Learn More About This Wonderful Double CD:

Terence McKenna (1946 – 2000) was one of the most provocative and entertaining philosopher-bards of the twentieth century. He stands alongside Aldous Huxley and Timothy Leary as a lion of psychedelic thought, but his penetrating ideas about art, technology, and the apocalyptic forces of history went well beyond the usual drug tales.

Blessed with a leprechaun's gift of gab, McKenna developed a cult following on the lecture circuit. Today recordings of his strange and often hilarious talks are traded like Dead bootlegs. As fans of his "trialogues" with Rupert Sheldrake and Ralph Abraham know, McKenna also came alive in conversation. But though scores of McKenna lectures circulate on tape and on the Internet, few in-depth recorded interviews with the man are available.

In November of 1999, six months before McKenna succumbed to brain cancer, journalist and author Erik Davis visited the alchemical philosopher and mushroom bard at his home on the big island of Hawaii. A DAT machine recorded their long evening chats, which took place in McKenna's library. These tapes were the final recordings of McKenna's career. Terence McKenna: the Last Interview is a two-disc set that compiles the best and brightest nuggets from these conversations.

Along with ruminations about entheogens, culture, and the future, McKenna talks about his childhood and his experiences traveling in the east. He and Davis also explore the psychedelic implications of animation and new technologies, as well as McKenna's spiritual beliefs. Finally, the conversations turn to the problem of death and dying, a topic that McKenna engages with admirable humor and courage.
