citizens to death summarily without appeal to the people. In vain did he assume the garb of mourning, and traverse the streets as a suppliant. The magnates stood coldly aloof, and the factions arrayed against him did not scruple to menace his scanty defenders with violence. Cicero was obliged to seek safety in flight, and withdrew to Thessalonica. Clodius obtained a decree of the people for his banishment 400 miles from the city, and the destruction of his house on the Palatine, the site to be devoted to the erection of a temple of Liberty (58 B.C.)

Pompeius and Caesar had suffered Cicero to undergo this humiliation for their own purposes, but they were not disposed to submit to the arrogance of the upstart Clodius, who was now making himself generally obnoxious. In the following year they let it be understood that the persecution should cease. The partizans of Clodius raised tumults in the city, but they were speedily put down, and a resolution for the exile's recall was carried in the assembly of the people. Cicero had betrayed much weakness under banishment. The exultation with which he triumphed on his return was hardly more dignified. The senate, however, complimented him, by coming forth to meet him, and the state undertook the restoration of his mansion. The armed opposition of Clodius was met by a counter demonstration on the part of Milo, a no less turbulent instrument of the oligarchy. But Cicero now felt himself powerless in the presence of chiefs of armies and leaders of factions. He attached himself more closely to Pompeius, and devoted his eloquence to the defence of his patron's creatures, while he courted more and more the pursuit of literature in retirement. The attainment of a seat in the college of augurs on the death of Crassus (53 B.C.) placed him in a position of dignity well suited to the taste of a constitutional antiquarian. But Caesar, though now absent in Gaul, was rapidly becoming a great power in the state, and Cicero did not fail to pay court to him also, proposing to celebrate his British wars in an epic poem. The death of Clodius (52 B.C.), whose slayer, Milo, he defended, relieved him from the apprehensions he had never yet shaken off. He accepted, though not without reluctance, the lot which assigned him the government of Cilicia for the year following. His conduct in this post seems to have been

highly meritorious. He checked the corruption of his officials while he preserved his own purity, and distasteful as warlike affairs were to his studious and quiet temper, he did not shrink from leading his troops against the restless mountaineers. His vanity induced him to pretend to a triumph for his success in these trifling operations; but in those degenerate days greater victories than his would have failed to secure such an honour, unless backed by the influence of the leaders of party, and neither Pompeius nor Caesar was disposed to indulge him.

The civil war between these two rivals was now imminent. Cicero naturally threw himself into the ranks of the senatorial or conservative party, which was blindly following the lead of Pompeius; but he was coldly received by the violent men who ruled it, to whom his old-fashioned patriotism was utterly distasteful. Reluctantly and with much misgiving he quitted Italy in the train of the senate and contented to set up a shadow of the commonwealth on a foreign shore; while Caesar attached to himself in the city, as dictator and consul, both the substance and the forms of constitutional power. After the disaster of Pharsalia and the rout of the senatorial forces, Cicero quickly threw aside his arms and returned to Italy, where Caesar had left Antonius in command. He was soon relieved from apprehensions for his own safety by kind assurances from the victor, and while Caesar was occupied in Egypt, Africa, and Spain, he withdrew altogether from public life. With his wife Terentia he had never lived happily, but he now took the step of repudiating her, which according to the ideas of the times caused no unfavourable remark, nor was it made matter of reflection upon him that he straightway married again his own ward Publilia, wealthy as well as beautiful. The young bride seems, however, to have contributed nothing to his domestic happiness, and her, too, he soon repudiated for the satisfaction she had seemed to evince at the death of his much-loved daughter Tullia. During this period, however, he abstained from making advances to Caesar, and did himself honour by composing a panegyric upon Cato, to which Caesar condescended to make an ill-tempered reply. But the conqueror's clemency to Marcellus at last won his heart, and now, after the death of Pompeius, Cato, and Scipio, with all the other chiefs of his party, he could not refrain from declaring warmly in favour of the new ruler. Caesar felt the compliment, and repaid it by sparing at his instance the life of Ligarius. The conduct of Cicero at this critical moment was undoubtedly the most truly politic. Other republicans, such as Brutus and Cassius, who had espoused the senatorial cause with feverish zeal or angry factiousness, did not scruple to give their actual support to the new government, and to accept office under it, while they secretly chafed against it and threw themselves into a conspiracy against the life of their master. The difference between their spirit and that of Cicero is marked by the fact that in a plot which numbered, it was said, as many as eighty men of public note, Cicero himself was not included. The covert assassins dared not consult with men of true honour. When the deed was done, indeed, Cicero might fairly take part with its perpetrators in the name of the free state which in his sanguine view might still be restored. When, however, the liberators, as they called themselves, repaired to the provinces to strengthen their party against the Cæsarians, Cicero declined to undertake active service. He remained in Italy, and employed himself in guiding, as he thought, the conduct of the young Octavius, the nephew and heir of the dictator. This crafty dissembler promised well, and Cicero expected to be able to use him as a convenient opponent to Antonius. It must be confessed that the veteran statesman was himself playing a part, and dissembling with the youth whom he meant eventually to get rid of. It was a game on both sides, and Octavius

won it. He looked on with satisfaction while Cicero excited the passions of the citizens against Antonius in the series of orations to which he gave the name of Philippics, while he armed the consuls Hirtius and Pansa to overthrow him. The orator, now advanced in years, showed at this crisis all the vigour with which he had encountered Catiline twenty years earlier. To him the people entrusted the government of the city, and while all the forces of the republic were concentrated under various leaders on the Cisalpine, he might fancy himself for a moment the real controller of affairs. But after the deaths of Hirtius and Pansa in the battles before Mutina, and the discomfiture of the republicans under Decimus Brutus, Octavius, Antonius, and Lepidus formed a compact, and assumed to be a triumvirate, or a board of three special officers for the regulation of the commonwealth. Their arrival at Rome was followed by bloody proscriptions of their public and private enemies. Antonius demanded the head of Cicero, and Octavius yielded it. The orator fled, together with his brother, but he could not endure to abandon Italy, and after some weeks' delay, which seems to show that the pursuit was not keen, he was overtaken at the door of his Formian villa and his throat cut by the bravo Popilius. His head and hands were cut off and sent to Rome, where Antonius caused them to be affixed to the rostra, and Fulvia, the widow of Clodius and the wife of Antonius, pierced with her needle the tongue which had declaimed against both her husbands. Cicero perished at the close of the year 43, at the age of sixty-three. Octavius, in his later years, as the Emperor Augustus, could coolly say of the great statesman and patriot to whose murder he had consented, "He was a good citizen, who really loved his country." The saying was indeed well deserved, but it should have come from purer lips.

Cicero was indeed not only a good citizen, but a good man; he loved not his country only but mankind in general; he loved them not merely from a kindly nature, but from reflection and self-discipline. As a specimen of the highest culture of the ancient world both moral and intellectual he must ever stand pre-eminent. He was a wiser if not a more sincere patriot than Cato; his private virtues were subjected to a severer test than those of M. Aurelius. His intellectual superiority is sufficiently attested by the important place he attained, in the face of many disadvantages, in the conduct of public affairs. But a large portion of his multifarious writings still remains, and constitutes an enduring monument to his fame, which has been recognized through all ages. The great bulk of these works may be conveniently classed as (1) political, (2) philosophical, (3) personal. The first division comprises a collection of fifty-six speeches professing to have been delivered in the forum or the curia, though some of them certainly, as for instance that for Milo and the greater number of the Philippics, were written for publication but not actually delivered. The genuineness of that for Marcellus, and of the four which refer to the orator's return from exile, has been much questioned. Besides the speeches themselves, Cicero produced several treatises on the subject of oratory, which as part of the Roman training for public life may be regarded as political. Of these the principal are the *de Oratore*, the *Orator*, and the *Brutus*. The origin of the strictly technical treatises *de Inventione* and *Rhetoricum* is involved in much perplexity. To this division belong still more strictly the important works *de Legibus* and *de Republica*, which contain valuable references to the events of early Roman history. To our second division belong the famous treatises on philosophy, from which we derive all our knowledge of the Greek systems which succeeded to the schools of Plato and Aristotle, and in which it became the fashion to affect an

interest at Rome. Of these the *Academica*, the *Tusculanæ*, the *de Finibus*, and others which have been lost were devoted to speculative questions; the *de Divinatione* and *de Natura Deorum* refer more strictly to theological traditions; while the book *de Officiis* is an elaborate treatise on moral obligations. The smaller works, *de Senectute*, *de Amicitia*, *de Consolatione*, and probably the lost essay *de Gloria*, may also be ranged more or less definitely under the head of practical philosophy. The third division embraces Cicero's letters in two series, the one those to his friend Atticus, the other (*ad familiares*) to his correspondents generally. To these may be added a collection of letters addressed to his brother Quintus. These together give an account of the writer's life almost from day to day; they are the most valuable of his works for the historical information they afford us, as well as for the insight they give us into the character not of the writer only but of many of the leading personages of the day. In both these respects they stand unique among the remains of antiquity, and few men of historical note even in recent times have been so fully presented to us in their correspondence as Cicero, whose life acquires thereby its transcendent interest for all students of human nature. It may be added that the great philosopher and orator amused himself further with more than one ambitious flight in poetry. His verses on his consulship attracted some attention from his countrymen, and a specimen of them has come down to us. He made also a Latin translation of the astronomical poem of Aratus, and proposed at least, as has been above mentioned, to execute an epic on the invasion of Britain by Cæsar.

The latest critical and complete edition of Cicero's works is that of J. Caspar Orellius, printed at Zurich (1826-1838). The text, accompanied by a full apparatus of various readings, is followed by a collection of the ancient scholiasts, an elaborate Onomasticon, and other valuable supplements. This edition is comprised in eight, but may be more conveniently bound in twelve large octavo volumes. (C. M.)

CICOGNARA, LEOPOLDO, COUNT (1767-1834), archaeologist and writer on art, was a native of Ferrara. At an early age he evinced strong predilections for the subjects on which he was to become so high an authority. Mathematical and physical science diverted him a while; but his bent was decided, and not even the notice of such men as Spallanzani and Scarpa could make a savant of him. A residence of some years at Rome, devoted to painting and the study of the antiquities and galleries of the Eternal City, was followed by a visit to Naples and Sicily, and by the publication, at Palermo, of his first work, a poem of no merit. The island explored, he betook himself to Florence, Milan, Bologna, and Venice, acquiring a complete and perfect knowledge of these and other cities from the point of view of an archaeologist and connoisseur. In 1795 he took up his abode at Modena, and was for twelve years engaged in politics, becoming a member of the legislative body, a councillor of state, and minister plenipotentiary of the Cisalpine Republic at Turin. Napoleon decorated him with the Iron Crown; and in 1808 he was made president of the Academy of the Fine Arts at Venice, a post in which he did good work for a number of years. In 1808 appeared his treatise *Del Bello Ragionamenti*, dedicated in glowing terms to Napoleon. This was followed (1813-1818) by his *magnum opus*, the *Storia della Scultura dal suo Risorgimento in Italia al Secolo di Napoleone*, in the composition of which he had been encouraged and advised by Giordano and Schlegel, while the great emperor to whom it was dedicated had assisted the publication pecuniarily,—an example which the Bourbons did not follow. This book, designed to complete the works of Winckelmann and D'Agincourt, was the result of many years of meditation and comparison; it is illustrated with 180 plates in outlines, and if imperfect, is yet of great value. In 1814, on the fall of Napoleon,

Cicognara was patronized by Francis I. of Austria, and published (1815-1820), under the auspices of that sovereign, his *Fabbriche più cospicue di Venezia*, two superb folios, containing some 150 plates. Charged by the Venetians with the presentation of their gifts to the Empress Caroline at Vienna, Cicognara added to the offering an illustrated catalogue of the objects it comprised; this book, *Omaggio delle Provincie Venete alla Maestà di Carolina Augusta*, printed for private circulation at the author's own expense, has since become of great value to the bibliophilist. Reduced to poverty by these splendid editorial speculations, Cicognara contrived to alienate the imperial favour by his political opinions. He left Venice for Rome; his library was sent to market; and in 1821 he published at Pisa a *catalogue raisonné*, rich in bibliographical lore, of this fine collection, the result of thirty years of loving labour, which in 1824 was purchased *en bloc* by Pope Leo XII., and added to the Vatican library. The other works of Cicognara are—the *Memorie Storiche de' Letterati ed Artisti Ferraresi*, 1811; the *Vite de' più insigni Pittori e Scultori Ferraresi*, MS.; the *Memorie spettanti alla Storia della Calcografia*, 1831; and a large number of dissertations on painting, sculpture, engraving, and other kindred subjects. (See Papoli, in No. 11 of the *Exile*, a print written and published by Italian refugees.)

Cicognara's reputation is principally founded on his *Storia della Scultura*. This is a valuable book, but it is disfigured and weakened by the enthusiasm that led the author to sacrifice almost all the lights of modern sculpture to the reputation of his friend Canova, to whom the seventh part of the book is devoted. His work as president of the Academy at Venice was also excellent; to him are attributed the increase in number of the professors, the improvement in the courses of study, the institution of prizes, and the foundation of a gallery for the reception of Venetian pictures.

CID, THE, RODRIGO DIAZ DE BIVAR, the favourite hero of Spain, and the most prominent figure in her literature, has a name so obscured by myth and fable as scarcely to belong to history. So extravagant are the deeds ascribed to him, and so marvellous the attributes with which he has been clothed by the fond idolatry of his countrymen, that by some he has been classed with the Amadis and the Orlando whose exploits he emulated. The Jesuit Masden stoutly denies that he had any real existence, and this heresy has not wanted followers even in Spain. The truth of the matter, however, has been expressed by Cervantes, through the mouth of the Canon in *Don Quixote*: "There is no doubt there was such a man as the Cid, but much doubt whether he achieved what is attributed to him." The recent researches of Professor Dozy, of Leyden, have amply confirmed this opinion. There is a Cid of history and a Cid of romance, differing very materially in character, but each filling a large space in the annals of his country, and exerting a singular influence in the development of the national genius.

The Cid of history, though falling short of the poetical ideal which the patriotism of his countrymen has for 700 years cherished, is still the foremost man of the heroic period of Spain—the greatest warrior produced out of the long struggle between Christian and Moslem, and the perfect type of the Spanish Goth of the 12th century. Rodrigo Diaz, called de Bivar, from the place of his birth, better known by the title given him by the Arabs as the *Cid* (*El Seid*, the lord), and *El Campeador*, the champion *par excellence*, was of a noble family, one of whose members in a former generation had been elected judge of Castile. The date of his birth cannot be fixed with any certainty, but it was probably between 1030 and 1040. As Rodrigo Diaz de Bivar he is first mentioned in a charter of Fernando I. of the year 1064. The legends which speak of the Cid as

accompanying this monarch in his expeditions to France and Italy must be rejected as purely apocryphal. Fernando, a great and wise prince under whom the tide of Moslem conquest was first effectually stemmed, on his deathbed, in 1065, divided his territories among his five children. Castile was left to his eldest son Sancho, Leon to Alphonso, Galicia to Garcia, Zamora and Toro to his two daughters Urraca and Elvira. The extinction of the Western Caliphate and the dispersion of the once noble heritage of the Omniades into numerous petty independent states, had taken place some thirty years previously, so that Castilian and Moslem were once again upon equal terms, the country being almost equally divided between them. On both sides was civil war, urged as fiercely as that against the common enemy, in which the parties sought allies indiscriminately among Christians and Mahometans. No condition of affairs could be more favourable to the genius of the Cid. He rose to great distinction in the war between Sancho of Castile and Sancho of Navarre, in which he won his name of *Campeador*, by slaying the enemy's champion in single combat. In the quarrel between Sancho and his brother Alphonso, Rodrigo Diaz espoused the cause of the former, and it was he who suggested the perfidious stratagem by which Sancho eventually obtained the victory and possession of Leon. Sancho having been slain in 1072, while engaged in the siege of Zamora, Alphonso was taken from his prison and raised to the vacant throne. One of the most striking of the passages in the Cid's legendary history is that wherein he is represented as forcing the new king to swear that he had no part in his brother's death; but there was cause enough without this for Alphonso's animosity against the man who had helped to despoil him of his patrimony. For a time the Cid, already renowned throughout Spain for his prowess in war, was even advanced by the king's favour and entrusted with high commissions of state. In 1074 the Cid was wedded to Ximena, daughter of the count of Oviedo, and granddaughter, by the mother's side, of Alphonso V. The original deed of the marriage-contract is still extant. Some time afterwards the Cid was sent on an embassy to collect tribute from Motamid, the king of Seville, whom he found engaged in a war with Abdallah, the king of Granada. On Abdallah's side were many Castilian knights, among them Count Garcia Ordoñez, a prince of the blood, whom the Cid endeavoured vainly to persuade of the disloyalty of opposing their master's ally. In the battle which ensued under the walls of Seville, Abdallah and his auxiliaries were routed with great slaughter, the Cid returning to Burgos with many prisoners and a rich booty. These fresh proofs of his prowess only served to kindle against him the rancour of his enemies and the jealousy of the king. Garcia Ordoñez accused him to Alphonso of keeping back part of the tribute received from Seville, and the king took advantage of the Cid's absence on a raid against the Moors to banish him from Castile. Henceforth Rodrigo Diaz began to live that heroic-picaresque life which has made him famous, sometimes fighting under the Christian banner, sometimes under Moorish, but always for his own hand. At the head of a band of 300 free lances he offered his services first to the count of Barcelona; then, failing him, to Moctadir, the Arab king of Saragossa, of the race of the Beni Houd. Under Moctadir, and his successors Montamin and Mostain, the Cid remained for nearly eight years, fighting their battles against Mahometan and Christian, when not engaged upon his own, and being admitted almost to a share of their royal authority. He made more than one attempt to be reconciled with Alphonso, but his overtures being rejected, he turned his arms against the enemies of the Beni Houd, extending their dominions at the expense of the

Christian states of Aragon and Barcelona, and harrying even the border lands of Castile. Among the enterprizes of the Cid the most famous was that against Valencia, then the richest and most flourishing city of the Peninsula, and an object of cupidity to both Christian and Moslem. The Cid appeared before the place at the head of an army of 7000 men, for the greater part Mahometans. In vain did the Valencians implore succour from the emir of Cordova, and from their co-religionists in other parts of the Peninsula. In defiance of an army which marched to the relief of the beleaguered city under Yussuf the Almoravide, the Cid took Valencia after a siege of nine months, on the 15th of June 1094—the richest prize which up to that time had been recovered from the Moors. The conditions of the surrender were all violated—the *cadi* Ibn Djahhaff burnt alive, a vast number of the citizens who had escaped death by famine slaughtered, and the possessions divided among the Campeador's companions. In other respects the Cid appears to have used his victory mildly, ruling his kingdom, which now embraced nearly the whole of Valencia and Murcia, for four years with vigour and justice. At length the Almoravides, whom he had several times beaten, marched against him in great force, inflicting a crushing defeat at Cuença upon the Cid's army, under his favourite lieutenant, Alvar Fañez. The blow was a fatal one to the aged and war-worn Campeador, who died of anger and grief in July 1099. His widow maintained Valencia for three years longer against the Moors, but was at last compelled to evacuate the city, taking with her the body of the Cid to be buried in the monastery of San Pedro at Cardena, in the neighbourhood of Burgos. Here, in the centre of a small chapel, surrounded by his chief companions in arms, by Alvar Fañez Minaya, Pero Bermudez, Martin Antolinez, and Pelsez the Asturian, rest, after frequent disturbances from friend and foe, the bones of the mighty warrior, the truest of Spanish heroes, the embodiment of all the national virtues and most of the national vices. Philip II. tried to get him canonized, but Rome objected, and not without reason. Whatever were his qualities as a fighter, the Cid was but indifferent material out of which to make a saint,—a man who battled against Christian and against Moslem with equal zeal, who burnt churches and mosques with equal zest, who ravaged, plundered, and slew as much for a livelihood as for any patriotic or religious purpose, and was in truth almost as much of a Mussulman as a Christian in his habits and his character. His true place in history is that of the greatest of the *guerrilleros*—the perfect type of that sort of warrior in which, from the days of Sertorius to those of El Empecinado, the soil of Spain has been most productive.

The Cid of romance, the Cid of a thousand battles, legends, and dramas, the Cid as apotheosized in literature, the Cid invoked by good Spaniards in every national crisis, whose name is a perpetual and ever-present inspiration to Spanish patriotism, is a very different character from the historical Rodrigo Diaz—the freebooter, the rebel, the consorter with the infidels and the enemies of Spain. He is the Perfect One, the Born in a Happy Hour, "My Cid," the invincible, the magnanimous, the all-powerful. He is the type of knightly virtue, the mirror of patriotic duty, the flower of all Christian grace. He is Roland and Bayard in one. In the popular literature of Spain he holds a place such as has no parallel in other countries. From an almost contemporary period he has been the subject of song; and he who was chanted by wandering minstrels in the 12th century has survived to be hymned in revolutionary odes of the 19th. In a barbarous Latin poem, written in celebration of the conquest of Almeria by Alphonso VII. in the year 1147, we have the bard testifying

to the supereminence of the Cid among his country's heroes:—

"Ipse Rodericus Mio Cid semper vocatus,
De quo catur quod ab hostibus haud superatus,
Qui domuit Mauros, comites domuit quoque nostros."

Within a hundred years of his death the Cid had become the centre of a whole system of myths. The *Poema del Cid*, written in the latter half of the 12th century, has scarcely any trace of a historical character. Already the Cid had reached his apotheosis, and Castilian loyalty could not consent to degrade him when banished by his sovereign:—

"Dios, que buen vasallo si oviese buen señor!"

cry the weeping citizens of Burgos, as they speed the exile on his way.

The Poem of the Cid is but a fragment of 3744 lines, written in a barbarous style, in rugged assonant rhymes, and a rude Alexandrine measure, but it glows with the pure fire of poetry, and is full of a noble simplicity and a true epical grandeur, invaluable as a living picture of the age. The ballads relating to the Cid, of which nearly two hundred are extant, are greatly inferior in merit, though some of them are not unworthy to be ranked with the best in this kind. Duran believes the greater part of them to have been written in the 16th century. A few betray, not more by the antiquity of their language than by their natural and simple tone, traces of an earlier age and a freer national life. They all take great liberties with history, thus belying the opinion of Sancho Panza that "the ballads are too old to tell lies." Such of them as are not genuine relics of the 12th century are either poetical versions of the leading episodes in the hero's life as contained in the *Chronicle*, that *Chronicle* itself having been doubtless composed out of still earlier legends as sung by the wandering *juglares*, or pure inventions of a later time, owing their inspiration to the romances of chivalry. In these last the ballad-mongers, not to let their native hero be outdone by the Amadis, the Esplandians, and the Felix-martes, engage him in the most extravagant adventures—making war upon the king of France and upon the emperor, receiving embassies from the Soldan of Persia, bearding the Pope at Rome, and performing other feats not mentioned even in the Poem or the *Chronicle*. The last and the worst of the Cid ballads are those which betray by their frigid conceits and feeble mimicry of the antique the false taste and essentially unheroic spirit of the age of Philip II. As for the innumerable other poems, dramas, and tales which have been founded on the legend of the Cid, from the days of Guillen de Castro and Diamante to those of Quintana and Trueta, they serve merely to prove the abiding popularity of the national hero in his native land.

The chief sources from which the story of the Cid is to be gathered are, first, the Latin chronicle discovered by Risco in the convent of San Isidro at Leon, proved by internal evidence to have been written before 1258; the *Cronica General*, composed by Alphonso X. in the second half of the 13th century, partly (so far as relates to the Cid) from the above, partly from contemporary Arabic histories, and partly from tradition; the *Cronica del Cid*, first published in 1512, by Juan de Velorado, abbot of the monastery of San Pedro at Cardena, which is a compilation from the last, interlarded with new fictions due to the piety of the compiler; lastly, various Arabic manuscripts, some of contemporary date, which are examined and their claims weighed in the second volume of Professor Dozy's *Historie de la littérature de l'Espagne au moyen âge*. Huber, Muller, and Ferdinand Wolf are among the leading authorities in the history and literature of the Cid. M. Damas Hinard has published the poem, with a literal French translation and notes, and John Hookham Frere has rendered it into English with extraordinary spirit and fidelity. The largest collection of the Cid ballads is that of Duran, in the *Romancero General*, in two volumes, forming part of Rivadeneyra's *Biblioteca de Autores Españoles*. (H. E. W.)

CIDER, an alcoholic beverage obtained by the fermentation of the juice of apples. The manufacture is chiefly carried on by the cultivators of the fruit, and it has been conducted from very remote times in Hereford, Worcester, Gloucester, Somerset, and Devonshire in England, and in Normandy in France. Cider is also largely prepared and consumed in Upper Austria, Wurtemberg, in the districts of the Maine and the Moselle, and in Holland; and it is besides a common beverage in the New England and Western States of America. In the south-west of England the most esteemed varieties of apple cultivated for cider-making are the Royal Wilding, the Foxwhelp, White Normandy Beech, Yellow Styre, Handsome Mandy, and Skyrme's Kernel. For a superior quality of cider the large well matured apples of several varieties are selected, and are ground up to a fine pulp either in an old-fashioned cider mill, or in one of several newer machines which have been introduced for pulping the fruit. The old form of mill consists of a circular trough around which a huge heavy stone wheel or runner, weighing about a ton, is drawn by a horse. Into the trough a charge of apples, to the amount of from 8 to 10 bushels, is thrown, and the mill is kept in motion till the whole mass is reduced to a fine uniform pulp, which is technically called "the cheese." The old-fashioned mills are now generally superseded by modern inventions, of which Coleman's cider press may be taken as the type. It consists of two pairs of rollers mounted in a strong wooden frame. The first and upper pair are of hard wood, studded with iron teeth or knives, set immediately under a hopper into which the fruit is fed. In passing between the first pair the fruit is sliced into small pieces which fall between the second pair of rollers, placed immediately below. These consist of heavy cylinders of stone set quite close so that the opposing surfaces press against each other, and the sliced apples in passing between them are bruised to a fine pulp which is received into a trough placed directly under. The pulp or cheese is, or ought to be, laid aside for at least a night to allow fermentation to set in before the juice is expressed. By this means the aromatic oil contained in the seeds is extracted, communicating its aroma to the mass, and a richer, fuller-flavoured beverage is the result. The cheese is placed in hair-cloths in a strong framed box for expressing the juice, an operation which must be gently and carefully performed, so that the liquid may be obtained as pure and clear as possible. The juice ought to have a specific gravity of from 1.07 to 1.08, and should contain 10 or 11 per cent. of sugar and 0.6 to 0.7 per cent. of malic acid. The liquor is strained and placed for fermenting either in large vats or in separate casks. In the fermentation which ensues an abundant sediment is thrown to the bottom and a scum rises to the surface. In a week or ten days this action should leave the liquid clear and bright if the fermentation has continued steady and moderate. The liquid is then racked off into casks, as free as possible from scum and sediment, and excluded from atmospheric influence to stop the further action of the ferment. If in the early part of the following spring it is found to be still clear, nothing further is required except to cask it up for the market; but should it have become thick and ropy it must be "fined" either by means of isinglass or with stewed and mashed apples. It is frequently found necessary, in order effectually to stop fermentation, to expose the liquor to the influence of sulphurous acid gas, which is done by burning a sulphur tipped stick inside a cask half filled with cider, and shaking the cask so as to make the liquor absorb the acid gas. Such "mashed" cider is readily detected by connoisseurs. The artificial colouring of cider, when practised, is done either with burnt sugar, the juice of red beet, logwood, or cochineal; and in Germany a flavour is sometimes communicated to the beverage

with elder flowers, cinnamon, cloves, or other aromatics. The following analysis of a pint of common cider such as is supplied to agricultural labourers in Somersetshire is by Dr Voelcker:—

Water	8292.41 grs.
Alcohol.....	367.69
Grape Sugar.....	31.67
Gum and extractive matter	45.05
Albuminous compounds	1.94
Malic Acid	44.86
Ash	18.38

8802.00 grs

Cider is very prone to undergo acetous fermentation, and develop a rough, sharp, vinegary taste; and in that condition its consumption readily causes diarrhoea and colic. Roughness may be much reduced by treatment with various compounds prepared for the purpose which contain lime, or by the addition of a quantity of hops boiled with treacle or honey to the acidified cider. When sound it is a wholesome, agreeable, and refreshing stimulant beverage. In Germany a spirit, apple brandy, is distilled from cider.

CIENFUEGOS, NICASIO ALVAREZ DE (1762-1809), poet and publicist, was born at Madrid. He studied with distinction at Salamanca, where he sat at the feet of the poet Melendez Valdez. The year 1778 saw the first of his poems published, and the attention of his countrymen was immediately attracted. He was appointed editor of the Government organs, the *Gaceta* and *Mercurio*, and an article on Napoleon published in the former drew down on him the heavy hand of Murat. Cienfuegos was condemned to death; he refused submission, and would assuredly have been executed but for the prayers of his friends. At their instance the sentence was commuted into one of deportation into France. Worn out with grief and fatigue, he died at Orthez in the following year. His verses are imitated from these of Melendez Valdez; they are by no means deficient in science or passion, but they are too often disfigured by a spurious sentimentality and by an affectation of the flimsy philosophy of the age. He was blamed for an unsparing use at once of archaisms and of novelties, which some regarded with approval, but others denounced him as a traitor to the glorious traditions of Castilian art, and as bent on Frenchifying the noble Castilian idiom. His plays—*Pitaco*, *Zoraida*, *La Condesa de Castilla*, and *Idomeno*, four tragedies on the pseudo-classic French model, and *Las Hermanas Generosas*, a comedy—have been long forgotten both in the closet and on the stage. See Ticknor, *History of Spanish Literature*, vol. iii.; and Cienfuegos, *Obras Poeticas*, 2 vols., Madrid, 1816.

CIGAR, a form in which tobacco is prepared for smoking without the use of a pipe. Cigars consist of certain portions of small and broken leaf tobacco rolled together in the form of a short stick or rod tapering to a point at one end called the curl or twist, and firmly wrapped round with one or two wrappings of whole leaf tobacco. The manufacture of cigars is conducted by hand-labour, and the various operations are performed with great dexterity. The selected leaves to be used for wrapping are first damped and stripped or freed from the midrib, by which each leaf is torn into two halves. These are smoothed out and pressed to remove any creases, and with a sharp knife the workman cuts each into the proper shape to form a wrapper. On each wrapper so prepared a sufficient quantity of small and broken leaf is placed, and the whole is then wrapped up in the form of a cigar. An external wrapper of fine uniform leaf is added and secured in a peculiar kind of knot at the smaller end. The thick end is trimmed by placing the cigar in a gauge and cutting it to a definite size. After finishing the cigars are dried on trays either by exposure to

the sun or in artificial heat, and when thoroughly dry they are packed in boxes for sale. *Cheroots* differ only in form from ordinary cigars, sloping gradually from the thick to the thin end, which instead of finishing in a point, is cut and trimmed the same as the thick end. *Cigarettes* are small cigars, sometimes consisting of fine cut tobacco wrapped up in thin paper or inserted in straw tubes. Cigars are sold under an immense variety of names, derived either from the country of their manufacture, from the kind of tobacco used, or from the fancy of the manufacturer. The finest cigars are obtained from Havana in Cuba, and in them the thick ends are left untrimmed by the knife; but although this is characteristic it is obviously no test of genuineness. Cheroots come principally from Manilla in the Philippine Islands. See TOBACCO.

CIGNANI, CARLO (1628-1719), was born at Bologna, where he studied under Battista Cairo, and afterwards under Albani. Though an intimate friend of the latter, and his most renowned disciple, Cignani was yet strongly and deeply influenced by the genius of Correggio, as a comparison of his drawing and of his manner of treating light and shadow with that of the painter of Parma will prove. His greatest work, moreover, the Assumption round the cupola of the church of the Madonna della Fuoca at Forlì, which occupied him some twenty years, and is in some respects one of the grandest and most remarkable works of art of the 17th century, is obviously inspired from the more renowned fresco of Antonio Leti in the cupola of the cathedral of Parma. Cignani had some of the defects of his masters; his elaborate finish, his audacious artificiality in the use of colour and in composition, mark the disciple of Albani; but he imparted to his work a more intellectual character than either of his models, and is not without other remarkable merits of his own. In private character Cignani was eminently amiable, unassuming, and generous. His success, however, made him many enemies; and the envy of some of these is said to have impelled them to deface certain of his works. He accepted none of the honours offered him by the duke of Parma and other princes, but lived and died an artist. On his removal to Forlì, where he died, the school he had founded at Bologna was fain in some sort to follow its master. His most famous pictures, in addition to the Assumption already cited, are—the Entry of Paul III. into Bologna; the François I. Touching for King's Evil; a Power of Love, painted under a fine ceiling by Agostino Carracci, on the walls of a room in the ducal palace at Parma; an Adam and Eve; a Temptation of Joseph, in the Florentine Palazzo Arnoldi; and a Sampson, in the Bolognese Palazzo Zambecconi.

CIGOLI, or CIVOLI, LUIGI CARDI DA (1559-1613), painter, architect, and poet, was born at Cigoli in Tuscany. Educated under Allori and Santo di Titi, he formed a peculiar style by the study at Florence of Michelangelo, Correggio, Andrea dal Sarto, and Pontormo. Assimilating more of the second of these masters than of all the others, he laboured for some years with success; but the attacks of his enemies, and intense application to the production of a wax model of certain anatomical preparations, induced an alienation of mind which affected him for three years. At the end of this period, he visited Lombardy, whence he returned to Florence. There he painted an *Ecce Homo*, in competition with Passignani and Caravaggio, which gained the prize. This work was afterwards taken by Bonaparte to the Louvre, and was restored to Florence in 1815. His other pictures of importance are—a St Peter Healing the Lame Man, in the church of St Peter's at Rome; a Conversion of St Paul, in that of San Paolo fuori le Mura, and a Story of Psyche, in fresco, at the Villa Borghese, in the same city; a Martyrdom of Stephen, which earned him

the name of the Florentine Correggio, a Venus and Satyr, and a Sacrifice of Isaac, at Florence; and a Stigmata of St Francis, at Foligno. Cigoli, who was made a knight of Malta at the request of Pope Paul III., was a good and solid draughtsman and the possessor of a rich and harmonious palette. He died, it is said, of grief at the failure of his last fresco (in the Roman church of Santa Maria Maggiore), which is rendered ridiculous by an abuse of perspective.

CILICIA, one of the most important provinces in the ancient division of Asia Minor, partly represented by the modern province of Adana. It comprised a large part of the southern coast of that country, extending from Pamphylia on the W. to Mount Amanus and the frontiers of Syria on the E. Throughout this extent it was bounded by the central ridge of Mount Taurus on the N. and by the Mediterranean on the S., so that its form was long and narrow, having a length in a direct line of nearly 270 English miles, while its breadth hardly anywhere exceeds 68 miles. It is divided by nature into two portions of a very different character;—the westernmost, known in ancient times as Cilicia Trachea or Tracheotis (the modern *Itsch Ili*), the Rugged Cilicia, a well-deserved epithet, as almost the whole region is occupied by a rugged mountain tract, formed by the branches and offshoots of Mount Taurus, which descend for the most part quite to the sea, while the interior is furrowed by deep and narrow valleys, leaving but scanty spaces fit for cultivation; the easternmost, on the contrary, called Cilicia Pedias, or “of the Plains,” presenting a broad expanse of level alluvial plains round which the lofty chain of Mount Taurus sweeps in a semicircle, forming a great mountain barrier that encloses it like a wall on the north and east, and separates it from the extensive upland plains of Lycaonia and Cappadocia.

Towards the west the limit between Cilicia and Pamphylia was an arbitrary one; the first place that is assigned by Strabo to Cilicia being Coracesium, a remarkable fortress on a projecting rocky headland, now called Alaja. The whole of this rugged mountain district indeed abounds in such projecting headlands, with small sheltered coves or harbours beneath them,—a character that has peculiarly fitted it, both in ancient and in modern times, for affording shelter to pirates. At the same time the difficulty of communication with the interior has prevented any of the towns on the coast from rising into important centres of trade. Notwithstanding these disadvantages there were in ancient times a considerable number of towns surrounding the coasts of Cilicia Trachea; among which may be mentioned (proceeding from W. to E.) Selinus, afterwards called Trajanopolis; Anemurium, near the promontory of the same name, which is the southernmost point of Asia Minor; Celenderis, still called Kelenderi, and used as a place of passage to the Island of Cyprus, though now a poor decayed village; and Seleucia, termed for distinction's sake Seleucia ad Calycadnum, from its position at the mouth of the river of that name. The Calycadnus, now known as the Gök Su, or “Blue River,” is indeed the only river of any importance in Cilicia Trachea, which it traverses nearly through its whole length, rising but a short distance from the sea, and flowing through a very winding valley, but with a general direction from W. to E. The only towns in the interior of this western part of Cilicia—Mout, which occupies the site of Claudiopolis, and Ermenek (Germanicopolis)—are situated in the valley of the Calycadnus, but they are places of little importance. The whole of this mountain tract is still covered with extensive forests, which in ancient times supplied timber for the navies of the Egyptian and Syrian kings, but are now almost entirely neglected.

The small river Lamus still called Lamas Su was con-

sidered by ancient geographers as constituting the limit between the two different provinces of Cilicia. From that point the mountains begin to recede from the coast, and leave a narrow strip of alluvial plain between them and the sea, which, beyond Soli to the east, opens out into the broad level expanse that gave name to Cilicia Pedias. The whole of this extensive plain, spreading out in some parts to more than 30 miles in width, is composed of alluvial deposits brought down by the rivers that intersect it. It has consequently a soil of great natural fertility, and would be capable of the richest cultivation; but it is for the most part a desolate uncultivated tract, in which the towns of Tarsus and Adana, with their surrounding gardens and fruit-trees, appear like oases in the midst of a desert. The surrounding plains are the abode in winter of numerous hordes of Turcomans and Kurds, who wander over them freely with their flocks and herds; while in summer they are rendered pestilential by the noxious miasmata produced by the marshes formed by the rivers that flow through them, so that at this season they are almost wholly uninhabited.

The plains of eastern Cilicia are traversed by three considerable rivers. Of these the Cydnus, which flows by Tarsus, though much the most celebrated in ancient times, is the least considerable. It is formed by the junction of three streams, all of which rise on the southern slope of the Bulghardagh, as the portion of Mount Taurus immediately north of Tarsus is called; and it has consequently but a short course from thence to the sea. But it is a deep and rapid stream, and was celebrated in antiquity for the coolness and clearness of its waters, a bath in which nearly cost Alexander the Great his life. The other two rivers, the Sarus and Pyramus, now known as the Sihun and Jihun, are much more important. Both of these take their rise in the upland plains of Cappadocia, beyond the range of Mount Taurus, through which they force their way to the Cilician plains below. On arriving in these they spread out into stagnant pools and marshes, through which the main streams are continually changing their courses, and cutting out for themselves new channels. These changes have caused much confusion in reconciling the accounts given by ancient writers with the present geography of the country. It appears certain that in ancient times the Sarus joined the Pyramus near its mouth, and both together fell into the sea immediately to the west of the small rocky headland called Karatasch Burn, near the site of the ancient city of Mallus; but at the present day the Sihun holds a separate course from Adana towards the south-west, flowing into the sea within a few miles of the mouth of the Cydnus, while the Jihun, as it approaches the sea, takes a sudden turn to the east, and flows into the Gulf of Scanderoon, between the site of Mallus and that of the ancient Agæ, now known as Aias.

Imperfectly as the plains of this part of Cilicia are cultivated, they produce cotton, wheat, barley, tobacco, and sesame in sufficient quantities to show of what they would be capable if properly drained and tilled; while the gardens around the towns of Tarsus and Adana are planted with palms, orange-trees, figs, and other fruit trees, which flourish with the utmost luxuriance. The climate in summer is intensely hot; and the plains at that season are burnt up and parched; but the abundant means of irrigation at hand, if properly utilized, would effectually remedy that disadvantage. These extensive plains are frequented by numbers of gazelles and jerboas, as well as bustards, francolins, and other game. Buffaloes also abound in the marshy tracts near the sea. In the ranges of Mount Taurus leopards, for which the province was noted in the time of Cicero, are still found not unfrequently.

Besides Tarsus and Adana, which retain their ancient names as well as sites, there were in ancient times several other important cities in the eastern portion of Cilicia. Among these Soli (afterwards called Pompeiopolis, from its having been repeopled and rebuilt by Pompey the Great) was situated at the western extremity of the great plain, a few miles west of Mersina, the modern port of Tarsus; while Mallus occupied the promontory now called Karatasch Burn, at its eastern extremity. In the interior were Mopsuestia (now Missis) on the River Pyramus, and Anazarbus (still called Ain Zarba) higher up the valley of the same river, which, under the Roman and Byzantine empires, became one of the most flourishing cities of Cilicia. In modern times Adana, which is the capital of the pashalic or vilayet that comprises all Cilicia, is much the most important town in the province, and is estimated to contain 18,000 inhabitants, while Tarsus does not possess more than 7000 or 8000.

Mersina, the port of Tarsus, though still but a small place, is gradually becoming the seat of a considerable trade, being the only outlet for the productions of the interior.

Cilicia is bounded on the east (as already stated) by Mount Amanus, one of the most considerable of the branches or offshoots of Mount Taurus. But the range to which this name was given by ancient geographers is in fact a double one, which forks into two branches about midway between Marasch and the sea, and sends down two arms,—the one in a south-west direction, ending in the Cilician plain before reaching the sea; the other running nearly due south till it curves round the Gulf of Scanderoon, and ends in the lofty mountain promontory of Ras el Khanzin, the Rossicus Scopulus of Ptolemy. Between these two ranges lies the deep bay or inlet called in ancient times the Gulf of Issus, and now known as the Gulf of Scanderoon, from the seaport of that name; this is above 50 miles long and about 20 miles wide at its entrance. On its shores were situated in ancient times the towns of Agæ (now Aias) on the western side, and Issus, Myriandrus, and Rhosus on the eastern; but after the foundation of Alexandria on the same side of the gulf, these last towns sank into comparative insignificance. Alexandria still survives under the name of Alexandretta, or Iskenderun (commonly corrupted into Scanderoon) as it is called by the Turks, and is a place of considerable trade.

The southern branch of Mount Amanus unquestionably constitutes the natural limit of Cilicia, and hence Strabo correctly assigns all the towns north of the promontory of Rhosus to Cilicia, and those on the other side of it to Pieria in Syria. But for political purposes the limit was fixed at a point some miles north of Alexandria, where there was a fortified pass called the Syrian Gates. The name of Pylæ Syriæ or Syrian Gates was also given, however, to the mountain pass across the range of Mount Amanus, now known as the Pass of Beilan, which has in all ages formed the direct route from Asia Minor into Syria. It was to its command of these passes, as well as that called the Cilician Gates on the north, leading directly across the chain of Mount Taurus, that Cilicia owed much of its importance in a military and political point of view.

History.—Though the boundaries of Cilicia, as above defined, were generally recognized in ancient times, the people of that name appears to have been in early days much more widely spread, and occupied a considerable extent of country north of Mount Taurus, as well as in the mountain regions extending towards Armenia. Thus Herodotus extends the name of Cilicia to the Euphrates, and must have comprised a large portion of Cappadocia under that appellation. There can be no doubt that the Cilicians, as well as the Cappadocians, were of Semitic or Aramæic descent, and belonged to the same stock as the

Syria, from whom, however, they were from a very early period politically separate. Cilicia appears as an independent kingdom under a monarch named Syennesis, in the time of Alyattes, king of Lydia, 610 B.C. (Herod., i. 74), and even after it passed under the Persian empire it continued to be governed by its own kings, all of whom appear to have borne the name, or rather appellation, of Syennesis. From its position Cilicia attracted much attention during the expedition of the younger Cyrus (401 B.C.), as well as in that of Alexander, whose first great victory over the Persian king was fought at Issus, in the narrow pass between Mount Amanus and the sea (333 B.C.)

Cilicia now passed under the Macedonian rule, and was subject to the Seleucidan kings of Syria. But owing to the feeble and unsettled character of the government under the later monarchs of that dynasty, the western portion of the country, or Cilicia Trachea, became the stronghold of numerous pirates, who carried their depredations to such an extent as to compel the Romans to wage regular war upon them. It was not till 66 B.C. that they were finally subdued by Pompey, and Cilicia was regularly constituted as a Roman province, which, however, comprised, in addition to Cilicia properly so called, Pamphylia, Pisidia, Isauria, Lycaonia, and a large part of Phrygia. This was the extent of the province when it was governed by Cicero as proconsul (51–50 B.C.), who obtained some successes against the mountain tribes of Mount Amanus, of which he was immoderately proud.

Under the Roman empire Cilicia was again reduced to its natural limits, but did not receive its final constitution as a province till the time of Vespasian. It retained its condition as such under the Roman and Byzantine empires till it fell, with the rest of Asia Minor, under the Seljukian Turks in the 11th century. After the break-up of the Turkish monarchy Cilicia was seized by the Armenians, who from the mountain districts of Mount Amanus and Taurus gradually made themselves masters of the whole country, of which they retained possession, notwithstanding frequent struggles with the Lusignans—the lords of the neighbouring island of Cyprus—till both were expelled by the Ottoman Turks in the 15th century. From that period Cilicia has continued to form part of the Turkish empire, with the exception of the brief interval from 1833 to 1840, during which it was annexed to his dominions by Mehemet Ali, viceroy of Egypt; but after the defeat of that ruler by the allied powers he was compelled to evacuate Cilicia, which was reunited as before with the Ottoman empire.

The ancient geography of Cilicia is well described by Strabo (bk. xiv. ch. 5). Its coasts were first visited and were described in detail by Captain Beaufort in his *Karamania*, 8vo, Lond., 1818. A more complete examination of the whole country was made by M. Langlois in 1852–58 (*Voyage dans la Cilicie et dans les Montagnes du Taurus*, 8vo, Paris, 1861). (E. H. B.)

CIMABUE, GIOVANNI (1240 to about 1302), painter, was born in Florence of a creditable family, which seems to have borne the name of Gualtieri, as well as that of Cimabue (Bullhead). He took to the arts of design by natural inclination, and sought the society of men of learning and accomplishment. Vasari, the historian of Italian painting, zealous for his own native state of Florence, has left us the generally current account of Cimabue, which later researches have to a great extent invalidated. We cannot now accept his assertion that art, extinct in Italy, was revived solely by Cimabue, after he had received some training from Grecian artists invited by the Florentine Government to paint the chapel of the Gondi in the church of S. Maria Novella; for native Italian art was not then a nullity, and this church was only begun when Cimabue was already forty years old. Even Lanzi's qualifying statement that Grecian artists, although they did not paint the chapel of the Gondi, did execute rude decorations in a chapel below

the existing church, and may thus have inspired Cimabue, makes little difference in the main facts. What we find as the general upshot is that some Italian painters preceded Cimabue—particularly Guido of Siena and Giunta of Pisa; that he worked on much the same principle as they, and to a like result; but that he was nevertheless the most advanced master of his time, and, by his own works, and the training which he imparted to his mighty pupil Giotto, he left the art far more formed and more capable of growth than he found it. The undoubted admiration of his contemporaries would alone demonstrate the conspicuous position which he held, and deserved to hold. For the chapel of the Rucellai in S. Maria Novella he painted in tempera a colossal Madonna and Child with Angels, the largest altarpiece produced up to that date; before its removal from the studio it was visited with admiration by Charles of Anjou, with a host of eminent men and gentle ladies, and it was carried to the church in a festive procession of the people and trumpeters. Cimabue was at this time living in the Borgo Allegri, then outside the walls of Florence; the legend that the name Allegri (Joyous) was bestowed on the locality in consequence of this striking, popular display is more attractive than accurate, for the name existed already. Of this celebrated picture, one of the great landmarks of modern and sacred art, some details may be here given, which we condense from the *History of Painting in Italy* by Messrs Crowe and Cavalcaselle. "The Virgin in a red tunic and blue mantle, with her feet resting on an open-worked stool, is sitting on a chair hung with a white drapery flowered in gold and blue, and carried by six angels kneeling in threes above each other. A delicately engraved nimbus surrounds her head, and that of the infant Saviour on her lap, who is dressed in a white tunic, and purple mantle shot with gold. A dark-coloured frame surrounds the gabled square of the picture, delicately traced with an ornament interrupted at intervals by thirty medallions on gold ground, each of which contains the half-figure of a saint. In the face of the Madonna is a soft and melancholy expression; in the form of the infant, a certain freshness, animation, and natural proportion; in the group, affection—but too rare at this period. There is sentiment in the attitudes of the angels, energetic mien in some prophets, comparative clearness and soft harmony in the colours. A certain loss of balance is caused by the overweight of the head in the Virgin as compared with the slightness of her frame. The features are the old ones of the 13th century; only softened, as regards the expression of the eye, by an exaggeration of elliptical form in the iris, and closeness of the curves of the lids. In the angels, the absence of all true notions of composition may be considered striking; yet their movements are more natural and pleasing than hitherto. One indeed, to the spectator's right of the Virgin, combines more tender reverence in its glance than any that had yet been produced. Cimabue gave to the flesh-tints a clear and carefully fused colour, and imparted to the forms some of the rotundity which they had lost. With him vanished the sharp contrasts of hard lights, half-tones, and shadows." In a general way, it may be said that Cimabue showed himself forcible in his paintings, as especially in heads of aged or strongly characterized men; and, if the then existing development of art had allowed of this, he might have had it in him to express the beautiful as well. He, according to Vasari, was the first painter who wrote words upon his paintings,—as, for instance, round the head of Christ in a picture of the Crucifixion, the words addressed to Mary, *Mulier ecce filius tuus*.

Other paintings still extant by this master are the following:—In the Academy of Arts in Florence, a Madonna and Child, with eight angels, and some prophets in niches,—better than the Rucellai picture in composition and study

of nature, but more archaic in type, and the colour now spoiled (this work was painted for the Badia of S. Trinita, Florence); in the National Gallery, London, a Madonna and Child with Angels, which came from the Ugo Baldi collection, and had probably once been in the church of S. Croce, Florence; in the Louvre, a Madonna and Child, with twenty-six medallions in the frame, originally in the church of S. Francesco, Pisa. In the lower church of the Basilica of S. Francesco at Assisi, Cimabue, succeeding Giunta da Pisa, probably adorned the south transept,—painting a colossal Virgin and Child between four Angels, above the altar of the Conception, and a large figure of St Francis. In the upper church, north transept, he has the Saviour Enthroned and some Angels; and, on the central ceiling of the transept, the Four Evangelists with Angels. Many other works in both the lower and the upper church have been ascribed to Cimabue, but with very scanty evidence; even the above-named can be assigned to him only as matter of probability. Numerous others which he indisputably did paint have perished,—for instance, a series (earlier in date than the Rucellai picture) in the Carmine church at Padua, which were destroyed by a fire.

From Assisi Cimabue returned to Florence. In the closing years of his life he was appointed capomaestro of the mosaics of the Cathedral of Pisa, and was afterwards, hardly a year before his death, joined with Arnolfo di Lapo as architect for the Cathedral of Florence. In Pisa he executed a Majesty in the apse,—Christ in glory between the Virgin and John the Evangelist, a mosaic, now much damaged, which stamps him as the leading artist of his time in that material. This was probably the last work that he produced.

The debt which art owes to Cimabue is not limited to his own performances. He was the master of Giotto, whom he found a shepherd boy of ten, in the pastures of Vespiignano, drawing with a coal on a slate the figure of a lamb. Cimabue took him to Florence, and instructed him in the art; and after his death Giotto occupied a house which had belonged to his master in the Via del Cocomero. Another painter with whom Cimabue is said to have been intimate was Gaddo Gaddi.

It had always been supposed that the bodily semblance of Cimabue is preserved to us in a portrait-figure by Simon Memmi painted in the Cappella degli Spagnuoli, in S. Maria Novella,—a thin hooded face in profile, with small beard, reddish and pointed. This is now extremely dubious. Simone Martini of Siena (commonly called Memmi) was born in 1288, and would therefore have been about nineteen years of age when Cimabue died; it is not certain that he painted the work in question, or that the figure represents Cimabue. The Florentine master is spoken of by a nearly contemporary commentator on Dante (the so-called Anonimo, who wrote about 1334) as *arrogante e disdegnoso*; so “arrogant and passionate” that, if any one, or if he himself, found a fault in any work of his, however cherished till then, he would abandon it in disgust. This, however, to a modern mind, looks more like an aspiring and fastidious desire for perfection than any such form of “arrogance and passion” as blemishes a man’s character. Giovanni Cimabue was buried in the cathedral of Florence, S. Maria del Fiore, with an epitaph written by one of the Nini:—

“Credidit ut Cimabos picturæ castra tenere
Sic tenuit vivens; nunc tenet astra poli.

Here we recognize distinctly the suggestion of the first clause in the famous triplet of Dante:

“Credette Cimabue nella pittura
Tener lo campo; ed ora ha Giotto il grido,
Sì che la fama di colui s’oscura.” (W. M. R.)

CIMAROSA, DOMENICO (1749–1801), an Italian musical composer, was born at Aversa, in the kingdom of Naples. His parents were poor but anxious to give their son a good education; and after removing to Naples they sent him to a free school connected with one of the monasteries of that city. The organist of the monastery, Padre Polcano, was struck with the boy’s intellect, and voluntarily instructed him in the elements of music, as also in the ancient and modern literature of his country. To the influence of the same worthy monk Cimarosa owed a free scholarship at the musical institute of Santa Maria di Loreto, where he remained for eleven years, studying chiefly the great masters of the old Italian school. Piccini, Sacchini, and other musicians of repute are mentioned amongst his teachers. At the age of twenty-three Cimarosa entered the lists as a composer with a comic opera called *Le Stravaganze del Conte*, first performed at the theatre dei Fiorentini at Naples in 1772. The work met with approval, and was followed in the same year by *Le Pazzie di Stellidanza e di Zoroastro*, a farce full of humour and eccentricity. This work also was successful, and the fame of the young composer began to spread all over Italy. In 1774 he was invited to Rome to write an opera for the stagione of that year; and he there produced another comic opera called *L’Italiana in Londra*.

The next thirteen years of Cimarosa’s life are not marked by any event worth mentioning. He wrote a number of operas for the various theatres of Italy, residing temporarily in Rome, in Naples, or wherever else his vocation as a conductor of his works happened to call him. From 1784–1787 he lived at Florence, writing exclusively for the theatre of that city. The productions of this period of his life are very numerous, consisting of operas, both comic and serious, cantatas, and various sacred compositions. The following works may be mentioned amongst many others:—*Caio Mario*; the three Biblical operas, *Assalonne*, *La Giuditta*, and *Il Sacrificio d’Abramo*; also *Il Convito di Pietra*; and *La Ballerina Amante*, a pretty comic opera first performed at Venice with enormous success. None of these works have survived, and their individual merits hardly give us cause to regret their loss. Excessive productiveness of this kind cannot but become mechanical. But this is no fault of Cimarosa’s. The enormous demand of the Italian stage has become fatal to the genius of some of the most gifted composers of that country both in the last and in the present century. Looking at Cimarosa’s works collectively, it may be said that they represent a style of considerable individuality and a perfect mastery of dramatic effect, so far at least as the vocal part is concerned. Cimarosa’s orchestra, like that of most Italian composers, is somewhat meagre, but here also the comparatively primitive stage of orchestration at the time he wrote ought to be taken into account. Cimarosa seldom succeeds in the highest walks of his art. His comic operas are infinitely superior to those in which a tragic subject compelled him to attempt dramatic pathos. As far as grace and melodious charm are concerned, Cimarosa was surpassed by none of his contemporaries, not even by Pacsiello, with whom he shared for a long time the leadership of the Italian school.

In 1787 Cimarosa went to St Petersburg by invitation of the Empress Catherine II. At her court he remained four years and wrote an enormous number of compositions, mostly of the nature of *pièces d’occasion*. Of most of these not even the names are on record. In 1792 Cimarosa left St Petersburg, the northern climate of Russia proving hurtful to the native of Italy. By invitation of the Emperor Leopold II. he went to Vienna, and it was there that he produced the masterpiece on which his claim to immortality must mainly rest. *Il Matrimonio Segreto* ranks amongst the highest achievements

of light operatic music. In Italy it is surpassed by Rossini's *Le Barbieri* alone. After the lapse of more than eighty years it evinces its vitality at theatres and concert halls wherever the whole opera or detached pieces are heard. Its humour is founded on human nature itself, and is therefore independent of local and temporal conditions. 1793 Cimarosa returned to Naples where *The Secret Marriage* and other works were received with great applause. Amongst the works belonging to his last stay in Naples, the charming opera *Le Astuzie Femili* may be mentioned. This period of his life is said to have been embittered by the intrigues of envious and hostile persons, amongst whom one is sorry to meet with Paesiello his old rival. During the occupation of Naples by the troops of the French Republic, Cimarosa joined the liberal party, and on the return of the Bourbons, was like many of his political friends condemned to death. By the intercession of influential admirers his sentence was commuted into banishment, and the composer left Naples with the intention of returning to St Petersburg. But his health was broken, and after much suffering he died at Venice in 1801 of inflammation of the intestines. The nature of his disease led to the rumour of his having been poisoned by his enemies, which, however, a formal inquest proved to be unfounded. He worked till the last moment of his life, and one of his operas, *Artemisia*, remained unfinished at his death.

(F. H.)

CIMBRI, or CIMBRIANS (Greek, *Κίμβροι*), an ancient nation of unknown affinity, which was one of the most formidable enemies of the Roman power, and has proved one of the most difficult subjects for the historical investigator. About 113 B.C., in company with the Teutones, they defeated the consul Papirius Carbo near Noreia in Styria; and in 109 B.C. they routed another army under the consul Silanus. By the latter success they opened their way to Gallia Narbonensis; and in 105 B.C. they began to threaten the Roman territory itself. They were joined by the Gauls from all quarters; and the Roman army sent against them under Cæpio and Manlius was almost exterminated. Only ten men with two generals are said to have escaped; and, in accordance with a vow which they had made before the battle, the conquerors destroyed all the spoil. The gold and silver they flung into the Rhone; they drowned the horses, and put all the prisoners to death. The Romans were thrown into consternation; but a new army was raised with all expedition, and the command was bestowed on Marius, who at that time enjoyed a high reputation on account of his victories in Africa. The Cimbric were approaching over the eastern Alps, and the Teutones and the other allies over the western. He first attacked and defeated the latter division at Aquæ Sextiæ, and then returned to face the Cimbric, who had meanwhile seen the backs of the soldiers of Catullus and Sylla. The vast host attacked the Romans with the utmost fury in the Campi Raudii near Yercellæ (101 B.C.); but, unaccustomed to the heats of Italy, they soon began to yield and were easily overcome. They had put it out of their own power to fly; for, that they might the better keep their ranks, they had, like true barbarians, tied themselves together. It is said that 120,000 were killed on the field of battle and 60,000 were taken prisoners. The people of the Italian districts known as the Sette Comuni in Vicenza and the Tredecim Comuni in Verona have a belief that they are descended from the remnants of the Cimbric army, but it is much more probable that they are the posterity of German settlers introduced by the bishops of Trent. Be this at it may, it is certain that after the victory of Marius the Cimbric were no longer of much importance as antagonists of Rome.

Two great questions have claimed the attention of the

historian in regard to this people; but to neither of them has anything like a definite answer been obtained. The first has to do with their local habitation, and the second with their ethnographical connection. Cæsar, Sallust, Cicero, and Diodorus Siculus seem to have regarded them as Gauls, and assign them a position within the Gallic area; whereas Strabo, Velleius Paterculus, and Tacitus treat them as Germans and locate them beyond the Rhine. The modern district of Jutland was familiarly known as the Cimbric Chersonese, and mention is made in the *Mon. Ancyranum* of an embassy from the Cimbric peninsula to Augustus. Beyond this our ancient authorities do not carry us, and modern discussion has done little but maintain a continual oscillation of opinion. That they were closely connected with the Teutones is evident, and that the Teutones at least were Germanic was for a time regarded as certain; but more elaborate investigation shows that even this is open to dispute, and can afford no support as an argument. The ancient identification of the people with the Cimmerici and the modern identification with the Cymry are well-nigh exploded, and probably owe their origin to mere similarity of names.

See Cellarius *De Cimbris et Teutonibus*; Joh. von Müller, *Bellum Cimbricum*, 1776; Schiern, *De Cimbrorum Origine et Migrationibus*, 1842; Latham, Appendix to edition of the *Germania* of Tacitus; and a paper read by Canon Rawlinson before the Anthropological Institute, May 1876.

CIMMERII, or Cimmericians, a nomadic people of antiquity who dwelt near the Palus Mæotis or Sea of Azof, in the Tauric Chersonese or Crimea, and in the Asiatic Sarmatia or the country of the lower Volga. They are said to have desolated Asia Minor prior to the time of Homer; and in their second invasion they penetrated as far westward as Æolis and Ionia, captured Sardis the capital of Lydia in the reign of Ardys, and continued in possession till they were driven out of Asia by Alyattes, the grandson of that sovereign. The fears of the Ionians are commemorated in the elegiac fragments of Callinus.

The name Cimmerici is also given to a mythical people, represented by Homer as inhabiting a remote region of mist and darkness, but localized by later writers near Lake Avernus, or in the Tauric Chersonesus, or in Spain. Their country was fabled to be so gloomy, that the expression "Cimmerician darkness" became proverbial; and Homer, according to Plutarch, drew his images of hell and Pluto from the dismal region they inhabited.

CIMON, an Athenian statesman, was the son of Miltiades. His father died in disgrace, leaving the fine which had been imposed on him unpaid. After a time it was paid by Cimon, who, according to one account, also took his place in prison. Distinguished by military ability, by a gentle and agreeable temper, and by the most open-handed liberality, Cimon gradually rose to the front rank among his contemporaries. His victorious attacks on the Persians, his ostracism, his request for leave to fight at Tanagra, and his recall on the motion of his rival Pericles are matters of history. (See GREECE.) He died while besieging Citium, 449 B.C.

CINCHONA, the generic name of a number of trees belonging to the Natural Order *Rubiaceæ*, but which, with a few allied genera, have been by some authorities established as a distinct order under the name *Cinchonaceæ*. Botanically the genus includes trees of varying size, some reaching an altitude of 80 feet and upwards, with evergreen leaves and deciduous stipules. The flowers are arranged in panicles, white or pinkish in colour, with a pleasant odour, the calyx being 5-toothed superior, and the corolla tubular, 5-lobed, and fringed at the margin. The stamens are 5, almost concealed by the tubular corolla, and the ovary terminates in a fleshy disk. The fruit is

an ovoid, or sub-cylindrical capsule, splitting from the base, and held together at the apex. The numerous seeds are flat and winged all round. According to the enumeration of Bentham and Hooker, 36 species have been distinguished, but of these not more than about a dozen have been economically utilized. The plants are natives of the western mountainous regions of South America, their geographical range extending from 10° N. to 22° S. lat.; and they flourish generally at an elevation of from 5000 to 8000 feet above sea level, although some have been noted growing as high up as 11,000 feet, and others have been found down to 2600 feet.

The trees are valued solely on account of their bark, which as cinchona bark, Jesuits' bark, or Peruvian bark is, and long has been, the source of the most valuable tonic and febrifuge medicines that have ever been discovered. The earliest well-authenticated instance of the medicinal use of cinchona bark is found in the year 1638, when the countess of Chinchon, the wife of the governor of Peru, was cured of an attack of fever by its administration. The medicine was recommended in her case by the corregidor of Loxa, who was himself said to have practically experienced its supreme virtues eight years earlier. The name *Cinchona* is due to the connection of the countess of Chinchon with the introduction of the remedy; and it is argued by Mr Markham and others that therefore the term should be written *Chinchona*. A knowledge of the virtues of the bark was disseminated throughout Europe by members of the Jesuit brotherhood, whence it also became generally known as Jesuits' bark. According to another account, this name arose from its value having been first discovered to a Jesuit missionary who, when prostrate with fever, was cured by the administration of the bark by a South American Indian.

The procuring of the bark in the dense forests of New Granada, Ecuador, Peru, and Bolivia is a work of great toil and hardship to the Indian *Cascarilleros* or *Cascadores* engaged in the pursuit. The trees grow isolated or in small clumps which have to be searched out by the experienced *Cascarillero*, who laboriously cuts his way through the dense forest to the spot where he discovers a tree. Having freed the stem from adhering parasites and twining plants, he proceeds, by beating and cutting oblong pieces, to detach the stem bark as far as is within his reach. The tree is then felled, and the entire bark of stem and branches secured. The bark of the smaller branches, as it dries, curls up, forming "quills," the thicker masses from the stems constituting the "flat" bark of commerce. The drying, packing, and transport of the bark are all operations of a laborious description conducted under most disadvantageous conditions.

The enormous medicinal consumption of these barks, and the wasteful and reckless manner of procuring them in America long ago, caused serious and well-grounded apprehension that the native forests would quickly become exhausted. The attention of European communities was early directed to the necessity of securing steady and permanent supplies by introducing the more valuable species into localities likely to be favourable to their cultivation. The first actual attempt to rear plants was made in Algeria in 1849; but the effort was not successful. In 1854 the Dutch Government seriously undertook the task of introducing the trees into the island of Java, and an expedition for that purpose was fitted out on an adequate scale. Several hundreds of young trees were obtained, of which a small proportion was successfully landed and planted in Java; and as the result of great attention the cultivation of cinchona plantations in that island is now highly prosperous and promising. The desirability of introducing cinchonas into the East Indies was urged in a memorial addressed to the East India Company between 1838 and

1842 by Sir Robert Christison and backed by Dr Forbes Royle; but no active step was taken till 1852, when, again on the motion of Dr Royle, some efforts to obtain plants were made through consular agents. In the end the question was seriously taken up, and Mr Clements L. Markham was appointed to head an expedition to obtain young trees from South America and convey them to India. In 1860 under Mr Markham's superintendence a first consignment of plants was shipped from Islay in Peru, and planted in a favourable situation in the Neilgherry Hills. For several years subsequently additional supplies of plants of various species were obtained from different regions of South America, and some were also procured from the Dutch plantations in Java. Now the culture has spread over a wide area in Southern India, in Ceylon, on the slopes of the Himalayas, and in British Burmah; and recently plantations which already present a promising appearance have been established in Mauritius. Exclusive of private enterprise, the trees in the Government plantations in India now amount to several millions, and in the Neilgherry plantations they have attained a height of from 20 to 30 feet. The species introduced in the East are principally *Cinchona officinalis*, *C. Calisaya*, *C. succirubra*, *C. pitayensis*, and *C. Pahudiana*, some agreeing with certain soils and climates better than others, while the yield of alkaloids and the relative proportions of the different alkaloids differ in each species.

In the original memorial above alluded to, presented to the East India Board by Sir R. Christison, he, according to a communication to the Edinburgh Botanical Society (*Trans.*, vol. xi. p. 111), pointed out that "the transplantation, if successful, would become remunerative. For although it would be a very arduous undertaking were the bark to be collected only by cutting down large trees, which do not attain sufficient growth in less than twenty or twenty-five years, being the only American method, the case would be very different were it shown that bark could be profitably taken from trees very much younger, and without either destroying or even injuring them. Now, I had ascertained," continues Sir Robert, "by chemical analysis that—contrary to the analysis of some French chemists—sulphate of quinia was to be obtained from fine quills of yellow bark taken from twigs two or three years old in as large proportion as from the large flat bark from the trunks and great branches. Consequently, as it appeared, from the facility with which the trees grew in their native forests by suckers from the old roots, when the trunks are properly cut down, that young twigs might safely be cut from them at an early period, it followed that the collection of cinchona bark might be conducted in the same way as that of cinnamon bark at Colombo, where only twigs of one or two years' growth are cut for the purpose, and without injuring the trees. . . . This doctrine has proved true, so true that it has been found suitable in India even to treat the cinchona plants like osier beds in England, by cutting them down altogether when young, thus using only twigs for the bark, and trusting to suckers for renewing the growth of the plants; and that the result has been the introduction of fine bark from India in such bulk as to have been sold by auction in the London market only nine years after the first cinchona plants were transplanted to India." Mr. W. G. M'IVOR, to whom the success of Indian plantations is largely due, introduced a system of mossing the plants, which consists in wrapping the growing stems in a layer of damp moss, whereby the yield of alkaloid is increased, and the growth of renewed bark promoted. It has been pointed out by Dr De Vrij, and the observation is confirmed by Mr D. Howard, that renewed bark contains the alkaloids not only in different proportions from the

original bark, but that it even develops principles altogether absent in the natural bark.

The official barks of the *British Pharmacopœia* are three in number:—(1) the pale or Loxa bark (*cortex cinchonæ pallidæ*) yielded by *Cinchona officinalis*; (2) the yellow, royal, or Calisaya bark (*cortex cinchonæ flavæ*), the produce of *C. Calisaya*; and (3) red bark (*cortex cinchonæ rubra*) derived from *C. succirubra*. These are the sources of the tinctures, extracts, and other preparations of pharmacy, while, in common with several others, they also yield the alkaloids which now constitute the chief form in which the active principles of the barks are administered in medicine. Among the other barks used as sources of quinine, &c., the principal are—the ashy crown bark, *C. macrocalyx*; Carthagena bark, *C. lanceolata*; Columbian bark, *C. lancifolia*; Pitayo bark, *C. pitayensis*; grey or Lima bark, *C. micrantha*, *C. nitida*, and *C. peruviana*.

Leaving out of view certain alkaloids unimportant as yet in a commercial view, and found very sparingly in particular barks, the four primary alkaloids yielded by cinchona barks are quinine, quinidine, cinchonine, and cinchonidine. Certain secondary alkaloids are developed by chemical treatment of these primary principles, and an amorphous substance precipitated from the mother liquors of the quinine manufactured under the name of quinoidine is in considerable medicinal use. Much confusion has arisen in the terminology of the alkaloids by the application of the same name to chemically distinct principles, and by the converse description of the same alkaloids or products under different names. It is found that different barks derived from the same species vary greatly in richness in alkaloids, and that equally great fluctuations occur in the relative proportions of the various principles they yield. When a comparison is instituted among the barks of different species the variations are of course even more marked,—some barks having been found to yield as high as 13 per cent. of alkaloids, while in others not a trace has been obtained. Certain barks, however, are known as a rule to contain quinine in largest proportion, and in others cinchonine is the most abundant principle. Generally quinine is the most constant and abundant constituent, after which cinchonine, then cinchonidine, while quinidine is the rarest both in proportion and in frequency of occurrence of the principal alkaloids.

The preparation of cinchona bark most extensively employed in medicine is the alkaloid quinine in the form of a sulphate. As the barks from which it is extracted contain besides proportions of one or other of the principal alkaloids above enumerated, a demand for any of them might be supplied without interfering with the production of quinine, and as they also have been proved to be potent febrifuges their non-utilization is a regrettable waste. From the record of an extensive series of experiments instituted by the Indian Government it is demonstrated that quinidine is even more active than quinine, and it forms the principal constituent of a variety of calisaya bark in extensive cultivation in Java. Cinchonidine is only a little less powerful in its febrifugal effect than quinine, and it is abundantly formed by the red bark cultivated in British India. Cinchonine, although the least potent, is an abundant principle, and still a highly valuable and efficient remedial agent.

(J. PA.)

CINCINNATI, an important city of the United States, situated in the S.W. part of Ohio, on the N. bank of the Ohio River, in 39° 6' N. lat. and 81° 26' W. long. It is the capital of Hamilton county, and in size is the first city in the State, while, according to the Federal census of 1870, it is the eighth in the United States. It was first settled in 1788 by persons from New Jersey, and is said to have been named in honour of the Cincinnati Society of officers

of the Revolutionary war. It was incorporated as a city in 1814, and soon acquired a commercial importance which has steadily increased. In 1800 Cincinnati contained but 750 inhabitants. The population amounted to 9602 in 1820, 46,338 in 1840, 115,436 in 1850, 161,044 in 1860, and 216,239 in 1870. Of the total population in 1870, 79,612 were foreigners, including 49,448 born in Germany, 18,624 in Ireland, 3526 in England, and 2093 in France. The city is chiefly built upon two terraces or plateaus, the first 60 and the second 112 feet above the river. Beyond these rises an amphitheatre of hills from 400 to 450 feet high, from which may be obtained a magnificent view of the valley of the Ohio and the surrounding country. On the opposite bank of the river, in the State of Kentucky, are Covington, which had 24,505 inhabitants in 1870, and Newport, which had 15,087. Communication between these cities and Cincinnati is afforded by two bridges and three steam ferries. The wire suspension bridge, which is 1057 feet long between the towers (or, including the approaches, 2252 feet), with a height of 100 feet above low water, was completed in 1867 at a cost of nearly \$2,000,000. It has a double waggon road, and two ways for pedestrians. Further up the river is a wrought iron railroad bridge built upon piers; besides a railway track, it has waggon and foot ways. Cincinnati covers an area of 24 square miles, extending along the river about 10 miles, with an average width of 3 miles. The most important part of the city, however, is comprised within a distance of 2½ miles along the river. The corporate limits have been much extended in recent years by the annexation of numerous villages, the most important being Columbia, Walnut Hills, Mount Auburn, and Cumminsville. In these, which still retain their former names, are seen the most costly residences and villas, with ornamental grounds embracing from 5 to 80 acres each. The city is also noted for the beauty of its suburbs and its surrounding scenery. The streets, which generally cross one another at right angles, are usually from 1½ to 2½ miles long, and from 50 to 100 feet wide. Many of them are lined with trees. Brick is chiefly used for buildings, with a greyish buff freestone for fronts. Business buildings are usually five and often six stories high. Cincinnati is well supplied with public parks, the largest of which, Eden, is situated on a hill in the eastern part of the city, and contains 216 acres. In Burnet Woods, recently purchased, there are 170 acres, mostly forest, on the hill north of the city. Centrally situated in the city are Washington, Lincoln, Hopkins, and the City parks, which together contain about 25 acres. One of the most attractive objects in the city is the Tyler Davidson bronze fountain which was unveiled in 1871. It was presented to the city by Mr Henry Probasco, a wealthy citizen, who named it after the late Mr Tyler Davidson, the originator of the proposal. Its cost was nearly \$200,000. The design embraces fifteen bronze figures, all cast at Munich, the chief one representing a female with outstretched arms, from whose fingers the water falls in fine spray. This is the surmounting figure, and reaches a height of 40 feet above the ground. Among the most notable buildings is that of the Federal Government, built of sawed freestone in the Roman Corinthian style, with a porch of six columns; it is three stories high, with a length of 150 feet and a width of 80 feet. The county court-house, in the same style of architecture, is 175 feet square and three stories high, and has a porch with six Corinthian stone columns. The brick buildings for the city offices are 205 feet long and 52 feet wide. The city workhouse, 3½ miles from the heart of the city, is a brick structure, 515 feet long and 55 feet wide, erected at a cost, including 26 acres of land, of \$650,000. It

has room for 700 prisoners. The Cincinnati hospital, comprising eight buildings arranged around a central court and connected by corridors, occupies a square of 4 acres. It cost more than \$1,000,000, and will accommodate 700 patients. The Masonic Temple, built in the Byzantine style, 195 feet long and 100 feet wide, is four stories high, and has two towers 140 feet, and a spire 180 feet high. Other noticeable structures are Pike's Opera House, 170 by 134 feet, and five stories high, the Public Library, St Xavier's College, the Wesleyan Female College, and the Hughes High School. The most imposing church edifices are St Peter's Roman Catholic Cathedral, built in

pure Grecian style, 200 by 80 feet, with a stone spire rising to a height of 224 feet; St Paul's Church (Methodist), with a spire 200 feet high; the First Presbyterian Church, with an immense tower surmounted by a spire 270 feet high; St John's Episcopal Church; and two large and attractive Hebrew temples.

Cincinnati is one of the most important commercial and manufacturing centres of the West. The six railroads entering the city are used by twelve companies, and besides these two lines terminate at Covington on the opposite side of the river. About 300 passenger and freight trains arrive and leave daily on these roads. For their use are

Plan of Cincinnati.

four depôts near the river in different parts of the city. Communication with different parts of the city and with the suburbs is afforded by fourteen lines of street railroad, with about 50 miles of track, and by numerous lines of omnibuses and stages. The top of the adjacent hills is reached by an inclined steam passenger-railway. The position of the city on the Ohio River gives it water communication with the extensive river system of the Mississippi valley; while it is connected with Lake Erie by the Miami Canal, whose northern terminus is at Toledo, Ohio. The Miami is connected by a branch with the Wabash and Erie Canal, the largest in the United States (467 miles), which extends from Toledo to Evansville, Indiana, on the Ohio river. The average yearly number of steamers and barges running between Cincinnati and other ports during the ten years ending with August 1875 was 338; the yearly number of arrivals of steamers during this period was 2713, and of departures 2680. The large steamers of the Mississippi river are enabled to reach Cincinnati by means of the canal around the falls of the Ohio at Louisville, Kentucky, which was opened in 1872. About three-fourths of the commerce of the city is by railroad and canal, and the remainder by river transportation. The extent of the entire commerce is indicated by the value of imports, which during the ten years ending in 1875 averaged \$314,528,009 a year, and of exports, which averaged \$201,236,066.

Cincinnati is one of those interior ports to which, under the Act of Congress passed in 1870, foreign merchandise may be transported without appraisement and payment of duties at the port of first arrival. The value of such imports to this city during the year ending June 30, 1875, was \$566,989. The total value of the products of manufacturing industry has increased from \$46,995,062 in 1860 to \$127,459,021 in 1870 and \$144,207,371 in 1874. The details for the last-mentioned years are as follows:—

Industries.	1870.		1874.	
	Hands Employed.	Value of Products.	Hands Employed.	Value of Products.
Iron	10,723	\$20,804,263	8,713	\$17,129,224
Other metals	1,809	3,873,356	2,147	4,871,362
Wood	7,597	12,699,163	7,977	13,776,066
Leather	4,647	7,227,274	4,929	7,651,113
Food	2,334	17,943,651	4,357	24,071,077
Snap, candles, and oils	1,122	7,455,661	1,043	9,527,343
Clothing	12,863	12,676,682	10,198	13,229,214
Beer and whisky	2,301	16,410,008	1,245	34,231,373
Cotton, wool, hemp, &c.	1,033	1,854,774	832	1,862,166
Drugs, chemicals, &c.	735	3,544,193	660	3,237,593
Stone and earth	2,209	2,941,102	2,199	3,916,401
Carriages, cars, &c.	1,173	1,794,413	1,332	1,941,306
Paper, &c.	422	880,316	662	1,687,790

Printing and publishing	2,388	4,699,280	2,274	5,230,354
Tobacco	3,886	3,837,490	3,270	4,745,688
Pine apples	250	840,746	363	624,114
Miscellaneous	4,177	3,027,427	1,290	4,463,224
Total	69,327	127,459,021	60,922	144,207,371

Boat building was formerly a prominent industry, but it has recently declined. Prior to 1833 Cincinnati was the chief centre in the United States for the slaughtering of swine and the packing of pork. Since that year this supremacy has been held by Chicago, Cincinnati taking the second rank. There are more than seventy establishments in the latter city employed in this industry. The United Railroads Stock-yards for the reception of live pigs occupy about 60 acres. During the winter season of 1874-75 there were slaughtered 560,164 hogs, weighing in the aggregate 155,864,126 lb, and valued at \$10,897,584. The production included 44,232 barrels of pork, and 23,400,157 lb of lard. During the year ending August 31, 1875, pork and bacon valued at \$12,645,538 were exported from the city; the imports amounted to \$2,580,493. The excess of exports of lard over imports was \$2,781,091. After this important industry the brewing of lager beer ranks next, the brewers here turning out about 15,000,000 gallons annually. Distillation is also carried on to a very considerable extent. The city contains five national banks with a capital of \$4,000,000, and seventeen private banks with a capital of \$1,740,000. The leading commercial organization is the Chamber of Commerce and Merchants' Exchange, which has about 1200 members and holds daily sessions. The Board of Trade has about 900 members, chiefly manufacturers. There are also a mechanics' institute, cotton exchange, and pork packers' association. An industrial exhibition has been held in the autumn of each year since 1871, and has attracted large numbers of visitors to the city. The buildings are centrally situated, and occupy 3½ acres of ground.

The city is divided into 25 wards, and is governed by a mayor, who is elected by the people for two years, and receives an annual salary of \$4000, a board of 25 aldermen, and a board of 50 councilmen, who are also elected by the people. It has a paid fire department under the control of five commissioners appointed by the mayor, and a police force under the control of the mayor and four commissioners. The efficiency of these departments is promoted by extensive fire-alarm and police telegraphic lines. The city is supplied with water obtained by pumping from the Ohio river by means of three immense reservoirs, two of which, with a capacity of 100,000,000 gallons each, are in Eden Park. Beside the usual municipal and county courts, the United States circuit and district courts for the southern district of Ohio are held in the city.

Cincinnati has a large number and variety of well-organized charitable institutions. The Cincinnati hospital is supported by taxation, and affords free treatment to all unable to pay for it; the city infirmary, besides supporting pauper inmates, affords relief to outdoor poor; the Good Samaritan and St Mary's hospitals are private institutions, under the supervision of Roman Catholic sisters; the Jewish hospital is maintained by persons of that faith. The Longview asylum for the insane, built at Carthage, 10 miles from the city, at a cost, including 110 acres of land, of \$1,000,000, ranks among the first institutions of the kind in the United States. It belongs to Hamilton county, whose population consists chiefly of the inhabitants of Cincinnati; patients are, however, sent here by the State, which contributes to its support. The average daily number of inmates in 1874 was 582, nearly all of whom were maintained free of charge. Besides the city orphan asylum, which has accommodation for 300 children, and is supported by private charity, and the German Protestant asylum, with a capacity for about 100, two large asylums are maintained by the Roman Catholics and by the coloured people. There are also several institutions for indigent and friendless women. The house of refuge and the city workhouse are maintained by the city for

the confinement of persons convicted of minor offences; children are sent to the former, and adults to the latter.

The public schools are under the control of a superintendent and a board of 50 elected members, and comprise 3 high, 5 intermediate, and 30 district schools, including those for coloured pupils. There are also a normal school for females and evening schools. In 1874 there were 529 teachers and 28,949 pupils enrolled, with an average daily attendance of 21,486. German is a prominent study in the public schools, and music and drawing are taught. The Woodward and the Hughes high schools have long been known for their excellence. Besides the above, there are a large number of Roman Catholic parochial schools. The university of Cincinnati, recently founded by means of a bequest made by Charles M'Micken, is designed to afford advanced and technical instruction free of charge. A school of design has been in operation since 1869. Besides the Cincinnati Wesleyan College for females (Methodist-Episcopal), St Xavier College (Roman Catholic), and Mount St Mary's of the West, the city has 1 law, 6 medical, and 2 theological schools, 4 commercial colleges, and 2 schools of music. One of the theological schools is connected with Mount St Mary's of the West, the other is the widely-known Lane Theological Seminary (Presbyterian), founded in 1829. It occupies a site of 7 acres on Walnut Hills, and has 5 professors and a library of 12,000 volumes. Three of the medical schools are classified as regular, one as pharmaceutic, one as homœopathic, and one as dental. The oldest is the medical college of Ohio, which was opened in 1819, and now has 10 instructors; the Cincinnati college of medicine and surgery was opened in 1821, and has 14 instructors; the Miami medical college, opened in 1852, has 12 instructors; and the Pulte medical college, opened in 1872, has 14. There are 11 public libraries in the city, the largest being the free public library, which has 81,000 bound volumes and 5500 pamphlets, and the young men's mercantile with nearly 40,000 volumes. The public library occupies one of the best library buildings in the country. The most important literary associations are the natural history and the historical and philosophical societies. There are published in the city 70 newspapers and periodicals,—9 appearing daily, 1 twice a-week, 33 weekly, 3 fortnightly, 21 monthly, and 3 quarterly. Of these 3 daily, 9 weekly, 1 fortnightly, and 2 monthly are published in German. The city contains 160 churches, the largest denominations being the Roman Catholic, which has 32 churches and 12 chapels, the Methodist with 26 churches, the Presbyterian with 22, the Baptist with 14, and the Protestant Episcopal with 11. (E. S. DR.)

CINCINNATUS, the hero of one of the early Roman legends, was born about 519 B.C. According to the story, he was ruined by the fine which was imposed on his son Cæso for the murder of a plebeian during the commotion caused by the introduction of a bill by Terentilius Arsa. This measure, which proposed the creation of a code of written laws applicable to plebeian and patrician alike, was also strongly opposed by Cincinnatus himself. Cincinnatus is, in fact, the type of the ancient patrician agriculturist. Twice he was called from the plough to the dictatorship of Rome. On the first occasion his task was to save the army from the Æquians and Volscians, who had forced it into a position of imminent danger; and he is said to have raised an army and defeated the enemy within a single day (458). On his return he summoned Volscius, the accuser of his son, to take his trial on a charge of perjury; but Volscius fled from the city. On the second occasion (439) he was appointed by the patricians, in order to crush Spurius Mælius, who had spent his wealth in relieving the wretched debtors, and who was consequently accused of

desiring popularity that he might seize the supreme authority. Mælius, refusing to appear before the dictator, was killed by Ahala, the master of the horse.

CINEAS, a Thessalian, the chief adviser of Pyrrhus, king of Epirus. The most famous event of his life was the visit which he made to Rome for the purpose of concluding the war, after the defeat of the Romans by Pyrrhus at Heraclea (280 B.C.) He performed the feat of learning in one day the name of every man of importance in the city, and displayed besides the most marvellous tact and eloquence; but the effects of his persuasion being destroyed through the patriotic vehemence of the venerable Appius Claudius Cæcus, he returned to his master with the report that Rome was a temple, and its senate an assembly of kings. Cineas also served as an ambassador in Sicily. He is perhaps the Cineas referred to by Cicero as the author of a work *De Re Militari*.

CINNA, LUCIUS CORNELIUS, a Roman patrician, conspicuous in the contest between Marius and Sulla. After serving in the war with the Marsi as pretorian legate, he was elected consul in 87 B.C. Breaking the oath he had sworn to Sulla that he would not attempt any revolution in the state, Cinna allied himself with Marius, raised an army of Italians, and took possession of the city. Soon after his triumphant entry and the massacre of the friends of Sulla, by which he had satisfied his vengeance, Marius died. L. Valerius Flaccus became Cinna's colleague, and on the murder of Flaccus, Cn. Papirius Carbo. In 84, however, Cinna, who was still consul, was forced to advance against Sulla; but while embarking his troops he was killed in a mutiny. See ROMAN HISTORY.

CINNABAR, the *κιννάβαρις* of Theophrastus, is the native sulphide of mercury, and the only commercial source of that metal and its compounds. It crystallizes in the rhombohedral form, in which condition it is sometimes found; but generally it occurs in fibrous or amorphous masses bedded in slate rocks and shales, and more rarely in veins in granitic or porphyritic rocks. In hardness it is intermediate between gypsum and calcspar; its specific gravity is 8.998, and its colour varies from a fine bright red to a reddish-brown and leaden-grey hue. It possesses the same composition as the ordinary vermilion of commerce for which it may, when pure and fine in colour, sometimes be used after simple levigation, although the greater part of that brilliant pigment is artificially prepared. Pure cinnabar should contain 86.21 per cent. of mercury, combined with 13.79 of sulphur; but in its native state the ore is frequently contaminated with oxide of iron, clay, and bituminous matter. The principal European localities for cinuabar are at Idria in Carniola, and at Almaden in Spain, whence the British demand is mainly supplied. It is also extensively worked at New Almaden and several other localities in California, in the southern part of Peru, and in Borneo, Japan, and China. See VERMILION.

CINNAMON is the inner bark of *Cinnamomum Zeylanicum*, a small evergreen tree belonging to the Natural Order Lauraceæ. The leaves are large ovate-oblong in shape, and the flowers, which are arranged in panicles, have a greenish colour and a rather disagreeable odour. Cinnamon has been known from the most remote antiquity, and it was so highly prized among ancient nations that in very small quantities it was regarded as a present fit for monarchs and other great potentates. It is mentioned in Exud. xxx. 23, where Moses is commanded to use both sweet cinnamon (*Kinnamon* and cassia. It is likewise alluded to by Herodotus under the name *κιννάμωμον*, and it is frequently mentioned by many other classical writers. It is now almost exclusively a product of Ceylon, but the origin of the plant and the derivation of its name are matters of considerable doubt and dispute. The Arab traders, by

whom the trade in this and other Oriental spices was conducted in ancient times, surrounded the history and production of these precious and lucrative products with grotesque tales of mystery. It is contended by some that cinnamon was originally obtained from the promontory of Gardafui (the *regio cinnamomifera* of classical geographers), while others lean to the opinion that it was brought from China, whence the chief portion of the closely allied cassia bark is still derived. Although as the produce of Ceylon, cinnamon did not come prominently into the market till the settlement of the Portuguese on the island, it is the opinion of the best authorities that the tree yielding it is indigenous, and certainly no other situation and climate have yet been found where the trees flourish so well and yield a bark so fine and so delicately aromatic.

The cinnamon gardens are confined to a strip of country in the neighbourhood of Colombo. When the trade was at its best, five of the principal gardens measured from 15 to 20 miles in circumference, but now the area of cultivation is very much restricted, and plants which were at one time tended with the greatest care, and guarded with inhuman jealousy, are choked with the natural profusion of jungle vegetation. The bark is taken from shoots of eighteen months or two years growth, in which time they attain a length of from 6 to 10 feet, and a thickness of from $\frac{1}{2}$ to 2 inches. The plants are managed on the coppice system, and only four or five shoots are allowed to grow up from each stool. The shoots are cut down twice a year after the rains, and the bark is detached in lengths of about a foot. After lying in bundles as taken from the shoots for about a day, each separate piece is carefully scraped to remove the outer and middle layers of the bark, and the remaining portion is thereby often reduced to the thickness of one-hundredth part of an inch. The pieces are then made up into composite quills by placing the smaller pieces inside the larger, and thus the cinnamon is often formed into straight firm rods of from 3 to 4 feet in length. After drying in the sun the bark is ready to make up into bundles for exportation.

Cinnamon of an inferior quality is grown in Southern India at Tellicherry and Tinnevely; and in Java the cultivation was introduced by the Dutch about the year 1825. The plant has also been grown in the colony of French Guiana, and in other localities. The produce of none of these places, however, approaches in quality to the cinnamon of Ceylon, whence also the largest proportion of the entire consumption is supplied. Nearly the whole quantity prepared in Ceylon is brought to the British market. The value of Ceylon cinnamon submitted to the English Board of Trade, was in 1874 more than 2s. 2d. per lb, that from other localities being estimated at about 10d.

Ceylon cinnamon of fine quality is a very thin smooth bark, with a light-yellowish brown colour, a highly fragrant odour, and a peculiarly sweet, warm, and pleasing aromatic taste. Its peculiar flavour is due to an aromatic oil which it contains to the extent of from 0.5 to 1 per cent. The essential oil of cinnamon, as an article of commerce, is prepared chiefly in Ceylon, where the coarser pieces of bark are used for its extraction. These are roughly powdered and macerated in sea water for two days, when the whole is quickly distilled. The oil is of a golden-yellow colour, with the peculiar odour of cinnamon and a very hot aromatic taste. It consists essentially of cinnamic aldehyde or the hydride of cinnamyl, and by the absorption of oxygen as it becomes old it darkens in colour and develops resinous compounds with cinnamic acid.

Cinnamon is principally employed in cookery as a condiment and flavouring material, being largely used in the preparation of some kinds of chocolate and liqueurs. In medicine it acts as an aromatic stimulant and cordial; but

it is chiefly prescribed for improving the flavour of bitter substances and to correct the griping action of purgatives. Being a much more costly spice than cassia, that comparatively harsh-flavoured substance is frequently substituted for or added to cinnamon. The two barks when whole are easily enough distinguished, and their microscopical characters are also quite distinct. When powdered bark is treated with tincture of iodine, little effect is visible in the case of pure cinnamon; but with cassia a deep-blue tint is produced, the intensity of the coloration depending on the proportion of the cassia.

CINO DA PISTOIA (1270-1336), a poet and jurist, whose full name was GUITTONCINO DE' SINIBULDI, was born in Pistoia, of a noble family. He studied law at Bologna under Dinus and Franciscus Accursius, and in 1307 is understood to have been assessor of civil causes in his native city. In that year, however, Pistoia was disturbed by the Guelf and Ghibelline feud. The Ghibellines who had for some time been the stronger party, being worsted by the Guelfs, Cino, a prominent member of the former faction, had to quit his office and the city of his birth. Pitecchio, a stronghold on the frontiers of Lombardy, was yet in the hands of Filippo Vergiolesi, chief of the Pistoian Ghibellines; Selvaggia, his daughter, was beloved by Cino (who was probably already the husband of Margherita degli Ungli); and to Pitecchio did the lawyer-poet betake himself. It is uncertain how long he remained at the fortress; it is certain, however, that he was not with the Vergiolesi at the time of Selvaggia's death, which happened three years afterwards (1310), at the Monte della Sambuca, in the Apennines, whither the Ghibellines had been compelled to shift their camp. He visited his mistress's grave on his way to Rome, after some time spent in travel in France and elsewhere, and to this visit is owing his finest sonnet. At Rome Cino held office under Louis of Savoy, sent thither by the Ghibelline leader Henry of Luxembourg, who was crowned emperor of the Romans in 1312. In 1313, however, the emperor died, and the Ghibellines lost their last hope. Cino appears to have thrown up his party, and to have returned to Pistoia. Thereafter he devoted himself to law and letters. After filling several high judicial offices, a doctor of civil law of Bologna in his forty-fourth year, he lectured and taught from the professor's chair at the universities of Treviso, Siena, Florence, and Perugia in succession; his reputation and success were great, his judicial experience enabling him to travel out of the routine of the schools. In literature he continued in some sort the tradition of Dante during the interval dividing that great poet from his successor Petrarca. The latter, besides celebrating Cino in an obituary sonnet, has coupled him and his Selvaggia with Dante and Beatrice in the fourth *capitolo* of his *Trionfi d'Amore*.

Cino, the master of Bartolus, and of Joannes Andreae the celebrated canonist, was long famed as a jurist. His commentary on the statutes of Pistoia, written within two years, is said to have great merit; while that on the code (*Lectura Cino Pistoia super Codice*, Pavia, 1483, Lyons, 1526) is considered by Savigny to exhibit more practical intelligence and more originality of thought than are found in any commentary on Roman law since the time of Accursius. As a poet he also distinguished himself greatly. He was the friend and correspondent of Dante's later years, and possibly of his earlier also, and was certainly, with Guido Cavalcanti and Durante da Maiano, one of those who replied to the famous sonnet *A ciascun' alma presa e gentil core* of the *Vita Nuova*. The great Florentine in the treatise *De Vulgari Eloquentia* refers to him as one of "those who have most sweetly and subtly written poems in modern Italian," but his works, printed at Rome in 1559, do not altogether justify the praise bestowed on them by his illustrious

friend. Strained and rhetorical as many of his outcries are, however, Cino is not without moments of true passion and fine natural eloquence. Of these qualities the sonnet in memory of Selvaggia, *Io fui in sull'alto e in sul beato monte*, and the canzone to Dante, *Avegnuchè di omaggio più per tempo*, are interesting examples.

The text-book for English readers is Mr D. G. Rossetti's *Early Italian Poets*, wherein will be found not only a memoir of Cino da Pistoia (pp. 206-211), but also (pp. 381-395) some admirably translated specimens of his verse,—the whole wrought into significant connection with that friendship of Cino's, which is perhaps the most interesting fact about him. See also Ciampi, *Vita e Poesie di Messer Cino da Pistoia*, Pisa, 1813.

CINQ-MARS, HENRI COIFFIER DE RUZÉ, MARQUIS DE (1620-1642), French courtier, was born in 1620. At the age of eighteen he was introduced to the court by Richelieu, who had been the patron of his father, and who intended him to fill the post of favourite to the king, Louis XIII. The design succeeded well, and Cinq-Mars became grand master of the wardrobe, and grand master of the horse. He developed into a gallant courtier, won the affection of the princess of Mantua, and claimed a seat in the royal council. But Richelieu opposed his ambition, and refused to countenance his pretensions. Cinq-Mars, therefore, in revenge, entered into the conspiracy against him, of which the duke of Orleans was nominal head. Unfortunately aid had been sought from Spain; and using this treason as an argument, Richelieu persuaded the weak and fickle king first to forbid Cinq-Mars to enter his presence, and then to permit his execution (1642).

CINQUE PORTS. The Cinque Ports, or Five Ports, is the name of an ancient jurisdiction in the south of England, which is still maintained with considerable modifications and diminished authority. As the name implies, the original members of the body were only five in number—Hastings, Romney, Hythe, Dover, and Sandwich; but to these were afterwards added the "Ancient Towns" of Winchelsea and Rye with the same privileges, and a good many other places, both corporate and non-corporate, which, with the title of Limb or Member, held a subordinate position. To Hastings were attached the corporate members of Pevensey and Seaford, and the non-corporate members of Bulverheeth, Petit Iham, Hidney, Beaksbourne, and Grange; to Romney, Lydd, and Old Romney, Dengemarsh, and Oswaldstone; to Dover, Folkstone and Feversham, and Margate, St John's, Goresend, Burchington Wood, St Peter's, Kingsdowne, and Ringwold; to Sandwich, Fordwich, and Deale, Walmer, Ramsgate, Stoner, Sarr, and Brightlingsea. The jurisdiction thus extends along the coast from Seaford in Sussex to Burghington near Margate in Kent; and it also includes a number of inland districts, at a considerable distance from the ports with which they are connected. The non-incorporated members are within the municipal jurisdiction of the ports to which they are attached; but the corporate members are as free within their own liberties as the individual ports themselves. The incorporation of the Cinque Ports had its origin in the necessity for some means of defence along the southern seaboard of England, and in the lack of any regular navy. Up to the reign of Henry VII. they had to furnish the Crown with nearly all the ships and men that were needed for the state; and for a long time after they were required to give large assistance to the permanent fleet. The oldest charter now on record is one belonging to the 6th year of Edward I.; and it refers to previous documents of the time of Edward the Confessor and William the Conqueror. In return for their services the ports enjoyed extensive privileges. From the Conquest or even earlier they had, besides various lesser rights,—(1) Exemption from tax and tallage; (2) Soc and sac, or full cognizance of all criminal and civil cases within their liberties; (3) Toll and theam,

or the right of receiving toll and of holding serfs; (4) Bloodwith and fledwith, or the right to punish shedders of blood and those who were seized in an attempt to escape from justice; (5) Pillory and tumbrell; (6) Infgangtheof and outfgangtheof, or power to imprison and execute felons; (7) Mundbriech, or authority to erect banks or dykes on any man's land as a defence against the sea; (8) Waives and strays, or the right to appropriate lost property or cattle not claimed within a year and a day; (9) The right to seize all flotsom, jetsom, or witsom, or in other words, whatever of value was cast ashore by the sea; (10) The privilege of being a guild with power to impose taxes for the common weal; and (11) The right of assembling in portmote or parliament at Shepway or Shepway Cross, a few miles west of Hythe—the parliament being empowered to make bye-laws for the Cinque Ports, to regulate the Yarmouth fishery, to hear appeals from the local courts, and to give decision in all cases of treason, sedition, illegal coining, or concealment of treasure trove. The ordinary business of the ports is conducted in two courts known respectively as the Court of Brotherhood and the Court of Brotherhood and Guestling,—the former being composed of the mayors of the seven principal towns and a number of jurats and freemen from each, and the latter including in addition the mayors, bailiffs, and other representatives of the corporate members. The Court of Brotherhood was formerly called the Brotheryeeld, Brodall, or Brodhull; and the name Guestling seems to owe its origin to the fact that the officials of the "members" were at first in the position of invited guests. The highest office in connection with the Cinque Ports is that of the Lord Warden, who also acts as governor of Dover Castle, and has a maritime jurisdiction as admiral of the ports. His power was formerly of great extent, and he held a court of chancery at Dover in the old parish church of St James. He still presides in the court of Shepway, and appoints the justices of peace for the liberties of the Cinque Ports.

See Samuel Jeake, *Charters of the Cinque Ports*, London, small folio, 1728; Philipott's *Villare Cantianum*; the *First Report on Municipal Corporations* in 1835; and the *Census of England and Wales*, 1871, vol. i.

CINTRA, a town of Portugal in the province of Estremadura, 14 miles north-west of Lisbon, with about 4500 inhabitants. It stands at the foot of a rocky mountain of an altitude varying from 1800 to 3000 feet, and is remarkable for the picturesque beauty of its situation and the salubrity of its climate, which render it a favourite resort of the wealthier inhabitants of Lisbon. On one of the adjacent summits stands the Penha Castle, erected by King Ferdinand of Coburg on the site of the former convent of the Hieronymites; and on another are the ruins of a Moorish castle. There is also an ancient royal palace described as a medley of Moorish and Christian architecture, and long famous as the summer residence of the court; and in the neighbourhood is the "Cork Convent" of Santa Cruz, which derives its name from the lining of its cells, and owes its origin to João de Castro, the celebrated viceroy of the Indies, whose heart is still preserved in the chapel of Penha Verde, near the villa in which he resided after his return. The convention by which the French were allowed to leave Portugal without molestation was signed at Cintra, August, 22, 1808.

CIPHER. See CRYPTOGRAPHY.

CIPRIANI, GIOVANNI BATTISTA (1727–1785), painter and draughtsman, was of Pistoian descent, but was born at Florence, where he studied design and colour under Heckford and Gabbiani. After painting several pictures at Pistoia and elsewhere, Cipriani, who had contracted a friendship with Bartolozzi, the eminent engraver, quitted Florence for London. There he worked for the duke of

Richmond and other noblemen and gentlemen, repaired the Rubens ceiling in Whitehall Chapel, and the Verrio frescoes at Windsor, and decorated in part the Royal Academy library. His drawings, which are better than his paintings, engraved by Bartolozzi and his pupils, achieved a wide popularity, and were bought up eagerly all over Europe; but his reputation is nowadays somewhat faded.

CIRCAR is an Indian term applied to the component parts of a *Subah* or province, each of which is administered by a deputy-governor. In English it is principally employed in the name of the Northern Circars, used to designate a now obsolete division of the Madras presidency, which consisted of a narrow slip of territory lying along the western side of the Bay of Bengal from 15° 40' to 20° 17' N. lat. These Northern Circars were five in number, Cicacole, Rajamundry, Ellore, Condapilly, and Guntoor, and their total area was about 30,000 square miles. The district corresponds in the main to that now occupied by the modern divisions of Guntoor, Masulipatam, Rajamundry, Vizagapatam, and Gunjam. It was first invaded by the Mahometans in 1471; in 1541 they conquered Condapilly, and nine years later they extended their conquests over all Guntoor and the districts of Masulipatam. But the invaders appear to have acquired only an imperfect possession of the country, as it was again wrested from the Hindu princes of Orissa about the year 1571, during the reign of Ibrahim Kutub, shah of Hyderabad or Golcondah. In 1687 the Circars were added, along with the empire of Hyderabad, to the extensive empire of Aurangzebe. Salabut Jung, the son of Nizam ul Mulk, who was indebted for his elevation to the throne to the French East India Company, granted them in return for their services the district of Condavir or Guntoor, and soon afterwards the other Circars. In 1759, by the conquest of the fortress of Masulipatam, the dominion of the maritime provinces on both sides, from the River Gondegama to the Chilca Lake, was necessarily transferred from the French to the British. But the latter left them under the administration of the Nizam, with the exception of the town and fortress of Masulipatam, which were retained by the English East India Company. In 1765 Lord Clive obtained from the Mogul a grant of four of the Circars, which in the following year was confirmed by a treaty entered into with Nizam Ali, who had by this time superseded Salabut Jung in his authority. The remaining Circar of Guntoor devolved to the East India Company in 1788.

CIRCASSIA. The name of Circassia is commonly given to the whole of the north-western portion of the Caucasus, including the district between the mountain range and the Black Sea, and extending to the north of the central ridge as far as the River Kuban. In this sense the term is still in use as a geographical appellation, though the Circassians, as a nation, may be regarded as extinct. The region thus defined may be considered as extending from the neighbourhood of Anapa on the Black Sea to the frontiers of Mingrelia, and having a seaboard of about 280 English miles. Throughout this extent the country is almost wholly mountainous,—the great range of the Caucasus, which begins in the neighbourhood of Anapa at a moderate elevation, rising gradually as it extends towards the south-east, till it culminates in the lofty summit of Mount Elbruz, at an elevation of 18,526 feet. The strip of land between the dividing ridge or watershed of these mountains and the sea, a tract varying from twenty to forty miles in width, is extremely rugged, traversed by successive offshoots of the mountains, extending quite down to the sea, and covered for the most part with extensive forests. The slopes on the northern side of the Caucasus are more gentle, and here the valleys afford abundant pasturage, but hardly any portion of Circassia, properly so called, is a level or open country.

The Tcherkesses or Circassians, who gave name to this region, of which they were until lately the sole inhabitants, are a peculiar race, differing from the other tribes of the Caucasus in origin and language. They designate themselves by the name of Adighe, that of Tcherkesses being a term of Russian origin. By their long-continued struggles with the power of Russia, during a period of nearly forty years, they attracted the attention of the other nations of Europe in a high degree, and were at the same time an object of interest to the student of the history of civilization, from the strange mixture which their customs exhibited of chivalrous sentiment with savage customs. For this reason it may be still worth while to give a brief summary of their national characteristics and manners, though these must now be regarded as in great measure things of the past.

In the patriarchal simplicity of their manners, the mental qualities with which they were endowed, the beauty of form and regularity of feature by which they were distinguished, they surpassed most of the other tribes of the Caucasus. At the same time they were remarkable for their warlike and intrepid character, their independence, their hospitality to strangers, and that love of country which they manifested in their determined resistance to an almost overwhelming power during the period of a long and desolating war. The government under which they lived was a peculiar form of the feudal system. The free Circassians were divided into three distinct ranks, the princes or *pschi*, the nobles or *uork* (Tartar *usden*), and the peasants or *hokott*. Like the inhabitants of the other regions of the Caucasus, they were also divided into numerous families, tribes, or clans, some of which were very powerful, and carried on war against each other with great animosity. The slaves, of whom a large proportion were prisoners of war, were generally employed in the cultivation of the soil, or in the domestic service of some of the principal chiefs.

The will of the people was acknowledged as the supreme source of authority; and every free Circassian had a right to express his opinion in those assemblies of his tribe in which the questions of peace and war, almost the only subjects which engaged their attention, were brought under deliberation. The princes and nobles, the leaders of the people in war and their rulers in peace, were only the administrators of a power which was delegated to them. As they had no written laws, the administration of justice was regulated solely by custom and tradition, and in those tribes professing Mahometanism by the precepts of the Koran. The most aged and respected inhabitants of the various *avouls* or villages frequently sat in judgment, and their decisions were received without a murmur by the contending parties. The Circassian princes and nobles were professedly Mahometans; but in their religious services many of the ceremonies of their former heathen and Christian worship were still preserved. A great part of the people had remained faithful to the worship of their ancient gods,—Shible, the god of thunder, of war, and of justice, Tleps, the god of fire, and Seosseres, the god of water and of winds. Although the Circassians are said to have possessed minds capable of the highest cultivation, the arts and sciences, with the exception of poetry and music, were completely neglected. They possessed no written language. The wisdom of their sages, the knowledge they had acquired, and the memory of their warlike deeds were preserved in verses, which were repeated from mouth to mouth and descended from father to son.

The education of the young Circassian was confined to riding, fencing, shooting, hunting, and such exercises as were calculated to strengthen his frame, and prepare him for a life of active warfare. The only intellectual duty of the *atalik*, or instructor with whom the young men lived

until they had completed their education, was that of teaching them to express their thoughts shortly, quickly, and appropriately. One of their marriage ceremonies was very strange. The young man who had been approved by the parents, and had paid the stipulated price in money, horses, oxen, or sheep, for his bride, was expected to come with his friends fully armed, and to carry her off by force from her father's house. Every free Circassian had unlimited right over the lives of his wife and children. Although polygamy was allowed by the laws of the Koran, the custom of the country forbade it, and the Circassians were generally faithful to the marriage bond. The respect for superior age was carried to such an extent, that the young brother used to rise from his seat when the elder entered an apartment, and was silent when he spoke. Like all the other inhabitants of the Caucasus, the Circassians were distinguished for two very opposite qualities, the most generous hospitality, and implacable vindictiveness. Hospitality to the stranger was considered one of the most sacred duties. Whatever were his rank in life, all the members of the family rose to receive him on his entrance, and conduct him to the principal seat in the apartment. The host was considered responsible with his own life for the security of his guest, upon whom, even although his deadliest enemy, he would inflict no injury while under the protection of his roof. The chief who had received a stranger was also bound to grant him an escort of horse to conduct him in safety on his journey, and confide him to the protection of those nobles with whom he might be on friendly terms. The law of vengeance was no less binding on the Circassian. The individual who had slain any member of a family was pursued with implacable vengeance by the relatives, until his crime was expiated by death. The murderer might, indeed, secure his safety by the payment of a certain sum of money, or by carrying off from the house of his enemy a newly-born child, bringing it up as his own, and restoring it when its education was finished. In either case, the family of the slain individual might discontinue the pursuit of vengeance without any stain upon its honour. The man closely followed by his enemy, who, on reaching the dwelling of a woman, had merely touched her hand, was safe from all other pursuit so long as he remained under the protection of her roof. The opinions of the Circassians regarding theft resembled those of the ancient Spartans. The commission of the crime was not considered so disgraceful as its discovery; and the punishment of being compelled publicly to restore the stolen property to its original possessor, amid the derision of his tribe, was much dreaded by the Circassian who would glory in a successful theft. The greatest stain upon the Circassian character was the custom of selling their children, the Circassian father being always willing to part with his daughters, many of whom were bought by Turkish merchants for the harems of Eastern monarchs. But no degradation was implied in this transaction, and the young women themselves were generally willing partners in it. Herds of cattle and sheep constituted the chief riches of the inhabitants. The princes and nobles, from whom the members of the various tribes held the land which they cultivated, were the proprietors of the soil. The Circassians carried on little or no commerce, and the state of perpetual warfare in which they lived prevented them from cultivating any of the arts of peace.

The early history of Circassia is exceedingly obscure. This part of the coasts of the Black Sea was inhabited in ancient times only by wild and barbarous tribes, whose names are very differently given by ancient writers. No Greek colonies were planted within the limits of Circassia proper, though the Greeks carried on an extensive trade with the nations of the interior at Dioscurias, near Sukhum

Kaleh. In the 12th and 13th centuries the princes of Georgia were successful in reducing Circassia into the condition of a province; and are said to have also been the first to introduce Christianity into the country—a religion which they continued to profess (in name at least) till the 18th century, when they were converted to Islamism by the teaching of a fanatical devotee named Mansur. The common people, however, retain to a great extent their pagan customs and beliefs. After they had succeeded in throwing off the Georgian yoke, the Circassians passed for a time under the rule of the Tartar khans of the Crimea, from whom they emancipated themselves, with the assistance of Ivan I., czar of Russia. But the Russian monarchs do not appear to have regarded their conquest as a matter of much importance, until the time of Peter the Great. That powerful monarch, perceiving how much the possession of the Caucasus would contribute to his political and commercial influence in Western and Central Asia, made an unsuccessful attempt to reduce it permanently under his dominion. Catherine II. pursued a similar line of policy. Georgia having been harassed by the successive invasions of the Persians and Turks, the prince of that country at last threw himself under the protection of the Russians, and became tributary to their power. The River Kouban being afterwards fixed as the southern boundary of the Muscovite empire, the Russians became ambitious of extending their dominion uninterruptedly to the extreme limits of Georgia. In the wars which now took place between the Russians and the Turks, the latter used every exertion, by exciting the fanatical feelings of the Circassians against the infidels, to induce them to harass the Russians by frequent incursions into their territory. After various vicissitudes of fortune, the Turks were worsted, and compelled by the treaty of Adrianople in 1829 to cede a considerable portion of their territory to the czar. Assuming a right of political sovereignty which they had never possessed, they included Circassia in this cession. The Circassians, refusing to acknowledge the right of the sultan (whom they had never recognized as their sovereign, though acknowledging him as head of their religion) thus to dispose of their country, were now exposed to the hostility of the Russians, who determined to become masters of the territory on the coasts of the Black Sea, and indeed of the whole Caucasian region, by force of arms. This was the origin of that remorseless war which was carried on with so much animosity down to a very recent period, and cost the Russians an incredible amount of blood and treasure.

A brief outline of the leading events which characterized this long-protracted struggle will be found in the article CAUCASUS. After the Circassians were finally reduced to submission, the inhabitants of the sea-coast, rather than submit to the regulations imposed by the Russian Government, determined to quit their country, and emigrate in a mass to Turkey. Not less than half a million of people carried out this resolution, and were settled in different parts of the Turkish empire,—the greater part of them in Asia Minor, but some also in the mountain country on the borders of Bulgaria and Servia. Since that period the whole tract along the sea-coast from Anapa to Sukhum Kaleh, which was that best known as Circassia, has been almost entirely destitute of inhabitants. But the northern slopes of the Caucasus, and the valleys descending towards the Kuban, are still occupied by tribes of Circassian race; and the Kabardans, a kindred tribe, but of less warlike character, extending eastwards to beyond the Terek, have long settled down quietly in the condition of Russian subjects.

(E. H. H.)

CIRCE, in classical mythology, the daughter of Sol and Perse, or of Hyperion and Aërope, or, according to some,

of Æetes, king of Colchis (whom others call her brother), was a famous sorceress. Having murdered her husband, the prince of Colchis, she was expelled by her subjects, and placed by her father on the solitary island of Æœa, on the coast of Italy. Here she was found by Ulysses and his companions; the latter she changed into swine, but the hero, protected by the herb *moly* which he had received from Mercury, not only forced her to restore them, but also gained her love. For a year he relinquished himself to her endearments; but at length he aroused himself, and after descending at her advice to the lower world, to consult the prophet Tiresias as to the fate which awaited him, he left her. The metamorphoses by Circe of Scylla and of Picus, king of the Ausonians, are celebrated by Ovid.

CIRCEII, a town of ancient Italy, in Latium, at the foot of Mons Circeius, or Capo Circello, a short distance from the sea, and 10 or 12 miles along the coast from Terracina. It was originally colonized by the Romans in the reign of Tarquin the Proud, who deemed the position favourable for commerce and for repressing the inroads of the Volsci. From its foundation till the date of the Latin War, 340 B.C., it seems at one time to have been subject to the Romans, at another to have espoused the cause of the Volsci, and sometimes to have been independent of both powers. After the Latin War it was recolonized by the Romans; but it continued gradually to decline till the emperors Tiberius and Domitian, attracted to it by the pleasantness of its situation and the excellence of its oysters, erected villas in the neighbourhood. Its ruins are still distinctly visible on the Monte della Cittadella, and consist of walls and gateways built of polygonal blocks.

CIRCUIT, a law term, signifying the periodical progress of a legal tribunal for the sake of carrying out the administration of the law in the several provinces of a country. It has long been applied to the journey or progress which the judges have been in the habit of making twice every year, through the several counties of England, to hold courts and administer justice, where recourse could not be had to the king's court at Westminster. The country, including Wales, is now, by Order in Council (under the Judicature Act, 1875), dated 5th February 1876, divided into seven circuits, viz., the Northern, North-Eastern, Midland, South-Eastern, Oxford, Western, North Wales, and South Wales Circuits. Counsel are not expected to practice on a circuit other than that to which they have attached themselves, unless they receive a special retainer. This and similar regulations are enforced by the discipline of the circuit bar mess only. In Scotland the judges of the supreme criminal court, or High Court of Justiciary, form also three separate circuit-courts, consisting of two judges each; and the country, with the exception of the Lothians, is divided into corresponding districts, called the Northern, Western, and Southern Circuits. In certain burghs of each circuit two courts are held in the year, in spring and autumn, called Circuit Courts. One more is held at Glasgow during the Christmas recess. Ireland is divided into the North-East and the North-West Circuits, the Home Circuit, and those of Leinster, Connaught, and Munster.

CIRCUMCISION. The importance of this rite is so largely due to its quasi-sacramental character in Judaism, that any inquiry into its history and meaning must be prefaced by a reference to the Old Testament.

I. There are three distinct narratives in the sacred literature of the Jews which claim to be considered. It is related in Gen. xvii. that when Abram the Hebrew was ninety-nine years of age, he became a party on behalf of himself and his descendants to a covenant with his God. Of this covenant the sign and condition was circumcision, which was directed to be performed (a peculiarity of Judaism) on

the eighth day after the child's birth. Is this account, we may ask, based on a historical tradition? If so, the circumcision of the Israelites is entirely unconnected with that of other nations unless indeed other nations have borrowed theirs from the Israelites. This has actually been maintained in the case of the Egyptians by Archdeacon Hardwicke, but the theory is not only improbable in itself, considering the imitative character of the Israelites, and their low reputation in Egypt (Gen. xlv. 34), but contrary to the evidence of the Egyptian monuments (see below). If, as has been supposed by some, the document to which Gen. xvii. belongs is of post-captivity origin, this would put it out of court as a witness to the popular tradition of the Hebrews. But there is another narrative, apparently of a more archaic complexion, which leads to a directly opposite historical result. We read in Exod. iv. 25, 26, that when Moses was returning from Midian to Egypt, he was in danger of his life, owing to the neglect of the rite of circumcision in his family. "And Zipporah," his Midianitish wife, "took a sharp stone, and cut off the foreskin of her son, and cast it at his feet, and said, Surely a *khathan* (Auth. Vers., 'husband') of blood art thou to me; so he (sc., the offended deity) desisted from him. At that time she said, A *khathan* of blood, with reference to the circumcision." The meaning of this story can still be discerned. *Khathan*, or *khatan*, meant originally not "husband" (as Auth. Vers. of Exodus), nor "son-in-law" (as in ordinary Arabic), but "a newly-admitted member of the family." This appears from the sense of Arab. *khatana*, "to provide a wedding-feast," and *khātana*, "to give or receive a daughter in marriage." So that in the sense of the old Hebrew tradition, "a *khathan* of blood" meant "one who has become a *khathan*, not by marriage, but by circumcision," a meaning which is still further confirmed by the derived sense of Arab. *khatana* "to circumcise," circumcision being performed in Arabia at the age of puberty. To sum up:—an Arabian woman plays the chief part in the story, and her words are only explicable from the Arabic; it is also far from improbable that Yahweh (or Jehovah) was himself first made known to the Jews in Arabia (comp. Judg. v. 4, Hab. iii. 3); putting all which together, we obtain a strong case for the hypothesis of the Arabian origin of Jewish circumcision.

The third narrative is Josh. v. 2-9, where Joshua is said to have circumcised the children of Israel a second time with "knives of stone," and to have thus "rolled away the reproach of Egypt from off them." It is not unnatural that this should have been used by some to confirm the view of an Egyptian origin of circumcision, among others by Dr Ebers, who refers to the additional words in the Septuagint, Josh. xxiv. 31, "There they buried with him. . . . the stone knives with which he had circumcised the children of Israel in Gilgal." But, first, with regard to this singular statement of the Alexandrine version, it must henceforth be abandoned by all scholars. It is simply an unscientific attempt to account for the existence near Joshua's supposed tomb of flint instruments, such as those discovered by M. Guérin on this very site. It need hardly be added that the flint instruments discovered by the French *savant* were really pre-historic; they consist not only of knives, but of saws, which would hardly have been available for the purpose ascribed to Joshua (see Burton and Drake's *Unexplored Syria*, ii. 295-300). And, secondly, Bishop Colenso has shown some reason for the suspicion that verses 2 to 8 (not verse 9) are later additions to the narrative, in which case the "reproach of Egypt" means, not the state of uncircumcision, but the contempt of the Egyptians so forcibly expressed in Exod. xxxii. 12, Num. xiv. 13-16. As for the "knives of stone" (comp. Josh. xxiv. 31, Sept.), on which Ebers

has laid some stress, such implements are not distinctively Egyptian, if they were even employed at all by the Egyptians for the purpose of circumcision. It is true that Herodotus (ii. 104, comp. Diod. Sic., i. 28) asserts the Egyptian origin of circumcision to have been admitted in Palestine, but he is probably only right so far as the Phœnicians or Canaanites are concerned.

II. We may now proceed to consider circumcision from an ethnographical point of view. It was not a specially Semitic rite, being only known to the southern and western Semites, who probably derived it directly or indirectly from the Egyptians, if not from some entirely non-Semitic source. Though not referred to in the Koran, it was a primitive Arabian custom to circumcise youths at their entrance on puberty (*i.e.*, between their tenth and fifteenth year), as appears not only from Gen. xvii. 25, *Joe. Antiq.*, i. 12, 2, but from the express statement of Ibn-al-Athîr (quoted by Pococke, *Specimen Hist. Arabum*, p. 319), which is confirmed by a remarkable passage in the life of the old Arabian poet Dhûl-Isba (*Zeitschr. f. d. Kunde des Morgenlandes*, iii. 230). From Arabia it was carried by the preachers of Islam to Persia, India, and Turkey; from Arabia, too, as we have seen, it probably came in remote times to the Israelites. The circumcision of the Phœnicians or Canaanites has been disputed, but is attested by Herodotus (ii. 104), and is confirmed by the story in Gen. xxxiv., as also by the fact that the term of contempt, "the uncircumcised," is reserved in the Old Testament for the Philistines. The rite seems, however, to have fallen into disuse in later times in Phœnicia as well as in Egypt (Dr Ebers refers to the uncircumcised figures on the stele of Pianchi, comp. also Herod. *l.c.*, *Joe. Antiq.*, viii. 10, 3, *Contr. Ap.* i. 22, and perhaps Ezek. xxxii. 24, 30), which may partly account for its being afterwards regarded as distinctive of the Jews. The Egyptians, too, were circumcised, and that prior to the immigration of the Hebrews (Wilkinson), as appears from the representations on the very earliest monuments. The most striking of these is the scene on a bas-relief discovered in the temple of Chunsu at Karnak, a drawing of which is given by M. Chabas and Dr Ebers. The subjects of the operation are apparently the two children of Rameses II., the founder of the temple. Their age, says Dr Ebers, must be between six and ten, which agrees with the present custom in Egypt, where, as Mr Lane tells us, circumcision is generally performed in the fifth or sixth year, though often postponed by peasants to the twelfth, thirteenth, or even fourteenth year (*Modern Egyptians*, i. 71). It has often been asserted that only the priests underwent the operation, but there is no earlier evidence for this than that of Origen (ed. Lommattsch, iv. 138), in whose time it is quite possible that the Egyptians, like the later Jews, sought to evade a peculiarity which exposed them to ridicule and contempt.

But the rite of circumcision is known among nations which cannot be suspected of communication with Egypt. Similar causes produce similar effects all the world over. It was in use in some form among the ancient civilized peoples of Central America, though this is better attested of the Nahua branch (including the Aztecs) than of the Maya (Bancroft, *Native Races*, vol. iii.). It is still kept up among the Teamas and Manaos on the Amazon; also among three distinct races in the South Seas, among most of the tribes of Australia, among the Papuans, the New Caledonians, and the inhabitants of the New Hebrides. It is widely spread in Africa, especially among the Kaffir tribes. Among the Bechuanas the boys who are circumcised together form a sort of society, for which among other reasons, Waitz conjectures that the Bechuanas communicated the rite to the other Kaffirs. Prichard (*Physical*

History of Mankind, ii. 287) rightly dismisses the idea that the Kaffirs borrowed the rite from Mahometan nations, though the progress of Islam will help to account for its prevalence in other parts of Africa.

III. Very different views were held in antiquity as to the meaning of the rite of circumcision. There was a myth common to Egypt and Phœnicia, though not of very ancient date in its extant Egyptian form, which seems to bring circumcision into connection with the Sun-god. In the *Book of the Dead*, chap. xvii., we read of "the blood which proceeded from the limb of the god Ra, when he wished to cut himself," which the late Vicomte de Rougé interpreted, with much plausibility, of circumcision (*Revue archéologique*, nouv. série, i. 244). And in a fragment of the Philonian Sanehoniaton (*Fragmenta Historicorum Græcorum*, ed. Müller, iii. 568, 569), we find a similar tale of El circumcising his father Uranos, or, according to another version, himself, and the blood flowing into the springs and rivers. Space forbids us to discuss the bearings of this myth. Herodotus (ii. 37) ascribes the Egyptian custom to the motive of cleanliness (*καθαριότητος εἴνεκα*). This is also one of the four causes reported on the authority of tradition by Philo the Jew (*Opera*, ed. Mangey, ii. 210), the three others being the avoidance of carbuncle, the symbolizing of purity of heart, and the attainment of a numerous offspring. Mere cleanliness, however, seems hardly an adequate motive for the practice. Sanitary reasons seem much more probable, judging from the well-ascertained physical advantages of circumcision to the Jewish race. But even this is not a complete explanation. Why was the practice adopted by some nations and not by others? The most scientific theory is that which refers it to a religious instinct common to all nations, though not always expressing itself in the same way, and this seems even to be at least obscurely indicated by the tradition of the Israelites. The prophet Jeremiah (ix. 25, 26), too, puts it in the same class with cutting off the hair (comp. Herod. iii. 8), which, like other bodily mutilations, has been shown to be of the nature of a representative sacrifice (Tylor's *Primitive Culture*, ii. 363, 364). The principle of substitution was familiar to all ancient nations, and not least to the Israelites. Witness the story of Gen. xxii., the paschal lamb, and the redemption of the first-born by an offering (Exod. xiii. 11-16), and compare the singular phrase ascribed to Saul in 1 Sam. xviii. 25. On this principle circumcision was an economical recognition of the divino ownership of human life, a part of the body being sacrificed to preserve the remainder. But it was more than this; otherwise it would scarcely have asserted its claim to existence among the Jews, when all other mutilations were strictly forbidden as heathenish (Lev. xix. 27, xxi. 5). It can scarcely be doubted that it was a sacrifice to the awful power upon whom the fruit of the womb depended, and having once fixed itself in the minds of the people, neither priest nor prophet could eradicate it. All that these could do was to spiritualize it into a symbol of devotion to a high religious ideal (comp. Jer. iv. 4; Deut. x. 16; Jer. ix. 25).

In conclusion, we must briefly refer to an analogous rite, of which women are in many countries the subjects. It is said to consist in mutilation of the clitoris, which is sometimes connected with the degrading practice of infibulation. It was prevalent in the time of Strabo (pp. 771, 824) in Arabia and in Egypt, and, as Mr Lane attests, is still native to those regions (*Modern Egyptians*, i. 73, *Arabic Lexicon*, s. v. "hafada"). Carsten Niebuhr heard that it was practised on both shores of the Persian Gulf, and at Baghdad (*Description de l'Arabie*, p. 70). It appears in some parts of West Africa, e.g., Dahomey, but is said to be still more common in the eastern part of that continent.

(F. K. C.)

CIRCUS, in Roman Antiquity, was a building for the exhibition of horse and chariot racing. It consisted of tiers of seats running parallel with the sides of the course, and forming a crescent round one of the ends. The other end was straight and at right angles to the course, so that the plan of the whole had nearly the form of an ellipse cut in half at its vertical axis. Along the transverse axis ran a fence (*spina*) separating the return course from the starting one. The straight end had no seats, but was occupied by the stalls (*carceres*) where the chariots and horses were held in readiness. This end constituted also the front of the building with the main entrance. At each end of the course were conical pillars (*metæ*) to mark its limits.

The oldest building of this kind in Rome was the CIRCUS MAXIMUS, in the valley between the Palatine and Aventine hills, where previous to any permanent structure races appear to have been held beside the altar of the god Consus. The first building is assigned to Tarquin the younger, but for a long time little seems to have been done to complete its accommodation, since it is not till 329 B.C. that we hear of stalls being erected for the chariots and horses. It was not in fact till under the empire that the circus became a conspicuous public resort. Cæsar enlarged it to some extent, and also made a canal 10 feet broad between the lowest tier of seats and the course as a precaution for the spectators' safety when exhibitions of fighting with wild beasts, such as were afterwards confined to the amphitheatre, took place. When these exhibitions were removed, and the canal (*envipus*) was no longer necessary, Nero filled it up. Augustus is said to have placed an obelisk between the meta or goals, and to have built a new *pulvinar*, or state box; but if this is taken in connection with the fact that the circus had been partially destroyed by fire in 31 B.C., it may be supposed that besides this he had restored it altogether. Only the lower tiers of seats were of stone, the others being of wood, and this, from the liability to fire, may account for the frequent restorations to which it was subject; it would also explain the falling of the seats by which a crowd of people were killed in the time of Antoninus Pius. In the reign of Claudius, apparently after a fire, the *carceres* of stone (*tufa*) were replaced by marble, and the meta of wood by bronze gilt. Under Domitian, again, after a fire, the circus was rebuilt and the *carceres* increased to 12 instead of 8 as before. The work was finished by Trajan. The number of people it could seat is given at 150,000 and at 250,000, the latter being supposed to be the more correct. This was the only public spectacle at which men and women were not assigned to separate places. The lower seats were reserved for persons of rank; the state box, *suggestus* or *cubiculum*, was midway in the range of seats. The principal object of attraction apart from the racing must have been the *spina* or low wall which ran down the middle of the course, with its obelisks, images, and ornamental shrines. On it also were seven figures of dolphins and seven oval objects, one of which was taken down at every round made in a race, so that spectators might see readily how the contest proceeded. The chariot race consisted of seven rounds of the course. The chariots started abreast, but in an oblique line, so that the outer chariot might be compensated for the wider circle it had to make at the other end. Such a race was called a *missus*, and as many as 24 of these would take place in a day. The competitors

were different colours, originally white and red (*albata* and *russata*); afterwards the colours green (*prasina*) and blue (*veneta*) were added, and further, under Domitian, gold and purple, but these last two were not long retained. To provide the horses and large staff of attendants, it was necessary to apply to rich capitalists and owners of studs, and from this there grew up in time four select companies (*factiones*) of circus purveyors which were identified with the four colours, and with which those who organized the races had to contract for the proper supply of horses and men. The drivers, who were mostly slaves, were sometimes held in high repute for their skill. The horses most valued were those of Sicily, Spain, and Cappadocia. Chariots with two horses (*bigæ*) or four (*quadrigæ*) were most common, but sometimes also they had three (*trigæ*) and exceptionally more than four horses. Occasionally there was combined with the chariots a race of riders (*desultores*), each rider having two horses and leaping from one to the other during the race. At certain of the races the proceedings were opened by a *pompa* or procession in which images of the gods and of the imperial family deified were conveyed in cars drawn by horses, mules, or elephants, attended by the colleges of priests, and led by the presiding magistrate seated in a chariot in the dress and with the insignia of a triumphant. The procession passed from the capitol along the forum, and on to the circus, where it was received by the people standing and clapping their hands. The presiding magistrate gave the signal for the races by throwing a white flag (*mappa*) on to the course. Next in importance to the Circus Maximus in Rome was the CIRCUS FLAMINIUS, erected 221 B.C., in the censorship of C. Flaminius, from whom it may have taken its name; or the name may have been derived from Prata Flaminia, where it was situated, and where also were held plebeian meetings. The only games that are positively known to have been celebrated in this circus were the *Ludi Taurii* and *Plebei*. There is no mention of it after the 1st century. Its ruins were identified in the 16th century at S. Caterina de Funari and the Palazzo Mattei. A third circus in Rome was erected by Caligula in the gardens of Agrippina, and was known as the CIRCUS NERONIS, from the notoriety which it obtained through the Circensian pleasures of Nero. A fourth was constructed by Maxentius outside the Porta Appia near the tomb of Cæcilia Metella, where its ruins are still, and now afford the only instance from which an idea of the ancient circi in Rome can be obtained. It was traced to Caracalla, till the discovery of an inscription showed it to be the work of Maxentius. Old topographers speak of six circi, but two of these appear to be imaginary, the Circus Floræ and the Circus Salustii. There remain then the four described above,—C. Maximus, Flaminius, Neronis, and Maxentii.

Circus races were held in connection with the following public festivals, and generally on the last day of the festival if it extended over more than one day:—(1) The *Consualia*, August 21, December 15; (2) *Equiviva*, February 27, March 14; (3) *Ludi Romani*, September 4-19; (4) *Ludi Plebei*, November 4-17; (5) *Cerealia*, April 12-19; (6) *Ludi Apollinares*, July 13; (7) *Ludi Megalenses*, April 4-10; (8) *Floralia*, April 28-May 3. (A. S. M.)

CIRENCESTER, or CICESTER, a parliamentary borough and market-town of England, in the county of Gloucester, 16 miles south-east of the town of that name, and 88 miles by road and 95 by the Great Western Railway from London. It returns one member to Parliament, and is a polling-place for East Gloucestershire. Not being incorporated, it is governed by two high constables and 14 wardens, elected annually. Cirencester was created a separate hundred by a charter granted in the reign of Henry IV. The town, which is situated on the River

Churn, and is in connection with a branch of the Thames and Severn Canal, has four principal streets, and contains a free grammar-school, alms-houses, a savings bank, a museum, a public library, breweries, and a carpet factory. The church is a fine structure of the 15th century, with an embattled tower 134 feet high, a fine decorated porch, and several lateral chapels. The Royal Agricultural College, which adjoins Oakley Park, the seat of Lord Bathurst, is about a mile and a half from the town. It is a handsome

Arms of Cirencester.

edifice, with a frontage of 190 feet, facing North Wiltshire. Its buildings include a chapel, a dining hall, a library, a lecture theatre, laboratories, class-rooms, private studies and dormitories for the students, apartments for resident professors, and servants' offices; also a museum containing a collection of anatomical and pathological preparations, and mineralogical, botanical, and geological specimens. The college farm comprises 500 acres, 450 of which are arable; and on it are the well-appointed farm-buildings and the veterinary hospital. Besides agriculture, the course of instruction at the college includes chemistry, natural and mechanical philosophy, natural history, mensuration, surveying, and drawing, and other subjects of practical importance to the farmer, proficiency in which is tested by means of sessional examinations. There is some manufacture of carpets, woollen cloths, and carriers' knives, but the industries of Cirencester are chiefly agricultural. It has now a chamber for the promotion of agriculture, and the market is accounted one of the best for live-stock in the west of England. In 1871 the population of the borough, which, including the parish of Stratton, has an area of 5935 acres, amounted to 7681; that of the parish was 7079.

Cirencester occupies the site of Corinum, Corinium, or Duro-cornovium, the capital of the Dobuni, and an important military station of the Romans, situated at the junction of the Fosse-way with the Ermin and Icknield streets. In 577 it was taken by Ceawlin, king of Wessex, and in 878 by the Danes; and it was the seat of a council held by Canute about the year 1020. An abbey for Black Canons, relics of which still exist, was founded here by Henry I. in 1117. The town was garrisoned for the Parliament at the commencement of the Civil War, and was taken by Rupert in 1642; but in 1643 it was finally surrendered to Cromwell's forces. Numerous Roman antiquities have from time to time been discovered at Cirencester, and remains of the ancient walls, two miles in circuit, and of a Roman amphitheatre are still to be seen there. (See *All the Year Round*, No. 494, Oct. 10, 1868.)

CIRILLO, DOMENICO (1734-1799), physician and patriot, was born at Grugno in the kingdom of Naples. Elected while yet a young man to the botanical chair left vacant by the death of Pedillo, Cirillo went some years afterwards to England, where he was made member of the Royal Society, and to France, where he became the friend of Buffon, Diderot, D'Alembert, and others of like mark. On his return to Naples he was appointed successively to the chairs of practical and theoretical medicine. He wrote voluminously and well on scientific subjects; and he secured an extensive medical practice. The entry into Naples of the French under Championnet, and the proclamation of the Parthenopean Republic (1799), brought to a conclusion his life of laborious and thoughtful benevolence. Cirillo was chosen a representative of the people; he then became a member of the Legislative Commission, and was elected its president. On the abandonment by the French of the young republic (June 1799), cardinal-general Ruffo and the army of Ferdinand of Bourbon returned to Naples, and the republicans withdrew, ill-armed and inadequately provisioned, to the forts. After a short siege, in which an English squadron under Captain Foote bore a prominent part, they surrendered, on honourable terms. Life, and

liberty were guaranteed them by the signatures of Ruffo, of Foote, and of Micheroux, the Russian minister. But the arrival of Nelson changed the complexion of affairs; he refused to ratify the capitulation. Secure under the British flag, too, Ferdinand and Caroline of Austria showed themselves eager for revenge. The patriots were arrested; and Cirillo, who had tended the queen more than once, and whose skill had been employed on behalf of the English admiral himself, was thrown into prison with the others. A court was formed to try the captives, and Cirillo was brought before them. Neither his age, nor his fair life and fame, nor his heroic speech and bearing, availed with them, and he was condemned to death. Nelson attempted to save him, and Ferdinand consented to forego his vengeance if the republican would ask for mercy. He refused, and was hanged. Cirillo, whose favourite study was botany, and who was recognized as an entomologist by Linnæus, left many books, in Latin and Italian, all of them treating of medical and scientific subjects, and all of little value now save as indications of the writer's fine qualities as a man of science and humanitarian. Exception must, however, be made in favour of the *Virtù Morali dell' Asino*, a pleasant philosophical opuscule remarkable for its double charm of sense and style.

CIRTA, an ancient city of Numidia, in Africa, in the country of the Massyli. It was regarded by the Romans as the strongest position in Numidia, and was made by them the converging point of all their great military roads in that country. By the early emperors it was allowed to fall into decay, but was afterwards restored by Constantine, from whom it took its modern name. See CONSTANTINE.

CIS-SUTLEJ STATES. This term has for many years been obsolete, as inapplicable to modern territorial arrangements. It came into use in 1809, when the Sikh chiefs south of the Sutlej (Satlaj) passed under British protection, and was generally applied to the country south of the Sutlej and north of the Delhi territory, bounded on the E. by the Himálayas, and on the W. by Soisá District. Prior to 1846, the greater part of this territory was independent, the chiefs being subject merely to control from a political officer stationed at Ambálá, and styled the agent of the governor-general for the Cis-Sutlej States. After the first Sikh war the full administration of the territory became vested in the officer already mentioned. In 1849 occurred the annexation of the Punjab, when the Cis-Sutlej States Commission, comprising the districts of Ambálá, Ferozpur, Ludhiáná, Thanésvár, and Simla, was incorporated with the new province. The name continued to be applied to this division until 1862, when, owing to Ferozpur having been transferred to the Lahore, and a part of Thanésvár to the Delhi Division, it ceased to be appropriate. Since then, the tract remaining has been known as the Ambálá or Umballa Division. Those of old Cis-Sutlej States which still retain their independence are Gatiálá, Jhino, Nábbá, Maler Kotlá, and Farídkot.

CISTERCIANS, a religious order of the rule of St Benedict, founded in 1098, by St Robert abbot of Molesme. It was so named from its original convent in the forest of Citeaux (Cistercium), about 14 miles north-east of Beaune. This order became so powerful that it governed almost all Europe both in temporal and spiritual concerns, and through the exertions of St Bernard of Clairvaux had increased so rapidly in power, that within a century from its foundation it embraced 800 rich abbeys in different countries of Europe. The abbeys of La Ferté, Pontigny, Clairvaux, and Morimond were offshoots of that of Citeaux, and produced in their turn a great number of separate communities, all which continued under the superintendence of the abbey of Citeaux. The abbey of Morimond alone possessed 700 benefices;

and its supremacy was acknowledged by the military orders of Calatrava, Alcantara, and Montesa in Spain, and by those of Christ and of Avis in Portugal. But the most famous of all the communities of this order was that of Clairvaux, founded in 1115 by St Bernard (see BERNARD). Towards the end of the 12th century, however, the immense wealth of Citeaux began to operate unfavourably on its discipline, and led the way to great corruptions. Jean de la Barrière, abbot of Nôtre-Dame des Feuillants, near Toulouse, succeeded in 1577 in effecting a reform, which gave rise to the Feuillants in France, and likewise to the Reformed Bernardines in Italy. But of all the reforms among the Cistercians, the most celebrated was that effected by the abbot of La Trappe in 1664.

Dependent on the abbey of Citeaux there were about 1800 monasteries and an equal number of nunneries. This ancient abbey was the burial-place of all the dukes of Burgundy of the original line, with the exception of the first two, who died before its foundation.

The Cistercians were involved in the general fate of the religious orders during the period of the French Revolution of 1789, and were reduced to a few convents in Spain, Poland, Austria, and the Saxon part of Upper Lusatia.

The habit of the order is a white robe or cassock, with a black scapulary and a woollen girdle. The nuns wear a white tunic and a black scapulary and girdle.

The order began by exercising more austerity than either the Benedictines of that period (the 11th century) or the Cluniac monks who had emerged from the Benedictine order two centuries earlier. This austerity was exhibited, not only in the rude and scanty fare of the brethren (limited during a great part of the year to one meal a day) and in the great amount of silence imposed, but likewise in the dress, the sacred vestments, and the church furniture of the order. The Cluniac monks not only possessed fine churches, but were also in the habit of adorning them with pictures, jewelled crosses, and other elaborate decorations, while their vestments and chalices were in keeping with this splendour. Indeed one of their first men, St Hugh, a contemporary of St Bernard, strongly maintained the principle that nothing could be too rich and costly for the divine service. But St Stephen Harding, the English monk, who, though only the second abbot, was the virtual creator of Cistercian rule and discipline, impressed on the Cistercian mind a different principle, and trained up St Bernard in it. Their chasubles were to be only of linen, the chalice not of gold but of silver gilt, and even the white robe of the order was less voluminous in its folds than that of the Cluniac brethren. In one respect, however, the sense of beauty seems to have been allowed to operate. Although the material was to be coarse, yet the form of a vestment might be carefully looked to; and this taste for beauty of form led in due time to great advances in the architecture of their buildings. This difference between the Cistercians and the Cluniacs occasioned considerable rivalry and even bitterness of sentiment,—the Cistercianna being in danger of something like Pharisaic pride in contrasting their own severer rule with the comparative luxury of their neighbours the Cluniacs, who apparently afforded some ground for the charge of relaxation of discipline, especially in the 12th century after the death of St Hugh.

In the matter of government, the Cistercian order (as constituted by St Stephen Harding at a general chapter held in 1119) differed both from the Benedictine and from the Cluniac constitutions. According to the rule of St Benedict each monastery was to be an independent monarchy under its own abbot; although in extraordinary cases neighbouring monasteries of the order might interfere in the election of an abbot. This independence had not been

found to work well, and the Cluniac rule made each daughter monastery to be subject to Cluny, and to receive its prior from his appointment. Such subordination tended to greater regularity of discipline, and greatly increased the power of the order, especially when abbey were assailed by laymen or unduly harassed by bishops. The abbot of Cluny became a veritable prince with 314 monasteries subject to him, and with the right of coining money, which was accepted as readily as that of the king of France. But its concentration of power in a single hand involved the risk attendant upon all such despotisms; and the Abbot Pontius, who had succeeded St Hugh about 1109 seems to have endangered the entire system by an extravagance which loaded Cluny with debt, and by his ambition in claiming the title of Abbot of Abbots, and in endeavouring to sway the oldest Benedictine house itself, the famous abbey of Monte Casino. St Stephen Harding framed a constitution for the Cistercians which aimed at combining the excellencies without the defects of the two systems. Although in his rule the abbot of Cîteaux was to be recognized as the *Pater Universalis Ordinis*, yet a system of reciprocal visitation was to be carried on, and the four earliest houses which derived their origin from Cîteaux—La Ferté, Pontigny, Clairvaux, and Morimond—governed the abbey which had respectively sprung from them. The four abbots of these eldest daughters of Cîteaux might even in an extreme case, with the consent of a general chapter, depose the head of the order, the abbot of Cîteaux. This constitution, known as the Chart of Charity, exercised much influence upon other orders, and in some degree upon that of Cluny. But it gave rise to a claim which (though not intended by its author, and denounced by its greatest *alumnus*, St Bernard) was successfully urged in after years by the Cistercian, as well as by other orders, viz., an exemption from episcopal superintendence.

With respect to intellectual culture and influence, the Cistercian order cannot claim a place in the front rank among the monastic bodies. Devoted to worship, to penance, to contemplation, and to culture of the soil, the order did not, like some others, admit the relaxation of scholastic disputations. No doubt it received learned men into its fold. It is also true that St Stephen Harding, with some of his brethren, undertook a revision of the Bible, that copies of many valuable works were made by the brethren (though, with less ornamentation than the illuminated MSS. of some other orders), and that St Bernard was solicitous to furnish all the monasteries founded by himself with good libraries. Nevertheless, as an order, the Cistercians have not achieved such triumphs of learning as the Benedictines, the Dominicans, or the Jesuits.

But no order springing out from the Benedictine proved so popular as the Cistercian. During the 11th century its houses were multiplied in every direction. It touched both ends of the social scale. St Bernard and the thirty novices who joined with him were all of noble birth; many similar accessions were made from time to time, and in the 12th century we read of fifteen young German princes entering the order. But a place was also found for the poor and uneducated. Such as could not be choir brethren, might be lay brethren and till the fields; and the contrast between a labourer of this sort, partaking of the dignity of a great and powerful community, and the neighbouring husbandman, the serf of some feudal lord, was in the eyes of many all in favour of the monk. It may have tended towards that emancipation of the labourers so largely effected by the monastic orders and celebrated in a well-known sonnet by Wordsworth.

The order seems to have especially thriven in England. From Waverley in Surrey, the earliest Cistercian settle-

ment in the country, they spread over Britain, especially by the rivers of Yorkshire, and extended into Scotland.

The overthrow of the Cistercian houses at the time of the Reformation is a part of general monastic history. While some of the dissolutions were unjust, and the execution of abbots mere judicial murders, the luxury of the great Yorkshire houses seems quite undeniable, and perhaps their overthrow may, on the whole, be thought to favour the *dictum* of Mr Carlyle,—that nothing is crushed from without, until it is ripe to perish from within.

For authorities see the articles already referred to. See also Manriquez, *Annales Cistercienses*, 4 vols. folio, Lyons, 1642, and the various biographies of St Bernard by Alban Butler, Neander, De Ratisbon, Morrison, and others; and *The Cistercian Saints of England*, especially *St Stephen Harding*, edited by John Henry Newman, London, 1844. Dean Milman cautions his readers against the love of legend displayed in these biographies, but praises "their research and exquisite charm of style." *Lat. Christianity*, bk. viii. chap. 4. See also Cheruel, *Dictionnaire Historique*, Paris, 1855; and for the artistic elements, so far as regards paintings, Mrs Jamieson's *Legends of the Monastic Orders*, London, 1850; also Cosmo Innes's *Scotland in the Middle Ages*, Edinburgh, 1860; *Records of the Monastery of Kinsloss*, by John Stuart, LL.D., Edinburgh, 1872; and an article "Cistercian Abbays in Yorkshire" in *Fraser's Magazine* for September 1876. (J. G. C.)

CITEAUX, or CISTEAUX, a village in France, in the department of Côte d'Or, about 7 miles east of the town of Nuits, and 12 from Dijon. It is celebrated for the great abbey founded by Robert de Molesme in 1098, which became the head-quarters of the Cistercian order (see last article). The buildings are now occupied as a reformatory for juvenile criminals; and in the neighbourhood is an extensive agricultural college.

CITHÆRON, or as it is now called from its pine forests, ELATEA, a famous mountain, or rather mountain range, in the south of Bœotia, separating that state from Megaris and Attica. It was greatly celebrated in Grecian mythology, and is frequently mentioned by the great poets of Greece, especially by Sophocles. It was on Cithæron that Actæon was changed into a stag, that Pentheus was torn to pieces by the Bacchantes whose orgies he had been watching, and that the infant Œdipus was exposed. This mountain, too, was the scene of the mystic rites of Dionysus; and the festival of the Dædala in honour of Juno was celebrated on its summit. The carriage road from Athens to Thebes crosses the range by a picturesque defile which has at one time been guarded on the Attic side by a strong fortress, the ruins of which are known as Ghypho-kastro or Gipsy Castle.

CITRIC ACID, or OXYTRICARBALLYLIC ACID, $C_6H_8O_7$, or $C_3H_4(OH)(CO.OH)_3$, a tetrahydric tribasic acid, first prepared in the solid state by Scheele, in 1784, from the juice of lemons, in which it exists in large quantity. It is present also in oranges, citrons, currants, gooseberries, and many other fruits, and in several bulbs and tubers. It is made on a large scale from lime or lemon juice, chiefly in the months of November and December. The juice is fermented for some time to free it from muceilage, then boiled and filtered, and neutralized with powdered chalk and a little milk of lime; the precipitate of calcium citrate so obtained is decomposed with dilute sulphuric acid, and the resulting solution of citric acid is separated by filtration, evaporated to remove calcium sulphate, and concentrated. The concentration is best effected in vacuum pans. The acid is thus procured in colourless rhombic prisms of the composition $C_6H_8O_7 + H_2O$. Crystals of a different form are deposited from a strong boiling solution of the acid. About 20 gallons of lemon juice should yield about 10 lb. of crystallized citric acid. The acid may also be prepared from the juice of unripe gooseberries. Calcium citrate for exportation in the place of lemon juice must be manu-

factured with care to avoid an excess of chalk or lime, which would precipitate constituents of the juice that cause the fermentation of the citrate and the production of calcium acetate and butyrate.

Citric acid has an agreeable sour taste. It is soluble in $\frac{3}{4}$ ths of its weight of cold, and in half its weight of boiling water, and dissolves in alcohol, but not in ether. At 150° C. it melts, and on the continued application of heat boils, giving off its water of crystallization. At 175° C., it is resolved into water and aconitic acid, $C_6H_6O_6$, a substance found in *Equisetum fluviatile*, monkshood, and other plants. A higher temperature decomposes this body into carbonic anhydride and itaconic acid, $C_5H_6O_4$, which, again, by the expulsion of a molecule of water, yields citraconic anhydride, $C_5H_4O_3$. Citric acid digested at a temperature below 40° C. with concentrated sulphuric acid gives off carbonic oxide. With fused potash it forms potassium oxalate and acetate. It is a strong acid, and dissolved in water decomposes the carbonates and attacks iron and zinc. Citric acid, in common with other tribasic acids, evolves about three times the amount of heat disengaged by acetic acid when quantities of these two bodies in the proportion of their molecular weights are saturated with soda,—one molecule of the tribasic being equivalent to three of the monobasic acid.

The citrates are a numerous class of salts, the most soluble of which are those with alkaline bases; the alkaline earthy citrates are insoluble. Citric acid, being tribasic, forms either acid monometallic, acid dimetallic, or neutral trimetallic salts; thus, mono-, di-, and tri-potassic and sodic citrates are known. In a few salts a fourth atom of hydrogen is replaced by a metal, and citric acid is therefore considered by some chemists to be tetrabasic. Citric acid gives with excess of lime-water a slight precipitate of calcium citrate; a further precipitate is produced by boiling, but it is redissolved as the liquid cools. Solution of citric acid may be approximately titrated by means of baryta-water and litmus.

The impurities occasionally present in citric acid are salts of potassium and sodium, traces of iron, lead, and copper derived from the vessels used for its evaporation and crystallization, and free sulphuric, tartaric, and even oxalic acid. Tartaric acid, which is sometimes present in large quantities as an adulterant in commercial citric acid, may be detected in the presence of the latter, by the production of a precipitate of acid potassium tartrate when potassium acetate is added to a cold solution of the sample of acid to be tested. Another mode of separating the two acids is to convert them into calcium salts, which are then treated with a perfectly neutral solution of cupric chloride, soluble cupric citrate and calcium chloride being formed, while cupric tartrate remains undissolved. Citric is furthermore distinguished from tartaric acid by the fact that an ammonia solution of silver tartrate produces a brilliant silver mirror when boiled, whereas citric of silver is reduced only after prolonged ebullition.

Citric acid is used in calico-printing, also in the preparation of effervescing draughts, and occasionally as a refrigerant and antiscorbutic, instead of fresh lemon juice, to which, however, it is therapeutically inferior. In the form of lime juice it has long been known as an antidote for scurvy, and several of the citrates are much employed as medicines.

CITRON, a species of *Citrus* (*C. medica*, Risso), belonging to the Natural Order *Aurantiacæ*, which furnishes also the orange, lime, and shaddock. The citron-tree is an evergreen growing to a height of about 8 feet; it has long, pendent and, in the wild varietal, spiny branches, pale-green, oblong, and sub-serrate leaves, and flowers purple without and white within. The fruit is ovate or oblong, protuberant at the tip, and from 5 to 6 inches

long, with a rough, furrowed, adherent rind, the inner portion of which is thick, white, and fleshy, the outer, thin, greenish-yellow, and very fragrant. The pulp is sub-acid and edible, and its seeds are bitter. There are many varieties of the fruit, some of them of great weight and size. The Madras citron has the form of an oblate sphere; and in the "fingered citron" of China, the lobes are separated into finger-like divisions.

Gallesio and De Candolle consider citrons and lemons to be distinct species; but the former authority states that seed produced by lemon-trees growing amongst citron-trees gave varieties which were intermediate between the two species; and by some botanists citrons, lemons, and oranges are held to be all varieties of the wild *Citrus medica*. According to Dr G. Birdwood, however, the orange and lemon are both natives of Upper India, the former being derived from the wild *Citrus Aurantium* of Gurhwal, Sikkim, and Khasia, and the lemon, lime, and probably citron also, from the wild *Citrus Limonum* of the valleys of Sikkim and Kumaon, of which the *Citrus medica* was the first cultivated variety (*Athenæum*, No. 2544, July 29, 1876, p. 151).

The citron-tree thrives in the open air in China, Persia, the West Indies, Madeira, Sicily, Corsica, and the warmer parts of Spain and Italy; and in conservatories it is often to be seen in more northerly regions. It was described by Theophrastus as growing in Media; it appears, however, not to be indigenous to Persia, but to have been introduced into that country and other lands from North India, where it was found growing wild by Dr Royle. It was early known to the ancients, and the fruit was held in great esteem by them; but they seem to have been acquainted with no other member of the *Aurantiacæ*, the introduction of oranges and lemons into the countries of the Mediterranean being due to the Arabs, between the 10th and 15th centuries. Josephus tells us that "the law of the Jews required, that at the feast of tabernacles every one should have branches of palm-tree and citron-tree" (*Antiq.*, xiii. 13, 5); and the Hebrew word *tappuah*, rendered "apples" and "apple-tree" in Cant. ii. 3, 5, Prov. xxv. 11, &c., probably signifies the citron-tree and its fruit. Oribasius in the 4th century describes the fruit, accurately distinguishing the three parts of it. About the 3d century the tree was introduced into Italy; and, as Gallesio informs us, it was much grown at Salerno in the 11th century. In China, citrons are placed in apartments to make them fragrant. The rind of the citron yields two perfumes, *oil of cedar* and *oil of citron*, isomeric with oil of turpentine; and when preserved it is much esteemed as a sweetmeat.

Oribasii Sardiani *Collectorum Medicinalium Liori XVII.*, l. i. c. 64 (*De citrio*); Gallesio, *Traité du Citrus* (1811); Darwin, *Animals and Plants under Domestication*, vol. i. pp. 334-6 (1868); Brandis, *Forest Flora of North-West and Central India*, p. 51 (1874).

CITTÀ DELLA PIEVE, a town of Italy, in the province of Umbria and district of Orvieto, about six miles from the station or Chiusi on the railway between Siena and Rome. It was the birthplace of Pietro Perugino, and still preserves some of his finest works. Of these several are to be found in the cathedral, and his fresco of the adoration of the Magi adorns the oratory of the *Disciplinati*. Population, 6500.

CITTÀ DI CASTELLO, a town of Italy, pleasantly situated on the left bank of the Tiber, in the province of Perugia, 25 miles N. by W. from the town of that name. It has a cathedral, dedicated to St. Floridus and dating from 1503, a large number of interesting churches with valuable paintings, a communal palace of the 13th century, an episcopal palace remodelled since 1789, and no fewer than four mansions belonging to the Vitelli family, who governed the town in the 15th century, and were among the first to

patronize the youthful Raphael. The city for a long time numbered several works of this artist among its most precious possessions; but they have all been removed except two of minor importance. Città di Castello occupies the site of the ancient *Tiferum Tiberinum*, which was chiefly famous for its connection with the younger Pliny, who had a villa in the neighbourhood. The older city was destroyed by Totila, but numerous inscriptions have been discovered which prove its identity. Population, 6090.

CITTÀ VECCHIA, or **CITTÀ NOTANILE**, a fortified city of Malta, situated about six miles west of Valetta, on high ground which affords a view of a large part of the island. It is the seat of a bishop, and contains an episcopal seminary and a handsome modern cathedral, which is said by tradition to occupy the site of the house of the governor Publius, who welcomed the apostle Paul. In the rock beneath the city there are some remarkable catacombs; and a grotto, reputed to have given shelter to the apostle, is pointed out below the church of S. Paolo. About two miles from the town is the residence of the English governor, known as the palace of St Antonio; and at a like distance in another direction is the ancient palace of the grand-masters of the order of St John, with an extensive public garden called *Il Boschetto*. Città Vecchia was called *Medina*, or the City, by the Arabs, and it probably represents the town of *Melita*, which is mentioned by all the ancient geographers. It continued to be the capital of the island till the rise of Valetta in the 16th century. Population about 7000.

CITY. This word, derived through the French *cité* from the Latin *civitas*, is used in England with considerable laxity as little more than a synonym for town; while at the same time there is a kind of traditional feeling of dignity connected with it. It was maintained by Coke and Blackstone that a city is a town incorporate which is or has been the see of a bishop; and this opinion has been very generally adopted since. It does not correspond, however, with actual English usage; for Westminster, on the one hand, is called a city though it has no corporation; and Thetford, Sherbourne, and Dorchester are never so designated though they are regularly incorporated and were once episcopal sees. It is true, indeed, that the actual sees in the country all have a formal right to the title, and that Westminster is the only place without a bishop that has the same claim. In the United States, where the ecclesiastical distinction does not exist, the application of the term depends on the kind and extent of the municipal privileges possessed by the corporations, and charters are given raising from the rank of town to that of city. This use of the word is much more in keeping with its derivation, which leads the mind back to the idea of the social life and corporate action of a body of freemen; and it also agrees better with such classical English phrases as "a free city," an imperial city. Both in France and in England the word is popularly used to distinguish the older and central nucleus of some of the larger towns such as London and Paris. The history of the rise of cities and towns has been given in the article **BOROUGH**.

CIUDAD BOLIVAR. See **ANGOSTURA**.

CIUDAD REAL, the chief town formerly of La Mancha, and now of the province of Ciudad Real, in Spain, 97 miles south from Madrid, on a plain between the Jabalon and Guadiana. It was built and fortified by Alphonso the Wise in 1264, to check the progress of the Moors; and portions of the walls and towers remain. It has several fine churches, and a large hospital, founded by Cardinal Lorenzana. It is one of the least commercial of the larger towns of Spain, deriving most of its trade from agriculture and an annual fair which is of great importance for the sale of asses and mules. Population, 9000.

CIUDAD REAL, the chief town of the state of Chiapas in Mexico, otherwise known as **SAN CRISTOBAL** (*q. v.*)

CIUDAD RODRIGO, a town of Spain, on the Agueda, in the province of Salamanca, near the frontier of Portugal. It is fortified, and has some good public buildings, including a cathedral (built in 1190), several churches and convents, an arena for bull-fights, and an episcopal seminary. In the principal square are three Roman columns brought from the ancient Malabrigo; and remains of a Roman aqueduct are also extant. A bridge connects the city with the suburbs, which are surrounded by a fertile and well-cultivated district. There are manufactures of woollen stuffs, leather, and linen; and the soap is celebrated in Spain as *Jabon de Piedra*. During the Peninsular war the town was taken by Marshal Masséna in 1810, and in 1812 by the duke of Wellington, who received from the Cortes the title of duke of Ciudad Rodrigo. Population, 5700.

CIUDADELA, a city, formerly the capital of Minorca, at the head of a deep and narrow bay on its west coast, 25 miles north-west of Mahon. It is surrounded by walls, and has a fine Gothic church. Population upwards of 5000.

CIVET (*Viverra*), a genus of Carnivorous Mammals forming with the genet and ichneumon the family *Viverridae*, and characterized by the possession of a deep pouch situated in the neighbourhood of the genital organs (divided into two sacs each about the size of an almond), into which the substance known as civet is poured from the glandular follicles secreting it. This fatty substance is at first semifluid and of a yellow colour, but afterwards acquires the consistency of pomade and becomes darker. It has a strong musky odour, exceedingly disagreeable to those unaccustomed to it, but "when properly diluted and combined with other scents it produces a very pleasing effect, and possesses a much more floral fragrance than musk, indeed it would be impossible to imitate some flowers without it" (Rimmel's *Art of Perfumery*). There are three species of civet-producing *Viverridae*. The Civet (*Viverra civetta*) is a native of North Africa and extends as far south and west as Fernando Po. It is from 2 to 3 feet in length, exclusive of the tail, which is half the length of the body, and stands from 10 to 12 inches high. It is covered with long hair, that on the middle line of the back being longest and capable of being raised or depressed at will, of a dark-grey colour, with numerous transverse black bands and spots. It is chiefly nocturnal, and is by preference carnivorous, feeding on birds and the smaller quadrupeds, in pursuit of which it climbs trees, but it is said also to eat fruits, roots, and other vegetable matters. In a state of captivity it is never completely tamed, and is only thus kept for the sake of the civet, which is obtained in largest quantity from the male, especially when he is in good condition and is subjected to irritation. It is scraped from the pouch with a small spoon usually twice a week. The Zibeth (*Viverra zibetha*) is a widely distributed species extending from Arabia to Malabar, and throughout several of the larger islands of the Indian Archipelago. It is smaller than the civet, and wants the dorsal crest. In the wild state it is exceedingly ferocious, doing great damage among poultry, and frequently making off with the young of the swine and sheep. "To the rapacity of the wolf," says Captain Williamson, "it joins the agility of the cat and the cunning of the fox." When hunted it makes a determined resistance, and emits a scent so strong as even to sicken the dogs, who nevertheless are exceedingly fond of the sport, and cannot be got to pursue any other game while the staunch of the zibeth is in their nostrils. In confinement, however, it becomes comparatively tame, and civet is obtained from it in considerable quantity. In preparing this for the market it is usually spread out on the leaves of the pepper plant in order to free it from the

hairs that have become detached from the pouch. The Rasse (*Viverra rasse*) is the fiercest and most carnivorous of its kind, and remains untamed in confinement. It is a native of Java, where it is found not unfrequently in forests at a moderate elevation above the sea level. It is almost 3 feet long including the tail, and is prettily marked with dark longitudinal stripes, and with spots which have a distinctly linear arrangement. Its perfume, which is extracted in the same way as in the two preceding species, is highly valued and much used by the Javanese, who, according to Dr Horsfield, apply it to their dresses, and by means of various unguents and mixtures of flowers to their persons. British imports of civet are chiefly from the Indian Archipelago, and when pure it is worth about £2 per ounce. It is frequently adulterated with butter or lard. Fossil remains of extinct civets are found in the Miocene strata of Europe.

CIVIDALE, or more precisely **CIVIDALE DEL FRIULI**, a town of Italy, in the province of Udine, and about ten miles east of the city of that name, on the right bank of the Natisone, over which there is a bridge 250 feet in length. It has an interesting collegiate church founded in 750, an antiquarian museum, and a military training college. The archives of the "duomo" contain various manuscripts of value, among which may be mentioned a 5th century copy of the translation of the Gospels by St Jerome, and the prayer-book of St Gertrude which dates from the 11th century. Cividale is generally supposed to occupy the site of the ancient *Forum Julii*, a town of the Carni, which rose to the rank of a Roman colony, became the capital of Venetia after the destruction of Aquileia in 452, was made the seat of a duchy under the Lombards, and thus gave its name to the province of Friuli. Many ancient remains have been brought to light from time to time, including vases, bas-reliefs, inscriptions, a temple, and another large building with mosaic floors. In 1874 the tomb of the Lombard duke Gisulfo was discovered. Paulus Diaconus was born at Forum Julii in the 8th century; and the actress Ristori is a native of Cividale. Population, 8200.

CIVIL LAW. This phrase, and its Latin equivalent *ius civile*, have been used in a great variety of meanings. *Ius civile* was sometimes used to distinguish that portion of the Roman law which was the proper or ancient law of the city or state of Rome from the *ius gentium*, or the law common to all the nations comprising the Roman world, which was incorporated with the former through the agency of the prætorian edicts. This historical distinction remained as a permanent principle of division in the body of the Roman law. One of the first propositions of the Institutes of Justinian is the following:—"Jus autem civile vel gentium ita dividitur. Omnes populi qui legibus et moribus reguntur partim suo proprio, partim communi omnium hominum jure utuntur; nam quod quisque populus ipsi sibi jus constituit, id ipsius civitatis proprium est, vocaturque jus civile quasi jus proprium ipsius civitatis. Quod vero naturalis ratio inter omnes homines constituit, id apud omnes peræquo custoditur, vocaturque jus gentium quasi quo jure omnes gentes utuntur." The *ius gentium* of this passage is elsewhere identified with *ius naturale*, so that the distinction comes to be one between civil law and natural or divine law. The municipal or private law of a state is sometimes described as civil law in distinction to public or international law. Again the municipal law of a state may be divided into civil law and criminal law. The phrase, however, is applied *par excellence* to the system of law created by the genius of the Roman people, and handed down by them to the nations of the modern world. The civil law in this sense would be distinguished from the local or national law of modern states. In England recent changes have reduced the number of courts in which the

principles of the civil law are recognized, but we are still accustomed to say that the civil law has a certain limited application, and that the race of civilians or civil lawyers is not quite extinct. The civil law in this sense is further to be distinguished from that adaptation of its principles to ecclesiastical purposes which is known as the canon law. See **ROMAN LAW**.

CIVITA CASTELLANA, a town of Italy, in the province of Rome, 17 miles E.S.E. of Viterbo, situated on a volcanic plateau surrounded on all sides but one by deep ravines which send down their streamlets to the Tiber. The road from Borghetto crosses the gorge by a magnificent bridge erected in 1712 by Cardinal Imperiali. The town is a bishop's see, and has a cathedral dating from 1210, with beautiful mosaics and an interesting crypt adorned by an altar-piece of the 14th century. The citadel, which was founded by Alexander VI. and completed by Leo X., is used for the incarceration of state prisoners. In the neighbourhood are the remains of the ancient city of *Falerium Vetus*, well known in connection with the story of Camillus and the schoolmaster; portions of the ancient walls, gateways, and sepulchres are still to be seen at the edge of the ravine. About four miles to the west are the much more extensive ruins of *Falerii Novi*, now known as Sta Maria di Falleri. They present some of the most remarkable specimens of ancient military architecture now in existence, consisting of walls nearly perfect, a large number of square towers in good preservation, and several finely-arched gateways. In the internal area the most important buildings are a Roman theatre erected on Etruscan foundations, and a Lombard church of the 12th century (the Abbazia di Sta Maria). The population of Civita Castellana is about 4000.

CIVITA DI PENNE, an episcopal town of Italy, at the head of a district in the province of Abruzzo Ulteriore I., 19 miles west of Pescara. Under the name of Pinna it was the chief city of the Vestini, and is celebrated in the history of the Social war for its obstinate resistance to the Roman army by which it was besieged. It has still some remains of ancient buildings, and numerous inscriptions that attest its importance, and it is noted for the manufacture of artificial flowers. Population, 9800.

CIVITA VECCHIA, a maritime city and port of the Roman territory, which gives its name to a "delegation," or province. It is the best and almost the only port on the coast of the former territories of the church, and is about 24 miles to the west of Rome. The city occupies the site of the ancient *Centum Cellæ*, so called from a palace which the Emperor Trajan built there. That place, which after Trajan had by means of an aqueduct brought good water thither from the mountain of Tolfo, acquired considerable importance as the natural port of Rome. Totila besieged it; Narses recovered it; but it was utterly destroyed in 812 by the Saracens, who were then ravaging all that coast. The inhabitants fled to the neighbouring mountains, but when Pope Leo IV. had overcome and driven away the Saracens, they returned to the old site, rebuilt the town, and called it Civita Vecchia. The articles exported from Civita Vecchia are timber, sulphur, wool and silk, skins, decorative marbles, and anchovies. The imports consist of wines, forged iron, salt provisions, stock-fish, linen, woollen, and cotton cloths, silks, coffee, sugar, and general colonial produce. The port enjoyed under the Popes commercial freedom and sundry special privileges. But its commerce declined in recent times almost to zero. Some little life is imparted to the place from its being a station for steamers on their way from Genoa and Leghorn to Naples, and from the residence of consuls of all nations. But the city, which apart from its territory has only 8143 inhabitants, is a squalid-looking place. On the land side it is protected by fortifications once of considerable importance.

ance. The principal of these is the castle erected by the architect Vangallo for Pope Julius II., after a design attributed to Michelangelo, and by others to Bramante. In the immediate vicinity of this castle are the arsenal and the bardo or establishment for convicts.

CLACKMANNAN, a county of Scotland, on the north bank of the River Forth, situated between $56^{\circ} 5'$ and $56^{\circ} 14'$ N. lat., and $3^{\circ} 33'$ and $3^{\circ} 56'$ W. long., is bounded on the S.W. by the Forth, W. by Stirlingshire, N. and N.W. by Perthshire and a detached portion of Stirling, E. by Fife, and N.E. by a detached portion of Perth. It is the smallest county in the United Kingdom, is irregular in form, and occupies an area of $47\frac{1}{2}$ square miles, or 30,477 acres. The surface of the county is varied in its character. An elevated ridge rises on the west, and, running through the middle of the county, spreads itself gradually till it reaches the eastern boundary, skirting the alluvial or carse lands in the valleys of the Forth and of the Devon. Still further to the north, the Ochil Hills (the highest of which is Bencluch, 2363 feet, above Tillicoultry) form a very picturesque landscape, having their generally verdant surface broken by bold projecting rocks and deeply indented ravines. The range forms a great igneous mound, developing itself in amygdaloid felspar and porphyry, and occasionally in pentagonal columns of basaltic greenstone. It is used almost entirely for sheep farming.

The only streams worthy of notice which traverse the county are the Devon and the Black or South Devon. The former, remarkable in the upper parts of its course for its romantic scenery, runs through the county near the base of the Ochils, and falls into the Forth at the village of Cambus. The Black Devon flows westward in a direction nearly parallel to the Devon, and falls into the Forth near Clackmannan. It supplies motive power to numbers of mills and coal engines; and its whole course is over coal strata. The Forth is navigable as far as it forms the boundary of this county, and ships of 500 tons burden can run up as far as Alloa.

The soils of the arable land of Clackmannanshire are in general productive and well cultivated; though the greater part of the elevated range which is interposed between the carse lands on the Forth and the vale of Devon at the base of the Ochils on the north consists of inferior soils, often incumbent on an impervious clay. All the crops commonly raised in Scotland grow luxuriantly on both sides of this tract, which also contains within itself a considerable proportion of valuable soil. According to the agricultural returns for 1875 the area of land under cultivation in Clackmannan is considerably above the average for Scotland, and the average under corn is 7 per cent. above the average of other counties. In minerals the county is rich. Iron-ore (hæmatite), copper, silver, lead, cobalt, and arsenic have all been discovered in small quantity in the Ochils, between Airthry and Dollar. Iron-stone is wrought to a considerable extent for the Devon iron-works, near Clackmannan. It is found either in beds, or in oblate balls imbedded in slaty clay, and yields from twenty-five to thirty per cent. of iron. Coal has been wrought for upwards of two hundred years in this county. A considerable proportion of the quantity obtained is shipped at Alloa for foreign ports. It is all bituminous or common coal of a good quality; no smithey or caking coal has yet been discovered. In 1871 there were 2137 persons engaged in coal mining and its adjuncts. The strata which compose the coal-field are varieties of sand-stone, shale, fire-clay, and argillaceous ironstone. The great coal-field of Scotland, which passes in a diagonal line from the mouths of the Forth and Tay to the Irish Sea, is bounded by the Ochils; no coal has been found to the north of them, except at Brora, in Sutherlandshire.

There is a considerable manufacturing industry in the county. Woollens are made extensively at Tillicoultry; and at other parts distilling, brewing, coopering, tanning, glass-blowing, and ship-building are carried on. In 1871 there were 4952 persons engaged in connection with the woollen manufacture or more than a fifth of the whole population.

Among the antiquities of Clackmannan may be mentioned the ruins of Castle Campbell, an old seat of the Argyll family, occupying a singularly wild and almost inaccessible situation, above the village of Dollar. It was burned by Montrose in 1644. The tower of Alloa, built prior to the year 1300, the residence of the Erskines, earls of Mar, now belonging to the representative of that noble family, is in good preservation. The tower of Clackmannan was long the seat of a lineal descendant of the Bruce family after the failure of the male line.

According to the parliamentary return for 1873 Clackmannan county was divided among 1227 proprietors, the average size of the properties amounting to $24\frac{1}{2}$ acres (that of all Scotland being 143), while the average value of the land was £3, 4s. 6d. per acre (that of Scotland being £1). There were in the same year 1137 properties of less than 1 acre, 52 of 1 and under 10 acres, 20 of 10 and under 100, and 5 above 2000—the largest amounting to 616 $\frac{1}{2}$ acres, the property of the earl of Kellie.

Clackmannanshire sends a member to Parliament conjointly with the county of Kinross and certain adjoining parishes. By the Reform Bill, the parishes of Culross and Tulliallan, formerly comprehended in the county of Perth, Alva, formerly belonging to Stirling, and the Perthshire portion of Logie were included in the parliamentary group. The population of the county in 1861 was 21,450, and in 1871, 23,747, consisting of 11,555 males and 12,192 females. The principal towns are—Alloa, population 9000; Tillicoultry, 3700; Dollar, 2100; and Clackmannan, 1300.

CLAIRAULT, or CLAIRAUT, ALEXIS-CLAUDE (1713–1765), a French mathematician, was born on May 7, 1713, at Paris, where his father was a teacher of mathematics. Under his father's tuition he made so rapid progress in mathematical studies, that in his thirteenth year he read before the French Academy an account of the properties of four curves which he had then discovered. When only sixteen, he finished his treatise on *Curves of Double Curvature*, which, on its publication two years later, procured his admission into the Academy of Sciences, although even then he was below the legal age. In 1736, together with his friend Maupertuis, he took part in the famous expedition to Lapland, which was undertaken for the purpose of estimating a degree of the meridian, and on his return he published his treatise *Sur la figure de la terre*. In his work on this subject he promulgated his theorem in regard to the variation of gravity, which has been corrected by Sir G. Airy. He obtained an ingenious approximate solution of the problem of the three bodies; in 1750 he gained the prize of the St Petersburg Academy for his treatise on the Lunar Theory; and in 1759 he calculated the perihelion of Halley's comet. Clairault died at Paris, May 17, 1765.

CLAMECY, a town of France at the head of an arrondissement, in the department of Nièvre, at the confluence of the Yonne and Beuvron, 38 miles N.N.E. of Nevers. It has some remains of its ancient castle, and of the massive walls by which it was formerly surrounded, several Gothic churches, and a handsome modern chateau. There are manufactures of woollen cloths, earthenwares, paper, and leather, and a considerable trade in wood and charcoal, principally with Paris, by means of the Yonne. Population in 1872, 4717.

CLAN. The Goidelic word *cland* or *clann* (in Welsh, *plant*) signifies seed, and in a general sense children, descendants. In the latter sense it was used as one of many terms to designate groups of kindred in the tribal system of government which existed in Ireland and the Highlands of Scotland. Through the latter country the word passed into the English language, first in the special sense of the Highland clan, afterwards as a general name for a tribe or group of kinsmen. The results of inquiries into the tenure of land in different countries and the ancient laws and institutions of Aryan nations, and the publication of various Celtic documents, particularly the ancient laws of Ireland and Wales, have thrown much light on the constitution of the clan system, and given to it a wider and more important interest than it had hitherto possessed.

Before the use of surnames and elaborate written genealogies, a tribe in its definite sense was called a *tuath*, a word of wide affinities, from a root *tu*, to grow, to multiply, existing in all European languages. When the tribal system began to be broken up by conquest and by the rise of towns and of territorial government, the use of a common surname furnished a new bond for keeping up a connection between kindred. The head of a tribe or smaller group of kindred selected some ancestor and called himself his *Ua*, grandson, or as it has been anglicized *O'*, e.g., *Ua Conchobair* (*O' Conor*), *Ua Suilleabhain* (*O' Sullivan*). All his kindred adopted the same name, the chief using no fore-name however. The usual mode of distinguishing a person before the introduction of surnames was to name his father and grandfather, e.g., Owen, son of Donal, son of Dermot. This naturally led some to form their surnames with *Mac*, son, instead of *Ua*, grandson, e.g., *Mac Carthaigh*, son of *Carthach* (*Mac Carthy*), *Mac Ruaidhri*, son of *Rory* (*Macrory*). Both methods have been followed in Ireland, but in Scotland *Mac* came to be exclusively used. The adoption of such genealogical surnames fostered the notion that all who bore the same surname were kinsmen, and hence the genealogical term *clann*, which properly means the descendants of some progenitor, gradually became synonymous with *tuath*, tribe. Like all purely genealogical terms, *clann* may be used in the limited sense of a particular tribe governed by a chief, or in that of many tribes claiming descent from a common ancestor. In the latter sense it was synonymous with *sil*, *siol*, seed, e.g., *Siol Alpine*, a great clan which included the smaller clans of the Macgregors, Grants, Mackinnons, Macnabs, Macphies, Macquarries, and Macaulays.

The clan system in the most archaic form of which we have any definite information can be best studied in the Irish *tuath*, or tribe. This consisted of two classes:—(1) tribesmen, and (2) a miscellaneous class of slaves, criminals, strangers, and their descendants. The first class included tribesmen by blood in the male line, including all illegitimate children acknowledged by their fathers, and tribesmen by adoption or sons of tribeswomen by strangers, foster-sons, men who had done some signal service to the tribe, and lastly the descendants of the second class after a certain number of generations. Each *tuath* had a chief called a *rig*, king, a word cognate with the Gaulish *rig-s* or *rix*, the Latin *reg-s* or *rex*, and the Old Norse *rik-tr*. The tribesmen formed a number of communities, each of which, like the tribe itself, consisted of a head, *ceann fine*, his kinsmen, slaves, and other retainers. This was the *fine*, or sept. Each of these occupied a certain part of the tribe-land, the arable part being cultivated under a system of co-tillage, the pasture land co-grazed according to certain customs, and the wood, bog, and mountains forming the marchland of the sept being the unrestricted common land of the sept. The sept was in fact a village community like the

Russian *mir*, or rather like the German *gemeinde* and Swiss *amend*, which Sir H. S. Maine, M. de Laveleye, and others have shown to have preceded in every European country the existing order of things as respects ownership of land.

What the sept was to the tribe, the homestead was to the sept. The head of a homestead was an *aire*, a representative freeman capable of acting as a witness, compurgator, and bail. These were very important functions, especially when it is borne in mind that the tribal homestead was the home of many of the kinsfolk of the head of the family as well as of his own children. The descent of property being according to a gavel-kind custom, it constantly happened that when an *aire* died the share of his property which each member of his immediate family was entitled to receive was not sufficient to qualify him to be an *aire*. In this case the family did not divide the inheritance, but remained together as "a joint and undivided family," one of the members being elected chief of the family or household, and in this capacity enjoyed the rights and privileges of an *aire*. Sir H. S. Maine has directed attention to this kind of family as an important feature of the early institutions of all Aryan nations. Beside the "joint and undivided family" there was another kind of family which we might call "the joint family." This was a partnership composed of three or four members of a sept whose individual wealth was not sufficient to qualify each of them to be an *aire*, but whose joint wealth qualified one of the co-partners as head of the joint family to be one.

So long as there was abundance of land each family grazed its cattle upon the tribe-land without restriction; unequal increase of wealth and growth of population naturally led to its limitation, each head of a homestead being entitled to graze an amount of stock in proportion to his wealth, the size of his homestead, and his acquired position. The arable land was no doubt apportioned annually at first; gradually, however, some of the richer families of the tribe succeeded in evading this exchange of allotments and converting part of the common land into an estate in severalty. Septs were at first colonies of the tribe which settled on the march-land; afterwards the conversion of part of the common land into an estate in severalty enabled the family that acquired it to become the parent of a new sept. The same process might, however, take place within a sept without dividing it; in other words, several members of the sept might hold part of the land of the sept as separate estate. The possession of land in severalty introduced an important distinction into the tribal system—it created an aristocracy. An *aire* whose family held the same land for three generations was called a *flaith*, or lord, of which rank there were several grades according to their wealth in land and chattels. The *aires* whose wealth consisted in cattle only were called *bó-aires*, or cow-*aires*, of whom there were also several grades, depending on their wealth in stock. When a *bó-aire* had twice the wealth of the lowest class of *flaith* he might enclose part of the land adjoining his house as a lawn; this was the first step towards his becoming a *flaith*. The relations which subsisted between the *flaiths* and the *bó-aires* formed the most curious part of the Celtic tribal system, and throw a flood of light on the origin of the feudal system. Every tribesman without exception owed *ceilsinne* to the *rig*, or chief, that is, he was bound to become his *ceile*, or vassal. This consisted in paying the *rig* a tribute in kind, for which the *ceile* was entitled to receive a proportionate amount of stock without having to give any bond for their return, giving him service, e.g., in building his *dun*, or stronghold, reaping his harvest, keeping his roads clean and in repair, killing wolves, and especially service in the field, and doing him homage three times

while scated every time he made his return of tribute. Paying the "*calpa*" to the Highland chiefs represented this kind of vassalage, a *colpdach* or heifer being in many cases the amount of food-rent paid by a free or *saer ceile*. A tribesman might, however, if he pleased, pay a higher rent on receiving more stock together with certain other chattels for which no rent was chargeable. In this case he entered into a contract, and was therefore a bond or *daer ceile*. No one need have accepted stock on these terms, nor could he do so without the consent of his sept, and he might free himself at any time from his obligation by returning what he had received, and the rent due thereon.

What every one was bound to do to his *rig*, or chief, he might do voluntarily to the *flaith* of his sept, to any *flaith* of the tribe, or even to one of another tribe. He might also become a bond *ceile*. In either case he might renounce his ceileship by returning a greater or lesser amount of stock than what he had received according to the circumstances under which he terminated his vassalage. In cases of disputed succession to the chiefship of a tribe the rival claimants were always anxious to get as many as possible to become their vassals. Hence the anxiety of minor chieftains, in later times in the Highlands of Scotland, to induce the clansmen to pay the "*calpa*" where there happened to be a doubt as to who was entitled to be chief.

The effect of the custom of gavel-kind was to equalize the wealth of each and leave no one wealthy enough to be chief. The "joint and undivided family," and the formation of "joint families," or gilds, was one way of obviating this result; another way was the custom of tanistry. The headship of the tribe was practically confined to the members of one family; this was also the case with the headship of a sept. Sometimes a son succeeded his father, but the rule was that the eldest and most capable member of the *geilfine*, that is the relatives of the actual chief to the fifth degree,¹ was selected during his lifetime to be his successor,—generally the eldest surviving brother or son of the preceding chief. The man selected as successor to a chief of a tribe, or chieftain of a sept, was called the tanist, and should be "the most experienced, the most noble, the most wealthy, the wisest, the most learned, the most truly popular, the most powerful to oppose, the most steadfast to sue for profits and [be sued] for losses." In addition to these qualities he should be free from personal blemishes and deformities, and of fit age to lead his tribe or sept, as the case may be, to battle.² So far as selecting the man of the *geilfine* who was supposed to possess all those qualities, the office of chief of a tribe or chieftain of a sept was elective, but as the *geilfine* was represented by four persons together with the chief or chieftain, the election was practically confined to one of the four. In order to support the dignity of the chief or chieftain a certain portion of the tribe or sept land was attached as an apanage to the office; this land, with the *duins*, or fortified residences upon it, went to the successor, but a chief's own property might be gavelled. This custom of tanistry applied at first probably to the selection of the successors of a *rig*, but was gradually so extended that even a *bó-aire* had a tanist.

A sept might have only one *flaith*, or lord, connected with it, or might have several. It sometimes happened, however, that a sept might be so broken and reduced as not to have even one man qualified to rank as a *flaith*. The rank of a *flaith* depended upon the number of his *ceiles*,

that is, upon his wealth. The *flaith* of a sept, and the highest when there was more than one, was *ceann fine*, or head of the sept, or as he was usually called in Scotland, the chieftain. He was also called the *flaith geilfine*, or head of the *geilfine*, that is, the kinsmen to the fifth degree from among whom should be chosen the tanist, and who according to the custom of gavel-kind were the immediate heirs who received the personal property and were answerable for the liabilities of the sept. The *flaiths* of the different septs were the vassals of the *rig*, or chief of the tribe, and performed certain functions which were no doubt at first individual, but in time became the hereditary right of the sept. One of those was the office of *maer*, or steward of the chief's rents, &c.,³ and another that of *aire tuisi*, leading *aire*, or *taoisech*, a word cognate with the Latin *dux* or *dux*, and Anglo-Saxon *here-tog*, leader of the "here," or army. The *taoisech* was leader of the tribe in battle; in later times the term seems to have been extended to several offices of rank. The cadet of a Highland clan was always called the *taoisech*, which has been translated captain; after the conquest of Wales the same term, *tywysaug*, was used for a ruling prince. Slavery was very common in Ireland and Scotland; in the former slaves constituted a common element in the stipends or gifts which the higher kings gave their vassal *sub-reguli*. Female slaves, who were employed in the houses of chiefs and *flaiths* in grinding meal with the hand-mill or quern, and in other domestic work, must have been very common, for the unit or standard for estimating the wealth of a *bó-aire*, blood-fines, &c., was called a *cumhal*, the value of which was three cows, but which literally meant a female slave. The descendants of those slaves, prisoners of war, forfeited hostages, refugees from other tribes, broken tribesmen, &c., gathered round the residence of the *rig* and *flaiths*, or squatted upon their march-lands, forming a motley band of retainers which made a considerable element in the population, and one of the chief sources of the wealth of chiefs and *flaiths*. The other principal source of their income was the food-rent paid by *ceiles*, and especially by the *daer* or bond *ceiles*, who were hence called *biathachs*, from *biad*, food. A *flaith*, but not a *rig*, might, if he liked, go to the house of his *ceile* and consume his food-rent in the house of the latter.

Under the influence of feudal ideas and the growth of the modern views as to ownership of land, the chiefs and other lords of clans claimed in modern times the right of bestowing the tribe-land as *turcree*, instead of stock, and receiving rent not for cattle and other chattels as in former times, but proportionate to the extent of land given to them. The *turcree*-land seems to have been at first given upon the same terms as *turcree*-stock, but gradually a system of short leases grew up; sometimes, too, it was given on mortgage. In the Highlands of Scotland *ceiles* who received *turcree*-land were called "taksmen." On the death of the chief or lord, his successor either bestowed the land upon the same person or gave it to some other relative. In this way in each generation new families came into possession of land, and others sank into the mass of mere

³ This office is of considerable importance in connection with early Scottish history. In the Irish annals the *rig*, or chief of a great tribe (*mor tuath*), such as of Ross, Moray, Marr, Buehan, &c., is called a *mor maer*, or great *maer*. Sometimes the same person is called king also in these annals. Thus *Findlacc*, or Finlay, son of *Ruadhri*, the father of Shakespeare's Macbeth, is called king of Moray in the *Annals of Ulster*, and *mor maer* in the *Annals of Tighernach*. The term is never found in Scottish charters, but it occurs in the Book of the Abbey of Deir in Buehan, now in the library of the University of Cambridge. The Scotch kings and their successors obviously regarded the chiefs of the great tribes in question merely as their *maers*, while their tribesmen only knew them as kings. From these "*mor-maerships*," which corresponded with the ancient *mor tuath*, came most, if not all, the ancient Scottish earldoms.

¹ It is right to mention that the explanation here given of *geilfine* is different from that given in the introduction to the third volume of the *Ancient Laws of Ireland*, which has been followed by Sir H. S. Maine in his account of it in his *Early History of Institutions*, and which the present writer believes to be erroneous.

² It should also be mentioned that illegitimacy was not a bar. The issue of "handfast" marriages in Scotland were eligible to be chiefs, and even sometimes claimed under feudal law.

tribesmen. Sometimes a "taksman" succeeded in acquiring his land in perpetuity, by gift, marriage, or purchase, or even by the "strong hand." The universal prevalence of exchangeable allotments, or the rundale system, shows that down to even comparatively modern times some of the land was still recognized as the property of the tribe, and was cultivated in village communities.

The chief governed the clan by the aid of a council called the *sabaid* (*sab*, a prop), but the chief exercised much power, especially over the miscellaneous body of non-tribesmen who lived on his own estate. This power seems to have extended to life and death. Several of the *flaiths*, perhaps, all heads of septs, also possessed somewhat extensive powers of the same kind.

The Celtic dress, at least in the Middle Ages, consisted of a kind of shirt reaching to a little below the knees called a *leun*, a jacket called an *inar*, and a garment called a *brat*, consisting of a single piece of cloth. This was apparently the garb of the *aires*, who appear to have been further distinguished by the number of colours in their dress, for we are told that while a slave had clothes of one colour, a *rig tuatha*, or chief of a tribe, had five, and an *ollamh* and a superior king, six. The breeches was also known, and cloaks with a cowl or hood, which buttoned up tight in front. The *leun* is the modern kilt, and the *brat* the plaid, so that the dress of the Irish and Welsh in former times was the same as that of the Scottish Highlander.

By the abolition of the heritable jurisdiction of the Highland chiefs, and the general disarmament of the clans by the Acts passed in 1747 after the rebellion of 1745, the clan system was practically broken up, though its influence still lingers in the more remote districts. An Act was also passed in 1747 forbidding the use of the Highland garb,¹ but the injustice and impolicy of such a law being generally felt it was afterwards repealed. (w. k. s.)

CLAPARÉDE, JEAN LOUIS RENÉ ANTOINE ÉDOUARD, (1832-1870), an eminent naturalist, was born at Geneva, April 24, 1832, and belonged to an ancient family of that city. His father was pastor of the parish of Chaney, and Edouard's early years were spent in that village. After a distinguished course at the classical college, the gymnasium, and the academy of his native city, he repaired in 1852 to the university of Berlin, and there devoted himself with self-sacrificing ardour to the study of medicine and the natural sciences and the acquisition of the Germanic languages of Northern Europe. The direction of his investigations was greatly affected by J. Müller and Ehrenberg, the former of whom was at that period engaged in his important researches about the Echinoderms. In 1855 he accompanied Müller to Norway, and there spent two months on a desolate reef that he might obtain satisfactory observations. The latter part of his stay at Berlin he devoted, along with Lachmann, to the study of the Infusoria and Rhizopods; and their united labours resulted in an important publication which at once gave them rank among the chief zoologists of the day. In 1857 he obtained the degree of doctor, and soon after he was chosen professor of comparative anatomy in the academy of Geneva. Here he continued to teach with ever growing acceptance; and he even became a favourite of the general public through his popular lectures. In 1859 he visited England, and, in

¹ The following oath was administered at Fort William and other places in 1747 and 1748:—

"I, [name], do swear, as I shall answer to God at the great day of judgment, that I have not, nor shall have, in my possession any gun, sword, pistol, or any arm whatsoever, and that I never use tartan, plaid, or any part of the Highland garb; and if I do so, may I be cursed in my undertakings, family, and property,—may I never see my wife and children, father, mother, or relations,—may I be killed in battle as a coward, and lie without Christian burial in a strange land, far from the graves of my forefathers and kindred; may all this come across me if I break my oath."

company with Dr Carpenter, took a voyage to the Hebrides; and in 1863 he spent some months in the Bay of Biscay. On the appearance of Darwin's work on the *Origin of Species*, he adopted his theories and published a valuable series of articles on the subject in the *Revue Germanique*, 1861. His enormous activity might seem to indicate vigorous health; but he was a martyr from the year 1854 to a painful affection of the heart, which caused excessive palpitations, frequently accompanied by spitting of blood. During 1865 and 1866 he was quite incapable of work, and he determined to pass the winter of 1866-7 in Naples. The change of climate produced some amelioration, and the patient's indomitable energy was attested by two elaborate volumes on the Annelidæ of the Gulf. He again visited Naples with advantage in 1868; but in 1870, instead of recovering as before, he grew worse, dropsy set in, and on the 31st of May he died at Siena on his way home. Modest and retiring, he was at the same time generous, hospitable, and helpful; and in spite of his physical weakness, he displayed remarkable spirit in the political disturbances of Geneva. A certain bluntness of expression sometimes made him fail of courtesy in debate, and he could be pitilessly severe in his criticism where he thought severity was deserved; but he was at the same time strikingly free from uncharitableness, jealousy, or resentment. His library was bequeathed to his native city. See the notice of his life by Henri de Saussure in the 42d vol. of the *Archives des Sciences physiques et naturelles* (Bibliothèque Univ. et Revue Suisse), Geneva, 1871.

Besides the works already mentioned his chief contributions to science are:—"Ueber Actinophrys Eichhornii," in Müller's *Arch. für Anatomie*, 1855; "Sur la théorie de la formation de l'œuf," in *Arch. des Sci.*, 1855; "Anatomie und Entwicklungsgeschichte der Neritina fluviatilis," in Müller's *Arch.*, 1857; various papers in regard to binocular vision in the *Arch. des Sci.*, 1858 and 1859; "Zur Morphologie der Zusammengesetzten Augen bei den Arthropoden," in *Zeitsch. für Wissensch. Zool.*, 1860; *Recherches anat. sur les Oligochètes*, Gen., 1862; *Rech. sur l'évolution des Araignées*, 1862, which obtained the gold medal of the Utrecht Society of Arts and Sciences; *Beobacht. über Anat. und Entwicklungsgesch. Wirbelloser Thiere an der Küste der Normandie*, 1863; "De la myopie," in *Arch. des Sci.*, 1868; "Studien an Akariden," in *Zeitsch. für Wiss. Zool.*, 1868; and "Histologische Unterschl. über den Regenwurm (*Lumbricus terrestris*)" in *do.*, 1868. He left in MSS. *Recherches sur la structure des Annelides sédentaires*.

CLAPPERTON, HUGH (1788-1827), an African traveller, was born in 1788 at Annan, Dumfriesshire, where his father was a surgeon. In his youth he gained some knowledge of practical mathematics and navigation; and while still very young he was apprenticed on board a vessel which traded between Liverpool and North America. After having made several voyages across the Atlantic, he was impressed for the navy, in which, having a little influence and much intelligence and physical vigour, he soon rose to the rank of midshipman. He acted as drill sergeant in the "Asia," the flag-ship of Vice-Admiral Cochrane, and was promoted to the rank of lieutenant, and to the command of a schooner on the Canadian lakes. In the year 1817, when the flotilla on the lakes was dismantled, he returned to his native country on half-pay.

In 1820 Clapperton removed to Edinburgh, where he contracted an intimacy with Dr Oudney, who first awoke his interest in the cause in which both were destined to perish. After the return of Captain Lyon, the British Government having determined on equipping a second expedition for the purpose of exploring Northern Africa, Dr Oudney was appointed to proceed to Bornu as consul, and Clapperton and Colonel Dunham were added to the party. From Tripoli, early in 1822, they set out southward to Murzuk, and from this point Clapperton and Oudney travelled westward into the country of the Tuareiks, as far as Ghraat, 11° E. long. On the 17th February 1823 they reached Kouka the capital of Bornu, where they

were well received by the sultan; and after remaining here till the 14th December they again set out for the purpose of exploring the course of the Niger. They arrived in safety at Murrur, where Oudney breathed his last in the arms of his companion. Clapperton, however, penetrated alone as far as Sackatu, 13° N. lat. and 6½° E. long., where he was obliged to stop, though the Niger was only five days' journey to the west. Worn out with travel he returned to Kouka, where he again met Denham. The two travellers then set out for Tripoli, and thence proceeded to England, where they arrived on June 1, 1825. An account of the travels of Denham, Clapperton, and Oudney was published under the title of *The Narrative of Travels and Discoveries in Northern and Central Africa in the years 1822-24*.

Immediately after his return Clapperton was raised to the rank of commander, and sent out with another expedition to Africa. He set sail in August 1825, in company with Captain Pearce, Mr Dickson, Dr Morrison, and Richard Lander, who acted as his servant. On this occasion he landed at Badagry in the Bight of Benin, and immediately commenced his journey into the interior, along with Lander, Captain Pearce, and Dr Morrison. The last two soon fell victims to the hardships of the journey; but in January 1826 Clapperton reached Katunga, the capital of Yariba, and soon afterwards crossed the Niger at Broussa, the spot where Mungo Park met his untimely fate. In July he arrived at Kano, a city which he had previously visited. Here he left his servant with the baggage, and proceeded alone to Sackatu, intending to proceed to Timbuctu. The sultan, however, detained him, and being seized with dysentery he died at Sackatu on the 13th April 1827. His Journal was published by Lander, who also wrote a work entitled *Records of Captain Clapperton's last Expedition to Africa*, which appeared in 1830, in 2 vols. 12mo.

CLARE, a maritime county in the south-west of Ireland, in the province of Munster, bounded N.W. by the Atlantic, S. by the estuary of the Shannon, S.E. and N.E. by Limerick, Tipperary, Lough Derg, and Galway, having an area of 1293 square miles, or 827,994 acres.

Although the surface of the county is hilly, and in some parts even mountainous, it nowhere rises to a great elevation. Much of the western baronies of Moyarta and Ibrickan is composed of bog land. Bogs are frequent also in the mountainous districts elsewhere, except in the limestone barony of Burren, the inhabitants of some parts of which supply themselves with turf from the opposite shores of Connemara. Generally speaking, the eastern parts of the county are mountainous, with tracts of rich pasture land interspersed; the west abounds with bog; and the north is rocky and best adapted for grazing sheep. In the southern part, along the banks of the Fergus and Shannon, are the bands of rich low grounds called corcesses, of various breadth, indenting the land in a great variety of shapes. They are composed of deep rich loam, and are distinguished as the black corcesses, adapted for tillage, and the blue, used more advantageously as meadow land.

The coast is in general rocky, and occasionally bold and precipitous in the extreme, as may be observed at the picturesque cliffs of Moher within a few miles of Ennistymon and Lisdoonvarna, which rise perpendicularly at O'Brien's tower to an elevation of 580 feet. The coast of Clare is indented with several bays, the chief of which are Ballyvaghan, Liscannor, and Malbay; but from Black Head to Loop Head, that is, along the entire western boundary of the county formed by the Atlantic, there is no safe harbour except Liscannor Bay. The county possesses only one large river, the Fergus; but nearly 100 miles of its boundary-line are washed by the River Shannon, which, after almost dividing

Ireland from north to south, and dispensing its bounties to the adjoining counties of Roscommon, Leitrim, Longford, Westmeath, Galway, King's County, Kerry, Tipperary, and Limerick, enters the Atlantic Ocean between this county and Kerry. The numerous bays and creeks on both sides of this noble river render its navigation safe in every wind; but the passage to and from Limerick is often tedious, and the port of Kilrush has from that cause gained in importance. The River Fergus is navigable from the Shannon to the town of Clare, which is the terminating point of its natural navigation, and the port of all the central districts of the county. A railway traverses Clare county *via* Ennis, connecting Limerick with Athenry and Galway.

There are upwards of one hundred lakes and tarns in the county, of which the largest are Loughs O'Grady, Graneg, Tedane, Inchiquin, Inniscronan, and Clonlea; but they are more remarkable for picturesque beauty than size or utility, with the exception of the extensive and navigable Lough Derg, formed by the River Shannon between this county and Tipperary.

Although metals and minerals have been found in many places throughout the county, they do not often show themselves in sufficient abundance to induce the application of capital for their extraction. The principal metals are lead, iron, and manganese. Lead mines were recently worked at Kilbricken in the barony of Bunratty (about six miles from Ennis), and at Annaglough. The Milltown lead mine in the barony of Tulla is probably one of the oldest mines in Ireland, and at one time, if the extent of the ancient excavations may be taken as a guide, there must have been a very rich deposit. The richest lead mine worked in recent times is that of Ballyhickey, about two miles from Kilbricken. Copper pyrites occurs in several parts of Burren, but in small quantity. Coal exists at Labasheeda on the right bank of the Shannon, but the seams are thin. Limestone occupies all the central and northern parts of the county in a tract bounded on the S. by the Shannon, on the E. by a line running parallel with the Ougarnee River to Scariff Bay, on the N. by the mountain of Talla and the confines of Galway, on the W. by Galway Bay and a line including Kilfenora, Corofin, and Ennis, and meeting the Shannon at the mouth of the Fergus. Within half a mile of the Milltown lead mine are immense natural vaulted passages of limestone, through which the River Ardsullas winds a singular course. The lower limestone of the eastern portion of the county has been found to contain several very large deposits of argentiferous galena. Flags, easily quarried, are procured near Kilrush, and thinner flags near Ennistymon. Slates are quarried in several places, the best being those of Broadford and Killaloe, which are nearly equal to the finest procured in Wales. A species of very fine black marble is obtained near Ennis; it takes a high polish, and is free from the white spots with which the black Kilkenny marble is marked.

The mineral springs, which are found in many places, are chiefly chalybeate. That of Lisdoonvarna, about eight miles from Ennistymon, has long been celebrated for its medicinal qualities. There are chalybeate springs of less note at Scool, Colneen, Kilkishen, Burren, Killecran, Broadford, Lahinch, Kilkee, Kilrush, Killadysart, and Casino, near Milltown Malbay. Springs called by the people "holy" or "blessed" wells, generally mineral waters, are common; but the belief in their power of performing cures in inveterate maladies is nearly extinct.

The Atlantic Ocean and the estuary of the Shannon afford many situations admirably adapted for summer bathing-places. Among the best frequented of these localities are Burren, Milltown Malbay, with one of the best beaches on the western coast, Lahinch, about two miles from Ennistymon, and near the interesting cliffs of Moher,

which has a magnificent beach, on Liscannor Bay, and forms a delightful summer residence, Kilkee, perhaps the most fashionable watering-place on the western coast of Ireland, and Kilrush on the Shannon estuary.

The soil and surface of the county is in general better adapted for grazing than for tillage. Agriculture is in a backward state, there not being a fifth part of its area under cultivation. In 1870 the acreage of the county under crops amounted to 147,662 acres, and in 1875 little advance had been made. The number of acres under the principal crops in these two years stood as follows:—

	Oats.	Wheat.	Potatoes.	Turnips and other Green Crops.	Meadow.
1870	18,776	7828	33,107	9,764	73,429
1875	17,854	3296	28,459	10,411	84,927

As regards live stock the same stationary condition of its agricultural industry will be apparent from the following figures:—

	Cattle.	Sheep.	Pigs.	Horses and Mules.	Poultry.
1870	100,839	15,100	24,771	6601	284,551
1875	100,405	13,459	21,413	6989	323,635

As regards the property in the county, the land in 1874 was divided among 1025 separate owners, of whom 243 possessed less than one acre, and 782 one acre and upwards. Twelve proprietors owned more than 10,000 acres each, the most extensive demesnes being in the hands of Lord Leconfield, with 37,292 acres; the marquis of Conyngham, with 27,613; E. P. Westby, 25,779; Lord Inchiquin, 20,321; Colonel Vandeleur, 19,790; and the Hon. C. W. White, 18,266. The value of the land was at the same date rated at an average of 8s. 3d. per acre, while that of all Munster was 11s. 2d.

There are no extensive manufactures in the county of Clare, although flannels and friezes are made for home use, and hosiery of various kinds, chiefly coarse and strong, is made around Corofin, Ennistymon, and other places. The Shannon, west of Scattery Island, and the sea along the coasts, are good fishing stations, abounding with cod, haddock, ling, sole, turbot, ray, mackerel, and other fish, but the rugged nature of the coast and the tempestuous sea greatly hinder the operations of the fishermen. Near Pooldoody is the great Burren oyster bed called the Red Bank, where a large establishment is maintained, and from which a constant supply of the excellent Red Bank oysters is furnished to the Dublin and other large markets. Crabs and lobsters are caught on the shores of the Bay of Galway in every creek from Blackhead to Ardfray. The salmon fishery of the Shannon is very considerable, and cels, which abound in every rivulet, form an important article of consumption.

The population of the county shows a remarkable decrease within the 30 years between 1841 and 1871, although, after all, this is exceeded by the neighbouring counties of Cork, Limerick, and Tipperary. In 1841 the inhabitants numbered 286,394; in 1851, 212,440; in 1861, 166,305; and in 1871, 147,864. Of these 144,440 were Roman Catholics, 8027 Episcopalians, 220 Presbyterians, and 177 of other denominations. In 1871 there were 8709 persons who had obtained parochial relief throughout the year, while during the twenty-four years ending 1875 there had emigrated from the county 90,154 persons. At the date of the last census (1871) 64,566 persons could read and write, and 15,972 could read but could not write; and 4432 were returned as speaking Erse only. There were 12 superior and 253 primary schools in the county. The principal towns in Clare are Ennis, population (1871) 6503; Kilrush, 4424; and Kilkee, 1600. The county returns three members to the Imperial

Parliament,—two for the county and one for the borough of Ennis.

The county of Clare, which is divided into 11 baronies, contains 80 parishes, and includes the diocese of Kilfenora, the greater part of Killaloe, and a very small portion of the diocese of Limerick. It is within the military district of Cork, with barracks for infantry at Clare Castle, Ennis, Killaloe, and Kilrush, and for artillery in the forts at Scattery Island, Donnaha, Kileredano, Blackwater, and Kilkerrin. The assizes are held at Ennis, where the county prison, the county infirmary, and the district lunatic asylum are situated. There are eight poor-law unions.

This county, together with some of the neighbouring district, was anciently called Thomond or Tuadmuid, that is, North Munster, and formed part of the monarchy of the celebrated Brian Boroihme, who held his court at Kincora near Killaloe, where his palace was situated on the banks of the Shannon. The site is still distinguished by extensive earthen ramparts. Settlements were effected by the Danes, and in the 13th century by the Anglo-Normans, but without permanently affecting the possession of the district by its native proprietors. In 1543 Murrough O'Brien, after dispossessing his nephew, and vainly attempting a rebellion against the English rule, proceeded to England, and submitted to Henry VIII., resigning his name and possessions. He soon received them back by an English tenure, together with the title of earl of Thomond, on condition of adopting the English dress, manners, and customs, and maintaining no kerns or gallowglasses. In 1565 this part of Thomond (sometimes called O'Brien's country) was added to Connaught, and made one of the six new counties into which that province was divided by Sir Henry Sidney under the Act 11 Eliz. c. 9. It was then named Clare, probably from the name of an English adventurer, Thomas de Clare, who obtained a grant from Henry III. of all the lands he should conquer from the Irish, and whose family for some time maintained a precarious position in the district. In 1602 the county was re-annexed to Munster. The O'Briens and other native chieftains had many fierce contests to preserve their independence against the Anglo-Norman and English adventurers, and generally succeeded in maintaining their position as native kings and chieftains of Thomond. From some cause or other the comparative immunity of Clare in ancient times from foreign rule and settlement, and from absenteeism, has proved of doubtful advantage to its modern condition. The chief ancient families of note in the district were the O'Briens, now represented by Lord Inchiquin of Dromoland, the Macnamaras, and the O'Loughlens.

The county abounds with remains of antiquities, both military and ecclesiastical. There still exist above a hundred fortified castles, several of which are inhabited. They are mostly of small extent, a large portion being fortified dwellings. The chief of them is Bunvatty Castle, built in 1277. Rath or Danish forts are to be found in every part. They are generally circular, composed either of large stones without mortar, or of earth thrown up and surrounded by one or more ditches. The list of abbeys and other religious houses formerly flourishing here (some now only known by name, but many of them surviving in ruins) comprehends upwards of twenty. The most remarkable are—Quin, considered one of the finest and most perfect specimens of ancient monastic architecture in Ireland; Corcomroe; Ennis, in which is a very fine window of uncommonly elegant workmanship; and those on Inniscattery, or Scattery Island, in the Shannon, said to have been founded by St Senanus. On the same island there is a round tower, and also the ruins of what are called the seven churches. It is called Holy Island, and is still one of the most popular burial-places in the county. Four other round

towers are to be found in various stages of preservation— at Drumcliffe, Dysert, Kilnby, and Inniscaltra. The cathedral of the diocese of Killaloe, at the town of that name, is a plain massive building originally erected in 1160; and near it are the ruins of the mausoleum of Brian Boroihne. Cromlechs are found, chiefly in the limestone rocky district of Burren, though there are some in other baronies. That at Ballygannon is formed of a stone 40 feet long and 10 broad. The celebrated tomb of Conan, on Mount Callan, is still extant.

CLARE, JOHN (1793-1864), commonly known as "the Northamptonshire Peasant Poet," was the son of a farm labourer, and was born at Helpstone, near Peterborough, on 13th July 1793. At the age of seven he was taken from school to tend sheep and geese; five years after he wrought on a farm, paying with his own meagre savings for the education he received in the evening. He endeavoured to enter a lawyer's office but failed, studied algebra, and fell in love, became a pot-boy in a public-house, and subsequently was apprenticed to a gardener, from which employment he ran away. Among the neighbors his manners and habits made an unfavourable impression. He enlisted in the militia, tried camp life with gypsies, and wrought as a lime burner in 1817, but the following year he was obliged to accept parish relief. In 1820 appeared his *Poems Descriptive of Rural Life and Scenery*, which were very indulgently received, and the year following his *Village Minstrel and other Poems* were published. He was greatly patronized; fame, with many curious visitors, broke the tenor of his life, and dangerous habits were formed. From subscriptions he became possessed of £45 annually, a sum far beyond what he had ever earned, but new wants made his income insufficient, and in 1823 he was nearly penniless. His next volume, the *Shepherd's Calendar*, 1827, met with little success, which was not increased by his hawking it himself. As he wrought again on the fields his health improved; but farm operations being unsuccessful he was "as dull as a fog in November," and became seriously unwell. Although a noble patron presented him with a new cottage and a piece of ground, Clare was full of anguish to leave the "old home of homes." The removal to Northborough was his culminating period, and gradually his mind gave way. His last and best work, the *Rural Muse*, published in 1835, was noticed by "Christopher North" alone. Bursts of insanity followed, of which he had for some time shown symptoms; and in July 1837 he was kept in confinement, and was subsequently lodged in Northampton General Lunatic Asylum, where he died May 20, 1864. The neglect of friends and relatives to visit him, together with the non-success of his later poems, preyed heavily upon his mind. In the asylum he penned his most thrilling poem, beginning—"I am! yet what I am who cares or knows?" In its exceeding sadness of thought there is sublime feeling,—a strain of divine music in the wail of woe,—and the poet longed to

"Sleep as I in childhood sweetly slept
Full of high thoughts, unborn. So let me lie,
The grass below, above the vaulted sky."

Clare was one of our most uneducated poets, and sung from the fulness of his heart; he is one of England's sweetest singers of nature, whose thoughts "gild life's brambles with a flower," and whose songs were gathered from the fields. Many of his sonnets, which display great power of word-painting, are sweet as "sunshine in summer dream." His ballads and love-songs are wild flowers strewn at will, which "art and fashion fling as weeds away," and his *Eternity of Nature*, and *First Love's Recollections* display deftness of touch, pastoral beauty, and genuine poetic ability. All his love and genius were showered on beautifying the rural scenes and humble incidents of his

surroundings. His poems, drawn with a delicate hand, are those of a keen observer, but they greatly want that vigour which is essential to popularity; in his own words, "the tide of fashion is a stream too strong for pastoral brooks that gently flow and sing."

See the *Life of John Clare* by Frederick Martin, 1865, and *Life and Remains of John Clare*, by J. L. Cherry, 1873, the latter of which, though not so complete, contains some of the poet's asylum verses and proso fragments.

CLARENDON, EDWARD HYDE, FIRST EARL OF (1609-1674), historian and statesman, born at Dinton in Wiltshire, on the 18th February 1609, was the third son of Henry Hyde, a gentleman belonging to an ancient Cheshire family. The profession first chosen for him was the church; and consequently, after being educated at home by the vicar of the parish up to the age of thirteen, he was sent to Magdalen College, Oxford. But his eldest brother having died young, the death of his second brother in 1625 left him heir to his father's estate; and the law being now considered a more appropriate profession, he was entered at the Middle Temple by his uncle, Sir Nicholas Hyde, then treasurer of that society. At the age of twenty he married a daughter of Sir George Ayliffe; but in six months he was left a widower; and three years later he took as his second wife a daughter of Sir Thomas Aylesbury, Master of Requests.

While yet a young man Hyde had the happiness, as he boasts in his autobiography, of being admitted into the most brilliant literary society of his time. Among poets he knew Ben Jonson, Waller, and Carew; he was acquainted with Selden, and with nearly every other scholar of eminence in his day; and he had a rare opportunity of acquiring, from the conversation of the subtle and impartial Chillingworth and the outspoken but liberal-minded Hales, a breadth of sympathy which unhappily his natural temper and the rough pressure of the times combined to prevent him from ever displaying. The brilliant, tender-hearted Falkland also was his most intimate friend. And, fortunately for his professional advancement, besides possessing considerable family influence, he enjoyed the favour of Laud, who, as commissioner of the treasury, regularly consulted him in regard to mercantile affairs.

When, therefore, in April 1640, Hyde took his seat in the Short Parliament as representative of Wootton-Basset, he was already known as a lawyer of mark. During its session of barely three weeks, he made himself prominent as a zealous supporter of the popular party; and his maiden speech consisted of a vigorous attack upon the Earl Marshal's Court, which had become notorious for the savage manner in which it resented the least affront offered to a man of rank.

In the Long Parliament (in which he sat as member for Saltash) his zeal for reform was at first in no degree diminished. He effected the final overthrow of the Earl Marshal's Court. He sat as chairman of the committee which collected evidence against the Councils of York and of the Marshes, and of the committee which was appointed to consider the advisability of remodelling the government of the church. He went entirely with the popular party in their condemnation of ship-money; and it was largely through the earnest speech which Hyde delivered against him that Lord Keeper Finch was driven into exile. When, however, Episcopacy was threatened, and it became apparent that the popular leaders were not to be satisfied with merely temporary reform, but were resolved on gaining a permanent triumph, Hyde, in perfect accordance with both his religious and his political principles, went over to the royalist party. He uttered an open and determined protest against the Grand Remonstrance, and drew up an answer to it which was adopted and published by the king, and

which procured for him the offer of the post of solicitor-general. This he declined; but he complied with the request that he would watch over his Majesty's interests in the House of Commons, in conjunction with Falkland and Colepepper. The king's deepest policy, however, was not disclosed to him, and there is no reason to doubt that the arrest of the five members surprised him as much as he professes. After the retreat of Charles from London, Hyde remained for some weeks in his seat in the Commons, maintaining constant but secret communication with the court; but in May, having been summoned by the king, and being besides alarmed for his own safety, he fled to York. In March 1643 he was made chancellor of the exchequer. He was also chosen one of the royal commissioners at Uxbridge, and was employed in many other matters of importance; and the most persuasive and dignified of the state papers on the royalist side are from his pen.

In 1645, after the final ruin of the king's cause at Naseby, Hyde was appointed, with Lord Capel, Lord Hopton, and Sir John Colepepper, to watch over the safety of the prince of Wales. In the spring of the next year they were compelled to take refuge in Scilly, whence, after six weeks' stay, they passed to Jersey. Soon the prince was called by his mother to Paris, against the will of the council, none of whom accompanied him except Colepepper. Hyde resided at Jersey for nearly two years, solacing himself by studying the Psalms and recording the meditations which they suggested, and also by composing the first four books of his greatest work, the *History of the Rebellion*. In April 1648 he drew up an answer to the ordinance which had been issued by the parliament declaring the king guilty of the civil war, and forbidding all future addresses to him. At length, in May, his attendance was required by the prince, who about this time assumed the command of the seventeen ships which had gone over to his side; but various accidents, of which the most serious was his capture by privateers, prevented him from meeting Charles till August, when he found him at Dunkirk.

In the agreement with the Covenanters and in the Scottish expedition of 1649 Hyde had no share, as he was then absent with Lord Cottington on a fruitless embassy to Spain. The two years which he passed there were not unpleasantly spent; for he was free from all serious care, and had little to do but study Spanish etiquette and write his *Animadversions on the Supremacy of the Pope*. In 1651, the slight offered by the Spanish ministers having been crowned by a request that he would leave the country, he rejoined Charles at Paris. During the nine weary years which had to elapse before the Restoration he was not the least unfortunate of the exiles. It was no easy matter to fulfil the duty which his office imposed upon him of supplying the wants of his careless master; and his family and himself were often scarcely able to procure the necessaries of life. Besides, he was far from popular. His attachment to the English church, admitting of compromise with no other sect, brought upon him the aversion alike of the Presbyterians and of the queen and the Papists. Charles, however, was wise enough to appreciate his disinterested fidelity. He was recognized as chief adviser of the king, and all state papers were drawn up by him; he conducted the correspondence with the English Royalists; and, in 1658, the dignity of lord chancellor was conferred upon him.

On the Restoration, Hyde retained his posts of lord chancellor and chancellor of the exchequer, and at once assumed the direction of the Government. What the Episcopalian Royalists now required was not so much a leader to stimulate, as a guide to control. Their fervour and their strength were more than sufficient to replace the king firmly on the throne, and to raise

the church to a loftier position than it had ever before attained. The parliament hastened to restore to the Crown the command of the militia, to repeal the Triennial Act, and to vote a revenue of £1,200,000. The Corporation Act, the Act of Uniformity, and the Five Mile Act avenged the church on her enemies, and forced all but the most determined of the clergy into her ranks. Thousands showed as much enthusiasm for monarchy as Hyde himself, and he was no longer the most Episcopalian of Episcopals. To some extent, if not to as great an extent as was to be desired, he has the credit of having restrained his party from too insolent a triumph. Desirous as he was of the re-establishment of the full royal prerogative, he had no wish to see it transgress the limits which he believed to be assigned to it by the constitution, for which he cherished the true lawyer's reverence. Strongly as he held that all were guilty who had in any way countenanced the government of Cromwell, he was statesman enough to see that it was necessary to carry out the Declaration of Breda by pressing the Acts of Oblivion and Indemnity on the reluctant parliament. On the other hand, with regard to the triumph of the church over dissent, if he was somewhat alarmed at its completeness, his fear arose from no pity for the dissenters. His opinion of them, and of the policy which ought to be observed towards them, is emphatically stated in his *Life* (vol. ii. p. 121).—"Their faction is their religion; nor are those combinations ever entered into upon real and substantial motives of conscience, how erroneous soever, but consist of many glutinous materials of will, and humour, and folly, and knavery, and ambition, and malice, which make men cling inseparably together, till they have satisfaction in all their pretences, or till they are absolutely broken and subdued, which may always be more reasonably done than the other."

But, notwithstanding his exaggerated reverence for the sovereign, his passionate attachment to the church, and his real worth, Hyde rapidly became the most unpopular man in the kingdom. The settlement of landed property which had been made by the Act of Indemnity deeply offended hundreds of the cavaliers; for, while it restored all they had lost to those who, like Hyde himself, had both escaped the necessity of selling their land and refused to bow to the government of Cromwell, it did nothing for those who had sold their property, even though they had ruined themselves to support the cause of the king. By the people, who had no means of judging for what he was responsible and of what he was innocent, he was blamed for every misfortune. The sale of Dunkirk was the chief crime with which they charged him; but there is no reason to disbelieve his own declaration that he was at first opposed to the scheme, while it must be allowed that there is force in his excuses that the fortress was expensive to maintain, that the money offered for it was sorely needed, and that its worth to England was by no means great. Still its surrender was a great political mistake; it displayed to the popular eye in far too striking a light the difference between the government of Clarendon and the government of Cromwell. He was also held responsible for the marriage of the king with the childless and Catholic princess of Portugal, and he was even accused of having selected her in order that his own descendants might inherit the throne. And, though his worst political weakness—his allowing Charles to accept the bribes of France—was not then made known; it was the general belief that his splendid mansion in Piccadilly had been erected with foreign gold. Of all dissenters, Catholic and Protestant, his bitter dislike had made determined enemies; and his repellent hauteur, his somewhat concealed austerity, offended the courtiers, and aroused their derision. All these enemies, however, he could afford to scorn so long

as he retained the regard of the king, who, to do him justice, was unusually mindful of his debts to Hyde. In 1661 the chancellor, on the disclosure of the marriage of his daughter to the duke of York, was created Baron Hyde of Hindon, and shortly after earl of Clarendon, at the same time receiving a gift of £20,000; he had already refused the offer of a garter and 10,000 acres. Two years later the attempt to impeach him, made by the earl of Bristol, resulted in a miserable failure, and the accuser sought safety in flight. But in 1667 a second impeachment found him powerless to resist. His dignified censoriousness must always have been disagreeable to the king, who was also annoyed by his strenuous opposition to every scheme for tolerating the Catholics; and when Clarendon ventured to thwart his plans and interfere with his pleasures, annoyance was turned into hatred. Charles, having become enamoured of Miss Fanny Stewart, resolved to marry her, and therefore determined to effect a divorce from the queen. This scheme, which threatened to exclude his descendants from the throne, Clarendon was bold enough to oppose; and it was insinuated by his enemies that the marriage of Miss Stewart to the duke of Richmond, which put an end to the project, had been brought about partly by his contrivance. Misfortunes now pressed thick upon him. About the middle of 1667 his wife died; and a few days after the duke of York was sent to him with a message requesting him to resign the chancellorship. This he could not be persuaded to do; he so far forgot his dignity as to plead personally with his master to be allowed to retain his office; and he also addressed to him a humble letter, in which he denied that he had been in any way concerned with Miss Stewart's marriage, and declared that he had no acquaintance with either herself or her husband. But his humiliation was in vain; and on the 30th of August Secretary Morrice was sent to take from him the great seal. On the 6th November the Commons drew up seventeen articles of impeachment against him. It would not have been easy to convict him of high treason. Several of the charges were exaggerated, and one or two were altogether false; there were some, however, sufficiently serious. The chief articles were:—that he had sought to govern by means of a standing army, and without parliament; that he had confined prisoners uncondemned in places where they could not appeal to the law; that he had sold Dunkirk; that he had made a sale of offices, and obtained money by means of his position in various illegal ways; that he had introduced arbitrary government into the colonies; and that he had deceived the king with regard to foreign affairs, and had betrayed his plans to the enemy. It was, however, a general charge of high treason, without specified grounds, which was presented to the Lords, and this they refused to accept. Nevertheless it became plain even to Clarendon himself that he was deserted, and that his cause was hopeless. On the 29th November 1667 he left England for ever, after addressing a vindication of his conduct to the Lords, which, being communicated to the Commons, was voted seditious, and burned by the hangman. A bill of attainder was brought in against him, but the Lords rejected it; and the matter was finally compromised by the passing of an Act which condemned him to perpetual banishment, unless he should appear for trial within six weeks.

Meanwhile, sick in body and in mind, he had landed in France; but, before reaching Rouen, he was stopped, and informed that he could not be allowed to remain in the country. After several refusals, however, permission to stay was granted; and he was conducted to Avignon by a French officer. At Evreux an incident occurred which shows the bitterness of the feeling with which he was regarded by his countrymen. A party of English sailors who happened to be working in the town, on hearing of

his arrival, broke into his bed-room, burst open his trunks, attacked and wounded him with their swords, and were only prevented from murdering him by the arrival of a body of French troops. From Avignon he passed to Montpellier; and the rest of his life was spent chiefly in this town and in Rouen. His time was thenceforth passed in the quiet pursuit of literature. He resumed his *Meditations on the Psalms*, concluded his *History of the Rebellion*, and wrote his *Life, A Short View of the State of Ireland*, most of his *Essays*, and his *Survey of Hobbes's Leviathan*. Twice he humbly appealed to Charles that he might be allowed to die in his native land; but not even a reply was vouchsafed, and it was at Rouen that he expired on the 9th December 1674.

The character of Clarendon is well-marked. In the court of Charles II. he was almost the only man who lived chastely, drank moderately, and swore not at all. Three principles guided his life. The first, from which he never swerved, was a passionate attachment to the religion and polity of the Church of England. The second, to which he was faithful on the whole, though with some declensions, was the determination to maintain what he regarded as the true and ideal English constitution. The third, which he more than once nobly sacrificed to the other two, was a desire for personal advancement. In political practice he sadly wanted both insight and tact, and, though he could plead most cleverly and affectingly in a state paper, he was too apt, when confronted by opposition in Parliament, to lose his temper. He was, however, ready in debate; he could speak well; and for business he was admirably adapted. In political theory he was intensely conservative; no royalist squire who had never seen the king but in moments of dignified ceremony could have cherished a deeper reverence for him than did this courtier, who had watched his every act of crime and selfishness. Cold and haughty as he was towards his equals, at least in the end of his life, in his bearing towards the royal family, he sometimes appeared to abjure every feeling of manly independence. On two occasions this was miserably exemplified. He was too proud to allow his own wife to visit any woman of disreputable character, whatever her position; yet, at the command of his master, he was base enough to urge the queen to admit her husband's favourite mistress as one of her ladies in waiting. And there is another scene in which we cannot help regarding him with still deeper scorn. In his *Life* he calmly tells us the story. About the time of the Restoration the duke of York had fallen in love with his eldest daughter, Anne Hyde, and before their intimacy had been discovered had given her a written promise of marriage. Of this Clarendon professes to have been completely ignorant; and when the affair could no longer be concealed, he tells us he was the last to be informed of it. Nor is this surprising if his own account of the manner in which he received the news is to be credited in the least. He broke into "a very immoderate passion." He would turn his daughter from his house. He hoped she was the duke's mistress, and not his wife, for then he could refuse to harbour her. He would have her sent to the Tower; he would have an Act passed to execute her; nay, he would be the first to propose such an Act. "Whoever knew the man," he adds, "will know that he said all this very heartily." Modern historians are perhaps too kind in doubting him. Soon after he told the king that he "so much abominated" the thought of his daughter's becoming the wife of the prince, that he "had much rather see her dead, with all the infamy that is due to her presumption." He even informed the duke himself—when an infamous conspiracy was hatched against her honour, and Sir Charles Berkeley swore that she had granted him favours incon-

sistent with her duty to her husband—that since she had deceived himself he could not answer for her fidelity to any other man. The conclusion of the affair displays a depth of meanness which could not have been credited on any other testimony than his own. In fear of death Mary of Orange confessed that the accusation was false, and Berkley admitted his perjury; but in Clarendon's breast there does not appear to have been kindled a spark of the burning indignation which an honourable stranger could not have repressed; Berkley himself had only to ask forgiveness. It is possible that this humiliating story—this basest display of the “besotted loyalty” of the time, is altogether true. Much of it is beyond denial; and if we hold that in the rest Clarendon was merely acting a part, we miserably save a very small portion of his malignity at the expense of all his sincerity.

It is in literature that Clarendon's name best deserves to be remembered. His *Essays* (which are chiefly didactic) and his *Survey of Hobbes's Leviathan* scarcely rise above the commonplace, but his *History of the Rebellion* and his *Life of Edward, Earl of Clarendon* have a high and permanent value. That he was a historian of wide grasp and deep insight cannot be maintained; his works are professedly pleadings on behalf of the Episcopalian Royalists and himself; but, though it would be too much to allege that his accuracy is never warped by his purpose, we may in general accept his statements of fact as correct. It is, however, as works of literary art that his histories have attained to the position they hold. They charm us by their calm and never-failing grace, by their quiet humour, by their general tone of lofty dignity, but perhaps most of all by the exquisite portraits which they contain. It is true he cannot penetrate to the innermost recesses of men's souls, and let us read the motives of their lives; but he can introduce them to us, as it were, in society, can let us observe their career, watch their humours, and listen to their talk. Clarendon's style, too, though extremely loose and often amusingly ungrammatical, has many beauties. His sentences are of extraordinary length, and usually contain numerous involved parentheses; but while these qualities threaten obscurity, obscurity is always avoided; and they have the merit of enabling the writer to produce a slow, stately, graceful music, of which the short sentence is altogether incapable.

(T. M. W.)

CLARENDON, GEORGE WILLIAM FREDERICK VILLIERS, FOURTH EARL OF, diplomatist and statesman, was born in London 12th January 1800, and died 27th June 1870. He was the eldest son of the Honourable George Villiers, brother of the third earl of Clarendon (second creation), by Theresa, only daughter of the first Lord Boringdon, and granddaughter of the first Lord Grantham. The earldom of the Lord Chancellor Clarendon became extinct in 1756 by the death of the fourth earl, his last male descendant. Jane Hyde, countess of Essex, the sister of that nobleman (who died in 1724), left two daughters; of these the eldest, Lady Charlotte, became heiress of the Hyde family. She married Thomas Villiers, second son of the second earl of Jersey, who served with distinction as English minister in Germany, and in 1776 the earldom of Clarendon was revived in his favour. The connection with the Hyde family was therefore in the female line and somewhat remote. But a portion of the pictures and plate of the great chancellor was preserved to this branch of the family, and remains at the Grove, their family seat at Hertfordshire, to this day.

Young George Villiers, the subject of this notice, entered upon life under circumstances which gave small promise of the brilliancy of his future career. He was well born; he was heir presumptive to an earldom; and his mother was a woman of great energy, admirable good sense, and high feeling. But the means of his family were contracted;

his education was desultory and incomplete; he had not the advantages of a training either at a public school or in the House of Commons. He went up to Cambridge in the early age of sixteen, and entered St John's College on the 29th June 1816. In 1820, as the eldest son of an earl's brother with royal descent, he was enabled to take his M.A. degree under the statutes of the university then in force; and in the same year he was appointed attaché to the British embassy at St Petersburg, where he remained three years, and acquired that practical knowledge of the business of diplomacy which was of so much use to him in after-life. He had received from nature a singularly handsome person, a polished and engaging address, a ready command of languages, and a remarkable power of composition.

Upon his return to England in 1823, Mr Villiers was appointed to a commissionership of customs, an office which he retained for about ten years. Part of this time was spent in Ireland in the work of fusing the revenue boards of England and Ireland into those of the United Kingdom. It was the period of the liveliest excitement that preceded Catholic Emancipation, and the young English official incurred the censure of the Tory Government of the day for having presumed to cultivate the acquaintance of the most accomplished of the Catholic leaders. These official duties trained Mr Villiers in the business of civil administration, and likewise enabled him to acquire some useful experience of the Irish character. In 1831 he was despatched to France to negotiate a commercial treaty, which, however, led to no result.

The time was come which was to open to him a wider and more congenial field of action in the politics of Europe. On the 16th of August 1833 Mr Villiers was appointed minister at the court of Spain. Ferdinand VII. died within a month of his arrival at Madrid, and the infant queen Isabella, then in the third year of her age, was placed by the old Spanish law of female inheritance on her contested throne. Don Carlos, the late king's brother, claimed the crown by virtue of the Salic law of the House of Bourbon which Ferdinand had renounced before the birth of his daughter. Isabella II. and her mother Christina, the queen regent, became the representatives of constitutional monarchy, Don Carlos of Catholic absolutism. The conflict which had divided the despotic and the constitutional powers of Europe since the French Revolution of 1830 broke out into civil war in Spain, and by the Quadruple Treaty, signed on April 22, 1834, France and England pledged themselves to the defence of the constitutional thrones of Spain and Portugal. For six years Mr Villiers continued to give the most active and intelligent support to the Liberal Government of Spain. He was censured, though unjustly, of having favoured the revolution of La Granja, which drove Christina, the queen mother, out of the kingdom, and raised Espartero to the regency. He undoubtedly supported the chiefs of the Liberal party, such as Olozaga and Espartero against the intrigues of the French Court; but the object of the British Government was to establish the throne of Isabella on a truly national and liberal basis and to avert those complications, dictated by foreign influence, which eventually proved so fatal to that princess. Spain never forgot what she owed in those years to the youthful and energetic minister of Great Britain, and he, on his part, retained a cordial interest in her welfare. He received the Grand Cross of the Bath in 1838 in acknowledgment of his services, and succeeded, on the death of his uncle, to the title of earl of Clarendon; in the following year, having left Madrid, he married Katherine, eldest daughter of James Walter, first earl of Verulam.

In January 1840 he entered Lord Melbourne's administration as Lord Privy Seal, and from the death of Lord Holland in the autumn of that year, Lord Clarendon also held the office of Chancellor of the Duchy of Lancaster until the dissolution of the ministry in 1841. In this capacity he made his first appearance in parliament, and although he always regretted the want of a previous training in the House of Commons, he was from the first listened to by the House of Peers as a speaker well qualified to assist the deliberations of parliament on questions of foreign policy. But on these questions he was not heartily united with the spirit that then animated the Foreign Office. Deeply convinced that the maintenance of a cordial understanding with France was the most essential condition of peace and of a liberal policy in Europe, he reluctantly concurred in the measures proposed by Lord Palmerston for the expulsion of the pasha of Egypt from Syria; he strenuously advocated, with Lord Holland, a more conciliatory policy towards France; and he was only restrained from sending in his resignation by the dislike he felt to break up a cabinet he had so recently joined. Lord Palmerston's policy (as is shown by his own published letters) was constantly governed by the belief that France must be regarded by England as a rival and an enemy, with whom war was sooner or

later, inevitable. Lord Clarendon, on the contrary, regarded France as a rival, but a friend; he relied on the good sense and common interests of the two nations to maintain amicable relations; and he succeeded in drawing closer for a period of thirty years, from 1840 to 1870, the ties which still happily remain unbroken between them. That was his great object, and the proudest result of his political life; and the difficulties he had to encounter were at times as great on his own side of the Channel as on the other.

The interval of Sir Robert Peel's great administration (1841-1846) was to the leaders of the Whig party a period of repose; but Lord Clarendon took the warmest interest in the progressive triumph of the principles of free trade and in the ultimate repeal of the corn-laws, of which his brother, Mr Charles Pelham Villiers, had been the earliest, the most constant, and the most able advocate. For this reason, upon the formation of Lord John Russell's first administration, Lord Clarendon accepted the office of President of the Board of Trade. Twice in his career the Governor-Generalship of India was offered him, and once the Governor-Generalship of Canada,—these he refused from reluctance to withdraw from the politics of Europe. But in 1847 a sense of duty compelled him to take a far more laborious and uncongenial appointment. The desire of the cabinet was to abolish the Lord Lieutenantcy of Ireland, and Lord Clarendon was prevailed upon to accept that office, with a view to transform it ere long into an Irish Secretaryship of State. But he had not been many months in Dublin before he acknowledged that the difficulties then existing in Ireland could only be met by the most vigilant and energetic authority, exercised on the spot. The crisis was one of extraordinary peril. Agrarian crimes of horrible atrocity had increased threefold. The Catholic clergy were openly disaffected. This was the second year of a famine which had desolated Ireland. The population, decimated by starvation and disease, lived upon the poor-rate and the alms of England, and extraordinary measures were required to regulate the bounty of the Government and the nation. In 1848 the French Revolution let loose fresh elements of discord, which culminated in an abortive insurrection, and for a lengthened period Ireland was a prey to more than her wonted symptoms of disaffection and disorder. During those five years Lord Clarendon held the reins of the vice-regal government; a task more entirely repugnant to his own predilections and more certain to be repaid with unmerited obloquy could not have been imposed upon him. But he bore up against that flood of hostile passions and difficulties with unshaken firmness. He fed the starving; he subdued the factious; he crushed the rebellions. He left behind him permanent marks of improvement in the legislation of Ireland; and he practised, as far as possible, the broadest toleration of races and of creeds. If any name is associated in Ireland with the recollection of a government at once firm, far-sighted, and liberal, it should be that of Lord Clarendon. His services were expressly acknowledged by her Majesty in the Speech to both Houses of Parliament from the throne, on September 5, 1848,—this being the first time that any *civil* services obtained that honour; and he was made a Knight of the Garter (retaining also the Grand Cross of the Bath by special order of her Majesty) on the 23d March 1849. Looking back to that period, after an interval of more than twenty years, it must be acknowledged that from this crisis dates the regeneration of Ireland. The population, reduced in numbers, has never ceased to advance in prosperity; wages have risen; the land has been freed from secular incumbrances; crime has diminished; and treason itself has never recovered the crushing defeat of Smith O'Brien and Meagher. Lord Clarendon had a large share in promoting these results; but he hailed with no common satisfaction the change of Government which released him from those arduous duties in 1852.

Upon the formation of the coalition ministry between the Whigs and the Peelites, in 1853, under Lord Aberdeen, the premier placed, without hesitation, the foreign office in the hands of Lord Clarendon; but incredulous himself of the peril of war, which was already casting its dark shadow over the East, Lord Aberdeen sought rather to check than to stimulate the decisions which might possibly have arrested the course of hostilities. It can hardly now be doubted that the hesitation which appeared to mark the successive steps of the Western allies encouraged the czar to more daring aggressions; and Lord Clarendon confessed, in an expression which was never forgotten, that we "drifted" into war, which a more prompt defiance and an open alliance between the Western powers and the Porte might have arrested. But the war once begun Lord Clarendon continually urged the prosecution of it with the greatest energy. He employed every means in his power to stimulate and assist the war departments, and above all he maintained the closest relations with our French allies, on whose co-

operation everything depended. The Emperor Nicholas had speculated on the impossibility of the sustained joint action of France and England in council and in the field. It was mainly by Lord Clarendon at Whitehall and by Lord Raglan before Sebastopol that such a combination was rendered practicable, and did eventually triumph over the enemy. The diplomatic conduct of such an alliance for three years between two great nations jealous of their military honour and fighting for no separate political advantage, tried by excessive hardships and at moments on the verge of defeat, was certainly one of the most arduous duties ever performed by a minister. No one will ever know all the labour it cost; but the result was due in the main to the confidence with which Lord Clarendon had inspired the emperor of the French, and to the affection and regard of the empress, whom he had known in Spain from her childhood.

In 1856 Lord Clarendon took his seat at the Congress of Paris convoked for the restoration of peace, as first British Plenipotentiary, invested with full powers. It was the first time since the appearance of Lord Castlereagh at Vienna that a secretary of state for foreign affairs had been present in person at a congress on the Continent. Lord Clarendon's first care was to obtain the admission of Italy to the council chamber as a belligerent power, and to raise the barrier which still excluded Prussia as a neutral one. But in the general anxiety of all the powers to terminate the war there was no small danger that the objects for which it had been undertaken would be abandoned or forgotten. It is due, we may say, entirely to the firmness of Lord Clarendon that the principle of the neutralization of the Black Sea was preserved, that the Russian attempt to trick the allies out of the cession in Bessarabia was defeated, and that the results of the war were for a time secured.¹ The Congress was eager to turn to other subjects, and perhaps the most important result of its deliberations was the celebrated Declaration of the Maritime Powers, which abolished privateering, defined the right of blockade, and limited the right of capture to enemy's property in enemy's ships. Lord Clarendon has been accused of an abandonment of what are termed the belligerent rights of this country, which were undoubtedly, based on the old maritime laws of Europe. But he acted in strict conformity with the views of the British cabinet, and the British cabinet adopted those views because it was satisfied that it was not for the benefit of the country to adhere to practices which exposed the vast mercantile interests of Britain to depredation, even by the cruisers of a secondary maritime power, and which, if vigorously enforced against neutrals, could not fail to embroil her with every maritime state in the world. The experience of 1780, when the armed neutrality of the North reacted so fatally on the American war, is the most conclusive demonstration of the fatal results of such a system of policy; and the more enlightened views of the present day have shown that a commercial belligerent nation would lose far more than she would gain by the suppression of the neutral trade, even if such a suppression were possible.

Upon the reconstitution of the Whig administration in

¹ The Crimean War and the peace of 1856 had results highly beneficial to the politics of Europe. They rescued Turkey from the inimical grasp of Russia, and gave to the Ottoman empire twenty years of peace and security, which might, under abler rulers, have restored it to real independence and prosperity. They overthrew the preponderance which the Emperor Nicholas had asserted in Europe; they cemented the alliance of France and England; and they led the way to the subsequent changes which followed in Italy and Germany. These were all objects which Lord Clarendon had at heart, and although no minister can hope to have a permanent influence on the course of human affairs, the events of the last twenty-five years have not been uninfluenced by his liberal and conciliatory views.

1859, Lord John Russell made it a condition of his acceptance of office under Lord Palmerston that the Foreign Department should be placed in his own hands, which implied that Lord Clarendon should be excluded from office, as it would have been inconsistent alike with his dignity and his tastes to fill any other post in the Government. The consequence was that from 1859 till 1864 Lord Clarendon remained out of office, and the critical relations arising out of the civil war in the United States were left to the guidance of Earl Russell. But he re-entered the cabinet in May 1864 as Chancellor of the Duchy of Lancaster; and upon the death of Lord Palmerston in 1865, Lord Russell again became prime minister, when Lord Clarendon returned to the Foreign Office, which was again confided to him for the third time upon the formation of Mr Gladstone's administration in 1868. To the last moment of his existence, Lord Clarendon continued to devote every faculty of his mind and every instant of his life to the public service; and he expired surrounded by the boxes and papers of his office on the 27th June 1870, within a few days of that great catastrophe which was about to change the face of Europe, and which he, if any body, might possibly have retarded or averted. His death called forth expressions of the deepest sympathy and regret from all the courts and statesmen of both hemispheres; and these manifestations of more than official sorrow were collected and laid before parliament by order of the Queen. This is not the place to enlarge on the charm of Lord Clarendon's personal demeanour, or on the playfulness and grace he threw over the conduct of great affairs. We must content ourselves with a brief record of what he did in public life. But no man owed more to the influence of a generous, unselfish, and liberal disposition. If he had rivals he never ceased to treat them with the consideration and confidence of friends, and he cared but little for the ordinary prizes of ambition in comparison with the advancement of the great cause of peace and progress in the world.

A notice of Lord Clarendon, by a friendly hand, was printed in *Fraser's Magazine* for August 1870, from which we have borrowed some details. No other biography of this eminent and accomplished statesman has been published. (H. R.)

CLARI, GIOVANNI CARLO MARIA, chapel-master at Pistoia, was born at Pisa in 1669. The time of his death is unknown. He was the most celebrated pupil of Colonna, chapel-master of S. Petronio, at Bologna. The works by which Clari distinguished himself pre-eminently are his vocal duets and trios, with a continued bass, published in 1720. In these beautiful and learned compositions the tonal responses and modulations are in the modern style. An edition of these duets and trios, with a pianoforte accompaniment, was published at Paris in 1823, by Mirecki, a Polish musician, and a pupil of Cherubini. In such esteem were these compositions held by Cherubini, that, in the course of his studies, he repeatedly transcribed them with his own hand, as models of excellence. Clari composed one opera, *Il Savio Delirante*, and for the church a *Stabat* and four other works.

CLARINET. See OBOE.

CLARK, SIR JAMES (1788-1870), an English physician, was born at Cullen, in Banffshire. He was educated at the grammar-school of Fordyce, and at the universities of Aberdeen and Edinburgh, at the former of which he took the degree of M.A., at the latter that of M.D. He served for six years as a surgeon in the navy; he then spent some time in travelling on the Continent, in order to investigate the effects of the mineral waters and the climate of various places commonly recommended to invalids; and for eight years he was settled at Rome. In 1824 he was chosen physician to Prince Leopold of Saxe-Coburg, and two years after he commenced to practise in London as physician to

the St George's Parochial Infirmary. He was elected a fellow of the Royal Society in 1832; in 1835 he was appointed physician to the Duchess of Kent and the Princess Victoria, and on the accession of the latter to the throne he became physician in ordinary to the Queen. On the foundation of the university of London, he was made a member of its senate; and he belonged to many medical societies both at home and abroad. In 1838 he was created baronet. Sir James Clark made a special study of sanatory science, and he was also regarded as an authority on diseases of the lungs. He published—*Medical Notes; The Sanative Influence of Climate*, containing valuable meteorological tables; *A Treatise on Pulmonary Consumption and Scrophulous Disease*; and *Clinical Instruction*.

CLARK, THOMAS (1801-1867), a distinguished chemist, was born at Ayr, on the 31st March 1801. His father was captain of a merchant vessel, and his mother began the Ayrshire needlework. He was educated at the Ayr Academy, a school of great efficiency and repute. In 1816 he entered the counting-house of Charles Macintosh & Co., the inventors of the waterproof cloth, but soon obtained the more congenial situation of chemist in Tennant's chemical works at St Rollox. In 1826 he was appointed lecturer on chemistry to the Glasgow mechanics' institution, where he propounded advanced views on the atomic theory and the theory of salts. The same year he published his first papers, containing his discovery of the pyrophosphate of soda, which was a turning-point in chemical history. Becoming a medical student in the university of Glasgow, he took the degree of M.D. in 1831. He was for several years apothecary to the Glasgow infirmary, and published several important papers on pharmacy. In 1832 he published in the *Westminster Review* an elaborate inquiry into the existing system of weights and measures. In 1833 he obtained by competition the chair of chemistry in Marischal College, Aberdeen. About the same time he matured two important practical researches relating to the construction of hydrometers and the means of detecting arsenic. In 1835 he published a paper on the "Application of the Hot-Blast," explaining the principle of its efficacy. In 1836 appeared his letter to Mitscherlich on the Oxygen Salts. Clark's name became most generally known in connection with his water tests and his process for softening hard (chalk) waters. These came out in 1841. The tests have been in use ever since; and the softening process intended for the London waters, but not as yet adopted by any of the London companies, has been very successfully carried out in several places. In 1844 his health gave way under mental strain, and he ceased to be able to lecture to his class. Being removed also from his laboratory, he did little more chemical work, except directing his assistant in perfecting his water tests. His active mind, however, could not rest, and he took up several inquiries, the last of all, which occupied what strength he had for nearly twenty years before his death, being the historical origin of the Gospels. Proceeding from one stage to another, he finally concentrated his energies on an attempt to settle the true readings of the Greek text of the three first Gospels. His mode of proceeding displayed the peculiar sagacity and tact shown in his scientific inventions, and his results had reached a firm admitting of publication at the time of his death. The work would have been very valuable in connection with the revision of the Bible, and it is to be regretted that his surviving relatives did not see fit to publish it. Clark took a leading part in all the discussions relating to the improvement of the university of Aberdeen. He was an admirable lecturer, but unfortunately his teaching career was short. He died at Glasgow on the 27th November 1867.

CLARKIE, ADAM (c. 1760-1832), a Wesleyan divine, distinguished for his varied learning, was born at Moybeg, in

the north of Ireland in 1760 or 1762. After receiving a very limited education he was apprenticed to a linen manufacturer, but, finding the employment uncongenial, he soon abandoned it, and devoted himself to study. His parents belonged to a Methodist congregation under the pastoral charge of Breendon, one of Wesley's earliest associates in the Methodist movement, by whose advice young Clarke was sent to the school founded by Wesley at Kingswood, near Bristol. In 1782 he entered on the duties of the ministry, being appointed by Wesley to the Bradford (Wiltshire) circuit. His popularity as a preacher was very great, and his influence in the denomination is indicated by the fact that he was three times chosen to be president of the Conference. He served twice on the London circuit, the second period being extended considerably longer than the rule allowed, at the special request of the British and Foreign Bible Society, who had employed him in the preparation of their Arabic Bible. He had found time during his itinerancy for diligent study of Hebrew and other Oriental languages, undertaken chiefly with the view of qualifying himself for the great work of his life, his *Commentary on the Holy Scriptures*, the first volume of which appeared in 1810, and the eighth and last in 1826. It is a work of much learning and ability, and it still possesses some value, though it is in great part superseded by the results of later scholarship. Dr Clarke's other literary works were very numerous. In 1802 he published a *Bibliographical Dictionary* in six volumes, to which he afterwards added a supplement. He was selected by the Records Commission to edit Rymer's *Fœdera*, a task for which he was not well qualified, and which he did not complete. He also wrote *Memoirs of the Wesley Family* (1823), and edited a large number of religious works. He died of cholera in London on the 16th August 1832. His Miscellaneous Works have been published in a collected form in 13 vols., and a Life by J. B. B. Clarke appeared in 1833.

CLARKE, EDWARD DANIEL (1769-1822), LL.D., an English traveller, was born at Willingdon, Sussex, June 5, 1769. In 1786 he obtained the office of chapel clerk at Jesus College, Cambridge, but the loss of his father at this time involved him in many difficulties. In 1790 he took his degree, and soon after became private tutor to the Honourable Henry Tufton, nephew of the duke of Dorset. In 1792 he obtained an engagement to travel with Lord Berwick through Germany, Switzerland, and Italy. After crossing the Alps, and visiting a few of the principal cities of Italy, including Rome, he repaired to Naples, where he remained nearly two years. Having returned to England in the summer of 1794, he became tutor in several distinguished families. In 1799 he set out with a Mr Cripps, on a tour through the Continent of Europe, commencing with Norway and Sweden, whence they proceeded through Russia and the Crimea to Constantinople, Rhodes, and afterwards to Egypt and Palestine. After the capitulation of Alexandria, Clarke was of considerable use in securing for England the statues, sarcophagi, maps, manuscripts, &c., which had been collected by the French savans. Greece was the country next visited. From Athens the travellers proceeded by land to Constantinople, and after a short stay in that city, directed their course homewards through Rumeia, Austria, Germany, and France. Clarke, who had now obtained considerable reputation, took up his residence at Cambridge, and there he continued chiefly to reside till the day of his death. He received the degree of LL.D. shortly after his return, on account of the valuable donations, including a colossal statue of the Eleusinian Ceres, which he had made to the university. He was also presented to the college living of Harlton, to which, four years later, his father-in-law added that of Yeldham. Towards the end of 1808 Clarke was

appointed to the professorship of mineralogy, then first instituted. Nor was his perseverance as a traveller otherwise unrewarded. The MSS. which he had collected in the course of his travels were sold to the Bodleian Library for £1000; and by the publication of his travels he realized altogether a clear profit of £6595. Besides lecturing on mineralogy and discharging his clerical duties, Dr Clarke eagerly prosecuted the study of chemistry, and made several discoveries, principally by means of the gas blowpipe, which he had brought to a high degree of perfection. His health gave way under too ardent study; and after a short illness he expired at London, March 9, 1822. In all the relations of life Dr Clarke was a most amiable man; and his enthusiasm was united with a great capacity for enduring long-continued exertion, both mental and physical. The following is a list of his principal works:—

Testimony of Authors respecting the Colossal Statue of Ceres in the Public Library, Cambridge, 8vo, 1801-3; *The Tomb of Alexander, a Dissertation on the Sarcophagus brought from Alexandria, and now in the British Museum*, 4to, 1805; *A Methodical Distribution of the Mineral Kingdom*, fol., 1807; *A Description of the Greek Marbles brought from the Shores of the Euzine, Archipelago, and Mediterranean, and deposited in the University Library, Cambridge*, 8vo, 1809; *Travels in various Countries of Europe, Asia, and Africa*, 4to, 1810-1819.

CLARKE, DR SAMUEL (1675-1729), a celebrated English philosopher and divine, was the son of Edward Clarke, alderman of Norwich, who had represented that city in parliament for several years. He was born October 11, 1675; and having finished his education at the free school of Norwich in 1691, removed thence to Caius College, Cambridge, where his uncommon abilities soon began to display themselves. Though the philosophy of Descartes was at that time the reigning system at the university, yet Clarke easily mastered the new system of Newton, and contributed greatly to the spread of the Newtonian philosophy by publishing an excellent translation of Rohault's *Physics* with notes, which he finished before he was twenty-two years of age. The system of Rohault was founded entirely upon Cartesian principles, and was previously known only through the medium of a rude Latin version. Clarke not only gave a new translation, but added to it such notes as were calculated to lead students insensibly to other and truer notions of science. "The success," says Bishop Hoadley, "answered exceedingly well to his hopes; and he may justly be styled a great benefactor to the university in this attempt." It continued to be used as a text-book in the university till supplanted by the treatises of Newton, which it had been designed to introduce. Whiston relates that, in 1697, he met young Clarke (at that time chaplain to Moore, bishop of Norwich), then wholly unknown to him, at a coffee-house in that city, where they entered into conversation about the Cartesian philosophy, particularly Rohault's *Physics*, which Clarke's tutor, as he tells us, had put him upon translating. "The result of this conversation was," says Whiston, "that I was greatly surprised that so young a man as Clarke then was should know so much of those sublime discoveries, which were then almost a secret to all but to a few particular mathematicians. Nor do I remember," continues he, "above one or two at the most, whom I had then met with, that seemed to know so much of that philosophy as Clarke." This translation of Rohault was first printed in 1697, 8vo. There have been four editions of it: the last and best is that of 1718, which has the following title:—*Jacobi Rohaulti Physica. Latine vertit, recensuit, et uberioribus jam Annotationibus, ex illustrissimi Isaaci Newtoni Philosophia maximam partem haustis, amplificavit et ornavit S. Clarke, S.P.T. Accedunt etiam in hac quarta editione novae aliquot tabulae aeri incisae et Annotationes multum sunt*

aucta. It was translated into English by Dr John Clarke, dean of Sarum, and published in two vols. 8vo.

Clarke afterwards turned his thoughts to divinity, and in order to qualify himself for the sacred office, devoted himself to the study of Scripture in the original, and of the primitive Christian writers. Having taken holy orders, he became chaplain to Moore, bishop of Norwich, who was ever afterwards his constant friend and patron. In 1699 he published two treatises,—one entitled *Three Practical Essays on Baptism, Confirmation, and Repentance*, and the other, *Some Reflections on that part of a book called Amyntor, or a Defence of Milton's Life, which relates to the Writings of the Primitive Fathers, and the Canon of the New Testament*. In 1701 he published *A Paraphrase upon the Gospel of St Matthew*, which was followed, in 1702, by the *Paraphrases upon the Gospels of St Mark and St Luke*, and soon afterwards by a third volume upon St John. They were subsequently printed together in two volumes 8vo, and have since passed through several editions. He intended to have treated in the same manner the remaining books of the New Testament, but something accidentally interrupted the execution of his design.

Meanwhile Bishop Moore gave him the rectory of Drayton, near Norwich, and procured him a parish in the city. In 1704 he was appointed to the Boyle lectureship, and chose for his subject the Being and Attributes of God. Having been appointed to the same office in the following year, he chose for his subject the Evidences of Natural and Revealed Religion. These lectures were first printed in two distinct volumes, but were afterwards collected together, and published under the general title of *A Discourse concerning the Being and Attributes of God, the Obligations of Natural Religion, and the Truth and Certainty of the Christian Revelation, in opposition to Hobbes, Spinoza, the author of the Oracles of Reason, and other Deniers of Natural and Revealed Religion*.

In 1706 he wrote a refutation of some positions which had been maintained by Dr Dodwell on the immortality of the soul, and this drew him into controversy with Collins. He also at this time wrote a translation of Newton's Optics, for which the author presented him with £500. In the same year also, through the influence of Bishop Moore, he obtained the rectory of St Bennet's, Paul's Wharf, London; and he soon afterwards appeared at the court of Queen Anne, who appointed him one of her chaplains in ordinary, and afterwards, in 1709, presented him to the rectory of St James's, Westminster. On his elevation to this latter office, he took the degree of doctor in divinity, defending as his thesis the two propositions:—“1. *Nullum fidei Christianæ dogma, in Sacris Scripturis traditum, est rectæ rationi dissentaneum*, no article of the Christian faith, delivered in the Holy Scriptures, is disagreeable to right reason, and 2. *Sine actionum humanarum libertate nulla potest esse religio*, without the liberty of human actions, there can be no religion. During the same year, at the request of the author, he revised and corrected Whiston's English translation of the *Apostolical Constitutions*.

In 1712 he published a carefully punctuated and annotated edition of Cesar's Commentaries, adorned with elegant engravings. It was printed in folio, 1712, and afterwards in 8vo, 1720, and dedicated to the duke of Marlborough. During the same year he published his celebrated treatise on *The Scripture Doctrine of the Trinity*. It is divided into three parts. The first contains a collection and exegesis of all the texts in the New Testament relating to the doctrine of the Trinity; in the second the doctrine is set forth at large, and explained in particular and distinct propositions; and in the third the principal passages in the liturgy of the Church of England relating to the doctrine of the Trinity are considered. Whiston

informs us that, some time before the publication of this book, a message was sent to him from Lord Godolphin and other ministers of Queen Anne, importing “that the affairs of the public were with difficulty then kept in the hands of those that were for liberty; that it was therefore an unseasonable time for the publication of a book that would make a great noise and disturbance; and that therefore they desired him to forbear till a fitter opportunity should offer itself,”—a message that Clarke of course entirely disregarded. The ministers were right in their conjectures; and the work not only provoked a great number of replies, but occasioned a formal complaint from the Lower House of Convocation. Clarke, in reply, drew up an apologetic preface, and afterwards gave several explanations, which satisfied the Upper House; and on his pledging himself that his future conduct would occasion no trouble, the matter dropped.

In 1715 and 1716 he had a discussion with Leibnitz relative to the principles of natural philosophy and religion, which was at length cut short by the death of his antagonist. A collection of the papers which passed between them was published in 1717. In 1719 he was presented by Lord Lechmere to the mastership of Wigston's hospital in Leicester. In 1724 he published seventeen sermons, eleven of which had not before been printed. In 1727, upon the death of Sir Isaac Newton, he was offered by the court the place of Master of the Mint, worth on an average from £1200 to £1500 a year. This secular preferment, however, he absolutely refused,—a circumstance which Whiston regards as “one of the most glorious actions of his life, and affording undeniable conviction that he was in earnest in his religion.” In 1728 was published “A Letter from Dr Clarke to Benjamin Hoadley, F.R.S., occasioned by the controversy relating to the Proportion of Velocity and Force in Bodies in Motion,” printed in the *Philosophical Transactions*. In 1729 he published the first twelve books of Homer's *Iliad*. This edition was printed in quarto, and dedicated to the duke of Cumberland. “The translation of Homer, who was Clarke's favourite author,” says Bishop Hoadley, “with his corrections, may now be styled accurate; and his notes, as far as they go, are indeed a treasury of grammatical and critical knowledge. He was called to his task by royal command, and he has performed it in such a manner as to be worthy of the young prince for whom it was laboured.” The year of its publication was the last of Clarke's life. Hitherto, though not robust, he had always enjoyed a firm state of health; but on the morning of Sunday, 11th May 1729, when going out to preach before the judges at Sergeant's Inn, he was seized with a sudden illness, which caused his death on the Saturday morning following. He died, May 17, 1729, in the 54th year of his age.

Soon after his death were published, from his original manuscripts, by his brother Dr John Clarke, dean of Sarum, *An Exposition of the Church Catechism*, and ten volumes of sermons, in 8vo. His *Exposition* is composed of the lectures which he read every Thursday morning, for some months in the year, at St James's church. In the latter part of his life he revised them with great care, and left them completely prepared for the press. Three years after his death appeared also the last twelve books of the *Iliad*, published in 4to by his son Mr Samuel Clarke, the first three of these books and part of the fourth having, as he states, been revised and annotated by his father.

Clarke was of a cheerful and even playful disposition. An intimate friend relates that happening to call for him he found him swimming upon a table. At another time, when Clarke and several other men of ability and learning were indulging in diversion, on looking out at the window he saw a grave blockhead approaching the house; upon which

he cried out, "Boys, boys, be wise; here comes a fool." This turn of his mind is confirmed by Dr Warton, who, in his observations upon the line of Mr Pope,

"Unthought-of frailties cheat us in the wise,"

says, "Who could imagine that Locke was fond of romances; that Newton once studied astrology; that Dr Clarke valued himself on his agility, and frequently amused himself in a private room of his house in leaping over the tables and chairs; and that our author himself was a great epicure?"

[Clarke, although in no department a genius of the first order, was a man of great general ability. He was eminent as a theologian, a mathematician, a metaphysician, and a philologist. His chief strength lay in his logical power. He was so disciplined and skilful a reasoner as to be able to contend on equal terms even with a Butler or a Leibnitz. Few have defended so well so many good causes. The materialism of Hobbes, the pantheism of Spinoza, the empiricism of Locke, the determinism of Leibnitz, Collins's necessitarianism, Dodwell's denial of the natural immortality of the soul, rationalistic attacks on Christianity, and the selfish morality of the sensualists,—all found in him a formidable opponent, possessed of great strength of mind, extraordinary dialectic skill, and a thorough conviction of the importance and truth of the principles which he advocated.]

His fame as a theologian and philosopher rests to a large extent on his demonstration of the existence of God and his theory of the foundation of rectitude. The former is not, as it is often described, a purely *a priori* argument, nor is it presented as such by its author. It starts from a fact, and it often explicitly appeals to facts. The intelligence, for example, of the self-existence and original cause of all things—the main question between theists and atheists—is admitted to be "not easily proved *a priori*," but argued to be "demonstrably proved *a posteriori* from the variety and degrees of perfection in things, and the order of causes and effects, from the intelligence that created beings are confessedly endowed with, and from the beauty, order, and final purpose of things." The propositions maintained in the argument are—"1. That something has existed from eternity; 2. That there has existed from eternity some one immutable and independent being; 3. That that immutable and independent being, which has existed from eternity, without any external cause of its existence, must be self-existent, that is, necessarily existing; 4. What the substance or essence of that being, which is self-existent or necessarily existing, is, we have no idea, neither is it at all possible for us to comprehend it; 5. That though the substance or essence of the self-existent being is itself absolutely incomprehensible to us, yet many of the essential attributes of his nature are strictly demonstrable, as well as his existence, and, in the first place, that he must be of necessity eternal; 6. That the self-existent being must of necessity be infinite and omnipresent, 7. Must be but one, 8. Must be an intelligent being, 9. Must be not a necessary agent, but a being endowed with liberty and choice, 10. Must of necessity have infinite power, 11. Must be infinitely wise, and 12. Must of necessity be a being of infinite goodness, justice, and truth, and all other moral perfections, such as become the supreme governor and judge of the world."

In order to establish his sixth proposition, Dr Clarke contends that time and space, eternity and immensity, are not substances but attributes,—the attributes of a self-existent being. Edmund Law, Dugald Stewart, Lord Brougham, and many other writers, have, in consequence, represented Clarke as arguing from the existence of time and space to the existence of Deity. This is a serious mistake. The existence of an immutable, independent, and necessary being is supposed to be proved before

any reference is made to the nature of time and space. Clarke has been generally supposed to have derived the opinion that time and space are attributes of an infinite immaterial and spiritual being from the *Scholium Generale*, first published in the second edition of Newton's *Principia* (1714). The truth is that his work on the Being and Attributes of God appeared nine years before that *Scholium*. The view propounded by Clarke may have been derived from the Midrash, the Kabbalah, Philo, Henry More, or Cudworth, but not from Newton. It is a view difficult to prove, and probably few will acknowledge that Clarke has conclusively proved it.

His theory as to the nature, foundation, and obligation of virtue is to the following effect. Things differ from one another in their natures. They necessarily, therefore, stand in different relations to one another. From these different relations of things there must arise an agreement or disagreement of some things to others, a fitness or unfitness of the application of different things one to another. Thus there is a fitness or suitability of certain acts in certain circumstances to certain persons and an unsuitableness of others founded on the nature of things and persons, apart from all positive appointment whatsoever. It is only imperfection or perversion of intelligence which can make the relations of things, and the fitness and unfitness involved in them, appear to be other than what they are. The fundamental truths of morals are absolutely and in themselves what they seem, no less than the truths of geometry. The obligation to virtue is involved in the very recognition of the moral relations which arise out of the necessary and eternal differences of things. It is impossible for us to apprehend them otherwise than as laws of reason which ought to guide our actions. Prior to all consideration of the divine will or law there is obligation; and God, although under no necessity to create, must, having resolved to create, have respect to certain proportions, abstractly of eternal necessity, and, having resolved to act, must determine His will according to eternal reason. His own law to himself is the law which He has given to every rational being, and which He has sanctioned by rewards and punishments. These are a secondary source of obligation.

This theory has been misunderstood and misrepresented in various ways. Jouffroy, Amédée Jacques, Sir James Meckintosh, Dr Thomas Brown, &c., criticise it on the assumption that Clarke made virtue consist in conformity to the relations of things universally, although the whole tenor of his argument shows him to have had in view only conformity to such relations as belong to the sphere of moral agency. We may admit, however, that he might have profitably insisted more on the fact that the relations and fitnesses spoken of are those which afford a reason and rule of action to the will. In this respect the doctrine of the distinguished German philosopher Herbart, which, while resolving morality into relations, lays stress on the fact that these relations are relations of will, may be regarded as an improvement of that of Clarke. It is erroneous to represent Clarke as confounding mathematical and moral relations, as overlooking that the relations involved in morality must be distinct from those involved in mere truth, or as meaning by the "fitness" which is constitutive of morality the adaptation of means and ends. In reality, he simply states an analogy between mathematical and moral truths, assigns to moral principles the distinctive peculiarity of being related to the will, and being liable to be set aside; and denotes by fitness the accordance of things with a standard by which they can be judged.

When Clarke's doctrine, that rectitude is a conformity to certain relations, has been accurately understood, it cannot fail to be obvious that although it must be vindicated from

many of the objections which have been urged against it, no one can justly regard it as more than the mere starting-point of a theory. It must be followed up by a great amount of research before it can approximate to what a theory should be. But there is no reason why it should not be followed up by research in various directions, nor why it should not be made much more precise and definite than it has yet been. The relations involved in morality may be compared with those involved in pure science, in utility both personal and general, and in beauty, and ought to be for it is only thus that what is distinctive of them can be brought clearly and completely out. More, perhaps, than any other theory on the nature of virtue, the theory of relations suggests and implies the necessity of a minute scientific inquiry into how truth, beauty, utility, and goodness are connected and distinguished. By Socrates and Wollaston truth and goodness, by Plato, Shaftesbury, and Herbart beauty and goodness, and by the selfish school and the utilitarian school of moralists, utility and goodness, have been, if not identified, too nearly so, while there have been held errors as great although directly contrary to these, separating unnaturally goodness from truth, or from beauty, or from utility; and it lies directly in the way of those who adopt the theory of relations to institute an investigation into the whole subject of the connection of truth, beauty, utility, and goodness, so thorough and comprehensive as to show what is true and what erroneous in all these views, and what are the resemblances and differences, the identities and distinctions, in the things themselves.

As to the biography of Clarke see the *Life* by Bishop Hoadley, and Whiston's *Historical Memoirs*. As to his philosophical, ethical, and theological tenets, there may be consulted Bishop Law's *Inquiry into the Ideas of Space, Time, &c.*, several works of Dr John Balguy (referred to in article BALGUY), Dugald Stewart's *Dissertation*, Sir James Mackintosh's *Dissertation*, Lord Brougham's *Discourse on Natural Theology*, Dr Burton's *Natural Theology*, Wardlaw's *Christian Ethics*, Dr Chalmers's *Natural Theology*, and Hunt's *Religious Thought in England, passim*, but particularly in vol. ii. 447-457, and vol. iii. 20-29 and 109-115, &c. The most elaborate essay on his philosophy as a whole is, perhaps, that by Prof. Zimmermann in the *Denkschriften d. k. Akademie der Wissenschaften, Phil.-Hist. Classe*, Ed. xix., Vienna, 1870. It treats of English rationalism before Clarke, his life, the general character of his philosophy, his criticism of materialism, his defence of natural religion, his discussion with Leibnitz, and his moral philosophy. (R. F.)]

CLARKSON, THOMAS (1760-1846), was born on the 28th March 1760, at Wisbeach, in Cambridgeshire, where his father was head-master of the free grammar school. He was educated at St Paul's School and at St John's College, Cambridge. Having taken the first place among the middle bachelors as Latin essayist, he succeeded in 1785 in gaining a similar honour among the senior bachelors. The subject appointed by the vice-chancellor, Dr Peckhard, was one in which he was himself deeply interested—*Anne liceat invito in servitute dare?* (Is it right to make men slaves against their will?) In preparing for this essay Clarkson consulted a number of works on African slavery, of which the chief was Benezet's *Historical Survey of New Guinea*; and the atrocities of which he read affected him so deeply that he determined to devote all his energies to effect the abolition of the slave trade, and gave up his intention of entering the church. His first measure was to publish, with additions, an English translation of his prize-essay (June 1786). He then commenced to search in all quarters for information concerning slavery. He soon discovered that the cause had already been taken up to some extent by others, most of whom belonged to the Society of Friends, and among the chief of whom were William Dillwyn, Joseph Wood, and Granville Sharp. With the aid of these gentlemen, a committee of twelve was formed in May 1787 to do all that was possible to effect the abolition of the slave trade. Meanwhile Clarkson

had also gained the sympathy of Wilberforce, Whitbread, Sturge, and several other men of influence. Travelling from port to port, he now commenced to collect a large mass of evidence; and much of it was embodied in his *Summary View of the Slave Trade, and the Probable Consequences of its Abolition*, which, with a number of other anti-slavery tracts, was published by the committee. Pitt, Grenville, Fox, and Burke looked favourably on the movement; in May 1788 Pitt introduced a parliamentary discussion on the subject, and Sir W. Dolben brought forward a bill providing that the number of slaves carried in a vessel should be proportional to its tonnage. A number of Liverpool and Bristol merchants obtained permission from the House to be heard by council against the bill, but on the 18th June it passed the Commons. Soon after Clarkson published an *Essay on the Impolicy of the Slave Trade*; and for two months he was continuously engaged in travelling that he might meet men who were personally acquainted with the facts of the trade. From their lips he collected a considerable amount of evidence; but only nine could be prevailed upon to promise to appear before the privy council. Meanwhile other witnesses had been obtained by Wilberforce and the committee, and on the 12th May 1789 the former led a debate on the subject in the House of Commons, in which he was seconded by Burke and supported by Pitt and Fox. It was now the beginning of the French Revolution, and in the hope that he might arouse the French to sweep away slavery with other abuses, Clarkson crossed to Paris, where he remained six months. He found Necker head of the Government, and obtained from him some sympathy but little help. Mirabeau, however, with his assistance, prepared a speech against slavery, to be delivered before the National Assembly, and the Marquis de la Fayette entered enthusiastically into his views. During this visit Clarkson also met a deputation of negroes from St Domingo, who had come to France to present a petition to the National Assembly, desiring to be placed on an equal footing with the whites; but the storm of the Revolution permitted no substantial success to be achieved. Soon after his return home he engaged in a search, the apparent hopelessness of which finely displays his unshrinking labouriousness and his passionate enthusiasm. He desired to find some one who had himself witnessed the capture of the negroes in Africa; and a friend having met by chance a man-of-war's-man who had done so, Clarkson, though ignorant both of the name and of the residence of the sailor, at once set out in search of him, and after many disappointments actually discovered him. His last tour was undertaken in order to form anti-slavery committees in all the principal towns. At length, in the autumn of 1794, his health, which had long been impaired by his uninterrupted exertions, gave way, and he was obliged to cease active work. He did not, however, entirely give up the cause. At the suggestion of Wilberforce and others, he occupied his time in writing a *History of the Abolition of the Slave Trade*, which appeared in 1808. In 1818 he had an interview at Paris with the emperor of Russia, to whom he presented an address against the negro slave trade. He again visited the emperor during the conference of the European monarchs which was held at Aix-la-Chapelle, and, through him, the address was also presented to the emperor of Austria and the king of Prussia. In 1823, the slave trade having been abolished in 1807, the Anti-Slavery Society was formed, and Clarkson was one of its vice-presidents. He was for some time blind from cataract; but several years before his death his sight was restored. He died at the age of eighty-six, at his patrimonial house, Playford Hall, Suffolk.

Besides the works already mentioned, he published

the *Portraiture of Quakerism* (1806), *Memoirs of William Penn* (1813), *Researches, Antediluvian, Patriarchal, and Historical* (1836), intended as a history of the interference of Providence for man's spiritual good, and *Strictures* on several of the remarks concerning himself made in the *Life of Wilberforce*, in which his claim as originator of the anti-slavery movement is denied. See his *Memoirs* by Thomas Elmes and Thomas Taylor.

CLAUBERG, JOHN (1622-1665), one of the most noted of the immediate followers of Descartes, was born at Solingen, in Prussia, in the year 1622. After travelling in France and England, he came to Leyden, where he studied philosophy under the Cartesian John Ray. He became professor of philosophy at Herborn, and afterwards at Duisburg, and was one of the earliest teachers of the new doctrines in Germany. Clauberger is justly celebrated as an exact and methodical commentator on his master's writings; but he was no mere commentator, and his speculations anticipate in a marked degree the subsequent course of thought in the Cartesian school. His theory of the connection between the soul and the body is hardly to be distinguished from that afterwards advanced by Malebranche; while his view of the relation which God holds to his creatures is a distinct foreshadowing of the pantheism of Spinoza. All creatures exist only through the continuous creative energy of the Divine Being, and are no more independent of his will than are our thoughts independent of us,—or rather less, for there are thoughts which force themselves upon us whether we will or not. Clauberger died at Duisburg in 1665. His chief works are—*De conjunctione animæ et corporis humani scriptum; Exercitationes centum de cognitione Dei et nostri; Logica vetus et nova; Initiatio philosophi, seu Dubitatio Cartesianæ*. He also wrote a commentary on Descartes's *Meditations*. A complete edition of his works in two vols. was published at Amsterdam in 1691.

CLAUDE, JEAN (1619-1687), a famous French Protestant preacher and controversialist, was born at Sauvetat near Agen, where his father was a Protestant minister. He held for eight years the office of professor of theology in the Protestant college of Nîmes; but in 1661, having opposed a suggestion which was made at a provincial synod for reuniting Catholics and Protestants, he was forbidden to preach in Lower Languedoc. On visiting Paris in order to appeal against this command, he became engaged in a controversy with Bossuet and Arnauld concerning the Eucharist. In 1662 he obtained a post at Montauban similar to that which he had lost; but after four years he was removed from it also. He next became pastor in Paris, where he continued his controversy with Bossuet. On the revocation of the Edict of Nantes he fled to Holland, and received a pension from the Prince of Orange. He continued to preach occasionally at the Hague till his death.

His principal works are the *Réponse aux deux traités intitulés La Perpétuité de la Foi de l'Église Catholique touchant l'Eucharistie* (1665); *Réponse au livre de P. Novet sur l'Eucharistie* (1668); *Défense de la Réformation, ou réponse aux préjugés légitimes de Nicole* (1678); *Plaintes des Protestants cruellement opprimés dans le Royaume de France* (1686); *Œuvres posthumes* (Amsterdam, 1688), containing the *Traité de la Composition d'un Sermon*, which was translated into English in 1778. See biographies by Nicéron and Laderize.

CLAUDE OF LORRAINE, or CLAUDE GELÉE (1600-1682), the celebrated landscape-painter, was born of very poor parents at the village of Chamagne in Lorraine. When it was discovered that he made no progress at school, he was apprenticed, it is commonly said, to a pastry-cook, but this is extremely dubious. At the age of twelve, being left an orphan, he went to live at Freiburg with an elder brother, Jean Gelée, a wood-carver of moderate merit, and under

him he designed arabesques and foliage. He afterwards rambled to Rome to seek a livelihood; but from his clownishness and ignorance of the language, he failed to obtain permanent employment. He next went to Naples, to study landscape painting under Godfrey Waals, a painter of much repute. With him he remained two years; then he returned to Rome, and was domesticated until April 1625 with another landscape-painter, Augustin Tassi, who hired him to grind his colours and to do all the household drudgery. His master, hoping to make Claude serviceable in some of his greatest works, advanced him in the rules of perspective and the elements of design. Under his tuition the mind of Claude began to expand, and he devoted himself to artistic study with great eagerness. He exerted his utmost industry to explore the true principles of painting by an incessant examination of nature; and for this purpose he made his studies in the open fields, where he very frequently remained from sunrise till sunset, watching the effect of the shifting light upon the landscape. He generally sketched whatever he thought beautiful or striking, marking every tinge of light with a similar colour; from these sketches he perfected his landscapes. Leaving Tassi, he made a tour in Italy, France, and a part of Germany, including his native Lorraine, suffering numerous misadventures by the way. Karl Dervent, painter to the duke of Lorraine, kept him as assistant for a year; and he painted at Nancy the architectural subjects on the ceiling of the Carmelite church. He did not, however, relish this employment, and in 1627 returned to Rome. Here, painting two landscapes for Cardinal Bentivoglio, he earned the protection of Pope Urban VIII. and rapidly rose into celebrity.

Claude was not only acquainted with the facts, but also with the laws, of nature; and Sandrart relates that he used to explain, as they walked together through the fields, the causes of the different appearances of the same landscape at different hours of the day, from the reflections or refractions of light, or from the morning and evening dews or vapours, with all the precision of a natural philosopher. He elaborated his pictures with great care; and if any performance fell short of his ideal, he altered, erased, and repainted it several times over.

His skies are aerial and full of lustre, and every object harmoniously illumined. His distances and colouring are delicate, and his tints have a sweetness and variety till then unexampled. He frequently gave an uncommon tenderness to his finished trees by glazing. His figures, however, are very indifferent; but he was so conscious of his deficiency in this respect, that he usually engaged other artists to paint them for him, among whom were Curtois and Filippo Lauri. Indeed, he was wont to say that he sold his landscapes and gave away his figures. In order to avoid a repetition of the same subject, and also to detect the very numerous spurious copies of his works, he made tinted outline drawings (in six paper books prepared for this purpose) of all those pictures which were transmitted to different countries; and on the back of each drawing he wrote the name of the purchaser. These books he named *Libri di Verità*. This valuable work has been engraved and published, and has always been highly esteemed by students of the art of landscape. Claude died at Rome at the age of eighty-two, on the 21st of November 1682, leaving his wealth, which was considerable, between his only surviving relatives, a nephew and niece. Many choice specimens of his genius may be seen in the National Gallery, and in the Louvre; the landscapes in the Altieri and Colonna Palaces in Rome are also of especial celebrity. He himself regarded a landscape which he painted in the Villa Madama, being a cento of various views with great abundance and variety of leafage, and a composition of Esther and

Ahasuerus, as his finest works; the former he refused to sell, although Clement IX. offered to cover its surface with gold pieces. He etched a series of twenty-eight landscapes, fine impressions of which are greatly prized. Full of amenity, and deeply sensitive to the graces of nature, Claude has long been deemed the prince of landscape painters, and indeed he must always be accounted a prime leader in that form of art, and in his day a great enlarger and refiner of its province. Within the last century, however, he has been vastly exceeded—in grasp, power, knowledge, subtlety, variety, and general mastery of all kinds—by many painters, one in one quality and another in another; in proof we need only name Turner, whose range, in comparison with Claude's, was as that of a continent to a canton, or a mountain to a hillock.

Claude was a man of amiable and simple character, very kind to his pupils, a patient and unwearied worker; in his own sphere of study, his mind was stored (as we have seen) with observation and knowledge, but he continued an unlettered man till his death. (W. M. R.)

CLAUDET, ANTOINE FRANÇOIS (1797–1867), an eminent photographer, was born at Lyons. Shortly after the publication of Daguerre's results (1839), Claudet, by the addition of bromide and chloride of iodine to the iodide of silver employed by the former discoverer, greatly accelerated the process of production. This, with the use of iodide of gold in fixing the image, may be said to have completed the invention. In 1848 Claudet produced the photophometer, an instrument designed to measure the intensity of photogenic rays; and in 1849 he brought out the focimeter for securing a perfect focus in photographic portraiture. In 1850 he received a medal from the Society of Arts and Manufactures for a machine to cut glass of any curvature of surface. This was followed in 1851, 1855, and 1862 by the medals awarded by the French and English universal exhibitions for eminence in and discoveries connected with his profession, and in 1853 by his election into the Royal Society. In 1858 he produced the stereomroscope, in reply to a challenge from Sir David Brewster. Claudet, who was photographer in ordinary to Her Majesty, was also a *decoré* of the Legion of Honour, and had received tokens of admiration and regard from Louis Philippe and the Czar Nicholas.

CLAUDIANUS, CLAUDIUS, the gifted poet who shed lustre on the last decrepid era of Roman literature, was, as we learn from himself (Epist. 1), an Egyptian by birth, and probably a native of Alexandria. It may be conjectured from his name that he was of Roman extraction, and it is hardly possible that he should have acquired such mastery over the Latin language if it had not been familiar to him from his boyhood. We have, however, his own authority for the assertion that his first poetical compositions were in Greek, and that he had written nothing in Latin before 395 A.D. In that year he appears to have come to Rome, and made his *début* as a Latin poet by a panegyric on the consulship of Olybrius and Probinus, the first brothers not belonging to the imperial family who had ever simultaneously filled the office of consul. This piece proved the precursor of the series of panegyric poems which compose the bulk of his writings. In 396 appeared the encomium on the third consulship of the Emperor Honorius, and the epic on the downfall of Rufinus, the unworthy minister of Arcadius at Constantinople. This revolution was principally effected by the contrivance of Stilicho, the great general and minister of Honorius. Claudian's poem appears to have obtained his patronage, or rather perhaps that of his wife Serena, by whose interposition the poet was within a year or two enabled to contract a wealthy marriage in Africa (Epist. 2). Previous to this event he had produced (398) his panegyric

on the fourth consulship of Honorius, his epithalamium on the marriage of Honorius to Stilicho's daughter, Maria, and his poem on the Gildonic war, celebrating the repression of a revolt in Africa. To these succeeded his piece on the consulship of Mallius Theodorus (399), the unfinished or mutilated invective against the Byzantine prime minister Eutropius, in the same year, the epics on Stilicho's first consulship and on his repulse of Alaric (400 and 403), and the panegyric on the sixth consulship of Honorius (404). From this time all trace of Claudian is lost, and he is generally supposed to have perished with his patron Stilicho in 408. It may, however, be plausibly conjectured that he must have died in 404, as he could hardly otherwise have omitted to celebrate the greatest of Stilicho's achievements, the destruction of the barbarian host led by Radagaisus in the following year. Nor, on the other hand, is ground wanting for the surmise that he may have survived Stilicho, as in the dedication to the second book of his epic on the *Rape of Proserpine*, he speaks of his disuse of poetry in terms hardly reconcilable with the fertility which, as we have seen, he displayed during his patron's lifetime. From the manner in which Augustine alludes to him in his *De Civitate Dei*, it may be inferred that he was no longer living at the date of the composition of that work, between 415 and 428.

We have already enumerated Claudian's chief poems, to which only remain to be added a number of short descriptive pieces and epigrams, his lively Fescennines on the emperor's marriage, his panegyric on Serena, and the *Gigantomachia*, a fragment of an unfinished epic. Several poems expressing Christian sentiments are undoubtedly spurious. There can be no question of his paganism, which, however, neither prevented his celebrating Christian rulers and magistrates nor his enjoying the distinction of a court laureate. We have his own authority for his having been honoured by a bronze statue in the forum, although the inscription on the pedestal which Pomponius Lætus professed to have discovered in the 15th century is almost certainly spurious.

Claudian's position in literature is unique. It is sufficiently remarkable that, after nearly three centuries of torpor, the Latin muse should have experienced any revival in the age of Honorius, nothing less than amazing that this revival should have been the work of a foreigner, most surprising of all that a just and enduring celebrity should have been gained by official panegyrics on the generally uninteresting transactions of an inglorious epoch. The first of these particulars bespeaks Claudian's taste, rising superior to the prevailing barbarism, the second his command of language, the third his rhetorical skill. As remarked by Gibbon, "he was endowed with the rare and precious talent of raising the meanest, of adorning the most barren, and of diversifying the most similar topics." This gift is especially displayed in his poem on the downfall of Rufinus, where the punishment of a public malefactor is exalted to the dignity of an epic subject by the magnificence of diction and the ostentation of supernatural machinery. The noble exordium, in which the fate of Rufinus is propounded as the vindication of divine justice, places the subject at once on a dignified level; and the council of the infernal powers has afforded a hint to Tasso, and through him to Milton. The inevitable monotony of the panegyrics on Honorius is relieved by just and brilliant expatiation on the duties of a sovereign. In his celebration of Stilicho's victories Claudian found a subject more worthy of his powers, and some passages, such as the description of the flight of Alaric, and of Stilicho's arrival at Rome and the felicitous parallel between his triumphs and those of Marius, rank among the brightest ornaments of Latin poetry. Claudian's panegyric, however lavish and re-

ardless of veracity, is in general far less offensive than usual in his age, a circumstance attributable partly to his more refined taste and partly to the genuine merit of his patron Stilicho. He is a valuable authority for the history of his times, and is rarely to be convicted of serious inaccuracy in his facts, whatever may be thought of the colouring he chooses to impart to them. As correctly observed by his latest critic, Mr Hodgkin, he was animated by true patriotic feeling, in the shape of a reverence for Rome as the source and symbol of law, order, and civilization. Outside the sphere of actual life he is less successful; his *Rape of Proserpine*, though the beauties of detail are as great as usual, betrays his deficiency in the creative power requisite for dealing with a purely ideal subject. This denotes the rhetorician rather than the poet, and in general it may be said that his especial gifts of vivid natural description and of copious illustration, derived from extensive but not cumbrous erudition, are fully as appropriate to eloquence as to poetry. In the general cast of his mind and character of his writings, and especially in his faculty for bestowing enduring interest upon occasional themes, we may fitly compare him with Dryden, remembering that while Dryden exulted in the energy of a vigorous and fast-developing language, Claudian was cramped by an artificial diction, confined to the literary class.

Claudian's works must have been carefully edited in his own time, for his epigrams include several short pieces evidently prepared for insertion in or rejected from poems of greater compass. The *editio princeps* was printed at Vicenza in 1482; the best subsequent editions are those by Gesner (1759), Burmann (1760), and Jeep (1872). There is a complete English translation of little merit, by Abraham Hawkins (London, 1817), and a version of the *Rape of Proserpine*, by Dean Howard. Some excellent criticism on Claudian will be found in Professor Ramsay's article in Smith's Classical Dictionary, and in two lectures by Mr Thomas Hodgkin (Newcastle, 1875). (R. G.)

CLAUDIUS, APPIUS CÆCUS, a Roman patrician and author of the 4th century B.C. In 312 B.C. he was elected censor without having passed through the office of consul. His censorship was remarkable for the actual or attempted achievement of several great constitutional changes. He filled vacancies in the senate with men of low birth; and when his list was rejected, and C. Plautius, his colleague, resigned, he continued, in defiance of custom, to hold the office alone. He also retained it for five years, despite the Æmilian law, which limited the duration of its tenure to a year and a half. He transferred the charge of the public worship of Hercules in the Forum Boarium from the hands of the Politian gens to that of public slaves. He distributed the *libertini* among all the tribes; and he further invaded the exclusive rights of the patricians by directing his secretary Cneius Flavius (whom, though a freedman, he made a senator) to publish the *legis actiones* and the list of *dies fasti* (or days on which legal business could be transacted). And lastly, he gained enduring fame by the construction of a road and an aqueduct, which—a thing unheard of before—he called by his own name. In the year after his resignation of the censorship (307) he was elected consul. In 298 he was made interrex; and in 296, as consul, he led the army in Samnium, and the armies of the two consuls gained a victory over the Etruscans and Samnites; but he never triumphed, nor does his military career appear to have been at all distinguished. Next year he was prætor, and he was once dictator. To the Ogulnian law admitting the plebeians to the offices of augur and pontifex he was strongly opposed; and his advocacy of the cause of the democracy seems to have ended with his censorship. His ambition and his pride of race were, however, accompanied by a passionate love of Rome.

He was already blind and tottering with age when Cineas, the minister of Pyrrhus visited him, but so vigorously did he oppose every concession that all the eloquence of Cineas was in vain, and the Romans forgot past misfortunes in the inspiration of his patriotism. The story of his blindness, however, may be merely a method of accounting for his cognomen.

Appius Claudius Cæcus is also remarkable as the first of the Roman writers, both in verse and prose, of whom we know anything. He wrote a poem which is mentioned by Cicero, but of which the remaining fragments are of the smallest, and a legal work entitled *De Usurpationibus*. It is very likely also that he was concerned in the drawing up of the *Legis Actiones* published by Flavius. His *Sententiæ*, which include the famous dictum "Every one is the architect of his own fortunes," were read by Panætius, but are now lost.

CLAUDIUS, APPIUS CRASSUS, was, according to Livy, a patrician notorious for his pride and cruelty and his bitter hatred of the plebeians. Twice they refused to fight under him, and, fleeing before their enemies, brought upon him defeat and disgrace. He retaliated by decimating the army. At length they effected his banishment, but he quickly returned, and again became consul. In the same year (451 B. C.) he was made one of the decemviri who had been appointed to draw up a code of written laws, and so carefully did he act during his first year of office that he was the only one of the ten who was re-elected. With Claudius at their head, the new decemviri appear to have resolved on retaining permanent authority, but an outburst of popular feeling suddenly crushed their power. Enamoured of the beautiful daughter of the plebeian centurion Virginius, Claudius attempted to seize her by an abuse of justice. One of his clients, Marcus Claudius, swore that she was the child of a slave belonging to him, and that she had been stolen by the childless wife of the centurion. Virginius was summoned from the army, but a private message was sent at the same time instructing the general to detain him. The first messenger was more speedy than the second, and on the day of trial Virginius was present to expose the conspiracy. Still judgment was given according to the evidence of Marcus, and Claudius commanded Virginia to be given up to him. There was but one way of escape, and in despair, her father seized a knife from a neighbouring stall and plunged it in her side. The popular passion was deeply stirred. Virginius, with Icilius, the betrothed lover of his daughter, and Namptorius, her uncle, hurried to arouse the army, Horatius and Valerius put themselves at the head of the people. The decemviri were overthrown; and Appius Claudius died in prison, either by his own hand or by that of the executioner. Mommsen rejects the view given as above by Livy, and is inclined to hold that Claudius, as decemvir, was the pretended champion of the plebs, and that the revolution which ruined him was a return of the people to the rule of the patricians, who are represented by Horatius and Valerius. See appendix to vol. i. of his *History of Rome*.

CLAUDIUS, or TIBERIUS CLAUDIUS DRUSUS NERO GERMANICUS (10 B.C.—54 A.D.); the first Roman emperor of the name, born at Lugdunum (Lyons), in 10 B.C., was the son of Drusus and Antonia, and grandson of Livia, the wife of Augustus. Paralyzed and lame, and unable to speak with distinctness, he was an object of scorn even to his mother; and the natural diffidence and timidity of his character were increased by neglect and insult, till he was regarded as little better than an imbecile. His time was spent chiefly in the society of servants, and devoted to the industrious pursuit of literature; and until his accession he took no real part in public affairs, though Caligula honoured

him with the dignity of consul. His first wife was Plautia Urgulanilla, whom he divorced because he suspected her of designs against his life; his second, Ælia Petina, was also divorced; and his third was the infamous Valeria Messalina. In 41 A.D., on the murder of Caligula, Claudius was seized by the prætorians, and declared emperor. As soon as he gained resolution to assume the authority of his office, he proclaimed an amnesty for all except Chærea, the assassin of his predecessor, and one or two others. The account, however, of his painstaking government, his laborious personal administration of justice, his conquest of Britain, his extension of the *jus honorum* to the Gauls, his construction of the Claudian aqueduct and the harbour of Ostia, are matters of history (see ROMAN HISTORY). The cruelties of his reign appear to have been due to the facility of character which placed him completely under the influence of his favourite freedmen, of whom the most conspicuous were Narcissus, Pallas, and Polybius, and of his wife, the vicious and shameless Messalina, whom he fondly loved and honoured. At length, according to the account of Tacitus, Messalina went through the ceremony of marriage with one of her lovers, and urged by her former confederate Narcissus, the emperor allowed her to be seized, and Narcissus put her to death. Suetonius throws a somewhat different light on the story, making it rather more probable, for he tells us that there was a rumour that the emperor desired and assisted in the marriage, because he had been warned by a soothsayer that the husband of Messalina was about to fall into misfortune. The next and fourth wife of Claudius was his niece Agrippina, a woman as criminal as any of her predecessors. She prevailed upon him to set aside his own son Britannicus in favour of Nero, her son by a former marriage; and in 54 A.D., that she might place the act beyond recall, she put the emperor to death by means of poison.

Encouraged by Livy, as Suetonius asserts, and assisted by the freedmen who attended him, Claudius produced a history of Rome, commencing with the battle of Actium (31 B.C.), in 41 books, a defence of Cicero against Asinius Pollio, memoirs of his own life, and, in Greek, a history of Carthage and a history of Etruria; but none of his writings have come down to us. He introduced three new letters into the Latin alphabet—the digamma, the ψ , and another not now known; but they appear to have been dropped at his death.

The principal authority for the life and times of Claudius is the *Annals* of Tacitus, in whose high-coloured pictures there is much that gives rise to a suspicion of exaggeration. Suetonius and Dion Cassius are even less trustworthy.

CLAUDIUS, MARCUS AURELIUS, GOTMUCUS, the second of the Roman emperors of the name of Claudius, was born in Illyria or Dardania in the first half of the 3d century. On account of his military ability he was placed in command of an army by Decius; and Valerian appointed him general on the Illyrian frontier, and ruler of the provinces of the lower Danube. During the reign of Gallienus, he was called to Italy in order to crush Aureolus; and, on the death of the emperor (268 A.D.) he was chosen as his successor, in accordance, it was said, with his express desire. He enjoyed great popularity, and, as far as we can now judge, he appears to have been a man of considerable ability and strength of character. The account of his reign belongs to the history of Rome.

CLAUDIUS, MATTHIAS (1743–1815), a German poet, otherwise known by the *nom de plume* of Asmus, was born in 1743 at Rheinfeld, near Lubek, and studied at Jean. With the exception of a short time in 1776 and 1777, when he held the office of superior commissioner or Oberlandcommissar at Darmstadt, he spent his life in the little town of Wandsbeck, near Hamburg, for which he had

conceived so strong an attachment that he would not accept any appointment which required him to settle elsewhere. Here he earned his first literary reputation by the publication, from 1770 to 1775, of a weekly periodical called the *Wandsbecker Bote* or *Wandsbeck Messenger*, in which he gave to the world a large number of prose essays and poems of various kinds. They were written in very pure and simple German, and appealed to the popular taste; in many there was a vein of extravagant humour or even burlesque, while others were full of quiet meditation and solemn sentiment. In his later days, perhaps through the influence of Klopstock, with whom he had formed an intimate acquaintance, Claudius became strongly pietistic, and the graver side of his nature was alone permitted to display itself. Instead of firing the German heart with a *Rheinweelied*, or shaking the German sides with a *Wenn Jemand eine Reise thut*, he translated the works of Saint Martin and Fénelon. At the same time, he thought it no harm to publish a complete collection of his writings, under the whimsical title of *Asmus omnia sua secum portans, oder Sämmtliche Werke des Wandsbecker Boten*, 8 vols. 1774–1812. His biography has been written by Herbst (Gotha, 1857); and Kalke has given us *Claudius und Hebel* (Berlin, 1864).

CLAVIJO, RUY GONZALEZ DE, a Spanish traveller of the 15th century, whose narrative is the first important one of its kind contributed to Spanish literature. He was a native of Madrid, and belonged to a family of some antiquity and position. On the return of the ambassadors Solomayor and Palazuelos from the East, Henry III. determined to send another embassy to the court of Timur, who had just risen to power, and for this purpose he selected Clavijo, Gomez de Salazar, and a master of theology named Fray Alonzo Paez de Santa Maria. They sailed from Seville in May 1403, touched at the Balearic Isles, Gaeta, and Rhodes, spent some time at Constantinople, sailed along the southern coast of the Black Sea to Trebizond, and proceeded inland, probably by Etchimizan, Tabreez, Teheran, and Meshud, to Samarcand, where they were well received by the conqueror. Their return was safely accomplished, and they landed in Spain in 1406. Clavijo proceeded at once to the court, at that time in Alcalá de Henares, and served as chamberlain till the king's death in the following year; he then returned to Madrid, and lived there in opulence till his own death in April 1412. He was buried in the chapel of the monastery of San Francisco, which he had rebuilt at great expense. His itinerary was first published in 1582 at Seville, by Argote de Molina, with the title of *Historia del gran Tamorian e itinerario y enarracion del viage y relacion de la embaxada que Ruy Gonzalez de Clavijo le hizo*,—the editor appending “a short discourse,” for the better intelligence of his author. Another edition was brought out at Madrid in 1782, by Antonio de Sancha; and from this an English translation was prepared by Clements Markham, and published by the Hakluyt Society in 1860. The identification of a great number of the places mentioned by Clavijo is a matter of considerable difficulty, and has given rise to some discussion (see Khanikof's list in *Geographical Magazine*, 1874). A short account of his life is given by Alvarez y Baena in the *Hijos de Madrid*, vol. ix.

CLAY, HENRY (1777–1852), a celebrated American politician, born near Richmond, in Virginia, on the 12th April 1777, was the son of a Baptist minister, who died when Henry was only five years old. His youth was consequently spent in some hardship, and for a time he worked on a farm; but at the age of fifteen he obtained a situation in the office of the clerk of the Court of Chancery. Having gained some influential friends, he began in 1796 to study law under Robert Brooke, the attorney-general. In 1797 he was admitted to the bar, and in the end of that year he

commenced to practise in Lexington. His great power of influencing a jury soon brought him a flourishing practice; and having taken a prominent part in the discussions as to the constitution which was drawn up for the State of Kentucky, he was in 1803 chosen member of the Legislature of that State. Three years later he became for a few months member of the Senate of the United States. In the next year he again took his seat in the Legislature of Kentucky, of which in 1808 he was appointed speaker. It was during this session that he challenged a fellow-member, who had attacked him warmly in debate. The meeting took place; two shots were fired, and both parties were slightly wounded. In 1811 he became at once member for the first time and speaker of the House of Congress, and he subsequently held the latter position four times. All his energies were now devoted to bringing about a declaration of war with Great Britain, and maintaining the contest with all the vigour possible. At the end of the war (1814) he was appointed one of the commissioners who was sent to Ghent to conclude the treaty of peace, and it was he who caused the erasure of the clause allowing Great Britain to navigate the Mississippi. During his visit to Europe he spent two months at Paris, enjoying the society of which Mme. de Staël was the queen. On his return to America he was again made speaker of Congress. In 1824 he allowed himself to be nominated for the office of president; but the election did not give to any one the required majority, and the decision between the three who had obtained the greatest number of votes had to be made by Congress. Clay, who had been fourth on the list, gave his support to Quincy Adams, whence arose his second duel, that with John Randolph, in which neither was hurt. Under Adams Clay accepted the post of secretary of state. In 1832 he was again candidate for the presidency, and again unsuccessfully; and in 1844 he was nominated for the third time with a similar result. He now retired from public life; but in 1848 he was again called into the Senate; and in 1850 he carried a bill, which sought to avert the great battle on the slavery question. In 1851, however, the weakness of his health prevented him from taking any part in public life; and on the 29th July of the next year he died. On receiving the news of his death Congress adjourned; next day orations in his praise were delivered in both houses; and the day of his funeral was observed in New York and in all the chief towns of the State to which he belonged.

Henry Clay commenced his political career in 1799 by attempting to persuade the State of Kentucky to introduce into its new constitution a provision for the gradual abolition of slavery. He never, however, made any attempt to free the whole country from the system, and the effect of much of his policy was to maintain it. His name is connected with the "Missouri Compromise," which, while providing that slavery should never be established in any State formed in the future from the lands lying to the north of lat. 36° 30', yet permitted Missouri to enter the Union as a slave-holding State. His bill of 1850, nicknamed the "omnibus bill," had for its result the admission of California into the Union on the basis of the constitution of 1849 which rejected slavery, while yet the newly acquired territories of Utah and New Mexico were left open to its introduction. A most important feature of Clay's policy was the desire to free America from European control, which led him to advocate, in some of his most powerful speeches, the recognition of the independence of the South American republics which had revolted from Spain. The part he took in the war with England has been already noticed. His action with regard to the tariff was not uniform; in 1832 he proposed to reduce gradually a large number of duties, but afterwards he

more than once sought to make it more protective. Though first opposed to the establishment of a national bank, he subsequently spoke vigorously in its favour. For some time he was president of the Colonization Society. See the edition of his speeches and writings, with a life by Calvin Colton (1857 and 1864).

CLAZOMENÆ, now KELISMAN, a town of Ionia, and a member of the Ionian Dodecapolis, or Confederation of Twelve Cities, on the Gulf of Smyrna, about 20 miles from that city in a south-west direction. It stood originally on the isthmus connecting the mainland with the peninsula on which were Erythræ and other towns of note; but the inhabitants, alarmed by the encroachments of the Persians, abandoned the continent and removed to one of the small islands of the bay, and there established their city in security. This island was connected with the mainland by Alexander the Great by means of a pier, the remains of which are still visible. Though Clazomenæ was not in existence before the arrival of the Ionians in Asia, its original founders were only partly Ionians, the great proportion being Phliasiæns and Cleonææns. It remained for some time subject to the Athenians, but about the middle of the Peloponnesian war it revolted. After a brief resistance, however, it again acknowledged the Athenian supremacy, and repelled the Lacedæmonians when they attempted to gain possession of the town. Under the Romans Clazomenæ was included in the province of Asia, and enjoyed an immunity from taxation. The site of the city can still be made out, in the neighbourhood of Vourla, but nearly every portion of its ruins has been removed. Anaxagoras the philosopher was born in Clazomenæ, 499 B.C.

CLEANTHES, a Stoic philosopher, born at Aseos in Asia Minor, about 300 B.C., was originally a boxer. He first listened to the lectures of Crates the Cynic, and then to those of Zeno, the Stoic, supporting himself meanwhile by working all night as water-carrier to a gardener. His apparent idleness aroused suspicion, and he was summoned before the Areopagus; but when his story became known the court offered him a present of ten minæ, which he refused to accept. His power of patient endurance, or perhaps his slowness, earned him the title of the Ass; but such was the esteem awakened by his high moral qualities that, on the death of Zeno in 263, he became the leader of the school. He still, however, continued to support himself as before by the labour of his own hands. Among his pupils were his successor, Chrysippus, and Antigonus, king of Macedon, from whom he accepted 2000 minæ. The story of his death, which took place about 220 or 225 B.C., is thus related. Being troubled by an ulcer, he had been directed to fast for a short time, but when that time had expired, he still refused to eat on the ground that he was now half-way on the road to death, and need not take the trouble of twice performing the journey.

Cleantes produced very little that was original, though he wrote some fifty works, of which fragments have come down to us. The principal is the large portion of the *Hymn to Jupiter* which has been preserved in Stobæus. He regarded the sun as the abode of God, the intelligent providence, or (in accordance with Stoical materialism) the vivifying fire or æther of the universe. Virtue, he taught, is life according to nature; but pleasure is not according to nature. He also originated a new theory as to the individual existence of the human soul: for he held that the degree of its vitality after death depends upon the degree of its vitality in this life. The principal fragments of Cleantes's works are contained in Diogenes Laertius and Stobæus; some may be found in Cicero and Seneca. See Zeller, *Stoics, Epicureans, and Sceptics*; and Ritter, *Geschichte der Philosophie*.

CLEARCHUS, a Spartan general of the 5th century B.C. After serving in the Hellespont and at the battle of Cyzicus, he became harmost of Byzantium; but, during his absence, the town was surrendered, and he was consequently

punished by a fine. He continued, however, to be employed in matters of importance; but at length, after being sent into Thrace to protect the Greek colonies, he was recalled by the Ephors. He refused to obey, and made himself master of Byzantium. Being driven thence, he visited the court of Cyrus, for whom he levied a little army of Greek mercenaries, which he led on the famous Expedition of the Ten Thousand. He was the only one of the Greeks who was acquainted with the real intention of Cyrus; and it was not till they had proceeded too far to retire with safety that he made known the object for which they had been collected. He commanded a division of his countrymen in the battle of Cunaxa (401 B.C.); and he led them on their difficult return journey till, being treacherously seized by Tissaphernes, he was sent to the court of Artaxerxes, where he was put to death.

CLEMENS ALEXANDRINUS. The little we know of Clemens Alexandrinus is mainly derived from his own works. The earliest writer after himself who gives us any information with regard to him is Eusebius. The only points on which his works now extant inform us are his date and his instructors. In the *Stromata*, while attempting to show that the Jewish Scriptures were older than any writings of the Greeks, he invariably brings down his dates to the death of Commodus, a circumstance which at once suggests that he wrote in the reign of the Emperor Severus, from 193 to 211 A.D. (see *Strom.*, lib. i. cap. xxi. 140, p. 403, Potter's edition). The passage in regard to his teachers is corrupt, and the sense is therefore doubtful (*Strom.*, lib. i. cap. i. 11, p. 322, P.)

"This treatise," he says, speaking of the *Stromata*, "has not been contrived for mere display, but memoranda are treasured up in it for my old age to be a remedy for forgetfulness,—an image, truly, and an outline of those clear and living discourses, and those men truly blessed and noteworthy I was privileged to hear. One of these was in Greece, the Ionian, the other was in Magna Græcia; the one of them was from Coele Syria, the other from Egypt; but there were others in the East, one of whom belonged to the Assyrians, but the other was in Palestine, originally a Jew. The last of those whom I met was first in power. On falling in with him I found rest, having tracked him while he lay concealed in Egypt. He was in truth the Sicilian bee, and, plucking the flowers of the prophetic and apostolic meadow, he produced a wonderfully pure knowledge in the souls of the listeners."

Some have supposed that in this passage seven teachers are named, others that there are only five, and various conjectures have been hazarded as to what persons were meant. The only one about whom conjecture has any basis for speculating is the last, for Eusebius states (*Hist. Eccl.*, v. 11) that Clement made mention of Pantanus as his teacher in the *Hypotyposes*. The reference in this passage is plainly to one whom he might well designate as his teacher.

To the information which Clement here supplies subsequent writers add little. By Eusebius and Photius he is called Titus Flavius Clemens, and "the Alexandrian" is added to his name. Epiphanius tells us that some said Clement was an Alexandrian, others that he was an Athenian (*Her.*, xxiii. 6), and a modern writer imagined that he reconciled this discordance by the supposition that he was born at Athens, but brought up at Alexandria. We know nothing of his conversion except that he passed from heathenism to Christianity. This is expressly stated by Eusebius (*Præp. Evangel.*, lib. ii. cap. 2), though it is likely that Eusebius had no other authority than the works of Clement. These works, however, warrant the inference. They show a singularly minute acquaintance with the ceremonies of pagan religion, and there are indications that Clement himself had been initiated in some of the mysteries (*Protrept.*, cap. ii. sec. 14, p. 13, P.). There is no means of determining the date of his conversion. He attained the position of presbyter in the church of Alexandria (Eus., *Hist. Eccl.*, vi. 11, and Jerome. *De Vir.*

Ill., 38), and became the successor of Pantanus in the catechetical school of that place. Among his pupils were Origen (Eus., *Hist. Eccl.*, vi. 7) and Alexander, bishop of Jerusalem (Eus., *Hist. Eccl.*, vi. 14). How long he continued in Alexandria, and when and where he died, are all matters of pure conjecture. The only further notice of Clement that we have in history is in a letter written in 211 by Alexander, bishop of Jerusalem, to the Antiochians, and preserved by Eusebius (*Hist. Eccl.*, vi. 11). The words are as follows:—"This letter I sent through Clement the blessed presbyter, a man virtuous and tried, whom ye know and will come to know completely, who being here by the providence and guidance of the Ruler of all strengthened and increased the church of the Lord." A statement of Eusebius in regard to the persecution of Severus in 202 (*Hist. Eccl.*, vi. 3) would render it likely that Clement left Alexandria on that occasion. It is conjectured that he went to his old pupil Alexander, who was at that time bishop of Flaviada in Cappadocia, and that when his pupil was raised to the see of Jerusalem Clement followed him there. The letter implies that he was known to the Antiochians, and that it was likely he would be still better known. Some have conjectured that he returned to Alexandria, but there is not the shadow of evidence for such conjecture.

Eusebius and Jerome give us lists of the works which Clement left behind him. Photius has also described some of them. They are as follows:—1. *πρὸς Ἑλληνας λόγος ὑποσηματωμένος*, *A Hortatory Address to the Greeks*. 2. *ὁ παιδαγωγός*, *The Tutor*, in three books. 3. *Στρωματίς*, or *Patch-work*, in eight books. 4. *πρὸς τὸν πλούσιον*, *Who is the Rich Man that is Saved?* 5. Eight books of *Ἐπιτομῆς*, *Abbreviations or Outlines*. 6. *On the Passover*. 7. *Discourses on Fasting*. 8. *On Slander*. 9. *Exhortation to Patience, or to the Newly Baptized*. 10. *Τὸ κατὰ Ἰουδαίαν ἑκκλησιαστικόν*, *the Rule of the Church, or to those who Judaize*, a work dedicated to Alexander, bishop of Jerusalem.

Of these, the first four have come down to us complete, or nearly complete. The first three form a series. The *Hortatory Address* to the Greeks is an appeal to them to give up the worship of their gods, and to devote themselves to the worship of the one living and true God. Clement exhibits the absurdity and immorality of the stories told with regard to the pagan deities, the cruelties perpetrated in their worship, and the utter uselessness of bowing down before images made by hands. He at the same time shows the Greeks that their own greatest philosophers and poets recognized the unity of the divine Being, and had caught glimpses of the true nature of God, but that fuller light had been thrown on this subject by the Hebrew prophets. He replies to the objection that it was not right to abandon the customs of their forefathers, and points them to Christ as their only safe guide to God.

The *Pædagogus* is divided into three books. In the first Clement discusses the necessity for and the true nature of the *Pædagogus*, and shows how Christ as the Logos acted as *Pædagogus*, and still acts. In the second and third books Clement enters into particulars, and explains how the Christian following the Logos or Reason ought to behave in the various circumstances of life—in eating, drinking, furnishing a house, in dress, in the relations of social life, in the care of the body, and similar concerns, and concludes with a general description of the life of a Christian. Appended to the *Pædagogus* are two hymns, which are, in all probability, the production of Clement, though some have conjectured that they were portions of the church service of that time.

Stromata, or rather *Στρωματίς*, are coverlets made out of miscellaneous pieces of cloth. The title is used by Clement to designate a miscellaneous collection of materials, and Clement's work is unquestionably of this nature. It is impossible to give a brief account of its varied contents. Sometimes he discusses chronology, sometimes philosophy, sometimes poetry, entering into the most minute critical and chronological details; but one object runs through all, and this is to show what the true Christian Gnosticism is, and what is his relation to philosophy. The work was in eight books. The first seven are complete. The eighth now extant is really an incomplete treatise on logic. Some critics have rejected this book as spurious, since its matter is so different from that of the rest. Others, however, have held to its genuineness, because in a Patch-work or Book of Miscellanies the difference of subject is no sound objection, and because Photius seems to have regarded our present eighth book as genuine (Phot., col. 111, p. 69b, Bekker).

The treatise *Who is the Rich Man that is Saved?* is an literal exposition of the narrative contained in St Mark's Gospel, x. 17-31. It was in all probability preached.

The *Hypotyposes* have not come down to us. Cassiodorus translated them into Latin, freely altering to suit his own ideas of orthodoxy. Both Eusebius and Photinus describe the work. It was a short commentary on all the books of Scripture, including some of the apocryphal works, such as the Epistle of Barnabas and the Revelation of Peter. Photinus speaks in strong language of the impiety of some opinions in the book (*Bibl.*, cod. 109, p. 89a, Bekker), but his statements are such as to prove conclusively that he must have had a corrupt copy, or read very carelessly, or grossly misunderstood Clement. Notes in Latin on the first epistle of Peter, the epistle of Jude, and the first two of John have come down to us; but whether they are the translation of Cassiodorus, or indeed a translation of Clement's work at all, is a matter of dispute.

The treatise on the Passover was occasioned by a work of Melito on the same subject. Two fragments of this treatise were given by Petavins, and are contained in the modern editions.

We know nothing of the work called *The Ecclesiastical Canon* from any external testimony. Clement himself often mentions the *ἐκκλησιαστικὸς κανὼν*, and defines it as the agreement and harmony of the law and the prophets with the covenant delivered at the appearance of Christ (*Strom.*, vi. cap. xv. 125, p. 803, P.). No doubt this was the subject of the treatise. Jerome and Photinus call the work *Ecclesiastical Canons*, but this seems to be a mistake.

Of the other treatises mentioned by Eusebius and Jerome nothing is known. A fragment of Clement, quoted by Antonius Melissa, is most probably taken from the treatise on slander.

Besides the treatises mentioned by Eusebius, fragments of treatises on Providence and the Soul have been preserved. Mention is also made of a work by Clement on the Prophet Amos, and another on Definitions.

In addition to these Clement often speaks of his intention to write on certain subjects, but it may well be doubted whether in most cases, if not all, he intended to devote separate treatises to them. Some have found an allusion to the treatise on the Soul already mentioned. The other subjects are Marriage (*γαμικὸς λόγος*), Contenance, the Duties of Bishops, Presbyters, Deacons, and Widows, Prophecy, the Soul, the Transmigration of the Soul and the Devil, Angels, the Origin of the World, First Principles and the Divinity of the Logos, Allegorical Interpretation of Statements made with regard to God's anger and similar affections, the Unity of the Church, and the Resurrection.

Two works are incorporated in the editions of Clement which are not mentioned by himself or any ancient writer. They are *ἐκ τῶν Θεοδότου καὶ τῆς ἀνατολικῆς καλαμμένης διδασκαλίας κατὰ τοὺς Οὐλεντίνου χρόνους ἐπιτομαί*, and *ἐκ τῶν προφητικῶν ἐκλογαί*. The first, if it is the work of Clement, must be a book merely of excerpts, for it contains many opinions which Clement opposed. Mention is made of Pantæus in the second, and some have thought it more worthy of him than the first. Others have regarded it as a work similar to the first, and derived from Theodorus.

Clement occupies a profoundly interesting position in the history of Christianity. He is the first to bring all the culture of the Greeks and all the speculations of the Christian heretics to bear on the exposition of Christian truth. He does not attain to a systematic exhibition of Christian doctrine, but he paves the way for it, and lays the first stones of the foundation. In some respects Justin anticipated him. He also was well acquainted with Greek philosophy, and took a genial view of it; but he was not nearly so widely read as Clement. The list of Greek authors whom Clement has quoted occupies upwards of fourteen of the quarto pages in Fabricius's *Bibliotheca Græca*. He is at home alike in the epic and the lyric, the tragic and the comic poets, and his knowledge of the prose writers is very extensive. He made a special study of the philosophers. Equally minute is his knowledge of the systems of the Christian heretics. And in all cases it is plain that he not merely read but thought deeply on the questions which the civilization of the Greeks and the various writings of poets, philosophers, and heretics raised. He pondered on all he read that he might gain a clearer insight into the truth. But it was in the Scriptures that he found his greatest delight. He believed them to contain the revelation of God's wisdom to men. He quotes all the books of the Old Testament except Ruth and the Song of Solomon, and amongst the sacred writings of the Old Testament he evidently included the Book of Tobias, the Wisdom of Solomon, and Ecclesiasticus. He is equally full in his quotations from the New Testament, for he

quotes from all the books except the epistle to Philemon, the second epistle of St Peter, and the epistle of St James, and he quotes from the pastor of Hermas, and the epistles of Clemens Romanus and of Barnabas, as inspired. He appeals also to many of the lost Gospels, such as those of the Hebrews, of the Egyptians, and of Matthias.

Notwithstanding this adequate knowledge of Scripture, the modern theologian is disappointed to find very little of what he deems characteristically Christian. In fact Clement regarded Christianity as a philosophy. The ancient philosophers sought through their philosophy to attain to a nobler and holier life, and this also was the aim of Christianity. The difference between the two, in Clement's judgment, was that the Greek philosophers had only glimpses of the truth, that they attained only to fragments of the truth, while Christianity revealed in Christ the absolute and perfect truth. All the stages of the world's history were therefore preparations leading up to this full revelation, and God's care was not confined to the Hebrews alone. The worship of the heavenly bodies, for instance, was given to man at an early stage that he might rise from a contemplation of these sublime objects to the worship of the Creator. Greek philosophy in particular was the preparation of the Greeks for Christ. It was the schoolmaster or pædagogus to lead them to Christ. Plato was Moses atticizing. Clement varies in his statement how Plato got his wisdom or his fragments of the Reason. Sometimes he thinks that they came direct from God, like all good things, but he is also fond of maintaining that many of Plato's best thoughts were borrowed from the Hebrew prophets; and he makes the same statement in regard to the wisdom of the other philosophers. But however this may be, Christ was the end to which all that was true in philosophies pointed. Christ himself was the Logos, the Reason. God the Father was ineffable. The Son alone can manifest Him fully. He is the Reason that pervades the universe, that brings out all goodness, that guides all good men. It was through possessing somewhat of this Reason that the philosophers attained to any truth and goodness; but in Christians He dwells more fully and guides them through all the perplexities of life. It is easy to see that this doctrine in regard to Christ may be misconstrued. If Jesus were the Reason, thus visible in all goodness, how could there be a real difference between Him and the Father, or how could He really become incarnate? Photinus, probably on a careless reading of Clement, argued that he could not have believed in a real incarnation. But the words of Clement are quite precise and their meaning indisputable. He believed in a personal God different from the universe. He believed in a personal Son of God who was the Reason and Wisdom of God; and he believed that this Son of God really became incarnate. The object of His incarnation and death was to free man from his sins, to lead him into the path of wisdom, and thus in the end elevate him to the position of a god. But man's salvation was to be gradual. It began with faith, passed from that to love, and ended in full and complete knowledge. There could be no faith without knowledge. But the knowledge is imperfect, and the Christian was to do many things in simple obedience without knowing the reason. But he has to move upwards continually until he at length does nothing that is evil, and he knows fully the reason and object of what he does. He thus becomes the true Gnostic, but he can become the true Gnostic only by contemplation and by the practice of what is right. He has to free himself from the power of passion. He has to give up all thoughts of pleasure. He must prefer goodness in the midst of torture to evil with unlimited pleasure. He has to resist the temptations of the body, keeping it under strict control, and with the eye of the soul undimmed by

corporeal wants and impulses, contemplate God the supreme good, and live a life according to reason. In other words, he must strive after likeness to God as He reveals himself in his Reason or in Christ. Clement thus looks entirely at the enlightened moral elevation to which Christianity raises man. He believed that Christ instructed men before He came into the world, and he therefore viewed heathenism with kindly eye. He was also favourable to the pursuit of all kinds of knowledge. All enlightenment tended to lead up to the truths of Christianity, and hence knowledge of every kind not evil was its handmaid. Clement had at the same time a strong belief in evolution or development. The world went through various stages in preparation for Christianity. The man goes through various stages before he can reach Christian perfection. And Clement conceived that this development took place not merely in this life, but in the future through successive grades. The Jew and the heathen had the gospel preached to them in the world below by Christ and His apostles, and Christians will have to pass through processes of purification and trial after death before they reach perfect knowledge and perfect bliss.

The beliefs of Clement have caused considerable difference of opinion among modern scholars. He sought the truth from whatever quarter he could get it, believing that all that is good comes from God, wherever it be found. He belongs, therefore, to no school of philosophers. Some have insisted that he was an eclectic. Daehne has tried to show that he was Neo-Platonic, and Reinkens has maintained that he was essentially Aristotelian. His mode of viewing Christianity does not fit into any classification. It is the result of the period in which he lived, of his wide culture and the simplicity and noble purity of his character.

It is needless to say that his books well deserve study; but the study is not smoothed by beauty of style. Clement despised ornament. He wished to avoid everything that might seem to deceive. He thought also that it was quite possible to throw pearls before swine, and that care should be taken to prevent this by digressions and difficulties which only the earnest student would encounter. He is singularly simple in his character. In discussing marriage he refuses to use any but the plainest language. A euphemism is with him a falsehood. But he is temperate in his opinions; and the practical advices in the second and third books of the *Pædagogus* are remarkably sound and moderate. He is not always very critical, and he is passionately fond of allegorical interpretation, but these were the faults of his age.

All early writers speak of Clement in the highest terms of laudation, and he certainly ought to have been a saint in any Church that reveres saints. But Clement is not a saint in the Roman Church. He was a saint up till the time of Benedict XIV., who read Photinus on Clement, believed him, and struck the Alexandrian's name out of the calendar. The Pope was unquestionably wrong; and many Roman Catholic writers, though they yield a practical obedience, have adduced good reason why the decision of the Pope should be reversed (Cognat, p. 451).

The editions of Clement's works are by (1) Petrus Victorius, 1550; (2) Sylburg, 1592; (3) Heinsius, 1616; (4) Fronto Ducaens, 1629, 1641, 1658; (5) Potter, London, 1715 (this was by far the best edition, and has formed the basis of subsequent editions; it was reprinted at Venice, 1757, and in Galland's *Bibliotheca*, in Oberthur, and in Miège's *Cursus Patrologiæ Græcæ*); (6) Klotz, Leipzig, 1821; (7) W. Lindorf, Oxford, 1869. There are separate editions of *Quis dicitur ecclesiarum* by Ghilar, Combefisius, Fell, Ittig, Segar, and Lindorf.

The writings that discuss Clement are very numerous. Notice is taken of him by ecclesiastical historians, and by the historians of Christian literature, among whom Eusebius, Perrin, and Kenyon give a deserved special mention. There are numerous works on Clement and his doctrine by J. and F. Thibbechovius, Eichele, Guñke,

Hofstede de Groot, Daehne, Lentzen, Réukens, Reuter, Laemmer, Duperron, Cognat, Lipsius, Muller, and Freppel, by Miss Cornwallis in her *Small Books on Great Subjects*, No. vii., and by Bishop Kaye. Clement's works have been translated in Clark's *Ante-Nicene Christian Library*, by the Rev. W. Wilson. (J. D.)

CLEMENT, the name borne by fourteen Popes.

CLEMENT I. (Clemens Romanus). See APOSTOLIC FATHERS, vol. ii. p. 195.

CLEMENT II. (Suidger, a Saxon, bishop of Bamberg) was chancellor to the Emperor Henry III., to whom he was indebted for his elevation to the Papacy upon the abdication of Gregory VI. (December 1046). His short pontificate was only signalized by the convocation of a council in which decrees were enacted against simony. He died in October 1047, and was interred at Bamberg.

CLEMENT III. (Paulino Scolari, bishop of Præneste) was elected Pope in December 1157, and died in March 1191. He succeeded shortly after his accession in allaying the discords which had prevailed for half a century between the Popes and the citizens of Rome, in virtue of an agreement by which the latter were allowed to elect their magistrates, while the nomination of the governor of the city remained in the hands of the Pope. He incited Henry II. of England and Philip Augustus to undertake the third crusade, and introduced several minor reforms in ecclesiastical matters.

CLEMENT IV. (Gui Foulques, archbishop of Narbonne) was elected Pope in February 1265. Before taking orders he had been successively a soldier and a lawyer, and in the latter capacity had acted as secretary to Louis IX. of France, to whose influence he was chiefly indebted for his elevation. At this time the Holy See was engaged in a conflict with Manfred, the usurper of Naples; and Clement, whose election had taken place in his absence, was compelled to repair to Italy in disguise. He immediately took steps to ally himself with Charles of Anjou, the French pretender to the Neapolitan throne, who marched into Naples, and having defeated and slain Manfred in the great battle of Benevento, established himself firmly in the kingdom. Clement is said to have disapproved of the cruelties committed by Charles, and there seems no foundation for the charge of his having advised the latter to execute the unfortunate Conradin, the last of the church's hereditary antagonists of the house of Hohenstaufen. His private character was unexceptionable, and he is especially commended for his indisposition to promote and enrich his own relatives. He also did himself great honour by his encouragement and protection of Roger Bacon. He died in November 1268, and was buried at Viterbo, where he had resided throughout his pontificate.

CLEMENT V. (Bertrand de Goth, archbishop of Bordeaux) is memorable in history for his suppression of the order of the Templars, and as the Pope who removed the seat of the Roman see to Avignon. He was elected in June 1305, after a year's interregnum occasioned by the disputes between the French and Italian cardinals, who were nearly equally balanced in the conclave. According to Villani he had bound himself to subservience towards the French monarch by a formal agreement previous to his elevation; however this may be, it is unquestionable that he conducted himself throughout his pontificate as the mere tool of that monarch. His first act was to create nine French cardinals. The removal of the seat of the Papacy to Avignon (1308) might seem palliated by the factious and tumultuary condition of Rome at the period, but it proved the precursor of a long "Babylonish captivity," in Petrarch's phrase, and marks the point from which the decay of the strictly Catholic conception of the Pope as universal bishop is to be dated. The guilt or innocence of the Templars is one of the most difficult of historical problems, the discussion of which belongs, however, to the history of the church.

Clement may have acted conscientiously in his suppression of an order which had heretofore been regarded as a main bulwark of Christianity, but there can be little doubt that his principal motive was complaisance towards the king of France, or that the latter was mainly actuated by jealousy and cupidity. Clement's pontificate was also disastrous for Italy. The Emperor Henry VII. entered the country, established the Visconti in Milan, and was crowned by Clement's legates in Rome, but was unable to maintain himself there, and died suddenly, leaving great part of Italy in a condition of complete anarchy. The dissensions of the Roman barons reached their height, and the Lateran palace was destroyed in a conflagration. Other remarkable incidents of Clement's reign are his sanguinary repression of the heresy of Fra Dolcino in Lombardy and his promulgation of the Clementine Constitutions in 1313. He died, leaving an inauspicious character for nepotism, avarice, and cunning, in April 1314. He was the first Pope who assumed the triple crown.

CLEMENT VI. (Pierre Roger, archbishop of Rouen), the fourth of the Avignon popes, was elected in May 1342. Like his immediate predecessors, he was devoted to France, and he further evinced his French sympathies by refusing a solemn invitation to return to Rome, and by purchasing the sovereignty of Avignon from Joanna, queen of Naples, for 80,000 crowns. The money was never paid, but Clement may have deemed that he gave the queen a full equivalent by absolving her from the murder of her husband. The other chief incidents of his pontificate were his disputes with Edward III. of England on account of the latter's encroachments on ecclesiastical jurisdiction, his excommunication of the Emperor Louis of Bavaria, his negotiations for reunion with the Eastern Church, and the commencement of Rienzi's agitation at Rome. He died in December 1352, leaving the reputation of "a fine gentleman, a prince munificent to profusion, a patron of the arts and learning, but no saint" (Gregorovius; see also Gibbon, chap. 66).

CLEMENT VII. (Giulio de' Medici), the most unfortunate of the Popes, was the son of Giuliano de' Medici, assassinated in the conspiracy of the Pazzi, and consequently nephew of Lorenzo the Magnificent and cousin of Pope Leo X. Upon the latter's accession to the Papacy, Giulio became his principal minister and confidant, especially in the maintenance of the Medici interest at Florence. At Leo's death, Cardinal Medici, though unable to gain the Papacy for himself or his ally Farnese, took a leading part in determining the unexpected election of Adrian VI., to whom he succeeded in the next conclave (November 1523). He brought to the Papal throne a high reputation for political ability, and possessed in fact all the accomplishments of a wily diplomatist, but the circumstances of the times required a man of far different mould. His worldliness and lack of insight into the tendencies of his age disqualified him from comprehending the great religious movement which then convulsed the church; while his timidity and indecision no less disabled him from following a consistent policy in secular affairs. At first attached to the imperial interest, he was terrified by the overwhelming success of the emperor in the battle of Pavia into joining the other Italian princes in a league with France. This policy in itself was sound and patriotic, but Clement's zeal soon cooled; by his want of foresight and unseasonable economy he laid himself open to an attack from the turbulent Roman barons which obliged him to invoke the mediation of the emperor. When this danger seemed over he veered back to his former engagements, and ended by drawing down upon himself the host of the imperialist general, the Constable Bourbon, who, compelled to satisfy his clamorous mercenaries by pillage, embraced the

opportunity of leading them against Rome. The city was assaulted and sacked on May 5, 1527, and Clement, who had displayed no more resolution in his military than in his political conduct, was shortly afterwards obliged to surrender himself together with the castle of St Angelo, where he had taken refuge. After six months' captivity he was released upon very onerous conditions, and for some years subsequently followed a policy of subserviency to the emperor, endeavouring on the one hand to induce him to act with severity against the Lutherans in Germany, and on the other to elude his demands for a general council. One momentous consequence of this dependence on Charles V. was the breach with England occasioned by Clement's refusal, justifiable in point of principle, but dictated by no higher motive than his fear of offending the emperor, to sanction Henry VIII.'s divorce from Catherine of Aragon. Towards the end of his reign Clement once more gave indications of a leaning towards a French alliance, which was prevented by his death in September 1534. As a man he possessed few virtues and few vices; as a pontiff he did nothing to disgrace the church and nothing to restore its lustre; his adroitness and dexterity as a statesman were counteracted by his suspicion and irresolution; his administration affords a proof that at eventful crises of the world's history mediocrity of character is more disastrous than mediocrity of talent.

CLEMENT VIII. (Ippolito Aldobrandini) was elected in January 1592. The most remarkable event of his reign was the reconciliation to the church of Henry IV. of France after long negotiations carried on with great dexterity by Cardinal D'Ossat. Europe is principally indebted to this Pope for the peace of Vervins (1598), which put an end to the long contest between France and Spain. Clement also annexed Ferrara to the States of the Church upon the failure of the line of Este, the last addition of importance to the Pope's temporal dominions. The execution of Giordano Bruno, February 17, 1600, is a blot upon an otherwise exemplary pontificate. Clement was an able ruler and a sagacious statesman, the general object of whose policy was to free the Papacy from its undue dependence upon Spain. The conferences to determine the questions of grace and free will, controverted between the Jesuits and Dominicans, were commenced under him, but he wisely abstained from pronouncing a decision. He died in March 1605, leaving a high character for prudence, munificence, and capacity for business. His reign is especially distinguished by the number and beauty of his medals.

CLEMENT IX. (Giulio Rospigliosi) was elected Pope in June 1667. Nothing remarkable occurred under his short administration beyond the temporary adjustment of the disputes between the Roman see and those prelates of the Gallican church who had refused to join in condemning the writings of Jansenius. He died in December 1669.

CLEMENT X. (Emilio Altieri) was elected in April 1670, at the age of eighty. His years and infirmities led him to devolve the charge of the government upon his nephew, Cardinal Altieri, whose interference with the privileges of ambassadors occasioned disputes in which the Pope was obliged to yield. Little else of importance occurred during his reign, which terminated in July 1676.

CLEMENT XI. (Giovanni Francesco Albani) was elevated to the pontificate in November 1700, and died in March 1721. The most memorable transaction of his administration was the publication in 1713 of the bull *Unigenitus*, which so greatly disturbed the peace of the Gallican church. By this famous document 101 propositions extracted from the works of Quesnel were condemned as heretical, and as identical with propositions already condemned in the writings of Jansenius. The resistance of many French ecclesiastics and the refusal of the French parliaments to

register the bull led to controversies extending through the greater part of the 18th century. Another important decision of this Pope's was that by which the Jesuit missionaries were forbidden to take a part in idolatrous worship, and to accommodate Christian language to pagan ideas under plea of conciliating the heathen. The political troubles of the time greatly embarrassed Clement's relations with the leading Catholic powers, and the moral prestige of the Holy See suffered much from his compulsory recognition of the Archduke Charles of Austria as king of Spain. His private character was irreproachable; he was also an accomplished scholar, and a patron of letters and science.

CLEMENT XII. (Lorenzo Corsini) was Pope from July 1730 to February 1740. His first act was the trial and condemnation of Cardinal Coscia, guilty of malversation under his predecessor. Nothing else of importance occurred under his administration, during the greater part of which, according to some historians, he was afflicted with blindness. He was the first pontiff who condemned the Freemasons.

CLEMENT XIII. (Carlo Rezzonico, bishop of Padua) was elected in July 1758. Notwithstanding the meekness and affability of his character, his pontificate was disturbed by perpetual contentions respecting the investiture of Parma, and subsequently by the demands of France, Spain, and Portugal for the suppression of the Jesuits. Clement warmly espoused the cause of the order in an apostolical brief issued in 1765. The pressure put upon him by the Catholic powers, however, was so strong that he seemed about to give way, when, having convoked a consistory to receive his decision, he died suddenly, February 3, 1769, not without suspicion of poison.

CLEMENT XIV. (Giovanni Vincenzo Antonio Ganganelli), the best and most calumniated of the popes, was born in 1705, and was originally a Franciscan monk. Having acquired a great reputation as a preacher, he became the friend and confidant of Pope Benedict XIV., and was created a cardinal by his successor. He was elected Pope on May 19, 1769, after a conclave extremely agitated by the intrigues and pretensions of the Catholic sovereigns, who were resolved to exclude every candidato favourable to the Jesuits. Theiner has satisfactorily vindicated Ganganelli from the charge of having given a formal pledge on this subject. He may probably have leant to the views of the Catholic powers, but if so his motive was widely different from the subservience which had induced his predecessor Clement V. to gratify Philip the Fair by the suppression of the Templars. The breach between the temporal and the spiritual authorities had become threatening, and the guiding principle of Clement's policy was undoubtedly the reconciliation of the European sovereigns, whose alienation threatened to produce the results which we have seen accomplished in our own times. By yielding the Papal pretensions to Parma, he obtained the restitution of Avignon and Benevento, and in general he succeeded in placing the relations of the spiritual and the temporal authorities on a satisfactory footing. Whether from scruple or policy he proceeded with great circumspection in the suppression of the Jesuits, the decree to this effect not being framed until November 1772, and not signed until July in the following year. This memorable measure, which takes rank in history as the most remarkable, perhaps the only really substantial, concession ever made by a Pope to the spirit of his age, has covered Clement's memory with obloquy in his own communion. There cannot be any reasonable doubt of the integrity of his conduct, and the only question is whether he acted from a conviction of the pernicious character of the Society of Jesus, or merely from a sense of expediency. In either case his action was abundantly justified, and to allege that though beneficial to the world it was detrimental to the church is merely to

insist that the interests of the Papacy are not the interests of mankind. His work was hardly accomplished ere Clement, whose natural constitution was exceedingly vigorous, fell into a languishing sickness, generally and plausibly attributed to poison. No conclusive evidence of this, however, has been produced; and it is but just to remark that poison would more probably have been administered before the obnoxious measure had been taken than when it was already beyond recall. Clement expired on September 22, 1774, execrated by the Ultramontane party, but regretted by his subjects for his excellent temporal administration. No Pope has better merited the title of a virtuous man, or has given a more perfect example of integrity, unselfishness, and aversion to nepotism. Notwithstanding his monastic education, he approved himself a statesman, a scholar, an amateur of physical science, and an accomplished man of the world. As Leo X. indicates the manner in which the Papacy might have been reconciled with the Renaissance had the Reformation never taken place, so Ganganelli exemplifies the type of Pope which the modern world might have learned to accept if the movement towards free thought could, as Voltaire wished, have been confined to the aristocracy of intellect. In both cases the requisite condition was unattainable; neither in the 16th nor in the 18th century has it been practicable to set bounds to the spirit of inquiry otherwise than by fire and sword, and Ganganelli's successors have been driven into assuming a position analogous to that of Paul IV. and Pius V. in the age of the Reformation. The estrangement between the secular and the spiritual authority which Ganganelli strove to avert is now irreparable, and his pontificate remains an exceptional episode in the general history of the Papacy, and a proof how little the logical sequence of events can be modified by the virtues and abilities of an individual. The history of Clement's administration has been written in a spirit of the most violent detraction by Creineau-Joly, and perhaps too unreservedly in the opposite spirit by Father Theiner, the custodian of the archives of the Vatican. Theiner calls attention to the disappearance of many documents which have apparently been abstracted by Clement's enemies. Ganganelli's familiar correspondence has been frequently reprinted and is much admired for its elegance and urbanity. (R. C.)

CLEMENT, FRANÇOIS (1714—1793), a French historian, was born at Brézé, near Dijon, and was educated at the Jesuit College at Dijon. At the age of seventeen he entered the society of the Benedictines at Saint Maur, and worked with such intense application that at the age of twenty-five he was obliged to take a protracted rest. He now resided in Paris, where he wrote the 11th and 12th vols. of the *Histoire littéraire de la France*. Clément also revised the *Art de vérifier les dates* (1783—92). The king appointed him on the committee which was engaged in publishing maps, acts, and other documents connected with French history, and the Academy of Subscriptions chose him as a member. He was engaged in preparing another edition of the *Art de vérifier les dates*, which was to include the period before the Christian era, when he died suddenly of apoplexy at the age of sixty-nine. (The work was afterwards brought down from 1770 to 1827 by De Courcelles and D'Urban.)

CLEMENTI, MUZIO (1752—1832), an Italian pianist and composer, was born at Rome in 1752. His father, a jeweller, encouraged his son's musical talent, which was evinced at a very early age. Buroni and Cordicelli were his first masters, and at the age of nine Clementi's theoretical and practical studies had advanced to such a degree that he was able to compete successfully for the position of organist at a church. He continued his contrapuntal studies

under Carpini, and at the age of fourteen wrote a mass which was performed in public and excited universal admiration. About this time Beekford, the author of *Vathek*, persuaded Clementi to follow him to England, where the young composer lived in retirement at one of the country seats of his protector in Dorsetshire up to 1770. In that year he first appeared in London, where his success both as a composer and pianist was rapid and brilliant. In 1777 he was for some time employed as conductor of the Italian opera, but he soon afterwards left London for Paris. Here also his concerts were crowded by enthusiastic audiences, and the same success accompanied Clementi on an artistic tour to Southern Germany and Austria which he undertook about 1780. At Vienna he was received with high honour by the Emperor Joseph II., in whose presence he met Mozart, and sustained a kind of musical duel with him. His technical skill proved to be equal if not superior to that of his great rival, who on the other hand infinitely surpassed him by the passionate beauty of his rendering. Such seems to have been the opinion of most of the witnesses of this remarkable meeting, and it is confirmed to some extent by the two musicians themselves. Apropos of the connection of these great men the fact may be mentioned that one of the finest of Clementi's sonatas, that in B flat, shows an exactly identical opening theme with Mozart's overture to the *Flauto Magico*, also that at the concert given by the Philharmonic Society in commemoration of Clementi's death, the German composer's *Recordare* was the chief item of the programme. Soon after his meeting with Mozart, Clementi returned to London, where he continued for the next twelve years his lucrative occupations of fashionable teacher and performer at the concerts of the aristocracy. He also started a pianoforte manufacturing firm of his own, and the commercial shrewdness characteristic of his nation greatly contributed to the lasting success of the business. Amongst his pupils on the pianoforte during this period may be mentioned John Field, the composer of the celebrated *Nocturnes*. In his company Clementi paid, in 1804, a prolonged visit to the large cities of the Continent, including Paris, Vienna, St Petersburg, and Berlin. At the Prussian capital he made a prolonged stay, and there counted Meyerbeer among his pupils. He also revisited his own country after an absence of more than thirty years. In 1810 Clementi returned to London, but refused to play again in public, devoting the remainder of his life to composition. Several symphonies belong to this time, and were played with much success at contemporary concerts, but none of them seem to have been published. His intellectual and musical faculties remained unimpaired up to his death, which took place at Evesham, Worcestershire, March 9, 1832. Clementi has been called the "father of pianoforte playing," and it cannot be denied that the modern style of execution owes a great deal to his teaching and example. His *technique* is described as all but unequalled at his time, and remarkable even according to our present advanced notions. Moscheles, a pianist of a very different school, gives a vivid description of the effect produced by Clementi's playing. At a dinner given in his honour in 1828 the composer was induced to play once more to a larger audience. "Smart, Cramer (another of Clementi's pupils), and I," Moscheles writes in his diary, "conducted him to the piano. Every one's expectation is raised to the utmost pitch, for Clementi has not been heard for years. He improvises on a theme of Händel and carries us all away to the highest enthusiasm. His eyes shine with the fire of youth, those of his hearers grow humid. . . . Clementi's playing in his youth was marked by a most beautiful *legato*, a supple touch in lively passages, and a most unerring *technique*. The remains of these qualities could still be discovered and admired, but

the most charming things were the turns of his improvisation full of youthful genius." Amongst his compositions the most remarkable are 60 sonatas for pianoforte, and the great collection of *Etudes* called *Gradus ad Parnassum*. As a work of instruction combining absolute artistic beauty with the highest usefulness for the purposes of teaching and self-practice the *Gradus* remains unrivalled.

CLEOBULUS, one of the Seven Sages, was son of Evagoras, and a native of Lindus, which town he ruled, though whether as monarch or as head of a republic is uncertain. He was distinguished for his strength and his handsome person, for the wisdom of his sayings, the acuteness of his riddles, and the beauty of his lyric poetry. Diogenes Laertius quotes a letter in which Cleobulus invites Solon to take refuge with him against Pisistratus; and this would imply that he was alive in 560 B.C. He is said to have held advanced views as to female education, and he was the father of the wise Cleobuline, whose riddles were not less famous than his own.

CLEOMENES (Κλεομένης), the name of three kings of Sparta, the 16th, 25th, and 31st of the Agid line. The second of these does not call for particular notice.

CLEOMENES I. succeeded as one of the two joint kings about 519 B.C. He led a Spartan force to Athens in 510 to aid the Alcæonids and their followers in the expulsion of Hippias. He was called in subsequently to support the oligarchical party there, headed by Isagoras, against the party of Clisthenes. He forcibly expelled from the city, on a technical charge of pollution, no less than 7000 families, and established an entirely new constitution, transferring the government from the old senate to 300 of the oligarchical party. Eventually, however, he and his small force were blockaded by their opponents in the Acropolis, and forced to capitulate and to quit the city. On his return home he at once raised a force of Spartans and allies in order to avenge his failure, and to establish a despotism at Athens in the person of Isagoras. But when the expedition had reached Elis on its march, not only some of the subject-allies but also his brother-king Demaratus (of the Proclid junior branch) refused to proceed further, and he had to return without effecting his object. When the Ionian colonies revolted from Persia, in 500, their leader Aristagoras came to seek aid from Sparta. Cleomenes was at first inclined to entertain the tempting offers of Asiatic conquest which the Ionian, in his eagerness to secure the alliance, laid before him. But when Aristagoras, in reply to his questions, was forced to confess that Susa, the Persian capital, was no less than three months' journey inland from the sea, the king was startled, and bade his visitor quit Sparta before sunset. The Ionian then tried to bribe him; and as his offers mounted higher and higher, his little daughter Gorgo, some eight or nine years old (afterwards the wife of Leonidas) said, "Father, go away, or the stranger will corrupt you." Such at least is the story told by Herodotus, though Grote doubts its authenticity.

During a local war between Sparta and Argos, Cleomenes by a stratagem defeated the Argive forces near Tiryns. Those who escaped from the battle took refuge in a consecrated grove, which was set on fire by order of Cleomenes, and no less than 6000 men, the flower of the Argive citizens, are said either to have been killed in the battle, or to have perished in the flames,—a loss from which Argos was very long in recovering. For some reason he did not pursue his victory, but returned at once to Sparta, to the great dissatisfaction of his own people. One legend relates that the city of Argos was successfully defended against him by its women.

When Darius (491) sent heralds to demand the submission of all the Greeks, and the inhabitants of Ægina

had consented to give the tributary "earth and water," Cleomenes proceeded to the island to punish its treachery to the national cause. His fellow-king Demaratus, who was always jealous of him, privately encouraged the Ægeians in their resistance, and the feud between the two became so bitter, that Cleomenes brought up an old charge of illegitimacy against his colleague, and succeeded in driving him into exile. Retributive fate very soon overtook himself; he was convicted of having procured the deposition of Demaratus by tampering with the priestess of the Delphian oracle, and had to retire for safety into Thessaly, and thence into Arcadia. There he endeavoured to raise war against his countrymen, who in their alarm were weak enough to recall him. His renewed reign was not long. He soon after showed symptoms of madness, attacking violently with his staff those who came to him for audience. Some attributed this derangement to a habit of hard drinking which had grown upon him; others saw in it the just punishment of his impiety, both in his intrigues with the oracle at Delphi, and in the burning of the sacred grove at Argos and the massacre of those who had taken sanctuary there. At length he had to be placed in close confinement, when he persuaded the slave who had charge of him to bring him a knife, with which he deliberately slashed himself to pieces.

CLEOMENES III. the last of the Agid line, succeeded 240 B.C.,—a king of strong and determined character, who wished to restore at Sparta the old constitution and discipline of Lycurgus, and to destroy the Achæan League. He met Aristomachus, the "captain" of the League, with a force of 5000 men against 25,000 at Palantium, but the Achæans, even with this advantage, declined the engagement. The next year he defeated them in a great battle at the foot of Mount Lycæum. He found active opponents at Sparta in the Ephors, whose anomalous authority he held to have been gradually usurped in derogation of the royal prerogative, affecting dangerously the independence of the kings, and which it was therefore his great object to crush. He succeeded in this at last by an unscrupulous *coup d'état*, surrounding the hall in which the Ephors were feasting with a body of armed mercenaries, and slaughtering them on the spot. He met with no resistance from the panic-stricken citizens, and at once proceeded to inaugurate his new constitution, abolishing the Ephorate entirely, restoring the old prerogatives of the kings, and amongst other reforms making a re-distribution of lands, and extending the franchise.

He had still to contend with the Achæan League for the supremacy of Greece. In the war which ensued he was finally defeated by Antigonus of Macedonia, who had become virtually the master of the League, in the battle of Sellasia (222), when the death-blow was given to the independence of Sparta. Cleomenes took refuge in Egypt with Ptolemy Euergetes, who received him kindly. But the succeeding Ptolemy neglected and even imprisoned him. He escaped and attempted to head an insurrection against the king, failing in which, he committed suicide.

CLEON (Κλέων), one of those popular leaders who rose to great temporary influence at Athens during the Peloponnesian War, and especially after the death of Pericles. He was emphatically a man of the people, sprung from their own ranks, his father Cleonetus having been a tanner or leather-dresser. He possessed considerable ability and was a powerful public speaker, though coarse and violent in manner and language. At first he seems to have formed one of the large party at Athens who protested against the policy of the war, and on that ground became a bitter opponent of Pericles. But his views must afterwards have changed, since we find him repeatedly urging active warlike measures in opposition to the peace party of which Nicias

and others were the representatives. He was at the height of his political influence when in 427 B.C. the revolted citizens of Mitylene, after a long siege, submitted to the Athenian forces, and the question of their punishment was discussed in a public assembly. Cleon proposed and carried, though against strong opposition, the terrible decree that all the males who were able to bear arms (Grote estimates them at as many as 6000) should be put to death, and the women and children sold for slaves. However, in a second assembly held next day, the decree was rescinded in spite of Cleon's remonstrances. A vessel hastily despatched was barely in time to stay its execution. Even as it was, a thousand of those who were considered the ringleaders of the revolt were put to death. But it was perhaps fortunate for Cleon's future influence with the Athenian commons that he had not to bear the odium of a cruelty which they might have bitterly repented. He was hated at all times by the aristocracy of Athens, and on one occasion they succeeded in convicting him of something like extortion of money from certain of the islanders who were subject to the Athenian rule. In 425, the seventh year of the war, he achieved his greatest military and political triumph. The Athenians had succeeded in cutting off from their ships and supplies a strong detachment of Lacedæmonian infantry, and blockading them in the small island of Sphacteria, off Pylos (the modern Navarino). At first it seemed that they must speedily surrender; Cleon persuaded the Athenians to dictate, as the price of their release, hard conditions of peace, which the Lacedæmonians rejected. Time wore on, and the Lacedæmonians still held out, while the blockade was maintained with great difficulty and hardship. Then Cleon came forward, and publicly declared that if he were general, he would undertake to bring the men who were on the island prisoners to Athens, dead or alive, within twenty days. Nicias, who at that time held the command-in-chief, anxious probably to discredit a political opponent, offered to take him at his word, and make over to him the command at Pylos. Cleon's own party were loud in their encouragements; and willingly or unwillingly, after obtaining a strong reinforcement of troops, and getting Demosthenes, an able general then employed on the station, joined with him in the command, he set out for the scene of operations. The historian Thucydides calls his boast "insane," but admits that he fulfilled it. Within the days named he landed on the island of Sphacteria, compelled the Lacedæmonian force there, after great loss, to surrender at discretion, and brought 300 prisoners to Athens. It is very probable that much of the credit was due to the skilful dispositions of Demosthenes, his colleague in command of the forces; but nevertheless, the man who dared and succeeded where others had so long failed must have had a well-grounded confidence in his own energy and resources. He did not long enjoy his new glories. Two years afterwards he was sent to act against Brasidas, the Lacedæmonian commander in Thrace, and to attempt the reconquest of Amphipolis. At first he was successful; he took Torone, and made an advance upon Amphipolis; but a sudden sally of Brasidas from the town utterly routed the Athenian forces, and Cleon fell there with half his men. Brasidas was at the same time mortally wounded.

We have to judge of the character and conduct of Cleon almost entirely from the history of Thucydides and the satiric comedies of Aristophanes. But the historian, even if his judgment were not warped by the fact asserted by some writers, that Cleon had been instrumental in procuring his disgrace and punishment whilst holding a military command, had at any rate strong oligarchical prejudices, and regarded him as a restless and dangerous agitator. If we might trust the picture given of him by Aristophanes

in his comedy of *The Knights*, he is the unscrupulous and shifty demagogue, always by lies and cajolery pandering to the worst passions of his master, the populace, filching from other men their glory, and resisting all the efforts of the peace party for his own selfish ends. But, besides the general mark which all public characters presented to the licence of the satirist, he had in this case his own private grudge against Cleon, who had laid a complaint before the Atheoian senate that in his comedy called *The Babylonians* he had held up to ridicule the policy and institutions of his country before the eyes of foreigners, and this in the midst of a great national war. With all his real faults, it is likely that Cleon has had less than justice done to him in such portraits of him as have come down to us. (w. l. c.)

CLEOPATRA (Κλεοπάτρα), the name of several Egyptian princesses of the house of the Ptolemies. The best known was the daughter of Ptolemy Auletes, born 69 B.C. Her father left her, at the age of seventeen, heir to his kingdom jointly with her younger brother Ptolemy, whose wife, in accordance with Egyptian custom, she was to become. A few years afterwards her brother, or rather her guardians, deprived her of all royal authority. She withdrew into Syria, and there made preparation to recover her rights by force of arms. It was at this juncture that Julius Cæsar followed Pompey into Egypt, resolved to settle there, if possible, the existing dispute as to the throne. The personal fascinations of Cleopatra, which she was not slow in bringing to bear upon him, soon won him entirely to her side; and as Ptolemy and his advisers still refused to admit her to a share in the kingdom, Cæsar undertook a war on her behalf, in which Ptolemy lost his life, and she was replaced on the throne in conjunction with a younger brother, to whom she was also contracted in marriage. Her relations with Cæsar were matter of public notoriety, and soon after his return to Rome she joined him there, in company with her boy-husband (of whom, however, she soon rid herself by poison), but living openly with her Roman lover, somewhat to the scandal of his fellow citizens. After Cæsar's assassination, aware of her unpopularity, she returned at once to her native country. But subsequently, during the civil troubles at Rome, she took the part of Antony, on whom she is said to have already made some impression in her earlier years, when he was campaigning in Egypt. When he was in Cilicia, she made a purpose journey to visit him, sailing up the Cydnus in a gorgeously-decked gally, arrayed in all the attractive splendour which Eastern magnificence could bring in aid of her personal charms. Antony became from that time forth her infatuated slave, followed her to Egypt, and lived with her there for some time in the most profuse and wanton luxury. They called themselves "Osiris" and "Isis," and claimed to be regarded as divinities. His marriage with Octavia broke this connection for a while, but it was soon renewed, and Cleopatra assisted him in his future campaigns both with money and supplies. This infatuation of his rival with a personage already so unpopular at Rome as Cleopatra, was taken advantage of by Octavianus Cæsar (Augustus), who declared war against her personally. In the famous sea-fight at Actium, between the fleets of Octavianus and Antony, Cleopatra, who had accompanied him into action with an Egyptian squadron, took to flight while the issue was yet doubtful, and though hotly pursued by the enemy succeeded in escaping to Alexandria, where she was soon joined by her devoted lover. When the cause of Antony was irretrievably ruined, and all her attempts to strengthen herself against the Roman conqueror by means of foreign alliances had failed, she made overtures of submission. Octavianus suggested to her, as a way to his favour, the assassination of his enemy Antony. She seems to have entertained the base proposal,—enticing him to join her in

a mausoleum which she had built, in order that "they might die together," and where he fulfilled his part of the compact by committing suicide, in the belief that she had already done so. The charms which had succeeded so easily with Julia and with Antony failed to move the younger Cæsar, though he at once granted her an interview; and rather than submit to be carried by him as a prisoner to Rome, she put an end to her life—by applying an asp to her bosom, according to the common version of the story—in the thirty-ninth year of her age. With her ended the dynasty of the Ptolemies in Egypt. Besides her remarkable charms of person, she had very considerable abilities, and unusual literary tastes. She is said to have been able to converse in seven languages. She had three children by Antony, and, as some say, a son, called Cæsarion, by Julius Cæsar. (w. l. c.)

CLEPSYDRA (from κλέπτειν, to steal, and ἕδωρ, water), the chronometer of the Greeks and Romans, which measured time by the flow of water. In its simplest form it was a short-necked globe of known capacity, pierced at the bottom with several small holes, through which the water placed in it escaped or stole away. The instrument was employed to set a limit to the speeches in courts of justice, hence the phrases *aquam dare*, to give the advocates speaking time, and *aquam perdere*, to waste time; it was also very generally used instead of the sun-dial. Its defects were—first, that the flow of water varied with the temperature and pressure of the air, and secondly, that the rate of flow became less as the vessel emptied itself. The latter was remedied by keeping the level of the water in the clepsydra uniform, the volume of that discharged being noted. In the clepsydra or hydraulic clock of Ctesibius of Alexandria, made about 135 B.C., the movement of water-wheels caused the gradual rise of a little figure, which pointed out the hours on an index attached to the machine. The rate of the flow of water through an orifice being proportional to the square of the vertical distance of its upper surface from the orifice, a clepsydra of simple construction can be formed by making in the bottom of a glass cylinder an opening through which its contents can escape in twelve hours, and graduating the vessel into 144 (= 12²) equal parts. A mark made at division 121 (= 11²) from the bottom indicates the quantity of water remaining at the end of the first hour, and in like manner the squares of 10, 9, 8, and the lower numbers give the divisions to which the level of the water descends at the end of the second, third, fourth, and succeeding hours.

CLERC, LE. See LECLERC.

CLERGY, a collective term signifying the body of "clerks," that is, in English, men in holy orders. *Clericus*, however, has, both itself and its equivalents in the languages of the Catholic countries of the Continent a wider ecclesiastical signification; while in England a use of the word, originally abusive, but now so entirely accepted as to constitute a proper secondary meaning of the term, comprises in the class of persons signified by it all those employed in duties the discharge of which demands the acquirements of reading and writing, which were originally supposed to be the exclusive qualification of the clergy.

The word is derived from the Greek κλήρος, which signifies a lot; but the authorities are by no means agreed in which sense the root is connected with the sense of the derivative, some conceiving that the original idea was that the clergy received the service of God as their lot or portion; others that they were the portion of the Lord; and others again, with, as Bingham (*Orig. Eccl.*, lib. i. cap. 5, sec. 9) seems to think, more reason, maintain that the word has reference to the choosing by lot, as was the case in early ages, of those to whom public offices were to be entrusted

In the primitive times of the church the term canon was used as synonymous with clerk, from the names of all the persons in the service of any church having been inscribed on a roll or *κατάλογος*, whence they were termed *canonici*, a fact which shows that the practice of the Roman Catholic Church in modern times of including all persons of all ranks in the service of the church, ordained or unordained, in the term clerks, or clergy, is at least in conformity with the practice of antiquity. The Roman hierarchy now reckons four grades of clerks:—1st, those who are merely tonsured as a sign of the ecclesiastical destination, but have received no orders of any kind; 2d, those who have received any of the four minor orders, as *hostiarii*, readers, exorcists, or acolytes; 3d, those who have received orders as subdeacons, deacons, or priests; 4th, those who have been consecrated to bishoprics, archbishoprics, or other of the higher dignities of the church. Monks, whether eremitic or cœnobite, have not at any time formed as such any part of the body of the clergy. But it would seem that in the earliest ages of the church they were not deemed even eligible to the priesthood, inasmuch as it is said that St Siricius, who became Pope in the year 384, first permitted them to receive priests' orders. And we read in the epistles of St Ambrose that monks began to be ordained priests towards the end of the 4th century,—St Athanasius having been the first who ordained monks to the church of Alexandria, in which course he was imitated in the West by St Eusebius, bishop of Vercelli.

At a very early period the church began to find the necessity of taking measures to stem the evil arising from the numbers of persons who embraced an ecclesiastical career from improper motives, and often without any intention of performing any of the duties of it. Of course the same evil has vexed the church in every age. From the first moment in which she became rich, worldly men were, and have always been, found eager to share her riches without sharing her work. But in the early times, even while she was poor, the state of society was such that many unworthy motives operated to induce men who neither had nor fancied themselves to have any call to the priesthood, to seek its immunities. Not only was an ecclesiastical career the only one which offered to the studious or the lazy man any hopes of a tranquil life, and to the unwarlike immunity from the necessity of fighting, but it offered very solid and valuable privileges in the shape of specialities of jurisdiction both in civil and criminal causes, and in exemption from taxes. There is a very early decree of a congregation of bishops, ordering that no more persons shall be ordained than are needed for the service of each church. And the germ of a politico-economical idea may be observed in the reason given for the prohibition, which one would hardly have expected to find at that period, and which both ecclesiastical and civil rulers altogether lost sight of at a later time. Clerks, it was decreed, should not be unnecessarily multiplied to the prejudice of the poorer laity. Casuists of a later age have pronounced it to be sinful to receive first orders, without the intention of proceeding to take full orders. Gregory the Great likens those who entered the ecclesiastical state merely for the sake of a benefice to the crowds who followed the Saviour only because He multiplied the miraculous loaves. The Council of Trent also at its twenty-fourth sitting, chap. 4, directs the refusal of ordination to those who may with probability be supposed to desire it for other than godly reasons.

Soldiers, slaves, comedians, tax-gatherers, those who had been married twice, and all persons exercising a mean and servile occupation could not be ordained. To which classes Bingham, particularizing more accurately, adds (*Orig. Eccl.*, lib. 4):—"No stranger from another diocese, unless by letters dismissory; no one who has performed

public penance; no homicide, adulterer, or who had in time of persecution denied the faith; no usurer; no one who had mutilated any of his members; no one who had been baptized only by a medical attendant, or by a heretic, or whose baptism was in any wise irregular; no one belonging to any guild of artificers; no legal official of the Roman court; no guardian of a ward, as long as that office lasted; none who had ever suffered from insanity or diabolical possession; to which certain other canonical impediments might be added."

Bingham (*Orig.*, lib. 2. cap. 6. sec. 4) says that in some churches the clergy lived in common. Moroni says (article "Clero," *Dict. Eccles.*) that in the 4th and following centuries it is certain that almost everywhere the clergy adopted the practice of living in common. The first assertion seems to be somewhat too narrow in its scope, the second too wide. It is certain that the practice was more common than seems to be indicated by the phrase, "in some churches;" but the instance which Moroni gives in support of his assertion seems to show that the practice was far from universal. We read in a chronicle of the church of Augsburg, that in the time of Constantine, when a church was dedicated to St Afra, "clerks were established there living in common, according to the apostolic rule." Of the church of Rinocotura in Mauritania, Sozomen tells us that the clerks there had "their dwelling, their table, all things, in short, in common." The venerable Bede says that Gregory I. ordered that the same rule should be observed in England. Eusebius, bishop of Vercelli, is praised by St Ambrose for restoring the practice in question in his church. Leo IX. ordered that cloisters should be established in connection with the churches in order that the clergy might live in common. Hence divers churches were anciently called monasteries, and in a history of the church of Besançon it is stated "that nothing is more common in ancient writings than to find any church called a monastery."

The immunities enjoyed by clerks of course differed largely at different times and in different countries, the extent of them having been gradually curtailed from a period a little earlier than the close of the Middle Ages. They consisted mainly in exemption from public burdens, both as regarded person and pocket, and in immunity from lay jurisdiction. This last enormous privilege, which became one of the main and most efficient instruments of the subjection of Europe to clerical tyranny, extended to matters both civil and criminal; though, as Bingham shows, it did not (always and everywhere) prevail in cases of heinous crime. The reader will find the whole subject lucidly set forth in the 5th book of Bingham's work.

This diversity of jurisdiction, and subjection of the clergy only to the sentences of judges bribed by their *esprit de corps* to judge leniently, led to the adoption of a scale of punishments for the offences of clerks avowedly much lighter than that which was inflicted for the same crimes on laymen. This part of the subject will be found fully elucidated in the 1st chapter of Bingham's 17th book; in the remaining chapter of which the penal portion of the canon law as regarding clerks is succinctly treated. (T. A. T.)

CLERGY, BENEFIT OF, an obsolete but once very important feature in the English criminal law. It was a relic of the claim of exemption from the authority of the common law tribunals on the part of the clergy, and marked the extent to which the demand was acceded to in England. The conclusion of the protracted conflict was that the common law courts abandoned the extreme punishment of death assigned to some offences, when the person convicted was a *clericus*, in holy orders, and the church was obliged to accept the compromise and let a secondary punishment be inflicted. For the more atrocious crimes

the partial exemption was not obtained, and hence offences came to be divided into clergyable and unclergyable. According to the common practice in England of working out modern improvements through antiquated forms, this exemption was made the means of modifying the severity of the criminal law. It became the practice for every convict to claim and be allowed the benefit of clergy; and when it was the intention by statute to make a crime really punishable with death, it was awarded "without benefit of clergy." A full account of the origin and progress of the system will be found in the 23th chapter of the fourth book of Blackstone's *Commentaries*. The benefit of clergy in cases of felony was abolished in the modifications of the criminal law by Sir Robert Peel in 1827 (8 Geo. IV. c. 28).

CLERMONT, or CLERMONT FERRAND, a city of France, formerly the chief town of Basse Auvergne, and now of the department of Puy-de-Dôme, is situated on a hill composed chiefly of volcanic tufa, in the fertile district of Limagne, and surrounded on the S. and W. by a line of mountains, of which the Puy-de-Dôme is the culminating point. It lies in 45° 46' N. lat. and 3° 5' E. long., and is 220 miles S. by E. from Paris. Since 1633 it is composed of the two towns of Clermont and Mount Ferrand, connected by a fine avenue of walnut trees and willows, two miles in length. The streets are generally ill laid out, narrow, and crooked; and the houses are built of dull, grey lava, which had a gloomy effect until the fashion was introduced of covering them with white-wash. It has several handsome squares ornamented with fountains, and is well supplied with water brought by subterranean conduits from Royat, a league distant. The principal public building is the cathedral, a Gothic edifice of the 13th century, and though still unfinished its interior is considered one of the finest existing specimens of Gothic architecture. The church of Notre-Dame-du-Port is curiously decorated externally with mosaic work and bas-reliefs, and is very ancient—parts of it dating from 870. Clermont has also a university-academy, a royal college, a botanic garden, a public library of 30,000 vols. (among which are several ancient MSS. of great value), museums of natural history and antiquities, two hospitals, and a theatre. The manufactures are woollen and linen goods, silk stockings, paper, cutlery, and jewellery. Being the entrepôt for the produce of the surrounding departments, the town carries on a considerable trade in hemp, flax, corn, wine, cheese, wool, hides, and cattle. In the suburb of St Allaire, to the north-west of the city, is a remarkable calcareous spring, the copious deposits of which have formed a curious natural bridge over a small stream. The population of Clermont in the end of the 18th century was about 16,000; in 1851, 30,566; and in 1872, 32,963.

Clermont (*i.e.*, Clarus Mons or Clarimontium) is identified with the ancient Augustonemetum, the chief town of the Arverni, and it still preserves some remains of the Roman period. The present name occurs as early as the 8th century, but was at first applied to the castle alone. During the disintegration of the Roman empire Clermont suffered as much perhaps from capture and pillage as any city in the country; but it preserved its municipal liberties down to the Middle Ages, and, even after it was incorporated in the domain of its bishops, maintained the rights of its communal charter. It was the seat of no fewer than seven ecclesiastical councils, held respectively in the years 535, 549, 587, 1095, 1110, 1124, and 1130; and of these the council of 1095 is for ever memorable as that in which Pope Urban II. first formally organized the great crusade. In the national wars of the 15th and the civil wars of the 16th century the town had its full participation; and in 1685 it acquired a terrible notoriety by the trial and execution of a number of robber chieftains who had infested the neighbouring district. The proceedings lasted six months, and the episode is still known as *les Grands Jours de Clermont*. Before the great Revolution the town possessed several monastic establishments, of which the most important was the abbey of Saint Allaire, founded, it is said, by St Austramonius, the apostle of Auvergne, and the abbey of St

André, where the counts of Clermont were interred. Among the great men whom the town has produced are Gregory of Tours, Pascal, and Montlosier.

CLERMONT EN BEAUVOISIS, frequently but by mistake called CLERMONT SUR OISE, a town of France, at the head of an arrondissement in the department of Oise, is situated about 36 miles by rail to the north of Paris, near a small tributary of the Oise, called the Brèche. The town-hall and the church of St Samson date from the 13th century, and the hill on which the town is built is surmounted by an old castle partly of the 10th or 11th, now transformed into a penitentiary capable of accommodating upwards of 1000 female prisoners. The principal industries are the manufacture of cotton goods and stained paper. Clermont was an important post in the Middle Ages. It was frequently taken and retaken in the wars of the English, and in 1437 it was surrendered to them as a ransom for the great national leader La Hire. In 1569 it was sold to the duke of Brunswick by Charles IX., and about thirty years later it was resold by the duchess of Brunswick to the duke of Lorraine. In 1595 it was captured by Henry IV., and in 1615 it was held by Condé. Cassini the astronomer was a native of the town. Population in 1872, 5774.

CLERMONT-L'HÉRAULT, or CLERMONT DE LODÈVE, a town of France, in the department of Hérault, and about ten miles by rail south of Lodève, is built on the slope of a hill which is crowned by an ancient castle and skirted by the Ydromiel, a tributary of the Ergue or Lergue. It owes its importance to its woollen manufacture, which was introduced in 1678; and it also produces vinegar and vitriol, has quarries of building-stone, plaster, and lime, and deals in brandy, oil, cattle, and wool. Population in 1872, 5487.

CLEVELAND, a city and lake-port, and the capital of Cuyahoga county, in the State of Ohio, situated at the mouth of Cuyahoga River, on the S. shore of Lake Erie, in 41° 30' N. lat. and 81° 47' W. long. Next to Cincinnati, it is the largest and most important city in the State. It was founded in 1796, and named in honour of General Moses Cleveland of Connecticut, who then had charge of the surveying of this region. It was an important point in the war of 1812, and was incorporated as a village in 1814 and as a city in 1836. Its population was 1075 in 1830, 6071 in 1840, 17,034 in 1850, 43,417 in 1860, and 92,829 in 1870. The number of inhabitants in 1876 is estimated at 140,000. Of the total population in 1870, 38,815 were foreigners—including 15,856 born in Germany, 9964 in Ireland, 4008 in England, 2634 in British America, and 2155 in Austria. The city is built on both sides of the river, which is here crossed by several bridges, and chiefly on a plain from 50 to 100 feet above the lake, of which a magnificent view is thus obtained. The streets are regularly laid out, and are generally from 80 to 100 feet wide. Many of them are lined with trees, chiefly maple, whence Cleveland is known as the "Forest City." Monumental Park, near the centre of the city, contains 10 acres divided into four squares by the extension of Ontario and Superior Streets. Besides a fountain and other attractive objects, the park contains a statue of Commodore Perry, erected in 1860, in commemoration of his victory on Lake Erie in 1813. It is of Italian marble, is 8 feet high, and stands upon a granite pedestal 12 feet high. The most noteworthy buildings are that of the United States (containing the post-office, the custom-house, and the federal courts), the city hall, the county court-house, the house of correction and workhouse, the city infirmary, the Cleveland medical college, Case Hall, and the two high-school buildings. The Union Railway depot, an immense structure of stone near the lake shore, is one of the largest of the kind in the United States. Cleveland has import-

ant commercial advantages. Five railways pass through or terminate in the city,—including the Lake Shore and Michigan Southern, a grand trunk line between the east and the west; a division of the Atlantic and Great Western, a leading channel of communication between the east and the south-west; and the Cleveland, Columbus, Cincinnati, and Indianapolis, a direct line to Cincinnati and the south. Other lines afford communication with the extensive coal and petroleum regions of Pennsylvania. Cleveland is the northern terminus of the Ohio Canal, which extends southwards to Portsmouth on the Ohio River. For the accommodation of the lake commerce, a capacious harbour has been formed at the mouth of Cuyahoga River by extending two piers, 200 feet apart, 1200 feet into the lake. The city has an extensive trade in copper and iron ore shipped from the Lake Superior mining region, and in coal, petroleum, wool, and lumber, received by railroad, canal, and lake transportation. In 1873 the number of vessels entered in the coast-wise trade was 3238, having an aggregate tonnage of 1,053,232 tons; 3204 vessels of 1,048,196 tons cleared. The foreign commerce, which is exclusively with Canada, is considerable,—the imports amounting in 1874 to \$449,118, and the domestic exports to \$1,426,990; 316 vessels of 64,213 tons entered in this trade, and 325 of 55,152 tons cleared. The total number of vessels registered, enrolled, and licensed in this district was 466, of 86,512 tons. Twenty vessels of 11,242 tons were built during the year. About \$20,000,000 of capital is invested in manufactures, the most important industries being those of iron and the production of refined petroleum. There are also several pork-packing establishments and breweries. The city contains six national banks with a capital of \$4,550,000, and two savings banks. The government of the city is vested in a mayor and a common council of two members from each of the eighteen wards. These officers are elected by the people. The city has an efficient police, a paid fire department, a board of public improvements, and a board of health. Besides the usual county and municipal courts, the United States circuit and district courts for the northern district of Ohio are held here. The city is supplied with water obtained from the lake by means of a tunnel $1\frac{1}{4}$ mile long, and forced into a large reservoir on high ground in the western part of the city. The streets are well paved, are lighted with gas, and are supplied with sewers. The reformatory and charitable institutions are numerous and varied. The house of correction and workhouse is for the confinement of persons convicted of minor offences. The city infirmary, connected with which are a farm and a house of refuge for the care and instruction of children, besides maintaining its inmates, affords relief to outdoor poor. The city hospital is supported by money received from those patients who are able to pay and from private charity. The charity hospital is maintained partly by contributions and partly by revenue from paying patients; connected with it is a lying-in hospital. There are also a homœopathic hospital founded by the Cleveland homœopathic college, a foundling hospital, and a United States marine hospital, which is supported by appropriations made by Congress and by a tax on sailors. The Cleveland Protestant orphan asylum has an endowment fund of about \$50,000, from the interest of which, and by private contributions, it is maintained. St Vincent's orphan asylum for males, and St Mary's orphan asylum for females, are Roman Catholic institutions, accommodating about 150 inmates each. An orphan asylum is also maintained by the Jews. Among other benevolent institutions are the home for the aged poor, the home for working women under the management of the women's charitable association, and the Bethel home for destitute sailors. The children's aid society, since its organization in 1857,

has secured homes for nearly 1500 children, besides extending aid to more than 5000. There are three industrial schools, maintained partly by the city, and partly by benevolent citizens, for the benefit of destitute children. The total debt of the city in 1875 was \$7,397,500; and the property taxed for city purposes was valued at \$73,210,144. The public schools in 1874 comprised 18 primary, 17 grammar, and 3 high schools, in which were enrolled, including those in the evening schools, 19,021 pupils, with an average daily attendance of 12,085. The total number of teachers was 261. The expenditure for the public schools during the year amounted to \$382,921. Besides the above, there were enrolled in private and parochial schools 8808 pupils. Cleveland has no college or university, but there are several excellent seminaries, academies, and private schools for the advanced education of both sexes. Professional instruction is afforded by the Cleveland medical college, the homœopathic hospital college, and the medical department of the university of Wooster (each having about fifteen professors), the Ohio State and union law school, and St Mary's theological seminary (Roman Catholic). The Cleveland library association has about 11,000 volumes, the public library, supported by taxation, about 20,000, and the law library about 2000. The Bethel free reading-rooms are open to the public, and the western reserve historical society has a valuable collection of books. There are published in the city 51 newspapers and periodicals; of these 6 appear daily, 4 thrice a week, 18 weekly, 2 fortnightly, 11 monthly, and 1 every two months. Of these 7 are published in the German language, and 1 in the Bohemian. Cleveland has about 100 churches, the following being the largest denominations:—the Methodist-Episcopal 18, Roman Catholic 15, Protestant Episcopal 11, Baptist 9, Presbyterian 8, and Congregational 4 churches.

CLEVELAND, JOHN (1613–1658), a poet and satirist, was born at Loughborough. He was educated at Hinckley school, whence he repaired to Cambridge, becoming in 1634 a fellow of St John's, and being appointed college-tutor and reader in rhetoric. The Latin and oratorical ability displayed by him in the exercise of the latter function were warmly praised by Fuller, who also commends the "lofty fancy" of his verse. He was the most distinguished and the earliest of loyal satirists. Joining the Cavaliers at Oxford, he was warmly received by the king; and having lost his fellowship and his college places, he was named judge-advocate in the garrison at Newark. The captain in command at that fortress, however, deprived him (1646) of this office, and he was fain to wander through the country depending on the alms of Royalists for bread. Arrested at Norwich, as one "whose great abilities rendered him able to do the greater disservice," he was held in durance of some months at Yarmouth, but was released at last by Cromwell (who seems to have behaved admirably towards the strolling libeller), and went to London, where he resided till his death, in the enjoyment of much consideration from his party. Cleveland, who was more highly esteemed than Milton by his contemporaries, was exceedingly popular. His serious poetry is perhaps the most extravagantly conceited in the language; his satires are more deserving, the best being the *Petition to the Lord-Protector for the Scots Rebel*. See Nichols, *History of Leicestershire*, and Cleveland's *Works*, London, 1687.

CLEVES (in German KLEVE), a town of Prussia, formerly the capital of the duchy of its own name, and now the chief town of a circle in the government of Düsseldorf, 46 miles N.W. of Düsseldorf and 12 E. of Nimeguen. It is a neatly built town in the Dutch style, situated on the declivities of three hills known as Kirchberg, Schlossberg, and Heideberg, in a fertile district near the frontiers of

Holland, and about two miles from the Rhine, with which it has been connected since 1848 by a canal. The old castle of Schwanenburg (formerly the residence of the dukes of Cleves, and the birthplace of Anne of Cleves, one of the wives of Henry VIII.) has a massive tower 180 feet high, which was built in 1439 on the traditional site of Cæsar's Tower and commands an extensive view. Cleves has two Roman Catholic and three Protestant churches, a synagogue, a gymnasium, a house of correction, and a zoological garden. The collegiate church dates from 1345, and contains a number of fine ducal monuments, among which the first place is held by that of Adolf VI. of the 14th century. The chief manufactures are linens, cottons, silks, woollens, and tobacco. To the south and west of the city a large district is laid out as a park; in the southern part, known as the Old Park, there is a statue to the memory of the founder, John Maurice of Nassau-Siegen, who governed the town from 1650 to

1679, and in the western part there are mineral wells with a pump-room and bathing establishment, which date from about 1848. The town was the seat of the counts of Cleves as early as the 11th century, but it did not receive its incorporation till 1242. It was raised, with the surrounding district on both sides of the Rhine, to the rank of a duchy by the Emperor Sigismund in 1417. On the death of Duke William in 1609, without issue, his inheritance, which also included Jülich and Berg, became the object of a violent contest between no fewer than six competitors; and it was not till 1614 that the dispute was settled by the treaty of Xanten, which assigned the duchy of Cleves to Sigismund, elector of Brandenburg, who had married a niece of the late duke. In 1805 it was ceded by Prussia to France; and in 1806 it was made a grand-duchy by Napoleon and bestowed on Murat. In 1815 it was restored to Prussia. The population of the town in 1871 was 9038.

THE TERRITORIES.

Alberta	25,515	* 20,056
Assiniboia East		20,282
Do. West		* 10,063
Saskatchewan	30,931	11,146
Unorganized		† 32,168

* Partly estimated. † Wholly estimated.

Complete returns from the district of Alberta give its population at 25,123 instead of 20,056, as contained in the partly estimated statement furnished to Parliament on Aug. 27, 1891. The increase in population, therefore, for the provisional districts in the Northwest Territories, from the returns so far received, is 12,039 instead of 9,972. The percentage of increase is 161.25, instead of 140.98, and the total numerical increase for the whole Dominion is 504,664, instead of 498,531, the percentage of total increase being 11.66, instead of 11.52.

CANAJOHARIE, a village of New York, situated on the south bank of the Mohawk, opposite Palatine bridge, 55 miles west of Albany. It is the seat of an academy, and contains manufactories of paper bags, malt, and lumber.

CANAL DOVER, a village of Ohio, situated on the Tuscarawas River, about a hundred miles north of Marietta. It contains manufactories of iron, flour, and leather.

CANASTOTA, a village of New York, about 30 miles west of Utica. It is the seat of an academy and of a high school, and contains manufactories of cutlery, astronomical instruments, and salt. Mineral springs occur within the town.

CANBY, EDWARD RICHARD SPRIGG, soldier, born in Kentucky in 1817, killed in Siskiyou county, Cal., April 11, 1873. He graduated in the class of 1839 from the U. S. Military School. He served with distinction in the Mexican war, as well as the war of the rebellion, receiving the full rank of brigadier-general in 1866. During the winter of 1872-73 he was engaged in making terms with the Modocs, and was treacherously shot while conferring with them regarding a treaty of peace.

CANISTEO, a village of New York, situated on the Canisteco River, 55 miles west of Elmira. It contains manufactories of flour, leather, chairs and lumber, and is the seat of an academy.

CANELTON, a village of Indiana, county-seat of Perry county, situated on the Ohio River, 70 miles above Evansville. It is an important coaling station for steamboats, and manufactures cotton goods, flour, pottery, chairs, paper, lumber and drain-tiles.

CAÑON CITY, a village of Colorado, county-seat of Fremont county, situated in a rich mining district, below the Grand Cañon of the Arkansas. It is the seat of an academy, and of the Colorado penitentiary. It is a favorite health resort, having several medicinal springs. The surrounding country is rich in copper, silver, coal, iron, marble, limestone and oil.

CANTON, a city of Ohio, and county-seat of Stark county (see Britannica, Vol. V, p. 39). Canton is the seat of extensive manufactories, including the works of the Wrought Iron Bridge Company, and Agricultural Machine Works. It is situated in a rich agricultural district, which furnishes wheat, corn and oats for export. Coal is also an article of export. Its population has increased from 12,258 in 1880 to 26,327 in 1890.

CANTON, a city of Illinois, about 25 miles west of Peoria. It contains important coal mines, an extensive meat-packing establishment, and important manufactories of iron, agricultural implements, wagon and cigars.

CANTON, a town of Massachusetts, situated on the Neponset River, fourteen miles south of Boston. Within the township are extensive manufactories of machinery, sewing silk and cotton and woolen goods. Population in 1890, 4,538.

CANTON, Missouri, the county-seat of Lewis county, an important shipping station for the surrounding country, being conveniently situated on a railroad and on the Mississippi River. Christian University is here located.

CANTON, a manufacturing town, county-seat of St. Lawrence county, N. Y., situated on Grass River and on the Rome, Watertown and Ogdensburg Railroad. Canton Academy and the St. Lawrence University are two of the institutions here located.

CANTON, a town of South Dakota, county-seat of Lincoln county, situated on the Sioux River, about seventy miles north of Sioux City. It is the seat of Normanna College. It has water-power, and extensive manufactories. Population in 1890, 1,642.

CANTON, a post village in Bradford county, Pa., located on the railroad and having in 1890 a population of 1,393; township, 1,835.

CANTON, in geography, a division of territory, constituting a separate government or state, as in Switzerland. In France a canton is a subdivision of an arrondissement.

CANTON'S PHOSPHORUS, or **PYROPHORUS**, is obtained by heating in a close vessel three parts oyster-shells and one part sublimed sulphur, when the sulphuret of calcium is formed, which takes fire when exposed to or thrown into the air.

CANTU, CESARE, an Italian author, born at Brivio in 1807, educated at Sondrio, where he was appointed professor of belles-lettres. Having been imprisoned in 1833 for the offense of expressing liberal tendencies in a historical work on Lombardy, he spent his leisure hours in describing the sorrows of a prisoner in the form of an historical romance, *Margherita Pusterla*. His great work, *Storia Universale* (35 vols., 1836-42), has been followed by many others on history and literature, as well as by some of a lighter character.

CANUN, a Turkish musical instrument, strung with gut-strings. It is thrummed with the fingers, on which are thimbles of tortoise-shell pointed with pieces of cocoa-nut, forming plectra for striking the strings.

CANVAS-BACK DUCK (*Fuligula vallisneria*), a North American duck highly esteemed for the delicacy of its flesh. See **POCHARD**, Britannica, Vol. XIX, p. 252.

CAP, in ship-building, a strong, thick block of wood fixed near the top of the mast. It has a hole to receive the upper end of the lower mast, and another to receive the lower end of the topmast with eyebolts to aid in hoisting the topmast. There is also a cap of smaller size at the point of junction between the topmast and the top-gallant-mast. When made of iron, the cap is called a "crance."

CAPACITY, LEGAL, the power to alter one's rights or duties by the exercise of free-will, or responsibility to punishment for one's acts. Civil capacity depends on age and mental condition. But civil incapacity is often imposed as a punishment on persons of full age and undoubted mental capacity. Convicts and persons attainted are placed under a general civil incapacity, and partial incapacities are also imposed as punishments. The disabilities attaching to married women have been largely removed by recent legislation both in Great Britain and in the United States. For supposed political reasons aliens were for a long time debarred from ordinary civil rights, and they are still properly excluded from political rights until they are naturalized and adopt the obligations of a citizen. Different tests of capacity are applied to different transactions, as in contracts and testaments.

CAP-A-PIE, a term applied, in the military language of the Middle Ages, to a knight or soldier armed from head to foot, with armor for defense and weapons for attack.

CAPARISONED, dressed in caparisons. A war-horse completely furnished for the field is said to be caparisoned.

CAPE ANN, the eastern point of Essex county, Mass. Valuable quarries of syenite are here opened on a rocky headland. On Thatcher's Island, the most northern limit of Massachusetts Bay, are two stone light-houses.

CAPE CANAVERAL, a point of land on the eastern coast of Florida, on which there is a tall light-house for warning seamen off the dangerous shoals that surround the cape.

CAPE CHARLES, the southern point of the "Eastern Shore" peninsula which separates the

Atlantic from Chesapeake Bay. Near the cape, on Smith's Island, is a light-house.

CAPE COD, properly a narrow peninsula of Massachusetts, in form somewhat like the letter L. It is 65 miles in length, and forms the southeast boundary of Cape Cod Bay. The northern extremity is marked by a revolving light, 155 feet above the sea.

CAPE ELIZABETH, a summer resort of Maine and a suburb of Portland. It has a State reform school, important manufactories and a dry-dock.

CAPE FAREWELL, the most southern point of Greenland.

CAPE FEAR, the southern point of Smith's Island, North Carolina, on the Atlantic Ocean.

CAPE FEAR RIVER, a river formed by the junction of the Haw and Deep Rivers at Haywood, Chatham county, N. C. It flows southeast, and enters the Atlantic near Cape Fear. Including its branches it has a length of 200 miles, 120 of which are navigable.

CAPE FLATTERY, the most westerly point of the United States outside Alaska. It is situated on the northwestern coast of Washington.

CAPE FLORIDA, the south point of Key Biscayne, 330 miles southeast of St. Augustine.

CAPE FOULWEATHER, or YAQUINA HEAD, the western point of Oregon, in Tullamook county. It has a brick light-house.

CAPE GIRARDEAU, a city of Girardeau county, Mo. It has a normal school, a female academy and St. Vincent's College. It exports cotton, and among its manufactures are plows and mineral paints.

CAPE HATTERAS, the eastern point of North Carolina. It is a long, low, sandy bank separated from the main land by Pamlico Sound. Navigation along the coast is very dangerous, and a light-house 190 feet high has here been erected.

CAPE HENLOPEN, the point of land on the east coast of Delaware, at the entrance to Delaware Bay, opposite Cape May. It has a stone light-house.

CAPE HENRY, a cape opposite Cape Charles, at the entrance to Chesapeake Bay, in Virginia. It has a light-house.

CAPE HORN, a dangerous, rocky, dismal island, the extreme southern point of America.

CAPEL, THOMAS JOHN, MONSIGNORE, an eminent English Roman Catholic prelate, born at Brompton in 1836. He is the founder of several educational and ecclesiastical institutions. He lectured in the United States in 1883.

CAPE LA HAGUE, a promontory of France, forming the northwest extremity of the peninsula of Cotentin in the department of Manche. It juts into the English Channel opposite the Island of Alderney.

CAPE LA HOGUE, often confounded with Cape la Hague, and situated on the east side of the same peninsula. Here the French were defeated by the united English and Dutch fleets in 1692.

CAPE OF GOOD HOPE (Cape Colony). See Britannica, Vol. V, pp. 41-50. The latest official returns up to 1891 give the area of the whole colony as 213,636 square miles, with a population of 1,250,000. The capital, Cape Town, has a population of 60,000; Port Elizabeth, the chief commercial port, has 18,000; Grahamstown, the capital of the eastern province, 10,000; Kimberly, the seat of the diamond trade, 25,000. Whites number about a third of the entire population, and the greater number of them are of Dutch descent. The number of registered electors in 1890 was 73,916. The right of suffrage is limited to occupiers of property worth \$250, or receiving \$250 salary, or \$125 salary with board and lodging. There is a university at Cape

Town (Royal Charter, 1877), and there are a large number of state-aided elementary schools, besides private and religious institutions. For defense there is a force of Cape Mounted Rifles, 769; Volunteers, 4,000; and every able-bodied man between 18 and 50 is liable to be called out for military service. There are 1,693 miles of railway in operation, which is government property. There are 8,981 miles of telegraph wires in operation. About 84,000,000 acres are in occupation, of which 600,000 are under cultivation. Vineyards occupy 20,000 acres, producing 4,500,000 gallons of wine, and 1,000,000 gallons of brandy. Ostriches number 25,000; sheep, 11,000,000; cattle, 1,112,000; goats, 3,000,000. The wheat crop of 1890 amounted to about 1,700,000 bushels, other grain 3,600,000 bushels, tobacco 3,000,000 pounds, aloes 340,000 pounds, and dried fruit 2,500,000 pounds. Cotton and rice are grown in limited quantities. The principal exports are wool, Angora hair, ostrich feathers, sheep and goat-skins, diamonds, wines, spirits, copper ore and aloes. The exports of wool in 1890 amounted to \$7,903,045, and diamonds over \$20,000,000. The colony has been gradually enlarged by annexations, the latest of which are Griqualand West, annexed in 1880; the various Transkeian territories, 1875-87; and Wal-fish Bay, 1884.

CAPELIN, or CAPLIN (*Mallotus villosus*), the only species of a genus belonging to the salmon family, and nearly related to the smelt (see Britannica, Vol. XXI, pp. 221-224). It is one of the smallest members of the family, lives on the sea-bottom of the northern coast of the Atlantic, comes to the surface to spawn, and furnishes one of the most important parts of the cod's food in northern regions. Vast shoals occur periodically off Newfoundland. The capelin is much used as bait in the cod fishery; it is eaten fresh in Iceland, and is sometimes imported in dried form into Great Britain. Its flavor is pleasant, and suggests affinity with herring.

CAPELLA, a bright star of the first magnitude, on the left shoulder of the northern constellation of Auriga, in front of the Great Bear, nearly in a line with the two northernmost of the seven stars forming Charles' Wain.

CAPE LOOKOUT, the southeast extremity of the islands adjacent to Carteret county, N. C. Its light-house is 150 feet high.

CAPE MAY, a famous watering place of New Jersey, on an island in the Atlantic, 81 miles by rail from Philadelphia, with which it has daily communication by steamboats during the summer.

CAPE MENDOCINO, a lofty headland, the most western point of California. It has a light-house 428 feet high.

CAPEEN, NAHUM, author and publisher, born in Canton, Mass., April 1, 1804, died in Dorchester in 1886. He edited the "Massachusetts State Record" from 1847 to 1851, wrote for the press, published the *Republic of the United States*, and, at the time of his death, had a *History of Democracy* nearly completed. He was among the first to urge the passage of an international copyright bill. The census board at Washington sprang from a letter of his published by the United States Senate. The system of collecting letters from street boxes originated with him while postmaster of Boston (1857-1861).

CAPE NORTH, the most northerly point of Europe, on the Magero Island, north of Norway.

CAPE OF GOOD HOPE, a lofty promontory, the southern extremity of Africa. It rises 1,000 feet above sea level, and terminates the range of Table Mountains. It was discovered by Bartholomew Diaz in 1486, and first doubled by Vasco de Gama in 1497.

CAPE PRINCE OF WALES, a point in Alaska on Bering Strait, opposite East Cape in Asia. It is the most westerly point of America.

CAPE RACE, the southeastern point of Newfoundland, extending into the Atlantic. It is a dangerous point on account of the dense fogs there prevalent. A light-house 180 feet high has here been built, and all vessels sailing between Great Britain and the northeastern part of North America are taxed for its maintenance.

CAPE RIVER, or RIO DE SEGOVIA (properly *Vauks*, or *Waux*), a large river of Nicaragua, which, after a generally northeast course of about 300 miles, empties into the Carribbean Sea. It is navigable for a considerable distance from the sea, but the upper part of its course is obstructed by cataracts and shallows.

CAPE SABLE, the southernmost point of Florida.

CAPE SAN LUCAS, the southern extremity of Lower California.

CAPE ST. ROQUE, a promontory of Brazil, the most eastern in America, with the exception of Cape St. Augustine.

CAPE ST. VINCENT, the southwestern extremity of Portugal. Near this point the Spanish fleet was defeated by the British navy in 1797.

CAPE TRAFALGAR, a headland of Spain, between Cadiz and Gibraltar, on the Atlantic coast. Near this cape a famous battle was fought, Oct. 21, 1805, between the English and the French and Spanish fleets, in which the English were victorious, but suffered the loss of their commander, Lord Nelson.

CAPE VERD, the most westerly headland in Africa, projecting into the Atlantic Ocean between the rivers Gambia and Senegal, in latitude 14° 43' north, and longitude 17° 34' west. It was discovered by the Portuguese about 1445, and is said to have derived its name from a group of gigantic baobab trees which adorn its summit.

CAPE VINCENT, a summer resort of New York, situated on the St. Lawrence River, opposite Kingston, Ont. Shingles and flour are here manufactured. The place is a port of entry.

CAPIAS. See *Britannica*, Vol. XXIV, pp. 695-96.

CAPILLAIRE, a syrup prepared by adding sugar and orange-flower water to an infusion of the Maidenhair fern, and formerly used as a pectoral in chronic catarrhs; any syrup flavored with orange-flower.

CAPITA, DISTRIBUTION PER, a familiar expression in the law relating to wills and succession. It means that where the persons claiming under a will consist of, for example, three families of grandchildren, the estate or fund is divided equally among all the grandchildren (whatever the size of the family), and not equally among the three families. The opposite principle of division, namely, among families, is called distribution *per stirpes*. Testators frequently fail to make their meaning clear on this point.

CAPITAL. See *Britannica*, Vol. V, p. 71-73.

CAPITAL: in fortification, an imaginary line dividing a defense work into two similar and equal parts.

CAPITAL, in geography, is the principal city or town of a country, where the legislature meets and the chief legal courts are held.

CAPITAL ACCOUNT, a name given to what concerns the capital stock of a railway or other public company. In authorizing a railway company, Parliament, Congress, or State legislatures give power, to raise so much money by shares, and so much by borrowing. This money forms the capital of the company, and constitutes the *capital ac-*

count. On this fund the directors of the company make drafts to pay for the land, and all the works connected with the line, as also rails, locomotives, carriages, and in short everything involved in perfecting the railway up to the point of working. After the railway is opened all working expenses and renewals of line and plant should be charged to revenue account, but extensions of the line and additional plant should be charged to capital account. The same principle applies to all joint-stock companies. It is of the utmost importance that these two accounts be kept quite distinct.

CAPITAL PUNISHMENT (Lat., *pœna capitalis*), a penalty relating to the head, affecting the head, or life, as without the head there can be no life; hence involving the forfeiture of life. All the more serious offenses against society, and frequently very trivial ones, were, in many parts of the world, punishable with death until comparatively recent times. As a penalty for murder it has prevailed from the earliest ages in all parts of the world. In the primitive state of the social organization, at least in the earliest condition of which we have any record, retaliation (*lex talionis*) was the common method of punishment. The right of individual revenge not only existed in the savage state of mankind, but also has been recognized and tolerated for many ages, even after laws had been enacted for the restraint of crime; and not only this, but with very many nations the rule of retaliation became established and recognized in a very large degree. It provided following not only the ancient savage procedure, but also the Mosaic permission, that the punishment should be the same in kind as the crime. Under the Hebrew law it was enacted that punishment should invariably be "an eye for an eye; a tooth for a tooth; a life for a life," and any person belonging to the family of the slain had the legal privilege of pursuing the murderer and taking the customary vengeance. The methods permitted by law for producing death were four: the sword, strangling, fire and stoning. Lest punishment might be too precipitate, or improperly administered, the criminal, especially if he were able to present the plea of justifiable killing, might flee and endeavor to reach one of the established "cities of refuge," where he would at least be temporarily safe.

The Hebrew polity being theocratic, many offenses were punished capitally as violations of the national faith. Among them are to be particularly noted—desecration of the Sabbath; blasphemy, idolatry, witchcraft, cursing, offerings to Moloch; disobedience to parents; murder, adultery; incest and kidnaping a free person. The "avenger of blood" was a person having such a right of carrying out private vengeance that he superseded any public officer who might otherwise have authority in the premises.

The Hebrews undoubtedly adopted this custom from the Egyptians; for when Moses fled the country after he had killed an Egyptian and buried him in the sands to avoid detection, he was after forty years informed that those who sought his life were dead; hence there was no fear in his returning to the land where his people dwelt.

In Greece, under the rule of Draco, a system of laws was prescribed which fixed death for certain offenses, some of them extremely trivial—as stealing from a dwelling-house an amount equivalent to about \$10 of American money. Draco claimed that those guilty of such a crime deserved death. The greater crimes could not be visited by any severer punishment, and therefore above a certain limit, of which the above cited instance is a specimen, death was invariably the penalty. The crimes

ordinarily punished by death, or for which death was prescribed by law, were sacrilege; disrespect for the popular faith; the non-observance of established religious rites; treason; murder, or attempt to murder; and incendiarism. Socrates was accused of spreading disbelief in the national religion, and notwithstanding his eminence as a teacher and a scholar, the ordinary administration of justice demanded his death, and he was condemned to drink poison. Such infamous results of basely conceived laws had a necessary reaction. Modifications were inaugurated, and the Athenian code became eventually very mild.

Among the principal methods of capital punishment crucifixion occupies a prominent place. This peculiar mode is traditionally ascribed to Semiramis, and was practiced by the Egyptians, the Carthaginians, the Persians, the Assyrians, Scythians, Indians, Greeks, Macedonians, ancient Germans, and Romans. Whether it was practiced by the ancient Jews or Hebrews is a matter of dispute.

In Japan, the criminal, especially if he be high in rank, is condemned to take his own life in the presence of officials, by the method known as *harikari*—a peculiar kind of disemboweling process; while in China the victim is usually beheaded.

In the Twelve Tables of ancient Rome, into which the decemvirs condensed the laws, there was very great severity, the statutes going so far as to pronounce the penalty of death against writers of libels, etc. The execution of the laws in all their rigor was only prevented by the laws previously passed during the consulate of Valerius Poplicola, and known as the Valerian laws. Crucifixion, one of the popular methods of punishment in the nation in all parts of the Empire, was abolished by Constantine in the latter part of his reign.

In ancient Germany private retaliation was permitted, and continued long after the country became a part of the Roman Empire. In the greater part of modern Germany beheading is the mode of execution adopted. In Austria hanging is the legal method.

Among the Anglo-Saxons associations were often formed by men of the same class for mutual protection, and any member of the society was pledged to pursue a murderer until the full completion of the *lex talionis*.

In the history of England the benefit of clergy was for a long time denied by statutory enactment to those condemned to death—until, indeed, a comparatively recent time. Blackstone enumerates 160 different offenses incurring the death penalty without benefit of clergy, four-fifths of which had been prescribed during the reigns of the first three Georges; but the terrible list was gradually reduced to two—treason and murder. In England, Scotland and Ireland, until within a generation or so, the rack, the gibbet, decapitation, quartering, disemboweling and burning were practiced. Happily, all but the gibbet have been abolished, or have gone into disuse owing to the advancement of civilization.

It is to be noted that in France the guillotine is still used, and in Spain the garrote, which is undoubtedly the quickest and most complete method where capital punishment is required.

The crimes which at various periods have been punishable by death in the United States are treason, murder, arson, piracy, robbery of the mail with jeopardy to the life of the person in charge thereof, rescuing a person convicted of a capital offense when on the way to execution, burning a vessel of war, or destroying a vessel owned by private parties. Treason and murder are punishable

with death in most of the States. Rape, arson and robbery when attended with special villainy are included. Within the United States so-called "witches" were punished by burning at the stake, and this at a period so recent as to produce in the reader a thrill of horror. The stake has been abolished, and hanging remains as capital penalty, only in some of the States. In William Penn's code of laws for Pennsylvania, capital punishment was prescribed for two crimes only—treason and murder. Since that time some of the States have abolished capital punishment, and substituted instead imprisonment for life. In New York in 1888, the condemnation to hanging was superseded by condemnation to "electrocution," or death by electricity.

In the armies of the world, desertion, conviction as a spy, and the act of secretly communicating intelligence to the enemy are all regarded as capital offenses, and punishable by either being shot or hanged—the latter being regarded as the more disgraceful mode of execution.

In many of the navies of the world the culprit, if he be an officer, is shot; if a common seaman he is usually hanged at the yard-arm.

The tendency in the present century has been to limit capital punishment to the greatest crimes only; and the more intelligent the nations become under the influence of Christian civilization, the more prevalent becomes the opinion that it would be well to abolish the death penalty altogether. One great argument in favor of this is that in all ages, our own not excepted, many persons have suffered the death penalty who were afterward found to have been wholly innocent of the crimes imputed to them.

CAPNOMANCY, a divination by smoke practiced by the ancient Greeks. They threw grains of jasmine or poppy on the burning coals, and watched the motions, and density of the smoke that rose from them, or they watched the smoke of sacrifices. If the smoke was thin and ascended in a right line, the augury was good. It was also believed that the inhalation of the smoke gave the priests prophetic powers.

CAPPAGH BROWN, a bituminous earth, which yields pigments of various shades of brown. The coloring matters are oxide of manganese and iron. The cappagh browns are transparent and permanent. The name is derived from Cappagh in Ireland.

CAPPARIDELE, a natural order of exogenous plants, allied to *Crucifera*, and including about 350 known species, mostly natives of tropical and subtropical countries. Many of the species possess stimulant properties, while some are poisonous. One of the most interesting plants of the order is the *Sivak*, a bush or small tree of Africa, the small berries of which have a pungent taste like pepper. When dried they constitute an important ingredient in the food of the natives, and the roots when burned yield considerable salt.

CAPP'EL, a village of Switzerland in the canton of Zurich, 10 miles southwest of the city of that name. Here the reformer Zwingli was killed in a conflict with troops of the Roman Catholic cantons, in 1531. See *Britannica*, Vol. XXIV, p. 833.

CAPRICCIO, in art, a term applied to a picture or other work which designedly violates the ordinary rules of composition. Foliated ornaments, with cupids or other figures appearing in them in situations not strictly natural, are capriccios. In music *capriccio* is a free composition, not conforming to rule as to form or figure. Locatelli, at the beginning of the 18th century, composed capriccios for the violin. The most celebrated capriccios of mod-

ern times is Mendelssohn's B minor capriccio for pianoforte and orchestra.

CAPRICORNUS, the *Goat*, a southern constellation and the tenth sign of the zodiac. It is usually represented as having the fore-part of a goat, but the hinder-part of a fish. The ancients regarded it as the harbinger of good fortune, and as marking the southern tropic or winter solstice, wherefore they called it the "Southern Gate of the Sun."

CAPRIDÆ, a term used by some naturalists to denote the sheep and goat family, but by others to include antelopes, their persistent horns being regarded as the great distinction between them and the *Cervidæ*, or deer family.

CAPRIFICATION, a practice of great antiquity, still followed in some localities, of hanging the branches of the so-called "goat-fig" or caprificus in the cultivated trees, for the purpose of effecting the fertilization of the edible fig. The goat-fig has male flowers, producing pollen, and female flowers, which the eggs of a parasitic insect, *Blastophaga grossorum*, turn into galls. The edible fig-tree has normal female flowers, which are not adapted to become galls. Hence, when the male and insect-containing female flowers of the wild-fig are hung on the edible fig-tree, the gall-insect escaping from the orifice covers itself with pollen, and flying to the normal female fig-flowers fertilizes them, causing the production of the proper figs.

CAPRIFOLIACÆ, a natural order of exogenous plants, consisting of shrubs and herbaceous plants, which have opposite leaves without stipules, and flowers disposed in corymbs, in heads or in whorls. The fruit is generally a berry. The order is very nearly related to *Cinchonacæ*. More than 200 species are known, chiefly natives of the temperate and colder regions of the Northern hemisphere. To this order belong the honeysuckle, elder, snow-berry, etc.

CAPRIMULGIDÆ, a family of birds of the order *Insessores* and tribe *Fissirostres*, nearly allied to the *Hirundinidæ*, or swallow tribe. They are insectivorous, have very long wings, short legs, and toes united at the base by a membrane. The family includes the whip-poor-will and night-hawk of America, and many other species widely distributed over the globe.

CAPSALI, a seaport town of the Ionian Islands, capital of Cerigo, built upon a narrow ridge terminating in a precipitous rock near the south end of the island. It has an excellent harbor. Population, 5,000.

CAPSICINE, an alkaloid, the active principle in capsicum or cayenne pepper, from which it is obtained. It is a thick liquid of a reddish color, and possesses strong acrid properties.

CAPSULE, in medicine, a word given by French anatomists to parts which bear no analogy to one another. Strictly speaking, a capsule is a small casing, envelope, covering, etc., thin and membranous; a membrane or ligament inclosing some part or organ, as in a bag or sac; a sacular investment, as the capsule of the kidney; the capsule of the crystalline lens of the eye; the capsule of the joint of the hip. The capsule of the kidney is a smooth, fibrous membrane, closely investing the kidney and forming its outer coat; the capsule of the lens is a transparent, elastic, brittle, and structureless membrane inclosing the lens of the eye; the "external capsule" is a layer of white nervous substance between the *claustrum* and the *putamen* of the brain; the "internal capsule" is a layer of nerve-fibers passing upward from the *crura cerebri* to the *cortex* between the *caudate nucleus* and the *optic thalamus* on the one side, and the *lenticular nucleus* on the other. The word has also been ex-

tensively used for a small gelatinous case or envelope, in which nauseous medicines are wont to be inclosed, to aid in their being swallowed. Certain medicines are so offensive to the taste, and consequently so apt to sicken the stomach, that it is highly desirable to administer them in such a way as to prevent their contact with the tongue and palate. This object is fully accomplished by the use of *capsules*. They are made principally of gelatin, and of such thickness that before the nauseating medicine can be dissolved it is swallowed, and its unpleasant taste avoided. In botany a capsule is a dry syncarpous fruit, opening either by valves, as in the rhododendron, or by pores near the summit, as seen in the poppy and snap dragon.

CAPTAIN (MILITARY), originally a head or leader, irrespective of the number of men under him, but now the commander of a company, whether of infantry, cavalry, or artillery. In the German army, where the infantry companies consist of 250 men each, the captain is a mounted officer; in the British and United States armies he marches on foot with his men, who look to him for everything, both in barracks and in the field. In cavalry regiments the captain also deals individually with his men when in barracks, but in the field he works under the leader of the squadron of which his troop forms half. The badge of rank in the British army is two stars on each shoulder-strap; in the United States army, two bars.

CAPTION: in law, the formal title of an indictment or a deposition, which shows the authority under which it is executed, and such other particulars as are necessary to render it legal and valid. Prior to 1837 caption was the name given in Scotland to the formal warrant to apprehend a debtor or other defaulting obligant, which was given in the bill chamber after letters of horning had been executed.

CAPTURE. See **CONTRABAND**, *Britannica*, Vol. VI, pp. 320-322.

CAPUCHIN MONKEY, a name given to several species of the genus *Cebus*, of South American monkeys, which have the head covered with short hair, so disposed as to resemble the cowl of a capuchin, the face being almost naked, or only covered with a little down.

CAPUCHINS. See *Britannica*, Vol. V, pp. 79, 80.

CAPUDAN-PASHA, the High Admiral of Turkey. He has the entire command of the navy, and the management of all naval affairs. The port of Pera, contiguous to the arsenal, the Turkish island in the archipelago, and a number of seaports and maritime districts are under him, even in their civil administration.

CAPULETS and **MONTAGUES**, the English spelling of the names of the Cappelletti and Montecchi, two noble families of Northern Italy, according to tradition of Verona, chiefly memorable from their connection with the legend on which Shakespeare has founded his tragedy of *Romeo and Juliet*. They both belonged to the Ghibelline faction, as we see from a reference in canto VI of Dante's *Purgatorio*. The first publication in which the essential incidents of Shakespeare's play appear is a novel by Luigi da Porto, printed at Venice in 1535. There is evidence that an English play founded on the same incidents appeared soon after, and that before Shakespeare's time the story was so well known in England that it had supplied subjects for tapestries.

CAPUT MORTUUM VITRIOLI, the name given by the alchemists to the red powder which remains in the retorts when green vitriol or the sulphate of iron is calcined.

CAPYBARA. See *Britannica*, Vol. V, p. 80.

CARACARA EAGLE, a genus of birds of prey, natives of America, regarded as a connecting link between eagles and vultures; agreeing with the former in their strong hooked bill and claws, and with the latter in their naked face and propensity to prey on carrion.

CARACCA, LA, a village of Andalusia, Spain, one of the chief naval arsenals of the kingdom, situated four miles southeast of Cadiz. It has been completely detached from the main land by artificial means; it is defended by four forts, and is altogether very complete as an arsenal. See CADIZ, *Britannica*, Vol. IV, p. 627.

CARABIDÆ, a tribe of beetles, or coleopterous insects, of the section *Pentamera*. See COLEOPTERA, *Britannica*, Vol. VI, p. 129.

CARACCIOLI, PRINCE FRANCESCO (1748-99), born in 1752 of a noble Neapolitan family. He had risen to the supreme command of King Ferdinand's navy, when, in December, 1798, he fled with him before the French from Naples to Palermo. Learning, however, of the intended confiscation of the estates of all absentees, he obtained permission to return to Naples, where he entered the service of the "Parthenopean Republic," and was placed at the head of its marine. For two months he ably directed the operations of the revolutionists, and not until their cause seemed hopeless, though before the capitulation, did he quit the capital. He was captured in peasant disguise, and June 29, 1799, was brought on board Nelson's flagship, tried by a court-martial of Neapolitan officers, and hanged from the yard-arm of a Neapolitan frigate.

CARADOC SANDSTONE, and **BALA BEDS**, a division of the Lower Silurian system developed in Shropshire, England. They consist of sandstones, grits, and slates, with occasional beds of limestone. See *Britannica*, Vol. X, p. 332, for a full account of the numerous fossils obtained from this formation.

CARAFFA, the name of an ancient and famous Neapolitan family, to which several cardinals and Pope Paul IV belonged. Carlo Caraffa, nephew of Paul IV, was born in 1517, fought in the Netherlands, joined the Knights of Malta, and was made cardinal by his uncle. Paul subsequently banished the cardinal and his brothers from Rome for extortion, and in 1561 Pope Pius IV caused him to be put to death.

CARAGLIO, a town of the Sardinian states in the province of Coni, six miles west of the city of that name. It is situated on the Grana, and has manufactories of silk. Population, 7,000.

CARAMBOLA, or **COROMANDEL GOOSEBERRY**, the fruit of *Averrhoa Carambola*, a small East Indian evergreen tree, belonging to the natural order *Oxalidaceæ*. It resembles the acid fruit of *A. Bilimbi*, and is often cultivated.

CARAMEL, the name applied to the dark brown and nearly tasteless substance produced on the application of heat to sugar. It is likewise formed during the roasting of all materials containing sugar, such as coffee, malt, etc., and is one cause of the dark color of porter and infusions of coffee.

CARAMANASSA, a river in the sub-presidency of Bengal. After a course of 150 miles it enters the Ganges about 50 miles from its mouth. It is crossed by a stone bridge, which has three wide arches, and which forms part of the grand road from Calcutta to Delhi. It is subject to floods, and has been known to rise 25 feet in one night.

CARANA RESIN, a resinous substance of the tropical parts of America. Its properties and uses resemble those of *lacamahæ*. It is entirely soluble in alcohol, and melts at a slight heat.

CARANJA, an island four miles long and two miles broad, on the east side of the harbor of Bombay, separated from the main land by a narrow channel. The island is comparatively level and fertile.

CARAPA, a genus of plants of the natural order *Meliaceæ*, found in tropical America and in Africa. *C. Guianensis* is a fine large tree, whose wood, called carapa-wood, or crab-wood, is used for making furniture, and also for the spars of ships; its bark is a febrifuge, and its seeds yield a lamp-oil, called carap-oil, or crab-oil. The African species, *C. Touloucouna*, yields an oil called coondi, kundah, or tallicoona, which is used by the natives for anointing their bodies, its bitterness protecting them from the bites of insects. The oil of the South American carapa is sometimes used for the same purpose. See *Britannica*, Vol. XVII, p. 746.

CARAPACE, the dorsal shield or buckler of chelonian reptiles (tortoises and turtles), and of crabs, lobsters, etc.

CARAT, a term applied by goldsmiths and assayers to the 24th part of a troy pound, ounce, or any other weight, as a means of stating the proportion of pure gold contained in any alloy of gold with other metals. Thus, pure gold being considered as 24 carats fine, gold containing two parts of alloy is called 22 carats fine, or 22-carat gold. The carat used in this sense has, therefore, no absolute weight; it merely denotes a ratio. The gold used by jewelers is seldom over 18 carats fine, except in wedding-rings, the standard fineness of which is 22 carats. The so-called gold used for jewels, watch-cases, etc., varies from eight or nine to 18 carats fine. The jewelry carat, used as a unit for weighing diamonds and other precious stones, is quite different. It has a fixed weight, equal to 3.16 troy grains, and is divided into quarters, or "carat grains," eighths, sixteenths, etc. These carat grains are thus less than troy grains, and therefore the jeweler has to keep a separate set of diamond weights. This weight was fixed in 1877 by a syndicate of Amsterdam, London, and Paris jewelers at 205 milligrams, and is known as the *Amsterdam or diamond carat*.

CARAVAGGIO, a town of Lombardy, Italy, about 24 miles from Milan. Population, 5,880. Three famous painters were born here—Fermo Stella, Pollidoro Caldara (see *Britannica*, Vol. V, p. 83), and Michel Angelo Amerighi (see *Britannica*, Vol. V, p. 82). In the neighborhood is a sanctuary of the Madonna, built from designs of Pellegrini.

CARBAZOTIC, CHRYSOLEIC, or PICRIC ACID, a substance of great importance in dyeing. It is a combination of nitric or sulphuric acid with carbonic acid. See *Britannica*, Vol. V, p. 85.

CARBIDES, formerly termed carburets, the compounds of carbon with the various metals. The carbides of iron are the most important, and it is to the addition of carbon, in one way or another, that we are indebted for the valuable properties of cast-iron and steel.

CARBINE, a light kind of musket, named probably from the carabins (see next article). The American carbine has a barrel 22 inches in length, and weighs 7½ pounds. It is simple in construction, and has a great range.

CARBINEERS, soldiers armed with carbines, and said to have derived their designation from the Arabs, among whom the *Carabins* were light horsemen, stationed at outposts to harass the enemy, defend narrow passages, etc.

CARBOHYDROGENS, a term applied to a series of compounds belonging to organic chemistry, which are composed of carbon and hydrogen in such proportions that the various members of the

groups differ from one another in definite and regular numbers of atoms of carbon and hydrogen.

CARBON, a village of Wyoming, about 80 miles northwest of Laramie. It is the trade center of a rich mining district, and is almost exclusively engaged in business tributary to the mining interests of the surrounding country.

CARBONADO, or **BLACK DIAMOND**, an amorphous variety of carbon, brown or black in color, found in Brazil in connection with pure diamonds, and extensively used in diamond drills.

CARBONATED or **ACIDULOUS WATERS**. See **MINERAL WATERS**, *Britannica*, Vol. I, p. 184.

CARBONDALE, a city and railroad junction of Jackson county, Ill. The Southern Illinois Normal University is located here. The trade of the city is principally in building-stone, tobacco, cotton, lumber and farm products.

CARBONDALE, a city and railroad junction of Osage county, Kan. Coal is mined here.

CARBONDALE, a city of Pennsylvania, on the Lackawanna River, 16 miles north-northeast of Scranton, and on the Delaware and Hudson Railroad, at the south terminus of the Jefferson ranch Railroad. Here are extensive anthracite coal mine owned by the Delaware and Hudson Canal Company. The population of the city was, in 1880, 7,714; in 1890, 10,826. See *Britannica*, Vol. V, p. 89.

CARBONIC OXID, or **OXIDE**. See **CARBON**, **OXIDES OF**, *Britannica*, Vol. V, p. 87.

CARBURETED HYDROGEN, a term in chemistry applied to several compounds of carbon and hydrogen. Thus light carbureted or monocarbureted hydrogen is the gaseous compound popularly known as marsh gas and fire-damp, and is the principal constituent of coal-gas. Heavy carbureted or bi-carbureted hydrogen is otherwise known as olefiant gas.

CARCANET, a jeweled chain or necklace. Venice was famous for the manufacture of carcanets in the 15th century.

CARCANO, GIULIO, born in Milan, Italy, in 1812, was brought to public notice in 1835 by his novel, *Ida della Torre*. He was banished in 1849; but on the establishment of national independence he was appointed inspector of schools, and has since held several important offices under the government. He is a poet and novelist of much merit. One of his principal works is a very faithful translation into Italian of the dramatic writings of Shakespeare.

CARCASS, in military pyrotechny, a hollow case of iron, filled with combustibles. It is fired from a mortar. Its chief use is to ignite the enemy's buildings, and to give sufficient light to aim the shot and shells. Carcasses were first used by one of the princely ecclesiastics, the Bishop of Munster, when he fought against the Duke of Luxembourg at Groll, in 1672.

CARCHEMISH, an ancient city on the Upper Euphrates, northeast of the modern Aleppo. It was long the northern capital of the Hittites, and a city of great importance. It has been identified by George Smith with Jerablûs or Jerabis.

CARDBOARD, a stiff compact pasteboard made by pasting together several layers of paper, according to the thickness and quality required. *Bristol-board*, used by artists, is made entirely of white paper; ordinary cardboard of fine white paper outside, with one or more sheets of coarse cartridge paper between.

CARDIA, the upper orifice of the stomach, called, on account of its vicinity to the heart, by the same Greek name, *cardia*, and probably hardly distinguished from it in the early times of Greek medicine.

CARDIAC MEDICINES, stomachic and stimulating remedies; cordials, so called from their action on the heart through the stomach.

CARDIFF, a village of New York, situated on Onondaga Creek, chiefly notable for being the place of the pretended discovery of the "Cardiff Giant," a statue carved in Chicago from a block of Iowa gypsum, and then buried at Cardiff. When dug up it was exhibited as a petrified giant.

CARDIGAN BAY, a semi-circular bend of St. George's Channel, on the west coast of Wales, 54 miles wide from north to south, and 35 miles long, with a sweep of coast of 130 miles. Almost all the harbors on the coast are obstructed by bars. A great part of Cardigan Bay is said to have been once dry land, protected, as Holland now is, by dikes and dams, and containing 16 towns. The land is said to have been submerged about A. D. 520.

CARDINAL BIRD, also called cardinal grosbeak, and Virginia nightingale, one of the finest songbirds of America, belonging to the family *Fringillidae*. The general color of the male is red, the head being vermilion, and only a small portion of the plumage around the base of the bill being black. The feathers of the crown are long, and erected into a conical crest, like a red cap. The cardinal bird abounds in Texas, Florida and the Southern States generally, migrating northwards in the spring as far as Massachusetts. Its loud, clear, sweet and varied song is to be heard chiefly in the morning and evening.

CARDINALIA, a genus of fossil conchifera, containing 85 species, which extend from the Silurian to the Inferior Oolite. They have an oval or oblong shell, attenuated posteriorly, and marked with lines of growth, and an external ligament. They occur abundantly in valuable layers of clay-ironstone called "mussel-bands."

CARDINAL VIRTUES, in ancient philosophy, the virtues of justice, prudence, temperance, and fortitude; so called because the whole of human virtue was supposed to hinge or turn upon them. The cardinal virtues were regarded by the Church as the moral, in distinction from the theological virtues, faith, hope, and charity.

CARDINGTON, a village of Ohio, on the Olentangy River, 40 miles north of Columbus. It contains manufactories of flour and woollens.

CARDITIS, or inflammation of the heart, a form of disease of very rare occurrence if the term be limited in its application to cases of true acute inflammation of the muscular structure of the heart itself. Carditis, however, was formerly understood in a wider sense, so as to include certain forms of disease of the external and internal lining membrane of the heart. See *Britannica*, Vol. XI, p. 554.

CARDOON, a vegetable. See *Britannica*, Vol. XII, p. 280.

CARDUCCI, GIUSTE, generally regarded by his countrymen as the foremost of contemporary Italian poets, was born in 1836 at Val di Castello, near Pietrasanta, in the province of Pisa. His youth was spent in study, and at the age of 25 he was appointed to a professorship in the University of Pisa, from which he was transferred in 1860 to a chair in the University of Bologna. He has been throughout his life a staunch Republican, and in 1867 was for a short time suspended from his professorship for having signed an address to the patriot Mazzini. In 1876 he was returned to the Italian parliament as member for Lugo di Romagna. His earliest poems, *Juvenilia* and *Levia Gravia*, contrast strongly with his later works. Signs of a transition in sentiment and in style appeared in the *Decennalia*, which dealt mainly with political events of the years 1860-70. The change became complete in the *Nuove Poesie*, in which he gave expression to the most advanced

political views. These poems are remarkable for the sustained power and dignity of the language and the frequent nobility of the thought. The *Odi Barbare*, written in meters borrowed from Horace, are very popular with Italians; but to foreign critics Carducci seems in these pieces to have erred in the rejection of rhyme.

CARDWELL, EDWARD, VISCOUNT, English statesman, born in Liverpool, July 24, 1813, died Feb. 15, 1886. He was educated at Oxford, where he became professor of Ancient History. He was elected to Parliament in 1842 as a member of the party known as Peelites, and was president of the board of trade from 1852 to 1855. In 1855 he was returned to Parliament for Oxford. He became secretary for Ireland in 1859, and secretary of state for the colonies in April, 1864, but resigned with his colleagues in June, 1866. In December, 1868, he entered the cabinet of Gladstone as secretary of state for war, and while occupying this position introduced important reforms in the army. Cardwell was raised to the peerage in 1874.

CARE, or CARLE SUNDAY, the Sunday before Palm Sunday, said to be so called because it was the practice in many places to eat gray peas, called carlings, which were steeped all night in water, and fried the next day in butter. This practice apparently had its more immediate origin in the custom of the Roman Catholic church of eating hallowed beans at this time. The beans are described in some religious books as symbolical of confession, and their steeping before use of meditation. It appears to have been adopted from a heathen custom.

CAREENING, the operation of heaving down a ship on one side, in order to expose the other side for cleaning by the process of breaming. In seaphrase, a vessel is said to "careen" when she leans over very much through press of sail.

CARÈME, MARIA, ANTONIN, French cook and author, born in 1784 in Paris, died there in 1833. He wrote *Les Dejeuners de l'Empereur Napoléon*, *La Cuisine Française*, and other works connected with his craft. As Talleyrand's cook he played an important part at the Congress of Vienna.

CARET, a mark (A) used in writing, indicating that something has been omitted, and interlined. Derived from the Latin *carco*, "I am wanting."

CAREX, a genus of plants of the natural order *Cyperaceæ*, commonly known as sedges, of which the species are very numerous. They are all of a grassy or rush-like appearance, and have some value in the economy of Nature as forming the principal part of vegetation of swamps, which they assist in converting into fertile ground.

CAREY, HENRY CHARLES, leading political economist of America, son of Mathew Carey, born in Philadelphia, Pa., Dec. 15, 1793, died there Oct. 13, 1879. At the age of 21 he became a partner in his father's business, and later was head of the publishing house. He was the originator of the system of trade sales between book dealers. In 1835 he retired from business, and devoted himself to scholarly pursuits. He was the founder of a school of political economy. At first he was a free-trader, but he came to believe protection the best present policy for the government. His first work was *The Principles of Political Economy*. He afterwards wrote *The Credit System of France, Great Britain, and the United States; The Past, the Present and the Future; Principles of Social Science; Letters on International Copyright; The Way to Oporto England Without Fighting Her; Miscellaneous Works; and The Unity of Law*. See *Britannica*, Vol. XIX, pp. 384, 385.

CAREY, MATHEW, publisher, born in Ireland, Jan. 28, 1760, died in Philadelphia, Pa., Sept. 16, 1839. He

was well educated, and selected as his life-work the printing and book selling business. Among his first pamphlets was an inflammatory address to Irish Catholics, which obliged him to flee to Paris to escape trouble. Here he made the acquaintance of Benjamin Franklin. He returned after a year to Ireland, where he established the "Volunteer's Journal," a newspaper very bold in tone, which became a political power. In 1784 an attack on Parliament brought on a suit for libel, and he was imprisoned. He sailed to the United States after his liberation, and within two months had started a newspaper, "The Pennsylvania Herald;" in this first appeared accurate reports of legislative deliberations. For six years he published "The American Museum." The yellow fever epidemic of 1793 showed him to be a philanthropist, and afterwards he wrote a history of the epidemic. He founded the Hibernian Society, and assisted in the formation of the first American Sunday-school Society. He published in 1814 the *Olive Branch, or Faults on Both Sides, Federal and Democratic*, a work designed to conciliate the different factions in the United States which disagreed on the subject of the war of 1812. He issued in 1820 the *New Olive Branch*, and two years later appeared his well-known work, *Essays on Political Economy*, which was followed by a series of tracts advocating the protective system as necessary for the good of all classes.

CAREY, a village of Ohio, 16 miles southwest of Tiffin. It contains manufactories of lumber and iron.

CARLIACOU, or VIRGINIAN DEER, a species of deer found in all parts of North America. It is of variable color, light reddish brown in spring, slaty blue in autumn and dull brown in winter. The horns of the adult male are of moderate size, bent strongly backward and then suddenly forward, so as to bring their tips nearly above the nose. The fawn is profusely decked with white spots arranged in lines.

CARIBBEE BARK, or PITON BARK, the bark of *Exostemma Caribbeum*, a small tree of the West Indies and of Mexico, belonging to the natural order *Cinchonaceæ*. It is one of the barks sometimes substituted for the cinchona barks.

CARINARIA, a remarkable genus of gasteropodous mollusks, of the order called *Heteropoda* or *Nucleobranchiata*, having a thin shell, in form somewhat like that of a limpet. The shells of some of the species have been denominated Venus's Slipper. The body is gelatinous, and so transparent that much of its interior organization can be seen. The species are all marine. See *Britannica*, Vol. XVI, p. 654.

CARISSA, a genus of plants of the natural order *Apocynaceæ*. *Carissa Carandas* is a thorny shrub, much used for fences in India. The fruit, called carandas, is a berry about the size of a small plum, and is used for tarts and preserves.

CARLÉN, EMILIA SCHMIDT FLYGARE, a well-known Swedish novelist, born at Strömstad, Aug. 8, 1807, died at Onfön, Dalecarlia, in 1883. Her first novel, *Waldemar Klein*, appeared in 1838. She was then a widow, having been married in 1827 to M. Flygare. In 1841, she was again married to J. G. Carlén, a lawyer and a poet. Her literary productiveness was remarkable; many of her works have been translated into English, French and German, and largely circulated both in Europe and America.

CARLETON, SIR GUY, Lord Dorchester, a British soldier, born in Strabane, Ireland, Sept. 3, 1724, died at Muidenhead, England, Nov. 10, 1808. He fought gallantly at Louisbourg, Quebec, Belle Isle and Havana. From 1772 to 1775 he governed Quebec.

He led the expedition which invaded New York in 1776 and in 1781, was appointed commander-in-chief of the British army in place of Sir Henry Clinton.

CARLETON, THOMAS, brother of the preceding, and also a soldier, born in 1736, died in Ramsgate, England, Feb. 2, 1817. He served in Wolfe's regiment in 1755, was appointed quartermaster of the army in Canada, was with his brother in the naval conflict with Benedict Arnold on Lake Champlain, was appointed lieutenant-governor of New Brunswick, and in 1784 governor and commander-in-chief of Nova Scotia and Canada. He remained in America 19 years; for 14 years after his return to England he retained those offices, the administration being carried on by his deputies. He was advanced in military rank, and in 1803 he was made a general in the British army.

CARLETON, WILL, author, born in Hudson, Mich., Oct. 21, 1845. He graduated at Hillsdale in 1869, visited Europe in 1878 and in 1885, and is well known by his ballads of rural life. He has lectured in England, Canada and some parts of the United States. His collections of published poems are entitled: *Farm Ballads; Farm Legends; Young Folks' Centennial Rhymes; Farm Festivals and City Ballads.*

CARLINE THISTLE (*Carlina*), a genus of plants of the natural order *Compositae*. The name is said to be derived from a legend, that an angel showed the root of one of the species to Charlemagne as a remedy for a plague. This species, *C. acutis*, grows on hills and mountains in the middle latitudes of Europe. It has a very short stem and very large heads of flowers.

CARLINGS, in ship-building, small beams laid fore and aft, and resting upon the main or deck beams. These, with other pieces called "ledges," laid at right angles to them, form a framework by which the deck is supported.

CARLINVILLE, a city in Illinois, the county-seat of Macoupin county. Blackburn University is here located, and there is also a theological seminary. Coal is found here. Population, 1890, 3,293.

CARLISLE, JOHN GRIFFIN, an American statesman, born in Campbell county, Ky., Sept. 5, 1835; taught school in the county, and afterwards at Covington; was admitted to the bar in 1858, and was a member of the House of Representatives from 1859 to 1861. He was elected to the State Senate in 1866, and re-elected in 1869; he was also a delegate at large from Kentucky to the National Democratic Convention in 1833. He resigned his seat in the Senate in June, 1871, and was the same year elected lieutenant-governor, serving until September, 1875. The year following he was alternate presidential elector for the State at large. He was a member of consecutive Congresses from the 45th to the 51st, both inclusive, and was Speaker in the 48th, 49th and 50th Congresses. In 1890 he was elected to the United States Senate as a Democrat, to fill the unexpired term of James B. Beck, deceased, taking his seat May 26, of the same year. His service will end March 3, 1895.

CARLISLE SPRINGS, a village of Pennsylvania, four miles north of Carlisle. It is noted for its mineral spring, and is a favorite summer resort. Population of Carlisle, 1890, 7,620. See *Britannica*.

CARLISTS, the name given to the supporters of the Spanish pretender, Don Maria Isador Carlos de Bourbon. See *SPAIN*, *Britannica*, Vol. XXII, pp. 345, 346.

CARLSON, FREDERICK, born in Upland, Sweden, in 1811. In early life he traveled extensively, studying in different universities, and in 1837 became tutor to the prince royal. He has held

many offices under the government. His literary fame rests upon his historical works, the chief of which is *A History of Sweden*.

CARLUDOVICA PALMATA, the screw pine, a small tropical tree of the order *Pandanaceae*, found in South America. From its leaves are plaited the best quality of Panama hats. Each hat is made from a single leaf, and has no joints.

CARLYLE, a village in Illinois, county-seat of Clinton county, on the Kaskaskia River, about 50 miles east of St. Louis. It contains important manufactories of iron, wagons and plows, and it is seat of a seminary for young ladies.

CARLYLE, ALEXANDER, Scottish Presbyterian ecclesiastic, born Jan. 26, 1722, at Prestonpans, East Lothian (of which parish his father was minister), died at Inveresk, Aug. 25, 1805. He was educated at the Universities of Edinburgh, Glasgow and Leyden, and in 1748 was ordained minister of Inveresk. With Robertson, the historian, he helped to lead the moderate party in the church of Scotland, and enjoyed in succession the highest honors of his connection, being sent to London as the accredited agent of his church, appointed moderator of the General Assembly and dean of the chapel-royal. Carlyle was a man of imposing presence, and of a singularly genial, sagacious and liberal nature. Throughout his long life-time he enjoyed the intimate friendship of some of the most notable men of his time, as Hume, Adam Smith, Smollett and John Home. His *Autobiography*, a charming picture of the social habits of a bygone age, was published in 1860, edited and completed by the Scotch historian, John Hill Burton.

CARLYLE, THOMAS (1795-1881), a British essayist and historian, born at Ecclefechan, a small market town, of Dumfriesshire, Scotland, Dec. 4, 1795. He was the second son of James Carlyle, stonemason, a man of great physical and moral strength, who, though in humble circumstances, was able to give his sons an excellent Scottish education. Thomas received his elementary instruction from his father and mother. His home-teaching was supplemented by attendance at the Ecclefechan school, whence he proceeded in 1805 to Annan Academy, and in 1809 entered Edinburgh University. Except in geometry, his college curriculum was not remarkable, and even in the mathematical class he took no prize. In 1813 he began a fitful preparation for the ministry, which, however, was soon abandoned.

In 1814 Carlyle became mathematical master of Annan Academy, in 1816 assistant teacher at Kirkcaldy, and two years later removed to Edinburgh, where he engaged in private teaching. An introduction to Dr. Brewster led to his writing articles for the *Edinburgh Encyclopaedia*, and subsequently to his translating Legendre's *Elements of Geometry*. At the beginning of the session of 1819 he enrolled in the class of Scots Law; but he found law as unengaging a study as divinity. In 1822, while engaged as a private tutor, he arranged to write a *Life of Schiller* for the "London Magazine," and a translation of the *Wilhelm Meister* of Goethe for an Edinburgh publisher.

In 1824 Carlyle paid his first visit to London, where he remained some months, superintending the publication in book form of his *Life of Schiller*. At this time he made the acquaintance of Coleridge, Thomas Campbell, Cunningham, Procter and other eminent literary men. In the spring of 1825 he removed to a farm near Mainhill, which he had leased, his brother attending to the farming while he himself translated German romances. His marriage with Miss Welsh took place in 1826, and

they at once settled in Edinburgh. Here Carlyle completed four volumes of translations, which were published under the title of *German Romances*, and became a contributor to the "Edinburgh Review."

In 1828 the Carlyles removed to Mrs. Carlyle's property of Craigenputtock, and there they lived for about six years. During this period Carlyle subsisted by writing for a number of reviews. He also wrote a *History of German Literature*, the best parts of which were subsequently published in the form of essays, and in 1833-34 there appeared by instalments, in "Fraser's Magazine," *Sartor Resartus*, his most characteristic work. Carlyle's quiet life at Craigenputtock was varied by occasional visits to Edinburgh, and by a residence of six months in London, during which time he made the acquaintance of John Stuart Mill and John Sterling.

In 1834 Carlyle resolved to try his fortune in London, and in the summer of that year established himself in the house at Chelsea in which he lived till the day of his death. Here he settled down to the writing of his *French Revolution*, which appeared in 1837. During the years 1837-40 he lectured to considerable yet select audiences, and his yearly earnings from these lectures maintained him and his wife till the *French Revolution* not only established his reputation as a literary genius of the highest order, but placed him beyond the possibility of want. In 1838 appeared *Sartor Resartus* in book-form, and the first edition of his *Miscellanies*. In 1845 he published *Cromwell's Letters and Speeches*, perhaps the most successful of all his works, inasmuch as it completely revolutionized the public estimate of its subject. In 1851 he published a biography of his friend John Sterling. From this time Carlyle gave himself up entirely to his largest work, the *History of Friedrich the Second, Called Frederick the Great*, the first two volumes of which were published in 1858, and which was concluded in 1865.

In November, 1865, Carlyle was elected Lord Rector of Edinburgh University, and in the following April the ceremony of his installation took place amid extraordinary demonstrations of enthusiasm. A few days later news reached him in Dumfries of the death of Mrs. Carlyle. His grief developed into remorse when he discovered from certain of her letters and her journal that, during a period of their married life, his unconscious want of consideration for her had caused her much misery. It has also been demonstrated by the *Letters and Memorials of Jane Welsh Carlyle* that at one time they were somewhat estranged. These *Memorials* are of note as proving Mrs. Carlyle to have been one of the keenest critics, most brilliant letter-writers and most accomplished women of her time. Carlyle wrote no important work after his wife's death. In 1871 he was offered and accepted the Prussian Order of Merit in recognition of his having written the life of Frederick the Great, who founded the order. In the same year Disraeli offered him the Grand Cross of the Bath (with the alternative of a baronetcy and a pension, but he declined both. He died at his house in Chelsea, Feb. 5, 1881. A burial in Westminster Abbey was offered, but, in accordance with his own wish, he was laid in the churchyard of Ecclefechan beside his kindred.

Of Carlyle's position in literature it may be said without risk of contradiction, that, for good or evil, he exerted a greater influence on British literature during the middle of the 19th century, and, through that literature, on the ethical, religious, and political beliefs of his time, than any of his contemporaries.

CARMAGNOLE, the name of a popular song and dance which was notorious as the accompaniment of many excesses in the French Revolution. It became popular in the South of France, where it was possibly named after Carmagnola in Italy. Fashion soon adopted the word, which was next applied to a sort of jacket worn as a symbol of patriotism. With the Reign of Terror both the song and jacket, associated with so many dismal recollections, disappeared.

CARMEL, a village of New York, county-seat of Putnam county, 55 miles north of New York city. It is the seat of Drew Seminary for Young Ladies.

CARMEL, Knights of the Order of Our Lady of Mount, instituted by Henry IV of France. The order consisted of 100 gentlemen, all French, who were to attend the king in his wars, and had considerable revenues assigned to them. The order was confirmed by bull by Pope Paul V, in 1607. The great master was created by the king putting about his neck a tawny ribbon, suspending a cross of gold, with the cloak of the order, and granting him power to raise 100 knights. None were admitted but those who had four descents of nobility, both by father and mother.

CARMEN, SYLVA, the pseudonym of Elizabeth, Queen of Roumania, born Dec. 29, 1843, the daughter of Prince Herman of Wied Neuwied and Maria of Nassau, and married King (then Prince) Charles of Roumania in 1869. Since the death of her only child, in 1874, she has devoted much time to literature. Two poems, printed privately at Leipzig in 1880, were followed by *Sturme* (Bonn, 1881), *Leidens Erdengang* (Berlin, 1882); translated into English as *Pilgrim Sorrow*, by Helen Zimmern, 1884, *Jeherah* (Leipzig, 1882), *Ein Gebet* (Berlin, 1882), *Pensées d'une Reine* (Paris, 1882), and *Petersch-Marchen* (Leipzig, 1883). During the war of 1877-78 she endeared herself to her people by her devotion to the wounded soldiers, and since that time has interested herself in establishing and fostering the national women's industries.

CARMI, a city of Illinois, county-seat of White county, situated at the head of navigation on the Little Wabash, about 100 miles northeast of Cairo. It contains a number of flour-mills and manufactories of woollens and iron.

CARMENATIVES, medicines to relieve flatulence and pain in the bowels, such as cardamoms, peppermint, ginger, and other stimulating aromatics.

CARMÖE, or KARMÖE, an island of Norway, at the entrance of the Bukke Fjord, in the North Sea, 20 miles northwest of Stavanger. It has a population of 6,400, who are principally engaged in the fisheries and in cattle-rearing.

CARNATIUBA PALM, or CARNAUBA PALM, a very beautiful species of palm, a native of Brazil. It attains a height of 20 to 40 feet, and its timber is used in Brazil for a great variety of purposes. The fruit is black, and about the size of an olive. It is sweet, and is eaten raw and also prepared in various ways. Scales of wax cover the under side of the leaves, and drop off when the fallen and withered leaves are shaken. Being collected in this way, the wax is melted into masses, and forms an important article of commerce. See Wax, Britannica, Vol. XXIV, p. 459.

CARNARIA, the name given by Cuvier to the flesh-eaters, or third order of mammals. Cuvier at first included the marsupial quadrupeds in this order, but afterwards, recognizing more fully the great importance of the characteristic from which they derive their name, constituted them into a distinct order; the remaining *Carnaria* being divided into *Cheiroptera*, *Insectivora*, and *Carnivora*.

CARNARVON, HENRY HOWARD MOLYNEUX HERBERT, EARL OF (1831-90), born in 1831, died Jan. 28, 1890. He was educated at Oxford, and succeeded his father as fourth earl in 1849. He entered the Upper House as a Conservative, and in 1866 accepted from Lord Derby the office of colonial secretary, but resigned in 1867. On Disraeli's return to power in 1874, Lord Carnarvon resumed office as colonial secretary—once more, however, to resign in January, 1878, in consequence of the dispatch of the British fleet to the Dardanelles. During the brief Conservative administration of 1885-86 he was Lord-Lieutenant of Ireland, and his negotiations with Mr. Parnell gave rise, two years later, to considerable controversy. He was author of *The Druses of Mount Lebanon* (1860); *Reminiscences of Athens and the Morea* (1869); and translations of the *Agamemnon* (1879), and the *Odyssey* (1886).

CARNATIONS, flesh-tints in painting. The art of producing the real color of flesh, from the rarity with which it is acquired by artists, would seem to be one of the most difficult branches of coloring.

CARNATION, in botany, a double-flowering variety of the clove pink. It is a native of the south of Europe, and in its wild state is single-flowering, and of a lilac-purple color.

CARNEGIE, ANDREW, manufacturer, born in Dunfermline, Scotland, Nov. 25, 1835. His father was a weaver, who, in the hope of bettering his family, came to the United States, where the son found employment at Pittsburgh, Pa., in tending a small stationary engine. Dissatisfied with this, the boy became telegrapher for the Atlantic and Ohio Company. While in the employ of the superintendent of the telegraph lines he met the inventor of the sleeping-car, Mr. Woodruff, and, seeing the value of the invention, engaged in the enterprise of getting it into use. This venture laid the foundation for his immense fortune. He became superintendent of the Pittsburgh division of the Pennsylvania railroad; was at one time a member of an oil syndicate which realized \$1,000,000 annually in cash dividends; established, in company with others, a rolling-mill, and in the extension of this last-mentioned enterprise Mr. Carnegie has become the controller of the largest system of iron and steel-works in the world. He has owned and controlled 18 English newspapers. Mr. Carnegie frequently writes on the labor question, and is the author of *An American Four-in-Hand in Britain*; *Round the World*; *Triumphant Democracy: or, Fifty Years' March of the Republic*. Besides carrying on immense business enterprises, Mr. Carnegie has established generous charities. His native country has been remembered in the gift of \$250,000 for a free library in Edinburgh, and in the erection (1879) of extensive swimming baths and the gift of \$40,000 to establish a free library for the use of the citizens of Dunfermline. Bellevue Hospital, in New York city has been endowed with \$50,000 for a Carnegie laboratory; Pittsburgh, Pa., has received \$500,000 for a free library, while Allegheny City has been given half that amount for a music hall and library. Mr. Carnegie has established free libraries for the use of his employés at several places.

CARNIFE FERRY, the place in Nicholas county, W. Va., where a fierce battle was fought between the Federals and Confederates, Sept. 10, 1861.

CARNOCHAN, JOHN MURRAY, surgeon, born in Savannah, Ga., July 4, 1817, died in New York city, Oct. 28, 1887. He was educated in the University of Edinburgh, and was fitted for the medical profession by studying with Dr. Valentine Mott, of New York, and by attending lectures in London, Paris, and Edinburgh. He became an eminent surgeon, and, being possessed of great skill and steady nerves,

he performed many remarkable and delicate surgical operations. For many years he was professor in the New York Medical College.

CARNOT, LAZARE HIPPOLYTE, a son of the celebrated French statesman and mathematician, born at St. Omer in 1801, died in 1888. He was a radical republican of much note. His principal literary works were memoirs of his father, and an able work on *Saint-Simonism*.

CARNOT, MARIE-FRANÇOIS SADI, son of Lazare Hippolyte, born at Limoges in 1837. He became a leader of the strict republicans; was a member of the National Assembly in 1871; of the Chamber of Deputies in 1876; and was successively secretary of the Chamber, under secretary and minister of public works, and minister of finance. He became president of France in 1887.

CARO, ELME MARIE, French philosopher, born at Poitiers, March 4, 1826, died July 13, 1887. He studied at the École Normale, of Paris, at Angers, and Donai; in 1857 became a lecturer at the École Normale, and, ten years later, professor at the Sorbonne. In 1876 he was elected to the French Academy. Caro's Wednesday lectures at the Sorbonne were exceedingly popular. His chief works are: *Le Mysticisme au XVIII^e Siècle* (1852-54); *L'idée de Dieu et ses nouveaux Critiques* (1864); *Le Materialisme et la Science* (1868); *Le Pessimisme au XIX^e Siècle* (1878); *La Philosophie de Goethe* (2d ed. 1880); *George Sand in Les Grands Écrivains Français*, and *Mélanges et Portraits* (1888).

CAROL-TREE. See LOCUST-TREE, Britannica, Vol. XIV, p. 767. See also Vol. III, p. 460, and Vol. V, p. 623.

CARPACCIO, VITTORE (1450-1522), a painter of the early Venetian school, born in Istria about 1450. In 1490-95 he painted nine subjects from the life of St. Ursula, which are now preserved in the Accademia of Venice. About 1494 he executed another work now in the same collection, *The Patriarch of Grado Casting Out a Devil*, which possesses much antiquarian interest, from its accurately detailed view of the Rialto. His next great series of works was the nine subjects from the lives of the Saviour, and Saints Jerome, George, Tryphonius, (1502-08), painted for the school of San Giorgio de Schiavoni, and still preserved there. In 1510 he executed the *Presentation in the Temple*, now in the Accademia, which is usually regarded as his masterpiece. His latest dated works, at Pirano and Pozzale, are inscribed 1519; and he is believed to have died about 1522.

CARPEL, in botany, a simple pistil or one of the several parts of a compound pistil. See Britannica, Vol. IV, p. 141.

CARPENTER, MARY, an English philanthropist, born at Exeter, April 3, 1807, died June 14, 1877. Trained as a teacher, she took an active part in the movement for the reformation of neglected children, and besides advocating their cause in her writings, she founded a ragged school at Bristol in 1846, and several reformatories, one of which, the Red Lodge Reformatory, she superintended. She promoted the Industrial Schools Act of 1857, and some of her proposals were adopted in the amended acts of 1861 and 1866. In the prosecution of her philanthropic labors she visited India four times, had an interview with the Queen in 1868 in connection with her work, and in 1870 instituted the National Indian Association, whose journal she edited. She attended at Darmstadt a congress on women's work, as a guest of the Princess Alice, and visited America in 1873. Her plan of day-feeding industrial schools in connection with school boards was adopted in 1876. Besides her reformatory writings she published *Our Convicts* (1864), *The Last*

Days of the Rajah Rammohan Roy (1866), and *Six Months in India*.

CARPENTER, MATTHEW HALE, Senator, born in Moretown, Vt., Dec. 22, 1824, died in Washington, D. C., Feb. 24, 1881. He studied military science at West Point for two years, then went to Vermont, where he read law with Paul Dillingham, who afterwards became governor. Mr. Carpenter was in the office of Rufus Choate in 1847, but the following year he removed to Beloit, Wisconsin. He was engaged in the *quo warranto* proceedings against Gov. William A. Barstow, of Wisconsin, and was the successful lawyer in vindicating the government reconstruction acts of 1867, in the McCordle case of 1868, when Jeremiah S. Black was opposing counsel. This was a test case, and the most important ever tried up to that time before the U. S. Supreme Court. From 1869 to 1881 he served in the U. S. Senate with the exception of one term. Senator Carpenter was a war Democrat, but in the particular tenets of his political faith disagreed with many of his party. He opposed the fugitive slave law, advocated emancipation, and the enfranchisement of the slaves, and believed that the State and government should control railroads and other semi-public organizations.

CARPENTER, PHILIP PEARSALL, naturalist, born in Bristol, England, Nov. 4, 1819, died in Montreal, Can., May 24, 1877. Educated in Edinburgh University and the Manchester new college, he became a Unitarian minister and held several pastorates, becoming widely known for his benevolence. For years he studied conchology and became an authority on this subject. He catalogued the Mazatlan shells of the British Museum and arranged collections of shells for the Smithsonian and other American institutions. He presented valuable collections of shells to the British Museum and to McGill University.

CARPENTER, WILLIAM BENJAMIN, C. B., an English physiologist (1813-85), eldest brother of Mary Carpenter, born at Exeter, Oct. 29, 1813, died Nov. 19, 1885. He was educated at Bristol, passed some time in the West Indies, and afterwards studied medicine at Bristol, London, and Edinburgh. His graduation thesis (1839) on the nervous system of invertebrate animals prepared the way for his *Principles of General and Comparative Physiology*, one of the earliest works giving a general view of the science of life. Removing to London in 1844, he was appointed Fullerian Professor of Physiology at the Royal Institution, lecturer or professor at the London Hospital and University College (1849), examiner at the University of London, and its registrar (1856). He also edited (1847-52), the *British and Foreign Medico-Chirurgical Review* and a *Popular Cyclopædia of Science*. On his retirement in 1879 he received the distinction of C. B. While vice-president of the Royal Society he secured government aid in the investigations in marine zoology.

Carpenter and his colleagues made three voyages to the North Atlantic and Mediterranean. He made valuable researches on the *Foraminifera*; on the *Eozoon Canadense*; on feather-stars and crinoids. His deep-sea explorations led him to advocate the doctrine of vertical ocean circulation sustained by opposition of temperature only, independent of and distinct from the horizontal currents produced by winds. See ATLANTIC, Britannica, Vol. III, pp. 22-24.

Carpenter received medals from the Royal and Geological Societies, and was corresponding member of the Institute of France (1873). The more important of his writings are: *Principles of Human Physiology* (7th ed., 1869); *Principles of Mental Physi-*

ology; Animal Physiology; Manual of Physiology; Zoology and Instincts of Animals; Microscope and its Revelations (5th ed., 1875); *Introduction to the Study of the Foraminifera; Physiology of Temperance* (1870); *Mesmerism and Spiritualism* (1877).

CARPENTER BEE, a name given to the different species of hymenopterous insects of the genus *Xylocopa*, so called because they excavate their nests in wood. In general appearance they resemble common bumble-bees. *X. violacea*, a very large bee with deep violet wings, is found in Southern and Middle Europe; the species are numerous in Asia, Africa, and America. They usually construct their nests in partially decayed wood, cutting out a hole a foot or more in length, which they divide into a number of chambers by partitions of glued saw-dust, the roof of each chamber as it is made forming the floor of the one above. In each of these cells an egg is deposited with a store of honey and pollen.

CARPENTER, SHIP'S, an officer of a ship whose duty it is to attend to necessary repairs of hull, masts and spars. During battle he watches for shot-holes, and is prepared with plugs to stop them up. He makes a daily return to the senior-lieutenant of each day's work, and is expected to be always able to report as to the ship's qualities. He is assisted by a carpenter's mate, and a carpenter's crew.

CARPET-BAGGER, a term applied after the American civil war of 1861-65 to political adventurers from the Northern States, who, taking advantage of the disorganized state of affairs in the South, tried to gain control of the public offices and to exert an influence over negro voters for their own selfish ends. The term implied that they had no property in the district save the contents of their carpet-bags.

CARPET-MAKING. See Britannica, Vol. V, pp. 127-31.

CARPINO, a town of Italy in the province of Foggia, twenty-two miles northeast of San Savero. Population, about 6,000.

CARPOLITES, a generic term applied to fossil fruits. One hundred species of such fruits have been described, seventy of which belong to the Carboniferous system.

CARR, EUGENE A., soldier, born in Erie county, N. Y., March 20, 1830. In 1850 he graduated at the U. S. Military Academy, and up to 1861 was engaged in expeditions against the Western Indians. During the civil war he served under Hunter, Halleck, and Curtis; fighting in Arkansas, Missouri, Mississippi, and being present at the battles of Wilson's Creek, Pea Ridge, Vicksburg, Port Gibson, Champion Hill, Edwards' Station, Black River Bridge, Little Rock, Clarendon and Camden. At the close of the war he was brevetted major-general U. S. A., and since that time has been on frontier duty, where he was engaged against the Apache Indians.

CARR, JOSEPH B., soldier, born in Albany, N. Y., August 16, 1828. In 1849 he entered the militia, and on the outbreak of the civil war his regiment was the first to encamp in the State of Virginia. In 1862 he was made brigadier-general of volunteers. He was present at the battles of Malvern Hill, Fredericksburg, Chancellorsville, and Gettysburg, and during the latter part of the war served on the defenses of James River. For meritorious service he was promoted to the rank of major-general. He was mustered out of service at the close of the war, and became a manufacturer of chain-cable. He was Secretary of State in New York in 1881 and 1883, and was the Republican candidate for lieutenant-governor in 1885.

CARR, SIR ROBERT, born in Northumberland, England, died in Bristol, June 1, 1667. He was one of the royal commissioners of New England appointed by Charles II in 1664. The colonists resisted the interference of the commissioners, and at New Amsterdam the Dutch settlers fought the English fleet. The commissioners conquered the Dutch and re-named the town, calling it New York, in honor of the Duke of York. Fort Orange surrendered to Sir Robert and his associates, and was given the name of Albany. The Swedes and Dutch along the Delaware River were forced to acknowledge the English authority, but the commissioners had some trouble with the people of Boston. In Casco, Maine, the inhabitants received the royal representatives very kindly, and a new government was instituted, which acknowledged the authority of the commission. Having accomplished his mission Sir Robert returned to England, and died the day after his arrival.

CARRERA, JOSÉ MIGUEL, a Chilean soldier, born in Santiago de Chili, July 19, 1782, died in Mendoza, Argentine Republic, Sept. 1, 1815. He was educated in Madrid, fought the French, and came to Chili upon hearing of the revolution, and became sufficiently popular with the chiefs to depose Rosas and to assume the government. He was proclaimed dictator and general July 19, 1812. By acts of severity he managed to keep control of the government till Nov. 27, 1813, when he was deposed. The following year he raised a rebellion, but the Spaniards routed him, and he fled to Mendoza. In 1815 he fell into the hands of his enemies and was executed.

CARRERA, RAFAEL, president of Guatemala, born in the city of Guatemala in 1814, died April 14, 1865. He was of Indian and negro descent, and began life as a drummer boy and herder in 1829. When Guatemala revolted in 1839 Carrera commanded 6,000 Indian mountaineers in the war which followed. He grew in favor with the aristocratic and clerical party, and was able to reinstate as ruler Rivera Paz, and soon became commander-in-chief of the army. Morazán, who had been president, was forced to abandon Guatemala, with the army which had supported him, and Carrera became president on March 21, 1847. He ruled for a year, then resigned and went to Mexico. Wars called him home, and, after defeating the enemies of Guatemala, he was re-elected president in October, 1851. In 1854 he was chosen president for life. Carrera opposed the plan for a confederation of the Central American States. He was an ignorant man, the foe of order and civilization. He administered the government with considerable severity.

CARRIAGE. See *Britannica*, Vol. V, pp. 134-37.

CARRICAL, or KARICAL, a French port within the limits of Tanjore, a district of the presidency of Madras. The town and territory contain 63 square miles, and about 50,000 inhabitants.

CARRICK, the southern division of Ayrshire. The Prince of Wales is Earl of Carrick.

CARRICK-ON-SHANNON, the capital of County Leitrim, Ireland, on the Shannon, 98 miles northwest of Dublin by rail.

CARRICK'S FORD, a place in West Virginia, on the Cheat River, in George Tucker county, where the Confederates under Gen. Garnett were routed from their position by General Grant's forces. The engagement took place July 13, 1861. General Garnett was killed.

CARRIER. See *Britannica*, Vol. V, pp. 138-39.

CARRIER, COMMON, one who, for hire, undertakes the conveyance of goods or passengers. See *Britannica*, Vol. V, pp. 138-39. There is an im-

portant distinction between a *common carrier* and a *private carrier*. A common carrier is bound by law to serve the public generally without favoritism or discrimination, and is held responsible for the safe delivery of all property delivered to his care. Railway companies, steamboat lines, express companies, and other carriers have endeavored to escape or limit this liability by incorporating in the bill of lading a contract to the effect that in case of loss or damage to property in transit the carrier should not be liable beyond a certain sum. But the American courts have held that, in so far as this provision seeks to avoid liability for injury resulting from the negligence of the carrier or its employés, it is against public policy, and therefore void. It seems, therefore, well settled that in case of damage occasioned by negligence the carrier must respond for all losses sustained. On the other hand, the law exempts the carrier from liability for injury occasioned by the "act of God," or by such agencies as human foresight and prudence cannot successfully guard against. Deception or misrepresentations by the owner of the goods, as undervaluation, etc., will also avoid or limit the carrier's liability.

CARRIER PIGEON, a variety of domestic pigeon trained to convey written messages from one place to another. See *Dove*, *Britannica*, Vol. VII, pp. 379-80.

CARRIERE, MORTZ, German philosophical writer, born at Griedel, in Hesse, March 5, 1817, studied at Giessen, Göttingen and Berlin, and in 1853 became professor of philosophy at Munich. He is one of the founders of the modern school of thought which endeavors to reconcile Deism and Pantheism. His important work, *Die Kunst im Zusammenhang der Kulturentwicklung und die Ideale der Menschheit* (5 vols., 1863-74), was so popular that a third edition was commenced in 1876. He has also published *Die Sittliche Weltordnung* (1877), a thoughtful monograph on Cromwell, and works on *Æsthetics*.

CARRINGTON, HENRY BEEBE, soldier, born in Wallingford, Conn., March 2, 1824. In 1845 he graduated from Yale, taught for three following years in Irving Institute, N. Y. then studied law at New Haven and again engaged in teaching, being an instructor in the Ladies' Collegiate Institute of New Haven. He removed to Columbus, Ohio, practiced law, engaged in the anti-slavery movement, and helped organize the State militia. When President Lincoln issued the first call for troops, Carrington, who was adjutant-general of the State, placed nine regiments of militia in western Virginia. During the war he was for most of the time engaged in raising and drilling troops, and he was promoted brigadier-general of volunteers. He was mustered out of this service in 1865, and until 1870 served on military expeditions in Nebraska, Montana and Colorado, and became instructor of military science in Wabash College. The rest of his life has been given to literary pursuits. Among his publications are: *Russia as a Nation*; *American Classics; or, Incidents of Revolutionary Suffering*; *Crisis Thoughts*; *Ab-sa-ra-ka, Land of Massacre* (relating the adventures of his wife on the plains); *Battle Maps and Charts of the American Revolution*; and *Battles of the Bible*.

CARRION-CROW, or BLACK VULTURE, of America, a native of the southern part of the United States. It feeds entirely on carrion. The name is also applied to the common crow of Europe, which sometimes feeds on carrion.

CARRION-FLOWER, a name which has been given to the flowers of many species of *Stapelia*, on account of their odor, which resembles that of putrid meat. The species are natives of the Cape

of Good Hope. The flowers are large and often beautiful.

CARROLL, CHARLES, of Carrollton, born in Annapolis, Md., Sept. 20, 1737, died in Baltimore, Nov. 14, 1832. He was a descendant of powerful and royal families of Ireland. He was educated at the Roman Catholic schools of France and studied law in London. Returning to the United States in 1764, he took an active part in the politics of his native State; was elected to the Continental Congress in 1775, and the following year his name was affixed to the Declaration of Independence—signed as Charles Carroll, of Carrollton, because a relative bore the same name, and whatever responsibility was attached to the act he was willing to bear. Afterwards he served in the Maryland Senate, and in 1788 was the first Senator from Maryland to sit in the National Congress under the Constitution of the United States. From 1791-93 he was again in the United States Senate, and he subsequently served in the State Senate until 1801. He was the last surviving Signer of the Declaration of Independence.

CARROLL, JOHN, Roman Catholic archbishop, born in Upper Marlborough, Md., in 1735, died in Georgetown, D. C., in 1817. He was a cousin of Charles Carroll, of Carrollton; was educated at Roman Catholic schools in France, became a Jesuit priest, and engaged in the struggle of the people of his faith for religious toleration in America. He was the first bishop of his denomination in the United States, and in his official capacity did much for the upbuilding of colleges and other schools. He founded Georgetown College; helped establish St. John's College at Annapolis; laid the foundation of the Baltimore cathedral in 1803, and was created archbishop in 1808. He was the intimate friend of Benjamin Franklin, and officiated in 1803 at the marriage of Prince Jerome Bonaparte with Miss Elizabeth Patterson, of Baltimore.

CARROLL, SAMUEL SPRIGG, soldier, born in Washington, D. C., Sept. 21, 1832. In 1856 he graduated at the United States Military Academy. During the civil war he was engaged in the battles of Cedar Mountain, the Rapidan, Fredericksburg, Chancellorsville, Gettysburg, the Wilderness and Spottsylvania, where he was severely wounded. He was brevetted brigadier-general U. S. A., in 1865, and in 1869 was retired from the army as major-general.

CARROLLTON, a city of Illinois, county-seat of Greene county, 34 miles north of Alton. It contains manufactories of iron, machinery, carriages and flour.

CARROLLTON, a village of Kentucky, county-seat of Carroll county, situated on the Ohio River, at the mouth of the Kentucky. It is the seat of a seminary, and contains manufactories of cotton goods, woolen goods and flour.

CARROLLTOWN, county-seat of Carroll county, Mo. It contains flour mills and a woolen factory, and has a school building which cost \$40,000. It is the seat of a Roman Catholic convent.

CARRONADE, a short iron gun, long superseded, named after the Carron Iron Works, of Scotland, where it was first made. It is lighter than ordinary guns, and has a chamber for powder like mortars.

CARROT. See Britannica, Vol. I, p. 369, and Vol. XII, p. 280.

CARROUSEL, a species of knightly exercise which was very common in the courts of Europe. It was an imitation of the tournament, and for a time seems to have supplied its place. The name is now applied to a revolving contrivance also called a "merry-go-round."

CARRUTHERS, WILLIAM A., novelist, born in Virginia about 1800, died in Savannah, Ga., about 1850. He was educated for the medical profession, but became famous as a writer of sketches and historical romances. Among his published works were: *The Cavaliers of Virginia; or, The Recluse of Jamestown; The Kentuckian in New York; The Knights of the Horse-Shoe; a Traditionary Tale of the Cockeyed Hat Gentry in the Old Dominion; and A Life of Dr. Caldwell*. He also published an account of a perilous ascent of the Virginia Natural Bridge.

CARSE, a term applied in Scotland to low lands adjoining rivers. In Stirlingshire it is restricted to the level alluvial soils, which are only a few feet above the River Forth. In Perthshire it applies to the whole of the slightly undulating lands to the north of the Tay, which form the carse of Gowrie. Carse soils usually consist of argillaceous deposits, which produce crops of great luxuriance.

CARSON, CHRISTOPHER ("Kit Carson"), soldier, born in Madison county, Ky., Dec. 24, 1809, died at Fort Lynn, Colo., May 23, 1868. His boyhood was spent in what was then the wilderness of Missouri, and at the age of seventeen he joined a hunting party, and commenced a roving life on the plains. He served as guide for Gen. John C. Fremont in his explorations; became familiar with more Indian tribes than any man since his time, and could speak their language equally as well as his own; assisted in making treaties between the United States and the Indians; served the Government in New Mexico, Colorado and the Indian Territory during the Mexican and civil wars, and for his conduct in the latter was brevetted brigadier-general.

CARSON CITY, a city of Nevada, capital of the State and county-seat of Ormsby county. It is beautifully situated in the midst of grand and picturesque scenery on a plateau at the base of the Sierra Nevadas, about 15 miles south of Virginia City. It contains a United States branch mint, railroad shops and offices, various manufactories, and several mills for extracting gold and silver, which are found in the vicinity. Carson City was founded in 1858; its incorporation dates from 1876. Its schools are noted for their excellence.

CARSON RIVER, a stream of Nevada, 150 miles long. It rises in the Sierra Nevada Mountains, and flows northeast into Carson Lake, a body of water 15 miles long, which has no outlet.

CARTENS, ASMUS JACOB, an eminent German artist, born near Schleswig in 1754, died at Rome in 1798. In 1762 he went to Copenhagen, where in 1769, he produced his *Baldar's Death* and *Eolus and Ulysses*. He subsequently went to Berlin, where his great composition, the *Fall of the Angels*, with 200 figures, gained for him an appointment as professor in an academy, while his decoration of a saloon in the Dorville Palace obtained for him an introduction to the king and a pension. He also visited Rome, and devoted himself to the study of the works of Michel Angelo and Raphael. His *Visit of the Argonauts to the Centaur Chiron* was distinguished by purity of style, beauty of forms, and fine distribution of light.

CARTE-BLANCHE, a paper authenticated with a signature and entrusted to some one to be filled up as he may think best. Thus, in 1649, Charles II tried to save his father's life by sending from The Hague to the Parliament a signed carte-blanche to be filled up with any terms, which would be accepted as the price of his safety. The term is used figuratively of unrestricted power to act or decide in a particular manner.

CARTEL, during the time of war, an agreement between the belligerents for an exchange of prisoners. Sometimes the name is given to a ship com-

missioned to convey the exchanged prisoners or to carry messages to the enemy. A ship when thus employed must carry no cargo, ammunition, or implement of war, except one gun for signals.

CARTER, PETER, publisher and brother of Robert, born in Earlston, Berwickshire, Scotland, July 19, 1825. In 1832 he came to the United States with his parents; received a common school education, and in 1848 was admitted as partner in the publishing house of Robert Carter and Brothers. He has been connected with temperance, charitable and Sunday-school work, and has written a book concerning his travels in Scotland, and also story books for children.

CARTER, ROBERT, publisher, born near Abbottsford, Berwickshire, Scotland, Nov. 2, 1807, died in New York city, Dec. 28, 1889. His father was a weaver by trade, and the son had little opportunity for gratifying his love of study, being compelled to help in supporting the family. By diligently improving his opportunities, however, the lad acquired some education, and at the age of fifteen opened a night school in his father's cottage. He entered the University of Edinburgh, and made rapid progress, but in 1831 came to America, where his first occupation was school teaching in the city of New York. Here Hon. Schuyler Colfax was one of his pupils in Latin and Greek. In 1834 he became a book-seller, and in 1848 took into partnership his brothers Walter and Peter, and the present firm name, Robert Carter & Brothers, was adopted. Mr. Carter made it a rule to publish books that would do good, not only such as would sell readily. He was a Presbyterian in religious belief, and frequently a delegate to the Synod and the General Assembly.

CARTER, ROBERT, editor, born in Albany, N. Y., Feb. 5, 1819, died in Cambridge, Mass., Feb. 15, 1879. His education was obtained at the common schools and at a Jesuit college of Chambly, Canada. In 1841 he started, in company with James Russell Lowell, a magazine called "The Pioneer." Although the corps of writers was an unusually fine one, the venture was not a success, and but three numbers were issued. In 1847 he was a private secretary to the historian Prescott, and after the latter's death wrote an elaborate article concerning his habits and character. In 1851 he became editor of the Boston "Commonwealth," the organ of the Free-soil party. In 1855 Mr. Carter was one of the editors of the Boston "Telegraph;" the following year he edited the "Atlas;" from 1857-59 he was Washington correspondent for the New York "Tribune;" from 1864-69 he edited the Rochester "Democrat;" and from 1870-73 he edited "Appleton's Journal." Mr. Carter wrote important articles in the first edition of the *American Cyclopaedia*; the articles on "Egypt," "Hindustan" and the history of the United States were written by him. He assisted in the revision of this cyclopaedia. Mr. Carter traveled in Europe for his health; wrote *A Summer Cruise on the Coast of New England*, and at the time of his death left an incomplete volume of memoirs.

CARTER, SAMUEL POWHATAN, naval officer and soldier, born in Elizabethtown, Carter county, Tenn., Aug. 6, 1819. He studied at Princeton; served as midshipman in the navy; was promoted and assigned to the *Ohio*; was engaged off the Mexican coast during the Mexican war; was a member of the expedition which captured the barrier forts, near Canton, China (1856); was appointed instructor in seamanship at Annapolis the following year, and when the war broke out was transferred to the War Department for a time, and assigned to the task of organizing troops in Eastern Tennessee. He was assigned to active duty after-

wards, and while in the field was present at Zollicoffer's repulse at Wild Cat, Ky.; fought at Cumberland Gap; led the cavalry expedition which destroyed nearly 100 miles of railroad track in Tennessee; assisted at the siege of Knoxville; and held various commands up to 1866, when he was mustered out of service, having been brevetted major-general in the preceding year. Returning to the navy he commanded at the Annapolis Academy from 1869-72, and received several promotions, being commissioned commodore in 1878. He retired from the service three years later, and was made rear-admiral in 1882. He died in 1891.

CARTERET, PINLIR, English navigator, sailed as lieutenant in Byron's voyage, and commanded the second vessel in Wallis's expedition to the Southern hemisphere (August, 1766). In the following April, while clearing the Strait of Magellan, Carteret's vessel was separated from the others by a hurricane, and he proceeded alone, discovering Pitcairn, Gloucester and a number of other small islands. He explored the strait between New Britain and New Zealand, and drew a map of the western coast of Celebes. He returned round the Cape of Good Hope to England March 20, 1769. His long voyage added much to the geographical knowledge of his time. He retired from active service in 1794 with the rank of rear-admiral, and died at Southampton, July 21, 1796.

CARTERSVILLE, a town of Georgia, county-seat of Bartow county. Gold and copper are found in the vicinity. It is a shipping point for pig-iron and cotton.

CARTESIAN DEVIL DIVER, or BOTTLE IMP, a philosophical toy, consisting of a small hollow figure, usually in the fancied form of a demon, with a hole near the top. This figure, filled partly with air and partly with water, floats in a tall glass vessel nearly full of water, and covered with an airtight piece of bladder or India-rubber. When this cover is pressed down, the air beneath is compressed, and water enters the floating figure until the air within is brought to an equal degree of compression. In consequence the figure sinks, not rising again till the pressure is removed.

CARTHAGE, a town of Illinois, county-seat of Hancock county, fifteen miles east of Keokuk. It is the seat of a Lutheran college and of a high school.

CARTHAGE, CAPE, a headland of North Africa, projecting into the Mediterranean. Traces of the ancient city of Carthage are found on it to the north of the Tunis lagoon.

CARTHAGE, a city and railroad center, and county-seat of Jasper county, Mo. It is located on Spring River in the midst of a rich lead-bearing section; has factories, schools, parks and a public library. In 1861 a battle was fought here on the morning of July 5, between the Confederate forces and General Siegel's army.

CARTHAGE, a railroad junction of Jefferson county, N. Y., on the Black River. Its extensive water-power is utilized in forges, foundries and manufactories, where leather, nails, furniture and machinery are made.

CARTHAGO, a ruined city of Central America, situated on a river of the same name. Down to 1841 it was the capital of Costa Rica, but being in that year destroyed by an earthquake, it was supplanted by San José. The volcano of the same name, doubtless connected with its overthrow, serves as a landmark to mariners.

CARTHAMINE, a dye obtained by a chemical process from safflower in crystals, which are insoluble in water and slightly soluble in alcohol or ether. When newly precipitated, it immediately

attaches itself to cotton or silk, dyeing it a beautiful red, which is changed to yellow on the addition of alkalis, and may be returned to red again on being treated with acids.

CARTIER, SIR GEORGE ETIENNE, BART., a Canadian statesman, born in St. Antoine, Quebec, Sept. 6, 1814, died in England, May 20, 1873. He was a lawyer who took an active part in the politics of Canada. He participated in the Lower Canada rebellion of 1837, and eleven years later was elected member of parliament. In 1857 he was attorney-general for Lower Canada, in which office he effected many reforms; he was a member the same year of Macdonald's reorganized cabinet, and of the Cartier-Macdonald ministry the following year. He was the leader of the French Canadian Conservatives in parliament.

CARTOUCH, a name once given to a wooden case containing 200 to 300 musket-balls, and eight or ten one-pound cannon balls, fired from a mortar or howitzer. The cartridge-box carried by the soldiers used to be called a cartouch in England, and still is in France.

CARTOUCHE, an oval or oblong figure on which the hieroglyphic characters and names of the Egyptian kings were sculptured. Cartouche is also used to signify a tablet either for ornament or to receive an inscription, so formed as to resemble a sheet of paper or parchment with the edges and ends rolled up. Cartouches are often seen on tombs.

CARTWRIGHT, PETER, clergyman, born in Amherst county, Va., Sept. 1, 1785, died near Pleasant Plains, Sangamon county, Ill., Sept. 25, 1872. His youth was spent in Logan county, Ky., then a region devoid of schools, churches and newspapers. Here he grew up a wild, reckless boy, but at the age of sixteen was converted, joined the Methodist Episcopal Church, was ordained to the ministry in 1803, and three years later became an elder. He became a powerful, and fearless preacher, noted for his eccentricities. A fund of ready wit added to his popularity. He was elected to the legislature of Illinois, and in 1846 was the Democratic candidate who opposed Abraham Lincoln in the contest for a seat in the U. S. Senate. He published several pamphlets, his *Controversy With the Devil* being the most famous.

CARTWRIGHT, SIR RICHARD JOHN, Canadian statesman, born in Kingston, Dec. 4, 1835. Entering parliament in 1863 as a Conservative, he became in 1870 a leader of the Liberals. He has introduced many reform motions in parliament, those bearing on the question of finance being the most important.

CARUCATE, formerly such an amount of land as one team of eight oxen could cultivate in a season. The quantity varied, averaging about one hundred acres.

CARUS, JULIUS VICTOR, a German zoologist, born at Leipsig, Aug. 25, 1823. He studied medicine and surgery at Leipsig, subsequently at Wurzburg and Freiburg, and in 1849 went to Oxford as keeper of the Museum of Comparative Anatomy. In 1851 he returned to Leipsig, and in 1853 was there placed in the chair of Comparative Anatomy. Carus lectured at Edinburgh for Wyville Thomson during his absence on the *Challenger* expedition. His writings, numerous and valuable, consist chiefly of monographs devoted to particular departments of zoology; the more general books are: *System der Thierischen Morphologie* (1853); *Handbuch der Zoologie* (1863); *Geschichte der Zoologie* (1872); and *Prodromus Fauna Mediterranea* (1884).

CARVER, JOHN, governor of Plymouth colony, born in England about 1590, died in Plymouth,

Mass., April, 1621. He was a member of the Puritan company at Leyden, and was an agent sent to secure permission from the Virginia company to found a colony in America. Carver came over in the *Mayflower*, was elected governor by the Pilgrims while the ship was in the harbor of Provincetown, and was reelected in March, 1621, but died suddenly the following month. He ruled over the colony with much discretion.

CARY, ALICE, author, born near Cincinnati, O., April 20, 1820, died in New York city, Feb. 12, 1871. Her youth was spent where the opportunities for education and culture were very limited. At the age of 18 she began to write prose and verse for the press, and her work met with acceptance. In 1852 she removed to New York city, where she attained literary eminence. Among her published works are: *Clovernook Papers*; *Hagar: a Story of To-day*; *The Clovernook Children*; *Lyra, and Other Poems*; *Married, Not Mated*; *Pictures of Country Life*; *Lyrics and Hymns*; *The Bishop's Son*; *The Lover's Diary*; and *Snow-Berries*.

CARY, ANNIE LOUISE, singer, born in Wayne, Kennebec county, Me., Oct. 22, 1842. She graduated at the Female Seminary in Gorham, Me., in 1862, and in 1866 went to Italy for the purpose of having her voice trained by Giovanni Corsi, of Milan. She made her *début* in Italian opera in Copenhagen, and for the next few months sang in the principal European cities. In 1869, having further improved her voice by study at Baden-Baden and Paris, she came to America and sang in Steinway Hall, New York. For 12 years she sang in America with the exception of two winters (1875-76 and 1876-77) spent in Russia. In 1882 Miss Cary married Mr. Raymond, of New York, and retired from the stage.

CARY, PHOEBE, author, sister of Alice Cary, born near Cincinnati, Ohio, Sept. 24, 1824, died in Newport, R. I., July 31, 1871. Her life and her literary work were closely connected with her sister's. She began to write poetry at the age of 17, one of her first poems being the hymn so widely known, commencing: "One sweetly solemn thought." As mistress of the New York home she had less leisure for writing than her sister, and she attempted but little prose. The *Poems of Alice and Phoebe Cary* are mostly the work of Alice. Phoebe's lines are more buoyant and cheerful in tone than are her sister's. Her published works are: *Poems and Parodies*; *Poems of Faith, Hope and Love*; and a number of the hymns published by Rev. Dr. Deems, in *Hymns for All Christians*. Mary Clemmer Ames Hudson, an intimate friend of the sisters, published a memorial of them.

CARY, LOTT, negro slave, born in Charles City county, Va., in 1780, died in Monrovia, Africa, Nov. 8, 1828. He educated himself, displayed remarkable business ability as shipping clerk in a Richmond tobacco warehouse, purchased his freedom and that of his two children and emigrated to Monrovia, where he became a useful and prominent member of the colony, which he served as physician, counselor and pastor. An accidental explosion caused his death.

CARY, SAMUEL FENTON, Congressman, born in Cincinnati, Ohio, Feb. 18, 1811, graduated at the Miami University in 1835, and the Cincinnati law-school in 1837, served as Independent Republican in Congress from 1867 to 1869, and was the Republican who voted against the impeachment of President Johnson. In 1876 Peter Cooper and Senator Cary were the candidates on the National Greenback ticket.

CARYATIDES, a name given to female figures in Greek architecture when applied instead of

columns to support an entablature. See *Britannica*, Vol. II, pp. 407, 461.

CARYOCAR, a genus of large trees of the natural order *Ternstroemiaceæ*, natives of the tropical parts of America. It yields a good timber for ship-building, and produces the delicious nuts called *butternuts*. Its flowers are large and of a purplish-red color. The fruit is a sort of drupe, the fleshy part of which consists of a butter-like substance, which is used in cookery instead of butter.

CARYOPHYLLACEÆ, a natural order of exogenous plants, containing upwards of 1,000 known species, mostly herbaceous, distributed all over the world. Most of them are inconspicuous weeds, but many produce beautiful flowers, and are found a favorite in many gardens, as the pink, carnations, sweet-Williams, etc. A few contain saponine, and afford a substitute for soap.

CARYOPSIS, in botany, a fruit in which the seed and pericarp are so incorporated as to be inseparable and even undistinguishable. The grain of the fruit of grasses, as wheat, barley, rye, maize, etc., is a caryopsis.

CASABIANCA, Louis (1755-98), a French naval officer, born at Bastia about 1755, sat in the National Convention of 1792, and in 1798 was captain of the flagship *L'Orient* in the expedition to Egypt. He was mortally wounded at the battle of the Nile, Aug. 1, 1798; the ship caught fire; his ten-year-old son would not leave him, and both perished in the final explosion.

CASAMASSIMA, a town of Italy, in the province of Bari, 14 miles southeast of the city of that name. It has a convent and two abbeys, and the vicinity produces wine and almonds. Population, 5,600.

CASANOVA, FRANCIS, a celebrated painter of battle-scenes and landscapes, born of Venetian parents in London in 1732, died at Briel in 1805. He was educated in Italy and took up his abode in Dresden. He afterwards went to Vienna, and painted for the Empress Catharine her victory over the Turks.

CASAREEP, or **CASSIRIPE**, a sauce or condiment made from the juice of the bitter cassava or manioc root. It is in highest esteem in Guiana, where it is employed to flavor almost every dish. It is the basis of the favorite West Indian dish called *pepperhot*. See *Britannica*, Vol. V, p. 182.

CASCARILLA, a name given in South America to many different kinds of bitter medicinal barks which form articles of commerce.

CASCO BAY, a body of water, 20 miles long, inclosing about three hundred islands. The city of Portland, Me., is at the western end of the bay.

CASE, AUGUSTUS LUDLOW, rear-admiral U. S. N., born in Newburg, N. Y., Feb. 3, 1813, entered the navy as midshipman in 1828, was promoted through the several grades until 1872, when he was made rear-admiral, and in 1875 was placed on the retired list. He served during the Mexican war, the civil war, and in 1865 was appointed fleet captain of the European squadron. In 1874 the combined European, North Atlantic, and South Atlantic squadrons, which at the time of the *Virginus* difficulties were grouped in the harbor of Key West, were under his command.

CASEMATE, originally a loopholed gallery excavated in a bastion, through which artillery could fire upon an enemy who had gained possession of the ditch. As defense from shells became more important, the term was subsequently applied to a bomb-proof vault in a fortress for the security of the defenders, without direct reference to the annoyance of the enemy.

CASERNE, a barrack or building for the accommodation of the soldiers forming the garrison of a fortified town or post.

CASEY, LYMAN R., an American statesman of North Dakota, was born in York, N. Y., in 1837, and when young removed to Michigan, where he was in the hardware business for many years. He retired from business, traveled and studied for five years, and settled in Dakota in 1882. He is secretary and general manager of the Casey-Carrington Land Company, chairman of the North Dakota Committee on Irrigation, and has held no public office except that of commissioner of Foster county. Elected to the United States Senate as a Republican, Nov. 21, 1889, under the provisions of the act of Congress admitting North Dakota and other States into the Union, he took his seat Dec. 2, 1889. His term of service will expire March 3, 1893.

CASEY, SILAS (1807-82), American soldier, born at Greenwich, R. I., July 12, 1807, graduated at West Point in 1826, served on the frontier in the Florida war, in the war with Mexico and in the civil war. He drilled volunteers at the national capital, fought at Fair Oaks, and presided over the board which examined officers for colored troops. At the close of the war he was brevetted major-general U. S. A., and was retired from the service in 1868. He was the author of a book on *Military Tactics*.

CASEY, SILAS, JR., commander U. S. N., born in Rhode Island, Sept. 11, 1841, graduated at the Naval Academy in 1860, and rose successively to the positions of lieutenant, lieutenant-commander, and in 1874 commander. He took part in the first attack on Fort Sumter and in other engagements in Charleston harbor. In 1886 he commanded the receiving ship *Dale*.

CASHIERING, a punishment for officers in the army and navy. It is more severe than dismissal from service, inasmuch as it disqualifies from entering the public service in any capacity, while dismissal does not.

CASIA, or **POET'S CASIA**, a South European shrub, *Osyris alba*, of the natural order *Santalaceæ*, having small white flowers and red drupes. It has been much admired for its modest beauty. The name is varied in spelling from *Cassia*, a name to which this plant is in no respect entitled.

CASINO (a little house), a place for social reunions. The name is usually applied to a place where musical or dancing *soirées* are held, containing conversation room, billiard room, refreshment room, etc.

CASOLI, a town of Italy, in the province of Chieti, situated on a hill 17 miles south of the city of Chieti. Population, about 6,000.

CASPARI, KARL PAUL, a Norwegian exegete and church historian, born at Dessau in 1814, became professor of theology at Christiania in 1857. His *Arabic grammar* (4th ed., 1875) is in high repute, and his contributions to the study of the Old Testament include works on Obadiah, Isaiah, Micah and Daniel. Besides his *Kirchenhistorische Anekdoten* (1883), he published at Christiania *Quellen zur Geschichte des Taufsymbols und der Glaubensregel* (2 vols., 1866-69), extensions of which appeared in 1875 and 1879.

CASSANDRA, a peninsula in the province of Roumelia, European Turkey, situated between the Gulfs of Salonica and Cassandra. The ancient name of this headland was Pallene. Grain of a superior quality is raised here, and silk-worms are extensively reared; wool, honey and wax are also produced.

CASSATION, COURT OF. In the law of France, the act of annulling the decision of a court or judicial tribunal is called cassation; and the function of cassation, as regards the judgments of all the other courts, is assigned to a special tribunal called the

court of cassation, which may thus be regarded, in a certain sense, as the last and highest court of France.

CASSELL, JOHN, founder of the English publishing firm of Cassell & Co., the son of a Manchester innkeeper, born Jan. 23, 1817, died April 2, 1865. He had no early educational advantages, but fitted himself for his later work by careful self-culture while employed as an apprentice joiner. He went to London in 1836, where he was for some time established as a tea and coffee merchant. Turning his attention to literary work, he issued his "Working Man's Friend" (1750); "Illustrated Exhibitor" (1851); *Popular Educator* (1852), the most popular of all his works, which in a revised form is still on sale; and "Family Paper" (1853). In 1859 he entered into partnership with Messrs. Petter & Galpin, and before his death he shared in the prosperity of one of the largest publishing houses of modern times.

CASSELL, PAUL, a German author and divine, born in Silesia in 1827. He was a Jew, but became a Christian in 1855, while engaged in literary work at Erfurt. He became a member of the Prussian parliament in 1866, but soon renounced politics for theology. His writings are mostly historical and Biblical.

CASSELTON, a thriving town of North Dakota, situated in the fertile wheat producing valley of the Red River of the North, about 25 miles west of Fargo.

CASSICAN, a bird of the genus *Cassicus*, allied to the starling and more closely to the hangnests. They are all American birds of gregarious habits, feeding on fruit and insects and exhibiting surprising skill in the construction of their pouch-like nests.

CASSIDARIA, a genus of gastropod mollusks, family *Cassidae*. The shell is roughly oval, with a wide mouth, a fairly long siphon canal, and without a closing lid. There are six modern Mediterranean species, and five times as many extinct in the Upper Chalk and Tertiary strata.

CASSIDY, WILLIAM, journalist, born in Albany, N. Y., Aug. 12, 1815, died there Jan. 23, 1873. He was a graduate of Union College in 1831; studied law and was admitted to the bar, and in 1840-42 was State Librarian. In 1843 he became editor of the Albany "Atlas," a Democratic daily. In 1856 the "Atlas" and "Argus" were consolidated, and he became editor.

In 1865 the paper was called the "Argus." Mr. Cassidy from 1868 till 1873 was secretary of the Democratic State committee, and framed the celebrated anti-slavery plank which suffered defeat at the convention at Herkimer. In 1872 Governor Hoffman appointed him as one of a committee of 16 to revise the constitution.

CASSIOPEIA, a beautiful constellation of the Northern hemisphere, supposed to represent the wife of Cepheus sitting in a chair with a branch in her hand. In 1572 there appeared in this constellation a new star, which was brighter than Venus. The star gradually diminished in luster, and in March, 1574, it disappeared.

CASSIQUARE, a river of Venezuela, South America. It is about 100 yards in breadth which gradually increases until at its union with the Rio Negro it attains a width of 600 yards. By means of this singular river water communication is established through the Amazon, Orinoco, and their affluents, between the interior of Brazil and the Caracas in Venezuela.

CASSIS, a French liquor prepared from black currants.

CASSIUS, PURPLE OR, a coloring substance of very ancient use, which is prepared by adding a

mixed solution of protochloride and bichloride of tin gradually to a solution of chloride of gold, when a more or less abundant precipitate of double stannate of gold and tin is thrown down. Purple of cassius is employed by the potter to communicate a rich purple or rose tint to fine china, and it also imparts the red color to *Bohemian glass*.

CASSOCK, a long, loose coat, worn by the Episcopal and Catholic clergy. It has a single upright collar, and reaches to the feet. Its common color is black for all orders of the clergy. In the Anglican church, on state occasions, the bishops frequently wear purple. In the Roman Catholic church cassocks vary in color according to the dignity of the wearer, priests wearing black, bishops purple, cardinals scarlet, and the pope white.

CASSOPOLIS, a village of Michigan, county-seat of Cass county. It contains manufactories of lumber, iron, sash, blinds, and furniture.

CAST, CASTING LINE, in angling, a gut-line on which artificial flies are fastened. It is made up of several lengths of gut, knotted together, from two to four yards long. The flies are attached at intervals of about two feet, and the line with its flies is called a *cast*.

CASTANET, a musical instrument of percussion in form of two hollow nut-shells, which are bound together by a band, slung over the thumb and struck by the fingers to produce a thrilling sound in keeping with the rhythm of the music. Castanets were introduced into Spain by the Moors, where they retain the name of castanulas, from their resemblance to the form of the chestnut. They are now widely introduced among other nations, with some variations in form, and are used in the ballet and in the opera.

CASTEGGIO, a town of Piedmont, Northern Italy, five miles northeast of Voghera. It was an important military position as early as the times of the Gallic and Punic wars. Some Roman antiquities still remain, and numerous curious inscriptions and coins have been found. Population, 3,200.

CASTELAR, EMILIO, an eminent Spanish statesman and orator, born in 1832. He joined the revolutionary Republicans in 1868, and, being condemned to death, fled to France. On the abdication of King Amadeo he became minister for foreign affairs, and afterwards President of the Cortes, and President of the Republic in 1873. Since the restoration of monarchy he has devoted himself more to literary pursuits than to politics.

CASTELLAMONTE, a town of Northern Italy, in the province of Turin, 10 miles southwest of Ivrea. It has an old castle, manufactories of earthenware, and a trade in the agricultural produce of the district. Population, 5,660.

CASTELLAN, or CHATELAIN, a name given during the Middle Ages to the keeper of a castle, or *burg*.

CASTELLANA, a town of Italy, in the province of Bari, 25 miles southeast of the city of that name. Population, 9,700.

CASTELLANETA, a town of South Italy, in the province of Lecce. It has several convents and a cathedral. Cotton is grown in the district. Population, 7,600.

CASTELLAZZO, a town of North Italy, about five miles southwest of Alessandria. Population, 6,500.

CASTELLEONÉ, a town of Lombardy, North Italy, situated near the Oglio. It is surrounded by old walls, and has a population of about 6,000.

CASTELLIO, SEVERINUS, a French theologian, born at Dauphiné in 1515. About 1540 he was invited to Geneva by Calvin, and appointed Humanity Professor, but having the misfortune afterwards to differ from the Reformer in religious opinion, he

was banished from the city, and went to Basel, where he spent the rest of his life in extreme poverty. Among his various writings may be mentioned *De Hæreticis*, etc., a treatise which argues against the right of the magistrate to punish heretical opinions; a Latin version of the Old and New Testaments; and a posthumous work, in dialogue, on predestination, election, free-will and faith.

CASTELNUOVO, a seaport town of Dalmatia, Austria, situated near the western entrance of the Gulf of Cattaro. It is surrounded by walls, and defended by two forts and a citadel. It has manufactories of brass, and a trade in the produce of the district, which is fertile. Population, 7,000.

CASTIGLIONE, LAKE OF, a lagoon of Tuscany, in the province of Siena. It lies to the north of Grosseto, and has a length of about 10 miles, with a breadth of one to three miles. Receiving the waters of the Bruna and other rivers, it discharges its waters by a short canal into the Mediterranean.

CASTILLA, RAMON, a Peruvian soldier, born in Tarapacá, Aug. 30, 1797, died in Tiviliche, May 25, 1867. He was brigadier-general of the army of Peru in 1834; was engaged in several insurrections; overthrew the government of Vivanco, and became president of Peru from 1845 to 1851; overcame his successor and ruled from 1854 to 1862, during which period he abolished slavery and other abuses, but allowed corruption, and after laying down his authority in 1862 was in 1867, the year of his death, again engaged in insurrection against the Peruvian ruler.

CASTILLION, a town of France in the department of Gironde, situated on the right bank of the Dordogne, 26 miles east of Bordeaux. It has manufactories of cotton and woolen yarns, nails and cordage. Population, about 4,000.

CASTINE, a town of Maine, situated on the east side of Penobscot Bay, at the mouth of the Penobscot River. It is a port of entry, has an excellent harbor, and is chiefly engaged in ship-building and in the manufacture of cordage, brick and furniture. It is the seat of a State normal school.

CASTING-VOTE, the decisive vote of a presiding officer, when the votes cast by the members of the assembly or house are equally divided. All the officers of a deliberative body are ordinarily members of the assembly, and as such are entitled to participate in the proceedings. The presiding officer does not usually engage in the debate, and votes only when the assembly is equally divided. In some legislative bodies, the presiding officer is not a member; as, for example, in the Senate of the United States; the Senate of New York, and in some other States. The Speaker of the House of Representatives is a member of that body; but the presiding officer of the Senate is not a member of the Senate. The Constitution specially provides that the Vice-President of the United States shall be President of the Senate, but shall have no vote unless the members are equally divided. The same rule is held with reference to the Speaker of the British House of Commons. Neither of these presiding officers are members of the body over which they preside, yet each one holds under the Constitution the casting-vote when there is a tie. If the presiding officer be a member of the body, he may give the casting vote, although he has, by already voting as a member created the tie. Under British parliamentary usage, the governor, in the time of Hastings, had only one vote in council, and in case of an equal division a casting vote, thus seeming to grant him under the exception a double vote.

CASTLE, FREDERICK ALBERT, physician, born in Fabius, N. Y., April 29, 1842. He studied at the

Albany Medical College, made a good record as surgeon in the navy, graduated from Bellevue Hospital Medical College in 1866, settled in New York city, where he is known as a lecturer on the diseases of women and children, the author of medical papers, and the editor of the "American Druggist."

CASTLEFORD, a town in the West Riding of Yorkshire, on the Aire, 10 miles southeast of Leeds. It was formerly a Roman station, and is now the seat of extensive glass-works, manufacturing especially large quantities of bottles. Population, 10,530.

CASTLEMAINE, a town of Victoria, 77 miles northwest of Melbourne by rail. The gold diggings here were among the first discovered in Australia. Population, 5,787.

CASTLE ROCK, a town of Colorado, county-seat of Douglas county, situated near the famous castle rock, about 30 miles south of Denver. The chief industries are dairying and cattle raising.

CASTLES, in heraldry, are often given as charges in the shields of persons who have reduced, or been the first to mount, the walls of a castle in an assault.

CASTLETON, a village of Rutland county, Vt., on Castleton River. A railroad passes through the place. There is here a State normal school, and also manufactories of marbelized slate and agricultural implements.

CASTOREUM, a substance secreted in two glandular sacs in the beaver, and at one time held in the highest repute in medicine, but now chiefly used by perfumers.

CASTRAMETATION, the art of encamping; and a camp is the result of that art.

CASTRI, a village of modern Greece, in the government of Phocis, situated on the south declivity of Mount Parnassus, and worthy of notice, as occupying a portion of the site of the ancient Delphi. The famous Castalian spring, now called the Fountain of St. John, is situated between 200 and 300 yards to the east of the village.

CASTRO, JUAN, the assumed name of a Cuban poet, who was born near Matanzas in 1790, of slave parents, but learned to read and write, and developed marked poetical genius. Some gentlemen purchased his freedom and assisted him in publishing his poems. He published an autobiography, which vividly portrays slave-life in Cuba. The finest of his poems, which are in Spanish, is entitled *The Clock That Gains*.

CASTRO, a seaport town of Asiatic Turkey, capital of the island of Mitylene, situated on the east coast, about 55 miles northwest of Smyrna. It is surrounded with walls and defended by a castle. Population, 6,500.

CASTUERA, a town of Estremadura, Spain, 68 miles southeast of Badajoz. It is situated on the right bank of the Guadalefra, and has manufactories of brick, earthenware, etc., and a trade in agricultural products. Population, 5,690.

CASUAL POOR, persons temporarily relieved without being admitted to the roll of permanent paupers.

CASUARINA, a genus of trees of the natural order *Amentaceæ*, and of the sub-order *Casuarinæ*. The trees are almost exclusively Australian, having a very peculiar appearance, their branches being long, slender, wiry, drooping and green, jointed with very small scale-like sheaths instead of leaves. They resemble arborescent *Equisetaceæ*. Some of the trees are large and produce timber of excellent quality, often called *beef-wood* from its resemblance in color to raw beef.

CASUS BELLI, or a cause of war, the reason alleged by one power for going to war with another.

It is found impossible to reduce these causes or reasons to any definite code, because an ambitious or aggressive power has no difficulty in making a reason to declare to others without acknowledging the real ground.

CASWELL, ALEXIS, educator, born in Taunton, Mass., Jan. 29, 1799, died in Providence, R. I., Jan. 8, 1877. He was at the head of the class which graduated at Brown University in 1822. The following year he became an instructor in Columbian University, remaining four years, and then becoming pastor of a Baptist church in Halifax, N. S., having pursued theological studies during his teaching. He taught for a year in Waterville College, was called in 1828 to the First Baptist church of Providence, R. I., and about this time was called to the chair of Mathematics and Natural Philosophy at Brown University. This he occupied for 35 years, resigning in 1863, but was chosen to serve as president of the University five years later, and held this position four years. He founded the alumni association, was connected with Newton theological institution, president of the Baptist Missionary Union for two years, a trustee and for two years the president of the Rhode Island Hospital, and connected with various other literary and scientific associations.

CASWELL, RICHARD, soldier, born in Maryland, Aug. 3, 1729, died in Fayetteville, N. C., Nov. 20, 1789. He was a member of the legal profession; was in the colonial assembly from 1754 to 1771; a delegate to Congress (1774-75); governor of North Carolina from 1777 to 1779; and was engaged in the war of the Revolution, reaching the rank of major-general. He became comptroller-general in 1782, governor from 1784 to 1786, Senator in 1789, and member and presiding officer of the convention which ratified the Federal Constitution in 1789.

CAT, on shipboard, a name for many of the ropes or lines employed. A *cat-fall* is a rope for heaving up the anchor from the water's level to the bow; it works through *cat-blocks*, and is connected with the *cat-head*. *Cat-harpings* are small ropes for tightening the shrouds.

CAT, or CAT-CASTLE, in the military engineering of the Middle Ages, a kind of movable tower to cover the sappers as they advanced to a besieged place. The garrison sometimes poured down burning pitch and boiling oil from the walls upon the *cat*.

CATABROSA, a genus of grasses formerly included in *Aira*. *Catabrosa aquatica* grows in very moist situations, and is only cultivated in irrigated meadows or on the banks of rivers subject to be overflowed by high tides. Its foliage is peculiarly sweet and much relished by cattle. Its foliage and seeds also afford much food to water-fowl and to some kinds of fish, particularly carp. Its leaves often float, and its stalks seldom rise more than a foot or 15 inches above the surface of the water. It abounds throughout Europe and in the torrid regions of South America.

CATACLYSMAL ACTION, a term applied by geologists to the effects of certain deluges, or other sudden and violent physical action of great extent, supposed to have swept over certain countries. In this way they account for various phenomena which cannot be attributed to the gradual action of ice or that of moderate currents.

CATAFALCO, or CATAFALQUE, a temporary structure of carpentry, intended to represent a tomb or cenotaph, and adorned with sculpture and painting. It was employed in funeral ceremonies. The most magnificent catafalco ever made was that used at the interment of Michel Angelo at Florence.

CATALANI, ANGELICA (1780-1849), a highly celebrated Italian singer, born at Sinigaglia in 1780, and educated in the convent of St. Lucien, near Rome. She made her first public appearance at Venice in her 16th year, and experienced a succession of triumphs in every country in Europe for more than 30 years. In 1830 she purchased a villa in Florence, where she gave free instructions to girls who had a talent for singing. In 1849 she repaired with her two daughters to Paris, where she died of cholera on the 13th of June.

CATALAUNIAN, the ancient name of the wide plain surrounding Chalons-sur-Marne, in the old province of Champagne, France, celebrated as the field of battle where the West Goths and the forces under the Roman general Aëtius gained a victory over Attila, A. D. 451. A wild tradition tells that three days after the fight the ghosts of the fallen myriads appeared on the plain, and renewed the conflict.

CATALDO, SAN, a town of Sicily, in the province of Caltanissetta, five miles west of the town of that name. There are productive sulphur mines in its vicinity. Population, 10,000.

CATALPA, a genus of hardy trees, order *Bignoniaceae*, of which two species, *C. bignonioides* and *C. speciosa*, are natives of the United States, and are common in cultivation as ornamental trees. The catalpa has large simple leaves, terminal panicles of showy flowers, and long pods with winged seeds. Its wood is light and soft, but exceedingly durable, and is used for fence-posts, railway sleepers, etc. *C. longissima* of the West Indies yields excellent timber known as French oak, and the bark is a source of tannin. The Japanese catalpas are small and unimportant.

CATALYSIS, a term applied in chemical physics to a force supposed to be exerted by one substance upon a second, whereby the latter is subjected to change or decomposition, while the former, or acting substance, remains comparatively unaltered, and does not combine with it.

CATAMARAN is a raft formed of three planks lashed together, the middle one serving as a keel, and the other two for the sides. These simple vessels are used by the natives of Madras to maintain communication between ships and the shore, ordinary boats being rendered unsafe by the surf. By the adoption of a similar construction on a larger scale, some of the catamarans are made large and strong enough to carry goods, and even artillery. Catamarans are also used along the sea shore of the West Indies, and on the coasts of South America.

CATAPLASM, an application to diseased or painful parts, for the purpose of promoting suppuration, relieving pain, and stimulating or soothing the skin according to circumstances. A cataplasm may be composed of any moist pulpy substance of sufficient consistence to retain the water without soaking through the thin muslin covering in which it is wrapped. The flaxseed poultice is the most easily made, and is the most satisfactory of all soothing applications.

CATARRHINA, a division of quadrumanous mammals, including those old-world monkeys and apes which have the nostrils close together and turned downward. This section includes the Barbary ape, gorilla, chimpanzee, orang, etc.

CATASAUQUA, a railroad town of Lehigh county, Pa., situated on the Lehigh River. It contains blast-furnaces, rolling-mills, machine-shops and manufactories of fire-brick and railroad cars.

CATAWBA, or GREAT CATAWBA, a river of North Carolina, 250 miles in length. It rises in McDowell county, flows eastward, enters South Carolina at

Rocky Mount, below which place it is called the Wateree River.

CATCHFLY, a common name of several plants of the natural order *Caryophyllaceæ*, which, being clammy in consequence of a peculiar exudation on the calyx, on the joints of the stem, etc., often prove fatal to insects settling upon them.

CATCHPOLE, in England, a sheriff's officer or bailiff, whose duty it is to make arrests. In various places a long pole was in use for catching or holding criminals by the neck, having at the end of it an iron collar with a V-shaped opening, occasionally armed with spikes on the inside.

CATE, WILLIAM H., of Jonesborough, Ark., a lawyer and planter, born in Rutherford county, Tenn., Nov. 11, 1839. He graduated from the University at Knoxville, Tenn., in 1857; was a teacher in the West and South, and served in the Confederate army during the war of the Rebellion. He settled at Jonesborough, Ark., in 1865, and entered the profession of law in 1866. In politics he was a Democrat, and was elected a member of the State legislatures of 1871 and 1873. He was prosecuting attorney of the second circuit in 1878, and elected judge of that circuit in 1884. He was declared elected a Democratic Representative from the First Congressional District of Arkansas to the 51st Congress, but the House of Representatives decided that he was not entitled to the seat. He was elected from the same district to the 52d Congress in 1890.

CATENIPORA, or **HALYSITES**, a genus of fossil lamelliferous corals peculiar to Palæozoic strata. The cells are terminal and oval, arranged like a loose net-work of chains, hence called "chain coral." Vertical anastomosing lamellæ united the cells together, and formed a hemispherical polypidom, sometimes of great size.

CATERINA, SANTA, a town of Sicily in the province of Caltanissetta, situated on a hill near the river Salso. It has manufactories of fine earthenware, and in the neighborhood are found jaspers and agates. Population, about 6,000.

CATESBY, MARK, naturalist, born about 1679, in London, died there Dec. 23, 1749. He traveled in North America from 1710 to 1719, and from 1722 to 1726, and published *Natural History of Carolina, Florida and the Bahama Islands* (2 vols., 1731-43); *Hortus Britannico-Americanus*; and a work on the fishes, reptiles and insects of the Isle of Providencee.

CATESBY ROBERT (1573-1605), a Northamptonshire Catholic, born in 1573, of good fortune and lineage, being sixth in descent from Richard III's Catesby, who was hanged three days after Bosworth. Robert, however, had suffered much as a recusant both by fines and imprisonment, when in 1604 he engaged in the gunpowder plot. He was killed in the defense of Holbeache House, Nov. 8, 1605.

CATHIA, a genus of plants belonging to the natural order *Celastraceæ*, chiefly natives of Africa. *C. edulis*, the *khat* or *kafra* of the Arabs, is a shrub highly valued by them, as its leaves and twigs are used in the preparation of a beverage possessing properties analogous to those of tea and coffee.

CATHARTICS, a name originally for all medicines supposed to purify the system from the matter of disease, which was generally presumed by the ancients to exist in all cases of fever and acute diseases and to require to be separated or thrown off by the different excretions of the body. The principal cathartics are aloes, colocynth, rhubarb, scammony, jalap, senna, epsom and other salts.

CATHARTIDE. See **VULTURE**, Britannica, Vol. XXIV, pp. 301, 302. See also under **BIRDS**, Britannica, Vol. III, pp. 699-778.

CATHARTINE, or **BITTER OF SENNA**, the essential principle in senna, which possesses laxative or purgative properties. It can be isolated as a yellowish-red uncrystallizable solid, which is deliquescent, soluble in water and alcohol, but insoluble in ether. It has a very bitter nauseous taste, and a characteristic odor.

CATHCART, WILLIAM SCHAW, first Earl Cathcart, a British general and diplomatist, son of the ninth Baron Cathcart of Cathcart, Renfrewshire, born Sept. 17, 1755, died June 17, 1843. He was educated at Eton and Glasgow, and admitted an advocate in 1773. He entered the army in 1774, took a prominent part in the American war, and fought with distinction in Flanders and North Germany. In 1803 he was made commander-in-chief in Ireland. In 1807 he commanded the land forces coöperating with the fleet in the attack on Copenhagen, and for his services was made a British peer, with the title of viscount, and received a vote of thanks from both Houses of Parliament. In 1814 he was raised to the rank of earl.

CATHIELINEAU, JACQUES, general of the army in La Vendée in the west of France. He was born at Pin-en-Mauges in 1759, died at St. Florent in 1793. Horrified at the atrocities and despotic acts of the Convention, he placed himself in opposition to it and soon collected around him a body of loyal peasantry, whom he led against and defeated the Republicans in several conflicts. After the victory of Saumur he was appointed commander-in-chief. He died from the effect of a wound received while making an attack upon Nantes.

CATHETER, a name applied to a tubular instrument introduced through the urethra into the bladder to draw off the urine when its discharge is arrested by disease or accident, and also to those used for injecting air or fluids into the Eustachian tube. The Eustachian catheter is generally made of metal or vulcanite, six or seven inches in length with the last inch or less slightly curved. It is introduced into the Eustachian tube along the floor of the nose, and air or fluid, as may be necessary, forced along it by an India-rubber bag, which can be attached to it.

CATHOLICOS, the title of the patriarchs or chief ecclesiastics in the hierarchy of the Armenian church.

CATKIN, in botany, a spike of numerous small unisexual flowers, destitute of calyx and corolla, and furnished with scale-like bracts instead. Examples are found in the willow, oak, alder, birch, etc.

CATLETTSBURG, the county seat of Boyd county, Ky., located at a railroad junction on the Ohio River, at the mouth of the Big Sandy. A State normal school is located here, and the town has a large lumber trade and several manufactories.

CATMINT, or **CATNIP** (*Nepeta cataria*), a plant of the natural order *Labiata*, widely diffused throughout Europe, Asia and North America. It has erect stems, two or three feet high, dense whorls of many whitish flowers, and stalked heart-shaped, velvety leaves, whitish and downy beneath, and its fragrance is very attractive to cats.

CATOPTRICS, that division of geometrical optics which treats of the phenomena of light incident upon the surfaces of bodies, and reflected therefrom.

CATOPROMANCY, a divination practiced by the ancients. It was generally believed that the healthy appearance of a sick person's face in a mirror under water betokened recovery, while a ghastly look indicated certain death. A more modern superstition attached to the looking-glass is that ill-luck will result from the breaking of one.

CATRON, JOHN, jurist, born in Wythe county, Va., in 1778, died in Nashville, Tenn., May 30, 1865.

He practiced law in Tennessee; served under Gen. Jackson in the war of 1812; was elected State attorney; chosen a Supreme Court judge, and was chief justice from 1830 to 1836. In 1837 he became associate justice of the United States Supreme Court, retaining the office up to his death. Judge Catron was a Democrat, a fervent Unionist, and for his opinions on secession was for a time compelled to leave the State.

CATSKILL, a village of New York, county-seat of Greene county, situated on the right bank of the Hudson, 35 miles below Albany. It is the seat of an academy, and contains a variety of manufactories, including woolen goods and paper. In the vicinity are a number of stone-yards and large ice-houses.

CATTELL, ALEXANDER GILMORE, Senator, born in Salem, N. J., Feb. 12, 1816. He was elected to the legislature in 1840; to the United States Senate in 1866; served for two years as a civil service commissioner, being on the first commission ever appointed; was financial agent to London for the government (1873-74); and was engaged in important financial transactions.

CATTELL, WILLIAM CASSIDY, educator, born in Salem, N. J., Aug. 30, 1827. He graduated at Princeton College and Theological Seminary, became professor of Latin and Greek in Lafayette College in 1860, and for three years was pastor of the Pine Street Presbyterian Church at Harrisburg, Pa. In 1863 he became president of Lafayette College, in which capacity he made extensive improvements. He was a director of Princeton Theological Seminary, and at the present time (1891) is corresponding secretary of the Presbyterian Board of Ministerial Relief.

CAUB, a town of Nassau, North Germany, on the right bank of the Rhine, 21 miles northwest of Weisbaden. It has underground slate quarries. It is celebrated as the place where Blucher crossed the Rhine with his army in 1814.

CAUCHON, JOSEPH EDWARD, Canadian author, born in St. Rochs, Quebec, Dec. 31, 1816, died in Whitewood, Northwest Territory, Feb. 23, 1885. He founded in 1842 "Le Journal de Québec," which he conducted until his death. From 1841 till 1867 he represented the county of Montmorency in the Canadian assembly. Under the MacNab-Taché administration he held for two years the office of commissioner to the crown, and was at the same time member of the Executive Council. During the Cartier-Macdonald régime Mr. Cauchon was commissioner of public works. He was speaker of the Senate from 1867 to 1872; president of the Privy Council of Canada from 1875 to 1877, and minister of inland revenue till 1877, at which time he became governor of Manitoba.

CAUCHY, AUGUSTIN LOUIS, mathematician, born in Paris, Aug. 21, 1789, died May 23, 1857. He published in 1815 a *Mémoire sur la Théorie des Ondes*, which was afterwards made the basis of the undulatory theory of light. Between 1820 and 1830 he wrote several important treatises. From 1818 to 1852 he was professor of astronomy at Paris, but refused the oath of allegiance to Napoleon III, and subsequently lived in retirement.

CAUDA-GALLIA GRIT, the lowest sub-division of the Devonian system of North America. The name (literally, "cock's tail") is derived from the feathery forms of a common fossil, supposed to be a seaweed.

CAUDEBEC-LES-ELBEUF, a town of France in the department Seine-Inferieure, 12 miles south of Rouen. It has manufactories of cloth. Population, 10,700. Caudebec is also the name of a town in the same department, situated on the right bank

of the Seine, 26 miles east of Havre. It manufactures cotton, sail-cloth, leather, and soap. Population, 2,100.

CAULAINCOURT, ARMAND AUGUSTIN LOUIS DE, Duke of Vicenza, a French statesman, born at Caulaincourt in 1772, died at Paris in 1827. He entered the army at the age of 15, rapidly attained promotion, and as colonel of a regiment of carbineers distinguished himself in the campaign of 1800. He was made a general of division in 1805, and shortly after created Duke of Vicenza. In 1807 he was appointed ambassador at St. Petersburg. Disputes having arisen between Alexander and Napoleon, Caulaincourt endeavored to restore amity and prevent war; but his proposals being rejected, he resigned his post in 1811, and accepted an appointment in the army of Spain. He was made minister for foreign affairs, and in this capacity attended the congress at Chalillon in 1814.

CAULOPTERIS, a generic name for the stems of fossil tree-ferns found in the Carboniferous and Triassic measures. They are hollow and covered with markings similar to the leaf-scars on recent tree-ferns.

CAURA, a considerable river of Venezuela in Guyana. It rises among the Sierras of the southern frontier, and flows northwest to the Orinoco. Length, about 150 miles.

CAUS, CAULX, OR CAULS, SALOMON DE, French engineer, born at Dieppe in 1576, died in Paris, June 6, 1626. He spent the greater part of his life in England and Germany. He was in the service of the Prince of Wales in 1612, and of the elector palatine at Heidelberg from 1614 to 1620. Returning to France in 1623, he became engineer and architect to the king. His *Raisons des Forces Mouvantes*, etc., published at Frankfurt in 1615, contained a description of an apparatus for forcing up water by a steam fountain, differing only in one detail from that of Della Porta. There is no reason to suppose that the apparatus was ever constructed; but, on the strength of the description, Arago has claimed for De Caus the invention of the steam-engine.

CAUSATION, the act of causing or producing; the act or agency by which an effect is produced.

CAUSE CÉLÈBRE, a convenient French term for a specially interesting and important legal trial, criminal or civil, such as the Douglas cause (1769-71), the Dred Scott case in the United States (1856), the Tichborne case (1871-74). There is a great French collection of *Causés Célèbres et intéressantes* (22 vols., 1737-45), by Gayot de Pitaval, with modern continuations.

CAUSERIE, a name applied to a somewhat short and informal essay on any subject in a newspaper or magazine. More familiar in manner and slighter in structure than the formal essay as usually understood, it is an excellent medium for a writer whose personality interests the reader as much as the value of his thoughts. The name owes its literary currency mainly to the famous *Causeries du Lundi* of Sainte-Beuve.

CAUSTIC, in medicine and in chemistry, the term applied to such substances as exert a corroding or disintegrating action on the skin and flesh. Lunar caustic is nitrate of silver, and common caustic is potash. When used as a caustic in medicine, the substance is fused and cast into moulds, which yield the caustic in small sticks the thickness of an ordinary lead pencil.

CAUTERETS, a fashionable French watering-place in the department of Hautes-Pyrenees, situated 3,250 feet above sea-level in the valley of the Lavedan, 12 miles southeast of Pau. The

permanent population is less than 2,000; but it is annually swelled in summer by 15,000 to 20,000 visitors, for whose accommodation numerous sumptuous hotels and bathing establishments have been built. It is a good center and guide-station for ascents among the Pyrenees. The sulphur springs, twenty-five in number, have been known from Roman times, though their modern reputation dates from the 16th century, when Margaret, sister of Francis I, held her literary court and wrote much of her *Heptameron* at Cauterets.

CAUTERY, in medicine, a term used of any substance which burns the tissues. The *actual* cautery is an instrument with a head or blade of steel, iron or platinum, which is heated in a fire or spirit-lamp. In the *thermo-cautery* (or Paquelin's cautery, from its inventor), the head or blade is made of hollow platinum, so arranged that a flame of benzole can be kept burning in its interior. The *galvano-cautery* consists essentially of a platinum wire, which can be heated to any required degree by passing a strong galvanic current through it.

CAUTION, in the law of Scotland, an obligation undertaken by a second party, whereby he binds himself, failing the primary obligant, to fulfill his obligation, whether it be of a pecuniary nature or otherwise. Cautionary obligations are thus essentially of an accessory nature, and cannot subsist apart from the principal obligation. Cautionary obligations are generally gratuitous, being for the most part undertaken from motives of friendship; but it is by no means uncommon for them to be entered into in consideration of a premium paid by the person guaranteed or by those interested in his fortunes. Judicial caution, in the law of Scotland, is of two kinds—for appearance, and for payment. If a creditor makes oath before a magistrate that he believes his debtor to be meditating flight, he may obtain a warrant for his apprehension; and should he succeed in proving the alleged intention to flee, he may compel him to find caution to abide the judgment of a court. The cautioner, or surety, undertakes that the defender shall appear to answer any action that may be brought within six months. There is also a form of judicial caution called *judicatum solvi*, given in cases of general loosing of arrestment of ships, in which the surety becomes liable for the whole debt.

CAUVERIPURAM, a town of the district of Coimbatore in the presidency of Madras, on the right bank of the Cauvery. It takes its name from the neighboring gorge of 30 miles in length, through the Eastern Ghats, along which the Cauvery finds a passage.

CAVA DEL TIRRENI, a town of Italy, situated in a valley, five and one-half miles northwest of Salerno by rail. It has manufactories of silk, woollens, cotton and linen. Population, 6,339. About a mile distant is the Benedictine monastery of the Trinity, celebrated for its archives.

CAVALCASELLE, GIOVANNI BATTISTA, Italian art writer, born at Legnago, Jan. 22, 1820, early visited the art-centers of Italy, and in 1846 went to Germany, where he met J. A. Crowe, with whom he returned to Italy. Banished for his share in the revolution of 1848, he accompanied Crowe to London, where their first joint work, *Early Flemish Painters* (1857; 3d edition, 1879), was published. Cavalcaselle returned to Italy in 1858, and in 1861 commenced with Crowe the *History of Painting in Italy* (London, five volumes, 1864-71). Other joint works are *Titian* (1876) and *Raphael* (1883). Cavalcaselle is head of the art department in the ministry of Public Instruction at Rome.

CAVALIER, in fortification, is a defense work constructed on the *terre-plein* or level ground of the

bastion. Its uses are to command any rising ground held by the enemy within cannon shot.

CAVALIER, a horseman; a knight. In 1641 the term "cavaliers" was applied to the Partisans of Charles I of England, in opposition to the Roundheads, or friends of the Parliament; and from a term of reproach it came later to be adopted as a title of honor, until, after 1679, it was superseded by "Tory."

CAVALLER-MAGGIORE, a town of North Italy, in the province of Cuneo, 24 miles northeast of Coni. Population, 5,300.

CAVALRY. See *Britannica*, Vol. V, pp. 261-63.

CAVATINA, a short form of operatic air, of a soft character, differing from the ordinary aria in consisting only in one part. The term is applied, however, to airs of any kind.

CAVEAT, a formal warning, entered in the books of a court or a public office, that no step shall be taken in a particular matter without notice to the person lodging the caveat, so that he may appear and object. Thus caveats are frequently entered at the Patent Office to prevent the unopposed granting of letters-patent.

CAVE SPRING, a railroad village of Floyd county, Ga. It has a large cave and a mineral spring, has a State asylum for deaf-mutes, and the Harn School for young men.

CAVY. See *Britannica*, Vol. V, p. 277.

CAWDOR, a village in Nairnshire, Scotland, five and one-half miles southwest of Nairn. Cawdor Castle, near by, is the seat of the Earl of Cawdor. It was founded in 1454, but is one of the three places which tradition has assigned as the scene of King Duncan's murder by Macbeth in 1040.

CAWK, a popular name for a massive variety of the mineral called *Heavy Spar*, or *Sulphate of Baryta*.

CAWKER CITY, a thriving town of Mitchell county, Kan., at the junction of two branches of Solomon River. It has a flour-mill, newspaper office, a high school, and United States land office.

CAXAMARQUILLA, a town in North Peru, province of Pataz, situated on the east bank of the Marañon. Population, 8,000.

CAYES, or AUX-CAYES, a seaport of Hayti, on the southwest coast, 95 miles southwest of Port-au-Prince. Population, 8,000.

CAYLEY, ARTHUR, English mathematician, born at Surrey in 1821. He was educated at King's College, London, and Trinity College, Cambridge, and graduated as senior wrangler, and first Smith's prizeman in 1842. Called to the bar at Lincoln's Inn in 1849, he was for a time established in business as a conveyancer. In 1863 he was elected first Sadlerian Professor of Pure Mathematics at Cambridge, and in 1875 was elected to a fellowship of Trinity College; was President of the Royal Astronomical Society (1872-73), and of the British Association at its Southport meeting in 1883, where his address on the ultimate possibilities of mathematics attracted much attention. In 1882 he gave a course of mathematical lectures at the Johns Hopkins University, Baltimore, and in the same year received the Copley medal of the Royal Society. He has received honorary degrees from Oxford, Dublin, and Leyden. His chief book is an *Elementary Treatise on Elliptic Functions* (1876); a 10-volume edition of his mathematical papers was begun in 1889.

CAYUGA, a village of New York, situated on the eastern shore of Cayuga Lake, which is here crossed by a railroad bridge about a mile long.

CAYUGA LAKE, a beautiful small sheet of water, which separates Cayuga and Seneca counties, N. Y. It is 38 miles long, from one to three miles wide, its greatest depth being 500 feet.

CAYUGAS. See INDIANS, AMERICAN, in these Revisions and Additions.

GAZENOVIA, an educational village of Madison county, N. Y., situated on a small lake 18 miles southwest of Syracuse. It has some manufactories, and is the seat of Central New York Conference Seminary.

CEBALLOS, José, Mexican soldier, born in the city of Durango, March 15, 1830. He commanded a regiment in the national army of Mexico during the administration of President Juarez, and was appointed brigadier-general; waged war on the bandit Losada; deposed, according to military orders, Camarena, governor of Jalisco, and then ruled over that State. When General Diaz became Mexican president, Ceballos plotted against him, but afterwards became one of his strong adherents, and returned to Mexico, where he was restored to rank, given the highest office after that of president—the governorship of the federal district—and chosen as senator. He manifested great enmity toward the newspapers, and several journalists have suffered imprisonment through his orders.

CECROPIA, a genus of *Artocarpaceæ* *C. peltata*, the trumpet-tree of the West Indies and South America; has a hollow stem and branches, exhibiting merely membranous partitions at the nodes. The branches, these partitions being removed, are made into water-pipes and wind instruments. The wood is very light and is used to make floats for nets, and by the Indians in kindling fires by friction against a harder piece of wood. The bast yields a cordage fiber, and the outer bark is astringent; the fruit resembles a raspberry, the buds furnish a potherb, and the juice hardens into caoutchouc.

CEDAR, BASTARD BARBADOS (*Cedrela odorata*), a tree of the natural order *Cedrelaceæ*, a native of the tropical parts of America; it is often upward of 80 feet high, with a trunk remarkable for its thickness. The wood has an agreeable fragrance, and being light and soft it is used for canoes and shingles. In France it is used in making black lead pencils. True Barbados cedar is *Juniper barbadensis*, and is of much less importance.

CEDAR-BERGEN, a mountain range in Cape Colony, stretching north and south on the east side of Olifant River Valley, in Clanwilliam division. The name is from the plantations of Cape cedar (*Haldrymtonia juniperoides*), which are now, however, being fast destroyed. This is the only locality where this species is found.

CEDAR BIRD. See BRITANNICA, Vol. XXIV, p. 461.

CEDAR CREEK, a river of Virginia, which gives name to a battle fought Oct. 19, 1861, between the Federals under Sheridan and the Confederates under Early.

CEDAR FALLS, a city of Iowa, situated on the Cedar River, 160 miles west of Dubuque. It is the seat of a State normal school, and contains a number of mills and various other manufacturing industries.

CEDAR KEYS, a seaport of Levy county, Fla. It is on the Gulf of Mexico, and its harbor is formed by several small islands, on one of which stands a light-house. The town has an ice factory, a large trade in lumber, oysters and pencil-wood, and has a very healthful climate.

CEDAR MOUNTAIN, a battlefield situated in Culpeper county, Va. The action took place Aug. 9, 1862, between the Confederate and Federal forces. It resulted in a severe defeat to the Union army.

CEDAR RAPIDS, a city of Iowa, on the Cedar River, 79 miles southwest of Dubuque, at the junction of the Chicago and Northwestern and the Burlington, Cedar Rapids and Northern railroads. It is

also the terminus of the Dubuque and Southwestern R. R. The Coe Collegiate Institute is situated here, and the city contains in addition a high school and numerous graded public schools. The rapid current of the river at this point provides ample water-power for flour mills and various manufactories of machinery, carriages, and agricultural implements. Population in 1880, 10,104; 1890, 17,997.

CEDAR SPRINGS, a village of South Carolina, about ninety miles northwest of Columbia. It is the seat of the State institution for the deaf, dumb and blind.

CEDILLA (Sp., Fr. *cédille*, It. *cediglia*; from *zeta*, the Greek name for *z*, because it has taken the place of *z* in such words as *lezon*, modern *leçon*), a mark placed under the letter *c* (thus *ç*), especially in French and Portuguese, where it is desired to give *c* the sound of *s* before the vowels *a, o, u*.

CEDELACEÆ, a natural order of exogenous plants, chiefly distinguished by the winged seeds, numerous in each cell of the fruit, which is a capsule. Most of the trees are valuable for their timber. To this order belong mahogany, satin-wood, ton, etc.

CEGLIE, a town in Southern Italy, 21 miles northeast of Taranto. It has a trade in grain, oil and fruit. Population, 13,865.

CELAKOVSKY, FRANZ LADISLAUS, Bohemian poet, and professor of Slav Philosophy, born in Strakonitz, March 7, 1799, died at Prague, Aug. 5, 1852. His principal works are *Echoes of Russian and Bohemian Folk-songs* (1833-40), and a cycle of love-songs and didactic and political poems (1840). He also translated the works of Herder, Goëthe, and Scott.

CELAYA, a town in the Mexican State of Guanajuato, situated on the Rio Laja, about 150 miles by rail northwest of the City of Mexico. It has several fine plazas, handsome churches, and manufactories of cotton and woolen clothes and saddlery.

CELINA, the county-seat of Mercer county, Ohio, situated at a railroad junction on the northwest bank of the Great Reservoir. It has several churches, banks and two planing-mills.

CELLS. See BACTERIA, in these Revisions and Additions.

CELLULOSE, or PAPERINE, a substance consisting chiefly of a dried solution of gun-cotton (pyroxylin). A variety of it can be made with pyroxylin and camphor. It resembles ivory, horn, tortoise-shell, and hardened India-rubber. The pyroxylin is prepared by treating cellulose from such vegetable materials as cotton, rags, paper-maker's half-stuff, or paper itself, with a mixture of one part of strong nitric acid and four parts of strong sulphuric acid. The distillate obtained by distilling wood naphtha with chloride of lime is used as a solvent for the pyroxylin. When the excess of solvent is removed from the pyroxylin, it is mixed with a considerable quantity of castor oil or cottonseed oil, and made into a paste between heated rollers. For a hard compound, the quantity of oil should be less than the pyroxylin. In a plastic condition celluloid can be spread on textile fabrics, or it may be made as hard as ivory, for which it is largely used as a substitute. Billiard balls, piano keys, and combs are made of it. It can be colored to represent amber, tortoise-shell, or malachite. In imitation of red coral it has been a great deal used for jewelry.

CELLULOSE, primarily, the essential constituent of the framework or wall membrane of all plant cells. It is a secretion from the contained protoplasm, but in the advancing growth of the plant the walls become incrustated with resin, coloring matter, etc. It composes the cells of wood as wax

composes the cells of a honey-comb. It is changed to glucose by long boiling with dilute sulphuric acid. A substance resembling parchment is readily obtained by treating unsized paper with cold sulphuric acid. Cellulose is also said to exist in the tunics of *Ascidia*, and in other invertebrates. It is insoluble in water, alcohol, ether, dilute alkalis, and dilute acids. It is remarkable for its insolubility, being dissolvable, so far as at present known, only by an ammoniacal solution of oxide of copper, from which it may be again precipitated. It may be bleached by the action of chlorine water. Skeleton leaves, so often made in phantom bouquets, consist of nearly pure cellulose. They are usually prepared either (a) by boiling the leaves in a dilute solution of caustic soda, and bleaching by an immersion in a solution of hypochlorite of lime; or (b) by suspending the leaves in a mixture of nitric acid and chlorate of potassa for several days. It is isomeric with starch in its composition, and allied to starch, sugar, and inulin. Cotton, and bleached flax, as well as hemp, are nearly pure cellulose. With age it becomes largely transformed into lignin, suberin, or mucilage. In some filter paper, notably the Swedish, it is in almost a chemically pure state. Sugar and gum are nearly allied to it in composition. When pure it is fibrous or spongy, white, translucent and often silky. Under the microscope the fibrous varieties appear like spun glass. It is tough and extremely elastic, with a specific gravity of 1.5.

By dipping paper, or cotton, or linen fabrics in a copper ammonia solution of cellulose, and then passing the sheets between rolls, they are rendered water-proof. Several layers of such sheets of cloth or fiber pressed together form an artificial wood of enormous strength. A plastic mass of this material can be readily prepared suitable for the manufacture of water-pipes, gas-pipes, hats, clothing, boats, etc.

Cellulose, by reason of its peculiar properties, is being largely introduced into ship-building, as it is specially adapted for resisting blows, concussions, or perforations either above or below the water-line. Its component parts are carbon, hydrogen, and oxygen, and its scientific formula is given as $C_{18}H_{30}O_{15}$.

The material used for ship protection is usually made from the ground fiber of the cocoa nut with a small percentage of original fibers. It is extremely light, and has the property of rapidly swelling when wet. A cubic foot weighs about seven and a half to eight pounds. It is practically free from danger of fire, burning very slowly, and with great difficulty when compressed. In France experiments have been made by firing a ten-inch shot through a mattress of cellulose; but the fibers came together and swelled so rapidly that only three and a half gallons per minute of water passed through the aperture, and in a short time the aperture was closed entirely. Cellulose was first used in ship-building in 1884, but so rapidly did it obtain favor that in 1890 the French had introduced it into the construction of some forty vessels of their navy, and in the same year its use was ordered as a means of protection in the construction of ships in Russia, Holland, Japan, and Greece as well as in the American navy. Its cost is about one dollar a cubic foot, or approaching \$350 a ton.

CELT, the name by which certain weapons or implements of early inhabitants of Western Europe are known among archaeologists. Celts are either of stone or bronze.

CEMETERY. See Britannica, Vol. V, pp. 328-32.

CENOTAPH, a monument which does not contain the remains of the deceased. Cenotaphs were

originally erected for those whose bones could not be found. Latterly, the name was applied to tombs built by a man during his life-time, for himself and members of his family.

CENSER, a vase or other sacred vessel used for burning perfumes. Censers were much used in the Hebrew service of the Temple. The censer, called also a *thurible*, is used in the Roman Catholic church at mass, vespers, and other offices. It is suspended by chains which are held in the hand, and is tossed in the air, so as to throw the smoke of the incense in all directions.

CENSUS. See Britannica, Vol. V, pp. 334-40.

CENT, the one hundredth part of a dollar. The Dutch cent is a copper coin. In the United States it is a coin of copper or copper and nickel, and is nearly equal to an English half-penny.

CENTAUREA, a genus of plants of the natural order *Compositae*, sub-order *Cynaraceae*, containing numerous species of annual and perennial herbaceous plants, chiefly natives of temperate and cold regions. The corn-blue-bottle (*C. cyanus*), common in flower gardens, has flowers variously modified by cultivation. The generic name has its origin in an ancient legend concerning the cure of a centaur by one of these species.

CENTAURUS, the *Centaur*, a constellation in the Southern hemisphere, represented by a form half man and half horse. The stars in this constellation are 37 in number. See Britannica, Vol. II, p. 817.

CENTAURY, a genus of plants with pink or rose-colored flowers, of the natural order *Gentianeae*, chiefly natives of the temperate parts of Europe and Asia. The American centaur (*Sabbatia angularis*) is extensively distributed throughout the United States and Canada.

CENTENARY, consisting of a hundred (Latin *centum*); a period of a hundred years, a term now usually employed to signify a commemoration of an event, as the birth of a great man; as, the centenary of Burns's birth, celebrated in 1859; the bi-centenary of Pope in 1888; the centenary of American Independence in 1876.

CENTERING, the framework upon which an arch, or vault of stone, brick, or iron is supported during its construction. The simplest form of centering is that used by masons and bricklayers for the arches of common windows and doors. This is merely a deal-board of the required shape, upon whose curved edge the bricks or stones of the arch are supported until they are keyed in. In building bridges or other structures where arches of great span are to be constructed, the centering is usually made of framed timbers, or timbers and iron combined.

CENTNER, in metallurgy, a weight of 100 lbs.; the pound is divided into thirty-two parts, or half-ounces, the half-ounce into two quarters, and each of these into two drams. In many European countries centner is a common name for a hundred-weight, but the centner of Germany, Austria, Sweden, Denmark, and Switzerland is now fixed at 50 kilos, or 110.23 pounds avoirdupois. The *cental* (100 pounds) of the United States and Great Britain is often called centner.

CENTOFANI, SILVESTRO, an eminent Italian writer, born near Pisa in 1794, died in 1880. He wrote several valuable works on philosophy and literary history.

CENTRAL CITY, the county-seat of Gilpin county, Colo., situated on a railroad among the Rocky Mountains. It has a fine school, and its prosperity is due to the gold mines in the vicinity.

CENTRAL FALLS, a village of Rhode Island, situated on the Blackstone River, about five miles

north of Providence. It contains a variety of important manufacturing and other industries.

CENTRALIA, a city and railroad junction of Marion county, Illinois. The Illinois Central R. R. Company has its machine shops here; there are also various manufactories. The fair grounds of Southern Illinois are located at Centralia.

CENTRALIZATION, a term which has come into general use for expressing a tendency to administer by the central government matters which would otherwise be under local management. The centralizing tendency has been a feature in most of the great states recorded in history. The Roman Empire was one of the most remarkable instances of centralization the world has ever seen.

CENTRAL FORCES, forces whose action is to cause a moving body to tend towards a fixed point called the center of force. By Newton's first law of motion, we know that every body continues in its state of rest or of uniform motion in a straight line except in so far as it is compelled by forces to change that state. From this we learn that, if the speed of a body changes, or if the line of motion be not straight, whether the speed be unaltered or not, some force must be acting. In the latter case the forces acting are called central forces.

CENTER OF GYRATION, the point at which, if the whole mass of a body rotating round an axis or point of suspension were collected, a given force applied would produce the same angular velocity as it would if applied at the same point to the body itself.

CENTER OF MAGNITUDE, or **FIGURE**, the point on which plane figures and curved surfaces would balance themselves, supposing their areas to have weight.

CENTER OF PERCUSSION. If a body receive a blow which makes it begin to rotate about a fixed axis without causing any pressure on the axis, the point in which the direction of the blow intersects the plane in which the fixed axis and the center of inertia lie is called the center of percussion. It is easily proven to be the same as the center of oscillation.

CENTER OF POPULATION. See **POPULATION**, in these Revisions and Additions.

CENTER OF PRESSURE of any surface immersed in a fluid is the point in which the resultant of the pressures of the fluid on the several points meets the surface. When the bottom of a vessel containing fluid, or when a plane immersed in fluid, is horizontal, the pressure on every point of it is the same, being that due to the weight of the column of fluid standing above the bottom or plane.

CENTREVILLE, a city and railroad junction, also the county-seat of Appanoose county, Iowa. It has several manufactories, and a handsome court-house; a stratum of fine coal underlies the town.

CENTREVILLE, a railroad town and the county-seat of Queen Anne Co., Md. It has a foundry, a fine academy, and is situated in a peach-growing section.

CENTRIFUGAL and **CENTRIPETAL** are terms used in botany to designate two different kinds of leaf development or inflorescence, the former term being applied when the development proceeds from the apex toward the base of the axis or leaf, and the latter when it is from the base upwards towards the apex.

CEPHALOPTERA, a genus of cartilaginous fishes of the Ray family, the type of the subfamily *Cephalopteridae*. Among this genus is the devil-fish of the American seas.

CEPHEUS, a northern constellation containing 35 stars, the brightest being of the third magnitude.

CERAMBYX, a genus of coleopterous insects, included among those which, on account of the length of their antennae, are usually known as long-horned beetles. To this tribe belong the musk-beetle, remarkable for its strong and agreeable odor.

CERAMIACEÆ, a sub-order of *Algae*, consisting of seaweeds of a rose or purplish color. Many of them are delicate and beautiful. A considerable number furnish an agreeable article of food, as Irish moss, and possibly the edible birds' nests of the East are made of them.

CERAMIC, a term used to designate the department of plastic art which comprises all objects made of clay, such as vases, cups, bassi-relievi, and the like. See **POTTERY**, *Britannica*, Vol. XIX, p. 600.

CERASTES, or **HORNED VIPER**, a genus of serpents of the family *Viperidae*, natives of Africa and India, having a scale above each eyelid developed into a spine or horn of considerable length. The tail is distinct from the body. *Cerastes vulgaris* of Northern Africa is a species which was known to the ancients, and is very venomous.

CERATE, a compound of wax with other oily and medicinal substances, in such proportions as to have the consistence of an ointment. Simple cerate is made by melting together equal parts of white wax and olive-oil.

CERATITES, a genus of *Ammonitida*, peculiar to, and characteristic of, the Trias, distinguished from the other members of the family by having the lobes of the sutures serrated, while the intervening curves directed toward the aperture are simple.

CERCARIA, a name formerly given to a supposed genus of *Entozoa*, but now generally known to be the young of *trematode worms*. These creatures consist of an oval body with a thread-like tail, and swim about with great activity, but exhibit a strong instinctive propensity to penetrate into the soft bodies of insect larvae, by means of a spine-like weapon projecting from their head. Within the body which it enters, the cercaria loses all its spines, becomes encysted, and awaits its passive migration into an animal of higher kind, there to become a trematode worm.

CERCELEE, or **RECERLEE**: in heraldry, a cross, circling or curling at the ends, like a ram's horn.

CERCOCEBUS, a genus of monkeys, natives of Asia and Africa, of the family *Cynopithecus*. They have large cheek-pouches, large callosities, and long tails. Some of the species of this genus are remarkable for their suppleness and agility.

CERDOCYON, a genus of *Canids*, apparently intermediate between dogs and foxes, natives of South America. Their aspect is thoroughly vulpine, as are also their manners. Some of them add to the dispositions of ordinary foxes a singular propensity to steal and secrete brilliant and gaudy objects. Some are natives of the coldest parts of South America, and have a rich fur.

CEREA, a town of North Italy, about nineteen miles southeast of Verona. Population, 5,930.

CEREALS, seeds, or any other grains used as food. The principal cereals are wheat, rye, oats, corn, buckwheat, rice, etc. See those topics in the several volumes of this work.

CEREBRATION, *Excorsions*, a principle of action of the brain expounded by Dr. Carpenter in the fourth edition of his *Human Physiology*, published in 1853. The doctrine is the same as that of "latent thought," previously expounded in lectures by Sir W. Hamilton. The doctrine of unconscious cerebration as stated by Carpenter, Laycock, and others holds that as there can be no doubt that molecular changes in the cerebrum accompany all

our conscious mental processes, so similar changes may go on in the cerebrum without any consciousness on our part until the complete mental result is presented. It is based on the every-day experience that after one has been vainly trying to recall some name or incident, it will suddenly flash into the mind when one is thinking of some entirely different subject. According to Carpenter the cerebrum put in action by our consciousness has gone on working automatically but unconsciously, until the processes accompanying the mental operation of remembering the name or incident have been completed.

CEREBRINE, or **CEREBRIC ACID**, an organic acid of very complex composition, found in the liver, blood and nerves, but especially in the brain of animals.

CEREMONIES, **MASTER OF THE**: specifically, an officer of the royal household of England, who receives ambassadors and dignitaries. The name came to be used for the supreme authority on etiquette at public assemblies at Bath and elsewhere, and is now popularly applied to any person who regulates the forms to be observed by the company on a public occasion.

CEREMONY, almost any act, when performed in a regular, orderly, and formal manner, and when viewed not with reference to its object, but to the mode of its performance.

CEREOPSIS, a genus of birds of the family *Anatidae*, to which the New Holland goose belongs. They are natives of Australia, and are so named from the remarkable size of their cere.

CERES, a planetoid discovered by Piazzi at Palermo, Sicily, on the first day of the present century. It is the first discovered, and its magnitude is less than that of the moon. It presents the appearance of a star between the seventh and eighth magnitudes. See *Britannica*, Vol. II, p. 806.

CERTHIUM, a genus and the type of a family, *Certhiidae*, of gasteropodous mollusca of the order *Pectinibranchiata*. The species are very numerous. Some are found in lakes and rivers, some in temperate climates, but most of them are tropical, and abound particularly in swamps.

CEROSTROTUM, or **CESTROTUM**, a species of encaustic painting upon horn or ivory, the lines of the design being burned in with the *cestrum*, or burning needle, and wax introduced in the furrows thus made.

CERRO GORDO, a plateau in Mexico, the most easterly on the route from Vera Cruz to the capital. Here April 18, 1847, the United States troops totally defeated the Mexicans.

CERRO LARGO, a department in the northeast of Uruguay, well watered, with large savannas and extensive forests. Area, 5,735 square miles; population, 36,000, chiefly engaged in cattle-raising. Capital, Cerro Largo, or Melo. Population, 5,000.

CERTHIADÆ, a family of birds, placed in the *Insectores* and tribe *Tenuirostres*. They live usually on the trunks and branches of trees, feeding on insects. The wall-creepers, and some others forming the genus *Certhia* are regarded as exhibiting the type of the family.

CERTIFICATE, in the law of England and of the United States, a written statement by a person having a public or official status concerning some matter within his knowledge and authority. In the United States, the word is commonly applied to any formal statement made by a public servant in the execution of his duty, as by a collector of taxes, a postmaster, etc.

CERTIFICATION, in the law of Scotland, the judicial assurance given to a party of the course to be followed by the judge in case he disobeys the

will of a summons, or other writ or order of the court.

CERTIORARI, the writ by which causes are removed from inferior courts of record into the higher or appellate court. Such removal is either before or after judgment in the inferior court. In the United States, certiorari is generally provided for by statute; but where no such provision is made, or no other mode of review of the proceedings of an inferior court has been provided by statute, any superior court exercising common-law jurisdiction has an inherent right to issue this writ.

CERTOSA DI PAVIA, LA, one of the most celebrated monasteries, situated in the neighborhood of Pavia. It was founded in 1396 by Giovanni Galeazzo Visconti, first Duke of Milan, to appease his conscience for the murder of his uncle. The church is a splendid structure in the form of a Latin cross.

CERUMEN, a wax-like substance secreted by certain glands lying in the external auditory canal, or the passage that leads from the external opening of the ear to the membrane of the tympanum. It acts as a lubricant. It possesses a peculiarly bitter taste, which is supposed to prevent insects from entering the auditory canal. It is popularly known as ear-wax.

CERVERA, a town of Spain, in the province of Barcelona, 28 miles east of the city of Lerida. It has manufactories of linen, woolen and cotton fabrics. Population, 5,300.

CERVIN MONT, a mountain of the Pennine Alps, about 40 miles northeast of Mont Blanc. Above an unbroken glacier line, 11,000 feet high, it rises in an inaccessible obelisk of rock, more than 3,000 feet higher. The total elevation of the mountain is 14,863 feet. The Col of Mont Cervin, used as a passage for horses and mules, has an elevation of 10,938 feet.

CERVINARA, a town of Italy, in the province of Principato Ultra, 12 miles northwest of Avellino. It has a trade in the produce of the district. Population, 6,328.

CESNOLA, **LUIGI PALMA DI**, archæologist, born near Turin, Italy, July 29, 1832. He served in the Sardinian army in 1849, in the Crimean war, and on the Union side in the American civil war, attaining the rank of colonel. He was afterwards appointed United States consul to Cyprus, where he made extensive collections of antiquities. These became the property of the Metropolitan Museum of Art (New York city) in 1873. On his return from Cyprus Col. Cesnola was appointed director of the museum. He has written a work entitled *Researches and Discoveries in Cyprus*.

CESSIO BONORUM, a process which the law of Scotland borrowed from that of Rome, and which also appears in most of the continental systems. On making a surrender of his estate to his creditors, the debtor was granted a judicial protection from imprisonment in respect of all debts then due by him.

CESTIUS, **PYRAMID OF**, a Roman monument of the Augstian age, situated close to the Porta San Paolo, partly within the walls of Aurelian. It is in the immediate vicinity of the cemetery where Protestants dying in Rome are buried. The pyramid is 125 feet high, 100 feet in width at the base, and the walls are 25 feet thick.

CESTRUM, the style or spatula used by the ancients in encaustic painting in wax and ivory.

CESTUS, a girdle worn by Greek and Roman women. The cestus of Venus was decorated with beautiful representations, and everything that could awaken love. *Cestus*, or more correctly *castus*, is also the name given to a sort of boxing-glove worn

by the Greek and Roman pugilists. It was at first a mere leathern thong or bandage to strengthen the fist; but afterwards it was covered with knots and nails, and loaded with lead and iron, to increase the force of the blow.

CETEOSAURUS, or CETIOSAURUS, a genus of large dinosaurian reptiles belonging to the Jurassic system. The species attained a length of 50 or 60 feet, and were probably not less than 10 feet in height and of a bulk in proportion. They appear to have frequented the marshes and river-sides of the period, and to have been vegetable-feeders.

CETEWAYO, or CETSIWAYO. See under ZULULAND, Britannica, Vol. XXIV, pp. 827-29.

CETOTOLITES, a name given to fossil cetacean teeth and ear-bones, which occur in great abundance in the red crag of Suffolk, a member of the Pleiocene period. Superphosphate manures have been manufactured from it on an extensive scale.

CETRARO, a town of Italy in the province of Cosenza, situated on the Mediterranean. It has anchovy fisheries. Population, about 3,000.

CEYLON. See Britannica, Vol. V, pp. 359-70. The latest official returns (1891) give the area as 25,365 square miles; population, 2,850,000. The capital, Colombo, has a population of 120,000. Until recently the chief production for export has been coffee; but now more attention is paid to tea, cinchona, cocoanut and other palms. There are 182 miles of railway in operation. The total public revenue for 1889 was 15,299,877 rupees, and the total expenditures 14,906,281 rs. On January 1, 1890, the public debt of the colony amounted to \$11,048,635. This debt was incurred entirely for public works, including 182 miles of railway, the Colombo break-water, and the Colombo water-works. There are under cultivation 1,944,215 acres, of which 715,647 are devoted to rice and other grains; 71,554 to coffee; 207,413 to tea; 656,766 to cocoanut palms; 39,486 to Palmyra palms; 30,083 to cinchona; 17,433 to tobacco; 37,331 to cinnamon; and 716,000 under pasture. The live-stock of the island in 1889 included 5,891 horses, 1,037,216 cattle, 116,202 goats, and 75,375 sheep. Plumbago is a valuable mining product, and in 1889 there were 753 plumbago mines. The declared value of the imports during 1889 was 60,695,135 rs.; and of the exports, 46,924,505 rs.

CEZIMBRA, a town of Portugal, in the province of Estremadura, on a bay of the Atlantic, about 18 miles south of Lisbon. It has active fisheries. Population, 5,000.

CHABAS, FRANÇOIS, French Egyptologist, born Jan. 2, 1817, at Briançon, died at Versailles, May 17, 1882. At first engaged in commerce, he found time to become a linguist; but it was not until 1854 that he devoted himself to the study of hieroglyphics. The first results of his studies appeared in 1856, followed by a series of invaluable books and papers on two important periods of ancient Egyptian history—the conquest of the country by the Hyksos, and the time of their expulsion. Among the more important of his many books are: *Les Pasteurs en Égypte* (1868); *Histoire de la XIX Dynastie et Spécialement des Temps de l'Érode* (1873), and *Études sur l'Antiquité Historique d'Après les Sources Égyptiennes* (2d ed., 1873). From 1873 to 1877 he edited "L'Égyptologie."

CHACONNE, an old dance, probably of Spanish or Moorish origin. The movement is slow, and the music a series of variations on a ground bass of eight bars' length.

CHAD, ST., born in Northumbria; became a pupil of St. Aidan, spent part of his youth in Ireland, and in 666 became bishop of York. Doubt having been cast on the validity of his consecration, he with-

drew in 669, but was immediately made bishop of Mercia, fixing the see at Lichfield. He died in 672, after a life eminent for humility and sanctity.

CHADBOURNE, PAUL ANSEL, educator, born in North Berwick, Me., Oct. 21, 1823, died in New York city, Feb. 23, 1883. He graduated at Williams College in 1848, and studied theology. He subsequently engaged in teaching, and was tutor at Williams in 1851. In 1853 he was licensed to preach, and in the same year was called to the chair of Chemistry and Botany at Williams; and when chosen to a similar chair in Boudoin, he performed the duties of both positions, and held two professorships in medical schools at the same time. He lectured at several colleges and institutes, and conducted scientific expeditions of Williams students to Newfoundland in 1855, to Florida in 1857, to Northern Europe and Iceland in 1859, and to Greenland in 1861. In 1857 he became president of the State Agricultural College of Massachusetts, and from 1867 to 1870 was president of Wisconsin University. In 1872 he was chosen president of Williams College, and the following year he again became president of the Massachusetts Agricultural College. He was a remarkable business man, took considerable part in politics, and was the author of several works, among which are: *Natural Theology; Instinct in Man and Animals; and Hope of the Righteous*. He edited "Public Service of the State of New York."

CHADWICK, EDWIN, K. C. B., a social reformer, born at Manchester, Eng., Jan. 24, 1801, died July 5, 1890. He studied law, and was called to the bar in 1830. He early devoted his attention to questions of social, sanitary and political science, and was by Lord Grey's government appointed an assistant commissioner to inquire into the operation of the poor-laws. His report, published in 1833, commanded great attention, and laid the foundation of the later systems of government inspection. His report on interments in towns (1843) laid the foundation of later legislation on the subject. He took great interest in promoting competitive examinations for government offices, and in almost all questions of social economy, and was an active member of the Social Science Association.

CHADWICK, JOHN WHITE, clergyman, born in Marblehead, Mass., Oct. 19, 1840. He graduated in 1864 from the Harvard Divinity School, was chosen to the pastorate of the Second Unitarian church, of Brooklyn, N. Y., and became widely known for the radical doctrines preached by him, and his articles contributed to Unitarian periodicals. In the list of his published works are: *Life of N. A. Staples; A Book of Poems; The Bible of To-day; The Man Jesus; and A Daring Faith*.

CHÆTODON, a typical genus of a family of bony fishes, known as squamipennes. They are tropical fishes, abounding near coral reefs and are beautifully colored. About seventy species are found in the tropical Atlantic and Indo-Pacific waters. It has one dorsal fin and a moderately long snout, which in some species is used to draw animals from their crevices. It often gets false credit for catching insects by spouting water. The archer-fish is an allied genus.

CHAFER, a common name for beetles or coleopterous insects, which, either in the perfect or larval state, are destructive to plants, particularly those which devour the wood, bark or roots of trees. The word chafer is seldom used alone, but generally with some prefix, as rose-chafer, bark-chafer, etc.

CHAFFEE, JEROME BRNTY, Senator, born in Niagara county, N. Y., April 17, 1825, died in Salem Centre Westchester county, N. Y., March 9, 1886. He lived in New York State for about twenty years, removed

to Michigan, to St. Joseph, Mo., and in 1859 became one of the first settlers in Denver, Colo. Mining ventures brought him wealth, and he was prominent in organizing the territory. He represented it in Congress in 1876, and when it attained statehood he sat for it in the United States Senate. He was an Independent Republican, and chairman of the Republican national committee in 1884.

CHAGNY, an important railway junction and commercial center in the French department of Saone-et-Loire, on the Canal-du-Centre, 32 miles south of Dijon. As the key of the roads to the Loire district, it has been strongly fortified. Population, 4,291.

CHAGRIN FALLS, a village of Cuyahoga county, Ohio, on the Chagrin River. It has iron foundries, and various mills, where water-power is applied. It has good flagstone quarries.

CHAIN, in surveying, a measure 22 yards long, composed of 100 iron links.

CHAIN-MAIL, or CHAIN-ARMOR, an armor much used in the 12th and 13th centuries. It consisted of hammered iron links connected into the form of a garment. Such armor was much more flexible and convenient to the wearer than one formed of steel or brass plates, but was less fitted to bear the thrust of the lance.

CHAIN-SHOT, destructive missiles formerly used in naval warfare. They consisted of two balls connected by a piece of chain eight or ten inches in length, and were fired collectively from the gun. The chain enabled the balls to catch and destroy objects which otherwise might have escaped.

CHAINS, on shipboard, strong iron links or plates bolted at the lower end to the ship-timbers, and having a block or *dead-eye* at the upper end. Their purpose is to fasten down the shrouds tightly.

CHAIRS. See FURNITURE, Britannica, Vol. IX, pp. 849-50.

CHALAZA, in botany, a membrane which unites the nucleus and integuments at the base of an ovule. It is traversed by vessels which supply nourishment to the ovule. The cords which bind the yolk-bag of an egg to the lining membrane at the two ends of the shell, and keep it near the middle as it floats in the albumen, are also called *chalazæ*.

CHALCEDONY, a variety of quartz which constitutes the principal part of many agates, and is generally translucent. It is much used in jewelry and ornaments of all sorts. It occurs in old lavas and trap-rocks, and is found in all parts of the world where these exist. See Britannica, Vol. I, p. 277; Vol. XVI, p. 389; Vol. XVII, p. 776.

CHALCEDONYX, a name given to agates formed of cacholong, or a white opaque chalcledony, alternating with a grayish translucent chalcledony.

CHALCHIHUITL, the Indian name of a bluish-green stone, taken from a quarry near Santa Fé, and by some regarded as a species of turquoise, by others identified with jade. It was valued above gold by the ancient Mexicans, who fashioned it into beads and ornaments.

CHALCIDIDÆ, a small family of short-tongued lizards, natives of tropical America. See Britannica, Vol. XIV, p. 733.

CHALCOGRAPHY, a pedantic term used to signify engraving on copper.

CHALDER, an old Scotch dry measure containing nearly 12 quarters Winchester measure, or 16 bolls.

CHALDRON, a measure formerly used in England for selling coal. It contained 36 heaped bushels.

CHALET, the French-Swiss name for the wooden hut of the Swiss herdsmen on the mountains. The

term is also extended to Swiss dwelling-houses generally, and to picturesque and ornate villas built in imitation of them.

CHALEUR BAY, an inlet of the Gulf of St. Lawrence, Canada, having Quebec on the north and New Brunswick on the south. It measures 90 miles from east to west, is everywhere deep and well sheltered, and is much frequented for its mackerel fisheries.

CHALICE, an ancient name for an ordinary drinking-cup, but now only applied to the cup in which the wine of the holy sacrament is administered. Chalices are commonly made of silver, but it is not unusual for them to be of gold, or gilt and jeweled.

CHALKING THE DOOR, a mode of warning tenants to remove from burghal tenements, long known and still in use in Scotland. A burgh-officer, in presence of witnesses, chalks the most patent door forty days before Whitsunday, having made out an execution of "chalking," which must be subscribed by himself and two witnesses. The execution of chalking is a warrant under which decree of removal will be pronounced by the burgh court, in virtue of which the tenant may be ejected on the expiration of a charge of six days.

CHALKY ISLAND, in New Zealand, near the south extremity of Middle Island. It takes its name from being composed of a mass of white limestone.

CHALYBEUS, a genus of birds remarkable for the brilliancy of their plumage. They are natives of New Guinea.

CHALYBEATE WATERS, waters which contain a considerable proportion of iron in solution.

CHAM, the pseudonym assumed by the caricaturist Amédée de Noé (1819-79), born at Paris in 1819. He studied art under Delaroche, and soon acquired a great reputation as a skillful and witty delineator of the humorous side of Parisian life. In 1834 he began his famous connection with the "Charivari," in which paper and in the "Journal des Pèlerinages" he continued to delight his fellow-citizens until close upon his death in 1879.

CHAMA, a genus of bivalve mollusks, found only in the seas of warm climates. The shell is generally thick, and is foliated with leaf-like projections.

CHAMÆROPS, a genus of palms with fan-shaped leaves, less exclusively tropical than palms in general. Its leaves are employed for various useful purposes, as for thatching, hats, cordage, chair-bottoms, brooms, pasteboard, paper, etc. See Britannica, Vol. XVIII, pp. 189-90.

CHAMALARI, a peak of the Himalayas, 23,944 feet high, between Thibet and Bhutan, 140 miles east of Mount Everest.

CHAMBERLAIN, a thriving city of South Dakota, county-seat of Brulé county, situated on the left bank of the Missouri River, in the midst of a fertile and well-settled district. It is an important center of trade and transportation.

CHAMBERLAIN, DANIEL HENRY, a governor of South Carolina, born in West Brookfield, Mass., June 23, 1835; graduated at Yale in 1862, and the Harvard law-school in 1863. The following year as lieutenant of a Massachusetts colored regiment he entered the army, serving in several of the Southern States. He engaged in cotton-planting in South Carolina after the war; was appointed delegate to the constitutional convention of 1868, and elected attorney-general of the State. In 1874 the Republicans elected him to the office of governor, and in 1876 he was re-elected, but the result was opposed and questioned by the friends of the defeated candidate, Wade Hampton, and after holding office for

more months Gov. Chamberlain resigned and went to New York city, where he resumed his legal work.

CHAMBERLAIN, THE RIGHT HON. JOSEPH, M. P., born in London in July, 1836, and educated at University College. He joined the firm of Nettlefold, screw-makers of Birmingham, and for many years devoted himself almost entirely to business. Elected mayor of Birmingham in 1873, reelected in 1874 and again in 1875, his term of office was remarkable for the expeditious dispatch of corporate business. About this period his name was brought prominently before the public by several articles written by him for the "Fortnightly Review," in which he expressed very advanced political and educational views. In 1876 Mr. Chamberlain was elected M. P. for Birmingham without opposition, and from that date his career is to be traced in Parliament and on the public platform. On the return of the Liberals to power in 1880 he was appointed president of the Board of Trade, with a seat in the cabinet. His influence as a political leader increased rapidly outside the House, and on his exit from office in 1885 he was elected for the western division of Birmingham, and held the office of president of the Local Government Board until his divergence of views on the Irish policy of Mr. Gladstone caused his resignation (March, 1886). He was subsequently appointed British commissioner to the Conference at Washington for the settlement of the fishery disputes between Canada and the United States. He revisited the United States on the occasion of his marriage with Miss Endicott (Nov. 15, 1888). His speech in the House of Commons in February, 1890, on free education was the subject of much comment.

CHAMBERLAIN, JOSHUA LAWRENCE, soldier and educator, born in Brewer, Me., Sept. 8, 1828. He graduated at Bowdoin in 1852, and at Bangor theological seminary three years later. From 1856 to 1865 he held professorships in Bowdoin College with the exception of the time of the civil war, during which he served gallantly, being several times wounded, and was brevetted major-general. He was elected governor of Maine in 1866, and served till 1871, being then chosen president of Bowdoin College; this office he held till 1883. In 1876 he was elected major-general of the State militia.

CHAMBERS, CHARLES JULIUS, author, born at Bellefontaine, Ohio, Nov. 21, 1850, graduated at Cornell in 1870; became special correspondent in the West Indies, Europe, Canada and the United States for the "New York Herald," equipped a canoe expedition to Lake Itasca in 1872, and in 1875 simulated insanity, and was incarcerated for several weeks in an insane asylum for the purpose of ascertaining how such people are treated. He is a contributor to current literature, and has published *A Mad World; On a Margin; and Lovers Four and Maidens Five*.

CHAMBERS, TALBOT WILSON, Reformed Dutch clergyman, born in Carlisle, Feb. 25, 1819, graduated at Rutgers in 1834 and studied theology, being licensed to preach in 1838, and ordained to the pastorate of the 2d Reformed Dutch church in Somerville, N. J. In 1850 he became pastor of the Collegiate Dutch church of New York city. He was on the American committee which revised the Old Testament.

CHAMBERS, WILLIAM, LL.D. (1800-83), publisher, born April 16, 1800, at Peebles. He received a fair elementary education, but owing to his father's misfortune his schooling terminated with his 13th year. The family migrated to Edinburgh in 1813, and next year William was apprenticed to a book-seller. When his five years were up he

started business in a humble way for himself. Between 1825 and 1830 he wrote the *Book of Scotland*, and in conjunction with his brother Robert a *Gazetteer of Scotland*. His experience gained as a book-seller and printer resulted in the founding of "Chambers's Edinburgh Journal" in 1832. This was about six weeks in advance of the "Penny Magazine," and may be considered the pioneer of that class of cheap and popular periodicals, of a wholesome kind now so generally diffused. At the end of the 14th number he united with his brother Robert in founding the business of William and Robert Chambers, in which they were associated in writing, editing, printing and publishing. W. & R. Chambers issued a series of works designed for popular instruction, including, besides the "Journal," *Information for the People*, two volumes; the "Educational Course" series; *Cyclopaedia of English Literature*, two vols.; *Miscellany of Useful and Entertaining Tracts*, 20 vols.; *Papers for the People*, 12 vols.; and the *Encyclopaedia*, 10 vols. (1859-68; new edition, 1888-92.)

In 1859 William founded and endowed an institution in his native town for purposes of social improvement. Twice elected Lord Provost of Edinburgh he occupied that office for four years, during which he promoted several important public acts, including one for the improvement of the older part of the city, which has resulted in a great diminution of the death-rate. He also carried out at his own cost a thorough restoration of St. Giles's Cathedral. He died May 20, 1883, having shortly before received the offer of a baronetcy. He was made LL.D. of Edinburgh in 1872. A statue has been erected to his memory in Edinburgh. Besides many contributions to the "Journal" he was author and editor of various volumes, and wrote the *Youths' Companion and Counsellor*, *Ailie Gilroy, Stories of Remarkable Persons*, and *Historical Sketch of St. Giles's Cathedral*.

CHAMBERS, private rooms attached to most of the courts in which the judges and chief clerks transact a large amount of judicial business. Counsel attend in chambers only in important matters.

CHAMBERSBURG, a town of New Jersey, a suburb of Trenton. It is the seat of an academy, a hospital, and a convent.

CHAMBERSBURG, a town of Pennsylvania, county-seat of Franklin county, situated on the east bank of the Conococheague Creek, about 50 miles west of Harrisburg. It is the seat of Wilson College, and of a great variety of manufacturing industries.

CHAMBERTIN, a famous red Burgundy wine obtained from a vineyard in the French department of Côte-d'Or, seven miles south of Dijon. It ranks among the chief red wines of the world.

CHAMBORD, HENRI COMTE DE, born in Paris in 1820, died 1883. See Britannica, Vol. IX, p. 620.

CHAMBRE ARDENTE (fiery chamber), a name given at different times in France to an extraordinary court of justice, probably on account of the severity of the punishments which it awarded, the most common being that of death by fire. In 1535 Francis I established an inquisitorial tribunal and a chambre ardente. Both were intended for the extirpation of heresy. The former searched out cases of heresy and instructed the processes, while the latter both pronounced and executed the final judgment.

CHAMFLEON, a southern constellation within the antarctic polar circle, containing nine stars.

CHAMFERING, in architecture, an angle which is slightly pared off is said to be chamfered. Chambers in Gothic architecture have frequently ornamental terminations of various kinds.

CHAMOND, St., a town of France, in the department of Loire. It is well built, has extensive manufactories of ribbons and stay-laces; also several silk mills, numerous iron furnaces and foundries. Population, 13,482.

CHAMORERIL, a lake of Ladakh, or Middle Thibet. It lies at a height of 15,000 feet above the sea, on the plateau between the upper waters of the Sutlej and of the Indus, girt by mountains which rise 5,000 feet above its own level.

CHAMPAC, or CHAMPAK, an Indian tree, *Michelia champaca*, natural order *Magnoliaceae*, possessing great beauty both of foliage and flowers, and held in high esteem by Brahmans and Buddhists. It is planted about their temples, and images of Buddha are made of its wood. Its beautiful yellow flowers and their sweet perfume are much celebrated in the poetry of the Hindoos. The timber of this and other species is useful and fragrant, and the bark and root are employed in native medicine.

CHAMPAIGN, a city and railroad center of Champaign county, Ill., 128 miles south-west of Chicago, in the midst of a rich agricultural region. It has a pretty park of 10 acres, and a young ladies' seminary. Pop. in 1890: city, 5,839; township, 6,619.

CHAMPARTY, or CHAMPERTY (a Norman-French word, derived from *champipars*): in law, a bargain whereby the one party is to assist the other in recovering property, and is to share in the proceeds. All such bargains are illegal, and therefore null and void. More particularly, an agreement to advance funds or supply evidence or professional assistance, for remuneration contingent on success, and proportional to, or to be paid out of, property recovered, is illegal; so is a purchase by an attorney from his client of the subject-matter of a pending suit; so is every such purchase if the real object is only to enable the purchaser to maintain the suit. A man may, however, lawfully sell evidence, and may lawfully purchase an interest in property, though adverse claims exist which make litigation necessary for realizing that interest.

CHAMPFLEURY, the assumed name of Jules Fleury-Husson, French author, born at Laon, Sept. 10, 1821. In a number of early pieces for the theater, as well as later romances, he has achieved some distinction as a realistic writer. Works of greater value, however, are those on the history of caricature, of literature, and of art, from 1825 to 1840, and his *Bibliographie Ceramique* (1882).

CHAMPION. In the judicial combats of the Middle Ages women, children, priests and aged persons were allowed to appear in the lists by a representative, and such hired combatant was called a champion (see *Britannica*, Vol. XVII, p. 820). In the age of chivalry, it signified a knight who entered the lists on behalf of any one incapable of self-defense. In England the crown had its champion, who, mounted on horse back and armed to the teeth, challenged, at every coronation at Westminster, all who should deny the king to be the lawful sovereign.

CHAMPION HILLS, Hinds county, Miss., the scene of a severe conflict between General Grant's army and the Confederates under General Pemberton. It was fought May 16, 1863, and is sometimes called the battle of Baker's Creek.

CHAMPLAIN, in American geology, a term originally applied to a portion of the Paleozoic series of the State of New York, and subsequently given by Professor Dana to the period succeeding the glacial. The Champlain period is to some extent equivalent to the Post-glacial period of English geologists.

CHAMPLAIN LAKE, a narrow body of water 125 miles long, which forms part of the boundary be-

tween the States of New York and Vermont. It extends from Whitehall, N. Y., to Canada. Two important battles were waged upon this lake between the British and American forces. The dates of the battles are Oct. 13, 1776, and Sept. 11, 1814.

CHAMPLIN, JAMES TIFT, educator, born in Colchester, Conn., June 9, 1811, died in Portland, Me., March 15, 1882. He graduated with the first honor in the class of 1834 at Brown University, taught there for three years, was pastor of a Baptist church in Portland, Me., from 1838 to 1841; was called to a professorship of Waterville (now Colby University), and became president there in 1857, serving till 1873. He edited *Demosthenes on the Crown*; *Demosthenes's Select Orations*; *Æschines on the Crown*; and published educational works, such as the *Text-book of Intellectual Philosophy*; *First Principles of Ethics*, and *Constitution of the United States with Brief Comments*.

CHAMPLIN, JOHN DENISON, author, born in Stonington, Conn., Jan. 29, 1834, graduated at Yale in 1856, studied law, and went into practice in New York city. He was connected with the Bridgeport "Standard" and "The Sentinel," after which he wrote for periodicals, and in 1873 edited *Fox's Mission to Russia*. Two years later he was associate editor in the revision of the *American Cyclopædia*. Mr. Champlin wrote many instructive reference books for young people, and a description of a coaching trip in England with Andrew Carnegie in *Chronicle of the Coach*, and is editor of Scribner's art cyclopædias.

CHAMPLIN, STEPHEN, naval officer, born in South Kingston, R. I., Nov. 17, 1789, died in Buffalo, N. Y., Feb. 20, 1870. When 16 years of age he went to sea, and at 23 years of age engaged in the naval operations of the war of 1812. He commanded successively the ships *Scorpion*, the prize ships *Queen Charlotte* and *Detroit*, the *Tigress*, the schooner *Porcupine*, the receiving ship *Fulton*, and the *Michigan*. In 1855 he was placed on the retired list, and in 1862 promoted to the rank of commodore. He was the last survivor of the battle of Lake Erie.

CHAMPNEY, JAMES WELLS, artist, born in Boston, Mass., July 16, 1843, served for a short time as volunteer in the 45th Mass. regiment. He taught drawing, and has spent several seasons in Europe studying art, his first teacher being Edouard Frère, of Paris. He is a member of the American Water-color Society, and an associate member of the National Academy. His paintings include: *Which is Empire? Indian Summer*; *Boarding-School Green-Room*; *He Loves Me*; *Griselda*; and *Song Without Words*. His wife, Lizzie Williams (born in Ohio in 1850), is a clever writer, and the author of charming books. Besides the "Vassar Girl" series, she has written *In the Sky-Garden*; *All Around a Palette*, and *Sebä's Tangled Web*. Her husband has illustrated many of her books.

CHANAK-KALESSI, a town of Anatolia, situated on the Dardanelles, about 28 miles southwest of Gallipoli. It derives its name from its manufactures of crockery.

CHANCE, in its original and strict meaning, that which determines the cause of events in the absence of the law, ordinary causation, or providence. Strictly speaking, it is an idea which few would now be disposed to admit as corresponding to anything which really exists; the religious mind excluding it as inconsistent with the belief in the Divine government, and the philosophical mind rejecting it as inconsistent with a recognition of universal laws of causation. As a word, however, it has always been, and always will be, popularly accepted, and its use is correct so far as we overlook,

or choose for the moment to throw out of view, the more universal connection of events and regard them as their emergence, on a superficial view, appears to be determined. It is clear that chance, being only legitimate as an expression in popular parlance, is a term which is too indefinite to admit of any kind of measurement.

CHANCEL, the space in the church that is inclosed and railed off from the choir. The chancel was, and still is in some churches, separated from the nave by a screen of lattice-work, so as to prevent general access thereto.

CHANCELLORSVILLE, a village of Virginia, near the south bank of the Rappahannock, about 10 miles west of Fredericksburg. It was the scene of a severe battle fought May 2 and 3, 1863, in which the Union forces under General Hooker were defeated by the Confederates under General Robert E. Lee.

CHANCERY. See Britannica, Vol. V, pp. 389-90.

CHANDAUSI, a town of the North-West Provinces of India, 27 miles south of Moradabad. Population, 27,521.

CHANDERI, a town of Central India, 105 miles south of Gwalior. It is now an insignificant place; but its fort and many ruined buildings attest its strength and splendor in former times, when it is said to have contained 14,000 stone houses, 384 markets, 360 caravansaries and 12,000 mosques.

CHANDLER, CHARLES FREDERICK, chemist, born in Lancaster, Mass., Dec. 6, 1836. He pursued scientific studies at Harvard and at foreign universities, and on his return to America was for seven years professor of chemistry in Union College. He was then employed in the organization of the Columbia School of Mines in New York city. Since that time he has been connected with the college, holding the chair of chemistry in that institution and in the New York College of Pharmacy. He has also been chemist to the Metropolitan board of health, and in 1873 was appointed president. In the College of Physicians and Surgeons he was, in 1876, appointed professor of chemistry and medical jurisprudence. As officer of the board of health Mr. Chandler has given attention to the subject of food adulteration, has compelled the location of slaughter-houses to be along a narrow area on the river side, and has obtained the passage of the Tenement-house act, which provides that the plans for such buildings be submitted to the health board. Aside from the reformatory work which he has accomplished for New York city he has analyzed the waters of several springs, has lectured frequently, and has investigated the water supply of Albany, New York and other cities. He is a member of several scientific societies, both at home and in Europe. Reports of his investigations have been published, many of them appearing in the "American Chemist," a periodical established in 1870 by himself and his brother, William Henry Chandler. The latter is a well-known chemist, and has been professor of this science at Columbia School of Mines (1868-71), and at Lehigh University. He was a juror at the United States centennial exhibition of 1876, and at the Paris exhibition two years later.

CHANDLER, JOSEPH RIPLEY, philanthropist and diplomat, born in Kingston, Mass., Aug. 25, 1792, died in Philadelphia, Pa., July 10, 1880. For several years he taught a successful school in Philadelphia, and was connected with the "United States Gazette," which afterward became the "North American." From 1849 to 1851 he was a member of Congress, representing the Whig party. In 1858 he was sent by President Buchanan as minister to the Two Sicilies. He published an English gram-

mar and many addresses. He was interested in the subject of prison reform.

CHANDLER, ZACHARIAH, Senator, born in Bedford, N. H., Dec. 10, 1813, died in Chicago, Ill., Nov. 1, 1879. He received a common school education and went to Detroit, in 1833, where he established himself in the dry-goods business. His energy brought success, while the same spirit in political matters soon made him prominent as a Whig and an active supporter of the "under-ground railroad," of which Detroit was a terminus. In 1851 he was elected mayor of the city, and the following year was an unsuccessful candidate for the office of governor. In 1857 he succeeded Gen. Lewis Cass in the U. S. Senate, and remained in this official body till his death, with the intermission of the years between 1875 and 1879. Senator Chandler took an active part in debates of Congress, opposing the admission of Kansas under the Lecompton constitution, advocating the war in defense of the Union, and insisting that the short term of enlistment for the volunteers first called for was a mistake; he also favored a sweeping confiscation bill, the stern measures of which would deter wavering persons from taking arms against the Government. In 1874 President Grant offered him the position of Secretary of the Interior, which office he held till the election of Grant's successor. He was chairman of the Republican national committee in 1868 and in 1876.

CHANDORE, a town and fort in the district of Ahmednuggar, presidency of Bombay. The town is a flourishing place, with a population of 7,000.

CHANDOS, the name of an English family descended from a follower of William the Conqueror, the last representative in the direct male line being Sir John Chandos (died 1428), whose sister married Giles Brydges. Their descendant, Sir John Brydges, was lieutenant of the Tower under Queen Mary, and was created Baron Chandos in 1554. James Brydges (1673-1744), eighth Lord Chandos, sat in Parliament for Hereford from 1698 to 1714, and was created Duke of Chandos in 1719. In 1796 the title passed by marriage to the family of Grenville, the present dukes of Buckingham and Chandos.

CHANG AND ENG, Siamese twins, born in Bangsaeu, Siam, April 15, 1811, died near Mount Airy, N. C., Jan. 17, 1874. Their bodies were joined by a fleshy band near the waist, and on this account they were exhibited by P. T. Barnum for many years as monstrosities. They earned nearly \$80,000 by exhibitions, and retired to North Carolina, where they became farmers. They married sisters, by whom they had children—Chang six, Eng five.

CHANGARNIER, NICHOLAS ANNE THEODORE (1793-1877), a French general, born in 1793. He received his education at the military school of Saint-Cyr. In 1830 he went as lieutenant to Algeria, and after the proclamation of the Republic in 1848 he was appointed governor-general. Returning to Paris, he was appointed commander-in-chief of the garrison of Paris and of the National Guard. As a member of the Legislative Assembly he opposed the Bonapartists, and in 1851 he was arrested and sent to the fortress of Ham. He lived in exile till the Franco-Prussian war, when he offered his services to Louis Napoleon, and was made a general. In 1871 he returned to France, and died in 1877.

CHANG-CHOW, a city of China, in the province of Kiang-su, about 50 miles southeast of Nanking. Population, 360,000.

CHANGELING. It was at one time a popular superstition that beautiful and charming infants were taken from their cradles by fairies, who left instead stupid, ugly ones. The children so left were called *changlings*. As it was supposed that fairies

had no power to change children that had been christened, infants were carefully watched till that ceremony had been performed.

CHANG-SHA-FOO, a city of China, capital of the province of Hoo-nan on the Heng-Kiang, 50 miles south of its embouchure in Lake Tong-Ting-Hoo.

CHANK-SHELL (TSJANKA), the popular name of the shell of several species of *Turbinella*, a genus of gasteropod mollusks, natives of the East Indian Seas. These shells are obtained chiefly on the coasts of the south of India and Ceylon, and form a considerable article of trade to Calcutta.

CHANNEL, ENGLISH, that arm of the Atlantic Ocean which divides England from France, gradually narrowing to the Strait of Dover. The greatest river which falls into it is the Seine. It forms bays both on the English and the French coast, those on the French coast being the largest.

CHANNING, WALTER, physician, brother of Rev. William Ellery Channing, born in Newport, R. I., April 15, 1786, died in Boston, Mass., July 27, 1876. He studied at Harvard, but on account of a "rebellion" in 1807 did not graduate. He pursued the study of medicine in Boston, Philadelphia, Edinburgh, and London. In 1812 he began to practice in Boston, and from 1815 to 1854 occupied the chair of obstetrics and medical jurisprudence at Harvard. For nearly 20 years he was physician in the Massachusetts General Hospital. He has published poems, books of travel, and medical works.

CHANNING, WILLIAM ELLERY, JR., author, a son of Dr. Walter Channing, and nephew of William E. Channing, Sr., born in Boston, Mass., June 10, 1818, and studied at Harvard, but did not graduate; lived in a log hut in Illinois, removed to Cincinnati, where he was connected with the "Gazette," then came to Massachusetts, married Margaret Fuller's sister, and settled in Concord. He has published volumes of poetry and of prose, and has been on the staff of the New York "Tribune," and also of the New Bedford "Mercury."

CHANNING, WILLIAM HENRY, Unitarian clergyman and orator, son of Francis Dana Channing, and nephew of William Ellery Channing, born in Boston, May 25, 1810, died in London, Dec. 23, 1884. He graduated at Harvard in 1829, and at the Divinity School four years later. He held pastorates in Cincinnati, Boston, Rochester, and New York. As a platform speaker it is said he has never been surpassed. He was interested in Fourierism and other schemes for social reorganization. He wrote a memoir of his uncle, and was chief editor of the memoirs of Margaret Fuller Ossoli. The last years of his life were spent in England, and his eldest daughter is the wife of the poet Edwin Arnold.

CHANTILLY, a small village of Fairfax county, Va., 20 miles west of Washington, where during a severe thunder-storm a fierce battle took place between General Pope's forces and the Confederates commanded by "Stonewall" Jackson. It was fought Sept. 1, 1862, and Generals Phil. Kearney and I. I. Stevens were both killed.

CHANTRY, a term applied alike to endowments or benefices, to provide for the chanting of masses and to the chapels in which the chanting takes place. A chapel attached to a church, in which services for prayer, church meetings, etc., are held, is also called a chantry.

CHANZY, ANTOINE EUGENE ALFRED (1823-83), French general, born at Nouart (Ardennes), March 18, 1823, entered the artillery as a private, received a commission in the Zouaves in 1841, and served almost uninterruptedly in Africa till 1870. He was elected to the National Assembly, and narrowly escaped being shot by the Communists in 1871. In

1873-79 he was governor-general of Algeria. Chosen a life Senator in 1875, he was put forward for the presidency in 1879. He was ambassador at St. Petersburg from 1879 to 1881, and afterwards commanded the 6th army corps at Chalons, where he died Jan. 4, 1883.

CHAOS, in the ancient cosmogonies, that vacant infinite space out of which sprang all things that exist. Ovid represented it as that confused, shapeless mass out of which the universe was formed into a *kosmos*, or harmonious order.

CHAOS, or BIRD ISLANDS, the name given to several rocky islets situated at the entrance of Algoa Bay, South Africa.

CHIAOU-CHOW-FOO, a city of China, and capital of a department of the same name in the province of Kwang-tung.

CHIAOU-KING-FOO, a city and capital of a department of the same name, in the province of Kwang-tung.

CHAPALA, the largest lake in Mexico, with an area of about 1,300 square miles. It is an expansion of the Rio Grande de Santiago. Chapala lies on the table land of Jalisco, and contains numerous islands.

CHAP-BOOKS, tracts of a homely kind, which at one time formed the only popular literature of Great Britain and the American colonies. They were of a miscellaneous kind, including theological tracts, lives of heroes, martyrs, wonderful personages, fortune-telling, interpretations of dreams, stories of ghosts, witches, histories in verse, songs, ballads, etc. They were sold by chapmen, or peddlers—hence the designation.

CHAPEL, a word derived from *capa*, which originally signified a case, or chest, in which were contained the relics of a saint, and afterwards the place where the chest was kept. The term now signifies a building erected for the purpose of public worship, but not possessing the full privilege and characteristics of a church.

CHAPELLE, LA, the name of several places in France, the most important of which forms a northern suburb of Paris. Chemicals, salt, starch, liqueurs, etc., are manufactured. Population, 33,436.

CHAPERON, a hood or cape worn by Knights of the Garter when in full dress. A person who acts as a guide and protector to a lady at public places is called a chaperon, probably from this particular piece of dress having been used on such occasions. The name was also applied to devices which were placed on the heads of horses at pompous funerals.

CHAPIN, EDWIN HUBBELL, Universalist clergyman, born in Union Village, Washington county, N. Y., Dec. 29, 1814, died in New York city, Dec. 27, 1880. He graduated at Bennington Seminary, Vt., studied law in Troy, N. Y., edited "The Magazine and Advocate" in Utica, and studied for the ministry, being ordained in 1837. He preached afterwards at Richmond, Va., for three years; at Charlestown, Mass., for six years; at Boston, where he was the colleague of Hosea Ballou, and in 1848 became pastor of the Fourth Universalist church of New York city. Dr. Chapin was considered a powerful orator, and his services on public occasions were in great demand. In 1850 he was a delegate to the peace congress at Frankfort-on-the-Main. In 1872 he became editor of the "Christian Leader." Among his publications are: *Hours of Communion; Moral Aspects of City Life; True Manliness; Humanity in the City; and A Crown of Thorns: a Token for the Suffering*. The last mentioned was the most popular of his works.

CHAPLAIN, originally an ecclesiastic who accompanied an army and carried the relics of the

patrou saint. It now signifies a clergyman employed to officiate at court, in the household of a nobleman or bishop, in prisons, with troops, for a legislative body, and on board ship. An army chaplain is a clergyman especially commissioned to do duty with troops. Chaplains are sent with the troops, and in peace are allotted to the various military stations. Their duties are to conduct divine service in camp or barracks, officiate at burials, baptisms, and churchings, visit the hospital and barrack-rooms, give religious instruction in the schools, and generally treat the soldiers and their families as their parishioners. In the United States army regimental chaplains and post-chaplains may be of any of the regular denominations. They mostly have the rank of captain. In the navy every large ship in commission has a chaplain, who performs divine service at stated times on ship-board, visits the sick sailors, and assists in maintaining moral discipline among the crew.

CHAPLEAU, JOSEPH ADOLPHE, Canadian statesman, born in Ste. Therese-de-Blainville, Terrebonne, Quebec, Nov. 9, 1840. He was admitted to the bar of Lower Canada in 1861, and soon made a brilliant reputation in the criminal courts. In 1867 he represented his county in the first legislature of the province of Quebec. He became Queen's counsel in 1873, held the office of solicitor-general in Mr. Oimet's cabinet, and two years later (1875) was champion speaker of the Conservatives, winning such success that he was called into the De Boucherville Ministry as provincial secretary and registrar. In 1878 Mr. Chapleau was elected leader of the party, and the following year became premier of Quebec and minister of agriculture and public works. He was invited to enter the Dominion cabinet, but for political reasons did not do so until the invitation was renewed in 1882, when he became member of the Privy Council and Secretary of State of Canada. The following month, August, he was elected to the House of Commons by his county. Mr. Chapleau is the finest orator among the French-Canadians, is leader of the party which opposes the ultramontanes, or *Castors*, has been professor of criminal jurisprudence, and is professor of international law in the Montreal section of Laval University.

CHAPLET, a garland or head-band of leaves and flowers. In heraldry a chaplet is always composed of four roses, the other parts being leaves.

CHAPMAN, a trader, but popularly applied in a more limited sense to a dealer in small articles, who travels as a peddler or attends markets. Our familiar *chap*, "a fellow," is an abbreviation of the name, which is derived from Anglo-Saxon *ceap*, "trade."

CHAPONE, HESTER, MRS., English authoress, was born at Twywell, Northamptonshire, Oct. 27, 1727, died at Hadley, Dec. 25, 1801. She wrote a short romance in her tenth year, and after her mother's death her attention was divided between household duties and the study of French, Italian, Latin, music and drawing. She wrote for the "Rambler," "Adventurer," and "Gentleman's Magazine," and soon became known to a large literary circle; but she is now chiefly remembered by her *Letters on the Improvement of the Mind* (1772), which went through many editions.

CHAPPAQUA, a small village of Westchester county, N. Y., on the Harlem railroad, where Horace Greeley had his summer home. Here is a good boarding school under the control of the Society of Friends.

CHAPPED HANDS, a form of inflammation of the skin of the back of the hands, characterized by abnormal dryness and roughness. It is caused by ex-

posure to cold and moisture or strong soap, and can generally be prevented or cured by carefully drying the hands after washing, and applying lemon juice or vinegar, with perhaps glycerine, or vaseline.

CHAPPELL, WILLIAM, F. S. A., English author and publisher, was born Nov. 20, 1809, died in London, Aug. 20, 1888. He spent the greater part of his life in London, where he was for some years a member of a great music publishing house. His first work of importance was *A Collection of National English Airs* (2 vols., 1838-40). This work ultimately grew into the greater and entirely rewritten work, *Popular Music of the Olden Time* (2 vols., 1855-59). The first volume forms a complete collection of English airs, so far as known, down to the reign of Charles I; the second is rather a selection, containing, however, all the more interesting or important airs of later date. Mr. Chappell took a principal part in the foundation in 1840 of the Musical Antiquarian Society, and the Percy Society, and edited some of Dowland's songs for the former and several rare collections for the latter. He published papers in the *Archæologia*, contributed valuable notes to Hales and Furnivall's reprint of the *Percy Folio MS.* (1867-68), and annotated the first three volumes of the Ballad Society edition of *The Roxburghe Ballads*. Mr. Chappell published in 1874 the first volume of a *History of Music*.

CHAPRA, a town of Bengal, situated on the Gogra, near its confluence with the Ganges. It is capital of the district of Saran. Population, 51,670.

CHAPTER-HOUSE. See *Britannica*, Vol. II, p. 462.

CHAPULTEPEC, a rock two miles southwest of the City of Mexico, rising to a height of 150 feet, and crowned by a castle which was erected by the Spanish viceroy in 1785 on the site of the palace of Montezuma.

CHARACEÆ, aquatic plants, nearly allied to the *Algæ*, and consisting of slender-jointed stems. They grow in stagnant waters, both fresh and salt, are always submerged, and often completely conceal muddy bottoms.

CHARACTER, that which is engraven on an object, either physically, by action of another external object or objects, or morally, by the passions, the affections, by good or evil fortune, and by what we designate generally as "circumstances." In art, the expression of character either in animate or inanimate objects, is, after correct delineation, the most important matter to be attended to.

CHARADRIADÆ, a large family of birds, of the order *Grallatores*, and tribe *Pressirostres*. Besides the plovers, the family includes the lapwings, oyster-catchers, sanderlings, etc.

CHARBON ROUGE, or RED CHARCOAL, a variety of charcoal obtained by subjecting wood to the action of heated air from furnaces, or of steam, which has been raised to a temperature of 572° F.

CHARCOAL BLACKS are made both from animal and vegetable substances. Those which are derived from vegetable substances, when mixed with white, are usually of a blue tint.

CHARENTE, a river in the west of France. This river gives its name to two departments, both remarkable for the productiveness of their vineyards.

CHARGE, in heraldry, a term given to the figures represented on a shield, and one thus adorned is said to be charged.

CHARGE, in military warfare, a sudden and impetuous attack on the enemy.

CHARGE, in military pyrotechny, sufficient combustible material for one firing or discharge. It is

also applicable to all kinds of firings, fireworks and explosions.

CHARGE, the exposition of the law made by the judge to the jury, in which he comments on the evidence and instructs the jury as to the application of the law to the facts.

CHARGÉ D'AFFAIRES, a fourth-class diplomatic agent, accredited, not to the sovereign, but to the department for foreign affairs; he also holds his credentials only from the minister.

CHARGER, a name sometimes given to a war-horse accustomed to the din of battles, and reliable under circumstances of confusion and danger. See *Britannica*, Vol. XII, p. 191.

CHARITIES, in law, are grants or devises for the benefit of the poor or friendless, for public institutions, or for education or religious culture.

CHARITON, a city and the county-seat of Lucas county, Iowa, situated on the Chariton River and the Chicago, Burlington and Quincy railroad.

CHARITY, **SISTERS OF**, nuns who are devoted to the temporal and spiritual care of the poor and the sick.

CHARIVARI, a French term used to designate a wild tumult, and uproar produced by the beating of pans, kettles, dishes, mingled with hissing, whistling, etc., for the purpose of expressing a general dislike to the person against whom the mock serenade is directed.

CHARLATAN, a quack-doctor, or empiric, or in fact any one who makes loud pretensions to knowledge or skill which he does not possess.

CHARLES, **ELIZABETH RUNDLE**, writer of several well-known historical novels, born about 1826. Among her most popular works are the *Chronicles of the Schönberg-Uccta Family* and the *Diary of Kitty Trevulyan*.

CHARLES CITY, a railroad junction and the county-seat of Floyd county, Iowa, on the Cedar River. It has various manufactories, among which is one for furniture.

CHARLES'S WAIN, the constellation of Ursa Major, also popularly known as "the plow," and "the dipper."

CHARLESTON, a city and county-seat of Coles county, Ill., 48 miles west of Terre Haute. It has an infirmary and a medical college. Pop., 4,135.

CHARLESTON, a city of South Carolina, and county-seat of Charleston county (see *Britannica*, Vol. V, p. 428-29). The trade of the city for the year 1889 amounted to \$80,000,000, an increase of \$4,000,000, over that of the previous year. The imports for 1889 were \$683,232 and exports \$13,807,673. Manufacturing industries numbered 360, with \$9,000,000 capital, producing \$13,742,879. The phosphate industry is the chief, the trade in phosphate fertilizers alone amounting to \$5,494,650, as against \$2,612,660 in 1887. The supply of water is obtained from three artesian wells, the third and largest of which was completed in 1889. The daily supply is 2,000,000 gallons. Public schools and libraries have advanced with the population and wealth of the city, and a new post office and custom house have been added to the public buildings. Population in 1880, 49,984; in 1890, 54,592.

CHARLESTON, or **KANAWHA COURT-HOUSE**, the capital of West Virginia, and the county seat of Kanawha county, situated on the Elk and Kanawha Rivers. A large amount of manufacturing and shipping is done in this city. Ice, furniture, doors, blinds, wagons and iron fences are made; there are dry docks and ship-building yards, many fine public buildings, water, gas, and electric-light works. Great quantities of salt are daily manufactured. In 1869 this city was the State capital; in 1875 Wheeling became the capital: in 1885

Charleston was again made the capital. Population in 1890, 2,287; township, 4,524.

CHARLESTOWN, a manufacturing town of Sullivan county, N. H., on the Connecticut River, fifty miles west of Concord. It has manufactories of boots, shoes, and lumber.

CHARLESTOWN, a railroad town and the county-seat of Jefferson county, W. Va. It is near Harper's Ferry. John Brown was tried and executed at Charlestown, Dec. 2, 1859.

CHARLOIS, a village of the Netherlands, situated on the Maas, about two miles southwest of Rotterdam. It is memorable on account of a terrible accident which occurred here in 1512. A religious procession, crossing the ice in defiance of magisterial prohibition, was precipitated into the Maas, and 8,000 lives were lost.

CHARLOTTE, a railroad city and county-seat of Eaton county, Mich. Lumber and flour are here manufactured. Population in 1890, 3,867.

CHARLOTTE, a city and county-seat of Mecklenburg county, N. C., situated on Sugar Creek, 110 miles north of Columbia, the capital of S. C. It is an important station of the Atlanta and Richmond Air-line Railroad, and terminus of the Charlotte, Columbia and Augusta, and the Atlantic, Tennessee and Ohio Railroads. The court-house is a substantial and commodious structure. The Biddle (Presbyterian) University was organized here in 1867. In 1838 a branch mint was established in Charlotte for the coinage of gold found in the vicinity. The principal manufactories are of carriages, machinery, cotton goods, agricultural implements, tobacco, and iron castings. Population in 1880, 7,094; in 1890, 11,555.

CHARLOTTE AMALIE, a town of the island of St. Thomas, the seat of government of the Danish West Indies. It has an excellent harbor, and an extensive trade. Population, 13,000.

CHARLOTTESVILLE, Virginia. See *Britannica*, Vol. V, p. 430. Population in 1890, 5,591.

CHARM, a form of words, generally in verse, supposed to possess some supernatural power, of a hurtful, a healing, or a protective kind.

CHARNEL HOUSE. See Vol. II, p. 462.

CHARNOCK, **STEPHEN**, born in London, England, in 1628, died in 1680. He was a Puritan divine. His principal literary work was a *Treatise on the Attributes of God*.

CHARON. See *Britannica*, Vol. V, p. 430. In the folklore of modern Greece, Charon still survives as a kind of shadowy representative of death and a mysterious under-world.

CHART, a marine or hydrographical map exhibiting a portion of a sea or other water, with the islands, coast of contiguous land, surroundings, currents, etc.

CHARTER, a charter or system of constitutional law, embodied in a single document. The first such charter in France is known as the *Grande Charte*, or the Charter of King John (1355). But the constitution to which the term *charte* is most frequently applied is that in which Louis XVIII solemnly acknowledged the rights of the nation on his restoration in 1814. This *charte* has ever since been considered the fundamental law of constitutional monarchy when that form of government has existed in France.

CHARTER. See *Britannica*, Vol. V, pp. 431-33.

CHARTER-HOUSE, a charitable hospital, chapel, and celebrated public school in London, founded in 1611 by Sir Thomas Sutton. It had been originally a Carthusian monastery. See *Britannica*, Vol. I p. 20; Vol. XIV, p. 835.

CHARTER PARTY. See *Britannica*, Vol. V, p. 433.

CHARTULARY, or **CARTULARY**, a collection of charters. As soon as a body, ecclesiastical or secular, possessed a considerable number of charters they were classified and copied into a book or roll, called a chartulary; the officer in the ancient Latin Church who had charge of the records was also called a cartulary.

CHARTERS TOWERS, a mining township of Northeast Queensland, Australia, situated on the northern spurs of the Towers Mountain, 820 miles northwest of Brisbane. It dates from the gold discovery here of 1871-72, and was incorporated in 1877. It has railway connection with Townsville on the coast. Population of town, 3,313; with district, 7,310.

CHASE, in a gun, the name given to the greater portion of the length between the muzzle and the trunnions.

CHASE, PHILANDER, P. E. bishop, born in Cornish, N. H., Dec. 14, 1775, died at Jubilee College, Ill., Sept. 20, 1852. He graduated in 1795 at Dartmouth College, and three years later was ordained priest of the Protestant Episcopal church. He held rectorates in New Orleans, La., and in Hartford, Conn., and in 1817 undertook missionary work in Ohio, where for a time he preached for three churches and took charge of the Worthington Academy. He twice visited England, obtained funds for educational works and therewith erected Kenyon College, Gambier Theological Seminary, and Jubilee College—the latter in Illinois. In 1819 Mr. Chase was consecrated bishop of Ohio and in 1835 bishop of Illinois. Two volumes of *Reminiscences* and two works concerning Kenyon College are among his publications.

CHASE, PLYN EARLE, scientist, born at Worcester, Mass., Aug. 18, 1820, died Dec. 17, 1886. He graduated at Harvard in 1839, taught in Philadelphia, engaged in mercantile pursuits, but employed his leisure in scientific and philosophical pursuits. In 1871 he became professor of logic and philosophy in Haverford College, and further pursued his investigations in the fields of electricity, gravity, magnetism and kindred forces. His scientific papers were widely published, and he received the Magellanic gold medal of the American Philosophical Society in 1864.

CHASE, SALMON PORTLAND, statesman and jurist, born in Cornish, N. H., Jan. 13, 1808, died in New York city, May 7, 1873. His father was Ithamas Chase, and the stock to which he belonged was prolific in eminent men. When the boy was eight years old the family removed to Keene, N. H., and soon after the father died. An uncle who was bishop of Ohio in 1820 offered the boy a home, and educational advantages in the academy of which the uncle was principal. Here he spent three years, and in 1821 entered Dartmouth College, graduating in 1826. He then went to Washington, D. C., opened a classical school for boys, and meantime studied law under William Wirt. After receiving his license to practice he went (1830) to Cincinnati, where he opened a law office, and while waiting for clients edited the *Statutes of Ohio* with notes; this drew public attention, and in 1831 he was appointed solicitor of the U. S. bank in that city. He very soon connected himself with the anti-slavery party, and defended so many fugitive slaves that Kentuckians called him the "attorney-general for runaway negroes."

Mr. Chase defended Van Zandt, who was charged with harboring fugitive slaves. "Slavery is sectional, freedom is national," was the maxim of this jurist, and he felt called by providence to devote his time and means to the upbuilding of the party of constitutional freedom. Mr. Chase became ul-

timately a founder of the Republican party. In the Liberal and Free-Soil conventions from 1841-48, he was the leading spirit, and allied himself with whatever party would at the time further his aims. The Democrats in 1849 elected him to the U. S. Senate, and here he distinguished himself by his firm stand against slavery.

In 1850, seeing the attitude of the Democratic party on the slavery question Mr. Chase left it, and in 1855 was elected by the Whigs governor of Ohio; two years later he was re-elected. At the Republican national convention which nominated Mr. Lincoln, he was a prominent candidate for the presidency. In 1861 he was again in the Senate, but President Lincoln called him to the cabinet as Secretary of the Treasury. In this office his duties were not arduous; the Government credit was below par; the treasury was empty, and in this state of finances a war must be carried on. Secretary Chase negotiated a loan for \$8,000,000, recommended confiscation of property belonging to those in rebellion, increase of duties, and a national currency with a system of national banking associations. Treasury notes, "greenbacks," were issued, and served to tide the government over the financial crisis.

The secretaryship was resigned by Mr. Chase in 1864, and a few months later the President nominated him as chief justice of the United States, and it was in this capacity that he presided at the impeachment of President Johnson in 1868. In 1864 his name had been brought forward as Republican nominee for the presidency, and in 1868 the Democratic party named him for the honor; but he did not command a large following at the convention.

CHASE, SAMUEL, signer of the Declaration of Independence, born in Somerset county, Md., April 17, 1741, died June 19, 1811. He was a lawyer by profession, an ardent patriot, a member of the Continental Congress from 1774 to 1778, and was one of a committee sent by Congress to urge Canada to unite with the colonies in resistance to England. After the war he was the agent sent to recover from the bank of England money deposited there by Americans before the war. In 1788 he became member of the Maryland convention which adopted the Federal Constitution, and three years later chief justice of the General Court of Maryland. On the occasion of a riot in 1794 he ordered the arrest of two rioters and assisted in taking them to jail. For this act John Randolph secured his impeachment five years after, when he was an associate justice of the U. S. Supreme Court. The Senate acquitted him of the charge.

CHASE, THOMAS, educator, brother of Pliny Earle Chase, scientist, born in Worcester, Mass., June 16, 1827; graduated at Harvard in 1848, taught in the institution from 1850 to 1853, studied abroad; in 1855 became professor at Haverford College, near Philadelphia, and its president in 1875. He was one of the American revisers of the New Testament. He has edited and published works on the classics.

CHASIDIM. After the Babylonish captivity, the Jews, with regard to their observance of the law of Moses, were divided into two classes—*Chasidim* and *Zadikim*. When the Great Synagogue was commissioned by the Persian government to draw up a code of civil and religious laws for the emigrant Jews, several innovations were made on the Mosaic law. Those who accepted these innovations were styled Chasidim, while those who rejected them were styled Zadikim. See ASSIDANS, Britannica, Vol. II, p. 729.

CHASING, the art of working raised or half-raised figures in gold, silver, bronze or other metal (see *Britannica*, Vol. VIII, p. 189). The art was known at a very early period, as may be inferred from the shield of Achilles, the ark of Cypselus, and other productions of this kind.

CHASKA, the county-seat of Carver county, Minn., on the left bank of the Minnesota River, thirty-two miles southwest of St. Paul. The Minnesota and St. Louis Railroad here forms a junction with the Hastings and Dakota Railroad, while on the opposite side of the river is the Chicago, St. Paul, Minneapolis and Omaha Railroad.

CHASLES, MICHEL, a French mathematician, born at Epernon in 1793, died in 1880. His principal works are a *History of Arithmetic*, and treatises on *Higher Geometry* and on *Conic Sections*.

CHASLES, PHILARETE (1798-1873), a French writer, born at Mainvilliers, near Chartres, Oct. 8, 1798. Early imbued with Rousseau's ideas by his father, he was apprenticed at fifteen to a Jacobin book-seller, with whom he was sent to jail after the restoration. Released by Chateaubriand's influence he went to England, where he found employment in a book-seller's shop, and during his seven years' residence laid the foundation of his large knowledge of English literature. After his return to France he contributed reviews of English books to the *Revue Encyclopédique*. In 1824 he published *Discours sur Jacques Auguste de Thou*, and in 1828 *Tableau de la Langue et Littérature Française, 1500-1610*. In 1837 Chasles became librarian of the Bibliothèque Mazarin, and in 1841 professor of Northern Languages at the Collège de France, which chair he filled until his death at Venice, July 18, 1873.

CHASSE, music composed in imitation of the chase, and produced chiefly by horns, occasionally combined with other wind instruments.

CHASSÉ, DAVID HENDRICK, BARON, a Dutch soldier, born in Thiel, in the Netherlands, in 1765, died in 1849. He began his military career at ten years of age. At sixteen he was lieutenant, and in 1787 became captain. He entered the French service, and for his fondness for bayonet charges Napoleon gave him the name of "General Bayonet." Louis Bonaparte made him a baron in 1809, and in 1815 he fought at the head of the Dutch forces against his old comrades, the French. As governor of Antwerp he defended the citadel bravely for three weeks against the Belgians and French. He died in 1849.

CHASSEPOT, ANTOINE ALPHONSE, a French inventor, born March 4, 1833. He was an employé in the Paris arsenal of St. Thomas, where he became an official in 1858, and in 1863 brought before the government the model of his rifle, adopted three years afterwards.

CHASSEURS, a name give to some light troops in several of the European armies. In 1815, battalions of chasseurs were enrolled in the French army. The name is now generally applied to one of a body of light troops designed for rapid movements.

CHASSEURS DE VINCENNES, one of the names given to a famous corps in the French army. In 1835, when certain improvements had been made in the French rifle, the Duke of Orleans ordered the formation of a company of riflemen, armed with new rifles. They proved so efficient that in 1838 a whole battalion was organized, which was called the *Chasseurs de Vincennes*.

CHASTELLUX, FRANÇOIS JEAN, MARQUIS DE, a French author, born in Paris in 1734, died there Oct. 28, 1788. He served during the American Revolution under Rochambeau, securing the friend-

ship of Washington and Jefferson. He wrote *Travels in America*, and an *Essay on Public Happiness*, a work which denounced Christianity.

CHIASUBLE, the uppermost garment worn by Roman Catholic priests, when robed for the celebration of the mass. See *Britannica*, Vol. VI, p. 462.

CHAT, a genus of birds of the thrush family. There are many species, chiefly African. The yellow-breasted chat of the United States is remarkable for the volubility and mimicry of its song. See *WHEATEAR* *Britannica*, Vol. XXIV, p. 537.

CHATEAU, a castle or a fortress in France. A manor house; a gentleman's country-seat; also a royal residence; as, the *château* of the Louvre. The distinctive French term for a fortified castle of the Middle Ages is *château-fort*.

CHATEAU-GONTIER, a town in the French department of Mayenne, situated on the Mayenne, 180 miles southwest of Paris by rail. It has linen and woolen manufactures. Population, 7,334.

CHATELAINE, the wife of the châtelain or castellan; the mistress of a castle or château. Also a chain worn by the castellan, depending from the girdle, to which the keys of the castle were attached. From this use of the term we have the application to a modern device consisting of an ornamental hook or clasp, worn by a lady at her waist, and having a chain attached for a watch, keys, trinkets, etc. Also applied to the trinkets themselves, and used adjectively, as *châtelaine* watch, belt, etc.

CHATHAM, a town and county-seat of Kent county, Ontario, on the Thames River, and the Great Western Railroad, 45 miles east of Detroit, Mich. It manufactures machinery and woolen goods, and has a large trade in lumber, potash, tobacco, soap, etc.

CHATHAM, a town of Barnstable county, Mass., on the Atlantic, at the southeastern point of Cape Cod. It is a summer resort, has good schools and two light-houses.

CHATHAM VILLAGE, CHATHAM FOUR CORNERS, a thriving village of Columbia county, N. Y. It has cotton and paper-mills, blast furnaces and machine shops. It is a junction for the Boston and Albany, the New York and Harlem, and the Harlem Extension Railroads.

CHATI, a small leopard-like cat (*Felis mitis*), found in South America.

CHATTANOOCHEE, a river of Georgia, about 500 miles long, and navigable for small boats for 325 miles. It rises in the Blue Ridge, in the northeast part of the State, flows south, forming the boundary between Georgia and Alabama, and unites with Flint River to form the Appalachian.

CHATTEL, every species of property, movable or immovable, which is less than a freehold. Real chattels are interests which are annexed to or concern real estate; as, a lease for years of land. Personal chattels are properly things movable, which may be carried about by the owner; such as animals, household stuff, money, corn, jewels, furniture, garments and everything else that can be put in motion and transferred from one place to another. Chattels, whether real or personal, are treated as personal property in every respect, and in case of the death of the owner, usually belong to the executor or administrator and not to the heir at law.

CHATTANOOGA, a city of Tennessee, and county-seat of Hamilton county, located near the southern boundary of the State, on the south bank of the Tennessee River, at the mouth of a valley formed by Mission Ridge on the east and Lookout Mountain on the west. Although it received a city charter in 1851 its population in 1860 was only 2,545. The civil war wiped out the commerce and indus-

tries of the little city, and it became a great depot of war supplies. The surrounding hills, valleys and plains were camps, and hospitals and tents filled the town. But with the close of the war came a remarkable growth. In 1899 the city contained 300 manufacturing establishments; several large hotels; street railways, both horse and electric; gas and electric lights, water-works, large jobbing houses, and elegant private residences. Chattanooga has nine trunk lines of railway. The United States government has expended \$4,000,000 in removing obstructions from the Tennessee River, and the river traffic is immense. A new bridge of steel and iron, built by the county at a cost of \$225,000, now spans the river at this point, and is free for carriages and foot passengers. The city is supplied with water taken from the river above the city, pumped through 63 miles of mains, with a capacity of 20,000,000 gallons daily. The Grant Memorial University (Methodist) is located here, and includes a classical school, medical school, law school, theological school, and the preparatory departments. Other educational institutions are the Notre Dame de Lourdes, in charge of the Dominican Sisters, numerous public schools, and a commercial college. The great bend of the river, sweeping around the city, gives 11 miles of deep water front, and supplies unusual transportation facilities for the manufacturing and commercial establishments. Iron ore abounds in the vicinity, and 300 tons of iron are produced daily by the smelting and puddling works in the city. Population in 1880, 12,879; in 1890, 29,113.

CHATTEL MORTGAGE, a mortgage on personal property.

CHATTERER, a popular name applied to the birds of the family *Ampelidæ*, of the order *Insessores* and tribe *Dentirostres*. They are found chiefly in the warmer regions. Some of them possess powers of song almost equal to those of the nightingale. See *Waxwing*, *Britannica*. Vol. XXIV, p. 460.

CHAUDFONTAINE, a village situated in the valley of the Vesdre, a few miles from Liège, in Belgium. Population, about 1,000.

CHAUMONOT, PIERRE JOSEPH MARIE, a Jesuit missionary, born near Chatillon-sur-Seine, France, in 1611, died near Quebec, Feb. 21, 1693. He labored among the Canadian Indians, and wrote a grammar of the Huron language.

CHAUNCEY, ISAAC, commodore U. S. N., born at Black Rock, Conn., Feb. 20, 1772, died in Washington, D. C., Jan. 27, 1840. At an early age he went to sea, and before he had completed his twentieth year he commanded a ship in the merchant service which belonged to John Jacob Astor. When the navy was organized in 1798, Chauncey was appointed lieutenant and rose to be captain in 1806. In the war with Tripoli he served with gallantry. During the war of 1812 Capt. Chauncey commanded on the lakes, superintended the building of a fleet, coöperated in the capture of York (Toronto), and put to flight the British fleet in York bay. After the war he commanded the Brooklyn navy-yard, negotiated a treaty with Algiers while commanding the Mediterranean squadron, and at the time of his death was president of the Board of Navy Commissioners at Washington.

CHAUNCEY, CHARLES, educator, born in Yardbury, Hertfordshire, England, in 1592, died in 1672. He graduated at Cambridge in 1613, and afterwards taught Hebrew and Greek there. He became a clergyman, but so strong were his Puritan convictions that he was continually in trouble with the higher church authorities. In 1638 he found in New England the liberty of conscience denied in Old England. The church of Scituate called him

to be its pastor, and here he remained for 12 years, at the end of which time he made ready to return to England to his old congregation of Ware; but Harvard College was just then without a president, and he accepted the office which was offered, serving acceptably up to the time of his death. He was the second president of Harvard, and held the office for 18 years.

CHAUSSES, in the armor of the Middle Ages, defense pieces for the legs. Some were made of padded and quilted cloth and some of riveted plates.

CHAUTAUQUA, an unique summer resort in Chautauqua county, N. Y., on Chautauqua lake. It was formerly called Fair Point, and was a favorite place for Methodist camp-meetings, but in 1874 the grounds were purchased by the Chautauqua Sunday-school Assembly. Many lots have been purchased, upon which neat cottages have been erected; there are also numerous boarding-houses and hotels, and large pavilions for religious services and instruction. Each year, during July and August, summer schools of language and art are held there, popular lecturers being secured to address the large classes. Crowds of people annually throng the Chautauqua grounds. Sunday-school and temperance work, as well as Bible study, receive attention. The "Chautauqua Idea" has become popular, and there are branch "Chautauqua Assemblies" in many of the States and in Canada.

CHAUTAUQUA LAKE, in Chautauqua county, N. Y., a picturesque sheet of water, 18 miles long and three miles in breadth at its widest point. It is the highest navigable water in the United States, being 726 feet higher than Lake Erie. Steamers sail between Mayville and the flourishing town of Jamestown, which lies at the opposite end of the lake. The Indian name means "bag tied in the middle," and refers to the fancied shape of the lake.

CHAUTAUQUA LITERARY AND SCIENTIFIC CIRCLE, an incorporated institution for study and instruction, suggested and largely promoted, by Hon. Lewis Miller, of Akron, Ohio. It was organized in 1878, at Chautauqua, N. Y., with Lewis Miller as President of the Association, and Rev. John H. Vincent, D. D., LL. D. (now a Bishop of the Methodist Episcopal Church) as chancellor of the faculty. The purpose of the Circle is to promote habits of reading and study in Nature, art, science, and in secular and sacred literature, in connection with the routine of daily life; to give college graduates a review of the college course; to secure for those whose educational advantages have been limited the college student's general outlook upon the world and life, and to develop the habit of close, connected, persistent thinking.

It endeavors to encourage individual study in lines and by text-books which shall be indicated; by local circles for mutual help and encouragement in such studies; by summer courses of lectures and "students' sessions" at Chautauqua, and by written reports of each year's work.

Any person may join the circle upon payment of the annual membership fee, which is fifty cents. No entrance examination is necessary. Persons may enter for one year, but the full course is four years, after which the graduate receives a diploma. The course of studies is directed from the center of the Circle, and may be pursued at home and in the local circles. Attendance at the summer meetings at Chautauqua, N. Y., is urged, but is not imperative. The meeting of 1890 began July 5 and closed August 25.

There are over fifty Chautauqua assemblies in the United States, Canada, Great Britain, Japan,

India, South America, Australasia, and South Africa, with a membership of half a million persons. All are modeled in organization and methods upon the original Chautauqua Assembly, but are independent in management. Dr. Jesse L. Hurlbut is Principal of the Faculty at Chautauqua, and A. M. Martin, of Pittsburgh, is Secretary. The general secretarial office is in Buffalo, N. Y., with Miss K. F. Kimball in charge.

CHAUVEAU, PIERRE JOSEPH OLIVIER, a Canadian statesman, born in Quebec, May 30, 1820. Educated at the seminary of Quebec, he afterwards studied law and was admitted to the bar in 1841, and three years later entered political life as a reform member for the county of Quebec. In 1851 he was solicitor-general for Lower Canada; in 1853 provincial secretary and member of the executive council; he was superintendent of education for his native city in 1855; and, after the confederation was elected to the Dominion House of Commons and the Quebec House of Assembly. He held the office of premier from 1867 to 1873, was speaker of the Senate in (1873-74), became president of Quebec harbor commission in 1876, and sheriff of Montreal in 1877. Mr. Chauveau has done much for the educational cause, and his writings in prose and poetry have been received with favor.

CHAUVENET, WILLIAM, an American mathematician, born at Milford, Pa., in 1820, died in 1870. He was one of the founders of the United States Naval Academy. He wrote many valuable works on mathematics, and originated numerous improvements in mathematical methods.

CHAY ROOT, CHOYA, or SAYAN, a perennial herbaceous plant of the natural order *Cinchonaceæ*, a native of India and Mexico. It is cultivated for the sake of its orange-colored roots, whose bark affords a beautiful red dye.

CHAYENPUR, a fortified town of Nepal, in the north of India. It is the chief town of a district which yields rice, wheat, cotton, butter, timber, spices, sugar, tobacco and pearls.

CHAZARS, a people of the Finnish stock known in the seventh century on the shores of the Caspian; in the ninth century their kingdom occupied the southeast of Russia from the Caspian and the Volga to the Dnieper. They were singularly tolerant of all religions; a large part of the nation adopted the Jewish faith from Jews who fled from the persecutions of Emperor Leo, and Cyril converted many to Christianity in the ninth century. The power of the Chazars was ultimately broken in the 12th century by the Byzantine emperors and the Russians.

CHAZY EPOCH, the name given by American geologists to that division of Silurian time during which the Chazy limestone of New York, Canada, etc., was formed.

CHEATHAM, BENJAMIN F., a soldier, born in Davidson county, Tenn., Oct. 20, 1820, died at Nashville, Tenn., Sept. 4, 1886. He achieved distinction as a captain and colonel of volunteers during the war between Mexico and the United States, at the conclusion of which he became major-general of the Tennessee militia. He pursued the occupation of farmer till 1861, at which time, under a call from the Governor of Tennessee, he enlisted in the military service of the State, was appointed a brigadier-general, and was soon afterward transferred with his command to the military service of the Confederate States, in which he continued till the close of the war, rising successively to the grades of major and lieutenant-general. He distinguished himself at the battle of Belmont in 1861, and commanded a division in Gen. Bragg's army in his campaign into Kentucky in 1862. He participated in the battles of

Perryville, Stone River, Chickamauga Missionary Ridge, Resaca, Marietta, in the battles near Atlanta, in the battle of Jonesboro, Ga., Franklin and Nashville, Tenn., in which he commanded an army corps as lieutenant-general, and also in the battle of Bentonville, N. C., soon after which he surrendered to the Federal forces with that portion of the Confederate army commanded by Gen. Joseph E. Johnston. At the conclusion of the war between the States he returned to the vocation of agriculture.

In 1872 he was nominated by the Democratic State convention to represent the State at large in the United State Congress; but Andrew Johnson becoming an independent candidate for the same office the Democratic vote was thus divided between him and Cheatham, and the contest resulted in the election of Horace Maynard, the Republican candidate.

He was subsequently appointed superintendent of State prisons, in which capacity he served four years. In 1885 he was appointed by President Cleveland postmaster at Nashville, Tenn., and died in the incumbency of that office. He was noted for his sound practical judgment, great personal courage, and firm fealty to his friends. He was one of the most popular and successful commanders in that portion of the Confederate forces known as the "Army of Tennessee," which was first commanded by Gen. Albert Sidney Johnston and successively by Gens. Beauregard, Bragg, Joseph E. Johnston and J. B. Hood.

CHEBOYGAN, the county-seat of Cheboygan county, Mich., on a river of the same name and on Lake Huron. It has saw, planing and grist-mills; also a large grain trade. Population in 1890, 6,235.

CHECK, a fabric whose pattern consists of rectangular spaces like a chessboard.

CHECK, or **CHEQUE**. See *Britannica*, Vol. V, pp. 583-84.

CHECKY, in heraldry, when the field or any charge is composed of small squares of different tincture, generally metal and color, it is said to be cheeky.

CHEDDAR, a village in Somersetshire, two miles southeast of Axbridge, England, celebrated for the production of the Cheddarcheeses. Population, 2,200.

CHEESE-HOPPER the larvæ of *Tyrophagacasei*; a small dipterous fly of the family *Muscidæ*, the same to which the house-fly, blow-fly, etc., belong. It lays its eggs in the crevices of cheese, the destined food of its larvæ, and is, therefore, a special pest of dairies.

CHEEVER, GEORGE BARRELL, clergyman and author, born in Hallowell, Me., April 17, 1807, died at Englewood, N. J., Oct. 1, 1890. He was a graduate of Bowdoin in 1825, of Andover seminary in 1830, and became pastor of a Congregational church in Boston. He was an active controversialist, writing against Unitarianism in *A Defense of the Orthodoxy of Cudworth*, against intemperance in an allegory entitled *Inquire at Deacon Gile's Distillery*, and against slavery, the operation of railroads on Sunday, the banishment of the Bible from public schools, and other questions of popular interest. His tract on temperance produced great excitement, and he was tried for libel and imprisoned. He traveled in Europe, and while there contributed letters to the "New York Observer;" on a second trip he was corresponding editor of the "New York Evangelist." In 1839 he became pastor of Allen street Presbyterian church in New York city, and from 1846 to 1870 had charge of the Church of the Puritans, which was organized for him. He was the writer of many books on religious, social and literary topics, his best work being *Lectures on the Pilgrim's Progress.*"

CHEIROLEPIS, a genus of fossil ganoid fish peculiar to the Devonian measures, in which eight species have been found. They had minute scales and greatly developed pectoral and ventral fins.

CHEIROMANCY, or **PALMISTRY**, a form of divination that professes to read the destiny of an individual by the lineaments of the hand.

CHEIROTHERIUM, a name given to the animal which produced the peculiar hand-like impressions on the Triassic rocks in England and Germany.

CHEIRONECTES, a genus of marsupial quadrupeds, differing from the opossum chiefly in having webbed feet and aquatic habits. It is sometimes known as yapock from the South American river of that name. It is common in many rivers of Brazil and Guiana.

CHE-KEANG, a maritime province of China. See *Britannica*, Vol. V, p. 636.

CHELICERÆ, the biting organs forming the first pair of appendages in spiders, scorpions and other arachnida, and answering the same purpose as the mandibles of insects.

CHELIUS, **MAXIMILIAN**, born at Mannheim, Germany, in 1794, died in 1876. He was a physician and surgeon of distinguished ability. His *Handbook of Surgery* is a standard work, and has been translated into many languages.

CHELMSFORD, **FREDERIC THESIGER**, **BARON**, born in London in 1794, died Oct. 5, 1878. He was a midshipman in the navy, but studied law, and was called to the bar in 1818; was made solicitor-general in 1844, attorney-general in 1845 and 1852, and lord chancellor, with the title of Lord Chelmsford, in 1858 and in 1866.

CHELMSFORD, **FREDERICK AUGUSTUS THESIGER**, second Baron, born in 1827, entered the rifle brigade in 1844, became major in the Grenadier Guards in 1855, and served through the Crimean war, the Indian mutiny, and the Abyssinian campaign of 1868. He was adjutant-general in Bengal (1869-74), and commanded the forces in the Kafir war of 1878 and in the Zulu war of 1879, having resigned the governorship of Cape Colony. Appointed lieutenant-general in 1882, he was made lieutenant of the Tower of London in 1884.

CHELONIA, an order of reptiles including the various forms of tortoise and turtle (see *Brit-*

tannica, Vol. XXIII, p. 455). Their distinctive characteristic is the more or less complete inclosure of the body by a dorsal and a ventral shield, of which the former is in part due to a modification of the vertebral spines and of the ribs. Within these shields the head, limbs and tail can be more or less retracted. The absence of teeth is also characteristic. The Chelonia include marine, freshwater, and terrestrial forms. The known living species number about 260, the majority occurring in warm countries; they are represented by numerous fossil forms from the Upper Jurassic onwards.

CHELSEA, a city of Massachusetts. For its historic description, see *Britannica*, Vol. V, p. 458. The manufactories of the city are many and important, the chief being an elastic-rubber factory, chemical works, factories for making sewing machines, brassware, linseed oil, safes, woolen goods, brushes and tools. Population in 1890, 27,909.

CHELSEA HOSPITAL, an asylum for old and disabled soldiers of the British army. The foundation stone was laid by Charles II in 1682, and the building, designed by Wren, was opened in 1692. The funds for its lands and buildings, and for many years the maintenance of its inmates, were derived chiefly by deductions from the pay of the troops themselves.

CHELYUSKIN, **CAPE**, formerly North-East Cape, and sometimes called Cape Severo, the most northerly point of Asia, on a peninsula of the same name. It is a low promontory, divided into two parts by a small bay; the latitude of the western part is 77° 36' 37" north, that of the eastern 77° 41' north. It is named after a Russian officer who led an expedition thus far in 1742; it was not revisited till 1878, when Nordenskjöld, in the *Vega*, spent the 19th and 20th of August here.

CHEMIC, the common name given to bleaching powder by those engaged in chemical works.

CHEMICAL AFFINITY, the name applied to that peculiar force which causes elementary atoms, or groups of atoms, to unite; or to the force by which the substances constituting a compound are held together.

CHEMICAL ANALYSIS. See *Britannica*, Vol. V, pp. 459-579. See also *Britannica*, Vol. I, pp. 795, 796.

CHEMISTRY, **RECENT DISCOVERIES IN**. (For general article on **CHEMISTRY**, see *Britannica*, Vol. V, pp. 459-579.) In recent years no less than thirty-one new elementary bodies have been discovered and announced to the learned world. Some have been buried as the result of scientific investigation, and concerning some of the survivors much is yet to be learned. The extreme rarity of the minerals in which the new elements have been detected; the excessively small percentages of the new ingredients, and the extraordinary difficulties attending their separation from known substances, combine to render the investigations laborious, protracted and costly. The extreme value, however, of some of the discoveries has caused an intense interest in the learned world, and chemists in every civilized nation have vied with one another to accomplish new and important results. The following is a list embracing some of the more important substances and compounds, and new uses of old substances and old compounds discovered:

ALUMINIUM, or **ALUMINUM**, a white metal, the base of alumina. In nature aluminium is not found in a separate or metallic state. It was formerly very rare and cost as much

as gold, but as a result of recent discoveries the price has been greatly reduced. Until very late years it was imported from Greenland, being obtained from the mineral cryolite, a double fluoride of aluminium and sodium. Its chemical symbol is Al, and atomic weight 27. To Sir H. Davy is awarded the honor of its discovery, although it is claimed by some that Wöhler is entitled to the credit. As a mineral it is remarkably light, being but about one-third the weight of iron. Recent investigations have verified the fact that in combination with oxygen it forms the common earth alumina (Al_2O_3), the most abundant of the earths as diffused over the globe in the shape of clays, loams, and similar substances. It has also been discovered that it enters largely into the composition of a great number of minerals, principal among which are the feldspars, from whose decomposition are the many forms of clay (kaolin, etc.); also a large number of silicates, as the andalusite, cyanite, fibrolite, topaz, etc. In its various compounds it is estimated that it forms fully one-twelfth of the crust of the earth, and on account of its abundance, its lightness of weight, freedom from tarnish, ease in working, and its non-poisonous qualities, every effort is being made to reduce the cost of its production. It has heretofore been used, to a limited extent, by itself, and in alloys in many articles where great strength and extreme lightness were both required.

An alloy of nine parts of copper to one of aluminium resembles gold in luster and color, and is much used in the manufacture of cheap jewelry, ornamental work, and for various industrial purposes. Three per cent. of silver mixed with aluminium gives the alloy the color and brilliancy of pure silver, and while silver is tarnished by sulphureted hydrogen, the alloy remains unchanged. An alloy made of

gold, silver, copper, and for soft solder a little zinc is used in soldering bronze. While it can enter largely into the mechanic arts, it cannot be used for cooking utensils, because it dissolves easily in organic acids in the presence of chlorides. It has proved especially valuable in the manufacture of fine wire lace, certain surgical instruments, suture wire, dental plates, etc., and on account of its remarkable strength aluminium-brass has been selected by the government of the United States as the best material for the propeller blades of the war vessels in course of construction. It has also been found especially valuable for gun metal.

As an evidence of the remarkable advance that has been made in its production, as well as in lessening its price, it is officially stated that in 1885 the price of the metal was quoted at from 75 cts. to \$1.25 per Troy ounce. In that year works were established in Cleveland, Ohio, and Lockport, N. Y., where its manufacture was entered upon with so successful a result that its cost was reduced to prices varying from \$3 to \$1.50 per pound. In 1890, by reason of two chemical discoveries, it was found that the pure metal could be extracted from common clay, and, it is claimed, can be produced for less than \$200 a ton—a price less than that of copper. As a gauge of its lightness, it may be stated that a cubic foot of silver weighs four times as much, and a cubic foot of iron three times as much as a cubic foot of aluminium, and, with its extreme ductility and its tensile strength of 25,000 to 30,000 pounds per square inch, it is destined to occupy a highly important position in the arts. See *Britannica*, Vol. I, p. 647.

ANTIFERINE.—An oxygenated alkaloid. As found in commerce it is an artificial organic base, in the form of a white crystalline powder, or in scales, remarkable for its ready solubility in water. It is produced by the action of phenylhydrazin on acetic ether, and the subsequent methylation of the product. Its composition corresponds to the formula $C_{11}H_{12}N_2O_2$, and its constitution may be indicated by the designation of Dimethylphenyloxypyrazol or by Dimethylphenylpyrazolon; this constitution, according to the elaborate researches of its discoverer, Dr. Ludwig Knorr, of Germany (1890), is seen in the formula grouped as follows:

Its most characteristic reactions are those it gives with perchloride of iron and nitrate of soda; the former produces a deep reddish-brown color in the neutral solution, the latter an intense emerald green tint in the slightly acidulated solution. It gives an intense red coloration with chloride of iron. It is an extremely efficacious agent for the reduction of the morbid temperature in nearly all cases of febrile disorder, such as typhus, pneumonia, pulmonary phthisis, pleurisy, acute rheumatic gout and articular rheumatism, erysipelas, puerperal fever, scarlatina, inflammations, etc. It effects with high fever a reduction of temperature from three and a half to five and a half degrees without unpleasant after-effects. It is given in doses of fifteen and thirty grains, and is dissolved in water or wine before each administration. The duration of the effect lasts from seven to twenty hours.

AMIDOGEN.—A hypothetical radical, with the formula NH_2 . It is a clear and very mobile liquid, boiling at $87^\circ C$. The vapor, absorbing moisture and forming minute drops of the liquid hydrate, produces a white cloud in the air. Brought in contact with water, it dissolves with evolution of great heat. It attacks the skin in the most painful manner and rapidly destroys cork and caoutchouc.

BACTERIAL FERMENTATION.—It has been discovered that certain alkaloids which act as violent poisons are the immediate result or accompaniment of bacterial fermentation. Brieger in 1887 isolated an alkaloid, to which he gave the name *btanin*, from the liquid used for cultivating a bacillus which has been supposed to cause tetanus traumaticus in animals. It remains to be determined whether the alkaloid is a secretion or other product of the life of the bacillus—in which case the bacillus would be the primary cause, and the *btanin* the secondary or immediate cause of disease—or whether it is a direct result of chemical action in the cultivating liquid.

BRAN AS FOOD.—It has been recently proclaimed (1886) by Aimé Gerard, as the result of his investigations of the alimentary value of the several tissues of which the wheat grain is composed, that while a considerable proportion of the seed coats is digestible in man, the proportion of nutriment is very small, and the quality of the bread is greatly impaired by the presence of these substances. From an economical standpoint, flour mixed with its full complement of bran is not desirable for human food, as the bran can be more profitably utilized as cattle feed.

BROMIDE OF ETHYL.—A new anæsthetic, claimed to be far superior to ether or chloroform. It is highly indorsed by members of the medical profession for the reason that it does not influence the circulation, except sometimes to produce a slight increase in the rapidity of the heart's action, and in arterial pressure. Respiration is but little affected by it, and there is but little, if any, nausea or vomiting. It vaporizes readily and produces no irritation in the respiratory passages, and there is far less tendency on the part of the

patient to struggle, as is frequently the case when ether or chloroform is administered. Complete anæsthesia is accomplished in about one-third the time experienced in the use of ether and chloroform, and the recovery is much more rapid, two minutes being enough for its completion. The vapor is not inflammable, hence no danger attends its use in the presence of artificial lights.

BROMINE, as a chemical element, has received an immense impetus and is manufactured on a large scale from the mother-liquors obtained at Stassfurt in working the salts of potassium and magnesium. Immense quantities are also produced from similar liquors obtained in salt boiling in West Virginia, Ohio and Pennsylvania. Bromine is now being extensively used as a substitute for iodine alcoholic compounds in the manufacture of coal-tar dyes, and also to some extent in the production of various artificial dye stuffs. On account of its volatile nature, it is now generally shipped in a solid or liquid form, as bromide of iron or of ethyl.

CHOLESTERIN, $C_{26}H_{44}O$, a fatty substance, originally found in gall-stones, but now known to be present in the yolk of egg, the blood corpuscles, milk, and other animal fluids, as well as in peas, barley, rye, etc. It is soluble in alcohol and ether, and separates from its solutions in glistening nacreous scales.

CELLULOSE.—A substance especially abundant in Nature. It composes the cells of wood, as wax composes the cells of a honey-comb. It is the essential of the primary wall membrane of the cells, isomeric with starch in its composition, and allied to starch, sugar and inulin. Cotton and bleached flax, as well as hemp, are nearly pure cellulose. In some filter paper it has been produced almost absolutely pure. It is remarkable for its insolubility, being dissolvable only by an ammoniacal solution of copper. It has recently been brought into use in ship-building, as it is specially adapted for protection against blows, concussions, or perforations, either above or below the water-line. Its component parts are carbon, hydrogen, and oxygen, in the proportions in which they exist in the cellular tissues of all plants, woods included. The material as prepared for ship-building is usually made of the ground fiber of the cocoa-nut, with a small percentage of the original fibers. It is extremely light, and has the property of rapidly swelling when wet. A cubic foot of it, as ordinarily prepared, weighs but seven and a half to eight pounds. It is practically free from danger of fire, burning very slowly and with great difficulty when compressed. The French made experiments with it by firing a 10-inch shot through a cellulose mattress. The fibers came together so rapidly that only about three and a half gallons of water per minute passed through the aperture, and it soon closed entirely. Its use was begun in 1881, and up to 1890 it had been put into about forty vessels of the French navy, and into a number of the Russian, Dutch, Japanese, and Greek navies. In 1890 its use was ordered in the construction of the vessels of the American navy. The cost as prepared for use is about \$350 a ton, or about one dollar a cubic foot.

COCAINE.—A vegetable alkaloid ($C_{17}H_{21}NO_4$) obtained from the leaves of the coca (or *coca*, for which see *Britannica*, Vol. VI, pp. 684, 685), a small shrub, growing in the mountains of Peru and Bolivia, but cultivated, after its wonderful properties became known, in other parts of South America. The principal source of the drug as a commercial product, at the present day, is the province of Yungas, in Bolivia. The leaves from which the drug is obtained are green about two inches long; the blossoms white, and the berries red. The annual product is estimated at 40,000,000 pounds. The leaves, when macerated and treated with pure wine, produce one of the finest stimulants ever tried by persons exhausted by excessive mental work, or emotional excitement. Many attempts have been made in time past by chemists to extract the medicinal and chemical properties of the plant; but no success was actually reached until within late years, when an alkaloid was isolated which proved a thorough local anæsthetic, and to which was given the name *cocaine*. The drug of commerce forms colorless transparent prisms, is odorless, and has a bitter taste. It is only sparingly soluble in water, but freely soluble in ether, and is used as a local anæsthetic. As such it has proved especially valuable in operations on the more delicate organs of the body, as the eye, etc. Two per centage of cocaine added to ordinary cacao butter-pencils converts the latter into a remedy which gives almost instant relief to a chafed or irritated skin, to insect bites, etc. In 1889 cocaine was made artificially from benzoil-ecgonine, by introducing into it the methyl group. Whether the new production possesses special therapeutic properties has not been ascertained, at least not announced.

The history of cocaine is a short one, but its strength as a drug and a poison places it in the front rank of drugs as the most deadly. So benign is its influence that few who begin its use suspect its power until the "cocaine habit" is formed, and the victim is rapidly becoming a wreck. Its distinctive feature is due to hyperæmia of the nerve centers; but as the effect is transient, reaction sets in with ever increasing power until the habit is fully formed and the victim is in the clutches of a terrible adversary with very little chance of hope for safety. As a stimulant it is justly regarded as far more powerful, rapid, and baneful in its effects than any known drug.

Beginning with 1885, when crude cocaine was first made in Peru, vast quantities were sent to the United States and to Europe. The advantages of exporting the crude alkaloid

rather than the leaves proved many and important. The principal source of supply for the United States is by the way of Hamburg.

CORROSION OF FRUIT CANS.—Acetic, tartaric, and citric acids dissolve more tin and lead (in some cases nearly, if not quite as much) from sheets of pure metal than from alloys. This has been especially noticed in the corrosion of fruit cans and tin-foil by the acids of the fruit inclosed in them. The action is very rapid; hence a can once opened should be emptied into glass or earthenware immediately. The solder of the tin cans contains a large amount of lead, and vegetable acids act on this as well as on the pure tin of the plate, the results proving often very deleterious. In an experiment on tin cans that had been emptied, it was found that acetic acid dissolved 0.4178 grams of tin, and 0.0117 grams of lead; tartaric acid dissolved 1.0430 grams of tin, and 0.0873 grams of lead; and citric acid, 0.6828 grams of tin, and 0.1539 grams of lead. In two weeks' time the tin was completely eaten off as far as the acids reached. The use of tin-foil for wrapping the so-called Neuchâtel and other soft cheese is regarded as reprehensible by chemists, so large a proportion of what is called tin-foil containing a large admixture of lead, sometimes as much as 75 to 80 per cent. This is readily dissolved by the acids in the cheese, and the lead is thereby received into the system.

CHOLESTERIN.—A substance ($C_{26}H_{44}O$) crystallizing in leaflets, with a mother-of-pearl luster and a fatty feel. It occurs in the blood and brain, in the yolks of eggs, and in the seeds of buds and plants. It has also been found as a fat occurring in the feathers of birds, and is present in considerable proportions in wool. It was, until 1887, regarded as of no value when occurring in feathers and wool, except as a combustible. Liebrich has experimented with it and produced an extremely pliant, soft mass, absorbable by the skin, and capable of being readily incorporated with various medicaments. It is now being manufactured commercially, and has come into general demand as a basis for salves and cosmetics.

CYANON.—A white powder which has a greenish-gray tint, and which, on the application of heat of about $400^{\circ} F.$, explodes with great violence. It is produced by passing coal-gas through an alkaline solution of bi-cyanide of mercury. In its explosion there is produced a considerable quantity of soot and carbon, while the mercury is thrown out to a considerable distance, so that cyanon may be said to combine the qualities of both gunpowder and shot.

DECIPIUM.—A new element discovered by Delafontaine in 1878. Its oxide (DpO) has a molecular weight of 122. The nitrate gives an absorption spectrum of three bands in the blue and indigo.

DIAMONDS, ARTIFICIAL.—First produced in 1880 by Prof. Hannay, of Scotland, who heated lithium in a mixture of highly rectified bone-oil and paraffine-spirit for fourteen hours, and then allowed it to cool slowly. On opening the tube in which it had been enclosed and allowing the gas to escape, he found adhering in its upper part a hard, smooth mass which had to be removed with a chisel. In pulverizing the mass transparent crystals of carbon, or diamonds, were found. Their purity was tested by burning a portion in oxygen with results indicating that their composition was 97.85 per cent. carbon. The remainder was found to be nitrogen, present in a chemical combination.

DRYING OILS.—When linseed oil is oxidized, it undergoes very marked changes in its physical properties; the color becomes darker, the oil more viscid, and there is an increase in weight, sometimes equaling eight per cent. The drying of the oil is due to its oxidation. Some carbon and hydrogen are also driven off. These changes likewise occur during the process of "boiling." According to Cloetz (1890), the carbon and hydrogen eliminated do not all pass off as carbonic acid and water, but partly as an irritating vapor resembling acrolein.

ECONOMICAL HEATING GAS.—Steam passed over coke or charcoal at a red heat causes a dissociation of the elements of the watery vapor. The hydrogen being set free, and the oxygen forming compounds with the carbon, an intense heat is generated. The mechanical apparatus for producing this effect is a hollow cylindrical body of wrought-iron terminated below by a cast-iron bottom having a hole in its center, and below this a second cylinder. In this lower cylinder the fire grate is lodged, the blast pipe opening into it below the fire grate. In the upper cylinder there is a coil of thick wrought-iron pipe with the ends of the coil turned outward at right angles, and passing gas-tight through the body of the generator. Various other mechanical features complete the heater. When a fire is lighted in the interior of the machine and water driven through the coil, the water reaches boiling point very quickly. The steam accumulating in the upper part of the coil becomes super-heated, and escaping by the small pipe with considerable force, carries with it by induction a stream of air, thus supplying the requisite oxygen for supporting combustion. The steam is decomposed in its passage over the incandescent coal, forming oxygen, carbon monoxide, and carbon anhydride. The gas produced is essentially a non-illuminating gas. It burns with a reddish blue flame with neither smoke, soot nor deposit of any kind, the sole product being water and carbonic anhydride. In the city of London it is made in considerable quantities at about one-quarter the cost of ordinary illuminating gas. The problem appears to have been solved by Joshua Kidd, an English inventor, about the

year 1878. A popular name given to the machine is "The Water-Burning Stove."

EIKONOGEN.—A new photographic developer, a description of which was first given by Prof. Liveing in 1883. It gives in greater detail the more delicate features of the negative, and also improves the tone of the product. The name is a manufactured one, for the salt consists of the sodium salt of amido β naphthol - β sulphuric acid.

ERYTHROGEN, a compound of carbon bi-sulphuret, uniting directly with a metal without the intervention of oxygen, or any similar body. Experiments have resulted in producing a new pigment (porsephen), and a new explosive (cyanon).

EXPLOSIONS FROM OIL LAMPS.—Owing to the great number of accidents which have occurred since the advent of petroleum into common use, the attention of chemists has been directed to a study of the causes, resulting in many important discoveries, among which may be enumerated: (a) If a lamp whose reservoir is only partly full be carried or moved rapidly from one place to another, a mixture of vapor and air may escape, and, becoming ignited by the flame, suddenly explode. (b) A sudden cooling of the lamp, by its exposure to a draught, or by being forcibly blown upon for its extinguishment, may give an inrush of air which will increase the explosive properties. (c) The glass may be cracked by sudden cooling, and permit small quantities of oil to escape, but enough to produce an explosive mixture. There are two distinct tests for oil: (a) the flashing test, and (b) the burning test. The flashing test is by far the more important, as it is the inflammable vapor, evolved at atmospheric temperature, that causes most of the accidents. The burning point is the lowest point at which it takes fire, and the two points are quite independent of each other. Since crude naphtha is worth but two or three cents a gallon, while refined petroleum oil sells for 13 to 20 cents; and as great competition exists among refiners, there is a strong inducement to turn the heavier portions of the naphtha into the kerosene tank, so as to get a kerosene price for the adulterated mixture. The mixture is highly dangerous. Very many variations of the mixture of naphtha, and benzine, and petroleum, have been indulged in. Processes have been patented, and patent rights and territory have been sold to the uninitiated; secret processes for rendering gasoline, naphtha, and benzine non-explosive, have been advertised and sold; "liquid gas," "aurora oil," "petrolino," "safety gas," "puroline," "black diamond," "septoline," "anchor oil," "sunlight non-explosive burning fluid," and a dozen more truth-sounding names have been put before the public, but in every instance there has been proved the strictest legislation. No roots, nor gums, nor barks, nor salts, when turned indiscriminately into the benzine will prevent its explosive power.

EXPLOSIVE, A NEW.—A powder discovered by Prof. Reynolds in 1878. It consists of two substances that can be kept apart without risk, and mixed as required, to form a blasting or explosive agent. The ingredients are chlorate of potassium, 75 parts; sulphurea, 25 parts. The compound is white powder, which can be ignited at a lower temperature than gunpowder, and leaves less residuum.

FUSEL-OIL IN BRANDY, MEASUREMENT OF.—Marquardt, in 1883, described to the scientific world a new method for the quantitative determination of fusel-oil in brandy. He extracted the oil with chloroform, and oxidized the product with bichromate of potash, then distilled, and treated with barium carbonate. The chloroform and the excess of barium carbonate were removed, and the baryta and barium chloride determined by means of nitric acid. The quantity of amyl alcohol or fusel-oil was calculated from the baryta.

GLASS-MARKING, IMPROVEMENTS IN.—So great has been the advance in procuring purer materials, that the coarser green glassware formerly in use is becoming a thing of the past, a colorless glass taking its place. The glass-pots formerly in use are being dispensed with by such improvements in the furnaces, that the preparation of the glass is completed in the hearth itself, where, in three separate compartments, are accomplished the fusing, the "fining," and the bringing of it to the proper consistence for working. Plate-glass has been brought more and more into use, and very large plates have become familiar. Touching processes are being constantly invented or discovered, resulting in a material of largely increased strength, and capacity for withstanding great mechanical stress and violent blows. Optical glass is made of marvelous size and clearness; telescope lenses of 80 inches and more in diameter having been made since 1880. That of the Lick Observatory has an object glass of 36 inches.

Tilchman's sand-blast for etching on glass is an important invention, on account of its simplicity and quickness, its efficiency in deep cutting, its applicability to sheets and wares of any size, and the delicacy of its operation in engraving minute figures of intricate designs.

GLUCOSE.—A group of sugars with the chemical formula $C_6H_{12}O_6$. In commercial usage glucose is the name of the thick syrup made from cornstarch, the name being applied to the solid product from the same source. In chemistry, the term *glucose* is used to describe either substance. The *glucose* of commerce is thick and colorless, or a slightly yellowish tint, although nearly colorless, and with a specific gravity at $20^{\circ} C.$ or $68^{\circ} F.$ of 1.412. It was investigated with different specimens. If the material has been well conducted the grape sugar is to from corn starch is, when new, of a pure white color, but gradually assumes a

yellowish tint. It is hard and brittle, and dissolves more slowly in water than cane sugar. Of the two, cane sugar is the sweeter, while the grape sugar leaves a faint but perceptible bitter taste in the mouth.

Glucose occurs abundantly in sweet fruits. Chemists distinguish between two kinds, because of their action on polarized light, naming one *dextroglucose*, *dextrose*, or *grape sugar*, this form turning the plane of polarization to the right; and *levoglucose*, *levulose* or *fruit-sugar*, this latter form turning the plane of polarization to the left.

The manufacture of glucose has attained a very considerable magnitude in the United States. It is made at the factories from Indian corn by converting the starch in the grain, through the action of sulphuric acid, and is used principally for the manufacture of table-syrups, candies, also in brewing, and as food for bees, as well as in the making of artificial honey. A large percentage is also used in making cane-sugar. Bees store it away unchanged as honey. Great quantities are used in the preparation of condensed milk. The question has been raised as to the possible injurious effects caused by the use of sulphuric acid; but it has been abundantly proven that in its chemical composition, it is identical with the natural sugars of fruits and honey, which are universally accepted as wholesome.

GRASSES, AMERICAN.—A series of important experiments made under the direction of the Department of Agriculture, in Washington, of which a report was made in 1883, show by their analyses that American grasses are strikingly different in composition from similar German varieties, chiefly in that the content of nitrogen is smaller, and the amount of fiber diminished, while the amount of nitrogen free extract is larger, and the fat is slightly increased. The deduction is conclusive that the nutritive range of American grasses is much wider than in the German grasses. The American wild grasses are less nutritive than the cultivated sorts.

HYALINE.—A newly manufactured composition, described as horny, translucent, possessing great tensile strength, and having considerable elasticity. It is used as a substitute for celluloid, and can be worked, dyed, pressed, denitrated, and rendered incombustible, or fireproof. It is composed of about equal parts of gun-cotton and colophony, or shellac, copal dammar, turpentine, or of any mixture of any of these resins.

HYDRAZINE.—A colorless stable gas with a formula of H_4N_2 . It is soluble in water, has a peculiar odor, and a strongly alkaline reaction. It attacks glass energetically, and rapidly destroys cork, and caoutchouc. Its taste, somewhat like that of ammonia, leaves a burning sensation on the tongue. It is an extremely strong reducing agent, and is, therefore, one of the most important factors yet discovered in chemical operations.

KEPHIR.—A fermented milk described by M. Strove, of Tiflis. What he calls it to the inhabitants of southeastern Russia, *kephir* is to those of the northern Caucasus. In its preparation cow's, sheep's or goat's milk is fermented in leather bottles with *kephir-grains*. These grains are the ferment proper, the leathern bottle not being deemed a necessity. During the fermentation the milk becomes very much changed. At a given stage the ferment-substance, or *kephir-grains* are removed, and dried in the sun, when they are ready for another service. An analysis of the dried grains gave:

Water.....	11.21
Fats.....	3.99
Soluble peptone substances.....	10.98
Proteids soluble in ammonia.....	10.32
Proteids soluble in potash.....	30.39
Insoluble.....	33.11

The insoluble residue exhibited under the microscope an intimate mixture of yeast-cells, and seemed to be the only active part of the *kephir-grains*. From this it is concluded that the fermentation of the milk is entirely due to *Saccharomyces Mycodermis*. The addition of a small quantity of "finished" drinkable *kephir* will start fermentation in fresh milk in the same manner as the *kephir-grains*.

IMPERIALINE.—An alkaloid obtained from the bulb of the poisonous plant Crown Imperial (*Fritillaria imperialis*). It is when first obtained, in the form of a yellow precipitate, but from the alcoholic solution crystallizes in short colorless needles with a composition of $C_{35}H_{60}NO_4$. The crystals are not readily soluble in water, but yield to ether, chloroform, and alcohol. A chloride has been obtained which makes bitter solutions with alcohol and water, and forms salts with platinum and gold. The discoverer was Dr. Fragner, of Prague.

IRON SURFACE, PROTECTION OF.—A process for protecting from rust, invented in 1879 by M. Dodé. It consists in coating either by bath or brush, the surface of cast or wrought-iron, with a composition of borate of lead, oxide of copper, and spirits of turpentine. When dried the metal is passed through a furnace, heated from 500° to 700° F., according to the thickness of the articles under treatment, so as to bring them to a cherry-red heat. At this point a fusion of the metallic pigment takes place, and, entering the pores of the iron, gives a dark coating, which will not scale off, and resists the action of the atmosphere, gases, alkaline, and other vapors. The cost of the process, which is intended to take the place of painting and varnishing, is about one-half a cent per square foot. Another process, invented by Bown in

the same year, employs magnetic oxide, which is applied while the articles are hot. It is claimed that this process effectually protects iron from oxidation in any form.

LIGHT, DIRECT PRODUCTION OF.—Prof. Hertz has demonstrated (1891): (a) That the medium which intervenes in the phenomena of electrical action is the same as that which is the seat of luminous phenomena; (b) that both species of perturbation are propagated under the same conditions, nature with equal velocity; and (c) that there is identity of nature between certain electrical and luminous phenomena. Experiment has given the following results for the ratio of duty of different luminous sources which can be measured in this way as light, the total radiation being taken as unity:

Candle.....	0.00298
Petroleum lamp.....	0.00315
Gas light.....	0.00317
Oil lamp.....	0.00317
Incandescent electric lamp.....	0.00442
Arc lamp.....	0.06
	0.1

Thus the electric arc lamp which gives the highest duty of all, wastes nine-tenths of its energy in non-luminous, invisible heat rays. Experiments for quickening these rays are being energetically prosecuted.

LUMINOUSITY OF FLAME.—From careful experiments conducted by Heuman, that eminent scientist advanced the theory in 1878 that the luminosity of hydrocarbon flames is due to the presence of solid particles of incandescent carbon. The grounds, on which his opinion is based, are briefly stated as: (a) The increased luminosity which chlorine gives to weakly luminous or non-luminous flames is due to its well-known property of separating the carbon as such. (b) A rod held in a flame is smoked only on the lower side, the side opposed to the gas-stream. (c) A body held in a flame is smoked even when it is in a state of ignition. (d) These particles can be actually seen in the flame when it is made to strike against a second flame or an ignited surface, the particles aggregating together to form visible masses. (e) The luminous portion of a flame is not very transparent—no more so above a flame fed with turpentine. (f) Flames which nanoparticles give a shadow with sunlight, precisely as do hydro-gases and vapors give no such shadow in sunlight.

LUMINOUS GLASS.—A phosphorescent powder is mingled with the glass while in a fused state, in the proportion of five to twenty per cent. of mass of glass. After the composition has been duly puddled, or mixed, it is converted into different articles by the ordinary processes. While the powder, which becomes readily incorporated into the surface of the article by pressure, and the constant effect of luminosity or iridescence is readily produced.

MANGANESE MINERAL, A NEW.—A hydrous sulphate of the Epsomite group discovered by Mr. Iles in Colorado in 1882. It is composed of loosely adhering, very friable, thick orthorhombic prisms, which frequently terminate in truncated pyramid, with a slightly glimmering luster. The aqueous solution effervesces with sodium carbonate, and reddens blue litmus paper. Its hardness is from .75 to 1, and its specific gravity is 2.167.

MILINE.—A new explosive invented by Redtenbacher, of Austria, in 1846. It is a brownish-black powder, insensible to percussion and friction, and ignitable only by a spark at from 335° to 340° C. It is claimed that it contains the elements of ordinary powder, and can be employed as powder is, but made to produce effects comparable with those of dynamite.

MILK OF THE EGYPTIAN BUFFALO.—From experiments made by MM. Ruppel and Richmond, of the Khedive Laboratory, Cairo, in 1891, the milk of the Egyptian buffalo (*Bos bubalus*) presents several characteristics distinguishing it from that of the cow. In Egypt the milk is extensively used by physicians for invalids, especially infants. The amount of fat is much greater than in cow's milk, the percentage varying from 5.15 to 7.25. The sugar, which appeared to be a hitherto undescribed variety, differing from milk sugar, was found to be of larger amount than that in cow's milk, the average percentage being 5.41. It was suggested that it be called *trephkosé*. The fat was found to differ from that of cow's milk, in containing minute quantities of sulphur and phosphorus, and yielding four times as much caproic acid as butyric acid; whereas in cow's milk the quantity of caproic acid is only double that of butyric acid. The milk also contained citric acid.

NITRIFICATION.—Among the older chemists it was believed that a decaying organic body evolves more or less of its nitrogen in a free state, and that this while nascent combines with the oxygen of the air. This, however, is no longer regarded as a purely chemical process, but the work of a living organism comparable to the yeast plant. Among many modern chemists the agent is believed to be ozone. Yet it has been discovered that the temperature of boiling water suffices to destroy all power of nitrification. As a fact the process of nitrification is strictly limited to the range of temperature within which the vitality of the living ferment is confined.

OLIVE OIL, A NEW TEST OF.—According to Prof. Bichi, of Florence, cotton-seed oil can certainly be detected in olive

oil by the test of a one per cent. solution of nitrate of silver in absolute alcohol. The test was applied to a sample of pure olive oil, and a sample in equal quantity of the doubtful oil. The pure oil was not affected, but the mixed oil began to darken to a tint depending on the amount of the adulterant present.

OLEOMARGARINE.—The first manufacture of oleomargarine in the United States was by Paraf in 1873, and for a year or two the sales were light, the product not being as good as that made under Mège's method in Paris. Experiments toward improvement were begun by Dr. Mott, of New York, with excellent results. These were followed by others, especially by Mr. G. Harding, most of which were satisfactory. A new industry was thereby created, and factories for its production were built in several States, some of them with a capacity for producing 50,000 pounds of the material daily. In order to make this quantity 122,000 pounds of fat were required. A careful analysis shows from what it appears its constituents are:

Water	11.203
Butter solids	88.797

100.

While the constituents of cream butter are:

Water	11.963
Butter solids	88.032

100.

Oleomargarine has, under the microscope, identically the same appearance as butter made from cream, but has less of the volatile fats in it, and keeps sweet for a much longer period than dairy butter. In 1882 very strict laws were enacted by the State of New York in reference to the manufacture and sale of the article; and the example set by her was generally followed by other States. One important requirement of the law is that every package of oleomargarine sold shall be invariably marked "Oleomargarine," and a penalty is provided for its breach. In 1881 the manufacture was carried on on an enormous scale. Three factories in the State of New York alone turned out not less than 4,500 tons. Grave fears have from time to time been expressed that animal parasites, or diseases might be introduced into the human system by this substitute for butter, but analysis has failed to discover them; and, as the aim of the manufacturers is to produce a sweet and merchantable article, it would be against their interests to use poor materials. It may be said in truth that the discovery and invention of Mège, with the improvements which have since been made, have revolutionized the treatment of beef-fat, which was formerly converted into tallow. Large quantities of the manufactured product are annually shipped to England and other European countries, where it is put on the market as *butterine*, or *saïne*. In some factories lard, as well as cotton-seed oil, is used as a substitute for oleomargarine in making artificial butter. Oleomargarine and lard are also used in making cheese from skimmed milk.

OXALOMOLYBDIC ACID.—A solid, crystallizing in large monoclinic prisms. It is nearly insoluble in strong nitric acid, but the crystals dissolve in water, yielding a colorless and strongly acid liquid. The crystals when dry are affected neither by sunshine nor dark. When moist and exposed to the sun's rays, they quickly become blue. If a piece of paper be immersed in the solution dried in the dark and exposed behind a photographic negative, a sharp print in blue is readily obtained by exposure to the sunlight, but the color will instantly disappear in contact with water. If, however, the paper with its blue markings be exposed to a gentle heat for a few minutes, the blue changes to black, and the characters are no longer destroyed by water.

OXYGEN, SOLIDIFICATION OF.—This was announced in 1886 as having been accomplished by Prof. Dewar. He allowed oxygen to expand in a partial vacuum, when an absorption of heat took place. The condensed oxygen became like snow, and had a temperature of 200° C. (369° F.) below the freezing point of water.

OZONE, LIQUEFACTION OF.—It was accomplished by MM. Hautefeuille and Chapuis in 1880. In performing their experiment they ozonized oxygen to a greater extent than had ever before been done, by passing a silent electric discharge through it at a low temperature. The oxygen was then conducted into the capillary tube of a Cailletet's apparatus at a temperature of -23°. After a few strokes of the pump the gas in the tube became of an azure blue. The pressure was increased until under 95 atmospheres it became of a dark indigo blue. The pressure was suddenly removed, when the mist which indicates liquefaction was formed in the tube. The stability of a mixture of oxygen and ozone, rich in ozone, appears to be chiefly dependent on the temperature. Ozone is much more easily liquefied than oxygen, the latter requiring the pressure of 500 atmospheres at a temperature of -29°.

PAPAIN.—A new digestive agent, derived from the juice of the common papaw tree (*Caribba papaya*). The milky juice is slightly bitter and styptic, and free from tartness. It flows from incisions made in the bark and the green fruits, and is bottled and sent to market, either pure or with the addition of ten to twelve per cent. of alcohol to prevent fermentation. The most important property of papain, and one which puts it in the rank of the most powerful digestive ferments, is its action on meats. One part will digest and transform into

soluble peptone from 250 to 300 parts of meat. Its solubility in different fluids allows it to be used in a great many pharmaceutical forms, and being a vegetable juice it can be preserved more readily than animal ferments. When dry it can be kept indefinitely. Attention was first called to its peculiar properties by M. Wurtz before the French Academy of Sciences in 1881.

PAPER MANUFACTURE.—Owing to the immense demand for paper, and the inability to secure supply from rags, esparto, etc., much attention has of late years been given to its production from wood, the supply of which is practically inexhaustible. Various processes have been patented in the United States and Canada. Their result can be best summed up as follows: Wood or straw is cut in pieces, macerated with milk of lime, transferred to a digester after twenty-four hours, and saturated with sulphurous acid, with the simultaneous application of a pressure of five atmospheres, for one or two hours. Washings with water and further pressure is given, with treatment of three per cent. calcium chloride and one-half per cent. aluminum sulphate. The pulp begins to resemble cotton in appearance, and is employed for manufacturing the finer grades of paper at once. Pine, birch, beech, and hickory are stated as producing the finest "Huen" paper stock. Pulp mills are abundant in many of the Northern and Western States, whence the pulp is shipped to other mills for final disposition.

PHILLIPIUM.—An oxide discovered by M. Delafontaine, and described by him in 1878. The earth of the metal phillipia is yellow, like terbia, but its equivalent is lower. Phillipium crystallizes with great facility either by cooling or by spontaneous evaporation, in small, brilliant, rhomboidal prisms. In the spectroscope the concentrated solution of phillipium gives in the indigo blue a magnificent absorption band, very intense and rather broad, with well-defined edges.

PHOTOGRAPHY, COLORED, has received a great deal of attention—but see under PHOTOGRAPHY, IMPROVEMENTS IN.

PONSÉLION.—A scarlet powder of very brilliant tint. It rivals gold itself in resisting the effects of atmospheric influences, and like gold is only attacked by *aqua regia* and those fluids which generate chlorine. Nor does sulphureted hydrogen have any effect upon it, or any of the hydrosulphates, so that as a paint it is practically imperishable. It was first described in 1878. Its composition as given seems to consist of:

Mercury	1 atom=202
Sulphur	3 atoms= 48
Carbon	1 atom= 6
Hydrogen	1 atom= 1

Thus making its atomic equivalent equal 277

PURIFYING WATER.—A method of purifying water was adopted in 1880 at the Royal Aquarium in London with most satisfactory results. The method of procedure is as follows: Receive the water in a "softening cistern," and expose it to a jet of lime-water. This coagulates the clay that is held in suspension, and causes the impurities to be deposited at the bottom. The water is afterward passed into a filter with a large surface, so arranged that it can be cleaned by mechanism in a few minutes. The cleansing usually takes place once a day. The filtering capacity is from 80 to 100 gallons of pure water an hour from each square foot of filter surface. The health of the occupants of the tanks was greatly improved as a result. The system immediately became popular, and was put into extensive use.

PYRIDINE.—A colorless liquid, derived from coal tar. Its symbol is C₅H₅N. It has a pungent odor, and its special use is in allaying asthmatic paroxysms, in accomplishing which it has proved extremely valuable.

RARE EARTHS.—Investigations of the spectra of various rare earths have led scientists to declare that there are elements whose existence is only revealed by the spectrum lines, and which still remain to be separated. Most valuable researches have been made by European physicists, and most interesting results are being constantly announced.

RUBERINE.—A new coloring matter extracted from the *Agaricus ruber*, a poisonous fungus, and first described by Dr. Pilpison in 1882. It possesses interesting optical and chemical qualities. In color it is a beautiful rose-red, and when seen by transmitted light presents a very vivid blue fluorescence. In its spectrum it gives two wide and dark absorption bands in the green. It is soluble in water and alcohol, in solutions that are rose-red by transmission, and blue by reflection.

SAMARITUM.—A new metal found in samarskite, the molecular weight of whose oxide is less than 117. It was first discovered by M. Delafontaine in 1878, but not verified until by M. Lecoq in 1881. It is regarded as identical with the β described by Marignac.

SCANDIUM.—A metal discovered in 1879 by Nilson in erbia, which up to that time had been considered as the oxide of a single metal, erbium. It occurs only in minute quantities, and forms but one oxide, scandia (Sc₂O₃). It is a fine, silvery white, light, infusible powder. The strongest acids attack it with difficulty. Its specific gravity is 3.8, and its atomic weight 44.2.

SPECTROSCOPY, A NEW.—Recently devised (1888) by Kirchoff, based on the Bunsen and Kirchoff's method. Spectra of its power that spectrum measurements may be made between two colors whose wave-lengths differ only 0.000001 mm.

SULPHUREA.—A body discovered by Prof. Reynolds, and obtained principally from the waste products of gas manufacture. It is a compound, and with three times its weight of chlorate of potassium, it forms an explosive more powerful and much cleaner than gunpowder.

TEMPERATURE OF FLAMES.—By some very skillful experiments made by Rosetti in 1878 with his ingenious calorimeter, investigating the temperature of different flames, he is enabled to present to the scientific world the result of his investigations in the following table:

Locatelli lamp.....	920° C.
Stearine candle.....	940° C.
Petroleum lamp, with chimney.....	1,030° C.
Petroleum lamp without chimney.....	920° C.
Illuminating part.....	780° C.
Sooty envelope.....	1,170 to 1,180° C.
Alcohol lamp.....	1,390° C.
Bunsen burner.....	1,390° C.

THEOPHYLLINE.—A new base discovered in tea. It forms a well crystallized series of salts with the mineral acids, and with platinum, gold and mercury chlorides. It also yields with silver nitrate a silver substitution compound, which is readily soluble in nitric acid.

TYROTOXICON.—A poisonous substance found by Prof. Vaughn in certain kinds of cheese. From an alcoholic extract a residue was collected, which, like the aqueous extract, produced the symptoms of poisoning. The poison was separated by spontaneous evaporation in needle-shaped crystals, having a penetrating, old-cheesy odor, like that sometimes observed in poisonous sausages. When the crystals were allowed to stand exposed to the air at ordinary temperature, they decomposed with the formation of an organic acid. Tyrotoxicon is soluble in water, alcohol, chloroform and ether. A few drops of an aqueous solution of the crystals placed upon the tongue produced the symptoms characteristic of poisonous cheese; dryness of the throat, nausea, vomiting and diarrhoea. The specimens of cheese secured for analysis gave, when freshly cut, various drops of a slightly opalescent fluid, which reddened litmus instantly and intensely.

WOOL, SILK AND COTTON, DETERMINING THEIR RESPECTIVE AMOUNTS IN TISSUES.—Four portions of cloth are taken, of equal weight. One is put aside, and the other three boiled in hydrochloric acid for the removal of the dyes and weighting materials. One of these boiled pieces is laid aside, and the other two exposed in a boiling solution of basic zinc chloride for the removal of the silk. One of these latter is laid aside, and the other boiled in soda-lye. All four are then heated in distilled water, and after 24 hours weighed. The difference between the first and second represents the dressing; that between the second and third gives the silk; that between the third and fourth, the vegetable fiber present; the remainder is wool.

YTERBIUM.—A new element described by Marignac in 1878 as found in gadolite. The atomic weight of 131 was provisionally adopted, but in 1880 it was changed and declared to be 173.01.

New processes are being constantly developed; new minerals discovered; new compounds produced. The instances given in the foregoing list are but specimens of the immense progress made in the past decade. Chemical science is constantly developing, and in every direction. The immensity of the field makes it practically limitless, and the fascinations of the study are calling into rank the best mental power and learning in all the civilized countries. For additional information, see the topics severally as given in these volumes.

CHEMITYPE, the name given to the art of producing on a metal plate by a chemical process and engraving in relief.

CHEMNITZIA, a genus of gasteropodous mollusca. There are many recent species scattered all over the world. No less than 180 have been described, occurring throughout all the divisions of the fossiliferous strata from the Lower Silurian upwards.

CHEMULPO, a town on the west coast of Corea, 25 miles by road southwest of the capital, Seoul. It is one of the three treaty ports opened in 1883 to foreign commerce, the volume of which has since steadily advanced in spite of the drawbacks resulting from the great difference between high and low water here (33 feet), and the want of wharves. Since 1885 it has been connected by telegraph with Tientsin.

CHEMUNG PERIOD, the name given by American geologists to one of the principal divisions of the Devonian time.

CHENAB, one of the five rivers which give name to the Punjab. It rises in the Kashmir range of the Himalayas, winds through the gorges of Jammu, and enters British territory in the Sialkot district. Its length is 755 miles.

CHENANGO RIVER, a river which rises in Oneida county, N. Y., flows southwest and enters the Susquehanna at Binghamton. It is 90 miles in length.

CHENEY, THESEUS APOLEON, historian, born in Leon, Cattaraugus county, N. Y., March 16, 1830, died in Starkey, N. Y., Aug. 2, 1878. He was educated at Oberlin, and spent most of his life in studying and writing the history of Southern New York. To him belongs the honor of having suggested, in a speech at Conewango, N. Y., Aug. 20, 1854, the name "Republican" for the party then being formed.

CHENILLE (French, "caterpillar"), a thick velvety cord of silk or wool, used in ornamental sewing and manufactured trimmings. Also a popular name for *Dasya elegans*, a beautiful species of marine algæ, having long cylindrical fronds, closely fringed with fine red filaments.

CHENONCEAUX, a famous French château, standing partly on an island in the Cher, partly on a bridge spanning the river, near a station 20 miles southeast of Tours. It was commenced in 1524 by Chancellor Thomas Bohier, continued by Diana of Poitiers, and completed by Catherine de' Medici, who richly embellished the building, and surrounded it with a beautiful park. It passed to the Condés, and afterwards to Madame Dupin, who was here visited by Montesquieu, Bolingbroke, Voltaire, Rousseau, Buffon and others. The castle is in excellent preservation, and possesses a fine chapel, a theater, and memorials of its former occupants in furniture, personal relics, and a collection of portraits.

CHENOPODIACEÆE, or **SALSOLACEÆE**, a natural order of exogenous plants, mostly herbaceous or half shrubby. There are about five hundred species, of which the beet and spinach are among the best known and most useful. Some of the species contain large quantities of alkaline salts. Some possess aromatic and medicinal qualities.

CHENOPODIUM, a genus of plants of the natural order *Chenopodiaceæ*. It includes various common weeds, such as goosefoot, pigweed, etc., which are eaten as greens when young. It is widely distributed in temperate regions. *C. anthelminticum*, the *wormseed* of the United States, has a strong and somewhat aromatic odor, and a reputation as a vermifuge.

CHER, a French river, flowing 200 miles northward and north-westward till it falls into the Loire below Tours. It is navigable from Vierzon.

CHERAW, a railroad junction in Chesterfield county, S. C., at the head of navigation on the Pedee River. This place was made a depot of supplies by the Confederates during the late war, but was captured by General Sherman's troops, March 3, 1865.

CHERBOULIEZ, VICTOR, an eminent French novelist, born at Geneva in 1829. Besides numerous popular works of fiction, he has published many volumes on literary and art criticism, and on politics.

CHERIMOYER, or **CHIRIMOYA**, a deliciously flavored fruit of Brazil and Peru. It belongs to the same genus as the *custard-apple*. Externally it is greenish, covered with small knobs and scales, the skin rather thick and tough. Internally it is white and juicy. The eatable part is soft like a custard, and forms almost the entire mass of fruit.

CHEROKEE, the county-seat of Cherokee county, Iowa, situated on a railroad and the Little Sioux River.

CHEROKEE INDIANS. See Vol. V, pp. 585-86. See also INDIANS, AMERICAN, in these Revisions and Additions.

CHERRY. See Britannica, Vol. V, p. 586.

CHERRY VALLEY, a village on a railroad in Otsego county, N. Y. On Oct. 11, 1778, nearly all the inhabitants were massacred by Indians and Tories, and the buildings were all burned.

CHERT, or HORNSTONE, a variety of quartz, always massive, and having a kind of granular appearance and structure. It is common in mountain limestone, oölite, and green-sand formations; sometimes forms rocks, and often contains petrifications. It passes into common quartz and chalcedony, also into flint and flinty slate. See Britannica, Vol. X, p. 239; Vol. XVI, p. 389.

CHERVIL (*ANTHRISCUS CEREFOLIUM*), a plant of the natural order *Umbelliferae*, cultivated as a potherb, and used in the same manner as parsley. It is a native of Europe.

CHESAPEAKE BAY, in Maryland and Virginia, and dividing the former State into two parts. It is the largest inlet on the Atlantic coast of the United States, being 200 miles long, and from 4 to 40 broad. Its entrance, 12 miles wide, has on the north Cape Charles and on the south Cape Henry, both promontories being in Virginia. The bay has numerous arms, which receive many navigable rivers, such as the Susquehanna on the north, the Potomac, Rappahannock and York on the west, and the James on the southwest. This network of gulfs and estuaries, with its noble feeders, affords depth of water for ships of any burden.

CHESELDEN, WILLIAM, an English surgeon and anatomist, born at Somerby, near Melton-Mobray, in 1688, died at Bath, April 10, 1752. Having in 1711 established himself in London as a lecturer on anatomy, he was next year elected a Fellow of the Royal Society. He was afterwards appointed surgeon to St. Thomas's, St. George's, and Westminster hospitals, where he acquired great reputation in 1727, especially by his "lateral operation for the stone." In 1728 he operated on a young man born blind, and the successful result of the operation did much to develop the theory of vision.

CHESNEY, FRANCIS RAWDON, the explorer of the Euphrates, born at Annalong, in County Down, Ireland, in 1789, died Jan. 30, 1872. He was gazetted to the Royal Artillery in 1805. In 1829 he inspected the route for a Suez canal, which he proved to be practicable.

CHESS, or CHEAT, the *Bromus secalinus*, a troublesome graminaceous weed, which infests wheat-fields. There is an erroneous vulgar notion that wheat itself is often transmuted into chess.

CHEST, or THORAX, in anatomy, the part of the body which lies beneath the neck and above the abdomen, constituting the uppermost of the two divisions of the trunk, or that which contains the heart and lungs. The chest is somewhat conical in form. Its sides are rounded, but in front and behind they are flattened. The apex or upper end is truncated, sloping downwards and forwards. Of small size, it permits of the passage of the gullet, windpipe, certain large veins and nerves from the neck into the chest, and of certain large arteries out of the chest. The broad or lower end of the cone slopes downwards, and is shut in by the diaphragm—a large muscular partition, which projects upwards from the lower ribs, being convex towards the chest and concave towards the abdomen. In respiration the diaphragm descends by its own muscular contraction, while at the same time the ribs are drawn upwards and outwards by the intercostal muscles. The structures forming the walls of the chest are: (1) The backbone or spinal column; (2)

twelve pairs of ribs; (3) the sternum or breastbone; (4) the diaphragm; and (5) the intercostal muscles. The contents of the chest are the heart, the great arteries and veins, the lungs, the trachea, or windpipe, the bronchi, or branches of the trachea leading to the lungs, the œsophagus or gullet, and the thoracic duct, or general terminus of the lymphatic system of vessels, by which the chyle and lymph are discharged into the blood.

CHEST, MILITARY, a technical name for the money and negotiable securities carried with an army, and intended to defray the current expenses.

CHESTER, a coal-shipping city and county-seat of Randolph county, Ill., situated on the Mississippi River. It has a grain elevator, and flour and rolling mills.

CHESTER, a city of Pennsylvania, on the Delaware River, about 15 miles below Philadelphia (see Britannica, Vol. V, p. 606). The town was settled by the Swedes in 1643, and called Upland. It was incorporated in 1866. Ship-building is its chief industry, several thousand men being employed in the ship-yards. Population in 1880, 14,997; in 1890, 20,167.

CHESTER, a manufacturing town of Windsor county, Vt., on a railroad. It has an academy, and produces leather, furniture, lumber, boots and shoes.

CHESTER, JOSEPH LEMUEL, antiquarian, born in Norwich, Conn., April 30, 1821, died in London, England, May 28, 1882. He was a writer for the Philadelphia press, and in 1858 went to England and made researches in the genealogies of the early settlers of New England. Mr. Chester published, with notes, an abstract of the Westminster Abbey registers, and collected much valuable family history.

CHESTERFIELD INLET, a narrow gulf penetrating to the westward from the northwest of Hudson Bay, its extreme dimensions being 250 and 25 miles.

CHESTERTOWN, a railroad and seaport town, county-seat of Kent county, Md. It is on the west bank of the Chester River. Washington College is here.

CHESTNUT. See Britannica, Vol. V, p. 608.

CHESTOPA, a railroad center of Labette county, Kan., near the line of Indian Territory, situated on the Neosho River. The city has many mills, where flour and castor-oil are made. There are also schools, stock-yards, and also a foundry.

CHEVALIER, an honorary title given formerly to younger sons of French noble families. Brought up in comparative luxury and having very little money, they became frequently aristocratic parasites. The title was given by their partisans to the old and also to the young pretender.

CHEVALIER, MICHEL, a French political economist, born in Limoges, Jan. 13, 1806, died Nov. 28, 1879. In 1828 he edited the "Globe," and four years later was sent by Thiers to examine the canals and railroads of the United States. He was an advocate of free trade, a professor of political economy in the College of France, in 1841 chief engineer of mines, and in 1860 became a Senator. He wrote several books about America.

CHEVERUS, JEAN LOUIS ANNE MAGDELINE LEBEVRE DE, Roman Catholic prelate and philanthropist, born in Mayenne, France, Jan. 28, 1768, died in Bordeaux, July 19, 1836. He went to Boston in 1796, having suffered persecution in France, became famed for eloquence and also for his philanthropy during a yellow fever epidemic. In 1803 he founded the Church of the Holy Cross; in 1810 became the first bishop of Boston, and founded the Ursuline convent at Charlestown. Returning to France on account of ill health he was conse-

erated archbishop of Bordeaux in 1826, and cardinal nine years later.

CHEVES, LANGDON, statesman, born at Rocky River, S. C., Sept. 17, 1776, died in Columbia, S. C., June 25, 1857. He was a lawyer, and became eminent in his profession; served in Congress from 1811 to 1816; was Speaker of the House during one session, and in 1816 became judge of the superior court of South Carolina. While in Congress he voted against rechartering the United States Bank, but in 1819 he was elected its president, holding this position for three years. In 1822 Mr. Cheves became commissioner of claims under the Ghent treaty.

CHEVEREUL, MICHEL EUGÈNE, a French chemist, born at Angers, Aug. 31, 1786, died in 1889. He lectured at the College Charlemagne, and was appointed special professor of chemistry in charge of the dyeing department at the Gobelins. In 1826 he took his seat in the Academy of Sciences, and in 1830 became director of the Museum of Natural History. One of his earliest discoveries was that of margarine, oleine, and stearine in oils and fats. His studies in fatty bodies and his theory of saponification have opened up vast industries. Between the years 1828 and 1864 Chevreul studied colors, publishing important memoirs from time to time.

CHEVRON, in heraldry, one of the honorable ordinaries, representing the couples or rafters of a house, and supposed to betoken the accomplishment of some memorable work, or the completion of some business of importance.

CHEVRON, in architecture, a molding in the form of a succession of chevrons, otherwise called zigzag molding. In general it is characteristic of Norman architecture.

CHEVRONS are bands or stripes of braid, meeting at an angle on the coat sleeves of non-commissioned officers. The number of stripes indicating the rank of the bearer.

CHEYENNE, a city and the capital of the State of Wyoming, and county-seat of Laramie county, located in the southeastern part of the State, on Crow Creek, and on the eastern slope of Laramie Mountain, at an altitude of 6,041 feet above sea level. It was founded in 1867, and because of its rapid growth has been called the "Magic City of the Plains." It is an important railroad center, being on the Union Pacific, the Denver Pacific, the Cheyenne and Burlington, and the Cheyenne and Northern Railroads. The railroad shops of the Union Pacific Railroad, which are located here, are built of brick and stone, and cost between \$4,000,000 and \$5,000,000. The State capitol, which covers nearly three acres of ground, is built of native sandstone, and cost \$300,000. Public, private, and denominational schools and a public library provide ample educational facilities. Cheyenne owed its first settlement to the discovery of gold in the Black Hills, but its present prosperity is largely due to the growth and profits of the cattle trade. Population in 1880, 3,456; in 1890, 11,693.

CHEYENNE INDIANS, a warlike branch of the Algonquin stock, originally on the Red River of the North, later on the Cheyenne River in Wyo-

ming, and as far south as the Arkansas. They are now partially settled in Indian Territory.

CHEYNE, GEORGE, an eminent Scottish physician, born in Aberdeenshire in 1671, died at Bath in 1743. In 1700, after taking the degree of M. D., he repaired to London, where he practiced in winter, and in Bath in summer. In 1702 he published *A New Theory of Fevers*, and a work *On Fluxions*, which procured him admission into the Royal Society. Among his other works are: *Philosophical Principles of Natural Religion*; *Essay on Health and Long Life*, etc.

CHEYNE, THOMAS KELLY, English clergyman and Biblical critic, born in London, Sept. 18, 1841, and educated at Merchant Taylors' school and Worcester College, Oxford. He was rector of Tendring in Essex from 1881 to 1885, when he was appointed Oriel professor of the Interpretation of Holy Scripture at Oxford and Canon of Rochester. He was a member of the Old Testament Revision Company, and has contributed many articles on Biblical questions to the magazines and reviews. A critic of ripe scholarship and remarkable clearness in exposition, he has done much to advance Biblical science. His chief books are: *The Prophecies of Isaiah* (1880; 3d ed., 1885); *Exposition of Jeremiah and Lamentations* (1883); and *The Book of Psalms, or Praises of Israel* (1888).

CHIABRERA, GABRIELLO, an Italian poet, born at Savona, June 8, 1552, died Oct. 14, 1637. An enthusiastic student of Greek, he conceived a great admiration of Pindar, and strove not unsuccessfully to imitate him. He wrote several epics, bucolics, and dramatic poems.

CHIANA (in ancient times, *Clanis*), a river in Tuscany, formed by several streams from the Apennines, and falling into the Arno a few miles below Arezzo. Along with another river of the same name it waters the level Val di Chiana.

CHIANTI, an Italian mountain-range in the province of Siena, clothed with olive and mulberry trees and vines. The mountain gives name to an excellent red wine grown here.

CHIAPA, or CHIAPAS, a State in the southeast of Mexico, lying to the southwest of Yucatan. The highlands have an agreeable climate, but the lowlands are hot and sickly.

CHIAROS CURO, a kind of painting in which the effects of light and shade are produced without colors—for example, painting in black and white or by different shades of a single color, such as brown.

CHICA, a red substance, valuable as a dye-stuff, obtained by boiling the leaves of a species of *Bigonia*, a native of the banks of the Cassiquiare and the Orinoco. It is used in the United States to produce red and orange shades on cotton and wool.

CHICA, or MAIZE BEER, a fermented liquor made from maize or Indian corn. It is much used in some parts of South America.

CHICACOLE, a town of the district of Ganjam, in the Madras province, on the Languliya River, 567 miles northeast of Madras by the Grand Trunk Road. It has a reputation for muslins. Population, 16,355.

CHICAGO

CHICAGO, the chief city of Illinois, and the second in population and importance in the United States, is situated on the southwest shore of Lake Michigan and about 715 miles in a direct line from New York. The city is surrounded by a level prairie of rich soil in all directions from the shores of the lake. The early settlers found the location of the future metropolis but seven feet above the lake, and at this level built a large city, so rapidly did population increase after the first survey and sale of lots. But within the first quarter of a century it was discovered that proper drainage was impossible, and the citizens solved the problem by raising the grade of the city seven feet, being forced in some instances to lift large brick and stone buildings by jack-screws. The old Tremont House, then the leading hotel of the city, was so raised without interfering with the convenience of its guests. The original settlement was made at the mouth of a small river or estuary, which was known to the Indians under different names, called variously "Chacaqua," "Eschikagow" and "Checagow." This river, from which the city takes its name, formerly flowed into the lake; but the necessities of a growing population led to the engineering feat of changing its course, and it now empties into the Illinois and Michigan canal. In 1889 there was created a Chicago sanitary district for the purpose of extending the work, and making such a channel as would form a navigable stream connecting Chicago with the Mississippi River. The influence of the lake is felt in making the climate of Chicago singularly healthful. In the spring the water of the lake is cold, and through the summer tempers the heat, while in winter it prevents very low temperature. The average death rate is smaller than in any other large city in the country. The streets mainly intersect each other at right angles. The river divides the city into three general divisions, known as North, South and West.

Chicago became an incorporated city March 4, 1837, comprising then an area of 10.70 square miles. Since that time there have been twelve additions, and it embraces in 1891 an area of 181.70 square miles. The first United States census was taken in Chicago in 1840, and showed a population of 4,497. In 1850 it was 16,859. In 1860 it was 100,206. In 1870 306,095. In 1880 503,185. In 1889 there were added large sections which had been practically within the city, and the population was given in the United States census as 1,098,576. The school census, however, showed a population of 1,208,029, which is believed to have been nearer the truth. Chicago has grown in area from 1835 to date, as follows:

Date.	Square Miles.
February 11, 1835, original town	2.55
March 4, 1837, there was added,	8.15 making 10.70
February 16, 1847, there was added	3.33 making 14.03
February 12, 1853, there was added	3.90 making 17.93
February 13, 1863, there was added,	6.18 making 24.11
February 27, 1864, there was added,	11.38 making 35.49
May 16, 1887, there was added	1.00 making 36.49
November and December 5, 1887, there was added,	7.15 making 43.64
July 23, 1889, there was added,	128.24 making 172.18
April 16, 1890, village of Gano added	2.00 making 174.18
1890, South Englewood added	2.98 making 177.16
1890, Washington Heights,	2.80 making 179.96
1890, West Roseland,	1.80 making 181.76

Of the present area 5.14 square miles are water, 176.56 land. LENGTH AND WIDTH OF CHICAGO.—The distance between north Seventy-first street, the northern city limits, and One Hundred and Thirty-ninth street, the southern city limits, is twenty-four miles. The city, at its broadest point, is 10.5

miles in width. State street has the greatest extension north and south, running from North avenue to the southern limits, eighteen miles; Eighty-seventh the greatest western extension, running the entire width of the city.

EDUCATION.—The public school system is under the control of a board of education, consisting of male and female members and appointed by the mayor. The board is divided nearly equally as to political preferences. The following statistics were compiled by the county superintendent of schools, and embrace items regarding both city and county:

Miscellaneous Items.	Chicago	County, excluding Chicago	Whole County.
No. ungraded schools	104	131	131
No. graded schools	11	57	251
No. high schools	205	5	16
Whole number schools	205	193	398
Average No. of months schools sustained	9.25	8.4	9
Children under 21 years	475,274	42,904	516,138
Between 6 and 21 years	283,433	28,171	317,004
No. in graded public schools	135,551	10,890	146,441
No. in district private schools	62,713	4,460	67,173
No. enrolled in private schools	198,264	3,806	202,070
Total in public and private schools	198,264	19,246	217,510
Average daily in public schools	9,412	409	8,951
No. teachers in public schools	1,161	100	1,260
No. teachers in private schools	2,599	36	2,635
No. pupils in public schools	891,834	\$204,236	\$1,116,370
No. pupils in private schools	1,550,000	367,157	1,917,157
Total of township funds	2,036,000	364,650	2,400,650
Bonded school debt	33,062,231	912,211	33,974,442
Estimated value township fund lands,			

It will be noted that the estimated value of the school lands in Chicago is placed at nearly \$1,000,000. This is the remnant of the land granted to the city under the provisions of law which gave to each township a mile square of land for school purposes. Speaking of the alienation of this land by sale the following appears in Andrews' recently published history of Chicago:

"The mania for speculation which prevailed in 1833 induced the authorities to sell the school lands of the State, wherever it was possible to do so. A public sale was carried on in Chicago from October 20, for five days, at which 140 city blocks were disposed of, being all but four blocks of the school section. The sum realized was \$38,619.47, which was placed at 10 per cent. interest. In the light of present knowledge, which demonstrates the unwise policy pursued concerning the sale of the Chicago school lands, and the conversion of what might now be an unparalleled fund, had the title of this section remained vested in the school board, into a fixed cash sum, it is but just to the memory of a faithful and honorable public servant, Col. Hamilton, school commissioner in 1833, to state that the sale was not his own work. A petition, signed by 25 residents of Chicago, the leading citizens of the place, urged him to that course; and it was in compliance with that formal demand that the sale was ordered. These men deemed it advisable to convert unproductive property into a stated sum, drawing 10 per cent. annual interest, payable in advance. Acting upon the will of the overwhelming majority, Col. Hamilton caused the property to be disposed of, as has already been stated, and thereby obtained a productive fund of nearly \$1,000,000."

The same authority refers to the inadequacy of the accommodations provided for the increasing number of children enrolled as of school age.

Chicago and its suburbs are rich in universities and colleges. Aside from the Northwestern and its branches at Evanston, are the medical colleges, the normal seminaries, training schools, and the recently established University of

Chicago, with an endowment fund sufficient to insure exceptional advantages in all departments.
 Summary of receipts and expenditures in districts by reports of township treasurers for 1889-1890:

RECEIPTS.	Chicago.	Excluding Chicago.	Whole County.
Balance in hands township treasurer, July 1.	\$892,375	\$405,371	\$1,297,749
State, county and township funds distributed by trustees	493,347	21,931	515,278
Special district taxes received	2,581,456	375,350	2,956,806
District bonds issued	310,503	41,374	351,877
Temporary loans and other sources	31,768	342,271
Total	3,436,680	859,397	5,125,079
EXPENDITURES.			
Paid to teachers	3,411,341	785,159	4,562,490
New school houses	688,372	86,175	774,547
School sites and grounds	39,700	12,081	51,781
Repairs and improvements	241,111	31,591	272,702
School furniture and apparatus	18,275	11,504	29,779
Libraries	385,745	57,779	443,524
Paid district clerks	27,327	2,308	29,635
Paid on district bonds	77,500	47,630	125,130
Paid interest on district bonds	169,383	23,186	192,569
Miscellaneous	151,667	211,149	362,816
Total	\$3,787,222	\$785,113	\$4,572,335
Balance in treasurer's hands the district	453,460	356,865	810,325
Total	\$3,870,801	\$788,499	\$5,125,079

CHARITABLE INSTITUTIONS.—The principal charitable institutions aside from the asylums and hospitals supported by the county are: The Nursery and Half Orphan Asylum, Protestant Orphan Asylum, Reform and Industrial School, Erring Woman's Refuge, Foundling's Home, Good Samaritan Industrial Home, Home for the Friendless, Old People's Home, Soldier's Home, St. Joseph's Orphan Asylum (Catholic), Lutheran Orphan Asylum, Washingtonian Home (temperance), all these institutions have been liberally endowed. In addition to these are 21 hospitals and nearly 250 benevolent associations and societies. To these must be added 980 secret societies, all engaged in charitable works, and 423 churches with their missions and charities.

MILEAGE OF STREETS.—The mileage of streets laid out within the city is as follows:

Old city, including sections 25, 35 and 36, 40, 13.	} 853.87 miles.
Sections 25, 40, 13.	
Annexed parts of former town of Cicero
Former city of Lake View	131.53 "
Former town of Jefferson	242.28 "
Former village of Hyde Park	541.94 "
Former town of Lake	347.09 "
Gano, Washington Heights, West Roseland and part of Calumet	119.00 "
Total	2,235.71 "
Boulevards laid out (taken from Park Commissioner's report)	50.00 "
Viaduct approaches	1.15 "
Grand total	2,286.86 "

THE CHICAGO FIRE.—Much of the architectural beauty of Chicago is due directly to the great fire which in 1871 devastated the city. The fire broke out Sunday night, October 8. Tradition says it was caused by the upsetting of Mrs. O'Leary's lamp by a cow in a stable on Jefferson street on the West Side. History agrees as to the location. The fire crossed the river at Van Buren street, and soon swept through the business portion of the city. The wind was high, but was probably increased in its effect by the terrible heat, and the buildings deemed most fire-proof melted before it like tinder. The court-house bell tolled the fire alarm until the last

moment, and the watchman was forced to flee for his life. At about half past three the fire had crossed to the North Side, having practically destroyed the business portion of the city, including the principal hotels, railway depots, elevators, board of trade building and many churches, and other public buildings. By night the North Side was a smouldering mass of ruins, and its inhabitants had been forced to take refuge on the lake shore and open prairies. A single house was left standing in the center of the burnt district. It was the old homestead of W. B. Ogden, and stood in the center of a block facing what is now Washington Square. The burnt district was bounded by Twelfth street on the south, by Lake Michigan on the east, on the west by Halsted street and by Fullerton avenue on the north. It embraced an area of three and one-third square miles, destroyed 17,450 buildings, made 98,500 persons homeless. Of the number of lives lost only an estimate can be made, but it is known to have exceeded 200. The pecuniary loss by the fire has been estimated at upwards of \$190,000,000, of which \$44,000,000 was recovered by insurance. Before the ruins had fairly cooled the citizens were at work on the task of rebuilding their city. Within the first year many fine buildings were erected, and within the next decade almost every trace of the calamity had been removed, Chicago being more beautiful in consequence. It was about this time that the study of architecture had led to the establishment of practically an American school, of which the best examples are to be found in Chicago.

Another conflagration occurred three years later, and destroyed eighteen blocks south of State street that had escaped in 1871. It resulted in the extension of the fire limits, most of the buildings burned having been of wood and deemed a constant menace to the newer portions of the city.

GOVERNMENT AND FINANCES.—Chicago's city government consists of a mayor and common council of 68 members, the city being divided into 34 districts or wards which are represented in the council by two aldermen each, and one alderman is elected every year. The common council controls all appropriations and levies of taxes and expenditures, but the State constitution limits the amount of the city's bonded indebtedness to 5 per cent. on the total taxable valuation of the property. The tax levy of 1840 was \$4,721.85; that of 1890 was on a valuation of \$170,553,854 of real estate, and \$48,800,514 of personal property.

THE PARK SYSTEM.—The area covered by the parks of Chicago, exclusive of the boulevards which are under the control of the different boards of park commissioners, embraces 1,974.61 acres. The system is divided into three general divisions, called the South Park, the North Park, and the West Park. The commissioners of the South Park board are appointed by the judges of the circuit court, those of the other boards by the governor. The funds are derived from a direct tax upon the three divisions of the city. There are also a number of small parks under the direct control of the city. The following gives the area of parks and public squares belonging to the city:

Parks and Public Squares.	Acres.
Aldine Square	1.44
Campbell Park	.05
Congress Park	.07
Dearborn Park	1.43
Douglas Park	179.79
Douglas Monument Square	2.02
Ellis Park	3.38
Gage Park	20.00
Garfield Park	185.87
Groveland Park	3.4
Holstein Park	2.3
Humboldt Park	200.62
Jackson Park	586.00
Jefferson Park (city)	5.5
Jefferson Park (Jefferson)	5.00
Lake Front Park	41.00
Lincoln Park	250.00
Logan Square	4.25
Midway Plaisance	80.00
Oak Park	.25
Sheets Park	1.00
Union Park	14.03
Union Square	.05
Vernon Park	4.04
Washington Park	371.04
Washington Square	2.25
Wicker Park	4.00
Woodlawn	3.84
Total	1,932.56

Visitors remark the wonderful progress made in decorating the public parks, and the extent to which the floral display

is carried. Conservatories are maintained at each, and in the seasons the gardens are filled with beautiful flora.

The park system was laid out with the view of having each of the larger ones connected by means of boulevards surrounding the city. These are not entirely completed, but there are many miles of smooth drives in the system. The approaches to the south parks are deemed the finest roadways on the continent. They are each 200 feet wide, and are called "Grand" and "Drexel" boulevards. The latter has in summer a continual stretch of floral decorations along the center, and is rapidly being lined with beautiful residences. Though these parks have entailed a large expenditure, in value they greatly exceed the entire bonded indebtedness of the municipality. There has recently been inaugurated an addition to what is known as the Lake Shore Drive, one of the boulevards connecting the park system, in the building of the Sheridan road. This is to extend from the northern end of the Lake Shore Drive northward along the shore of Lake Michigan to Fort Sheridan, about 25 miles north of Chicago.

LIBRARIES.—Chicago is rapidly becoming rich in its libraries. Aside from its private collections, there are many open to the public, well-filled and being steadily increased, under the supervision of competent librarians. Among the most important of these are: *The Public Library*, containing something over 150,000 volumes, and circulating more books than any other library in the country; *The Newberry*, which is now in temporary quarters pending the erection of the building provided for in the founder's will. This new building is to have a capacity for 1,000,000 books. It is to be located on what has long been known as the "Ogden Block," on which stood the only building left on the north side by the fire of 1871. It is to be a reference library, circulating no books. It is free to the public, and even in its temporary quarters are facilities for the use of the books already gathered. It was founded by the late Walter L. Newberry, one of the early settlers who profited largely by the rise in land values as the city grew in population; The John Crerar library, to which the late John Crerar left an endowment of \$2,000,000; the Chicago Athenæum library, at 18 to 26 Van Buren street; the Armour Mission; Chicago branch of the I. T. & M. Society, at 26 College Place; Chicago Historical Society; Hyde Park Lyceum; Illinois Tract Society; Pullman; Union Catholic; Western New Church; Wheeler; Pullman.

POLICE AND FIRE DEPARTMENTS.—The police department is under the control of the mayor, under whose appointment it is conducted by a superintendent; a secretary, with rank of lieutenant; a chief clerk, with rank of captain; five inspectors commanding as many divisions. There are 35 stations, including the central station at the City Hall. There are 13 captains of precincts; 50 lieutenants; 50 patrol sergeants and 74 desk sergeants, the total force numbering, officers and men, 1,870. There are also 20 matrons employed at the principal stations for the care of females and children when arrested.

Amount appropriated for maintenance in 1890 was for salaries, \$2,241,176.25; for new buildings and sites, \$66,800; for supplies, \$180,000; total, \$2,490,976.25. Estimated cost for 1891, for salaries, \$2,778,673; for new sites and buildings, \$122,900; miscellaneous supplies, \$190,000.

The patrol wagon system had its origin in Chicago, and is here worked to perfection. The wagons with a full complement of officers may be called from the conveniently located boxes or from any telephone station. The response is surprisingly quick at any hour of the day or night. There are also two regular ambulances, which act in connection with the patrol wagons of the force. The Policemen's Benevolent Fund pays large sums annually to widows and for sick benefits and funeral expenses. The fund was established and is maintained by a percentage of certain municipal revenues by sale of lost and stolen property unclaimed, and by fines imposed upon the members. This fund receives two per centum of all moneys received for licenses for saloons and drinshops; 75 per cent. of dog tax; 25 per cent. of licenses from pawnshops and second-hand dealers and junk dealers; all the moneys received as fines for carrying concealed weapons, and 50 per cent. on all costs collected for the violation of city ordinances.

Of its fire department Chicago is justly proud, it being admittedly the best in the country. There are 1,000 miles of wire in the fire alarm system, and 791 boxes; 62 engine companies, of which three are marine companies, having fire-boats for service along the water front. There are also 21 hook and ladder companies, and nine hose companies. The department has one water tower, 90 apparatus stations, an extensive repair shop, 357 horses. Notwithstanding the large increase in the territorial limits of the city the proportion of losses for 1890 showed a favorable balance over that of the year before. The headquarters are in the City Hall. The organization is as follows: Fire marshal and chief of brigade; assistant fire marshal and department inspector; assistant fire marshal and department secretary; fire inspector; 13 chiefs of battalion. Each engine and hose company is commanded by a captain and lieutenant. The total force is 911, and the expenditures for the year 1890 were \$1,278,327.41.

The fireman's pension fund receives from the city one per cent. of all moneys received from licenses, and the firemen are retired on half pay after continuous service of 20 years. The firemen have also a benevolent society for the care of widows and orphans.

VIADUCTS AND BRIDGES.—Chicago River being navigable, and dividing the city into three parts, a large number of

bridges have been necessary. More than 40 now span the river, in addition to which are two tunnels under its bed, and one more in process of construction. Nearly all the bridges are of new and improved construction, built of steel and turned by machinery driven by steam. One of these bridges, the Adams street, presents the novel feature of being reversible while the east end is two feet three inches lower than the west end, the turn-table track being laid at a grade of 1 to 115. The two tunnels now operated are under the river at La Salle and Washington streets, and are both used by the cable system of street railways.

Railroads enter the city at or near grade, and this has required the construction of viaducts, of which 35 have been built—one extending from Clark street to Wabash avenue costing upwards of \$209,000.

ELECTRIC LIGHTING.—Chicago has undertaken the task of lighting its streets by electricity by means of a plant owned and operated by the municipality. The experiment has been regarded with much interest, and the reports of the superintendent give ground for belief in its final success. Since the commencement of the work there has been expended for construction and maintenance \$556,877.72, which includes the erection of four power houses and two for experimental stations, which latter have been abandoned. The superintendent shows in his last report (Dec., 1890) the following as relative figures of cost:

Cost of 900 2,000 C. P. arc lights, \$83.....	\$74,700.00
Cost of 3,621 C. P. gas lights, \$20.....	72,420.00
Total candle power 900 2,000 C. P. arc lights.....	1,800,000.00
Total candle power 3,621 gas lights, 20 C. P.....	72,420.00
Cost per candle power for arc lights.....	04
Cost per candle power for gas light.....	1.00

The system owned by the city now comprises—

Power stations.....	4
125 horse power high speed engines.....	13
300 horse power Corliss engine.....	1
100 horse power tubular boilers, heaters, pumps, etc.....	6
125 horse power tubular boilers, heaters, pumps, etc.....	15
Double carbon lamps.....	1,929
Lamp posts and hoods.....	929
60 light high tension dynamos.....	3
60 light low tension dynamos.....	4
35 light high tension dynamos.....	11
35 light low tension dynamos.....	6
30 light low tension dynamos.....	14
Miles of electric light cable.....	169
Number of feet of underground conduit.....	12,109
Number of feet of iron pipe laid underground.....	500,614
Number of manholes.....	248
Number of handholes.....	125

ESTIMATED EXPENSE FOR MAINTENANCE OF EXISTING LIGHTS AND PROPOSED EXTENSIONS OF ELECTRIC LIGHT SYSTEM.

Maintenance of 1,128 arc lights, \$83.....	\$93,624.00
Lamps, dynamos, hoods, posts, switches, power, labor, iron pipe, cable, to add 196 lamps to District No. 1, increasing it to 500 light plant.....	71,736.00
Lamps, dynamos, hoods, posts, switches, power, labor, iron pipe, cable, to add 179 lamps to District No. 1, increasing it to 400 light plant.....	65,514.00
Lamps, dynamos, hoods, posts, switches, power, labor, iron pipe, cable, to add 201 lamps to District No. 6, increasing it to 500 light plant.....	74,664.00
Lamps, dynamos, hoods, posts, switches, power, labor, iron pipe, cable, to add 192 lamps to District No. 8, increasing it to 500 light plant.....	70,272.00
Total.....	\$375,810.00

WATER SUPPLY.—Chicago draws its water supply from Lake Michigan. The average temperature of the lake water as taken at one of the cribs during the year 1890 was: January, 32.0; February, 32.0; March, 35.4; April, 43.3; May, 51.9; June, 54.9; July, 65.9; August, 60.2; October, 50.6; November, 43.0; December, 37.5.

At the pumping works near the lake are the main pumps which draw the water from a well at the inshore end of a tunnel reaching out to a "crib" two miles from shore. This crib is an iron structure nine feet in diameter and extending down 31 feet below the bottom of the lake, and connecting with two tunnels leading to separate pumping works on shore. Water is admitted into the crib from the surface, regulated by a gate. The first tunnel constructed from this point is five feet in diameter, and leads to the Chicago avenue pumping works, where there are four double and two single engines, giving a daily average of 50,000,000 gallons under a head of about 105 feet. The second tunnel is seven feet in diameter, and extends under the lake and city to the West Side pumping works, where there are four pumping engines with a daily capacity of about 61,000,000 gallons, under a head of 106 feet. Still another tunnel is in process of construction to increase the water supply in proportion to the increase of population. Water from this source will be available before the close of the year 1892, and in season for the rush of people to the city the following year.

There are several central pumping works. The first is near the lake at the southern end of the Lake Shore Drive. West

Side works are at the corner of Blue Island avenue and Twenty-second street. Central pumping station on West Harrison street between Desplaines and Halsted streets.

COST OF WATER WORKS.—The Total cost of the Chicago Water system is as follows:

Cost up to May 6, 1861, when the works were transferred from the Board of Water Commissioners to the Board of Public Works \$1,020,160.21

EXPENDITURES SINCE 1861.

Cost of water pipe laid (including labor).....	\$7,812,132.37
Cost of North pumping works	918,573.14
Cost of West pumping works	896,849.37
Cost of first lake tunnel.....	464,866.37
Cost of second lake tunnel.....	415,709.36
Cost of lake crib protection.....	119,431.63
Cost of new lake tunnel.....	232,466.19
Cost of land tunnel to west pumping works	542,912.61
Cost of new land tunnel.....	254,894.28
Cost of lake tunnel crib.....	70,319.10
Cost of lake shore inlet.....	42,871.17
Cost of new lake shore inlet.....	84,474.17
Cost of water works shop.....	25,551.73
Cost of water works stock.....	29,218.00
Cost of water reservoir fence.....	1,792.7
Cost of addition to stable.....	1,019.45
Cost of real estate for sites of new pumping works	206,972.35
Cost on account of Central pumping works.....	235,159.11
Cost on account of South Side pumping works.....	141,745.46
Cost on account of new lake crib.....	132,262.65
Cost on account of breakwater.....	28,181.93

Total cost of the water works to Dec. 31, 1889. \$13,767,562.67
Amount expended in 1890..... 1,250,000.00

Total cost to Dec. 31, 1890..... \$14,977,562.67

The water supply of the Hyde Park and Lake districts, recently added to the city, is taken through a five-foot tunnel nearly a mile long and is pumped through the district by two 12,000,000 horizontal and one 6,000,000 vertical Gaskill engines; one horizontal 3,000,000 Knowles engine, two 3,000,000 Coppe and Maxwell engines, and one high-duty engine. The plant is located at the foot of 68th street, near the South Shore station of the South Chicago branch of the Illinois Central Railroad. In the Lake View district, at the northern extremity of the city, the water is drawn through a 24-inch pipe and an 18-inch pipe, and is pumped by one 12,000,000 Gaskill engine, one 5,000,000 Worthington low-duty engine, and one 3,000,000 Verghennes geared engine. A new lake tunnel for this district is in process of construction. When completed it will be six feet in diameter and two miles long.

STREET CAR LINES.—For the old horse cars there have been substituted in the three divisions of the city the cable system of transportation. On the South Side the lines run from Lake street, the northern limit, to Hyde Park, something over six miles. The property of this company has grown within the last 18 years from less than 25 miles of track to over 150, and from 60 cars to 1,250. Its revenue has increased from \$600,000 to nearly \$3,500,000 a year. During the period named there has not been a single strike on the line, nor trouble between employers and employed. During the year 1890 this road carried 68,734,969 passengers, for which it received \$3,435,748. After paying all expenses and interest, the net earnings were equal to 18.37 per cent. of the capital. The growth of this company will be understood by the fact that the increase of the daily earnings for the year 1890 over 1889 was over \$1,500. The company operates horse cars on some portions of the line. The cost of operating a car per mile by cable was 9.650 cents; the same by horses, 21.985 cents. The net earnings of the road have been as follows: In 1886, \$619,253; 1887, \$686,239; 1888, \$683,338; 1889, \$45,339; 1890, \$1,139,097. During 1890 the equipment of the road was increased by the addition of 100 open cars. The present equipment consists of 222 "grip" cars and 1,028 passenger cars.

On the North Side the cable system is of more recent construction, and its operation is attended with more difficulty because of the necessity of crossing the Chicago River through the tunnel. The earnings of the company in 1890 were \$1,972,172. Net earnings, \$868,899. Increase over 1889, \$331,653. These lines are being rapidly extended northward to the limits of the city in that direction. The same company has recently opened a cable system on the West Side. Its gross receipts in this section were \$3,663,381; operating expenses, \$2,202,067; net income, \$1,460,613. Dividends on the stock were about 7 per cent. The cost of carrying passengers was 2.93 cents each, which was a decrease of .04 cents for the year. It is stated that the average cost of running a horse car a mile in this city has been 18 cents. By cable the cost is much less. Each of the companies named operate lines of street cars drawn by horses, but all are intending to substitute the cable system wherever practicable.

STEAM RAILWAYS.—Chicago is the greatest railway center in the world. It is the common saying that all roads lead to Chicago, and this has been the necessity of railroad construction in the West and Northwest. The following lines of railway now have their termini in Chicago: Atchison, To-

peka and Santa Fé; Baltimore and Ohio; Chicago and Erie; Chicago and Alton; Chicago and Eastern Illinois; Chicago and Grand Trunk; Chicago and Northern Pacific; Chicago and Northwestern; Chicago, Burlington and Quincy; Chicago, Milwaukee and St. Paul; Chicago, Rock Island and Pacific; Chicago, St. Louis and Pittsburgh; Chicago, St. Paul and Kansas City; Cleveland, Cincinnati, Chicago and St. Louis (The "Big Four"); Illinois Central; Lake Shore and Michigan Southern; Louisville, New Albany and Chicago (The Mohan Route); Michigan Central; Pittsburgh, Fort Wayne and Chicago; Wabash.

TRADE AND COMMERCE.—The increase in the trade of Chicago has been equal to its growth in population. The following are the figures given by careful statisticians for the "Chicago Tribune" for the years named:

Year.	In Currency.	In Gold.
1890	\$1,380,000,000	\$1,380,000,000
1889	1,177,000,000	1,177,000,000
1870	439,000,000	377,000,000
1860	97,000,000	97,000,000
1850	20,000,000	20,000,000

PRODUCE—RECEIPTS AND SHIPMENTS FOR TWO YEARS.—The following table gives receipts and shipments of flour, grain, live-stock and produce at Chicago for the past two years:

Articles.	Receipts.		Shipments.	
	1890.	1889.	1890.	1889.
Flour, Bbls.....	4,358,058	4,400,595	4,134,586	3,919,454
Wheat, Bu.....	13,966,439	18,762,646	11,979,723	16,138,815
Corn, Bu.....	81,117,251	70,320,691	60,556,100	83,861,818
Oats, Bu.....	64,170,660	43,001,502	70,729,015	50,471,836
Rye, Bu.....	2,916,720	2,066,684	3,271,382	2,801,266

CHICAGO STOCK YARDS.—The Chicago Stock Yards are now within the city limits, though located in what was known as the town of Lake, about five and one-half miles south of the court-house. The Union Stock Yards were organized in 1865. The plant, which covers about 400 acres, cost about \$4,000,000, and the cost of the various packing companies located there is stated to be over \$10,000,000. The following is the number of carloads of live-stock brought to the city for the past three years by the railroads: 1888—210,797; 1889—265,116; 1890—311,663.

LIVE-STOCK TRANSACTIONS.—The following gives the business at the Union Stock Yards during the year 1890, compared with the transactions of the year 1889: Cattle, 3,481,280; calves, 175,025; hogs, 7,663,828; sheep, 2,182,667; horses, 101,566.

The valuation of the stock was \$231,344,879 for the year, and for the years since 1866 to 1889 the sum of \$3,207,981.48.

THE LUMBER TRADE.—Chicago is the lumber mart of the West, and probably the largest market in the country. The city sales for 1890 amounting to upwards of 2,050,000,000 feet, of which only about 850,000,000 was used outside of Chicago.

BOARD OF TRADE.—Chicago's Board of Trade is known throughout the commercial world. Something of the speculation on this board may be gleaned from the following figures from its annual reports, showing the monthly clearings and totals:

Date.	1890.	1889.
January	\$2,090,090.00	\$8,077,053.00
February	2,363,103.75	6,991,001.25
March	2,814,658.90	6,078,357.00
April	8,762,065.75	6,564,766.75
May	10,017,336.25	4,584,955.00
June	6,429,276.25	3,472,982.50
July	7,902,114.50	3,779,494.83
August	13,651,411.25	3,262,478.75
September	9,939,287.50	3,933,817.50
October	6,470,851.25	3,517,875.07
November	9,489,613.75	2,421,917.42
December	6,099,830.00	2,171,781.25
Totals	\$86,630,158.25	\$55,463,080.32

Total balances last year were \$28,190,093.56, against \$18,763,093.56 in 1889, and \$30,153,835.15 for 1888. The clearings last year were more than \$31,000,000 greater than in 1889.

LAKE COMMERCE.—The statement of the clearances from this inland harbor is hardly to be believed when compared with those of seaport towns. The following table shows the growth of Chicago's lake commerce since the year 1883, being the arrivals and clearances of vessels and their tonnage:

Year.	Arrivals.		Clearances.		Total.	
	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.
1883	11,203	3,555,586	11,271	3,743,574	22,474	7,299,160
1884	10,513	3,481,957	10,640	3,489,066	21,153	6,971,023
1885	9,846	3,317,547	9,910	3,334,109	19,756	6,711,816
1886	10,180	3,716,309	10,267	3,591,549	20,447	7,440,858
1887	10,828	3,888,465	10,920	3,984,645	21,748	7,858,000
1888	10,158	3,990,321	10,308	4,131,064	20,466	8,124,385
1889	9,582	4,417,415	9,462	4,403,634	19,044	8,821,049
1890	9,158	4,344,502	9,281	4,429,652	18,439	8,774,154

The following table affords comparison with the tonnage of the ports named:

DISTRICTS ON THE SEABOARD.

Districts.	Arrivals.	Clearances.	Total.
Baltimore, Md	1,756	2,156	3,912
Boston, Mass	3,171	3,389	6,560
New York, N. Y.	7,571	7,712	15,283
New Orleans, La	1,040	987	2,027
Philadelphia, Pa	1,806	1,943	3,749
Portland, Me	2,758	698	3,456
San Francisco, Cal.	1,181	1,597	2,778
Total	19,283	18,482	37,765
Chicago, Ill.	11,300	11,401	22,701

MANUFACTURES.—In manufactures Chicago has increased as rapidly as in population. The returns for the year 1890 show an increase of over a hundred firms. The figures for the two years were, for 1889, 3,130, and for 1890, 3,250. The capital employed in 1890 was \$190,000,000, an increase of \$22,000,000 over the previous year. The following tables present a fair showing of the growth of various industries:

Articles.	No.	Capital.	Work-ers.	Product.
Principal bakeries	35	\$1,400,000	770	\$3,300,000
Flour mills	3	1,000,000	110	2,000,000
Meal and feed mills	3	250,000	100	1,500,000
Coffee and spice mills	12	3,000,000	750	11,000,000
Baking powder, etc.	10	2,500,000	450	3,500,000
Confectionery	8	750,000	1,200	3,000,000
Preserved, canned goods	18	400,000	500	1,300,000
Vinegar and Pickles	20	350,000	300	3,000,000
Sugar refinery	1	300,000	475	2,500,000
Totals, 1890	110	\$10,150,000	4,655	\$31,700,000
Totals, 1889	98	7,610,000	4,500	27,500,000

The wages paid in 1890 were \$2,523,000, against \$2,439,000 for 1889.

Drinks and Tobacco.	No.	Capital.	Work-ers.	Product.
Breweries	43	\$11,500,000	2,200	\$12,700,000
Malthouses	32	6,000,000	600	4,100,000
Distillers and rectifiers	72	5,000,000	950	18,072,000
Tobacco and snuff	23	910,000	800	2,600,000
Cigars and cigarettes	990	1,750,000	2,500	6,925,000
Totals, 1890	1,160	\$25,160,000	7,050	\$44,787,000
Totals, 1889	1,119	22,550,000	5,700	28,223,000

The amount paid in wages was \$1,368,000, against \$1,550,000 for 1889.

Brass, Copper, etc.	No.	Capital.	Work-ers.	Product.
Brass, cop'r, and pl'r's sup.	25	\$7,000,000	1,700	\$12,000,000
Tin, st'm'd, & sh't met'l-ware	31	3,000,000	2,500	6,200,000
Jewelry manufactures	20	7,000,000	600	2,250,000
Watch case and tools	9	400,000	175	2,250,000
Optical goods	1	60,000	60	270,000
Tel. and electric'l supplies	1	1,000,000	2,000	1,200,000
Sm., ref., & iron brass wks	10	1,200,000	900	21,000,000
Miscellaneous	25	600,000	800	2,700,000
Totals, 1890	141	\$8,560,000	9,135	\$41,420,000
Totals, 1889	130	6,210,000	7,250	30,000,000

The amount of wages paid in 1890 was \$5,500,000, as against \$1,500,000 for 1889.

Brick, Stone, etc.	No.	Capital.	Work-ers.	Product.
Brickyards.....	66	\$2,500,000	3,200	\$4,200,000
Cut stone contractors.....	60	1,500,000	2,000	2,500,000
Marble and granite works.....	32	830,000	600	2,800,000
Gravel roofers.....	35	225,000	500	1,150,000
Line kilns.....	6	225,000	370	450,000
Terra-cotta.....	1	100,000	450	600,000
Stained glass factories.....	14	300,000	400	900,000
Totals, 1890.....	214	\$5,680,000	7,520	\$12,600,000
Totals, 1889.....	194	4,975,000	6,820	10,700,000

The amount of wages paid was about \$3,209,000, against \$2,900,000 in 1889.

Iron and Wood.	No.	Capital.	Work-ers.	Product.
Wagons and carriages.....	70	\$2,500,000	2,500	\$3,750,000
Agricultural implements.....	4	5,500,000	4,700	16,000,000
Car and bridge builders.....	4	3,750,000	6,000	18,000,000
Elevators.....	8	1,250,000	1,000	2,750,000
Sewing machines and cases	6	700,000	1,000	1,500,000
Totals, 1890.....	92	\$13,700,000	15,200	\$42,000,000
Totals, 1889.....	81	11,850,000	13,000	35,400,000

The wages of the year were estimated at \$13,000,000, an increase of \$2,000,000 over the amount for the previous year.

Chemicals.	No.	Capital.	Work-ers.	Product.
Chemical works.....	6	\$700,000	250	\$1,750,000
White lead and paint.....	26	1,500,000	1,200	4,000,000
White lead corrodors.....	2	1,300,000	250	1,600,000
Varnish.....	6	400,000	110	1,150,000
Axle grease.....	1	500,000	25	1,000,000
Glue, fertilizers, etc.....	4	5,000,000	1,000	2,000,000
Soap.....	8	1,600,000	1,000	5,000,000
Candles.....	2	500,000	125	800,000
Lined oil and cake.....	8	2,000,000	210	4,000,000
Soda, mineral waters, etc.	18	720,000	580	2,000,000
Ink.....	3	100,000	150	250,000
Totals, 1890.....	84	\$14,320,000	4,900	\$23,550,000
Totals, 1889.....	82	12,275,000	4,400	19,475,000

The wages paid in 1889 and 1890 were estimated at \$2,208,000 and \$2,160,000.

Iron Manufactures.	No.	Capital.	Work-ers.	Product.
Rolling mills.....	6	\$25,000,000	15,000	\$22,275,000
Foundries.....	60	3,500,000	5,000	12,000,000
Mach., mill, iron, etc.....	67	2,800,000	3,400	9,800,000
Boiler works.....	22	600,000	1,500	2,800,000
Carwheel works.....	7	1,600,000	1,700	5,500,000
Stoves, furnaces, ranges..	22	1,750,000	2,000	3,200,000
Steam fitting and heating..	12	600,000	800	2,700,000
Gal. iron, tin, slate roof'g.	70	600,000	1,000	1,700,000
Barbed wire, wireworks..	10	150,000	200	350,000
Miscellaneous.....	45	4,000,000	4,000	9,000,000
Totals, 1890.....	321	\$40,500,000	34,600	\$69,325,000
Totals, 1889.....	290	34,200,000	26,300	61,450,000

The amount of wages paid in 1890 is estimated at \$18,500,000, as compared with \$15,600,000 for 1889.

Meats.	1890.	1889.
January and February.....	1,063,000	650,000
Summer months.....	3,182,000	2,294,000
November and December	1,368,000	1,116,000
Total for year.....	5,613,000	4,060,000
Value of animals.....	\$51,920,000	\$45,420,000
Value of product.....	58,400,000	50,650,000

Packing.	1890.	1889.
Number of companies.....	75	75
Capital.....	\$17,000,000	\$14,000,000
Workers.....	24,500	22,000
Wages paid.....	\$13,585,000	\$12,100,000
Value of product.....	137,275,000	112,000,000

Leather.	No.	Capital.	Work-ers.	Product.
Tanners and curriers.....	19	\$5,000,000	1,800	\$6,500,000
Boot, shoe & slipper mfrs..	50	4,000,000	5,000	13,000,000
Saddle and harness mfrs..	3	400,000	500	2,000,000
Trunk manufacturers.....	9	800,000	500	1,600,000
Hose, leather belt'g mfrs..	3	275,000	275	900,000
Totals, 1890.....	84	\$10,475,000	7,975	\$24,000,000
Totals, 1889.....	81	9,325,000	7,350	19,975,000

The amount of wages paid was approximately \$5,340,000, against \$4,920,000 for 1889.

Printing, etc.	No.	Capital.	Work-ers.	Product.
Prt'g, bind'g, newspapers..	240	\$1,400,000	6,000	\$20,000,000
Lithographing houses.....	7	230,000	440	600,000
Electrotyping, stereotyp'ng	15	300,000	500	900,000
Type-founders.....	4	600,000	400	800,000
Printers' ink factories.....	3	62,000	20	77,000
Printers' supplies, presses.	3	400,000	300	475,000
Printers' furniture, etc.....	2	30,000	40	100,000
Book-binders.....	11	300,000	1,500	960,000
Totals, 1890.....	285	\$6,322,000	9,200	\$23,912,000
Totals, 1889.....	277	5,490,000	8,670	19,720,000

The estimated amount of wages paid in 1889 was \$5,100,000; in 1890, \$5,800,000.

Textiles.	No.	Capital.	Work-ers.	Product.
Men's and boy's clothing...	50	\$10,000,000	14,000	\$20,000,000
Colored shirts, overalls, etc.	25	2,000,000	2,500	3,750,000
Men's neckwear.....	6	400,000	1,200	1,500,000
White shirts.....	40	340,000	930	1,700,000
Furs.....	10	700,000	400	800,000
Cloaks and suitings.....	18	2,600,000	6,000	8,500,000
Cloak and dress trimmings..	4	283,000	480	400,000
Children's caps, etc., of lace and plush.....	3	50,000	250	175,000
Millinery.....	9	350,000	1,200	1,500,000
Totals, 1890.....	165	\$16,723,000	46,860	\$38,325,000
Totals, 1889.....	151	14,285,000	22,785	32,000,000

The estimated amount of wages paid was \$8,700,000 against \$7,360,000 for 1889.

Miscellaneous.	No.	Capital.	Workers.	Product.
Toy and bicycle factories.	5	\$450,000	1,000	\$1,300,000
Sign-makers	30	120,000	415	715,000
Brushes (not brn.)	16	275,000	350	650,000
Brooms.	1	50,000	250	250,000
Feather-dusters	5	72,000	250	250,000
Show-cases.	10	70,000	130	300,000
Glass	1	100,000	200	200,000
Corks.	2	100,000	90	175,000
Paper boxes.	11	170,000	800	800,000
Sails, awnings, etc.	12	100,000	350	1,500,000
Shipyards.	2	300,000	200	350,000
Perfumer.	3	170,000	200	650,000
Totals, 1890	98	\$2,277,000	4,235	\$7,140,000
Totals, 1889	95	2,210,000	3,920	6,650,000

The wages paid approximate \$2,053,000 against \$1,000,000 for 1889.

BANKING INTERESTS.—Chicago banks rank high in the financial world. The capital of the national banks of this city in 1890 was \$16,100,000, and their surplus and profits \$10,313,119. The bank clearings for 1890 were \$4,093,145,904, being nearly ten times the amount in 1866.

BOOK PUBLISHING.—Chicago is rapidly becoming a book publishing center. In bound books the production has exceeded 8,500,000 copies, and of books in paper covers nearly 3,000,000. A heavy proportion of this product was shipped to Eastern markets. One bindery has a daily capacity of 15,000 volumes.

CHICAGO POSTOFFICE.—The Chicago postoffice has eleven carrier stations and 22 sub-postal stations at different parts of the city. The force employed consists of about 650 regular carriers, 200 substitutes, 687 regular clerks and 60 substitutes, making a total of nearly 1,600 employes. The revenue of the office has increased from \$1,930,363 in 1885 to \$3,126,810 in 1890. The disbursements have increased during the same period from \$726,860 to \$1,131,474. It is estimated that in 1895 the revenues will reach upwards of \$5,000,000. This is based upon the rate of increase in New York; but if the expectations regarding the influence of the world's fair and the growth of the city shall be realized, the increase will be much greater.

JOBGING AND WHOLESALE BUSINESS.—The following are the figures of this trade for the years named:

	1890.	1889.
Dry goods and carpets.	\$93,730,000	\$87,610,000
Groceries.	56,700,000	54,000,000
Lumber.	36,900,000	36,000,000
Manufactured iron.	15,580,000	15,530,000
Clothing.	21,500,000	21,500,000
Boots and shoes.	25,300,000	23,600,000
Drugs and chemicals.	7,100,000	6,800,000
Crockery and glassware.	5,500,000	5,100,000
Hats and caps.	7,000,000	6,000,000
Millinery.	7,000,000	6,000,000
Tobacco and cigars.	10,850,000	6,600,000
Fresh and salt fish, oysters, salmon.	5,160,000	5,140,000
Oils.	4,000,000	4,000,000
Dried fruits.	4,300,000	3,500,000
Building materials.	4,168,000	3,655,000
Furs.	1,500,000	500,000
Carriages.	1,850,000	1,640,000
Pianos, organs, musical instruments.	7,200,000	6,625,000
Music books and sheet music.	575,000	520,000
Books, stationery and wall paper.	22,000,000	20,700,000
Paper.	25,500,000	25,000,000
Paper stock.	5,000,000	5,500,000
Pig iron.	20,065,000	16,200,000
Coal.	25,075,000	23,250,000
Hardware and cutlery.	17,500,000	15,500,000
Wooden and willow ware.	3,162,000	2,875,000
Liquors.	13,800,000	11,500,000
Jewelry, watches and diamonds.	20,400,000	17,000,000
Leather and findings.	2,520,000	2,400,000
Pig lead and copper.	5,666,000	3,760,000
Iron ore.	1,000,000	2,000,000
Miscellaneous.	5,085,000	5,485,000
Totals.	\$496,856,000	\$445,165,000
Do. in 1888.		437,500,000
Do. in 1887.		419,000,000
Do. in 1886.		408,000,000
Do. in 1885.		380,000,000
The increase of \$58,355,000 from 1889 is 13 1/2 per cent.		

GRAIN STORAGE CAPACITY.—The following table shows the regular grain warehouses of the city of Chicago:

GRAIN WAREHOUSES.

Name of Elevator.	Proprietors.	Receive From	Capacity, Bushels.
Central A	Central Elevator Co	I. C. R. R.	1,000,000
Central B			1,500,000
C. B. & Q. A.			1,250,000
Do. B	Dole & Co	C. B. & Q.	800,000
Do. C			1,500,000
Do. D			1,800,000
Do. D aux			1,200,000
Rock Island A	Chas. Counselman & Co	C. R. I. & P.	1,250,000
Rock Island B	Congdon & Co	C. R. I. & P.	1,000,000
Galena		C. & N. W.	700,000
Air Line			700,000
Fulton	City of Chicago Grain Elevators, United.	C. M. & St. P.	100,000
St. Paul			500,000
City			1,000,000
Union		R. R. & Canal	800,000
Iowa		W. St. P. & P.	1,000,000
National		C. & N. W.	1,000,000
Chicago & St. Louis	National Elevator & Dock Co	R. R. & Canal	1,000,000
Wabash	Chicago Elevator Co	Various R. R.	1,500,000
Indiana			1,500,000
Pacific B	Chicago & Pacific Elevator Co	C. M. & St. P.	1,000,000
Illinois River	Illinois River Elevator Co	Canal.	170,000
Alton	G. A. Seaverns	R. R. & Canal.	1,100,000
Alton B	G. A. Seaverns		200,000
Santa Fé	Santa Fé Elevator Co	A. T. & S. F. R. R.	1,000,000
Armour Elevator	Armour Elevator Co	C. M. & St. P. R. R.	2,000,000
Necley's Elevator	Illinois T. & S. Bank	R. R. & Canal	700,000
Total			29,270,000

CHICAGO UNIVERSITY, a new educational institution located on a site embracing about twenty-four acres fronting on Midway Plaisance, Chicago. By its charter granted in 1889 two-thirds of its trustees including its president must be members of the "Regular" Baptist Church. The financial resources of the institution thus far reported embraces the following: A subscription of \$1,600,000 by John D. Rockefeller, of New York, a general subscription of \$600,000; and an interest in the legacy of the late W. B. Ogden of Chicago, now estimated at about \$300,000, and which may prove to be a sum much larger. A part of this site was the gift of Marshal Field, one of Chicago's chief merchants, and the remainder of the site was purchased at a cost of \$282,500. At this writing Jan. 1892, plans are matured for the immediate erection of three of the edifices designed for the use of the University. A dormitory to cost \$100,000; a recitation hall to cost \$150,000; and a building to cost \$100,000 for the theological seminary—these buildings to be ready for use Oct. 1, 1892. The first general examinations of students preparatory to admission are to take place in June, 1892. The plan of the projectors of the institution includes the purpose of keeping open doors for students during the whole of each year, and in order to do this successfully the school year is divided into four equal terms, but the students will not be required to attend more than three terms in any one year.

CHICKAHOMINY, a river of Virginia, which flows within five miles of Richmond, and enters the James, after a southeasterly course of 90 miles.

CHICKAMAUGA, a tributary of the Tennessee River, rising in Georgia, and flowing northwest into Tennessee, in which State the Confederate General Bragg defeated Rosecrans in a battle fought on the banks of the stream, Sept. 19 and 20, 1863.

CHICKASAW INDIANS. See Britannica, Vol. V, p. 614. See also INDIANS, AMERICAN, in these Revisions and Additions.

CHICKERING, JONAS, piano manufacturer, born in New Ipswich, N. H., April 5, 1797, died in Boston, Mass., Dec. 8, 1853. He was the son of a blacksmith, began business life as a cabinet-maker, and became noted for the number and excellence of the pianos which he manufactured. His factory in Boston grew to be very extensive. Mr. Chickering patented many improvements in pianos and was noted for his business enterprise, public spirit and benevolence. After his death the business passed into the hands of his three sons; the eldest, Thomas Edward (born in Boston, Oct. 22, 1824, died there Feb. 14, 1871), succeeded his father as head of the firm, and distinguished himself in the civil war. Charles Frank, second son (born in Boston, Jan. 20, 1827, died in New York city, March 23, 1891), after receiving his education entered his father's factory. He represented his father at the World's Fair in London in 1851, and made many improvements in the manufacture of pianos.

CHICO, a town of California, former county-seat of Butte county, situated on Chico Creek, ninety-five miles north of Sacramento. It is the trade-center of a fertile district, and an important shipping-point for lumber. It is the seat of an academy, and contains a variety of manufactories.

CHICOPEE, a city of Massachusetts (see Britannica, Vol. V, p. 614). Among the principal industries are the cotton mills of the Dwight Company, with a capital of \$2,000,000. The Chicopee River affords ample water power for the numerous mills and manufactories. There is a convent of the Sacred Heart, a high school, and several churches, and

national and savings banks. Population in 1880, 11,516; in 1890, 14,007.

CHICKORY. See Britannica, Vol. V, pp. 614, 615. **CHIEF**, in heraldry, an honorable ordinary formed by a horizontal line, and occupying the upper part of the escutcheon. Any object borne in the upper or chief part of the shield is said to be *in chief*, though the chief be not divided off from the rest of the field as a separate portion.

CHIEMSEE, a lake of Upper Bavaria, the largest in the country. It lies about forty-two miles southeast of Munich. It is twelve miles in length and nine miles in breadth, and is situated at an elevation of more than 1,500 feet above the sea.

CHIFF-CHIAFF (*Sylvia hippolais*), a small species of warbler, of very wide distribution. Its general color is brown; the under parts lighter. Its song consists merely of a frequent repetition of two notes resembling the syllables chiff-chaff.

CHIGNECTO BAY, an inlet at the head of the Bay of Fundy, in British North America. It separates Nova Scotia from New Brunswick, is thirty miles long and eight broad, and has an isthmus only fourteen miles in width between it and Northumberland Strait, in the Gulf of St. Lawrence.

CHIGNON (Fr., originally the "nape of the neck"), a general term for a woman's hair when gathered up into a roll on the back of the head and neck. The term is more particularly applied to such a roll when the hair is arranged over a pad, or combined with false hair to make it very large.

CHIHUAHUA, the largest State of Mexico, bounded on the north and northeast by New Mexico and Texas; has an area of 83,746 square miles, and a population of about 226,000. In the east is the *Bolson de Mapima*, a vast desert of sand and alkali plains; in the south and west the surface is mountainous, and there are numerous rivers. The State is better adapted for stock-raising than for agriculture; the fertile districts are mainly confined to the valleys and river-courses. Cotton is grown in the south. The silver mines were for centuries among the richest in Mexico, and though many are now abandoned mining is still the chief industry. The State is traversed by the Mexican Central Railway. The capital, Chihuahua, 225 miles south of El Paso by rail, rises like an oasis in the desert, among roses and orange-groves. It is well built, and is the center of considerable trade with Texas. Founded in 1691; population, 12,116.

CHILBLAINS, localized inflammations of the skin which occur in cold weather, and affect the hands and feet, more rarely the ears or nose. They are at first bright red, but as they disappear assume a purplish tinge. Sometimes they break and give rise to ulcers, which are slow to heal. They occur most frequently in young people, affect women more often than men, and are generally associated with weak health and a sluggish circulation. They are often extremely irritable and painful, especially when the affected part has been chilled and is quickly warmed again.

CHILD, LYDIA MARIA, author, born in Medford, Mass., Feb. 11, 1802, died in Wayland, Mass., Oct. 20, 1880. She was the daughter of Richard Francis, and the wife of David L. Child, journalist. At the age of seventeen she wrote her first novel, and five years afterward became editor of the "Juvenile Miscellany." The following year she married. William Lloyd Garrison interested Mr. and Mrs. Child in the subject of slavery, and soon after Mrs. Child began to write on the question. For her action in befriending so unpopular a cause she was for a time socially ostracized. From 1840 to 1843 she edited the "National Anti-Slavery Standard" in New York city, and the following year

assisted her husband to edit the paper. When John Brown was a prisoner at Harper's Ferry, she sent a letter offering her services as nurse. Mr. Brown declined, but asked her aid for his family, and she responded to the request. Mrs. Child was the author of many books, among which were: *The History of Women*; *Letters from New York*; *Fact and Fiction*; *Looking Toward Sunset*; and *The Progress of Religious Ideas*.

CHILD, SIR JOSIAH (1630-99), an eminent London merchant, and writer on commerce and political economy. His principal work is entitled, *Brief Observations Concerning Trade and the Interests of Money*, published in 1690.

CHILDREMAS, or HOLY INNOCENTS' DAY, observed in the Roman Catholic and Anglican churches on the 28th of December, to commemorate the slaughter of the children by order of Herod.

CHILDERS, HUGH, an English statesman, born in London in 1827. He went to Australia about 1850, and was a member of the government until 1857. He became a lord of the admiralty in 1864; chancellor of the duchy of Lancaster in 1872; secretary of war in 1880; chancellor of the exchequer in 1882; and home secretary in 1886.

CHILDREN, SOCIETY FOR THE PREVENTION OF CRUELTY TO, a society organized in the city of New York in 1874 by Henry Berg and his associates, and chartered under the laws of the State of New York. Its purpose is specially stated in its name. Up to Jan. 1, 1891, the society had investigated 53,784 complaints, involving 161,936 children; 18,480 cases were prosecuted, resulting in 17,477 convictions, and the relief of 28,950 children. The present chief officers (1891) are: Eldridge T. Gerry, president and counsel; Courtland V. Anable, attorney; and E. F. Jenkins, secretary and superintendent; with vice-presidents, and a board of fourteen additional directors. There were in 1891 about 300 other similar societies in the world, of which there were in the United States ninety-six, all organized since the parent society in New York was founded.

CHILDS, GEORGE W., an American publisher and philanthropist, born at Baltimore in 1829. He became a partner in a publishing house in Philadelphia in 1849; and in 1864 he bought the "Public Ledger" of that city, with which his name has been since identified.

CHILI, or CHILE (Republica de Chile). See Britannica, Vol. V, pp. 616-24. For the purposes of local government the republic is now divided into provinces, presided over by intendants; and the provinces into departments, with gobernadores as chief officers. According to the rearrangement of 1887 there are twenty-three provinces, subdivided into sixty-eight departments and one territory. The Senate, of thirty-seven members, is elected by the provinces for six years; the chamber, of 109 members, by the departments for three years, by electors possessing a small property qualification. The latest census, that of Nov. 26, 1885, gives the area of the republic as 293,970, and the population as 2,665,926. The estimated population in 1890 was 2,715,400, including about 50,000 American Indians and Auriacians. The capital is Santiago, with a population of 236,412. The revenue of the republic for 1889 was 46,000,000 pesos, and the expenditures 52,000,000 pesos. The imports for 1889 amounted to 65,090,013 p., and the exports to 65,963,100 p. The public debt of Chili Jan. 1, 1889, was 93,617,955 p. Tobacco-growing and the production of raw silk have been attempted of late years, but only with indifferent success. About 1,500,000 of the population are engaged in agriculture. Chili produces annually about 21,000,000 bushels of

wheat; 24,000,000 gallons of wine; 40,000,000 tons of copper; 335,000 lbs. of silver; 1,000 lbs. of gold; and 10,000,000 tons of coal. A large amount of capital is also employed in the nitrate industry, the production of nitrate in 1888 amounting to 800,000 tons. By an act passed in 1887 the army is limited to 5,885 men. Besides this regular army there is a national guard, composed of citizens, numbering 48,530 men.

The Chilean navy consisted in 1890 of two iron-clads, each of 2,033 tons; a monitor of 1,130 tons; two corvettes of 1,101 tons; one corvette of 1,075 tons; two gun-boats of 660 and 775 tons; a cruiser of 3,000 tons; another of 465 tons; 10 torpedo-boats of from 40 to 400 horse-power. At this writing (1891) two cruisers of 2,080 tons each are building in France, and two torpedo-boats are building in England. There is a good naval college in Valparaiso. The expenses of the national armament are paid out of the revenue from nitrate.

In 1890 there were published in Chili 400 daily, weekly, monthly or intermittent periodicals. The presidential term of office is for five years; and the president cannot be reelected until after an interval of one term. For the last six terms he has practically named his own successor—a fact which caused great criticism, and created a powerful party against the administration. Early in 1891, large number, including a majority of the naval forces, began an insurrection for the overthrow of the government, and it has gone forward constantly increasing in strength until this writing (April 1, 1891), at which date there seems little promise for the survival of the governmental administration.

CHILISALTPETER, a commercial name applied to the nitrate of soda.

CHILLICOTHE, a city of Missouri, county-seat of Livingston county, about seventy-five miles east of St. Joseph. It is the chief town of the Grand River Valley, and has manufactories of machinery, lumber, and flour, and is the seat of an academy.

CHILLICOTHE, a city of Ohio, and county-seat of Ross county (see Britannica, Vol. V, p. 624). The Ohio Canal, and the Marietta and Cincinnati, and Sciota Valley Railroads pass through the city. The court-house is a fine stone edifice. There is also a high school, public library, and numerous manufactories of carriages, paper, machinery and farming implements. Population in 1880, 10,938; in 1890, 11,256.

CHILLON, a celebrated castle and fortress of Switzerland, in the canton of Vaud. It is situated on the east end of the Lake of Geneva, on an isolated rock, almost entirely surrounded by deep water, and is connected with the shore by a wooden bridge. The castle is said to have been built in 1238, by Amadeus IV of Savoy. It long served as a state prison, but is now used as a magazine for military stores.

CHIMBORAZO, "Mountain of Snow," a conical peak of the Andes, in Ecuador, 20,517 feet above the sea. The first successful attempt to reach the summit was in 1880, when Whymper twice made the ascent. See Britannica, Vol. VII, p. 645.

CHINESE, a bishop's upper robe, to which the lawn-sleeves are attached. That of Anglican bishops is of black satin, that of English Roman Catholics is of purple silk.

CHIMNEY. See Britannica, Vol. IV, p. 466.

CHINA, the great empire of Eastern Asia. For its history, topography, productions, government, and religion, see Britannica, Vol. V, pp. 626-72. The area in 1891 was reported as 4,179,559 square miles, and the population as 404,180,000, including dependencies; the population of China proper was

estimated at 383,000,000, and the number of square miles at 1,297,999. The reigning emperor, Tsait-ien, born in 1871, who succeeded to the throne Jan. 22, 1875, at the death of Tung-chi, rules under the style of Kwangsu, and is the ninth emperor of the Manchu dynasty. The late emperor, dying suddenly in the eighteenth year of his age, did not designate a successor, and it was in consequence of arrangements directed by the empress dowager that the infant son of Prince Ch'un was made the nominal occupant of the throne. There were two dowager empresses concerned in the arrangements—the eastern and the western. The western still lives, and has lately withdrawn from power. Having become of age the young emperor nominally assumed government in 1887, but did not assume full control until February, 1889, when the other empress dowager withdrew. He was married Feb. 26, 1889.

No official reports are made of the receipts and expenditures of the government. The annual average estimates, however, place the amount at about \$125,000,000, the income being derived from taxes on land, grain, salt, and customs duties. The expenditure of the government is mainly for the army. China had no foreign debt until the beginning of 1875, when it contracted a debt of about \$3,000,000, secured by the customs revenue. Since that date it has increased the debt as follows: In 1878, about \$8,000,000; in 1884, about \$7,000,000; in 1886, about \$12,000,000; and in 1887, about \$1,250,000. The total external debt was estimated on Jan. 1, 1891, at \$20,000,000.

Its army statistics in 1891 were reported as follows: (1) The Eight Banners, including Manchus, Mongols, and Chinese reached a total of 323,800. Of these 100,000 are supposed to be reviewed by the emperor at Peking once a year. (2) The Ying Ping or national army, having 6,459 officers and 650,000 privates. The pay of the infantry is from \$1 to \$2 per month, and the cavalry receive about \$5 per month, out of which each man must feed his horse, and replace it if the one originally supplied by the government is not forthcoming. China has lately acquired a considerable navy, the ships of which are of an advanced type.

In the eighteen provinces there are now 8,000 offices for post-carts, and scattered over the whole of the Chinese territories are 2,040 offices for runners. There are also numerous private postal couriers.

CHINESE EXCLUSION QUESTION. The United States Treasury Department in the annual report to Congress, Dec. 10, 1891, took a decided stand on the question of the law excluding the Chinese from the United States. Complications have been caused by the enactment of a law amendatory of the original law, and the enactment of another law, which, if operative, would repeal both the earlier acts. The first law was passed in 1882 and amended in 1884, while the last act was approved in 1888 and was virtually to repeal the others. Judge Field of the United States Supreme Court in May, 1891, defined what the Treasury Department regards as the only authority for the Chinaman to enter the United States. He said that the only admissible evidence was the certificate prescribed by the Act of 1882, as amended by the Act of 1884, and he ignored entirely the Act of 1888. The Attorney-General is thought to regard this latter act as inoperative, since its provisions were made dependent upon the ratification of a treaty with China, a diplomatic action not yet taken. Five Federal Judges have included the Act of 1888 in their decisions, and by virtue of its provisions have remanded prisoners to Canada instead

of to China. The action taken was the result of an appeal provided for only in this last act. The language of the law is to the effect that where the Chinese are found here unlawfully they shall "be returned to the country whence they came," and these Judges held that "the country whence they came" was Canada.

The Treasury Department officers think that if any evidence is required to show the intention of Congress it is to be found in the appropriation bill providing the means for enforcing the Exclusion Acts, in which bill a certain amount is set aside for the payment of the salaries of officers to be employed to enforce the act "and to defray the expense of returning to China, persons of that nationality found in this country unlawfully. There are questions of construction regarding this exclusion law coming up continually and the Secretary has made a decision in one of the most important of the many which have been presented to the Department. The Collector of Customs at Burlington, Vt., raised the point whether the Chinese should be inspected at the first stations this side of the Canadian line where the railroads stop, or whether measures should be taken to prevent the actual crossing of the line. The matter is of great interest to the Grand Trunk and Canadian Pacific Railways, and the representatives of these roads also wrote to the Department for some decision as to the liability of the roads in the transportation of Chinese seeking admission into the United States. It appears that the Federal officials had suggested to the agents of these roads that their respective companies were violating the Chinese Exclusion law when they conveyed to points in the United States persons of that race who were not lawfully entitled to enter its territory. Acting Secretary Spaulding, in his letter to the Collector at Burlington, says:

"The act approved July 4, 1884, provides in Section 11 that "any person who shall knowingly bring into or cause to be brought into the United States by land, or who shall aid or abet the same, or aid or abet the landing in the United States from any vessel, of any Chinese person not lawfully entitled to enter the United States, shall be deemed guilty of a misdemeanor, and shall, on conviction thereof, be fined in the sum not exceeding \$1,000, and imprisoned for a term not exceeding one year." Under the provisions of this section, all persons concerned in the unlawful importation of Chinese by railroad or by other means are clearly amenable to the penalty therein prescribed, and it is suggested that you so advise the proper officials of all railroad companies whose lines enter your collection district from Canada. Hereafter you will report to the District Attorney for his official action any instance where Chinese persons are brought by rail into your district who are not furnished with the certificates required by Section 6 of the act, together with the names of the names of the railway officials responsible for their transportation.

In reply to the Collector's intimation that the necessary inspection of persons and papers cannot be made before arrival at the first port of entry Mr. Spaulding says:

The law is mandatory and prohibits the entrance into the United States of Chinese not legally entitled to the privilege. The inspection of trains for the purpose indicated must, therefore, be made at the border, and you should instruct your officers accompanying the trains to make inspection in such manner as not to interfere unnecessarily with the railway schedules.

CHIPPEWA FALLS, a flourishing city and railroad junction of Wisconsin. It is located on Chippewa River, and is the county-seat of Chippewa county. The city has water, gas, and electric light works. Here are several mills, and lumber is extensively manufactured.

CHIRRA POONJEE, a town in the northeast of India. It stands on the Cossya hills, at the height of 4,200 feet above the sea. The vicinity abounds in mines of coal and iron.

CHIRIQUI, a division of the department of Panama, Colombia; area, 6,500 square miles; population, 43,000. Also a lagoon 90 miles long and 50 in width, with a depth of water for the largest ships on the north coast of Central America, and a river flowing towards the north, the latitude and longitude of its mouth being 9° N., and 82° 30' E.

CHISELHURST, a village in Kent, 11 miles southeast of London. Sir Nicholas Bacon was a native of Chiselhurst. Camden Park estate (now built over) was the residence of Camden, the antiquary. Napoleon III died at Camden Place in 1873; his remains and those of the Prince Imperial were removed to Farnborough in January, 1888. There are here an orphanage and a governesses' benevolent institution.

CHITALDRUG, the chief town of the district of the same name, in Mysore, India, situated 126 miles northwest of Bangalore. It has manufactories of coarse blankets and cotton cloth. The military cantonments have been abandoned on account of their unhealthfulness. Population, 4,271. The district of Chitaldrug is the least populous in the Mysore states, and is remarkable for its low, rainfall and arid, stony soil. Area, 4,871 square miles; population, 376,310.

CHITIN, an organic substance which forms most of the hard parts of crustaceans and insects. It is an amorphous, white substance, containing nitrogen, but free from sulphur. It is unaffected by digestive ferments, by water, hot or cold, by alcohol or ether. It may, however, be dissolved by strong mineral acids (hydrochloric or sulphuric), and prepared from the cleaned exoskeleton of a lobster, or preferably from the pen of a squid. Chemically it is regarded as a derivative of carbohydrates.

CHITON, a family of gasteropodous mollusks of the order *Cyclobranchiata*, sub-order *Polyplacophora*. The shell is composed of eight narrow, calcareous pieces, overlapping one another in a row along the back, and strongly attached to the mantle, which is remarkably fleshy and fibrous. There are over 200 known species, found all over the world, adhering to rock-like limpets.

CHITTAGONG WOOD, a name somewhat vaguely used by cabinet-makers; usually the wood of *Chickrassia tabularis*, a tree of the order *Cedrelaceae*, a native of the mountainous countries to the east of Bengal. It is often beautifully veined and mottled.

CHITTOR, a fortified town of India, in the district of Odeypoor, or Mewar. The fortress occupies the summit of an isolated rock nearly 6,000 yards in length and 1,200 in breadth.

CHITTOR, a town of India, in the district of Arore, about 80 miles west of Madras, on the right bank of the Puni, about 1,100 feet above the sea.

CHIVALRY, a social arrangement of mediæval life in Christian Europe, of which knighthood formed a central feature. It included everything relating to martial accomplishments and the relation between vassal and lord, then the chief bond of society. With regard to the position of the female sex and domestic life, it developed sentiments and manners which had a powerful and salutary effect on modern society, although it is true that the high ideal standard of morals which it cultivated was not always fully exemplified in the lives of those who were trained under its influence. Though closely connected with feudalism its germ has been traced to a much earlier age.

In English law, chivalry is used to mean the tenure of lands by knight's service, which might be general or special, according as the tenant was bound to perform military service generally or some particular service.

The *Court of Chivalry* was a military court, established by Edward III, of which the earl marshal and the lord high constable were judges. It tried military offenses and decided questions of personal honor, questions as to coat-armor, and the like; it sat for the last time in 1737.

CHIZEROTS and BURINS form one of those peculiar races in France that live isolated in the midst of the rest of the population, and are despised and hated by their neighbors. They are found in the arrondissement of Bourg-en-Bresse, in the department of Ain, and the communes of Sermoyer, Arbigny, Boz and Ozan belong to them. According to tradition they are descended from the Saracens. Although industrious and prosperous, they are held in the utmost contempt and detestation by their peasant neighbors, who are themselves often indolent and destitute. They are looked upon as covetous and malicious, and scarcely would the daughter of a small farmer or well-to-do day laborer become the wife of one of them, so that they mostly marry among themselves. From time immemorial they have been field-laborers, cattle-dealers, butchers, and the like.

CHLORANTHACEÆ, a small group of aromatic and stimulant plants, chiefly tropical, allied to the peppers. *Chloranthus inconspicuus* is the Chu-lan of the Chinese, who use it for perfuming teas.

CHLORIMETRY, the process of estimating the proportion of "available chlorine" in bleaching powder, which may vary from 20 to 40 per cent. The term *available* applies only to that portion of the chlorine which is easily liberated, and which takes part in the bleaching process.

CHLORITE, or RIPIDOLITE, an abundant mineral, consisting of silica, alumina, magnesia and protoxide of iron, in somewhat variable proportions. It is of a green color (see Britannica, Vol. XVI, p. 413), and occurs now and again crystallized in minute hexagonal plates, or in aggregates of small leaflets, either singly or disposed in radial groups, which are scattered over the joint-surfaces of certain rocks, or may occur in a thin incrustation upon other minerals. It is rather soft, and is easily broken or scratched with a knife.

CHLORITE-SCHIST, a green schistose rock, in which chlorite is abundant in foliated plates, usually blended with minute grains of quartz, and often with feldspar, mica, talc, or magnetite.

CHLORITIC MARL, a thin bed of white or pale-yellow marl, sometimes indurated, containing dark-green glauconitic grains, phosphatic nodules, and iron pyrites. It belongs to the Cretaceous system, coming between the Upper Greensand and Chalk Marl.

CHLOROSIS, a peculiar form of anemia or bloodlessness, common in young women, and connected with the disorders incident to the critical period of life. It has been called the *green sickness*, from the peculiar dingy greenish-yellow hue of the complexion; the green color, however, is not always present. The disease is attended with very great debility, and often with breathlessness, palpitation and other distressing or even alarming symptoms. In a few cases it is associated with imperfect development of the larger arteries, and is then incurable; but in the vast majority of cases it yields readily to treatment unless complicated with some other disease.

CHOATE, Rufus, advocate and orator, born in Essex, Mass., Oct. 1, 1799, died in Halifax, N. S., July 13, 1859. He graduated at Dartmouth in 1819, was tutor in the college during the following year, studied law at Cambridge, and afterwards in the office of William Wirt in Washington, who then held the office of attorney-general. Returning to

Salem he was elected to Congress in 1830, where he remained until 1834, at which time he resigned and went to Boston. In 1841 Daniel Webster was called to the cabinet of President Harrison, and Mr. Choate was elected to his place in the United States Senate. Here he made several brilliant speeches, among which were those on the Oregon boundary, the tariff, and the proposed annexation of Texas. Resigning his seat, Mr. Choate returned to his legal business in Boston. After Webster, he was considered the leader of the Massachusetts bar. Mr. Choate died while he was on his way to Europe for the benefit of his health. A musical voice, winning personality, learning, good judgment and a quaint humor were among the elements of his popularity.

CHOCTAW INDIANS. See *Britannica*, Vol. V, pp. 680-81. See also **INDIANS, AMERICAN**, in these Revisions and Additions.

CHOKE-CHERRY, a name given to certain nearly allied species of cherry, natives of North America, having small fruit in racemes like the bird-cherry or cherry-laurel, from which latter, however, they are easily distinguished by their deciduous leaves. The fruit is at first rather agreeable, but afterwards astringent in the mouth.

CHOKE-DAMP, also called *after-damp* or *foul-damp*, the carbonic acid gas given off by coal which accumulates in coal mines, and may suffocate those exposed to it. It is distinguished from *fire-damp*, the marsh-gas or light carbureted hydrogen which causes the explosions.

CHOKING, in its slighter forms, a very familiar occurrence, resulting from a morsel of food or other solid, or even a drop of liquid, passing into the larynx or upper opening of the wind-pipe, instead of the gullet. It is generally caused by a breath being suddenly drawn in coughing, laughing, etc., while food or fluid is in the mouth. Sometimes a larger mass is drawn into the opening of the wind-pipe, completely blocking it, and arresting respiration altogether. This condition is one of extreme danger; the sufferer becomes purple in the face, and if not at once relieved will speedily die of suffocation.

In *cattle* the causes fall under two heads: (1) those that depend on the material swallowed; and (2) those that depend on the animal swallowing. Under the first head we find sharp-pointed objects which become fixed into or entangled in the membrane lining the throat and gullet; solid masses too large to pass on to the stomach; dry farinaceous materials which clog in the passage. The second class of causes consists in inflammation of the throat, or irritation of the organs of deglutition; constrictions of the passage; ulceration of the œsophagus, which is apt to follow choking, and is the cause of a relapse; lastly, without any disease of the deglutitory organs an animal may be choked by eating too greedily, and imperfectly masticating or salivating its food.

CHOLERA. See *Britannica*, Vol. V, pp. 682-84.

CHONOS ARCHIPELAGO. See *Britannica*, Vol. XVIII, p. 352.

CHOPIN, an old English liquid measure equal to half a pint. The Scotch *chappin* was nearly an English quart. The German *schoppen* is a pint.

CHOPIN, FREDERIC FRANÇOIS. See *Britannica*, Vol. V, pp. 685-86.

CHOPINE (Spanish, *chapin*), a high clog or patten formerly worn by women under the shoe, the height being regulated in accordance with the rank of the wearer. It was of Oriental origin, having been introduced into Venice from Turkey, and thence into England during the reign of Elizabeth. Some chopines were half a yard high, resem-

bling a short stilt; they were covered with leather, many of them being decorated with painting or gilding. The term came later to be applied to the shoe and clog combined.

CHORALE. Though the name is occasionally applied to the psalm and hymn tunes of similar character used in the Protestant churches of France and Britain, it most properly belongs to the melodies sung to the metrical hymns of the German Reformed church, and introduced by Luther, by whom and his friend Walther the first collection of importance was produced in 1524, and entitled the *Enchiridion*. The settings were in four, five or six parts, the melody, as with all the old choral hymns and psalms, being given to the tenor. They possess in common a solemn, dignified and devotional character. In Germany they are now usually sung very slowly and heavily in unison with organ accompaniment.

CHORAL SERVICE, the musical service of the Church of England, celebrated by a full complement of clergymen, lay clerks, and choristers, when all those parts of the service are sung or intoned as ordered in the rubrics.

CHORD. The chord of an arc is a straight line joining its two extremities; or a chord in a circle, ellipse, parabola, etc., is a straight line joining any two points in a curve.

CHORLEY, HENRY FOTHERGILL, musical critic, born at Blackley Hurst, England, Dec. 15, 1808, died Feb. 16, 1872. He was educated in Liverpool, and in 1833 became a member of the staff of the "Athenæum," and soon after assumed charge of the musical department, from which he retired in 1868. He contributed also many literary reviews. Chorley was author of three acted dramas, and some graceful verse, but his chief works are *Music and Manners in France and Germany* (1841), and *Thirty Years' Musical Recollections* (1862).

CHOSE IN ACTION (Fr., *chose*, "a thing"), one of the two great classes of what the law calls *chattels-personal*. The one class is "choses in possession," such as goods, household furniture, cattle, etc.; the other class is "choses in action," such as the right to sue for a debt, a legacy, damages, etc. The old common-law rule was that, except in the case of negotiable instruments, contracts could not be assigned so that the assignee might sue in his own name; but the assignee must bring his action in the name of the assignor or cedent, so that the assignee was always exposed to every defense which might have been stated against the original debtor under the contract. Now, every *legal* chose in action is absolutely assignable if express notice in writing be given to the debtor, and in some States a chose in action may not only be assigned, but the assignee may bring suit for possession in his own name; while in others the name of the assignor is used as plaintiff in the action to the use of the assignee. Courts of law generally follow the rules of equity in this respect.

CHOUTEAU, AUGUSTE, pioneer, born in New Orleans, La., in 1739, died in St. Louis, Mo., Feb. 24, 1829. His brother Pierre was born in New Orleans in 1749, died in St. Louis, July 9, 1849. The young men made a trip northward from their native city in 1763, reaching Ste. Genevieve, Mo., and afterwards they ascended the river some sixty miles and founded a trading station on the present site of the city of St. Louis.

CHRESTOMATHY, a name for books of selections from foreign languages, usually provided with glossary and notes for the use of learners.

CHRETIEN DE TROYES, an old French poet, of whose life nothing more is known than that he lived in the second half of the 12th century, and was

a favorite poet at the court of Mary, daughter of Louis VII. He worked up the legends of the Round Table into numerous spirited poems, which had a wide literary influence, and were translated by the German minnesingers, Wolfram von Eschenbach, Gottfried of Strasburg, and others.

CHRISM, the name given to the oil consecrated on Holy Thursday, in the Roman Catholic and Greek churches, by the bishop, and used in baptism, confirmation, ordination, and extreme unction. There are two kinds of chrism—the one, a mixture of oil and balsam, is used in baptism, confirmation, and orders; the other, which is merely plain oil, is used in extreme unction.

CHRISOME, the name of the white linen cloth laid by the priest on the child in Roman Catholic baptism to signify its innocence. By olden usage it was generally presented by the mother as an offering to the church, but if the child died before the mother was "churched" again it was used as a shroud. By a common abuse of words, chrisome came to mean the child itself, being first applied in the old bills of mortality to denote such children as died within the month of birth.

CHRISTADELPHIANS, a small religious body which arose in the United States about the middle of the 19th century. The Christadelphians (or "Brethren of Christ") claim to represent the true faith and practice of Apostolic times, as revived by Dr. John Thomas, of Brooklyn, N. Y., the leading advocate of their views, who was born in England in 1805 and died in 1871. They deny the existence of a personal devil, and the immortality of the soul, believing in "conditional immortality," to be bestowed upon the faithful of all ages when Christ returns. They insist on the plenary inspiration of the Bible, the real death of Christ as a sacrifice for sin, his resurrection and ascension, and look for his return to the earth to reign on the throne of David over the converted and restored twelve tribes of Israel and all nations. They believe that death is a state of entire unconsciousness, terminated by a corporeal resurrection for those who have become related to Christ through faith and obedience, or are responsible for his rejection. Those accepted after the judgment reign forever with Christ over the nations; those rejected die the second death. Communities of Christadelphians exist in the principal towns of Great Britain, Ireland and the United States.

CHRISTENING, a term often used as equivalent to baptism.

CHRISTIAN ALLIANCE, a religious association organized in 1887, with its headquarters at 692 Eighth Avenue, New York city. It was founded by Rev. A. B. Simpson, who, at this writing (1891), has been its president from the date of its organization. Its membership, as described by its founder, "consists of all professing Christians who subscribe to its principles, and enroll their names." Its objects are stated to be "wide diffusion of the Gospel in its fullness, the promotion of a deeper and higher Christian life, and the work of evangelization, especially among the neglected classes, by highway missions and any other practical methods." The organization is said to be rapidly extending, especially throughout the United States and Canada. Auxiliary to the parent Alliance, is the "International Missionary Alliance," with a missionary training school located at 690 Eighth Avenue, New York city. Rev. A. B. Simpson is also corresponding secretary of the Missionary Alliance. At the opening of the year 1890, the secretary reported having established 23 missionaries in India, China, Japan, Hayti and Congo Free State. In New York city special work is done for fallen girls by means

of "the Door of Hope," a branch "home" opened by the Alliance.

CHRISTIAN II (1481–1559), king of Denmark, Norway and Sweden, born at Nyborg, in the island of Funen, in 1481, and mounted the throne of Norway and Denmark in 1513. In 1520 he overthrew at Bogesund the brave regent of Sweden, Sten Sture the younger, and thereafter was crowned king. But his ferocious passions, and especially his treacherous massacre in the Stockholm "blood bath" of the foremost men in Sweden, roused such a spirit of opposition in that country that he was speedily driven out by the young national leader, Gustavus Vasa, himself the son of one of the victims. Assisted by Charles V, Christian landed in Norway in 1531, but at the battle of Aggerhuus next year was totally defeated, and spent his remaining years in imprisonment at Sonderburg and Kallundborg, where he died in 1559. See Britannica, Vol. XXII, p. 747.

CHRISTIAN IV, king of Denmark and Norway, and duke of Sleswick-Holstein, born at Frederiksborg, in Zealand, in 1577, died at Copenhagen, Feb. 28, 1648. He was elected successor to the throne in 1588. He assumed the government of the duchy in 1593, and of the kingdom in 1596. He labored earnestly for the improvement of his country, and his legislative and financial reforms, together with his love and patronage of the arts and sciences, gained for him the affection of his people.

CHRISTIAN COMMISSION, an organization formed at the call of the Young Men's Christian Association in New York city, Nov. 14, 1861, for the purpose of looking after the spiritual and temporal welfare of the volunteer soldiers in the Union army. George H. Stuart, a well-known Christian merchant of Philadelphia, was president of the organization throughout the war; and thousands of the ministers and most active laymen of the churches of the North gave their personal services in connection with the humane work of the Commission upon the field of battle, on the march, in camp, and in the hospital.

CHRISTIAN CONNECTION, or UNION, an American religious denomination which originated about the beginning of this century in North Carolina, Vermont, Kentucky and Tennessee, on the basis of the Bible as the sole authoritative rule of faith and practice, with open fellowship to all Christians of whatever creed, personal piety being the only test of qualification for membership.

CHRISTIAN KNOWLEDGE, SOCIETY FOR PROMOTING, one of the great religious associations connected with the Church of England, and the oldest of them all. It was founded in 1698, although it did not receive its present name till 1701, and had for its objects: "(1) To promote and encourage the erection of charity schools in all parts of England and Wales; (2) to disperse, both at home and abroad Bibles and tracts of religion; and, in general, to advance the honor of God and the good of mankind by promoting Christian knowledge both at home and in other parts of the world by the best methods that should offer." These objects it has never ceased to pursue, chiefly directing its efforts to the British dominions. The Protestant missionaries who labored in the south of India in the 18th century were supported chiefly by this society, and it is now fully engaged in supplying to the mission field throughout the world needful religious literature in the vernacular.

CHRISTIAN SCIENCE, a system of religion founded by Rev. Mary Baker Glover Eddy, president of the Massachusetts Metaphysical College in Boston, Mass., and chartered in 1881. The founder claims that as early as 1866 she discovered meta-

physical healing emanating from the Divine Mind, and named it Christian Science; that the Principle thereof is Divine and Apodictical, governing all; that all real Being is the Divine Mind and Idea; that the Science of Divine Mind demonstrates that Life, Truth, and Love are all-powerful and ever present; that the opposite of Truth, named Error, is the false supposition of a false sense; that Mind governs all, not partially but supremely, and that the Mind's control over man is a demonstrable science; that it is capable of healing sickness and sin, and so destroying the foundations of death. The platform adopted by the society claims God as Supreme Being, the only Life, Substance, and Soul, the only Intelligence of the Universe, including Man; that neither God nor the perfect man can be discerned by the human senses; that the individuality of Spirit is unknown; that God is a Trinity consisting of a Trinity in Unity, Life, Truth, and Love; the same in essence, though multimorphic in office; God the Father, Jesus the Type of Sonship, Divine Science, or the Holy Comforter—these three expressing the threefold essential nature of the Infinite; that Jesus the Christ was a mediator between humanity and Spirit; that he voiced Truth; that God is all-inclusive, and is reflected by everything real and eternal; that the word Christ is not properly a synonym for Jesus, though commonly so used; that it expresses God's spiritual, eternal idea, being synonymous with Messiah; that Jesus was a corporeal, or bodily existence, but the Christ was incorporeal, and the dual personality continued until the Master's Ascension; that then the human, the corporeal concept, or Jesus, disappeared, while the invisible, the spiritual idea, or the Christ continued to exist in the eternal order of Divine Science, taking away the sins of the world, as the Christ has always done, even before the human Jesus was incarnate to mortal eyes; that Spirit is infinite; that there is but one Spirit, because there can be but one Infinite, and therefore but one God; that there is no evil in Spirit, because Spirit is God; that Soul and Spirit are one; that God is Soul; and Soul is not corporeal, but a Divine Principle; that sin, sickness, and mortality are inharmonious, the opposite of Mind, and contradictions of reality; that Mind is Divine, the only Ego, and the Ego is deathless and limitless; that the Divine Ego or individuality is all-inclusive Being, that Being is God; that God is personal, and that in its scientific sense, but not in any anthropomorphic sense; that the Science is demonstrably true, for it heals the sick and sinful as no other system can; that, rightly understood, it leads to eternal harmony, and brings to light the eternal and true God, and man as made in His likeness; that the basis of all health, sinlessness, and immortality is the great fact that God is the only Mind; that sin, sickness, and death are error, and to conquer error is to deny its verity; that to get rid of sin through science, is to divest sin of any supposed mind or reality, and never to admit that sin can have intelligence or power, pain or pleasure.

The "tenets" or "creed" of the Society, and its church, which is called "the Church of Christ (Scientist)," is as follows:

First.—As adherents of Truth, we take the Scriptures for our Guide to Life.

Second.—We acknowledge one Father, Son and Holy Ghost—one God, the brotherhood of man, and Divine Science—and the forgiveness of sin, which is the destruction of sin; and the atonement of Christ, which is the efficacy of Truth and Love; and the way of salvation marked out by Jesus, which is healing the sick, casting out devils (evils),

and raising the dead—uplifting a dead faith into Life and Love."

CHRISTIANSFELD, a settlement of Moravian brothers in Northern Sleswick, founded in 1772. Population, 700.

CHRISTISON, SIR ROBERT, D. C. L., LL.D., Scottish physician and toxicologist, born at Edinburgh, July 18, 1797, died January 23, 1882. In 1819 he proceeded to London and Paris, and in the French capital studied toxicology under the celebrated Orfila. He was in 1822 appointed professor of Medical Jurisprudence in the University of Edinburgh, and in 1832 was promoted to the chair of *Materia Medica*, which he occupied till 1877, when he retired. He was appointed physician-in-ordinary to the Queen in 1848; president of the Edinburgh Royal Society (1868-73); and created a baronet in 1871. Besides contributing papers on various subjects to medical journals, Christison wrote a *Treatise on Poisons* (1829); *Biographical Sketch of Edward Turner, M. D.* (1837); a treatise on *Granular Degeneration of the Kidneys* (1839); and *The Dispensatory: a Commentary on the Pharmacopœias of Great Britain* (1842).

CHRISTOPHE, HENRI (1767-1820), king of Hayti, the Pacific, lat. 1° 57' north, long. 157° 27' west. It has good anchorage, and is the headquarters of an American guano company. Another Christmas Island, annexed to Britain in 1888, lies about 250 miles southwest of Java. It is 6 miles long by 4 broad, composed of coral masses piled up on a volcanic substratum, and is partially covered with luxuriant vegetation. There is a third Christmas Island in the Bras D'Or, Cape Breton.

CHRISTOPHE, HENRI, 1767-1820, king of Hayti, born a slave on the island of Granada, Oct. 6, 1767. He joined the black insurgents against the French in 1790, and, from his gigantic stature, energy and courage, soon became a leader among them, and was appointed brigadier-general. In 1802 he gallantly defended Cape Hayti against the French. In 1807 he was appointed president of Hayti. In 1811 he was proclaimed king of Hayti, by the name of Henri I, and ruled with vigor; but his avarice and cruelty led to an insurrection, and, deserted by his body-guard and all his nobles, he shot himself, Oct. 8, 1820. See *Britannica*, Vol. XI, p. 545.

CHRISTOPHER, a saint of the Roman Catholic and Greek churches. According to the oldest form of the legend, he is said to have lived in Syria, and suffered martyrdom under the Emperor Decius (249-251). He is reported to have been 12 feet high, and of prodigious strength. In the pride of his strength he would serve only the mightiest upon earth. After being some time in the service of a king and seeing his master's dread of the devil, he gave himself to be the devil's servant. One day, however, he saw the devil trembling before an image of Christ, and he resolved thenceforth to serve Christ only. For his penance he undertook to carry pilgrims across a broad unbridged stream. One day Christ came to him in the form of a child to be carried over, but the burden grew ever heavier and heavier, until it was almost too much for him to reach the farther shore. "Marvel not Christopher," said the child, "for with me thou hast borne the sins of all the world." In painting and sculpture the saint is usually represented with the infant Christ upon his shoulders, leaning on a great staff, and straining every nerve to support his weight. The Greek church celebrates his festival on the 9th of May, the Roman Catholic on the 25th of July.

CHRIST'S HOSPITAL, Newgate Street, London, founded on the site of the Greyfriar's Monastery by Edward VI, June 26, 1553, as a hospital for orphans.

Children are admitted between eight and ten years of age, and discharged between fifteen and sixteen, according to their school position, excepting the "Grecians" (i. e., the highest class of scholars in the hospital), of whom five are sent annually on various scholarships to the Universities of Oxford and Cambridge. Altogether about 1,180 boys and 90 girls are now upon the foundation. The governors are the patrons of several churches, chiefly in Surrey and Essex. Most of the building perished in the great fire of 1666, but it was soon rebuilt under the superintendence of Sir Christopher Wren. In the course of time the new hospital fell into decay, and in 1825 a third structure was erected by Mr. Shaw. The great hall of the hospital is a magnificent room, second only to that of Westminster. Christ's hospital is essentially a classical institution, Latin and Greek being the basis of education; but, to satisfy the wants arising from the changed condition of society, the modern languages, drawing, science, etc., are also taught.

CHRISTY, EDWIN P., born in 1815, died in New York city, May 21, 1862. The original "Christy's Minstrels" were organized by him in Buffalo, in 1842, and as manager of the troupe in America and London he amassed a fortune. He died insane.

CHROMATIC, in music, a term applied to notes in melodic progression which are raised or lowered by accidentals, without changing the key of the passage, and also to chords in which such notes occur. The chromatic scale is one proceeding by semitones alone.

CHROMATIC, in optics, that part of the science which deals with the colors of light and of bodies.

CHROMATOPHORES, pigment cells containing pigment granules of various colors. It is by contraction and expansion of these cells that chameleons and cuttle fishes are enabled to change color rapidly.

CHROMATYPE, a photographic picture, in which the paper employed has been sensitized by some of the salts of chromium.

CHRONICLE, a history in which events are treated in order of time. Most of our older histories were called chronicles, such as the *Saxon Chronicle*, *Holinshed's Chronicle*, *Baker's Chronicle*. The name is also given to two historical books of the Old Testament.

CHRONICLES, BOOKS OF. See *Britannica*, Vol. V, pp. 706-9.

CHRONOGRAM, or CHRONOGRAPH, a whimsical device of the later Romans, by which a date is given by selecting certain letters among those which form an inscription, and printing them larger than the others. The principle will be understood from the following example, made from the name of George Villiers, first Duke of Buckingham:

GEORGI^VS DVX BVCKINGAMIE.

The date MDCXVVIII (1628) is that of the year in which the duke was murdered by Felton at Portsmouth. Another well-known example conveys the date in the inscription upon a medal struck by Gustavus Adolphus in 1632:

CHRISTVS DVX; ERGO TRIVM^{PH}VS.

CHRONOGRAPH ("time marker" or "recorder"), an instrument to note, within a certain fraction of a second, the instant when a particular event occurs. The most recent are electrical, now indispensable to astronomers, since the transit of a star can, by touching a stud, be noted to within $\frac{1}{1000}$ th of a second of time. The typical form of the chronograph is a cylinder which revolves once a minute, and carries on its surface a sheet of paper divided all round into equal parts, indicating fractions of a second. If, for example, the cylinder is

thirty inches round, it is evident that very minute sub-divisions of time are attainable. A valuable application of the chronograph is for determining the longitude—e. g., in trigonometrical surveys. Thus two observers note simultaneously the transit of a star, say at Washington and Indianapolis (and that without any reference to right ascension or declination), and having telegraph as well as chronograph determine very easily the difference of time with an accuracy never dreamed of formerly.

CHRONOSCOPE, an instrument contrived by Sir Charles Wheatstone to measure the duration of certain short-lived luminous phenomena, such as the velocity of light, or the electric spark, of which the eye itself can be no judge, owing to the persistence of impressions on the eye after the cause of sensation has ceased. The phenomenon is observed by reflection in a mirror in such rapid motion that the image of the luminous object would appear to describe a circular arc the length of which must be a measure of the duration of the light.

CHRYSALIS, or CHRYSALID, a term originally applied to the golden-colored, resting stages in the life-history of many butterflies, but sometimes extended to all forms of pupæ or nymphs—that is, to the second stages in the history of insects which undergo complete metamorphosis. It is the stage which results from the fasting quiescence of the generally active and voracious larvæ or caterpillar, and also, of course, the stage which after one or rarely two months awakens into the winged insect or imago.

CHRYSANTHEMUM (Gr., "gold flower"), a genus of plants of the natural order *Compositæ*, sub-order *Corymbifera*, having a hemispherical or nearly flat involucre, with imbricated scales, which are membranous at the margin, a naked receptacle, the florets of the disc tubular and hermaphrodite, those of the ray strap-shaped and female, the fruit destitute of pappus. The species of this genus are annuals, perennials, or shrubby, and all have leafy stems.

CHRYSELEPHANTINE, the art of making statues jointly of gold and ivory, extensively practiced among the Greeks. It developed out of the art of wood-carving, the draperies of the wooden figures being gilded for ornament, while the faces, hands, etc., were painted white. Then the uncovered parts of the body came to be made of marble, producing acroliths, and ultimately ivory was used, with gilding or gold-plating. The bulk of the figure continued to be made of wood, or wood and clay; thin gold plates were fastened over the parts intended to represent clothing, while on the fleshy parts small plates of ivory were skillfully laid.

CHRYSIS, "golden-wasp," a genus of hymenopterous insects, type of a family *Chrysidæ*. Their systematic position is not far from that of the true wasps. They delight in sunshine and may be seen poised in the air—the motion of their wings being so rapid as to render the body alone of the insect visible.

CHRYSOBALANUS, a genus of trees and shrubs, natives of tropical and subtropical America and Africa, of which there are probably only two species. The cocoa-plum, *C. leaco*, of tropical America, produces an edible fruit.

CHRYSOBERYL, a gem almost as hard as sapphire, and the finer specimens of which are very beautiful, particularly those which exhibit an opalescent play of light. It is of green color, inclining to yellow, semi-transparent, and has double refraction. It occurs crystallized in six-sided prisms; often in masses, or twin crystals. It is found occasionally in granite, but more frequently in gneiss and mica-schist. See *Britannica*, Vol. XVI, p. 386.

It is composed of alumina, glucina, and small proportions of ferric oxide, titanite acid, and sesquioxide of chromium—the alumina being about 80 per cent. of the whole. The chrysoberyl of the ancients was a different mineral, probably the Chrysoprase, of the moderns.

CHRYSOLITE, a mineral composed of silica, magnesia, and protoxide of iron; of a fine yellowish-green color, with vitreous luster; transparent, and having double refraction; in hardness, about equal to quartz; and with conchoidal fracture (see *Britannica*, Vol. XVI, p. 410). It often crystallizes in four-sided or six-sided prisms, variously modified. *Olivine*, or common chrysolite, is an important rock-forming mineral. It is dark yellowish-green in color, and occurs generally in somewhat rounded grains or corroded crystals in some igneous rocks, such as the basalts.

CHRYSOTYPE, a photographic process, the result being produced mainly by a solution of chloride of gold.

CHUCK-WILL'S-WIDOW, a bird found in the southern parts of the United States, so called from its note, which is repeated like that of the whip-poorwill, and which resembles the syllables of its name very distinctly articulated. The bird is of the family *Caprimulgidae*.

CHUDLEIGH, CAPE, on the north coast of Labrador, at the entrance of Hudson Strait, 60° 12' N. lat., 65° 25' W. long.

CHUFFUCK, SAMUEL W., inventor, born in Vermont in 1800, died in Utica, N. Y., June 28, 1875. In 1845 he engaged in the manufacture of telegraph instruments in Utica, and is said to have made the first one. The "pony" sounder and circuit-closer attachment to the key were his inventions. He was also a collector of rare coins.

CHUMBUL, a river of Central India, rising in the Vindhyan Mountains, at a height of 2,019 feet above the sea, and entering the Jumna after a generally northeast course of 650 miles.

CHUNAM, the Indian name for a very fine kind of quicklime made from calcined shells or from very pure limestone, and used for chewing with betel, and for plaster.

CHRONOLOGICAL OUTLINE of Historical Events. See *Britannica*, Vol. V, pp. 709-54.

1876.—Colorado admitted into the Union, March 11. Queen Victoria proclaimed Empress of India, May 1. Centennial exhibition opened at Philadelphia, May 10. Sioux Indian massacre of Federal troops, June 25. French decree of amnesty for Communists, June 28. Centenary of American Independence, July 4.

1877.—United States electoral commission appointed, January 30. Rutherford B. Hayes declared elected, March 2; inaugurated, March 5. First Turkish parliament, March 19. Great railroad strike in the United States, July 18-30. Trial of Russian Nihilists began October 31.

1878.—Paris International Exhibition opened, May 1. Attempted assassination of the Emperor of Germany, June 2. Berlin treaty signed, June 13. Yellow fever raged in the Southern States, September and October. United States paid the Fisheries award under protest, November 23. Gold sells at par in Wall street, December 17.

1879.—United States resumes specie payment, January 1. Zulus defeat English in South Africa, January 12. McMahon resigns the presidency of the French Republic; Jules Grévy succeeds, January 30. Bill admitting women to practice in the Supreme Court passes Senate, February 7. *Jeannette* sails from San Francisco for North Pole, July 9.

1880.—Winter Palace at St. Petersburg blown up by dynamite, February 17. Work of tunneling Mont St. Gothard completed, February 29. Prince Bismarck resigns, April 17. International Fishery Exhibition at Berlin, April 10. International Exhibition at Brussels, June 1. Mount Vesuvius railway opened, June 6. French Republic expels Jesuits, June 20. Cologne cathedral (commenced in 1228) completed, August 14. International Exhibition at Melbourne, October.

1881.—Chilians take Lima, January 17. James A. Garfield inaugurated President of the United States, March 4. Alexander II of Russia assassinated March 13. Attempted assassination of Garfield, July 2. Garfield died September 19. Vice-President Chester A. Arthur inaugurated 21st President of the United States September 22. Cotton exhibition

opened at Atlanta, October 25. *Jeannette* survivors heard from, December 20.

1882.—Guiteau found guilty, January 25. Attempted assassination of Queen Victoria by Roderick McLane, March 7. Assassination in Dublin of Lord Cavendish and Burke, May 3. Guiteau hung June 30. Alexandria bombarded by British fleet, July 11. Great floods in Germany, November 27. Transit of Venus, December 6. Arabi Pasha exiled, December 13.

1883.—Great floods in Rhine Valley, January 2. Great eruption of Mount Etna, March 23. Phoenix Park murderers executed at Dublin, May-June. Brooklyn Bridge opened, May 24. Coronation of Alexander III of Russia, May 27. Great cholera mortality in Cairo, Egypt, July 19. Great strike of telegraphers in the United States, July 19-August 18. United States Arctic relief steamer *Proteus* crushed in Smith's Sound, July 23. French begin hostilities in Anam, August 17. Death of Count de Chambord, Bourbon claimant, August 24. Volcanic eruption devastates Java, destroying 50,000 lives, August 22-25. O'Donnell, assassin of Cary, the informer, reached London for trial, September 20. Rediscovery of comet of 1812, September 22. Hurricane at Nassau, N. P. (100 vessels destroyed), September 25. Army of Egypt annihilated by El Mahdi, November 3-5.

1884.—England assumes protectorate over Egypt, January 7. Destructive hurricane in Great Britain and Ireland, January 23. Baker Pasha suffers severe defeat in Sudan, February 24. Tornado crosses Georgia, Tennessee, Missouri, Illinois and Indiana, February 20. *Jeannette* explorers reach New York, February 22. General Graham defeats Egyptian rebels at Teb, February 20. Dynamite explosions in London, March 1-15. French capture Bac Ninh, March 14. English troops recalled from Egypt, March 31. Steamship *Daniel Stehman* wrecked off Halifax (121 lives lost), April 4. Two thousand Soudanese massacred by Arabs at Shendi, April 16. Steamer *State of Florida* collides with bark *Ponema* in mid-Atlantic, sinking both vessels (100 persons drowned), April 18. Severe earthquake in Eastern England, April 22. The *Bear*, the advance ship of the second Greely relief expedition, sails from New York, April 24. The *Thetis*, second ship of the expedition, sails May 1. Financial panic in New York (several banks suspending), May 12-16. Petroleum discovered near Quetta, India, June 15. Steamships *Gijon* and *Latham* collide near Corunna, sinking both (130 lives lost), July 21. British ministry ratify the annexation of New Guinea by Australian Confederation, July 31. Great Britain determines to rescue Gen. Gordon at Khartoum, September 1. Hurricane devastates Yokohama and Tokio, September 15. British government liberate "Richborne claimants" October 20. New Guinea formally annexed to Great Britain, November 6. Congo conference meets in Berlin, November 15. Earthquakes in Malaga, Spain, destroy villages, drowning 2,000 persons, December 25-31.

1885.—English in Egypt defeat Mahdi's troops near Metemneh, January 17. Khartoum captured by Mahdi and Gen. Gordon killed, January 26. War opens between Nicaragua and Guatemala, March 11. Half-breed insurrection under Louis Riel, N. W. Territory, March 27-28. French reverses in Tonquin, March 30-April 6. Peace signed in Central America, April 15. King Leopold of Belgium assumes title "Sovereign of the Congo," April 28. Riel captured, May 16. Revised Old Testament published, May 22. El Mahdi dies of small-pox, June 16. Lord Salisbury forms a new cabinet, June 18. Two thousand lives lost by Cashmere earthquake, June 18-20. Great strike of car conductors and drivers in Chicago, June and July. Niagara State Park thrown open to public, July 15-17. Death of Gen. Grant, July 23. Cholera ravages in Spain (5,000 dying daily), August 15-25. *Prinara* outsails *Genesta*, August 11. Eastern Roumelia annexed by Bulgaria, September 19. Hell Gate blown up by dynamite, October 10. Hurricane in Labrador destroys hundreds of lives, October 27. Vice-President Thomas A. Hendricks, of United States, and King Alfonso XII of Spain die, November 25. Jules Grévy reelected President of France, December 28.

1886.—Mr. Gladstone forms a new cabinet, February 2. Great street-car strike in New York and Brooklyn, March 3-5. Fighting between Anarchists and police in Chicago, May 4. Tornadoes and floods devastate central portion of United States, May 11-15. Great eruption of Mount Etna, May 16. President Cleveland married, June 2. Orange election riots in Dublin, July 6. Gladstone defeated by Conservatives and Unionists, July 20. Prince Alexander abdicates throne of Bulgaria, August 20; reelected on the throne, September 1; but finally abdicates, September 5. Statue of Liberty on Bedloe's Island unveiled, October 28. Valuable discoveries of gold in Australia announced, November 25. Freycinet cabinet resigns in France, December 3. M. Goblet forms new French ministry, December 9.

1887.—Queen Victoria's Jubilee Year opens, January 1. Stanley starts on his expedition to relieve Emin Bey, January 18. German elections result in favor of Bismarck, February 14-20. Emperor William of Germany celebrates 90th birthday, March 22. British government introduces new coercion bill for Ireland, March 28. The Goblet ministry of France resigns, May 17. *Coltie* and *Britannic* collide (several lives lost), May 19. M. Rouvier forms French ministry, May 28. Cyprus ceded by Turkey to England, June 1. Queen Victoria's jubilee celebrated in London June 19-25. King Kalakaua in Hawaii deposed, July. Irish coercion bill passed, July 4. Dr. McGlynn excommunicated by the Pope, July 8. Prince Ferdinand accepts throne of Bulgaria, August 15. Exhibition opened at Atlanta, Ga., October 10. Great

fire at Han-Kow, China (1,000 lives lost), October 17. Alliance between Austria, Germany, and Italy prolonged for five years, October 26. Four of the Chicago anarchists hung, November 11. French president Grévy resigns, November 26. M. Sadi-Carnot elected President of the French Republic, December 2. Barcra, Cuba, devastated by a tidal wave, December 22. Powder explosion at Amoy, China (800 lives lost), December 31.

1888.—Pope Leo XII's Jubilee begins in Rome, January 1. Frightful blizzard in Western States, January 13-14. The Fisheries Convention signed in Washington, February 15. Emperor William of Germany died, March 9. Great blizzard in Eastern States, March 11. Disastrous floods in Germany and Hungary, March 19. Great earthquakes in China, April 23. Trans-Caspian Railroad opened to Samarcand, May 26. Emperor Frederick II of Germany dies, June 15. President Diaz of Mexico reflected, July 14. Yellow fever appears at Jacksonville, Florida, and became epidemic, August 15. Lord Sackville, British Minister at Washington dismissed by President Cleveland, October 30. England annexes the Cook Islands, November 20. Jacksonville Board of Health raises quarantine, December 4. Panama Canal Co. fails, December 14. British troops rout the Arabs at Suakin, December 20. Portuguese blockade Eastern coast of Africa, December 31.

1889.—Oklahoma bill, making a new territory in the United States, passes Congress, February 1. French Chambers dissolve Panama Canal Co., February 4. Great earthquake shocks in South America, March 4. Great hurricane in Samoan waters, wrecking six men-of-war, March 29. Centennial Anniversary of the founding of the United States Government celebrated in New York, April 29, 30, and May 1. Conemaugh Valley flood, May 30. Samoan Treaty signed in Berlin, June 11. Gen. Hippolyte chosen President of Hayti, October 17. Brazil proclaimed a republic, November 15. Stanley arrives at Zanzibar with Emin Bey, December 6.

1890.—New Extradition Treaty between United States and Great Britain, ratified by United States Senate, February 18. Congress selects Chicago as site of the World's Fair, February 24. Seynoid Ali, brother of the late Sultan of Zanzibar, succeeds to the throne, February 13. New Peruvian cabinet formed, February 13. Battle between Mwanga assisted by Europeans, and King Kalema, for throne of Uganda, Africa, reported, February 11—annihilating forces of the latter. German elections result in enormous gains for Socialist party, February 20. Battle between French and King of Dahomey's troops at Kotonou, Senegal, repulsing the latter, February 24. German victory in Africa, under Wissmann, January 4. Dr. Palacios elected president of Venezuela, March 7. Treaty of Commerce between Germany and Austria, signed at Constantino-ple, August 26. Tokay, Hungary, destroyed by fire (1,000 families made homeless), August 26. Keneshima, Russia, nearly destroyed by fire, August 28. Mine explosion at Boryslav, Russia (80 deaths), August 28. Treaty of Peace between Sao Salvador and Guatemala, August 28. Triple Alliance Treaty, between Germany, Austria, and Italy, extended to 1897, September 13. Elections in Brazil result in favor of the government, September 13. Disastrous floods in China (4,000,000 Chinese made homeless), September 17. Turkish man-of-war, *Ertogroul*, founders at sea (500 persons drowned), September 19. Moorish rebels defeated by Sultan's forces at Al Shokhman, September 25. Congress adjourned, October 1. The McKinley Tariff Bill signed by the President, October 2. Centennial celebration of the introduction of cotton manufacture in United States, held at Pawtucket, R. I., September 23 to October 3. Treaty between Germany and Zanzibar signed, October 5. Mormon Conference at Salt Lake City sustained President's action declaring the abolition of polygamy, October 6. United States Supreme Court Justice Samuel F. Miller died, October 13. Serious election disorders in Swiss canton of Ticino, October 27, 28. Elections in Brazil sustain the new government by large majorities, October. Elections held in United States resulted in large gains by Democrats, November 4. British protectorate over Zanzibar proclaimed, November 7. King William III, of Holland, died, and was succeeded by his daughter, 10 years old, November 23. Congress reassembled, December 1. Sioux Indian war breaks out, December 15. A new congressional apportionment bill based on the census of 1890, passed the House, December 17. Henry B. Brown, of Michigan, appointed Justice of United States Supreme Court, in place of Justice Miller, deceased, December 23.

1891.—German government takes possession of territory on coast of Zanzibar, January 1. Gen. Miles takes command of troops at seat of Sioux Indian War, January 2. In Caroline Islands over 300 foreigners killed and houses of missionaries destroyed at Pohni, January 7. Difficulties with Sioux Indians adjusted, January 15. Chili insurrection breaks out, and ports of Valparaiso and other important towns blockaded by the rebels, January 15. George Bancroft, the historian, dies in Washington, January 17. Brazilian ministry resigned, January 22. Hon. William Windom, Secretary of the Treasury, died suddenly in New York city, January 23. At Oporto, Portugal, garrison mutinied against government, but were suppressed, January 31. Spanish elections under new universal suffrage law favorable to government, February 2. Italian ministry under senator Crispien resigned, February 2. Swiss government gives notice of terminating commercial treaty with Italy, February 10. Admiral D. D. Porter dies in Washington, February 13. Egyptian ministry resigned, Feb-

ruary 13. Gen. Sherman dies, February 11. Spanish force repulsed in Caroline Islands, February 17. American Loan and Trust Company suspends, February 18. Dr. Alexander Winchell, of Michigan University dies, February 19. Dillon and O'Brien transferred to Galway Jail, February 19. Disestablishment in Wales rejected by English Parliament by a vote of 235 to 202, February 20. Osman Digma's forces defeated by Egypt, February 21. Disastrous floods in Arizona, February 22. Admiral Alvarez, Commander of the Spanish navy, dies, February 22. Empress Frederick visits Paris, February 22. Great floods along the Ohio river, February 23. Norwegian cabinet resigns February 23. Brazilian Assembly adopts the proposed constitution, February 24. Women's Triennial Council at Washington, D. C., February 25. United States Congress passes agricultural appropriation bill, February 25. Gen. da Fonseca elected president of Brazil, February 25. Woman's National Suffrage Association meets in Washington, February 25. New York Merchants present testimonial of appreciation to Secretary Blaine, February 27. Great floods at Yuma, Arizona, February 27. Roumanian minister resigns, February 27. Empress Frederick leaves Paris, February 27. New cabinet elected at Honolulu, February 28. United States Congress passes subsidy bill; also postoffice bill, March 2. Free fights between Irish factions in Ireland, March 3. United States Congress adjourns, March 4. The Czechs victorious in Bohemia, March 5. Canadian elections carried by Conservatives by reduced majorities, March 5. Financial panic in Buenos Ayres, March 6. German victory in Zanzibar, March 6. United States Secretary of War decides to enlist 2,000 Indians as soldiers, March 7. King Alexander I, of Servia, officially proclaimed king, March 7. Parnell collection delegates start for America, March 8. Bishop Paddock, of P. E. diocese of Massachusetts, dies March 9. Severe blizzard prevails in England, March 9. Heaviest snow-storm of century in Great Britain, March 11. Canadian Parliament announced to meet April 29, March 11. French garrison in Tonquin overcome by natives, March 12. Italians arrested for killing chief Hennessy, after acquittal by jury, are assassinated in New Orleans, March 14. Judge John K. Brady, of New York Supreme Court, dies March 16. British steamer *Roxburgh Castle* sinks in collision off Selly Islands, 22 men drowned, March 16. Prince Jerome Napoleon dies at Rome, March 17. First telephonic communication between London and Paris, March 17. Tippoo Tib, famous African chief, stricken with paralysis, March 18. Gen. Joseph E. Johnston, ex-Confederate general, dies March 21. Insurgents make great progress in Chili, March 22. New York legislature refuses to submit prohibition amendment to the vote of the people by a party vote of 62 to 45, March 23. Queen Victoria visits Grasse, France, March 23. Governor of Belanona, Madagascar, and his brother executed for the massacre of 278 persons, March 23. Protocols exchanged delimiting the British and Italian boundaries in Africa, March 24. Minnesota State Prison burned (loss \$900,000), March 25. England and Spain accept invitation to participate in World's Fair, March 25. New York legislature passes Zoological Garden and Bronx Botanical Bill, March 26. New Hampshire House kills local option license bill, March 26. Bulgarian Minister of Finance shot in Sofia, March 27. Russian troops reported massing on the Austrian and German frontiers, March 28. Dr. Howard Crosby dies in New York city, March 29. Irish factions in collision at Sligo, Ireland, March 29. Belgian police arrest three anarchists with 500 lbs. of dynamite in their possession, March 29. Phineas Taylor Barium dies at Bridgeport, Conn., April 7.

CHURCH. See Britannica, Vol. V, pp. 758-60.

CHURCH, PHARCELLUS, Baptist clergyman, born in Seneca, N. Y., Aug. 11, 1801, died in Tarrytown, N. Y., June 5, 1886. He graduated in 1824 at Madison University (now Colgate), and after being ordained to the ministry, held pastorates in Providence, R. I., New Orleans, La., Boston and elsewhere. In 1854 he was editor of the "New York Chronicle," and from 1865 to 1886 one of the proprietors of the "Examiner." He was editorially connected with the "Watchman and Reflector." In 1846 Dr. Church was a delegate to the evangelical alliance meeting in London. He published many sermons, addresses and religious books, and he was connected with the founding of Rochester University.

CHURCH, FREDERIC EDWIN, painter, born in Hartford, Conn., May 4, 1826, became a pupil of Thomas Cole at Catskill, N. Y., and opened a studio in New York city in 1849. In South America, the West Indies, Mexico, Europe and the Holy Land, he has collected artistic material, but is best known by his picture of the *Falls of Niagara*, as seen from the Canadian side. Among his other paintings are: *The Heart of the Andes*; *S. arise on Mt. Desert*; *Jerusalem*; *The Parthenon*; and *The Ministry*.

CHURCH, RICHARD WILLIAM, born in 1815, died Dec. 9, 1890. He spent a great part of his youth in Italy and elsewhere on the Continent; took a first-class at Oxford in 1836, and soon after was elected to a Fellowship at Oriel. From 1853 he held the rectory of Whatley, near Frome. In 1854 he published *Essays and Reviews*, and thereby took rank almost at once as one of the most graceful and scholarly writers of the day. His University sermons (1876-78), in a volume entitled *Human Life and Its Conditions* (1878), the series of St. Paul's and Oxford sermons in *The Gifts of Civilization* (1880), and the five St. Paul's sermons forming *The Discipline of the Christian Character* (1885), are profound contributions to religious thought. Other works are his *Life of St. Anselm* (1871), an amplification of two essays in his first volume; *The Beginning of the Middle Ages* (1877), an introduction to the series of *Epochs of Modern History*; *Dante; An Essay*; *Spenser* (1879), and *Bacon* (1879), two of the best books in the series of *English Men of Letters*.

CHURCH, SANFORD ELIAS, jurist, born in Milford, Otsego county, N. Y., April 18, 1815, died in Albion, N. Y., May 14, 1880. He became a lawyer and settled in Albion, whence he was called to the assembly in 1842. He was district-attorney (1846-47); lieutenant-governor from 1851 to 1855; comptroller of the State (1868-69), and member of the State constitutional convention in 1867. In 1870 he was elected chief justice of the court of appeals of the State of New York and held the office until his death. He was an influential politician of the Democratic party, and was respected for his uprightness and conservatism.

CHURCH-ALE, an ale brewed especially for use at church festivals; also a church festival at which this ale was served. These festivals were convivial meetings, usually held on Easter Sunday or during Whitsuntide. Two persons were chosen beforehand to preside over the feast and divide the victuals and drink voluntarily contributed by the parishioners. Sometimes the drink which had been brewed from malt given by the parishioners was sold about Whitsunday for the payment of church expenses. The church-ale was one of the old English institutions denounced by the Puritans.

CHURCHILL, LORD RANDOLPH HENRY SPENCER, an English statesman, third son of the seventh duke of Malborough, born Feb. 13, 1849, and educated at Eton and Merton College, Oxford. Lord Randolph entered Parliament in 1874; but it was not until after the general election of 1880 that he became prominent in politics, when he appeared as the leader of a band of Conservatives known as the "Fourth Party." Though a Conservative by tradition, he had a mind of his own, and in the period of Conservative depression that followed Disraeli's death he was frequently in collision with the nominal leaders of his party on questions of party organization and the conduct of the Opposition; but his vigorous attacks on Mr. Gladstone's policy, both foreign and domestic, were of unquestionable value to the Conservative cause; and upon Mr. Gladstone's defeat (1885) Lord Randolph was rewarded with the Secretaryship for India in Lord Salisbury's first ministry. From July to December, 1886, he was Chancellor of the Exchequer and leader of the House of Commons, a position which he soon relinquished. His attacks on the spending departments thenceforward were most incisive; but on most other points he spoke and voted steadily on the Conservative side. Lord Randolph Churchill is brilliant, versatile, erratic, and, though now (1891) in comparative retirement, no one can predict his future. His wife, Lady

Randolph Churchill, of American birth, daughter of Leonard Jerome, has given most valuable assistance to her husband in his electoral contests, and is a prominent member of the Primrose League.

CHURCHILL RIVER, of Canada, rises between the north branch of the Saskatchewan and the Athabasca, under 55° north latitude, and flows generally northeast through a series of lakes, first as the Beaver, then as the Missinippi, and finally as the Churchill or English River, to Hudson Bay, which it enters near Fort Churchill, after a course of nearly 1,000 miles. It is extensively navigated by canoes which are conveyed by portage past the largest of the many rapids.

CHURCHING OF WOMEN, a religious usage, prevailing in the Christian church from an early period, of women, on their recovery after child-bearing, going to church to give thanks. It appears to have been borrowed from the Jewish law (Lev. XII, 6), and the earliest express mention of it is in the pseudo-Nicene Arabic canons.

CHURCH OF GOD. See RELIGIOUS DENOMINATIONS IN THE UNITED STATES, in these Revisions and Additions.

CHURCH-RATES, in England, a tax or assessment laid on the parishioners and occupiers of land within a parish, by a majority of their own body in vestry assembled, for the purpose of upholding and repairing the fabric of the church and the belfry, the bells, seats and ornaments the churchyard fence and the expenses (other than those of maintaining the minister) incident to the celebration of divine service.

CHURNS, machines used for the production of butter from cream or from whole milk. By agitation the butter globules are thrown against each other, until, after a period which varies in length with the quality of the butter-fat, the temperature and the condition of "ripeness," or incipient acidity of the cream. Churns are of great variety in form and dimensions, from the ladies' glass hand-churn, producing a few ounces of butter at a time, to one driven by water, steam or horse-power and churning the whole milk of a dairy at one operation.

CHUTNEY, an East Indian condiment, very largely used in India, and to a considerable extent in Britain. Indian Chutney is a compound of mangoes, chillies or capsicum and lime-juice, with some portion of other native fruits, such as tamarinds, etc., the flavor being heightened by garlic.

CIALDINI, ENRICO, Italian soldier, born at Castelvetro, Modena, Aug. 10, 1811. He studied at Parma, but by his share in the abortive insurrection of 1831 was forced to escape to France. In 1835, passing over to the Spanish service, he fought against the Carlists, and was made colonel. When Charles Albert headed the Italian rising in 1848 he hurried to Italy, and in the struggle which ensued fell into the hands of the Austrians. On his release he was employed by the Sardinian government, and fought in the brief campaign of 1849. In the Crimea he commanded a division of the Sardinian contingent. Created Duke of Gaeta, and for a few months governor of Naples, he had to act against Garibaldi in the second Sicilian expedition (1862). In 1864 he became a senator, and in the war of 1866 occupied Venice. In 1876 he was sent as ambassador to Paris, but retired in 1881, and received the post of one of the two generals of the army. He died in 1891.

CIBRARIO, LUIGI, an Italian historian, born in Turin in 1802, died in 1870. He was minister of public instruction in 1852, and minister of foreign affairs in 1855. He wrote important works on the history of Turin, and of the monarchy of Savoy, and on the political economy of the Middle Ages.

CICADA, a large genus of hemipterous insects, typical of the sub-order *Homoptera*, with uniform wings. They are well known for the noise made by the males, and for the "manna" or sap which their incisions cause to exude from trees. Specially abundant in warm countries, some eighteen species of cicada occur in the vine-bearing regions of Europe. Some large South American species are said to chirp "loud enough to be heard at the distance of a mile." The noise is caused by the vibrations of membranes at the openings of two respiratory tubes (tracheæ) on the last joint of the thorax, and the volume of sound is increased by two complex resonating cavities a little farther back. The apparatus is rudimentary in the females. *C. septendecim* is the North American "seventeen years' locust," or "harvest fly," said to occur in special abundance every seventeen years, though they probably appear in some parts of the country every year. The males of the species perform the act of reproduction and soon die, probably taking no nourishment in the perfect state. The females deposit about 500 eggs in the twigs of trees, and die immediately after. The larvæ drop and bore their way into the ground, where they are supposed to remain for seventeen years, sucking the juices of the roots of trees and plants. When the pupæ emerge, the ground sometimes seems honeycombed by their numbers. The family to which cicadas belong is often known as that of the *stridulent* insects, and includes about five hundred species. An even larger closely allied family is that of the *Cicadellidæ*, including the common cuckoo spit. The name cicada has sometimes been applied to another hemipterous insect, a common bug named *Halticus pallicornis*, or *C. aptera* of Linnaeus.

CICATRIZATION (Lat., *cicatrix*, "a scar"), the process of healing or skinning over of an ulcer or broken surface in the skin or in a mucous membrane, by which a fibrous material of a dense resisting character, covered by a protecting layer of epithelium, is substituted for the lost texture. The new tissue in such a case is called the cicatrix, and usually resembles to a considerable extent the structure which it replaces; it is, however, less elastic, and from its shrinking in volume may produce an appearance of puckering.

CICERONE (from Cicero, "the orator," or "speaker"), a name given by the Italians to the guides who show travelers the antiquities of the country; hence, in general application, a guide; one who explains interesting features or curiosities.

CICINDELLA, a genus of beetles in the section *Pentamera*, and type of a family with some 300 species. They are very active, and occur abundantly on sandy places.

CICISBEO, a professed gallant who waits with fantastic devotion upon a married lady. In the higher ranks of Italian society, it was at one time considered unfashionable for the husband to associate with his wife anywhere except in his own house; and in society, or at public places of amusement, the wife was accompanied by her *cicisbeo*.

CIDARIS, a genus of sea urchins, and type of a family (*Cidaridæ*) with very long spines. The most of the members of the family are fossil forms, but over a score of living species are known.

CIEZA, a town of Spain, 26 miles northwest of Murcia. Population, 10,910.

CIGAR. See Britannica, Vol. V, pp. 775-76.

CILIA, "eyelashes," hair-like lashes borne by cells. They are mobile modifications of the living matter of the cell, and exhibit alternate bending and straightening. In many cases normal, patho-

logical and artificial cilia may sink down into less motile ameboid processes.

CIMARRON, a beautiful interior village of New Mexico, former county-seat of Colfax county, situated near a range of lofty mountains, about 65 miles south of El Moro.

CINCHONA. See Britannica, Vol. V, pp. 780-82.

CINCINNATI, a city of Ohio, county-seat of Hamilton county, and the metropolis of the State (see Britannica, Vol. V, pp. 782-84). The city is specially noteworthy for the elegance of its private residences and public edifices. Among the latter are the county court-house, the post-office and United States government building; the Cincinnati Hospital, Pike's Opera House, Chamber of Commerce building, Masonic Temple, Art School and Museum of Art, and numerous beautiful church edifices and charitable institutions. The frequency with which expositions have been held in Cincinnati during the last twenty years has given it the title of the Exposition City of the West. The most important of these was the Centennial Exposition, held in 1888 to celebrate the one hundredth anniversary of several important events, among them the settlement of Ohio. The exposition opened on July 4, and continued for one hundred days. The buildings for the various exhibits covered about twenty-three acres of ground. The central position of Cincinnati in relation to extensive producing regions and to leading channels of commerce, renders it one of the most important commercial cities of the Mississippi Valley. Its manufactures are of a widely diversified character, the more important being iron and leather goods. The population, which in 1880 was 255,708, has increased to 296,309 in 1890.

CINCINNATI GROUP, in American geology, an important group of rocks, belonging to the Lower Silurian series, particularly well developed near Cincinnati. The rocks of this series are rich in fossil remains, and some of the shales contain a large proportion of bituminous matter. Also called *Hudson River Group*.

CINCINNATI, ORDER OF THE, a society in the United States of North America, established by the officers of the Revolutionary Army in 1783, "to perpetuate their friendship, and to raise a fund for relieving the widows and orphans of those who had fallen during the war." It was so named because it included patriots, who, in many instances, had, like Cincinnati, left rural affairs to serve their country, and were resolved to return to their citizenship and its peaceful pursuits. The badge of the society consists of a bald eagle of gold suspended by a dark-blue ribbon with white borders, symbolizing the union of France and America. On the breast of the eagle there is a figure of Cincinnati receiving the military ensigns from the senators, in the background his cottage; near it a plow and instruments of husbandry, and round the whole are the words, *Omnia reliquit servare rempublicam*. As this distinction was made hereditary, it was attacked as opposed to republican equality, and at a meeting held in Philadelphia in 1784 several changes were made in the constitution of the society, the right of succession being made conditional on approval in each case by the society. After 1801 the branches in several of the States were abolished. There are still, however, several State societies.

CINDER-BED, a name given by the quarrymen to a stratum of the Middle Purbeck series of the Jurassic system, almost entirely composed of the loosely aggregated shells of a small oyster.

CINNAMIC ACID, $C_9H_7O_2$ (C_6H_5COOH), exists in the free state in the balsams of Tolu and

Peru, in liquid storax, and in gum benzoin. Cinnamic acid forms colorless crystals readily soluble in alcohol, ether, and boiling water, but sparingly soluble in cold water. It is not of any importance in the arts, and is chiefly interesting as being the acid corresponding to oil of cinnamon. Although isomeric with oil of cassia, it has a slightly different flavor. Both of these oils are employed in medicine as aromatic stimulants, but chiefly as pleasant adjuncts to disguise the taste of nauseous drugs.

CINQUE, chief of the Mendi Africans, born at Caw-Mendi, about 1800. In 1839 this chief and a large company of his tribe were stolen from Africa and shipped to Havana, Cuba, being there purchased by Montes and Ruiz. The Africans were transferred to another ship, and were on their way to a southern port of Cuba when Cinque organized a revolt, overcame the crew and put them and the passengers on shore, then directed the two Spaniards to take them to Africa. By night the vessel was steered northward and finally arrived at Montauk Point, L. I. The Africans were put ashore at Farmington, Conn., and benevolent people instituted a trial for their release. The case was tried in the U. S. district court of the State, and after prolonged investigations the Africans were declared born free, and not amenable to punishment for the revolt on board ship. They were returned to their native land at public expense, and a mission was there established which is still maintained.

CINQUEFOIL, a common bearing in heraldry, representing a flower with five petals borne full-faced and without a stalk. If pierced—that is, perforated in the center—it should be so blazoned. Cinquefoil in architecture is an ornamental foliation in five compartments, used in the tracery of windows, panelings, and the like. The cinquefoil is often represented in a circular form, the spaces between points or cusps representing the five leaves.

CIOTAT, LA, a town in the French department of Bouches-du-Rhone, on a bay in the Mediterranean, twenty-three miles southeast of Marseilles. It has a commodious harbor, the extensive workshops of the *Messageries Maritimes Company*, and a great coral fishery. Population, 8,901.

CIRCEA, a small and widely distributed genus of Onagraceous herbs. *C. lutetiana*, frequent in shady situations, bears the name of Enchanter's Nightshade, and in Germany of Hexenkraut (Witches' Herb).

CIRCIANS, a name given in its wider sense to all the formerly independent tribes of the Caucasus; in a narrower sense it denotes the tribes inhabiting the northwestern wing of the Caucasus, with a government half patriarchal and feudal, and half constitutional. In 1858-65, rather than submit to Russian government, nearly the whole nation of fifteen tribes, to the number of nearly half a million persons, left their country for the Turkish possessions in Asia Minor, or the mountainous parts of Bulgaria, carrying with them their insubordinate spirit and marauding habits, which added to the horrors of the Bulgarian massacres of 1876-77. The Circassian nobles are principally Mohammedans, while the great mass of the people profess a corrupt Christianity, which shows strange survivals of earlier heathenism in its sacrifices and sacred trees, joined to the celebration of Easter, the sign of the Cross, and processions with lights. The Circassians are proverbially handsome, and for generations their daughters have adorned the harems of the wealthy Turks. They are also strong, active, brave and temperate. They are chiefly known through their long struggles to

maintain their independence against the aggression of Russia.

CIRCLE, Magic, a space in which sorcerers were wont to protect themselves from the fury of the evil spirits they had raised. This circle was usually described at midnight in certain conditions of moon and weather, on a piece of ground about nine feet square. Inside the outer circle was another somewhat less, in the center of which the sorcerer had his seat. The spaces between the circles, as well as between the parallel lines which inclosed the larger one, were filled "with all the holy names of God," and a variety of other characters supposed to be potent against the powers of evil.

CIRCLEVILLE, a flourishing railroad city and county-seat of Pickaway county, Ohio. It is on the Scioto River and Ohio Canal. The city is built on ancient earthworks, which are in the form of a circle and a square. Pork-packing and broom-making are two leading industries. Pop. in 1890, 6,556.

CIRCULAR NOTES, bank-notes issued by foreign bankers for the special use of travelers, corresponding to the letters of credit issued by American bankers.

CIRCULAR NUMBERS, numbers whose powers end in the same figure as the numbers themselves: as those ending in 0, 1, 5, 6.

CIRCULATION. See under PHYSIOLOGY, Britannica, Vol. XIX, pp. 8-64.

CIRCUMCISION, FEAST OF, a festival in honor of Christ's circumcision, observed on Jan. 1st in the Roman church since about A. D. 487, and in the Anglican since 1549.

CIRCUMFERENCE, or PERIPHERY, the curve which incloses a circle, ellipse, oval, cardioid, or other plane figure. In figures bounded by straight lines, as the triangle, square, and polygon, the term *perimeter* is employed to designate the sum of all the bounding lines taken together.

CIRCUMNAVIGATION, the term usually applied to the act of sailing round the world, its literal meaning being simply "a sailing round."

CIRCUMVALLATION, LINES OF, the chain of works surrounding an army engaged in besieging a fortress, facing outward towards the country so as to guard against all attempts at relief by a field army. Redoubts, either isolated or connected by a line of parapet, were much used for this purpose in the sieges of the ancient and Middle Ages.

CIRCUS. See Britannica, Vols. V, p. 791; X, p. 65; XX, p. 829. The modern circus is chiefly an exhibition of feats of horsemanship and acrobatic displays, often combined with a menagerie, or collection of wild beasts. Astley was the most famous of English circus-managers; the Paris hippodrome is justly celebrated; but probably the most important circus ever organized is that of Barnum and Bailey's "Greatest Show on Earth," which includes a whole army of performers, "mid-air artists," and male and female equestrians.

CIRRIPEDIA, or CIRRHIPEDIA, a degenerated sub-class of crustacea, including the numerous forms of barnacles and acorn-shells. *Cirrhopoda* was a form of the name once commonly in use.

CIRRHOSIS: in pathology, a chronic inflammation of the liver, so called because of the yellow appearance of the organ when in this condition. The term is sometimes applied to a similar affection of other organs.

CIRRHUS, CIRRHUS, or TENDRIL: in botany, a leaf altered into a slender spiral, which by twisting around such objects as it comes in contact with attaches the plant to them, and enables it to climb. The term is also employed in zoölogy to designate any curled filament, and has been applied to the curiously modified feet of the *Cirripedia*.

CIRTA, the capital of ancient Numidia, now Constantine.

CIS, a Latin preposition meaning "on this side;" it is often prefixed to names of rivers and mountains; as Cisalpine, "on this side of the Alps."

CISALPINE REPUBLIC. After the battle of Lodi, in 1796, Bonaparte organized two states, one on the south of the Po, the Cispadane Republic, and one on the north, the Transpadane. In 1797 these two were united into one under the title of the Cisalpine Republic, which embraced Lombardy, Mantua, Bergamo, Brescia, Cremona, Verona, and Rovigo, the duchy of Modena, the principalities of Massa and Carrara, and the three legations of Bologna, Ferrara, and the Romagna. The republic was dissolved for a time in 1799 by the victories of the Russians and Austrians, but was restored by Bonaparte after the victory of Marengo, with some modifications of constitution and increase of territory. In 1802 it took the name of the Italian Republic, and chose Bonaparte for its president. In 1805 a deputation from the republic conferred on

the Emperor Napoleon the title of King of Italy, after which it formed the kingdom of Italy till 1814.

CISTERN. See Britannica, Vol. IV, p. 503; Vol. XXI, pp. 714 *et seq.*

CISTUS, or Rock-Rose, a genus of exogenous plants giving its name to the natural order *Cistaceæ*, which contains about 200 known species, chiefly natives of the South of Europe and the North of Africa. Some of them are beautiful evergreen shrubs. From *Cistus Creticus*, *Cistus ladaniferus*, and other species, *gum ladanum* is obtained.

CITADEL, a fort of four or five bastions in or near a town. It serves two purposes: it enables the garrison of a town to keep the inhabitants in subjection; and in case of a siege, it forms a place of retreat for the defenders.

CITATION, the act of calling a party into court to answer to an action, to give evidence, or to perform some other judicial act.

CITHARA, an ancient instrument closely resembling the guitar. See Britannica, Vol. XV, p. 114.

CITIES OF THE UNITED STATES. The following is a list of the cities of the United States having a population of 10,000 or over in 1890, as shown by the census of that year:

Akron, Ohio.....	27,702
Albany, N. Y.....	93,523
Alexandria, Va.....	14,318
Allegheny, Pa.....	104,967
Allentown, Pa.....	25,183
Alpena, Mich.....	11,228
Alton, Ill.....	10,184
Altoona, Pa.....	30,269
Amsterdam, N. Y.....	17,264
Anderson, Ind.....	10,759
Appleton, Wis.....	11,825
Asheville, N. C.....	10,433
Atchison, Kan.....	14,222
Atlanta, Ga.....	65,511
Atlantc City, N. J.....	13,038
Auburn, Me.....	11,228
Auburn, N. Y.....	25,887
Angusta, Ga.....	33,150
Angusta, Me.....	10,521
Aurora, Ill.....	19,634
Austin, Tex.....	15,324
Baltimore, Md.....	432,547
Bangor, Me.....	19,090
Baton Rouge, La.....	10,397
Battle Creek, Mich.....	13,090
Bay City, Mich.....	27,826
Bayonne, N. J.....	18,996
Beatrice, Neb.....	13,221
Belleville, Ill.....	15,330
Beverly, Mass.....	10,821
Bildeford Me.....	11,418
Binghamton, N. Y.....	35,093
Birmingham, Ala.....	35,211
Bloomington, Ill.....	21,212
Boston, Mass.....	448,477
Bradford, Pa.....	10,478
Bridgeport, Conn.....	48,856
Bridgeton, N. J.....	11,471
Brockton, Mass.....	27,291
Brookhaven, N. Y.....	12,572
Brookline, Mass.....	12,103
Brooklyn, N. Y.....	891,377
Buffalo, N. Y.....	251,457
Burlington, Iowa.....	25,528
Burlington, Vt.....	14,599
Butte City, Mont.....	10,701
Calro, Ill.....	10,041
Cambridge, Mass.....	70,028
Camden, N. J.....	58,271
Canton, Ohio.....	26,327
Carbondale, Pa.....	10,826
Cedar Rapids, Iowa.....	17,397
Charleston, S. C.....	54,542
Charlotte, N. C.....	11,885
Chattanooga, Tenn.....	29,114
Chelsea, Mass.....	27,891
Chester, Pa.....	20,167
Cheyenne, Wyo.....	11,003
Chicago, Ill.....	1,098,576
Chilcopec, Mass.....	14,050

Chillicothe, Ohio.....	11,256
Cincinnati, Ohio.....	296,309
Cleveland, Ohio.....	261,546
Clinton, Iowa.....	13,629
Clinton, Mass.....	10,424
Cohoes, N. Y.....	22,432
Columbia, Pa.....	10,597
Columbia, S. C.....	14,508
Columbus, Ga.....	18,650
Columbus, Ohio.....	90,398
Concord, N. H.....	17,004
Council Bluffs, Iowa.....	21,388
Covington, Ky.....	37,375
Cumberland, Md.....	10,090
Dallas, Texas.....	88,140
Daubury, Conn.....	19,385
Danville, Ill.....	11,528
Danville, Va.....	10,285
Davenport, Iowa.....	25,161
Dayton, Ohio.....	68,863
Decatur, Ill.....	16,841
Deulson, Texas.....	10,959
Denver, Col.....	126,786
Des Moines, Iowa.....	50,067
Detroit, Mich.....	205,669
Dover, N. H.....	12,790
Dubuque, Iowa.....	30,147
Duluth, Minn.....	82,725
East Liverpool, Ohio.....	10,947
Easton, Pa.....	14,185
East Portland, Oregon.....	10,481
East St. Louis, Ill.....	15,156
Eau Claire, Wis.....	17,448
Elgin, Ill.....	17,429
Elizabeth, N. J.....	37,683
Elkhart, Ind.....	11,370
Elmira, N. Y.....	28,070
El Paso, Texas.....	10,896
Erie, Pa.....	89,699
Evansville, Ind.....	50,671
Everett, Mass.....	11,098
Fall River, Mass.....	74,328
Findlay, Ohio.....	18,674
Fitchburg, Mass.....	22,007
Flushing, N. Y.....	19,156
Fond du Lac, Wis.....	11,942
Fort Scott, Kan.....	11,867
Fort Smith, Ark.....	11,291
Fort Wayne, Ind.....	35,309
Fort Worth, Texas.....	31,725
Freeport, Ill.....	10,159
Galesburg, Ill.....	15,202
Galveston, Texas.....	28,118
Gloucester, Mass.....	5,001
Greenville, S. Y.....	13,736
Grand Rapids, Mich.....	61,147
Greenwich, Conn.....	10,120
Hagerstown, Md.....	11,608
Hamilton, Ohio.....	17,519
Hannibal, Mo.....	12,816
Harrisburg, Pa.....	43,161
Hartford, Conn.....	50,182
Hastings, Neb.....	10,793
Haverhill, Mass.....	27,402
Hazleton, Pa.....	11,828
Helena, Mont.....	13,884

Hempstead, N. Y.	23,517	Norfolk, Va.	35,454
Hoboken, N. J.	43,560	Norristown, Pa.	19,750
Holyoke, Mass.	35,637	North Adams, Mass.	16,074
Hornellsville, N. Y.	10,948	Northampton, Mass.	14,990
Houston, Texas	27,411	Norwalk, Conn.	17,739
Hudson, N. Y.	10,027	Norwich, Conn.	16,192
Huntington, W. Va.	10,082	Oakland, Cal.	48,590
Hyde Park, Mass.	10,193	Ogden, Utah	14,919

Zanesville, Ohio.....	21,117

CITIZEN (Fr., *citoyen*; Lat., *civis*), a term applied either specifically to a dweller in a town, or to any one who is either born in the country or has become legally naturalized in it. From the point of view of American constitutional law, a citizen being a member of the political community to which he belongs, every person born in the United States and subject to its jurisdiction (except untaxed Indians) falls within the definition. An alien may become a citizen by being naturalized under the acts of Congress. A citizen of the United States residing in any State of the Union is a citizen of that State. There being a government in each of the several States, as well as a government of the United States, a person may be, and usually is, at the same time a citizen of both, but his rights as a citizen under one of these governments differ legally from those under the other. On the other hand, a person may be a citizen of the United States and not be a citizen of any particular State, having his residence in one of the Territories, or not having a fixed residence in any State. Citizenship is not confined to those who have a right to vote, as minors and women are usually citizens without those rights.

In France during the Revolution, the word citizen was adopted by the Republicans as the most appropriate term to express the principle of *liberté, égalité et fraternité*. It took the place of *Monsieur*. Every Frenchman became *citoyen* in relation to other Frenchmen, the highest in official station being so addressed by the lowest. The usage gradually died out after the assumption of imperial power by Napoleon.

CITIZENSHIP IN THE UNITED STATES embraces the following persons: (1) All individuals born in the United States and not subject to any foreign power (except untaxed Indians). This includes all children of alien parents other than those of foreign official representatives. (2) All children born elsewhere to fathers who were at the time of their birth citizens resident at some time in the United States. (3) All naturalized persons. (4) Women, though not born in the United States, nor naturalized (if not incapable of naturalization) who are married to citizens. (5) All Indians born within the United States, who have withdrawn from tribal relations, and who are enrolled as taxpayers, or who have accepted lands in severalty under the Congressional act of 1870.

A person may be a citizen of the United States without being a citizen of a particular State, and *vice versa*. The two citizenships are quite distinct in law. For citizenship in the States severally, see **NATURALIZATION OF ALIENS**.

A naturalized citizen is one of foreign birth who has become a citizen by adoption or naturalization. The conditions under and the manner in which an alien may be admitted to citizenship in the United States are prescribed by sections 2165-71 of the Revised Statutes of the United States. They sub-

stantially include the following: The alien must declare upon oath before a circuit or district court of the United States, or a district or supreme court of the Territories, or a court of record of any of the States having common-law jurisdiction, and a seal and clerk, two years at least prior to his admission, that it is his intention, *bona fide*, to become a citizen of the United States, and to renounce forever all allegiance and fidelity to any foreign prince or state, and particularly to the one of which he may at the time be subject. He must also declare on oath before one of the courts named "that he will support the Constitution of the United States, and that he absolutely and entirely renounces and abjures all allegiance and fidelity to every foreign prince, potentate, state or sovereignty, and particularly by name to the prince, potentate, state or sovereignty, of which he was before a citizen or subject," which proceedings must be recorded by the clerk of the court.

If it shall appear to the satisfaction of the court to which the alien has applied that the applicant has resided within the United States, continuously, for five years, and that during that time "he has behaved as a man of good moral character, attached to the principles of the Constitution of the United States, and well disposed to the good order and happiness of the same," he will be admitted to citizenship. If the applicant has borne any hereditary title or order of nobility he must make an express renunciation of it at the time of his application. Any alien twenty-one years old and upwards, who has been in the armies of the United States and has been honorably discharged therefrom, may become a citizen on his petition without any previous declaration of his intention, provided that he shall have resided in the United States at least one year previous to his application, and is of good moral character. Any alien under the age of twenty-one years, who has resided in the United States three years next preceding his arriving at that age, and who has continued to reside therein to the time he may make application to be admitted a citizen thereof, may, after he arrives at the age of twenty-one years, and after he has resided five years within the United States, including the three years of his minority, be admitted a citizen; but he must make a declaration on oath and prove to the satisfaction of the court that for two years next preceding it has been his *bona fide* intention to become a citizen. The children of persons who now are or have been citizens of the United States are, though born out of the limits and jurisdiction of the United States, considered as citizens thereof. The naturalization of Chinese is expressly prohibited by section 14, chapter 126, Laws of 1882.

CITRON-WOOD, or **CITRUS-WOOD**, the most highly prized wood of Roman antiquity, derived from *Biota orientalis*, or from *Callitris quadrivalvis*, allied coniferous trees, natives of Africa and the Orient. It is a very beautiful wood, beloved by the Turks to be imperishable, and much used by them for floors and ceilings of mosques.

CITRUS, a genus of the natural order *Aurantiacæ*, trees and shrubs of tropical, subtropical and warm temperate Asia, but many of them now cultivated in all similar climates for their fruit. To it belong the orange, citron, lemon, lime, bergamot, shaddock, etc.

CITROSMA, a genus of trees of the natural order *Moriniacæ*, of which the leaves abound in an oil resembling oil of citron. They are natives of the tropical parts of South America.

CITTADELLA, a town of Northern Italy, 14 miles northeast of Vicenza, situated on the Bren-

tella. It has manufactories of paper and woolen. Population, 8,505.

CITY (Fr., *cité*; Lat., *civitas*), an important town. In the United States a city is an incorporated town, usually governed by a mayor, aldermen and common council. In some States 10,000 inhabitants are requisite to the formation of a city government, while in the new States a less number is required, some having incorporated cities of fewer than 3,000 inhabitants. In several of the Western States cities are organized under a general law by which they are designated, according to the number of inhabitants, as cities of the first, second and third class. The term city, as used in Great Britain, is generally applied to all towns which are incorporated, and which either are or have been sees of bishops. In the case of towns which have grown greatly beyond their original dimensions it is not unusual to give the name of city to the space which they originally occupied—thus, we speak of the city of London in contradistinction to the metropolis, *la Cité* of Paris, and similarly of other places.

CITY OF REFUGE. The Jewish law set apart six cities, three on each side of the Jordan, as cities of refuge for the murderer. These cities were Bezer, Ramoth, and Golan on the east, and Hebron, Shechem, and Kadesh on the west.

CITY POINT, a port of entry situated at the confluence of the James and Appomattox Rivers, in Prince George county, Va. This place was made a supply depot by General Grant in his assaults on Petersburg and Richmond.

CIUDAD RODRIGO, a fortified town of Spain, 17 miles from the Portuguese frontier, and 56 southwest of Salamanca by rail, on a steep hill above the river Agueda, which is here crossed by a fine bridge. It is a poor, dirty town, chiefly of interest for its sieges during the Peninsular War.

CIVICS (Lat., *civis*, a citizen), a new word directly derived from the adjective civic, and introduced by Henry Randall Waite, Ph.D., F. A. S. A., who defined it as follows: "The body of knowledge or science which devotes itself to the consideration of citizenship relations, including the reciprocal relations of government and citizenship." Civics seeks to properly coördinate, as parts of an integral science, the essential truths with which the citizen must be familiar in order to the best use of his powers and privileges. It includes (1) *Ethics*: defined by E. Benjamin Andrews, D.D., LL.D., of the Faculty of the Institute as "The Doctrine of Duties in Society;" in other words, the study and setting forth of the conditions of human character which are essential to the welfare of the citizen, society and government. As right character is the natural source of right action, the science of civics first concerns itself with the facts which underlie and account for these essential characteristics of the good citizen. That the citizen may be qualified to act the part of an intelligent juror in all affairs submitted to the decision of the suffrage, it is essential that he be adequately informed as to other facts in Civics as follows: (2) *Civil Polity*—Governmental methods and machinery; suffrage rights and obligations; the qualifications and duties of public officials; executive, legislative, and judicial affairs, and all other matters having relation to the orderly and proper administration of government. (3) *Law*—The principles and facts of the law in applications most directly involving the interests of society, and especially of the citizen and the government. (4) *Economics*—The principles or laws which explain or control the production, distribution and ownership of that which constitutes, or is technically called wealth; the facts relating to the develop-

ment of natural resources, to manufactures, and to internal and foreign commerce; questions of supply and demand, labor and capital; and matters of like character, considered with reference to their effects upon the citizen, and in their relations to government. (5) *History*—Collateral facts illustrative of tendencies and results, growing out of given conditions, considered in connection with Ethics, Civil Politics, Law and Economics. *Civics* offers an opportunity for the exact differentiation of facts hitherto confused, as within the scope of two or more of the sciences which it includes, and for corresponding exactness in deductions. It differs from what is called social science in general, or sociology, in confining itself to the consideration of sociological facts in their bearings on affairs of citizenship and government.

CIVICS, AMERICAN INSTITUTE OF, a National Educational Institution, with a charter from the United States Government. Founded in 1885, by the late Chief Justice Morrison R. Waite and Justice William Strong, of the U. S. Supreme Court; Noah Porter, late President of Yale University; John Bigelow, Mellen Chamberlain, Theodore W. Dwight, John Jay, Ex-Governor Hugh S. Thompson, of South Carolina; General H. B. Carrington, U. S. A.; W. E. Sheldon, the late Dr. Alexander Winchell, Henry Randall Waite, Ph.D., General William Preston Johnston, of Louisiana; General Joseph R. Hawley, W. H. Du Puy, LL.D., Bishop J. H. Vincent, and other distinguished citizens. Assuming that the voter is a trustee charged with sacred responsibilities, the Institute aims to secure such attention to the facts of Civics on the part of all citizens as shall surround the suffrage with the safeguards which grow out of a proper sense of obligations, integrity of purpose, and an adequate degree of intelligence as to affairs in issue. The Institute is controlled by 33 Trustees, and has auxiliaries styled "Councils" in every State and Territory. The immediate direction of its affairs is intrusted to a President and Faculty now numbering 12 members. It has departments of work as follows: 1st, in connection with Common Schools; 2nd, Colleges and Professional Schools, A. B. Woodford, Ph.D., secretary; 3d, the Press, L. A. Maynard, secretary; 4th, Popular Work. Its Faculty has corresponding members in 152 colleges. Its Press Department, with the aid of leading newspapers, reaches more than a million readers weekly; its corps of lecturers, scattered throughout the land, numbers 45 distinguished speakers and writers. In connection with its Department of Popular Work, aided by Rev. J. M. Whiten, Ph.D., it seeks to promote its purposes through the co-operation of pulpit orators by suitable addresses on stated occasions intended to exalt the standard of citizenship. The Business Educators' Association of America, representing Business Schools with an attendance of more than 50,000 youth, has made itself an auxiliary of the Institute, with the purpose of carrying instructions in Civics into all business schools. The President of the Institute is Dr. H. R. Waite, and its offices are in New York city.

CIVIL DAMAGE ACTS, the name given to measures passed in several of the United States giving to persons who have sustained injury, in person or property or means of support, by any intoxicated person, in consequence of such intoxication, the right of action against the person who sold or gave away the liquor which caused such intoxication.

CIVIL DEATH, a term applied to one who is separated from civil society, or from the enjoyment of civil rights. In the United States one who has

been convicted of a felony and sentenced to imprisonment for life is said to be civilly dead.

CIVILIAN, a person whose pursuits are civil, that is, neither military nor naval; or one who is skilled in the civil law.

CIVIL RIGHTS, a term applied to the privileges which are accorded to every citizen by virtue of his citizenship, without regard to race, color, or previous condition of servitude. The condition of the colored race in the United States after the abolition of slavery led to the adoption of the 14th and 15th amendments to the Constitution, by which it is provided that "no State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States;" and that the "right of citizens of the United States to vote shall not be denied or abridged by the United States, or by any State, on account of race, color, or previous condition of servitude." The words "privileges and immunities" have been held to mean such as are of a general nature, as security to life and liberty, the right to acquire property, to have access to courts of justice, and freedom to pursue and obtain happiness and safety, with such restrictions as are necessary to the public good. Whatever guaranties States accord to their own citizens upon these points must be extended to the citizens of other States. The effect of the 15th amendment to the Constitution in respect of many questions of right in the several States has not been settled by the courts, but the object of that amendment is well understood. It abrogates all State legislation or Constitutional provision creating distinctions among citizens of the United States based upon race and color, and prevents the introduction of such distinctions either by the action of the State or by the General Government.

CIVIL RIGHTS ACT, an act of the United States Congress, passed in 1875, forbidding the exclusion of any person from the enjoyment of inns, public conveyances, theaters, etc., on account of race or color.

CIVIL RIGHTS BILL, an act passed in 1866 by the United States Congress conferring citizenship upon all persons born in the United States, not subjects of other powers, "of every race and color, and without regard to any previous condition of servitude."

CIVIL SERVICE AND CIVIL SERVICE REFORM. Civil Service is the executive branch of the public service, as distinguished from the military and the naval. Under enlightened forms of government it is separated into three branches: Legislative, Judicial, and the Executive.

The Legislative branch is essentially representative, and this function of legislators makes their views and interests an important part of the proper test of fitness for the places they seek. But very different considerations should prevail in the selection of clerks and other subordinates, for the reason that secretaries, clerks, copyists, messengers, etc., are in no sense representative. They owe no duty to members of one party that they do not owe equally to the other. Their political views should under no circumstances enter into their work.

The Judicial branch of the Government is not representative. To make it so in any sense is a prostitution of judicial functions and a calamity. Justice should be administered alike to every one, at all times and places, without party fear or favor. In the Executive department of the United States there are more than 100,000 persons occupying responsible clerical positions above the grade of laborers; there are nearly 50,000 postmasters, with tens of thousands of subordinates, and in all the departments official life is graded from the central

authority down to the porters and doorkeepers. With rare exceptions they are doing work the success and the utility of which depend upon its being done wholly on business principles, without any bias of party views. Yet so great was the effort made by parties struggling for power to fill these places with their favorites for the sake of their patronage that gross abuses were practiced.

The same difficulties exist in a monarchical as in a republican form of government. Great Britain discovered the abuses fifty years ago, and required an examination of applicants. The first ones were called *pass* examinations, but rapidly grew into *competitive* examinations. The British precedent was the basis of an act, passed by the United States Congress in 1853, by which such examinations were made the basis of an appointment to any place in the four great classes of clerkships in Washington. These examinations were the first practical steps toward what is designated as Civil Service Reform. For more than thirty years Great Britain enforced competitive examinations in the selection of her administrative officials in British India. They proved successful, and in 1870 were insisted upon in the administration of the Home Government.

In 1872 and 1874 President Grant enforced the system in the departments at Washington. He appointed a Civil Service Commission to attend to the matter, and the result was that a superior mental power began to be felt in the executive part of the national work. The hostility of many members of Congress, who wanted their favorites in official positions, was encountered, and for a time was partially successful. Competitive examinations were, however, reestablished by President Hayes at the postoffice and custom-house in New York city, and continued there by Presidents Garfield and Arthur. In 1883 Congress passed an act containing stringent provisions for the suppression of political assessments, and also provided for a complete system of competitive examinations. Since July, 1883, these rules have been enforced not only in the national departments, but in various State and municipal governments.

CIVIL SERVICE RULES. President Grant in 1872 appointed a "commission" to "devise rules and regulations" for admission to, and continuance in, the civil service of the United States. The commission prepared and reported such rules, based upon competitive examinations, and the Government officers began at once to carry them out to some extent. But the political pressure brought to bear upon many of the Senators and Members of Congress by their constituents for place and promotion was such that the progress made in the proposed reform was much less rapid than had been expected. In 1879 President Hayes renewed the efforts of President Grant, and the reform was specially observed in the New York postoffice and some other large postoffices. Since that date considerable progress has been made, and the system of competitive examinations has been extended not only to the Federal offices but also to the civil service in several of the States and chief cities.

The act of Congress prescribing rules and the extent of their application was passed in 1883. It provides for the appointment by the President of three "Civil Service Commissioners," with a chief Examiner, a Secretary, and other employes, and makes it the duty of the Commission to aid the President in preparing rules for carrying the new act into effect; to make regulations for examinations, and for office records and reports, and to provide also for the enforcement of the act. The headquarters of the Commission is in Washington, D. C. The act prescribes that the rules shall apply

to the Executive Departments at Washington; the Department of Labor and the Civil Service Commission; the Customs districts in which there are fifty or more employes, eleven in number; the postoffices in which there are fifty or more employes, now forty-six; and the Railway Mail Service—including, altogether, about thirty-two thousand places.

The Classified Departmental Service embraces all places in the departments at Washington, excepting messengers, laborers, workmen, and watchmen (not including any person designated as a skilled laborer or workman), and no person so employed can, without examination under the rules, be assigned to clerical duty, and also excepting those appointed by the President, by and with the advice and consent of the Senate. The Classified Customs Service embraces the customs districts where the officials are as many as fifty, including the places giving \$900 a year, and all those giving a larger salary where the appointee is not subject to confirmation by the Senate. The Classified Postal Service embraces the postoffices where the officials are as many as fifty, including all places above the grade of a laborer.

For places in the Classified Service, where technical additional qualifications are needed, special examinations are held. In the Departmental Service they are held for the State Department, the Pension, Patent and Signal offices, Geological and Coast Surveys, and other offices.

Applicants for examination must be citizens of the United States of the proper age. No person habitually using intoxicating liquors can be appointed. No discrimination is made on account of sex, color, or political or religious opinions. The limitations of age are: For the Departmental Service, not under twenty years; in the Customs Service, not under twenty-one years, except clerks or messengers, who must not be under twenty years; in the Postal Service, not under eighteen years, except messengers, stampers, and other junior assistants, who must not be under sixteen or over forty-five years, and carriers, who must not be under twenty-one or over forty; and in the Railway Mail Service not under eighteen or over thirty-five years. The age limitations do not apply to any person honorably discharged from the military or naval service of the United States by reason of disability resulting from wounds or sickness incurred in the line of duty. Such persons are preferred under § 1754 R. S.

Every one seeking to be examined must first file an application blank. The blank for the Departmental or Railway Mail Service should be requested directly of the Civil Service Commission, at Washington. The blank for the Customs or Postal Service must be requested in writing by the persons desiring examination of the Customs or Postal Board of Examiners at the office where service is sought. These papers should be returned to the officers from whom they emanated.

The applicants to enter the services designated are examined as to their relative capacity and fitness. The clerk examination is used only in the Customs and Departmental Services for clerkships of \$1,000 and upward, requiring no peculiar information or skill. It is limited to the following subjects: First, orthography, penmanship, and copying; second, arithmetic—fundamental rules, fractions, and percentage; third, interest, discount, and elements of book-keeping and of accounts; fourth, elements of the English language, letter-writing, and the proper construction of sentences; fifth, elements of the geography, history, and government of the United States. For places in which a lower degree of education suffices, as for employes in postoffices and those below the grade of clerks in custom-houses and in the departments at Washington, the Commission limits the examination to less than these five subjects, omitting the third and parts of the fourth and fifth subjects; and this is known as the copyist examination. No one is certified for appointment whose standing upon a just grading in the clerk or copyist examination is less than 70 per centum of complete proficiency, except that applicants claiming military or naval preference under § 1754 R. S. need obtain but sixty-five.

The law also prescribes competitive examinations to test the fitness of persons in the service, for promotion therein. Persons passing an examination are graded and registered. The Commission gives a certificate to the person stating whether he passed or failed to pass.

When there is a vacancy to be filled the appointing officer applies to the Commission or proper examining board, and it reports to him the names of the three persons graded highest on the proper register of those in his branch of the service and remaining eligible, and from the said three a selection must be made.

Every appointment is made for a probationary period of six months, at the end of which time, if the conduct and capacity of the person appointed have been found satisfactory, the appointment is made absolute.

The following are excepted from examination for appointment: Confidential clerks of heads of departments or offices, cashiers of collectors and postmasters, superintendents of money-order divisions in postoffices, custodians of money for whose fidelity another officer is under bond, disbursing officers who give bonds, persons in the secret service, deputy collectors and superintendents and chiefs of divisions or bureaus, and a few others.

CIVITA SAN-ANGELO, a town of South Italy in the province of Teramo, near the Adriatic. It has a population of 6,578, and a trade in grain, wine and oil.

CIVITELLA DEL TRONTO, a town of South Italy in the province of Teramo, situated on a rock crowned by a castle. Population, 7,227.

CLAFLIN, HORACE BINGHAM, merchant, born in Milford, Mass., Dec. 18, 1811, died in Fordham, N. Y., Nov. 14, 1885. He entered business life as clerk in his father's store, and in 1831 he formed a partnership with his brother and his brother-in-law, and succeeded to his father's business. A dry-goods store in Worcester was their next venture, and as it was successful Mr. Claflin came to New York city in 1843, and entered upon what proved to be a remarkably successful business career. The business of the house in which he held the chief interest during the last twenty years of Mr. Claflin's life exceeded that of any other similar house in the world. Mr. Claflin was an influential member of Henry Ward Beecher's church, a liberal contributor to Brooklyn's charities, and the benefactor of many young men who were in need of credit or money. He was a Republican until the election of 1884, and a vigorous opponent of slavery.

CLAIBORNE, or CLAYBORNE, WILLIAM, colonist, born in Westmoreland, England, about 1589, died in Virginia about 1676. He was appointed secretary of state for the dominion of Virginia by Charles I. in 1626, and in 1642 treasurer for life. His rights and claims were disputed by Lord Baltimore, and he finally gave up the struggle in support of them. He discovered Kent Island in 1631, and owned a large tract of land upon which Annapolis was built. Claiborne has been misunderstood by historians, but recent investigation has shown that he was the victim of court favoritism and injustice. By his friends he was called "the champion of Virginia," while others denounced him as the "evil genius of Maryland."

CLAIBORNE, WILLIAM C. C., an American statesman, born in Virginia in 1775, died in 1817. He represented Tennessee in the National Congress in 1797, and was appointed governor of the Mississippi Territory in 1802, and of Louisiana Territory in 1804; he was governor of the State of Louisiana from 1812 to 1816.

CLAIBORNE GROUP, a name given in America to certain beds of clay, lignite, shelly sands, and marly limestone which occur in the vicinity of Claiborne, Alabama, and are believed to belong to the Eocene system.

CLAIRAC, a town of France, in the department of Lot-et-Garonne, situated on the Lot. It has flour and paper mills, and considerable trade in white wines, and prunes. Population, 2,423.

CLAIRAÛT, ALEXIS CLAUDE, a mathematician, born at Paris, May 13, 1713, died there May 17, 1765. He early exhibited a remarkable aptitude for mathematics, and at eighteen years of age was admitted into the Academy of Sciences. He wrote a number of scientific papers, but his fame rests principally upon his *Théorie de la Figure de la Terre* (1743), in which he promulgated the theorem that the variation of gravity on the surface of the earth, regarded as an elliptic spheroid, was altogether independent of the law of density; on his explanation of the motion of the lunar apogee, and on his computation of the time of the return of Halley's comet.

CLAIRVAUX, a village in the department of Aube, 10 miles above Bar-sur-Aube, on the left bank of the river. Its celebrated abbey was founded in 1115 by St. Bernard. It is now transformed into a great prison or house of detention. Population, 1,950.

CLAIRVOYANCE. See Britannica, Vol. XXII, pp. 404-7.

CLAM, the popular name of various genera of bivalve mollusks, of which the principal are the common hard-shell clam—the Indian quahaug—of the Atlantic coast of the United States; the long or soft-shelled clam, known in England as the cob; the fresh-water clam, which is properly a mussel; and the edible giant clam of the South Sea and the Pacific, which bears the largest and most beautiful of bivalve shells.

CLAN-NA-GAEL, THE, a secret organization founded in Dublin in 1869. Its avowed purpose was to keep alive the Irish national spirit, and to aid in the liberation of Ireland from English rule; also to secure a republican form of government for the Irish nation. Membership was confined exclusively to Irishmen, and all proceedings were guarded with the greatest secrecy, the members being bound by oaths, and protected by passwords and signs of recognition. At a later period of its existence it was also known as the United Brotherhood. American headquarters were established in Chicago and Philadelphia, with branches in all the principal American cities. An enormous following was secured. Each branch or section in the United States was known by a given number. Particular care was taken as to the character of those admitted to membership. Each member had his individual number, and on it a password was framed. Each candidate was required to swear that he entertained no mental reservations, and that he was not bound by any previous oath to expose anything relative to the order. A sword was used in the ceremony of initiation to signify that force only could accomplish the society's aim. A cipher was used by the simple device of writing the alphabetical letter next succeeding the real one required, thus: "Fohmboe" was by the initiated readily translated into "England;" "Ce" meant "Bd," an abbreviation for "Brotherhood." Each candidate solemnly pledged himself, under penalty of death, to keep the name and everything connected with the organization strictly secret from all not entitled to know the secrets, and also faithfully to preserve the funds of the society for the cause of a prospective Irish revolution. The oath was as follows: "I (name in full) do solemnly swear, in the presence of Almighty God, that I will labor while life is left me to establish and defend a republican form of government in J s f m b o e; that I will keep strictly secret the name and everything connected with the C e from all not entitled to know such secrets; that I will obey and comply with the constitution and laws of the C e, and that I will faithfully preserve the funds of the C e for the cause of J s j t i _evolution alone, as specified in the constitution; that I will deem it my special duty and mission to promote and foster sentiments of union, brotherly love and nationality among the J s j t i n f o; that I take this obligation without any mental reservation, holding the same forever binding upon me, and that any violation thereof, or desertion of my duty to the brotherhood is infamous, and merits the severest punishment. So help me God"

Very little was known by the American public about the Clan-na-Gael until the summer of 1889. In May of that year, Dr. Philip N. Cronin, a physician of high professional and social standing in the city of Chicago, suffered a violent and mysterious death. It was found by certain members of the order that he had in his possession evidence that would convict Clan-na-Gael officials of the misappropriation of large funds belonging to the society.

The parties writhed under the consciousness of guilt, and the fear of exposure drove them wild. It was determined to get rid of Dr. Cronin. A secret meeting was held, and a vote to "remove" him passed. He was enticed from his home on the plea that his professional services were needed by a person seriously ill. Quick to respond to such a call, he went to his death. While bending over his supposed patient, the blow was struck. His mutilated remains were discovered in a sewer basin in the outskirts of the city. In the investigation which followed the society was unearthed, its methods disclosed, four of its members convicted of the murder, three of whom were sent to prison for life, while the fourth was sentenced to imprisonment for three years.

CLANWILLIAM, a division of the Western Provinces, north of Cape Town, South Africa, embracing within its area the rich valley of Olifant River West, with a large stretch of mountain and "karroo" on each side. Chief village, Clanwilliam, on Jan Dissels River.

CLAP, THOMAS (1703-67), Congregational minister, and from 1739 to 1765 president of Yale College. He was born in Scituate, Mass., in 1703, graduated at Harvard in 1722, and preached at Windham, Mass., from 1726 to 1739. His learning and other qualities eminently fitted him for the position of president of the College, and he made important improvements in its various departments; he drew up a new code of laws, which were adopted by the trustees, and a new charter which was granted by the legislature; but his religious views led to his resignation in 1765, and he died in New Haven, Conn., in 1767. Thomas Clap, his great-grandfather, came to New England in 1630 and settled in Scituate, Mass., in 1640.

CLAUQUE (Fr., *claque*, "to clap the hands," or "applaud"), the name given to an institution for securing the success of a public performance or production, by bestowing upon it preconcerted applause, thus giving the impression that it is favorably received. The claque is of great antiquity, but first became a regularly organized and paid body during the time of the great Napoleon, in the famous struggle between Mademoiselle Georges and Mademoiselle Duchesnois at the Théâtre Français. The performances of the claque are directed by a leader, who arranges the points at which applause, laughter or tears are to be forthcoming, and each claqueur has a special role allotted to him. Thus, in various parts of the theater are placed *rieurs*, those who laugh at the comic sallies; *pleureurs*, those who weep at pathetic passages; *bisseurs*, who call *bis* or *encore*, and so on; while all occasionally join in hand-clapping and applause.

CLARE ISLAND, an island of Ireland, belonging to the county of Mayo, situated in the Atlantic at the entrance of Clew Bay.

CLAREMONT, a mansion at Esher, Surrey, Eng., 11 miles southwest of London, built in 1768 by Lord Clive at an expense of £100,000, and now the private property of Queen Victoria.

CLAREMONT, a manufacturing town of Sullivan county, N. H., 48 miles northwest of Concord. There are cotton, woolen and paper mills; also a water-wheel manufactory. The town has a large library and a high school.

CLARENCE, an English ducal title, first conferred in 1362 on Lionel, second son of Edward III and Philippa.

CLARENCEUX, or CLARENCEUX, the first of the two provincial Kings-of-Arms, in England, whose jurisdiction of Clarenceux extends to all England south of the Trent, that of Norroy comprehending the portion north of that river.

CLARENDON, a small town of Rutland county, Vt., much visited by invalids on account of its mineral springs, the waters of which are efficacious in skin diseases and kidney complaints.

CLARENDON, CONSTITUTIONS OF, a series of ordinances, sixteen in number, made by a council of the nobility and prelates held at the hunting lodge of Clarendon in 1164, whereby King Henry II checked the power of the Church, and greatly narrowed the total exemption which the clergy had claimed from the jurisdiction of the secular magistrate. They defined the limit of the patronage as well as of the jurisdiction of the Pope in England, and provided that the Crown should be entitled to interfere in the election to all vacant offices and dignities in the Church. See ENGLAND, Britannica, Vol. VIII, p. 372; also Vol. I, p. 32.

CLARE, Sr., born in 1193, of a noble family of Assisi, in 1212 retired to the Portiuncula of St. Francis, and in the same year founded the order of Franciscan nuns, which spread rapidly through Europe. She died Aug. 11, 1253. Two years afterwards she was canonized by Alexander IV; her festival falls on August 12.

CLARETIE, JULES, real name ARSÈNE ARNAUD, French author, born at Limoges, Dec. 3, 1840. While still a school boy in Paris, he published a novel and became a contributor to the Parisian journals. His short story, *Pierrille* (1863), was praised by George Sand; and the novels *Mademoiselle Cauchemire* (1865), and *Un Assassin*, renamed later *Robert Burat* (1866), were at once popular. He became one of the most important art and dramatic critics and political writers on the Paris press. During the Franco-German war he acquired the materials for a series of bright and vigorous anti-German books of an historical character, comprising *Histoire de la Révolution de 1870-71* (new ed., 5 vols. 1875-76); *Les Prussiens chez Eux* (1872); and *Cinq Ans apres l'Alsace et la Lorraine depuis l'Annexion* (1876). He distinguished himself by his conduct during the siege of Paris. His more important later novels are: *Madeleine Bertin* (1868); *Le Train 17* (1877); *Monsieur le Ministre* (1881); and *Le Prince Zilah* (1884). He gained a firm footing on the stage through his pictures of the Revolution, *Les Muscadins* (1874); *Le Regiment de Champagne* (1877), and *Les Mirabeau* (1878); and in 1885 he succeeded M. Perin as director of the Théâtre Français. An English translation of his *Life of Camille Desmoulins* was published in 1876.

CLARIFICATION, the process of clearing a fluid from a turbid condition. Natural waters containing much organic matter are clarified by the addition of a little alum, which is precipitated with the organic matter, and the water then becomes healthy and refreshing. An addition of cold water to hot coffee, etc., causes a deposit to be thrown down, which clears the solution.

CLARINDA, a city at a railroad junction and the county-seat of Page county, Iowa. It is 62 miles southeast of Council Bluffs, and situated on the Nowaday River, and has a woolen factory and a flour mill.

CLARION, the county-seat of Clarion county, Pa. The village is in the oil region, and the prosperity of the place is much increased thereby. Clarion Seminary is here.

CLARK, ABRAHAM, one of the Signers of the Declaration of Independence, born in Elizabethtown, N. J., Feb. 15, 1726, died in Rahway, Sept. 15, 1794. By profession he was a surveyor and conveyancer and earned the title of "poor man's counselor." He was elected to the Continental Congress, serving from 1776 to 1783, with the exception of 1779, and he had a place in the New Jer-

sey legislature from 1782 to 1787, and from 1787 to 1788 was again in the Continental Congress. Mr. Clark has been called the "Father of the Paper Currency." From 1791 till his death he held a seat in the United States Congress.

CLARK, ALVAN, optician, born in Ashfield, Mass., March 8, 1804, died in Cambridge, Mass., Aug. 19, 1887. He was a farmer's son and became an engraver for calico print-works (1827-36), then a portrait painter, and ultimately became famous as a manufacturer of telescopes.

CLARK, ALVAN GRAHAM, astronomer, born at Fall River, Mass., July 10, 1832. He has discovered double stars, was a member of the expeditions which went to Spain to observe the total eclipse of 1870, and to Wyoming eight years later. Mr. Clark has invented several improvements in telescopes, and assisted in the completion of several famous lenses, among which are the Chicago refractor, the 30-inch for the Imperial Observatory at St. Petersburg, and the 36-inch refractor for the Lick Observatory in California, 1887.

CLARK, DANIEL, Senator, born at Stratham, Rockingham county, N. H., Oct. 24, 1809. He graduated at Dartmouth, 1834, studied law, was a member of the assembly five years, served in the United States Senate from 1857 to 1866, and afterward held other government offices. The resolution expelling from the Senate the Southern Senators who had left their seats on the secession of their States was offered by Senator Clark in 1861. President Johnson appointed him United States Judge for the New Hampshire district.

CLARK, DAVIS WAGGAT, D. D., Methodist Episcopal bishop, born at Mount Desert, Me., Feb. 12, 1812, died in Cincinnati, O., May 23, 1871. He graduated at Wesleyan University in 1836; taught for seven years in Amenia Seminary, N. Y.; edited the "Ladies' Repository" from 1853 to 1864, when he was made a bishop. He afterwards labored in California, Oregon, and in the region south of the Ohio River. He was the author of *Elements of Algebra; Mental Discipline; Life and Times of Bishop Hedding*, and *Man All Immortal*.

CLARK, GEORGE ROGERS, an American general, born near Monticello, Albemarle county, Va., Nov. 19, 1752, died near Louisville, Ky., Feb. 18, 1818. In early life he was a surveyor and farmer, but he became distinguished as a leader of frontiersmen against the Indians and the British. All of the fertile region northwest of the Ohio River was wrested from the British by the valor of this soldier, yet he died in poverty. The State of Virginia sent him a sword after he had become old and poor, but he broke it in pieces, exclaiming, "When Virginia needed a sword, I gave her one. She sends me now a toy. I want bread!"

CLARK, HORACE FRANCIS, LL. D., railroad president and statesman, born in Southbury, Conn., Nov. 29, 1815, died in New York city, June 19, 1873. After graduating at Williams in 1833, Mr. Clark became a lawyer and won the reputation of being the hardest worker in the profession in New York city. He was twice elected to Congress (1856-61) on the Democrat ticket. In 1857 he became connected with the New York and Harlem Railroad as director, and afterward was president or director of a number of important roads. He was a manager of the Western Union Telegraph Company; president of the New York Union Trust Company; a successful operator in Wall street; and was one of the politicians who in 1871 broke the power of the Tweed ring. Com. Vanderbilt was the father-in-law of Mr. Clark.

CLARK, JONAS, patriot clergyman, born in Newton, Mass., Dec. 25, 1730, died in Lexington,

Mass., Nov. 15, 1805. After graduating at Harvard, 1752, he became pastor of a church in Lexington, where he spent his life. Edward Everett said of Mr. Clark that he "rendered services second to no other, in enlightening and animating the popular mind on the great question at issue in Revolutionary times." John Hancock and Samuel Adams were at the house of Mr. Clark on the night of April 18, 1775, when Paul Revere took his famous ride, and warned them, among others, of the danger at hand. These two men asked Mr. Clark if his people would fight. "I have trained them for this very hour; they would fight, and, if need be, die too under the shadow of the house of God," he replied. The first blood of the Revolution was shed near his house, April 19, 1775, and when he saw the dead heroes he exclaimed, "From this day will be dated the liberty of the world!"

CLARK, LABAN, Methodist Episcopal clergyman, born in Haverhill, N. H., July 19, 1778, died in Middletown, Conn., Nov. 28, 1868. He was an itinerant preacher, and labored for half a century in Canada, New York and New England. The missionary society of the Methodist church was organized in consequence of a motion offered by Mr. Clark in 1819. He was one of the founders of Wesleyan University at Middletown in 1831, and president of its board of trustees until his death.

CLARK, LEWIS GAYLORD, author, born in Otisco, Onondaga county, N. Y., in 1810, died at Piermont, on the Hudson, Nov. 3, 1873. From 1834 to 1859 he edited the "Knickerbocker Magazine" and increased its popularity by writing the "Editor's Department," and contributing pleasant humorous stories to its columns. Among the contributors to the magazine were many famous people, and these persons collected their contributed articles, illustrated them with their portraits, and had them published in *The Knickerbocker Gallery*, devoting the proceeds of the book to purchase a residence for Mr. Clark at Piermont on the Hudson. This genial author numbered among his friends Charles Dickens.

CLARK, WILLIS GAYLORD, twin brother of the preceding, died in Philadelphia, June 12, 1841. He was editorially connected with the "New York Mirror," "Columbian Star," and the Philadelphia "Gazette," and wrote poetry and humorous sketches. *The Spirit of Life* was his longest poem. A volume entitled *Literary Remains*, containing his contributions to the "Knickerbocker Magazine," was issued by his brother.

CLARK, MYRON HOLLEY, governor of New York, born in Naples, Ontario county, N. Y., Oct. 23, 1806. From 1852 to 1854 he was State senator, and during his first term of service there were consolidated the various railroads that now form the New York Central. To Mr. Clark's influence is due the provision which limits passenger fares to two cents a mile. He was a temperance and anti-slavery man, and elected to be governor by the coalition of several parties, some of which called themselves "Republican;" he was therefore the first State candidate elected on that ticket (1854).

CLARK, THOMAS MARCH, Protestant Episcopal bishop, born at Newburyport, Mass., July 4, 1812. He graduated at Yale, 1831, studied theology at Princeton, and became a Presbyterian pastor in his native town. Afterwards he became an Episcopal clergyman, held rectorates at Philadelphia, Hartford and twice in Boston. In 1854 he was consecrated second bishop of Rhode Island. Bishop Clark has published sermons, addresses, *Lectures to Young Men on the Formation of Character*; *The Efficient Sunday-School Teacher*; and *Primary Truths of Religion*.

CLARK, SIR ANDREW, F. R. S., Scottish physician, born at Aberdeen, Oct. 28, 1826, and educated at

Aberdeen and Edinburgh. After an exceptionally brilliant career as a student of medicine in the latter city, he became assistant to Dr. Hughes Bennett and Dr. Robert Knox the anatomist, and afterwards had charge for four years of the pathological department at the Haslar Naval Hospital. He subsequently settled in London, where he has acquired a high reputation for skill. He is president of the Royal College of Physicians, and consulting physician to the London Hospital. Dr. Clark is the author of numerous essays, lectures and reviews, and has for some time been Mr. Gladstone's medical attendant. He was created a baronet in 1883.

CLARK, WILLIAM GEORGE, English scholar and author, born in March, 1821, died at York, Nov. 6, 1878. He was educated at Scarborough and Shrewsbury. He entered Trinity College, Cambridge, in 1840, and in 1844 was elected Fellow of his college, where he resided until 1873. He acted long as a tutor, and was public orator in the University from 1857 to 1869. Ordained in 1853, he resigned his orders in 1869, publishing his reasons in *The Present Dangers of the Church of England*. Clark edited the first series of *Cambridge Essays* (1855), and long acted as one of the editors of the "Journal of Philology." Other works were his edition of George Brimley's *Essays* (1858), and *Lectures on the Middle Ages and the Revival of Learning* (1872). His greatest work was the famous *Cambridge Shakespeare* (9 vols., 1863-66).

CLARK, WILLIAM SMITH, educator, born in Ashfield, Mass., July 31, 1826, died in Amherst, March 9, 1886. He graduated at Amherst and afterwards held professorships of chemistry and botany in that college. During the war of 1861-65 he served, and two years after its close, he became president of the agricultural college of Massachusetts. In 1876 he went to Japan, pursuing botanical studies and introducing into the United States new shade trees and seeds of foreign plants which proved of value. He was twice elected to the State legislature. As an author Prof. Clark contributed many papers on botany and chemistry.

CLARKE, CHARLES (1787-1877), and Mary Victoria Cowden, English authors. Charles was born at Enfield, Middlesex, Dec. 15, 1787, and early imbibed a passion for the theater. After his father's death, in 1820, he became a book-seller in London, and soon afterwards partner as music publisher with Alfred Novello, whose sister (born 1809) he married in July, 1828. The next year Mrs. Cowden Clarke began her famous *Concordance to Shakespeare's Plays*, published, after sixteen years' toil, in 1845. In 1834 Clarke began a twenty years' course of public lectures on Shakespeare and other dramatists and poets, which brought him much celebrity and profit. In 1859 he published *Carmina Minora*, a volume of original verse, and in 1863 he edited the poems of George Herbert. The joint productions of the pair were an edition of Shakespeare's works with annotations (1869), *Recollections of Writers* (1878), and the valuable *Shakespeare Key* (1879). In 1856 they went to live at Nice, but removed in 1861 to Genoa, where Charles died, March 13, 1877. Mrs. Clarke alone wrote several novels, volumes of verse, and other works. Of these the best known are the *Girlhood of Shakespeare's Heroines* (1850), and *World-noted Women* (1857).

CLARKE, HYPE, English financier and philologist, born in London in 1815, was employed in England as a civil engineer in the improvement of Morecambe Bay, and next in the promotion of telegraph and railway service in Upper India. In 1858 he founded the Council of Foreign Bondholders, whose affairs he administered for some years, and

he has done much to promote the Anthropological Institute and the Press Fund. His writings include books on mythology and comparative philology, especially on the native American languages and their supposed connection with those of the Old World; and a number of pamphlets on railways, foreign loans, banking, etc.

CLARKE, JAMES FREEMAN (1810-88), clergyman, born in Hanover, N. H., April 4, 1810. After graduating at Harvard in 1829, and at Cambridge divinity school in 1833, he held a pastorate in Louisville, Ky., for seven years, and then returned to Boston, where, in 1841, he established the Unitarian Church, known as the Church of the Disciples. The worship of his church combined some of the forms of the Protestant Episcopal Church, the silent prayer of the Friends, and the *extempore* prayer of the Congregationalists. Dr. Clarke was for several years an overseer of Harvard University and a lecturer and professor. His acquaintance with Margaret Fuller enabled him to prepare, with the assistance of William H. Channing and R. W. Emerson, a volume of memoirs. A large number of works were published by him and include the following: *Eleven Weeks in Europe; Christian Doctrine of Forgiveness of Sin; Service Book; Orthodoxy: its Truths and Errors; Self-Culture; Every-day Religion; and Vexed Questions.*

CLARKE, JOHN, physician, born in Suffolk, England, Oct. 8, 1609, died in Newport, R. I., April 20, 1676. He emigrated to Boston in 1637, and desiring more religious freedom than the colony afforded, he with others settled in Rhode Island, then called Aquidneck, in 1638. He is supposed to have drawn up the code of laws which governed the colony. For several terms he was elected to the general assembly of the State, and it is said that he was the first to show "in an actual government, that the best safeguard of personal rights is Christian law." He has been called the "Father of Rhode Island," and also the "Father of American Baptists."

CLARKE, JOHN SLEEPER, comedian, born in Baltimore, Md., 1835, studied for the law, but abandoned it and went upon the stage in his native city. He made a success as a low comedian, and acted in Philadelphia, New York city, Boston and London. His home is now in England, although he was warmly received by the American public, who considered him almost equal to the comedian Burton.

CLARKE, MARY BAYARD, author, born in Raleigh, N. C., about 1830. Her father was Thomas P. Devereux, and she married Col. William J. Clarke. She has lived in Texas, Cuba and North Carolina. Among her writings are: *Reminiscences of Cuba; Mosses from a Rolling Stone; or, Idle Moments of a Busy Woman; Battle of Manassas; and Rebel Sock.* Besides writing prose and poetry Mrs. Clarke has translated Victor Hugo's *Marquise, or Two Loves.*

CLARKE, McDONALD, the "Mad Poet," born in Bath, Me., June 18, 1798, died in New York city, March 5, 1842. He was an eccentric character, about whose life little was known till he came to New York city in 1819. He was the author of the oft-quoted lines:

"Night drew her sable curtain down
And pinned it with a star."

Among his publications were the following books: *A Review of the Eve of Eternity, and other Poems; The Elixir of Moonshine, by the Mad Poet; The Belles of Broadway; Death in Disguise; and A Cross and a Coronet.*

CLARKE, REBECCA SOPHIA, author, born in Norridgewock, Me., Feb. 22, 1833. She has written stories for young people; among her best are *Little*

Prudy Stories; Flaxis Frizzle Stories; Dotty Dimple Stories; and Quinnebasset Girls. Her pen-name is "Sophie May."

CLARKE RIVER, or FLATHEAD RIVER, a stream which drains a part of Montana, Idaho and Washington. It rises in the Rocky Mountains, flows northwest and finally reaches the Columbia River. Gold is found near its source.

CLARKSBURG, the county-seat of Harrison county, W. Va., situated at the place where the Elk and West Fork Rivers unite with the Monongahela. It has flour, woolen and saw-mills, electric lights, gas and water-works, two academies, fine public buildings, and in the vicinity of the town coke and coal are found.

CLARKSVILLE, the county-seat of Montgomery county, Tenn., 50 miles northwest of Nashville, on the Cumberland River. Tobacco is manufactured in large quantities. Iron mines are near the town. It is the seat of the Southwestern Presbyterian University. Population in 1890, 7,924.

CLARKSVILLE, the oldest town of Northern Texas and the county-seat of Red River county. It has various schools and churches, and is the center of a very fertile region.

CLARY (*Salvia sclarea*), a plant of the same genus with sage, a native of the South of Europe. Its flowers are used for making a fermented wine, esteemed for its flavor.

CLASSICS. The term *classici* was originally applied to those citizens of Rome that belonged to the first and most influential of the six classes into which Servius Tullius divided the population. As early as the second century after Christ it was applied figuratively to writers of the highest rank, and this mode of designation has since been generally adopted both in literature and art. As the great productions of writers and artists of antiquity have continued to be looked upon by moderns as models of perfection the word *classics* has come to designate, in a narrower sense, the best writers of Greece and Rome.

CLASTIC ROCKS (Greek *Klastos*, "broken"), rocks composed of fragmental materials. The term includes all rocks of a secondary or derivative origin, as conglomerate, sandstone, shale, etc., which have been formed out of the remains of previously existing rocks. Besides the large class of sand and gravel rocks, it also embraces many rocks of organic origin, such as certain limestones, composed of the débris of shells, corals, etc.; coals, made up of the remains of plants; some ironstones, consisting in whole or in part of organic débris, fragmental volcanic rocks, such as tuff and agglomerate, come also into the same division.

CLAUDE, Sr., a town of France in the department of Jura, at the confluence of the Bienne and Tacou Rivers. It has manufactories of cotton, paper, musical boxes, toys, and fancy articles of horn, bone, ivory, etc. Population, 6,632.

CLAUSEN, HENRIK, a Dutch divine and statesman, born in Laaland in 1793, died in 1877. He became professor of theology at Copenhagen in 1820; was chosen a deputy of the states in 1840, and became a member of the cabinet in 1848. His writings were chiefly on church history and biblical exegesis.

CLAUSEWITZ, KARL VON, Prussian general, born at Burg, June 1, 1780, died of cholera at Breslau, Nov. 16, 1831. He served with distinction in several campaigns in the Prussian and in the Russian service, in 1815 became chief of the Prussian army corps, and was ultimately director of the army school, and inspector of artillery. His writings prepared the way for a complete revolution in the theory of war. Of his works the best known

are his great book on war, *Tom Krieg* (3 vols. 4th edition, 1880), and his life of Scharnhorst.

CLAUSIUS, RUDOLPH, born in 1822; became professor at the Polytechnic Institution of Zurich in 1855, at the University of Würzburg in 1867, and at the University of Bonn in 1869. His calculations based upon the dynamical theory of heat, by which he shows the necessity of a Creator and the possibility of miracles, have won for him much distinction among scholars.

CLAVAGELLA, or CLUB-SHELL, a genus of lamellibranchiate mollusks of the same family with *Asperigillum*. These mollusks inhabit holes which they excavate for themselves in rocks or in masses of coral.

CLAVARIA, a genus of fungi, order *Hymenomyces*, family *Clavariæ*, in which the spore-bearing tissue is produced over all parts of the surface. The species are numerous, some of them simple and club-shaped, some branched. *C. botrytis*, a species common in oak and beech woods, especially in Germany, is gathered when young and used as food. Other species, notably *C. flava*, *coralloides*, *aurea* and *formosa*, are used in the same way.

CLAVICLE, an important part of the pectoral girdle of vertebrates, perhaps most familiarly known in the collar-bone of man and in the "merry thought" of birds. It is well developed in those mammals in which the fore-leg or arm is used very strongly and freely, but is poorly developed or absent in many cases, as in Carnivores and Ungulates. In most flying birds it is strong, and often fused to the breast-bone. It is a paired bone superadded from the skin as an auxiliary to scapula and coracoid. Its position is ventral and anterior to the coracoid, and it is often associated with an interclavicle. See ANATOMY, Britannica, Vol. I, p. 826.

CLAVICORNES, a great family of coleopterous insects, of the section *Pentamera*. Most of the beetles of this family feed on animal substance, and many of them find their appropriate food in substances undergoing decay. See Britannica, Vol. VI, p. 131.

CLAVIJERO, FRANCISCO HAVIER (1721-87) Mexican historian, born at Vera Cruz in 1721; entered the order of the Jesuits in 1748, and became a teacher of rhetoric and philosophy. On the suppression of the Jesuits in Spanish America in 1767, Clavijero retired to Italy, where he died at Bologna in 1787. He wrote in Italian a *History of Mexico*, an impartial and valuable work, of which an English translation by C. Cullen was published in 1787.

CLAXTON, KATE, actress, born in New York city in 1848, grand-daughter of Rev. Spencer H. Cone, an actor at one period of his life, and daughter of a colonel of the 61st New York regiment during the civil war. She made her dramatic debut as "Lotia" in Chicago, but created no enthusiasm till she appeared as "Mathilde" in *Led Astray*, 1873; in this she was a success, and she added to her reputation by acting "Louise" in *The Two Orphans*. While acting this part in Brooklyn, N. Y., the disastrous theater fire occurred, Dec. 5, 1876, and shortly afterwards a hotel in St. Louis, where the actress was staying, was burned. On both occasions she displayed great coolness and bravery. In 1876 she married a fellow-actor, Charles Stephenson.

CLAY, a term applied to those kinds of earth or soil which, when moist, have a notable degree of tenacity and plasticity. The clays appear to owe their origin to the decomposition of various rocks, and to consist chiefly of aluminic silicate, along with other ingredients, which vary in character with the nature of the parent rock from the degradation of which they are derived. Thus, common clay is a mixture of kaolin or China clay (which is a

hydrated clay), and the fine powder of some felspathic mineral, which is anhydrous and not decomposed. The commoner varieties of clay and clay-rocks are: China clay, or kaolin; pipeclay, very like kaolin, but containing a larger percentage of silica; potter's clay, not so pure as the preceding; sculptor's clay or modeling clay, a fine potter's clay, sometimes mixed with fine sand; plastilina, a potter's clay from Italy, supposed to be composed of oil, glycerine, resin and powdered clay; brick-clay, an admixture of clay and sand with some ferruginous matter; fire-clay, containing little or no lime, alkaline earth or iron; shale, a laminated clay-rock; clay-slate, an indurated cleaved clay-rock; loam, a non-plastic mixture of clay and sand; marl, a clay containing much calcareous matter.

CLAY, CASSIUS MARCELLUS, politician, born in Madison county, Ky., Oct. 19, 1810.

While studying in Yale College, from which he graduated in 1832, he heard William Lloyd Garrison speak, and this influenced him to become an abolitionist, although his parents were slave-holders. Entering the legal profession on his return to Kentucky, he attained prominence and was elected in 1835 to the legislature. In 1837 and in 1840 he was sent to that official body; the improvements in the common schools and in the jury system of Kentucky are due to Mr. Clay's efforts. Mr. Clay was the supporter of Henry Clay for the presidency, the opposer of the annexation of Texas, and in 1845 the editor of an anti-slavery paper, "The True American," and was continually involved in quarrels. He served and was taken prisoner in the Mexican war, and aided in the election of President Taylor. He labored for the election of Fremont in 1856, and Lincoln in 1860. The following year he was sent as minister to Russia, but returned to America in 1862, being made major-general of volunteers. Refusing to serve so long as slavery was recognized, Mr. Clay left the Union army and went again to Russia, remaining as minister from 1863 to 1869.

After the war he supported the revolutionary movement in Cuba in 1870; he gave political support to Horace Greeley in 1872, to Samuel J. Tilden in 1876, and, although a Democrat, advocated the election of Mr. Blaine in 1884. For killing a negro, Perry White, in 1877, Mr. Clay was tried, but acquitted, the jury bringing in a verdict of "justifiable homicide," as the man, a discharged servant, had threatened his life.

CLAY CENTRE, a town of Kansas, county-seat of Clay county, situated on the Republican River about 125 miles west of Leavenworth. It contains a variety of manufactories, and is an important center of trade.

CLAY CROSS, a town in Derbyshire, England, 4½ miles south of Chesterfield, the center of a coal and iron district. Population, 6,879.

CLAY, HENRY. See Britannica, Vol. V, pp. 817-18.

CLAYMORE, the old Celtic one-handed, two-edged longsword. The name is now inaccurately given to the basket-hilted sword of the officers of Highland regiments.

CLAYTON, a village of Jefferson county, N. Y., on the St. Lawrence River at the western end of the region of The Thousand Islands. It is a railroad terminus, a summer resort, and a place where ships and skiffs are built.

CLAYTON, JONAS MIDDLETON, a jurist, born in Dagsborough, Sussex county, Del., July 21, 1796, died in Dover, Del., Nov. 9, 1856. He graduated at Yale in 1815; became a lawyer; was elected to the legislature in 1824; elected to the U. S. Senate in 1829 and 1835; was Secretary of State under President Taylor, and served in the U. S. Senate from 1845 to

1849, and from 1851 to 1856. He acquired a reputation for oratory while in the Senate; his best efforts being the speeches on the Foote resolution, in which he discussed nullification, the argument favoring the paying of French spoliation claims, and his defense of the Clayton-Bulwer treaty (negotiated by him while Secretary of State), and President Taylor's administration.

CLAYTON-BULWER TREATY. See Britannica, Vol. VI, p. 782.

CLEARANCE, in the mercantile marine, a permission from the custom-house officers for the departure of a ship from a port, denoting that all the formalities have been observed, and all dues, etc., paid. If a foreign vessel, she must also be certified by the consul of the nation to which she belongs.

CLEAR CAPE, a headland of Clear Island, the most southerly point of Ireland, with a light-house and telegraph station.

CLEARFIELD, the county-seat of Clearfield county, Pa., on a railroad and the west branch of the Susquehanna. It has lumber manufactories, a foundry, machine shops, a public park and an academy.

CLEARING-HOUSE. See Britannica, Vol. III, pp. 328-29.

CLEARING-HOUSE CERTIFICATES, certain evidences of value, or of credit, taking the place of money for the time being, and especially used by the Clearing-House Association of Banks. It is one of the developments in banking procedure, whereby the clearing-house combination or association of banks constituting the clearing house is pledged to maintain the credit of every member of the association. Its beneficial effects will be readily comprehended by stating that if a bank is threatened with a run on its funds, and cannot convert its securities into ready cash to meet the contingency without heavy loss, owing either to the temporary or other depreciation in the value of the securities, or the inability at the moment to convert them into cash because of a possible stringency of the money market, the other banks in or of the association come to the rescue, by the issuance of certificates from the clearing house, which certificates are good at any bank in the association for their face value, and have the immediate effect of restoring confidence in the minds of depositors. For example, suppose, in the event of a "run" on a given bank, the demand for a million and a half of dollars is made; it would require three tons of gold coin to meet it, involving an immense expense as well as risk; whereas, under the system of clearing-house certificates there is a guaranty given that a sum sufficient to satisfy all demands has been deposited, subject to the return on demand, and the entire body composing the Clearing-House Association is pledged to maintain the integrity of the certificate.

The totals of the general proof being daily transferred to the ledger, reference to this is alone necessary to ascertain the dealings of each individual bank, day by day, month by month, and year by year, since it became a member of the association. There is a constant check upon irregularities, as all the banks are under the scrutinizing eye of the clearing house. Each one of the body fully realizes how greatly expulsion would jeopardize its credit. This latter feature has done much to prevent the undue extension of loans which would inevitably produce weakness and possible disaster. The system originated with Mr. F. W. Edmonds, formerly cashier of the Mechanics' Bank, New York city. He planned the issue of clearing-house certificates in 1852, and paved the way for the

smooth and successful business management subsequently developed in the banking world.

CLEARING-NUT (*Strychnos potatorum*), a small tree, a native of India, whose seeds are much used for clearing water. A seed rubbed around the inside of a vessel of muddy water causes the impurities to settle rapidly.

CLEAR LAKE, a sheet of water in Lake county, Cal. It is 24 miles long and from two to six miles broad, and is much frequented by hunters and tourists, on account of the various kinds of game which frequent its shores and the fish in its waters.

CLEATS, in ship-building, pieces of wood fastened to various parts of the vessel, and having holes or recesses for fastening ropes. There are several kinds applied to various purposes.

CLEAVAGE, or SLATY CLEAVAGE, the property possessed by many crystallized minerals of breaking easily into thin plates. Cleavage is the result of an operation which is subsequent to, and entirely independent of the original stratification of the rocks.

CLEBURNE, a village and town of Johnson county, Texas; about 50 miles southwest of Dallas, and 155 miles north of Austin. It had a population of 1,855 in 1880, and of 3,278 in 1890.

CLEBURNE, PATRICK RONAYNE, a soldier, born in Cork county, Ireland, March 17, 1828, killed in the battle of Franklin, Tenn., Nov. 30, 1864. He early discovered a predilection for the profession of arms, and enlisted in the 41st regiment of infantry in the English army. After several years in the military service, he came to the United States and located at Helena, Ark., where he adopted the profession of law, in which he was succeeding at the commencement of the civil war in 1861. He enlisted in the Confederate army as a private; contrived the capture of the United States arsenal in Arkansas in March, 1861, and was soon afterward promoted from the rank of captain to that of colonel. He was promoted to the grade of brigadier-general in March, 1862. At the battle of Shiloh he commanded a brigade in the third army corps, and signalized himself for courage and sagacity. He was made major-general in December, 1862, and commanded a division of the right wing of the Confederate army at the battles of Stone River and Chickamauga. He distinguished himself in covering the retreat of Gen. Bragg's army after the battle of Mission Ridge in November, 1863, and was commended by the Confederate Congress for his heroic and successful defense of Ringgold Gap. He was a division commander under Gen. Joseph E. Johnston during his famous campaign in North Georgia, and distinguished himself in a number of its various battles. He commanded a corps at the battle of Jonesboro, Ga., also at Franklin, Tenn., where he was killed in storming the second line of the Federal works.

CLEF, a musical character placed on the staff, by which the names of the notes are fixed. There are three clefs; namely, the G, the C and the F clef.

CLEG, a name given to some insects of the dipterous family *Tabanidae*. The females are extremely troublesome to horses and cattle.

CLEMATIS, a genus of plants of the natural order *Ranunculaceae*, mostly herbaceous climbers. There are many species, natives of the temperate climates. *C. viorna*, *cylindrica*, and *virginiana*, or virgin's-bower, with white flowers, are the best known species in the United States. There are many forms in cultivation, with large flowers of various colors, mostly varieties or hybrids that have been obtained from *C. viticella* of Europe, *C. lanuginosa* of China, and the Japanese species, *C. azurea* and *C. florida*.

CLEMENCEAU, EUGÈNE, a French statesman, born at Mouilleron-en-Pared, in 1841. He early obtained distinction as a physician in Paris, where he was elected mayor of the 18th arrondissement in 1870, and member of the National Assembly in 1871. He became a member of the Chamber of Deputies in 1876, and was one of the committee of 18 who directed the resistance against the anti-Parliamentary party. He is proprietor of "La Justice," an important Paris journal. He is noted as being one of the most expert swordsmen in France.

CLEMENS, JEREMIAH, statesman, born in Huntsville, Ala., Dec. 28, 1814, died there May 21, 1865. After graduating at the State University he became a lawyer; was appointed United States marshal for Northern Alabama, and elected to the legislature in 1839, 1840, 1841 and 1843. He was connected with the army in 1842, when he went to Texas as lieutenant-colonel of volunteers, and in 1847-48 was an officer in the infantry. From 1849 to 1853 he was in the United States Senate, and in 1859 became editor, at Memphis, of the "Eagle and Enquirer." Popular feeling influenced him, and he became a secessionist, but in 1864 he declared for the Union cause. He was the author of several novels, some of which dealt with American history. Just previous to his death he was at work on a history of the war.

CLEMENS, SAMUEL LANGHORNE, an American humorist, born at Florida, Mo., Nov. 30, 1835. He is best known by his *nom-de-plume*, "Mark Twain," which had been the pen-name of Capt. Isaiah Sellers, who, previous to 1863, furnished river news to the "New Orleans Picayune," and which was derived from the call of the leadsmen on the Mississippi River boat when he sounds two fathoms. Mr. Clemens's education was chiefly obtained in the printing office, he being apprenticed to a printer at the age of thirteen, and he worked at the trade in St. Louis, Cincinnati, and New York, and in 1851 became river pilot on the Mississippi. He followed mining and newspaper work in Nevada and California; made a trip to the Hawaiian Islands in 1866; lectured in California and Nevada; made a tour through Europe, Egypt and the Holy Land; and since 1870 has lived at Hartford, Conn., employing his time in writing books or delivering lectures. He established in 1884 the publishing house of C. L. Webster & Co., in New York city, and this firm brought out Gen. U. S. Grant's *Memoirs*. Among Mr. Clemens's most popular books are: *The Innocents Abroad*; *Roughing It*; *Adventures of Tom Sawyer*; *The Prince and the Pauper*; and *A Yankee at the Court of King Arthur*.

CLEMMER, MARY, author, born in Utica, N. Y., in 1839, died in Washington, D. C., Aug. 18, 1884. This was the maiden name of Mrs. Edmund Hudson; but as she wrote for many years under the name Clemmer, she was best known by it. Her first literary work was for the "Springfield Republican," and she afterwards gained reputation by the "Woman's Letter from Washington," which for years regularly appeared in the "New York Independent." She was the friend of Alice and Phoebe Cary, and wrote their biographies. Monographs on Margaret Fuller, George Eliot, Charles Sumner, Longfellow, and Emerson were from her pen. She was the author of *Victoria*; *Eirene*; *His Two Wives*; *Ten Years in Washington*; and a volume of poems. She was married to Rev. Daniel Ames, but was divorced, and married Mr. Hudson in 1883.

CLEOMEDES, a Greek writer on astronomy. Nothing is known regarding his life, nor the period when he flourished. His treatise is entitled *The Circular Theory of the Heavenly Bodies*, and is remarkable as containing several truths of modern

science—such as the spherical shape of the earth, the revolution of the moon about its axis, etc. Cleomedes's treatise was first printed in Latin in 1498, and the last edition in German in 1832.

CLERC, LAURENT, educator, born in La Balme, near Lyons, France, Dec. 26, 1785, died in Hartford, Conn., July 18, 1869. When only a year old he fell into the fire, and was so injured that he lost the sense of smell and hearing. Several years later Abbé Sicard took the lad and gave him so good an education that he became a teacher. Rev. Dr. Gallaudet persuaded him to come to America, and found an institution for the instruction of the deaf and dumb. This he did, and in 1817 such a school was opened at Hartford, and M. Clerc devoted the rest of his life to this work.

CLERK, JOHN, of Eldin, writer on naval tactics, born in 1728, died May 10, 1812. He prospered as an Edinburgh merchant, and by 1773 purchased the small estate of Eldin at Lasswade, where he devoted himself to etching, to geology, and to studying deeply both the theory and practice of naval tactics. On April 12, 1782, his maneuver for breaking the enemy's line was tried, and a decisive victory was gained over the French.

CLERK, JOHN (1757-1832), son of the naval writer, was raised to the Scottish bench in 1823, when he assumed the judicial title of Lord Eldin.

CLERK, PARISH, an official in the Church of England, who leads the responses in the congregation, and assists in the services of public worship, at funerals, etc.

CLERMONT-DE-LODEVE, a town in the department of Hérault, 23 miles northwest of Montpellier. It has extensive manufactories of woolen cloth. Population, 5,685.

CLERUS, a genus of insects of the order *Cleoptera*, section *Pentamera*, and of the great family *Serricornus* (see *Britannica*, Vol. VI, p. 132). There are about 20 species of this genus in the United States. Their larvæ feed on the larvæ of different kinds of bee.

CLEVELAND, a wild mountainous district, with some picturesque fertile valleys, forming the east part of the North Riding of Yorkshire, England. In the south the hills rise 1,300 to 1,850 feet. An extraordinary change has been wrought in the aspect of the country by a rich discovery of ironstone in the Cleveland hills; since 1851 lonely hamlets have become populous towns. The ironstone is chiefly an argillaceous carbonate, inferior in quality to the ironstone of the coal-measures.

CLEVELAND, a city of Ohio (see *Britannica*, Vol. V, p. 828). The population of the city has increased from 160,146 in 1880 to 261,546 in 1890, and its growth in business and wealth has been correspondingly rapid. There were in 1890 2,500 manufacturing establishments, employing 40,000 persons, with an annual production of \$85,000,000. The city contains eight ship-yards, two of them of immense proportions, constructing iron and steel vessels. A harbor of refuge, constructed by the United States Government and costing nearly \$2,000,000, was completed during the last decade, and the great viaduct extending from the lake on the east side to the top of the hill on the west side, costing \$2,225,000, was completed a little earlier. The public library contains 50,000 volumes.

CLEVELAND, a railroad junction and the county-seat of Bradley county, Tenn. It is an educational town and contains an academy, a female institute, and the largest southern female college.

CLEVELAND, CHARLES DEXTER, educator, born in Salem, Mass., Dec. 3, 1802, died in Philadelphia, Pa., Aug. 18, 1869. Graduating at Dartmouth in

1827, he became a teacher of Latin and Greek in Dickinson College, and afterwards in the New York University, and in a young ladies' school in Philadelphia. He was appointed consul to Cardiff, Wales (1861-67). Prof. Cleveland was the author of several works on English, American, and classical literature, text-books and song-books for schools, and prepared a concordance to Milton's poems.

CLEVELAND, GROVER, the twenty-second President of the United States, born in Caldwell, Essex county, N. J., March 18, 1837. He was christened Stephen Grover, in honor of Rev. Stephen Grover, pastor of the Presbyterian church at Caldwell, but the first name was omitted in his early life. When four years old his parents removed to Fayetteville, N. Y., where Grover received an academic education, and afterwards became a clerk in a country store. At the age of 17 he became an assistant teacher in the New York Institution for the Blind in New York city. In 1855 he went to Buffalo and assisted his uncle, Lewis F. Allen, in the compilation of the *American Herd Book*, and in August of that year entered the law office of Rogers, Bowen & Rogers, in Buffalo, as a student-at-law. He was admitted to the bar in 1859, and in 1863 was appointed assistant district attorney of Erie county, a position which he retained for three years. In 1865 he was the Democratic candidate for district attorney, but was defeated. He then became a law partner of Isaac V. Vanderpool in Buffalo, and four years later a member of the law firm of Lanning, Cleveland & Folsom. In 1870 he was elected sheriff of Erie county, and at the close of his term of office formed the law firm of Bass, Cleveland & Bissell, which subsequently became the firm of Cleveland & Bissell, Mr. Bass having retired on account of failing health. In 1881 Mr. Cleveland was elected mayor of the city of Buffalo on the Democratic ticket, and by his fearless use of the veto prerogative soon became known as the "veto mayor." In 1882 he received the Democratic nomination for governor of the State of New York, and was elected by a plurality of 192,854 over the Republican nominee, Charles J. Folger. July 11, 1884, the Democratic national convention nominated him for the Presidency of the United States, he receiving 683 votes out of a total of 820. James G. Blaine was the Republican candidate, and the canvass which followed was remarkable more for the discussion of the personal characters and qualifications of the respective candidates than for the discussion of political issues. In the election which followed Mr. Cleveland received a majority of 37 in the electoral college and a majority in the popular vote of 23,005 out of a total of 10,067,610. His administration of the Presidential office was marked by the same unprecedented use of the veto power which had characterized his administration of the gubernatorial office. June 2, 1886, President Cleveland married, in the White House, Frances Folsom, daughter of his former law partner. With the exception of Mrs. Madison, Mrs. Cleveland was the youngest of the many mistresses of the White House, having been born in Buffalo, N. Y., in 1864. In 1888 Mr. Cleveland was renominated for the Presidency by the Democratic national convention, but was defeated by the Republican candidate, Benjamin Harrison. Since his retirement from the Presidential office, Mr. Cleveland has resumed in New York city the practice of law.

CLEVELAND, ROSE ELIZABETH, sister of Grover Cleveland, born in Fayetteville, N. Y., in 1846, educated at Houghton Seminary, Clinton, and became a teacher in that institution, and somewhat later assumed charge of the Collegiate institution

at Lafayette, Ind. She has lectured before several schools on historical subjects, and has written a book entitled *George Eliot's Poetry and Other Studies*; and a novel entitled *The Long Run*. For a short time she was editor of "Literary Life," a Chicago magazine.

CLEW, or CLUE, a name given to the lower corner of square sails, and the aftermost lower corner of stay-sails.

CLEW BAY, an inlet of the Atlantic, on the west coast of Mayo county, Ireland. Old Red Sand Stone, Carboniferous limestone, and Cambrian strata form the shores of the bay. The upper part of the bay contains an archipelago of 300 fertile and cultivated islets.

CLICHÉ, the impression made by a die in melted tins, or other fusible metal. It is the proof of a die-sinker's work, by which he judges of the effect, and ascertains the stage of progress reached before the die is hardened. The same term is applied by the French to stereotype casts from woodcuts.

CLICK-BEETLE, the popular name given to many species of coleopterous insects of the family *Elateridae*. They are so called from springing into the air with an audible click, when placed on the back. The American species are very numerous, and in the imago state feed on vegetables. See *Britannica*, Vol. VI, p. 132.

CLIENT, a term in universal use in the United States and England to designate the person who employs an attorney, counselor, or other member of the legal fraternity, either to conduct a case or to give legal advice.

CLIDASTES, a remarkable genus of snake-like reptiles found in the cretaceous formation of North America. They have an additional articulation of the vertebrae. About 12 species have been described.

CLIFFORD, WILLIAM KINGDON (1845-79), an English mathematician. In 1870 he accompanied the English expedition to the Mediterranean to observe the solar eclipse, and in 1871 became professor of applied mathematics at University College, London. On account of failing health he spent the summer of 1876 in Spain and Algiers, and in 1878 was again compelled to seek rest in Madeira, where he died the following year.

CLIFF DWELLINGS. See *Britannica*, under *METEORA*, Vol. XVI, p. 114; and *INDIANS, AMERICAN*, Vol. XII, pp. 822-33, and in these Revisions and Additions.

CLIFTON SPRINGS, a health resort of Ontario county, N. Y. It has large sulphur springs and a building devoted to invalids, called the Clifton Springs Sanitarium.

CLIFFORD, NATHAN, jurist, born in Rumney, N. H., Aug. 18, 1803, died in Cornish, Me., July 25, 1881. He adopted the legal profession, was in the State legislature from 1830 to 1834, was attorney-general for the State from 1834 to 1838, and subsequently served two terms in Congress. In 1846 he was called to President Polk's cabinet as attorney-general, and in this capacity he made important treaties with Mexico. California was annexed to the United States according to the terms of one of these treaties. In 1858 he became associate justice of the Supreme Court, and in 1877 it was his duty as senior associate judge to preside over the electoral commission of that year; and although Judge Clifford believed Mr. Tilden elected, he conducted the proceedings impartially, and the court declared for the election of Mr. Hayes.

CLIFTON, a town of Ontario, and a port of entry, situated on the Niagara River, two miles below the Falls. The river is here crossed by the great railroad suspension bridge, and the view of the Falls from the town is magnificent.
